terminated without bloodshed, at first bore a threatening aspect, and caused great anxiety. This was a mutiny of the Seaforth Highlanders, then quartered in the Castle. It having been determined to send the regiment to India at a time when considerable arrears of pay were due, the soldiers took counsel among themselves in regard to their present condition and future prospects. One morning, during drill upon Leith Links, an unusual place for this purpose, suspicion was aroused that they were about to be entrapped on board ship, and sent off without payment of the arrears. Instantly, as in all probability had been previously arranged, the whole body shouldered their arms and marched off at quick step to Arthur's Seat, and fixed their quarters near its summit. Their officers, in the first instance, tried to soothe them with fair promises, but to these the men turned a deaf ear, having already experienced their worthlessness. Threats then resorted to being equally unavailing, as the Highlanders knew they were so situated as to place infantry at defiance, and that, from the nature of the ground, cavalry would be equally ineffective, the only resource was an accommodation through the intervention of some one in whom the Highlanders would place confidence. This was at last effected through Lords Macdonald and Dunmore, on whose honour the men had great reliance, and the differences being satisfactorily arranged, the regiment returned to its allegiance, and shortly after embarked for foreign service.

In the end of last century the city was disturbed by the 'Friends of the People,' the members of the memorable British Convention being seized while attending a meeting in the Cockpit, in the Grassmarket, in 1793; while, in the following year, Robert Watt and David Downie, two of the most active of the local leaders, were convicted of high treason. Both were condemned to death, but Watt only was executed, Downie's sentence being commuted to transportation for life.

A no-Popery riot, on the occasion of the attempt to repeal the penal laws against Catholics in 1799, led to the demolition and plundering of several chapels, and the destruction of considerable property belonging to Roman Catholics, but with military aid order was restored without loss of life. The city, during the menaces of Bonaparte against Britain, made great demonstrations of loyalty, and raised a volunteer force of between 3000 and 4000 men.

In 1822 George IV. paid a visit to Edinburgh, and remained there from the 15th till the 29th of August, occasioning great excitement in the city, and drawing to it many visitors from all parts of the country. Two years later two great fires broke out in the Old Town in June and November, and caused serious damage, one of them, which lasted three days, destroying the greater part of the High Street between St Giles' and the Tron Church, and being checked with the utmost difficulty. The demonstrations in Edinburgh which accompanied the general demand for parliamentary reform in 1830 were remarkably strong, as were also those associated with the election of the first members for the city under the new bill in 1832. Queen Victoria and Prince Albert visited the city in 1842, and were everywhere received with enthusiasm, even greater than that extended to George IV. The accounts of the sudden overthrow of Louis Philippe's government at Paris in Feb. 1848 excited intense interest in Scotland, one result of which was an alarming riot which took place in Edinburgh on the 7th March. Upwards of 3000 persons having assembled at the Tron Church, evidently bent on mischief, the Lord Provost enrolled a number of citizens as special constables, and sent to Piershill and the Castle for military aid, while the sheriff read the Riot Act, and advised the crowds to disperse. These proceedings being energetically followed up, a stop was speedily put to the disturbances, but not till considerable mischief had been done.

The royal family again visited Edinburgh in 1849, and in 1850 when the Prince Consort publicly laid the foundation-stone of the National Gallery; and the Prince of Wales resided at Holyrood during several months of

1859, while studying history under Dr Schmitz of the High School. In 1860 her Majesty reviewed upwards of 20,000 volunteers in the Queen's Park; and in 1861 the Prince Consort officiated at the laying of the foundation-stones of the new General Post Office and the Industrial Museum—this being among the last public appearances which the Prince made before his death. In 1863 there was a great public illumination on the occasion of the marriage of the Prince of Wales, as was also the case at the time of the Duke of Edinburgh's marriage in 1874. The Prince and Princess of Wales made a public appearance, accompanied with great masonic display, on the occasion of the Prince laying the foundation-stone of the new Royal Infirmary in 1870, and since then they have publicly visited the city in 1884, when they were at the Forestry Exhibition, and in 1886, when they visited the International Exhibition, which had previously been declared open by their eldest son, the late Duke of Clarence. Repeated visits have been made by her Majesty to the city since the occasions already mentioned, and in Aug. 1881 the Queen again reviewed the northern volunteers to the number of about 40,000 in the Park at Holyrood.

Edinburgh was the meeting-place of the British Association in 1834, 1850, 1871, and 1892; of the Social Science Congress in 1863 and 1880; of the Highland and Agricultural Society in 1842, 1848, 1859, 1869, 1877, 1884, and 1893; and of the Librarians' Congress in 1880. In April 1882 there was a Fisheries Exhibition, in 1884 a Forestry Exhibition, in 1886 and 1890 general International Exhibitions of Art and Industry, and in 1891 a Heraldic Exhibition.

The Castle.—Exclusive of the Esplanade, the site of the Castle, which occupies the top of the sharp boss of volcanic rock at the extreme W end of the central ridge of Edinburgh, measures some 280 yards from E to W, and about 180 yards at the widest part from N to S, and covers an area of above six acres. A considerable portion of the northern, western, and southern sides are precipitous, while on the NE a steep grassy bank slopes down to the West Princes Street Gardens. The space at the top of the Castle Hill immediately E of the present fortifications, which now forms an esplanade or glacis sloping gently up to the level of the drawbridge, was originally much lower. Defended all round till about 1753 by a strong outwork, it is now entirely open, with merely a parapet wall along the side, and serves as a garrison parade and general lounging place. When the surface was at its original low level, the access from it to the Castle was by a long flight of steps, and the approach was defended on the E by an old battery called the Spur, which was demolished about 1649. After the removal of this, a narrow raised roadway was formed across the ground, and the whole level gradually raised by the deposition on it of the earth removed from the site of the Royal Exchange during the building operations there after 1753. Further improvements were made in 1816-20. The 1450 line of defence round the city passed across the top of the Castle Hill at the E end of the Esplanade, and was there pierced by a gateway called the Barrier Gate, which was temporarily restored when George IV. visited Scotland in 1822, and again in 1832—on the latter occasion for the purpose of isolating the garrison during the cholera epidemic then prevalent in Edinburgh. On the Esplanade are various monuments connected with the army, including a statue of the Duke of York erected in 1839, a Celtic cross (1862) in memory of the officers and men of the 78th Highlanders who were killed in the Indian Mutiny, another in memory of Colonel Mackenzie of the 92d Highlanders (1873), and a granite obelisk, a memorial of those of the 72d Highlanders who fell in Afghanistan in 1878-80.

Dismantled by Bruce, as we have seen, the fortifications rose again from the ruins in the brief period of power of Edward III., who erected, after the fashion of his time, a strong curtain wall with towers; and shortly afterwards David II., when he had recovered his kingdom, still further strengthened the place by the massive square tower, known from its builder as 'Davies Tower,'

in which he died in 1370. Of these early works only some small fragments, at the Half-Moon Battery and elsewhere, remain, the rest having been all reduced to ruin in 1573 during the thirty-three days' siege by the troops of the Regent Morton and the English auxiliaries under Sir William Drury. Even of the old portions that remain the appearance has been greatly changed, for the upper parts, very much shattered during the siege, seem to have been restored on new lines. 'On the highest part of the rock stood, and yet stands, the square tower where Mary of Guise died, James VI. was born, and where the regalia have been kept for ages. On the N a massive pile, called David's Tower, built by the second monarch of that name, and containing a spacious hall, rose to the height of more than 40 feet above the precipice, which threw its shadows on the loch 200 feet below. Another, named from Wallace, stood nearer to the city; and where now the formidable Half Moon rears up its time-worn front, two high embattled walls, bristling with double tiers of ordnance, flanked on the N by the round tower of the Constable 50 feet high, and on the S by a square gigantic peel, opposed their faces to the city. The soldiers of the garrison occupied the peel, the foundations of which are yet visible. Below it lay the entrance, with its portcullis and gates, to which a flight of forty steps ascended. The other towers were St Margaret's, closed by a ponderous gate of iron, the kitchen tower, the large munition house, the armourer's forge, the bakehouse, brewery, and gun-house, at the gable of which swung a sonorous copper bell for calling the watchers and alarming the garrison. The Castle then contained a great hall, a palace, the regalia, a church, and an oratory endowed by St Margaret.' Battered from the high ground at Heriot's Hospital, from where the W end of Princes Street now is, and from the high ground farther E, the east and north fronts were soon almost entirely destroyed. David's Tower, with all its guns and men, went crashing over the precipice on the sixth day of the siege, and was followed on the seventh by the Gate Tower and Wallace's Tower. The great square peel and the Constable's Tower went next, and at last, when the assailants got possession of the Spur, in which was the only well left available, the stout-hearted garrison had to yield, and the brave governor, Kirkaldy of Grange, basely delivered up by Drury, to whom he surrendered, to the Regent Morton, was soon afterwards hanged at the Cross, having, says Sir James Melvil, 'perished for being too little ambitious and greedy.'

Douglas of Parkhead, the regent's cousin, who now became governor, proceeded at once with the work of restoration, the principal feature of the new defences being the Half-Moon Battery. The Douglas star and heart over the portcullis gateway still mark the builder, but the arms of Morton, which were placed there above the royal arms—a circumstance afterwards set down to his discredit when he came to be tried for his life—have long been gone. The lines of the new walls did not follow those of the old, and so we now find standing apart such fragments as Wallace's Cradle on the face of the cliff on the N, Wallace's Tower—part of the 1450 works—at the base of the same precipice, and the other ruins on the bank below the Esplanade. Prior to the invention of gunpowder the fortress was so strong by nature that art easily made it almost, if not altogether, impregnable; but in these days of long range and heavy guns, it has of course become quite useless for purposes of defence. The garrison consists generally of one regiment, but accommodation could be provided for about three on their full war establishment.

The entrance to the Castle is across a drawbridge spanning a deep dry fosse, through a gateway flanked by low batteries, up a rocky path, and through a long vaulted archway, with slits where of old there have been two portcullises, and with traces of the hinges of more than one ancient gate. The present outer gateway, which includes the guardhouse, was erected in 1836, at the cost of the late Mr William Nelson, the well-known publisher, in pursuance of his efforts to improve the picturesqueness

of the Castle buildings. In the sides of the archway are placed two curious stone panels, on which are sculptured in minute detail representations of old cannon and military weapons. These formed part of a fine old 17th century gateway, which was demolished in the beginning of the 19th century to make way for the mean building which served as a guardhouse till the latest building was erected. Over the second vaulted arch mentioned above, with the grooves for the portcullises, is a panel with pilasters and pediment. The panel bears the royal arms, and was—somewhat tardily, so far as governments are concerned—placed there during the restorations of 1890, to take the place of the shield cast down by Cromwell in 1650. On the pediment are the Douglas star and heart, which seem to point to this as part of the 1574 work. The so-called dogs beneath are sometimes referred to the Duke of Gordon's governorship in 1688. The building above is the Argyll Tower, the upper part of which was restored by the late Mr William Nelson in 1890. It was used till the end of the 18th century as a state prison, and receives its name from either the Marquess of Argyll, whose place of confinement it was previous to his execution in 1661, or from the ninth Earl of the same name who was imprisoned here in 1685. Other occupants of note have been Carstares (afterwards Principal of the University) in 1682, Lord Balcarres in 1689; and Lady Ogilvie, the Viscountess of Strathallan, and several other fair Jacobites in 1746. The last occasion when it was used for prisoners charged with high treason was when Watt, Downie, and Orrock were committed to it in 1794. The Argyll Battery facing the N, a few paces beyond the archway, commands a fine view over all the New Town. It takes its name from the second Duke of Argyll, who was commander-in-chief in Scotland in 1715. Beyond and below it is Mylne's or Mills Mount Battery, built by Robert Mylne in 1689, and a little beyond, at the NW corner, are the magazine and what used to be the armoury, but is now the hospital. A high bastion behind the armoury was erected about 1856 on the site of an ancient sally-port. One of the turrets on the wall has the name of the Queen's Post, and stands on the site of Queen Margaret's Tower, but whether it takes its name from this, or from the spot having been a favourite resort of Mary of Guise and her little daughter when resident in the Castle, is doubtful. To the W of the hospital and magazine a staircase leads down to a small postern in the rock, which was the scene, in 1689, of the interview between the Duke of Gordon and Viscount Dundee, when the latter, after defying the Convention, and telling them that

'Ere the King's crown shall fall there are crowns to be broke,'

rode off to the north to raise the clans, and go whither 'the shade of Montrose should direct' him. Long blocked up, it was cleared in 1888, and an inscribed tablet placed over it. Immediately to the S is Bute's Battery, and the open space is all that is left of the archery ground, which seems to have been the place where the Earl of Douglas and his brother were executed in 1440. The rest of it was in 1796 covered by the ungainly pile known as the New Barracks, which, with its arched rear elevation, appears at a distance somewhat like a factory set on a precipice. To the N of this is the Governor's House, built in 1705, and to the S the garrison prison, erected in 1840, beyond which is Drury's Battery, so named from John Drury, chief of the Scottish engineers, by whom it was erected in 1689.

Past the buildings just mentioned the road sweeps in an ascending curve, and proceeds eastward through a strong gateway into the inner or higher division of the Castle, known as the Citadel. Of this the southern part, surmounting the edge of the cliffs overhanging the Grassmarket, is the quadrangle called the Grand Parade or Palace Yard, about 100 feet square, and with buildings on all its four sides. On the N side there was formerly a large church, of very early date, and seemingly of characteristic Norman architecture; but this, converted after the Reformation into store-rooms of various kinds, was finally demolished in the middle of the 18th century,

when the present hideous barracks—hideous still in spite of all Billings could do to improve them in 1860-62—were built. The old Parliament Hall, on the S side of the Grand Parade, a magnificent apartment, about 80 feet long, 32 wide, and 27 high, was built probably about 1434, and was used for royal banquets as well as for meetings of Parliament. Here it must have been that the Earl of Douglas beheld that bull's head, 'which was a sign and token of condemnation to the death,' and afterwards the hall was the scene of the coronation banquet of Charles I. in 1633, and of the festivities of 1648, when the Earl of Leven entertained Cromwell, Hazlerig, and other leading men of the Commonwealth. Cut up into mean apartments it was long lost to view till it was, in 1887-90, restored at the cost of the late Mr William Nelson, who unfortunately did not live to see the completion of the work. It is now used as a national armoury, and as such was opened with some ceremony by the Princess Louise in 1892. Occupying the rest of the S side, and the whole of the E side, of the square is the old royal palace, erected in the fifteenth century, and altered at various dates down to 1616. Queen Mary's room, where James VI. was born in 1566, is a small closet less than nine feet long, on the ground floor, at the SE corner. It still retains its original ceiling, in ornamental wooden panels, with the initials I. R. and M. R., and a royal crown in alternate compartments. The panelling was taken in recent times from an old house called the Oratory of Mary of Guise, which stood on the Castle Hill, and was demolished in 1846. The Crown Room, on the E side of the Grand Parade, contains the ancient regalia of Scotland, comprising crown, sceptre, sword of state and belt (presented to James IV. by Pope Julius II.), the lord treasurer's rod, the George that belonged to James V., the collar of the Garter that belonged to James VI., and the St Andrew and coronation ring that belonged to Charles I. The regalia were lodged here in 1707 at the time of the Union, but there was a belief—notwithstanding the provision in the Treaty that they should be always kept in Scotland—that they had been afterwards conveyed away by stealth to London; and it was only when, in 1818, a commission appointed by the Prince Regent, afterwards George IV., opened the old oak chest, that doubt on the subject was removed. Since then 'the Honours' have been always open to the view of the lieges. Near the Crown Room is the room in which Mary of Guise died. In front of the Grand Parade, on the E face of the citadel, is the Half-Moon Battery. It was constructed in 1574 on the site of David's Tower, overlooks the Old Town in the line of Castle Hill and High Street, and is mounted with fourteen guns. An electric clock and apparatus connected with the Royal Observatory on Calton Hill discharges a time-gun here daily at one o'clock, by means of a wire stretching from the hill to the Castle; and it was from behind the flagstaff here that King George IV. in 1822, and Queen Victoria in 1842, surveyed the city. The King's Bastion, on the NE verge of the citadel, occupies the highest cliff of the Castle rock. It forms a tier above the Argyll Battery, commands a most gorgeous panoramic view over the New Town to the Ochil Hills and Ben Lomond, and was formerly mounted as a bomb battery. In it is the famous old monster-gun called Mons Meg, composed of thick iron bars held together by a close series of iron hoops. It was constructed in 1455 by native artisans, at the instance of James II. when baffled with the siege of Threave in Galloway, a stronghold of the Douglasses, tradition adding that certain loyal lieges of the King, or more properly enemies of the Douglass, contributed each a bar to its construction, and that the name bestowed on the gun was in honour of the wife of the smith who hammered out its ribs and hooped them together. It was employed by James IV. in 1489 at the siege of Dumbarton Castle, rent in 1682 when firing a salute in honour of the Duke of York's visit, removed to the Tower of London in 1754, and returned to Edinburgh in 1829 by the Duke of Wellington in response to the petition of Sir Walter Scott. St Margaret's Chapel, behind the King's Bastion, is the only

building of the Castle of earlier date than the 15th century, and is the oldest extant building in Edinburgh. The nave was the private oratory of Margaret, queen of Malcolm Ceanmor; and the chancel, if not of the same date, must be but very little later. Long neglected, like so many of the historical buildings of Scotland, and even degraded to the uses of armourer's store and powder magazine, it was at length, owing to the exertions of the late Sir Daniel Wilson of Toronto, restored in 1853. Beneath the Citadel buildings on the E and S sides are vaults, which seem to have been used as dungeons. One is popularly associated with the name of the Marquess of Argyll, and another with that of Lady Glamis, who was so barbarously executed on the Castle Hill in 1538. The double range on the S was also used, in the end of the 18th and the beginning of the 19th centuries, for the confinement of the French prisoners of war. On the slope below the Castle buildings proper, on the S, behind the houses in the Grassmarket, are the quarters of the married soldiers of the garrison. Originally erected in 1872-73, in a style so severely plain that it positively disfigured the locality, the block has since been improved, but is still far from being 'a thing of beauty.'

Holyrood.—Holyrood, at the opposite end of the central ridge from the Castle, originated as an abbey in the time of David I.; and the ground occupied by it, as well as by the adjacent burgh of Canongate, was till that period a natural forest, which extended eastward nearly as far as Musselburgh. Monkish legend asserts that, on Rood-day, or the festival of the Exaltation of the Cross, King David I. proceeded, against the wish of his confessor, from the Castle to hunt in the forest, and that, when in the hollow between the present site of the Abbey and the N end of Salisbury Crags, and separated from his retinue, the King was assailed, unhorsed, and driven to bay by a vicious hart with powerful antlers. Just at the moment of direst peril a dazzling cross, or 'holy rude,' was miraculously extended to the King by an arm shrouded in a dark cloud, and the mystic sheen struck such sharp terror into the infuriated deer that it at once turned and took to flight. On the following night the King was admonished in a dream or vision to erect and endow a monastery at the spot where this happened, in token of thankfulness for his supernatural deliverance; and here accordingly King David founded an Augustinian abbey, and dedicated it to the Holy Rude. Such is the legend, which, though no doubt partly fictitious, must have been suggested by some unusual incident that had occurred during the hunt on an annual church festival. Possibly the Abbey may owe its name to a cross, believed to contain a portion of the actual 'rude' on which Christ was crucified, and known as the 'Black Rude,' that had been bequeathed to David by his mother, the pious Margaret, who had brought it with her to Scotland, probably as a relic she cherished of Edward the Confessor. The Abbey would almost seem to have been erected to guard this relic, which appears to have been looked on as a talisman on which depended not only the fortunes of the Abbey, but the fate of the country. David II. had it carried before his army when he invaded England, but it passed ominously into the hands of his enemies at the battle of Neville's Cross, and was placed by them in Durham Cathedral, where it was long preserved, both as a trophy of victory and as an object of religious veneration.

Founded in 1128, and bestowed with large revenues on the canons regular of the Augustinian order, the Abbey was designed and built in the grandest manner, and became very soon one of the richest and most splendid monastic establishments in the kingdom. Besides the usual monastic buildings it had a magnificent cruciform church, with all the accessories of a cathedral—nave, transepts, and choir—with two towers on its western front, and a great central tower at the intersection of the nave and transepts. The apartments for royal guests stood to the south of the church, and formed in the time of the first three Jameses one of the favourite royal residences. The original cloisters to the S of the nave of the church are now traceable in only a part of their

N side. The church choir, with the Lady chapel at its E end, was partly demolished by the English in 1544 and 1547, and the ruins were in 1569 'disposed be faithful men, to repair the remanent sufficiently.' The nave, 148 feet long and 66 broad, was altered at various periods, both before and after the destruction of the other parts of the pile; and the roof, central tower, spires of the western towers, and some of the upper parts of the walls, are all gone. The wall across its E end and the large window form part of the repairs executed in 1569 to convert it into a parish church. The cloister doorway, still apparent on the south side and showing beautiful shafts and rich chevron moulding of the Norman period, must belong to the church of David I. The buttresses, side windows, and a doorway on the N side were reconstructed about the middle of the 15th century, and exhibit ornate features of the later Gothic. Most of the W front is a little later than the cloister part of the south side, and forms an exquisite specimen of the Transition Norman architecture, with mixture of pure Norman and Early English. On the face of the NW tower is an elaborately sculptured arcade, with boldly cut heads between the arches. The peculiar windows over the great doorway have been doubtfully referred to the period of Charles I., when some restorations took place, but they are probably earlier.

Charles II. restored the nave, and converted it into a chapel royal. A throne was then erected for the sovereign, and twelve stalls for the Knights of the Thistle, while the floor was tessellated with variously-coloured marble. A mob, at the Revolution, in revenge for James VII. having used the chapel for Romish worship, unroofed it, and reduced everything to a state of ruin. A restoration was attempted, and a stone roof placed over it in 1758, but the roof, being too heavy for the old walls, fell in suddenly in 1768, and destroyed all the new work. The pile was thereafter utterly neglected, and became a crumbling ruin, choked with rubbish, till 1816, when it was put into orderly condition. In 1857 its appearance was still further improved by alterations that took place in connection with the extensive clearances then effected in Palace Yard.

The royal burial-place was originally near the high altar, in the choir; and after the choir was demolished a new vault was constructed in the S aisle of the nave. Down to 1688, when the coffins were destroyed and the bones scattered over the pavement, this contained the remains of James V. and his first queen, and of Lord Darnley, and to it in 1848, on the wanton destruction of old Trinity College Church, the remains of Mary of Gueldres were removed. David II. and James II. were also buried within the walls, probably in the old vault. About the building are also the tombs of Hepburn, the last abbot of Holyrood, and of Wishart, the biographer of the great Marquess of Montrose; an interesting recumbent statue of Lord Belhaven, the strenuous opponent of the National Union; and the burial places of many other notable persons, including Sir John Sinclair of Ulbster. The chief historical events that have taken place within the chapel walls have been the marriages of James II. and James III., and the hapless union of Mary and Darnley; the presentation to James IV. of the great sword of state; and the coronation of Charles I. The foundation charter of the Abbey, which, however, speaks of the church as already in existence, bears date somewhere between 1143 and 1147, and by it the canons not only received large estates and various rights connected with multures and fishings, but also the privilege of erecting the burgh of Canongate, as well as a right of trial by duel and of the water and fire ordeal. Whether their extensive jurisdiction also included the power of protecting any delinquent who took refuge within the Abbey bounds, or whether this was a royal prerogative connected with the Palace, is not clear, but such right of sanctuary certainly existed from an early period, and extended over all the precincts, from the Girth Cross at the foot of Canongate to the utmost limits of the royal park. In early times it shielded every description of offender, but came afterwards to be used only for pro-

tecting insolvent debtors, in times especially when the law gave greater powers to creditors than it does now. The refugees within the sanctuary were for a long time popularly and satirically called 'Abbey Lairds,' and were made the subject of an old comic song, entitled *The Cock Laird*. A group of plain old houses, called St Ann's Yards, which stood on ground now within the enclosure to the S of the palace, and figure in Scott's *Chronicles of the Canongate*, was their principal retreat. Some of these houses were swept away in 1850 and the remainder in 1857. To the NE of the Abbey is the old sixteenth century house of *Croft-an-Righ* (King's Croft)—Scott's Croftangry—with quaint corbelled turrets and dormer windows. It is said to have been the residence of the Regent Moray, and has some curious ornamental ceilings. The fine garden and orchard behind were included within the Palace grounds in 1857.

The Palace, as distinct from the Abbey, was founded by James IV. in 1501; enlarged by James V. in 1528; mostly destroyed, by the English forces under the Earl of Hertford, in 1544; rebuilt, on a much larger scale and in greater splendour, in the immediately following years; destroyed again by fire when occupied by the soldiers of Oliver Cromwell; and partly restored, but mainly reconstructed, by Charles II., on an entirely new plan, after designs by Sir William Bruce of Kinross, in 1671-79. The contract for the demolition of the old pile of buildings and their reconstruction shows that in 1671 the amount for the work was reckoned at £4200; but there was a second contract in March 1676 for £324, and a third in July 1676 for £350. The builder was the well-known Robert Mylne, whose name is cut in large letters on one of the pillars at the NW corner of the piazza. The pile of 1528 is still represented by the northern projecting wing of the front range of the existing palace. The palace erected immediately after 1544 comprised five courts; the first projecting toward the foot of Canongate, and entering from thence through a strong gateway flanked with towers; the second and the third occupying nearly the same ground as the present palace; the fourth and the fifth of small size, and situated to the S. The present building, consisting of the small remaining part of the pile of 1528, and the entire edifice of 1671-79, has the form of an open quadrangle, enclosing a court 94 feet square. It underwent exterior repair in 1826, interior improvement in 1842, and the roof was entirely renewed in 1878-80, at a cost of about £5000. It has, all round the S, E, and N sides, a uniform three-storey elevation, in plain Italian style. The main front to the W consists of a centre and wings—the centre a two-storey architectural screen, pierced by the entrance doorway, surmounted by a balustrade and by a small clock lantern, with an open, carved, stone cupola in the form of an imperial crown. The wings project about 40 feet, rising to the height of three storeys, with circular conical-roofed corner turrets. The enclosed court shows an arcade-piazza basement, and three upper ranges of fluted pilasters, successively Doric, Ionic, and Corinthian. In the centre of the front, toward the W, is a pediment on which are carved the royal arms. The royal private apartments occupy the S and the E sides, and are reached by a grand staircase from the SE angle of the court. They were formed on a model combining features from all the older royal residences in Scotland, and lay long in a state of great neglect, but preparatory to the visits of Queen Victoria were entirely refitted. The great picture gallery on the N measures 150 feet in length, 24 feet in breadth, and about 20 feet in height. It is hung with more than one hundred alleged portraits of reputed Scottish kings, all in barbarous style, painted in 1684-86 by the Flemish artist De Witt. There is also a remarkable diptych, painted about 1484, containing portraits of James III., his queen, Margaret of Denmark, his young son (afterwards James IV.), and Edward Boncle, the then provost of Trinity Church, of which the painting is supposed to have been an altarpiece. This picture gallery was used by Prince Charles Edward in 1745 for his receptions and balls, and is the place where the Scottish peers elect their representatives

for parliament, and where the Lord High Commissioner to the General Assembly of the Church of Scotland holds his levees. The rooms in the part of the palace erected in 1528, entering from a stair in the NW angle of the court, continue in nearly the same condition as when Queen Mary inhabited them. In consequence of their historical associations and curious furnishings, Queen Victoria, at the time of the interior improvements of the Palace, issued a special order to leave them undisturbed. They include a vestibule with some dark stains, fabled to have been made by the blood of David Rizzio, who was murdered here in 1566; an audience chamber, hung with ancient tapestry, and containing some richly-embroidered chairs, where the famous interviews occurred between Queen Mary and John Knox; and a bed-chamber, containing Queen Mary's bed and portrait. But few of the other pictures or furnishings are of much importance.

James VI., who was residing here when he received the tidings of his accession to the throne of England, was the last permanent royal occupant, though Charles I. was here for a short period at the time of his coronation, and James VII., when Duke of York, in 1680-82. Prince Charles Edward, during the brief period of his presence in Edinburgh, held high state in the Palace, in such style as greatly to delight the Scottish Jacobites. The Duke of Cumberland, on his return to the S, after crushing the rebellion on the field of Culloden, occupied the same apartments and the same bed in the Palace that had been used by his opponent. Charles X. of France took up his abode here as an exile in 1795, when he was Comte d'Artois, and again, in 1830, when the revolution of that year drove him from his throne. George IV., during his brief sojourn at Dalkeith in 1822, held his levees in the picture gallery of Holyrood; and Queen Victoria made similar use of it in 1842; while, between 1850 and 1861, her Majesty used to spend two nights in the royal private apartments of the Palace, on her way to and from Balmoral, and she was there in August 1881 for three days and two nights, on the occasion of the great review of Scottish Volunteers.

The Palace and the surrounding grounds were for long closely hemmed in by old and dilapidated houses, which were gradually cleared away between 1851 and 1862. A spacious carriage-way was formed from Abbeyhill southward across the W side of the Palace-yard to a new entrance into the Royal Park, the old dingy houses of St Ann's Yards were cleared away, and the site, along with a considerable section of the Royal Park to the S and E, enclosed to form a private royal garden or home park; a range of offices, comprising guard-house, royal mews, and other conveniences, was erected in a castellated style along the W side of the Palace-yard; and great improvement was at the same time effected on the adjacent grounds of the Royal Park. A curious appendage to the Palace, in Queen Mary's time and earlier, was a lions' den, a small enclosure adjoining one of the windows on the N, but it has entirely disappeared. Near the place where it stood is a sun-dial, also associated with Queen Mary's name, but the connection is a mistake, as it was erected in the time of Charles I., when over four hundred pounds Scots was paid to the 'maissoune' for the working and hewing thereof. A lodge, called Queen Mary's bath, in the isolated part of the gardens on the NW, is a quaintly shaped little building. It has a spring underneath the floor. During some alterations about 1798 there was found, in the sarking of its roof, a richly inlaid but wasted dagger, supposed to have been stuck there by the murderers of Rizzio on their escape from the Palace. A series of pointed arches in a high blank wall on the S side of the thoroughfare from the Palace-yard to Canongate, belonged to a Gothic porch and archway built about 1490, and serving for some time as the outer entrance to the Abbey. The space now mainly occupied by the new guard-house and royal mews was the site of the mint, during the regency of Mary of Guise, and of the residence of Rizzio. A sandstone statue of Queen Victoria, on an ornamental pedestal, with sculptured

groups of figures, from the chisel of A. H. Ritchie, that was placed in the centre of the Palace-yard in 1850, was removed in 1857, and the present ornamental fountain erected in its room in 1859 at a cost of £1700. It is a restoration of a ruined fountain in Linlithgow Palace, and has three ranges of statues, representing, in the highest range, four men-at-arms supporting the Imperial crown; in the second, eight figures typical of sixteenth century life; and the lowest has heraldic figures with shields bearing the arms of James IV., James V., and James VI. and their queens. Beneath there are heads of various celebrated persons.

The Royal Park, extending from the Palace eastward to the vicinity of Jock's Lodge, south-eastward to Duddingston, and south-south-westward to the vicinity of Newington, and comprehending Arthur's Seat, Salisbury Crags, and part of St Leonard's Hill, measures in circumference nearly five miles, and has an area of about 680 acres. It continued, for ages after the erection of the Abbey, to be natural forest, and was first enclosed and improved by James V. Improved again in the time of Queen Mary, it passed from Charles I. to Sir James Hamilton and his heirs, who rented it out to tenants; but in 1844 it was repurchased by the Crown for £30,674, and put under the management of the Commissioners of Woods and Forests, by whom it was greatly altered for the better, and the present magnificent Queen's Drive formed.

The Canongate.—The monks of Holyrood were, as we have seen, privileged to erect a burgh in connection with the Abbey, and so the Canongate, sheltering at first under the walls of the brotherhood, extended by slow degrees westward till, at the Netherbow, it met its rival Edinburgh pushing eastward from the Castle. Its name is of course derived from its having formed the approach to the Abbey from the city and Castle. A burgh of regality almost from its birth, it received charters granting various privileges from David I., Robert I., and Robert II.; the abbots of Holyrood, as superiors, having the appointment of bailies and council, with a right to enrol burgesses. All rights and privileges, along with certain feu-duties, were afterwards conveyed absolutely to the burgh, the abbots retaining only the bare superiority, which they continued to hold till the dissolution of the Abbey at the time of the Reformation. The superiority passed then to Robert Stewart as commendator, next to Sir Lewis Bellenden of Broughton, and thereafter to several others till, in 1630, it was acquired by the city of Edinburgh, the only rights left to the ancient suburb consisting of the superiority over certain properties within its bounds, and the power to levy petty customs, market dues, and causeway mail. The magistrates were next deprived of their jurisdiction in criminal cases, but were allowed to retain a weekly court for civil causes and for the settling of certain other classes of questions, as well as to act with the assistance of an assessor as justices of peace within their own territory. The original jurisdiction, of which even these last remnants were swept away by the Edinburgh Municipal Extension Act of 1856, was very wide, extending over not only the Canongate proper, but also the Abbey district, St Cuthbert's, Pleasance, North Leith, and Coalhill in South Leith; and no one but a burgher or freeman of Canongate was at liberty to carry on trade or manufacture within the bounds. The hammermen, tailors, wrights, baxters, shoemakers, weavers, fleshers, and barbers, incorporated by royal charter in 1630, have still corporate existence, though now merely as benefit societies. Under cover of its ecclesiastical connection the burgh had for long immunity from all harm, but its security was rudely broken in 1544, when the English forces made sad havoc. During the troubles of 1571 the Canongate was for a time the seat of Parliament, and suffered severely from the fire of the Queen's party from the Castle.

Supreme Court.—The Courts of Session and of Justiciary—the supreme courts of law in Scotland—meet in buildings on the S and W sides of Parliament Square. This space (formerly known as Parliament Close) was, along with the slope extending to the Cowgate, anciently

used as a burying ground. On the lower part of the slope was a chapel of the Holy Rood, and at the NW corner were the residences of the St Giles' clergy. In consequence of the meetings of Parliament and of the Court of Session being, in the latter part of the sixteenth century, held in the Old Tolbooth, near the NW corner of the square, the churchyard became a busy thoroughfare, and part of it at any rate must have been simply an open public meeting-place, for in 1617, when James VI. returned to visit his native land, a banquet was given him in St Giles' churchyard. The Parliament House proper, which is at the SW corner, was erected in 1631-40 at a cost of £14,600, and its external elevation was such an excellent and characteristic specimen of the Scottish Renaissance style of that period that it is a matter of regret that it has been obscured and destroyed by the modern front. Built at first in an open space, it was soon surrounded by houses, the southern part of which was so high, owing to the slope, that there is said to have been sometimes fifteen storeys on the Cowgate front. Curiously enough these houses never had time to get very old, for those first built were destroyed by fire in 1676, their successors in the same way in 1700, and those last built by the great fire of 1824; after the removal of the ruins of which, the square began to assume its present form. The present front of the Court buildings was erected in 1808 in accordance with designs by Mr Robert Reid. Italian in style, the elevation shows a first storey, rusticated and pierced with semicircular arches which form piazzas. A central projection has a handsome hexastyle Doric portico. At intervals on the cornice are six sphinxes.

The great hall in the SW corner—a magnificent room 120 feet long, over 40 feet wide, and 40 feet high, with a very fine oak hammer-beam roof—was built, as we have just seen, for the accommodation of the Parliament (which had, up to 1640, held its sittings in the Tolbooth), and served that purpose till 1707. 'The whole Parliament sat as one Chamber, like the States-General of France. At the south end, below the large window, stood the high throne, which, in absence of the King, was occupied by the Chancellor, who acted as chairman of the assembly. On the steps of the throne were congregated the officers of state. On either side of the upper end of the hall there were raised and decorated benches for the use of the nobles and higher barons. At a table in the centre the judges of the Court of Session and the clerks of Parliament were seated, while the commissioners of burghs and the lesser barons were ranged on plain benches lower down. Beyond these, at the end of the hall, such of the general public as had gained admittance, and the retainers of the various members, assembled. Distinguished strangers were either accommodated with seats at the extremities of the burgesses' benches, or were admitted into a small gallery, which was probably situated above the present entrance door, where a projection may be seen in the wall. A pulpit [still preserved in the Museum of the Society of Antiquaries] stood below the gallery, from which sermons were occasionally preached to the House.' After the parliamentary glories had departed, the hall was used as the Outer House of the Court, and one portion, indeed, occupying some twenty feet of the N end, and separated from the rest by a wooden partition about fifteen feet high, 'was filled with stalls on which jewellery and cutlery were exposed for sale. Cockburn says that he bought his first pair of skates there, and he remembers his surprise at the figures with black gowns and white wigs walking about among the cutlery. A judge sat in each of the recesses in the east wall, where the statues of Lord President Boyle and Lord Jeffrey now are, and cases were pleaded before them amid all the hubbub and bustle which went on in the House itself.' During the reign of George III. the hall also every year witnessed the somewhat wild revelry indulged in by the more convivial of the citizens who had accepted the invitation of the magistrates to assemble and drink the King's health on the anniversary of his birthday. In 1656 it was the scene of a great entertainment given to General

Monk and the leaders of the Commonwealth; in 1680 of a great banquet to the Duke and Duchess of York and their daughter, afterwards Queen Anne; in 1822 of another to George IV.; and in 1887 of a fourth in honour of the Jubilee of Queen Victoria. The whole interior is now entirely open, and as the meeting-place of agents, counsel, and clients, as well as the promenade of the briefless, it presents during session a scene of great bustle and animation. It is lit by a great S window and by four smaller openings on the W side. The latter are filled by stained glass inserted in 1870, and bearing the arms of the various Lord-Justice-Clerks, of the famous legal writers of the Faculty of Advocates, of the Deans of Faculty, and of the successive Lord Advocates. The large window in the S end used to be filled by a representation of Justice (a badly executed copy of Sir Joshua Reynolds' design at New College, Oxford), with the figure so placed with reference to the leading of the window that it gave rise to jocular comments as to 'Justice barred out trying to get in.' This was, however, removed in 1868, and replaced by the present window by Kaulbach, which represents the inauguration of the College of Justice by James V. in 1532. In the hall are statues of Forbes of Culloden (1752), by Roubillac; Viscount Melville (1811), Lord President Blair (1811), Lord President Dundas (1819), all by Chantrey; Lord President Boyle (1841) and Lord Jeffrey (1850), both by Steell; and Lord Cockburn (1854), by W. Brodie. There are also a number of interesting portraits of various legal luminaries. At the S end are the courts for the various Lords Ordinary of the Outer House—the court of first instance—while the first and second divisions of the Inner House have their rooms off the E side. The High Court of Justiciary is still farther east. Accommodation is also provided in the building for the Secretary for Scotland, and for Her Majesty's Office of Works. Underneath the great hall is the Laigh Parliament House, which was long divided into a number of dark and inconvenient little rooms, but which was opened up in 1870. It is generally looked on as the torture-chamber of the old Scottish Privy Council, but this seems more than doubtful, as the meetings for the examination of prisoners would probably take place in the Old Tolbooth.

In this last building, which has come to have world-wide fame through Scott's *Heart of Midlothian*, the Court of Session seems to have originally held its sittings and Parliament its meetings. It was a gloomy structure to the NW of St Giles' Church, from the corner of which it was separated by a narrow lane, and was removed in 1817 in order to widen the street, which here previously measured only 14 feet across. The gate and keys were given to Sir Walter Scott, and are still to be seen at Abbotsford. The 'Heart of Midlothian' consisted of three different buildings of different dates. The eastern, erected about 1468, consisted of a massive square tower, resembling a strong Border fortalice, four storeys high. The middle portion was built in room of a part of the older prison, which had become so ruinous that, in 1561, the magistrates were ordered by Queen Mary to take it down; and, in 1562, threats were further made that if the new building were not more quickly proceeded with the courts of justice would be permanently removed to St Andrews. The western portion, of much later date, was only two storeys high, and had a flat roof, on which public executions took place from 1785 to 1817. The site of the Tolbooth is now indicated by the figure of a heart in the causeway near the NW corner of St Giles' Church.

Municipal Buildings.—The Tolbooth, among its many other functions, served for long as the meeting place of the Town Council, but as that body came to have a higher sense of its own dignity, it demanded better accommodation, and this it found in the Royal Exchange, on the N side of High Street, opposite the E opening of Parliament Square. The Exchange was erected in 1753-61 at a cost of over £31,000, and the front portion occupies the site of the house of Sir Simon Preston, 'forwart the Croce, upon the north syd of the gait,'

where Queen Mary was 'logit' after her surrender at Carberry Hill. So steep is the slope on which it stands that the height, which is 60 feet in front, becomes in the rear 100 feet. The buildings, Italian in style, are arranged round an open quadrangle, the south side of which consists of a range of seven archways, about 25 feet high, with a flat roof and a vase-adorned balustrade. The central arch forms the entrance to the court, but the others are enclosed so as to form shops. The main building on the N side is faced at the base by a piazza, over which rises a centre, with four Corinthian pilasters surmounted by a pediment bearing the city arms. This portion, the interior of which was altered and rearranged in 1871, contains the Council Chamber, the Lord Provost's apartments, the Burgh Court Room, etc. In 1896 it was decided to extend, rearrange, and rebuild the Municipal Buildings, the work to be done in three sections, the first of which was commenced at the end of 1896.

The Usher (or City) Hall.—In 1896 Mr. Andrew Usher of Blackford Park, Edinburgh, presented the Lord Provost, Magistrates, and Council with a sum of £100,000 for the erection of a City Hall for popular concerts, &c.

Town Cross.—Opposite the entrance to the Royal Exchange, at the opening into Parliament Square, stands the town cross as restored by the Right Hon. W. E. Gladstone in 1835. It is designed in the style of the two old 'Mercat Croces,' the first of which stood a little to the W of the present one, and the second, which was minutely described by Arnott in 1788, a little to the E, at a point marked by an octagonal figure in the causeway. The first reference to any cross is in one of the St Giles' charters in 1447, and in 1477 there is mention of one in the burgh records, the magistrates having decreed in that year that 'all patrikis, pluvaris, capons, conynges, chikinnis, and all uther wyld fowlis and tame be usit and sald about the Merket Croce.' From this time onward, for three hundred years, the Cross of Edinburgh began to acquire associations that made it the centre, not only of civic affairs, but of the public life of Scotland. 'It was draped with tapestry or hung with scarlet cloth and green garlands when the city rejoiced; it was clothed in black weeds when civil discord ended in the execution of the leaders of the losing side; it has been lighted up by joyful "bale fires" and darkened for weeks, ayemonths together, by the shadow of the gallows; it has "rnn with wine and heard the glad shouts and loud huzzas of the citizens, and echoed to the dying speeches of the martyrs for conscience' sake." From the Cross our Kings were proclaimed and traitors were outlawed; here bankrupts were exposed to public derision, and criminals chained in the pillory to stand the taunts and assaults of the mob; it was the centre of the most jovial part of those magnificent pageants for which the Middle Ages are celebrated; and it was likewise the scene of those ghastly punishments—the mutilation of the living and the dead—which disgraced the criminal jurisprudence of the time. The story of the City Cross varies with the fortunes of the age—it is ghastly or gay as war or peace reigned in the land.*

For some reason unknown this Cross was rebuilt in 1555, the contractor being bound 'to set the lang stane as it is now,' and it was on the 'turret octagon' of that date that both the later ones were modelled. Found to stand in the way of the royal procession when James VI., with 'salmon-like affection,' revisited his native land, it was removed and rebuilt on the spot already noted, where it remained till 1756, when it was 'hanged, drawn, and quartered,' according to Claudero, 'for the horrid crime

* Some of the executions that have taken place at the Cross, such as that of Kirkaldy of Grange, of Morton, of Montrose, and of the two Argylls, are well-known facts of history; another, that of a person one would hardly have expected to find here, is not of such common knowledge. This was Colonel Rumhold, the owner of the Rye House, from which the celebrated plot takes its name, and one of those who guarded the scaffold at the execution of Charles I. Captured and brought to Edinburgh mortally wounded, in 1685, after the fallure of the Argyll rising, it was, says Macaulay, 'the wish of the government that he should be executed in England. But he was so near death that, if he was not hanged in Scotland, he could not be hanged at all; and the pleasure of hanging him was one which the conquerors could not bear to forego.' So he was tried at Edinburgh, and being found guilty of high treason, was executed with all the usual barbarous ceremonial.

of being an incumbrance to the street.' The 'lang stane' which had been the silent witness of so many incidents in the history of Scotland, was by some accident allowed to fall among the ruins, with the result that its former fair length of twenty feet was curtailed to fourteen; but while the rest of the stones were sold for rubbish, its shattered fragments fortunately passed into the possession of Lord Somerville, by whom and his successors it was carefully preserved at Drum House, near Gilmerton, till 1869, when it was restored to the city and temporarily erected beside the N transept of St Giles. The present unicorn on the top was added at the same time. The basement building on which the old shaft now stands is an octagon, 16 feet across and 15 feet in height. At each corner is an Ionic pillar, with a mimic bastion corbelled out from the capital, while between each pair of pillars is a semicircular arch, over which, between the bastions, is a medallion. Hopes were at one time entertained that five of the old medallions, which passed into the possession of Sir Walter Scott, might be obtained and inserted in the new building, but this was unfortunately impossible. One which shows an old form of the city arms was copied, and the places of the others have been filled up by various coats of arms. The arch on the E side has, as of yore, a door leading to the open platform on the top of the octagon, whence all royal proclamations affecting Scotland are once more made, the magistrates and council having at the time of the restoration formally declared the new structure to be the Market Cross of the city.

County Buildings, Court-house, and Police Buildings.—The County Hall, erected in 1817 at a cost of £15,000, after designs by Archibald Elliot, occupies the W side of the open space at the W end of St Giles' Church. The main front facing eastward is modelled after the Temple of Erectheus at Athens, and has a portico over the entrance, with four fine fluted columns, surmounted by a pediment. It was proposed in 1893 to add a west front towards George IV. Bridge, as the present W wall of the building, which was at first screened by houses now removed, is so plain and ugly as to be an eye-sore—the interior, which contains one large room for court purposes, another for county meetings, and offices for the transaction of county business, to be at the same time remodelled, so as to provide accommodation for the County Council of Midlothian. The alterations were estimated to cost about £20,000. In the hall is a statue by Chantrey of Lord Chief Baron Dundas. The Sheriff Court-house, a little to the S, facing George IV. Bridge, is a somewhat clumsy-looking structure in the Italian style, erected in 1866-68 at a cost of over £44,000, after designs by David Bryce. The head office of the police, at the corner of Parliament Square and High Street, is a plain Italian building, erected in 1849, and altered and improved in 1875. This is also the chief station of the fire brigade. There are sub-offices for police purposes and fire stations at Causewayside, Gayfield Square (Leith Walk), Stockbridge, West Port, Torphichen Street (Haymarket), and Waverley Market.

Prisons.—The old Tolbooth, demolished in 1817, has been already noticed. The guard-house, erected in the time of Charles II. for the old Town-Guard—with its black hole for the incarceration of the unruly, and the sharp-backed wooden mare at its W end, on which offenders against good discipline were made unwillingly to 'ryd with stoppis and muskettis tyed to thair leggis and feet, a paper on thair breast'—which stood in the High Street, about midway between the modern police-office and the Tron Church, was removed in 1787. The present main district prison—Calton Jail—is on the SW shoulder of Calton Hill, to the S of Regent Road, on the cliff overhanging the North Back of Canongate. It comprises three distinct groups of buildings, designed in somewhat garish imitation of a square-towered mediæval castle. The western portion was built as the town and county jail in 1815-17, and has at the SW corner of the enclosure, perched on the edge of the precipice, the round-towered governor's house. The middle group was erected in 1834-37, in pursuance of the general scheme formulated in the Prisons Act of 1877, and took the place of the

old Town and County Bridewell, built in 1791-96. The eastern group, dating from 1846-47, was originally the Debtors' Jail, but has since the abolition of imprisonment for debt been used for general prison purposes. There are also legalised cells in connection with the police-office, court-house, and judiciary court.

Register House.—The General Register House of Scotland contains not only the registers of sines, inhibitions, and adjudications, but also the national records, the official writings of the clerks and extractors of the Court of Session, Jury Court, Court of Judiciary, the Great and Privy Seal, the Chancery, the Lord Lyon's office, and the Bill Chamber, and the duplicate registers of births, marriages, and deaths. The ancient national records were destroyed by Edward I. and by Cromwell, while those of later date were, prior to the building of the Register House, kept in part of the Laigh Parliament House, almost inaccessible, suffering injury from damp, and constantly exposed to great risk from fire. In their present place of keeping all these conditions are reversed. The original Register House at the E end of Princes Street, opposite the North Bridge, was built partly in 1774-76, partly in 1822-26, after designs by Robert Adam, in the Italian style, and cost about £80,000. A long curtain wall, on each side of a central, spacious, double flight of steps, divides a space in front of it from the street. It stood originally at a distance of 40 feet from the façade, but was shifted back, first in 1850, and again still farther in 1891, when the staircases were also altered. The double flight of steps has handsome balustrades, and leads up to the principal entrance. The front of the edifice is 200 feet long, has a basement storey mostly concealed by the structures in front of it, and two upper storeys full in view, and is ornamented from end to end with a beautiful Corinthian entablature. It projects slightly in its central portion, and is adorned there with four Corinthian pilasters surmounted by a pediment, in the form of an attached portico; has, in the tympanum of the pediment, a sculpture of the royal arms; and has a turret at each end, one containing a clock and the other having dials showing the direction of the wind. In the curtain wall is a recess with a niche containing a barometer and thermometer. In the centre of the edifice is a circular saloon, 50 feet in diameter, with galleries, from which corridors branch off to the different departments. Over it is a dome, and in a recess is a marble statue of George III. by the Hon. Mrs Damar. A second block, erected in 1857-60, at a cost of over £26,000, is immediately behind the first one, and is entered from West Register Street. It forms a quadrangular pile, much smaller than the original building (to which it is similar in style, but not quite so plain), and contains the duplicate registers of births, marriages, and deaths. It stands on the site of Ambrose's Tavern, the reputed scene of the famous 'Noctes.' The third block was erected in 1869-71, at a cost of about £8000, after designs by Mr Matheson. Situated to the E of the second, with which it is connected by a long stone corridor, it is used entirely for record volumes, and is a circular structure, 55 feet in diameter and 65 in height, surmounted by a dome, from windows in which the entire lighting takes place. Eight massive piers at regular intervals project from the general line of the exterior wall, a dado course dividing the elevation into a lower portion, with the piers rusticated and the inter-spaces plain, and an upper portion, in which both have moulded panels.

Post Office.—Opposite the Register House, at the corner of Princes Street and the North Bridge, is the General Post Office, occupying the site of Shakespeare Square and the old Theatre-Royal. The old Post Office, built in 1819, farther E, in Waterloo Place, is now used as the New Waverley Hotel. Of the new office the foundation-stone was laid on 23 Oct. 1861 by the late Prince Consort, almost the last public act of his life, and it was opened for business in May 1866. It cost, inclusive of the site, about £120,000, and is a magnificent edifice, in a moderately rich type of the Italian style, after designs by Mr Matheson. An addition was

made to the S side in 1891-92. The N front, toward Princes Street, is the principal one, and shows a recessed centre two storeys high, and massive wings three storeys high. The recessed part, facing a pavement 43 feet wide, is pierced with three lofty circular-headed arches, resting on massive piers, and giving entrance to a vestibule of 34 by 32 feet. In the upper storey are five windows with balustrades in front, flanked by Corinthian columns, and with alternately circular and angular pediments. The basement storey of each wing is rusticated. The W front is entirely similar to the N front, with the exception that it has no vestibule. A massive cornice and balustrade surmounts all the three fronts, and the balustrade is intersected at intervals by pedestals supporting ornamental vases. The Corinthian columns on the N and W fronts, 16 feet high, consist of a single stone. There are branch offices, with money order, savings-bank, insurance and annuity, and telegraph departments, at George Street, Lynedoch Place, and Newington; and there are also throughout the city and suburbs 36 sub-offices, of which 20 have telegraph departments, and nearly 90 pillar and wall letter-boxes.

A Telephone Company has its head office in Frederick Street, with several branch stations throughout the city.

The Observatories.—The old Royal Observatory, a plain, dingy, three-storey tower on the Calton Hill, was projected in 1736 and erected in 1776, and is now used only for anemometrical and rain gauge purposes. The second Royal Observatory, to the E of it, is a very graceful little building in the form of a St George's Cross, built in 1818 from a design by W. H. Playfair. On each of the four fronts is a hexastyle Doric portico, with a handsome pediment. In the centre is a dome 13 feet high, with a solid pillar 19 feet high in the middle for the astronomical circle. Having unfortunately, from the growth of the town and the increase of the railway traffic in the hollow below, become unsuitable for the finest and most accurate observations, it has now in turn given place to another, a new observatory having been erected in 1893 on the E shoulder of Blackford Hill, where the Corporation gifted three and a half acres for the site. The buildings consist of an observatory on the N side of the site, and detached residences for the Astronomer Royal and his assistants. The observatory proper—Italian in style, with Greek features—has a plan like the letter T, with a northern front 180 feet long and 30 feet high, flanked at the east end by an octagonal tower 75 feet high and 40 feet across, and on the W by a similar tower 44 feet high and 27 across. Between the windows of the central part, which are somewhat ornately treated, are carved the signs of the Zodiac, and the wall is surmounted by an ornamental balustrade. In the towers (which are surmounted by copper domes of cylindrical form), on massive hollow brick piers, are placed the 15-inch refracting (E) and 24-inch reflecting (W) telescopes. The larger tower also contains a small vault for the sidereal clocks. The central part contains various work-rooms, and on the roof is placed a 15-inch heliostat. Extending southwards is what forms the stem of the T, in which is placed the heating and lighting apparatus and the library. A little to the W of this main building is the transit house, with walls and roof of corrugated iron, covered with curved louvres of tinued steel, with an air space of 6 inches between. It contains, on insulated piers, the transit circle, with a telescope of 8·6 inches aperture, and two large collimators. The cost of the whole was about £34,000. The most of the instruments, as well as the library, which is one of the finest in Europe, were formerly in the observatory at DUNDEE House, and were gifted to the nation by the Earl of Crawford and Balcarres in 1889. The observatory on the Calton Hill has been purchased by the Town Council, and in it are placed, under the charge of the City Astronomer, the fine set of instruments formerly in the private observatory at Murrayfield, belonging to Mr Cox of Gorgie, and gifted by him to the city in 1889.

Markets.—The chief public market for butcher meat is on the slope from the Old Town ridge, close to the

North Bridge, and is still largely used; though of course all the best butcher meat and fish are now disposed of in shops throughout the town. The cattle market is on a large open space at the corner of Lauriston and Lady Lawson Street. At the sales, which take place every Wednesday, from 800 to 900 head of cattle and about 2000 sheep are generally disposed of. The slaughter-house is situated in Fountainbridge, on the SW side of the city. The buildings, which were erected in 1852, and occupy an area of nearly four acres, have towards Fountainbridge a massive Egyptian façade, with emblematic figures and stone caryatides of cattle, serving as corbels and supports. The old Green Market for vegetables and fruit was in the hollow now occupied by the Waverley Station, for the extension of which the site was, in 1869, acquired by the North British Railway Company. The present vegetable market is in the building on the S side of Princes Street, opposite St Andrew Street, known as the Waverley Market. It was erected by the railway company in lieu of the one they had removed, and occupies the northern part of the site of the terminus of the old Edinburgh, Perth, and Dundee Railway. The wide open space within—which is often used for large public meetings—is surrounded by a gallery, giving access to a number of small shops; and the roof, which is flat, is supported by iron girders and pillars. The roof has a series of wells or deep depressions, with glass sides for lighting the interior of the market, and was greatly improved in 1877 by the formation of flower-beds on the intervening parts of the platform. A grain and produce market is held every Wednesday in the Corn Exchange and the adjoining part of the Grassmarket.

Banks.—The Bank of Scotland, an establishment which received its charter as early as 1695, was originally in Old Bank Close, which was swept away when the streets in the line of George IV. Bridge were formed, but was in the beginning of the nineteenth century moved to its present home in the building facing the straight part of Bank Street, at the top of the Mound. Originally erected in 1806 at a cost of £75,000,* after a design by Richard Crichton, it was greatly altered and enlarged in 1868-70, after designs by David Bryce. It is now a highly ornate building in the Italian style, with campanile towers and a great central dome, all surmounted by statues, that of Fame, on the top of the dome, being 7 feet high. The elevation to the N, seeming to rise from the strong curtain wall which screens it below, has a most imposing appearance as seen from Princes Street.

The new Union Bank, built in lieu of former premises on the E side of Parliament Square, stands on the S side of George Street, a little E of Frederick Street. It was erected in 1874, after designs by David Bryce, in ornate Italian style, and with a frontage of more than 100 feet, extends backward to Rose Street Lane. It rises from a sunk basement to a height of three storeys crowned with attics, is screened from the pavement by a handsome stone balustrade, and has three Ionic porticos at separate entrances. The windows on the first and second floors are each flanked by richly-headed pilasters, and surmounted by a triangular pediment, while the whole terminates in a bold cornice, supporting a balustrade. It contains a magnificent telling-room, fully 80 feet long and nearly 50 wide. The Clydesdale Bank, at the E corner of George Street and North Hanover Street, has its principal front to George Street. Erected in 1842 for the Edinburgh and Glasgow Bank, now extinct, the building is adorned with Corinthian pillars and pilasters, and with a handsome stone balcony. The Commercial Bank (established in 1810), on the S side of George Street, midway between Hanover Street and St Andrew Square, was built in 1847, after designs by David Rhind, and has a façade 95 feet long, with profusely decorated windows, and a good Corinthian portico. It is entered through a lofty vestibule, surrounded by a gallery with Ionic columns, and lighted from a panelled roof supported

* A considerable part of the cost was due to difficulty in finding a firm foundation.

by Corinthian columns rising in the same line with the pillars supporting the gallery. The telling-room is 90 feet long and 50 wide, with a dome roof supported by Corinthian columns, and enriched with ornaments in alto-relief. The portico on the façade rises from the top of a flight of steps, and has six fluted columns 35 feet high, with bold, graceful, well-relieved capitals; and the tympanum is filled with sculptured figures in high relief, from the chisel of A. Handyside Ritchie, emblematic of commercial, manufacturing, and agricultural enterprise. The group of statuary comprises a central figure of Caledonia on a pedestal, supported at the sides by figures of Prudence, Agriculture, Commerce, Enterprise, Manufactures, Mechanical Science, and Learning; it is figured on the notes of the Bank.

The National Bank (established in 1825), on the E side of St Andrew Square, at the corner of West Register Street, was originally a large private mansion, one of the earliest aristocratic structures of the New Town. Exteriorly plain, it was enlarged in 1868, and again in 1885, the addition at the latter date forming the envelope of one of the strongest safe-rooms in Britain. The interior is of toughened steel, manufactured by Messrs Chubb & Sons, and this is set in casings of firebrick and concrete, to a thickness of nearly 3 feet. The British Linen Company's Bank (established in 1746), on the E side of St Andrew Square, immediately N of the National Bank, was built in 1852, after designs by David Bryce, at a cost of £30,000; and is a good structure in the Palladian style. Its front, about 60 feet high, shows a rusticated basement and two upper storeys. The windows of the second storey have the tympanums filled with sculpture; while those of the third storey have small balconies supported on carved consoles and massive wreaths of ash-leaves, suspended by rosettes at the top of the architraves. Six fluted Corinthian columns rise singly from the basement to the height of about 31 feet, inclusive of their pedestals. The entablature is about 7 feet high, has a finely sculptured frieze in alto-relief, and is recessed. Six statues, each 8 feet high, from the chisel of A. H. Ritchie, representing Agriculture, Mechanics, Architecture, Industry, Commerce, and Navigation, stand on it. Behind the statues is a balustrade about 7 feet high. The telling-room is a splendid cruciform saloon, 74 feet by 69, lighted by a cupola 30 feet in diameter and 50 feet high. The floor is a brilliant mosaic of encaustic tiles; the roof is supported by eight Corinthian columns and twenty-four Corinthian pilasters, their pedestals of marble, their shafts of polished Peterhead syenite, their capitals of bronze; and a panelled arrangement beneath the cupola contains allegorical figures of Mechanics, Science, Poetry, and History, and busts of the founder of the Bank of England, George Buchanan, Adam Smith, Fletcher of Saltoun, Lord Kames, Dr Duncan Napier of Merchiston, Sir Walter Scott, Professor Wilson, Rennie, Watt, and Wilkie. The Royal Bank, established in 1727, stands at the head of an enclosed and paved recess on the E side of St Andrew Square, immediately N of the British Linen Company's Bank. Originally the town mansion of Sir Lawrence Dundas, the ancestor of the Marquess of Zetland, it was built, after a design by Sir William Chambers, on the model of a villa near Rome; then passed by sale to the Board of Trade, and afterwards to the Royal Bank. It presents a neat front, with four Corinthian pilasters, surmounted by a pediment, with a sculpture of the royal arms. All the banks have sub-offices throughout the whole city. The Savings Bank occupies premises in a good building of the old Scottish style, to the E of the Free Church College, at the top of the Mound.

Insurance Offices.—The Life Association Office, in Princes Street, nearly opposite the Mound, was built in 1855-58 from designs by Sir Charles Barry and David Rhind. It is an ornate building of three storeys, divided by cornices and balustrades. The basement storey is in rusticated Doric, and has a grand central archway, the second is Ionic, and the third Corinthian. Both of the upper storeys have ranges of columns between the

windows, and pairs of small pillars adjoining the sides of the main lights; and these lights are recessed and arched, and have spaces over them filled with elaborate sculptures. The part of the edifice not occupied by the Life Association is used for shops, a hotel, and offices. The Scottish Widows' Fund Life Assurance Office, on the W side of St Andrew Square, at the corner of Rose Street, was built in 1848 by the Western Bank Company, stood a considerable time unoccupied after that company's failure in 1857, and was then sold to its present owners at a price greatly below its original cost. It is a large, elegant, symmetrical edifice in the Florentine style, with screen balustrade, neat porch, handsome window-mouldings, and heavy projecting roof. The Scottish Provident Institution, on the S side of St Andrew Square, a little E of St David Street, erected in 1867, is an elegant edifice in Italian style. The Standard Insurance Company's Office, on the N side of George Street, near St Andrew Square, has a neat Corinthian portico, showing on the tympanum a sculptured group by Steell, representing the parable of the Ten Virgins. The Caledonian Insurance Company's Office, in the same street, a little farther W, has four beautiful Corinthian columns, with massive entablature. The Edinburgh Life Insurance Company's Office is on the S side of George Street, a little E of Hanover Street, and was formerly partly occupied by the Antiquarian Museum. It has Doric features and two porches in its basement storey, Corinthian features in its second storey, and a massive cornice and a balustrade. The North British and Mercantile Insurance Company's Office in Princes Street, to the E of Hanover Street, has a neat, projected basement storey, surmounted by a statue of St Andrew with his cross. The Scottish Union and National occupies a plain but good building in St Andrew Square.

Bridges.—When the erection of the New Town was resolved upon, the construction of some easier means of communication than then existed across the valley of the Nor' Loch became imperatively necessary. Accordingly, in 1763, the hollow was drained, and on the 21st October of the same year the foundation-stone of the North Bridge was laid. The work, however, was not begun till two years after, when, through miscalculations of the builder, a considerable portion of the incomplete structure fell in August 1769, and caused loss of life. This mishap being repaired, the bridge was securely completed in 1772, at a cost of about £18,000. Rebuilt in 1894-97 the North Bridge is constructed of iron girders resting on stone piers and abutments. It consists of three spans of 175 feet each, the north abutment being in line with the south face of the General Post Office, and the south abutment at the south side of Market Street. The width between the parapets of the new bridge is 75 feet, while that of the old bridge as altered more than twelve years ago was 54 feet. Each span is of six steel arched ribs, over which there is a system of steel bracing supporting the roadway. The parapets and outer facing of the arches are of ornamental cast-iron work. The South Bridge and George IV. Bridge have been already noticed. Regent Bridge, across Low Calton at Waterloo Place, was erected in 1815-19. Waverley Bridge, crossing the North British railway, to the W of the Waverley Market, occupies the site of the Little Mound, and was originally a stone bridge, replaced in 1870-73 by a 3-span iron structure, which again had to give way to a more commodious one erected in 1895-96. Dean Bridge, which carries the Queensferry Road across the valley of the Water of Leith, was built in 1832 after designs by Telford. It has four beautiful arches, 96 feet in span, and has a height of 106 feet above the rocky bed of the stream below. The breadth between the parapets is 39 feet, and the footpaths on each side being carried on arches of greater radius than those of the roadway, seem to be set on to the main building, but the effect is much more graceful than that of the patch on the North bridge. There is a beautiful view from the bridge both up and down the stream, but this a small section of the citizens

are constantly trying to shut out by demanding every now and again that the parapet shall be heightened—the occasion of the outcry being that some poor creature has committed suicide by leaping over to the rocks beneath. Considering that this happens once in five years or so, it is to be hoped that the view may long be spared. To the W of the bridge is the little old-fashioned village from which the district takes its name. It is of considerable antiquity, as is plain from the mills belonging to it having been granted by David I. to the monks of Holyrood. At Well Court here are a group of quaint-looking and artistically designed buildings, erected by Mr J. R. Findlay of the *Scotsman*, as model dwellings for workmen. They were designed by Mr Sidney Mitchell, and afford ample evidence that all the latest improvements in sanitation can be combined with picturesqueness of effect. To the E of the bridge, and close to the footpath leading from Water of Leith village to Stockbridge, is St Bernard's Well, which is said to take its name from the redoubtable Abbot of Clairvaux, who, having drunk of the spring during his visit to the district while preaching the second crusade, gave it his blessing, and so secured to it for ever the possession of healing virtues. However that may be, the mineral spring is spoken of in the *Scots Magazine* for 1760 as having been 'lately discovered.' It was covered in shortly afterwards, and a small temple was erected over it in 1790 by the eccentric Lord Gardenstone, who had derived benefit from drinking its waters. There was a 'pump-room' (if we may call it so) designed by Alexander Nasmyth, surmounted by an open pillared canopy, in which was placed a statue of Hygeia. This fell afterwards into disrepair, but was restored in 1887 by the late Mr William Nelson, and the sadly damaged statue replaced by a new one of marble from the chisel of D. W. Stevenson. Farther up the stream than Dean Bridge was a narrow, inconvenient structure by which the old Queensferry Road crossed the river. This was, however, removed in 1836, and replaced by the present handsome Belford Bridge, which has an arch of 68 feet span, 52 feet above the stream. The roadway is 38 feet wide. There are several other bridges, but none of them calls for particular notice.

Railway Stations and Railways.—The present Waverley Station of the North British Railway Company occupies the entire areas of the original stations of the North British and Edinburgh and Glasgow Railway Companies, about half the site of the terminus of the old Edinburgh, Perth, and Dundee railway, and the whole of that of the old vegetable market. It was mainly brought into its present shape in 1869-73, when the greater part of it was covered by a glazed roof in narrow cross ridges, supported on an iron framework. The station was then thought to have enough spare ground within its own limits to meet all expansion of traffic for many years to come, but the opening of the Suburban line in 1884 and of the Forth Bridge in 1890 rendered fresh extension necessary, and new works were begun in 1892 to provide additional accommodation, by the construction of two new tunnels through the Mound and on to Haymarket, and the inclusion of part of the East Princes Street Gardens. This entailed an almost entire reconstruction of the station, for which a large hotel was built at the corner of the North Bridge and Princes Street. Haymarket Station accommodates the north-western part of the city. For the E, NE, and N there are stations at Easter Road, Leith Walk, and Bonnington; and for the SW, S, and SE on the Suburban line (which is a circular route) at Haymarket, Gorgie, Craiglockhart, Morningside Road, Blackford Hill, Newington, Duddingston, Piershill, and Abbeyhill. The old Edinburgh and Dalkeith Railway (now included in this system) starts at St Leonards, and joins the Suburban line near Duddingston. The passenger carriages on it were drawn by horses for some time after locomotive engines were used on other railways, and it hence got the name of the 'Innocent Railway.' It is now used only for the conveyance of coal. The original terminus of the Caledonian Railway Company was on the W side of Lothian Road, where the goods station now is, and

ceased to be used in 1869, when a new passenger station was erected on a site to the N, at the S corner of the west end of Princes Street. This structure, which was of a very makeshift nature, was removed in 1892-93, and replaced by the present one, which is much more worthy of the company and the situation. Designed in the Renaissance style by Messrs Kinnear and Peddie, it is a handsome building of two storeys, with frontages of 75 feet to Princes Street, 175 to Rutland Street, and 450 to Lothian Road. This portion—the stonework of which is all of red sandstone from Corsehill and Corncockle quarries, Dumfriesshire—is so constructed as to allow a hotel to be built over it at any future time. The whole covered area is about 18,000 square yards, and is 850 feet long with 190 feet of average width. The framework of the roof, which is of mild steel, is a wide form of ridge and valley, and is carried on steel girders that have a clear span from wall to wall. The main line and branches provide accommodation for the W and N of the city by stations at Merchiston, Murrayfield, Craighleith, and Granton Road.

The Tramways.—A system of tramways for the principal thoroughfares of the city and its environs was authorised in 1871, and now comprises lines from the General Post-Office to Leith, Newhaven, and Trinity; to Haymarket and Coltbridge; by Waterloo Place, Regent Road, and London Road, to Portobello; by North Bridge, South Bridge, Nicolson Street, and Clerk Street, to Newington and Powburn; by Princes Street, Lothian Road, and Earl Grey Street, to Morningside, and thence eastward by Churchhill and Grango Road, to junction with the Newington line at Minto Street; by Princes Street, Lothian Road, Earl Grey Street, and Gilmore Place, to Merchiston; and from the Tron Church by High Street, George IV. Bridge, Forrest Road, and Lauriston, to Merchiston. All these lines are at present worked by horse traction, though permission has been obtained to employ mechanical power under certain conditions; but other two lines (dating the first from 1885 and the second from 1890), on the north of the city, where the gradients are very steep, have from the first been worked by endless cables. The one extends from Princes Street northward by Hanover Street, Dundas Street, and Pitt Street, to the N end of Inverleith Row; the other from Princes Street by Frederick Street, Howe Street, and Circus Place, to Comely Bank.

Clubs and Hotels.—The Conservative Club in Princes Street, erected in 1882-84 at a cost of £32,000 (exclusive of site, &c.), after designs by Dr Rowand Anderson, is one of the best buildings in Edinburgh. The front is a plain but dignified example of the Italian Renaissance, and has a height of 76 feet from pavement to cornice. The masonry of the street floor (the first of seven, of which two are in the roof) is rusticated, all above is ashlar, and the whole surmounted by a carved frieze and cornice. Some of the windows have pediments and others cornices, while all have architraves. Two of those on the smoking-room floor, and all those on the dining-room floor, are joined by a balcony. A large oriel projection extends as high as the third floor. The Liberal Club, close by, was removed to its present home in 1890, the buildings—formerly used as a hotel—being altered and refitted for club purposes. The New Club, in Princes Street, a little W of Hanover Street, was built, and is maintained for their own exclusive use, by an association of noblemen and gentlemen, limited to 660 in number, and elected by ballot. It is a spacious edifice, after designs by W. Burn, with Tuscan doorway, projecting basement windows, stone balcony on curved trusses, and surmounting balustrade. It was considerably enlarged about 1865. The University Club, in Princes Street, between Castle Street and Charlotte Street, erected in 1866-67, after designs by Peddie & Kinnear, at a cost of nearly £14,000, is in the Palladian style, with elegant Grecian details; and, has a handsome interior, with accommodation for 650 members. The United Service Club in Queen Street, and the Northern Club in George Street, as well as the many large and handsome hotels in Princes Street

and elsewhere, do not call for particular notice. One of the hotels in Princes Street has, since it was built in 1876, had part of the basement set apart as a small arcade, 100 feet long by 30 wide.

Theatres, &c.—The old Theatre Royal, in Shakespeare Square, at the E corner of Princes Street and North Bridge, was built in 1769 at a cost of about £5000, and had flanks and rear as plain as those of a barn, but the front to the N had a piazza-porch and some sculptures. It was demolished in 1860-61 to make room for the new Post-Office. The Adelphi Theatre stood at the corner of Broughton Street and Little King Street, where both these thoroughfares join the head of Leith Walk. It was used chiefly in summer while the Royal Theatre was shut, had no kind of architectural ornamentation, and was burned in 1853. The Queen's Theatre and Opera House, which occupied the site of the Adelphi, was erected in 1856, showed little exterior ornament, and was burned in 1865. The new Theatre Royal occupies the same site, and was erected, after designs by David Macgibbon, immediately after the destruction of the Queen's Theatre; it has an elevation to Broughton Street of an Italian tetrastyle portico, decorated pilasters, arched windows, and a frieze; and was designed to have, in niches of that elevation, allegorical statues of Tragedy, Comedy, Music, and Dancing. The interior was destroyed by fire in 1875, and again in 1884. Restored thereafter, it has now accommodation for 2000 persons. The Lyceum Theatre, at the corner of Grindlay Street and Cornwall Street, is a plain building, erected in 1883, and has accommodation for 3000 persons. The old Southminster Theatre, which was on the W side of Nicolson Street, near Nicolson Square, was burnt in 1875, and replaced by a large building, used chiefly as a circus; but this has, in its turn, given place to a large music hall, with accommodation for 3000 persons, erected in 1891-92 at a cost of £25,000, after designs by Mr F. Matcham. This, the Empire Palace of Varieties, makes (from its position behind other buildings) little external show, but is magnificently, as well as conveniently, fitted up inside, the decorations, which are very elaborate, being after Indian types. Of the roof, the chief feature is an octagon-shaped dome of iron and glass mounted on wheels, so that it can be removed when the weather is fine, and the audience permitted to enjoy cool fresh air on a summer evening. The stage, which is 75 feet wide and 40 deep, has a fire-proof curtain, the stairs are fire-proof, and there are hydrants innumerable all over the building. The whole place is heated by hot-water pipes, and lit by electricity. The opening up of back entrances from the Potterrow unfortunately necessitated the removal of the small but interesting building erected, in 1673, by the incorporation of tailors of Easter Portsburgh, and used as the court-house of that extinct burgh. The Albert Hall, in Shandwick Place, built in 1876 in connection with a scheme for an Institute of the Fine Arts, is now used for occasional entertainments.

Libraries.—The *Advocates' Library*, founded by Sir George Mackenzie in 1680, originally occupied a flat in a close at the SE corner of Parliament Square, and had a narrow escape from destruction during the great fire of 1700. It is now housed in rooms below and to the W of Parliament Hall, and has various extensions towards George IV. Bridge, erected from time to time as necessity has demanded. Some of the rooms contain portraits and busts of various noteworthy legal luminaries. Supported from the private funds of the Faculty of Advocates, it is always accessible to visitors and literary workers, and has been since 1709 one of the five libraries (the only one now in Scotland) entitled to receive a copy of every book published in Great Britain. It contains nearly 300,000 printed volumes, besides large and important collections of MSS. and a varied collection of literary curiosities. Of these, there may be mentioned a manuscript Bible of St Jerome's translation, believed to have been written in the eleventh century, and known to have been used as the conventual copy in the Abbey of Dunfermline; a copy, in two volumes, of the first

printed Bible by Faust and Gutenberg; the Gospels, in the Tamil language, written upon dried leaves; five parchment copies, in MS., of the National Covenant of 1638, with the actual signatures of Rothes, Montrose, Loudon, and others; letters of Mary Queen of Scots; the Wodrow manuscripts; an interesting collection of Celtic MSS.; the first stereotype plates; the original manuscript of *Waverley*, old copies of the classics, etc. Among the chief librarians have been Thomas Ruddiman, David Hume, Adam Ferguson, Dr Irving, and Samuel Halket.

The *Signet Library*, adjoining Parliament House on the N, presents uniform elevations, in the Grecian style, of two storeys, to Parliament Square and County Square. It has a lower apartment, 170 feet long, 40 wide, and 22 high, with two rows of Corinthian pillars and open arches dividing it into unequal sections; and an upper hall of magnificent character, 132 feet long and 40 wide, with a richly-panelled arched ceiling, supported by 24 Corinthian pillars and 36 pilasters. The two halls are connected by a fine staircase, adorned with busts and portraits of eminent lawyers. At one time the property of the Faculty of Advocates, the building was by them sold to the Society of Writers to the Signet about the beginning of the 19th century. The designs on the dome of the upper hall were executed by Thomas Stothard, R.A., in 1822. 'In the centre of the frieze opposite the entrance are represented Apollo and the Muses. Facing them, in three compartments, are portraits of orators, poets, historians, and philosophers, placed as follows:—Immediately opposite the figure of Apollo is that of Demosthenes, on whose right is Cicero, and on his left Herodotus and Livy. To the left of these are historians and philosophers, the former being represented by Hume, Robertson, and Gibbon, and the latter by Sir Isaac Newton, Lord Bacon, Napier of Merchiston, and Adam Smith. In the group which contains the poets, Homer occupies the centre, on his right are Shakespeare and Burns, and on his left Milton and Virgil.' The west window was, in commemoration of the jubilee of Queen Victoria, filled with stained glass bearing the coats of arms of various keepers and deputy-keepers of the Signet. The library (begun in 1778), which is kept up by the Society of Writers to the Signet, and is liberally accessible to visitors, contains about 70,000 volumes, exclusive of pamphlets and tracts. It is peculiarly rich in works on topography, antiquities, biography, and British and Irish history.

The *Library of the Solicitors before the Supreme Courts* is in a large and handsome building to the S of the Parliament House, from which it is entered by a bridge connecting it with the end of the corridor between the Outer and Inner Houses. Generally Scottish baronial in style, it was erected in 1838-91, after designs by Mr J. B. Dunn, at a cost of £30,000 including the site. The S front, to the Cowgate, is 150 feet high, and the lower part is used for dwelling-houses, entering from that street. The upper part shows handsome corbelled oriel windows, with parapeted roof and picturesquely grouped chimneys. The library portion is occupied by the Entrance Hall, Library, Reading Room, Society's Hall, etc. The windows in the entrance hall contain medallion portraits of Scott, Brougham, Cockburn, Jeffrey, Erskine, Stair, Sir William Hamilton, and Inglis; those in the library, similar likenesses of Nisbet of Dirleton, Bankton, Sir James W. Moncreiff, Lords Fraser and Kames, Baron Hume, Lord Murray, Thomas Thomson, Boyle, Sir C. Mackenzie, C. T. Bell, and Forbes of Culloden. In a large window in the library, figures of Justice, Peace, and Fidelity illustrate the Society's motto, *Pro jure, puce et fiducia*. The library contains about 16,000 volumes, mostly legal, but there is room for about 70,000.

The *Public Library*, in George IV. Bridge, was built in 1887-90 from designs by Mr Washington Browne, at a cost, inclusive of site, of £50,000, that sum having been gifted to the city by Mr Carnegie of Pittsburg on condition that the citizens should adopt the Free Libraries Act. It stands on the site of a very quaint

and characteristic specimen of old Edinburgh architecture, known as the Hope House, built in 1616. The style is that of the French Renaissance of the time of Francis I., and sculptured ornament has been freely used. The front to George IV. Bridge has two storeys with attics, but that to the Cowgate is three storeys more. The principal part of the front, which is recessed, has a circular-headed doorway, with a window of similar design on either side. Over these are three elaborately sculptured panels, and above these again three oblong mullioned windows lighting the reference library, the whole being surmounted by a cornice and balustrade. On the main floor is the lending library, entered from George IV. Bridge; the one below this is occupied by the reading-room, the next lower by work-rooms, and the basement by the heating and electric-lighting apparatus. There is also a juvenile library on the same floor as the newsroom. The books number about 75,000 volumes, but the collection is rapidly increasing. In a niche in the staircase is a bust of Mr Carnegie by C. M'Brice, presented by the Corporation in recognition of Mr Carnegie's generosity to Edinburgh. Other libraries are noticed under the different institutions with which they are connected.

Museums and Picture Galleries.—The Industrial Museum, or Museum of Science and Art, on the S side of Chambers Street, occupies the site of Argyle Square and the old Trades' Maiden Hospital. The foundation stone was laid by the late Prince Consort in October 1861, and between that time and 1866 about one-third of the whole building was finished and opened. The second portion, to the W of the main entrance, was added in 1871-74, and the design was completed when the W wing was erected in 1885-89. Designed by Captain Fowke, R.E., it is externally a handsome block in the style of the Venetian Renaissance, and is 400 feet long, 200 wide, and 90 high. The interior structure is after the scheme invented by Sir Joseph Paxton for, and so successfully employed by him in, the Great Exhibition building of 1851. Over the main entrance, in the centre of the front, are three colossal groups, executed by Mr John Rhind, and placed in position in 1889, representing Science, Natural History, and Applied Art; while in panels in the spandrels are relief heads of the Queen, the Prince Consort, James Watt, Darwin, Michael Angelo, and Sir Isaac Newton. The E wing and adjoining rooms contain the magnificent collections of Natural History specimens formerly in the University, as well as the many specimens added since 1866 at the national expense. In the W wing the upper galleries are occupied by the geological collections formed in the course of the Geological Survey of Scotland, and a series of the maps executed by the surveyors. In those of the floor beneath are the magnificent Indian and Persian collections, and in part of the ground floor is a library containing the publications of the Patent Office, a set of the Ordnance Survey maps, and over 7000 volumes on technical and scientific subjects. In its industrial department the museum has one of the largest collections of raw products anywhere in the world, together with illustrations of nearly all the principal manufactures of Great Britain, and many of those of foreign countries. There are also sections showing various processes connected with the construction and materials of buildings, mining, metallurgy, ceramic art, vitreous manufactures, decorative art, textile manufactures, photography, materia medica, chemistry, food, and education. Admission is free on Wednesdays, Fridays, and Saturdays, but 6d. is charged on Mondays, Tuesdays, and Thursdays.

The *National Gallery*, on the southern part of the Mound, was erected in 1850-53, at a cost of £40,000, after designs by W. H. Playfair. Intended to provide suitable accommodation for the annual exhibition of the Royal Scottish Academy,* for a Scottish National Gallery

* The Royal Scottish Academy, the body officially representative of Art in Scotland, sprang from a Society of Scottish Artists formed in 1826, and its proceedings were for half a century governed by a royal charter granted in 1835. The original charter having through lapse of time become somewhat unsuited to the necessities of the age, a new one was procured in 1889. Under

of Painting and Sculpture, and for a section of the School of Design, the buildings are Ionic in style, with their greatest length from N to S, and with a broad transept in the centre. The N and S fronts, which are exactly alike, show a double portico and centre, each wing having four columns and a pediment, and the centre two columns in antes and a balustrade. The transept has a hexastyle portico with pediment, while the other parts of the E and W walls are somewhat bare, relieved only by pilasters and a balustraded parapet. The eastern division of the building, occupied by the Royal Scottish Academy, is for three months every year used for the exhibition of paintings held by that body. The similar western portion is devoted to the exhibition of the permanent collection of works of art in the National Gallery. This includes works, or copies of works, by Titian, Tintoretto, Guido, Paul Veronese, Greuze, Hobbema, Spagnoletto, Vanduyke, Rembrandt, Velasquez, Murillo, and other continental masters; portraits by Sir Thomas Lawrence, Sir Henry Raeburn, Sir J. Watson Gordon, and Graham Gilbert; works of Sir George Harvey, Sir Noel Paton, Horatio Macculloch, Dyce, Eddy, Sir William Fettes Douglas, John Phillip, Roberts, Faed, Herdman, Paul Chalmers, and other modern artists; and some very fine specimens of water-colour drawings. Admission is free on Mondays, Tuesdays, Wednesdays, and Saturdays, but 6d. is charged on Thursdays and Fridays.

The *Royal Institution*, to the N of the National Gallery, on the N end of the Mound, was founded in 1823, extended in 1832, and completed in 1836, at a cost of about £40,000. Designed in a most masterly manner by W. H. Playfair, it is in pure Doric style of the time of Pericles, with fluted columns along all the face of each of its four sides, resting on flights of steps, and surmounted by a uniform entablature. The N front, containing the principal entrance, has a fine portico with three lines of columns, the first and second having each eight and the third two, while a massive pediment, with richly carved tympanum, surmounts the entablature. The S front corresponds in form and ornament, but has only two lines of columns, the first with eight and the second with four in antes. The E and W fronts are precisely alike, with a distyle projection at each end, and seventeen columns between. On the top of the N front is a colossal statue of Queen Victoria, executed in 1848 by Sir John Steell, and showing Her Majesty in robes of state, with a mural crown, and holding orb and sceptre. The top of each of the distyle projections bears two sphinxes. The edifice contains the apartments of the Board of Trustees for the Encouragement of Manufactures and of the Royal Society of Edinburgh, a gallery of statuary, and the class-rooms of the Life School of the Royal Academy and of the School of Design, which is in connection with the Department of Science and Art, and is carried on by two masters and two mistresses. The gallery of statuary contains casts of the Elgin Marbles, of all the celebrated ancient statues, of the Ghiberti gates at Florence, and of a series of antique Greek and Roman busts originally collected at Rome. It is open free on Saturdays, and at a charge of 6d. on Wednesdays and Fridays.

The building containing the *National Portrait Gallery* and the *Antiquarian Museum*, at the E end of Queen Street, was erected in 1885-90, after designs by Dr Rowand Anderson, on a site provided by Government and the Board of Manufactures, and at the cost of Mr J. R. Findlay of the *Scotsman*, whose munificent gifts for the purpose, amounting in all to £50,000, are commemorated in an inscription on a panel near the central doorway.

the members of the Academy are arranged in three orders—Academicians, Associates, and Honorary Members. The first rank consists of thirty Academicians, who must be settled and resident in Scotland, and who forfeit part of their privileges if they are absent more than three years from the country. The number of Associates and Honorary Members is practically unlimited. An exhibition of paintings is held every year, and instruction is given to students in different branches of art. There are funds amounting to about £26,000, from the income of which pensions may be granted to members or their widows, or aid provided for them in case of necessity.

The style is Italian Gothic of the early 14th century, with English Gothic details. The main entrance, in the centre of the building, is by a deeply-moulded pointed doorway, with the mouldings carried up and finished as pinnacles supporting a gablet carried to the eaves. On the first floor level is a quadruple window with tracery. The accompanying allegorical sculptures and ornaments, also the gift of Mr Findlay, are very handsome and elaborate. A quatrefoil over the door bears the arms of the Board of Manufactures, who are the custodiers of the Gallery, and the cusped panels of the spandrels have figures of War and Peace. Of the three panels above, under the sill of the large window, the centre one has figures of Painting, Sculpture, Architecture, Poetry, and Music, while that on the right has the Sciences, and that on the left the Ruder Arts—the latter being represented by workers of the flint, bronze, and iron ages. In the large panel under the main arch of the gable over the window is a central figure of Scotland, supported on the right by figures symbolical of Industry, and on the left by others representing Religion. The panel in the centre above bears the arms of Scotland before the Union, and on the apex of the gable is a statue of History. In the niches at the sides of the doorway are statues of Malcolm Ceanmor and Queen Margaret by Birnie Rhind, by whom also the other figures mentioned above were designed and modelled. On each side of the doorway are four large pointed windows, and over them a line of smaller windows arranged in pairs, with pinnacled niches between for statues. At each corner, corbelled out from about half-way up the first floor, is an octagonal tower, with niches on each face, and surmounted by an open balustrade and spire, of which the former is carried all round the building. Two of the many niches—all to be ultimately filled by statues of those eminent in connection with Scottish history—have been already filled by the figures of Malcolm III. and his queen, mentioned above, while others are occupied by statues of Queen Mary, with Maitland of Lethington and Bishop Lesley beside her, and of James VI. The part of the building to the W of the main entrance contains the collections of the Scottish National Portrait Gallery, that to the E those of the Antiquarian Museum, while accommodation is also found for the rooms of the Royal Scottish Geographical Society. The first contains many admirable and interesting pictures and engravings, which, however, need not be here referred to in detail. The treasures of the Antiquarian Museum are under the control of the Society of Antiquaries of Scotland (charter dated 1783), by which the collections were first begun in 1780. They became national property by the gift of the Society in 1851. Admission to the whole building is free on Tuesdays, Wednesdays, and Saturdays, and the Portrait Gallery is also free on Mondays, but 6d. is charged on Thursdays and Fridays for both.

The Botanic Gardens and Arboretum.—The Royal Botanic Garden was founded by Sir Andrew Balfour and Sir Robert Sibbald in 1670, and was used for the purpose of teaching by the professor of botany in the University from 1676. Its first site was in the valley to the rear of the Post Office, in a district long after known as the Physic Gardens; but in 1763 it was transferred to Leith Walk, and thence, in 1824, to its present position on the W side of Inverleith Row. It was enlarged to the extent of 10 acres about 1867, by the inclusion of the contiguous Experimental Garden, formed in 1824, and belonging to a society instituted in 1809 for the improvement of the cultivation of flowers, fruits, and culinary vegetables. It contains a superintendent's house, a lecture room, a museum, extensive hot-houses, a fine palm-house, beds of plants arranged according to the natural orders, an extensive Pinetum, collections of native and medical plants, a winter garden, and a magnificent rock-garden. In 1878-81 the adjoining mansion-house and policy of Inverleith were acquired by government and the city corporation, and the grounds, extending to about 30 acres, set apart for the purposes of an arboretum, which has not, however, made the progress it

should have done if, as it was hoped, Edinburgh is to become a great centre of forestry instruction. The professor of botany at the University is Regius Keeper of both Botanic Garden and Arboretum. The lecture-room is supplemented by a class museum and a large herbarium. The hot-houses were founded in 1835, and gradually extended to a great range, comprising now a large octagon in the centre, and two lateral wings each with a central octagonal compartment—the large central octagon being added so late as 1872. The chief palm-house is 96 feet long, 57 wide, and 70 high; and contains magnificent specimens of both herbaceous and ligneous endogens. The Rock-Garden is one of the finest in Europe, and commands, from its topmost terrace, a very striking view of the city. The whole extent of ground is about 60 acres.

Public Parks.—The great public park of Edinburgh is the Queen's Park, including Arthur's Seat, which is separately noticed. Of the others the Northern, or *Inverleith Public Park*, is a flat open space of some 60 acres, immediately to the W of the Botanic Gardens and Arboretum. It was acquired by the town in 1889 at a cost of £33,500, and after being laid out was opened to the public in 1891. Provision is made for games of different kinds, and a ride is to be formed along part of the boundary. The handsome E and W gateways, the band-stand, and the sun-dial in the SE corner were the gifts of patriotic citizens.

The *East and West Princes Street Gardens* occupy the hollow along the Side of Princes Street, and are divided by the Mound. The former portion was first laid out and planted in 1830, under the direction of Dr Patrick Neill, and was rearranged in 1849-50, when its beauty was unfortunately broken in upon by the extension of the Edinburgh and Glasgow Railway. Still further injury was caused by the extension of the Waverley Station to the W in 1892. The high bank on the S is wooded, but on the N a terrace about 100 feet broad, on the same level as Princes Street, extends all along the side, and is bounded by a handsome parapet wall with pedestals at intervals. A walk about 10 feet wide extends along the middle of the face of the slope below, and is reached, from the ends of the terrace, by two flights of steps, each 15 feet wide at the top, and expanding with circular wing walls to nearly 30 feet toward the bottom. The space between the terrace and the walk is laid out with grass, in which are open flower beds. The West Gardens are laid out much in the same way, but contain, along the edge of Princes Street and elsewhere, more trees and shrubs, while the slope on the S up to the Castle ridge is much higher. Reclaimed from the marshy bottom of the Nor' Loch, they were formed under powers of a special statute in 1816-20. Originally town property, they were for a time alienated and attached to the feus in Princes Street, from the owners of which an unsuccessful attempt to recover them for public use was made in 1852. After this they became, however, partially available to the citizens at certain hours on particular days, and in 1876 were reacquired by the Council and thrown completely open. They were at the same time greatly improved. The large and elaborate fountain near the W end of the gardens, designed and executed by Durenne of Paris, was presented to the city by Mr Ross of Rockville in 1869, and is known from its donor as the Ross Fountain. High up on the S slope, near the wall of the Castle Esplanade, is a curious stone bearing an incised cross and a runic inscription, recording that it was erected in memory of a Norseman of the name of Hjalm. It was brought from Sweden many years ago by Sir Alexander Seton of Preston.

The *Cation Hill*, all formerly a public common, was so seriously encroached on by the formation of the Regent and London Roads, as well as by the construction of the Regent and Royal Terraces and the private gardens connected with them, that for long little more than the mere crown remained public property—a state of matters which in 1893 it was proposed to rectify by the Town Council becoming custodiers of the large Regent Gardens to the E of the present public part of the hill.

The *Meadows* are about three-quarters of a mile long, and have a mean width of about 300 yards. They were anciently covered by a lake called the South or Borough Loch, which by partial drainage in the seventeenth century became an unhealthy marsh. In 1722 the eastern part of the ground was let to Mr Thomas Hope under obligation to drain and enclose it—it is said that Robert Burns' father was one of the workmen employed; and this was so effectually done that, as Hope Park, it became the favourite promenade for the fashionable of those days. A considerable marsh, however, still remained; and not till 1842 was the whole converted into 'dry green sward.' Fresh drainage and levelling-up operations were carried out in 1858-60 and in 1870-75. The whole now presents a fine level expanse of grass bordered by wood. Near the W end are trees planted by the Queen, the Prince and Princess of Wales, and the late Duke of Clarence, to commemorate their visits to the Exhibition of 1886. The sun-dial beside them is also a memorial of the Exhibition. The pillars at the W end were presented in 1886 by the Master Masons of Edinburgh, and illustrate the different building stones of the district. The pillars at the E end were presented in 1881 by Messrs Nelson, the publishers, as a token of gratitude for the use of part of the ground after the great fire that destroyed their works in 1878. The Lauriston entrance, opposite the S end of Forrest Road, was formed in 1850. To the NE of the Meadows is the hall of the Royal Archers, the Queen's Body Guard for Scotland, for whom a portion of the East Meadows is fenced off as an archery ground. South-west of the Meadows is Bruntfield Links, all that now remains open of the once extensive common of the Boroughmuir. Long the happy hunting-ground of golfers, their glory has in this respect departed since the opening of the public course on Blackford Hill, though a 'driving-putter' game is still allowed.

The *Blackford and Braid Hills*, on the extreme S side of the city, became public property in 1884 and 1889 respectively, at a cost of about £20,000. The higher grounds of both command charming and extensive views not only of the city itself, but of the surrounding country, and the open space provided (107 acres at Blackford and 134 at Braid) affords ample scope for the enjoyment of the citizens. The large ornamental gateway at the NE entrance of Blackford Hill was erected in honour of Sir George Harrison, who was Lord Provost when the hill was purchased. On the Braids an extensive and excellent golf course was formed to compensate the golfers for their relinquishment of the right of servitude for the game over Bruntfield Links. The two parks are separated by the deep dell of the Burn of Braid and some intervening fields, but in 1891 connection through these was established by means of bridges and footpaths. The Harrison Public Park, between Dalry and Merchiston, does not call for particular notice.

Cemeteries.—The Cemetery of Dean was formed in 1845, on the grounds of Dean House, a curious old mansion built in 1614, and long the family residence of the Nisbets of Dean, and afterwards of Mr John Learmonth, who built Dean Bridge. Tastefully laid out with terraced walks on the slopes leading down to the river, and retaining many of the old trees, it was considerably extended in 1871-72. It contains a number of beautiful monuments, and is the last resting-place of many distinguished men, among whom may be mentioned Lords Cockburn, Jeffrey, Murray, and Rutherford; Professors Wilson, Aytoun, Edward Forbes, and Goodsir; Sir William Allan, David Scott, Paul Chalmers, Sam Bough, William Brodie, W. H. Playfair, George Combe, and Russel of the *Scotsman*. Near the centre of the ground is a tall obelisk to the memory of soldiers of the Cameron Highlanders; at the north-east gate is an imposing memorial to the Nasmyth family; and a cross marks the spot where are interred the remains of Lieutenant Irving, one of the officers of the Franklin Expedition, which were found and sent home more than thirty years after his death. Warriston Cemetery, to the NE of the Botanic Gardens, was formed in 1843-44, and laid out with much taste. It commands

from some of its walks one of the finest of the northern views of the city and its environs, and has an extensive range of vaults, above which is a balustraded terrace with a small mortuary chapel. Among a number of beautiful monuments, those of Alexander Smith, the poet, and Sir James Y. Simpson, the celebrated physician, may be noted. High and Low Calton Cemeteries, at Waterloo Place and Regent Road, contain the graves of David Hume, Sir David Allan, Constable, Blackwood, Professor George Wilson, Dr Candlish, Lord Gifford, Sir Robert Christison, and Dr John Brown, the author of *Rab and his Friends*. In the High Cemetery, which was gifted to his vassals by Lord Balmerino, there is also an obelisk, erected in 1844, in memory of some of those who were sent into exile in 1794 for their connection with the revolutionary movements of that period. The new or Low Cemetery was formed to compensate for the part of the old burial ground removed when the line of Princes Street was extended eastward by Waterloo Place. Grange Cemetery, in the district of the same name, was laid out shortly after the one at Warriston, and contains the graves of Dr Chalmers, Sheriff Speirs, Sir Andrew Agnew, Sir Thomas Dick Lauder, the second Lord Dunfermline, Hugh Miller, Dr Guthrie, Dr Duff, and Dr Robert Lee. The other cemeteries do not call for particular notice, and the various churchyards are noticed under the churches with which they are connected.

Monuments.—On the summit of the Calton Hill pre-eminence is given to one of the ugliest monuments in Edinburgh—the curious butter-churn structure by which public taste saw fit to perpetuate the memory of Lord Nelson. Founded soon after Trafalgar, but not completed till 1815, it comprises an octagonal battlemented basement, containing several rooms, surmounted by a circular embattled tower of four storeys, over which is a similar but narrower turret of one storey. Rising to the height of 102 feet from the ground, and 450 feet above sea-level, it commands from the parapets of its tower and turret an extensive and magnificent view. The entrance is surmounted by an inscription tablet, the crest of Nelson, and sculpture in bas-relief representing the stern of the *San Josef*; the interior contains an autograph of Nelson, and various curiosities connected with his name and exploits. On the summit is a time-ball, with a diameter of $5\frac{1}{2}$ feet, erected in 1852. It is raised by machinery every day a little before one o'clock, and falls exactly at the hour by a drop which acts in connection with an electric-clock in the adjoining Royal Observatory, a wire attached conveying, at the same time, an electric current to the time-gun in the Castle. The ball is seen all round, and by its fall ship-masters at Leith and Granton are able to regulate their chronometers. The National Monument, a little to the NE of Nelson's monument, was projected in 1816 to commemorate the Scottish heroes—naval and military—who fell in the wars with Napoleon. Designed by W. H. Playfair, in imitation of the Parthenon, and promising to reflect the highest credit on his genius, it was founded in 1822 during George IV.'s visit to Edinburgh, and was begun in 1824; but, in consequence of failure of funds, operations ceased after the erection of twelve columns, with basement and architrave. The pillars, which cost upwards of £1000 each, are large, fluted, and beautifully proportioned; and the whole, looking like the fragment of some great ruin, has probably as excellent an effect as the finished structure would have had.

Burns' Monument, on the S side of the Calton Hill, in Regent Road, crowning a rock 10 feet higher than the level of the street, was erected in 1830, after a design by Thomas Hamilton. It is a circular Corinthian cyclostyle of twelve columns, raised on a quadrangular base, and surmounted by a cupola in imitation of the monument of Lysicrates at Athens, and contains a bust of Burns by W. Brodie, and a number of interesting relics of the poet. A marble statue of Burns, Flaxman's last work, which stood formerly in the monument, is now in the National Portrait Gallery. A monument to Dugald Stewart, the distinguished Scottish philosopher, on the

W face of the Hill, overlooking Waterloo Place, was erected in 1831, after a design by W. H. Playfair. It is in the style of a Grecian temple, partly copied from the Choragic monument of Lysicrates; and has a high basement, an open interior, a beautiful funereal urn, a rich entablature, and a cupolar canopy. Professor Playfair's monument, higher up, at the SE corner of the New Observatory, was also designed by W. H. Playfair, who was the professor's nephew; it is a solid Doric structure of small dimensions, but great purity of style.

On a pedestal of Peterhead granite, in front of the Register House, is a bronze equestrian statue of the Duke of Wellington, by Sir John Steell, inaugurated in 1852, on the anniversary of the battle of Waterloo. The horse is represented as rearing under the curb, as if pulled suddenly up when in full gallop, while the rider sits erect and calm, holding in his left hand the horse's reins and his plumed hat, and seeming, by the gesture of his right hand, and by the expression of his countenance, to be issuing some command connected with the evolutions of a battle. The weight of the entire figure rests on the horse's hind legs and tail; and it demanded great skill to distribute the metal, of which there is about 12 tons, through the parts in such a way as to produce a secure equipoise. The Duke not only sat to the artist for his portrait, but also rode before him, so as to give him exact ideas of his style of horsemanship. The inauguration took place in the midst of a violent thunderstorm, which gave origin to the following epigram:—

“Mid lightning's flash and thunder's echoing peal,
Behold the Iron Duke, in bronze, by Steell!”

The horse and figure are nearly 14 feet high, and the pedestal, which is very plain, thirteen. The cost was £10,000.

The next important monument in the Princes Street line is that of Sir Walter Scott, which stands in the East Princes Street Gardens, opposite St David Street, where it was erected in 1840-44, at a cost of nearly £16,000, after designs by George M. Kemp, a self-taught architect, who, on his travels over Europe studying Gothic architecture, supported himself the while by working as a stone-mason. He was unfortunately drowned in the Canal at Edinburgh before the work was finished. The monument, which has particularly excited the scorn of Mr Ruskin, who styles it ‘a small vulgar Gothic steeple on the ground,’ is a handsome imitation of the finer market crosses of mediæval age. Four great basement arches meet in a centre like those beneath the central tower of a cathedral, and from the piers of these four other arches spring diagonally outwards, and rest on strong octagonal buttressed exterior piers, which are surmounted by turret pinnacles. Elegant pierced flying buttresses ascend from the inner side of the base of these pinnacles, and from the end of a pierced horizontal parapet over the contiguous spandrils, to the middle of the second stage of the monument. A contracting series of galleries, arches, turrets, and pinnacles soars aloft from the summit of the four grand basement arches, stage above stage, till it attains a height of about 200 feet from the ground, and terminates there in a finial. The capitals, mouldings, niches, parapets, crocketings, and other ornaments are in the same style of Decorated Gothic and on the same pattern as those of Melrose Abbey. A stair of 287 steps ascends to within a few feet of the top, whence there is a most magnificent bird's-eye view of the city. In each front of the main basement, above the archivolt and in the parapet, are nine small niches; and in the exterior piers, in the turret-pinnacles above them, and in the prominent parts of the second stage, are many more. Figures of the principal characters in Scott's poems and novels were originally intended to occupy all the niches, and 4 of these were forthcoming at the erection of the monument, 1 more ten years after, 27 statuettes and 16 likenesses of Scottish poets in 1874, 8 medallions in 1876, and 32 statuettes in 1882. Flights of steps from the ground, on all the four sides, converge to a platform beneath the four grand basement arches, on a pedestal in the centre of which is a marble statue, by Steell, of

the great Wizard, representing Sir Walter seated in a characteristic attitude, attended by his dog Maida. Executed in 1846, at a cost of £2000, it was cut from a block of marble weighing upwards of 30 tons, and is well-formed and harmonious; but, though large in itself, it looks almost unduly small when compared with the pillars and arches around. On the capitals of the pillars supporting the vaulted roof are representations of Hogg, Burns, Robert Fergusson, and Allan Ramsay on the W front; George Buchanan, Sir David Lindsay, Tannahill, and Lord Byron on the S front; Smollett, James Beattie, Thomson, and John Home on the E front; Queen Mary, King James I., King James V., and Drummond of Hawthornden on the N front. The medallions are ranged in pairs, in spandrels between the panels of the walls, and they represent the heads of John Knox, James V., George Buchanan, James VI., Queen Mary, Charles I., the Regent Moray, and the Marquis of Montrose. For a fee of 2*d.* access is obtained to the galleries and Museum. The latter, instituted in 1879, contains a number of interesting objects associated with the great novelist.

To the E of the Scott monument is a bronze statue of Dr Livingstone, by Mrs D. O. Hill, erected in 1876, while along the terrace to the W is one of Adam Black, the publisher, also in bronze, by J. Hutchison, erected in 1877. Still farther W, at the corner next the Royal Institution, is one of Professor Wilson, by Steell, erected in 1865. In the West Princes Street Gardens, at the NE corner, is a marble figure of Allan Ramsay, also by Steell, and erected in 1865 by Lord Murray, who was related to the poet. It rests on a pedestal, on which are medallions of Lord Murray (N), of General Ramsay (Allan's grandson), of his wife, and of his daughters, Lady Campbell and Mrs Malcolm. To the W is a statue, in bronze, by W. Brodie, of Sir James Simpson, seated, in his academic robes. It was erected in 1877. Near the W end of the Gardens is a large Celtic Cross, designed by Dr Rowand Anderson and erected in 1879, in memory of Dean Ramsay, the well-known author of *Reminiscences of Scottish Life and Character*, who was incumbent of the adjoining Episcopal Church of St John.

On the George Street line there is, within the recess in front of the Royal Bank, a bronze statue (by Campbell, 1835) of Sir John Hope, afterwards fourth Earl of Hope-toun, who succeeded to the command of the British army after the death of Sir John Moore at Corunna. It represents the General in Roman costume leaning on a charger, and has inscriptions commemorative of his military achievements. In the centre of St Andrew Square is a Doric column, modelled after that of Trajan at Rome, in memory of Henry Dundas, first Viscount Melville. It was erected in 1821-28 'by the voluntary contributions of the officers, petty-officers, seamen, and marines of these united kingdoms' (Viscount Melville having held office as treasurer of the navy), at a cost of £8000, after a design by Mr Burn, and consists of a basement and pillar surmounted by a statue 14 feet high, executed by Forrest. The basement is square and massive, and adorned with symbolical devices, while the pillar, which is simply fluted, diminishes in diameter from 12 feet 2 inches at the bottom to 10½ feet at the top, and contains a spiral staircase. The whole reaches a height of 150 feet. Opposite the end of George Street, on the W side of the square, is a bronze group of Alexander and Bucephalus, modelled by Sir John Steell in 1832, but not cast till 1883, when it was commissioned and, in 1884, presented to the city by a number of the artist's friends and admirers. At the intersection of George Street and Hanover Street is a statue of George IV. by Chantry, erected in 1832, and representing the gracious monarch in a very 'first-gentleman-of-Europe' attitude. At the intersection of Frederick Street is a dignified statue of Pitt by the same artist, erected in 1833, and at the intersection of Castle Street one of Dr Chalmers by Steell, erected in 1876.

In the centre of Charlotte Square is one of the finest of the Edinburgh monuments, the dignified and beautiful memorial of the late Prince Consort, which, designed

and partly executed by Steell, was unveiled by the Queen with great ceremonial in 1876, on which occasion the sculptor received the honour of knighthood. The monument, which is a colossal equestrian statue of the Prince in the uniform of a field-marshal, rises from a platform of Peterhead granite 20 feet square, and forms three stages, with a total height of 35 feet. The first stage, some 4 feet high, has at each angle a square projection, surmounted by a group of figures—which represent Labour (Macallum and Stevenson), the Army and Navy (Clark Stanton), Learning and Science (Stevenson), and the Nobility (W. Brodie)—offering tribute of reverence to 'Albert the Good.' The second stage bears quotations from the Prince Consort's public speeches; and the third, which is richly moulded, has bronze bas-reliefs—the larger ones showing the marriage of the Queen and the opening of the Great Exhibition of 1851, and the two lesser ones illustrating the domestic and artistic tastes of the Prince. A group of objects resting on the ledge formed by the projection of the second stage is emblematic of his honours and pursuits.

Next in importance and beauty to the Prince Consort's monument comes the memorial of the fifth Duke of Buccleuch, erected in West Parliament Square in 1887-88. A statue by Boehm, 10½ feet high, surmounts an elaborate hexagonal pedestal, 22 feet high and 10½ feet across, designed by Dr Rowand Anderson in the style of the fifteenth century. The latter is divided into two stages, of which the lower shows a moulded buttress, rising at each angle, surmounted by a buck's head bearing a shield of one of the leading families allied by marriage to the Buccleuchs. Between the buttresses, and surmounted by delicately pierced canopies, are bas-reliefs representing six of the leading incidents in the family history of the Scotts—the death of Sir Walter Scott at Homildon Hill in 1402; the burning by the English of Catslack Tower in Yarrow, along with Lady Buccleuch and all her household, in 1548; the attempted rescue of James V. from the power of Angus in 1526; the burning of Branxholme by the English in 1532; a rising of the Scotts under Buccleuch to pursue English reivers; and the interview between Queen Elizabeth and the 'Laird' when he went to appease her Majesty for the rescue of Kinmont Willie in 1596. The second stage, rising from a Decorated base, has pinnacles with allegorical figures of Fortitude, Liberality, Temperance, Prudence, Charity, and Truth, and on the faces between are canopied reliefs of incidents in the life of the Duke—his reception of Queen Victoria at Dalkeith in 1842, the inception of the Granton Harbour, the anniversary dinner given him by his tenantry in 1877, his installation as Chancellor of Glasgow University, his appearance as a colonel of militia at the head of his regiment, and his coat of arms on a garter plate. The historical panels were executed by Clark Stanton, the allegorical figures by Birnie Rhind, the upper panels by Stuart Burnett, and the other ornaments by D. W. and W. G. Stevenson. The total cost was nearly £7000.

Other monuments are a statue of Sir William Chambers, erected in 1891, in the centre of the street that bears his name (executed by John Rhind, and placed on a pedestal designed by Mr H. J. Blauwe, with panels representing Liberality, Perseverance, and Literature); an equestrian statue of Charles II. (judiciously concealed in Parliament Square), made of lead, and cast in Holland in 1685; a bronze statue of the second Viscount Melville, erected in 1857, at the intersection of Melville Street and Walker Street; a statue of James Watt at the Heriot-Watt College; one of Sir David Brewster in the University Quadrangle; and a pretty little Eleanor cross at the W end of Queen Street, erected in 1868 in memory of Miss Catherine Sinclair. The memorials on the Castle Esplanade have been already noticed; some, of minor importance, do not need special mention, and a few are noticed in connection with the churches.

Surgeons' and Physicians' Halls.—Surgeons' Hall, on the E side of Nicolson Street, was built in 1833, at a cost of £20,000, after a design by W. H. Playfair, succeeding the old Chirurgeons' Hall on the W side of the

Pleasance, in the High School yards. It is a large and splendid edifice, in the Grecian style, presenting to the street a lofty hexastyle Ionic portico, the base in the form of a curtain-wall, the columns fluted and well proportioned, and the frieze and the tympanum adorned with fine carved work. It contains apartments for meetings, tastefully-fitted galleries, and a valuable museum, chiefly of anatomical and pathological subjects. The Royal College of Surgeons, to whom the hall belongs, was incorporated in 1505, and reincorporated in 1778; maintains courses of lectures for students of medicine; and issues diplomas which, together with those of the Royal College of Physicians, are recognised as qualifying for the practice of Medicine.

The Physicians' Hall was, from 1775 till 1845, on the S side of George Street, on the ground now occupied by the Commercial Bank; and was a beautiful structure three storeys high, in pure Grecian style, with a tetrastyle Corinthian portico. The present hall in Queen Street, midway between St David Street and Hanover Street, was built in 1845, after designs by T. Hamilton, and contains a fine hall for meetings and a good museum. It has a Corinthian portico of peculiar character, comprising successively a tetrastyle and distyle with entablatures, and a pediment. The tetrastyle has columns of the rare quasi-Corinthian kind called by some architects the Attic; the ends of the first entablature are surmounted by statues of Esculapius and Hippocrates, from the chisel of A. H. Ritchie, and the apex of the pediment is crowned by a statue of Hygeia. A new library-hall, with a circular ceiling, 27 feet 6 inches high in the centre, divided into panels, ten of which are filled in with glass, was added in 1877. It is in the Italian style, and was designed by Mr David Bryce. The Royal College of Physicians, to whom the hall belongs, was incorporated in 1681; possesses an exclusive but obsolete privilege of practising medicine within certain limits of the city; and is charged with the public duty of preventing the sale of adulterated drugs. It maintains an annual course of six lectures on mental diseases, and indirectly supports the medical schools of the city.

Miscellaneous Public Buildings.—The Assembly Rooms on the S side of George Street, midway between Hanover Street and Frederick Street, were built in 1787 by subscription, and were considerably improved internally in 1871. They have a plain Italian front, with a tetrastyle Doric portico, on a rusticated piazza basement, over which is a more recent projection which accommodates the orchestra. The principal room is 92 feet long, 42 wide, and 40 high. The Music Hall, in the rear of the Assembly Rooms, is accessible by the same entrance, and extends back to Rose Street. It was built in 1843, after a design by Messrs Burn & Bryce, at a cost of more than £10,000, and contains a principal apartment 108 feet long and 91 feet wide, with richly panelled ceiling and shallow central dome, an orchestra large enough for several hundred performers, and a large organ built by Hill of London. It is much used for great public meetings, and has accommodation for 1500 persons. The Masonic Hall, on the S side of George Street, behind the street-line of houses, and entered by a vestibule through the house No. 98, was erected in 1858-59, after a design by David Bryce, and is a spacious well-arranged edifice. The Masonic Hall, on the new side of Blackfriars Street, was built in 1871, and is a substantial structure in the Scottish Baronial style. The Oddfellows' Hall, on the E side of Forrest Road, was built in 1872-73, after designs by J. C. Hay, at a cost of about £5000, and is in the Italian style, with balcony and corner turrets. The Young Men's Christian Association building, on the W side of South St Andrew Street, was erected in 1875, after designs by George Beattie & Son, at a cost of about £18,000, and is a six-storey edifice in the Italian style, containing a hall, a reading-room, a library, and other apartments. The Catholic Young Men's Institute, in St Mary Street, was built in 1869, after designs by Cousin, at a cost of £5000, and is in the old Scottish domestic style. The Inland Revenue Office, on the S side of Waterloo

Place, is a plain Græco-Italian building of four storeys. The Highland and Agricultural Society, for the promotion of the interests of agriculture (instituted in 1784, and incorporated by royal charter in 1787), has its offices in a plain building in George IV. Bridge, nearly opposite the sheriff courthouse. The Volunteer Drill Hall, on part of the site of the old city workhouse, off the W side of Forrest Road, was erected in 1872, and comprises a main hall 135 feet long, 96 wide, and 46 high from the ground to the roof-ridge, with segment circular roof supported on iron ribs and glazed in three stretches. The Militia Depot stands off the E side of Easter Road, adjacent to the Granton branch of the North British Railway. It was erected in 1868, comprises neat ranges of two-storey buildings, for the occupancy of the resident staff, and has commodious enclosed grounds for drill. There are large and handsomely fitted up proprietary baths at Drumsheugh and Thirlstane Road, and a large public swimming-bath on the low ground near the N end of Pitt Street. In Infirmary Street large public swimming and plunge baths were erected by the Town Council in 1886 at a cost of £8000. The public wash-house in South Gray's Close was erected and fitted up in 1892 at a cost of £3800.

The Corn Exchange, on the S side of the Grassmarket, towards the W end, was erected in 1849, after a design by Cousin, at a cost of nearly £20,000, and is a massive though plain structure in the Italian style, well suited to its site and uses. Its façade comprises a main front of three storeys, 98 feet long and 60 feet high, and two small wings recessed from the line of the main front, both of them containing staircases, and the western one rising as a clock-tower one storey higher than the rest of the building. The doorway is adorned with two rustic Doric columns; the windows have ornate mouldings, and are varied in design in all the three storeys. The portion of the edifice equal in height to the façade extends only so far as to contain the vestibule, and the main part for business extends to the rear over a distance of 152 feet. It is constructed like a railway station, with the roof, from which it is lighted, supported by two rows of metal pillars. It is often used for great public meetings. The Stock Exchange, which cost about £17,000, including the price of the site, is a building in the Queen Anne style, at the NW corner of St Andrew Square, and was erected in 1890 after designs by Mr J. M'Lachlan. Over the first floor there is a large panel representing Commerce, while on the belting of the second are four figures representing the quarters of the globe.

One or two public buildings, which no longer exist, but which figure occasionally in the civic annals, may here be noted. The old Weigh-house, which stood on the thoroughfare at the head of the Lawnmarket and the West Bow, was surmounted by a small spire, which combined with those of St Giles' and the Netherbow gateway to give the line of High Street a picturesqueness of appearance greatly superior to what it now possesses. It was demolished by Cromwell in 1650, and the site occupied in 1660 by an ungainly building with a machine for the same purpose called the Butter Tron, to distinguish it from the other weigh-beam in the central part of High Street, which was the Salt Tron. This was held by the Jacobites as a military post in 1745, and was finally demolished in 1822, in the course of the preparations for the public reception of George IV. The Luckenbooths extended eastward between the Lawnmarket and the High Street, from the Old Tolbooth to nearly the City Cross, and were separated from St Giles' Church by a narrow lane. They consisted principally of lofty houses with timber fronts and projecting peaked gables, erected probably about the end of the fifteenth century, with the exception of that farthest to the east. This, which was of considerably more recent date, was remarkable as having been occupied in 1725 and subsequent years by Allan Ramsay's bookselling establishment, and between 1775 and 1815 by the well-known publisher and bookseller Creech, who was twice lord provost of the city. The whole of

the Luckenbooths were demolished in 1817. The lane between them and St Giles' was lined on both sides with shops, of which those on the S side, built against the walls of the church at various dates from 1555 onwards, were called the Krames. A flight of steps leading from the E end of the lane past the church, and known as St Mary's Steps, received its name from a statue of the Virgin that occupied a niche on the W side. Another lane, called the Old Kirk Style, which passed through the middle of the Luckenbooths to the vanished Norman porch in the north-western part of St Giles', was in 1525 the scene of the murder of M'Lellan of Bombie by the lairds of Drumlanrig and Lochinvar. The Black Turnpike, immediately W of the site of the Tron Church, was a large structure of such solidity and stateliness as to be one of the most remarkable features in the line of the High Street. Erected about the beginning of the fifteenth century, it was long believed to have been, as the mansion of the lord provost Sir Simon Preston, the place of imprisonment of Queen Mary in 1567, after the battle of Carbery Hill; but, as noted elsewhere, it is now definitely ascertained that this stood on the opposite side of the street farther to the west. The Black Turnpike was demolished in 1788. Blackfriars' Monastery stood on, or near, the site of the old High School in Blackfriars Wynd, and had large gardens extending to the Cowgate, the Pleasance, and the Potterrow. Founded in 1230 by Alexander II., it was used by the founder so frequently as a residence that it became known as the King's Mansion. It had a large cruciform church, with central tower and lofty spire, which was partially destroyed by fire in 1528, and was totally demolished at the Reformation in 1558, the lands belonging to the Brotherhood being granted by the Crown to aid in the erection and endowment of Trinity Hospital.

Infirmaries, Lunatic Asylum, &c.—The Royal Infirmary, instituted on a small scale in 1729, and incorporated by royal charter in 1736, was first provided with suitable buildings in 1738. Those in Infirmary Street, though extended from time to time, were at length found to be utterly inadequate for modern requirements, and it was decided to have a new Infirmary on a new site. The ground to the W of the Middle Meadow Walk, occupied by, and around, George Watson's Hospital, was chosen for the purpose, and here, between 1870, when the foundation-stone was laid by the Prince of Wales, and 1879, when they were first occupied, the present buildings were erected, the cost being defrayed partly from the capital fund of the institution and largely by a very munificent public subscription. The site, facing on the N the open grounds of George Heriot's Hospital, and on the S the Meadows, is an excellent one. Designed by Bryce in a plain variety of the old Scottish style, the buildings are constructed on the separate pavilion plan, the pavilions, which are three storeys high, being connected by one-storey corridors. The centre of the main front, to Lauriston, is four storeys high, and has a massive square clock-tower with corbelled corner turrets. The pavilions have round towers at the corners similar to those at Holyrood and Falkland Palaces. A nurses' home was added in 1892, in which year also additional ground was acquired to the W, on which new wards were to be built at an estimated cost of £100,000. The number of indoor patients treated annually varies from 6000 to 8000, and the outdoor from 26,000 to 28,000; while the expenditure is about £36,000, of which a half is met by voluntary subscriptions, about a sixth by the interest of investments, and the rest is made up by legacies, donations, and students' fees. Connected with the Infirmary there is a convalescent home at Corstorphine and a Samaritan Society for aiding patients and their families.

Also in Lauriston, farther to the W, are the Chalmers Hospital for the Sick and Hurt, and the Royal Maternity and Simpson Memorial Hospital. The former sprang from a bequest by George Chalmers, a plumber in Edinburgh, of about £27,000, which was allowed to accumulate from his death in 1836 till 1853. The building, which was erected in 1861-63, is a long plain structure, and is under the management of the Faculty of Advocates. The

income is about £1500, and the yearly number of patients is about 300, of whom one-fourth pay for their treatment, the charge being five shillings a day. About 3000 outdoor patients are also attended to every year. The Royal Maternity and Simpson Memorial Hospital is a plain building, erected in 1871 in accordance with the expressed views of Sir James Simpson as to what such an hospital should be, and provides gratuitous medical aid for women, both in the institution and at their own homes. Nurses are also trained. The original Royal Maternity Hospital, instituted in 1843, was in St John Street. About 1000 cases (one-third indoor) are attended to annually at a cost of about £800, almost entirely met by voluntary subscription. The Longmore Hospital for Incurables, a plain but handsome classic building in Salisbury Place, Newington, was first erected in 1880, but was altered and added to in 1886, and again in 1891. It is named after Mr J. A. Longmore, whose trustees provided £10,000 for the building fund of 1880, and also supply part of the income, the rest being derived from voluntary subscriptions. The Royal Hospital for Sick Children was commenced in 1860 in a small house in Lauriston Lane, and was afterwards removed to a separate building near the SW corner of the Royal Infirmary, with a fine lawn bordering the West Meadows. Here it remained till 1891, when the place had to be abandoned on account of defective drainage, and the site having been acquired for the extension of the Infirmary, it was resolved to erect a new hospital on ground at Rillbank, on the opposite side of the Meadows, that had up till then been occupied by the Trades' Maiden Hospital. The building is a handsome one in the English Renaissance style, and has provision for 118 beds, at a cost of about £30,000. There are from 600 to 700 indoor patients every year, and about 7000 cases are attended to in the dispensary attached, the total expenditure being about £4000, of which nearly the whole is met from voluntary subscriptions. The managers of the Royal Infirmary having decided to refuse to admit cases of infectious disease, these are now received in the Epidemic Hospital, in Infirmary Street, where provision has been made by the Corporation, acting as Local Authority for the city, for the treatment of patients thus afflicted. There are also, throughout the city, various dispensaries for general as well as particular forms of disease, where about 50,000 poor out-door patients are attended to every year.

The erection of an asylum for the treatment of the insane was first advocated by Professor Andrew Duncan, whose attention had been called to the unsatisfactory state of the provision then made for lunatics, by his having attended the poet Fergusson in his last illness. A subscription was started for the purpose in 1792, and in 1806 the government of the day made a grant in aid of the building fund of £2000 from the money received for the estates forfeited in 1745; and the contributors having been incorporated by royal charter in 1807, and a site procured at Morningside, the foundation of the first part of the present buildings (what is now known as the East House) was laid in 1809, and the first patient admitted in 1813. The patients have been, from the first, of all classes of society, the surplus income derived from the board and treatment of the wealthy being applied to making provision for the poor. In 1840 arrangements were made with the Edinburgh City, St Cuthbert's, Canongate, and North and South Leith parishes for the reception of pauper lunatics, and in consequence, between that date and 1850, large additions had to be made to the original buildings. Owing, however, to the spread of the city, the present situation became unsuitable, so in 1878 the managers acquired the estate of Craighouse, to the SW, and in 1893 engaged in erecting there a new Royal Edinburgh Asylum for the Insane—a very handsome building, designed by Mr Sydney Mitchell, in the late French Renaissance style. The Midlothian and Peeblesshire Lunatic Asylum is also at Morningside. There is an establishment, dating from 1861, for the treatment of female inebriates, at Queensberry Lodge, in the South Back of Canongate, S of Queensberry House.

The Royal Blind Asylum, which dates from 1793, originated with Dr Blacklock, David Miller, the Rev. Dr Johnson, and the celebrated Wilberforce, and first occupied a house in Shakespeare Square, whence it was removed in 1806 to No. 58 Nicolson Street, where the large warehouse still is for the sale of the productions of the blind inmates. It included another house at No. 38, purchased in 1822 for the accommodation of females, and now used for the males who do not reside with friends; the females and the blind children having been removed in 1876 to a spacious new building at West Craigmillar. The institution is managed by a body of directors, and instructs and employs the males in making mattresses, brushes, baskets, mats, and other objects, and in weaving sackcloth, matting, and rag-carpets—the females in knitting stockings, sewing covers for mattresses and feather beds, and other occupations. Both of the buildings in Nicolson Street were originally private houses, but that at No. 58 was altered and adorned, about 1860, at a cost of £3500. A handsome new façade, with stone-faced dormer windows and a neat cornice and balustrade, was then erected. It is pierced with a large central door-way, flanked by two spacious windows, and surmounted by a bust of the Rev. Dr Johnson. The new building at West Craigmillar, on a rising-ground S of Powburn, was erected in 1874-76 at a cost of £21,000, and is in light French style, with a handsome central clock-tower 80 feet high, surmounted by dome and lantern. Accommodation is provided for 200 inmates. The school for blind children, prior to its amalgamation with the Royal Blind Asylum, was in a commodious building, originally a private house, at No. 2 Gayfield Square. The Institution for the Deaf and Dumb dates from 1810, and stood originally in Chessels Court, in Canongate; but acquired, in 1826, an edifice off the N side of Henderson Row, on the N side of the town. It is managed by a body of fourteen directors, and early acquired so much celebrity, by the excellence and success of its system of training, as to be made a model for similar institutions in other cities. The building was erected, by subscription, at a cost of £7000.

Charities and Religious and Philanthropic Societies.—Trinity Hospital, which was founded in connection with Trinity College Church by Mary of Gueldres, and occupied part of the original collegiate buildings of the church, refitted for the purpose after the Reformation, had some curious architectural features, but was entirely removed in 1845 to make room for the Waverley Station. Prior to its demolition it afforded homes to 42 inmates, who were either burghesses of Edinburgh or wives or unmarried children of such, not under fifty years of age. From 1845 to 1880 pensions of £26 a year were granted, and since the latter date the charity, which is in the charge of the Corporation, has been managed under a scheme then authorised by the Court of Session. By this, 60 pensioners, 22 of whom are appointed by private patrons, receive £25 a year, while 140 receive £15. One-eighth of the whole number must be incurables, for whom no limit of age is fixed, while the others must be persons not under 50 years of age, who have at some time resided and maintained themselves in Edinburgh for two years, or the wives or children of burghesses—all being in decayed circumstances. There is also a separate Crichton bequest (1889), which provides pensions of £12, with £5 of funeral expenses, for eight persons of the same class. The Alexander Fund, for the benefit of indigent persons of good reputation who have fallen into decayed circumstances through causes beyond their own control, was formerly administered by the Governors of Trinity Hospital, but has been since 1880 under the care of a separate body of trustees, consisting of the ministers of Edinburgh as well as the Town Council. Persons of kin of Mr Alexander of Knockhill, who died in 1696, or of the surname of Alexander, have preference, otherwise the beneficiaries, who at present number 33, are as noted above. The pensions are of the value of £27 15s. 6d. The Lennie Fund provides seven persons with pensions of £10 a year. The Christie Fund, bequeathed

by Mr Robert Christie, merchant in Edinburgh, in 1888, is for promoting the comfort of old men or women over 60 years of age, resident in the county of Edinburgh, indigent and suffering from acute and painful diseases. In 1883 Mr Thomas Lockerby bequeathed £31,000 for the erection and endowment of twelve or more almshouses, in or near Edinburgh, for the relief of those who, having been left, or having acquired, a competency, have been thereafter reduced to indigence by the fault of others, the recipients to be allowed a free house and 10s. a week. Preference is to be given to natives of the south of Scotland, Edinburgh, and Glasgow. With this bequest is now conjoined a sum of about £4000, bequeathed in 1892 for the same purpose by Miss Agnes Macaulay, Glasgow. In 1892 Mr Thomas Nelson, the publisher, bequeathed in trust to the Corporation £50,000 for the erection and maintenance of shelter halls in poor districts of Edinburgh, where persons of the working class may go to sit, read, write, converse, and otherwise occupy themselves. There are other minor funds for the relief of indigent persons of different classes, and among the many agencies of all kinds whose purpose is the relief of the poor and the afflicted, we may note the Society for the Relief of Incurables at their own homes, the Destitute Sick Society, the Deaf and Dumb Benevolent Society, the District Nurses' Home, the Jubilee Nurses' Institute, the Lying-in Institution, the Society for the Relief of Married Women, the Homes for Crippled Children, the Ravenscroft Convalescent Home, several societies for the relief of the blind, societies for the relief of indigent gentlewomen, and of the indigent aged of both sexes; the Society for Improving the Condition of the Poor, the Night Asylum, the Society for the Relief of Deserving Foreigners, the Association for the Relief of Soldiers' and Sailors' Families, the United Industrial School, a Model Lodging-House Society, the Society for Feeding Destitute Children, and the *Courant* Fund for a similar purpose; the House of Refuge; Bread, Meal, and Coal Societies, several soup kitchens and rescue homes, the Society for the Prevention of Cruelty to Children, Orphan Homes, and societies for Aiding Discharged Prisoners, and for the Prevention of Cruelty to Animals. These societies, etc., are almost all entirely supported by subscriptions, and it has been estimated that, including the contributions to the hospitals and infirmaries, and to reformatories and industrial schools, the sum of about £50,000 is voluntarily raised every year in the city for charitable and philanthropic purposes.

Literary, Scientific, and Miscellaneous Societies and Institutions.—The Philosophical Institution (1832) has, in premises at 4 Queen Street, a news-room, a reading-room, and an extensive library, and organises every year concerts and a winter course of lectures by distinguished men on philosophical, literary, and miscellaneous subjects. The Edinburgh Literary Institute, incorporated in 1870, erected a handsome building in Clerk Street in 1872, and has there a news-room, library, ladies' room, etc. It organises lectures similar to those of the Philosophical Institution. There is also an Edinburgh Subscription Library in George Street, instituted in 1794 and incorporated in 1815. The Royal Association for the Promotion of the Fine Arts in Scotland was founded in 1833 and incorporated in 1847. It purchases works of Art, which are distributed among the subscribers by drawings on the Art Union principle.

At the head of the scientific societies stands the Royal Society of Edinburgh, instituted in 1783; and among others may be mentioned the Royal Scottish Geographical Society, the Geological Society, the Botanical Society, the Meteorological Society, the Royal Physical Society, the Royal Medical Society, and the Field Naturalists' Society. Connected with the University are the University Union, the Philomathic Society, the Diagnostic Society, the Dialectic Society, the Philosophical Society, the Speculative Society, the Scots Law Society, the Tusculan Society, and the Cap and Gown Club. Among the miscellaneous may be noted the Royal Scottish Society of Arts, the Scottish History Society, the Scottish Text Society, the Juridical Society, the Cockburn

Association, the Institute of Bankers, the Architectural Association, the Sanitary Protection Association, the Edinburgh Health Society, the Pen and Pencil Club, a number of county associations, and the usual school and athletic clubs of all kinds. There are also 19 masonic lodges (including No. 1 Mary's Chapel, No. 2 Canongate, Kilwinning, No. 5 Canongate and Leith, and No. 8 Edinburgh Journeymen), 8 lodges of the Scottish Order of Oddfellows, and 5 lodges of Free Gardeners.

There are connected with the city the Queen's Rifle Volunteer Brigade, with three battalions; the Fourth Volunteer Battalion the Royal Scots, the First Edinburgh City Volunteer Artillery, and the Forth Volunteer Division Royal Engineers (Submarine Miners). Associated with these are the City of Edinburgh and Mid-Lothian Rifle Association, and the East of Scotland Tactical Society.

Educational Institutions.—*The University.*—The University of Edinburgh was founded in 1582 by James VI., or rather by his advisers, urged on somewhat unwillingly by the Town Council, the members of which showed a keen desire to have a 'Tounis Colledge.' The infant university began its active life in the following year in the buildings of the Collegiate Church of St Mary in the Fields, which appears to have been founded in the 15th century, and stood, as its name implies, originally outside the city walls, but was included within the extension wall of 1513. It occupied the ground now covered by the south-eastern portion of the present University buildings in South Bridge, and the street area thence to the NW corner of Drummond Street. Among the portions appropriated for University purposes was the Provost's house, which, almost destroyed by the explosion which killed Lord Darnley within its walls, was repaired and used as the house of the Principal. It existed till at least 1803, and its site is now covered by the University Library. The buildings were enlarged, in 1617, by additions containing a common hall and several class-rooms; but these, which were both unsightly and incommodious, becoming ruinous, a resolution was come to, after the middle of the 18th century, to sell part of the property and raise public subscriptions for the erection of an entirely new edifice of great extent and magnificence, a resolution that resulted in the realisation of about £32,000. The new University, which was to be erected about two quadrangles, was founded in 1789, but the funds became exhausted when only the front or E part had been built. This, however, became immediately available for college purposes, and formed a striking contrast to the ruinous old structures which required to be retained. This unsightly patchwork condition of affairs remained till 1815, when an Act of Parliament was obtained, allotting £10,000 a year for the further construction of the edifice till it was completed. The original design by Adam was then revised and extensively altered—particularly as to the interior façades, and by the substitution of one quadrangle for two—by W. H. Playfair, and building operations went regularly on till the N and the W sides of the quadrangle were completed. Therafter there was again a long pause, and only in 1834 was the work brought to a completion.

The edifice presents its main front to the South Bridge, and measures 358 feet from E to W, and 255 feet from N to S. The style of architecture is Græco-Italian, and the exterior façades show four storeys, differing much from one another in height. So closely is it hemmed in by the buildings around that the full architectural effect of the different elevations is very much injured and even lost. The basement storey is rusticated, the second and third are lofty, with moulded windows, and the fourth is an attic. The central part of the main front contains the entrance, and has three lofty archways, of which the middle one is for carriages. The entrance is adorned by a grand Doric portico, with centre and wings, the former recessed and having two attached columns at the sides of the carriage archway, and the wings, which cover the side archways, having each two projected columns. All the six columns are of

equal diameter and 26 feet high, and are each formed of a single block of stone. A very broad entablature, with a long appropriate Latin inscription, surmounts the portico. A massive dome was designed by Adam to rise immediately behind the entablature, and to form the crowning feature of the main front, but owing to lack of money it was not proceeded with at the time; and the present dome was not erected till 1837, the necessary funds for the purpose having been bequeathed by the late Mr Robert Cox of Gorgie in 1872. The original design was, however, departed from, and improved on by Dr Rowand Anderson, to whose skill the present handsome structure is due. The top of the lantern, which reaches a height of 153 feet, is surmounted by a figure of Youth bearing on the Torch of Knowledge, modelled by Hutchison.

The quadrangle, which stands considerably higher than the exterior level, and is reached by steps through the side arches, is very spacious, and has finer architectural features than the exterior fronts. A continuous platform or small paved terrace goes round the base of the main elevations, considerably higher than the level of the open court, and is reached at intervals by flights of steps, and adorned with handsome balustrades. The fronts of the main elevations have two lofty storeys, the lower one rusticated, the upper adorned with columns, and the junctions of front with front are not corners but curves, containing the entrances to most of the apartments, and the curves are filled in the lower storey with arcade-piazas, and in their upper with open galleries supported by Ionic columns. The E front, or that containing the street entrances, is adorned with Doric columns and entablature. The W front is fitted in the central part of its lower storey with an arcade-piazza—within which is a statue, by Brodie, of Sir David Brewster, a former principal—and is adorned in its upper storey with Corinthian attached columns and Venetian windows. The N and S fronts correspond to each other, and have on their upper storey a series of Corinthian attached columns. The library, which occupies both storeys of the S side, has a magnificent principal hall, measuring 185 feet in length and 54 feet in breadth, and contains about 180,000 printed books and 3000 volumes of manuscript, besides numerous busts and pictures of professors and distinguished alumni.

The buildings just described, which provide accommodation for the class-rooms of the Faculties of Arts, Divinity, and Law, as well as for general University purposes, constitute what is now known as the Old University, the Medical Faculty and School having been transferred in 1880 to what is known as the New University, in Teviot Place, on the opposite side of the Middle Meadow Walk from the Royal Infirmary. The number of students, which in 1858 had been only about 800, rose gradually till, in 1869, there were more than 1500, and as there were then 33 professors and only 17 class-rooms, the problem of extension had to be faced. In 1873, therefore, an appeal was made to the public for subscriptions, to enable new class-rooms, etc., to be built, the first idea being to acquire a site opposite the old Royal Infirmary. The removal of the latter, however, led to a change of plan, and the present ground was bought at a cost of £30,000. The public subscriptions amounted to nearly £150,000, and a government grant of £80,000 having been obtained, the New Medical School buildings were begun in 1878, partially opened in 1880, and finally completed and transferred by the Committee of Subscribers to the University authorities in 1888. Designed by Dr Rowand Anderson, in the Italian style of the Cinque Cento period, and ranged about two quadrangles, they form one of the handsomest piles in Edinburgh. The main frontage presents, as its central feature, a slightly projecting elevation, pierced by the archway which forms the principal entrance. Over the arch is an ornate window, flanked by pilasters, between which are niches for statuary; and the whole is surmounted by a bold semicircular pediment, intended to be occupied with a group of sculpture. The façade is three storeys in height, except in the projecting west

wing, which has an additional floor. On the ground floor the windows are square, and are surrounded with simply moulded architraves. Above these runs a well-marked string-course, ornamented with dentils. The first floor windows are round-headed, and furnished with architraves, their arches showing boldly in the masonry of the wall. Next comes a broad frieze, relieved at intervals with the circular panels intended for carved work. Over this the string-course is repeated; and the upper floor windows are separated by pilasters, each being divided by a shaft which supports a circular tracery in the window head. The wall is finished at the top with architrave, frieze, and cornice, and crowned with a low-pitched roof, covered with red tiles.' At the NE corner is the M'Ewan Hall, erected in 1889-97, in the semicircular form of a Greek theatre; here all the great academic ceremonies take place. The great outer wall has a diameter of 144½ feet, and the inner wall of arches and pillars has a diameter of 134 feet, and measures at right angles to this 107 feet. The height is 90 feet, and light is obtained from a large skylight, and from windows placed close to the roof. The roof is carried on 22 steel ribs, the horizontal strain being borne by the bracing between, and the horizontal thrust of expansion and contraction on the walls avoided by setting the ribs on rollers. Across the stage the strain is carried by a strong steel girder. Thrusts on the inner wall, on which the roof is set, are transmitted to the outer wall by flying buttresses. The external façade harmonises with that of the main building, and is divided into three stages, of which the first is panelled with circular lights, the second is blank, and the third arched with three arches between each buttress. The buttresses have niches for figures. There is in the auditorium accommodation for about 3000 persons. The general design was furnished by Dr Rowand Anderson, and that for the roof by Mr Westland; while the hall receives its name from Mr William M'Ewan, M.P., of Edinburgh, by whose munificence the necessary funds were provided. Between the hall and the present buildings is the base of the great campanile, 32 feet square, and intended to rise to a height of 275 feet. To the S of the hall is the Music Class-room and Museum, erected in 1858, after designs by Cousin, in the purest style of the Italian Renaissance of the early sixteenth century. To the E of this is the Students' Union, erected in 1887-89, after designs by Mr Sydney Mitchell. Plain in style, and after the decidedly Scottish types of the palaces of Dunfermline and Stirling, and the earlier portions of Linlithgow, the building has richly moulded and deeply recessed arched and cusped windows, and a boldly corbelled and battlemented parapet. At the SE corner is a tall circular turret, corbelled out to an octagonal form at the top, and at the corners of the N end are two circular towers, with conical roofs. It contains a large debating hall and reading-room, smoking and billiard-rooms, luncheon-rooms, and a large gymnasium. The funds for the erection of the Union were provided partly by private subscription, but to a great extent by the proceeds of a bazaar held in the Waverley Market in 1886—probably the largest and most successful affair of the kind that ever took place in Edinburgh. Buildings partly for the residence of students were in 1892-93 constructed at the Castle Hill.

Opened in 1583 by Robert Rollock, who became the first Principal in 1586, and was almost from the first assisted by a Latin Lecturer, the University had by 1685, when the study of medicine was introduced into the curriculum, no fewer than eight professors. There are now eighteen professorships in the Faculty of Arts, four in the Faculty of Divinity, seven in the Faculty of Law, and thirteen in the Faculty of Medicine, while there are eight University Lecturers. The professorships, with the dates of their foundations, are—humanity, 1597; mathematics, 1679; Greek, 1708; logic and metaphysics, 1708; moral philosophy, 1708; natural philosophy, 1708; history, 1719; rhetoric and English literature, 1760; practical astronomy, 1786; agriculture, 1790; theory of music, 1839; Sanskrit and comparative philology, 1862;

engineering, 1863; geology and mineralogy, 1871; commercial and political economy, and mercantile law, 1871; theory, practice, and history of education, 1876; fine art, 1879; Celtic history and literature, 1882; history, 1893; divinity, 1629; Hebrew and Oriental languages, 1642; church history, 1694; biblical criticism and biblical antiquities, 1846; public law, 1707; civil law, 1710; Scots law, 1722; conveyancing, 1825; botany, 1676; institutes of medicine, 1685; practice of physic, 1685; anatomy, 1705; chemistry and chemical pharmacy, 1713; midwifery and diseases of women and children, 1726; clinical medicine, 1741; natural history, 1767; materia medica, 1768; clinical surgery, 1803; medical jurisprudence, 1807; surgery, 1831; general pathology, 1831. The University lecturers deal with natural theology (Gifford Bequest), forestry, agricultural entomology, civil and criminal procedure, mental diseases, diseases of the eye, clinical instruction on the diseases of children, and comparative embryology. The patronage of fifteen of the chairs entirely, and of six others partly, was formerly held by the town council of Edinburgh; but, under the University Act of 1858, was transferred to seven curators, four of them chosen by the town council and three by the university court. The patronage of the chairs of rhetoric, practical astronomy, engineering, Sanskrit, geology, church history, biblical criticism, public law, natural history, clinical surgery, and medical jurisprudence is held by the Crown; that of the humanity chair by the Lords of Session, the Faculty of Advocates, the Society of Writers to the Signet, and the curators; that of history, civil law, and Scots law chairs by the Faculty of Advocates and the curators; that of the agriculture chair by the Lords of Session, the University Court, and the curators; that of the music chair by the University Court; that of the commercial and political economy chair by the Merchant Company and the curators; that of the conveyancing chair by the Deputy-Keeper and Society of Writers to the Signet and the curators; that of education by Bell's Trustees; that of fine art by the University Court and the President of the Royal Scottish Academy. That of all the other chairs is held by the curators.

The emoluments of the principal and professors are derived from various sources. Formerly each professor received his own class-fee, but the University Commission in 1893 proposed that in future all these shall be paid into a general Fee Fund, from which the occupants of the Chairs for the time being shall receive the sum necessary to bring their incomes up to certain fixed amounts. The sums (the first figures representing the normal, and those in brackets the minimum salary) thus assigned to the various professors will be, for the Principal, £1100 and an official residence; the Professor of Humanity, £1100 (£800); Greek, £1100 (£800); Mathematics, £1100 (£800); Natural Philosophy, £1100 (£800); Logic and Metaphysics, £900 (£700); Moral Philosophy, £900 (£700); Hebrew and Oriental Languages, £600 (£400); Rhetoric and English Literature, £900 (£700); Astronomy, £825, with official residence, and exclusive of the salary of the Professor as Astronomer-Royal; Agriculture, £600 (£400); Sanskrit, £500 (£450); Engineering, £700 (£500); Geology, £700 (£500); Political Economy, £600 (£500); Education, £600 (£450); Fine Art, £500 (£430); Celtic, £600 (£555); History, £900 (£700); Public Law, £600 (£400); Civil Law, £600 (£400); Constitutional Law, £600 (£400); Scots Law, £850 (£500); Conveyancing, £850 (£500); Physiology, £1400 (£800); Anatomy, £1400 (£800); Chemistry, £1400 (£800); Pathology, £1400 (£800); Botany, £1000 (£800); Natural History, £1000 (£800); Medicine, £600 (£500); Midwifery, £600 (£500); Materia Medica, £600 (£500); Clinical Surgery, £600 (£500); Medical Jurisprudence, £600 (£500); Surgery, £600 (£500). Separate provision is made, where necessary, for the salaries of assistants and for class expenses.

Attached to the several faculties there are over one hundred fellowships and scholarships, tenable for from two to four years, and of various values up to £120. Of bursaries in the Arts Faculty there are over 200, of the annual value of over £5000, and ranging in amount from

£4 to £90; in Divinity over 40, annual value about £1000, and ranging from £7 to £90; in Law 8, annual value about £200, ranging from £19 to £90; in Medicine 60, annual value £2500, ranging from £20 to £70.

The chief officers of the University are a chancellor, chosen by the general council; vice-chancellor, chosen by the chancellor; rector, chosen by the matriculated students; principal, chosen by the curators; and assessors, chosen by respectively the chancellor, the town council, the rector, the general council, and the *Senatus Academicus*. The University Court consists of the rector, the principal, the lord provost of Edinburgh, and the assessors. The *Senatus Academicus* consists of the principal and the professors. The winter session, for all the faculties, opens in the middle of October and closes about the middle of April. The summer session, which comprehends only the faculties of law and medicine, with tutorial classes in arts, opens in the beginning of May and closes near the end of July. The annual number of students is about 3400, of whom a little more than half are students of medicine. The first graduation ceremony was held in 1587, when Rollock conferred the degree of M.A. on 47 students. During the year 1891-92, 82 students took the degree of M.A., 19 that of B.D., 20 that of LL.B., 3 that of B.L., 230 that of M.B. and C.M., 44 that of M.D., 3 that of D.Sc., and 33 that of B.Sc. The General Council, which comprises about 5000 members, meets twice a year, on the first Tuesday after 14 April and on the last Friday in October, and on special occasions on the requisition of a quorum of members. The University unites with that of St Andrews in sending a representative to parliament.

In the portion of the new buildings set apart for the Anatomical Museum, there are now also shown the skulls, and casts of busts and heads, formerly in the Phrenological Museum in Chambers Street. Originated by a bequest made in 1832, under which Mr W. R. Henderson left the residue of his estate, amounting to over £6000, in trust for the advancement of phrenology, the collection, which is a very valuable one, and includes part of that of Spurzheim, was at first housed in a hall at Surgeon Square, but was in 1877 transferred to a building in Chambers Street erected specially for it. Ten years later, when this was acquired by the Heriot Trust for the extension of the Heriot-Watt College, the trustees decided to place the specimens in the keeping of the conservator of the University Anatomical Collection, on condition that the public should have, as formerly, free access on certain days of the week.

There is an Extra-Mural School of Medicine with some fifty lecturers, whose courses of instruction are recognised as qualifying for graduation in medicine. The lectures are delivered in buildings connected with Surgeons' Hall in Nicolson Square, in Chambers Street, in Park Place, and elsewhere.

There are also an Edinburgh Association for the University Education of Women; an Edinburgh School of Medicine for Women at Surgeon Square, with 18 lecturers; and a Medical College for Women in Chambers Street, with 21 lecturers.

The Edinburgh Veterinary College, on the N side of Clyde Street, near the NE corner of St Andrew Square, is a modern three-storey edifice in plain Doric style. Established in 1818, it was brought into full working order in 1823 by the late Professor Dick, by whom it was also endowed at his death in 1866. It is under the trusteeship of the magistrates and town council of Edinburgh, and the patronage of the Highland and Agricultural Society of Scotland, and is conducted by a principal, four professors, and seven lecturers. The winter session commences early in November, and continues till the end of April; and the summer session commences in the second week of May, and continues till the end of July. The New Veterinary College in Leith Walk was established in 1873. It is conducted by a principal and seven lecturers.

The Heriot-Watt College.—The Heriot-Watt College sprang from the old School of Arts, which was founded in 1821 by Mr Leonard Horner and others for the purpose of teaching working tradesmen, at convenient hours and

at a cost within their reach, branches of science, the knowledge of which was beneficial in the exercise of their trades. It was the first institution in Great Britain formed for the express purpose of giving education in the principles of science to the industrial classes. After occupying for a time premises of a very humble character in Niddry Street, the school was afterwards moved to a building in Adam Square, which, at first rented, became in 1851 the joint property of the directors and of the subscribers to a fund for erecting a memorial of James Watt, and after this time it became known as the Watt Institution and School of Art. Watt's memory was further perpetuated by a statue placed in the Square. In 1871 the old building, which had become too small for its purpose, was pulled down to make way for the E end of Chambers Street, and premises were erected in the new street, opposite the Industrial Museum, after designs by David Rhind. In 1879 the directors presented to the governors of the various educational trusts in Edinburgh a memorial setting forth the claims of the institution to additional endowment, and in 1885 the Educational Endowments Commission sanctioned a scheme for the amalgamation of the Watt Institution with George Heriot's Trust, from whose resources funds for extension were to be supplied. Under the fostering care of the past and present managers the original classes of mathematics, chemistry, natural philosophy, and mechanical drawing have been increased till they number 43, in which instruction in different subjects is given by professors, lecturers, and instructors. There are over 3000 pupils in attendance. The Chambers Street building was largely extended and altered in 1886-88, after designs by Mr Chessar. After a somewhat florid Italian style, it has now a façade of 268 feet, with centre and two wings. In the centre is a spacious doorway, with groups of columns on the street and first-floor levels. Between the groups of pillars, at the height of the first floor, are busts of George Heriot and Mr Leonard Horner; while above is a handsome pediment, the upper part of which is filled in with carvings having in the centre a shield with Heriot's coat-of-arms. On the apex is a figure of a boy hammering on an anvil, symbolical of Industry. On the pediment of the W wing are carved Heriot's initials, and symbols of Peace and Plenty, while on that of the E wing are Watt's initials and a representation of the model of Newcomen's engine in the Glasgow University collection, the repairing of which led the great Scottish inventor to the investigations which resulted in the steam engine. The statue which was formerly in Adam Square now stands on a pedestal to the E of the doorway.

Free Church College.—The Free Church College was instituted in 1843, and was for several years provided with accommodation in private houses in George Street, but was in 1850, removed to buildings of its own at the head of the Mound. These, erected in 1846-50, after designs by W. H. Playfair, at a cost of nearly £47,000, are in the English Collegiate style of the Tudor period, and are conjoined on the E with the Free High Church. The main front is to the N, overlooking the Mound, and is divided into two storeys, crowned with a range of dormer windows. In the centre, giving admission to the quadrangle, is a groined archway, surmounted by two large oriel windows, and flanked by two square towers, rising to the height of 121 feet, buttressed at the corners from base to summit, and each terminating in four heavy crocketed pinnacles. At the NE corner is a similar tower, 96 feet high, belonging to the Free High Church. The quadrangle, which measures 85 feet by 56, has on the S two octagonal towers, surmounted by ogee roofs. The library contains over 40,000 volumes, and is particularly rich in works bearing on patristic theology, ecclesiastical history, systematic theology, and the Reformation period. There is also a good museum. The educational work is carried on by a principal, and professors of systematic theology, apologetics, church history, Hebrew and Old Testament exegesis, exegetical theology, evangelistic theology, and natural science, there being also a lecturer on elocution.

To the S of the college buildings, on the site of the palace of Mary of Guise, is the Hall—erected in 1858-59 at a cost of £7000, after designs by David Bryce—where the meetings of the Free Church General Assembly are held. It has accommodation for about 1700 persons. The Assembly met, prior to 1859, in the large plain low-roofed hall at Tanfield (at the S end of Inverleith Row), where it was first constituted in 1843. The offices of the Church are in the block of buildings at the head of the Mound, already mentioned as containing the Savings Bank.

The United Presbyterian Synod Hall.—The United Presbyterian Synod and Theological Halls were, prior to 1877, in a plain building, originally a private house, in Queen Street; the hall, which has accommodation for about 1100 persons, having been erected over ground to the back in 1847, after the amalgamation of the United Secession and the Relief synods with the United Presbyterian Synod. It is still used for occasional public meetings. The new Synod and Theological Halls are in buildings originally erected, in 1875, at a cost of £65,000, for the West-End Theatre, and purchased, in 1877, on the failure of the company to which that belonged, by the United Presbyterian Church. Designed in what may be termed the Geometric style, the front is bold and imposing. The hall where the Synod meetings are held has accommodation for over 2000 persons. The educational work is carried on by a principal and professors of systematic theology, Hebrew and Old Testament exegesis, New Testament literature and exegesis, church history, and practical training. There is a good library of some 30,000 volumes.

The Protestant Institute of Scotland, organized in 1850, and maintaining classes, conducted by a lecturer, for training students of all Protestant denominations in the polemics of the Romish controversy, has a plain building in George IV. Bridge, erected in 1862, in commemoration of the tercentenary of the Reformation. The Episcopal Church in Scotland has a Theological College at Coates' Hall, conducted by a principal and four lecturers.

Normal Schools.—The Church of Scotland Normal School and Training College, in Johnstone Terrace, near the W end of the Lawnmarket, was erected in 1845, at a cost of £8500, and is now used exclusively for the training of female teachers, and for the practising school; the training of male teachers having been, in 1879, transferred to a building erected for the purpose near the E end of Chambers Street. The educational work is carried on by a rector, eight teachers, and a lady superintendent; while the practising school is conducted by a head-master and ten assistants. The Free Church Normal School is, as has been already noticed, in Moray House, in the Canongate. The educational work is carried on by a rector, nine teachers, and a lady superintendent, and the practising school is conducted by a head-master and eleven assistants. The Training College for Schoolmistresses in connection with the Episcopal Church in Scotland, at Dalry House, is carried on by a principal, two masters, and five mistresses.

The Royal High School.—This institution, which, under the old name of the Grammar School, dates from 1519, probably sprang from a school in Holyrood, which seems to have existed from a much earlier date. It occupied for some time a dwelling-house in Blackfriars Wynd, which had been a palace of Archbishop Beaton; was removed in 1555 to a house at the E side of Kirk of Field, near the head of what came to be called High School Wynd; and acquired in 1578 a new building for itself, within the Blackfriars' cemetery, on the ground at the foot of Infirmary Street, giving to the tract around it the name of High School Yards. Another edifice, erected on or near the same site in 1777, gradually, owing to the inconvenience of the situation, lost caste in the eyes of the citizens of the New Town, and was, in 1823, sold to the directors of the Infirmary, to be used as a surgical hospital. The present Royal High School, on the S face of Calton Hill, a little above the line of Regent Road, is built on a terrace cut out of the

solid rock, and forms a prominent object in all the eastern views of the city. Erected in 1825-29, after designs by Thomas Hamilton, at a cost of £35,000, it has a curtain-wall measuring upwards of 400 feet in length, with a lodge at each end, in front of the main building, but at a considerably lower level. The main building consists of a centre, two lofty open corridors, and two wings. The two lodges have each a tetrastyle portico, and the one contains class-rooms, while the other (originally intended for the use of the janitor) was, in 1855, converted into a small swimming-bath, a new lodge for the janitor having been erected at the W end of the ground. Two doorways, Egyptian in design, boldly break the centre of the curtain-wall; and a double flight of steps, flanked half-way up by Egyptian projections, ascends to a spacious platform at the level of the main building. All these features are merely ornamental, the real access being through the playground by a gateway on a higher level considerably to the west. A massive Doric portico, copied from the temple of Theseus at Athens, with a front range of six columns over 20 feet high, and a rear range of two columns, rises from the platform at the top of the double flight of steps, and covers all the centre of the main building. The open corridors, connecting the centre with the wings, commence at points slightly behind the portico; and are each supported by six Doric columns. The wings present their shorter elevations to the front, and are adorned only with pilasters and entablature. The central part of the main building contains a large examination hall, a library hall, the rector's apartments, and some smaller rooms; the wings contain class-rooms, and apartments for masters. To the S is a gymnasium, erected in 1835. At first a purely classical seminary, the High School now furnishes systematic instruction in all the departments of a commercial as well as a liberal education; the curriculum extends over a period of six years, and the classes are conducted by a rector, 15 masters, and 2 lady teachers. The school was formerly under the care, and is still under the patronage of the magistrates and town council; but, in terms of the Education Act of 1872, it is now managed by the city school-board.

The Edinburgh Academy, on the N side of Henderson Row, was founded as a classical school by a number of distinguished citizens, including Leonard Horner, Henry Cockburn, Henry Mackenzie, Sir Walter Scott, and Sir Harry Moncrieff. The building, erected in 1824, at a cost of £13,000, after designs by W. Burn, is a low but neat Doric structure, occupying the centre of a playground of about three acres. A new gymnasium and laboratory were added in 1890, and additional class-rooms in 1892. Not far from the school, near the Inverleith Public Park, is a large cricket-ground of nine acres, for the exclusive use of present and past pupils. Under the royal charter of incorporation, the management is in the hands of a board of fifteen directors, of whom three are elected annually from the body of subscribers. The curriculum in the upper school extends over seven years, the boys in the senior division being divided into the Greek, German and Science, and Army sections, so that they may be, according to circumstances, prepared for the universities, for business life, or for the army or public services. Special attention is given to athletics. The instruction is carried on by a rector, 18 masters, and 5 lady teachers.

Fettes College, on a gentle eminence at Comely Bank, in the north-western outskirts of Stockbridge, was erected in 1865-70, at a cost of about £150,000, after designs by David Bryce, and is an extensive and stately edifice in the domestic Gothic style, prevalent in France and Scotland in the sixteenth century, showing in its grand proportions and infinite variety of detail, all the leading features of a great baronial castle. The arcaded front, the pointed mansards, the boldly-corbelled corner turrets, and the massive tower, render the building, as seen from a distance, most imposing and picturesque, while the elegance and diversity of detail make it equally beautiful on a close view. There are also a

beautiful and richly adorned chapel, a large gymnasium, and an hospital. The school originated in a bequest by Sir William Fettes of Comely Bank (1750-1836), under which the residue of his estate was 'to form an endowment for the maintenance, education, and outfit of young people whose parents have either died without leaving sufficient funds for that purpose, or who, from innocent misfortune during their own lives, are unable to give suitable education to their children.' The sum originally available was £166,000, and this was allowed to accumulate for a number of years, till it reached such an amount as the trustees deemed sufficient to carry out the intentions of the testator in a satisfactory way. The number of boys on the foundation is limited to fifty; and, beautiful as the building is, it seems somewhat of a mistake that such a palace should have been erected for the accommodation of so small a number. A large number of day-scholars and boarders are also admitted at an entrance-fee of ten guineas, an annual fee of £25, and an annual charge for board of £60. For the accommodation of boarders, four boarding-houses (each of which is managed by one of the masters) have at different times been erected within the grounds. The education given is of the highest class, and is carried on by a head-master and 17 masters. Connected with the institution, there are exhibitions at Edinburgh University of £60 a year each, founded in 1875; and at the English Universities of £100 a year each, founded in 1876.

Merchant Company's Schools.—Under the care of the Merchant Company are George Watson's College for Boys, George Watson's College for Ladies, The Edinburgh Ladies' College, Daniel Stewart's College (for boys), and James Gillespie's Schools (for boys and girls). George Watson's College had its origin in a bequest of £12,000 made in 1723 by George Watson, a native of Edinburgh, first a merchant in Holland, and afterwards accountant of the Bank of Scotland. The fund was to be applied for the maintenance and education of boys who were the children or grand-children of decayed merchants in Edinburgh. Originally constituted as George Watson's Hospital, the institution was conducted on the monastic system, the boys living, as well as receiving their education, in the building; but, in 1870, sweeping changes were made, and the governors (Sir Thomas J. Boyd being Master of the Company at the time), taking advantage of the powers of the Endowed Institutions (Scotland) Act, obtained permission to convert all their hospitals into day schools, and in the case of the Watson bequest to include girls within its scope. The foundationers, limited to 60 (of whom, under an amending order of 1888, one-fourth are to be elected by competition among boys attending the school), are to be either (1) sons or grandsons of burgesses and Guild brethren, members of the Merchant Company; or sons or grandsons of ministers of the Old Church, Edinburgh; or (2) sons or grandsons of burgesses and Guild brethren admitted prior to 1881, not members of the Merchant Company. They must be between 9 and 14 years of age when admitted, and are boarded in families in Edinburgh. They may also receive certain benefits at the time of leaving school. Connected with the trust there are open fellowships at Edinburgh University. The original school, built in 1738-41, stood on the site now occupied by the Royal Infirmary, to the managers of which it was sold in 1871. The present buildings (on the N side of the Meadows, to the W of the Royal Infirmary), which had, up to the year mentioned, been occupied as the Merchant Maiden Hospital, were erected in 1816, at a cost of £12,500, after designs by Burn, and show a handsome front, with a tetrastyle Ionic portico, modelled after the temple of the Muses on the Ilyssus. Extensions were made to the N in 1872-73, and E and W projecting wings with open square towers, as well as a gymnasium, a workshop, and a laboratory, were added in 1892-93. The number of pupils is about 1200. The School for Young Ladies was established in 1870, in dwelling-houses altered for the purpose on the N side of George Square. The buildings were afterwards, in 1890-91 and in 1892, still further altered and enlarged. The number of pupils is about 900

The Edinburgh Ladies' College was founded, as the Merchant Maiden Hospital, in 1695, by contributions from the Merchant Company, and by a large donation from Mrs Mary Erskine, the widow of an Edinburgh druggist. Incorporated in 1707, it originally occupied premises at the corner of Bristo and Lothian Street, but having outgrown its accommodation, acquired in 1816 the building just described. Altered under the provisional order already referred to, as having revolutionised all the Merchant Company's schools, it was, in 1871, removed to the premises at the W end of Queen Street, where it is now carried on. There are 41 foundationers, of whom 21 are selected by competitive examination from girls attending the school. They must all be between 9 and 16 years of age when admitted, and must 'be the children or grandchildren of such who are, or were, merchant burgesses of Edinburgh, or ministers of Edinburgh, Canongate, Leith, or West Church, or who have been governors of, or benefactors to, the hospital.' They are, under the supervision of the governors, boarded with families in Edinburgh. There are also bursaries in connection with the trust. The number of pupils is about 1200.

Daniel Stewart's College, on the Queensferry Road, owes its existence to a bequest of £13,000 in money and some house property, made by Mr Daniel Stewart, an officer of the Court of Exchequer, in 1814, to be allowed to accumulate, for building and endowing an hospital for the maintenance and education of boys, the children of honest and industrious parents, whose circumstances in life do not enable them suitably to support and educate their children at other schools. Erected in 1849-53, at a cost of £30,000, after designs by David Rhind, the buildings show a curious mixture of Elizabethan and Scottish baronial. They are ranged round three sides of a quadrangle, and have several towers, of which the two chief, with lanterns and ogee roofs, rise to a height of 120 feet. The education given is similar to that in George Watson's College, and the foundationers, 40 in number, are selected from the same class in the same proportion. The number of pupils is about 900.

James Gillespie's Schools, to the W of Bruntsfield Links, were founded in terms of a bequest by James Gillespie of Spylaw, a tobacconist and snuff-merchant in the High Street, who left the greater part of his property for the endowment of a charitable school, and the maintenance of old men and women. The building, which does not need particular description, and for which Burn is responsible, was erected in 1801-3, and occupies the site of the curious old pile known as the Wright's-houses, which belonged to a branch of the Napier family. The charitable school was, under the scheme of 1870, converted into an excellent primary school, while the old men and women beneficiaries—who are persons not under 55 years of age, (1) of the name of Gillespie from any part of Scotland; (2) anyone belonging to Edinburgh or its suburbs; (3) anyone belonging to Leith, Newhaven or any part of Midlothian; and (4) failing these, any person belonging to any part of Scotland—receive pensions of from £10 to £25 a year. Connected with the trust are twelve bursaries for enabling deserving pupils to attend the higher class schools of the Company, where they receive education free. There are about 1400 pupils.

George Heriot's Hospital, which occupies a commanding site on the high ground to the S of the Grassmarket—formerly known as the High Riggs—and is worthy of its fine position, sprang from a bequest of George Heriot, the royal goldsmith of the time of James VI. Founded in 1628, but not completed till 1650, it was first used by Cromwell as an hospital for his sick and wounded soldiers after the battle of Dunbar, and did not become available for its proper purpose till 1659. The building is, alike in general effect and in details, so beautiful, that it is matter of regret that the architect is unknown. The design was long attributed to Inigo Jones, but this must certainly be a mistake, for although the names of several of the 'master masons' connected with the work are duly recorded, in no single document is the name of Jones mentioned. Among the portraits preserved in the hospi-

tal is that of William Aytoun, a cadet of the house of Inchdairnie, in Fife, and the first master of works was William Wallace, so that it is probable that to one or other of these, possibly partly to both, the honour of being the 'maker' is to be assigned; for on the death of the latter, the governors recorded their high appreciation of the 'extraordinary panes and grait cair he had in that wark baith by his advyce and in the building of the same;' and in a later contract, dated in 1632, Aytoun was bound 'to devyse, plott and set down what he sall think meittest for the decorement of the said wark, and pattern thereof alreddie begun, when any defect is found, and to make with his awiu handis the haill mowlds, alsweil of tymber as of stane belanging generally to the said wark, and generally the said William Aytoun binds and obliges him to do all and quhatsumevir unquihle William Wallace, last Maister Maissone at the said wark, aither did or intended to be done at the same.' One curious entry in connection with the payments causes one to wonder whether such things could be in the year of grace 1639. It records the prices paid for 'six shakellis for the hands of ye six wemin yt drew ye cairt wit ye chainyeis to same, 14 lokis for yair waists ond yair handis' and 'ane qwhip for ye gentlwemen in ye cairt!'

Designed in the peculiar Renaissance style that obtained in Scotland in the early part of the seventeenth century, the structure is the best example in the country of the beauty that resulted from what would at first seem an incongruous mixture of styles. 'We know,' says Telford, 'of no other instance in the work of a man of acknowledged talents where the operation of changing styles is so evident. In the chapel windows the general outlines are fine Gothic, the mouldings are Roman. In the entrance archways, although the principal members are Roman, the pinnacles, trusses, and minute sculptures partake of the Gothic.' The windows and dormers in particular show such an infinite variety of detail that no two of the two hundred and thirteen—with one exception—are alike. The buildings, which form a square, with a side of 162 feet, and are surrounded by a terrace and balustrade, are ranged round an interior quadrangle with a side of 94 feet. At the corners are massive square towers, four storeys high, with ornamental bartisans and circular corbelled corner turrets with curved roofs. The centre of the N side, which contains the entrance archway, flanked with Doric columns, is surmounted by a square dome-capped tower rising to the height of 100 feet, while in the centre of each of the other sides is a semi-octagonal projection rising above the side walls as a complete octagon, and terminating in a curved roof. All the other portions of the elevation have a height of three storeys, and the enclosed court, which is paved, has an arcade on its N and E sides, and is pierced on the S side by a Corinthian doorway leading to the Chapel, the interior of which was fitted up after designs by Gillespie Graham about 1840. Over the northern gateway are the armorial bearings of Heriot and some emblematic sculptures, and in a carved niche is placed a statue of the founder from the chisel of Robert Mylne, already mentioned in connection with Holyrood. This it used to be the custom every year to decorate with flowers on 'founder's day,' the first Monday of June—a pleasing and appropriate sign of gratitude, which was practically ended by the stupidity of the Endowed School (Scotland) Commission when the Hospital was put on its present footing. The old and ordinary access to the grounds was from the Grassmarket, but there is now also an entrance archway and lodge on the S side in Lauriston. The annual income was at first so limited as to maintain and educate only 18 boys, but this number was increased till in 1885 there were about 220, of whom 120 were resident in the building. In the year just mentioned the whole arrangements were altered under a scheme prepared by the Endowed Schools Commission. The Hospital was discontinued, and in its place there was established George Heriot's Hospital School, open to fee-paying as well as free pupils, in which mathematics, science, modern languages, drawing, and technical instruction take the place held by classics in secondary schools of the ordinary type; while certain

proportions of the funds were ordered to be applied for the endowment of the Heriot-Watt College, for the foundation of bursaries and fellowships in connection with the University, and for establishing bursaries for the higher education of girls, and in making a grant to any institution which may be founded or opened in Edinburgh for the higher education of women. The number of foundations of £20 a year each 'for poor orphans or fatherless children of burgesses in Edinburgh' was fixed at 120; while 60 free scholarships are annually awarded to 'the most meritorious pupils uot being foundationers,' and there are 40 school bursaries of the annual value of £10, with free education, a certain proportion of which are open for competition among the pupils every year. These changes involved considerable alterations in the internal arrangements of the buildings and the addition of a technical department. These were carried out in 1886-88, accommodation for the latter being provided in a building on the site of the former Heriot Bridge School on the N side of the grounds, where there are now large laboratories and workshops as well as a gymnasium. Under an Act of Parliament obtained in 1836 twelve free elementary schools were established in different parts of the town for the education of children of poor but industrious persons, but owing to the change that has come over the conditions of education in recent years, these, having become unnecessary, have been discontinued. The governors were formerly the magistrates, town councillors, and parish ministers of Edinburgh, but under the new scheme the number of trustees is fixed at 21, of whom eleven are elected by the magistrates and town council, three by the school board, two by the city ministers, one by the magistrates and council from ministers other than those of the Established Church, two by the senatus of the University, one by the Royal Society, and one by the Chamber of Commerce. The amount of the original bequest 'for the maintenance, relieve, bringing upp and education of poore fatherlesse boyes, freemen's sonnes of the towne of Edinburgh' was about £24,000; but so well has this been invested, and so prudently has it been managed, that the present capital value of the trust property is over £700,000, and the income—exclusive of fees and grants from the school and the Heriot-Watt College—about £30,000, while the total ordinary income is over £34,000.

Donaldson's Hospital, to the NW of Haymarket, on the N side of the Corstorphine Road, from which the grounds extend northward to the Water of Leith, was built and endowed from a bequest of about £210,000 by James Donaldson of Broughton Hall, proprietor and printer of the *Edinburgh Advertiser*, who died in 1830. Erected in 1842-51 at a cost of about £100,000, after designs by W. H. Playfair, the buildings, which are an excellent and rich example of the Tudor style as adapted to modern requirements, are arranged round an open quadrangle, measuring 258 by 207 feet on the outside, and 176 by 164 in the interior. In the centre of the main front, flanking the principal entrance, are four octagonal towers of five storeys, with domed roofs and lanterns rising to a height of 120 feet; while at each corner are four square towers of four storeys with ogee roofs, rising to a height of about 100 feet. The other parts of the elevations are two storeys high, with mullioned windows with buttresses between. There is a beautiful little chapel projecting from the N side. The hospital was erected and endowed for maintaining and educating, '(1) Poor children of the name of Donaldson or Marshall, if appearing to the governors to be deserving; (2) such poor children as shall appear to be in the most destitute circumstances and the most deserving of admission.' It has accommodation for 150 boys and 150 girls, and about half the inmates are deaf and dumb. The age for admission is from 6 to 9, and for leaving 14, and no child is admitted whose parents are able to maintain it. The instruction given is such a plain English education as will fit the boys for trades and the girls for domestic service.

The Orphan Hospital at Dean was projected by Andrew Gairdner, merchant in Edinburgh, in 1727, and began its career of usefulness in 1733 in a house rented for the

purpose. Two years later it was removed to a building erected for it and situated at the E end of the Nor' Loch Valley. Here it remained till 1833, when, in consequence of the unhealthiness of the site, a fresh change was made to the present building. This, erected in 1831-33 at a cost of £16,000, after designs by Thomas Hamilton, is a plain two-storey structure with a central portico, with seven Tuscan columns, and over the wings two square open arched towers. Over the portico is a small clock turret, which contains the clock from the tower of the old Netherbow Port. The institution, which has accommodation for 200 children, has, from lack of funds, only about 100 inmates, who are either orphans or fatherless children maintained by the charity, or similar hoarders from any part of Scotland, who are admitted at a charge of £16 a year for boys and £14 for girls. The age for admission is between 7 and 10, and they now receive their education at one of the neighbouring board schools. The institution is partly maintained from the interest on donations that have been allowed to accumulate, but mainly from voluntary contributions and legacies.

John Watson's Hospital, near the Orphan Hospital, was founded and endowed by John Watson, W.S., who in 1759 bequeathed his estate to trustees for 'such pious and charitable uses within the city of Edinburgh as they shall think proper.' The original bequest was about £5000, but this was carefully nursed by the trustees, who are the Keepers and Commissioners of the Signet, and in 1822 an Act of Parliament was obtained authorising the erection and endowment of a hospital for destitute children. The building is a large plain edifice with a Doric portico, erected in 1825-28, after designs by W. Burn. The inmates, who number about 100, and are admitted between 7 and 9 and leave at 14, are fatherless children of the better classes, such as clergymen, officers in the army and navy, legal and medical practitioners, and the like.

The Trades' Maiden Hospital, founded in 1704, and incorporated in 1707, owes its existence to a fund formed from donations given by the Freemen of the Incorporated Trades, and by Mrs Mary Erskine, whose name has been already mentioned in connection with the Merchant Maiden Hospital. Long housed in a plain building in Argyle Square, dating from 1740, it was, in 1859, when the site was acquired for the Industrial Museum, removed to a building at Rillbank, on the S side of the Meadows. This having been in 1892, as already noticed, purchased by the directors of the Sick Children's Hospital, the Institution was again moved to the mansion-house of Ashfield, on the S side of the city, at the corner of Blackford Avenue and Grange Loan. The inmates, who number about 50, must receive presentation to the benefits of the foundation from some of the trade incorporations, and must be daughters, granddaughters, or great-granddaughters of freemen craftsmen, whom failing, any girl, qualified by age or otherwise, who may be presented by the incorporation or society. They are admitted between 7 and 11 years of age, and may remain till they are seventeen. They now receive their education at George Watson's College for Ladies.

There is a College for Daughters of Ministers of the Church of Scotland and Professors in the Scottish Universities, in Kilgraston Road, in the Grange district; but neither this, nor any of the other private higher class schools of Edinburgh, requires detailed notice.

Board Schools.—The City School Board consists of 15 members, and was constituted in 1872 by the Education Act passed in that year. When the first board came into office, it was found that there were then within the limits 169 primary schools, with accommodation for 45,492 scholars; but that 7 of these, for 1218 scholars, were to be discontinued, so that to provide for all children of school age it would be necessary to provide 4160 additional places. To meet this deficiency, it was resolved to erect 7 new schools for 4200 children; and by 1874 buildings had been acquired, or temporary provision made, for the wants of the district, in 17 day and 13 evening schools. A deficiency in places still existed, and in

1893, many of the lesser and temporary premises having been abandoned, the board had under its management 24 schools, with accommodation for 24,423 pupils—10 square feet being allowed for juveniles, and 8 for infants—the average number on the rolls for 1892 having been 24,657, and the average attendance 20,397. The schools vary in architectural features, but some of them are very handsome buildings; and in this connection Sciennes School, on the S side of the Meadows, and the one last erected, may be particularly noted. Designed in Queen Anne style, by Mr Robert Wilson, and erected at a cost of about £28,000 (inclusive of the price of the site), it has all the ordinary school fittings, and is besides provided with a cookery department, a large swimming-bath, and a gymnasium. There were in 1892 one elementary, 6 continuation, and 5 advanced evening schools, attended by 1222 pupils. The staff in 1892 numbered 606, of whom 231 were assistants and 239 pupil-teachers. The salaries of the head-masters vary from £320 to £420, of first assistants from £130 to £200, and of ordinary assistants from £65 to £120. The following table gives details, taken from the *Report of the Committee of Council on Education in Scotland for 1894-95*, for the various schools:—

	School.	Accommodation.	Average Attendance.	Grant.
1	Abbeyhill, . . .	769	774	£803 15 6
2	Bristo, . . .	856	768	798 14 6
3	Canonmills, . . .	850	764	855 5 2
4	Castle Hill, . . .	913	826	907 2 6
5	Causewayside, . . .	972	608	673 15 6
6	Dalry, . . .	1712	1467	1607 9 4
7	Davie Street, . . .	586	497	495 12 6
8	Dean, . . .	565	536	562 2 8
9	Leith Walk, . . .	1483	1429	1630 14 7
10	London Street, . . .	1.66	1468	1594 10 10
11	Lothian Road, . . .	950	886	995 4 6
12	Milton House, . . .	1174	980	1042 16 2
13	New Street, . . .	706	452	459 8 0
14	North Canongate, . . .	1045	879	961 12 0
15	North Merchiston, . . .	1016	989	1021 7 4
16	Regent Road, . . .	883	834	914 3 0
17	St Bernard's, . . .	1041	1088	1162 11 0
18	St Leonard's, . . .	1463	1022	1162 8 0
19	Sciennes, . . .	1323	1276	1458 4 6
20	South Bridge, . . .	1281	1147	1263 14 0
21	Stockbridge, . . .	727	787	873 12 6
22	Torphichen Street, . . .	988	875	991 1 0
23	Warrender Park, . . .	912	929	1056 8 0
24	West Fountain- bridge,	937	852	915 4 2

The income of the Board amounts to nearly £90,000, of which about £50,000 is derived from the rates, including the proportions (a little over £3000) received from the parishes of North and South Leith, Duddingston, and Liberton. Nearly £36,000 is derived from grants, including those of the Science and Art Department, and the grant in relief of fees; while fees themselves produce now only a little over £1000. Of the outlay over £45,000 is spent on teachers' salaries, and £20,000 in payment of interest and instalments of loans. The total amount of loans received up to May, 1892, was over £326,000, of which over £72,000 had been at the same date repaid; while over £90,000 had been paid on account of interest. The Board Offices are in a handsome block of buildings at the corner of Castle Terrace and Cornwall Street, erected in 1888, after designs by Mr Wilson, at a cost of £10,000. Plain Italian in style, they have a corner-tower with a dome.

Among the miscellaneous schools may be noted a School of Cookery, and a ragged school.

Parishes and Parochial Affairs.—Edinburgh has within itself the *quoad civilia* parishes of City (603 acres) and Canongate (678 acres), and covers also portions of St Cuthbert's, North Leith, South Leith, Duddingston, and Liberton. St Cuthbert's, which contains more than half the population of the city, extends beyond the municipal boundaries as far as Slateford, Corstonphine Hill, Trinity, and North Leith. Its greatest

length is 5 miles, and the greatest breadth $3\frac{3}{4}$ miles, while the area is 6675 acres, of which 14 are foreshore and $13\frac{1}{2}$ water. The portion of the parish beyond the parliamentary boundary is joined to the district of Dean for school purposes, under the St Cuthbert's and Dean School Board. For poor-law purposes St Cuthbert's and Canongate are combined as St Cuthbert's Combination. The poor-house belonging to it was formerly a group of buildings to the W of St Cuthbert's Church, but when these were sold to the Calodoonian Railway Company, and removed in 1866, they were replaced by the present handsome poor-house, which stands in an open and airy situation amid extensive grounds, to the W of Fettes College. Additions were made to it in 1880. The average number of inmates is a little over 400, and of poor belonging to the parish over 3000. The income and expenditure of the combination are about £36,000. The offices of the Board are in a handsome building at the corner of Castle Terrace and Cambridge Street, erected in 1888, after designs by Mc'Gibbon and Ross, at a cost of £12,000. Late Scottish baronial in style, it has an angular corner tower. The old poor-house for the City parish stood on the W side of Forrest Road, but was sold in 1871, and the inmates removed to a new building at Craiglockhart, on the SW of the city, erected in 1867-70. Scottish baronial in style, it has a corbelled octagonal tower in the centre, 105 feet high, and comprises besides the poor-house proper an infirmary and a lunatic asylum. The average number of inmates is about 450, and of the poor belonging to the parish about 1700. The income and expenditure are over £26,000. The offices are in a plain building between Bristo and Forrest Road, occupying part of the site of the old Darien house.

Registration.—For registration purposes Edinburgh is divided into five districts. These, with their populations in 1891, are:—St George's, 69,154; St Andrew's, 56,360; Canongate, 38,252; St Giles', 31,779; Newington, 65,680. The registrars are appointed by the town-council.

Ecclesiastical Affairs.—*Established Churches.*—For ecclesiastical purposes the City parish is now broken up into Abbey (part), Greenside, St Giles', Lady Yester's, New Greyfriars, New North, or West St Giles, Old Church, Old Greyfriars, St Andrew's, St George's, St John's, St Leonard's (part), St Luke's, St Mary's, St Stephen's, Tolbooth, Trinity College (part), and Tron parishes. Canongate has been broken into Canongate and Trinity College (part) parishes. St Cuthbert's has been divided into Buccleuch, Dean (part), Granton (part), Lady Glenorchy's, Mayfield (part), Morning-side, Newington, Robertson Memorial, St Aidan's, St Bernard's, St Cuthbert's, St David's, St Leonard's (part), St Margaret's, St Michael's, and West Coates parishes. There are also a Gaelic charge, a deaf and dumb congregation, and four mission stations. The number of communicants is over 36,000.

The stipends of all the city ministers were, prior to 1860, derived mainly from a tax, known as the annuity-tax, on houses and shops within the royalty; and rose from £200 each in 1802, to £625 in 1850. By the Annuity-tax Abolition Act of 1860, they were fixed at £600 for the existing incumbents, the funds being raised by means of seat-rents and a general tax, and power being retained for future reduction of the incomes to £550. Under an amending Act of 1870, the annuity payable by the city was finally redeemed for £56,500. The patronage of all the charges was held by the town council till the Abolition Act of 1860, and from that date till the abolition of patronage in 1875, by the ecclesiastical commissioners appointed under the Act by various public bodies. This commission still administers all the temporal affairs of the city charges.

St Giles' Church.—There seems to have been a church on the site of the modern St Giles' before the year 854, but by whom or under what circumstances it was built, or why dedicated to St Giles, is not known. A new church in lieu of the original one was erected in the early part of the twelfth century by Alexander I. It

stood on the north-western part of the ground occupied by the present building, and had a choir and nave, with small side aisles and a central tower, but it was almost entirely demolished in 1385, when Richard II. burnt the city. One of the doorways on the N side, where is now the third window from the west, long survived, but was unfortunately destroyed when the fabric was being repaired in 1797 or 1798. Nothing else seems to have been left except, probably, the three octagonal pillars on each side of the W end of the choir with their arches, and the wall about the entrance to the Royal Pew. Rebuilding on a larger scale, however, proceeded apace, large grants being made from the municipal funds for this purpose as early as 1387, when a contract was entered into for the construction of five vaulted chapels on the S side of the nave. These remained intact till 1829, when the two to the W were demolished; the others form the present south aisle. Between 1387 and 1416 these chapels had been finished, and the Albany Aisle on the north-west of the nave added. This received its name from the Duke of Albany, who, always careful to keep on good terms with the church, made a number of gifts for the building of 'the fabric of the parochial church of the burgh of Edinburgh.' The chapel of St Eloi, to the W of the N transept, was probably also added about the same time. About 1460 still further extensions took place. One of these was the enlargement of the choir to the E, and the other its extension on the S side, in what is known as the Preston Aisle. The first seems to have been carried out in accordance with the royal desire, and probably partly at the royal expense, for the capital of one of the pillars, called the King's Pillar, bears shields on which are the arms of King James II., of his wife Mary of Gueldres, and of his son Prince James. The second receives its name from William Preston of Gortoun, who 'had with diligent labour and great expense, and aided by a high and mighty prince, the King of France, and many other Lords of France, succeeded in obtaining possession of the arm-bone of St Giles, and this inestimable relique had been freely bequeathed by him "to oure mother kirk of Sant Gell of Edynburgh withouten any condicion." The provost, bailies, and community of Edinburgh, deeply impressed with the importance of such an acquisition, voluntarily undertook to commence within one year [after January 1455], and to complete in the space of six or seven years, an aisle "furth fra our Lady Isle, where the said William lvis," to erect there his monument with a brass tablet, with his arms and an inscription specifying his having brought that relique to Scotland; his arms also to be put in hewn stone in three other parts of the aisle; also an altar, and to endow a chaplain to sing for him from that time forth, and granting to his nearest relations the privilege of carrying the relique in all public processions.' And so the aisle remains to this day, but the precious arm-bone, which was kept in a richly jewelled case, can no longer be carried in public processions, for it has disappeared from mortal ken since 1560.

In 1466 St Giles' was, by a charter granted by James III., converted into a collegiate foundation, with a provost, a dean, sixteen prebendaries, a master of the choir, four choristers, a sacristan, and a beadle, together with a number of chaplains to attend to the thirty-six altars of the church; and just before the death of James IV. it received the last pre-Reformation addition to the building. This was a chapel off the SW corner of the Preston Aisle, founded by Walter Chepman for the prosperity of the King and Queen and the benefit of his own soul; and in the vault beneath the 'Scottis Caxton' was buried. Then came all the troubles of the Reformation, when the walls rang with the fervid eloquence of Knox, or echoed the sad tribute he paid to 'the good Lord James' when he was borne to his last rest in the Moray Aisle, and the preacher 'moved three thousand persons to shed tears for the loss of such a good and godlie governor;' or again, when he preached his last sermon at the installation of his successor 'on the dutie of a minister and the dutie of the flock,' and then, tottering feebly out, passed along the High Street home to die.

After the Reformation the building was, from 1633 to

1638, the cathedral of the short-lived episcopal diocese of Edinburgh, which came to such an abrupt end after Jenny Geddes had thrown her stool at the head of poor Dean Hannay as he read the service book, and the Bishop himself narrowly escaped being stoned to death by 'a number of the meaner sort of people, most of them waiting maids and women who use for to keep places for the better sort.' Partitioned off ultimately into four churches—the High Church in the choir, the Tolbooth Church in the SW, the Old Church in the middle and part of the S side, and the Little Kirk in the NW—in which condition it remained till our own day, St Giles' suffered for a time even greater degradation, for part of it was used for a time as a prison, and as a police-office. Surrounded till 1817 by the shops called the Krames, which were placed against its walls, and hemmed in by the Luckenbooths on the N, the Old Tolbooth on the W, and shops and tall tenements on all the other sides, it was practically lost to view; and it might have been better had it remained so, for, after all these obstructions had been removed, the exterior of the building was discovered to have a ragged appearance (as well it might), and plans for its renovation by Mr Burn were approved of, and the alterations carried out, with the aid of a government grant of about £20,000, in 1829-32. The result can be seen and lamented any day, and no more barbarous and tasteless piece of work than the outside change has ever been accomplished in the nineteenth century. The inside and the tower fortunately almost entirely escaped, for, though alterations were made, they were of such a nature that it was possible to undo them. The complete restoration of the interior was first proposed by William Chambers, the publisher, when he was Lord Provost in 1867, but not till 1871 was a Restoration Committee appointed, with Mr Chambers as chairman. St Giles' at this time contained the High Church in the E end, the New North or West St Giles' Church in the W, and Trinity College Church in the south. By the middle of 1872 the subscription obtained had reached a sum sufficient to warrant a commencement being made, and, under the direction of Mr W. Hay, the choir was, at a cost of £4500, brought into nearly its original state; and in its renovated form was opened for public worship in 1873. By the removal of the Trinity College Church to a new building, in 1878, the southern and centre parts of the church, including the Prestow Aisle and the transepts, became available, and in 1879-80 these portions were treated as the choir had been, the galleries and partitions removed, and the walls cleared of plaster and cleaned; the whole cost, which amounted to some £3000, being borne by Mr Chambers. Finally a sum of money sufficient to erect a new church for the West St Giles' congregation having been raised by public subscription, Mr Chambers undertook, at his own expense, the restoration of the nave, the operations in connection with which were finished in 1883, when, thanks to this act of munificence on the part of a private citizen, St Giles' became once more, as far as was possible, worthy of its historical associations, and 'so long as these stones remain one upon another will men remember the deed which William Chambers did, and tell of it to their children.' The total length inside the walls is 194 feet from E to W, and 124 across the transepts; while the width of nave, choir, and transepts is about 23 feet. The height of the arches varies from 35 feet beneath the tower to 26 feet in the choir, and the height from the floor to the roof of the choir is 51 feet. The western entrance, which dates from 1883, is entirely new, and has a double doorway, over which is a seated figure of St Giles with his hind. In the double row of canopied niches are placed statuettes of the leading royal and ecclesiastical personages associated with the history of the building. The steeple, rebuilt in 1648, on the model of a previous one of fifteenth century work, which had become dilapidated and required to be taken down, consists of a tower 30 feet square, terminating in a balustrade and surmounted by an open octagonal lantern in the shape of an imperial crown. It is about 150 feet high, and standing as it does on elevated ground is seen from a great distance, and forms a characteristic

feature in all views of Edinburgh. 'From whatever point of view the city is looked at, the picturesque crown of the steeple is seen sharply outlined against the sky. Soaring aloft unlike every other spire in its neighbourhood, it seems like the spirit of old Scottish history, keeping watch over the city that has grown up through the long years beneath its shadow. Edinburgh would not be Edinburgh without it.'

The building, as now existing, consists of nave and choir, with side aisles and transepts. Beyond the north side-aisle of the nave are the Albany Aisle at the W end, the scssion-house (erected in 1883), and St Eloi's or the Hammermen's Chapel, and to the E of the transept the Chambers Memorial Chapel. To the S of the south side-aisle of the nave are the three remaining chapels of the five erected in 1887, and now called the South Aisle, the vestry, erected in 1883, and the Moray Aisle, while to the S of the south side aisle of the choir is the Preston Aisle and the Chepman Aisle. The Chambers Memorial Chapel, dedicated to the memory of the modern benefactor, and containing memorial windows and a brass tablet setting forth the history of the renovation, was formed in 1891, by opening up and connecting with the main building, by a wide arch, a little side room, in the corner between the north transept and the choir, dating probably from the Reformation. In the Moray Aisle the Good Regent was buried in 1570, and in it is now placed the monument erected to him in 1864, by the twelfth earl of the line, which bears the brass plate from the old monument erected in the year of his death, with Buchanan's beautiful inscription—*Jacobo Stovarto Moraviae Comiti Scotiae Proregi viro actatis suae longe optimo ab inimicis omnis memoriae deterrimis ex insidiis extincto ceu patri communi patria moerens posuit.* The widow above was erected by the fourteenth earl, and represents the assassination at Linlithgow, and the scene in St Giles' during Knox's sermon at the funeral. From this recess a doorway and staircase lead down to a small vault beneath the Chepman Aisle, where the remains of the Marquess of Montrose were buried with such ceremony in 1661, and in the aisle itself overhead is the memorial erected by the Grahams to their great kinsman in 1888—the finest mural monument that has been executed in Scotland for the last two hundred years. Designed by Dr Rowand Anderson in the Renaissance style of the middle of the seventeenth century (the time of the Marquess' death), and carved in coloured marble and alabaster, with elaborate gilding, by Messrs John and Birnie Rhind, it has at the base a semicircular arch, deeply recessed, and with a sarcophagus and black marble bier, on which is a recumbent figure of Montrose. The window beside is filled with stained glass, showing the armorial bearings of the distinguished relatives, companions-in-arms, and associates of the Marquess. In the Aisle is also a brass plate, inscribed by Dr William Chambers to Chepman's memory. Beside the Moray Aisle is a tablet in honour of Jenny Geddes, and on one of the pillars another commemorating Dean Hannay. There are a number of stained glass memorial windows, those in the choir showing incidents in the life of Christ. The great west window has figures of the prophets, and in the clerestory are representations of the arms of the various crafts of Edinburgh. Ranged along the pillars are old stands of colours that have been carried by various Scottish regiments—many of them placed here with considerable ceremonial in 1883—and in different parts of the church are interesting military memorials. In the S transept, formerly known as St Anthony's Aisle, is a very fine organ, erected in 1884-91. It consists of four full manuals, of compass CC to A (fifty-eight notes), and a pedal organ, CCC to F. The great organ has 16 stops, 6 composition pedals, and 1218 pipes; the swell organ 16 stops, 4 composition pedals, and 1160 pipes; the choir organ 11 stops, 3 composition pedals, and 628 pipes; the solo organ 6 stops and 348 pipes; and the pedal organ 11 stops, 4 composition pedals, and 390 pipes. There are besides 11 couplers, which bring up the whole number of knobs at the organist's disposal to 71. In the Preston Aisle is the Royal Pew, erected in 1885, and elaborately

carved in oak, after the style of the old stalls in Dunblane Cathedral; and at the E end of the choir are stalls for the Deans of the Chapel Royal and the chaplains of the Queen. There is a special royal entrance at the E end of the aisle, formed in 1885. The only old bell in the steeple is the vesper or ave bell, which bears the inscription, *O mater Dei, memento mei: Anno 1504*. That on which the clock strikes the hours was recast in 1844. There are also two bells on which the quarters are struck, dated 1700 and 1728, and eight chime bells erected in 1858. On a frame beneath the open arches of the crown there remained till 1890 a set of 23 small musical bells, dating from 1698 (when they were cast by Meikle on the Castlehill); but, as they had suffered a good deal from the attacks of age and time, they were in the year just mentioned replaced by a set of 13 tubular bells in the key of A flat, the largest having a length of 9 feet 3 inches and a diameter of 4½ inches, and the smallest a length of 5 feet and a diameter of 3 inches. The clock belonged originally to Lindores Abbey, after the dissolution of which, in 1585, it was bought for £55 by the town council, and was the same year repaired and set up 'in the hie steeple'—curiously enough by a smith from Blantyre.

The Victoria Hall, the meeting-place of the General Assembly of the Church of Scotland, and the parochial church of the Tolbooth parish, at the corner of Castle Hill and Johnstone Terrace, was erected in 1842-44, at a cost of about £16,000, after designs by Gillespie Graham, in the Decorated Gothic style. At each corner is a richly adorned pinnacle, and at the E end is a massive tower containing the chief entrance. The buttresses at the corners of the tower terminate in pinnacles, and from its top springs a handsome octagonal spire, which rises to a height of 241 feet, and forms a very prominent object in many of the views of Edinburgh. Prior to the opening of the Victoria Hall—which receives this name from the Queen, who laid the foundation stone on the occasion of her first visit to Scotland—the Assembly met in St Andrew's parish church. St Cuthbert's, or the West Church, seems to occupy the site of a very early church or cell, dedicated to the great northern saint, the 'kirk-town' of which is mentioned in the time of David I., when it became the property of the monks of Holyrood. The oldest church of which any account remains was a large cruciform edifice with a massive square tower, which suffered very severely during the siege of the Castle in 1689. Taken down at last in 1775, it was replaced by a very ugly building, in the interior of which gallery was piled above gallery, so that accommodation was provided for about 3000 people. The steeple was added in 1787-90, built by public subscription, to render less unsightly the church which the economical heritors had built in so plain a fashion. This gave place again in 1892-93 to the present church, a very plain building, with square-headed windows with architraves below, and circular-headed windows with pilasters above. There are transepts with plain pediments, and a semicircular projection at the E end, on each side of which is a square tower. The old steeple has been preserved. The church is surrounded by a large burying ground, in which is the grave of De Quiney. The congregational halls to the S were erected in 1893.

Trinity College Church, which stood on the W side of Leith Wynd, was founded in 1462 by Mary of Gueldres, consort of James II., as a collegiate church, but was removed in 1848 in connection with the clearances for the Waverley Station. It consisted of choir, transepts, and central tower, and was a rich and beautiful example of Middle Pointed. The E end was pierced by three lofty and richly-traceried windows, and on the S side was a very fine doorway beneath a beautiful porch with groined roof. In an aisle on the N side was the tomb of the foundress, whose remains were, on the demolition of the building, removed and re-interred in the royal vault at Holyrood. The stones of the old church were all carefully numbered and preserved with a view to reconstruction on another site, but after a long lawsuit the project was abandoned, and in 1872 a new church, bearing the same name and

in the same style as the old, was begun in Jeffrey Street, many of the details being exact reproductions of the corresponding features of the original building. To the S of the church is the congregational hall, which is a reconstruction of the apse and eastern portion of the fifteenth century structure, from the old stones. The Tron Church, at the corner of High Street and South Bridge, was founded in 1637, opened in 1647, and completed in 1663. Consecrated to Christ and the Church, it received its name from being situated opposite a public weighing-beam or tron, called the Salt Tron. The present spire was built in 1828 to replace the curious lead-covered wooden one destroyed by the great fire of 1824. The Greyfriars' Churches, Old and New, off Candlemaker Row, near the W end of Chambers Street, take their name from a monastery of the Greyfriars, founded here by James I. An edifice of considerable size and importance, it was, in 1449, the temporary home of Mary of Gueldres, and, a few years afterwards, the asylum of Henry VI. of England; and it was finally demolished about 1559, when the gardens were granted by Queen Mary to the magistrates for use as a public burying ground, 'being somewhat distant from the town.' The Old Church was built in 1612, and had originally a steeple at the W end, but this was destroyed in 1718 by the accidental explosion of some gunpowder which had been stored in it by the city authorities. The whole building was destroyed by fire in 1845, and underwent restoration so slowly that it was not again ready for use till 1857. It was the first Presbyterian church that had stained glass windows or contained an organ. It has had many famous ministers, among whom may be mentioned Principals Rollock, Carstares, and Robertsons, and Doctors John Erskine, John Inglis, Guthrie, and Robert Lee, of the last of whom a medallion, by Hutchison, was placed inside the church in 1870. The Solemn League and Covenant of 1638 was partly signed within the walls and partly on a tombstone in the churchyard. Old Greyfriars figures in Scott's *Guy Mannering*, and is also interesting in connection with his first love affair, he having here made the acquaintance of Miss Margaret Stuart Belsches, the early object of his affections, by offering her the use of his umbrella as the congregation was dispersing. New Greyfriars' Church was built in 1721, adjoining the W end of the Old Church, and is a very plain, not to say ugly, structure. It was injured in the fire of 1845, but not to any great extent. Round these churches is the large graveyard in which are the resting-places of many famous men. At a spot near the NE corner lie the remains of many of the martyrs of the Covenant who were executed in the Grassmarket, and among other tombs may be noted those of George Buchanan (with a stone erected by David Laing on the traditional site of the grave), George Heriot (father of the goldsmith), Alexander Henderson, Sir George Mackenzie, Sir James Stewart, Principal Carstares, Sir John de Medina, Jameson, the painter; Robert Mylne, Principal Robertson, Dr Pitcairn, Allan Ramsay, Colin Maclaurin, Dr Joseph Black, Dr Hugh Blair, Dr M'Crie, Lord President Forbes, Lord President Blair, Boswell of Auchinleck, the two Professors Munro, Kay, the caricaturist; Henry Mackenzie, Sir Walter Scott's father, Dr Carson, Patrick Fraser Tytler, and Duncan Ban Macintyre. The position of the grave of the Regent Morton, who was buried here, is not exactly known. Riddiman has a monument in the New Church. In the southern portion of the ground the Covenanters captured at Bothwell Bridge were confined, exposed to the weather for five months. Canongate Church was built in 1688, to make provision for the parishioners who were turned out of Holyrood Chapel when James VII. appropriated it for service after the Roman Catholic rites. It is a very plain structure, and has the front gable adorned with a deer's head with a cross, representing the crest of the ancient burgh. In the churchyard are the graves of Adam Smith, Dugald Stewart, Dr Gregory, Provost Drummond, and the poet Fergusson—the last with the stone erected by Burns. A space on the N side of the ground has been used since 1692 as a garrison burying ground, and is marked by a granite pillar erected

in 1880. St George's Church, in the centre of the W side of Charlotte Square, was erected in 1811-14, at a cost of £33,000, after designs by Robert Reid. Massive Græco-Italian in style, it has a lofty Ionic portico with four columns and two pilasters, and is surmounted by a handsome dome, which rises to a height of 150 feet, and forms an important feature in all views of the city from the north and west. St Andrew's Church, on the N side of George Street, opposite the Commercial Bank, is a very plain structure, built in 1785, but has a graceful tetrastyle Corinthian portico and steeple, 168 feet high, erected in 1787. The tower contains a fine chime of eight bells, which were placed in position in 1789. The church, the interior of which was altered and improved in 1862, was in 1843 the meeting place of the General Assembly at which the Disruption took place. St Stephen's Church, in St Vincent Street, facing the Howe Street line, was erected in 1826-28, at a cost of £21,000, after designs by W. H. Playfair, and has a massive square tower 163 feet high. Lady Yester's Church, a very plain building on the N side of Infirmay Street, erected in 1803, took the place of an older church a little to the east. The latter was built and partly endowed from a gift of 15,000 merks made in 1647 by Dame Margaret Kerr, Lady Yester, for the purpose. Lady Glenorchy's Church, in Roxburgh Place, was built in 1809 as a chapel of ease to St Cuthbert's. The original building was on the ground now occupied by the Waverley Station, and owed its existence to the beneficence of the widow of Viscount Glenorchy, who erected it in 1774. St Mary's Church, in Bellevue Crescent, dating from 1824, has a good spire 186 feet high; and in the burying ground attached to Buccleuch Church, in Buccleuch Street, are the graves of Dr Adam, the once famous rector of the High School, and Dr Blacklock. Of more recent churches many are excellent specimens of modern ecclesiastical architecture, but none of them calls for special notice.

The Established Church Presbytery of Edinburgh includes all the parishes mentioned above, as well as those of Colinton, Corstorphine, Cramond, Currie, Duddingston, Gilmerton, Granton, Kirknewton, five charges in Leith, Liberton, Mid-Calder, West Calder, Portobello, and Ratho; and the mission stations at Craiglockhart, Juniper Green, Gogar, Portobello, Leith, Oakbank, and Addiewell. There are about 54,000 members within the bounds.

Free Churches.—St George's Church, in Shandwick Place, superseded a previous building in Lothian Road, removed to make way for the Caledonian Railway Station, and was erected in 1866-69 at a cost, including site, of £31,000, after designs by David Bryce. Pædian in style, it is by no means beautiful. The campanile, with its curious candle-extinguisher top, which reaches a height of 185 feet, was added in 1882, and contains a clock with a set of bells which ring the Westminster chimes, and which were placed in position in 1891. Barclay Church, on the western verge of Bruntsfield Links, was erected in 1862-63, after designs by F. T. Pilkington, at a cost of £10,000, the funds being gifted by a lady named Barclay. It is a curiously intricate example of the Venetian Gothic style, with an elegant tower and spire rising to the height of 250 feet. The congregational hall was added in 1891-92. The M'Cre Church in Davie Street formerly belonged to the Original Secession, and is notable for the ministry in it of Dr M'Cre, the biographer of Knox and Melville. St John's Church, in Johnston Terrace, is notable for the ministry of Dr Guthrie and Dr Hanna. None of the other Free Churches calls for particular notice.

The Free Church Presbytery of Edinburgh includes the churches of Corstorphine, Cramond, 41 charges in Edinburgh, Gorgie, Juniper Green, 5 charges in Leith, Liberton, Newhaven, Portobello, Ratho, and West Calder. There are about 29,000 members or adherents within the bounds.

The U.P. Presbytery of Edinburgh includes the charges of Aberlady, Balerno, Bathgate, Broxburn, 2 charges at Dalkeith, Dunbar, East Calder, East Linton, 27 charges

in Edinburgh, Fala, Ford, Gorebridge, 2 charges in Haddington, Howgate, Lasswade, 7 charges in Leith, Mid Calder, 2 charges in Musselburgh, Newlands, North Berwick, 2 charges in Peebles, Penicuik, 2 charges in Portobello, Queensferry, Slateford, Tranent, Wardie, West Calder, West Linton, and Whitburn. The number of members within the bounds is about 29,000. Broughton Place Church was the scene of the labours of the well-known Rev Dr John Brown; and Nicolson Street Church had for one of its ministers Jamieson of *Scottish Dictionary* fame. None of the other churches in Edinburgh calls for particular notice.

Episcopal Churches.—St Mary's Cathedral Church for the diocese of Edinburgh, on the E side of Palmerston Place, originated in a bequest by the Misses Walker, who owned the estate of Coates, comprising the sites of Coates Crescent, Walker Street, Melville Street, and several other thoroughfares in the West End. This, which yielded a revenue of £20,000, they bequeathed for erecting and endowing a cathedral, and for purposes connected with it, so far as the funds would allow. The proceeds became available in 1870, and the work, begun in 1874 in accordance with designs by Sir George Gilbert Scott, was after his death, in March 1878, carried on and completed by his son, Mr John Oldrid Scott. The church was consecrated and opened in Oct. 1879. The cathedral is cruciform in plan, with lofty central tower and spire, the nave, choir, and transepts having respectively seven, four, and two bays. Each of the four arms has aisles on both sides, and by the arrangement of the reredos the choir aisles are connected at the E end. The style is Early Pointed, and recalls Jedburgh Abbey, and Duublane and Glasgow Cathedrals. The choir, crossings, and aisles are grained in stone, the nave and transepts in wood. The E end has three lancet windows, above which is a range of niches containing figures about life size, and over these is a seated figure of our Lord in glory, with angels grouped around. The fronts of the N and S transepts have wheel windows, and the W front has a great arch, within which are four lancet windows of equal size and design, with a beautiful rose window above. In this front is the main entrance, with recessed arch and elaborate carving, the doorway being divided by a central pier, on which rests a sculptured tympanum. The total external length is 262 feet; width across transepts, 132½ feet; across nave and aisles, 75 feet; and height of ridge of roof externally, 84 feet. There are towers at each corner of the W end, and at the intersection of the choir, nave, and transepts, is a very massive tower and spire, 42 feet across, and rising to a height of 295 feet. The chapter house to the N was added in 1891, the necessary funds having been provided from a bequest by Mr Rollo, W.S. Internally the whole is elaborately finished, the pavement of the choir being of Sicilian marble and tiles, and the wooden fittings, stalls, bishop's throne, etc., of walnut. In 1880 there was added a reredos of reddish-veined alabaster with enrichments of variously coloured marbles, and sculptures in white Carrara; the most important of the latter being a relief of the Crucifixion by Miss Grant. It has a central elevation and two receding wings, one of which has a statue of St Margaret, and the other, one of St Columba bearing the crozier of St Fillan. The song school was elaborately decorated in fresco in 1890-92 by Mrs Traquhair—a labour of love. The cost of the whole building was over £100,000.

St Paul's Church, at the E end of York Place, formerly the bishop's church or pro-cathedral, was erected in 1816-18 at a cost of about £12,000, after designs by Archibald Elliot, and is a somewhat heavy edifice in the later Pointed style, with intermixture of Tudor. The interior was greatly improved, and a chancel was added, in 1891-92. The organ was originally built in 1774 by Schnetzler for the church which preceded the present, and underwent, from time to time, such improvements as won for it the reputation of being the finest in Scotland. Further improvements were made in 1870, and it has now forty stops, besides eight couplers. One of the ministers was the Rev Archibald Alison, author of *Essays on Taste*, and father of the historian.

St John's Church, at the corner of Princes Street and Lothian Road, was erected in 1818 at a cost of £15,000, after designs by W. Burn, and is an oblong edifice, with nave and aisles, Perpendicular Gothic in style, with details copied from St George's Chapel at Windsor. At the W end is a square tower, 120 feet high, with corner pinnacles. At the E end is a chancel, added in 1882, and a large low vestry. Underneath are burial vaults, and these and the little burying ground contain the remains of Sir Henry Raeburn, Sir William Hamilton, and Macvey Napier. One of the ministers of St John's was the Rev Dean Ramsay, the genial author of *Reminiscences of Scottish Life and Character*. Christ Church, in Morningside, a very beautiful building, in the French Gothic style of the thirteenth century, was erected in 1876 at a cost of £11,000, after designs by Mr H. J. Blanc.

The *Episcopal Diocese of Edinburgh* contains 14 charges and 7 mission stations in Edinburgh, charges at Alloa, Armadale, Biel, Colinton, Dalkeith, Dalmahoy, Dunbar, Dunmore, Duns, Falkirk, Galashiels, Haddington, Hawick, Jedburgh, Kelso, Lasswade, Leith, Melrose, Musselburgh, North Berwick, Peebles, Portobello, Selkirk, Stirling (2), Trinity, and West Linton, and mission stations at Balerno, Bo'ness, Eyemouth, Chirnside, Gargunnoch, Gilmerton, Penicuik, and South Queensferry. The number of members within the bounds is about 25,000.

Other Churches.—There are also in Edinburgh one church connected with the United Original Seceders, 8 Congregational churches, 4 Evangelical Union churches, 5 Baptist churches, a Wesleyan Methodist church, an English Episcopal church, a Unitarian church, a Catholic Apostolic church, a Jewish Synagogue, and 6 Roman Catholic churches.

The Catholic Apostolic Church, at the N end of Broughton Street, is a very handsome building, erected in 1874-76 at a cost of £17,000, after designs by Dr Rowand Anderson. The Roman Catholic pro-cathedral at the S end of the same street, close to the Theatre Royal, is a plain building, erected in 1813, at a cost of £8000, after designs by Gillespie Graham. It was greatly enlarged and improved in 1891. Connected with the Roman Catholic Church there is a convent (St Catherine's) in Lauriston, and another (St Margaret's) in Whitehouse Loan, near Bruntsfield Links. The former was built in 1861, and the latter, dating from 1835, was the first religious house established in Scotland after the Reformation. It has a beautiful little Norman chapel, designed by Gillespie Graham, in the vaults of which lie the remains of Mr and Mrs Hope-Scott of Abbotsford.

Social Condition and Industries.—As the principal seat of the administration of justice, the meeting-place of the supreme courts of the principal religious denominations, a fountain-head of scientific and literary activity, the seat of a great university, and the home of many good schools, Edinburgh contains always a large body of inhabitants who belong to the cultured classes either by education or occupation, or who are attracted thither by the beauty of the place and the excellence and cheapness of the education they are able to procure for their families. The city, too, is truly national; and unquestionably, London excepted, 'fulfils the idea of a capital more than any other city in the United Kingdom, and every Scotsman finds in it a common centre for his sympathies.' Edinburgh, remarks Alexander Smith, 'is not only in point of beauty the first of British cities, but, considering its population, the tone of its society is more intellectual than that of any other. In no other city will you find so general an appreciation of books, art, music, and objects of antiquarian interest. It is Weimar without a Goethe—a Boston without its nasal twang.' Edinburgh, he says elsewhere, 'is a patrician amongst British cities, "a penniless lass wi' a lang pedigree." She has wit if she lacks wealth; she counts great men against millionaires. . . . The success of the actor is insecure until thereunto Edinburgh has set her seal; the poet trembles before the Edinburgh critics; the singer respects the delicacy of the Edinburgh ear; coarse London may roar

with applause, but fastidious Edinburgh sniffs disdain, and sneers reputations away.'

Though the city derives considerable commercial importance from the presence in it of so many head offices of banks and insurance companies, employing a large amount of capital, and though it has a considerable amount of trade, and is probably the greatest retail shopkeeping centre out of London, it can be said to have but few industries of widespread importance. The making of linen, at one time of considerable consequence, has long been extinct, as has also the weaving of rich shawls and plaids in imitation of Indian work, which was begun in 1805, and for a time promised well. Silk manufacture, begun in 1841 in a large factory at Fountainbridge, had soon to be abandoned, and in 1855 the buildings passed into the hands of the North British Rubber Company, who succeeded in establishing in them, and in the extensive enlargements that have from time to time become necessary, a thriving and very important business in all kinds of india-rubber goods. There is also an extensive manufacture of vulcanite and other rubber products in an adjacent work. Other branches of general industry that may be mentioned are brewing and distilling—which are largely carried on, the city having been long famous for its ales, and the Caledonian Distillery being one of the largest in the world—cabinetmaking, coach-building, tanning, the manufacture of jewellery, and of machinery for paper mills—of which there are a number in the neighbourhood—type founding, printing, and publishing. The two last demand rather more than mere passing notice, for literature and the arts connected with its production may be said to hold the most prominent place among the productive industries of Edinburgh. About 1507, some thirty years after Caxton set up his press in Westminster Abbey, the first printing press in Scotland was established in the Cowgate, at the foot of Blackfriars Wynd. Scotland's first printer was Walter Chepman, with whom was associated Andro Myllar, and though it may at first seem strange that the art should have been so long in coming to Scotland when we recollect that Blind Harry, Fordun, Henryson, Hector Boece, and other Scotsmen of literary note, lived and wrote prior to this date, yet an art like printing could not easily take root in a country so torn by faction as Scotland had long been. There still exists among the public records the patent dated 15th September, 1507, granted by King James IV. to Chepman and Myllar, burgesses of Edinburgh, 'in which it is set forth that they, "at his Majesty's request, for his pleasure, and the honour and profit of his realm and lieges, had taken upon them to bring hame an print, with all stuff belonging thereto, and expert men to use the same, for imprinting within the realm of the books of the laws, Acts of Parliament, chronicles, mass-books, and portuus after the use of the realm, with additions and legends of Scottish saints, now gathered to be eked thereto, and all other books that shall be necessary, and to sell the same for competent prices by his Majesty's advice and discretion, their labours and expenses being considered." To what extent Chepman and Myllar made use of this privilege we cannot determine, but as Chepman lived till 1530 we may reasonably conclude that a great number of works issued from their press; of these only two are now known—the first, a volume of metrical tales and ballads, such as were popular in those times; and the second, the *Breviarium Aberdonense*. It was not till 1788 that any earlier production of Chepman and Myllar's press than the Aberdeen Breviary was known to exist, but in that year there was presented by a Mr Alston of Glasgow to the Advocates Library the volume of ballads already referred to, and of which that prince of re-printers the late Mr David Laing of the Signet Library, in the preface to his fac-simile reprint of this volume, published in 1827, says:—"This neglected and long forgotten volume proved to be a collection of those tracts which had been published in or about the year 1508; and which, mutilated and defective as it was, possessed an almost inestimable value, and contained various compositions nowhere else preserved, as being a book com-

pletely unique, and as exhibiting unquestionably the earliest productions of the Scottish press." It is known that Chepman was a burghess of Edinburgh, and that, besides being a printer, he was in a good position as a merchant in the city. He settled a chaplainry at the altar of St John the Evangelist, in the aisle which he had built in St Giles' Church, and endowed it with an annual rent of twenty-three merks.

The first printers were followed by Thomas Davidson (about 1586), John Skot (about 1539-60, who got into some trouble with the Privy Council 'for his demerits and fautes'—seemingly in printing books without licence), Robert Leyprevic (about the same date), and Bassendyne. For the benefit of the last, the Privy Council in 1574 levied from each parish in the kingdom the sum of £5, to enable him to print an edition of the Bible, of which he undertook to deliver copies 'weel and sufficiently bund in paste or timmer' for £4 13s 4d; but he was unable to finish his contract within the specified time, and he had to deliver up his office and the printed sheets to Alexander Arbuthnot, by whom the edition was completed and issued. Printing as a large trade was, however, of but slow growth, for before the middle of the eighteenth century there were only four offices, a number which had, however, by 1780 increased to twenty-seven, and which in the subsequent brilliant period of Edinburgh's literary history—when Scott, Mackenzie, Jeffrey, Christopher North, Sir William Hamilton, the Etrick Shepherd, Leonard Horner, and Lockhart, made the literary set of the city world-famous—became larger at a still more rapid rate. Among the earlier publishers was Allan Ramsay, who issued as well as sold his own songs and his pastoral play of the *Gentle Shepherd*, and was among the first to establish a circulating library. Later came Creech, Bell, Donaldson (father of the founder of Donaldson's Hospital), Constable—the first publisher of the *Waverley Novels* and the *Edinburgh Review*—Blackwood, Cadell, Black, Chambers, and Nelson. The start and success of the *Edinburgh Review* and *Blackwood's Magazine* need only be referred to, and though *Tait's Edinburgh Magazine* proved ultimately a failure, *Chambers's Journal*, which was established in 1832, still holds on in its triumphant career, maintaining all the vigour of its youth and its popularity, in spite of the keen competition and many magazines of recent days. The greatest work ever issued from the Edinburgh press is undoubtedly the *Encyclopædia Britannica* (first published in 1771, and the ninth edition in 1875-90); but important as that work was in even its early form, it was but an imperfect indication of the literary activity soon to follow, and which had so important an effect upon the city's prosperity. The far-reaching speculations of Constable, with his popular *Miscellany* and other works; the many productions of the Ballantyne Press, with its ever-flowing stream of novels from the pen of the author of *Waverley*, gave ample proof to the world that Edinburgh was rapidly becoming a centre of literature. Since then the progress has continued, and now the city may be said to produce a larger proportional quantity of standard works than any other with the exception of London. It ought besides not to be forgotten that the process of stereotyping, now so important an aid to the cheap production of literature, was the invention of an Edinburgh silversmith, John Ged, specimens of whose work—the plates of an edition of Sallust—are still to be seen in the Advocates' Library and in the Industrial Museum. The literary prestige which the northern capital attained in the days of *Waverley* and the *Edinburgh Review* has been well maintained, even though in these latter days the great metropolis attracts and absorbs the principal literary talent of the nation.

Newspapers.—Although there was a *Scots Intelligencer* as early as 1643, and this was followed by other papers, the inhabitants had no regular news-letter till a printer named James Watson started the *Edinburgh Gazette* in 1690, and followed it up in 1750 by the *Edinburgh Courant*, which lasted long enough for 55 numbers to be issued. The *Scots Courant*, also published by Watson, came next in 1706, and it again was succeeded by the *Edinburgh*

Flying Post and the *Scots Postman*, but these papers were all short-lived. In 1718, a printer named James M'Ewan obtained from the town council, for a newspaper which he and two other proprietors had established, the exclusive privilege of using the title of *Edinburgh Evening Courant*, on condition that before publication he was 'to give a ne copy of his print to the magistrates,' and this was the first Scottish paper that gave its readers foreign intelligence direct from foreign parts. It was published tri-weekly, and continued to be so issued till 1860, when it became a Conservative morning daily, with the name changed to *The Edinburgh Courant*. It ceased to be issued in 1886. The *Caledonian Mercury*, published first as a tri-weekly in 1720, by James Rolland (but always trying to establish a longer history by tracing its lineage back to the *Mercurius Caledoniensis* of 1660), was curious on account of its political changes. The entrance of Prince Charles Edward into Edinburgh altered its sentiments from the soundest Hanoverianism to the most rabid Jacobitism, while the retreat from Derby was the signal for a demonstrative rejoicing at the overthrow of the 'rebellion.' Afterwards representing moderate Liberal views, it latterly became fiercely Radical. About 1867 it was finally merged in the *Weekly Scotsman*. The *Edinburgh Advertiser*, established in 1764, was a Tory organ, and was so successful a venture that the profits from it and from the book-work printing business with which it was combined, enabled the proprietor, James Donaldson, at his death in 1830, to leave £200,000 for the erection and endowment of the princely hospital that bears his name. The *Scotsman*, founded in 1817, in the Whig interest, fought the battles of Reform and Free Trade with indefatigable vigour, and under the editorship of Charles M'Laren, J. R. M'Culloch, Alexander Russell, and Mr Cooper, has distanced all competitors, and attained a circulation greater than that of any paper in Britain out of London. It was the first paper to establish special telegraphic wires to London, to run special trains to different parts of the country for the transmission of early editions, and to introduce the Walter Press in the provinces. The *Daily Review*, founded in 1861, took the place of the old *Witness* as the leading Free Church paper. It was discontinued in 1886. The papers at present issued in Edinburgh are, the *Catholic Herald* (Friday), *Edinburgh Evening Despatch* (daily, 1886, Liberal), *Edinburgh Evening News* (daily, 1873, Independent), *Edinburgh Gazette* (Tuesday and Friday, 1690, neutral), *Educational News* (Saturday, 1876, neutral), *Farming World* (Friday, 1885, Independent), *North British Advertiser and Ladies' Journal* (Saturday, 1826, neutral), *North British Agriculturist* (Wednesday, 1843, neutral), *Scotsman* (1817, daily 1855, Liberal), *Weekly Scotsman* (Saturday), and the *Scottish Guardian* (Friday, 1870, Independent, the organ of the Scottish Episcopal Church).

Municipal Affairs.—The Corporation.—Edinburgh was a royal burgh as early at least as the time of David I., who refers to it in one of his charters, dated about the middle of the twelfth century, as 'meo burgo de Edwinesburgh'; but the oldest direct burghal charter is that in which Robert I., in 1329, gives to the burghesses of Edinburgh 'the aforesaid Burgh of Edinburgh with the Port of Leith, mills, and other appurtenances, to be held of the King and his successors, with all the franchises it possessed in the time of King Alexander III.' for payment of fifty-two merks yearly. Other possessions and privileges were added by the Jameses, and the city is now mainly dependent for its prerogatives on the Golden Charter of James VI. (1603), which made it a Free Royal Burgh, and the subsequent grant of Charles I., in 1636, which erected it into a Royal City. The first official civic head was probably the royal bailiff or rent-gatherer, but in 1296 we find the chief magistrate termed 'alderman,' and in 1377 'John of Quhitress' is mentioned as the first provost of Edinburgh. The official title of Lord Provost seems to date from the end of the fifteenth century. The city has, since about the same time, formed a county by itself, and the Lord Provost—

who is entitled to have the Right Honourable prefixed to his personal name—is also Lord Lieutenant of the County of the City, and Lord High Admiral of the Firth of Forth, High Sheriff of the royalty, one of the Commissioners for Northern Lighthouses, a member of the Board of Supervision, a member of the University Court, chairman of the different statutory trusts connected with civic affairs, and has precedence of all other subjects within his jurisdiction. From 1583 to 1856 the city was governed by a council—practically a close corporation—of 17 merchants, 6 deacons, and two trades representatives, from whom were chosen a lord provost, a dean of guild, a treasurer, and four bailies. Since 1856 the affairs have been, in terms of a special Act, managed by 39 popularly elected councillors, from whom are chosen a lord provost, a treasurer, and six bailies, while the dean of guild, as elected by the guild-brethren, and the convener of the trades, as elected by the free craftsmen, claim seats as magistrates and office-bearers. For municipal purposes Edinburgh is divided into the 13 wards of Calton, Broughton, St Bernard's, St George's, St Stephen's, St Luke's, St Andrew's, Canongate, St Giles', St Cuthbert's, George Square, St Leonard's, and Newington, each of which returns three representatives, one-third of the whole council retiring from office every year. To the above 13 wards there have been added by the Amalgamation Act of 1896 the three wards into which Portobello has been divided. The lord provost serves for three years from the date of his election, but the other magistrates hold office for one year only. The council also act as Police Commissioners and governors of Trinity Hospital, and have a share in the management of the Water Trust, the Gas Commission, and the Water of Leith Sewerage Commission, as well as in the government of Heriot's Hospital. The committees of the town council are the lord provost's (including watching and coal weighing, and public library), Trinity Hospital, education, markets (including slaughter-houses), plans and works (including fire-engines and policehouse department), treasurer's, law, cleaning and lighting (including workshops), streets and buildings (including drainage), public health, public parks, police appeals, and electric lighting. The municipal constituency, which in 1862 was 8883, rose after the extension of the franchise, till in 1871 it reached 23,935; in 1881, 28,894; and in 1895, for the extended city, over 49,000, of whom nearly one-fourth were women.

The corporation revenue is derived principally from landed property, feu-duties, and market-dues. In 1788 it amounted to about £10,000, but in spite of increase the total revenue became in the first part of the 19th century—owing to improvident management, over-sanguine expectations of increasing revenue, profuse expenditure for entertainments, and extravagant outlay on public buildings and works—insufficient to meet the expenditure; and in 1833, when the value of the whole heritable and movable property (exclusive of ecclesiastical rights, the High School, the council chambers, and the court-rooms) was £271,657, the corporation, which had long lain under heavy emharrassment, was at last declared insolvent. The total debts, which in 1723 had stood at £78,164, then amounted to £635,555, of which one of £228,374, due to government, had been contracted within the preceding years for the works at Leith docks. An Act of Parliament authorising a settlement was obtained in 1838. This relieved the corporation from all responsibility in connection with the docks, fixed a certain annual payment to be made from the dock revenues in aid of Edinburgh, and provided that the public creditors of the city should receive in payment of their debt transferable, redeemable bonds, bearing 3 per cent. of perpetual annuity. The number of bonds issued was 3126, representing £385,035, 16s. 8d., and of these, between 1838 and 30 January 1895, bonds representing £89,732, 10s. of debt had been cancelled, reducing the debt to £295,303, 6s. 8d., and the annuities in respect thereof to £8859, 2s. These annuities were wholly redeemed on 1 February 1895, under

the provisions of 'The Edinburgh Corporation Stock Act, 1894.' During this period also, liabilities amounting to over £600,000, arising in connection with the Cattle Market Act, the Corn Market Act, the Slaughter House Act, the Annuity-tax Abolition Act, the Market and Customs Act, and the City Improvement Trust Act, had been entirely discharged. The gross amount of municipal revenue for the year ended 1 August, 1895, was:—Proper municipal (or common good) account, £236,800; town clerk's fee fund, £4856; registration of births, deaths, and marriages, £1775; valuation of lands, &c., £2596; registration of voters, &c., £3095; slaughter houses, £4176; Dick's trust (for veterinary college), £2539; Trinity College Hospital, £6565; Alexander mortification, £6368; and these, together with minor sums, yielded a total revenue of £295,800, against which there was a total expenditure of £364,784. These amounts included capital sums, as follows:—In revenue, £230,972; in expenditure, £299,633, principally in connection with the redemption of the old city debt annuities before referred to. The halauces in favour of the different city accounts (exclusive of the value of heritable properties and of arrears) at the same date (1 August, 1895) amounted to £210,200; and against accounts, £121,834.

The arms of Edinburgh are, according to Nisbet, in his *Heraldry*, connected with its 'impregnable castle,'

Seal of Edinburgh.

where the honourable virgins,* the daughters of our sovereigns and of our nobility, were kept from the insults of the enemy in time of war. The city,' he adds, 'has that castle represented for their arms, sometimes black on a white field, and at other times white on a black field; but I shall blazon them as I find them most frequently painted, viz.:—*Argent*, a castle, triple-towered and emhatted *sable*, massoned of the first and topped with three fans, *gules*; windows and portcullis shut of the last; situated on a rock proper; supported on the dexter by a maid richly attired, with her hair hanging down on her shoulders, and on the left by a stag or deer proper. Motto, *Nisi Dominus frustra*.' This agrees with the patent of the Lord Lyon prepared in 1732, and registered in 1774, except that the sinister supporter is there called a 'doe proper,' and it is added, that 'on a wreath of the colours is set for the crest an anchor wreathed with a cable all proper.' The crest seems to refer to the Lord Provost's admiralty jurisdiction, and the deer probably represents the hind of St Giles.

Police.—After the battle of Flodden, the citizens

* For Buchanan's opinion of the Maiden Castle see *ante* p. 420. Other writers suggest for the origin of the name *Magh-dun*—the stronghold of the plain.

began voluntarily to perform, by rotations of four, the duty of watching and warding the city; and though in 1648 a paid guard of 60 men, with a captain and two lieutenants, was appointed for the purpose, it proved distasteful to the inhabitants, and the voluntary system was resumed. About 1689 there was raised, under authority of an Act of Parliament, another paid body, 126 in number, which received the name of the town-guard, and had its rendezvous in the lower portion of the Old Tolbooth. The train-bands, contemporaneous with these, and consisting of 16 companies of 100 men each, with the Lord Provost as colonel, were called out only on great occasions. A new system, inaugurated in 1805, and improved in 1812, 1822, and 1848, showed all the leading features of the best modern police organization. The management, originally vested in commissioners, partly appointed by public bodies and partly elected by the ratepayers, passed in 1856 into the hands of the town-council. The force now consists of a chief-constable, three superintendents, a detective inspector, five lieutenants, six inspectors, and over 500 men, the total cost of these being about £49,000. Under the police is now also a sanitary department, which deals with cleansing and public health. The leading officers connected with both are a chief-constable, a court prosecutor, a police clerk, a medical officer of health, a public analyst, a burgh engineer, a road surveyor, an inspector of lighting and cleaning, an inspector of markets, a superintendent of parks and gardens, and a fire-master. The details of management do not differ in a marked degree from those of any other large city. One recent improvement in the sanitation of the city has been the purification of the Water of Leith, by the construction of a great intercepting sewer, formed in 1859-93, at a cost of about £200,000. It extends far beyond the municipal boundaries, reaching as far as Balerno, in order to carry off the discharges from the paper mills on the upper part of the stream. The internal drainage of Edinburgh may now be said to be fairly complete. The solid refuse—ashes, street sweepings, &c.—is now consumed by fire in destructors, which are erected in different parts of the town.

The total revenue for the year ending 15th May, 1895, was, for general police purposes (including watching, lighting, cleaning, fire-brigade, public parks, baths, &c.), £138,001; streets and public safety, £48,876; tramways, £13,827; general improvements, £18,801; sewers and drains, £19,760; public health, £21,133; dwelling-house improvement, £1483; electric lighting, £2248; police force pension fund, £13,600;—total of police, &c., purposes revenue (including £24,632 of capital receipts), £302,364; against which there was an expenditure of £460,753 (including £202,386 of capital expenditure). The total balances in favour of the different departments amounted to £36,825, those against to £628,764, of which over £600,000 was due on account of the tramways, general improvements, sewers, public health, dwelling-house improvement, and electric lighting.

Water.—In 1621 the magistrates obtained parliamentary authority to cast 'seuchs and ditches' in the lands between the city and the Pentlands, for the purpose of bringing in a water supply, but operations were not begun till more than half a century later, when, in 1674, a contract was entered into with a Dutchman, Peter Brauss, who undertook, for the sum of £2950, to lay down a leaden pipe 3 inches in diameter from Comiston to a reservoir on Castle Hill, whence the water was distributed to the various public wells. The springs are 44 feet above the level at Castle Hill, and provided a supply of about 135,000 gallons a day. Other springs were taken in from time to time, and in 1722 the main was increased to 4½ inches; but as there was still a scarcity of water (especially in times of drought) an additional supply was, in 1760, introduced by wooden pipes from Swanston; and in 1787-90, the lead and wooden pipes were replaced by iron mains of 5 and 7 inches diameter, and two reservoirs were about the same time constructed at Bonally. It seems, however, to be the destiny of the Edinburgh citizens ever to suffer from

chronic periodic scarcity of water; for no sooner has the supply at any time been increased, than a few years brings again a fresh demand for 'more.' The new source did not come up to expectation as to either quantity or quality, and it became evident, not only that an additional supply must be provided,* but that all further extension must be based on compulsory powers of assessment. A company, in which the town council, as representing the citizens, held a large number of shares, was accordingly formed in 1810, and a bill introduced into Parliament in 1815, providing for the acquisition of the Crawley springs. It was, however, withdrawn, and only after the incorporation of the company in 1819 was the Crawley water introduced (1819-22), the quantity then becoming available being 7·85 gallons per head. Previous to this the supply as obtained at the public wells had been intermittent, and the upper classes had had their wants supplied by 'caddies,' who carried round small casks, from which they filled the vessels of their customers; while many of the humbler citizens, after forming part of the long lines that stood for hours wearily waiting their turn at the wells, had often to turn away with their 'stoups' empty, and without their 'rake.' Now, however, service-pipes were introduced, and in 1826, power having been obtained to provide for the wants of Leith, the Black Springs were added to the Crawley supply. About 1842 (especially during the excessive drought of that summer, when the reservoir was empty), the new sources were again found inadequate; and in 1843-53 large reservoirs were constructed along the N side of the Pentlands at Bavelaw, Listonshiel, Loganlee, Bonally, Clubbidean, and Torduff, with extensive filter beds at Torduff and Glencorse; while in 1856-60 springs at Colzium were added, and another reservoir formed at Harperrig. The result of this was that the average quantity available per head of the population, which in 1844 had fallen to 11·95 gallons, was by 1863 increased to 31·12. Again, however, there came the inevitable tale of scarcity; and by 1869, when the works were transferred to a Trust selected from or by the Edinburgh, Leith, and Portobello town councils, the question of addition had once more to be faced. Two rival schemes, which divided the city into factions as vehemently opposed as were ever the supporters of the Montagues and the Capulets, were brought forward; and, after a long and severe parliamentary contest, the advocates of St Mary's Loch were defeated, and those of the Moorfoot Hills gained the day. Large works were accordingly carried out in that district in 1875-85, by which 25 gallons a head additional was provided, bringing the total available quantity up to over 40 gallons per head per day. There is a large settling pond and filter-beds at Alnwick Hill, near Liberton, and in 1892-93 regulating cisterns for reducing the pressure on the lower part of the town (the main spring of the Pentlands sources being about 700 feet above sea-level) were constructed at Craiglockhart, Regent Road, Queen Street Gardens, and Stockbridge. In 1890 there was again a scarcity, the works being able to supply at most 15,000,000 gallons a day, and in dry weather only 13,000,000 or less, while with the increased population within the district the consumption was, in the year mentioned, 14,794,000 gallons, of which 11,412,890 were for domestic purposes. There is of course a good deal of waste, and efforts have been made to check this by the use of Deacon meters. In 1895 it was decided to still further increase the water supply, and the Talla water scheme was inaugurated towards the end of that year, the new works being begun under auspicious circumstances. The old cistern at Comiston, which had a capacity of only 5000 gallons, was in 1888 replaced by one holding 80,000 gallons. The original reservoir on Castle Hill, NE of the Castle Esplanade, erected about 1674, was demolished in 1849, and replaced by a much larger one, which has a storage capacity of over 1,800,000 gallons. The income and expenditure of the Trust is now over £98,000 per annum.

* So great was the scarcity about 1814 that many people had to draw from disused quarry holes, and in one case a cask that had gone to London full of ale was brought back filled with water.

Lighting.—The gas-works formerly belonging to the Edinburgh Gas-light Company, formed in 1811, and incorporated in 1818, as well as the works in Leith belonging to the Edinburgh and Leith Gas-light Company, formed in 1839, passed in 1888 into the management of a commission, chosen from, or by, the corporations of Edinburgh and Leith. The total cost has been over £490,000, and the annual income and expenditure of the commissioners are nearly £300,000. By an Act passed in 1891 the Edinburgh corporation undertook to introduce the electric light within three years. Princes Street was lighted by the new illuminant on 11th April, 1895, and a supply or current equal to the requirements of 40,000 incandescent lamps was provided. The demand, however, increased so rapidly that within seven months the equivalent of upwards of 45,000 such lamps had been installed, and the rapidly growing demand rendered it necessary to greatly extend the plant for supply of current. The capital outlay up to 15th May, 1895, had been £102,899. The first lighting of a street by gas was in March, 1820, when High Street was so lighted. The lighting of streets at night had so early an origin as 1554, when we learn from the Council Register that, 'owing to the frequent robberies and assaults committed in the streets of Edinburgh at night, the Council ordered "lanterns or bowets to be hung out in the streets and closes, by such persons and in such places as the magistrates should appoint, to continue burning from five o'clock in the evening till nine."'

Sub-Municipal Bodies.—The Guildry Court comprises the Dean of Guild, the dean of the previous period, ten councillors, a clerk and extractor, a master of works, a procurator-fiscal, and two officers; and the guildry council comprises the dean of guild, fifteen councillors, a secretary, a treasurer, and an officer. The jurisdiction of the court, at one time very extensive, and including mercantile and maritime causes, is now confined to sanctioning the erection of new buildings (none of which can be begun without its permission), to seeing that these neither encroach on private property nor on the streets, and to enforcing the demolition of any dangerous structure. From the Guildry sprang what is now a much more important body, The Merchant Company, which came into existence 'amidst some of the most distressing things in our national history—hangings of the poor "hill folk" in the Grassmarket, trying of the patriot Argyll for taking the test oath with an explanation, and so forth; and its nativity 'was further heralded by sundry other things of a troublous kind affecting merchandise and its practitioners.' Constituted by royal charter in 1681, under the title of The Company of Merchants of the City of Edinburgh, from 'the then haill present merchants, burgesses, and gild brethren of the burgh of Edinburgh who were importers or sellers of cloths, stuffs, or other merchandise for the apparel or wear of the bodies of men or women, for themselves and successors in their said trade in all time coming,' the incorporation received the right of preventing anyone not a member from trading as a merchant in the city, and of impounding all goods exposed for sale in contravention of their bye-laws—a privilege which, in 1688, brought in a contribution to the funds of £36, 13s. Scots. The badge of the members was a stock of broom, 'a modest shrub, but with a great tendency to increase. As such they regarded their society and plan of charity, and ever since "the stock of broom" has been the first toast at all the convivial meetings of the company.' The Episcopalian Dean of Edinburgh, who composed a prayer to be said at the meetings, was in 1686 rewarded with 'six ells of fine black cloth for a gown, at twenty shillings sterling the ell, if paid within twelve months, and if not, the price was to be augmented till paid, at the discretion of the company.' In 1691 the Company purchased a hall in the Cowgate (on a site now occupied by one of the piers of George IV. Bridge) for £670, and adorned it with a hundred and nineteen skins of gold leather on a black ground, at an expense of 253 pounds Scots. A piece of waste land behind the building was at first a source of great concern, but was ultimately converted into a bowl-

ing-green for the use of both the members of the company and the general public. 'Many years afterwards we find Allan Ramsay making Horatian allusions to this place of recreation, telling us that now in winter douce folk were no longer seen using the biased bowls on Thomson's Green—Thomson being a subsequent tenant. It is not unworthy of notice that from the low state of the arts in Scotland, the bowls required for this green had to be brought from abroad. It is gravely reported to the company on the 6th of March, 1693, that the bowls are "upon the sea homeward." Ten pairs cost £6, 4s. 3d. Scots.' The present hall is in Hanover Street. The Company received ratification of its constitution by Act of Parliament in 1693, and thereafter obtained a second charter ratified by two other Acts. The latest, in 1827, provided for the admission of all persons 'being merchants, burgesses, and guild brethren, or entitled to be chosen merchant-councillors or magistrates of the city of Edinburgh.' The schools under the care of the Merchant Company, and their enlightened management, have been already noticed. The original entry money was ten shillings, and the annual contribution two shillings, but these have been largely increased. Admission now costs £63, and the company possesses property and funds yielding over £1200 a year, devoted to aiding widows and decayed members. The management is in the hands of a master and twelve assistants, with executive officers. The Edinburgh Chamber of Commerce and Manufactures, an offshoot from the Merchant Company, incorporated in 1786, with a chairman, 26 directors, and other officers, has taken a prominent part in promoting the trade and commerce of the city. The Trades Corporations, which formerly wielded so much influence in the community, number 13, under a convener and represented by the convener in the town council, and 2 standing apart. The first group contains the waulkers (constituted by seal of cause in 1500), skimmers (seals of cause 1586 and 1630), furriers (acts of council 1593 and 1665), goldsmiths (seal of cause in 1581 and crown charters in 1586 and 1687), hammermen (seal of cause in 1483), wrights (act of council in 1475), masons (act of council in 1475), tailors (seals of cause in 1500, 1531, and 1584, and royal charters in 1531 and 1594), baxters or bakers (before 1522), fleshers (seal of cause in 1488), cordiners (seals of cause in 1440 and 1479, and crown charter in 1598), websters (seals of cause in 1475 and 1520), and bonnetmakers (seals of cause in 1530 and 1684). The two others are candlemakers (constituted by deeds of 1517, 1597, and 1695) and barbers (deed of 1722). The High Constables, instituted in 1611, form a numerous body, available for aid in preserving the public peace in cases of emergency. They are governed by a moderator and 13 captains—one for each of the municipal wards.

Parliamentary Representation.—Down to 1855 Edinburgh was represented by two members, but by the Redistribution of Seats Act of that year the number was increased to four, and the city is now for parliamentary purposes divided into four parts, each of which returns a member. These are:—(1) The East Division, including the municipal wards of Broughton, Calton, and Canon-gate, and so much of St Leonards as lies to the N of a line drawn along the centres of East and West Richmond Streets. Constituency (1892), 9059. (2) The West Division, containing the municipal wards of St Andrew's, St Stephen's, St Bernard's, and St Luke's. Constituency (1892), 8278. (3) The Central Division, containing the municipal wards of St Giles', George Square, and St Leonard's, except the part included in the East Division. Constituency (1892), 7651. (4) The South Division, containing the municipal wards of St George's, St Cuthbert's, and Newington. Constituency (1892), 11,281.

Edinburgh gives the title of Duke in the peerage of the United Kingdom to Prince Alfred Ernest Albert, second son of Her Majesty Queen Victoria, who was, in 1866, created Duke of Edinburgh, Earl of Kent, and Earl of Ulster.

Population, &c.—The rental of the city in 1855 was £761,863; in 1860, £844,542; in 1865, £1,003,793; in 1870, £1,214,046; in 1875, £1,419,043; in 1880,

£1,727,740; in 1885, £1,931,942; in 1890, £2,106,395; and in 1895, £2,218,697.

The population of the parliamentary burgh was in 1801, including Canongate and other suburbs, 66,544; (1831), 136,294; (1841), 140,241; (1851), 160,302; (1861), 168,121; (1871), 196,988; (1881), 212,916—or including the inhabitants within the enlarged boundary of 1885, 234,402—(1891), 261,225, or including the suburban portions outside the parliamentary boundary (1881), 236,002; (1891), 263,646. Of the population of 261,225 in 1891, 119,255 were males and 141,970 were females; while 15 persons spoke Gaelic only, and 4715 both Gaelic and English. At the same date there were within the parliamentary boundaries 59,997 separate families, 50,979 houses inhabited, 3230 uninhabited, and 607 building; and the number of rooms with one or more windows was 212,916. One family of four lived in a room without a window, 32,549 families in houses of 1 or 2 rooms with windows, 9708 in houses of 3 rooms with windows, 9019 in houses of 4 or 5 rooms with windows, and the rest in abodes of larger size. Of the males 41,280 were under 15 years of age, 12,688 between 15 and 20, 38,818 between 20 and 40, 19,869 between 40 and 60, and the remainder over 60; of the females 40,510 were under 15, 15,195 between 15 and 20, 48,515 between 20 and 40, 26,192 between 40 and 60, and the rest over 60. Of the 77,975 males over 15 years of age 37,337 were bachelors, 36,881 husbands, and 3757 widowers; and of the 101,460 females over 15, 50,977 were spinsters, 37,908 wives, and 12,575 widows; while of the whole population 236,069 had been born in Scotland, of which 132,612 were natives of Edinburgh itself. Of the total population 23,018 were under 5 years of age, and 53,772 between 5 and 15, and of the latter number 42,848 were at school. The population of the different wards in 1891 was:—1st, 23,801; 2d, 11,852; 3d, 13,824; 4th, 21,528; 5th, 12,315; 6th, 14,592; 7th, 12,834; 8th, 20,368; 9th, 22,438; 10th, 29,122; 11th, 26,626; 12th, 20,238; 13th, 31,687. The estimated population to the middle of 1893 was 267,762.

In 1863 the death-rate was 26 per 1000, but after 1867 the half-million spent by the Improvement Trust and the removal of 3000 unwholesome houses, caused a decrease, the total in 1892 being 17 per 1000. The figures for the New Town districts were 14·7, for the Old Town 23·2, and for the Southern districts 13·1. Of the total deaths 36·7 were of children under 5 years of age, 13·9 of persons between 5 and 30, 24·7 of persons between 30 and 60, and 24·7 of persons above sixty. St Giles' ward had in 1892 the highest mortality, 28·6 per 1000, and St Bernard's the lowest, 12·2; while the others were Calton 17·4, Broughton 13·7, St George's 16·9, St Stephen's 13·7, St Luke's 13·2, St Andrew's 17·9, Canongate 25·0, St Cuthbert's 16·1, George Square 20·2, St Leonard's 19·2, and Newington 13·4. The mortality in houses with a rental of under £5 was 25·5 per 1000; between £5 and £10, 21·7; between £10 and £15, 17·2; between £15 and £20, 12·9; between £20 and £30, 14·6; between £30 and £40, 13·3; between £40 and £50, 11·5; and over £50, 13·0.

And so we may take leave of the royal city. 'Seated,' says Mrs Oliphant, 'on the rocks which are more old than any history, though those precipices are now veiled with verdure and softness, and the iron way of triumphant modern science runs at their feet; with her crown of sacred architecture hanging over her among the mists, and the little primeval shrine mounted upon her highest ridge; with her palace, all too small for the requirements of an enlarged and splendid royalty, and the great crouched and dormant sentinel of nature watching over her through all the centuries; with her partner, sober and ample, like a comely matron, attended by all the modern arts and comforts, seated at the old mother's feet—Edinburgh can never be less than royal, one of the crowned and queenly cities of the world. It does not need for this distinction that there should be millions of inhabitants within her walls, or all the great threads of industry and wealth gathered in her hands. The pathos

of much that is past and over for ever, the awe of many tragedies, a recollection, almost more true than any reality of the present, of ages and glories gone—add a charm which the wealthiest and greatest interests of to-day cannot give, to the city, always living, always stirring, where she stands amid traditionary smoke and mist, the grey metropolis of the North, the Edinburgh of a thousand fond associations, Our Own Romantic Town.'

Edinburghshire or Midlothian, a maritime county in the eastern part of the southern division of Scotland, is bounded N by the Firth of Forth; E by Haddington, Berwick, and Roxburgh shires; S by Selkirk, Peebles, and Lanark shires; and W and NW by Linlithgowshire. Its greatest length, from E to W, is 36 miles; its greatest breadth, from NW to SE, is 24 miles; and its area is 231,724 acres.

The boundaries of Edinburghshire, in so far as they were affected by the neighbouring counties of Haddington and Linlithgow, were rearranged by the Boundary Commissioners in 1891. The Haddingtonshire parish of Humber had a detached part within the county of Edinburgh, which has been transferred to the Edinburghshire parish of Fala and Soutra, this latter parish, which was itself situated partly in Edinburghshire and partly in Haddingtonshire, having been placed wholly in the county of Edinburgh. Of the parishes partly in Edinburghshire and partly in Linlithgowshire, (1) Cramond has been restricted to the former county, its Linlithgowshire portion having been transferred to the Linlithgowshire parish of Dalmeny. The only alteration in the county boundary here, however, was one by which a small part of Dalmeny parish on the Edinburgh side of the river Almond was transferred to the parish of Cramond and the county of Edinburgh. (2) Kirkliston detached part, in the county of Edinburgh, has been transferred to the Edinburghshire parish of Currie, Kirkliston remaining otherwise as it was—partly in the county of Edinburgh and partly in that of Linlithgow. The parish of Stow, which was partly in Edinburgh and partly in Selkirk shires, has been similarly treated, the Commissioners in the end deciding to leave it as it was, partly in the two counties, but expressing the opinion that the wider powers conferred upon the Secretary for Scotland by Section 51 of the Act appointing them (the Local Government (Scotland) Act, 1889) should be utilized in the formation of a new civil parish of Caddonfoot, which should embrace the whole of the Selkirkshire portion of the parish of Stow. On the boundaries of the interior parishes of the county there have been extensive alterations, for which, however, see the separate articles throughout the work.

The outline of the county is somewhat irregular, but forms approximately the figure of a half-moon, with the convex side resting on the Forth and the horns stretching respectively to the SE and SW. Its coast-line is neither rugged nor bold, but stretches for about 12 miles along the southern shore of the Firth, for the most part in sandy or shingly beach. There are several havens for fishing-boats, and large and important harbours at Leith and Granton.

The surface of Edinburghshire is exceedingly diversified with hill and dale, but on the whole gradually ascends from the sea towards the interior till it reaches its culminating point (2136 feet) in Blackhope Scar among the Moorfoot Hills in the SE. The effect of this far from regular upward incline is to produce scenery of a tolerably varied kind; and though there is no part of Edinburghshire that can be described as grand, yet most parts are picturesque, and all are pleasant. There are several of those wooded dens or 'cleuch's that are almost peculiar to southern Scotland and northern England. On the south-eastern boundary of Edinburghshire stretch the western slopes of the Lammermuirs; further W, and occupying the S of the county and extending into Peeblesshire, lie the Moorfoot Hills, in a large triangular mass. In this group, almost wholly pastoral, the summits are generally rounded, often isolated, and nowhere linked into a continuous chain. About 3 miles from their western limit rise the Pentland Hills, the chief range in the county. These, springing steeply and suddenly about 4 miles SSW of Edinburgh, stretch 12 miles SSW into Peeblesshire, with a breadth averaging 3 miles, but gradually increasing towards the S. The chief summits, in order from the N, are Castlelaw Hill (1595 feet), Bell's Hill (1330), Black Hill (1623), Carnethy (1390), Seald Law (1898), West Kip (1806), East Cairn Hill (1839), and

West Cairn Hill (1844). The various volcanic eminences in the immediate neighbourhood of Edinburgh, which add so much to the charm of the city, are specifically noticed in our article on EDINBURGH. Corstorphine Hill, 3 miles W of the Castle rock, rises to 520 feet above sea-level, and stretches curvingly for about 2 miles. The Craiglockhart, Blackford, and Braid (698 feet) Hills form points in a rough semicircular line round the S of the city, none of them much more than 2 miles from it. The Carberry Hill ridge, on the NE border, extends for nearly 6 miles from N to S, and attains its highest point at 680 feet above sea-level.

The streams of the county are all too small to deserve the name of river; but the deficiency in individual size is made up for by the number of small streams, which drain the county very thoroughly, and for the most part fall into the Forth. The most easterly is the Esk, formed by the junction of the North and South Esks about 6 miles from Musselburgh, where it debouches. The Water of Leith drains the NW side of the Pentlands, and enters the Forth at Leith. The Almond enters Edinburghshire from Linlithgowshire, and, after forming the boundary between these two counties for some miles, falls into the Firth at Cramond. The Tyne, rising near the middle of the E border, passes off into Haddingtonshire after a course of 5 miles northwards; while the Gala, with its source in the eastern Moorfoots, flows SSE into Roxburghshire. Some of these streams, notably the North Esk and the Water of Leith, afford water-power for driving numerous paper-mills. The natural lakes of Edinburghshire, with the exception of Duddingston Loch at the base of Arthur's Seat at Edinburgh, need not be separately named; there are large artificial reservoirs at Threipmuir, Loganlee, Harelaw, Torduff, Clubbiedean, Gladsmuir, Rosebery, and Cobbinsshaw. There are mineral springs at St Bernard's in Edinburgh, and at Bonnington, Cramond, Corstorphine, Midcalder, Penicuik, and St Catherine's.

The geology of Edinburghshire is most interesting, but our space only admits of its salient features being sketched. The county naturally divides itself into three districts. The first, embracing the Moorfoot and Lammermuir Hills in the SE, is a portion of the 'great Lower Silurian tableland of the South of Scotland,' and its rocks consist of greywacke, grit, and shale folded into a constant succession of NE and SW waves. The second is that of the Pentland and Braid Hills, where the basement rocks are of Upper Silurian age, consisting of greywackes, shales, and limestones, some of them being highly fossiliferous. These are conformably overlaid by the lowest members of the Lower Old Red Sandstone, while there rests on the upturned and denuded edges of both an unconformable series of porphyrites, tuffs, sandstones, and conglomerates, also of Lower Old Red age, pointing to upheaval, long continued denudation, and subsequent volcanic activity during that period. The third district takes in the remainder of the county, and, with the exception of a few later intrusions of trap, is floored with carboniferous rocks. The Pentland and Braid Hills wedge this into two basins. In the western one the Calciferous sandstones alone occur. These yield the rich oil shales of Midcalder, the limestone of Raw Camps, and the building stones of Granton, Craighleith, Hailes, and Redhall, and it is on members of this series that the capital stands. In the eastern basin, however, all the several members of this important system as developed in Scotland are represented, viz.,—in ascending order the *Calciferous Sandstone Series*, including the Burdiehouse Limestone, noted for its excellence, and the Straiton oil shales; the *Carboniferous Limestone Series*, locally known as the 'Edge coals,' containing numerous coal and ironstone seams, as well as several workable limestone, oil shales, and building stones, forming together the most important portion of the Midlothian coalfield; the barren *Millstone Grit* and the true *Coal Measures* of Dalkeith, Millerhill, and Dalhousie. This last series contains several workable seams of coal and ironstone, and the

field gets the local name of the 'Flat Coals,' from the low angles at which the beds lie, in contradistinction to those of the Carboniferous Limestone Series. The volcanic rocks of Carboniferous age, the phenomena of glaciation, and the ancient raised beaches are treated of in the geological section of the article on Edinburgh city. Coal seems to have been worked in Lasswade parish so early as the beginning of the 17th century. Parrot coal of good quality occurs in the rising-ground S of Newbattle, and has been much used for the manufacture of coal gas. There are some twenty collieries in the county, and ironstone mines at Roslin, Gilmerton, and Lasswade. Building stone is abundant, and paving stones are also found.

Edinburghshire includes some of the finest agricultural land in the country, and the methods of farming, the implements used, and the science of the farmers are inferior to none. The fertile districts in the N and W sections of the shire are generally arable, and in a high state of cultivation; the S and SE sections, more particularly the latter, are to a large extent pastoral. Only about one-eighth of the entire area is unprofitable. In June 1895, 138,291 acres were under crops, bare fallow, or grass. The soils of the low arable lands are much diversified. Clay, sand, loam, and gravel are, in some cases, all to be seen on the same farm—even in the same field. It is difficult to determine which predominates. Careful farming has done much to improve the poor and mossy soil on the high-lying tracts; but the range of fertility between the best and the worst arable lands is very great. Agricultural improvements on fairly intelligent principles, or with fairly visible results, began so late as about 1725; but since then, combined efforts by societies, and single efforts by proprietors, have united to advance the agricultural interests of the county. The use of sewage as manure was adopted near Edinburgh tolerably early; and the Craightenny meadows, separately noticed, are a signal instance of its fertilising power. The country round Edinburgh is largely occupied by market gardens, whose produce is chiefly potatoes, cabbages, turnips, and strawberries; in 1895 there were 1116 acres under this form of cultivation—an area greater than in any other Scottish county, with the single exception of Lanarkshire. To orchards there were 75 acres, and to coppices and plantations 11,110 acres, given up in Edinburghshire. Perthshire, Lanarkshire, Ayrshire, and Haddingtonshire, however, excel the metropolitan county in extent of orchard-ground. The principal crops of the county, with their acreage, are as follows:—

Crops.	1866.	1876.	1880.	1890.	1895.
Wheat	6,241	4,456	4,866	4,249	2,997
Barley,	4,205	11,982	11,095	6,666	5,709
Oats,	22,866	21,311	22,323	23,111	24,649
Sown Grass, . . .	26,907	31,889	29,390	37,296	33,734
Potatoes,	6,358	6,930	7,590	5,073	4,841
Turnips,	13,629	13,343	11,889	11,934	12,627
Totals,	80,206	89,891	87,153	88,329	84,557

In June 1895, 138,291 acres were divided as follows:—corn crops, 33,614 acres; green crops, 19,266 acres; sown grasses, 33,734 acres; permanent pasture, 51,230 acres.

The tendency in Midlothian, in view of the low price of grain and the high price of cattle, is to turn attention more and more from raising crops to raising cattle. But as yet there is little cattle-breeding in Edinburghshire. In 1895 the county contained 19,451 cattle, 283,322 sheep, 4540 horses used for agricultural purposes, and 8133 pigs. In the vicinity of Edinburgh very large dairies, with from 30 to 70 cows, are maintained.

The Midlothian farms vary much in size, from over 500 acres downwards—there being in all more than 1000 farms. The rent per acre varies fully as much, but increases in direct ratio to the proximity of the farm to Edinburgh. The farms are generally held on 19 years' lease.

Edinburghshire enjoys a climate that is on the whole equable, and not severe. In the N, it is mild and dry; among the hills, colder and moister. Generally speaking, the fruits of the ground ripen early, especially garden-stuff and strawberries. The mean annual temperature has been set down at 47°1', which is the exact figure for the capital. Observations at 13 stations give 32·66 inches as the average annual rainfall in the county. The range is between 23·75 inches at Corstorphine (the driest station in Scotland) and 45·52 at Colzium.

Notwithstanding many and great natural advantages, the metropolitan county has no very important manufactures. When those carried on in Edinburgh and Leith and the immediate environments are subtracted, there are but few left to represent the industrial activity of the county proper. The pre-eminent manufacture is that of paper, supported in great measure by the important publishing and printing businesses of the capital. Gunpowder and carpets are manufactured at Roslin; bricks and tiles at Portobello, Millerhill, Newbattle, Rosewell, and Bonnyrigg; candles at Dalkeith and Loanhead; leather at Dalkeith; and there are iron-works at Dalkeith, Westfield, Loanhead, Penicuik, and Millerhill. Shale-mining with paraffin-oil working (chiefly near Midcalder), and coal-mining, employ many hands; fishing is the main occupation of the inhabitants of Newhaven, Fisherrow, Musselburgh, and other coast villages; while Leith and Granton have a very large shipping industry.

The roads in Edinburghshire are numerous and good. They are maintained by assessment levied on the city and county. The Union Canal extends from Edinburgh through the western part of the county, and joins the Forth and Clyde Canal at Falkirk. Though no longer used for passenger traffic, it still affords means of transit for coal and other minerals. The North British and Caledonian Railway Companies' lines not only connect Edinburgh with all parts of the kingdom, but also provide very good local communication within the county. A ferry from Granton to Burntisland has been almost entirely superseded by the stupendous Forth Bridge.

Edinburgh is the only royal burgh in the county; Leith, Portobello, and Musselburgh are municipal and parliamentary burghs; Bonnyrigg, Dalkeith, Lasswade, Loanhead, and Penicuik are police burghs; Canongate and Portsburgh were formerly burghs of regality, but have been incorporated with Edinburgh. Among the chief villages in Edinburgh are (besides the above)—Balerno, Colinton, Corstorphine, Cramond, Duddingston, Eskbank, Fala, Gilmerton, Gorebridge, Granton, Kirknewton, Midcalder, Newbattle, Newhaven, Ratho, Roslin, Slateford, and Stow. According to the *Miscellaneous Statistics of the United Kingdom* (1879), there were 16,945 landowners in the county, with a total holding of 231,742 acres, and a total gross estimated rental of £2,129,038. There are many fine mansion-houses and gentlemen's seats in the county, of which the chief are Dalkeith Palace, Duddingston House, Newbattle Abbey, Dalhousie Castle, Pinkie House, Dreghoru Castle, Hatton House, Bonally Tower, and Craigcrook.

The county is governed by a lord-lieutenant, a vice-lieutenant, 9 deputy-lieutenants, a sheriff, and 2 sheriff-substitutes. Besides these *ex-officio* justices of the peace, there are 223 gentlemen in the commission of the peace, of whom 173 have qualified. The County Council is composed of 45 members, 41 of these representing as many electoral divisions, and 2 each being elected by the Musselburgh and Portobello town councils. The divisions are classed into four districts, the Suburban and Calder districts having 11 divisions each, the Lasswade district 16, and Gala Water district 7. The Council is divided into the following committees:—The General Committee, the Police Committee (appointed by the County Council and the Commissioners of Supply, and including the sheriff of the county), the Finance Committee, the Executive of Contagious Diseases (Animals) Act, the Valuation Committee, the Peebles District and the Urban District Lunacy Committees,

the Road Board, the Prison Visiting Committee, the Technical Education Committee; while for roads and public health there are the four district Committees, composed of the representatives of the above four groups of divisions, along with one member from each parochial board in the district. The police force, exclusive of that for the burghs of Edinburgh and Leith, amounted in 1891-92 to 86 men. Besides the head-office in Edinburgh, there are 45 police stations in the county. The prison of Edinburgh serves as the county jail. The valued rent in the county for 1674 was £15,921; the valuation for 1892-93 gives it at £581,608 (exclusive of railways and water-works, which, with the exception of portions within burghs, were valued at £117,946). Since the passing of the Redistribution Act of 1885 the city has been divided into four electoral divisions, each returning one member to parliament; the Leith Burghs (Leith, Portobello, and Musselburgh), 1; and the rest of the county, 1. The parliamentary constituency of the county proper in 1892-93 was 13,496. Pop. (1801) 122,597, (1881) 388,977, (1891) 434,276, of whom 205,698 were males and 228,461 females. Houses (1891) inhabited 85,164, uninhabited 5559, building 883.

The county contains 34 *quoad civilia* parishes, and parts of two others. Ecclesiastically it is divided into 77 *quoad sacra* parishes, and parts of four others; and it includes also 12 chapelries. These are divided among the presbyteries of Edinburgh, Dalkeith, Linlithgow, and Earlstoun; and all, with the exception of a part of a parish in Earlstoun presbytery, are included in the synod of Lothian and Tweeddale. In 1892 the Church of Scotland had 91 churches in the county; the Free Church of Scotland, 69; the United Presbyterians, 54; Episcopalian, 34; Congregationalists, 12; Roman Catholics, 17; Baptists, 8; Evangelical Union, 8; Methodists, 4; United Original Seceders, 1; and other denominations, 10. In the year ending Sept. 1894, the county had 233 schools (165 public), which, with accommodation for 71,415 pupils, had 66,608 on the rolls, and an average attendance of 56,193.

The registration county gives off part of Kirkliston parish to Linlithgow, but takes in parts from Linlithgow, Selkirk, and Haddington shires, and had 433,646 inhabitants in 1891. All the parishes are assessed for the poor. The number of registered poor in the year ending 14 May 1891 was 4925; and of casual poor, 317. The expenditure for the poor in the same year was £86,039. In 1892 pauper lunatics numbered 1038, their cost being £27,544. The percentage of illegitimate births was 8·1 in 1871, 7·3 in 1881, and 7·3 in 1891.

The history of Edinburghshire cannot well be separated from the history of the larger district of the **LOTHIANS**. The territory now known as Midlothian was included in the district usually ascribed to the Caledonian Otaleni or Otadani and Gadeni. In Roman times the tribe of Damnonii seems to have dwelt here; and the district was brought within the northern limit of the Roman province in Britain by Agricola in 81 A. D. Thence onwards the Lothians were the scene of many struggles and wars for their possession; and about the beginning of the 7th century, when historians recognise the four kingdoms of Dalriada, Strathclyde, Bernicia, and the kingdom of the Picts, under tolerably definite limits, Edinburghshire was the centre of what the latest historian of early Scotland calls the 'debatable lands'—a district in which the boundaries of the four kingdoms approached each other, and which was sometimes annexed to one of these kingdoms, sometimes to another. Lothiana or the Lothians was thus peopled by a mixed race of Scots, Angles, and Picts; but seems most often to have been joined to Bernicia, with which it was absorbed into the great northern earldom of Northumbria. But the kings of Scotia or Alban, who, about the 9th century, had established their rule from the Spey to the Forth, succeeded, after many efforts, in bringing this rich district also under their sceptre. The final scene was at the battle of Carham in 1018, in the reign of Malcolm II. From that date an integral part of political Scotland, practically without intermission, the

county was the scene of many battles and skirmishes between the English and the Scotch. In 1303 a small native force defeated near Roslin a much larger army of Southrons; in 1334, the Boroughmuir, now a southern suburb of Edinburgh, witnessed another victory of the Scots under Sir Alex. Ramsay over the English under Count Guy. In 1385 the county was devastated by Richard II. of England; a century and a half later it suffered the resentment of Henry VIII.; and the fields of Pinkie (1547), Carberry Hill (1567), and Rulliou Green (1666) are all included within its limits.

Central Lothian very probably was placed under the administration of a sheriff, or under some similar administration, as early as the epoch of the introduction of the Scto-Saxon laws. A sheriffdom over it can be traced in record from the reign of Malcolm IV. down to the restoration of David II.; but appears to have extended during that period over all the Lothians. The sheriffdom underwent successive limitations, at a number of periods, till it coincided with the present extent of the county; it also, for many ages, was abridged in its authority by various jurisdictions within its bounds; and it likewise, for a considerable time, was hampered in its administration by distribution into wards, each superintended by a sergeant. The last sheriff under the old *regime* was the Earl of Lauderdale, who succeeded his father as sheriff in 1744; and the first under the present improved system was Charles Maitland, who received his appointment in 1748.—A constable was attached, from an early period, to Edinburgh Castle; and appears to have, as early as 1278, exercised civil jurisdiction. The provost of Edinburgh, from the year 1472, had the power of sheriff, coroner, and admiral, within Edinburgh royalty and its dependency of Leith. The abbot of Holyrood acquired from Robert III. a right of regality over all the lands of the abbey, including the barony of Broughton; and, at the Reformation, he was succeeded in his jurisdiction by the trustees of Heriot's Hospital. The monks of Dunfermline obtained from David I. a baronial jurisdiction over Iuveresk manor, including the town of Musselburgh; and, at the Reformation, were succeeded in their jurisdiction by Sir John Maitland, who sold it in 1709 to the Duchess of Buccleuch. The barony of Ratho, at Robert II.'s accession to the crown, belonged to the royal Stuarts; was then, with their other estates, erected into a royal jurisdiction; went, in that capacity, to Prince James, the son of Robert III.; and, at the bisection of Lanarkshire into the counties of Lanarkshire and Renfrewshire, was disjoined from Edinburghshire and annexed to Renfrewshire. A right of regality over the lands of Dalkeith was obtained by the Douglasses, and passed to the family of Buccleuch. The estates in Edinburghshire belonging to the see of St Andrews were erected into a regality, and placed under the control of a bailie appointed by the archbishop. The lands of Duddingston, of Prestonhall, of Carrington, and of Carberry also were regalities; and the first was administered by a bailie, the second by the Duke of Gordon, the third by Lord Dalmeny, the fourth by Sir Robert Dickson. These several jurisdictions comprised a large proportion of the county's territory, and a still larger one of the county's population; and they must, in the aggregate, have greatly embarrassed the paramount or comprehensive civil administration; but all were abolished in 1747. A justiciary of Lothian also was appointed in the time of Malcolm IV., exercised a power superior to that of the sheriff, and had successors wielding that superior power, or entitled to wield it, till the time when the baronial jurisdictions became extinct. The power of the Archbishop of St Andrews also, being both baronial over his own estates and ecclesiastical over the entire county, was often, in the Romish times, practically paramount to that of the sheriff; and even after the Reformation, when the archiepiscopal prerogatives were wholly or mainly abolished, it continued for a time to throw impediments in the way of the sheriff's movements.

There are Caledonian stone circles in Kirknewton parish and at Heriot-town-hill; and there are cairns

and tumuli at many places in the county. Pictish forts may probably have preceded the Castles of Edinburgh and Roslin; and it is very possible that the caves at Hawthornden House were either formed or enlarged by the Picts also. Traces of Roman occupation are still to be discerned; and Roman coins, weapons, etc., have been found in various parts. There are several old castles, some forming most picturesque ruins. Among the more interesting are those at Roslin, Catecune, Borthwick, Crichton, and Craigmillar. Extensive monastic establishments have left their ruins at Holyrood, Newbattle, and Temple—the last, as its name suggests, having been an important house of the Knights Templars. There are vestiges of an ancient hospital on Soutra Hill.

There is no good history of Edinburghshire, but reference may be made to *The County of Edinburgh; its Geology, Agriculture, and Meteorology*, by Mr Ralph Richardson (1878), *The Geology of Edinburgh and its Neighbourhood*, by Sir Arch. Geikie (1879), J. Small's *Castles and Mansions of the Lothians* (1883), and Miss Warrender's *Walks near Edinburgh* (1890). Comp. also Mr. Farrall 'On the Agriculture of Edinburghshire,' in *Transactions of the Highland and Agricultural Society* (1877).

Edinchip House. See BALQUHIDDER.

Edingight, a mansion in Grange parish, Banffshire, at the W skirt of Knock Hill (1409 feet), 7 miles NE of Keith, and 4 N by E of Grange station.

Edinglassie, an estate, with an old mansion, in Strathdon parish, Aberdeenshire.

Edington, a hamlet and an ancient fortalice in Chirnside parish, Berwickshire, 2½ miles E of Chirnside village. Only the S side of the fortalice continues standing.

Edinkillie, a hamlet and a parish in the W of Elginshire. The hamlet is on the small river DIVIE, close to the point where the Highland railway, which intersects the parish for 10 miles, crosses the stream on a lofty seven-arched viaduct. It is about a mile from Duniphail station, at which there is a post office under Forres.

The parish is bounded N by Dyke and Moy, NE by Rafford, E by Dallas, SE by Knockando, S by Cromdale, and W by Ardelach in Nairnshire. Its greatest length, from N to S, from a point on the Findhorn near Mains of Dalvey to Lochindorb, is 13½ miles; its breadth, from E to W, varies considerably, attaining 7 miles at the widest part; and its area is now 35,773 acres, of which 437½ are water. The Boundary Commissioners in 1891 added to this parish (and to the county of Elgin) the Glenernerney and Lurg detached portions of the Nairnshire parish of Ardelach (of 750 and 2119 acres respectively), which had been wholly and partly surrounded by Edinkillie, and altogether encompassed by Elginshire. The S and SE parts are mostly moorland and hill pasture, the N and NW woodland and arable. Between 3000 and 4000 acres are in tillage, between 4000 and 5000 are under wood, and the remainder is rough hill pasture or heath. The soil of the arable districts consists of a brown or black loam overlying clay, sand, or gravel, and in some places the loam becomes very light and sandy. In the upper part the moss lies generally on clay or white sand. The surface is very irregular. At the extreme N end of the parish the height of the ground above sea-level is a little over 100 feet, and from that point it rises in rugged undulations till in the S and E it reaches an average height of from 900 to 1000 feet, and rises in some places still higher, the principal elevations being Romach Hill (1012 feet), Hill of Tomechola (1129), Sliabh Bainneach (1453), and Knock of Braemoray, the highest point (1493). The last summit commands a very extensive view. The upper part of the parish to the S is drained by the streams Divie and Dorbock and the smaller streams that flow into them. The DIVIE rises in Cromdale to the S of Edinkillie, and flows northward to about the middle of the parish, where, half a mile below the church, it is joined by the DORBOCK, which forms the outlet for the waters of Lochindorb. From the point of junction the united streams, still retaining the name of

the Divie, continue in a northern course for 2½ miles by Duniphail and Relugas, and enter the Findhorn a short distance N of Relugas. The scenery along the greater part of the courses of both streams is very picturesque. The river FINDHORN flows through the parish for 7 miles of its course. Entering near the middle of the western side, it first forms for a mile the western boundary of Edinkillie, then passes across in a northerly direction, and forms thereafter the eastern boundary for 3 miles at the N end of the parish. The course of the river is marked by fine rock and wood scenery, the vales of Logie, Sluie, and St John being particularly pretty. The greater portion of the district W of the Findhorn is covered with part of the great forest of DARNAWAY. The mansions—Duniphail, Relugas, and Logie—are separately noticed, as also are the chief antiquities of the parish—Duniphail Castle and Relugas Doune. The principal landowner is the Earl of Moray. The parish is in the presbytery of Forres and synod of Moray; the minister's income is £189. The parish church was erected in 1741, and repaired in 1813; it contains 500 sittings. There is a Free church. The schools of Duniphail, Half Davoch, Conicaval, and Logie, with respective accommodation for 100, 50, 58, and 116 children, have an average attendance of about 50, 20, 50, and 60, and grants amounting to nearly £50, £30, £50, and £60. Pop. (1881) 1175, (1891) 1032.—*Ord. Sur.*, shs. 84, 85, 1876-77.

Edinshall. See COCKBURNLAW.

Edleston. See EDDLESTON.

Edmonston Castle. See BIGGAR.

Edmonstone House, a mansion, with finely-wooded grounds, in Newton parish, Edinburghshire, 3½ miles SE of Edinburgh. The estate belonged, from 1248 and earlier, to the family of Edmonstone, who are commonly said to have come to Scotland in 1067 with St Margaret, the queen of Malcolm Ceanmor, but who probably were a branch of the powerful race of Seton. (See DUN-TREATH.) From them it passed, about the beginning of the 17th century, to the Raits; and from them, by marriage, in 1671, to John Wauchope (1633-1709), a cadet of the Nidry Wauchopes, who, in 1672, on becoming a lord of session, assumed the title of Lord Edmonstone. Its present holder is Sir John Douglas Don-Wauchope of NEWTON, ninth Bart. since 1667 (b. 1859; suc. 1893). A hamlet of Edmonstone, with a public school, stands a little to the E.

Ednam (12th century *Ednamham*, 'village on the Eden'), a village and a parish of N Roxburghshire. The village stands, 190 feet above sea-level, on the left bank of Eden Water, 2½ miles NNE of its station and post-town, Kelso. A pretty little place, of hoar antiquity, burned by the English in 1558, it retains, as outhouse of a farmsteading, the former manse (and later village school) in which James Thomson was born, 11 Sept. 1700. His father, nine or ten weeks afterwards, was transferred to the ministry of Southdean; but a miniature of the poet, presented to the bygone Ednam Club by the eleventh Earl of Buchan, is preserved in the present manse; and in 1820 an obelisk, 52 feet high, was erected to his memory on a rising-ground 1 mile to the S of the village.

The parish is bounded N and NE by Eccles in Berwickshire, SE by Sprouston, S and SW by Kelso, W by Nenthorn in Berwickshire, and NW by Stichill. Its utmost length, from E by N to W by S, is 3½ miles; its utmost breadth, from N to S, is 3½ miles; and its area is 3919½ acres, of which 70½ are water. The TWEED sweeps 3 miles north-eastward along all the Sprouston border; and EDEN Water winds 4½ miles eastward to it, along the boundary with Nenthorn and through the interior. In the furthest E the surface sinks along the Tweed to 95 feet above sea-level, thence rising with gentle undulation to 236 feet near Ferneyhill, 282 near Cliftonhill, 278 near Kaimflat, and 265 near Harper-town. Sandstone is the prevailing rock, and the soils are of four kinds, in pretty equal proportions—loam, incumbent on gravel; clay and light gravel, both on a porous bottom; and a light humus on a moorish

enbsoil. In an early charter of Coldingham priory, Thor informs his lord, Earl David, that King Edgar had given him Ednam waste, that he had peopled it, and built from the foundation, and endowed with a plough-gate of land, a church in honour of St Cuthbert; and he prays his son to confirm his donation of the church to St Cuthbert and the monks of Durham. 'Here,' says Dr Skene, 'we have in fact the formation of a manor with its parish church, and in a subsequent document it is termed the mother church of Hedenham' (*Celt. Scotl.*, ii. 367, 1877). Hendersyde Park, which is separately noticed, is the only mansion. Ednam is in the presbytery of Kelso and synod of Merse and Teviotdale; the living is worth £220. The present church, built in 1800, contains 260 sittings; and a public school, with accommodation for 130 children, had (1891) an average attendance of 96, and a grant of £101, 11s. Pop. (1881) 613, (1891) 581.—*Ord. Sur.*, sh. 25, 1865.

Edrachillis. See EDRACHILLIS.

Edradour, a burn and a hamlet in Moulin parish, Perthshire. The burn runs 4½ miles south-westward to the Tummel, forming at one point a picturesque fall of 120 feet, called the Black Spout; and the hamlet, Milton of Edradour, lies on the burn, 2 miles E of Pitlochry.

Edradyne, an estate, with a mansion, until 1891 in a detached portion of Logierait parish, Perthshire, but with that portion transferred by the Boundary Commissioners in the year mentioned to the parish of Weem. It stands near the left bank of the Tay, 3 miles NE of Aberfeldy.

Edrington Castle, a ruined fortalice in Mordington parish, Berwickshire. Crowning a steep rock on the left bank of Whitadder Water, 5 miles W by N of Berwick, it seems to have been a solid substantial strength, well fitted to check incursions and depredations from the English side of the Tweed, on the W being totally inaccessible. It figures frequently in Border wars and treaties; and, having for some time been held by the English, was restored in 1534 by Henry VIII. to James V. Down to the close of last century it continued to be four stories high, but is now reduced to a small fragment. Modern Edrington Castle is in the immediate vicinity of the ruins; and Edrington House stands on the E bank of a small tributary of the Whitadder, 4 miles WNW of Berwick.

Edrom, a village and a parish in the E of central Berwickshire. The village stands near the right bank of Whitadder Water, 5 furlongs NNW of Edrom station, on the Reston and Dunse branch of the North British, this being 3¼ miles ENE of Dunse; at it is a post and railway telegraph office.

The parish, containing also the village of ALLANTON, is bounded N by Bunkle, NE by Chirnside, E by Hutton, SE by Whitsome, S by Swinton and Fogo, and W by Langton and Dunse. With a very irregular outline, it has an utmost length from ENE to WSW of 7¾ miles, a varying breadth of 1 mile and 4¾ miles, and an area of 9634½ acres, of which 89¾ are water. WHITADDER Water roughly traces all the northern and north-eastern border; and BLACKADDER Water, coming in from the SW, traces for a short distance the boundary with Fogo, and then runs 5 miles east-north-eastward, through the interior, to the Whitadder at Allanton. A mineral spring, called Dunse Spa, is on the W border, 1½ miles SSE of Dunse; and was long celebrated for its reputed medicinal qualities, but fell into disrepute and total neglect. The surface lies all within the Merse, is mostly low and flat, and rises nowhere higher than 286 feet above sea-level. The rocks are chiefly clay, marl, and sandstone. The clay occupies about two-thirds of the entire area; the marl is in thin beds, never more than 2 or 3 feet thick; and the sandstone is generally of a whitish hue, and has been quarried. The soils, to a small extent, are reclaimed moor; in general, are highly fertile; and, excepting over about one-eighth of the entire area, occupied by roads, buildings, and plantations, are all in tillage. Pools and lochlets formerly generated marsh, but have all been completely drained. Ancient fortalices were at Broomhouse, Nisbet, and

Blackadder, and keeps or bastels were at Kelloe and two or three other places. Edrom House stands in the western vicinity of Edrom village, and has beautiful grounds. Other mansions, separately noticed, are Broomhouse, Kelloc, Kimmerghamc House, Nisbet House, Blackadder House, and Allanbank. Edrom is in the presbytery of Chirnside and synod of Merse and Teviotdale; the living is worth £378. The parish church, built in 1732, was reconstructed in 1886; and a Free church at Allanton contains 450 sittings. Edrom, Sinclair's Hill, and Allanton public schools, with respective accommodation for 172, 100, and 115 children, had (1891) an average attendance of 78, 47, and 33, and grants of £68, 11s., £39, 5s., and £33, 5s. 6d. Pop. (1881) 1514, (1891) 1361.—*Ord. Sur.*, shs. 34, 26, 1864.

Edzell (13th century *Edale*; popularly *Aigle* or *Eagle*), a village of Forfarshire, and until 1891 a parish partly also of Kincardineshire. The village, formerly called Slateford, stands, 185 feet above sea-level, towards the S of the parish, near the right bank of the river North Esk, and 6 miles N by W of Brechin, under which it has a post office, with money order, savings bank, and telegraph departments. Dating from the 16th century, but greatly improved since 1839, it now is a pleasant little place, with its neat stone houses, flower-plots, and pretty environs; and has a branch of the Union Bank, a national security savings bank, 2 inns, a gaswork, 2 libraries and reading-rooms, a curling club, a Highland games association, and Cooper's Mortification, founded in 1833, being a fund the interest of which is devoted to the poor for alimentary and educational purposes. A memorial arch was erected here in 1888 to the 13th Earl of Dalhousie and his Countess, between whose deaths there was but one day. Fairs are held here on the third Thursday of February, the first Monday of May, 26 May (hiring), the Friday of July after Old Deer, the Wed. after 26 August, the Friday of Oct. before Kirriemuir, and 22 Nov. (hiring). A branch of the Caledonian railway from Edzell to Brechin, 5½ miles in length, was opened 8 June 1896. Pop. (1891) 351.

The parish is bounded NE by Strachan, E by Fettercairn, S and W by Stracathro, W by Lethnot, and NW by Lochlee. Its area is now 19,125½ acres, of which 308¾ are water. The parish has been reduced in area through the transference by the Boundary Commissioners in 1891 of the Kincardineshire portion (1104 acres) to the Kincardineshire parish of Fettercairn, Edzell parish being now confined to the county of Forfar. The North Esk flows 1¾ mile north-eastward along the Lochlee boundary, then 6 miles south-south-eastward through the northern interior, and lastly 5 miles, still south-south-eastward, along the Kincardineshire border; at the SE corner of the parish it is joined by WEST WATER, which winds 4¾ miles east-south-eastward along all the Stracathro boundary. The delta between these streams to the S of the village, with extreme length and breadth of 2½ and 1½ miles, is low and flat, sinking to 120, whilst nowhere attaining 200, feet above sea-level. Northwards the surface rises rapidly to 748 feet at Colt Hill, 663 at the Blair, 1321 at the Hill of Corathro, 2220 at the *Hill of Wirren, 872 at Mappach Hill, 1986 at Bulg, 1686 at *Craigangowan, 968 at Whups Craig, and 2250 at the *southern slope of Mount BARTOCK (2558 feet), where asterisks mark those heights that rest upon the confines of the parish. The rocks are primary chiefly, and an iron mine was for a short time worked at Dalbog about the beginning of the 17th century. Much of the arable land consists of moderate black loam or stiffish clay, but hardly more than an eighth of the entire area is in tillage, the rest being all either pastoral or waste, with the exception of some 200 acres under wood. Edzell Castle lies in a hollow, 1¼ mile W by N of the village, and 3 furlongs from the left bank of West Water; its ruins, for size and magnificence, are matched in Angus and Mearns only by those of Dunnottar. Its oldest portion, the great square donjon or Stirling Tower, to the S, has walls 4 to 5 feet thick, and is 60 feet high; and, till the havoc wrought by the great storm of 12 Oct. 1838, its battlements were easily

accessible. The extensive pile to the N, though much more ruinous than the keep, dates only from the 16th century, having been built by David, ninth Earl of Crawford, and his son. 'The garden wall is ornamented by a number of elaborate carvings in stone. On the E wall are the celestial deities, on the S the sciences, and on the W the theological and cardinal virtues, forming one of the most interesting memorials of the kind in Scotland.' The Edzell estate belonged in 1296 to the Glenesks, after them to a branch of the Stirlings which failed about the middle of the 14th century in two co-heiresses, one of whom, Catherine, by Alexander, third son of Sir David Lindsay of Crawford, was mother of the first Earl of Crawford. The lordship of Glenesk was sold in 1715 to the Earl of Panmure; and, sharing the fortunes of the BRECHIN property, it now belongs to the Earl of Dalhousie. In 1562 Edzell Castle received a visit from Queen Mary, in 1651 from Cromwell's soldiery, and in 1746 from the Argyll Highlanders, to whom its ruinous state is in great measure due. Auchmull Castle, $2\frac{1}{2}$ miles NNW of the village, was also built by the Lindsays early in the 16th century, and was demolished in 1773. At Colmeallie, 3 miles NNW of Auchmull, are two concentric 'Druidical circles,' the outermost measuring 45 by 36 feet, and its highest stone standing being $5\frac{1}{2}$ feet above ground; another, whose last boulder was removed in 1840, was at Dalbog, $2\frac{1}{2}$ miles NNW of the village; and at Dalbog stood also a pre-Reformation chapel. Of the old parish church of St Lawrence, on the bank of West Water, 3 furlongs SSW of Edzell Castle, only the Lindsays' slated burial vault remains, built by the ninth Earl of Crawford. George Low (1746-95), the Orkney naturalist, was a native. The Earl of Dalhousie owns nearly all the parish as now constituted. Edzell is in the presbytery of Brechin and synod of Angus and Mearns; the living is worth £192. The present church, built at the village in 1818, contains 650 sittings. There is also a Free church; and two public schools, Edzell and Waterside, with respective accommodation for 185 and 60 children, had (1891) an average attendance of 118 and 14, and grants of £118, 5s. 6d. and £27, 4s. Valuation (1857) £4842, (1882) £6875, 3s. 4d., of which £630, 14s. 6d. was for the Kincardineshire section, (1891) £6532, 18s. Pop. (1801) 1012, (1831) 974, (1841) 1064, (1871) 976, (1881) 823, (1891) 700.—*Ord. Sur.*, shs. 57, 66, 1868-71. See the Earl of Crawford's *Lives of the Lindsays* (3 vols. 1849), and Andrew Jervise's *Land of the Lindsays* (2d ed. 1882).

Effock Water, a mountain rivulet in Lochlee parish, Forfarshire, running $4\frac{1}{2}$ miles east-north-eastward to the North Esk at a point $1\frac{1}{2}$ mile SE of Lochlee church, and giving to its basin the name of Glen Effock. It has, during this brief course, a total descent of 1550 feet.—*Ord. Sur.*, sh. 66, 1871.

Egg. See EIGG.

Eggersness. See EAGERNESS.

Eglishay. See EAGLESHAY.

Eglin Lane. See EAGTON LANE.

Eglinton. See KILWINNING.

Eglinton Castle, the chief seat of the Earl of Eglinton, in Kilwinning parish, Ayrshire, on the left bank of Lugton Water, $2\frac{1}{2}$ miles N of Irvine. A castellated edifice of 1798, it comprises a large round keep and round corner turrets, connected by a curtain—to use the language of fortification. The whole is pierced with rows of modern sash-windows, which in some degree destroy the outward effect, but add to the internal comfort. The interior corresponds with the magnitude and grandeur of the exterior. A spacious entrance-hall leads to a saloon 36 feet in diameter, the whole height of the edifice, and lighted from above; and off this open the principal rooms. All are furnished and adorned in the most sumptuous manner; and one of them in the front is 52 feet long, 32 wide, and 24 high. Everything about the castle contributes to an imposing display of splendid elegance and refined taste. Nor are the lawns around it less admired for their fine woods, varied surfaces, and beautiful scenery. The park is

1200 acres in extent, and has one-third of its area in plantation.

The first of the Anglo-Norman family of Montgomerie that settled in Scotland was Robert (1103-78), who probably was a nephew of the third Earl of Shrewsbury, and who, soon after June 1157, obtained from his father-in-law, Walter the Steward, a grant of the lands of EAGLESHAM, in Renfrewshire. This was, for more than two centuries, the chief possession of the Scottish branch of the Montgomeries. Sir John de Montgomerie, ninth of Eaglesham, married Elizabeth, daughter and sole heiress of Sir Hugh de Eglinton, and through her acquired the baronies of Eglinton and Ardrossan, the former of which had been held by her ancestors from the 11th century. At the battle of Otterburn (1388) he had the command of part of the Scottish army under the brave Earl of Douglas, and, by his personal valour and military conduct, contributed not a little to that celebrated victory. The renowned Harry Percy, best known as Hotspur, who commanded the English, Sir John took prisoner with his own hands; and with the ransom he received for him, he built the castle of Polnoon in Eaglesham. His grandson, Sir Alexander Montgomerie, was raised by James II., before 1444, to the title of Lord Montgomerie; and his great-grandson, Hugh, third Lord Montgomerie (1460-1545), was created Earl of Eglinton in 1508, having previously entered upon a feud with the Earl of Glencairn, which long continued between their descendants, and occasionally broke forth in deeds of violence, such as the burning of Eglinton in 1528. Hugh, fourth earl, a youth of singular promise, had enjoyed his inheritance only ten months when he fell a victim to this hereditary feud. Riding from his own castle towards Stirling on 20 April 1586, he was, near the bridge of Annick, waylaid and shot by David Cunningham of Robertland and other Cunninghams, emissaries of the Earl of Glencairn. So late as twenty years after this event, on 1 July 1606, the old feud broke out in a violent tumult at Perth, under the very eyes of parliament and the privy council. In the 18th century, all the valuable improvements in gardening, planting, and agriculture, which, during half a century, were made in the parish of Kilwinning, and throughout a great part of Ayrshire, proceeded, in great measure, from the spirited exertions, combined with the fine taste, of Alexander, tenth earl, who was murdered near Ardrossan in 1769. Nor was Hugh, twelfth earl (1740-1819), less distinguished for his magnificent and costly schemes to enrich the district of Cunningham, and advance the public weal of Scotland, by improving the harbour of Ardrossan, and by means of a canal (now a branch of the Glasgow and South-Western railway) making this town the port of Glasgow, the navigation of the river being then open to none but very small craft. Under his successor was held, in August 1839, a gorgeous pageant, the Eglinton Tournament, one of the actors in which was Prince Louis Napoleon, afterwards Emperor of the French, whilst the Queen of Beauty was Lady Seymour, a grand-daughter of Sheridan. The present is the fifteenth Earl, George Arnulph Montgomerie, who was born in 1848, and succeeded his brother in 1892. See ARDROSSAN, SKELMORLIE, SETON, and Sir William Fraser's *Memorials of the Montgomeries* (2 vols., Edinb., 1859).—*Ord. Sur.*, sh. 22, 1865.

Eglishay. See EAGLESHAY.

Eglismonichy, an ancient chapelry, now included in Monifeth parish, Forfarshire. The chapel stood on a crag above Dighty Water, nearly opposite Balmossie mill; and, having continued long in a state of ruin, was demolished for building material about 1760.

Eigg or Egg, an island in Small Isles parish, Inverness-shire. It lies 3 miles NE of Muck, 4 SE of Rùm, 5 SW of Sleat Point, and $7\frac{1}{2}$ W of Arisaig. It measures $6\frac{1}{2}$ miles in length from NNE to SSW, 4 miles in extreme breadth, and 7803 acres in area. It is intersected in the middle, from sea to sea, by a glen; and it takes thence its name of Eigg, originally *Ec*, signifying a 'nick' or 'hollow.' It is partly low, flat, and

arable; partly hilly, rocky, and waste. A promontory, upwards of $1\frac{1}{2}$ mile in length, exhibits columnar cliffs almost equal in beauty to those of Staffa, and rises into a hill, called the Scur of Eigg, 1272 feet in altitude, of peculiar romantic contour, skirted with precipices, and crowned with a lofty columnar peak. The rocks, both in that promontory and in other parts, possess high interest for geologists, and are graphically and minutely described by Hugh Miller in his *Cruise of the Betsy*. Numerous caves, some of them wide and spacious, others low and narrow, are around the coast. An islet, called Eilan-Chastel or Castle Island, lies to the S, separated from Eigg by a sound which serves as a tolerable harbour for vessels not exceeding 70 tons in burden. About 900 acres are cultivated for cereal crops, and are fairly productive. Scandinavian forts, or remains of them, are in various parts; a barrow, alleged to mark the grave of St Donnán, is on Kildonnain farm; and a narrow-mouthed cavern in the S, expanding inward, and measuring nearly 213 feet in length, has yielded many skulls and scattered bones of human beings. In 617 St Donnán, one of the 'Family of Iona,' went, with his *muinntir*, or monastic family, 52 in number, to the Western Isles, and took up his abode in Eigg, 'where the sheep of the queen of the country were kept. This was told to the queen. Let them all be killed, said she. That would not be a religious act, said her people. But they were murderously assailed. At this time the cleric was at mass. Let us have respite till mass is ended, said Donnán. Thou shalt have it, said they. And when it was over, they were slain every one of them' (Skene's *Celtic Scotland*, ii. 152, 1877). Yet grimmer is the cavern's history. Towards the close of the 16th century, a band of the Macleods, chancing to land on the island, were hospitably welcomed by the inhabitants, till, having offered rudeness to the maidens, they were bound hand and foot, and sent adrift in a boat. Rescued by a party of their own clansmen, they were brought to Dunvegan, the stronghold of their chief, to whom they told their story, and who straightway manned his galleys and hastened to Eigg. On descriing his approach, the Macdonalds, with their wives and children, to the number of 200, took refuge in a cave. Here for two days they remained undiscovered, but, having sent out a scout to see if the foe was departed, their retreat was detected. A waterfall partly concealed the mouth of the cave. This Macleod caused to be turned from its course, and, heaping up wood around the entrance, set fire to the pile, and suffocated all who were within (Skene's *Highlanders*, ii. 277, 1837). Eigg has a post office, Small Isles parish church and manse, a Roman Catholic church (1844), and a public school. Pop. (1891) 233.

Eil, a sea-loch on the mutual border of Argyll and Inverness shires, and consisting of two distinct portions, Upper and Lower Loch Eil—the Upper loch forming since 1891 the northern boundary of Argyllshire. Upper Loch Eil, commencing 4 miles E by S of the head of Loch Shiel, extends thence $6\frac{3}{4}$ miles east-by-southward, with a varying breadth of 4 and $7\frac{1}{2}$ furlongs. Then come the Narrows, 2 miles long, and 1 furlong wide at the narrowest; and then from Corpach, at the entrance to the Caledonian Canal, in the neighbourhood of Fort William, Lower Loch Eil strikes $9\frac{1}{2}$ miles south-westward, with varying width of 5 furlongs and $1\frac{1}{2}$ mile, to CORRAN Narrows, where it merges with Loch Linnhe, of which it is often treated as a part. It receives, near Fort William, the Lochy and the Nevis, and is overflowing here by the mighty mass of Ben Nevis (4406 feet).—*Ord. Surv.*, shs. 62, 53, 1875-77.

Eilan. See ELLAN.

Eildon Hills, The, are situated in the parishes of Melrose and Bowden, Roxburghshire, the town of Melrose lying in the Tweed valley on the N, and the village of Bowden, which overlooks Teviotdale being on the S. They rise from one base of N and S extension into three coneshaped summits, their length being $1\frac{1}{2}$ mile, and their breadth $\frac{1}{2}$ mile. The middle summit is the highest (1385 feet), that to the NE attaining 1327, and that to

the S 1216, feet. These summits stand apart, the northern 5 furlongs, and the southern 4, from the middle one. The appearance they present from all sides is very striking, especially from the wide rich country to the N, E, and S swept by the Tweed and the Teviot, and bounded in the latter direction by the blue Border Cheviots. Their weird aspect from this quarter, where these three summits stand out in bold relief, is enough to justify the popular tradition which represents them as originally one mass cleft into three by the demon familiar of Michael Scott. The view from these summits is of vast scope and great variety of interest. On the E the eye ranges over the curves of the silver Tweed as far as the rising-ground overlooking Berwick at its mouth, on the SE and S as far as the Cheviots and the long ridge of Carter Fell, on the SW to the hills of Liddesdale and Eskdale, on the W to the heights of Ettrick and Yarrow, while, as it sweeps by N, it takes in beyond Galashiels the pastoral uplands of the Gala and the darkening range of the lonely Lammermuirs. The panorama thus swept is rich in scenes of romantic and historic as well as physical interest. On the hills themselves are the remains of a strong Roman encampment as well as a tumulus which is supposed to be of Druidical origin, and the whole country to E and S swarms with legends of old Border valour, Border ballad, and Border foray. 'I can stand on the Eildon Hill,' said Sir Walter Scott, 'and point out forty-three places famous in war and verse.' There at our feet and to the E lie the rich lands of the Abbeys of Melrose, Dryburgh, Kelso, and Jedburgh, and on the horizon the classic battlefields of Chevy Chase and Flodden, while, over all breathes the magic genius of Sir Walter, whose honoured ashes rest down there among those of the Dryburgh monks. On these hills the imagination may still trace the figure of Thomas the Rhymer; and a spot is pointed out on the slope of the north-eastern hill, marked by a stone where stood the Eildon tree, under which he conceived and delivered to superstitious ears the fortune he darkly foresaw in store for his native country. One of his prophecies that refers to this spot, forecasting what might seem miraculous at the time, though it has been often since fulfilled—

'At Eildon Tree, if you shall be,
A brig over Tweed you there may see;'

shows him to have been a man of patriotic fervour as well as natural shrewdness. The Roman encampment here already referred to, appears to have been of considerable extent. It occupied chiefly the north-eastern hill, where it was $1\frac{1}{4}$ mile in circuit, and where the remains of it, inclusive of two fosses, an earthen dyke, four gates, and the general's quarter, can still, it is said, be traced. To place, however, *Tremontium* on the Eildon Hills is to do great violence to Ptolemy's text, according to Dr Skene, by whom *Tremontium* is identified with BRUNSWARK. The supposed Druidical relic in the W is a mound, called the Bourjo, of evidently artificial construction, and here the Baal priests of the ancient Caledonians, it has been thought, were wont to offer sacrifices to the sun-god. It is an oak bower, surrounded by a deep trench, and is approached by a plain way made to it from E to W, called the Haxalgate. The hills are composed of porphyritic trap or whinstone, with a large proportion of felspar, which reflects a silvery gleam in the sunshine that has wrought itself into poetic description; while the soil is hard and mostly covered with grass. On the southern hill the opening of a quarry some years ago laid bare a perpendicular cliff of regular basaltic columns, about 20 feet elevation of which stands exposed, looking over Bowdenmoor to the W. On the sides of these hills, like the 'Parallel Roads of Glenroy,' sixteen terraces are traceable, which rise one above another like the steps of a stair. The Eildons lately became, by purchase, the property of the Duke of Buccleuch; and on their eastern slope, which is finely wooded, stands Eildon Hall, the residence of the Earl of Dalkeith, the eldest son of the Duke. Except on the Bowdenmoor side, and where, as on its E, there are

woods and enclosed grounds, cultivation extends a good way up from their base, though not so far as it once did, it would seem, under the monks, on the side of Melrose particularly.—*Ord. Sur.*, sh. 25, 1865. See chap. xxxiv. of James Hunnewell's *Lands of Scott* (Edinb. 1871).

Eilean. See ELLAN.

Eilean-Aigas. See AIGAS.

Eileanmore. See ELLANMORE.

Eisdale. See EASDALE.

Eishort, a sea-loch in the S of the Isle of Skye, Inverness-shire, separating the Strathaird peninsula from the upper part of the peninsula of Sleat. It opens at right angles to the mouth of Loch Slapin, and, striking 6 $\frac{3}{4}$ miles east-north-eastward, diminishes gradually from a width of 3 miles at the entrance to a point, and terminates at an isthmus 1 $\frac{1}{2}$ mile broad from the head of Loch na Dal. 'There is not,' says Alex. Smith, 'a prettier sheet of water in the whole world. Everything about is wild, beautiful, and lovely. You drink a strange unfamiliar air; you seem to be sailing out of the 19th century away back into the 9th.'

Elchaig, a stream of Kintail parish, SW Ross-shire, formed by two head-streams—the Allt na Doire Gairbhe, flowing 5 $\frac{1}{4}$ miles south-westward from Loch Muirichinn (1480 feet); and the Allt a Ghlomaich, which, winding 3 $\frac{3}{4}$ miles north-north-westward from Loch a Bhealaich (1242 feet), makes, by the way, the beautiful Falls of GLOMACH. From their confluence, at an altitude of 290 feet, the Elchaig itself flows 6 $\frac{1}{2}$ miles WNW to the head of salt-water Loch Long. It is a fine salmon and trout stream.—*Ord. Sur.*, sh. 72, 1880.

Elchies. See KNOCKANDO.

Elcho, a ruined castle in Rhynd parish, Perthshire, on the right bank of the Tay, 4 miles by river, 5 $\frac{1}{4}$ by road, ESE of Perth. Re-roofed about 1830, to preserve it from further dilapidation, it is of considerable extent, and remains entire in the walls, which are strong and massive, in very durable material. Its battlemented top, gained by several winding stairs, in good preservation, commands magnificent prospects up and down the river. Elcho belongs to the Earl of Wemyss, and gives to him, and through him to his eldest son, the title of Lord Elcho, dating from 1633.—*Ord. Sur.*, sh. 48, 1868.

Elderslie, a village in Abbey parish, Renfrewshire, with a station on the Glasgow and South-Western Railway, 2 $\frac{1}{4}$ miles W by S of Paisley, with a post office under Johnstone. Consisting principally of two rows of houses along the road from Paisley to Johnstone, and inhabited chiefly by weavers and other operatives, it is notable as the reputed birthplace of Sir William Wallace, who hence is often styled the Knight of Elderslie. The estate on which it stands was granted in the latter half of the 13th century to Sir Malcolm Wallace, who is supposed to have been the Scottish hero's father, and with whose descendants it continued till, in 1729, it came to Helen, only child of John Wallace of Elderslie, and wife of Archibald Campbell of Succoth. By her it was sold, in 1769, to the family of Speirs. A plain old house in the village claims to be that in which Sir William Wallace was born; but, though partly of ancient structure, bears unmistakable marks of having been built long after his death; yet, very probably occupies the spot on which the house of Sir Malcolm Wallace stood. A venerable yew tree in its garden, known popularly as 'Wallace's Yew,' must likewise have got its name, not from any real connection with the patriot, but simply from the situation in which it stands. A still more famous oak tree—'Wallace's Oak'—standing a little distance to the E, was gravely asserted to have afforded shelter, from the pursuit of an English force, to Wallace and 300 of his followers; and continued in tolerable vigour till 1825, when its trunk girthed 21 feet at the base, 13 $\frac{1}{2}$ feet at 5 feet from the ground, and 67 feet in altitude, whilst the branches covered 495 square yards. Time and relic-mongers, however, had reduced it to little more than a blackened torso, when by the gale of Feb. 1856 it was levelled with the dust (pp. 205, 206 of *Trans. Highl. and Ag. Soc.*, 1851). At the

village are a *quoad sacra* church (1840; 800 sittings) and the Wallace public school. In 1893 Mr Bine Renshaw presented a handsome cottage hospital, containing 20 beds, to the village, the site for which was given free by Mr Speirs. Pop. (1881) 1141, (1891) 1468.—*Ord. Sur.*, sh. 30, 1866.

Elderslie, an estate, with a mansion, in Renfrew parish, Renfrewshire, named after Elderslie in Abbey parish. The mansion, on the left bank of the Clyde, $\frac{1}{2}$ mile E of Renfrew town, was built in 1777-82, and enlarged and improved at subsequent periods. Engirt by a fine park, it presents a handsome frontage to the Clyde, and contains a number of interesting relics associated with the name of Sir William Wallace, and brought from Elderslie village. Its owner is Alexander Archibald Speirs, Esq.

Eldrig or Elrig, a village in Mochrum parish, SE Wigtownshire, 3 miles NW of Port William. Eldrig Loch, 1 mile to the N, lies 260 feet above sea-level, has an utmost length and width of $\frac{1}{2}$ mile and 1 furlong, and contains some fine trout.—*Ord. Sur.*, sh. 4, 1857.

Eldrig. See ELLRIG.

Elgar or Ella, an island in the parish of Shapinshay, Orkney.

Elgin, a parish containing a city and royal burgh of the same name in the N of the county of Elgin. It is bounded on the N by Spynie; on the NE and E by St Andrews-Lhanbryd; on the S by Rothes, Birnie, and Dallas; on the W by Rafford, and on the NW by Alves. Its shape is very irregular, but the greatest length from SW to NE is 11 miles, and its greatest breadth from N to S 4 $\frac{1}{2}$ miles. The area is 19,166 acres, of which nearly 12,000 are under cultivation, upwards of 2000 are under wood, and most of the remainder is pasture-land, very little of the surface being waste. The soil varies considerably, being in many places (especially on the alluvial flats lying along the banks of the river Lossie) a good black loam, rich and fertile; in other places, particularly towards the S of the parish, it is a light sandy loam passing in many parts into almost pure sand; elsewhere, again, it is clay. The subsoil is clay, sand, or gravel. In the W of the parish the underlying rock is a hard, whitish-grey sandstone, which is almost throughout of excellent quality for building purposes. In 1826 a considerable quantity of it from the ridge to the N of Pluscarden was sent to London, to be used in the construction of London Bridge. In the E the underlying rock is an impure silicious limestone, which was at one time, at several places, quarried and burned for lime, but this, which was of a dull brown colour, was so impure and inferior, whether for building or agricultural purposes, that the workings have been abandoned. The western part of the parish is occupied by the long valley of Pluscarden, which is bounded on the N by the steep slope of the Eildon or Heldun Hill (767 feet), separating the parish from Alves, and on the S by the gentler slope leading to the Hill of the Wangie (1020), which separates Elgin from Dallas. The surface of the rest of the parish is undulating, and rises gradually from N to S from the height of about 36 feet above sea-level at the extreme E end of the parish to a height of about 900 feet on the extreme S, on the slopes of the Brown Muir Hill. The main line of drainage is by the river Lossie, and the tributary streams that flow into it. The Lossie enters the parish near the middle of the S side, and forms the boundary between Elgin and Birnie for about 3 miles. It thereafter passes across to the northern side, where it turns abruptly to the E and winds along, forming the boundary between Elgin and Spynie, and between Elgin and St Andrews-Lhanbryd. It has everywhere a very winding course, and is confined by artificial banks, against which (notwithstanding its quiet appearance and placid flow on ordinary occasions) it rushes furiously in times of flood. About 2 miles from the city of Elgin it is joined by the Black Burn or Black Water, a stream of fair size, which flows along and carries off the drainage of the whole valley of Pluscarden. About a quarter of a mile lower it receives the water from a small canal formed for the drainage of the

district of Mostowie in the NW corner of the parish. Other small streams in or passing partly through the parish are the Tyock and Muirton or Linkwood Burn. The parish contains the city of Elgin, the village of New Elgin, and the hamlets of Clackmarras and Muir of Miltonduff. There are distilleries at Miltonduff, Glenlossie, and Linkwood, a brewery W of the city near Brucealand, and several woollen and tweed mills. The industries carried on in or about the city are noticed in the following article. In the landward part of the parish there are a number of meal and flour mills. The mansion-houses of Blackhills and Westerton are noticed separately, as also is the chief object of antiquarian interest in the landward district, Pluscarden Abbey. The parish is traversed by the Highland railway, by the Morayshire section of the Great North of Scotland railway system, by the main road from Aberdeen to Inverness, and by the road to Rothes and Speyside. The parish is in the presbytery of Elgin (of which it is the seat) and the synod of Moray. The charge is collegiate, the stipend of the ministers being respectively £419 and £390. The senior minister has besides a manse and glebe, and the second minister a glebe. The churches are noticed under the city of Elgin, in which they all stand, except a charge of the Free Church of Pluscarden, the congregation of which has accommodation in one of the rooms of Pluscarden Abbey. This was formerly a church of the royal bounty, but ceased to be connected with the Establishment at the Disruption in 1843. The parish is one of fifteen forming the Morayshire Poor Law Combination, with a poorhouse in a suburb of Elgin to the N, but in the parish of Spynie. It has accommodation for 150 inmates. The buildings, which were erected in 1865, rise to a height of two stories, and are surrounded by walled-in grounds of fair size. They are in the Elizabethan style, treated very plainly. The porter's lodge is at the entrance from the turnpike road to Lossiemouth, and from this a straight path leads to the chief entrance in the centre of the main building, in which are the governor's and matron's rooms, and the board-room, dining-hall, and chapel. On either side of the central portion are the day-rooms, with the dormitories above. The public schools of Mostowie, New Elgin, Pluscarden, and Clackmarras, with respective accommodation for 154, 120, 120, and 64 children, had (1891) an average attendance of 109, 101, 76, and 38, and grants of £88, 4s. 6d., £85, £70, 11s. 6d., and £42, 18s. Pop. (1881) 8741, (1891) 9285.—*Ord. Sur.*, shs. 95, 85, 1876.

The presbytery of Elgin comprises the parishes of Elgin, Alves, St Andrews-Lhanbryd, Birnie, Drainie, Duffus, Speymouth, Spynie, and Urquhart, the *quoad sacra* parish of Burghead, and the chapelry of Lossiemouth. Pop. (1871) 22,966, (1881) 23,984, (1891) 24,547, of whom 3997 were communicants of the Church of Scotland in 1892.—The Free Church has also a presbytery of Elgin, with 2 churches in the city of Elgin, 1 in the glen of Pluscarden, and 7 at respectively Alves, Burghead, Garmouth, Hopeman, Lossiemouth, and Urquhart, which 9 churches together had 3196 members and adherents in 1892.—The United Presbyterians have a presbytery of Elgin and Inverness, meeting on the first Tuesday of February and October at Inverness, and of April, June, and December at Forres, and exercising supervision over 2 churches in Elgin and 10 at respectively Archiestown, Burghead, Campbelton, Forres, Inverness, Lossiemouth, Moyness, Nairn, Nigg, and Tain.

Elgin, a city and royal burgh, and the county town of Elginshire, is one of the brightest and most picturesque little towns in Scotland. It is situated on the right bank of the river Lossie in the NE end of the parish of Elgin, and includes within the municipal and parliamentary boundaries small portions of the parishes of Spynie and St Andrews-Lhanbryd. It has a station on the Highland railway, and is the terminus of the Craigellachie and Lossiemouth sections of the Great North of Scotland railway system. It is also the terminus of the extension of that system westward from Portsoy by Cullen and Buckie. It is by rail 5 miles

SSW of its seaport, Lossiemouth, 12 $\frac{1}{2}$ NNW of Craigellachie, 18 WNW of Keith, 37 ENE of Inverness, 12 ENE of Forres, 71 $\frac{1}{2}$ NW by W of Aberdeen, 179 $\frac{1}{2}$ N of Edinburgh *via* Forres and Dunkeld (201 $\frac{1}{2}$ *via* Aberdeen and Tay and Forth bridges), and 194 NNE of Glasgow *via* Forres (223 $\frac{1}{2}$ *via* Aberdeen). The main part of the city lies along a low ridge running E and W, and sloping gently to the S; and this, as well as the adjacent lower land on which the rest of the town is built, is shut in and sheltered on all sides by well-wooded rising-grounds approaching close to the town, and by their protection greatly assisting the sandy and porous subsoil in producing the mild and healthy climate which the citizens enjoy. Much of the scenery in the neighbourhood is extremely beautiful, especially the wooded districts to the W and N, known as the Oakwood and Quarrywood, and along the banks of the Lossie; while the surrounding district is so fertile that the inhabitants delight, and justly so, in claiming for the environs of their ancient city the distinguished appellation of 'the Garden of Scotland.'

The origin of the name is lost, and though many conjectures have been made, most of them are somewhat unsatisfactory. The derivation that finds most favour is one that takes its rise from the legend on the corporation seal (*Sigillum commune civitatis de Helgyn*), and from the spelling Helgyn it is argued that the place has received its name from Helgy, a general of the army of Sigurd, the Norwegian Earl of Orkney, who about 927 overran Caithness, Ross, Sutherland, and Moray, and who may possibly have formed a settlement here; but the town is noticed in 1190, in the Chartulary of Moray, with the name spelled Elgin as at present, which seems to be against this. Be that as it may, both name and town are very old, for we find that at an early period Elgin was a place of note, and a favourite and frequent royal residence, probably on account of the excellent hunting which was to be had in the neighbouring royal forests. Nor did the royal visits altogether cease till the middle of the 16th century. Edward I., in his progress through the North in 1296, turned back at Elgin, after staying for two days in its royal castle. He also passed through it in 1303, when he lived for some weeks at Kinloss Abbey, 10 miles to the W. Again, in 1457, James II., having resumed possession of the Earldom of Moray, which had been held by one of his foes the Douglasses, and being minded to bestow it on his infant son, came down to set things in order, and was so charmed by the country that he stayed for some time and hunted, and often dwelt at one of the cathedral manses, which used to stand at what is now the NE corner of King Street. James IV. also paid it a visit in 1490, and Queen Mary is said to have also been in the neighbourhood. It was a royal burgh in the reign of David I., and received from Alexander II. a royal charter, which is still carefully preserved. About the same time that the city received this royal charter, it also became the cathedral seat of the great bishopric of Moray, for in 1224 Bishop Andrew de Moravia settled his episcopal see—which had hitherto been unfixed, and sometimes at Birnie, sometimes at Spynie, sometimes at Kinneddar—permanently at the Church of the Holy Trinity at Elgin; and to this it owes the peculiar character which it had almost unaltered down to the beginning of the present century, and which it still, though to a very slight degree, retains. It bore, and still bears, a strong resemblance to St Andrews—a likeness which is to be attributed to the circumstance of its having been, like that ecclesiastical metropolis, the seat of an important and wealthy see, and the residence of a numerous band of dignified ecclesiastics and affluent provincial gentry, drawn together here as to a common centre of attraction. Many of the quaint old houses remained till a recent period, and a few (not the most characteristic specimens) are still standing, although, just as in Edinburgh and elsewhere, the ancient mansion-houses were long since 'handed down' to artizans and others in the lower ranks of life. Though a new town has sprung up, and

the old has in a measure 'cast its skin,' and has thus become almost entirely renovated, yet the period is by no means remote when Elgin wore the antiquated, still, and venerable aspect which so well befits the habits and harmonises with the repose of genuine ecclesiastics in the full enjoyment of an intellectual '*otium cum dignitate.*' Till little more than seventy years ago the town consisted of one main street running from E to W, with narrow streets, lanes, or closes striking off from each side at right angles, like ribs from a spine. The houses that lined the sides of the long main street, as it then existed, were of venerable age, with high-pitched roofs, overlaid with heavy slabs of priestly grey, presenting to the street the fore-stair and an open piazza, consisting of a series of pillared arches in the front wall over the entrance to a paved and sheltered court within, in which was the ancient merchant wont at times, with a perfect sense of security, to leave his goods and walk unceremoniously off—'his half-door on the bar'—to breakfast, dinner, or his evening stroll. The piazzas are all long since gone, and only a very few of the houses in which they were now remain, though several of the pillars and arches are yet to be seen. The last house that had the piazza open was Elchies House, a most picturesque specimen of the old burgh architecture, which was removed in 1845 to make way for the buildings occupied by the Caledonian Banking Company, and since that date the best of the remaining examples was removed to make way for new buildings on the N side of High Street. A fine stone mantelpiece, which was in the old house, has found a position of honour in the new building, and so also have the quaint gablets over the windows on the attic floor. The dates of their erection and the names of their proprietors were usually inscribed upon the lintels of these ancient domiciles, and here and there might be seen carved one of those religious quotations which the taste of the 16th century so much delighted in, and with which our Reformation forefathers saluted those who crossed their thresholds. The pavement was an ancient causeway, which tradition modestly reports to have been the work of Cromwell's soldiers, though most likely it was many ages older. It rose high in the middle, and the 'crown of the causeway,' where the higher-minded folks delighted to parade, was elevated, and distinguished by a row of huge stone blocks, while those of a more moderate size occupied the sloping sides. The drains, which ran along the street, were crossed rectangularly by the common gutter, which passed immediately to the E of the Commercial Bank, and carried all the surface sewage of the western part of the town to an open ditch at the Borough Brigs. In heavy rains it often swelled into a rapid stream of considerable size. There were no side pavements till the Earl of Fife, aided by the citizens and the road-trustees, introduced them in 1821. About the centre of the town the street then, as now, widened out at the point where stand the parish church and the water-fountain, and the centre of the wider space was occupied by the old church of St Giles and the Tolbooth.

St Giles, or 'the Muckle Kirk'—the old parish church—was pulled down in the end of 1826 to make way for the present parish church. It was a very old building, so old indeed that there is no record of its first erection, but it was older than the cathedral, and was very early mentioned as a parsonage. There is little doubt that the centre tower—a square heavy mass without a steeple—was as old as the 12th century. It was dedicated to St Giles, the patron saint of the city, said to be one of the early missionaries from Iona. In the palmy days of the cathedral's glory it was in the bishop's pastoral charge. The form of the church was that of a Greek cross, with nave, choir, and transepts. The nave had two rows of massive pillars, surmounted by arches; its roof outside was covered with heavy slabs of hewn stone. The principal entrance was a large door in the W end, over which was a handsome three-light window. In the middle of the 16th century it had altars belonging to the different incorporated trades, who also maintained a chaplain, but at the Reformation these were all swept away, and there

were lofts or galleries erected for the various incorporations, possibly above the sites of the old altars, and probably about the same time the nave and the choir were separated, and the former became what was known as 'the Muckle Kirk,' while the latter formed 'the Little Kirk.' The timber that supported the roof of heavy freestone slabs over the Muckle Kirk having become decayed, the whole of the roof fell—providentially between services—on Sunday, 22 June 1679, the same day on which the battle of Bothwell Bridge was fought, and the whole of the western part of the fabric was destroyed. The rebuilding began the following year, and was finished in 1684, when two long aisles, one on each side, were added, and the church was reseated after the Presbyterian fashion. The massive oak pulpit, which cost at that time £244 Scots, is still to be seen in the church at Pluscarden. It has some curious carved work about it, and even yet bears the old iron rim for the baptismal basin, while the iron sandglass holder lies close by. Both are specimens of characteristic twisted iron work. Although the interior of the Muckle Kirk—with its rows of massive sandstone pillars running along the aisles and topped by high-peaked arches; with its beams of wood, from which were hung by strong iron chains massive brass chandeliers; with its old pulpit and curious galleries, and with its walls hung from place to place with the coats of arms of the principal heritors, or with black boards setting forth the charity and brotherly kindness of those who had

'Mortified their cash,
'To mortify their heirs,'

and bequeathed sums of money to be managed by the kirk-session for the benefit of the poor—possessed a dignity and grandeur of no common order, its exterior was not at all rich in architectural display, but yet everything connected with it was held in such veneration by the citizens that its demolition caused a general feeling of deep regret, if not dismay, which the unequivocal symptoms of decay and the impending danger of a repetition of the accident of 1679 did not at all diminish. The original transepts were removed about 1740, and the Little Kirk was so ruinous that it had to be demolished in 1800.

The old Tolbooth stood to the W of St Giles, and down to 1716 must have been a very primitive sort of erection, for in 1600 the building had a thatched roof, as is testified by the entry in the town's records: 'Item, £3, 6s. 8d. for fog to theck the Tolbooth.' In 1605 a new one was erected, 'biggit wt stanes frae ye kirkyard dyke, and sclaited wt stanes frae Dolass;' but it was burned in 1701, and the new one, begun in 1709 and finished in 1716 or 1717, was used as court-house, council-room, and prison, and remained in use till 1843. It had a massive square tower, with a round corner turret and a clock and bell. The bell now hangs between the burgh and county buildings, and the works of the clock are in the museum. In the museum is also preserved the lintel of the doorway, with the very suggestive motto, '*Suum cuique tribue.*' The 'Muckle Cross' near the E end of the old church of St Giles, was built about 1630 and destroyed about 1792. It was rebuilt and presented to his native city by William Macandrew, Esq., of Westwood House, Little Horkesley, Essex, in 1888. The old cross was a hexagonal pile of dressed ashlar, about 12 feet high; outside and around its base was a stone seat. A stair comprised of a few steps was within the building, and on the top of these was a perpendicular column (now set up at the south wall of the Bishop's Palace), surmounted by the Scottish lion rampant (now resting on the column of the present Cross), and the initials (C. R.) of King Charles I. The iron cross that adorned the head of the lion on the old Cross is now placed on the top of the column at the Palace. The 'Little Cross' still stands near the E end of the town, not far from an old house, originally with a piazza, and at one time the place of business of Duff of Dipple, an ancestor of the Duke of Fife. It is supposed to mark the western limit of the chanonry or precincts of the cathedral, and to occupy the site of a cross erected with part

of the money paid in 1402 by Alexander, third son of the Lord of the Isles, in compensation for his having, when on a raid, attacked and plundered the chanonry of Elgin. The present shaft of the Little Cross is not, however, older than the 17th century. The cathedral precinct was surrounded by a wall about 12 feet in height and from 6 to 8 feet in thickness, of run lime work. A small part of it at the E gate or Panns Port still exists, and a considerable portion, extending across the field to the SW of Panns Port, was removed so late as 1866. Of the four gates, which were each defended by a portcullis, the Panns Port is the only one remaining. The town itself seems also to have at one time had some defence, possibly a pallsade, for there was a gate near the W end, called the West Port, close to West Park; a second, about the middle of Lossie Wynd, called the North or Lossie Wynd Port; a third, at the S end of Commerce Street, called the South or Smithy or the School Wynd Port (from the old name of the street); and a fourth, in South College Street, close to the Beid House, called the East Port. Close to this last there was another, called the South Precinct Port, which would make it appear that there had been five ports. The exact site of the North Port was discovered while certain improvements were being carried out in 1884-85, and is now marked by a stone of the old port and a descriptive tablet inserted in the garden wall opposite. These gates were all removed in the latter part of last century, and were probably erected when the town and its approaches were restored after the destruction caused by the Wolf of Badenoch. They must certainly have been of later date than the 15th century, for there is a persistent tradition that previous to the Douglas troubles in the middle of the 15th century the old church of St Giles stood at the extreme E end of the town, and there were buildings extending westward along the ridge by Gray's Hospital and Fleurs, as far as the knoll (now $\frac{1}{2}$ mile from the city), called the Gallow Hill. In 1452, in the struggle against the 'banded Earls,' the contest was carried on in the North between the Earl of Huntly and Archibald Douglas, Earl of Moray. After the battle of Breechin and the defeat of the Earl of Crawford, Huntly started in pursuit of the Earl of Moray, who had been raiding in Strathbogie, and pursued him beyond Elgin, till he took up a strong position on the heights above Pluscarden. Halting at Elgin,* and finding that part of the town was inhabited by those favourable to the Douglas cause, and the other part by those favourable to himself, he burned the whole of the former portion, and hence the proverb, 'Half done as Elgin was half burned.' Huntly's men having, however, scattered in search of plunder, Douglas attacked them, and drove them into the Bog of Dunkinty, to the NW of the cathedral, where some 400 or 500 of them perished, and this gave rise to the jeering rhyme:

'Oh where are your men,
Thou Gordon so gay?
In the Bog of Dunkinty,
Mowing the hay.'

It is said that the part then burned was the western half, and that it was never rebuilt, but that the new buildings were erected to the E beyond St Giles, and so the town was continued eastward in the direction of the cathedral. This Archibald Douglas seems to have been the last constable of the royal castle of Elgin, which stood on the flattened summit of the Lady Hill, a conical-shaped eminence near the W end of High Street. The ruins of the castle are all that remain of the oldest building in connection with Elgin. From its isolated and commanding position Lady Hill no doubt attracted the attention of our rude ancestors at a very early period. It was a place of importance, and probably fortified with earthworks, in the time of the Celtic Mormaers of Moray. The ruins still existing are those of walls faced with rough ashlar (now, alas, nearly all gone), and backed with run lime work, and date

* Pittscottie (2d edit., Glasgow, 1749, p. 80) says it was Forbes, but the evidence seems conclusive in favour of Elgin, and the proverb puts the matter beyond dispute.

from the time of David I., for Elgin is mentioned as a king's burgh in his reign, and must therefore have had a royal castle at that time. Malcolm IV. mentions it in a charter granted in 1160, and it is again referred to in a deed granted by William the Lion. Both David and William held their courts here, as also did Alexander II. and Alexander III.; and Wytownton records numerous visits of the former to Elgin. Edward I. resided in the castle during his two days' stay at Elgin in 1296; and in the journal of his proceeding, preserved in the Cottonian MSS., it is described as '*bon chastell et bonne ville*,' or 'a good castle and a good town.' It probably suffered, however, in the few following years, for some of the wooden apartments in the interior of the place were burned while it was held by the English governor (Henry de Ryc), and, accordingly, when Edward returned in 1303, it was not seemingly considered a fitting residence for him. From this time it ceased to be a royal or even a baronial residence, but still continued to possess its keep, chapel, and probably its storehouses, and it no doubt was maintained as a fort, and perhaps used as a prison for at least a century and a half afterwards; but after the forfeiture of the Douglasses the buildings were neglected, and fell rapidly into decay. The works seem to have occupied the greater portion of the flat part on the top of the hill, which measures about 85 yards in length by 45 in breadth. It is difficult to form any idea of the plan of the buildings, but there seems to have been a strong outer wall and a massive keep. There seem also to have been an outer and an inner court, and a circular depression near the NW angle of the remains of the keep is said to mark the draw-well. There were gates to both the E and the W, the latter being the chief one. From some points of view Lady Hill looks as if a smaller hill had been set down on the top of a larger, and for this tradition has assigned a reason. An earlier castle stood at a lower level, but the 'pest' having appeared, hung over it for some time as a dark blue cloud, which was by some means induced to settle, and then the inhabitants gathering, covered the castle and all its inmates deep under a fresh mound of earth, which now constitutes the upper part of the hill.

—'The Castle in a single night
With all its inmates sunk quite out of sight;
There at the midnight hour is heard the sound
Of various voices talking under ground;
The rock of cradles—wailing infants' cries,
And nurses singing soothing lullabies.'

In 1858 excavations were made on the top of the hill by the Elgin Literary and Scientific Association, but nothing of any importance was discovered. On the top of the hill now stands a Tuscan column erected by subscription by the inhabitants of the county in 1839 to the memory of the last Duke of Gordon. A stair leads up the shaft, and from the top a very extensive view may be obtained. The statue of the duke is 12 feet high, and was placed on the top in 1853. The cannon close by is one of those captured at Sebastopol, and was presented to the city of Elgin by the War Office in 1858. The hill takes its name—Lady Hill—from the chapel in the castle, which was dedicated to the Virgin Mary, and a spring in the neighbourhood to the westward—deep-seated, and very cool in summer—is still known as Mary Well, no doubt for the same reason. The flat ground immediately to the N of Lady Hill, and lying between it and the river Lossie, is known as Blackfriars Haugh. It was formerly the site of a monastery, of the Dominicans or Black Friars, which was founded by Alexander II., when the order was first introduced into Scotland in his reign. No account of the building nor of anything connected with it now remains, nor is any trace of it left, though some parts of the ruins were in existence up to the middle of the 18th century. There was a monastery of the Franciscans or Greyfriars near the E end of the town. The original buildings, founded also by Alexander II., stood on the ground now occupied by the garden of Dunfermline House, on the S side of High Street, at the Little Cross, but this structure fell

into decay in the beginning of the 15th century, between 1406 and 1414, and the new buildings which stand on the S side of Greyfriars Street, in the ground to the E of Abbey Street, were erected. A dovecot and some ruins of the older building remained till the beginning of the present century, when they were demolished, and the stones used in the erection of the present garden walls of Dunfermline House. Of the newer buildings extensive remains still exist. The walls of the church are pretty entire, though the roof fell about the middle of the 18th century, or perhaps earlier, for an ash tree measuring 4 feet in circumference grows through one of the windows. Part of the monastery walls form part of the modern mansion-house of Greyfriars, which was sold in 1891 to the Sisters of the Convent of Mercy. The church was the meeting-place of the trades from 1676 till about 1691. Still further to the E, on a field now feued by the trustees of Anderson's Institution as a play-field, stood the *Maison Dieu*, or House of God, a foundation dating also from the time of Alexander II., and largely endowed by Bishop Andrew de Moravia for the reception of poor men and women. It was burned by the Wolf of Badenoch at the same time as the cathedral in 1390, and was never rebuilt. After the Reformation the revenues belonging to it, which had reverted to the Crown, were, by a charter dated 1620, granted to the 'Provost, Bailies, Councillors, and community of Elgin,' to support poor and needy persons, to maintain a teacher of music, and to increase the common revenue of the burgh. The support of the poor and needy persons is carried out by the Beid House, in South College Street, in which 4 poor men reside, each of whom has a small house, a strip of garden, and £12, 10s. a year. The original building was erected in 1624, and the present one erected in 1846. The tablet from the old house, with a representation of an old style Beid-man, and the inscription 'Hospitalium Burgi de Elgin per idem conditum, 1624,' and the text, 'Blessed is he that considereth the poor; the Lord will deliver him in time of trouble,' has been built into the gablet over the doorway of the new building. There was a Leper House further to the E, on the opposite side of the road, but the only trace of it remaining is the name given to the fields, viz., 'the Leper Lands.' Still further to the E, close to the point where the Aberdeen road crosses the Lossiemouth railway, is a pool, till recently of considerable depth, known as 'the Order Pot,' a name corrupted most probably from the Ordeal Pot, and the place where presumptive witches underwent the ordeal by water. It may have also been the place where criminals sentenced to be put to death by drowning (as was sometimes the case) were executed, and was probably the only remaining specimen of such a 'pit.' In Rhind's *Sketches of Moray* there is a long account of the death of a supposed witch by drowning at this place. Traditionally it was supposed to be bottomless, but in the course of years the amount of rubbish thrown into it materially diminished its size, and it is now also numbered with the things that were, and it will therefore no longer be possible that the old prophecy that

* The Order Pot and Lossie grey
Shall sweep the Chan'ry Kirk away;

attributed to Thomas the Rhymer, can be fulfilled.

The crowning glory of old Elgin, as of the modern city, is the Cathedral, still grand, though but a ruin and a shadow of what once was, when the cathedral church of the diocese of Moray was not only 'the lantern of the north,' but also, as Bishop Bur states so plaintively in his letter to the King complaining of the destruction caused by the Wolf of Badenoch, 'the ornament of the district, the glory of the kingdom, and the admiration of foreigners.' 'It is,' says Chambers in his *Picture of Scotland*, 'an allowed fact, which the ruins seem still to attest, that this was by far the most splendid specimen of ecclesiastical architecture in Scotland, the Abbey church of Melrose not excepted. It must be acknowledged that the edifice last mentioned is a wonderful instance of symmetry and elaborate decoration; yet in

extent, in loftiness, in impressive magnificence, and even in minute decoration, Elgin has been manifestly superior. Enough still remains to impress the solitary traveller with a sense of admiration mixed with astonishment.' Shaw in his description of it does not hesitate to say that 'the church when entire was a building of Gothic architecture inferior to few in Europe.' 'At a period,' observes Mr Rhind, 'when the country was rude and uncultivated, when the dwellings of the mass of the people were mere temporary huts, and even the castles of the chiefs and nobles possessed no architectural beauty, and were devoid of taste and ornament, the solemn grandeur of such a pile, and the sacred purposes with which it was associated, must have inspired an awe and a reverence of which we can form but a faint conception. The prevailing impulse of the religion of the period led its zealous followers to concentrate their whole energies in the erection of such magnificent structures; and while there was little skill or industry manifested in the common arts of life, and no associations for promoting the temporal comforts of the people, the grand conceptions displayed in the architecture of the Middle Ages, the taste and persevering industry, and the amount of wealth and labour bestowed on these sacred edifices find no parallel in modern times. When entire, indeed, and in its pristine glory, the magnificent temple must have afforded a splendid spectacle. A vast dome, extending from the western entrance to the high altar, a length of 289 feet, with its richly ornamented arches crossing and recrossing each other to lean for support on the double rows of stately massive pillars—the mellowed light streaming through the richly stained windows, and flickering below amid the dark shadows of the pointed aisles, while the tapers of the altars twinkled through the rolling clouds of incense—the paintings on the walls—the solemn tones of the chanted mass, and the gorgeous dresses and imposing processions of a priesthood sedulous of every adjunct to dazzle and elevate the fancy, must have deeply impressed a people in a remote region with nothing around them, or even in their uninformed imaginations, in the slightest degree to compare with such splendour. No wonder that the people were proud of such a structure, or that the clergy became attached to it. It was a fit scene for a Latin author of the period, writing on the "tranquillity of the soul," to select for his Temple of Peace, and under its walls to lay the scene of his philosophical dialogues.' It has been already noted that the early cathedral of the diocese was at Birnie, Kinneddar, or Spynie. This practice seems to have answered for a time, for though the bishopric of Moray was founded by Alexander I. shortly after his accession (1107), it was not till 1203 that 'Bricius the sixth bishop made application to Pope Innocent III. to have a fixed cathedral, and the Pope ordered that the cathedral should be fixed at Spynie,' which probably led to the foundation of what afterwards developed into the Bishop's Palace at that place. [See SPYNE.] Bricius died in 1222, and his successor, Bishop Andrew de Moravia, coming in the reign of Elgin's great benefactor, Alexander II., and having obtained from him an extensive site on the banks of the Lossie, made in 1223 fresh application to Pope Honorius, representing the solitary unprotected site of the cathedral, and its distance from market, and praying that it might be translated to Elgin as a more suitable place, and there settled at the church of the Holy Trinity, a little to the NE of the town, adding as an additional reason that the change was desired, not only by the chapter, but also by the King. The Pope readily consented, and on 10 April 1224 issued a bull directed to the Bishop of Caithness, the Abbot of Kinloss, and the Dean of Ross, empowering them to make the desired change if they should see fit; and these dignitaries, having met at Elgin on 19 July 1224, 'appointed the said church of the Holy Trinity to be the cathedral church of the diocese of Moray, and so to remain in all time coming; and on the same day the foundation-stone of the cathedral was laid with all due pomp and ceremony. Bishop Andrew de Moravia lived for eighteen

years after, and therefore carried the building far towards completion, if he did not, as is most likely, actually finish it. Of this first building probably saw little if any, part is left, for it is recorded by Fordun under the year 1270, that the cathedral of Elgin and the houses of the canons were burned, whether by accident or design he does not say. Part of the walls of the S transept seems somewhat different in structure and design from the rest of the building, and may possibly belong to the earlier building. The ruins now standing probably, then, date from a period immediately subsequent to this, and then arose that grand structure which the Chartulary of Moray describes as the 'mirror of the country and the glory of the kingdom,' which Bower in his continuation of Fordun calls 'the glory of the whole land,' which Buchanan terms 'the most beautiful of all which then existed in Scotland,' and of which, in still later times, Mr Billings has written that for size and ornament, as its lovely and majestic fragments still indicate, it must have been unmatched. Stately as it was, it was doomed to still further misfortune, for in 1390 it was again destroyed and burned by the Earl of Badenoch, Alexander Stewart, son of Robert II., and best known as the Wolf of Badenoch. The Wolf having seized some of the church lands in Badenoch was excommunicated, and in his ire descended on the low country in 1390, and in May burned the town of Forres with the choir of the church and the manse of the archdeacon. In June he followed this up by coming to Elgin and burning a considerable part of the town of Elgin, the church of St Giles, the Hospital of Maison Dieu, the official residences of the clergy in the chanonry, and the cathedral itself. This sacrilegious outburst of the Earl of Badenoch and his 'wyld wykked Heland-men,' as Wyntoun calls them, was too great to be overlooked, even though the aggressor was the king's son, and Bishop Bur sent a very plaintive appeal to the king for aid and reparation, and the Wolf was at last compelled to yield, when 'on condition that he should make satisfaction to the bishop and church of Moray, and obtain absolution from the Pope,' he was absolved by the Bishop of St Andrews in the Blackfriars Church at Perth. In spite of the old age and feebleness of Bishop Bur, he pressed on the rebuilding of the church energetically, and this was continued by his successors, Bishops Spynie and Innes, and even at the death of the latter the structure was not finished. Mr Billings thinks that the amount of destruction caused by the Wolf of Badenoch was very much overrated; 'the pointed arches,' he says, 'and their decorations are a living testimony that he had not so ruthlessly carried out the work of destruction; and there is every reason to believe that the portions which have since gradually crumbled away are the inferior workmanship of the 15th and 16th centuries, while the solid and solemn masonry of the 13th still remains.' The immense amount of destruction accomplished, however, may be best estimated when we consider the long period during which the reconstruction had to be carried on—for the Wolf's raid was in 1390, and Bishop Innes died in 1414, and the rebuilding was not then completed; and this notwithstanding the fact that the See was a wealthy one, and that no doubt a considerable portion of the revenue was devoted to the building. Even as it was, some of the work does not seem to have been very good, for in 1506 the great central tower which stood at the intersection of the nave, choir, and transepts, either fell or showed such signs of impending disaster that it had to be taken down. It reached to a height of 198 feet (including the spire), and must have been a stately structure, for the rebuilding, though begun in 1507, was not completed till 1538, and from that time till the Reformation the structure remained perfect. In 1568, however, the privy council, hard pressed by their necessities, appointed the Earl of Huntly Sheriff of Aberdeen and Elgin, with some others, 'to take the lead from the cathedral churches of Aberdeen and Elgin, and sell the same' for the maintenance of Regent Moray's soldiers. The vessel freighted with the metal had,

however, scarcely left the harbour of Aberdeen on her way to Holland, where the plunder was to be sold, when she sank with all her cargo. From that time onward the cathedral, on which so much care and thought had been spent, was long left exposed to the ravages of wind and weather. In 1637 the rafters of the choir, which had been standing without cover, were blown down, and in 1640 Gilbert Ross, minister of Elgin, 'with the assistance of the young laird of Innes, the laird of Brodie, and others, all ardent Covenanters,' broke down the carved screen and woodwork inside, and destroyed it. In the presbytery records it is minuted on 24 Nov. 1640 that 'that day Mr Gilbert Ross regreathed in Presbyterie the imagerie in the rood loft of the Chanrie Kirk, yerfor the moderator and the said Mr Gilbert was appointed to speak to my Lord of Murray for demolishing yrof.' The 'demolishing' was carried out on 28 Dec. The tracery of the W window is said to have been destroyed between 1650 and 1660 by a party of Cromwell's soldiers. The walls remained pretty entire down to 1711, when on Easter Sunday the foundations of the great central tower gave way, and the structure falling to the westward, destroyed the whole of the nave of the building and part of the transepts. The mass of rubbish became at once a 'prey to every needy adventurer in want of stones to build a dyke, a barn, or a byre,' till 1807, when, through the exertions of Mr Joseph King of Newmill, a wall was built round the churchyard, and a keeper's house was erected. In 1816 the attention of the Barons of the Exchequer, who claim the walls and all the area within as belonging to the Crown, was called to the ruinous state of the buildings, which have been from that time onwards most diligently cared for by the Crown authorities.

Like all the churches of the time, the cathedral stood E and W, and had the form of a Jerusalem or Passion Cross. The principal entrance was at the W end between two lofty square towers. On each side of the nave was a double aisle. The aisle on the S side of the chancel, which is known as St Mary's aisle, is still pretty entire, and so is the chapter-house, which stands near the angle between the N transept and the chancel. The great centre tower rose at the intersection of the nave, choir, and transepts. The western towers, which are still pretty entire, rise to the height of 84 feet. The communication between the different floors was by means of circular stairs in one of the angles in each tower. The great entrance is in the wall between, and consists of a finely-carved pointed arch, 24 feet high, which again divides into two pointed doorways. The ornamented space between, at the top, is said to have contained a statue of the Virgin, and the other niches may have been for statues of some of the saints. Above this is the great pointed western window, 28 feet high, which must at one time have been filled with elaborate tracery, but so completely did Cromwell's men do their work, that of this now not a scrap remains. The great gateway is entered by a flight of steps, and leads to the nave. The aisles were separated from the nave by rows of stately pillars rising up to support the roof. Pillars and roof are now alike gone, and only the bases of the former remain. Between the nave and the choir, where the rites were performed, stood the pillars that supported the walls of the great central tower, and on each side were the transepts. The choir extended eastward to the high altar, beyond which was the Lady Chapel. The S aisle and transept were dedicated to St Peter and St Paul, and the N aisle to St Thomas à Becket, the martyr. The crossing was separated from the choir by a screen, on the E side of which was a painting representing the Day of Judgment, and on the W was a representation of the Crucifixion. This was destroyed in 1640, as has been already noticed, by some zealous Reformers. Spalding records it as very wonderful, that although the screen had been standing exposed to the weather from the time of the Reformation, 'and not a whole window to save the same from storm, snow, sleet, and wet,' yet

the painting 'was so excellently done that the colours and stars had never faded, but kept whole and sound.' Some remains of painting may still be traced on the arch of the recess in St Mary's aisle, over the statue of Bishop John Winchester, who died in 1458. The high altar stood on the spot now occupied by the granite monument to the Rev. Lachlan Shaw, one of the ministers of the parish, and the first historian of the province of Moray. The altar was reached by an ascent of three steps, and must have been very strongly lighted, as the eastern gable immediately behind is pierced by two rows of slender lancet-headed windows, with five in each row, and these are again surmounted by the circular eastern window. The choir and the nave were also lighted by a double row of windows with pointed arches, the lower range being the largest, and both tiers ran along the whole extent of the church. The stonework intervening between the windows on both tiers was constructed so as to form a corridor round the whole building. The windows were filled with richly tinted glass, fragments of which have been found amongst the ruins. The chapter-house, attached to the northern cloister, is extremely elegant. It is later in style than the other parts of the building, and was probably built during the incumbency of one of the Bishop Stewarts, of whom there were three, in the latter part of the 15th century. At all events, there are on the roof three Stewart coats of arms. It is an octagon with an elaborately groined roof. The groins spring from the angles, meet at fine bosses, and again separate to reunite in the centre in the great 'Prentice' Pillar, which is 9 feet in circumference, and is a very beautiful specimen of the workmanship of the period. One side of the octagon is occupied by the door, and each of the other seven is pierced by a large window. In the interior, over the doorway, are five niches—a row of four and one by itself over. Opposite the doorway is the niche reached by steps, where the throne of the bishop was placed, and the space on either side was occupied by the stalls of the dignitaries who sat in council with him. The chapter-house is richly ornamented with sculptured figures, and it now also contains grotesque heads and various other fragments of carving, which have been found in clearing out the ruins. It is like all the choice portions of the ecclesiastical buildings of the Middle Ages, known as the 'Apprentice Aisle,' having been built, according to the curious but hackneyed legend, by an apprentice in the absence of his master, who from envy of its excellence murdered him on his return—a legend so general (see ROSLIN) that probably it never applied to any cathedral in particular. On the E side of the entrance to the chapter-house is a small dark chamber which was used as a lavatory. It has an interesting association with General Anderson, who left the fortune with which the institution at the E end of the town, now known as Anderson's Institution, was built, for the stone basin here was his cradle. The dimensions of the cathedral are as follows:—length from E to W, including towers, 289 feet; breadth of nave and side aisles, 87 feet; breadth of choir including walls and aisles, 79 feet; length across transepts including walls, 120 feet; height of W towers, 84 feet; height of E turrets, 60 feet; height of middle tower, including spire, 198 feet; height of grand entrance, 24 feet; height of chapter-house, 34 feet; breadth of chapter-house, including walls, 37 feet; height of great western window, 27 feet; diameter of eastern circular window, 12 feet; height of side walls, 43 feet; breadth of side aisles, 18 feet.

The chapter consisted of 22 canons, who resided within the chanonry or college, to the boundary-wall of which reference has already been made, and memorials of which appear in the names of North College Street and South College Street, as well as in the modern mansion-houses of North College and South College, the former being the residence of the Dean—whose memory is embalmed in the adjoining flat along the river known as Deaushaugh, and the bend beyond known as Dean's Crook—and the latter of the Sub-Dean. Duffus Manse and Un-

thank Manse—residences of the canons who were ministers of Duffus and Unthank—which stood at the N end of King Street, remained till the early part of the nineteenth century; the other 18 had disappeared long before. The dignified clergy were the Dean, who was minister of Auldearn; the Archdeacon, who was minister of Forres; the Chanter, who was minister of Alves; the Treasurer, who was minister of Kinnedar; the Chancellor, who was minister of Inveraven; the Sub-Dean, who was minister of Dallas; and the Sub-Chanter, who was minister of Rafford. The bishop had civil, criminal, and ecclesiastical courts and officers, and his power within his diocese—which comprehended the present counties of Moray and Nairn, and part of those of Aberdeen, Banff, and Inverness—was almost supreme. The first Bishop of Moray on record is Gregory, who held the See in the reign of Alexander I. and the beginning of that of David I. There were 28 Roman Catholic and 8 Protestant Bishops—the last of the former being Patrick Hepburn, an uncle of the notorious Earl of Bothwell. The bishop's town residence, or the Bishop's Palace, as it is commonly called, stands close to the NW corner of the enclosing-wall of the cathedral. The northern part is supposed to have been erected by Bishop John Innes about 1406, but besides his initials it bears also the arms of one of the bishops of the name of Stewart, probably David. The S wing was built by Bishop Patrick Hepburn, and bears his arms and initials, with the date 1557. Soon after the Reformation it was granted by the Crown to Alexander Seton, Earl of Dunfermline, who was provost of Elgin in the early part of the seventeenth century, lived a considerable time in the palace, and from whom it got the name of Dunfermline House. Probably the bishops never lived much in it, as they had their principal residence at SPYNE Castle.

The revenues of the bishopric were no doubt at first very limited, but by the bounty of successive kings, nobles, and private individuals, they afterwards became very ample. King William the Lion was a liberal donor. At a very early period he granted to the See the tenth of all his returns from Moray. Grants of forests, lands, and fishings were also made by Alexander II., David II., and other sovereigns, besides the Earls of Moray, Fife, etc. The rental for the year 1563, as taken by the steward of the bishop, was £1649, 7s. 7d. (Scots), besides a variety of articles paid in kind. At this period, however, the revenue had been greatly dilapidated, particularly by Bishop Hepburn, and a large proportion of the church lands had been alienated, the full rents were not stated, and probably the rental then given did not amount to a third of the actual income in the flourishing period of the bishopric. The estates, with the patronages belonging to the bishop, remained vested in the Crown from the Reformation till 1590, when James VI. assigned them to Alexander Lindsay, a son of the Earl of Crawford, and grandson of Cardinal Beaton, for payment of 10,000 gold crowns which he had lent to his Majesty when in Denmark, Lindsay being at the same time created Baron Spynie. The King afterwards prevailed on Lord Spynie to resign the lands in order that they might be appropriated to the use of the Protestant bishops of Moray, but the rights of patronage remained with the Spynie family till its extinction in 1671, when they were reassumed by the Crown as *ultimus hæres*. They were granted by charter in 1674 to James, Earl of Airlie, by whom they were disposed to the Marquis of Huntly in 1682.

The burying-ground about the cathedral contains many quaint and curious monuments, the inscriptions on some of the 17th and 18th century stones being particularly noteworthy. On one dated 1777 a husband records of his wife that—

'She was remarkable for
Exact, Prudent, Gentle Economy;
Ready, Equal Good Sense;
A Constant flow of cheerful Spirits;
An uncommon sweetness of natural temper;
A great warmth of Heart Affection,
And an early and continued piety.'

And he adds that 'strict justice demands this tribute to her memory.' On another, with the date 1687, are four very pointed lines—

'This world is a Cittle full of streets,
And death is the mercat that all men meets,
If lyfe were a thing that monie could buy,
The poor could not live and the rich would not die.'

The stone coffin near the S entrance is said to have contained the body of King Duncan, previous to its removal and re-interment at Iona. St Mary's aisle was the burial-place of the Gordon family, the tomb in the E end being that of the first Earl of Huntly (date 1470). The blue slab in the NW corner marks the burial-place of some of the bishops, and the great blue slab in the chancel, close by, marks the grave of Bishop Andrew de Moravia, the founder of the cathedral. The granite monument to the Rev. Lachlan Shaw has been already mentioned. In a line with the wall of the chancel and of the N transept is an old Celtic pillar which was found in 1823 about 2 feet below the surface of the High Street, near the site of old St Giles Church. It is 6 feet long, 2½ broad, and 1 thick, but is evidently incomplete. On the obverse is a hunting party with men, horses, and hawks, and, on the reverse, is a cross covered with so-called Runic knots, and figures in the attitude of

Arms of Elgin.

supplication. The arms of Elgin are Saint Giles in a pastoral habit holding a book in his right hand and a pastoral staff in his left. The motto is *Sic itur ad astra*.

The new parish church, which stands in the centre of High Street, is one of the most elegant structures in the north of Scotland. It was erected in 1827 at a cost of nearly £8700. The length, including walls, is 96 feet, the breadth 60½, and the height from floor to ceiling is 31 feet. It has at the W end a spacious portico, composed of six massive Doric fluted columns, surmounted by a pediment. At the E end is a tower, with clock and bells. The lower part of the tower is square, the upper circular, with six fine Corinthian pillars, with a slightly dome-shaped roof and a finial. The whole rises to a height of 112 feet; and the upper part is a copy of the Choragic monument of Lysicrates. It has sitting accommodation for about 2000. There are two Free churches, two United Presbyterian churches, an Episcopal church, a Roman Catholic church, a Congregational church, and a Baptist church, rebuilt in 1892 at an expense of £1400, and accommodating about 800 people. Each of the Free churches has a mission hall or children's church in connection with it. The Assembly Rooms, at the corner of High Street and North Street, were erected by the Trinity Lodge of Freemasons in 1821. They contain a large ball-room and supper-room. There is a public subscription reading-room on the ground floor. The Elgin Club (1863) has a fine building in Commerce Street, with reading-room, billiard-room, and card-rooms. There is also the New Club with a similar set of rooms. Near the 'Little Cross' is the Museum, belonging to the Elgin and Moray Literary and Scientific

Association. It contains a number of interesting and curious objects, and among the fossils from the rocks of the neighbourhood are some specimens so rare that they are to be seen nowhere else. The Elgin Institution, at the E end of the town, was erected and endowed in 1831, from funds, amounting to £70,000, bequeathed for the maintenance of aged men and women, and the maintenance and education of poor or orphan boys or girls, by Lieut.-General Andrew Anderson (1746-1824), who was cradled in the stone basin in the lavatory of the cathedral, and who rose from the position of a private soldier to the rank of Lieut.-General in the Honourable East India Company's service. The style of the building is Grecian, and there is a central circular bell-tower and dome. Over the principal entrance to the N is a sculptured group, representing the founder, with one hand bestowing bread on an aged woman, and with the other holding a book before a boy and girl. There is accommodation provided for 50 children and 10 aged persons. The management is carried on by a house governor, a female teacher, and a matron. On leaving the institution at the age of fourteen, the boys are apprenticed to any trade or occupation they may desire, and during their apprenticeship have a yearly allowance. Attached to the institution, previous to the days of free education, was a free school for the education of children whose parents, though in narrow circumstances, were still able to maintain and clothe them. Standing at the opposite end of the town, Gray's Hospital is another memorial of the munificence of Elgin's sons. It was built and endowed from a fund of £20,000, left by Dr Alexander Gray (1751-1808), a native of Elgin, who had acquired a large fortune while in the service of the East India Company. The hospital is intended for the relief of the sick poor of the town and county of Elgin. The building is a handsome erection, in the Grecian style, with a projecting portico of Doric columns on the eastern front, and a central dome which is seen for a long distance round. It forms a fine termination for High Street on the W. There is a resident physician, and two of the doctors in town visit the building daily. Immediately to the W of the hospital is the Elgin District Lunatic Asylum. It was originally built by voluntary assessment in 1834, but was greatly enlarged and improved in 1865, when it passed into the charge of the Lunacy Board. The Burgh Court-House (1838) and County Buildings (1866) stand on the S side of High Street, a short distance W from the Little Cross. Both buildings are Italian in style, the former being very plain, while the latter has rusticated work along the lower part. The centre projects, and has eight Ionic columns, with frieze and cornice. The courtroom is 30 feet by 40. In 1885 a town-hall, of imposing appearance, was opened by the Duke of Fife. There are several woollen manufactories close to the town. The chief textures made are plaids, tweeds, kerseys, etc. Two breweries are in the town and also several flour-mills and saw-mills in or near it; also large nurseries at both ends of the town; and two tan-works. The city has a gas supply and a water supply by gravitation, both now under the charge of the corporation. There is a market company (1850), with buildings comprising a fish, beef, and vegetable market, a corn market hall, and a concert hall, which is let for concerts, lectures, and theatrical entertainments. Public baths and a laundry were opened in 1886. Elgin has also a literary association, two masonic lodges, several cricket clubs, a curling club, a bowling club, a golf club, a cycling club, a boating club, a football club, a philosophical society, and a horticultural society. There are six incorporated trades—the hammermen, the glovers, the tailors, the shoemakers, the weavers, and the square-wrights. Besides the Beid-House or Alms House already mentioned, there are a number of other charitable funds and mortifications. The Guildry divides an income of upwards of £400 a year for the benefit of decayed brethren, and of the widows and children of deceased members. The Guildry society also manage the Braco and Laing's Mortifications. There is also a charitable fund connected with the Incorporated Trades. There are a number of

these trusts under the kirk-session, the chief being Petrie's; and a number under the management of the corporation, the chief being the Auchray Mortification. The Academy formerly stood in Academy Street, near the centre of the town. There is a 'general school' mentioned in the *Registrum Moraviense* as early as 1489; and this was no doubt the same as the grammar school which we find mentioned in 1585, and which was then under the jurisdiction of the magistrates. In 1594 part of the funds arising from *Maison Dieu* was granted by the Crown for the support of a master to teach music, and a 'sang school' was established. The old grammar school stood near the top of Commerce Street, which was long known as the School Wynd. The schools were united when the buildings in Academy Street were erected in 1800. In 1885-86 a handsome building was erected for this institution, and the old building was handed over to the Girls' School. The Academy was one of the eleven high-class schools scheduled in the Education Act of 1872, and then passed from the management of the Town Council to that of the School-Board. There are a rector and five masters for respectively classics, mathematics, English, modern languages, singing, and drawing; also, a lady teacher. The Victoria School of Science and Art, which had previously been accommodated in various temporary quarters, opened new and suitable premises in 1890, as a memorial of the Queen's jubilee. Bishopmill public, East End public, Elgin girls' public, West End public, and a Roman Catholic school, with respective accommodation for 363, 443, 676, 456, and 135 children, have an average attendance of about 220, 160, 450, 460, and 110, and grants amounting to over £200, £160, £396, £440, and £96. There is also a private day school for boys and girls, and three ladies' boarding and day schools.

Elgin has a head post office, with money order, savings bank, insurance, and telegraph departments, branches of the Bank of Scotland and the British Linen Co., Caledonian, Commercial, North of Scotland, Royal, and Union Banks, a National Security Savings Bank, several hotels, and 2 newspapers—*The Elgin Courant and Courier* (1827), published every Tuesday and Friday, and the *Moray and Nairn Express*, published on Saturday. The Fountain was erected by public subscription in 1846 on the site of the old Tolbooth, and another has since been erected in the neighbourhood of Gray's Hospital. The chief courts for the county are held at Elgin. A weekly market is held on Friday. Cattle markets are held fortnightly on the second and last Friday of every month. Feeding markets are held on the third Friday of March for married farm servants, on the Friday before 28 May, on the last Friday of July for harvest hands, and the Friday before 28 November. There is a considerable trade in grain. A portion of the Borough Briggs was (1888) secured as a public park and added to Lossie Green recreation ground. A new cemetery has been laid out by a company formed for the purpose. The latest outstanding event in Elgin's history is the visit of His Royal Highness the Duke of Edinburgh in Jan. 1882.

Elgin unites with Banff and Macduff, Cullen, Inverurie, Kintore, and Peterhead to form the Elgin Burghs, which district returns one member to Parliament. The corporation consists of a provost, 3 bailies, and 12 councillors. The revenue of the burgh was £715 in 1832, £835 in 1860, £803 in 1870, £762 in 1881, and £880 in 1892. Under the Lindsay Act, the Town Council act as Police Commissioners, and under a special Road Act for the county and burgh they act as Road Trustees for the burgh. The police force is separate from the county, and consists of a superintendent, a sergeant, and 4 constables. The municipal constituency was 1373 in 1892; while the parliamentary constituency was 1002. Annual value of real property (1881) £30,297, (1892) £33,147, plus £1673 for railways. Pop. of the royal burgh (1831) 4493, (1861) 6403, (1871) 6241, (1881) 6286, (1891) 7646; of the parliamentary burgh (1861) 7543, (1871) 7340, (1881) 7413, (1891) 7799, of whom 3401 were males and 4398 females. Houses (1891) inhabited 1542, vacant 121, building 11.

See Shaw's *History of the Province of Moray* (Edinb. 1775; new ed., Elgin, 1827; 3d ed., Glasgow, 1882); Young's *Annals of Elgin* (Elgin, 1879); Sinclair's *Elgin* (Lond. 1866); Taylor's *Edward I. in the North of Scotland* (Elgin, 1858); Watson's *Morayshire Described* (Elgin, 1863); the *Registrum Episcopatus Moraviensis* (edited for the Bannatyne Club by Cosmo Innes, Edinb. 1837); and Mackintosh's *Elgin Past and Present* (Elgin, 1891).

Elgin, New, a village, with a public school, in Elgin parish, just beyond the municipal boundary of the city, 3 furlongs S by E of the station. Pop. (1861) 520, (1871) 559, (1881) 625, (1891) 704.

Elginshire or Moray, a maritime county on the southern shore of the Moray Firth, forming the central division of the old Province of Moray. It used formerly to consist of two separate though not widely detached parts, a portion of Inverness-shire having, by one of those zig-zag arrangements that may be traced back to the days of feudal jurisdiction, got between the two portions. In 1870, however, by 'The Inverness and Elgin County Boundaries Act,' a part of the united parish of Cromdale and Inverallan, including the village of Grantown, was transferred from Inverness to Elgin, and portions of the parishes of Abernethy and Duthil from Elgin to Inverness. In 1891, again, the county boundaries, in so far as affected by the adjoining counties of Banff and Nairn, were rearranged by the Boundary Commissioners. Of those parishes partly in Elginshire and partly in Banffshire, Bellie and Rothes have been placed wholly and for all purposes in the former county, and Boharm, Inveraven, and Keith in the latter. Of the parishes partly in Elginshire and partly in Nairnshire, that of Dyke and Moy has been placed wholly in the county of Elgin, as well as the two detached parts of the Nairnshire parish of Ardcloch, which have been transferred to the parish of Edinkillie. As regards the county of Inverness, the parish of Cromdale was situated partly in it and partly in that of Elgin. The Commissioners in this case (as in that of the Ardcloch transfer) left the boundaries undisturbed, by transferring the Inverness-shire portion of the parish to the Inverness-shire parish of Duthil, the parish of Cromdale being now restricted solely to the Elginshire portion. For further information regarding the alterations effected by the Boundary Commissioners' Orders, see the articles on the various parishes named. Elginshire is bounded on the N by the Moray Firth, on the E and SE by Banffshire, on the S and SW by Inverness-shire, and on the W by Nairnshire. Its greatest length from NE to SW, from Lossiemouth to Dulnan Bridge in Strathspey, is 34 miles; its greatest breadth from E to W, from Bridge of Haughs near Keith to Macbeth's Hillock on the Hardmuir to the W of Forres, is 29½ miles. The coast-line along the shore at high-water mark measures 33 miles, and a straight line from the mouth of the Tynet on the E to the sea near Maviston sandhills on the W measures 28½ miles. The total area is 304,606 acres. Roughly speaking, the county forms a sort of triangle, with a sharp apex to the NW, and somewhat blunt corners to the S and NE, and in this triangle the northern and western sides measure 25 miles, and the south-eastern side somewhat more—all the measurements being in straight lines. Over 20 miles of the boundary on the E is traced by the river Spey, and over 24 on the W by the watershed along the north-eastern prolongation of the Monadhliath Mountains; but everywhere else, except along the Moray Firth, the boundary is purely artificial. Starting from the NE corner the boundary-line follows the channel of the Tynet Burn, and about a mile S of Ryeriggs station it runs a short distance W, then S, then W again, by Thief's Hill to the Spey, about a mile S of Fochabers. About 2 miles below Rothes it leaves the Spey, and running south-east turns abruptly to the west, and taking in a part of the long slope of Ben Aigan, runs south and then west again, till it reaches the river once more about a mile above Rothes. From this point it follows the course of the Spey as far as Inveraven church, when it leaves the river, and takes first a SW course along the watershed of the

Cromdale Hills, but returns to the Spey about 2 miles due E of Grantown, and keeps to the river as far as Dulnan Bridge. It then turns up the Dulnan for about a mile, and from that point proceeds in a direction more or less northerly (not taking minor irregularities into account), until it reaches the Moray Firth about 5 miles W of the mouth of the river Findhorn. The lower part of the county is flat, and remarkable for its amenity of climate, high cultivation, and beauty of landscape, in which respects it holds the highest position in the northern lowlands. The only exception is a part between the mouth of the Findhorn and the western boundary, which is covered by a mass of sand constantly in motion in the slightest breeze of wind, and known as the Culbin Sands. Culbin was at one time almost the richest and most fertile part of the county, but now some 3600 acres are little better than an arid waste. In 1693 the rental was worth what might be represented by £6000 of our present money, but in 1694 or 1695 sand began to blow in from the shore, and rapidly overwhelmed the whole district. From the Findhorn eastward to Burghead, the tract along the coast is also barren and sandy, and from Lossiemouth eastward to the mouth of the Spey there are a series of great gravel ridges formed from the boulders brought down by the Spey, which have been in the course of ages carried westward by the inshore current, and thrown up by the sea. The district adjoining the coast along the parishes of Urquhart, St Andrews-Lhanbryd, Drainie, Duffus, Spynie, Alves, Kinloss and Dyke, and Moy is rich and fertile with heavy loam and strong clay soils, and is so flat that it might be mistaken for a portion of England set down there by accident. High wooded ridges running through Speymouth, Elgin, and Forres, and sweeping up to the S to the beginning of the hill country, which occupies the S part of the county, where the land is mostly covered with heather and given over to grouse and the red deer, and where cultivation, when carried on at all, is under much harder conditions of soil and climate than in the rich and fertile 'Laigh of Moray.' There are, however, along the courses of all the streams numerous, though small, flats or haughs of great fertility. The soil of the arable lands of the county may be classified under the general names of sand, clay, loam, and reclaimed moss. Sand, or a light soil in which sand predominates, extends, with inconsiderable exceptions, over the eastern half of the lowlands, or most of Speymouth, Urquhart, St Andrews-Lhanbryd, and Drainie, the eastern part of Spynie, part of Elgin, and the lower lands of Birnie and Dallas. A clay soil prevails throughout Duffus and Alves, part of Spynie, and small strips in the sandy district. A loamy soil covers extensive tracts in Duffus, Alves, and Spynie, and nearly the whole of Kinloss, Forres, Dyke, the lower lands of Rafford and Edenkille, and the alluvial grounds of the highland straths. A clay loam covers a considerable part of Knockando. Moss, worked into a condition of tillage, occurs to a considerable extent in Knockando, and in strips in the flat districts in the low situations. It is superincumbent on sand, and is so peculiar in quality as to emit, on a hot day, a sulphureous smell, and to strongly affect the colour and formation of rising grain: it occurs also on the flats and slopes of the lower hills of the uplands, peaty in quality, but corrected by the admixture of sand. The far extending upland regions are prevailing moss and heath.

Though the low district has a northern exposure, the climate is so mild that the hardier kinds of fruit—all the varieties of the apple, and most of the varieties of the pear and the plum—may, with very little attention, be grown abundantly; and fruits of greater delicacy—the apricot, the nectarine, and the peach—ripen sufficiently on a wall in the open air. The wind blows from some point near the W during about 260 days in the year, and in summer it is for the most part a gentle breeze, coming oftener from the S than from the N side

of the W. Winds from the NW or N generally bring the heaviest and longest rains. The district has no hills sufficiently elevated to attract the clouds while they sail from the mass of mountains in the S towards the heights of Sutherland. The winter is singularly mild, and snow lies generally for only a very brief period. In the upland districts rain falls to the amount of 5 or 6 inches more than the mean depth in the low country, and there the seasons are often boisterous and severe, and unpropitious weather delays and, by no means seldom altogether, defies the efforts of the farmer.

Rather more than half the county is drained by the river Spey and its tributaries. Of the latter the most important is the Dulnan, of which, however, no more than a very small portion of its course lies within the county. The middle part of the county is drained by the river Lossie. It rises near the centre of the upper part of the shire, and has a very sinuous course in a general north-easterly direction, till it enters the sea at Lossiemouth. Its principal tributaries are the Lochy or Black Burn, the Burn of Glen Latterich, and the Burn of Shogle. The western part is drained by the Findhorn and its tributaries. The whole course of the Findhorn is very beautiful and picturesque, till it expands, near the mouth, into the open sheet of Findhorn Loch or Findhorn Bay. There is at the mouth, between the village of Findhorn and the Culbin Sands, a dangerous and much-dreaded bar. The principal tributaries are the Divie and the Dorbock. The latter issues from Lochindorb, and flows parallel to the western boundary of the county, at a distance of about a mile, along a course of about 10 miles, when, after uniting with the Divie, the streams fall into the Findhorn near Relugas. The principal lochs are—Lochindorb, which lies among the mountains, near the point where Elgin, Nairn, and Inverness unite. It is $2\frac{1}{2}$ miles long and 5 furlongs broad at the widest part. The Loch of Spynie, now only 5 furlongs long by $1\frac{1}{2}$ furlong wide, was formerly an extensive lake 3 miles long and $\frac{1}{2}$ mile wide, but by the drainage operations carried on from time to time between 1779 and 1860, the whole of the loch was drained excepting a mere pool a little to the W of the old Castle of Spynie. The present sheet of water has been reformed by the proprietor of Pitgaveny. Loch-na-Bo ($4 \times 1\frac{1}{2}$ furl.) lies 1 mile to the SE of the village of Lhanbryd. It contains a large number of excellent trout. The banks are prettily wooded, though up to 1773 the surrounding tract was merely a barren heathy moor. There are a number of chalybeate springs in the county, but none of them are at all distinguished for their medicinal properties. The surface of the county rises gradually from N to S, the ridges getting higher and higher till between Creag-an-Tarmachan and the Cromdale Hills, a height of 2323 feet is attained. The principal elevations going from E to W and from N to S are Findlay Seat (1116 feet), Eildon or Heldun Hill (767), Hill of the Wangie (1020), Knock of Braemroy (1493), James Roy's Cairn (1691), Cairn-an-Loin (1797), Craig Tiribeg (1586), Carn Sgriob (1590), Creag-an-Righ (1568).

Geology.—The geology of the Morayshire plain has given rise to considerable controversy. For a time, indeed, the age of the reptiliferous sandstones N of the town of Elgin was one of the most keenly disputed points in Scottish geology. They had been classed for many years with the Old Red Sandstone formation; but when Professor Huxley announced in 1853 that the Elgin reptiles had marked affinities with certain Triassic forms, geologists began to waver in this belief. The subsequent discovery of the remains of *Hyperodapedon*—a typical Elgin reptile—in beds of undoubted Triassic age, in England and in India, caused some of the keenest supporters of the old classification to abandon it altogether. It must be admitted, however, that the stratigraphical evidence is far from being satisfactory, owing to the great accumulation of glacial and post-glacial deposits.

The oldest rocks in the county belong to the great

crystalline series composing the central Highlands, of which excellent sections are exposed in the Findhorn between Coulmony and the Sluie, in the Divie, the higher reaches of the Lossie, and in the streams draining the western slopes of the valley of the Spey. They consist mainly of alternations of grey micaceous gneiss, quartzites, and mica schists, the prevalent type being gneissose; and with these are associated, in the neighbourhood of Grantown, an important bed of crystalline limestone. In the Findhorn basin they form a well-marked syncline, extending in a SE direction from the bridge of Daltullich to the junction of the Dorbock with the Divie. This trend, however, is quite exceptional, for when we pass eastwards to the valleys of the Lossie and the Spey, they assume their normal NE and SW strike. As the prevalent dip of the strata is towards the SE, it is evident that there is a gradually ascending series in that direction. In the valley of the Spey they plunge underneath the quartzites, which are so well displayed at Boat of Bridge, on the slopes of Ben Aigan, and at Craigellachie; and these are overlaid by the grand series of schists containing actinolite, andalusite, and staurolite that cover wide areas in Banffshire.

The Old Red Sandstone strata, which come next in order, rest on a highly eroded platform of these crystalline rocks. From the manner in which they wind round the slopes of the hills formed by the metamorphic series, sweeping up the valleys and filling ancient hollows, it is evident that the old land surface must have undergone considerable denudation prior to Old Red Sandstone times. Within the limits of the county there are representatives both of the upper and lower divisions of this formation, which differ widely in lithological character and organic contents. The members of the lower division are displayed on the banks of the Spey N of Boat of Bridge. At the base there is a coarse brecciated conglomerate, which, though it attains a thickness of about 500 feet on the right bank of the river, thins away to a few feet when traced to the N. This massive conglomerate is overlaid by red sandstones, shales, and clays in the neighbourhood of Dipple, and from the limestone nodules embedded in the shales numerous ichthyolites have been obtained. This fossiliferous band, commonly known as the fish-bed, forms an important horizon in the Lower Old Red Sandstone of the Moray Firth basin. There can be little doubt that the outcrop at Dipple is on the same horizon as the well-known bed in the Tynet Burn, about 3 miles to the NE, which is one of the most celebrated localities in the North of Scotland for well-preserved ichthyolites. Amongst the species obtained from these localities are the following:—*Cheiracanthus Murchisoni*, *Diplacanthus striatus*, *Osteolepis major*, and *Glyptolepis leptopterus*. Like the succession in Tynet Burn, the Dipple fish-bed is overlaid by coarse conglomerate passing upwards into red pebbly sandstones, which are well seen at the bridge of Fochabers. The sandstones on the left bank of the Spey, above the fish-bed have yielded some large specimens, which are probably fragments of *Pterygobus*. This fossil, which is characteristic of the Upper Silurian and Lower Old Red Sandstone formations, has been found in the flagstones of Forfarshire, Caithness, and Orkney. N of the bridge of Fochabers the succession in the Spey is obscured by alluvial deposits; but in the Tynet and Gollachie sections there is an ascending series to certain contemporaneous volcanic rocks, which are of special importance, inasmuch as they are the only relics of volcanic activity during this period in the Moray Firth basin. From the persistent NNW inclination of the strata in the Spey and Tynet sections, we would naturally expect to find the members of the lower division extending westwards across the Morayshire plain. But with the exception of the great conglomerate filling the ancient hollow of the vale of Rothes, which may justly be regarded as the equivalent of the conglomerate in the Spey, there is no trace of the members of the lower division till we pass westwards to Lethen Bar in Nairnshire. They are overlapped by the Upper Old Red Sandstone strata, which sweep up the valleys of the

Lossie and the Findhorn till they rest directly on the metamorphic rocks. In other words, there is in this area a marked unconformity between the upper and lower divisions, which is equally apparent in the county of Nairn. The boundary line of the upper division extends from Glensheil on the Muckle Burn, eastwards by Sluie on the Findhorn, thence curving northwards round the slope of the Monaughty Hill, and winding up the Black Burn as far as Pluscarden Abbey. From this point it may be traced eastwards across the Lossie to Scaat Craig at the mouth of the Glen of Rothes. In the neighbourhood of Dallas there is a small outlier of thick-bedded sandstones, which, in virtue of the fish scales embedded in them, must be grouped with the upper division.

Lithologically the Upper Old Red strata are very different from the older series. The dominant feature of the division is the occurrence of massive grey and yellow sandstones, full of false bedding, with occasional layers of conglomerate. By far the finest section of these strata is exposed on the Findhorn, between Sluie and Cothall, where the river has cut a deep gorge through them, exposing magnificent cliffs of the massive sandstones. They are inclined to the NNW, at angles varying from 5° to 10°, and in the course of this section upwards of 1000 feet of strata are exposed. At Cothall they pass underneath a remarkable bed of corncornstone, containing calcite, arragonite, iron pyrites, and chalcedony, which is overlaid on the right bank of the river by red marls. By means of small faults, which are well seen on the left bank, the corncornstone is repeated towards the N. To the S of Elgin the members of this series are exposed on the Lossie and at Scaat Craig where they have a similar inclination; but, owing to the covering of superficial deposits, no continuous section is visible. At Glasgreen, near New Elgin, there is a band of corncornstone closely resembling that at Cothall and apparently occupying the same horizon, which can be traced at intervals in a NE direction to the Boar's Head rock on the sea-coast. Again, to the N of Elgin, the younger series extends along the ridge from Bishopmill to Alves. They are admirably displayed in the quarries at the former locality, where they have been extensively worked for building purposes. The fossils obtained from the Upper Old Red strata consist of fish scales, bones, and teeth, and, though by no means plentiful, they have been found at various localities. They occur in the Whitemyre quarry on the Muckle Burn, in the Findhorn cliffs, at Alves, in the Bishopmill and Dallas quarries, and again at Scaat Craig. The last of these is the most widely known. Here they are embedded in a conglomeratic matrix, and show signs of having been subjected to aqueous action. The characteristic fossils of the upper division are *Holoptychius nobilissimus*, *Dendrodus latus*, *D. strigatus*, and *Pterichthys major*.

In the tract of ground lying to the N of the Quarry Wood ridge, the strata are met with which have given rise to so much controversy. They consist of pale grey and yellow sandstones in which the reptilian remains have been found, and with these is associated a cherty and calcareous band, commonly known as 'the cherty rock of Stotfield.' This term was first applied to it by the Rev. George Gordon, LL.D., of Birnie, to whose valuable researches, extending over half a century, geologists are specially indebted for the information they possess regarding this district. Along with the calcareous portion of the Stotfield rock there are nodular masses of flint, and throughout the matrix, crystals of galena, iron pyrites, and blende are disseminated. Attempts have recently been made to work the galena at this locality, which have not been attended with success. This rock is also exposed at Inverugie and to the S of Loch Spynie, where, as at Stotfield, it rests on the reptiferous sandstones. The latter are visible at Spynie, in the Findrassie quarry, and on the N slope of the Quarry Wood. They also extend along the ridge between Burghead and Lossiemouth, being admirably displayed on the sea-cliffs between these localities. In this interesting section one may study to advantage the

lithological characters of the strata. Indeed the false-bedded character of the sandstones is so conspicuous that it is no easy matter to determine their true dip.

In endeavouring to solve the problem of the stratigraphical position of the beds now referred to, it is of the utmost importance to remember that *the reptiliferous sandstones are never seen in contact with the strata yielding Upper Old Red Sandstone fish-remains*. Though they occur near to each other in the neighbourhood of Bishopmill and the Quarry Wood, there is no continuous section showing their physical relations. Along the boundary line at these localities, the strata in both cases dip to the NNW, and to all appearance the angle of inclination is much the same. It is not to be wondered at, therefore, that the advocates of the old classification persistently maintained the existence of a perfectly conformable passage between the Upper Old Red beds and the reptiliferous sandstones. The two sets of strata have many points in common, and were it not for the remarkable palæontological evidence, they might naturally be regarded as members of the same formation. The suggestion has been made by Professor Judd, whose contribution to the literature of the subject is by far the most valuable which has recently appeared, that the reptiliferous sandstones are thrown against the Upper Old Red beds by powerful faults. But no trace of these faults is to be seen on the surface along the lines indicated by him, save that on the shore at Lossiemouth, which brings the patch of oolitic strata against the cherty rock of Stotfield. Quite recently, however, Mr Linn of H.M. Geological Survey has discovered fish scales of Upper Old Red age in flagstones, on the raised beach W of Stotfield. These flagstones dip to the NNW at a gentle angle, and it is possible that they may form part of a small ridge of Upper Old Red sandstone protruding through the younger strata. In that case the reptiliferous sandstones may probably rest with a gentle unconformity on the older strata.

The fossils which have invested these beds with special importance belong to three species, viz.: *Stagonolepis Robertsoni*, *Telerpeton Elginense*, and *Hyperodapedon Gordoni*. The remains of these reptiles have been found in the sandstones at Lossiemouth, at Spynie, and in the Findrassie quarry, while in the Cummington sandstones only footprints have been obtained. The *Stagonolepis*, which, according to recent discoveries, must have been about 18 feet long, was a crocodile allied to the modern Caiman in form. Its body was protected by dorsal and ventral scutes; and it possessed elongated jaws after the manner of existing Gavials. The *Telerpeton* and *Hyperodapedon* were species of lizards, the former measuring about 10 inches and the latter about 6 feet in length. It is interesting to observe that the terrestrial lizard, *Telerpeton*, differs but little from existing forms, thus furnishing a remarkable example of a persistent type of organisation. The *Hyperodapedon* bears a close resemblance to the existing *Sphenodon* of New Zealand. The important discovery of the remains of *Hyperodapedon* in undoubted Triassic strata in Warwickshire, Devonshire, and in Central India ultimately led geologists to regard the reptiliferous sandstones of Elgin as of the same age. The palæontological evidence from the Elgin sandstones is quite in keeping with this conclusion, for in no single instance have reptilian remains been found in the same beds with Upper Old Red fishes, though the strata have long been extensively quarried, and though careful attention has been paid to any indications of organic remains. On the whole, then, the evidence bearing on this long disputed question seems to be in favour of grouping the reptiliferous sandstones with the Trias.

On the shore at Lossiemouth, to the N of the fault bounding the cherty rock of Stotfield, a small patch of greenish white sandstones occurs, which, from the series of fossils obtained by Mr Grant, must be classed with the Lower Oolite.

Throughout the plain of Moray there is a remarkable development of glacial and post-glacial deposits. Indeed, owing to the great accumulation of these deposits the

strata left by the ancient glaciers are not readily found. A beautiful example, however, occurs on the hill of Alves, where the direction of the markings is ESE, which is in keeping with the general trend over the plain along the S side of the Moray Firth. The boulder clay in the neighbourhood of Elgin, and in fact in the upland districts generally, presents the usual character of a tenacious clay with striated stones. It occasionally contains intercalated masses of sand and gravel of interglacial age, indicating considerable climatic changes during that period. A remarkable example occurs on the left bank of the Dorbock opposite Glenerner, where, in a drift section about 100 feet high by aneroid measurement, three boulder clays are exposed which are separated by rudely stratified sands and gravels, the whole series being capped by stratified sands and finely laminated clays. An important feature connected with the history of the glacial deposits in the Elgin district is the occurrence of numerous blocks containing secondary fossils. They occur in the boulder clay, and they are likewise strewn over the surface of the ground. From an examination of the fossils it is evident that the boulders belong to the horizons of the Lower and Middle Lias, the Oxford clay, and the Upper chalk. The most remarkable example of a transported mass occurs at Linksfield, which demands special attention on account of its enormous size. Unfortunately the section is now covered up, but from the excellent descriptions of Mr Duff and Dr Malcolmson, there can be no doubt that the succession of limestones and shales yielding fish-remains, *Cyprides* and *Estheria*, rests on boulder clay and is covered by it. The fossils obtained from this transported mass do not fix the age of the beds with certainty, but they probably belong to the horizon of the Rhætic or Lower Lias formations.

Throughout the district there are widespread sheets of sand and gravel, and along the banks of the Spey, the Lossie, and the Findhorn there are high-level terraces which are evidently of fluvial origin. They are grandly developed in the Findhorn basin along the borders of Elginshire and Nairnshire, and their characteristic features may be most conveniently described in connection with the post-glacial deposits of the latter county. The 100, 50, and 25 feet raised beaches are well represented within the limits of the county. The lowest of these forms a belt of flat land stretching from Lossiemouth westwards by Old Duffus Castle to the plain S of Burghead. It is evident, therefore, that the ridge between Lossiemouth and Inverurie must have formed an island in comparatively recent times. This sea-beach also forms a broad strip of low-lying ground between Burghead and the western limit of the county, and at various points it is obscured by great accumulations of blown sand, of which the most remarkable are the Culbin sandhills. As these deposits are continued into the adjoining county of Nairn their striking features and their mode of formation will be described in connection with that county. Between Lossiemouth and the Spey the present beach is bounded by a series of ridges which are evidently due to wave action. They consist of alternations of gravel and shingle, the stratification of which usually coincides with the external form of the mounds. They run parallel with the existing coast-line, and occur at no great distance from each other; indeed so rapidly do they succeed each other as we advance inland, that upwards of twenty of them may be counted in regular succession. An interesting example of a 'kitchen midden' occurs on the old margin of the Loch of Spynie on the farm of Brigzes. From the interesting description given by Dr Gordon, it is clear that the two mounds must have attained considerable dimensions; the latter measuring 80 by 60 yards, and the smaller 26 by 30 yards. Among the shells composing the refuse heap are the periwinkle, the oyster, the mussel, the cockle, the limpet, and of these the first is by far the most abundant. The occurrence of these mounds along the inner margin of the 25-foot beach furnishes interesting evidence of the elevation of the land since its occupation by man. On the other hand the submerged forest, which occurs to the W of Burghead,

clearly points to the depression which preceded the recent changes in the relative level of sea and land.

The cultivation of the county is, on the whole, in a highly advanced condition. Most of the farms are held on lease of nineteen years. Over 280 of these exceed 100 acres. The farm steadings have of late years undergone great improvement, and on the majority of the large and middle-sized farms there are comfortable and well-fitted dwelling-houses. Most of the farms, too, have acquired additional value by the enlargement of fields, the removal of dilapidated dykes, the covering-in of ditches, the reclamation of waste portions, drainage, and the growth of hedge fences or the erection of wire paling, as well as by the extensive and marked improvements in farm implements, and by the introduction of the reaping machine. Some farms are cropped on the seven and some on the six shift course, but the majority of the farmers adhere to the five. The acreage under woods and plantations is 47,650, and according to the Agricultural Returns for 1895 the total acreage 'under all kinds of crops, bare fallow, and grass' is 101,753, including 9378 acres under permanent pasture or grass not broken up in rotation.

The cattle in Elgin are fewer in proportion to the cultivated acreage than in any other county N of Forfarshire, but estimated by the excellence of individual animals they have more than average merit. They are mostly a cross breed between the short-horned and polled breeds, produced with great attention to the high character of the bulls. This cross breed is believed to be hardier, to grow more rapidly, and to take on flesh more readily than any other variety. There are also a number of well-known herds of shorthorns, and though pure polled cattle are not very numerous, the Morayshire herds are very celebrated, and can generally manage to hold their own at the leading shows in Scotland and England, and even in France. Morayshire sheep are also well known. Leicesters are the standard breed for the lower part of the county, and the blackfaced sheep for the higher ground. Some farmers keep crosses, and at Gordon Castle there are Southdowns.

The manufacturers of the county are comparatively inconsiderable. Whisky is one of the chief products, there being seven distilleries in full operation within the county. Besides the wool manufactories at Elgin and Coleburn, in the Glen of Rothes, there are others at St Andrews-Lhanbryd, Forres, and Milntoduff. Tan works have long existed in Elgin and Forres. Shipbuilding on a small scale is carried on at Kingston, at the mouth of the Spey. There used to be a considerable herring fishing at Lossiemouth, Hopeman, and Burghead, but for a number of years the home fishing has been almost a complete failure, and most of the boats prefer to go to some of the larger ports at Aberdeen, Peterhead, or elsewhere. Each of the three seaports above mentioned has a tidal harbour, and there is a coasting trade, particularly in slates, coal, and pit props. There are chemical works at Forres and Burghead. Black cattle and field produce are the principal articles of export. Large quantities of salmon are sent south from the valuable fisheries at the mouths of the Spey and Findhorn, and from the fixed net fishings along the intervening coast. Timber from the Strath-spey forests has also long been exported. The principal ports are in order from E to W, Garmouth, Kingston, Lossiemouth, Burghead, and Findhorn, but they are all small, none of them being more than a sub-port. At Burghead, cargoes are discharged in connection with the chemical works at Burghead and Forres. Numerous fairs for live stock are held at Elgin, Forres, Findhorn, Lhanbryd, and Garmouth, but they are less valued by the farmers than the fairs of Banffshire.

The county is intersected by a number of railways. The Inverness and Keith portion of the Highland railway enters the shire at the Spey, and passes through it from E to W, by Lhanbryd, Elgin, and Forres. There are branch lines to Burghead and Hopeman (from Alves station), and to Findhorn (from Kinloss); but the latter has been discontinued for some years. At Forres, the

Forres and Perth section branches off and passes through the county from N to S, till it leaves it about 4 miles S of Grantown, close to the point where the Dulnan and Spey unite, and therefore almost at the most southerly point of the shire. Starting from Elgin, as its northern terminus, the Great North of Scotland railway system has a branch line from Elgin to Lossiemouth. The main line passes southward through the Glen of Rothes, passes Rothes, and leaves the county when it crosses the Spey at Craigellachie. At Craigellachie the line branches, one part passing on to Keith and Aberdeen, and the other turning up Spey-side. The Spey-side section runs for the first 6 miles on the Banffshire side of the river, but at Carron it crosses to Elginshire, and with the exception of about $\frac{3}{4}$ mile near Ballindalloch, remains in Elginshire till it passes into Inverness-shire, about 2 miles E of Grantown. It joins the Highland railway system at Boat of Garten. There was at one time a branch line connecting the Great North (Morayshire) system at Rothes with the Highland system at Orton, but it also has not been worked for a number of years. A branch railway runs along the coast, from Elgin to Portsoy, intersecting the county from Elgin eastwards. The roads all over the county are numerous and excellent. A survey, made in 1866, gave the total length of roads within the county at 439 miles. In 1864 tolls were abolished all over the shire.

The royal burghs are Elgin (including Bishopmill) and Forres; the police burghs are Lossiemouth (including Branderburgh) and Rothes; the other towns, with each more than 1000 inhabitants, are Burghead, Fochabers, Grantown, and Hopeman; and the smaller towns and principal villages are Findhorn, Garmouth, New Elgin, Kingston, Archiestown, Lhanbryd, Mosstodlach, Urquhart, Stotfield, New Duffus, Cumington, Roseisle, Kinloss, Crook, Colfield, Rafford, Dallas, Edenkille, Dyke, Kintessack, and Whitemyre. The principal seats are Gordon Castle, Darnaway Castle, Innes House, Castle-Grant, Duffus House, Altyre, Roseisle, Roseislehaugh, Inverugie, Muirton, Orton House, Springfield, Inverne, Dunkinty, Easter Elchies, Wester Elchies, Dunphail, Seapark, Kincorth, Dalvey, Westerton, Blackhills, Milton Brodie, Newton, Doune, Sanquhar House, Drumduan, Dallas Lodge, Relugas, Logie, Grange Hall, Brodie House, Orton, Auchinroath, and Burgie.

The county is governed by a lord-lieutenant, a vice-lieutenant, 17 deputy-lieutenants, a sheriff, a sheriff-substitute, 3 honorary sheriff-substitutes, and 136 magistrates. The ordinary sheriff court is held at Elgin, on every Monday for proofs in civil causes, on every Thursday for ordinary business of civil causes, and on every or any Tuesday, as occasion requires, for criminal causes. The County Council is composed of 25 members, 23 of these being representatives of as many electoral divisions, and the other two representing the burgh of Forres. The Council is divided into the following Committees:—The County Road Board, Standing Joint-Committee (composed of members of the County Council and the Commissioners of Supply), Finance and Small Holdings Committee, four local committees for the Special Water Supply and Drainage Districts of Grantown, New Elgin and Moy Croft, Archiestown, and Burghead; Hopeman Water Supply Committee, Public Health Committee, Executive Committee under Contagious Diseases (Animals) Acts, Appeals Committee under Valuation Acts, Weights and Measures Committee, Courthouses Committee, and Prison Visiting Committee. The commissary court for Elginshire and Nairnshire is held at Elgin. Sheriff small debt courts are held at Elgin on every Wednesday; at Forres, six times a year; at Grantown, four times a year; at Rothes, four times a year; at Fochabers, three times a year. The police force, in 1892, exclusive of that for Elgin burgh, comprised 21 men; and the salary of the chief constable was £200. Besides the headquarters at Elgin, there are stations at Knockando, Findhorn, Rothes, Forres, Fochabers, Burghead, Garmouth, Grantown, Branderburgh, Dallas, Hopeman, New Elgin, and Alves. The prison is in Elgin, and is one of those still retained under the new Prisons Act.

The annual value of real property was in 1882, £228,073; and in 1892, £188,002. Elgin and Nairn shires return a member to parliament; and the Elginshire constituency was 4991 in 1892. Pop. (1881) 43,788, (1891) 43,471 of whom 20,381 were males, and 23,072 females. Houses (1891) inhabited 8338, vacant 646, building 36.

The registration county gives off part of Cromdale parish to Inverness-shire, and parts of Inveraven and Keith to Banffshire; takes in part of Dyke and Moy from Nairnshire, parts of Bellie, Boharm, and Rothes from Banffshire, and parts of Abernethy, Duthil, and Cromdale from Inverness-shire. It comprehends nineteen entire *quoad civilia* parishes, and had in 1871 a population of 44,549, in 1881 45,108, and in 1891, 44,829. All the parishes are assessed for the poor. Fourteen of them, with one in Banffshire, form the Morayshire Combination, which has a poorhouse at Bishopmill. One is in the Nairn Combination. The number of registered poor, for the year ending 14 May 1891, was 1062; of casual poor, 24. The expenditure for the poor was £14,233. The percentage of illegitimate births was 16·8 in 1880, and 13·9 in 1891.

The county comprises the nineteen entire parishes of Alves, St Andrews-Lhanbryd, Birnie, Drainie, Duffus, Elgin, Speymouth, Spynie, and Urquhart, constituting the presbytery of Elgin; Dallas, Dyke, Edenkillie, Forres, Kinloss, and Rafford, in the presbytery of Forres; Knockando and Rothes, in the presbytery of Aberlour; Cromdale, in the presbytery of Abernethy; and Bellie, in the presbytery of Strathbogie. There are *quoad sacra* parishes at Advie, Burghhead, and Inverallan; chapelries at Elchies, Lossiemouth, and Orbliston; and a mission church at Darnaway. The whole are within the jurisdiction of the synod of Moray. In the year ending 30 Sept. 1894, the county had 61 schools (53 of them public), with accommodation for 11,391 scholars, 8774 on the registers, and 7099 in average attendance. The certificated, assistant, and pupil teachers numbered respectively, 125, 18, and 66.

The territory now forming Elginshire belonged to the ancient Caledonian *Vacomagi*, and was included in the Roman division or so-called province of *Vespasiana*. It formed part of the kingdom of *Pictavia*, and underwent many changes in connection with descents and settlements of the Scandiavians. In the Middle Ages it formed the middle part of the great province of Moray [see MORAY], although it early became a separate part of that province. It seems to have been disjoined from Inverness as early as 1263, for in that year Gilbert de Rule is mentioned in the *Registrum Moraviense* as sheriff of Elgin. The sheriff of Inverness still, however, at times exercised a jurisdiction within the county of Elgin; and the proper erection of the county and sheriffdom was not till the time of James II., the earlier sheriffs having probably had much narrower limits to their power. The principal antiquities are the so-called Roman well and bulls at Burghhead, standing stones at Urquhart and elsewhere, cup-marked stones near Burghhead and near Alves, the cathedral, etc., at Elgin, Spynie palace, Birnie church, the abbey of Kinloss, the priory of Pluscarden, the Michael kirk at Gordonstown, the old porch of Duffus church, Sueno's Stone at Forres, remains of Caledonian encampments on the Culbin Sands, a sculptured cave near Hopeman, castles at Elgin, Forres, Lochindorb, Rothes, and Duffus, and the towers at Coxton and Blevie. See Shaw's *History of the Province of Moray* (Edinb. 1775; 2d ed., Elgin, 1827; 3d ed., Glasgow, 1882); *A Walk Round Morayshire* (Banff, 1877); Watson's *Morayshire Described* (Elgin, 1868); Leslie and Grant's *Survey of the Province of Moray* (1798).

Elibank, an estate, with a mansion and a ruined castle, in Yarrow parish, Selkirkshire. The mansion, Elibank Cottage, stands on the right bank of the river Tweed, 5½ miles E of Innerleithen. In 1595 the estate was granted to the eminent lawyer, Sir Gideon Murray, a cadet of the Darnhall or Blackbarony line; and by him, doubtless, Elibank tower was either wholly built or extended from the condition of an old Border peel. 'Now a

shattered ruin,' says Dr Chalmers, 'occupying a commanding situation on the S bank of the Tweed, Elibank still shows signs of having been a residence of a very imposing character, defensible according to the usages of the period at which it was inhabited.' Sir Gideon's daughter, Agnes, was the 'Muckle-mou'ed Meg' of Border story, who really, in 1611, did wed young William Scott of HARDEN, though the story otherwise seems to have no foundation; and Sir Gideon's son, Patrick, was in 1643 raised to the peerage as Lord Elibank. Two younger sons of the fourth Lord Elibank, Alexander and James, are notable—the first as a violent Jacobite, and the second for his five months' defence of Fort St Philip, Minorca (1781-82), with less than 1000 men against 40,000 French and Spaniards. The Darnhall, Ballencrieff, and Elibank estates were all united in the person of Alexander Murray (1747-1820), who succeeded as seventh Lord in 1785; and Elibank Tower has since been left to sink to decay.—*Ord. Sur.*, sh. 25, 1865. See DARNHALL, and pp. 345-354 of Dr William Chambers' *History of Peeblesshire* (Edinb. 1864).

Elie or **Ely**, a small police burgh and a parish on the SE coast of Fife. The town stands close to the shore at the head of a bay of its own name, and has a station on the East of Fife section of the North British, 4¾ miles WSW of Anstruther, 14 ENE of Thornton Junction, and 44¾ NE of Edinburgh (*vid* the Forth Bridge). In bygone times a place of some importance, it retains a few antique mansions in a street near the beach, but mainly consists of modern well-built houses. It has for a long time been a place of considerable resort for summer sea-bathing, and is even claimed by some as one of the best health resorts, particularly in winter, of any place in Scotland; but carries on little trade, although it possesses an excellent natural harbour, much improved by quays and a pier, and affording safe and accessible shelter during gales from the W or SW. The bay is 7 furlongs wide across the entrance, and thence measures 3¼ to its utmost recess; it is flanked on the E by Elie Ness, and by Chapel Ness on the W. Wadehaven, a little to the E of the harbour, has a depth of from 20 to 22 feet of water at ordinary tides, and is said to have been named after General Wade, who recommended it to Government as a suitable harbour for ships of the royal navy. Immediately to the W is the small old burgh of EARLSFERRY, on whose capital links an elegant golf club-house was lately erected; and Elie itself has a post office, with money order, savings bank, and telegraph departments, a branch of the National Bank, Elie and Earlsferry savings bank, 2 hotels, a gas-work, waterworks (1882, conjointly with Earlsferry and St Monans), a subscription library of 4000 volumes, the old parish church (1630, reseated 1885), with a spire and two stained glass windows, the Wood Memorial Free Church (1887), with a tower, a public school, a coastguard station, curling, lawn tennis, and golf clubs, and an excellent system of drainage. Having in 1865, along with the villages of Liberty and Williamsburgh, adopted the General Police and Improvement Act, the united burgh is governed by a provost, 2 bailies, and 3 other police commissioners, with a town-clerk and a treasurer. Pop. (1881) 625, (1891) 723.

The parish down to about 1639 formed part of Kilconquhar. It is bounded W and N by Kilconquhar and Carnbee, NE by St Monance, and SE and S by the Firth of Forth, which here has a minimum width of 8¼ miles. The Moorcambus detached part (containing 650 acres) situated to the north-west of the parish, and lying naturally into the parish of Kilconquhar, was in 1891 transferred by the Boundary Commissioners to Kilconquhar parish; but in return all the coast district of Kilconquhar south of the railway line and of the Cockle-mill Burn was transferred to the parish of Elie. This addition to the area of the parish includes the burgh of Earlsferry and the villages of Liberty and Williamsburgh, and places the united burgh wholly within the parish of Elie. The surface is generally flat, and rises nowhere into a hill. Kilconquhar Loch (4 × 3 furl.) touches the northern boundary on the east, and Cockle-mill

Burn traces the north-western border of the extended parish. The rocks belong chiefly to the Carboniferous formation, but include, on the coast, greenstone, basalt, clinkstone, and trap-tufa. The carboniferous rocks, too, are traversed by trap-dykes; and they comprise sandstone, limestone, shale, coal, and clay-ironstone. Some 50 acres are under wood; and nearly all the rest of the land, excepting the links, is in tillage. Natives were Robert Traill (1642-1716), a divine of the Church of Scotland, and James Horshurgh, F.R.S. (1762-1836), the eminent hydrographer. Elie House, to the NNE of the town, was built towards the close of the 17th century, and is a large edifice in the Renaissance style, with beautiful grounds. Its owner is William Baird, Esq. (b. 1848; suc. 1864). Elie is in the presbytery of St Andrews and synod of Fife; the living is worth £170. Two public schools, Elie and Williamshurgh, with respective accommodation for 160 and 102 children, have an average attendance of about 90 and 70, and grauts of over £90 and £60. Valuation (1882) £7234, 9s., (1892) £8587, 13s. 6d. Pop. (1861) 826, (1881) 670, (1891) 1172.—*Ord. Sur.*, sh. 41, 1857.

Elieock. See **ELIOCK.**

Eliston, an ancient haronial pile in Kirkliston parish, Linlithgowshire, on the left bank of the Almond, 1 mile ESE of Drumshoreland station. It is supposed to have been an ancient hunting-seat of the kings of Scotland, particularly of James II. and James IV.; and it now belongs to the Earl of Hopetoun.

Elistone, an ancient baronial castle on the river Almond, in Kirkliston parish, Edinburghshire.

Elizafield, a village in Torthorwald parish, Dumfriesshire, near Collin, 4½ miles E by S of Dumfries.

Elia. See **ELGAR.**

Ellag Loch, a lake of Kincardine parish, N Ross-shire, 6½ miles NW of Oikell Bridge. Lying 500 feet above sea-level, it has an utmost length of 2 and 1½ furlongs; is notable for wild swans; and sends off a stream 1½ mile east-north-eastward to the river Oikell.—*Ord. Sur.*, sh. 102, 1881.

Ellam or Ellem, an ancient parish in the N of Berwickshire, now incorporated with Longformacus. It lies along Whitadder Water, among the Lammermuir Hills; and it gives its name to Ellem Inn and Ellemford on Whitadder Water, 6 miles NW of Duus. It belonged to the Earls of Dunbar, and, after their forfeiture, was given by the Crown to Thomas Erskine.

Ellan or An Eilein, a loch in the Rothiemurchus portion of Duthil parish, Invernessshire, stretching along the base of Ordban Hill. Lying 840 feet above sea-level, it has an utmost length and breadth of 7¼ and 4½ furlongs; contains an islet, with ruins of a stronghold of the Wolf of Badenoch; and is skirted by some noble remains of the ancient Caledonian forest.—*Ord. Sur.*, sh. 74, 1877.

Ellanabrieck, a village in Kilbrandon parish, Argyllshire, on the W coast of Seil island, opposite Easdale island, and forming practically one seat of population with Easdale village. See **EASDALE.**

Ellan-Aigas. See **AIGAS.**

Ellan-an-Tighe. See **ELLAN-NA-KELLY.**

Ellan-Collumkill, a small island in Portree Bay, Isle of Skye, Invernessshire, about one mile in length and half a mile in breadth. It got its name in honour of St Columba; and the bay in which it lies was long called Loch Collumkill. See also **ERISORT.**

Ellan-Dheirrig. See **DHEIRRIG.**

Ellandonan, a small rocky island, crowned by a ruined, ivy-clad, ancient castle, in Kintail parish, Ross-shire, at the forking of Loch Alsh into Lochs Long and Duich, 8½ miles E of Kyle Akin. The castle presents a picturesque appearance, backed by a noble range of hills. Occupying the site of a Caledonian vitrified fort, it is said to have been given in 1266 to Colin Fitzgerald, son of the Earl of Desmond, and to have been the scene in 1331 of a severe act of retributive justice by Randolph, Earl of Moray, then warden of Scotland, who executed in it fifty delinquents, and ranged their heads round its walls. Certain it is that it was long a stronghold of the Mackenzies of Kintail, and that it sustained in 1539 a

famous attack by Donald Gorm, a claimant to the lordship of the Isles, whose assault on it cost him his life, and is celebrated in a ballad by Colin Mackenzie in Scott's *Border Minstrelsy*. In 1719 it was garrisoned by a Spanish force under William Mackenzie, fifth Earl of Seaforth, with the Earl Marischal and the Marquis of Tullibardine; but three English ships-of-war soon battered its rude square tower to pieces, and its defenders retired to **GLENSHIEL.**

Ellan-Duirinnis, an islet (3¼ × 1½ furl.) of Ardhattan parish, Argyllshire, in Loch Etive, opposite Bunawe. It lies in the line of the ferry over the loch, and is connected with the mainland by a raised road approach.

Ellan-Fada, an island of South Knapdale parish, Argyllshire, near the head of Loch Caolisport. It affords shelter from the heavy swells raised by the SW gales, and there is good anchorage for vessels on its lee side.

Ellan-Finnan, a small island of Ardnamurchan parish, Argyllshire, in Loch Shiel, at the boundary with Invernessshire.

Ellan-Freuch, an islet, with ruins of an ancient fortalice, in the Sound of Islay, Argyllshire.

Ellan-Gainvich. See **SANDA**, Small Isles, Argyllshire.

Ellan-Gheirrig. See **DHEIRRIG.**

Ellangowan. See **CAERLAVEROCK.**

Ellan-Issa. See **ISSAY.**

Ellan-Lochscar, the chief one of several islets off the SW side of Lismore island, Argyllshire, at the mouth of Portnamarloch.

Ellan-Maree, a wooded islet of Gairloch parish, Ross-shire, one of the smallest and most easterly of the island group towards the middle of Loch Maree. It seems to have been the site of a pre-Reformation chapel dedicated to the Virgin Mary, and hence to have got its name, which some, however, derive from the Gael. *Ellan-mac-Rìgh*, 'the island of the king's son,' a prince of Norway, according to tradition, having been buried here. It contains remains of an ancient hurrying-ground, and has also a deep well, consecrated in popular superstition to Saint Maree. Till not very long ago Ellan-Maree was supposed by the country folk round to possess a virtue for the cure of insanity—their method for obtaining the cure being to drag the lunatic to the shore of the lake, fasten him by a rope to a rowing boat, and tow him round the island, after which he had to drink some water from the holy well. The island was visited by Queen Victoria in Sept. 1877.—*Ord. Sur.*, sh. 92, 1881.

Ellan-More, a pastoral isle of Tiree and Coll parish, Argyllshire, adjacent to the NE coast of Coll island.

Ellan-More, a pastoral isle of South Knapdale parish, Argyllshire, in the Sound of Jura, near the mouth of Loch Swin. An ancient chapel, dedicated to St Cormac, stands nearly in the middle, and, measuring only 15 feet by 8, is an arched structure, covered with flags, and in a state of high preservation. It includes an upper chamber, accessible only by a ladder, and supposed to have been used for concealment; contains an admirably sculptured effigy of a priest, under a canopy; and is adjoined by an apartment, now roofless. The shaft of an ancient cross stands on the highest point of the island; and the disc of the cross, showing on one side a quaint representation of the Crucifixion, on the other side a scroll-work of foliage, was discovered in the vicinity in 1864.

Ellan Munde, an islet of Lismore and Appin parish, Argyllshire, in Loch Leven, opposite Ballachulish and the mouth of the rivulet Coe. It contains the ruins of a church, founded, on the site of a Culdee cell, about the middle of the 10th century by an abbot of the name of Mund; and around the ruins is an ancient cemetery still in use. A former parish, including the island, and taking name from it, comprehended Glencoe and the adjacent parts of Appin, and now is incorporated chiefly with Lismore and Appin, and partly with Kilmallie.

Ellan-na-Coomb or Ellan-na-Naoimh, a small island of Tongue parish, Sutherland, separated from the mainland by the strait of Caol Bean, 1 furlong wide at the

narrowest, a little W of Torrisdale Bay, and 9 furlongs E by S of Ellan-nan-Ron. With utmost length and breadth of $4\frac{1}{2}$ and $3\frac{1}{2}$ furlongs, it rises to a height of 231 feet, contains traces of an ancient chapel and cemetery, and is so tunnelled and perforated on the S side that half-flood tide, during a north-westerly gale, throws up from it a *jet d'eau* 30 feet high, followed by a detonating sound like the report of cannon.—*Ord. Sur.*, sh. 114, 1880.

Ellan-na-Kelly or **Ellan-an-Tighe**, the southern one of the three Shiant isles, in the Outer Hebrides, in the Minch, $5\frac{1}{2}$ miles SE of Ushenish Point in Lewis, and $22\frac{1}{2}$ S by E of Stornoway. It connects with Garv-Ellan by a neck of rolled pebbles, covered only at a concurrence of spring tide and tempestuous wind; and is 1 mile long, whilst varying in width from 1 to $2\frac{1}{2}$ furlongs. Its basaltic rock presents some columnar masses similar to those of Ulva and Staffa; and its tumulated but verdant surface affords rich sheep pasture. It appears to have anciently been the seat of a monastery or hermitage, whence it took its name, signifying the 'island of the cell;' and it still possesses some ruins which look to have been ecclesiastical.—*Ord. Sur.*, sh. 99, 1858.

Ellan-na-Naomih. See ELLAN-NA-COOBE and GAR-VELOCH ISLES.

Ellan-nan-Gobhar, an islet in Loch Aylort, Ardnarmurchan parish, Inverness-shire. It is an abrupt irregular mass of mica slate; and it contains two vitrified forts within a few yards of each other—the one of an oblong figure, and 140 paces in circumference, the other circular, and 90 paces in circumference.

Ellan-nan-Ron (Gael. 'seal island'), an inhabited island of Tongue parish, N Sutherland, to the E of the entrance to the Kyle of Tongue, $5\frac{1}{2}$ miles NNE of Tongue church. Measuring 1 mile by $6\frac{1}{2}$ furlongs, and rising to a height of 247 feet above the sea, it is parted on the NW by a narrow channel from Ellan-Iosal ($\frac{3}{4}$ mile \times $2\frac{1}{2}$ furl.; 171 feet), and is girt with high precipitous rocks, deeply channelled on the N side by narrow fissures. On the N side, too, is a noble natural arch, 150 feet high and 70 wide; whilst towards the middle of the island is a large round hole, which is supposed to communicate with the sea by a natural tunnel. The fissures of its cliffs are swept, with great violence, by winds impregnated with saline matter, and, leaving deposits of salt, so are used, without any artificial appliance of salt, for curing fish.—*Ord. Sur.*, sh. 114, 1880.

Ellan-Rorymore, an island in Loch Maree, Gairloch parish, Ross-shire. It was planted with pines about the year 1815, and it contains vestiges of a subterranean circular structure, similar to a Scandinavian dun or burgh. John Roy, ancestor of the Mackenzies of Gairloch, held it as a place of security from the attacks of the Macleods; and it was afterwards occupied by his son Alexander or Allister, who figures in tradition as a man of great wisdom and valour.

Ellan-Subhainn, a wooded island of Gairloch parish, Ross-shire, the largest of the group towards the middle of Loch Maree, 5 furlongs N of Talladale. It measures 1 by $\frac{3}{4}$ mile, and to the NW contains a small loch.—*Ord. Sur.*, sh. 92, 1881.

Ellan-Vow, an islet of Arrochar parish, Dumbartonshire, towards the head of Loch Lomond, $2\frac{1}{2}$ miles N by W of Inversnaid. It is beautifully wooded, and some of its trees are very old, said to have been planted by King Robert Bruce. It also contains ruins of an ancient fortalice of the Macfarlanes; and a vault beneath the ruins was inhabited, early in the present century, by an ascetic of the Macfarlane clan, and bears the name of the Hermit's Cave.—*Ord. Sur.*, sh. 38, 1871.

Ellan-Wirrey or **Ellan-Mhuire**, the easternmost of the three Shiant isles, in the Outer Hebrides, $\frac{1}{2}$ mile E of Garv-Ellan and 5 furlongs NE of Ellan-na-Kelly. With a crescent-like outline, it measures $7\frac{1}{2}$ by $2\frac{1}{2}$ furlongs, and presents a basaltic and verdant appearance similar to that of Ellan-na-Kelly.—*Ord. Sur.*, sh. 99, 1858.

Ellemford, a place on Whitadder river, 6 miles NW of Dunse, Berwickshire.

Ellenabeich. See ELLANABRIECH.

Ellen, Port. See PORT ELLON.

Ellen's Isle or **Eilean Molach**, an islet of Callander parish, Perthshire, towards the foot of Loch Katrine, immediately opposite Ben Venue. Highly romantic in appearance, craggy and wooded, it is the centre of the action of Sir Walter Scott's *Lady of the Lake*; and it contained, for some time, a modern sylvan lodge like that described in the poem, decorated with trophies of the chase and fray, but destroyed by accidental fire in 1837. Together with the surrounding shores, aided by the strong natural defences of the circumjacent ravines and mountains, it long served as a fastness of Highland caterans in their marauding expeditions against the Lowlanders.—*Ord. Sur.*, sh. 38, 1871.

Eller-Holm, a verdant isle of Shapinshay parish, Orkney, lying across the mouth of Ellwick Bay, on the SW side of Shapinshay island.

Ellim. See ELLAM.

Ellinorton, a village in the parish of Kirriemuir, Forfarshire.

Elliock, an estate, with a mansion, in Sanquhar parish, NW Dumfriesshire, on the left bank of Elliock Burn, 3 miles SE of Sanquhar. It belonged to Robert Crichton, lord advocate of Scotland in the reigns of Queen Mary and James VI., and father of James Crichtou (1560-83), best known as 'the Admirable Crichton.' The room in which the latter was born is kept in nearly its original condition. (See CLUNIE, Perthshire.) By the lord advocate the estate was sold to the Dalzells, afterwards Earls of Carnwath, and from them it went to the Veitches, its present owner being the Rev. Henry G. J. Veitch. Elliock Burn, rising on Wether Hill, at the Penpont border, runs 3 miles north-north-eastward to the Nith, and descends in this short course from 1400 to 400 feet above sea-level.—*Ord. Sur.*, sh. 15, 1864. See the *History of Sanquhar*, by James Brown (Dumfries, 1891).

Elliot Junction, a station in Arbirlot parish, Forfarshire, on the Dundee and Arbroath section of the Caledonian, at the junction of the branch to Carnyllie, $1\frac{1}{2}$ mile SW of Arbroath station. It is near the mouth of the Elliot Water.

Elliotston Tower. See CASTLE-SEMPLE.

Elliot Water, a stream of SE Forfarshire, rising at an altitude of 550 feet above sea-level in the W of Carnyllie parish, and running 8 miles east-south-eastward through or along the borders of Carnyllie and Arbirlot, till it falls into the German Ocean, near Elliot Junction, $1\frac{1}{2}$ mile SW of Arbroath. Its banks, at the mansion of Guynd, picturesque by nature, have been highly adorned by art; and its steep wooded dell below Arbirlot village has many memories of Dr Guthrie, the well-known divine, and presents an interesting relic of the past in the old tower of Kelly Castle.—*Ord. Sur.*, shs. 57, 49, 1868-65.

Ellishill, an estate, with a mansion, in Peterhead parish, Aberdeenshire, $2\frac{1}{2}$ miles WNW of the town.

Ellisland, a small farm in Duescore parish, Dumfriesshire, on the right bank of the broad, wooded Nith, $5\frac{3}{4}$ miles NNW of Dumfries and $2\frac{1}{2}$ SSE of Auldgirth station. Extending to 170 acres, it was rented for £50 a year by Robert Burns (1759-96) from Whitsunday 1788 to December 1791, his landlord being Mr Patrick Miller of DALSWINTON. A new five-roomed house was built; the farm has a kindly soil, its holmland portion loamy and rich; and its walks by the river-side command fair views of FRIARS CARSE, Dalswinton, and Cowhill Tower. So here Burns set himself to work the ground, till in the autumn of 1789 he was appointed a gauger, with a salary of £50, when Ellisland was made a dairy rather than an arable farm, with from nine to twelve cows, three to five horses ('Pegasus' or 'Peg Nicholson' among them), and several pet sheep. Things prospered not, and the close of the third year saw him forced to remove to DUMFRIES and bid farewell to pleasant Ellisland, 'leaving nothing there,' says Allan Cunningham, 'but a putting-stone, with which he loved to exercise his strength, a memory of his musings that can never die, and £300 of his money sunk beyond

redemption in a speculation from which all had augured happiness.' Yet was the Ellisland life a fruitful one, for the world, if not for the poet, since here were written *To Mary in Heaven* and *Tam o' Shanter*.—*Ord. Sur.*, sh. 9, 1863. See William M'Dowall's *Burns in Dumfriesshire* (Edinb. 1870).

Ellon, a village and a parish of E Aberdeenshire. The village stands, 40 feet above sea-level, on the left bank of the Ythan, 5 furlongs ESE of Ellon station, on the Formartine and Buchan section of the Great North of Scotland, this being 19½ miles N by E of Aberdeen, and 11¾ S by E of Maud Junction. The ancient seat of jurisdiction for the earldom of Buchan, it belonged, in pre-Reformation times, to Kinloss Abbey in Elginshire, and thence was often called Kinloss-Ellon. It now is a thriving centre of local trade, under the superiority of Mr Gordon of Ellon, and retains the site of its ancient open-air courts in the Mote or Earl's Hill, a small mound which long was occupied by the stables of the New Inn, and was railed in and cleared of disfiguring buildings about fifty years ago; but now the railing is broken down and the mound all but levelled. The Ythan is spanned here by a handsome three-arch bridge; and the newer part of the village, to the W of this bridge, comprises a number of well-built houses, in rows or detached, with pretty gardens, fringing the water-side; the older portion, to the E, is much less regular. Its salubrious climate and the Ythan's good trout-fishing attract a fair number of summer visitors to Ellon, which possesses a post office, with money order, savings bank, insurance, and telegraph departments, branches of the Town and County, North of Scotland, and Union Banks, a local savings bank, inns, a gaswork (1827), water-works, a brewery, and a horticultural society. Cattle and grain markets are held on the first and third Mondays of every month; hiring markets on the Tuesday after 11 April and the Wednesday after 12 November. It has (1893) been proposed, principally with the view of tapping the traffic from the numerous granite quarries about Peterhead, to construct a line of railway from Ellon through Buchan to Stirling village and Boddam. Meantime a coach runs from the station by the coast to Peterhead in connection with certain trains. The ancient cruciform church of St Mary, bestowed on Kinloss in 1310, was superseded in 1777 by the present plain parish church, which, renovated and decorated in 1876, contains 1200 sittings. The Free church, built in 1825 as an Independent chapel, contains 350 sittings; a U.P. church of 1827 contains 340; and a fine Episcopal church, St Mary of the Rock, was rebuilt (1870) in the Early English style from designs by Mr G. E. Street, R.A., and consists of narthex, nave, ante-choir, and apsidal chancel. Pop. of village, including Craighall, (1891) 1254.

The parish is bounded N by Old Deer, NE by Cruden, E, SE, and S by Logie-Buchan, SW by Udney, W by Tarves and Methlick, and NW by New Deer. Its utmost length, from N to S, is 8½ miles; its breadth, from E to W, varies between 3½ and 7 miles; and its area is now 23,220½ acres, of which 77 are water, the Boundary Commissioners having in 1891 transferred to it the Invererie detached portion of Methlick parish, consisting of 831 acres. The YTHAN has here an east-south-easterly course of 6¼ miles, partly along the Methlick and Logie-Buchan borders, but mainly across the southern interior; in the W it is joined by EBBIE Burn, and in the W by the Burn of Auchmacoy. Coal lighters ascend to within a mile of the village, and spring-tides are perceptible as high as the Bridge of Ellon. S of the Ythan the surface attains its highest point above sea-level at Cairnhill (256 feet), whilst northwards it rises gently to 229 feet near Colchill, 317 near Mossnook, 403 at Hillhead of Argrain, 321 at Braehead, 496 at Ardarg, 572 at the Hill of Dudwick, and 530 at Whitestone Hill—petty enough hillocks, that yet command far-away views to Bennochie and the Grampians. Gneiss and granite are the prevailing rocks, and the soil of the valley is mainly fertile alluvium; elsewhere it is generally poor, either black and moorish or a very retentive clay. Thorough draining, however, and artificial manures

have done much to increase its productiveness; and more than three-fourths of the entire area is now in tillage. Woods and plantations cover a small extent, the northern and eastern districts of the parish being bleak and bare. In the wall of the old church is a monument to the Annands of Auchterellon, with their arms and the date 1601; of Waterton, a stately seat of Bannermans and Forbeses between 1560 and 1770, and a haunt of 'Jamie Fleeman's,' slight vestiges remain; but the girls' school stands on the site of the house in which the Rev. John Skinner wrote *Tullochgorum*—'the best Scotch song,' said Burns, 'that ever Scotland saw.' Of the Ellon Castle of 1780, built by the fourth Earl of Aberdeen, only one tower remains; its successor of 1851, with noble avenue and tasteful grounds, is the seat now of A. J. L. Gordon, Esq. Other mansions or estates, separately noticed, are Arnage, Dudwick, Esslemont, and Turner Hall. The seat of a presbytery in the synod of Aberdeen, Ellon gives off portions to the *quoad sacra* parishes of Ardallie and Savoeh; the living is worth £336. Barford, Drumwhindle, Ellon, and Esslemont girls' public schools, with respective accommodation for 120, 100, 420, and 70 children, had (1891) an average attendance of 64, 54, 298, and 52, and grants of £59, 5s., £51, 10s., £257, 6s. 6d., and £42. Pop. of civil parish (1891) 3998; of registration district (1891) 3212.—*Ord. Sur.*, sh. 87, 1876. See Thomas Muir's *Records of the Parish of Ellon* (Aber. 1876).

The presbytery of Ellon comprises the parishes of Ellon, Cruden, Foveran, Logie-Buchan, Methlick, Slains and Forvie, Tarves, and Udney, and the *quoad sacra* parish of Barthol Chapel. Pop. (1871) 15,516, (1881) 16,062, (1891) 15,864, of whom 5757 were communicants of the Church of Scotland in 1892. The Free Church also has a presbytery of Ellon, with churches at Ellon, Cruden, Foveran, Methlick, New Machar, Old Meldrum, Slains, and Udney, which together had 1739 communicants in 1892.

Ellon, Port. See PORT ELLON.

Ellridgehill or **Elsrickle**, a village near the southern border of Walston parish, E Lanarkshire, 4¼ miles NNE of Biggar. It is a pleasant place, in a picturesque situation, and decidedly superior to most small Scottish villages. It has a Free church and a school. Some stone coffins, a number of years ago, were exhumed at the E end of the village.

Ellrig, a lake in the NE of Slamannan parish, Stirlingshire, 3½ miles S of Falkirk. Measuring 5½ by 1¼ furlongs, it sends off a small burn, of some water power, 9 furlongs south-westward to the Avon.

Ellrig, the highest part of the ridge of upland on the mutual border of East Kilbride parish, Lanarkshire, and Eaglesham parish, Renfrewshire. It culminates, 4 miles SSE of Eaglesham village, at 1230 and 1215 feet above sea-level, and it cradles both the White Cart and head-streams of Calder Water.

Ellwick or **Elswick**, a fine bay in the SW of Shapinsay island, Orkney. It opens towards Kirkwall; is sheltered, across the entrance, by the green islet of Eller-Holm; has from 4 to 6 fathoms of water, over a bottom of hard clay covered with sand; is skirted, on the W side, by a fine beach, with abundance of excellent fresh water; forms almost as good a natural harbour as any in Orkney; and is overlooked by a pleasant modern village.

Elphine. See ASSYNT.

Elphinstone, a collier village in Tranent parish, W Haddingtonshire, 2 miles S by W of Tranent town. It has a post office under Tranent, a public school, a mission station of the Established Church, and a Primitive Methodist chapel (1867). Elphinstone Tower, 5 furlongs WSW, is a square three-storied pile of the 14th or 15th century, a ruin, but well preserved, the two lower stories retaining their stone vaulting, and the uppermost having been re-roofed with slate. In the hall, on the second story, eight carved escutcheons are over the fireplace. A mansion, built on to the tower in 1600, was demolished in 1865. The lands of Elphinstone were held in the 13th and 14th centuries by Lord Elphinstone's ancestors, and

passed from them by marriage to the Johnstons. On a December night of vehement frost, 1545, George Wishart was brought from ORMISTON by the Earl of Bothwell to Elphinstone Tower, where was Cardinal Beaton; and thence he was taken to St Andrews for trial and execution. Pop. of village (1861) 388, (1871) 488, (1881) 597, (1891) 685.—*Ord. Sur.*, sh. 33, 1863.

Elphinstone, a property in Airth parish, E Stirling-shire. Passing by marriage to the Tranent Elphinstones about the beginning of the 14th century, it has given them the title of Baron in the peerage of Scotland since 1509, and in that of the United Kingdom since 1885. See CARBERRY.

Elphinstone, Port. See PORT ELPHINSTONE.

Erlick, an estate, with a mansion, in New Machar parish, Aberdeenshire, 1½ mile SSW of New Machar station.

Erlick, a village in the E of Cabrach parish, Banffshire, 6½ miles W by S of Rhynie.

Erlick or Elrig, Wigtownshire. See ELDRIG.

Elsbieshields Tower, a mansiou in Lochmaben parish, Dumfriesshire, on the right bank of the Water of Ae, 2 miles NNW of Lochmaben. It is partly a modern edifice and partly a massive old tower.

Elsness, a promontory in Sanda island, Orkney. Projecting 1½ mile southwest from the main body of the parish, and flanking the W side of Stywrick Bay, it commands an extensive sea-view, and is crowned by more than twenty vitrified cairns, supposed by Dr Hibbert to have been signal stations of the Norsemen for communicating with their fleets.

Elsrickle. See ELLRIDGEHILL.

Elswick. See ELLWICK.

Elvanfoot, an inn and a station in Crawford parish, SE Lanarkshire, on the Caledonian railway, adjacent to the confluence of Elvan Water and the Clyde, 5½ miles SE of Abington, under which it has a post office, and 12 NW of Moffat.

Elvan Water, a rivulet of Crawford parish, SE Lanarkshire, rising, at Shortleuch Water, on Lowther Hill, close to the Dumfriesshire border. Thence it winds 7½ miles north-eastward till, just after passing beneath a viaduct of the Caledonian Railway, it falls into the Clyde at Elvanfoot. It descends during this course from 2000 to 885 feet above sea-level, and is famous for particles of gold which, from time to time, have been found in its sands; the precious metal having in remote times been found in considerable quantity here and by the banks of Glengonuar Water.—*Ord. Sur.*, sh. 15, 1864.

Elvingston, an estate, with a mansion, in Gladsmuir parish, Haddingtonshire, 2½ miles SSE of Longniddry station.

Ely. See ELIE.

Emanuel. See MANUEL.

Embo, a fishing village, with a public school, in Dornoch parish, SE Sutherland, 2½ miles NNE of Dornoch, under which it has a post office. Pop. (1891) 471.

Endrick Water, a stream of Stirlingshire chiefly, but partly of Dumbartonshire, formed, at a point 4½ miles SSE of Kippen village, by the confluence of Gourlays and Burnfoot Burns, which, rising among the Gargunock Hills at 1480 and 1450 feet above sea-level, have a southerly course of 3½ and 2½ miles. Thence it winds 29 miles (only 15½ as the crow flies) westward, till it falls into Loch Lomond, towards the foot, and 2½ miles WNW of Buchanan House. It bounds or traverses the parishes of Gargunock, Fintry, Balfron, Killearn, Kilmarnock, Drymen, and Buchanan, under which its chief features—waterfalls, villages, and mansions—are described; and it receives a number of affluents, the largest of them the BLANE. Many parts of Strathendrick, or 'Sweet Innerdale,' are of great beauty; and Richard Franck, in his quaint *Northern Memoirs* (1694), speaks of the 'memorable Anderwick, a rapid river of strong and stiff streams, whose fertile banks refresh the borderer, and whose fords, if well examined, are arguments sufficient to convince the angler of trout, as are her deeps, when consulted, the noble race and treasure

of salmon, or remonstrate his ignorance in the art of angling.' The waters are mostly preserved, and the trout are still fairly plentiful, with a good many pike, sea-trout in autumn, and now and then a salmon.—*Ord. Sur.*, shs. 39, 30, 38, 1866-71.

Enhallow, an island of Rousay parish, Orkney, in the sound between the SW side of Rousay island and the Evie district of Pomona. It measures about a mile in circumference, has good soil, and is overlooked by the headlands and hills of Rousay and Pomona. The strait between it and Rousay is beset by a reef of rocks, covered at high water, and very dangerous to unwary mariners. That between it and Pomona bears the name of Enhallow Sound; offers but little width of fair way to vessels; is swept by a rapid tide; and ought never to be attempted except in moderate weather, and with a fair wind.

Ennerdale, the valley or basin of the river ENDRICK, in Stirling and Dumbarton shires.

Enneric. See ENRICK.

Ennerurie. See INVERURY.

Ennerwick. See INNERWICK.

Ennich or Eunach, a loch towards the head of Glen Eunach, in the S of the Rothiemurchus portion of Duthil parish, E Inverness-shire. Lying 1700 feet above sea-level, it has an utmost length and breadth of 1½ mile and 2½ furlongs; is overhung by Sgoran Dubh (3658 feet) on the W, and Braeriach (4248) on the E; and sends off the Allt na Beinne Moire 10¾ miles northward to the Spey at Craigellachie.—*Ord. Sur.*, sh. 73, 1878.

Ennoch, a hamlet of Kirkmichael parish, NE Perthshire, near the right bank of the Blackwater, 12½ miles NW of Blairgowrie.

Enoch, a hamlet in Portpatrick parish, Wigtownshire, 1½ mile NE of Portpatrick town.

Enoch, a desolate granite-bound loch of Minnigaff parish, NW Kirkcudbrightshire, on the Ayrshire border, 5¾ miles SSW of the head of Loch Doon. With a very irregular outline, it is 6½ furlongs long and from 2 to 4½ furlongs wide, lies 1650 feet above sea-level, contains three islets, and communicates with Loch Doon by Eagton and Gala Lanes. Its waters teem with fine red-fleshed trout, averaging ½ lb. 'Loch Enoch,' says Mr. Harper, 'is the most apparent rock-basin in the district, being situated on the highest part of the granite plateau, absolutely bare, grassless, treeless, and weirdly wild, every cape, peninsula, and island showing the severest ice-action' (*Rambles in Galloway*, 1876, chap. xviii).—*Ord. Sur.*, sh. 8, 1863.

Enoch, a lofty hill in the SW of New Cumnock parish, Ayrshire, near the source of the Nith, 6 miles SW by S of New Cumnock village. It has an altitude of 1865 feet above sea-level.

Enoch. See ENNOCH.

Enoch (Celt. *aeinach*, 'a place of popular assembly'), a barony in Durisdeer parish, NW Dumfriesshire, between the Nith and Carron Water, belonging to the family of the Menzies from the beginning of the 14th century till 1703, when it was sold to James, second Duke of Queensberry, thus coming in 1810 to the Duke of Buccleuch. Enoch Castle stood on a peninsular spot between a deep ravine and the Carron, and bore, on the lintel of its gateway, the date, 1281. See Dr Craufurd Tait Ramage's *Drumlanrig Castle and Durisdeer* (Dumfries, 1876).

Enochdhu, a hamlet of Moulin parish, NE Perthshire, at the head of Strath Ardle, 10 miles ENE of Pitlochrie, under which it has a post office.

Enrick, a troutful stream of Urquhart parish, N Inverness-shire, issuing from Lochnan Eun (5 × 2 furl.; 1650 feet) in a detached portion of Kiltarlity. Thence it winds 11¾ miles north-north-eastward and eastward to Loch MEIKLIE (9 × 3 furl.; 372 feet), and thence 6 miles eastward along wooded GLEN URQUHART, till at Urquhart Bay, near Drumnadrochit, it falls into Loch Ness (48 feet). In its upper course it makes a very picturesque cascade, called Moral Fall, near which is a large cave, where some leading Jacobites found tem-

porary concealment after the battle of Culloden.—*Ord. Sur.*, sh. 73, 1878.

Ensay, an islet of Harris parish, Outer Hebrides, Inverness-shire. Lying 2 miles SW of the main body of Harris, it measures 5 miles in circumference, and is all verdant and partly cultivated.

Enterkin, a troutful burn in Durisdeer parish, NW Dumfriesshire, rising, close to the Lanarkshire border, on the western slope of LOWTHER HILL (2377 feet), at an altitude of 2000 feet above sea-level, and 2¾ miles S of Leadhills. Thence it runs 5¼ miles south-south-westward, till at Enterkinfoot (280 feet), midway between Sanquhar and Thornhill, it falls into the Nith. It is followed along all its course by the old Leadhill bridle-path from Clydesdale into Nithsdale, that famous Enterkin Pass of which the author of *Rab and his Friends* has written: 'A few steps and you are on its edge, looking down giddy and amazed into its sudden and immense depths. We have seen many of our most remarkable glens and mountain gorges—Glencroe and Glencoe; Glen Nevis (the noblest of them all); the Sma' Glen, Wordsworth's Glen Almain (Glenalmond), where Ossian sleeps; the lower part of Glen Lyon; and many others of all kinds of sublimity and beauty—but we know nothing more noticeable, more unlike any other place, more impressive, than this short, deep, narrow, and sudden glen. There is only room for its own stream at the bottom, and the sides rise in one smooth and all hut perpendicular ascent to the height, on the left, of 1895 feet in Thirstane Hill, and, on the right, of 1875 feet in the exquisitely moulded Stey Gail, or Steep Gable, so steep that it is no easy matter keeping your feet, and if you slip you might just as well go over a *bona fide* mural precipice. "Commodore Rogers" would feel quite at home here; we all know his merits—

"Commodore Rogers was a man—exceedingly brave—particular; He climbed up very high rocks—exceedingly high—perpendicular; And what made this more inexpressible, These same rocks were quite inaccessible."

Defoe, in his *Memoirs of the Church of Scotland*, gives a vivid description of the rescue here by twelve countrymen of a minister and five other Covenanters whom a company of dragoons was taking prisoners to Edinburgh, July or August, 1684. The fall of their commanding officer, shot through the head, so daunted the soldiers that without striking a blow—after firing one volley, however, according to Wodrow—they yielded their prisoners to the rescuing party, whose leaders were James and Thomas Harkness, of Lockerben, in Closeburn.—*Ord. Sur.*, sh. 15, 1864. See Dr Craufurd Tait Ramage's *Drumlanrig Castle and Durisdeer* (Dumf. 1876), and Dr John Brown's *John Leech and other Papers* (Edinh. 1882).

Enterkine, an estate, with a mansion, in Tarhollow parish, Ayrshire, near the right bank of the river Ayr.

Enterkinfoot, a hamlet in Durisdeer parish, Dumfriesshire, at the foot of Enterkin Burn.

Enterkins-Yett, a place in Currie parish, Edinburghshire, traditionally said to have been the scene of a sanguinary battle between the ancient Caledonians and an invading force of Scandinavians.

Enzie, a hamlet in Bellie parish, Elginshire, and a *quoad sacra* parish and a district also in Banffshire. The hamlet lies 3¼ miles ENE of Fochabers, and has a post office under Buckie. The *quoad sacra* parish, containing also the village of Port Gordon, comprises the eastern part of Bellie parish and the western part of Rathven parish in Banffshire. It is in the presbytery of Fordyce and synod of Aberdeen; the minister's stipend is £140. The parochial church was built in 1785, and, as enlarged in 1815 and 1822, contains 400 sittings. There is also a Free church; and two public schools, Enzie and Port Gordon, with respective accommodation for 209 and 388 children, had (1891) an average attendance of 130 and 253, and grants of £128, 17s. and £220, 18s. 6d. The district extends from the river Spey to Buckie Burn, but is popularly regarded as com-

prising all Bellie and Rathven parishes. Pop. of *quoad sacra* parish (1871) 2251, (1881) 2413, (1891) 2460.—*Ord. Sur.*, sh. 95, 1876.

Eorradail, a headland in Barvas parish, Lewis, Outer Hebrides, Ross-shire, 2¼ miles SE of the Butt of Lewis.

Eorsa, a small island of Kilfinichen and Kilvickeen parish, Argyllshire, on the W side of Mull, in Loch-na-Keal, 2 miles NE of Inch Kenneth. It belonged anciently to the Abbey of Iona, and is now the property of the Duke of Argyll. It was described in 1549, by Dean Munro, as 'fertile and full of corn,' hut now is used only for sheep pasture.

Eousmil, a rocky islet on the W side of North Uist, in the Outer Hebrides. It measures ½ mile in circuit, and is notable as a place for capturing seals.

Eoy, an islet of the Outer Hebrides, between Barra and South Uist.

Erchless, a *quoad sacra* parish, partly in Kintail parish, in the county of Ross and Cromarty, and partly in Kilmorack and Kiltarlity parishes, Inverness-shire. The living is worth £180. Pop. (1891) 598.

Erchless Castle, a mansion in Kiltarlity parish, Inverness-shire, near the left bank of the Beauly, 5 furlongs N of the confluence of the Glass and the Farrar, and 10 miles WSW of Beauly town. A modernised, yet still a stately old pile, lofty and narrow, it stands in a fine park, completely encircled by wooded hills. From the 15th century onwards it has been the seat of the Chisholms, one of whom vaunted that in all the world there were hut three entitled to the designation 'The'—the Pope, the King, and the Chisholm. They were zealous Jacobites, garrisoning their castle after Killiecrankie, and fighting at Sheriffmuir and Culloden.—*Ord. Sur.*, sh. 83, 1881.

Ercildoun. See EARLSTON.

Eredine, an estate, with a mansion, in Kilchrenan and Dalavich parish, Argyllshire, near the head of Loch Awe, 10 miles N by W of Lochgilphead.

Eriboll, a sea-loch in Durness parish, N Sutherland, opening from the sea between Whiten Head and Rispond Point, and penetrating 10½ miles south-south-westward. Its breadth varies between 5 furlongs and 2¼ miles; it forms, over much of its expanse, particularly at Camas-an-Duin Bay, 7 miles from its entrance, one of the finest natural harbours in the world, with depth ranging from 15 to 60 fathoms; and just to the N of that bay it is crossed by Heilem ferry. Its eastern shore, for 4 miles southward from Whiten Head, presents a series of caves and arches, pronounced by Dr Macculloch 'the most extensive and extraordinary on any part of the Scottish coast;' and its upper part is overhung by magnificent alpine summits—Ben Hope (3040 feet) on the E, and Crann Stacach (2630) on the W.—*Ord. Sur.*, sh. 114, 1880.

Erichdie Water, a stream of Blair Athole parish, N Perthshire, formed, at a point 4¼ miles N by E of Kinloch Rannoch, by the confluence of the Allt Sleibh and the Allt na Feith Reidhe, which, rising at altitudes of 1550 and 1600 feet above sea-level, have an east-south-easterly and an east-north-easterly course of 3½ and 5 miles. The Erichdie itself runs 10¼ miles east-by-northward, past Trinafou and Auchleeks, along a wild glen, called from it Glen Erichdie; and falls into the Garry at Struan, 4 miles W of Blair Athole village. It is joined, 1½ mile above Trinafou inn, by the Allt Choin, running 1¼ miles south-eastward from Loch Choin (7½ × 1 furl.; 1360 feet), and sometimes regarded as its parent stream.—*Ord. Sur.*, sh. 55, 1869.

Ericht, a river of NE Perthshire, formed near Strone House by the confluence of the AIRDLIE and the BLACK-WATER, and winding 10 miles south-eastward, mainly along the boundary between Blairgowrie and Rattray parishes, partly across Bendochy, till it falls into the Isla, 2¼ miles NNE of Coup-ar-Angus. During this course the 'ireful' Erich descends from 490 to 115 feet above sea-level; its bed is rocky, its current rapid and turbulent; and the scenery on its banks in many parts, particularly at CRAIGHALL and in the neighbourhood of Blairgowrie town, is singularly romantic. A splendid

salmon stream before its waters were befouled by the works of Blairgowrie, it still contains a good abundance of trout, running from $\frac{1}{2}$ lb. to 2 or even 3 lbs.—*Ord. Sur.*, sh. 56, 1870.

Ericht, a loch on the mutual border of Perth and Inverness shires, and a stream of Fortingall parish, Perthshire. The loch, beginning 1 mile SW of Dalwhinnie station, extends $14\frac{3}{4}$ miles south-south-westward; forms, for 5 miles, the boundary between the two counties; has a varying width of $\frac{1}{2}$ mile and 9 furlongs; and lies among the central Grampians at an elevation of 1153 feet above sea-level. Overhung on its W side by the precipitous mountain-range of BEN ALDER (3757 feet), on its E by BEN UDLAMAN (3306), it presents an aspect of wild desolation and solemn grandeur, having nowhere on its shores any other signs of human habitation than a couple of shooting lodges and a shepherd's hut. The fishing is capital, the salmo-ferox running up to 20 and 25 lbs., whilst the trout, though rather shy, are very plentiful. The stream, issuing from the foot of the loch, runs $5\frac{1}{2}$ miles south-south-eastward to Loch Rannoch (668 feet), at a point 7 furlongs from that loch's head; flows, for the first mile or two, in slow, deep current; and is afterwards a sheer torrent, lashing and tearing its banks with wild fury.—*Ord. Sur.*, shs. 63, 54, 1873.

Erickstanebrae, a hill (1566 feet) contiguous to the meeting-point of Dumfries, Peebles, and Lanark shires, overhanging the high road from Dumfries to Edinburgh at a point 5 miles NNW of Moffat, and terminating at the road's side in an immense hollow, noticed in our article ANNANDALE'S BEEF STAND.

Erigmore. See BIRNAM.

Erins, an estate, with a mansion, in South Knapdale parish, Argyllshire, on the W shore of Loch Fyne, 5 miles N by W of Tarbert.

Erisa, a loch in the NW of Mull, Argyllshire, commencing at a point 4 miles WSW of Tobermory. It extends 5 miles south-eastward, has a width of $\frac{3}{4}$ mile, contains salmon, grilse, and trout in abundance, and sends off a streamlet 4 miles east-south-eastward to the Sound of Mull at Aros Castle.

Erisay, a small island of the Outer Hebrides, Inverness-shire, between North Uist and Harris.

Eriska, a small inhabited island of Ardchattan parish, Argyllshire, in the mouth of Loch Creran, 3 furlongs W of Shian ferry. With utmost length and breadth of $1\frac{1}{2}$ mile and 5 furlongs, it rises to a height of 156 feet, and is severed from the mainland by a strait little more than 100 yards wide at the narrowest, and dry at low tide. It presents a beautiful appearance, being variously wooded, pastoral, and arable; and forms a pleasant farm.—*Ord. Sur.*, sh. 45, 1876.

Eriska (Norse *Eiríksøy*), an island of South Uist parish, Outer Hebrides, Inverness-shire, separated by a channel 2 miles wide from the S end of South Uist island. It measures 3 miles in length from N to S, and $1\frac{1}{2}$ mile in breadth; and it is notable for having been the place where Prince Charles Edward first set foot on the Kingdom of his ancestors, 23 July 1745. He landed with his attendants from the *Doutelle*, and passed the night in the house of the tacksman, Angus Macdonald—an uncomfortable night enough, since the beds were few, and the Prince resigned his to Sir Thomas Sheridan, whilst the smoke from the chimneyless fire obliged him ever and anon to go out into the fresh air. 'What a plague is the matter with that fellow,' asked honest Angus, 'that he can neither sit nor stand still, and neither keep within nor without doors?' The channel between Eriska and South Uist is used as a boat harbour for the export of local produce. There are a post office, a public school, and a Roman Catholic church. Pop. (1891) 454.

Erisort, a long, narrow sea-loch in Lochs parish, Lewis, Outer Hebrides, Ross-shire. Opening from the Minch at a point 7 miles S of Stornoway, it penetrates 10 miles west-south-westward to within $1\frac{3}{4}$ mile of the upper part of Loch Seafort; is $1\frac{1}{2}$ mile wide at the entrance, but only from 2 to 7 furlongs in its upper reaches: and contains, in its mouth, fifteen hilly islets (the Barkin Isles)

and many excellent anchorages for ships of any size. One of its islets, called Tanneray, contains a remarkable cave; on another, Eilan Collumhill ($1 \times \frac{1}{4}$ mile), the largest of the group, stood a chapel dedicated to St Columba.—*Ord. Sur.*, sh. 99, 1858.

Ermit. See ARMIT.

Ernan Water, a rivulet in the Edinglassie section of Strathdon parish, W Aberdeenshire, rising close to the boundary with Banffshire, and running $7\frac{1}{2}$ miles east-south-eastward, till it falls into the Don at Invernan, after a total descent of 1300 feet.—*Ord. Sur.*, sh. 75, 1873.

Erncrogo, a small loch near the centre of Crossmichael parish, Kirkcudbrightshire. Lying 380 feet above sea-level, it has an utmost length and breadth of 3 by $1\frac{1}{2}$ furlongs, and contains two islets, which formerly were frequented by sea-gulls. A streamlet, flowing from it to the Dee, drives a meal mill that serves for nearly all the parish; otherwise the loch might be advantageously drained.—*Ord. Sur.*, sh. 5, 1857.

Erne. See LAERN.

Erriboll. See ERIBOLL.

Erickstanebrae. See ERICKSTANEBRAE.

Errol, a village and parish in the Carse of Gowrie, Perthshire. The village stands 5 furlongs from the Tay's N bank, and $1\frac{1}{4}$ mile S of Errol station on the Dundee and Perth section of the Caledonian, which station is $10\frac{1}{2}$ miles WSW of Dundee and $11\frac{1}{2}$ E of Perth, and near which is Errol post office, with money order, savings bank, insurance, and railway telegraph departments. Crowning a gentle eminence that commands a delightful view, particularly towards the S and W, it is under the superiority of Mr and Mrs William Ogilvy Dalgleish; serves as a business centre for much of the Carse district; is inhabited mainly by weavers and operatives; and has a post office of its own under Errol, a branch of the Union Bank, 2 chief inns, a gaswork, a public hall, 2 schools, a reading-room and library, and fairs on the last Wednesday of July and the Wednesday before Little Dunning. The parish church, built in 1831 after designs by Gillespie Graham, is a cruciform Norman structure, with a conspicuous square tower, and contains 1450 sittings. There are also a Free church and a U.P. church, the latter containing 751 sittings. Pop. (1841) 1147, (1861) 1036, (1871) 918, (1881) 890, (1891) 741.

The parish, containing also the village of Leetown, is bounded N by Kinnaird, NE by Inchtute, SE and S by the Firth of Tay, W by St Madoes and Kinfauns, and NW by Kilsplindie. Its utmost length, from ENE to WSW, is 6 miles; its breadth varies between $1\frac{3}{4}$ and $3\frac{3}{4}$ miles; and its area is 11,754 acres, of which 2229 are foreshore and 17 $\frac{3}{4}$ water. The shore is everywhere flat, nowhere exceeding 20 feet above high-water mark; and the eastern interior, to the extent of half of the entire area, is all but a dead level—its highest point Middlebank (89 feet). The western district is more diversified, having several low ridges extending nearly parallel with the Tay, and attaining, near Mains of Errol, a summit altitude of 156 feet. Three or four very sluggish streamlets, locally called pows, rise near or beyond the northern and north-western boundaries, and, winding through the interior, carry the drainage to the Firth of Tay. Fossiliferous sandstone and limestone are the predominant rocks. The sandstone is a good building material, and has been largely quarried at Clashbennie; whilst the limestone, though coarse, was formerly worked at Murie. The soil throughout the flat tracts is carse clay or strong argillaceous loam, on the ridges is blackish earth, and, as a whole, is singularly fertile. Scarcely a rood of land is waste; little more than 200 acres are under wood, including hedgerows; and the rest of the land is so richly cultivated and so beautifully enclosed as well to compensate by its luxuriance of aspect for any absence of the picturesque. Two standing stones are at Clashbennie and near Inchmartin; an ancient artificial mound, the Law-Knoll, rises in Murie Park; and at West-town is a small ruined pre-Reformation chapel. Considerable commerce, both in export and in import, is done at the little harbour of Port Allen. The lands of Errol were

granted by William the Lyon (1166-1214) to his butler, William de Haya, whose descendants, the Hays, obtained the hereditary high constableness of Scotland in 1315, and the earldom of Errol in 1452. (See LUNCARTY and SLAINS.) By them the estate was sold in 1634, and, after passing through a number of hands, it was purchased in 1872 by the late Francis Molison, Esq., who, at great cost, had restored the old mansion, a three-storied quadrangular pile, 100 by 80 feet, with courtyard in the centre, when, upon 10 Oct. 1874, it was reduced by fire to a mere shell, the damage being estimated at £9000. Other mansions, separately noticed, are, Murie House, Megginch Castle, and Gourdiehill. Errol is in the presbytery of Perth and the synod of Perth and Stirling; the living is worth £325. Pitrodie U.P. church, on the NW border, 2½ miles NW of the village, contains 320 sittings; and Errol public, Glendoick public, and Errol female industrial schools, with respective accommodation for 223, 130, and 146 children, had (1891) an average attendance of 120, 86, and 68, and grants of £99, 18s. 6d., £74, 10s., and £59, 10s. Valuation (1860) £20,089, 5s. 6d., (1882) £22,570, 14s. 11d., (1892) £17,599, 10s. Pop. (1801) 2653, (1831) 2992, (1861) 2759, (1871) 2504, (1881) 2421, (1891) 2158.—*Ord. Sur.*, sh. 48, 1868.

Erskine (13th century *Irschen*), a parish on the northern border of Renfrewshire, containing the post office, village, and railway station of BISHORTON, 5 miles NNW of Paisley. The Glasgow and Greenock section of the Caledonian railway passes through the parish. It is bounded N and NE by the river Clyde, E by Inchinnan, S by Houston, and SW and W by Kilmalcolm. Its utmost length, from E to W, is 7 miles; its breadth, from N to S, varies between 1½ and 3½ miles; and its area is 9092½ acres, of which 1189 are foreshore and 368 water. The CLYDE, a stately sea river, sweeping 6½ miles west-north-westward, here widens from 1 furlong to 1½ mile, and here is crossed by Erskine and West Ferries, the former just above Old Kilpatrick village, with quays so as to serve for horses and carriages as well as for foot passengers, and said to be the oldest ferry on the Clyde; the latter opposite Dumbarton Castle. The Renfrewshire shore is much of it low and flat, and throughout all the eastern interior the surface nowhere exceeds 150 feet above sea-level. The western division is hillier, attaining 317 feet near Netherston, 600 at Barscube, 583 at Gallahill, 626 near Bogside, and 611 near Langside—heights that command magnificent views along the Clyde, up Gare Loch and Loch Long, and away to the Grampians. Dargavel Burn traces most of the southern boundary, and several short burns rise in the interior, and run to the Clyde; whilst springs of excellent water are everywhere plentiful. The rocks of the E are chiefly carboniferous, and those of the W eruptive. Minerals of the zeolitic family abound in the latter; and fine specimens have been found of mesotype and amethystine quartz. Sandstone, for building purposes, has been worked in three quarries; and trap rock, for road metal, in several places. The soil is mainly either a light friable retentive earth, with tilly subsoil, or a sharp dry earth, incumbent upon trap. Nearly a twelfth of the entire area is under wood; about a fifth is pastoral, mossy, or waste; and all the rest is arable. In 1226 the barony of Erskine was held by one Henry de Erskine, of whose descendants the fifth had a grant of ALLOA, the twelfth was created Earl of MAR, and by the fourteenth this property was sold in 1638 to Sir John Hamilton of Orbiston. From the Hamiltons it was purchased in 1703 by the noble family of BLANTYRE, and it now belongs to Charles Stuart, twelfth Baron Blantyre (b. 1818; suc. 1830). The present mansion stands on a rising-ground above the Clyde, ¾ mile WNW of Erskine ferry, and 2 miles NNE of Bishopton. Built in 1828 after designs by Sir Robert Smirke, it is a splendid Tudor edifice, and commands a view as varied as it is beautiful. One feature in the finely-wooded park is an obelisk, 80 feet high, erected to the memory of Robert, eleventh Lord Blantyre (1777-1830), who, after serving through the Peninsular campaign, was killed by a stray

bullet during the Brussels insurrection. Dargavel has been separately noticed, as also has Bargarran of witchcraft fame. The Rev. Walter Young, D.D., F.R.S., and the Rev. Andrew Stewart, M.D., the former famous as a musician, the latter distinguished for great skill in pulmonary complaints, were ministers of Erskine, the one till 1814, the other till 1839. Erskine is in the presbytery of Greenock and synod of Glasgow and Ayr; the living is worth £318. The parish church, 1½ mile NNE of Bishopton, was built in 1813, and is a handsome Gothic edifice, containing 500 sittings. At LANGBANK there is a *quoad sacra* church, at Bishopton a Free church; and two public schools, Erskine and Undercraig, with respective accommodation for 205 and 103 children, had (1891) an average attendance of 127 and 36, and grants of £121, 15s. 6d. and £34, 18s. Pop. (1801) 847, (1831) 973, (1861) 1457, (1871) 1565, (1881) 1653, (1891) 1693.—*Ord. Sur.*, sh. 30, 1866.

EsK (Cymric *wysg*, Gael. *wisge*, 'water'), a river of E Dumfriesshire, formed by the confluence of the Black and White Esks, the former of which rises in the W of Eskdalemuir parish, on the NE slope of Jock's Shoulder, at an altitude of 1600 feet, and thence runs 12½ miles south-south-eastward, whilst the White Esk, springing from the NE acclivity (2000 feet) of Ettrick Pen, in the N of the same parish, runs 14½ miles south-by-eastward, on the way being joined by GARWALD Water, Moodlaw and Rae Burns, and a number of lesser tributaries. They unite, 490 feet above sea-level, at the SE corner of Eskdalemuir; and from this point the Esk winds 22½ miles south-eastward, and south-south-eastward through Westerkirk, Langholm, and Canonbie parishes, then for 5 furlongs flows south-south-westward along the English Border, and finally passes off into Cumberland on its way, past Longtown, to the head of the Solway Firth. Its principal affluents, during its Scottish course, are Megget Water, Wauchope Water, Ewes Water, Tarras Water, and Liddel Water, all under charge of the Esk and Liddel Fisheries Association, and all, like itself, affording capital sport. Since the formation of this association the Esk, from being a moderately fair fishing river, has become one of the best in the south of Scotland. It contains salmon, grilse, herling, sea trout, and river trout. The association rents the net fishings in the lower waters, and has taken them off, thus greatly improving the angling. Its memories, its geology, and its scenery—heathery uplands in its higher reaches, and wooded luxuriant haughs after it passes Langholm—are noticed under ESKDALE, DUMFRIESSHIRE, and the parishes that it traverses.—*Ord. Sur.*, shs. 16, 10, 11, 1864-63.

EsK, a river flowing through Midlothian into the Firth of Forth at Musselburgh. It is composed of the North and South Esks, which unite 7 furlongs below Dalkcith Palace. The North Esk rises in the parish of Linton, Peeblesshire, at Boarstone and Easter Cairnhill, and, after a brief course through barren moorland districts, touches the boundary of Midlothian. This boundary it follows for 2½ miles, and receives the Carlops Burn and some other small tributaries. It proceeds in a north-easterly direction through or along the borders of the parishes of Penicuik, Lasswade, Glencorse, Cockpen, and Dalkeith; and in its upper course, near Carlops, passes through 'HABIE'S HOWE,' the scene described in Allau Ramsay's *Gentle Shepherd*. The most notable portion of the valley of the North Esk is where it flows through ROSLIN Glen and HAWTHORNDEN, presenting here a scene of striking beauty, which is visited by thousands of strangers, attracted not less by the picturesque elements of the scene than by the literary and historic recollections of the spot. At the latter place the poet Drummond was visited by Ben Jonson in 1618, and many stories of this visit have been recorded. At Roslin Chapel is the celebrated 'Prentice Pillar,' with its finely sculptured foliage; and at Lasswade Sir Walter Scott wrote his 'Grey Brother' and other works, and was here visited by Wordsworth. De Quincey also resided here for some time. Below Lasswade the North Esk

traverses the magnificent pleasure-grounds of Melville Castle, and afterwards enters the policies of Dalkeith Palace, joining with the South Esk, after a north-easterly course of 17 miles, at a scene of great sylvan beauty. The basin of the North Esk abounds in valuable minerals of the Carboniferous formation, while from Penicuik to Lasswade the abundance of fine springs has made its banks the seat of prosperous paper manufactures. Mr Watson Lyall, in his *Sportsman's Guide*, says:—'While in a scenic point of view the North Esk is famous, in a piscatorial sense it is, we are glad to say, a great deal better than it was, owing to the enterprise and judgment of the proprietors, which is all the more praiseworthy, as their exertions were attended with great expense. The refuse of all the paper-mills, etc., on its banks used to be thrown into it, making it utterly worthless, but a great improvement has been wrought.' The South Esk rises, at an altitude of 1700 feet, on the western slope of BLACKHOPE SCAR (2136 feet), in the southern extremity of Temple parish; and thence winds 19 miles north-by-eastward through or along the borders of Temple, Borthwick, Carrington, Cockpen, Newbattle, and Dalkeith. This stream receives a number of tributaries, including the Fullarton or Redside Burn, Gore Water, and Dalhousie Burn, all of which yield trout of a small size, which are eagerly sought for, the waters being mostly free. The village of Temple is quiet and remote, but is notable for its old church, once the seat of a body of Red Friars or Templars, established by David I., and at one time endowed with large possessions; lower down, the stream flows past Dalhousie Castle, surrounded by picturesque grounds, in which the river forms a pleasing feature, and the magnificent park of Newbattle Abbey, famous for its gigantic beeches, a short distance below which it joins the North Esk. The basin of the South Esk is also rich in coal measures, and in scenic attraction it is little inferior to the companion stream, although not associated with so much history or romance. Below the confluence of the two streams, the Esk winds 3½ miles north-by-eastward through Dalkeith Park and along an alluvial valley, overhanging by the eminence on which the parish church of Inveresk is situated, passing the villages of Cowpitts, Monktonhall, and Inveresk, and reaching the sea at MUSSELBURGH. Of the many bridges crossing these streams, the most interesting is the old bridge at Musselburgh, which is of great antiquity, and is popularly believed to be of Roman origin. At a time when few bridges existed, this passage of the Esk was of great strategic importance, and is notable as having been crossed by the Scottish army before the battle of Pinkie in 1547, and also in 1745 by the Highland army under Prince Charles Edward, previous to the battle of Prestonpans.—*Ord. Sur.*, shs. 24, 32, 1864-57.

Eskdale, a hamlet and a mansion in Kiltarlity parish, Inverness-shire, on the right bank of the river Beauly, 7 miles SW of Beauly town. The hamlet is small and rural, but contains a neat Roman Catholic church, St Mary's (1826; 600 sittings). The mansion, 1 mile nearer Beauly, is a handsome edifice, and commands an extensive view of Strathglass.

Eskbank. See DALKEITH.

Esk, Black. See ESK, Dumfriesshire.

Eskbridge, a station adjacent to the North Esk river, at the boundary between Penicuik and Lasswade parishes, Edinburghshire, on the Edinburgh and Penicuik railway, 1 mile NE of Penicuik.

Eskdale, the eastern and smallest one of the three districts of Dumfriesshire. It is loosely understood to be coterminous with all the Scottish territory within the basin of the Esk river; but it has sometimes been treated as excluding the basin of the tributary rivulet Ewes, which often is styled Ewesdale; and, on the other hand, it is commonly taken to include the parish of Half Morton, which lies beyond the basin of the Esk, and is drained into the Sark. The parishes undoubtedly comprised in it are Eskdalemuir, Westerkirk, Langholm, and Canonbie. The first and the second of these parishes, most of the third, and all Ewes, are hilly or mountainous, lying within the Southern Highlands, and

thinly peopled; but the southern part of Langholm, and all Canonbie and Half Morton are a fine flat country. Eskdale, in the early part of the 12th century, was nearly all divided among the Anglo-Norman families of Avenel, Soullis, and Rossedal; in the times of Robert I. and David II., was mostly acquired by the Douglases; continued to be held by them till their forfeiture in 1455; passed then to the Maxwells, and continued to be held by them throughout the 16th and 17th centuries. A regality over it was erected in favour of the Douglases; passed, through the Maxwells, to the Scotts of Buccleuch; and, at the abolition of hereditary jurisdictions in 1747, was compensated by the payment of £1400 to the Duke of Buccleuch.

Eskdalemuir, a parish of E Dumfriesshire, whose church stands, 620 feet above sea-level, on the right bank of the White Esk, 14 miles NW of Langholm, under which there is a post office of Eskdalemuir. It is bounded N by Ettrick in Selkirkshire, NE by Robertson and Teviothead in Roxburghshire, E and SE by Westerkirk, S and SW by Hutton, and NW by Moffat. Its utmost length, from N to S, is 12½ miles; its utmost breadth, from E to W, is 9¼ miles; and its area is 43,518½ acres, of which 236½ are water. The Black Esk, rising on Jocks Shoulder in the W, runs 12½ miles south-south-eastward, close to the western and south-western border, tracing, indeed, for the last mile of its course the southern boundary with Westerkirk; and the White Esk, from its source on Ettrick Pen, flows 14½ miles south-by-eastward, cutting the parish into two pretty equal parts. By these two streams and their innumerable affluents, of which Fingland Burn and GARWALD Water form picturesque cascades, this parish has been channelled into mountain ridges, heathy moorland most of it—hence its name *Eskdalemuir*. At the confluence of the White and Black Esks to form the river Esk, the surface declines to 490 feet above the sea; and elevations, northwards thence, to the left or E of the White Esk, are the Pike (1001 feet), Blaeberry Hill (1376), *Stock Hill (1561), *Quicknigair Hill (1601), and *Blue Cairn Hill (1715), where asterisks mark those summits that culminate on the confines of the parish. Between the White and Black Esks, again, rise Castle Hill (1054), Ashy Bank (1394), *ETTRICK PEN (2269), and *Loch Fell (2256); and lastly, to the right or W of the Black Esk are *Hart Fell (1085), Haregrain Rig (1336), and *Jocks Shoulder (1754). The rocks are mainly Silurian, but include some Old Red sandstone and conglomerate. The soil in general of the pastoral tracts is deep but mossy, carpeted with carices or with coarse herbage at the best; but some of the slopes along the White Esk's banks are green and afford good grazing; and here, too, are some 500 acres of holm-land—naturally wet, but greatly improved by draining—that repay the trouble of cultivation. On every height almost are traces of ancient camps, circular, oval, or rectangular, the most curious of which, that of Castle O'er, at the confluence of the Rae Burn with the White Esk, about 1 mile above Eskdalemuir parish church, has been noticed in a separate article. Of two stone circles upon Coatt farm, the more entire measured 90, and the other (partly destroyed by the White Esk) 340, feet. The Rev. William Brown, D.D. (1766-1835), author of *Antiquities of the Jews*, was minister for more than forty years. The Duke of Buccleuch owns two-thirds of the parish. Disjoined from Westerkirk in 1703, Eskdalemuir is in the presbytery of Langholm and synod of Dumfries; the living is worth £293. The church, built in 1826, is a neat edifice, containing 393 sittings. A Free church is at DAVINGTON; and two public schools, Eskdalemuir and Davington, with respective accommodation for 60 and 100 children, had (1891) an average attendance of 24 and 29, and grants of £35, 12s. and £41, 14s. 6d. Pop. (1801) 537, (1831) 650, (1861) 590, (1871) 551, (1881) 543, (1891) 488.—*Ord. Sur.*, shs. 16, 10, 1864.

Esk, North, a *quoad sacra* parish in Inveresk parish, Edinburghshire, adjacent to Musselburgh post office and

station, and including the Musselburgh suburb of Fisherrow. It is in the presbytery of Dalkeith and synod of Lothian and Tweeddale; the nominal stipend is £120. The church, in Fisherrow, was built in 1838 as a chapel of ease, and contains 1000 sittings. See INVERESK.

Esk, North (the *Leva* of Ptolemy), a river of Forfar and Kincardine shires, formed, at an altitude of 820 feet above sea-level, by the confluence of Lee and Mark Waters at Invermark, near Lochlee church, 17 miles NW of Edzell. Thence it winds 29 miles south-eastward, till, at a point $4\frac{1}{2}$ miles NNE of Montrose, it enters the North Sea. During the last 15 miles of its course it roughly traces the boundary between Kincardine and Forfar shires; and from head to mouth it traverses or bounds the parishes of Lochlee, Edzell, Fettercairn, Stracathro, Logiepert, Marykirk, Montrose, and St Cyrus. Its upper tributaries are, on the right, the Efock, the Keeny, and the Mooran, the water of the last of which supplies the town of Brechin with 360,000 gallons a day. The works, constructed in 1874, cost over £15,000, and the supply is conveyed 10 miles. On the left bank the Esk receives the Tarf at Tarfside, the Turret at Millden, between Lochlee and Edzell, and lower down the Burns of Meallie and Auchmull. The course of the North Esk where it leaves the Grampians is rugged, wooded, and picturesque, and that part which forms the county boundary pierces for a number of miles through a red sandstone gorge. It is crossed by the 'Loups Bridge' and Gannochy Bridge, the latter erected in 1732 by James Black, a farmer in the district. Passing the village of Edzell, it receives West and Cruick Waters at Stracathro, and Luther Water at Balmakewan, all from the Howe of the Mearns; then after passing Craigo, Logie, Montrose Water-works, and Kinnaber Mills on the right, and Marykirk village on the left, it loses itself at length in the ocean. On 20 Sept. 1861 the Queen and the Prince Consort, with Princess Alice and Prince Louis of Hesse, drove down Glenesk from Invermark to The Burn, in the course of their Fettercairn or 'second great' expedition. The river gives a title to a branch of the Carnegie family. Sir John, younger brother to the first Earl of Southesk, was created Lord Lour in 1639, Earl of Ethie in 1647, and in 1662 received the titles of Earl of Northesk and Lord Rosehill, the latter from an eminence on the banks of the river. (See ETHIE.) The river offers good sport, containing as it does, salmon, sea trout, and common trout. The net fishings are valuable, 700 to 800 salmon having been taken on the opening day of the season below Marykirk Bridge.—*Ord. Sur.*, shs. 66, 57, 1871-68.

Eskside. See MUSSELBURGH.

Esk, South, a river of Forfarshire, $48\frac{3}{4}$ miles long, rising in the NW corner of the county, at an altitude of 3150 feet above sea-level, within $\frac{1}{2}$ mile of feeders of the Callader and Muick, both of which flow to the Dec. It flows SE for $20\frac{1}{2}$ miles to Inverquhar, to which point it is a rugged Highland stream, and thence it flows due E to Montrose. In its upper reaches its waters are supplemented by Lochs Brandy and Wharral, Rottal and Glenmoy Burns, flowing in on the E bank, and on the W side by White Water from Glen DOLL, Drums Burn, and PROSEN Water, joining it at Cortachy. Carity Burn enters the Esk from the W, and Glenquiech Burn enters from the N. The South Esk then passes Tannadice and Finhaven Castle, and, at the last-named place, it receives the Lemno, and further down the NORAN, a beautiful and rapid stream. Leaving Auldbar Castle on the right, the South Esk passes Brechin with its castle and cathedral, then the grounds of Kinnaird Castle; and soon after receiving the Pow, a sluggish burn 7 miles long, expands into Montrose Basin, an inland lake at high tide $2\frac{1}{2}$ miles by $1\frac{1}{2}$ mile, and 7 miles in circumference. At low tide the basin is a melancholy expanse of mud with a narrow stream at the S side, and the Taycock Burn flowing in at the NE corner. The basin is joined to the sea by two channels which reunite and form Rossie Island or Inchbrayock. The

wider of the two outlets is crossed by a suspension bridge, built in 1826-29 at a cost of £26,000, and by the N.B. railway viaduct. (See NORTH BRITISH RAILWAY.) From this point seawards the South Esk presents a fine navigable channel. It traverses or bounds the parishes of Cortachy and Clova, Kirriemuir, Tannadice, Oathlaw, Aberlemno, Careston, Brechin, Farnell, Dun, Maryton, Montrose, and Craig. The South Esk with its tributaries has some capital fishing, but it is largely preserved. Trout-fishing, however, is plentiful in all the streams, and there are three varieties of this fish—one yellowish, another whitish, and a third very dark, with small red spots deeply imbedded, and like a pike. The title Earl of Southesk was bestowed in 1633 on Lord Carnegie, formerly Sir David Carnegie of Kinnaird. The peerage was forfeited in 1716 on account of the participation of the fifth Earl in the rising of the Fifteen, but was restored in the person of the present Earl in 1855. See KINNAIRD.—*Ord. Sur.*, shs. 65, 56, 57, 1870-68.

Esk, White. See ESK, DUMFRIESHIRE.

Esslemont. See ESSEMONT.

Eslin. See GLENESLAND.

Esragan, a burn of Ardochattan parish, Argyllshire, rising at an altitude of 2100 feet above sea-level, and running $4\frac{3}{4}$ miles southward to Loch Etive at Inveresragan, $2\frac{1}{2}$ miles NW of Bunawe.—*Ord. Sur.*, sh. 45, 1876.

Esseforse, a cataract in Ulva island, Argyllshire, on a tiny hill stream falling into Ulva North Loch. Above it are two lesser waterfalls; and its own is an unbroken and precipitous descent of 90 feet.

Essenside, a loch near the centre of Ashkirk parish, W Roxburghshire. Lying 680 feet above sea-level, it measures $\frac{1}{2}$ by $\frac{1}{8}$ mile, abounds in fine trout and perch, and sends off a streamlet to the Ale.—*Ord. Sur.*, sh. 17, 1864.

Esset, a troutful burn of Tullynessle parish, Aberdeenshire, rising among the Correen Hills, at an altitude of 1300 feet above sea-level, and running $6\frac{1}{2}$ miles southward across the middle of the parish, till it falls into the Don 9 furlongs below the Bridge of Alford. It has a total descent of nearly 900 feet; drives nine or ten mills during the last $2\frac{1}{2}$ miles of its course; is subject to great freshets; and in the years 1829 and 1835 became for some hours a devastating and overwhelming torrent.—*Ord. Sur.*, sh. 76, 1874.

Essich, an estate in Inverness parish, Inverness-shire, 4 miles S by W of the town.

Essie, an ancient parish of NW Aberdeenshire, united at a remote period to Rhynie. Its church, however, standing $2\frac{1}{2}$ miles WN W of Rhynie village, was not discontinued till about 1760. At Essie, Lulach, Macbeth's successor, was slain on 17 March 1058, after a nominal reign of seven months.

Essie, Forfarshire. See EASSIE.

Essiemore. See AUCHINCHEW.

Essil, an ancient parish in the NE of Elginshire, united to Dipple in 1731 to form Speymouth parish.

Esslemont, an estate, with a station and a mansion, in the S of Ellon parish, Aberdeenshire. The station is on the Formartine and Banchan section of the Great North of Scotland railway, $1\frac{1}{2}$ mile SSW of Ellon station. The mansion, $1\frac{1}{2}$ mile N by W of the station, on the right bank of the Ythan, is a plain building, with a finely-wooded park; its owner is Henry Wolrige Gordon (b. 1831; suc. 1874). A ruined fortalice, the old castle of Esslemont, in a clump of trees not far from the farmhouse of Mains of Esslemont is nearer the station.

Essmore. See AUCHINCHEW.

Ethie. See EATHIE.

Ethiebeaton. See MONIFIETH.

Ethie Castle, the seat of the Earl of Northesk, in Inverkeilor parish, Forfarshire, 5 furlongs from the coast, and 5 miles NNE of Arbroath. Built and inhabited by Cardinal Beaton, it was, with neighbouring lands, conferred by his father, in 1596, on Sir John Carnegie, who in 1639 was created Lord Lour, and in 1647 Earl of Ethie—a title which he exchanged in 1662 for that of Earl of Northesk. William, seventh Earl,

G.C.B. (1756-1831), was third in command at Trafalgar. His great-grandson, David Carnegie, is the present and tenth Earl (b. 1865; suc. 1891).—*Ord. Sur.*, sh. 57, 1868.

Etive, a river and a sea-loch in the Loru district of Argyllshire. The river issues from Lochan Mathair Etive ($\frac{1}{2} \times \frac{1}{2}$ mile; 970 feet) on desolate Rannoch Muir, at the mutual border of Lismore and Glenorchy parishes, 2 miles E of Kingshouse inn. Thence, past KINGSHOUSE and Dalness, it runs $15\frac{1}{2}$ miles west-south-westward and south-westward, mainly through the parish of Ardchattan, till it falls into the head of the loch. It is fed by rivulets innumerable; near Dalness and Coileitir it forms two fine cascades; and the fishing is good for salmon and sea trout from Dalness downwards, for river trout higher up. Glen Etive is grandly alpine, flanked on the right by BUACHAILLE-ETIVE (3345 feet) and BEN VEEDAN (3766), which part it from Glencoe; on the left by Clach Leathad (3602) and BEN STARAV (3541). 'Several houses or huts,' says Professor Wilson, 'become visible no long way up the glen; and though that long hollow—half a day's journey—till you reach the wild road between Inveroran and Kingshouse—lies in gloom, yet the hillsides are cheerful, and you delight in the greensward, wide and rock-broken, should you ascend the passes that lead into Glencleran or Glencoe. But to feel the full power of Glen Etive, you must walk up it till it ceases to be a glen. When in the middle of the moor, you see far off a solitary dwelling—perhaps the loneliest house in all the Highlands—and the solitude is made profounder, as you pass by, by the voice of a cataract, hidden in an awful chasm, bridged by two or three stems of trees, along which the red deer might fear to venture; but we have seen them and the deer-hounds glide over it, followed by other fearless feet, when far and wide the Forest of Dalness was echoing to the hunter's horn.'

Loch Etive extends first $10\frac{1}{2}$ miles south-westward to Bunawe, and then winds $8\frac{3}{4}$ miles westward, till at Dunstaffnage Castle it merges in the Firth of Loru. Its width—from $\frac{1}{4}$ to $1\frac{1}{2}$ mile over the upper loch—is $1\frac{1}{2}$ furlong at BUNAWE ferry, $1\frac{1}{4}$ mile at Airds Bay, and $1\frac{1}{2}$ furlong at CONNELL ferry. Sir A. Geikie sees in Loch Etive a good example of an ancient submerged glen, belonging to the secondary stage of submergence, higher than Loch Fyne and lower than Loch Marec. 'It narrows,' he remarks, 'at Connell ferry, and across the straitened part runs a reef of rocks, covered at high water, but partly exposed at ebb. Over this barrier the flowing tide rushes into the loch, and the ebbing tide rushes out, with a rapidity which, during part of the time, breaks into a roar of angry foam like that of a cataract. The greatest depth of the loch above these falls is 420 feet; at the falls themselves there is a depth of only 6 feet at low water; and outside this barrier the soundings reach, at a distance of 2 miles, 168 feet. Loch Etive is thus a characteristic rock-basin, and an elevation of the land to the extent of only 20 feet would isolate the loch from the sea, and turn it into a long, winding, deep, freshwater lake.' Many have described the beauties of Loch Etive, none better than Dorothy Wordsworth. 'The loch,' she writes, 'is of a considerable width; but the mountains are so very high that, whether we were close under them or looked from one shore to the other, they maintained their dignity. I speak of the higher parts of the loch, above Bunawe and the river AWE, for downwards they are but hills, and the water spreads out wide towards undetermined shores. On our right was BEN CRUAOHAN (3611 feet), rising directly from the lake, and on the opposite side another mountain, called Ben Duirinnis (1821), craggy, and exceedingly steep, with wild wood growing among the rocks and stones. We crossed the water, which was very rough in the middle, but calmer near the shores; and some of the rocky basins and little creeks among the rocks were as still as a mirror, and they were so beautiful with the reflection of the orange-coloured sea-weed growing on the stones or rocks, that a child, with a child's delight in gay colours, might have danced with joy at the sight of them. It never ceased raining, and the tops of the mountains were con-

cealed by mists, but as long as we could see across the water we were contented; for though little could be seen of the true shapes and permanent appearances of the mountains, we saw enough to give us the most exquisite delight: the powerful lake which filled the large vale, roaring torrents, clouds floating on the mountain sides, sheep that pastured there, sea birds and land birds. . . . Cruachan, on the other side of the lake, was exceedingly grand, and appeared of an enormous height, spreading out two large arms that made a cove down which fell many streams swollen by the rain, and in the hollow of the cove were some huts which looked like a village. The top of the mountain was concealed from us by clouds, and the mists floated high and low upon the sides of it. . . . *Friday, Sept. 2, 1803.*—Departed from Taynult about seven o'clock this morning, having to travel 8 miles down Loch Etive and then to cross Connell ferry. Our road was at first at a considerable distance from the lake, and out of sight of it, among undulating hills covered with coppice woods, resembling the country between Coniston and Windermere; but it afterwards carried us close to the water's edge, and in this part of our ride we were disappointed. We knew that the high mountains were all at the head of the lake, therefore had not expected the same awful grandeur which we beheld the day before, and perceived by glimpses; but the gentleman whom we met with at Dalnally had told us that there were many fine situations for gentlemen's seats on this part of the lake, which had made us expect greater loveliness near the shores, and better cultivation. It is true there are pleasant bays, with grounds prettily sloping to the water, and coppice woods, where houses would stand in shelter and sun, looking on the lake; but much is yet wanting—waste lands to be ploughed, peat-mosses drained, hedgerows reared; and the woods demand a grant of longer life than is now their privilege. But after we had journeyed about 6 miles, a beautiful scene opened upon us. The morning had been gloomy, and at this time the sun shone out, scattering the clouds. We looked right down the lake, that was covered with streams of dazzling sunshine, which revealed the indentings of the dark shores. On a bold promontory, on the same side of the loch where we were, stood DUNSTAFFNAGE Castle, an irregular tall building, not without majesty; and beyond, with leagues of water between, our eyes settled upon the island of Mull, a high mountain, green in the sunshine, and overcast with clouds,—an object as inviting to the fancy as the evening sky in the west, and, though of a terrestrial green, almost as visionary. We saw that it was an island of the sea, but were unacquainted with its name: it was of a gem-like colour, and as soft as the sky. The shores of Loch Etive, in their moorish, rocky wildness, their earthly bareness, as they lay in length before us, produced a contrast which, with the pure sea, the brilliant sunshine, the long distance, contributed to the aerial and romantic power with which the island was invested.' In 1871, Dr R. Angus Smith discovered, in a large moss on the shores of Loch Etive, an ancient lake-dwelling, 50 feet long and 28 broad, on a platform 60 feet in diameter; whilst a large cairn disclosed two megalithic chambers, connected by a narrow passage, and each of them 20 feet long. Relics these, possibly, of that dim, far-away Píngalian age, whose memories linger round 'BEREGONIUM,' Dunstaffnage, and other spots on or near to the shores of Loch Etive.—*Ord. Sur.*, shs. 54, 53, 45, 1873-77. See pp. 143-153 of Dorothy Wordsworth's *Tour in Scotland* (ed. by Principal Shairp, 1874); Sir Archibald Geikie's *Scenery and Geology of Scotland* (Lond. 1865); and *Loch Etive and the Sons of Uisnach* (Lond. 1879).

Etterick, a bay on the W side of the Isle of Bute, opening near the extremity of the Kyles of Bute, $2\frac{1}{2}$ miles ENE of Ardlamont Point. It measures 1 mile across its entrance, and 5 furlongs thence to its inmost recess; a dingle extends from it, 2 miles east-north-eastward across the island, to the head of Kames Bay; and Glen More descends southward to its N side, and brings down to it a burn from a point within $1\frac{1}{2}$ mile of the

northern extremity of the island.—*Ord. Sur.*, sh. 29, 1873.

Ettleton, an ancient parish of Liddesdale, S Roxburghshire, since 1604 incorporated with Castleton parish. Its church stood near the W bank of Liddel Water, 9 furlongs SSW of Newcastleton.

Ettrick, a parish of Selkirkshire, whose tree-girt church and manse nestle, 800 feet above sea-level, in a sunny corner of the high green hills, $\frac{1}{2}$ mile from the left bank of Ettrick Water, but with their own little Kirk Burn— $4\frac{1}{2}$ miles SSE of 'Tibby Shiels,' $3\frac{1}{2}$ SW of Tushielaw Inn, and $18\frac{1}{2}$ SW of the post-town, Selkirk. It is bounded N by Yarrow, NE by Kirkbope, SE by Robertson (since 1891 wholly in the county of Roxburgh), S by Eskdalemuir in Dumfriesshire, W by Moffat in Dumfriesshire, and NW by Lyne in Peeblesshire. From NE to SW its utmost length is $12\frac{1}{2}$ miles; its breadth, from NW to SE, varies between $7\frac{1}{2}$ furlongs and 10 miles, being greatest at the middle; and its area is $42,682\frac{1}{2}$ acres, of which 296 are water. The Loch of the LOWES ($6\frac{1}{2} \times 1\frac{1}{2}$ furl.) lies nearly all within the NW corner of Ettrick parish, to which also belongs the western half of the upper $\frac{1}{2}$ mile of ST MARY'S LOCH; whilst on the eastern and south-eastern border are CLEARBURN Loch ($2\frac{1}{2} \times 1$ furl.), Crooked Loch (2×1 furl.), and Kingside Loch ($2\frac{1}{2} \times 1\frac{1}{2}$ furl.) From its source upon Capel Fell, at the SW extremity of the parish, ETTRICK WATER winds $14\frac{1}{2}$ miles north-eastward through the interior, and then 9 furlongs along the Kirkhope border, descending during this course from 1900 to 745 feet above sea-level, and being joined by TIMA Water, RANKIE Burn, TUSHIELAW Burn, and thirty-four lesser tributaries. From NE to SW, the chief elevations to the left or NW of the Ettrick are the Kip (1293 feet), *Turner Cleuch Law (1809), Tushie Law (1431), Coom Law (1619), Thirlestane Hill (1475), Ward Law (1951) and Craig Hill (1597) behind the church, Penniestone Knowe (1807), *Muckle Knees (1929), *Herman Law (2014), *Andrewhinney (2220), Black Knowe Head (1938), *BODESBECK Law (2173), and *Capel Fell (2223); to the right or SE of the stream rise Caera Hill (1546), Gamescleuch Hill (1490), Law Kneis (1634), *Quickningair Hill (1601), Hope Head (1697), Cauld Face (1756), Black Knowe (1804), and ETTRICK PEN (2269)—where asterisks mark those summits that culminate on the confines of the parish. The rocks are Silurian, greywacke chiefly and clay slate. The soil of the haughs is fine alluvium, of the skirts of the hills is either sandy or gravelly or else a cold stiff clay, and on their shoulders and summits is mostly a deep moss. Barely 400 acres are arable, barely 300 are under wood, though a start was made in 1865 to break up the bill-sides at Ramsaycleuch for tillage, and though Lord Napier's plantations round Thirlestane Castle have thriven exceedingly. Nor of permanent pasture are there more than 120 acres, although from the point where the Ettrick's defile broadens into valley, a mile above the church, meadows begin to appear, where cattle graze—Ayrshires and shorthorns, with a few of the Highland breed. The rest of the parish is all one mighty sheep-walk, wave upon wave of long, green, rounded hills, whose rich grass feeds enormous flocks of Cheviots. Fitting that Ettrick should be forever associated with the 'Ettrick Shepherd,' James Hogg (1770-1835). The cottage in which he was born, by Ettrick Hall, 3 furlongs ESE of the church, fell down about 1830; but his grave in the churchyard remains for a shrine of pilgrimage. (See ALTRIVE and ST MARY'S LOCH.) There, too, are buried William John, eighth Lord Napier (1786-1834), who died in China, and the Rev. Thomas Boston (1676-1732), minister of Ettrick from 1707, and author of *The Fourfold State*. Many are the memories of this well-cherished divine, who tells us of his last communion how 'there were nearly 800 communicants, great numbers of them from a considerable distance. The hospitality of the farmers, and all those who had it in their power to accommodate and support them, during the preaching days, was beyond all praise. At one

farm place they accommodated nine score, at another they had half a boll of meal baked, besides a quantity of loaf bread; they killed three lambs, and made up thirty beds.' But, indeed, to enumerate all of interest that attaches to Ettrick were to write a volume which still remains to be written, and to trench on our articles BUCCLEUCH, TUSHIELAW, GAMESCLEUCH, CHAPELHOPE, KIRKHOPE and THIRLESTANE CASTLE. Other mansions are Caera Bank and Rodono, now a hotel. The chief proprietors are the Duke of Buccleuch, who takes his ducal title from a place in this parish, and Lord Napier of Merchistou, who was made a peer of the United Kingdom in 1872 under the title of Baron Ettrick of Ettrick. Ettrick is in the presbytery of Selkirk and synod of Merse and Teviotdale; the living is worth £354. The church, built in 1824, is a neat edifice, with a square tower and 310 sittings; and a public school, 3 furlongs to the E, with accommodation for 62 children, had (1891) an average attendance of 31, and a grant of £67, 12s. 6d. Pop. (1871) 434, (1881) 397, (1891) 414.—*Ord. Sur.*, sh. 16, 1864.

Ettrick-Bank, an estate, with a mansion, in Selkirk parish, Selkirkshire, on the left bank of Ettrick Water, $2\frac{1}{2}$ miles N by E of Selkirk town. It belongs to the same proprietor as SUNDERLAND HALL.

Ettrick-Bridge, a village in Kirkhope parish, Selkirkshire, on Ettrick Water, 7 miles WSW of Selkirk. It has a post office under Selkirk, an inn, and Kirkhope manse; and it serves as an angling centre for the lower reaches of Ettrick Water.

Ettrick Forest, a popular, poetic, and historic name for the whole or chief part of Selkirkshire, together with contiguous parts of Peebles and Edinburgh shires. All the country drained by the Ettrick and the Yarrow, with part of that drained by other affluents of the Tweed, as also the country now forming the upper ward of Clydesdale, was clothed with wood once, a remnant of the ancient Caledonian Forest. Oak was the commonest tree, mingled with birch and hazel. Great numbers of oaks have been dug up in mosses which evidently owed their formation to the stagnation of water upon the neglected woodlands. The forest, judging from the prevalence of a Saxon nomenclature throughout the district, appears to have been early settled by the Northumbrian Saxons. From the time of Earl David (afterwards David I.), early in the 12th century, many grants were made, chiefly to the abbots of Selkirk, Melrose, and Kelso, of various 'easements' within the wide range of the forest. At the close of the 13th century Edward I., acting as arbiter of Scotland, gave away the forest's timber; and was followed in this conduct by Edward II. and Edward III. Robert Bruce at his accession gave the forest to Sir James Douglas in guerdon of his services; and with his family it continued till their forfeiture in 1455. On the 4th of Aug. in that year Ettrick Forest was, by Act of parliament, annexed to the Crown. Abounding in beasts of chase and birds of prey, the forest now became again—what it had been before its tenure by the Douglases—a favourite hunting-ground of the Scottish kings. In 1528, James V. 'made proclamation to all lords, barons, gentlemen, landward-meu, and freeholders, that they should compare at Edinburgh, with a month's victuals, to pass with the King where he pleased, to danton the thieves of Tiviotdale, Annandale, Liddisdale, and other parts of that country; and also warned all gentlemen that had good dogs to bring them, that he might hunt in the said country as he pleased: the whilk the Earl of Argyll, the Earl of Huntly, the Earl of Athole, and so all the rest of the gentlemen of the Highland, did, and brought their hounds with them in like manner, to hunt with the King, as he pleased. The second day of June the King past out of Edinburgh to the hunting, with many of the nobles and gentlemen of Scotland with him, to the number of twelve thousand men; and then past to Meggitland, and hounded and hawked all the country and bounds; that is to say, Pappert-law, St Mary-laws, Carlavrick, Chapel, Ewindoores, and Longhope. I heard say, he slew, in these bounds, eighteen

score of harts' (Pitscottie's *History of Scotland*, folio edition, p. 143). After this stately hunting, James, who 'made the rush-bush keep the cow,' in order to increase his revenues, turned 10,000 sheep into Ettrick Forest, to graze there under the tending of a thrifty keeper, instead of 10,000 bucks that scoured its woodlands during the bounteous age of Edward I.; and by this act he led the way to such a conversion of the entire forest into sheep-pasture, as occasioned a rapid and almost total destruction of the trees. The last sovereign of Scotland who visited it for the sake of the chase was the beautiful Mary. Excepting a few straggling thorns, and some solitary birches, no traces of 'Ettricke foreste feir' now remain, although, wherever protected from the sheep, copses soon arise without planting. See Craig Brown's *Selkirkshire* (1886).

Ettrick Pen, a mountain on the mutual border of Ettrick parish, Selkirkshire, and Eskdalemuir parish, Dumfriesshire, at the sources of Ettrick Water and the White Esk, $2\frac{1}{2}$ miles ENE of Capel Fell, and $7\frac{1}{4}$ ENE of Moffat. A central height of the Southern Highlands, it attains an altitude of 2269 feet above sea-level, and commands round three-fourths of a circle a very extensive prospect; yet it is so hidden in the intervening segment, by mountains of similar altitude to itself, as to make but a slight figure in the general landscape.—*Ord. Sur.*, sh. 16, 1864.

Ettrick Water, a river of Selkirkshire, rising in the south-western extremity of the county, on Capel Fell (2223 feet), at an altitude of 1900 feet, $5\frac{1}{4}$ miles ENE of Moffat, and within a half-mile of affluents of both the Esk and Moffat Water. Thence it winds $32\frac{1}{2}$ miles north-eastward through or along the borders of Ettrick, Kirkhope, Selkirk, and Galashiels parishes, till, $2\frac{1}{2}$ miles below Selkirk town, it falls into the Tweed. It makes during this course a total descent of 1500 feet, and is joined by Tima and Yarrow Waters, with many lesser tributaries. Its scenery and the many interesting spots by which it flows are noticed in our articles on the four above-named parishes, and on Ettrick Forest, Oakwood, Bowhill, Carterhaugh, Philiphaugh, Haining, and Sunderland Hall. The song of *Ettrick Banks*, composed in the 16th or the 17th century, but printed first in Thomson's *Orpheus Caledonius* (1725), 'has,' says Prof. Veitch, 'some exquisite references to local scenery and traits of the older shepherd life, which could have been noted only by a native of the district, or one resident there, and thoroughly familiar with the people and the scenes.' The fishing, mostly open to the public, is capital, the trout ranging between $\frac{1}{2}$ lb. and 3 lbs., though running smaller above Tushielaw.—*Ord. Sur.*, shs. 16, 17, 25, 1864-65.

Eu. See EWIE.

Euchan Water, a rivulet in Sanquhar parish, NW Dumfriesshire, rising on the SE slope of BLACKLARG Hill, close to the meeting-point of Dumfries, Kirkcudbright, and Ayr shires, and running $9\frac{1}{2}$ miles east-north-eastward through mountain scenery, till it falls into the Nith opposite Sanquhar Castle, after a total descent of 1500 feet.—*Ord. Sur.*, sh. 15, 1864.

Euchar, a rivulet in Lorn district, Argyllshire, issuing from Loch Scammadale, and running 2 miles west-by-southward, then 2 north-westward, till it falls into the sea at Kilninver. It traverses a deep, rocky, and finely wooded ravine, and makes a waterfall a mile above its mouth. Trout, of $\frac{1}{2}$ lb. each, are plentiful; and salmon and sea-trout collect in a pool below the fall.

Eunach, Loch. See ENNICH.

Evanton, a village in Kiltearn parish, Ross-shire, $\frac{3}{4}$ mile from the Cromarty Firth, and 3 furlongs SW of Novar station, this being $6\frac{1}{4}$ miles NE of Dingwall. Founded about 1810 on a waste piece of land, it presents a neat and regular appearance, better than that of most other villages in the North; and it has a post office, with money order, savings' bank, and telegraph departments, an inn, and fairs on the first Tuesday of June and December. Pop. (1861) 584, (1871) 526, (1881) 436, (1891) 493.—*Ord. Sur.*, sh. 93, 1861.

Evan Water, a stream of Lanark and Dumfries shires,

rising in Crawford parish, close to the summit level (1012 feet) of the Caledonian railway, and so near Little Clydes Burn, the reputed head-stream of the CLYDE, as now to receive a rill that formerly flowed to that river. Thence it runs $12\frac{1}{2}$ miles south-south-eastward through Crawford, Moffat, and Kirkpatrick-Juxta parishes, till it falls into Annan Water, opposite the influx of Moffat Water, and 2 miles SSE of Moffat town, at an altitude of 290 feet. With a rocky bed, and a rapid or impetuous current, it traverses a glen remarkable for affording transit both to the Glasgow and Carlisle road and to the Caledonian railway through an alpine precipitous range of the Southern Highlands. High up it is conveyed by an aqueduct across the lue, and, soon re-appearing far below, it afterwards is frequently crossed by the railway; whilst from head nearly to foot it is flanked by green mountains, rising to altitudes of 800 to 1800 feet above sea-level, yet rounded and comparatively soft in contour. Its glen possesses considerable amenity; contains, above Beattock, the ruined castle of ACHINCASS; and opens there into the fine broad strath of Annandale.—*Ord. Sur.*, sh. 16, 1864.

Evelaw (popularly *Ively*), an old tower in Westruther parish, Berwickshire, $10\frac{1}{2}$ miles ENE of Lauder. One of the castellated houses common on the Border prior to the union of Scotland and England, it still is tolerably entire.

Evelick or Pole Hill, a wooded summit (944 feet) of the Sidlaws, in Kilspindie parish, Perthshire, $5\frac{1}{4}$ miles ENE of Perth. Commanding one of the finest prospects in Scotland, it is crowned, on its SE shoulder, with vestiges of an ancient fortification, seeming to have comprised two concentric stone walls and a fosse. Evelick Castle, a ruin at the eastern base of the hill, was the ancient seat of the Lindsays, knights of Evelick, and appears to have been a place of considerable strength.

Evelix, a stream of Creich and Dornoch parishes, SE Sutherland, issuing from Loch an Lagain ($7\frac{1}{2} \times 1\frac{3}{4}$ furl.; 446 feet), $4\frac{1}{2}$ miles NE of Bonar Bridge. Thence it winds $5\frac{1}{2}$ miles east-south-eastward along the mutual boundary of the two parishes, next $7\frac{1}{2}$ miles east-south-eastward and west-south-westward through the interior of Dornoch, till it falls into Dornoch Firth at Meikle Ferry. Its banks, over most of its course, are beautifully wooded; and it affords fair trout and grilse fishing.—*Ord. Sur.*, shs. 102, 103, 94, 1878-81.

Evie, a parish in the NE of Mainland in Orkney, containing Dale hamlet, 16 miles NW of Kirkwall, and a post office (Evie), with money order and savings bank departments, and having a company of artillery volunteers.

The present parish has, since the Reformation era, comprised the ancient parishes of Evie and Rendall—Evie on the N, Rendall on the S; and it lies near Enhallow island, within a mile of Rousay, Wire, and Gairsay islands, and $2\frac{1}{2}$ miles W of Shapinshay. Bounded N and E by the sea, S by Firth, and W by Harray and Birsay, it has an utmost length from NW to SE of $10\frac{1}{2}$ miles, an utmost breadth of $4\frac{1}{2}$ miles, and an area of 14,720 acres. Costa Head terminates the north-western extremity of Evie, and is a hill of considerable size and elevation, presenting to the ocean a front of precipitous rock. No other headland of any importance is on the coast, nor are there any of those deep indentations elsewhere so frequent in Orkney. The beach, excepting at Woodwick Bay, is rocky, and forms, in some parts, a mural bulwark against the billows, but in others is low and flat. Woodwick Bay, on the mutual boundary of Evie and Rendall, penetrates $1\frac{1}{2}$ mile inland, and has a beach of beautiful white shell sand. Gairsay island, which belongs to Rendall, is nearly circular, and measures 4 miles in circumference. From Costa Head a range of monotonous hills, 200 to 734 feet in height, and moorish mostly or mossy, extends along all the Birsay and Harray border, and sends off spurs, less lofty than itself, into the interior of Rendall. Swaney Loch ($1\frac{1}{2} \times 1$ mile) interrupts that hill-range at a distance of $1\frac{1}{2}$ mile from Costa Head, and

discharges itself, by a streamlet through Birsay, to the ocean. The hills were formerly all in a state of commonage, but began about 1841 to be divided. The arable land is all a gentle slope from the skirts of the hills to the shore, varying in breadth from $\frac{1}{2}$ to $1\frac{1}{2}$ mile. The rocks range from blue slate to white sandstone, and some are as hard as flint and as dark as lava, while others are soft and of a brownish-grey hue. Naturally a fine agricultural district (the best land facing northward), the arable soil is mostly a rich black loam, and has generally a lighter and sharper character in Rendall than in Evie. Agriculture is further advanced in the latter than in the former division, the estate of Swaney having been much improved by the proprietor. A peat moss occupies an entire large vale in Rendall; and other peat mosses, which might easily be drained, occupy hollows in other low tracts. Turbary moss, affording an inexhaustible supply of excellent peat fuel, abounds in the vales or hollows among the hills. Aikerness, Isbister, Swaney, Rendall Hall, and Burgar are chief residences; and the first was the birthplace of the judge, Sir William Honyman, Bart. (1756-1825). Numerous tumuli are in Evie; no fewer than nine Picts' houses stand along the shores of Evie and Rendall; and a small old farmhouse at Cottascarth in Rendall, on being taken down in 1832, was found to have concealed in its walls 150 silver coins, a few of them Scottish, and most of the others of Elizabeth, James VI., and Charles I. Evie and Rendall is in the presbytery of Kirkwall and synod of Orkney; the living is worth £245. Evie church, built towards the close of the eighteenth century, contains 498 sittings; in 1891 a gallery was erected seated for 56 persons. Other places of worship are Rendall chapel of ease and a Free church; and the four schools of Costa, Evie, Rendall, and Gairsay, with respective accommodation for 65, 89, 86, and 20 children, had (1891) an average attendance of 36, 63, 55, and 6, and grants of £57, 3s., £64, 15s., £78, 13s. 6d., and £20, 14s. 6d. Valuation (1881) £2163, 10s. 6d., (1891) £3485, 14s. 11d. Pop. (1801) 1415, (1831) 1450, (1851) 1408, (1871) 1340, (1881) 1351, (1891) 1233.

Evigan, a bay on the W side of Stronsay, Orkney.

Evlx. See EVELIX.

Evort, an intricate sea-loch on the E side of North Uist island; Outer Hebrides, Inverness-shire. Opening $3\frac{1}{2}$ miles S of Loch Maddy, it penetrates 7 miles westward, has numerous ramifications, and forms a safe harbour.

Ewe, a river, a sea-loch, and an island of Gairloch parish, NW Ross-shire. The river, issuing from Loch Maree, runs $3\frac{1}{2}$ miles west-north-westward to the head of the sea-loch at Poolewe, is voluminous but rapid, and, abounding with salmon and sea-trout of prime size and quality, is excelled by no stream in the W of Scotland for angling. The sea-loch extends 10 miles north-north-westward from Poolewe to the North Minch, and from a width of 3 miles at the beautiful little bay of Aultbea contracts to $1\frac{1}{2}$ mile below Cove, but expands again to $8\frac{1}{2}$ miles at its entrance between Ru Rea and Greenstone Point. Its shores are rocky; its flanks bare, broken, and ridgy. The island lies nearly in the middle of the sea-loch, measures $2\frac{1}{2}$ miles by 1 mile, and has a pleasant cultivated surface. Pop. (1861) 48, (1871) 50, (1881) 43, (1891) 39.

Ewes, a parish in the NE of Eskdale, E Dumfriesshire, whose church stands, 400 feet above sea-level, on the right bank of Ewes Water, 4 miles N by E of Langholm, the post-town and station. It is bounded N by Teviothead in Roxburghshire, NE and E by Castleton, also in Roxburghshire, SE by Canonbie, SW by Langholm, and W by Westerkirk. Its utmost length, from N to S, is $9\frac{1}{2}$ miles; its utmost breadth, from E to W, is 7 miles; and its area is 23,010 acres, of which 69 $\frac{1}{2}$ are water. From Moss-paul (827 feet), one of its two sources, EWES WATER flows $9\frac{1}{2}$ miles south-by-westward, till it passes into Langholm; whilst from Harts-garth Fell, another of the Esk's tributaries, TARRAS WATER, runs $6\frac{1}{2}$ miles south-south-westward, then $1\frac{1}{2}$ mile along the Canonbie border. The entire parish,

then, is a double basin, rimmed on three sides by mountain watershed. Along Tarras Water its surface declines to 450, along Ewes Water to 370, feet above the sea; and elevations to the left or E of Ewes Water, northwards, are Muckle Knowe (1136 feet), *Watch Hill (1642), Arkleton Hill (1708), *Roan Fell (1862), Pike Fell (1837), and *Tudhope Hill (1961), where asterisks mark those summits that culminate on the confines of the parish; whilst to the right or W of the Ewes rise *Addergill Hill (1276), *Meg's Shank (1571), Roughbank Height (1474), *Faw Side (1722), and *Wisp Hill (1950). The rocks are mainly greywacke and greywacke slate, but include some trap. Less than 1200 acres is arable, and some 200 are under wood, nearly all the remainder being pastoral. Dorothy Wordsworth, who with her brother drove down Ewesdale on 23 Sept. 1803, gives us a vivid word-painting of the landscape:—'Moss-paul, the inn where we were to bait. The scene, with this single dwelling, was melancholy and wild, but not dreary, though there was no tree nor shrub; the small streamlet glittered, the hills were populous with sheep; but the gentle bending of the valley, and the correspondent softness in the forms of the hills, were of themselves enough to delight the eye.' The hills are unchanged, but the dwellers among them have altered greatly in the last two centuries. It is hardly a hundred years since the Lords of Justiciary rode from Jedburgh to Dumfries through Ewesdale, impassable then by any vehicle. Here once, when Henry Home (the after Lord Kames) went for the first time on the circuit as advocate-depute, Armstrong of Sorbie inquired of Lord Minto in a whisper, 'What lang, black, dour-looking chiel that was they had got wi' them?' 'That,' said his lordship, 'is a man come to hang a' the Armstrongs.' 'Then,' was the dry retort, 'it's time the Elliots were ridin'.' Now the parish is traversed down all its length by the high road from Edinburgh to Carlisle. The property is divided among four. Ewes is in the presbytery of Langholm and synod of Dumfries; the living is worth £309. The parish church, originally dedicated to St Cuthbert, is a handsome Gothic edifice of 1867, containing 230 sittings; and a public school, with accommodation for 60 children, had (1891) an average attendance of 45, and a grant of £52, 11s. Pop. (1801) 353, (1831) 335, (1861) 356, (1871) 338, (1881) 337, (1891) 299.—*Ord. Sur.*, shs. 11, 10, 17, 1863-64.

Ewesdale. See EWES, Dumfriesshire.

Ewes Water, a rivulet of Eskdale, E Dumfriesshire, formed by two head-streams, Blackhall and Moss-paul Burns, the latter of which, rising near Moss-paul inn, close to the Roxburghshire border, runs $2\frac{1}{2}$ miles south-by-westward, whilst Blackhall Burn winds $3\frac{1}{2}$ miles west-south-westward from its source on the western acclivity of Tudhope Hill. Onward from their confluence Ewes Water flows 8 miles south-by-westward, till, after a total descent of 900 feet from its highest or Tudhope source, it falls into the Esk at Langholm town. All but the last $1\frac{1}{2}$ mile of its course lies through the parish of Ewes, and here it is joined by Unthank, Meikledale, Arkleton, and five or six lesser burns. The scenery along its banks is extremely picturesque. Like all the Esk's tributaries, the Ewes is a capital trouting stream—its river-trout smallish, four or so to the lb., but its sea-trout running from 1 to 3 lbs. It is under the protection of the Eskdale Fisheries Board.—*Ord. Sur.*, shs. 17, 11, 1864-63.

Exnaboe, a village of Dunrossness parish, in the S of Shetland, 3 miles from Boddam hamlet.

Eye, a loch on the mutual border of Fearn and Tain parishes, NE Ross-shire, $\frac{3}{4}$ mile NE of Fearn station. Lying 51 feet above sea-level, it has an utmost length and breadth of $1\frac{3}{4}$ mile and $4\frac{1}{2}$ furlongs.—*Ord. Sur.*, sh. 94, 1878.

Eye, a small river of NE Berwickshire, rising on Monynut Edge at an altitude of 1260 feet above sea-level, and $2\frac{1}{2}$ miles SW of Oldhamstocks village. Thence it winds 20 miles east-south-eastward and north-north-eastward, till it falls into the German Ocean at Eye-mouth town. It traverses or bounds the parishes of

Oldhamstocks, Cockburnspath, Abbey St Bathans, Coldingham, Ayton, and Eyemouth; receives, midway between Ayton and Eyemouth, the considerable tribute of Ale Water; traverses, for the most part, a narrow vale of pleasant aspect; is followed, along great part of its course, and frequently crossed and recrossed, by the North British Railway; and abounds in trout of small size but excellent quality.—*Ord. Sur.*, shs. 33, 34, 1863-64.

Eyebroughy or **Ibris**, a basaltic islet of Dirleton parish, Haddingtonshire, in the Firth of Forth, $\frac{1}{2}$ mile from the mainland, and $3\frac{3}{4}$ miles W by N of North Berwick.

Eyemouth, a fishing town and a parish of Berwickshire. The town has a station on the Burnmouth and Eyemouth section of the North British railway, and stands 3 miles NNE of Ayton, and $2\frac{1}{2}$ NNW of Burnmouth station, this being $5\frac{1}{2}$ miles NNW of Berwick-upon-Tweed, and 52 E by S of Edinburgh. The river Eye here falls into the German Ocean at the head of a small sinicircular bay (from which circumstance Eyemouth takes its name) immediately S of the larger bay that takes its name from Coldingham Shore. The bay is accessible at all times of the tide, or ships may lie at anchor in the haven, secure from all winds except the north and north-east, or when the passage cannot be effected up the Firth of Forth; and the port is occasionally frequented by wind-bound vessels. On the NW side are precipitous whinstone rocks, and the cliffs begin to rise again on the S side of the river, between Eyemouth and Burnmouth attaining a height of from 70 to 339 feet above sea-level. Out at the entrance to Eyemouth Bay are the 'Hurcurs,' rocks upon which the sea, when even slightly stirred, breaks with much force and beauty. The place itself is not so greatly altered from what it was in 1827, when Chambers's *Picture of Scotland* described it as 'dark and cunning of aspect, full of curious alleys, blind and otherwise, and having no single house of any standing but what could unfold its tale of wonder.' Stories of smugglers mainly, for Eyemouth in last century was a noted seat of the 'free-trade,' and many of the older dwellings retain deep hiding-places for smuggled goods. The vigilance and energy of the preventive service, together with a judicious alteration of the duties, have, however, long since destroyed this illegitimate mode of acquiring wealth, and turned the trade of the town into more honourable and less hazardous channels. But though the streets are still narrow and intricate, a good many better-class houses have been built. A town-hall, built in 1874 at a cost of £1200, is a handsome Romanesque structure; a public-school was erected in 1876; and in 1880 part of the old parish school was opened as a reading-room, with a public library containing over 2400 volumes. Eyemouth, besides, has a post office, with money order, savings bank, insurance, and telegraph departments, branches of the Commercial and Royal Banks, insurance agencies, hotels, gaswork (1847), waterworks (1856), now under the management of the Police Commission, a masonic lodge, St Abb's (1757), a masonic hall, Foresters' and Good Templars' lodges, cricket and football clubs, a cemetery, a coastguard station, and a branch of the Royal National Lifeboat Institution. It is besides the headquarters of the First Berwickshire Artillery Volunteers, and has fairs on the first Thursday of June and the last Thursday of October. Burgh small debt courts are held in the Volunteer Hall at Ayton on the first Monday of February, second Monday of May, Tuesday before last Friday of July, and first Thursday of October—justice of peace courts being held in the same place on the first Thursday of each month except September. Burgh courts are held on the second Thursday of each month, or as required. Places of worship are the parish church (1812; 450 sittings) with a neat spire, a Free church (1878; 450 sittings), a U.P. church (1842; 500 sittings), an Evangelical Union chapel (250 sittings), and a Primitive Methodist chapel.

The old harbour was formed by a stone E pier of 1768 (one of Smeaton's earliest designs), and a short W

jetty, with an entrance between them 154 feet wide; but it proving wholly inadequate, the harbour trustees obtained £25,000 from the Public Works Loan Commissioners to accelerate the long-desired extension of the harbour, the works in connection with which were completed in 1885-87. The new harbour basin has concrete quay walls, and is $9\frac{1}{2}$ acres in area. The need for it was terribly instanced by the great gale of 14 Oct. 1881, which cost the lives of 191 fishermen belonging to fishing-ports from Burnmouth to Newhaven, 129 of them to Eyemouth alone, for whose widows, orphans, and other dependants a relief-fund of £50,000 was raised. Unfortunately the high expectations formed in connection with the harbour extension scheme have not been realized. In addition the Eyemouth Railway Company was formed, with a capital of £30,000 in 3000 shares of £10 each, and a line constructed to Burnmouth, thus connecting Eyemouth with the North British system. The Eyemouth white winter fishing-boats are among the largest and finest in Scotland, and the fishermen among the best and most energetic to be anywhere met with. The annual produce of this fishing now amounts to about £40,000. In the capture hundreds of tons of mussels are used as bait, almost the whole of which is brought by rail from Boston in England. About 100 boats belonging to Eyemouth are engaged in the herring fishery. In each of these boats from 2 to 4 hired hands from other places are employed. Eyemouth is head of a fishery district marching with that of Leith, and extending from St Abb's Head southward to Amble. In this district the number of boats in 1894 was 451, of fishermen 1082, of fish-curers 49, and of coopers 117, whilst the value of boats (Scotch section) was £11,246, of nets £11,115, and of lines £3763. The following is the number of barrels of herrings cured here in different years—(1864) 43,458, (1871) 46,127, (1873) 42,939, (1874) 52,060, (1878) 18,056, (1879) 58,177, (1880) 58,639, (1881) 67,915, (1890) 49,096, (1891) 37,883, (1894) 48,168.

As a dependency of Coldingham priory, and the only harbour within its limits, Eyemouth acquired early importance, being known in the reign of Alexander II. (1214-49) as a commodious haven for the import of supplies and the shipment of wool, hides, etc. On a small bold promontory, called the Fort, to the N of the town, is a series of grassy mounds, remains of a fortification, erected by the Protector Somerset in his invasion of Scotland, and reconstructed by Mary of Lorraine and Cromwell. An Eyemouth notary-public, George Sprott, was executed in 1608 for being privy to the Gowrie Conspiracy, into which he was drawn by Logan of Fast Castle; from Eyemouth the Duke of Marlborough assumed his first title of Baron in the peerage of Scotland. But none of its other memories are equal in interest to that thus jotted down in Burns's *Border Tour*:—'Friday, 18 May 1787. Come up a bold shore from Berwick, and over a wild country to Eyemouth—sup and sleep at Mr Grieve's. Saturday.—Spend the day at Mr Grieve's—made a royal arch mason of St Abb's lodge. Mr William Grieve, the oldest brother, a joyous, warm-hearted, jolly, clever fellow; takes a hearty glass, and sings a good song. Mr Robert, his brother and partner in trade, a good fellow, but says little. Take a sail after dinner. Fishing of all kinds pays tithes at Eyemouth.' The entry in the lodge books shows that he was admitted gratis, on the score of his 'remarkable poetical genius.' In 1597, by a charter from James VI. in favour of Sir George Home of Wedderburn, Eyemouth was erected into a free burgh of barony, with the privilege of a free port; but having adopted the General Police and Improvement Act (Scotland) in 1866, it now is governed by a body of nine commissioners. Pop. (1831) 1100, (1861) 1721, (1871) 2324, (1881) 2825, (1891) 2576, or, with Ayton suburb, 2638.

The parish was anciently included in the territory of Coldingham Priory, and did not assume a parochial form earlier than the reign of James VI. In 1891 the Boundary Commissioners transferred to Eyemouth the High-laws detached portion (80 acres) of the parish of Coldingham, which previously had been surrounded by the

parish to which it has now been connected. Bounded N by the German Ocean, E, S, and SW by Ayton, and W by Coldingham, the parish has an utmost length from N to S of $1\frac{1}{8}$ mile, an utmost breadth from E to W of $1\frac{1}{2}$ mile, and an area of 1160 acres, of which 64 are foreshore and $11\frac{1}{2}$ water. EYE Water flows $1\frac{1}{2}$ mile north-north-eastward along the eastern border to Eyemouth Bay; and ALE Water flowing $1\frac{3}{4}$ miles east-by-southward to the Eye, traces all the south-western and southern boundary. The coast rises 90 feet from the sea in rocky precipitous cliffs, which here and there are channelled by deep fissures or gullies, and at one place are pierced by a cavern; except at two points where roads have been scooped down its fissures, and at Eyemouth, where it is dis severed by the Eye, it admits no access to the beach. The interior is undulating, or slightly hilly, attaining 212 feet above sea-level at a point on the Coldingham road 7 furlongs W of the town, 252 at Highlaws, and 305 on the western boundary. The rocks comprise traps, greywacke, and Old Red sandstone, in such connections one with another as are eminently interesting to geologists. The soil in general is

fertile. All the land, since the latter part of last century, has been in productive condition. Linthill House, overlooking the confluence of the Ale and the Eye, $1\frac{1}{2}$ mile S by W of the town, is an old mansion, and was the scene, in 1752, of the murder of the widow of its proprietor, Patrick Home. Milne-Home of Wedderburn is chief proprietor. Eyemouth is in the presbytery of Chirnside and synod of Merse and Teviotdale; the living is worth £292. The public school, with accommodation for 607 children, had (1891) an average attendance of 458, and a grant of £400, 15s. Pop. (1801) 899, (1831) 1181, (1851) 1488, (1861) 1804, (1871) 2372, (1881) 2935, (1891) 2686.—*Ord. Sur.*, sh. 34, 1864.

Eylt, Loch. See RANNOCH.

Eynort, a sea-loch in the E of South Uist island, Outer Hebrides, Inverness-shire. Opening at a point $8\frac{1}{2}$ miles N of the south-eastern extremity of the island, it strikes 6 miles north-westward to within a brief distance of the western coast; and, with a very irregular outline, exhibits wild and picturesque features of scenery, that only want trees or copsewood to render it in many places enchantingly beautiful.

ORDNANCE GAZETTEER

OF

SCOTLAND.

FAD (Gael. *fada*, 'long'), a narrow loch on the mutual border of Rothesay and Kingarth parishes, Isle of Bute. Lying 48 feet above sea-level, it extends $2\frac{1}{2}$ miles north-north-eastward, varies in width between 1 and $2\frac{1}{4}$ furlongs, and sends off a stream 7 furlongs north-by-eastward to Rothesay Bay at Rothesay town. It presents in its scenery a miniature of some of the most admired lakes in the Highlands; contains perch, pike, and trout; and has, on its western shore, 2 miles SSW of Rothesay, a neat two-story house, Wood-end or Kean's Cottage, built in 1827 by the tragedian Edmund Kean (1787-1833), and afterwards occupied by Sheridan Knowles (1784-1862).—*Ord. Sur.*, sh. 29, 1873.

Fad, a lake near the centre of Colonsay island, Jura parish, Argyllshire.

Fad, a lake in Portree parish, Isle of Skye, Invernesshire, $3\frac{1}{2}$ miles NNE of Portree town. Measuring $\frac{3}{4}$ by $\frac{1}{4}$ mile, it teems with trout, and sends off a streamlet $\frac{5}{8}$ furlongs north-north-eastward to Loch Leathan ($1 \times \frac{1}{2}$ mile), which streamlet, issuing from that loch, proceeds $\frac{3}{4}$ mile north-eastward to the cliffs, and there descends to the sea in a clear leap of 300 feet.

Fad. See INCH FAD.

Fada. See ELLAN-FADA.

Fada-Lochan, a lake of Gairloch parish, NW Ross-shire. Lying 1000 feet above sea-level, and 928 acres in area, it has an utmost length and width of $3\frac{3}{4}$ miles and 5 furlongs. Two streams flow from it—one $4\frac{1}{2}$ miles south-south-westward to Loch Maree, near its head; the other $2\frac{3}{8}$ miles north-westward to Fionn Loch.—*Ord. Sur.*, sh. 92, 1881.

Faichfield, an estate, with an old mansion, in Longside parish, Aberdeenshire, 4 miles W of Peterhead, and $2\frac{3}{8}$ ESE of Longside station.

Faifley. See DUNTOCHER.

Fail, a rivulet and the site of a monastery in Tarbolton parish, Ayrshire. The Water of Fail, rising in Craige parish, winds $7\frac{1}{4}$ miles south-eastward, till below COLSFIELD or Montgomerie it falls into the river Ayr at Failford, $2\frac{3}{4}$ miles WSW of Mauchline. The monastery, St Mary's, stood on the right bank of the rivulet, $1\frac{1}{2}$ mile NNW of Tarbolton town, and, founded in 1252 by Andrew Bruce for Red or Trinity friars, was cast down by the lords of council in 1561, when its lands fell to the Wallace family. One old satirical poem says of its friars, that 'they never wanted gear enough as long as their neighbours' lasted;' and another runs—

'The friars of Fail drank berry-brown ale,
The best that ever was tasted;
The monks of Melrose made gude kail,
On Fridays, when they fasted.'

Failford. See FAIL.

Fairay. See PHARAY.

Fairburn Tower, a ruined stronghold of the Mac-

kenzies in Urray parish, Ross-shire, near the left bank of the Orrin, and $2\frac{1}{4}$ miles S by E of Contin.

Fairfolk, a tumulus near the summit of Carmyllie Hill, in Carmyllie parish, Forfarshire. Popular superstition long regarded it as a favourite haunt of fairies. Part of it was, many years ago, thrown down, and found to contain a small brass ring and some fragments of bones.

Fairholm, an estate, with a mansion, in the SE of Hamilton parish, Lanarkshire, on the left bank of Avon Water, $1\frac{3}{4}$ mile W of Larkhall.

Fairies' Dyke. See CUMBRAE, GREAT.

Fair Isle (Scand. *farr*, 'a sheep'), an island of Dunrossness parish, Shetland, 29 miles SSW of Sumburgh Head, and nearly midway between Shetland and Orkney. It measures 3 miles in length, and nearly 2 in breadth; is inaccessible except at one point on the SE; and rises into three lofty promontories. One of these, the Sheep Craig, is nearly insulated, has a conical shape, and rises to the height of 480 feet. The upper grounds are mostly covered with excellent sheep pasture, and the lower are fairly fertile, but the island does not raise grain enough for its inhabitants. These, who dwell chiefly in the middle vale, are engaged—the men in fishing, and the women in hosiery. The art of knitting woollen articles of various colours and curious patterns is said to have been taught the islanders by the 200 Spaniards who escaped from the wreck at Stromceiler Creek of the flagship of the Duke de Medina Sidonia, the admiral of the Spanish Armada, when retreating in 1588 before the English squadron. In 1868 a German emigrant ship went full sail into Sheltie Cave; but this time happily no lives were lost. Cauada has from time to time received a good deal of the surplus population, and in 1874 there was serious talk of an emigration *en masse* to New Zealand. There are two lighthouses on the island—the one on the SW end, showing four white flashes in quick succession, with intervals of half a minute between the groups, visible 16 nautical miles; the other, on the Skroo, at the NE end, showing two flashes in quick succession every 30 seconds, visible 23 nautical miles. In 1893 a fog-signal was established at each station. There are an Established mission church, a post office under Lerwick, with money order and savings bank departments, and a public school. Pop. (1881) 214, (1891) 223.

Fairlaw, an estate, with a mansion, in Coldingham parish, Berwickshire, 2 miles WSW of Reston station.

Fairley or Farland Head. See KILBRIDE, WEST.

Fairlie, a coast village and a *quoad sacra* parish in the S of Largs parish, NW Ayrshire. Sheltered eastward by uplands that rise to a height of 1331 feet, the village is charmingly seated on the Firth of Clyde, $1\frac{1}{2}$ mile E of Great Cumbrae by water, $2\frac{3}{8}$ miles S by E of Largs by road, and $4\frac{1}{4}$ N of West Kilbride by an extension of the Glasgow and South-Western railway, opened on 1 June 1880, and traversing at the back of the

village one of the longest tunnels in the S of Scotland. A century ago it was only a tiny fishing hamlet, but now it has several handsome villas, an Established church (1833; 300 sittings), a Free church, a public school, 2 inns, a post office, with money order, savings bank, and telegraph departments, a public hall, presented by Mr Charles S. Parker in 1892, 2 railway stations, of which that at the pier is a fine erection of 1882, a steamboat pier (1882), and a yacht building-yard, which, dating from 1812, has turned out some of the finest clippers afloat. It was here that the *Industry*, the oldest steamboat in existence, and now lying in Bowling harbour, was built in 1814. KELBURNE CASTLE stands $\frac{1}{2}$ mile to the N; and at the village itself is Fairlie House, the seat of Charles Stuart Parker, Esq. M.P. for Perthshire from 1868 to 1874, and for Perth from 1878 to 1892. Fairlie Burn, rising on Fairlie Moor (1100 feet), and hurrying 2 miles westward to the Firth along the boundary between Largs and West Kilbride, threads in its lower course a lovely glen. Here, on a rounded knoll, above a waterfall, stands the ruins of Fairlie Castle, a square tower, built in 1521, the seat of Fairlies of that ilk who figure from the 14th to the 18th century. Elizabeth Halket, Lady Wardlaw (1677-1727), laid in this tower the scene of her fine ballad *Hardyknute*. The *quoad sacra* parish is in the presbytery of Greenock and synod of Glasgow and Ayr. Pop. of village (1871) 294, (1881) 672, (1891) 691; of *g. s.* parish (1871) 313, (1881) 771, (1891) 744.—*Ord. Sur.*, sh. 21, 1870. See pp. 82-85 of *Wemyss Bay* (Paisley, 1879).

Fairlie or Fairley, a mansion in Newhills parish, Aberdeenshire, $\frac{5}{2}$ miles W by N of Aberdeen.

Fairlie House, a mansion in Dundonald parish, Ayrshire, on the left bank of the Irvine, 1 mile SW of Gatehead station, and $\frac{3}{2}$ miles WSW of Kilmarnock.

Fairport. See ARBROATH.

Fairway, a sunken rock of Dunfermline parish, in the Firth of Forth S of the E end of Loug Craigs. It is covered, at lowest stream ebb, by $\frac{5}{2}$ or 6 feet of water.

Fairy-Bridge, a place in Duirinish parish, Isle of Skye, Inverness-shire, 3 miles from Dunvegan.

Fairy-Knowe, an eminence in Lecropt parish, Perthshire, near Sunnyslaw farm, in the vicinity of Bridge of Allan. It is crowned with an ancient Caledonian camp.

Fala and Soutra, a united parish of Edinburgh and (until 1891) Haddington shires, containing in its Fala portion the village of Fala, whose post office is Blackshiels, and which stands $\frac{3}{2}$ miles SE of Pathhead, $1\frac{1}{2}$ SE of Edinburgh, and $\frac{3}{2}$ ENE of Tynehead station. The parish, containing also part of the hamlet of Fala Dam, $\frac{2}{3}$ mile to the NW, is bounded NE by Humbie, SE by Channelkirk in Berwickshire, S by Stow, SW by Heriot, W and NW by Crichton. Previous to 1891 it was bounded on the W by detached portions of the parishes of Stow, Borthwick, Cranston, and Humbie in Haddingtonshire. But the Boundary Commissioners in that year transferred the first two to Heriot parish, the next to Crichton, and the Blackshiels detached portion of Humbie to Fala and Soutra. They at the same time altered the county boundaries so as to place the united parish of Fala and Soutra wholly in the county of Edinburgh. Its utmost length, from NNE to SSW, is 5 miles; its breadth, from WNW to ESE, varies between 1 mile and 5 miles; and its area is 6516 $\frac{2}{3}$ acres, of which 3126 $\frac{1}{2}$ belonged to the Edinburghshire or Fala portion, 2940 $\frac{1}{2}$ to the Haddingtonshire or Soutra portion, and 450 to the Humbie detached portion. By Brothershiels Burn, Dean Burn, and East Water, Fala is parted from Soutra; and ARMT Water runs south-south-westward towards the Gala along most of the Channelkirk border. In the extreme N the surface declines to 600 feet above sea-level, thence rising to 819 near Fala village, 1209 at Soutra Hill, and 1250 at Upper Brotherstone. The whole is upland then; but the northern section, comprising somewhat less than half of the entire area, is gently undulating, fertile, and well cultivated, whilst the southern mainly consists of the westernmost part of the Lammermuirs, and, with the exception of a few arable patches, is all of it one great sheep-walk. The

rocks are mainly Silurian; and the soil in general is thin and gravelly. A large moss, Fala Flow, $\frac{1}{2}$ mile SSW of the village, has been considerably reduced by draining since 1842, but still supplies great quantities of peat. Peel towers stood at Fala Hall and Gilston; but the chief antiquity, an ancient hospice, is separately noticed under SOUTRA. A mansion is Woodcot, $\frac{1}{2}$ mile E by S of the village. This parish is in the presbytery of Dalkeith and synod of Lothian and Tweeddale; the living is worth £173. The church, at the village, is a plain old building, containing 250 sittings. There is also a U.P. church (1787; 250 sittings); and a public school, with accommodation for 80 children, has an average attendance of about 60, and a grant of nearly £60. Pop. (1891) 285, of whom 80 were in Soutra.—*Ord. Sur.*, shs. 33, 25, 1863-65. See Rev. J. Hunter's *Fala and Soutra* (1892).

Fala Dam. See CRICHTON and FALA AND SOUTRA.

Faldonside, an estate, with a mansion, previous to 1891 in the Roxburghshire portion of Galashiels parish, $\frac{4}{2}$ miles W by S of Melrose. The parish of Galashiels was placed by the Boundary Commissioners in the above year wholly in Selkirkshire.

Falfield, an estate, with a mansion, in Kilconquhar parish, Fife, $3\frac{2}{3}$ miles ESE of Ceres.

Falkirk, a town and parish of SE Stirlingshire. A parliamentary burgh, a seat of considerable trade and industry, and the virtual capital of the south-eastern portion of the county, the town stands near the southern bank of the Forth and Clyde canal, and $\frac{3}{2}$ miles from the right shore of the Firth of Forth. By road it is $1\frac{1}{2}$ mile SSE of Carron Iron-works, and $7\frac{1}{2}$ miles ENE of Linlithgow; whilst from two North British stations—Grahamston, on the Polmont and Larbert loop-line (1852), at the town, and Falkirk, on the Edinburgh and Glasgow section (1842), $\frac{2}{3}$ mile SSW—it is $2\frac{1}{2}$ miles W by N of Edinburgh, $\frac{3}{2}$ SW of Grangemouth, $1\frac{1}{2}$ SSE of Stirling, and $21\frac{1}{2}$ ENE of Glasgow. The site is partly a gentle hill-side, partly low level ground on the southern skirt of the Carse of Forth, and commands magnificent views of the Ochils, the Denny and Campsie Hills, and the Grampian Mountains. The burgh consists of Falkirk proper, which lies wholly S of the Edinburgh and Stirling railway; Grahamston, between the railway and the Forth and Clyde canal; and Bainsford, N of the canal.

The town steeple, in the market-place, rebuilt in 1813 on the site of a tower of 1697, is 146 feet high, and contains a clock and two bells; immediately W of it is a stone equestrian statue of the Duke of Wellington, erected by public subscription in 1854. The county buildings and prison (1866-69) are Scottish Baronial in style, as are also the more recently built burgh buildings (1876-77), with a mansard-roofed SE tower, 60 feet high, a spacious court-hall, and a council-room. The prison, since 1878, has merely served as a place of imprisonment for terms of not more than 14 days. The town-hall, Italian in style, and seated for upwards of 1600 persons, is the corn exchange of 1859, reconstructed in 1878 at a cost of over £5000. A new corn exchange was built in 1878. Italian, too, is the Science and Art School, which, opened by the Earl of Rosebery in 1878, has a large hall and five smaller ones, among them a chemical laboratory. Other noteworthy edifices are the National Bank (1863), the Young Men's Christian Institute (1880), and the Catholic Institute (1881).

The cruciform parish church, said to have been founded by Malcolm Ceanmmor (1057-98), and to have been granted in 1166 by the Bishop of St Andrews to Holyrood Abbey, was razed to the ground in 1810, when two 'most interesting' inscriptions were found in the *débris*—inscriptions whose faulty Latinity and faultier chronology should at once have stamped them for palpable forgeries. The present church of 1811 is a plain galleried edifice, with stained-glass windows; in 1892 it was restored, and had an organ placed in it, at a total cost of about £3000. The ancient steeple of its predecessor, 130 feet high, serves for its vestibule, and contains a marble monument to the Rev. John Brown Paterson (1804-35), with four life-size effigies believed to be those of the earliest feudal lords of Callendar, and transferred from the old church to their

present position in 1852. There are, besides, Grahamston *quoad sacra* church, Falkirk and Bainsford Free churches, West, East, and Graham's Road U.P. churches, Evangelical Union, Congregationalist, Methodist, and Baptist chapels, Episcopal Christ Church, and Roman Catholic St Francis Xavier's. Of these, Grahamston *quoad sacra* church (1874-75; 800 sittings) is an Early French Gothic edifice, whose high-pitched front gable is flanked by two steeples, 120 and 62 feet high; Graham's Road U.P. church (1878-79; 600 sittings) is a striking example of Gothic, with square tower and octagonal spire, 110 feet high; and Gothic also are Bainsford Free church (1879; 800 sittings), Christ Church (1864; 200 sittings), and St Francis (1843; 600 sittings).

Since the passing of the Education Act of 1872, much has been done in the burgh in behalf of education. The five public schools under the burgh board—High, Central, Northern, Bainsford, and Comely Park—with respective accommodation for 261, 384, 1141, 620, and 901 children, have an average attendance of about 250, 400, 950, 400, and 520, and grants amounting to over £250, £390, £920, £400, and £530. A handsome Roman Catholic school, accommodating 288 children, was opened in 1881; and there is also a Ragged and Industrial school (1857). Falkirk Academy, called also the High School, is now under the School Board, and is divided into two schools—the senior department in Park Street, and the junior department in Cockburn Street, formerly the Southern public. There are two public parks, the Prince's and the Victoria parks, the latter of which was opened in 1895.

Falkirk has a new post office (1893), with money order, savings bank, insurance, and telegraph departments, branches of the Bank of Scotland and the Clydesdale, Commercial, National, and Royal Banks, a National Security Savings Bank (1845), 'Dollar' Free Library, a cottage hospital, a parochial board, with offices in Vicar Street, a gaswork, the Gaff trust, several hotels, a cemetery; assembly, masonic, Oddfellows', and two other halls; a reading room and library, and two newspapers—the Wednesday and Saturday Liberal *Falkirk Herald* (1846) and the Saturday Independent *Falkirk Mail*. The water supply is controlled by the Falkirk and Larbert Water Trust, new waterworks, supplying a million gallons a day, having been constructed in 1885-86 at a cost of £70,000. Thursday is market-day; and cattle markets are held on the last Thursday of January, the first Thursday of March, and the Thursday before the third Friday of April, cattle and horse markets on the third Thursday of May and the second Thursday of July, and hiring fairs on the first Thursday of April and the last Thursday of October. The famous Falkirk Trysts on Stenhousemuir, 3 miles to the NNW, are held, for cattle and horses, on the second Tuesday of August, September, and October; for sheep, on the Monday before the September and October Trysts. Transferred hither from CRIEFF about 1770, these Trysts are among the largest cattle markets in the kingdom. The town conducts an extensive retail trade, and serves as the centre to a busy and populous district. In or close to it are Aitken's large and long-established brewery, a distillery, chemical and dynamite works, fire-brick and tile-yards, and a leather factory; but iron-founding is the staple industry.* The Falkirk Iron-works, started in 1819 by a colony of workmen from CARRON, came to its present proprietors, the Messrs Kennard, in 1848, and now is second only to Carron itself. The buildings cover 8 acres; and the employés, about 1600, turn out weekly several hundred tons of castings—stoves, grates, viaduct girders, garden seats, verandahs, etc. Here, during the Crimean War, 16,000 tons of shot and shell were manufactured. Other works, with the date of their establishment, are Abbot's Foundry (1856), Burnbank Foundry (1860), Gowanbank Iron-works (1864), Grahamston Iron-works (1862), Camelon Iron Co. (1872), Parkhouse Iron Co. (1875),

* So long ago as 1695 we find the Darien Company contracting for Falkirk smith and cutlery work.

Port Downie (1875), Forth and Clyde Iron-works (1876), Springfield Iron-works (1876), Etna Foundry (1877), and Callendar Iron Co. (1877). These give employment to several thousand workpeople.

The town was made a burgh of barony in 1600, and a burgh of regality in 1646, its affairs being managed till 1859 by a body of 28 'stint-masters,' who by a rude manner of guessing at the 'means and substance' of the rate-payers assessed accordingly. Now the burgh—since July 1882 divided into four wards—is governed by a provost, 3 bailies, a treasurer, a town-clerk, and 7 councillors, who also are commissioners of police under the

Seal of Falkirk.

Falkirk Police and Improvement Act of 1859. With Airdrie, Hamilton, Lanark, and Linlithgow, it sends one member to parliament, Falkirk being the returning burgh. The corporation revenue was £10,618 in 1896, and the municipal constituency numbered 2470 in the same year, when the annual value of real property amounted to £65,549. The parliamentary constituency in that year numbered 2015. Pop. (1841) 8209, (1851) 8752, (1861) 9030, (1871) 9547, (1881) 13,170, (1891) 17,312, of whom 8980 were males, and 8322 females. Houses (1891) inhabited 3374, building 30, vacant 40. Pop. with suburbs (1881) 15,599, (1891) 19,769.

Falkirk in Latin is termed *Varia Capella*, and still is known to Highlanders as *Eaglaisbreac*. Both mean 'the speckled church,' or 'the church of the mixed people;' and *Falkirk*, or rather *Fawcirk*, is the Saxon equivalent for the same, being compounded of Anglo-Saxon *fah*, 'of various colours,' and *circe*, 'kirk or church.' ANTONINUS WALL passed just to the S, and various Roman relics have from time to time been found. St Modan, fellow-worker with St Ronan, on a mission connected with the Romish party, appears to have been here about the year 717; and in 1030, in revenge for Malcolm Ceanmor's devastation of Northumberland, William the Conqueror sent his son Robert to Scotland, 'who, having gone as far as *Egglesbreth*, returned without accomplishing anything.' Prior to Sauchieburn (1488) the discontented nobles occupied Falkirk, whose old church witnessed a solemn subscription of the League and Covenant in 1643, and which two years later was decimated by the plague. These are the leading events in Falkirk's history, besides the two battles and passing visits from Robert Burns (25 Aug. 1787), from Wordsworth and his sister Dorothy (14 Sept. 1803), and from the Queen and Prince Consort (13 Sept. 1843). 'Like the bairns o' Fa'kirk, they'll end ere they mend,' says a popular by-word, but Falkirk has produced one most illustrious 'bairn' in Admiral Sir Charles Napier (1786-1860), who was born at Merchiston Hall. Another native was Henry Belfrage, D.D. (1774-1835), an eminent Secession minister; whilst residents were William Symington (1760-1831), a claimant to the invention of steam navigation, and James Wilson, D.D., author of a *History of Egypt*, and minister of Falkirk from 1794 to his death in 1829.

Of the two battles of Falkirk, the first was fought on 22 July 1298 between Scottish and English armies, led by Sir William Wallace, then Guardian of the kingdom, and Edward I. of England. The invading host is said by the English chroniclers of the day to have numbered 7500 mounted men-at-arms (3000 of them clad in coats of mail) and 80,000 foot—a force before which Wallace's poor army, less than a third of the enemy's, was fain to retreat, leaving Edward a desert to tread where neither was there food to eat nor man to direct him on the way.

furl.) and Green ($1\frac{1}{2} \times 1$ furl.) lie $3\frac{1}{2}$ miles S and 5 miles WSW of Falkirk town, but present no feature of special interest. The land, from the confluence of Carron Water and West Quarter Burn, southward and west-south-westward, to the extent of about a third of the entire area, is all but a dead level, and consists of rich carse soil in the highest state of cultivation. From the town onward the surface is partly undulating, partly hilly, rising west-south-westward to 405 feet near Standalane, 612 near Westside, and 596 near Sauchierig; southward and south-south-westward to 646 near Greencraig, 675 near Loch Allrig, and 581 near Greenrig. Most of that region is arable, and much of it is diversified by natural woods and thriving plantations, but a considerable tract, near the southern boundary, is moor and moss. Of the entire area, 11,000 acres are arable, 4851 are pasture, 1900 are waste, and 1800 are under wood. The rocks belong to the Coal Measures of the Carboniferous formation. Coal of excellent quality is so abundant as to be largely exported; sandstone, limestone, and ironstone occur in the same district as the coal; and lead, copper, silver, and cobalt have been found, though not in considerable quantities. Vestiges of ANTONINUS' WALL occur in various parts; traces of the Roman town of Old CAMELON existed till a comparatively recent period; some wheat, supposed to have lain concealed from the time of the Roman possession, was found about the year 1770 in the hollow of a quarry near CASTLECARY; funeral urns and stone coffins have been exhumed in various places; and several moats or artificial earthen mounds, used in the Middle Ages as seats of justiciary courts and deliberative assemblies, are in Seabegs barony. The Forth and Clyde Canal, commencing at Grangemouth, traverses the parish through nearly its greatest length, or about 9 miles; the Union Canal, defecting from the Forth and Clyde Canal $1\frac{1}{2}$ mile W of the town, traverses the parish to the length of fully 3 miles, passing on the way a tunnel 3 furlongs in length; the Edinburgh and Glasgow railway makes a reach of nearly $7\frac{1}{2}$ miles within the parish, and traverses a long tunnel immediately E of Falkirk station; the Polmont and Larbert loop-line of the North British railway, and the branch from it to Grangemouth, are entirely within the parish; the junctions of that line with both the Caledonian and the North British lines from the W, and with the branch line to Denny, are on the N border, about 2 miles W by N of the town. The Greenhill junctions, and the line from the upper one of them to the Larbert junctions, also are within the parish, about 2 miles from the western boundary; and the reach of the Caledonian railway from the lower Greenhill junction makes a curving sweep of fully $2\frac{1}{2}$ miles to the western boundary. Callendar, Kerse, and Bantaskine, noticed separately, are chief mansions. In the presbytery of Linlithgow and synod of Lothian and Tweeddale, this parish is ecclesiastically divided into Falkirk proper and the *quoad sacra* parishes of Grahamston, Camelon, Grangemouth, Slamannan, Cumbernauld, and Bonnybridge; Falkirk itself being a living worth £460. The public schools in the landward parish are Auchingean, Bonnybridge, Camelon, Greenhill, and Laurieston, which, with total accommodation for 2866 children, have an average attendance of about 1730, and grants amounting to over £1700. Valuation of landward portion of parish (1892) £38,710, 15s. 10d., plus £19,038 for railways and canals. Pop. of civil parish (1881) 25,143, (1891) 30,731; of *q.s.* parish (1881) 11,549, (1891) 14,506.—*Ord. Sur.*, sh. 31, 1867. See Robert Gillespie's *Round About Falkirk* (Glasgow, 1879).

Falkland, a small town and a parish in the Cupar district of Fifeshire. The town stands at the NE base of East Lomond hill, $2\frac{3}{4}$ miles NW of Falkland Road station on the North British railway, this being $2\frac{3}{4}$ miles SSW of Ladybank Junction, $8\frac{1}{2}$ miles SW of Cupar-Fife, $5\frac{1}{2}$ miles N by W of Thornton Junction, and $36\frac{1}{2}$ miles N of Edinburgh. It once was a place of much resort, the capital of the stewardry of Fife, the residence of the retainers of the earls of Fife, and afterwards the residence of the courtiers of the kings of Scotland; and it possesses memorials of its ancient consequence in the remains of

the royal palace, some curious old houses, and such local names as Parliament Square, College Close, and West Port. It is now, and has long been, a sequestered country town, and though enlivened by a few modern erections, it consists mainly of unpaved roadways, sloping alleys, intricate lanes, and picturesque old houses. A house of two stories, fronting the palace, bears an inscription with the date 1610, intimating it to have been a royal gift to Nichol Moneriff; the house adjoining it occupies the site of the residence of the royal falconer, and retains an inscribed stone of the year 1607; and there are houses bearing later dates in the same century. A three-storied house on the S of the square, now used as a co-operative store, was the birthplace of the famous Covenanter Richard Cameron.

Falkland was originally a burgh of barony belonging to the Earls of Fife, but it was erected into a royal burgh in 1458, during the reign of James II. The preamble to the charter of erection states, as the reasons for granting it, the frequent residence of the royal family at the manor of Falkland, and the damage and inconvenience sustained by the many prelates, peers, barons, nobles, and others of their subjects who came to their country-seat, for want of innkeepers and victuallers. This charter was renewed by James VI. in 1595. Among the privileges which these charters conferred, was the right of holding a weekly market, and of having four fairs or public markets annually. To the public markets two others were subsequently added—one called the linseed market, held in spring, and the other the harvest market, held in autumn. There are now seven public markets held throughout the year. These occur in the months of January, March, May, June, August, September, and November, but only the last is well attended. Like the neighbouring burgh of Auchtermuchty—although certainly entitled originally to have done so—Falkland does not appear at any time to have exercised its right of electing a member to the Scottish parliament; consequently its privileges were overlooked at the time of the Union. In all other respects, however, this burgh enjoys the privileges of a royal burgh. It is governed by a town-council, consisting of 3 magistrates, 8 councillors, a treasurer, and a town-clerk. The magistrates, besides managing with the council the civil affairs of the burgh, hold courts from time to time for the decision of questions arising out of civil contracts and petty delicts.

No town, probably, in Scotland is better supplied with spring water. This was brought in 1781 from the neighbouring Lomonds by means of pipes, and is distributed by wells situated in different parts of the burgh. This useful public work cost about £400 sterling, and was executed at the expense of the corporation. Falkland has a post office, with money order, savings bank, and telegraph departments, a branch office of the British Linen Company Bank, 2 hotels, gaswork, and a masonic lodge. The town-house, in front of which stands an ornamental fountain, has a spire, was erected in 1802, and contains a hall in which the burgh courts and the meetings of the town-council are held; its lower story, occupied now by a draper's shop, served originally as a lock-up house. The parish church, built in 1849, by the late O. T. Bruce, Esq., at a cost of £7000, is a handsome Gothic edifice, with a fine spire and 900 sittings. There is also a Free church, whilst at Freuchie, 2 miles to the eastward, are another

Seal of Falkland.

Established and a U.P. church. The manufacture of linens and woollens is the staple industry, brewing and brick-making being also carried on. Pop. (1881) 1068, (1891) 1045, of whom 959 were in the royal burgh.

The lands of Falkland, including what now constitutes the burgh, belonged originally to the Crown, and were obtained from Malcolm IV. by Duncan, sixth Earl of Fife, upon the occasion of his marriage with Ada, the niece of the king. In the charter conferring them, which is dated 1160, the name is spelled 'Falecklen.' The lands of Falkland continued, with the title and other estates, with the descendants of Duncan until 1371, when Isobel, Countess of Fife, the last of the ancient race, conveyed the earldom and estates to Robert Stewart, Earl of Monteith, second son of Robert II., who thus became seventeenth Earl of Fife, and in 1398 was created Duke of Albany. On the forfeiture of his son, Murdoch, in 1424, the lands of Falkland reverted to the Crown, and the town was shortly afterwards erected into a royal burgh. The courts of the stewartry of Fife—which comprehended only the estates of the earldom—were also removed from the county town of Cupar to Falkland, where they were afterwards held as long as the office of steward existed. In 1601, Sir David Murray of Gospetrie, first Viscount Stormont, obtained a charter of the Castle-stead of Falkland, with the office of ranger of the Lomonds and forester of the woods, and he also held the office of captain or keeper of the palace and steward of the stewartry of Fife. The lands called the Castle-stead, with the offices and other parts of the lands of Falkland, were afterwards acquired by John, first Duke of Athole, who was appointed one of his majesty's principal secretaries of state in 1696, and lord high commissioner to the Scottish parliament the following year. He was twice appointed to the office of keeper of the privy seal, and was made an extraordinary lord of session in 1712.

At an early period, the Earls of Fife had a residence here, called the castle of Falkland. Not a vestige of this building now remains, but its site appears to have been in the immediate neighbourhood of where the palace was afterwards built. This fortalice had in effect the honours of a palace while it was occupied by one of the blood-royal, Robert, Duke of Albany, who, for 34 years, had all the power of the state in his hands, under the different titles of lieutenant-general, governor, and regent. Although Robert gives it the more humble designation of 'Manerium nostrum de Fawkland,' it was, in fact, the seat of authority; for his aged and infirm father constantly resided in the island of Bute. It receives its first notoriety, in the history of our country, from the death here, on 27 March 1402, of Albany's nephew, David, Duke of Rothesay, eldest son of Robert II. That madcap prince was on his way to seize the castle of St Andrews, whose bishop had just died, when at Strathlyrum he was arrested under a royal warrant, and brought a prisoner to the castle of Falkland. There, says the popular legend, adopted by Scott in *The Fair Maid of Perth*, he was thrust into a dungeon, and left to die of starvation. His life was for some days feebly sustained by means of thin cakes, pushed through a crevice in the wall by the young daughter of the governor of the castle; but her mercy being viewed by her ruthless father in the light of perfidy to himself, she was put to death. Even this brutal act did not deter another tender-hearted woman, employed as wet-nurse in the family, who supplied him with milk from her breasts by means of a long reed, until she, in like manner, fell a sacrifice to her compassion. Certain it is that the prince's body was removed from Falkland for burial in the Abbey of Lindores, that public rumour loudly charged Albany and Douglas with his murder, and that a parliamentary inquiry resulted in a declaration to the doubtful effect that he 'died by the visitation of Providence, and not otherwise.' Wytoun laments his untimely death, but says nothing of murder; so that by Dr Hill Burton the regent is acquitted of this foul blot upon his character (*Hist. Scotl.*, ii. 380-396, ed. 1876).

After the lands and castle of Falkland came to the

Crown by the forfeiture of the earldom, the first three Jameses occasionally resided at the castle, enjoying the pleasures of the chase in the adjoining forest, and on the Lomond hills; and in consequence of this the charter was granted by James II., erecting the town into a royal burgh. It is impossible now to ascertain whether James III. or James IV. began to build the palace, as both of these monarchs were fond of architecture, and both employed workmen at Falkland; but the work was completed by James V. in 1537, and with him the palace is closely associated. Hence he escaped out of Angus's hands to Stirling, disguised as a stable-boy, May 1528; and hither, broken-hearted by the rout of Solway Moss, he returned to die, 13 Dec. 1542. By his deathbed stood Cardinal Bebbune, Kirkcaldy of Grange, and his old tutor, Sir David Lindsay, who told him of the birth, a few days before, of Mary at Linlithgow. 'It came with a lass, and it will go with a lass,' said James; then, turning his face to the wall, spake nothing more. Here Mary of Guise, his widowed queen, often resided, while she governed the kingdom for her infant daughter; and here she found it necessary to give her reluctant consent to the armistice agreed to near Cupar with the Lords of the Congregation. Here, too, the unfortunate Mary, after her return from France, oft sought relief in the sports of the field from the many troubles of her short and unhappy reign. She appears first to have visited it in Sept. 1561, on her way from St Andrews to Edinburgh. She returned in the beginning of the following year, having left Edinburgh to avoid the brawls which had arisen between Arran and Bothwell; and resided partly at Falkland, and partly at St Andrews, for two or three months. She occupied her mornings in hunting on the banks of the Eden, or in trials of skill in archery in her garden, and her afternoons in reading the Greek and Latin classics with Buchanan, or at chess, or with music. During 1563, after her return from her expedition to the North, she revisited Falkland, and made various short excursions to places in the neighbourhood; and again, in 1564, and after her marriage with Darnley in 1565. After the birth of her son, she once more visited Falkland; but this appears to have been the last time, as the circumstances which so rapidly succeeded each other, after the murder of Darnley and her marriage with Bothwell, left her no longer at leisure to enjoy the retirement it had once afforded her.

James VI., while he remained in Scotland, resided often at the palace of Falkland; and indeed it seems to have been his favourite residence. After the Raid of Ruthven (1582), James retired here, calling his friends together for the purpose of consulting as to the best means of relieving himself from the thralldom under which he had been placed; and he was again at Falkland in 1592, when Francis-Stewart, Earl of Bothwell, made one of his desperate attempts on the king's person, and was driven back solely by the timely assistance of the neighbouring peasantry. After the riots in Edinburgh in 1596, James again retired here, where he employed himself partly in hunting, and partly in plotting the destruction of the Presbyterian religion, and the introduction of Episcopacy. In 1600, he was again residing at Falkland, when the first act was played of the so-called Gowrie Conspiracy. The king, on 5 Aug., was about to mount his horse to follow his favourite sport, when the mysterious message was delivered to him by Alexander Ruthven, brother to the Earl of Gowrie, which induced James, after the buck was killed, to ride to PERTH. In 1617, when James, now King of Great Britain, visited Scotland, he, in his progress through the kingdom, paid his last visit to Falkland. In 1633, when Charles I. visited Scotland, he slept three nights here, on his way to Perth; and on his return, he slept two nights in going to Edinburgh, and created several gentlemen of the county knights. Upon the 6th of July 1650, Charles II., who had arrived from Holland on the 23d of the preceding month, visited Falkland, where he resided some days, receiving the homage of that part of his subjects who were desirous of his restoration to the crown of his ancestors; and

here he again returned, after his coronation at Scone, on the 22d of Jan. 1651, and remained some days.

The oldest portion of the palace, which was erected either by James III. or James IV., forms the S front, and still is partially inhabited. On each floor there are six windows, square-topped, and divided by mullions into two lights. Between the windows, the front is supported by buttresses, enriched with niches in which statues were placed, the mutilated remains of which are still to be seen, and terminating in ornamented pinnacles which rise considerably above the top of the wall. The lower floor is the part inhabited, and the upper floor is entirely occupied by a large hall. The western part of this front of the palace is in the castellated style, and of greater height than the other; it is ornamented with two round towers, between which is a lofty archway which forms the entrance to the courtyard behind, and which, in former times, was secured by strong doors, and could be defended from the towers that flank it. James V. made great additions to the palace, and appears to have erected two ranges of building, equal in size to that described, on the E and N sides of the courtyard. As completed by him, therefore, the palace occupied three sides of a square court, the fourth or western side being enclosed by a lofty wall. The range of building on the N side of the court has now entirely disappeared, and of that on the E, the bare walls alone remain, these two portions of the palace having been accidentally destroyed by fire in the reign of Charles II. Having erected his addition to the palace in the Corinthian style of architecture, James assimilated the inner front of the older part of the building, by erecting a new façade in the same style with the rest of the building. The building consisted of two stories, a basement or lower floor, and a principal one, the windows of which are large and elegant, when we consider the period. Between the windows, the façade is ornamented with finely proportioned Corinthian pillars, having rich capitals; and between the upper row of windows are medallions, presenting a series of heads carved in high relief, some of which are beautifully executed, and would lead us to believe that more than native talent had been engaged in the work. On the top of the basement which supports the pillars, the initials of the king and of his queen, Mary of Guise, are carved alternately.

The palace of Falkland, deserted by its royal inmates, was for a long series of years suffered to fall into decay:

'The fretted roof looked dark and cold,
And tottered all around;
The carved work of ages old
Dropped wither'd on the ground;
The casement's antique tracery
Was eaten by the dew;
And the night-breeze, whistling mournfully,
Crept keen and coldly through.'

It was purchased in 1888 by the Marquis of Bute, who takes great interest in its careful preservation, as well as in ornamenting the courtyard with flowers and shrubs, and the ground in its immediate neighbourhood, which has been laid out as a garden. The mixture of Gothic, Baronial, and Palladian architecture in this building makes it of much interest to the antiquarian. The main front, although distinctly Baronial, has been treated with buttresses and pinnacles, till it assumes the outward appearance of some ancient chapel, while alongside stand the two round towers of the gateway, with shot-holes, portcullis, and massive walls, that look incongruous. In the inside, this part at one time presented the appearance of a narrow, stone-roofed main building, winged with two round towers corresponding to those at the entrance. But the space between those has been filled up to widen the building, and provide a gallery leading to the large hall, and it is on this latter face that the Corinthian pillars and rows of medallions are shown. At a certain level on the old towers there is a bold string course, and it is remarked by architects how admirably the row of medallions, on the same level, carries on the line, although of such a different style of architecture. The ruined E wing of the square presents

similar medallions, but they are between the rows of windows, not alternate with the main windows as in the other wing, and are far less effective. The grand hall, occupying the main building to the front, shows a pannelled roof, of which some part of the colouring still remains, and part of the original decoration of the walls is also seen. One end of the hall is separated from the corridor by a magnificent screen in oak, consisting of slender turned pillars rising from floor to ceiling, and displaying a very marked style of chamfering, at the changes from round to square, where the pillars are divided into stages. A stone balcony runs round the two towers, with their connecting building, and the main portion of the front, and from this height a very delightful view of the surrounding country is obtained. The view from the southern parapet of the palace has long been admired. On the one hand, the Lomond hills spread out their green sides, and point their conical summits to the sky; on the other, the whole strath of Eden, the Howe of Fife from Cupar to Strathmiglo, lies open and exposed. Previous to becoming the property of the Marquis of Bute it was owned by the late Mr Bruce of Nutt Hill, and by him was rescued from total decay and repaired. The excellence of the workmanship still delights the eye of the antiquarian, and gives an idea of what the building once was.

It might reasonably be supposed that, while Falkland continued to be the occasional residence of royalty, it was not only a place of resort to the higher classes, but that the peasantry would be permitted to enjoy that festivity here which was most congenial to their humours. As it was a favourite residence of that mirthful prince James V., it might well be conjectured, from his peculiar habits, that he would be little disposed to debar from its purlieus those with whom he was wont frequently to associate in disguise. Accordingly—although it is still matter of dispute among our poetical antiquaries, whether the palm should not rather be given to his ancestor James I.—one of the most humorous effusions of the Scottish muse, which contains an express reference to the jovial scenes of the vulgar at Falkland, has, with great probability, been ascribed to the fifth of this name:

'Was nevir in Scotland hard nor sene
Sic dansin nor deray,
Nouthir at Falkland on the Grene,
Nor Pebbilis at the Play,
As wes of wowaris, as I wene,
At Christis kirk on ane day,' etc.

According to Allan Ramsay and the learned Callander, 'Chrystis Kirk' is the kirktown of Leslie, near Falkland. Others have said, with less probability, that it belongs to the parish of Leslie, in that part of the county of Aberdeen called the Garioch. Pinkerton thinks that, besides the poems of *Christis Kirk* and *Pebilis to the Play*, a third one, of the same description, had been written, which is now lost, celebrating the festivities of 'Falkland on the Grene.' This phraseology might refer to what has been called 'the park at Falkland.' Sir David Lindsay, being attached to the court, must have passed much of his time at this royal residence. According to his own account—notwithstanding the badness of the ale brewed in the burgh—he led a very pleasant life here; for, in the language of anticipation, he bids adieu to the beauties of Falkland in these terms:

'Fare well, Falkland, the forteress of Fyfe,
Thy polite park, under the Lowmound law.
Sum tyme in the, I led a lustie lyfe.
The fallow deir, to se thame raik on raw,
Court men to cum to the, thay stand grait aw,
Sayand, thy burgh hene of all burrows hail,
Because, in the, they never gat gude aill.'

In 1715 Rob Roy and his followers, who had hung about Sheriffmuir, without taking part with either side in that struggle, marched to Falkland, and, seizing the place, levied contributions from the district.

Owing to its courtly surroundings, Falkland long showed superior refinement in its inhabitants; and 'Falkland bred' had become an adage. The superiority, however,

of Falkland breeding is, like the former grandeur of the town and palace, now among the things that were. The place is remarkable also for a reminiscence of a totally opposite kind. 'A singular set of vagrants existed long in Falkland called Scrapies, who had no other visible means of existence than a horse or a cow. Their ostensible employment was the carriage of commodities to the adjoining villages; and in the intervals of work they turned out their cattle to graze on the Lomond hill. Their excursions at night were long and mysterious, for the pretended object of procuring coals; but they roamed with their little carts through the country-side, securing whatever they could lift, and plundering fields in autumn. Whenever any inquiry was addressed to a Falkland Scrapie as to the support of his horse, the ready answer was—"Ou, he gangs up the (Lomond) hill ye ken." The enclosing of the hill and the decay of the town, however, put an end to this vagrancy.

The parish of Falkland contains also the villages of FREUCHIE and Newton of Falkland. It is bounded N by Auchtermuchty, E by Kettle, SE by Markinch, S by Leslie, SW by Portmoak in Kinross-shire, and W and NW by Strathmiglo. Its greatest length, from E to W, is 5½ miles; its greatest breadth, from N to S, is 3½ miles; and its area is 8265½ acres. By Conland, Maspie, and other small burns, the drainage is carried partly southward to the Leven, but mainly northward to the Eden, which flows just outside the northern boundary; and the highest point in Falkland between the two river-basins is the East LOMOND (1471 feet), since the loftier West Lomond (1713) falls within the Strathmiglo border. The parts of the parish to the N and E of the town sink to 130 feet above the sea, and are almost a dead level; but most of the surface is finely diversified with gentle valleys and wooded hillsides. The rocks are variously eruptive and carboniferous—greenstone and limestone; and a vein of galena, discovered about 1783 on the S side of the East Lomond, was thought to be argentiferous, but never repaid the cost of working. The soil, too, varies, but is mainly a fertile light friable loam. Woods and plantations cover some 400 acres; about a fifth of the entire area is pastoral or waste; and all the rest of the land is under cultivation. Kilgour, 2¼ miles W by N of the town, was the site of the ancient parish church, and formerly gave name to the entire parish. Traces of several prehistoric forts are on the Lomond hills; remains of extensive ancient military lines are in the lands of Nuthill; and several old coins, chiefly of Charles I. and Charles II., have been found among the ruins of Falkland Palace. The 'Jenny Nettles' of song hanged herself on a tree in Falkland Wood, and was buried under a cairn on the Nuthill estate. Falkland House, or Nuthill, ¾ mile W of the town, was built in 1839-44, after designs by Mr Burn, of Edinburgh, at a cost of at least £30,000, and is a fine edifice in the Tudor style, with a pleasant well-wooded park. It is the Fife residence of the Marquis of Bute. In the presbytery of Cupar and synod of Fife, this parish since 1880 has been ecclesiastically divided into Freuchie and Falkland, the latter a living worth £266. Two public schools, Falkland and Freuchie, with respective accommodation for 272 and 299 children, have an average attendance of about 195 and 130, and grants of nearly £200 and £130. Valuation (1892) £10,513, 12s. 6d. Pop. (1881) 2698, (1891) 2470, of whom 1489 were in Falkland *q. s.* parish.—*Ord. Sur.*, sh. 40, 1867. See J. W. Taylor's *Some Historical Antiquities connected with Falkland, Kettle, and Leslie* (Cupar, 1861), and Major W. Wood's *Historical Description of Falkland* (Kirkcaldy, 1838).

Falkland, Newton of, a village in Falkland parish, Fife, 1 mile E by S of Falkland town. It carries on some manufactures of dowlas and sheeting.

Falkland Road, a station near the meeting-point of Falkland, Kettle, and Markinch parishes, Fife, on the Thornton and Ladybank section of the North British railway, 3 miles NNW of Markinch Junction.

Fallen Rocks, a vast mass of blocks of Old Red sandstone on the N coast of Arran island, Buteshire,

2 miles NNW of Sannox. They occur on the sea-face of an isolated mountain ridge, 5½ miles long and 1½ mile broad, so situated as to compel the coast-road round the island to make a detour there inland; they consist of masses hurled from an overhanging cliff which fell in the way of landslip; they strew a steep slope and a skirting beach in magnificent confusion; they look like a rocky avalanche rushing to the shore, and form a piece of singularly striking scenery; and they can be approached on land only on foot and by wary walking.

Falloch, a rivulet of Perth and Dumbarton shires, rising, at an altitude of 2600 feet above sea-level, on BEN-A-CHROIN, close to the southern border of Killin parish. Thence it runs 3¼ miles north-by-westward to a point (563 feet) 1½ mile SW of Crianlarich Hotel, and thence 3¼ miles south-westward, 3¼ miles southward, till it falls into the head of Loch Lomond (23 feet) at ARDLUI. The chief of its many mountain affluents are the Dubh Eas and the Allt Arnar or ALDERMAN on the right, and the Allt Inse on the left. From the point where it turns southward, it traverses the romantic glen named after it GLEN FALLOCH, through which the West Highland railway runs from Ardlui to Crianlarich, a distance of 9 miles; forms, in one part, a fine cascade; and has mostly a rapid current, though finally it subsides into comparative sluggishness. Its trout, as a rule, run small, but are so plentiful that from ten to twelve dozen have been taken by one rod in the course of a few hours.—*Ord. Sur.*, shs. 46, 38, 1872-71.

Fallside, a station in Bothwell parish, Lanarkshire, on the Glasgow South-Side and Motherwell branch of the Caledonian railway, 1 mile ESE of Uddingston.

Falside, an estate, with a mansion, in Kinneff parish, Kincardineshire, 3 miles N by E of Bervie.

Falside Castle, an ancient peel-tower in Tranent parish, Haddingtonshire, 2 miles SW of Tranent town, and 2¾ ESE of Musselburgh. The E part of its stone vaulted roof remains; and a building, a little to the SW, though later, is quite as ruinous. Standing high, 420 feet above sea-level, Falside commands on a clear day a glorious view of the Pentlands, Arthur's Seat, the Firth of Forth, North Berwick Law, and the Bass. Early in the 14th century, under King Robert the Bruce, the lands of Falside were forfeited by Alexander de Such, who had married a daughter of Roger de Quincy, Earl of Winchester; and they came then to the great Seton family, one of whose younger branches styled themselves Setons of Falside. A spot near the castle was the scene of a disastrous skirmish in 1547, on the day before the battle of Pinkie.—*Ord. Sur.*, sh. 32, 1857.

Fanna, a hill near the meeting-point of Hobkirk, Southdean, and Castleton parishes, Roxburghshire, forming part of the watershed between Teviotdale and Liddesdale, 8¼ miles SE of Hawick. It has an altitude of 1687 feet above sea-level.

Fannich Loch, a lake of Contin parish, towards the centre of Ross and Cromarty. Lying 822 feet above sea-level, it extends 6½ miles east-south-eastward and east-by-northward, has a varying width of 3 and 7 furlongs, and sends off a stream 6½ miles east-south-eastward to Loch Luichart. On its northern shore, 15 miles WNW of Garve station, stands the shooting-lodge of Fannich deer-forest, a mountainous region, whose loftiest summit is Sgurr Mor (3637 feet), 3¾ miles N of the loch. There are boats on the latter, but the trout are small and none too plentiful. Achanault station, on the Highland railway, is only 4 miles from the loch.—*Ord. Sur.*, sh. 92, 1881.

Fannyside, a shallow loch and a moor in Cumbernauld parish, Dumbartonshire. The loch, 2¾ miles SE of Cumbernauld town, lies 550 feet above sea-level, and measures 6¾ furlongs in length by from 1 to 2 furlongs in breadth. It contains a few pike and perch, but no trout. The moor lies around the loch, chiefly on the N side, comprises upwards of 3 square miles, and has traces of a Roman road, running southward from Castleary.—*Ord. Sur.*, sh. 31, 1867.

Far. See FARR.

Faray. See PHARAY.

Fare, Hill of, a broad-based granitic eminence on the mutual border of Aberdeen and Kincardine shires, belonging to the parishes of Echt, Midmar, Kincardine O'Neil, and Banchory-Ternan, and culminating, at 1545 feet above sea-level, $4\frac{3}{4}$ miles NNW of Banchory village. It forms part of the northern scree of the basin of the Dec, is partly dissevered by the marshy hollow of CORRICHE, contains some valuable peat moss, and affords excellent pasture for numerous flocks of sheep, producing mutton of very superior flavour, whilst its fine luxuriant heaths abound in moor-fowl, hares, and other game.—*Ord. Sur.*, sh. 76, 1874.

Farg, a stream of Perthshire, rising among the Ochils at an altitude of 800 feet above sea-level, and $5\frac{1}{2}$ miles N by W of Milnathort. Thence it winds $10\frac{1}{2}$ miles south-south-westward, east-by-southward, and north-north-eastward, bounding or traversing the parishes of Forgan-denny, Arngask, Dron, and Abernethy, till, at a point $1\frac{3}{4}$ mile NW of Abernethy town, it falls into the river Earn. Containing plenty of burn trout, it mostly traverses a deep, narrow, romantic, wooded glen, called from it Glen Farg. The North British direct route from Edinburgh to Perth runs through this glen, in which there is a station, as does also the turnpike road between the two cities. On 6 Sept. 1842 the Queen and Prince Albert drove down 'the valley of Glen Farg; the hills are very high on each side, and completely wooded down to the bottom of the valley, where a small stream runs on one side of the road—it is really lovely.'—*Ord. Sur.*, shs. 40, 48, 1867-68.

Farigaig, a troutful stream of Daviot and Dunlichity parish, and of Dores parish, NE Inverness-shire. It is formed, 840 feet above sea-level, and 1 mile NE of Dumaglass Lodge, by the confluence of two head-streams, the longer of which, the Allt Uisg an t-Sithein, rises at an altitude of 2500 feet, and runs $6\frac{3}{4}$ miles north-by-westward. From their point of confluence the Farigaig winds $8\frac{1}{2}$ miles north-north-westward and south-westward, till it falls into Loch Ness at Inverfarigaig, $2\frac{1}{2}$ miles NNE of Foyers. It receives a rivulet running $\frac{3}{4}$ mile west-by-southward from Loch RUTHVEN ($2\frac{1}{2}$ miles \times $4\frac{1}{2}$ furl.; 700 feet), and it traverses a deep and finely wooded defile.—*Ord. Sur.*, sh. 73, 1878.

Farkin or Firkin, a small bay and a small headland in Arrochar parish, Dumbartonshire, on the W side of Loch Lomond, $1\frac{3}{4}$ mile NNW of Rowardennan Ferry.

Farland Head. See KILBRIDE, West.

Farne, a mansion in Rutherglen parish, Lauarkshire, on the left bank of the Clyde, 1 mile N by E of Rutherglen. Consisting of a very ancient castellated structure in a state of high preservation, with harmonious modern additions, it forms one of the finest specimens of the old baronial mansion-house in the W of Scotland. The estate, which mainly consists of extensive fertile haugh half engirt by a bold sweep of the Clyde, belonged to successively the royal Stuarts, the Crawfords, the Stewarts of Minto, the Flemings, and the Hamiltons, and now is held by Allan Farie, Esq.—*Ord. Sur.*, sh. 31, 1867.

Farnell, a parish of E Forfarshire, whose church stands on the southern side of the pretty Den of Farnell, 4 miles SSE of the post-town Brechin, and 1 furlong NW of Farnell Road station on the Scottish North-Eastern section of the Caledonian, this being $3\frac{1}{4}$ miles SW of Bridge of Dun Junction.

The parish is bounded W, NW, and N by Brechin, NE by Dun, E by Maryton, SE by Craig, S by Kinnell, and SW by Gnathrie. Its length from E by N to W by S, varies between $2\frac{1}{2}$ and $4\frac{1}{2}$ miles; its utmost breadth is $3\frac{1}{2}$ miles; and its area is now 5705 $\frac{3}{4}$ acres, of which 52 $\frac{1}{2}$ are water. A detached portion of the parish (containing 49 $\frac{3}{4}$ acres), that formed a portion of Moutreatmont Moor and adjoined the parish of Kinnell, was transferred by the Boundary Commissioners in 1891 to the latter parish. The river South Esk winds $1\frac{1}{2}$ mile east-by-southward along the northern border, and just beyond the NE corner of the parish receives Pow Burn, which,

coming in from Kinnell, and running north-eastward across the south-eastern interior, then along the Maryton boundary, itself is joined by two or three rivulets from the W. In the NE the surface declines to 20 feet above sea-level, thence rising gently to 200 feet at the western border, and more rapidly southward to 446 on Ross Muir. 'The whole of Farnell belongs to the Earl of Southesk, whose estate is one of the most compact and desirable in the county. The soil is mostly a clayey loam, in parts rather stiff, and in others of a moorish texture. The subsoil is chiefly clay, mixed with gravel, and resting on the Old Red sandstone. On the higher parts whinstone shoots up here and there to within a few inches of the surface,' etc. (*Trans. Highl. and Ag. Soc.*, 1881, pp. 87-89). Farnell Castle, $\frac{1}{2}$ mile WNW of the church, was visited by Edward I. of England on 7 July 1296, and first is heard of as a grange or residence of the Bishops of Brechin. Now turned into an almshouse for old women, it is a plain three-story pile, with a turnpike staircase on its southern front; the oldest or SW part was built about the beginning of the 16th century, perhaps by Bishop Meldrum. Bishop Campbell resigned the lands of Farnell in 1566 to his patron and chief, the fifth Earl of Argyll, who within two years bestowed them on his kinswoman, Catharine, Countess of Crawford. Her grand-daughter married Sir David Carnegie of Kinnaird, afterwards Earl of Southesk; and with his descendants, save for the period of their forfeiture (1716-64), Farnell has since continued. Kinnaird Castle is noticed separately. Since 1787 comprising great part of the ancient parish of Cuikestone or Kinnaird, Farnell is in the presbytery of Brechin and synod of Angus and Mearns; the living is worth £310. The church, on a rising ground, surrounded by fine old trees, is a neat Gothic edifice of 1806, containing 330 sittings; an ancient stone monument found here, with carving on it of the Fall of Adam, is figured in Dr John Stuart's *Sculptured Stones of Scotland* (1867). Farnell public school, with accommodation for 130 children, has an average attendance of about 110, and a grant of nearly £115. Valuation (1892) £5435, 2s., plus £1515 for railway. Pop. (1881) 613, (1891) 627.—*Ord. Sur.*, sh. 57, 1868. See chap. ii. of Andrew Jervise's *Memorials of Angus and Mearns* (Edinb. 1861).

Farnell Road. See FARNELL.

Farnua. See KIRK HILL, Inverness-shire.

Farout Head or Fair Aird, a promontory in Durness parish, N Sutherland, projecting $2\frac{1}{2}$ miles north-north-westward, between Balnakiel or Baile na Cille Bay on the W and the entrance to Loch Eriboll on the E, till it terminates in a point $8\frac{1}{2}$ miles ESE of Cape Wrath. Its sides rise in rocky cliffs to a height of 329 feet above sea-level, and present a sublime appearance; its summit commands a magnificent view from Cape Wrath to Whiten Head.—*Ord. Sur.*, sh. 114, 1880.

Farr, a hamlet and a parish on the N coast of Sutherland. The hamlet, Bettyhill of Farr, lies at the head of Farr Bay, 9 furlongs E of the mouth of the river Naver, 30 miles W by S of Thurso, and 27 NNE of Altnaharrow; at it are an inn, a police station, and a post office under Thurso, with money order, savings bank, and telegraph departments. A mail coach runs daily to and from Thurso.

The parish, containing also the hamlets of ALTNAHARROW, ARMADALE, and Strathly, is bounded N by the North Sea, E by Reay (in Caithness-shire) and Kildonan, SE by Clyne, S by Rogart, SW by Lairg, and W by Durness and Tongue. Its utmost length, from NNE to SSW, is 32 miles; its breadth, from E to W, varies between $8\frac{1}{2}$ and 22 miles; and its area is now 267,039 acres, the Sutherlandshire portion of the parish of Reay, containing no less than 71,842 acres, having been transferred by the Boundary Commissioners in 1891 to the parish of Farr, and Reay parish restricted to its Caithness-shire portion. The coast-line is indented from E to W by Bighouse, Strathly, Armadale, Kirtomy, and Farr Bays, and projects a prominent headland in Strathly Point (287 feet), lesser ones in Kirtomy Point (467), Farr Point (369), and Creag

Ruadh (331). It is 'composed,' says Mr Archibald Young, 'either of bold rocks from 20 to 200 feet high, against which the waves of the North Sea break with fearful violence, or of shallow sands, on which heavy surges are generally rolling. Yet, on all this extent of coast, there is nothing worthy of the name of a harbour; though at Kirtomy and Armadale, and in one or two creeks, boats may land in moderate weather. It is impossible to doubt that this want of harbour accommodation for fishing boats very much hinders the prosecution of the fishings of cod, ling, haddocks, and herrings which abound off the coast, and that the establishment of a commodious and secure landing-place for boats would be a great boon to the district,' etc. (pp. 45-50, *Sutherland*, 1880). Inland, the surface is everywhere hilly or mountainous, from N to S attaining 553 feet at Naver Rock, 1728 at Beinn's Tomaine, 3154 at conical *BEN CLIBRICK, 2669 at the *NE shoulder of BEN HEE, and 2278 at *Creag nah-Iolaire, where asterisks mark those summits that culminate on the confines of the parish. Loch NAVER ($6\frac{1}{2}$ miles \times $4\frac{1}{4}$ furl.; 247 feet) lies towards the SW, and, whilst receiving the river of Mudale and other streams at its head, discharges from its foot the river Naver, winding $18\frac{1}{2}$ miles north-by-eastward to the sea. The Naver, $\frac{1}{2}$ mile below its efflux from Loch Naver, is joined by the Malert, which itself flows 7 miles north-north-eastward out of Loch Coir'an Fhearna ($3\frac{1}{2}$ miles \times $3\frac{1}{2}$ furl.; 570 feet), a lake that lies towards the southern extremity of Farr, and at its head communicates by a narrow channel with Loch a' Bealach ($1\frac{1}{2}$ \times $\frac{1}{4}$ mile). The eastern shore of Loch LOYAL likewise belongs to Farr, and its effluent, the Borgia, above and below Borgia Bridge traces $2\frac{1}{2}$ miles of the boundary with Tongue; on the eastern border lies Loch nan Cuinne (3×1 mile; 392 feet), the westernmost of the BADEN chain of lakes, so that the drainage partly belongs to the basin of Helmsdale river. Out of Loch Strathy ($7 \times 2\frac{3}{4}$ furl.; 646 feet) Strathy Water runs $14\frac{1}{2}$ miles north-by-eastward to Strathy Bay, and drains, with its affluents, what is now the northern central district of Farr, whose chief other stream is Armadale Water, running 5 miles north-by-eastward to Armadale Bay, whilst of lakes beyond number one other only needs notice—Loch Meadie ($1\frac{1}{2} \times \frac{1}{4}$ mile; 405 feet). Through the added or Reay portion of the parish the river HALLADALE runs $22\frac{1}{2}$ miles NNW and N to the Bay of Bighouse. It rises close to the southern boundary at an altitude of 1200 feet above sea-level, and is fed by Dyke Water (running $8\frac{1}{2}$ miles NNE) and a number of lesser streams. The rocks on the seaboard are mainly Devonian, and granite and gneiss prevail throughout the interior. A whitish sandstone, capable of fine dressing by the chisel, has been quarried at Strathy; and near it is limestone of first-rate manorial quality. Along Strathnaver, the finest strath perhaps in all the county, there is a considerable extent of good haugh land, a mixture of sand, gravel, and moss; and along the Strathy, too, there are here and there arable patches of fertile thin sandy soil. Sheep-farming, however, is the staple industry, the largest of several large sheep farms being Langdale, Rhifail, Clebrig, Armadale, and Bighouse. The scanty vestiges of BORVE tower have been separately noticed; 'duns,' barrows, standing stones, and remains of several circular towers in Strath-Halladale make up the remaining antiquities. The Duke of Sutherland is sole proprietor of the older part of the parish, and almost so of the added portion. In the presbytery of Tongue and synod of Sutherland and Caithness, this parish is divided ecclesiastically into Farr and Strathy, the former a living worth £215. Its church, built in 1774, was restored in 1882; in the churchyard is a very early stone obelisk, sculptured with crosses and other emblems. In the added portion there is Strath-Halladale Free Church mission chapel. Six public schools—Armadale, Dalhalvaig, Farr, Kirtomy, Melvich, and Strathy—with total accommodation for 523 children, has an average attendance of about 315, and grants amounting to nearly £415. Pop. (1871)

2019, (1881) 2750, (1891) 2750, of whom 1081 were in Farr *g. s.* parish, and 776 in that of Strathy.—*Ord. Sur.*, shs. 114, 115, 108, 109, 1878-80.

Farr, an estate, with a mansion, in Daviot and Dunlichity parish, Inverness-shire, on the Nairn's left bank, $6\frac{1}{2}$ miles SSW of Daviot church.

Farragon Hill, a mountain in Dull parish, Perthshire, 4 miles NNW of Aberfeldy. It rises to an altitude of 2559 feet above sea-level.

Farraline, Loch, a lake of Dores parish, NE Inverness-shire, 3 miles E by S of Inverfarigaig. Lying 650 feet above sea-level, it has an utmost length and width of 9 and $2\frac{1}{2}$ furlongs, abounds in trout, and sends off a stream $3\frac{1}{2}$ miles north-north-eastward to the Farigaig. A number of muskets, discovered here in 1841, in the course of drainage operations, were supposed to have been thrown into the loch during the troubles of the '45.—*Ord. Sur.*, sh. 73, 1878.

Farrer, a small river of Ross and Inverness shires. It rises among mountains of SW Ross-shire, 9 miles E of the head of Loch Carron, and thence winds $27\frac{1}{2}$ miles east-north-eastward and east-by-southward, expanding at various points into Lochs MONAR, MIULIE, and Bunacharan ($1\frac{1}{2}$ mile \times $2\frac{1}{2}$ furl.; 367 feet), till, 5 furlongs S by W of ERCHLESS Castle, it unites with the GLASS to form the river BEAUTY. Its glen, Strathfarrer, is a series of circular meadowy spaces, two of them occupied by Lochs Miulie and Bunacharan, and all flanked by bold, rocky, intricate, mountainous acclivities, partly fringed with wood; and it displays a rich variety of picturesque scenery. Its waters are well stocked with trout and grilse. A carriage road, striking into Strathfarrer from Strathglass, crosses the river, near its mouth, by a strong bridge, and ascends the glen to the foot of Loch Monar; and a footpath goes thence, through a wild mountain region, and partly through a mountain pass, to Lochs Carron and Alsh. Masses of graphite or black lead lie embedded among gneiss rocks in the mouth of Strathfarrer.—*Ord. Sur.*, shs. 82, 83, 1882-81.

Farthingbank, a hamlet in Durisdeer parish, NW Dumfriesshire, near the right bank of the Nith, $5\frac{1}{2}$ miles NNW of Thornhill.

Fascadale, a place on the northern coast of Ardnarnachan parish, Argyllshire, 20 miles NNW of Salen, in Mull.

Faseny Water, a Lammermuir rivulet of Garvald and Whittingham parishes, S Haddingtonshire, rising close to the Berwickshire border at an altitude of 1550 feet above sea-level, and winding $7\frac{1}{2}$ miles east-north-eastward till it falls into the Whitadder at Mill Knowe, 3 miles WNW of Cranshaws church. It possesses great interest to geologists as exposing a fine section of the Lammermuir rocks, and is well stocked with trout.—*Ord. Sur.*, sh. 33, 1863.

Faskally, an estate, with a mansion, in Logierait parish, Perthshire, at the confluence of the rivers Tummel and Garry, 2 miles NW of Pitlochry. Nature and art have combined to render it 'a very pretty place,' as Queen Victoria styles it in her *Journal*, 11 Sept. 1844.

Faskine, an estate and a village in Old Monkland parish, Lanarkshire, on the right bank of North Calder Water, $\frac{3}{4}$ mile W of Calderbank. The estate contains coal and ironstone mines, worked from an earlier period than any others in the great Clydesdale mineral field. Pop. of Faskine and Palacearaig (including Hillhead), (1881) 475, (1891) 486.

Faslane, a small bay in Row parish, Dumbartonshire, on the E side of Gare Loch, $1\frac{1}{2}$ mile SSE of Gareloch-head. An ancient castle of the Earls of Lennox here is now represented by only a grassy mound; but a pre-Reformation chapel, dedicated to St Michael, has left some vestiges.

Fasnacloich, a mansion in Lismore and Appin parish, Argyllshire, in Glenceran, $2\frac{1}{2}$ miles NE of the head of Loch Creran, and $13\frac{1}{2}$ N of Tainmuilt station. It stands on the NW shore of Loch Baile Mhic Chailein or Fasnacloich ($4\frac{1}{2} \times 1\frac{1}{2}$ furl.), a beautiful expansion of the river Creran, containing plenty of sea-trout and salmon; and

there is a post office of Fasnacloch under Ledaig.—*Ord. Sur.*, sh. 53, 1877.

Fasnakyle, a mansion in Kilmorack parish, Invernesshire, at the confluence of the Affric and Amhuinn Deabhaidh to form the river Glass, $2\frac{3}{4}$ miles SW of Glenaffric Hotel.

Fasque, a mansion in Fettercairn parish, SW Kincardineshire, between Cricchie Burn and the Burn of Garrol, $1\frac{1}{2}$ mile N by W of Fettercairn village. Built in 1808-9 at a cost of £30,000 by Sir Thomas Ramsay of Balmain, seventh Bart. since 1625, it is a large palatial looking edifice, commanding a wide prospect, and surrounded by beautiful and extensive policies, with a lake (3×1 furl.) and many trees of great dimensions and rare grandeur. The Fasque estate, held by the Ramsays from the 15th century, was purchased about 1828 by the Liverpool merchant, Mr John Gladstones (1764-1851), who in 1846 was created a baronet as Sir John Gladstone of Fasque and Balfour, and whose fourth son is the Right Hon. William Ewart Gladstone (b. 1809). The estate is now held by Sir John Robert Gladstone, third Bart. (b. 1852; suc. 1889). 'The Fasque property,' writes Mr James Macdonald in *Trans. Highl. and Ag. Soc.*, 1881, pp. 114, 115, 'now extends from Fettercairn village to within less than 10 miles of Banchory on Deeside, a distance of over 16 miles. By far the greater portion lies on the Gramplan range, and consists of black heath-clad hills intersected by numerous valleys or small straths in which there is a good deal of green pasture. On the immense estate of Glendye, purchased by Sir Thomas Gladstone (father of the present baronet) about 1865 from the Earl of Southesk, there are several small farms in the lower parts towards Banchory, while on the other estates there is a large extent of excellent arable land, mostly good rich loam, strong and deep in some parts and thin in others, but all over sound and fertile. The property contains a great deal of valuable wood, not a little of which has been planted by Sir Thomas and his father.

. . . A very commodious farm-steading was erected on the home farm (670 acres) in 1872.' The Episcopal church of Fasque, St Andrew's, was built in 1847 by Sir John, the first baronet, who made his place of sepulture within its walls.—*Ord. Sur.*, sh. 66, 1871. See BIGGAR.

Fassifern, an estate, with a mansion, in the Invernesshire section of Kilmallie parish, on the northern shore of Upper Loch Eil, $7\frac{1}{2}$ miles WNW of Fort William. It was the seat of a branch of the Camerons, to which belonged Col. John Cameron (1771-1815), who fell at Quatre Bras, and over whose grave in Kilmallie churchyard at Corpach is a lofty obelisk, with an inscription by Sir Walter Scott. A stone quarry on the estate supplied material for constructing the Caledonian Canal and building a quay at Fort William.

Fast, an ancient military strength in Bedrule parish, Roxburghshire, 1 furlong NW of the ruins of Bedrule Castle. It seems to have been an outwork of the castle, and is now represented by merely a mound.

Fast Castle, a ruinous sea-fortress in Coldingham parish, Berwickshire, perched on a jutting cliff that beetles 70 feet above the German Ocean, $4\frac{1}{2}$ miles NW of Coldingham village, 3 WNW of St Abb's Head, and 7 E of Cockburnspath station. Backed by high grassy hill slopes, it presents one shattered side of a low square keep, with a fragment more shattered still overhanging the sea-verge of its rock, which, measuring 120 by 60 feet, is accessible only by a path a few feet wide, and formerly was quite dis severed from the mainland by a chasm of 24 feet in width that was crossed by a draw-bridge. In 1410, it was held by Thomas Holden and an English garrison, who had long harassed the country by their pillaging excursions, when Patrick, second son of the Earl of Dunbar, with a hundred followers, took the castle and captured the governor. According to Holinshed, Fast Castle again fell into the hands of the English, but was recovered by the following stratagem in 1548—'The captain of Fast Castle had commanded the husbandmen adjoining to bring thither, at a certain day, great store of victuals. The young men thereabouts

having that occasion, assembled thither at the day appointed, who, taking their burdens from their horses, and laying them on their shoulders, were allowed to pass the bridge, which joined two high rocks, into the castle; where, laying down that which they brought, they suddenly, by a sign given, set upon the keepers of the gate, slew them, and before the other Englishmen could be assembled, possessed the other places, weapons, and artillery of the castle, and then receiving the rest of the company into the same, through the same great and open gate, they wholly kept and enjoyed the castle for their countrymen.' Sir Nicolas Throgmorton, in 1567, characterises it as a place 'fitter to lodge prisoners than folks at liberty;' and, in 1570, when only tenanted by ten Scots, Drury, Marshal of Berwick, after taking Home Castle, was sent to invest Fast Castle with 2000 men, it being the next principal place that belonged to the Homes. Passing from them by marriage about 1580, 'Fast Castle,' says Sir Walter Scott, in his *Provincial Antiquities*, 'became the appropriate stronghold of one of the darkest characters of that age, the celebrated Logan of Restalrig. There is a contract existing in the charter-chest of Lord Napier betwixt Logan and a very opposite character, the celebrated inventor of logarithms, the terms of which are extremely singular. The paper is dated July 1594, and sets forth—"Forasmuch as there were old reports and appearances that a sum of money was hid within John Logan's house of Fast Castle, John Napier should do his utmost diligence to search and seek out, and by all craft and ingine to find out the same, and, by the grace of God, shall either find out the same, or make it sure that no such thing has been there." For his reward he was to have the extra third of what was found, and to be safely guarded by Logan back to Edinburgh. And in case he should find nothing, after all trial and diligence taken, he refers the satisfaction of his travel and pains to the discretion of Logan.' Logan was next engaged in the mysterious Gowrie Conspiracy (1600). It was proposed to force the King into a boat from the bottom of the garden of Gowrie House, and thence conduct him by sea to that ruffian's castle, there to await the disposal of Elizabeth or of the conspirators. Logan's connection with this affair was not known till nine years after his death, when the correspondence betwixt him and the Earl of Gowrie was discovered in the possession of Sprott, a notary public, who had stolen them from one John Bour, to whom they were intrusted. Sprott was executed, and Logan was condemned for high treason, even after his death, his bones having been brought into court for that purpose. Almost greater, however, than any historic interest connected with Fast Castle is the fictitious one with which Scott invested it in his *Bride of Lammermoor*, by choosing it for prototype of 'Wolf's Crag,' the solitary and naked tower of Edgar Ravenswood.—*Ord. Sur.*, sh. 34, 1864. See PERTH, DIRLETON, BALDOON, and chap. xxxvi. of James F. Hunnewell's *Lands of Scott* (Edinh. 1871).

Fatlips Castle, an ancient fortalice in Minto parish, Roxburghshire, on the crown of Minto Crags, near the left bank of the Teviot, $\frac{3}{4}$ mile ENE of Minto House. Supposed to have been a stronghold of the Turnbulls, it is figured in Grose's *Antiquities of Scotland*, and appears there as still comprising two stories; but it is now a small fragmentary ruin.

Fatlips Castle, an ancient fortalice in Symington parish, Lanarkshire, on a spur projecting from the SE skirt of Tinto Hill, 2 miles NNE of Wiston. It is now represented by only a piece of wall about 6 feet high and fully 6 feet thick.

Fauldhouse, a *q. s.* parish and a mining village in Whitburn parish, SW Linlithgowshire, with a station on the Cleland and-Midealder line of the Caledonian, $6\frac{1}{2}$ miles WSW of West Calder. Lying in a bleak region of collieries, ironstone mines, and paraffin works, it stands within a mile of CROFTHEAD and Greenburn, villages similar to itself, and practically forms one with them. It has a post office, with money order, savings' bank, and telegraph departments, a branch of the

National Bank, and an endowed school. The Established church, built at a cost of £1700, was raised to *quoad sacra* status in 1872; St John's Roman Catholic church (1873; 550 sittings) is a good early English edifice. Pop. of Fauldhouse and Crofthead (1871) 3151, (1881) 3000, (1891) 2762; of *quoad sacra* parish (1881) 3933, (1891) 3469.—*Ord. Sur.*, sh. 31, 1867.

Faungrass, a burn in Longformacus and Greenlaw parishes, Berwickshire, rising on Evelaw, among the Lammermuirs, on the SE border of Longformacus, and running 5 miles southward and south-eastward to Blackadder Water, at a point $1\frac{3}{4}$ mile NW of Greenlaw town.—*Ord. Sur.*, sh. 25, 1865.

Fawside. See FALSIDE.

Fea, an eminence in Cross parish, Sanday Island, Orkney. It rises gently from the E, terminates in a maritime precipice on the W, is pierced in the base of the precipice by curious caverns, and commands from its summit very fine views.

Feachan, Feochan, or Feuchan, a sea-loch on the mutual boundary of Kilniver and Kilbride parishes, Argyllshire. Penetrating the land $4\frac{3}{4}$ miles, first south-eastward, next east-north-eastward, it is 1 mile wide at the entrance, and from 1 furlong to $\frac{1}{2}$ mile higher up; has a depth of 15 fathoms; is flanked by high rocky promontories; receives at its head the Nell, and at Kilniver the Euchar; and at the time of spring tides has the appearance of a wide rapid river.

Fearn, a village and a coast parish of NE Ross and Cromarty. The village, Hill of Fearn, stands 50 feet above sea-level, $1\frac{1}{4}$ mile E by S of Fearn station, on the Dingwall and Tain section of the Highland railway, this being $3\frac{1}{2}$ miles SE of Tain, and 22 NE of Dingwall; at it is a post office, with money order, savings bank, and railway telegraph departments.

The parish, containing also the fishing villages of Balintore and Hilton of Cadboll, $2\frac{1}{2}$ miles SE and $2\frac{3}{4}$ ESE of Hill of Fearn, is bounded NW by Tain, NE by Tarbat, SE by the Moray Firth, S by Nigg, and SW and W by Logie-Easter. Its utmost length, from E to W, is 5 miles; its utmost breadth, from N to S, is $4\frac{1}{2}$ miles; and its area is 8253 $\frac{3}{4}$ acres, of which 123 $\frac{1}{2}$ are foreshore and 289 $\frac{1}{4}$ water. The coast-line, $3\frac{1}{4}$ miles long, rises steeply near Geanies in precipitous cliffs to a height of 200 feet above the sea, but southward is low and sandy; inland the surface is much of it nearly flat, and nowhere exceeds 150 feet. Loch EYE ($1\frac{1}{4}$ mile \times $4\frac{1}{2}$ furl.; 51 feet), on the Tain border, is almost the only lake that has not been drained; and there are no streams of any consequence. The predominant rock is Old Red sandstone; but the small vein of limestone that runs from the North Sutor to Tarbat Ness, crops out at Geanies. The soil is largely a very rich fertile loam, and agriculture is carried to high perfection, steam-ploughing having been introduced in 1875, whilst from a little knoll near Cadboll no fewer than eighteen steam-stalks may be counted. Cattle-feeding, too, is carried on, especially on the farms of the Cadboll property, belonging to Macleod of Invergordon. Geanies estate underwent great improvement from 1840 under the care of that eminent agriculturist, Kenneth Murray, Esq. (1826-76), who succeeded his brother in 1867, and who extended the arable area from 2016 to 4000 acres, the new land being partly reclaimed from bog and moss, partly from moor, and partly from lochs. Geanies House, 4 miles ENE of Hill of Fearn, commands a glorious view over the Moray Firth, has extensive and well-kept gardens and pleasure grounds, and is now the seat of his son, William Hugh Eric Murray, Esq. (b. 1858). Other mansions are Allan House and Rhynie House, standing respectively $1\frac{1}{4}$ mile SW and $1\frac{1}{2}$ NE of the village of Hill of Fearn. The Premonstratensian Abbey of Fearn was founded in 1221 by Ferchard Macintaggart, Earl of Ross, in EDDERTON parish, but in 1338 was transferred to Fearn to escape the ferocity of neighbouring clans. Of its twenty-one abbots the fifteenth was the protomartyr of the Scottish Reformation, Patrick Hamilton (1503-28), who was burned at ST ANDREWS. He was but a youth when he obtained the abbacy

in 1524, and it is doubtful whether he ever took orders; anyhow his connection with Fearn was little more than titular. The abbey church comprised a nave, a choir (99 \times 25 $\frac{1}{2}$ feet), a Lady chapel, and two transeptal chapels—First Pointed mainly in style, with later insertions and additions, the whole having been completed by Abbot James Cairncross in 1545. It served as the parish church from the Dissolution till 1742, when on a Sunday of October the ponderous stone roof fell in; as graphically told in Hugh Miller's *Scenes and Legends*, under the title of 'The Washing of the Mermaid.' Forty-four persons were killed, and more must have lost their lives, but that the stalwart preacher, Robertson of Gairloch, set his shoulder against the door, and so propped up the side wall. The pile lay in ruins till 1772, when it was patched up to serve anew as parish church; and though lamentably mutilated, with its E end cut off for the Balnagowan mausoleum, it still retains many features of interest—three sedilia, two piscinas, a credence, three monumental effigies, and some good lancet and traceried windows. Another antiquity, noticed separately, is Lochslin Castle. Vestiges of Cadboll Castle are still to be seen, and also an ancient sculptured pillar. Fearn is in the presbytery of Tain and synod of Ross; the living is worth £364. The parish or abbey church stands 5 furlongs SE of the village, and a Free church $1\frac{1}{4}$ mile E by N. Three public schools, all of recent erection, at Balmuchy, Hill of Fearn, and Hilton, with respective accommodation for 80, 131, and 202 children, have an average attendance of about 80, 80, and 165, and grants of nearly £90, £95, and £215. Pop. (1801) 1528, (1831) 1695, (1861) 2083, (1871) 2135, (1881) 2135, (1891) 1900.—*Ord. Sur.*, sh. 94, 1878.

Fearn, two districts and a rivulet in Edderton parish, Ross-shire. The districts are Easter Fearn and Wester Fearn; and the rivulet intersects or divides them northward to the inner Dornoch Firth. See EDDERTON.

Fearn or Fern, a parish in the central part of Forfarshire, whose church is beautifully situated on an isolated hillock in the midst of a romantic den, 9 miles N by E of Forfar, and 7 W of Brechin, under which there is a post office of Fearn. It is bounded N by Lethnot, E by Menmuir and Careston, S and W by Tannadice. Its utmost length, from NNW to SSE, is 5 $\frac{1}{2}$ miles; its greatest breadth, from E to W, is $3\frac{1}{4}$ miles; and its area is 8811 $\frac{1}{2}$ acres, of which 20 are water. Clear-flowing NORAN Water winds 4 $\frac{1}{2}$ miles east south-eastward along all the southern border, on its way to the South Esk; and CRUICK Water, an affluent of the North Esk, rising in the northern extremity of the parish, runs 5 $\frac{1}{2}$ miles south-south-eastward, then $1\frac{1}{2}$ mile eastward, through the interior, and passes off into Menmuir. In the SE the surface sinks to less than 300 feet above sea-level, thence rising to 421 feet near Wellford, 605 near Noranside, 970 at Deuchar Hill, 1003 at Greens of Shandford, 1009 at *Mansworn Rig, 1682 at *Benderochie, 1377 at Craig of Trusta, and 1900 at the *Hill of Garbet, where asterisks mark those summits that culminate on the borders of the parish. The rocks include clay slate and Old Red sandstone, and the slate has been quarried; whilst the soil is fertile throughout the Strathmore district and in parts of the central valley. On a rocky and precipitous reach of Noran Water stand the haunted ruins of the castle of Wayne, or ancient manor-house of Fearn, originally a three-story pile of friable red sandstone, with a round south-western tower. Falsely ascribed to Cardinal Bethune, and greatly enlarged towards the close of the 17th century by Robert, third Earl of Southesk, this, or a predecessor, was the seat of the Montealtos or Mowats, who held the estate of Fearn from the reign of William the Lyon (1166-1214) till some time prior to 1450. In that year it was in the possession of the Earls of Crawford, from whom it passed about 1594 to the Carnegies of SOUTHESK. By them it was sold in 1766 to Mr John Mill, whose son built Noranside. The small estate of Denchars has its interest, as having been owned by Deuchars of that ilk from the 10th century till 1818. The 'Kel-

pie's Footmark' is still to be seen in a sandstone rock near the castle ofayne, but little or nothing remains of a 'Druidical circle,' of a circular prehistoric dwelling, or of three tumuli on the hills, one of which yielded a number of ancient urns. NORANSIDE is the chief mansion. Fearn is in the presbytery of Brechin and synod of Angus and Mearns; the living is worth £162. The church, originally founded by Bishop Colman about 666, and dedicated to St Aidan, was rebuilt in 1806, and contains 238 sittings; whilst a public school, with accommodation for 68 children, has an average attendance of about 50, and a grant of nearly £50. Valuation (1857) £4155, (1882) £5194, 10s. 9d., (1892) £3975, 1s. Pop. (1801) 448, (1831) 450, (1861) 439, (1871) 348, (1881) 316, (1891) 277.—*Ord. Sur.*, sh. 57, 1868. See chap. v. of Andrew Jervise's *Land of the Lindsays* (Edinb. 1853).

Fechley or **Fichlie**, a place in Towie parish, W Aberdeenshire, $1\frac{1}{2}$ mile ENE of Towie church. The Peel of Fechley, a mound here, partly natural and partly artificial, measures upwards of 60 feet in height, and from 127 to 200 feet in summit breadth; is surrounded by a fosse, from 12 to 41 feet in width, and from 8 to 35 feet in depth; and is crowned with vitrified remains of a tower.

Fechtin Ford, a place on the border of Muiravonside parish, Stirlingshire, on Avon Water, 1 mile above Manuel House. It is traditionally said to have been the scene of a feud between the shepherds of the confronting banks.

Federate, a ruined castle in New Deer parish, Aberdeenshire, 2 miles N of New Deer village. Surrounded partly by a fosse, partly by a morass, it was approachable only by a causeway and a drawbridge; formed an incomplete square, with great thickness of wall, and with the corners rounded off; and, dating from some period unknown to either record or tradition, is said to have been one of the last strongholds of the Jacobite forces after the battle of Killiecrankie.

Fender, a burn in Blair Athole parish, Perthshire, rising on the SW slope of Bengo at an altitude of 3050 feet above sea-level, and running $6\frac{1}{2}$ miles south-westward along an alpine glen, till, after a total descent of 2400 feet, it falls into the river Tilt, 1 mile N by E of Blair Athole village. It makes three picturesque falls, the first about a mile from its mouth, the third at its influx to the Tilt; approaches the last fall through a narrow recess; and in a boiling and eddying series of five descents, to the aggregate depth of 30 feet, thunders into the Tilt at a point where the latter flows in dark glood between two vertical cliffs of limestone rocks.—*Ord. Sur.*, sh. 55, 1869.

Fendoch, an ancient camp in Monzie parish, Perthshire, on the high ground at the lower end of the Sma' Glen or deep narrow defile of Glensalmond, 9 furlongs W by N of BUCHANTY, and 3 miles NE of Monzie church. Overlooked by a native strength upon DUNMORE, it is traditionally called the Roman Camp, and may be truly regarded as the work of the Roman legions under Agricola or one of his successors. It measures 180 paces in length by 80 in breadth, and is alleged to have had accommodation for 12,000 men; it was defended on two sides by water, on the other side by morass and precipice; and it continued till about the beginning of the present century to retain considerable portions of both rampart and fosse, but has subsequently been greatly levelled by tillage and road-making operations. A moor immediately E of it was, till a recent period, dotted with cairns over an extent of several acres,—several of the cairns measuring from 10 to 14 paces in diameter; and it is thought, from the number and size of these cairns, and from human remains having been found beneath them, to have been the scene of some great ancient battle.—*Ord. Sur.*, sh. 47, 1869.

Fenella, several localities in the SW and S of Kincardineshire. Strathfenella Hill, in the western vicinity of Fordoun village, is a crescent-shaped isolated ridge 3 miles long, and 1358 feet high. Fenella Strath, to

the N of the hill, is a pleasant vale traversed by Luther Water. Fenella Castle, 1 mile W of Fettercairn village, is the vestige of an ancient structure, situated on an eminence, enclosed by an inner and an outer wall, and surrounded on three sides by a morass. Fenella Den, in St Cyrus parish, is traversed by a burn running to the North Esk river, making a cascade of 65 feet in fall, and crossed by two handsome bridges, one of them 120 feet high. All these take their name from Fenella, daughter of the Mormaer of Angus, and wife of the Mormaer of the Mearns, who in 994 is said to have slain King Kenneth III. at Fenella Castle, to revenge the death of her son. 'Not only Hector Boece,' says Dr Hill Burton, 'but the older and graver chroniclers, Fordun and Wyntoun, bring out this affair in a highly theatrical shape. We are to suppose that the victim has been lured in among the avenger's toils. He was led into a tower of the castle "quhilk was theiket with copper, and hewn with mani subtle mouldry of flowers and imageries, the work so curious that it exceeded all the stuff thereof." So says the translator of Boece. In the midst of the tower stood a brazen statue of the king himself, holding in his hand a golden apple studded with gems. "That image," said the Lady Fenella, "is set up in honour of thee, to show the world how much I honour my king. The precious apple is intended for a gift for the king, who will honour his poor subject by taking it from the hand of the image." The touching of the apple set agoing certain machinery which discharged a hurdle of arrows into the king's body. The trick is copied from some of those attributed to the Vehmich tribunals. The picturesque district between Fettercairn and the sea is alive with traditions of Fenella and her witcheries' (*Hist. Scotl.*, i. 339, ed. 1876).

Fenton Barns. See DIRLETON.

Fenwick, a village and a parish in Cunninghame district, Ayrshire. The village stands 430 feet above sea-level on the right bank of Fenwick Water, $4\frac{1}{2}$ miles NNE of Kilmarnock, under which it has a post office with money order and savings' bank departments. Pop. (1871) 469, (1881) 366, (1891) 327.

The parish is bounded NE by Eaglesham in Renfrewshire, E and SE by Loudoun, S by Kilmarnock, SW by Kilmarnock and Dregghon, W by Stewarton, and NW by Stewarton and by Mearns in Renfrewshire. Its utmost length, from E to W, is 8 miles; its breadth, from N to S, varies between 2 and $5\frac{1}{2}$ miles; and its area is 18,161 $\frac{1}{2}$ acres, of which 57 are water. Crawfordland and Fenwick Waters, gathering their head-streams from Eaglesham, run west-south-westward and south-westward across the parish, and, passing into Kilmarnock, there unite to form Kilmarnock Water; whilst Loch GOIN or Blackwoodhill Dam (7×3 furl.) just touches the north-eastern boundary. The surface sinks, below Dalmusternock, in the furthest S, to 340 feet above sea-level, and rises thence east-north-eastward to 714 feet at Airtnock, 836 at Greenhill, 807 at Crins Hills, and 932 near the eastern border; north-north-eastward or northward to 785 at Dicks Law, 914 near Loch Goin, 556 at East Pokelly, 754 at Greelaw, and 876 at Drumboy Hill. Thus, though, as seen from the hills of Craigie in Kyle, Fenwick looks all a plain, it really attains no inconsiderable altitude, and from many a point commands far-reaching views of Kyle and the Firth of Clyde, away to the heights of Carrick and the Arran and Argyllshire mountains. Originally, for the most part, fen or bog, the land, in spite of a general scarcity of trees, now wears a verdant, cultivated aspect, being chiefly distributed into meadow and natural pasture. Fossiliferous limestone is plentiful; in the W are a free-stone quarry, and a thin seam of coal; and seams of ironstone, with coal and limestone, are on the Rowallan estate. This estate was held from the 13th till the beginning of the 18th century by the Mures of Rowallan, of whom a curious *Historie*, published at Glasgow in 1825, was written by Sir William Mure (1594-1657), 'a man'—we have it on his *ipse dixit*—'that was pious and learned, had an excellent vein in poesie, and much

dehlyted in building and planting.' His son and grandson both were zealous Covenanters; and during the former's time the celebrated William Guthrie, who was minister of Fenwick from 1644, is said to have held conventicles in the house of Rowallan after his ejection (1664). Fitly enough, the sufferings of the martyrs and confessors of the Covenant were chronicled in the *Scots Worthies* of a native of Fenwick, John Howie of Lochgoin (1735-91). He was descended from a Waldensian refugee who had settled here so long ago as 1178; and Lochgoin, in the days of his great-grandfather, had twelve times been pillaged by the persecutor. In his own day that ancient and sequestered dwelling became a kind of covenanting reliquary, wherein were enshrined the Bible and sword of Paton, the standard of Fenwick parish, the drum that was sounded at Drumclog, and so forth. To revert to Rowallan, it passed, through an heiress, to the fifth Earl of LOUDOUN. Disjoined from Kilmarnock in 1642, Fenwick is in the presbytery of Irvine and synod of Glasgow and Ayr; the living is worth £185. The parish church, at the village, was built in 1643, and contains 850 sittings. It retains its original black oak pulpit, with a half-hour sand-glass; and the joughs still hang from the S gable. In 1889-90 it underwent extensive renovation, which cost about £600. There are also Free and U.P. churches; and two public schools, Fenwick and Hairshaw, with respective accommodation for 131 and 65 children. have an average attendance of about 85 and 35, and grants amounting to nearly £95 and £40. Pop. (1881) 1152, (1891) 1007.—*Ord. Sur.*, sh. 22, 1865.

Ferdun, a streamlet of Fording parish, Kincardineshire. Formed by two burns that descend from the frontier Grampians, and unite at Clattering-Briggs, it runs 5½ miles south-south-eastward, past the W end of Strathfenella Hill, to a confluence with Luther Water, 1¼ mile W of Laurencekirk.—*Ord. Sur.*, sh. 66, 1871.

Ferneze or **Ferneze**, a range of hills on the mutual border of Abbey and Neilston parishes, Renfrewshire, culminating, 1½ mile W by S of Barrhead, at 725 feet above sea-level.

Fergus, a lake (3 × 1 furl.) on the mutual border of Ayr and Coynton parishes, Ayrshire, 4½ miles SE of Ayr town. It has an islet in its centre, contains pike, and sends off a rivulet 1 mile southward through Loch Snipe to Loch Martnaham.—*Ord. Sur.*, sh. 14, 1863.

Fergushill, a *quoad sacra* parish and a collier village in Kilwinning parish, Ayrshire. The *q. s.* parish comprises parts of Irvine, Kilwinning, and Stewarton parishes. Founded about the year 1835, the village, 1¾ mile E of Kilwinning town, has a public school for the children of the colliers and the parish church. Pop. of village (1891) 412; of *q. s.* parish (1891) 2032.

Ferguslie, a western suburb of Paisley, in Renfrewshire. It lies within Paisley parliamentary burgh, and was built on an estate which belonged for some time to the monks of Paisley, but was afterwards divided. An old castle stood on the estate, and has left some remains; and a modern mansion, called Ferguslie House, is now on it. See PAISLEY.

Ferguston, a farm, near Bearsden station, in New Kilpatrick parish, Dumbartonshire, retaining, on the face of a hill, a reach of the fosse of Antoninus' Wall.

Ferintosh, a former detached section of Nairnshire, at the head of Cromarty Firth, surrounded by Ross and Cromarty, and lying about 2¼ miles SE of Dingwall. It had for some years previous to 1891 been treated as part of Ross and Cromarty for most county purposes, and in that year the Boundary Commissioners completed the transference by disjoining the detached section from Nairnshire and annexing it to the united county of Ross and Cromarty. It forms the central district of the united parish of Urquhart and Logie-West; comprises part of Mullbuie, and part of the strath at that ridge's south-western base; is bounded along the W for 2½ miles, by the river Conan and the upper part of Cromarty Firth; and comprises 6385 acres of land, partly moor, partly pasture, but chiefly arable. The barony of Ferintosh was purchased about 1670 by

the Forbeses of CULLODEN, who here have a mansion, Rye-field Lodge; and a privilege of distilling whisky on it, from grain of its own growth free of duty, was granted in 1689 to Duncan Forbes, father of President Forbes, but was withdrawn in 1785, being compensated by a grant of £20,000. Great improvements have been carried out since 1847 by reclaiming, draining, &c.

Ferintosh, **Newton** of, a hamlet in Ferintosh district, county of Ross and Cromarty, 1¾ mile ESE of Conan-Bridge. It has a post office under Dingwall.

Fern, Forfarshire. See FEARN.

Fernell. See FARNELL.

Ferneze. FERENEZE.

Ferne, an estate in Monimail parish, Fife, 4 miles W of Cupar and 3¼ NNE of Ladybank. It appears to have been part of the original demesne of the Earls of Fife; and it retains a baronial fortalice of great antiquity, once a place of considerable strength, surrounded by marshy ground.

Ferne, **Easter**, a hamlet in Monimail parish, Fife, 2¾ miles W of Cupar.

Ferniegair, a village, with a station in Hamilton parish, Lanarkshire, on the Lesmahagow railway, at the junction of the eastward line from Hamilton, 2¼ miles NNW of Larkhall. It has a post office under Hamilton. Pop. (1871) 395, (1881) 551, (1891) 906.

Ferneherst Castle, a border stronghold in Jedburgh parish, Roxburghshire, on the right bank of Jed Water, 2½ miles S by E of Jedburgh town. It was the ancient seat of the Kerrs of the Lothian line, as CESSFORD was that of the Roxburghe Kerrs—offshoots both of the same Anglo-Norman stock, but wrangling ever as to seniority. Ralph Kerr about 1350 settled in Teviotdale, and his seventh descendant is designated of Ferneherst in the parliament records of 1476. To this date, then, or somewhat earlier, belonged the original castle, where Sir Andrew or 'Dand' Kerr was taken prisoner by the English under Lord Dacre, after a valiant defence, 24 Sept. 1523. With the aid of D'Essé's French auxiliaries, his son, Sir John, retook the castle in 1549; and his son, Sir Thomas, on 22 Jan. 1570, the day after Moray's murder at Lillithgow, swept over the Border with fire and sword, hoping to kindle a war that might lead to Queen Mary's release. For this, in the following April, the Earl of Sussex demolished Ferneherst, which was not rebuilt till 1598; its interior was restored in 1889-92. Sir Thomas's fourth son was Robert Carr, Earl of Somerset, Sir Thomas Overbury's murderer; whilst the eldest son, Andrew, was also ennobled as Lord Jedburgh in 1622. The third Lord Jedburgh, Ralph Kerr's twelfth descendant, died without issue in the year 1692, when the title devolved on his second cousin once removed, Robert, fourth Earl of Lothian, who in 1701 was created Marquis of Lothian. (See NEWBATTLE.) Not the least interesting of Ferneherst's many memories is the visit paid to it on 21 Sept. 1803 by Scott and Wordsworth, whose sister writes: 'Walked up to Ferneherst, an old hall in a secluded situation, now inhabited by farmers; the neighbouring ground had the wildness of a forest, being irregularly scattered over with fine old trees. The wind was tossing their branches, and sunshine dancing among the leaves, and I happened to exclaim, "What a life there is in trees!" on which Mr Scott observed that the words reminded him of a young lady who had been born and educated on an island of the Orcaes, and came to spend a summer at Kelso and in the neighbourhood of Edinburgh. She used to say that in the new world into which she was come nothing had disappointed her so much as trees and woods; she complained that they were lifeless, silent, and, compared with the grandeur of the ever-changing ocean, even insipid. At first I was surprised, but the next moment I felt that the impression was natural. . . . The valley of the Jed is very solitary immediately under Ferneherst; we walked down to the river, wading almost up to the knees in fern, which in many parts overspread the forest ground. It made me think of our walks at Allfoxden, and of our own park—though at Ferneherst is no park at

present—and the slim fawns that we used to startle from their couching-places among the fern at the top of the hill. We were accompanied on our walk by a young man from the Braes of Yarrow, William Laidlaw, an acquaintance of Mr Scott's, who, having been much delighted with some of William's poems which he had chanced to see in a newspaper, had wished to be introduced to him; he lived in the most retired part of the dale of Yarrow, where he had a farm; he was fond of reading and well informed, but at first meeting as shy as any of our Grasmere lads, and not less rustic in his appearance.' See pp. 265-267 of Dorothy Wordsworth's *Tour in Scotland* (ed. by Priuc. Shairp, 1874).—*Ord. Sur.*, sh. 17, 1864.

Fernielea. See FERNILEE.

Fernielee, a hamlet on the S border of Galashiels parish, Selkirkshire, on the left bank of the river Tweed, near Yair Bridge, 5½ miles NNW of Selkirk. Fernielee mansion here, now a decayed edifice, was the seat of the Rutherfords, and in one of its turrets the beautiful Miss Alison Rutherford (1712-94), who in 1731 became the wife of Patrick Cockburn, advocate, wrote her version ('I've seen the smiling,' etc.) of the *Flowers of the Forest*.

Fern-Tower, a mansion in Crieff parish, Perthshire, on the SE slope of the pine-clad Knock (911 feet), 2 miles NNE of Crieff town. In 1810 Sir David Baird (1757-1829), the hero of Seringapatam, married Miss Aun Campbell Prestou of Valleyfield and Fern-Tower, and it was at Fern-Tower that he spent his last years and died. His widow survived him till 1847; and now the estate belongs to and is one of the Scottish seats of Lord Abercromby. See TOM-A-CHASTEL, AIRTHREY, and TULLIBODY.

Ferrintosh. See FERINTOSH.

Ferry. See QUEENSFERRY.

Ferrybank, an estate, with a mansion, in Cupar parish, Fife, 1 mile SW of the town.

Ferryden, a fishing village in Craig parish, Forfarshire, on the right bank of the South Esk river, 1 mile above its mouth, directly opposite MONTROSE, but 1½ mile therefrom by road. Till the river was bridged it was the ferry-station on the road from Aberdeen, by way of Montrose, to the S of Scotland. It conducts a fishery so extensive as to employ about 300 men in boats, to send off loads of fish to the markets of Montrose, Brechin, Forfar, Dundee, Perth, and other towns, and to supply immense quantities to fish-curers in Montrose for the markets of the South. It owns boats and other fishing appliances to the extent of about £28,000, and its people are hardy and industrious. It contains a post office under Montrose, the Free church of Craig, and two public schools, which, with accommodation for 254 and 258 children, have an average attendance of about 160 and 155, and grants of nearly £165 and £135. Pop. (1881) 1520, (1891) 1482.—*Ord. Sur.*, sh. 57, 1868. See And. Douglas, *History of Ferryden* (Montrose, 1857).

Ferry, East and West. See BROUGHTY FERRY.

Ferryhill. See ABERDEEN.

Ferry Hill, a peninsula in Inverkeithing parish, Fife, bearing on its point the village of North Queensferry. It is connected with the mainland by an isthmus 4½ furlongs broad, and rises to an altitude of 200 feet above sea-level.

Ferry, Little, a ferry (1 furlong broad) on the mutual boundary of Dornoch and Golspie parishes, Sutherland, across the neck of water between Loch Fleet and the sea, 4¼ miles N by E of Dornoch town. An action was fought on the N side of it, in 1746, between the Jacobites and the militia.

Ferry, Meikle, a ferry (5½ furlongs broad) on the mutual boundary of Ross-shire and Sutherland, across a contracted part of the Dornoch Firth, 4 miles NW of Tain, and 4¾ WSW of Dornoch. It formerly was used as the chief thoroughfare between the eastern parts of the two counties; but it suffers much obstruction from winds and currents; and the road round by Bonar Bridge, though exceedingly circuitous, has long been generally preferred.

Ferry-Port-on-Craig, a town and a parish in the extreme NE of Fife. Stauding on the southern side of the entrance of the Firth of Tay, the town by water is 7 furlongs S of Broughty Ferry and 3½ miles E by S of Dundee, whilst by rail it is 11¼ miles NNE of Cupar and 56½ NNE of Edinburgh by the Forth Bridge. It sprang into being and took its name from an ancient ferry (said to be the oldest in Scotland), whose port was dominated by a rock or craig; and it acquired a great and sudden increase of prosperity, from the purchase in Sept. 1842 of the right of ferry by the Edinburgh and Notheru (now the North British) Company. Thenceforth it came to be occasionally known as Tayport, a name that has now almost superseded its older parochial designation, and under which it became a burgh in 1887. By rail it is in communication with Edinburgh, Glasgow, and the South, while by the Tay Bridge (see DUNDEE) it has direct railway connection with Dundee and the North. Though all carriage traffic has now ceased at the ferry, steamers still cross nearly every hour to Broughty Ferry. The burgh is governed by a provost, two bailies, and six commissioners. Tayport, besides, is a favourite bathing resort, with many new villas and cottages commanding delightful views of the opposite coast; and employment is furnished to its townspeople by a flax and jute spinning mill, 2 linen factories, 2 sawmills, engine works, a bobbin factory, as also by the valuable salmon fisheries and mussel dredging of the Tay. It has a post office, with money order, savings bank, and telegraph departments, a branch of the North of Scotland Bank, insurance agencies, a gaswork, 2 hotels, a public school, the Scots-craig golf club, a Young Men's Christian Association, a cemetery, a masouic hall, and a temperance hall, which last, erected in 1877, measures 60 by 34 feet, and has accommodation for 500. The parish church (1825; repaired 1882) is a neat edifice, containing 850 sittings; and other places of worship are Free and U.P. churches and a Baptist chapel. The railway works include a large artificial basin; an outer mole or breastwork, constructed with great skill and at vast expense, to shelter this basin from E and N wiuds; an inner breastwork or landing-slip, 600 feet long and 30 high; and a quay-wall, 200 feet long, at the eastern end of the basin. The harbour thus comprises a sheltered floating basin, fully 600 feet long and 200 in average breadth, with a depth of 28 feet of water at full spring tides, and of not less than 8 feet at the lowest tides. It is usually full of vessels taking in cargoes of coal, etc., there being no coal mines further north of this in Scotland. Pop. (1831) 1538, (1861) 1773, (1871) 2498, (1881) 2630, (1891) 2871.

The parish, constituted in 1606, and supposed to have previously formed part of Leuchars, is bounded N by the Firth of Tay, E by the German Ocean, SE by Leuchars, and SW and W by Forgan. Its utmost length, from WNW to ESE, is 4¾ miles; its utmost breadth is 1½ mile; and its area is 4952¼ acres, of which 2177½ are foreshore. The coast to the E of the town is flat and for the most part sandy, including nearly all this large expanse of foreshore, but westward of the town it is rocky and irregular, and inland the surface rises rapidly to 129 feet at Spearshill, and to 300 at Waterloo Towers and Scotsraig Law. The rocks are chiefly eruptive, and include considerable quantities of beautiful spar. In part of the parish the soil, though light and variable, is kindly and fertile; and upon Scotsraig Mains there are a few fields of very superior land, the entire farm extending over 500 acres. Two lighthouses, to E and W of the village, serve, with those on the Forfar shore of the firth, to guide the navigation of the Tay. An old building, now represented by scanty vestiges, and usually called the Castle, seems to have been erected subsequent to the invention of gunpowder, and was probably designed to act, in concert with Broughty Castle, for defence of the entrance of the firth. SCOTSCRAIG is the chief mansion. This parish is in the presbytery of St Andrews and synod of Fife; the living is worth £220. The public school, with accommoda-

tion for 576 children, has an average attendance of about 515, and a grant of over £585. Valuation (1866) £5972, 12s. 9d., (1882) £10,168, 14s. 8d., (1892) £10,343, 19s. 2d. Pop. (1801) 920, (1841) 1714, (1861) 2013, (1871) 2674, (1881) 2818, (1891) 3008.—*Ord. Sur.*, sh. 49, 1865.

Ferrytown-of-Cree. See CREETOWN.

Feshie, a rapid stream of Alvie parish, SE Inverness-shire, rising among the Grampian Mountains at an altitude of 2750 feet, and $5\frac{1}{2}$ miles W by N of the meeting-point of Aberdeenshire, Inverness-shire, and Perthshire. Thence it winds 23 miles northward, mostly along the Kingussie border, till, nearly opposite Kincaig station, it falls into the river Spey, after a total descent of fully 2000 feet. Quite early in its course the Feshie approaches within $\frac{1}{4}$ mile of Geldie Burn, a rise of barely 50 feet here parting the basins of the Spey and the Dee. It was by this route, up Glen Geldie and down Glen Feshie, that the Queen and the Prince Consort rode from Deeside to Strathspey on 4th Sept. 1860. (See ALVIE.) In the great flood of Aug. 1829 the Feshie did enormous damage, and rose at the romantic old bridge of Inver-eshie to a height of 25 feet above its ordinary level.—*Ord. Sur.*, shs. 64, 74, 1874-77. See chap. xii. of Sir Thomas Dick Lauder's *Moray Floods* (3d ed. 1873).

Feshie-Bridge, a hamlet in Kingussie parish, Inverness-shire, on the left bank of the Feshie, $1\frac{1}{2}$ mile above its mouth, and $2\frac{1}{4}$ miles SE of Kincaig station. It has a post office under Kingussie.

Fetheray. See FIDRA.

Fetlar, an island and a civil parish in the N of Shetland. The island lies $2\frac{1}{2}$ miles E of Yell, 4 S of Unst, and 33 N by E of Lerwick, under which it has a post office. Its greatest length, from NW to SE, is $6\frac{1}{2}$ miles; its greatest breadth is $2\frac{3}{4}$ miles; and its area is 10,133 acres. The outline is rendered so irregular by numerous headlands and sea inlets as to give a large extent of sea coast. The principal bays or sea inlets are Tresta, with a sandy beach; Aith, with a pebbly beach; Funzie, used as a ling fishing station; Gruting, with a pebbly beach; Urie, with a rude pier; Sand, of small extent and sandy; and Mowick, used for the transporting of peats from an inland hill by sea to the other bays of the island. The interior comprises several hills and vales, but nowhere exceeds 521 feet above sea-level. The rocks comprise gneiss, syenite, granite, quartzite, syenitic greenstone, mica slate, chlorite slate, clay slate, serpentine, and diallage rock. Bog iron ore, of a very rich quality, occurs in peat moss; chromate of iron is found in the serpentine rock; and some veins of copper ore have been found. Less than a tenth of the island is under cultivation, as much which was formerly arable is now under pasture. Save in the manse garden not a tree or shrub is anywhere to be seen. Brough Lodge is the principal residence. Pop. (1831) 843, (1861) 543, (1871) 517, (1881) 431, (1891) 363.

The parish until 1891 included also the northern part of Yell island, bore the name of Fetlar and North Yell, and had a total area of 26,659 acres. In that year the Boundary Commissioners curtailed the name of the parish to Fetlar, and transferred the Yell portion to the parish of Mid and South Yell under the name of Yell only. The parish of Fetlar now consists of the following islands:—Fetlar (10,133 acres), Urie Lingey (59 acres), and Daay (23 acres). Sir Arthur Nicolson is chief proprietor. In the presbytery of Burray and synod of Shetland, Fetlar forms one *quoad sacra* parish and North Yell another, the former a living worth £199. Its church, rebuilt in 1790, contains 267 sittings. There is also a Free church of Fetlar; and a public school, with accommodation for 65 children, has an average attendance of about 40, and a grant of nearly £50. Pop. (1891) 363.

Fetterangus, a village of Old Deer parish (which was placed by the Boundary Commissioners in 1891 wholly in Aberdeenshire), 5 furlongs from the right bank of N Ugie Water, and 2 miles NNW of Mintlaw, under which it has a post office. Here is a public school. Pop. (1871) 362, (1881) 364, (1891) 358.

Fettercairn (10th century, *Fotherkern*; Wyntoun's Cronykil, *Fethyrkerne*; Hollinshed, *Fethircarne*—meaning the cairn of the jutting eminences or of the green acclivity), a village and a parish of SW Kincardineshire. A burgh of barony, the village stands, 220 feet above sea-level, at the confluence of Crichie and Balnakettle Burns, $10\frac{3}{4}$ miles NNE of Brechin, and $4\frac{3}{4}$ WNW of Laurencekirk, under which there is a post office, with money order, savings bank, insurance, and telegraph departments. It has, besides, a branch of the North of Scotland Bank, a national security savings bank, insurance agencies, 2 hotels, a gaswork, a public hall with library, reading, and billiard rooms, quoit, cricket, golf, and curling clubs, a farmers' club, and a distillery. At the W end of the bridge a graceful triumphal arch has been erected to commemorate the royal visit of 20 Sept. 1861, a visit thus described in the Queen's Journal: 'At a quarter-past seven o'clock we reached the small quiet town, or rather village, of Fettercairn, for it was very small—not a creature stirring, and we got out at the quiet little inn, "Ramsay Arms," quite unobserved, and went at once upstairs. There was a very nice drawing-room, and, next to it, a dining-room, both very clean and tidy, then to the left our bed-room, which was excessively small, but also very clean and neat, and much better than at Grantown. Alice had a nice room, the same size as ours; then came a mere morsel of one (with a "press-bed"), in which Albert dressed; and then came Lady Churchill's bedroom just beyond. Louis [Prince Louis of Hesse] and General Grey had rooms in an hotel, called "The Temperance Hotel," opposite. We dined at eight, a very nice, clean, good dinner. Grant and Brown waited. They were rather nervous, but General Grey and Lady Churchill carved, and they had only to change the plates, which Brown soon got into the way of doing. A little girl of the house came in to help—but Grant turned her round to prevent her looking at us! The landlord and landlady knew who we were, but *no one else* except the coachman, and they kept the secret admirably. The evening being bright and moonlight and very still, we all went out, and walked through the whole village, where not a creature moved; through the principal little square, in the middle of which was a sort of pillar or Towu Cross on steps, and Louis read by the light of the moon a proclamation for the collections of charities which was stuck on it. We walked on along a lane a short way, hearing nothing whatever—not a leaf moving—but the distant barking of a dog! Suddenly we heard a drum and fife! We were greatly alarmed, fearing we had been recognised; but Louis and General Grey, who went back, saw nothing whatever. Still, as we walked slowly back, we heard the noise from time to time, and when we reached the inn door we stopped, and saw six men march up with fifes and a drum (not a creature taking any notice of them), go down the street, and back again. Grant and Brown were out, but had no idea what it could be. Albert asked the little maid, and the answer was, "It's just a band," and that it walked about in this way twice a week. How odd! It went on playing some time after we got home. We sat till half-past ten working, and then retired to rest.—(Saturday, Sept. 21.) Got to sleep after two or three o'clock. The morning was dull and close, and misty with a little rain; hardly any one stirring; but a few people at their work. A traveller had arrived at night, and wanted to come up into the dining-room, which is the "commercial travellers' room;" and they had difficulty in telling him he could *not* stop there. He joined Grant and Brown at their tea, and on his asking "What's the matter here?" Grant answered, "It's a wedding party from Aberdeen." At "The Temperance Hotel" they were very anxious to know whom they had got. All, except General Grey, breakfasted a little before nine. Brown acted as my servant, brushing my skirt and boots, and taking any message, and Grant as Albert's valet. At a quarter to ten we started the same way as before, except that we were in the carriage which

Lady Churchill and the General had yesterday. It was unfortunately misty, we could see no distance. The people had just discovered who we were, and a few cheered us as we went along.' The cross referred to here is an octagonal shaft, rising from a circular stepped basement, and was originally erected at the extinct town of Kincardine by John, first Earl of Middleton. It bears his arms and initials, with the Scottish lion and the date 1670. In the centre of the village there is also a drinking fountain, a memorial to Sir John H. Stuart Forbes (1804-66). Pop. of village (1841) 280, (1861) 339, (1871) 391, (1881) 398, (1891) 358.

The parish is bounded NW by Strachan, NE and E by Fordoun, SE by Marykirk, S by Stracathro, in Forfarshire, and W by Edzell, also in Forfarshire. Its utmost length, from N to S, is 8 $\frac{3}{4}$ miles; its breadth, from E to W, varies between 4 $\frac{1}{2}$ furlongs and 4 $\frac{3}{4}$ miles. The area of Fettercairn was slightly increased in 1891 by the Boundary Commissioners, who transferred to it the Kincardineshire part of the parish of Edzell. The North Esk flows 4 $\frac{1}{2}$ miles south-south-eastward along the Edzell boundary, and for 1 $\frac{1}{2}$ furlongs touches the parish again at its south-eastern corner; 1 mile N of Edzell village it is spanned by the romantic Bridge of Gannochy, which, built in 1732 and widened in 1796, is founded on two stupendous rocks, and rises to great height above the river's bed. Black Burn, the Esk's immediate tributary, drains the level and low-lying southern interior, which forms a portion of the Howe of Mearns. The Burn of Garrol, rising on the southern acclivity of Hound Hillock, runs 5 $\frac{1}{2}$ miles south-eastward and south-by-eastward, mainly along the north-eastern and eastern border, till, at a point 5 furlongs SE of the village, it is joined by the confluent Crichio and Balnakettle Burns; as Dourie Burn the united stream winds 1 $\frac{1}{2}$ mile onward along the eastern border, then passes off into Marykirk on its way to Luther Water, and so ultimately to the North Esk. In the furthest SE the surface declines to 115 feet above sea-level, thence rising northwards gently to 194 feet near Arnhall and 200 at Bogmuir, more rapidly to 428 near West Woodtown, 1035 near Garrol Wood, and 1698 at heath-clad Hound Hillock, close to the northernmost point of the parish. The rocks are partly eruptive, partly Devonian, including granite, quartzite, mica slate, greenstone, red sandstone, limestone, etc., which, in a section along the North Esk, are seen in every kind of irregular stratification. Very fine porcelain clay occurs on the banks of Balnakettle Burn; and at Balnakettle bog iron ore has been found of the latest formation. Rather more than half of the entire area is in tillage, nearly one-seventh is under wood, and the rest is either pastoral or waste. The soil is deep, strong, rich loam around the village, but in other parts of the parish not a little of the land consists of moderate black loam or stiffish clay. Great improvements have been carried out within the last forty years on the lands of Fasque, The Burn, Balmain, and Fettercairn, the first two of which estates have been noticed separately. That of Fettercairn or Middleton was held for upwards of five centuries by the Middleton family, of whom General Middleton (1610-73) was at the Restoration created Earl of Middleton and Lord Clermont and Fettercairn. Forfeited by his son, the second and last earl, the estate was purchased in 1777 by Sir John Wishart Belsches or Stuart, Bart., and through his daughter's marriage (1797) passed to Sir William Forbes, Bart. of PRISLIGO. His grand-daughter, Harriet Williamina (d. 1869), in 1858 married Chas. Trefusis, twentieth Baron Clinton of Maxtock since 1299 (b. 1834; suc. 1866); and their son, Charles John Robert (b. 1863), now holds the estates in Kincardineshire. Fettercairn House, a little N by E of the village, was built in 1666 by the first Earl of Middleton, and enlarged in 1829 by Sir John Stuart-Forbes, and again by Lord Clinton in 1877. Balbegno and Fenella Castle, the chief antiquities, have separate articles. Fettercairn is in the presbytery of Fordoun and synod of Angus and Mearns; the living is worth £307. The parish church, at the village, was

built in 1804, and contains 800 sittings. There are also a Free church and Fasque Episcopal church, St Andrew's; and three schools—Fettercairn public, Inch public, and Fasque—with respective accommodation for 198, 120, and 78 children, have an average attendance of 132, 39, and 56, and grants of £124, 9s., £33, 4s., and £52, 7s. 6d. Valuation (1856) £9412, (1882) £12,057, 6s., (1892) £10,859, 11s. 11d. Pop. (1801) 1794, (1841) 1791, (1861) 1700, (1871) 1539, (1881) 1503, (1891) 1421.—*Ord. Sur.*, shs. 66, 57, 1871-68.

Fetteresso (10th century *Fodresach*), a hamlet and a coast parish of Kincardineshire. The hamlet lies on the left bank of Carron Water, 1 $\frac{1}{4}$ mile W of Stonehaven. The parish contains also all the New Town or northern part of STONEHAVEN, the post office village of MUCHALLS, the fishing-villages of Cowie, Stranathro, and Skateraw, and the stations of Stonehaven, Muchalls, and Newton-hill. It is bounded N by Maryculter and Banchory-Devenick, E by the German Ocean, S by Dunnottar, W by Glenberrie, and NW by Durris. Its utmost length, from E to W, is 7 $\frac{1}{2}$ miles; its breadth, from N to S, varies between 5 and 7 $\frac{1}{4}$ miles; and its area is 27,529 acres, of which 223 $\frac{1}{2}$ are foreshore and 61 water. CARRON Water runs 6 $\frac{1}{2}$ miles eastward, mainly along the southern boundary to the sea at Stoucheaven, uniting just above its mouth with COWIE Water, which here winds 7 $\frac{1}{2}$ miles east-south-eastward, for the first $\frac{1}{2}$ mile along the Glenberrie border, and then through the southern interior. The central and northern districts are drained by Muchalls Burn and the Burn of Elsieck, running to the sea, and by Crynoch Burn, flowing east-north-eastward and northward, past Netherley House, till it passes into Maryculter on its way to the river Dee. The coast is bold and rocky, niched and vandyked by a score of small bays and headlands (the chief of these Garron Point), and rising rapidly to 100 feet and more above sea-level. Inland the surface is irregular, though nowhere mountainous, the chief elevations to the S of Cowie Water being Cheyne Hill (552 feet), the Hill of Swanley (700), Elf Hill (715), and the Hill of Trusta (1051), whilst to the N of it rise Kempstone Hill (432), White Hill (495), Curlethney Hill (806), Meikle Carewe Hill (872), the Hill of Pitspunkie (666), Craignell (886), and, on the northern border, Berry Too (558). The landscape presents a striking contrast of picturesqueness and the most utter bleakness. The vales of the Carron and the Cowie, and spots on the seaboard, are very lovely; but other districts are comparatively tame. Gneiss and Old Red sandstone are the prevailing rocks; but granite, porphyry, and chloride slate occur as well. Near Stonehaven the soil is mostly sharp friable loam, but in the more inland and higher parts it is an inferior clayey or moorish loam. Various improvements in the way of draining and building have been carried out since 1855, and considerable reclamations effected within this century. The latest, about 1860, was the dividing of the commonly of Cowie, 2000 acres or thereby, among the proprietors interested, who then let it out in small lots to tenants on improving leases. About 2000 acres are under wood. Ancient Caledonian remains were formerly more numerous than now; but Raedyke Camp, Caledonian, not Roman, one of the many sites of the Battle of the GRAMPAINS, is still almost entire, occupying a space of 71 acres on a hill 4 miles NW of Stonehaven. Another camp, more evidently Roman, was formerly on ground contiguous to Stonehaven. Numerous tumuli, most of them small, but some of them very large, are on Kempstone Hill, 2 $\frac{1}{4}$ miles N of the town, and are supposed to be sepulchral monuments, raised on a battlefield. Remains of a small old castle and of St Mary's pre-Reformation chapel, are on the coast at COWIE. Malcolm's Mount, 1 mile W of Stonehaven, takes its name from Malcolm I., King of Alban (942-54), who, according to the Ulster Annals, was slain here by the men of Mearns, though later chronicles remove his death further N—to Ulurn in Moray. Fetteresso Castle, near the left bank of Cowie Water, 2 miles W by S of Stonehaven, stands in a park adorned with

many venerable trees. A seat once of the great Earls Marischal, it was partly rebuilt and greatly extended about the year 1830 by the late Colonel Duff, whose kinsman, Robert William Duff, Esq. (born in 1873; suc. 1895), is present proprietor. (See *CULTER*, Aberdeenshire, and *GLASSAUGH*. Other mansions, elsewhere noticed, are Cowie, Elsick, Muchalls, Netherley, Newtonhill, Rickarton, and Ury. In the presbytery of Fordoun and synod of Angus and Mearns, this parish is ecclesiastically divided into Fetteresso proper, Cookney (formed 1859), and Rickarton (1872), the first a living worth £320. The plain but very ancient church, St Caran's, at Fetteresso hamlet, is still represented by its walls or shell, and by its large kirkyard, one of Stonehaven's three cemeteries. The present parish church, near the town, was built in 1810, and, as enlarged and greatly improved (1876-78) at a cost of £3000, contains 1300 sittings, and possesses a fine organ. Other places of worship are noticed under Stonehaven, Cookney, Rickarton, and Muchalls. The eight schools of Cairnhill, Cookney, Muchalls, Netherley, Rickarton, Stonehaven, Twel, and Newtownhill—the last Episcopalian, the others all public—with total accommodation for 1202 children, have an average attendance of 805, and grants amounting to £837, 11s. 6d. Valuation (1856) £21,147, (1883) £32,730, 12s., (1892) £22,549, 9s. 6d., plus £3816 for railway. Pop. (1801) 3687, (1831) 5109, (1861) 5527, (1871) 5665, (1881) 5541, (1891) 5527, of whom 3743 were in Fetteresso registration district, and 3362 in Fetteresso ecclesiastical parish.—*Ord. Sur.*, shs. 67, 66, 1871.

Fetternear, an ancient chapelry and an estate in the S of Chapel of Garioch parish, Aberdeenshire, near the left bank of the Don, 1 mile NNW of Kemnay station. The chapelry was constituted in 1109; its original church was built in the same year; and ruins of that church or of a successor of it, together with its cemetery, still exist. The estate belonged to the bishops of Aberdeen, and, conveyed by the last Roman Catholic bishop to the Leslies of Balquhain, is held now by Charles Stephen Leslie, Esq. (b. 1832; suc. 1870). Its mansion was originally a summer lodging of the bishops when surveying the cautions and priests of the chapelry church, and is now a handsome and commodious modern residence. A Roman Catholic church, Our Lady of the Garioch and St John's, was founded near the site of the ancient church in 1859, but not opened till 1869, and consists of nave, chancel, porch, and belfry, all built of granite, with sandstone dressings.—*Ord. Sur.*, sh. 76, 1874.

Feuchan. See *FEACHAN*.

Feugh, Water of, a stream of Aberdeen and Kincardine shires, rising, at an altitude of 1800 feet above sea-level, in the S of Birse parish, close to the Forfarshire border, 2 miles WNW of Mount Battock. Thence it winds 19½ miles east-north-eastward either through or along the borders of Birse, Strachan, and Banchory-Ternan, till it falls into the Dee opposite Banchory village, after a total descent of 1640 feet. Its lowest reach is spanned by the bridge of Feugh, and includes a romantic waterfall; its principal affluents are the Aan and the Dye, both separately noticed; and it is a capital trouting stream, containing also salmon in its lower waters.—*Ord. Sur.*, sh. 66, 1871.

Fewin or **Fionn**, a loch on the mutual border of Assynt parish, SW Sutherland, and the Coigach section of Ross and Cromarty, 3½ miles SE of Lochinver. The lowermost of a chain of lakes in the basin of the river *KIRKAIG*, and lying 357 feet above sea-level, it has an utmost length and width of 2½ miles and 3 furlongs, and teems with beautiful trout, ranging between ½ lb. and 10 lbs.—*Ord. Sur.*, sh. 101, 1882.

Fiag or **Fiodhaig**, a rivulet in Lairg parish, Sutherland, issuing from Loch Fiodhaig (1½ mile × 5½ furl.; 650 feet), and running 5½ miles southward to Loch Shin (270 feet), at a point 5½ miles ESE of that lake's head. It traverses a glen called from it Glen Fiodhaig, and abounds in capital trout, with a few salmon.—*Ord. Sur.*, sh. 108, 1880.

Fiddich, a small river of Banffshire, rising in the S of Mortlach parish, on the NE slope of Corryhabbie Hill, at an altitude of 2300 feet, and 4½ miles SSE of Ben Rinn. Thence it winds 18½ miles north-north-eastward and north-westward, till, after a total descent of nearly 2000 feet, it falls into the river Spey at Craigellachie Junction. It is a capital trout and salmon stream; and its basin is partly an upland glen, partly a beautiful vale, bearing the name of Glenfiddich or Fiddichside, and is proverbially notable in its lower reaches for fertility. Dullan Water is its principal affluent; it traverses or bounds the parishes of Mortlach, Boharm, and Aberlour; and it flows by Dufftown and the ancient castles of Auchindoun and Balvenie; all three of which are noticed separately.—*Ord. Sur.*, shs. 75, 85, 1876.

Fidra or **Fetheray**, a rocky basaltic islet of Dirleton parish, Haddingtonshire, 3 furlongs from the coast, and 2½ miles WNW of North Berwick. It has ruins of a small old chapel; and there is a lighthouse, with group flashing white, showing two flashes in quick succession, with intervals of about 15 seconds between the groups, visible for 17 nautical miles.

Fife or **Fifeshire**, a maritime county on the E side of Scotland. It is bounded on the N by the Firth of Tay, on the E by the German Ocean, on the S by the Firth of Forth, and on the W by Perth, Clackmannan, and Kinross shires. Its greatest length, from Fife Ness west-south-westward to Torry, is 41½ miles; its greatest breadth in the opposite direction, from Newburgh on the Tay to Burntisland on the Firth of Forth, is 21 miles; and its area is 492 square miles or 314,952 acres, of which 12,338½ are foreshore and 1082 water. The western boundary, about 60 miles long, if one follows its ins and outs, is marked here and there, from S to N, by Comrie Burn, Loch Glow, Lochornie Burn, Benarty Hill, and the rivers Leven and Farg, but mostly is artificial. The northern coast, which has little curvature, trends mostly in an east-north-easterly direction, and measures 20½ miles in length; the eastern is deeply indented by St Andrews Bay or the estuary of the Eden, and in its southern part forms a triangular peninsula, terminating in Fife Ness, on the N of the entrance to the Firth of Forth. The coast measures in a straight line from Teuts Moor Point to Fife Ness 14½ miles, but along its curvatures 24 miles. The southern coast, 55 miles long, from Fife Ness to North Queensferry runs generally in a south-westerly direction, and from North Queensferry to the western boundary takes a west-north-westerly turn. The shore-line projects slightly at Elie Ness, Kinghorn Ness, and North Queensferry, and has considerable bays at Largo and Inverkeithing. It offers a pleasing variety of beach and shore, partly rocky and partly sandy, but generally low and gentle. The sea has, from time to time, made great encroachments on the shores of Fife, at Burntisland, Kirkealdy, Dysart, Crail, St Andrews, and other places.

Fife, for its size, has a smaller fresh-water area than has any other Scotch county, smaller indeed than have several Highland parishes. The only streams of any consequence are the Edeu, winding 29½ miles east-north-eastward to St Andrews Bay; the Leven, flowing 16½ miles eastward (the first 1¼ in Kinross-shire) out of Loch Leven to Largo Bay; and the Orr, creeping 17 miles east-by-northward to the Leven a little above Cameron Bridge. The lakes, too, all are small—Kilconquhar Loch (4 × 3 furl.), in the SE; Kinghorn Loch (1½ × 1½ furl.), Camilla Loch (2 × 1 furl.), Loch Gelly (5½ × 3½ furl.), Loch Fitty (8 × 2 furl.), and Loch Glow (6 × 3½ furl.), in the S and SW; and Lindores Loch (6½ × 3 furl.), in the NW. And the surface, though mostly undulating or hilly, is nowhere mountainous, the principal heights being Lucklaw Hill (626 feet), in the NE; Kellie Law (500) and Largo Law (965), in the SE; Burntisland Bin (632) and Dunearn Hill (671), in the S; East Lomond (1471) and West Lomond (1713), near the middle of the W border; Benarty Hill (1167), Knock Hill (1189), and Saline Hill (1178), in the SW; and Green Hill (608), Black Craig (665), Norman's Law (850), and Lumbenny Hill (889),

in the NW. So that Mr Hutchison is fully justified in saying that 'the physical aspect of Fife possesses nothing specially remarkable, and, compared with portions of the contiguous counties, may be described as rather tame. Geologically, it consists of one or two extensive open valleys and some smaller ones, with the alternating high lands, and then a gradual slope all round the coast towards the sea. Lofty mountains there are none; only hills, of which the principal are Wilkie's "ain blue Lomonds," Largo Law, and Norman's Law. The Eden and the Leven, with some tributary streams, are the only rivers in the interior; but the absence of any imposing volume of water inland is amply atoned for by the two noble estuaries of the Forth and the Tay, which, with the German Ocean, surround three-fourths of the county. Fife, as a whole, although the surface is nowhere flat, but pleasantly undulating all over, except, perhaps, in what is called the "Howe of Fife," is lacking in both the picturesque and the sublime, and it has never been regarded as a hunting-field for tourists. Its grand attractive feature, however, in the way of scenery, is the sea-coast. "He," says Defoe, "that will view the county of Fife, must go round the coast;" and Mr Billings remarks that "a ramble amongst the grey old towns which skirt the ancient Kingdom of Fife might well repay the architectural or archaeological investigator." We might add that the tourist who was daring enough to abjure Schiehallion and Loch Maree for a season, and "do" the coast of Fife instead, would be equally surprised and delighted with his vacation trip; a seaboard which is begirt with a score or more of towns and townlets, nearly as many ruined castles, several islands, and bays and creeks and picturesque projections innumerable.'

Geology.—The oldest rocks in the county belong to the volcanic series of the Lower Old Red Sandstone. The members of this series, consisting of a great succession of lavas and tuffs, can be traced from the Ochils where they are folded into a broad anticline NE by the Sidlaws to Dunnottar in Kincardineshire. The high grounds bounding the Howe of Fife on the N side are composed of these igneous materials, indeed they cover the whole area between Damhead and Tayport. They are inclined to the SSE at gentle angles, so that we have only the southern portion of the anticlinal arch represented in the county. Lithologically these ancient lavas are composed of red and purple porphyrites, which, at certain localities, are associated with extremely coarse agglomerates. In the neighbourhood of Auchtermuchty, and even to the E of that locality, the agglomerates present appearances indicating partial rearrangement by water; indeed in some places they are indistinguishable from conglomerates formed by aqueous action. When we come to describe the prolongations of these rocks in Forfarshire and Kincardineshire it will be seen that the volcanic accumulations, which, in Perthshire and Fifeshire, have hardly any intercalations of sedimentary material, are associated in the former counties with conglomerates, sandstones, and shales, till at Dunnottar they are represented by a few thin sheets of porphyrite. It is probable, therefore, that the partially waterworn agglomerates at Auchtermuchty are indications of the change of physical conditions. On the slope overlooking the Tay, near the village of Balmerino, some thin beds of sandstone and shales are intercalated with the porphyrites which have yielded remains of fishes similar to those obtained in the Forfarshire flagstones.

A long interval must have elapsed between the close of the Lower and the beginning of the Upper Old Red Sandstone periods, which is indicated by a strong unconformity between the two series. This vast interval was characterised by certain striking physical changes which may be briefly summarised. Between the Ochils and the flanks of the Grampians a great succession of sedimentary deposits, nearly 10,000 feet in thickness, rests conformably on the volcanic series, which originally extended far to the S of their present limits. Indeed they must have completely buried the volcanic accumu-

lations, though not necessarily to the extent indicated by their thickness N of the Ochils. The Grampian chain formed the northern margin of the inland sea in which these deposits were laid down, and the sediment may have decreased in thickness in proportion to the distance from the old land surface. At any rate, during the interval referred to, the volcanic rocks and overlying sedimentary deposits were folded into a great anticlinal arch, the latter were removed by denudation from the top of the anticline, and the volcanic series was exposed to the action of atmospheric agencies. Further, the great igneous plateau, during its elevation above the sea-level, must have been carved into hills and valleys ere the deposition of the Upper Old Red Sandstone.

The members of the latter series are traceable from Loch Leven through the Howe of Fife by Cupar to the sea coast. Along this tract they rest unconformably on the volcanic rocks just described, and they pass conformably below the Cementstone series of the Carboniferous system. They consist of honeycombed red and yellow sandstones which become conglomeratic towards the local base, the pebbles being derived from the underlying rocks. On the W side of the Lomonds they dip to the E, while in the neighbourhood of Strathmiglo, where their thickness must be about 1000 feet, they are inclined to the SSE. This series has become famous for the well-preserved fishes obtained in the yellow sandstones of Dura Den, comprising *Phaneropleuron Andersoni*, *Pterichthys hydrophilus*, *Glyptolaemus Kinnairdi*, *Glyptopomus minor*, *Holoptychius Andersoni*. The last form seems to have been fossilised in shoals. *Holoptychius nobilissimus* and *Pterichthys major* are found in the underlying red sandstones.

The Upper Old Red Sandstone is succeeded by the various divisions of the Carboniferous system which are well represented in the county. The succession may be readily understood from the following table of the strata given in descending order:—

Carboniferous System.	{	Coal Measures.	{ Red sandstones. Sandstones, shales, with several workable coal seams and ironstones.
		Millstone Grit.	{ Coarse sandstone and conglomerate.
	{	Carboniferous Limestone.	{ Upper Limestone series. Middle series with coals and ironstones but containing no limestones. Lower Limestone series.
		Calcareous Sandstones.	{ Cementstone series comprising black and blue shales with marine zones, limestones, sandstones with thin seams and streaks of coal passing conformably downwards into red and yellow sandstones (Upper Old Red Sandstone).

The Cementstone series occupies several detached areas, and presents two distinct types. Along the county boundary between Fife and Kinross there is a small outlier on the N slopes of the Cleish Hills representing the W type. There the strata consist of blue clays and sandstones with cementstone bands and nodules. The members of this series, of a type approaching that to the S of St Andrews, crop out also on the W and N slopes of the Lomonds, and they extend E by Cults and Ceres to the coast. By far the most important development of this series, however, occurs in the triangular area between Elie and St Andrews and round the shore by Fife Ness. The essential feature of the group is the occurrence of a great thickness of shales with marine bands characterised chiefly by *Myalina modioliformis* and *Schizodus Salteri*. These shales alternate with sandstones and limestones, the latter being charged with true Carboniferous Limestone forms. About midway between St Monans and Pittenweem on the coast, the members of this series pass conformably below the basement beds of the Carboniferous Limestone with an inclination to the W, and from this point E to Anstruther there is a steady descending

series for 2 miles. Upwards of 3900 feet of strata are exposed in this section, and yet the underlying red sandstones are not brought to the surface. At Anstruther the beds roll over to the E, and the same strata are repeated by gentle undulations as far as Fife Ness. It is probable, therefore, that the beds at Anstruther are the oldest of the Cementstone series now exposed at the surface between Elie and St Andrews. From the valuable researches of Mr Kirkby, it appears that all the fossils, save *Sanguinolites Abdensis*, which are found in the marine bands near the top of the series at Pittenweem, occur also in the Carboniferous Limestone. Not until nearly 3000 feet of strata have been passed over, do we find forms that are peculiar to this horizon, some of which are given in the following list:—*Littorina scotburdigalensis*, *Cypricardia bicosta*, *Myalina modioliformis*, *Sanguinolites Abdensis*, *Schizodus Salleri*, *Bairdia nitida*, *Cythere superba*, *Kirkbya spiralis*. Another distinguishing feature of this type of the Cementstone series is the presence of numerous cases of ostracod crustaceans, of which the most abundant form is *Leperditia Okeni* var. *Scotburdigalensis*. Numerous thin seams and streaks of coal, varying from a few inches to 2 feet in thickness, are exposed in this coast section. They rest on fireclays which are charged with stigmairian rootlets.

The Cementstone group is likewise met with in the neighbourhood of Burntisland, an area which is invested with special importance on account of the great development of volcanic rocks to be described presently. In this district they occupy a semicircular area extending from Inverkeithing Bay to near Kirkcaldy. A line drawn from Donibristle N by Camilla Loch near Auchtertool, thence winding round Raith Park and S to the sea-shore at Seafeld Tower, marks the rim of the semicircle. Along this line they pass conformably below the basement beds of the Carboniferous Limestone. The sedimentary strata with the interbedded volcanic rocks are folded into an anticlinal arch, the lowest beds being exposed near Burntisland where they are inclined to the N and NNW. From the presence of marine zones in the Calciferous Sandstones of this area, it is evident that the Burntisland district forms a connecting link between the types represented in Midlothian and between Pittenweem and St Andrews. The Grange limestone at Burntisland is regarded as the equivalent of the Burdiehouse Limestone to the S of Edinburgh.

In the W of Fife the members of the Carboniferous Limestone lap round the anticlinal arch of the Cementstone series at Burntisland, and they cover the whole of the area between that arch and the Cleish Hills. To the E and W they pass below the Dysart and Kinglassie coal-fields respectively, reappearing to the N in the Lomond Hills, and being traceable from thence into East Fife as far as Westfield and Radernie. As in other districts in Scotland this series is divisible into three groups, described in the foregoing table. The limestones of the lowest group occur at Roscobie, Dunfermline, Potmetal, and on the Lomond Hills. The middle division consists of a succession of sandstones and shales with coals and ironstones, comprising the Torryburn, Oakley, Saline, Dunfermline, Kirkcaldy, and Markinch coal-fields. Indeed, this group forms the chief source of the gas coals and blackband ironstones of Fife. The limestones of the upper group are comparatively insignificant. They crop out on the coast E of Pathhead, where they pass below the Millstone Grit.

The latter series, consisting of coarse sandstone and conglomerate, forms a narrow border round the Dysart coal-field on the W and the Kinglassie coal-field on the S. It is well exposed on the shore to the E of Pathhead, where it is rapidly succeeded by the true Coal-measures. The latter are best developed in the Dysart and Leven coal-fields, though a small area is also met with at Kinglassie. This series consists of sandstones, shales, numerous workable coal seams, clayband ironstones, and an overlying group of red sandstones. In the Dysart and East Wemyss coal-field there are no fewer than fourteen seams of coal which are inclined to the E at angles varying from 10° to 20°.

A remarkable feature of the Carboniferous system as represented in Fife is the great development of contemporaneous and intrusive volcanic rocks. In this county volcanic activity seems to have begun somewhat later than in the Edinburgh district, and to have been partly coeval with that in West Lothian. In the neighbourhood of Burntisland there must have been a continuation of the volcanic action from the horizon of the Grange Limestone in the Cementstone series to the basement beds of the Carboniferous Limestone. The basaltic lavas and tufts which were ejected during that period are admirably displayed on the shore section between Burntisland and Seafeld Tower near Kirkcaldy, where they are interstratified with marine limestones, sandstones, and shales. But on the Saline Hill in West Fife there is conclusive evidence that volcanoes must have been active even during the deposition of the coal-bearing series of the Carboniferous Limestone. That eminence marks the site of a vent from which tuff was ejected which was regularly interbedded with the adjacent strata. Seams of coal and ironstone are actually worked underneath the tuff on the S side of Saline Hill, and not far to the E a bed of gas coal is mined on the slope of the Knock Hill which forms another 'neck' belonging to that period.

In East Fife, as the researches of Sir Archd. Geikie have conclusively shown, there is a remarkable development of volcanic vents which are now filled with tuff or agglomerate. Upwards of fifty of these ancient orifices occur between Leven and St Andrews, piercing the Calciferous sandstones, the upper or true Coal-measures, and even the overlying red sandstones, which are the youngest members of the Carboniferous system. It is evident, therefore, that most of these 'necks' must be of later date than the Carboniferous period. Nay, more, from the manner in which they rise along lines of dislocation, and pierce anticlinal arches as well as synclinal troughs, from the way in which the volcanic ejectamenta rest on the denuded edges of the Carboniferous Limestone series, there can be no doubt that they were posterior to the faulting, folding, and denudation of the strata. Sir Archd. Geikie has suggested that they probably belong to the period of volcanic activity indicated by the 'necks' of Permian age in Ayrshire. Largo Law is a striking example of one of the cone-shaped necks, and so also is the Binn Hill at Burntisland. Another great vent, upwards of $\frac{1}{2}$ mile in length, occurs on the shore at Kincaig Point, E of Largo Bay, which is filled with tuff. In this case the tuff is pierced by a mass of columnar basalt, the columns rising to a height of 150 feet above the sea-level. The occurrence of veins and masses of basalt is a common feature among these necks, but it is seldom that such a remarkable example of columnar structure is displayed in the series. The Rock and Spindle near St Andrews is an excellent instance of the radial arrangement of the columns.

No less remarkable are the great intrusive sheets of basalt and dolerite which are conspicuously developed in the Carboniferous rocks of Fife. Indeed, in none of the other counties in Scotland do they occur in such numbers. From the Cult Hill near Saline, they are traceable E along the Cleish Hills to Blairadam. They cap Benarty and the Lomonds, and from that range they may be followed in irregular masses to St Andrews and Dunino. Another belt of them extends from Torryburn by Dunfermline to Burntisland, thence winding round by Auchtertool to Kirkcaldy. They occur mainly about the horizon of the lowest limestones of the Carboniferous Limestone series, and are, in all probability, the E extension of the intrusive sheets at Stirling Castle and Abbey Craig. But in addition to these great intrusive masses of Carboniferous age, there are various dykes of basalt having a general E and W trend, which may probably belong to the Tertiary period. Of these, the best examples are met with in the Old Red Sandstone area, near Damhead, and W of Strathmiglo.

The direction of the ice flow during the glacial period

was SE across the Ochils, but as the ice sheet approached the Firth of Forth it veered round to the E and ENE. An instance of this latter movement occurs near Pettycur N of Burntisland, where the stræ point E 15° N. Throughout the county there is a widespread covering of boulder clay, which, like the deposit on the SE slopes of the Sidlaws, contains an assemblage of boulders derived from the Grampians. A great series of sands and gravels rests on the boulder clay at certain localities, which seems to have a direct connection with the retirement of the ice. Where there are open valleys forming passes across the Ochils, great ridges of gravel are met with parallel to the trend of the valleys. Near the mouths of the passes the material is very coarse, but it gradually becomes finer and more water-worn as we advance southwards. Similar deposits are met with in the E of Fife, which are, to a large extent, of the same origin. There is no trace of the later glaciation within the county.

The 100-foot beach is traceable round the greater part of the coast-line, being well developed at Dunfermline, Kirkcaldy, and in the Howe of Fife. The arctic shells at Elie occur in the fine clays of this beach, and in a similar deposit of the same age near Cupar bones of a seal have been exhumed. Along the estuary of the Tay this beach forms but a narrow terrace of gravel, owing to the comparatively steep slope flanking the shore. In that neighbourhood there are indications of an old sea margin at the level of 75 feet, as if there had been a slight pause in the upheaval of the land. The 50 and 25 feet beaches are well represented, the one merging into the other. In the East Neuk of Fife the latter is bounded by an inland cliff, in which sea-worn caves are not uncommon.

The soil—we abridge from Mr Maedonald—to the N of the Eden is quick and fertile, nowhere very deep or very strong, but kindly, highly productive, and specially suited for the cultivation of grass. The Howe of Fife or Stratheden, comprising both sides of the Eden up as far as Cupar, has a rich fertile soil, parts of it being exceedingly productive. S of the Eden the land rises gradually, till, in Cameron parish, it reaches 600 feet. On this high land the soil is cold and stiff and of a clayey character, with a mixture of lime. Round Ladybank it is very light and shingly, as though its richest earthy coating had been swept off by a current of water. The land on the rising-ground in Collessie, Monimail, Cults, and Kettle parishes is heavier and more valuable than in the valley of Ladybank. In the neighbourhood of the Lomonds and on the high land of Auchtermuchty, Leslie, and Kiuglassie the soil is light, but sharp and valuable for grass; in Beath, Auchterderran, and Ballygry it is principally cold and stiff, though several excellent highly-cultivated farms are in these parishes. A good deal of land on the N side of Dunfermline is strong retentive clay, on the S is thin loam with a strong clayey subsoil. In Saline, Torryburn, and Carnock the soil is mainly a mixture of clay and loam, and is generally very fertile. All along the coast, too, though variable in composition, it is rich and productive. The 'Laich of Dunfermline' has a strong clayey soil, very fertile on the whole, but somewhat stiff to cultivate. The soil between Inverkeithing and Leven varies from light dry to strong clayey loam, rendered highly productive and friable by superior cultivation; it is deep rich loam about Largo, and light in Elie, both equally fertile and productive; and along the E coast it is deep, strong, and excellent, consisting chiefly of clay and rich loam. Near St Andrews the soil is by no means heavy, while the section NE of Leuchars village is sandy and very light, especially on the E coast, where a large tract of land known as Tent's Moor is wholly covered with sand, and almost useless for agricultural purposes. In Forgan and part of Ferryport-on-Craig the soil, though light and variable, is kindly and fertile.

In the whole of Scotland the percentage of cultivated area is fully 24·7, in Fife it rises as high as 78·9, a figure approached by only six other counties—Linlithgow (76·6), Berwick (65), Haddington (65·5), Kinross

(63·8), Renfrew (58·2), and Edinburgh (58·3). But great improvements have been effected since 1850 in the way of draining and re-draining, fencing, building, etc. The six-course shift of rotation predominates; leases are nearly always for 19 years; and 'in the matter of land apportionment Fife is almost all that could be desired.' Fife is not a great county for live-stock, and the majority of its cattle are Irish bred. The few cows kept are crosses mostly of somewhat obscure origin; the bulls are almost all shorthorns. Since the dispersion of the famous Keavil herd in 1869, the breeding of pure shorthorns has all but ceased. Neither is sheep-farming practised to the extent one might look for, soil and climate considered. The sheep are almost all hogs—good crosses between Cheviot ewes and Leicester tups—with a few black-faced in the western and higher parts of the shire. Nearly all the farm-horses are Clydesdales or have a strong touch of the Clydesdale, powerfully built and very hardy, great care having been exercised of recent years in the selection of stallions, with highly successful results. Many good ponies are kept, and hunters and carriage-horses are generally of a superior class. Swine are not numerous, but have been greatly improved by crossing the native sows with Berkshire boars. The following table gives the acreage of the chief crops and the number of live-stock in Fife in different years:—

	1875.	1881.	1891.	1896.
Wheat,	16,748	13,142	11,525	7,873
Barley,	30,037	30,024	23,467	23,282
Oats,	37,646	39,111	39,610	41,500
Sown Grasses,	56,430	62,147	62,383	65,833
Potatoes,	17,746	19,155	15,436	14,855
Turnips,	28,514	27,547	25,736	25,371
Cattle,	39,540	39,076	48,155	49,632
Sheep,	69,609	69,275	109,226	105,918
Horses,	9,689	10,166	10,100*	10,290
Swine,	6,050	5,366	4,681	5,955

The yearly rainfall varies considerably, from 21½ inches at Cupar to 36½ at Loch Leven, which, though in Kinross-shire, may be taken as representing the western portion of the Fife peninsula. Still it is not by any means heavy; and the climate, greatly improved by thorough drainage, and modified by the nearness of the sea, is mild and equable. Westerly winds prevail, and the biting E winds that sometimes sweep the coast are broken inland by the numerous belts and clumps of plantation that stud the fields. Less than one-twenty-third of the whole of Scotland is under woods; in Fife the proportion is fully one-sixteenth, viz., 19,648 acres, a figure surpassing twenty-five, and surpassed by only seven, of the Scottish counties. Dr Samuel Johnson remarked in 1773 'that he had not seen from Berwick to St Andrews a single tree which he did not believe to have grown up far within the present century.' So far the remark did good, that, widely read by the landed gentry, it stimulated the planting fever to intensity, and hundreds of acres of hillside now are clothed with trees which otherwise might have retained their primeval bareness. It was false, none the less, as shown by five tables in *Transactions of the Highland and Agricultural Society for 1879-81*, where sixteen of the 'old and remarkable' trees described are trees of Fife—4 Spanish chestnuts at Aberdour and Balmerino, 2 ash-trees at Otterston and Donibristle, 3 sycamores at Aberdour and Donibristle, 1 oak at Donibristle, and 6 beeches at Otterston, Donibristle, Kellie Castle, Leslie House, and Balmerino. To which might have been added the two famous walnuts of Otterston, planted in 1589, and felled by the great gale of January 1882.

The damask manufacture of DUNFERMLINE is probably unequalled in the world for excellence of design and beauty of finish. Other linen manufactures, comprising sail-cloth, bed-ticking, brown linen, dowlas, duck, checks, and shirting, together with the spinning of tow

* Included all horses, not only those engaged in farming.

and flax, are carried on at Dunfermline, KIRKCALDY, Dysart, Leslie, Auchtermuchty, Kingskettle, Ladybank, Strathmiglo, Falkland, Tayport, and other places. Collieries and limestone quarries are numerous, some of the former being very extensive, and employing a large number of hands. Breweries are numerous, and there are several pretty extensive distilleries. The manufacture of floor-cloth (at Kirkcaldy), ironfounding and the making of machinery, the tanning of leather, the manufacture of earthenware and porcelain, paper, and fishing-nets, coach-building, ship-building in iron and wood, and the making of bricks and tiles, are also carried on. The maritime traffic is not confined to any one or two ports, but diffuses itself round nearly all the coast, at the numerous towns and villages on the Tay, the German Ocean, and the Forth, though chiefly on the latter. It is of considerable aggregate extent, and has grown very rapidly of recent years, according to the statistics of the one headport, KIRKCALDY. Lastly, there are the fisheries, for cod, ling, hake, etc., in the home waters, and for herrings as far afield as Wick and Yarmouth. Steam ferries are maintained between Newport and Dundee, between Ferryport-on-Craig (Tayport) and Broughty Ferry, between Burntisland and Granton, and between North Queensferry and South Queensferry.

A main line of railway, connecting by the Forth Bridge with Edinburgh, goes along the coast to Burntisland and Dysart, strikes thence northward to Ladybank, and forks there into two lines—the one going north-eastward, and at Leuchars Junction turning again north-westward to the shores of the Tay near Newport, where it crosses the Tay Bridge to Dundee; the other goes north-westward to Newburgh, and proceeds thence into Perthshire towards Perth. One branch line leaves Leuchars Junction and goes NNE to Tayport, then turning west up the firth joins the main line at the Tay Bridge; while another branch goes south-eastward to St Andrews, and meets there the East Fife railway. Another line, coming eastward from Stirling, passes Alloa, Dunfermline, Crossgates, and Lochgelly, forming a junction with the main line at Thornton. From the last-named station a railway runs eastward along the coast to Leven, Largo, Elie, Anstruther, Crail, and St Andrews. It has been proposed to construct an East Fife Central railway from Leven to Bonnyton, with a northern branch connecting with the main line at Dairsie, and another branch going direct east and connecting with the Anstruther and St Andrews railway. From Alloa and Kinross a railway enters the upper reach of Eden valley, passing to the vicinity of Auchtermuchty, and thence SE to a junction with the main line at Ladybank. A railway from Cowdenbeath goes north-north-westward into Kinross-shire, to join the Alloa and Ladybank line at Kinross. A railway has been constructed by the owner of the property, from Thornton to Wemyss, Buckhaven, and Methil. The Dunfermline, Kinross, and Glenfarg line to Perth affords the most direct route to that city from Edinburgh. Starting from Inverkeithing at the north end of the Forth Bridge, it runs NW to Dunfermline, then NE to near Cowdenbeath, where it turns again in a north-westerly direction through Kinross-shire and Glenfarg. The Cupar district contains 85 miles of turnpike roads and 126 miles of statute labour roads; the Dunfermline district, 45½ of turnpike roads and 49½ of statute labour roads; the St Andrews district, 135½ of turnpike roads and 73½ of statute labour roads; the Kirkcaldy district, 77 of turnpike roads and 67½ of statute labour roads; the Cupar and Kinross district, 22½ of roads; the Outh and Nivingston district, 27½ of turnpike roads; the Leven Bridge district, 7½ of roads.

The Fife boundaries, as affected by the adjoining counties of Kinross and Perth, underwent considerable readjustment by the Boundary Commissioners in 1891. Of those parishes partly in Kinross-shire and partly in Fife, the Ryelaw detached part of the parish of Portmoak, and those portions of the same parish and of Balingry detached part which lay to the south of the new channel (called The Cut) of the river Leven, have been transferred to Fife (to the parish of Kinglassie), while

the portions of Kinglassie and of Balingry detached part that lay north of The Cut, have been transferred to Kinross-shire (to the parish of Portmoak). The Moreland portion of Dunfermline (in the extreme north of the parish), which had been claimed and assessed by Kinross-shire, was declared by the Commissioners to form part of that county, and was transferred to the parish of Cleish. As concerns the county of Perth, the Perthshire detached parishes of Culross and Tulliallan have been transferred wholly to Fife; while Abernethy, which was partly in Perthshire and partly in Fife, has been placed entirely in the former county—the Easter Colzie portion of the parish, however, going to the Fife parish of Newburgh, and the Nochnarrie and Pitlour portions to that of Strathmiglo. The parish of Arngask, which was situated partly in Fife, partly in the county of Perth, and partly in that of Kinross, was also placed wholly in Perthshire. Extensive alterations have likewise been made on the boundaries of the interior parishes of Fife, for which, however, see the separate articles.

By the Redistribution of Seats Act of 1885 the county was divided into two divisions, East and West, each of which returns one member to Parliament. The constituency in 1896 numbered, East, 9573; West, 11,130. Royal burghs exercising the parliamentary franchise are—Dunfermline and Inverkeithing, included in the Stirling district of burghs; the Kirkcaldy district of burghs, comprising Kirkcaldy, Burntisland, Dysart, and Kinghorn, with a total constituency of 6234; and the St Andrews district of burghs, comprising St Andrews, Anstruther-Easter, Anstruther-Wester, Crail, Cupar, Kilrenny, and Pittenweem, with a total constituency of 3923. The royal burghs not now exercising the parliamentary franchise are Newburgh, Auchtermuchty, Falkland, and Earlsferry. Leslie, Leven, Linktown, West Wemyss, and Elie are burghs of barony or of regality; and Ladybank and Lochgelly are police burghs.

Mansions, all noticed elsewhere, are Balcaskie, Balcarres, Birkhill, Broomhall, Cambu, Charleton, Crawford Priory, Donibristle, Dysart House, Elie House, Falkland House, Fordel, Grangemuir, Inchdairnie, Inchrye Abbey, Kilconquhar, Largo House, Leslie House, Naughton, Otterston, Pitcorrhie, Raith, Wemyss Castle, and many others.

The county is governed by a lord-lieutenant, a vice-lieutenant, forty deputy-lieutenants, a sheriff, two sheriffs-substitute, and 374 commissioners of supply and justices of peace. It is divided into an eastern and a western district, each with a resident sheriff-substitute; and sheriff ordinary and debts recovery courts are held in Cupar, Dunfermline, and Kirkcaldy. Sheriff small-debt courts are also held at Cupar, Dunfermline, Kirkcaldy, St Andrews, Anstruther, Auchtermuchty, Leven, and Newburgh. There is a burgh police force in Dunfermline (17), and in Kirkcaldy (21); the remaining police in the county comprise 90 men, under a chief constable, whose yearly pay is £400.

For County Council representation Fife is divided into four districts—namely, Cupar District, with 10 divisional members and one representative each for the 4 burghs of Auchtermuchty, Cupar, Falkland, and Newburgh; St Andrews District, also with 10 divisional members and 8 representatives—two for St Andrews, and one each for the burghs of Anstruther-Easter, Anstruther-Wester, Crail, Kilrenny, Pittenweem, and Earlsferry; Kirkcaldy District, with 14 divisional members and 3 burgh representatives—one each for the burghs of Burntisland, Dysart, and Kinghorn; and Dunfermline District, with 9 divisional members and 2 representatives—one each for the burghs of Culross and Inverkeithing. The Council is divided into the following committees:—The Convener's Committee, Local Authority (composed also of gentlemen who are not councillors), Standing Joint Committee (composed also of Commissioners of Supply, with the Sheriff of Fife *ex officio*), County Road Board, Finance and Property Committee, Valuation Committee, Fife and Kinross District Lunacy Board (including two representatives from Kinross-shire), Weights and Measures Committee, Prison Visiting Committee, Tay Ferries

Committee, Commissioners under Kirkcaldy Harbour Acts, Technical Education, and Small Holdings Act Committee.

The registration county gives off a part of Abernethy parish to Perthshire, takes in part of Arngask parish from Perthshire, and had in 1891 a population of 187,601. The number of registered poor in the year ending 26 Sept. 1894 was 2303; of dependants, 1315. The expenditure was £34,917. The number of pauper lunatics was 522, their cost of maintenance being £11,259. The percentage of illegitimate births was 6·8 in 1880, 6·2 in 1892, and 4·8 in 1894.

Although sixteenth in size of the thirty-three Scotch counties, Fife ranks as fifth in respect of rental-roll (only Aberdeen, Ayr, Lanark, and Perth shires surpassing it), its valuation, exclusive of the seventeen royal burghs, of railways, and of water-works, being (1815) £405,770, (1856) £543,536, (1865) £581,127, (1875) £698,471, (1880) £700,651, (1882) £697,448, 17s., (1892) £682,255, (1895-96) £667,166. Valuation of railways and water-works (1882) £62,234, (1892) £106,159, (1895-96) £117,731; of burghs (1866) £146,129, (1882) £238,472, (1892) £335,074. In point of population it stands seventh, the six higher counties being Aberdeen, Ayr, Edinburgh, Forfar, Lanark, and Renfrew shires. Pop. (1821) 114,556, (1831) 128,839, (1841) 140,140, (1851) 153,546, (1861) 154,770, (1871) 160,735, (1881) 171,931, (1891) 190,365, of whom 90,527 were males and 99,838 females. Houses (1891) inhabited 41,434, vacant 3267, building 378.

The civil county comprehends sixty-one *quoad civilia* parishes, with the extra-parochial tract of the Isle of May. There are also twenty *quoad sacra* parishes and five chapels of ease belonging to the Church of Scotland. The places of worship within the county are, 92 of the Church of Scotland, 55 of the Free Church, 45 of United Presbyterians, 4 of the Congregationalists, 4 of the Evangelical Union, 9 of Baptists, 11 of Episcopalians, and 6 of Roman Catholics. The Established Synod of Fife, meeting on the second Tuesday of April and October at Cupar, Dunfermline, Kirkcaldy, and St Andrews successively, comprehends the presbyteries of Dunfermline, Kinross, Kirkcaldy, Cupar, and St Andrews, and thus takes in Kinross-shire and the Perthshire parish of Muckart. The Free Church Synod of Fife, meeting at Kirkcaldy on the second Tuesday of April, and at Cupar, St Andrews, or Dunfermline on the second Tuesday of October, comprises presbyteries identical with those of the Established Church.

It is claimed by the natives of Fife that it has a more peaceful history than most other counties in Scotland, containing no great battlefields, and although prominent in many important events, displaying to view few signal crimes and no great national disasters. Ancient stone circles, standing stones, and cairns or tumuli abounded, but are not now to be found, though remains of hill forts exist in several places. On Duncarn there are remains of such a fort, and another strong one was on Carneil Hill, near Carnock, and stood adjacent to some tumuli which were found in 1774 to enshrine a number of urns containing Roman coins. Traces of two Roman military stations are found near the same locality; and a Roman camp for Agricola's ninth legion was pitched in the vicinity of Loch Orr, confronting Benarty Hill on the right and the Cleish Hills on the left. Human skeletons, found at various periods on the southern seaboard, are regarded as relics of conflicts with invading Danes in the 9th and following centuries. Great monastic establishments were formed at St Andrews, Dunfermline, Balmerino, Lindores, Inchcolm, and Pittenweem, and have left considerable remains. Mediæval castles stood at St Andrews, Falkland, Leuchars, Kellie, Dunfermline, Bambriech, Balcomie, Dairsie, Aberdour, Seafield, Loch Orr, Tarbet, Rosyth, Inverkeithing, Ravensraig, Wemyss, Monimail, Balwearie, etc., and have left a large aggregate of interesting ruins. Old churches, with more or less of interest, exist at Crail, St Monance, Leuchars, Dysart, Kirkforfar, Dunfermline, Dairsie, and St Andrews.

Early in the summer of 83 A.D. Agricola had his army

conveyed across the Bodotria, or Firth of Forth, and landing, as is said, at BURNISLAND, gradually but thoroughly made himself master of Fife, whilst his fleet crept round its shores, and penetrated into the Firth of Tay. The eastern half of the peninsula was then possessed by the Vernicoes, and the western by the Damnonii, one of whose three towns, the 'Victoria' of Ptolemy, was situated at Loch Orr, a lake, now drained, in Ballingry parish. The Damnonii, says Dr Skene, 'belonged to the Cornish variety of the British race, and appear to have been incorporated with the southern Picts, into whose language they introduced a British element. The Frisian settlements, too, on the shores of the Firth of Forth, prior to 441, may also have left their stamp on this part of the nation; and the name of Fothrik, applied to a district now represented by Kinross-shire and the western part of Fife, may preserve a recollection of their Rik or kingdom.' *Fife* itself is probably the Frisian *fibh*, 'a forest;' the name Frisian Sea is applied by Nennius to the Firth of Forth; and part of its northern shore was known as the Frisian Shore. By the establishment of the Scottish monarchy in the person of Kenneth mac Alpin (844-60) Fib or Fife, as part of southern Pictavia, became merged in the kingdom of Alban, of which under Constantin III. (900-40) it is described as forming the second of seven provinces, a province comprising the entire peninsula, along with the district of Gowrie. It thus included the ancient Pictish capital, ABERNETHY, whither in 865 the primacy was transferred from Dunkeld, and whence in 908 it was again removed to St Andrews. In 877 the Danes, expelled by the Norwegians from Ireland, sailed up the Firth of Clyde, crossed the neck of the mainland, and attacked the province of Fife. They routed the 'Scots' at Dollar, and, chasing them north-eastward to Inverdovet in Forgan, there gained a second and more signal victory, King Constantin, son of Kenneth mac Alpin, being among the multitude of the slain. On two accounts this battle is remarkable, first as the only great conflict known for certain to have been fought on Fife soil; and, secondly, as the earliest occasion when the term 'Scotti' or Scots is applied to any of the dwellers in Pictavia. According to Hector Boece and his followers, Kenneth mac Alpin appointed one Fifus Duffus thane or governor of the province of Fife, but thanes of Fife there never were at any time, and the first Macduff, Earl of Fife, figures in three successive charters of David I. (1124-53), first as simply 'Gillemichel Makduf,' next as 'Gillemichel Comes,' and lastly as 'Gillemichel Comes de Fife.' In earlier charters of the same reign we hear, indeed, of other Earls of Fife—Edehrad, son of Malcolm Ceanmor, and Constantin,—but between these and the Macduffs there seems to have been no connection. 'The demesne of the Macduff Earls of Fife appears to have consisted of the parishes of Cupar, Kilmarny, Ceres, and Cameron in Fife, and those of Strathmiglo and Auchtermuchty in Fothruff, near which Macduff's Cross was situated. Whether this sept were the remains of the old Celtic inhabitants of the province, or a Gaelic clan introduced into it when its chief was made Earl, it is difficult to say; but it is not impossible that it may have been a northern clan who followed Macbeth (1040-57) when the southern districts were subjected to his rule, and that there may be some foundation for the legend that the founder of the clan had rebelled against him, and adopted the cause of Malcolm Ceanmor, and so maintained his position. Some probability is lent to this supposition by the fact that the race from whom the Mormaers of Moray derived their origin is termed in one of the Irish genealogical MSS. Clan Duff, and that the Earls of Fife undoubtedly possessed from an early period large possessions in the North, including the district of Strathearn. The privileges of the clan, however, stand on a different footing. From the earliest period the territory of Fife comes prominently forward as the leading province of Scotland, and its earls occupied the first place among the seven earls of Scotland. The first two privileges, of placing the king on the Coronation Stone, and of heading the van in the army, were probably

attached to the province of Fife, and not to any particular tribe from which its earls might have issued; on the other hand, the third seems derived from the institution connected with the ancient *Fine*, etc. (Skene's *Celtic Scotland*, iii. 61-63, 305, 306, 1880).

The history of Fife centres round no one town, as that of Dumfriesshire round Dumfries, but is divided among three at least—ST ANDREWS for matters ecclesiastical; for temporal, DUNFERMLINE and FALKLAND. Each of the latter has its royal palace; and Dunfermline was the burial-place of eight of Scotland's kings, from Malcolm Ceanmhor (1093) to the great Robert Bruce (1329), thus including Alexander III., who met with his death in Fife, being dashed from his horse over the headland of KINGHORN (1286). Duncan, Earl of Fife, was one of the three guardians appointed to rule the southern district of the kingdom in the absence of Alexander's infant daughter, the Maid of Norway; but he was murdered in 1288; and his son, the next earl, was too young to seat John Baliol on the Coronation Stone (1292) or to take any part in the earlier scenes of the War of Independence. During that war, in 1298, the Scottish victory of 'Black Innes' is said to have been won by Wallace over Aymer de Valence in Abdie parish, near Newburgh. The young Earl was absent at the English court in 1306, but his sister, the Countess of Buchan, discharged his functions at Bruce's coronation, for which, being captured by Edward, she was hung in a cage from one of the towers of Berwick. Presently, however, we find him on Bruce's side; and, according to Barbour, it was he and the sheriff of Fife who, with 500 mounted men-at-arms, were flying before an English force that had landed at Donibristle, when they were rallied by William Sinclair, Bishop of Dunkeld. Another English force under the Earl of Pembroke, in 1327, landed in Fife, and stormed the Castle of Leuchars; and in 1332 Edward Baliol and the 'disinherited barons' landed at Kinghorn, and marched north-westward to DUNPLIN, in Strathearn. A parliament was held at Dairsie Castle in 1335, but failed to accomplish its purposes; and another was then held at Dunfermline, and appointed Sir Andrew Moray to the regency. The English immediately afterwards invaded Scotland, sent a powerful fleet into the Firth of Forth, and temporarily overmastered Fife. A Scottish army, soon collected by Sir Andrew Moray to confront them, besieged and captured the town and castle of St Andrews, and, save in some strongly garrisoned places, drove the English entirely from the county. The Steward of Scotland (afterwards Robert II.) succeeded Sir Andrew Moray in the command and direction of that army; and, in the year of his accession to the throne (1371) the earldom of Fife was resigned by the Countess Isabella, last of the Macduff line, to his third son, Robert, Earl of Menteith, whose brother Walter had been her second husband. The new Earl of Fife was created Duke of Albany in 1398, and it is as the Regent Albany that his name is best known in history, whilst the deed whereby that name is most familiar was the murder—if murder it were—of the Duke of Rothesay at FALKLAND (1402), which figures in Sir Walter Scott's *Fair Maid of Perth*.

Andrew Wood, in 1480, attacked and repulsed a hostile English squadron, which appeared in the Firth of Forth; and he received, in guerdon of his services, a royal grant of the village and lands of Largo. A body of 13,000 infantry and 1000 horse, suddenly levied in Fife and Forfarshire, formed part of the Scottish army, which, in 1488, fought in the battle of Sauchieburn. The Douglasses, in 1526, after defeating their opponents at Linlithgow, advanced into Fife, and pillaged Dunfermline Abbey and St Andrews Castle. Fife figures prominently in Scottish Reformation history. At ST ANDREWS were burned the English Wicliffe, John Reseyb (1408), the German Hussite, Paul Crawar (1432), and Scotland's own martyrs, Patrick Hamilton (1528), Henry Forrest (1533), and George Wishart (1546). Barely two months had elapsed ere the last was avenged by the murder of Cardinal Beaton, and barely thirteen years ere, in the summer of 1559, John Knox's 'idolatrous sermon' had roused, in Tennant's words—

'The steir, strabnsh, and strife,
Whan, bickerin' frae the towns o' Fife,
Great bangs o' bodies, thick and rife,
Gaed to Sanct Androis town
And w' John Calvin i' their beads,
And hammers i' their hands and spades,
Enraged at idols, mass, and beads,
Dang the Cathedral down.'

At CRAIL the crusade began, and from Crail the preacher and his 'rascal multitude' passed on to Anstruther, Pittenweem, St Monance, St Andrews, the abbays of Balmorino and Lindores, and almost every other edifice in the county, large or small, that seemed a prop of the Romish religion. Queen Mary, in 1563, spent nearly four months in Fife, removing frequently from place to place, but residing chiefly at Falkland and St Andrews, where Chastelard was beheaded for having burst into her chamber at Burntisland. Next year, she spent some time at the same places; and at WEMYSS Castle in Feb. 1565 she first met her cousin, Lord Darnley. Donibristle, in 1592, was the scene of the murder commemorated in the ballad of *The Bonnie Earl o' Moray*; and Falkland Palace, in 1600, was the scene of the antecedent of the mysterious affair known as the Gowrie Conspiracy. Fife suffered more injury to trade than most other districts of Scotland from the removal of the court to London, at the accession of James VI. to the crown of England (1603). Its enthusiasm for the Covenant was great, and the seaports put themselves in a state of defence when, on 1 May 1639, the Marquis of Hamilton arrived in the Firth of Forth with 19 Royalist vessels and 5000 well-armed men, of whom, however, only 200 knew how to fire a musket. This alarm passed off with the pacification of Berwick; and the next marked episode is the battle of PITREAVIE, fought near Inverkeithing on 20 July 1651, when 6000 of Cromwell's troopers defeated 4000 adherents of Charles II., killing 1600 and taking 1200 prisoners. Then comes that darkest scene in all Fife's history, the murder by men of Fife on MAGUS MUIR of Archbishop Sharp, 3 May 1679, so strongly illustrative of the fanaticism, the superstition, and the unwarlike spirit of its perpetrators. The Revolution (1688) was followed by a long and severe famine, a great depression of commerce, and an exhaustion of almost every resource; the Darien scheme (1695-99) proved more disastrous to Fife than to most other parts of Scotland; at the Union (1707) legitimate commerce was all but annihilated, its place being taken by smuggling. (See DYSART.) The Earl of Mar landed from London at Elie in Aug. 1715, the month of the famous gathering at Braemar; on 12 Oct. Brigadier MacIntosh of Borlum succeeded in conveying 1600 Jacobites from Fife to East Lothian over the Firth of Forth; and about the same time the Master of Sinclair, proceeding from Perth through Fife with 400 horsemen, surprised two Government vessels at Burntisland, which furnished the rebels with 420 stands of arms. The plundering of the custom-house at PITTENWEEM by Wilson, Robertson, and other smugglers, is memorable as leading to the Porteous Riot at Edinburgh (1736). Among many illustrious natives are Tennant and Dr Chalmers, born at Anstruther; Lady Ann Barnard, at Balcarras; Alexander Hamilton, at Creich; Sir David Wilkie, at Cults; Lord Chancellor Campbell, at Cupar; Charles I. and Sir Noel Paton, at Dunfermline; Richard Cameron, at Falkland; Adam Smith, at Kirkcaldy; Alexander Selkirk, at Largo; Sir David Lindsay, at Monimail; Major Whyte Melville, at Mount Melville, near St Andrews; and Lady Elizabeth Halket, at Pitreavie.

A characteristic feature of Fife is its large number of small seaport towns, in many places so close as to be practically a continuous town. Buchanan used the expression *oppidulis praeingitur* to describe it, and James VI. called the county a grey cloth mantle with a golden fringe. The modern demand for harbours capable of admitting large vessels has tended to concentrate the shipping of Fife at Burntisland, and the establishment of large factories has in like manner concentrated population in such places as Dunfermline and Kirkcaldy. Thus, though Fife is rich and fruitful in its laud, and has many important industries, as well as large import and export

trades, most of the coast towns are so quiet and decayed as to give the casual visitor a much less favourable impression of the county than a complete examination affords.

The county acquired its popular name of the 'Kingdom of Fife,' partly from its great extent and value, and partly from its forming an important portion of the Pictish dominion. It anciently, as we have seen, was much more extensive than it now is, comprehending nearly all the region between the Tay and the Forth, or the present counties of Fife, Kinross, and Clackmannan, and the districts of Strathearn and Monteith. Dismemberments of it were made at various periods. In 1426 the county of Kinross was formed; other changes were afterwards made to form the stewartries of Clackmannan and Culross—the latter, however, restored to Fife in 1891; and in the year 1685 three parishes were cut off to complete the county of Kinross. Numerous ancient hereditary jurisdictions existed in the county, and, in common with similar jurisdictions in other parts of Scotland, were abolished, under compensation, in 1747. The chief of these were that of the steward of the stewardry of Fife, for which the Duke of Athole received £1200; that of the baillie of the regality of Dunfermline, for which the Marquis of Tweeddale received £2672, 7s.; that of the baillie of the regality of St Andrews, for which the Earl of Crawford received £3000; that of the regality of Aberdour, for which the Earl of Morton received £93, 2s.; that of the regality of Pittenweem, for which Sir John Anstruther received £282, 15s. 3d.; that of the regality of Lindores, for which Antonia Barclay of Colcerny received £215; and that of the regality of Balmerino, which had been forfeited to the Crown through Lord Balmerino's participation in the rebellion of 1745, and so was not valued.

See Sir Robert Sibbald's *History of Fife* (1710; new ed., Cupar, 1803); J. M. Leighton's *History of Fife* (3 vols., Glasgow, 1840); Thomas Rodger's *Kingdom of Fife* (2 vols., Cupar, 1861); Walter Wood's *East Neuk of Fife* (1862); M. F. Conolly's *Biographical Dictionary of Eminent Men of Fife* (Cupar, 1862); his *Fifiana* (Cupar, 1869); William Ballingall's *Shores of Fife* (1872); James W. Taylor's *Historical Antiquities of Fife* (2 vols., 1875); James Macdonald's 'Agriculture of Fife,' in *Trans. Highl. and Ag. Soc.* (1876); J. R. Walker's *Pre-Reformation Churches in Fifeshire* (1888); Sheriff A. Mackay's *History of Fife and Kinross* (1890); Chapman's *Handbook to Elie and East of Fife* (Elie, 1892); besides works cited under BALMERINO, BURNTISLAND, CELLARDYKE, CRAIL, DUNFERMLINE, DURA DEN, DYSART, FALKLAND, INCHCOLM, LINDORES, ISLE OF MAY, and ST ANDREWS.

Fife-Keith. See KEITH.

Fife Ness, a low headland in Crail parish, Fife, 2 miles NE of Crail town, 5 N by W of the Isle of May, and 16 NNE of North Berwick. It flanks the northern side of the entrance of the Firth of Forth, is the most easterly point in Fife, and terminates the tract popularly called the East Neuk of Fife. It has traces of a defensive wall running across it, and said to have been constructed by the Danes in 874 to cover an invasive debarkation; and it is subtended for a considerable distance seaward by a dangerous reef, noticed in our article on CARR.—*Ord. Sur.*, sh. 41, 1857.

Fife Railway, West of. See NORTH BRITISH RAILWAY.

Fiagh. See FIAG.

Figgate Burn. See DUNDDINGSTON.

Figgate Whins, a tract of laud in Duddingston parish, Edinburghshire, traversed and mainly drained by Figgate Burn. It was anciently a forest, where Sir William Wallace is said to have mustered his forces for the siege of Berwick, and Gibson of DURIE to have been pounced upon by Christy's Will—this latter a false version of the story. In 1762 it was sold for only £1500; and it now is partly the site of the widespread watering-place of Portobello, and partly the fertile tract extending south-westward thence to the eastern skirts of Arthur's Seat.

File. See BENFILE.

Fillan, a stream of Killin parish, W Perthshire, rising,

at an altitude of 2980 feet, on the northern side of BEN-LOY (3708 feet), close to the Argyllshire border. Thence it winds 11½ miles east-north-eastward and east-south-eastward, past Dalree and Crianlarich, along a glen called from it Strathfillan, till it falls into the head of Loch DOCHART, or rather expands into that loch, being thus the remotest head-stream of the river Tay. It is followed along all its lower course by the Callander and Oban railway. Near Crianlarich the West Highland railway crosses the Fillan by a viaduct having a stretch of over 300 feet in six spans, four of which are 45 feet and two 60 feet wide. This viaduct is built chiefly of Ben Cruachan marble, and in order to protect it from ice-floes and heavy floods a very strong V-shaped cutwater has been erected. Within ¼ mile of its left bank, and 2½ miles SSE of Tyndrum, stand the ruins of an Austin priory church, dedicated in 1314 to St Fillan by Robert Bruce as a thank-offering for the victory of Bannockburn. The square-shaped 'Bell of St Fillan,' of cast bronze, with double-headed dragonesque handle, lay on a gravestone here till 1798, when it was stolen by an English traveller. In 1869 it was restored to Scotland, and now is deposited in the Edinburgh Antiquarian Museum, where also now is the *quigrich* or silver head of St Fillan's crozier, carried to Canada in 1818, and returned by its hereditary keeper, Mr Alex. Dewar, to Scotland in 1877. This bell used to be rung during that curious superstitious rite according to which lunatics were brought to the neighbouring 'Holy Pool of Fillan,' and plunged in its waters just before sunset, then bound hand and foot, and left all night in the ruins beside what was known as 'St Fillan's Tomb.' If in the morning they were found still bound, the case was abandoned as hopeless; but if the knots were untied, it was deemed the merciful work of the saint, and the sufferers were quit for ever of their malady. Of St Fillan himself very little is known, except that he belonged to the close of the 5th century, is called *an Iobar* ('the leper'), was a disciple of Ailbe in Emly, and in the Irish calendar is said to have been of *Rath Ereann in Albon*, or 'the fort of the Earn in Scotland.' Some hagiologists, however, maintain that this leprous saint of Strathearn was distinct from him of Strathfillan, whom they assign to a century later.—*Ord. Sur.*, sh. 46, 1872.

Fillans, St, a village in Comrie parish, Perthshire, on the N bank of the river Earn, just below its efflux from Loch Earn, 13 miles W by N of Crieff, under which it has a post office with money order, savings bank, and telegraph departments. Both as to situation and structure one of the pleasantest villages in Scotland, it comprises a range of slated one-story houses, mantled with ivy and honeysuckle, an hotel, called the Drummond Arms, an Established and a Free church, a public school, and a curling club. St Fillans was erected into a *quoad sacra* parish in 1895 under the name Dunduru. On a green level plain here the St Fillans Highland Society, instituted in 1819, for twelve years held a famous annual meeting for athletic sports.—*Ord. Sur.*, sh. 47, 1868.

Finaglen or Finglen, a glen, traversed by a mountain burn, in Comrie parish, Perthshire, descending from Ben Bhan, 1½ mile north-north-eastward to Loch Earn, at a point 2 miles W by S of St Fillans.

Finart, an estate, with a mansion, in Row parish, Dumbartonshire. The mansion, standing on the E shore of Loch Long, 3 miles N of Garelochhead, is the seat of Edward Caird, Esq., a relative of John and Edward Caird, the former principal of Glasgow University, the latter Master of Balliol, Oxford. It has finely wooded grounds, and is overhung by a hill and mountain that command a superb view of Loch Long. Hill and mountain are often called Finart, but really consist of, first, Tom Buidhe (936 feet), 1 mile NE of the mansion, and, next, Ben Mhanarch (2328), culminating 9 furlongs ESE of that hill.—*Ord. Sur.*, sh. 38, 1871.

Finart, Argyllshire. See GLENFINART.

Finavon. See FINHAVEN.

Fincastle, a south-eastern district of Blair-Athole parish, Perthshire, extending 3½ miles along the N bank of the Tummel from the foot of Loch Tummel to Bon-

skeld House, and $1\frac{1}{2}$ mile along the S bank of the Garry from Blair-Athole village to Auldclune. Fincastle Burn flows through the midst to the Tummel, along a fertile narrow strath, and near its left bank stands Fincastle House, the seat and death-place of Sir Robert Gilmour Colquhoun, K. C. B. (1803-70), who for seven years served as Consul-General in Egypt. The district takes its name from having anciently contained no fewer than fifteen castles, vestiges of a number of which may still be seen; and it gives the title of Viscount to the Earl of DUNMORE. It has a post office under Pitlochry, 6 miles to the S. E.—*Ord. Sur.*, sh. 55, 1869.

Findhorn, a seaport village in Kinloss parish, NW Elginshire, at the right side of the mouth of Findhorn river, and on the point of a peninsula between Findhorn and Burghhead Bays. By road it is 5 miles N of Forres and $3\frac{1}{2}$ NE of Kinloss station on the Highland railway, this station being $9\frac{1}{4}$ miles W by S of Elgin and $27\frac{3}{4}$ ENE of Inverness. A branch line from Kinloss to Findhorn, opened in 1860, has now for some years been discontinued. The original town, which stood at least 2 miles westward of the present one, was destroyed by the drifting of the CULBIN Sands; the next one stood a mile NW, on ground now covered by the sea, and was swallowed in a few hours by the great inundation of 1701; and even the present town is so beset with surge-lashed sand-banks, that it, too, possibly may some day share their fate. A place of worship in it, used first as a dissenting meeting-house, and next as a chapel of ease, was built on the sand, and fell in Jan. 1843. The town, from its situation at the mouth of the Findhorn, known in Gaelic as the *Erne*, is commonly called by the Highlanders *Inververne*. It ranks as a burgh of barony; is the centre of an extensive fishery district between Buckie and Cromarty; and carries on some commerce in the export of salmon, grain, and other goods, and in the import of coals, groceries, and manufactured wares. It has a post office under Forres, a good harbour, a Free church, a girls' public school, and a public library. The harbour is partly natural, partly artificial, with a stone pier, two quays of hewn stone, and a breastwork connecting the pier with one of the quays; and has, in the shallowest part of the channel at its entrance, $10\frac{1}{2}$ feet of water in the lowest neap tide, and from 13 to 17 feet in spring tides. In 1894 the number of boats employed in the district was 384, of fishermen and boys 2012, of fish-curers 22, and of coopers 72; the value of the boats being £50,729, of the nets £37,935, and of the lines £6467. The following is the number of barrels of herrings salted or cured in different years:—(1866) 29,572, (1870) 16,311, (1880) 16,255, (1890) 22,885, (1894) 12,331; of cod, ling, or hake taken (1866) 20,779, (1873) 67,837, (1879) 56,191, (1880) 34,265, (1881) 15,255, (1891) 19,192, (1894) 8123. Pop. (1841) 806, (1861) 891, (1871) 701, (1881) 605, (1891) 562.—*Ord. Sur.*, sh. 94, 1878.

Findhorn, a river of Inverness, Nairn, and Elgin shires, rising in the southern extremity of Moy and Dalarossie parish, among the Monadhliath Mountains, $5\frac{1}{2}$ miles N by W of Laggan Bridge, and thence winding $62\frac{1}{2}$ miles north-eastward, till it falls into the Moray Firth at Findhorn village. In the first $7\frac{1}{2}$ miles of its course it bears the name of Abhainn Cro Chlach ('stream of the stone fold'); and a 13th century charter alludes to it as the Earn, so that *Findhorn* is possibly a corruption of *fionn-ear-an*, 'wan east-flowing river,' the greater part of its basin being still known as Strathdearn. It is joined by the Eskin, Moy Burn, the Divie, Muckle Burn, and numerous mountain torrents; it expands, between Forres and Findhorn village, into a triangular tidal lagoon, 2 miles long and $2\frac{3}{4}$ wide, called Findhorn Bay or Harbour, and again contracts to $2\frac{1}{2}$ furlongs at its mouth. Its scenery, alpine at first, then moderately mountainous, and finally lowland, exhibits almost every variety of picturesqueness, from the wildly grand to the softly beautiful, abounding in features of wood and rock, gorge and cliff, fertile valley and finely-contoured hill, and is not excelled, either in diversity of attraction or in aggregate richness, by the scenery of any equal

length of stream in Scotland. From 2800 feet above sea-level at its mossy source, it descends to 1627 at the Eskin's confluence, 950 at Findhorn Bridge, 580 at the Bridge of Dulzie, and 280 near Relugas House; and thus its current is impetuous in the upper, swift in the middle, and broad and placid in the lower reaches. Its volume varies greatly in time of drought and in time of heavy rain; and it is subject to such strong, sudden freshets as sometimes to roll down a wall-like wave of water with irresistible and destructive force along the narrow or contracted parts of its bed, and to overflow its banks and make a lake of all the lowland portions of its valley. In the Plain of Forres, over 20 square miles were so inundated by it in the memorable floods of Aug. 1829, that a large boat, in full sail, swept along its basin to within a few yards of the town. The Findhorn is still a fine salmon and trout river, though not what it was half a century since, when in a single day 360 salmon were taken from one pool. The Aviemore and Inverness section of the Highland railway crosses the Findhorn about 5 miles NW of Carrbridge station. The Findhorn traverses or bounds the parishes of Moy and Dalarossie, Cawdor, Ardcloch, Edinkillie, Forres, Dyke and Moy, and Kinloss; and in our articles on these, its various features of bridge, mansion, village, and town are noticed.—*Ord. Sur.*, shs. 73, 74, 84, 94, 1876-78. See chaps. ii.-x. of Sir Thomas Dick Lauder's *Moray Floods* (Elgin, 1830; 3d ed. 1873).

Findlater, an estate on the coast of Fordyce parish, Banffshire. It formerly belonged to the Ogilvies of Deskford, and gave them the title of earl from 1638 till 1811. That title expired at the death of the seventh Earl of Findlater and fourth of Seafield, who was succeeded in his estates and in the earldom of Seafield by his cousin. Findlater Castle stood on a peninsulated rock overhanging the sea, 2 miles E of Cullen, and 4 W by N of Portsoy, and, with permission of the Crown, was fortified in 1445 by Sir Walter Ogilvie, knight, of Auchleven. It was one of the places which refused to receive Queen Mary on her visit to the North (1562), and is now a curious picturesque ruin. See CULLEN.—*Ord. Sur.*, sh. 96, 1876.

Findochty, a fishing village in Rathven parish, Banffshire, $3\frac{1}{2}$ miles W by N of Cullen, under which it has a post office, with money order, savings bank, and telegraph departments. Founded in 1716 by a colony of fishermen from Fraserburgh, it has a public school and 132 boats engaged in fishing. Its sheltered harbour, with 24 feet depth of water, and 270 feet of width at the entrance, was greatly improved by the Fishery Commissioners in 1832-33. Near it is a medicinal spring situated within high water mark. Findochty was formed into a special water-supply district in 1879. Pop. (1881) 936, (1891) 1148.—*Ord. Sur.*, sh. 96, 1876.

Findogask. See GASK.

Findon, an estate in Urquhart and Logie-Wester parish, Ross-shire, on the SE shore of Cromarty Firth, 5 miles NE of Conan Bridge. It is traversed by a burn of its own name, which makes a fine cascade of 20 feet in a yawning bosky gorge.

Findon, a farm in Gamrie parish, NE Banffshire, 5 furlongs S by W of Gardenstown. Its rocks are famous for great abundance and variety of fossil fish, ganoids chiefly, many of which were figured and described by Agassiz.

Findon or Finnan, a fishing village in Banchory-Devenick parish, Kincardineshire, $1\frac{1}{2}$ mile NE of Portlethen station, this being 8 miles S by W of Aberdeen. It is a little place, of no more consequence than other fishing villages on the E coast; but it has gained celebrity for having been the first place to prepare the dried fish called from it Findon or Finnan haddocks. It has a public school.—*Ord. Sur.*, sh. 67, 1871.

Findrack, an estate, with an old mansion, in Lumphanan parish, Aberdeenshire, $2\frac{1}{2}$ miles ENE of Lumphanan station. It was sold in 1670 by Sir Robert Forbes of Learney to the Frasers; and its present owner is William N. Fraser, Esq.

Findrassie, an estate, with a mansion, in Spynie parish, Elginshire, $2\frac{1}{2}$ miles NW of Elgin. It belonged,

from the first half of the 16th century, to a branch of the Leslies, descended from Robert, youngest son of the third Earl of Rothes; but was sold in 1825 by Sir Charles Leslie, fifth Bart. since 1625.

Fine. See FYNNE.

Finella. See FENELLA.

Finfan, a farm in Urquhart parish, NE Elginshire, 1½ mile WSW of Garmouth. It has a mineral well, of similar quality to Strathpeffer spa, and a neat cottage was built at it by General Sir James Duff for supplying the water to occasional visitors.

Fingal's Cave. See STAFFA.

Fingal's Fort. See DUN FIONN.

Fingal's Griddle, an ancient Caledonian monument in Ardnamurchan parish, Argyllshire. It is situated on Ormsaigmore, and consists of large stones in the form of a rude altar, surrounded by remains of a circle of smaller stones.

Fingal's Oak, a famous old tree in Ardchattan parish, Argyllshire, near Barcaldine House. It girthed 29 feet (only half its original size) in 1835, and continued so to decay and crumble, that in 1844 it measured but 23 feet in girth.

Fingal's Seat. See AIT-SUIDBE-THUIN.

Fingal's Stair. See BENEADDAN.

Fingask, an estate, with a mansion of 1834, in Daviot parish, Aberdeenshire, 2 miles W of Old Meldrum. A small enclosure on the estate is thought to have comprised a pre-Reformation chapel.

Fingask or Marlee, a loch in the SE of Kinloch parish, NE Perthshire. Lying 139 feet above sea-level, it has an utmost length and breadth of 3 and 2 furlongs, is connected by rivulets with Black and White Lochs of similar extent in Blairgowrie parish, and sends off a stream ¼ mile south-south-westward to Lunan Burn. It is notable for having furnished from its bed great quantities of manurial clay or marl.—*Ord. Sur.*, sh. 48, 1868.

Fingask Castle, a fine old mansion in Kilspindie parish, Perthshire, 3½ miles NNW of Errol station. It stands on the W side of a wooded glen, 200 feet above the Carse of Gowrie, and by Dr Chambers is described as an irregular but picturesque structure, comprising a tall front tower of 1594; a still older central portion; an addition of about 1675, with pepper-box turrets at the angles; and a modern dining-room, conservatory, etc. On one side is a winding avenue of pines and sycamores; on the other a beautiful garden, with a terrace beyond, that commands a magnificent view of the Firth of Tay, the Sidlaws, and the Grampians. Within are portraits of the Old Chevalier, Clementina his wife, Prince Charles Edward, his brother Henry, Cardinal of York, the poet William Hamilton of Bangour, and many members of the Threipland family, which seems to have migrated from Threipland in Kilbucho parish, Peeblesshire, about the beginning of the 17th century, and which in 1672 bought Fingask from a cadet of the Bruces of Clackmannan, two years later adding thereto the adjacent estate of KINNAIRD. Patrick Threipland, becoming provost of Perth in 1665, was knighted in 1674 for diligence in suppression of conventicles, was made a baronet of Nova Scotia in 1687, and in 1689 died a prisoner in Stirling Castle. His son, Sir David (1666-1746), in 1715 was one of the first to join the standard of the Earl of Mar, with his eldest son and namesake. The latter was captured whilst crossing the Firth of Forth under MacIntosh of Borlum, but effected a daring escape from Edinburgh Castle. The Old Chevalier passed the night of 7 Jan. 1716 in the 'state-room' of Fingask, and was again there in the following month; in March Sir David was a fugitive, and his castle was occupied by a party of Government dragoons. The forfeited estate, however, was leased by Lady Threipland from the York Building Company, who had bought it for £9606. In the '45 the eldest son, David, fell at Prestonpans; but the youngest, Stuart (1716-1805), went through the entire campaign, for some time shared in the Prince's wanderings, and at length escaped to France, disguised as a bookseller's assistant, Fingask meantime having been plundered by dragoons. Return-

ing in 1747, he set up as a physician in Edinburgh, and in 1783 bought back the estate for £12,207, whilst to his son, Patrick (1762-1837), the baronetcy was restored in 1826. His son, the fifth baronet, Sir Patrick-Murray Threipland (1800-82), dying without issue, was succeeded by his cousin, William Scott Kerr, Esq., who holds also the estate of Tofingall in Caithness, and who has assumed the name of Murray Threipland in accordance with the last baronet's will.—*Ord. Sur.*, sh. 48, 1868. See Robert Chambers, LL.D., *The Threiplands of Fingask* (Edinb. 1880).

Fingland, a huru in Traquair parish, Peeblesshire, rising just within Yarrow parish, Selkirkshire, at an altitude of 1300 feet, and flowing 4½ miles north-by-westward till it falls into Quair Water a little above Traquair village.

Fingland, a burn in Eskdalemuir parish, NE Dumfriesshire, running to the White Esk at a point ½ mile NNE of Davington Free church. A cascade on it, called Wellburnspout, makes a leap of 56 feet.

Fin Glen, a glen in the W of Campsie parish, Stirlingshire, traversed by a burn which, rising in the S of Killearn parish, on the NE shoulder of Earl's Seat (1894 feet), runs 4½ miles south-south-eastward, till, near Campsie Glen station, it unites with the Pow and Kirkton Burns to form the GLAZERT. Though somewhat less picturesque than Kirkton Glen, Fin Glen has a larger volume of water and two very beautiful waterfalls; whilst, like Kirkton Glen, it presents features of gorge, crag, and wood somewhat similar to those of the Trossachs.—*Ord. Sur.*, sh. 31, 1866.

Finglen, Perthshire. See FINAGLEN.

Finhaven or Finavon (anc. *Fothnevyyn* = Gael. *fodha-fainn*, 'place under a hill'), a ruined castle in Oathlaw parish, Forfarshire, on a rising ground at the influx of Lemno Burn to the South Esk, 5¼ miles NNE of Forfar and 8 WSW of Brechin. A stately five-storied tower, 86 feet high, larger but plainer than Edzell, it dates in its present condition from the latter half of the 16th century. 'The N wall is yet entire, but the S one is rent through two-thirds of the length of the building, and on some frosty morning at no distant date will inevitably crumble to pieces. According to Thomas the Rhymer's prediction:

'When Finhaven Castle rins to sand,
'The world's end is near at hand.'

The ruin is a very storehouse of strange memories. Hither David, third Earl of Crawford, and his foeman hut brother-in-law, Ogilvy of Inverquhar, were brought, sore wounded, from the battle of ARBEROATH (1446). The Earl died after a week of lingering torture; and scarce was he dead, when the Countess hurried to Inverquhar's chamber, and smothered him with a pillow, thus avenging her husband by murdering her own brother. 'Earl Beardie' or 'the Tiger' Earl of Crawford fled to Finhaven from the rout of BRECHIN (1452), and, on alighting from his horse, exclaimed that gladly would he pass seven years in hell to gain the honour of Huntly's victory. Eleven months later he was pardoned by James II., who here received a sumptuous entertainment; but the King, having sworn in his wrath 'to make the highest stone of Finhaven the lowest,' must needs, to keep his word, go up to the roof of the castle and thence throw down a stone that was lying loose on the battlements. On the Covin Tree of Finhaven, grown from a chestnut dropped by a Roman soldier, Earl Beardie hanged Jock Barefoot, the Careston gillie who had dared to cut a walking-stick therefrom, and whose ghost oft scares the belated wayfarer. The Covin Tree was levelled to the ground in 1760; but, in the secret chamber of Glamis, Earl Beardie still drees his weird, to play at cards until the clap of doom. In 1530 David, eighth Earl, was for thirteen weeks imprisoned in the dungeons of Finhaven by his son, the Wicked Master, who eleven years after was stashed by a Dundee cobbler for taking from him a stoup of drink. David, tenth Earl, in 1546 married Margaret, daughter of Cardinal Beaton. The nuptials were solemnised at

Finhaven with great magnificence, in presence of the Cardinal, who that same month was murdered at St Andrews. Held by the Lindsays since 1375, the estate was sold in 1629 by the fourteenth Earl of Crawford to his cousin, Lord Spynie. Later it was owned by the Carnegies, till in 1775 it was sold for £19,500 to the Earl of Aboyne. It was sold again in 1805 for £45,000 to a Mr Ford, and was re-sold in 1815 for £65,000 to a subsequent Earl of Aboyne, and belongs now to Col. Charles Greenhill Gardyne. Wooded Finhaven Hill extends along all the south-eastern border of Oathlaw parish, and some way into Aberlemno. Culminating at a height of 751 feet above sea-level, it commands a beautiful view of Strathmore, and is crowned, on its north-eastern shoulder, with a vifrifed fort, in the form nearly of a parallelogram 380 feet long and 112 at the broadest. Anciently there was a parish of Finhaven, divided now between Oathlaw and Aberlemno; and well on into the 19th century the former parish was oftener called Finhaven than Oathlaw. The church, standing 1 mile E of the castle, was built in 1380, and fell into disuse about the beginning of the 17th century. In its side aisle, however, the thirteenth Earl of Crawford was buried as late as 1622, and this aisle was left standing till 1815. In 1849 the ancient encaustic pavement of the church was laid bare, and two monuments were found at a considerable depth, one being of a robed ecclesiastic.—*Ord. Sur.*, sh. 57, 1868. See Chap. iv. of Andrew Jervise's *Land of the Lindsays* (Edinb. 1853).

Finik, St, an ancient chapelry and an extinct hamlet in Bendochy parish, Perthshire, 2½ miles NE of Blairgowrie. The chapelry included the tract above the confluence of the Erich and the Isla.

Finlagan, a hill-girt loch in Killarrow and Kilmeny parish, Isle of Islay, Argyllshire, 4½ miles W by N of Port Askaig. Measuring 1 by ¼ mile, it sends off a rivulet of its own name to salt-water Loch Gruinard, and abounds with trout and salmon, the former averaging ½ lb. each. An islet in it is crowned by the ruins of the castle and chapel of the Macdonalds, Lords of the Isles; and on its shore are traces of a pier for communicating with the castle.

Finlarig, a picturesque ruined castle in Killin parish, Perthshire, at the head of Loch Tay, 1½ mile N by E of Killin village. An ancient seat of the Earl of Breadalbane's ancestors, it figures in Sir Walter Scott's *Fair Maid of Perth* as the death-place of the chief of the clan Quhele, and is a narrow three-story ivy-clad pile, with a square tower at one corner. Adjoining it is the burying-vault of the Breadalbane family; and around is an undulating park with grand old trees. The scene of a sanguinary fight between the Campbells and the Macdonalds is in its neighbourhood.—*Ord. Sur.*, sh. 46, 1872.

Finlas, a lake in Straiton parish, Ayrshire, 5 miles S by W of Dalmellington. Lying 840 feet above sea-level, it extends 1½ mile from NW to SE, has a varying width of ¾ furlong and 2¾ furlongs, is fed from Loch DERCLACH at its head, and from its foot sends off Garpel Burn 1½ mile north-eastward to Loch Doon. Boats are kept on it, and the trout fishing is good.—*Ord. Sur.*, sh. 8, 1863.

Finlas, a streamlet in Luss parish, Dumbartonshire, rising at an altitude of 1800 feet, and running 4¾ miles south-eastward along an alpine glen, called from it Glenfinlas, and eastward and north-by-eastward through low, rich, wooded grounds, till it falls into a baylet of Loch Lomond 3 furlongs SW of Rosssdu House.—*Ord. Sur.*, sh. 38, 1871.

Finlay's Castle, a remnant of an old castle in Nairn parish, Nairnshire. See NAIRN.

Finlay's Mire. See MONQUHITTER.

Finlayston House, a mansion in the NW corner of Kilmalcolm parish, Renfrewshire, near the S shore of the Clyde, 1½ mile W by N of Langbank station, and 3 miles E by S of Port Glasgow. Partly an edifice of the latter half of the 15th century, it was long a residence of the Earls of Glencairn; and, under the fifth or 'Good' Earl, was the scene of a notable celebration of the Lord's Supper by John Knox (1556). It is also associated with the name of Alexander Montgomery, a

poet who flourished in the time of James VI., and wrote *The Cherrie and the Slae*; and it commands a brilliant view along the Clyde.—*Ord. Sur.*, sh. 30, 1866.

Finnan, a stream in the Inverness-shire section of Ardnamurchan parish, rising at an altitude of 1586 feet above sea-level, close to the Kilmallie border, and thence running 5¼ miles south-south-westward to the head of Loch Shiel, along a narrow rocky mountain glen, called from it Glenfinnan. The glen, toward the mouth of the stream, opens in four directions, somewhat in the manner of four divergent streets; and, terminating at the head of the loch in a small plain, is crossed there by a road leading 35 miles westward from Banavie, up Loch Eil, to Arasaig. This was the scene of the unfurling of Prince Charles Edward's banner at the commencement of the Rebellion of 1745, an event 'sung finely by Professor Aytoun in his *Lays of the Cavaliers*. 'The spot,' says Hill Burton, 'adopted for the gathering was easily accessible to all the garrisons of the Highland forts. It was only 18 miles distant from Fort William, and almost visible from the ramparts; but when a general gathering in force was intended, the presence of the forts—well adapted as they were to keep down petty attempts—was no impediment to it. The 19th of August was the day fixed for the momentous ceremony; but the Prince's faith in his destiny was again tried, for, when he arrived, the glen was silent and deserted, save by the ragged children of the hamlet, who glared with wondering eyes on the mysterious strangers. After two hours thus spent, the welcome sound of a distant bagpipe was heard, and the Camerons, between seven and eight hundred strong, appeared on the sky-line of the hill. Before the group dispersed in the evening, the number assembled amounted to 1500 men. The post of honour on the occasion was given to the old Marquis of Tullibardine, heir to the dukedom of Athole, who, like his young master, had come to "regain his own." Prince Charles's Monument here, a tower with a Gaelic, Latin, and English inscription, was founded in 1815 by Alex. Macdonald of Glenaladale, whose namesake lodged the Prince on the night preceding the gathering, and whose descendant, John Andrew Macdonald, Esq. of Glenaladale (b. 1837; suc. 1870), has his seat at Glenfinnan. Glenfinnan has also a post office under Fort William, an inn, a public school, with accommodation for 30 children, and the Roman Catholic church of SS. Mary and Finnan, an Early English edifice of 1873. St Finnan's green islet, at the head of Loch Shiel, has been the burial-place of the Macdonalds since their first settlement in these lonely glens; and a square bronze bell—one of three to be found in Scotland, and as old, it may be, as Columba's day—still rests on the altar slab of its ruined chapel. See SHIEL, LOCH.—*Ord. Sur.*, sh. 62, 1875.

Finnan, Kincardineshire. See FINDON.

Finnart, a shooting-lodge in Fortingal parish, NW Perthshire, on the S shore of Loch Rannoch, just below its head, 10 miles W by S of Kinloch Rannoch. The house is beautifully situated on a promontory jutting out into Loch Rannoch and commanding beautiful views. The shootings form part of the Robertson-Luxford property and extend to about 18,000 acres, capable of yielding in a good season about 900 brace of grouse, besides a heavy bag of blackgame, hares, rabbits, roe-deer, etc. Red-deer are also sometimes met with. A little SW of the lodge is an Established mission chapel.—*Ord. Sur.*, sh. 54, 1873.

Finnart, Dumbartonshire. See FINART.

Finnich or Carnock Burn. See CARNOCK.

Finniiston. See GLASGOW.

Finnyfold or Whinnyfold, a fishing hamlet in the S of Cruden parish, Aberdeenshire, 2½ miles SSE of the church.

Finstown, a village in Firth and Stenness parish, Orkney, at the head of Firth Bay, 6 miles WNW of Kirkwall. It has a post office, with money order, savings bank, and telegraph departments; horse and cattle fairs on the third Monday of every month; and a pier, 500 feet long, where an extensive trade is carried on in coal, lime, manures, grain, etc.

Fintray, a village and a parish of SE Aberdeenshire. The village, Hatton of Fintray, stands within 3 furlongs of the Don's left bank, $3\frac{1}{2}$ miles E by N of Kintore, and $1\frac{1}{2}$ mile NNE of Kinaldie station on the Great North of Scotland, under which Fintray has a post office.

The parish is bounded NE and E by New Machar, S by Dyce, Kinnellar, and Kintore, and W and NW by Kintore and Keithhall. Rudely resembling a triangle in outline, with northward apex, it has an utmost length from N by W to S by E of 4 miles, an utmost width from E to W of $5\frac{1}{2}$ miles, and an area of 7389 acres, of which $69\frac{3}{4}$ are water. The Don, winding $7\frac{1}{2}$ miles east-by-southward, from just below Kintore to opposite the manse of Dyce, roughly traces all the south-western and southern boundary; and, where it quits the parish, the surface sinks to 116 feet above sea-level, thence rising, in gentle knolls and rounded eminences, to 300 feet at Woodhill, 245 at the parish church, 325 near Cairnie, and 415 at the Hill of Tillykerrie in the farthest N. Granite and gneiss are the prevailing rocks, traversed by veins of coarsish limestone; and the soil of the haughs along the Don is a rich alluvium, of the grounds above them is dry and early on a gravelly subsoil, and elsewhere ranges from peat earth and blue gravelly clay to yellow loam of a more productive nature. Eleven-fourteenths of the entire area are regularly or occasionally in tillage, about 660 acres are under wood, and the rest is either pastoral or waste. Cothall Mill here is a woollen factory with steam and water power, and employing a large number of hands. Patrick Copland, LL.D. (1749-1822), professor of natural philosophy at Aberdeen, was a native, his father being parish minister. Fintray House, near the bank of the Don, 7 furlongs E of the village, is a large modern mansion in the Tudor style; the estate was acquired in 1610 by the first of the Forbuses of CRAIGIEVAR, having belonged to the Abbey of Lindores in Fifeshire from 1224 down to the Reformation. Another residence is DISBLAIR Cottage. Fintray is in the presbytery and synod of Aberdeen; the living is worth £254. The church, at the village, is a neat and substantial structure of 1821, containing 800 sittings; and 2 public schools, Disblair and Hatton, with respective accommodation for 86 and 140 children, have an average attendance of 42 and 92, and grants amounting to £39, 9s. and £88. Pop. (1801) 886, (1831) 1046, (1861) 1003, (1871) 1108, (1881) 1032, (1891) 999.—*Ord. Sur.*, sh. 77, 1873.

Fintry, a hamlet and a parish of central Stirlingshire. The hamlet stands, 400 feet above sea-level, on the left bank of Endrick Water, 5 miles ESE of Balfroon, 16 WSW of Stirling, and 17 N by E of Glasgow, under which it has a post office. Gonachan hamlet lies 5 furlongs E by S of it, and Newtown hamlet $\frac{3}{4}$ mile WNW.

The parish is bounded NW by Balfroon, NE by Gargunnoch, E by St Ninians, SE by Kilsyth, S by Campsie, SW by Strathblane, and W by Killearn. Its utmost length, from E to W, is $6\frac{1}{2}$ miles; its breadth, from N to S, varies between $2\frac{1}{2}$ and 5 miles; and its area is 13,881 acres, of which 109 are water. From its source (1600 feet) upon Campsie Muir, in the S of the parish, the river CARRON flows 6 miles east-north-eastward, at first along the boundary with Campsie, but chiefly through the south-eastern interior, till it passes off eastward into Kilsyth. ENDRICK Water, gathering its head-streams from the N of Fintry and the SW of Gargunnoch, winds $3\frac{1}{2}$ miles south-eastward and southward along the Gargunnoch and St Ninians border, then, bending sharply, continues $5\frac{1}{2}$ miles west-by-northward, and passes off into Balfroon. About a mile below its westerly bend, it hurls itself over a precipice 94 feet high, and makes a superb cascade—the 'Loup of Fintry.' DUNGOIL (1396 feet) and Gartcarron Hill (1006) form the 'divide' between these streams, which at one point approach within 7 furlongs of each other—the Carron running eastward to the Firth of Forth, and the Endrick westward to Loch Lomond, and so to the Firth of Clyde. The surface mainly consists of soft green hills, part of the range that stretches from Stirling to Dumbarton—the Fintry Hills in the N, in the S the Campsie Fells.

It declines along the Carron to 750 feet above sea-level, along the Endrick to 270; and the highest points in the parish are Stronend (1676 feet) near the north-western, Meikle Bin (1870) near the south-eastern, and Holehead (1801) exactly on the southern, border. The only inhabited parts are the two intersecting valleys, watered by respectively the Carron and the Endrick. The Carron's valley, so far as within the parish, is mostly meadow, and has few inhabitants. The Endrick's valley, narrow at its eastern extremity, opens gradually to a width of about a mile, and partly exhibits, partly commands, a series of richly picturesque scenes. Cultivated fields, interrupted by fine groves, along the river's banks, hedgerows and plantations around Culcreuch on the N side, and some well-arranged clumps of trees on the skirts and shoulders of the hills to the S, combine to form an exquisite picture. The flanking hill-ranges, occasionally broken and precipitous, wreathed sometimes in clouds, and always wearing an aspect of loveliness and dignity, produce an imposing effect along the entire reach of the valley; and the summits of Ben Lomond and other mountains of the frontier Grampians, seen in vista away to the W, present a noble perspective. In a hill called the Dun, near the hamlet, is a range of basaltic pillars. Seventy pillars are in front, some of them separable into loose blocks, others apparently unjointed from top to bottom. Some are square, others pentagonal or hexagonal; and they rise perpendicularly to a height of 50 feet. At the E end of the range they are divided by interstices of 3 or 4 inches; but as the range advances they stand closer and closer, till at last they are blended in one solid mass of honeycombed rock. Trap also constitutes most of the other hills, which often have such forms or projections as add no little to the beauty of the scenery. Granite occurs in detached fragments, and coal in several small seams; in Dun Hill are extensive beds of red ochre; and fire stone, jasper, and fine specimens of zeolite are found among the rocks. The soil, in most parts of the valleys, is light and fertile; but of the entire area only 1020 acres are in tillage and 100 under wood, the rest of the land being either pastoral or waste. Fintry or Graham's Castle, the ancient stronghold of the Grahams of Fintry, stood near the left bank of Endrick Water, on the St Ninians side, $3\frac{1}{2}$ miles E of Fintry hamlet, and now is represented by mere vestiges. Sir Daniel Macnee (1806-32), portrait painter, and president of the Royal Scottish Academy, was a native. Culcreuch, which has been noticed separately, is the only mansion; and its owner (Mr J. C. Dun Waters) and the Duke of Montrose divide between them nearly all the property in the parish. Fintry is in the presbytery of Dumbarton and synod of Glasgow and Ayr; the living is worth £165. The church, situated at the hamlet, was built in 1823, and is a neat edifice, with a W tower, and contains 500 sittings. A public school, with accommodation for 90 children, has an average attendance of 54, and a grant amounting to £60, 4s. Valuation (1860) £4532, (1882) £5329, 14s. 6d., (1892) £4602, 11s. 7d. Pop. (1801) 958, (1831) 1051, (1851) 823, (1861) 685, (1871) 499, (1881) 414, (1891) 357.—*Ord. Sur.*, shs. 31, 30, 39, 38, 1866-71.

Fintry, an estate in Mains and Strathmartine parish, Forfarshire, 3 miles NNE of Dundee. From the Earls of Angus it passed by marriage to the Grahams of Fintry; was held by them for several centuries; contained CLAVEHOUSE, the family seat of the notorious Viscount Dundee; and went eventually to Erskine of Linlathen. Fintry Castle, built in 1311 on the steep bank of a rivulet amidst a dense mass of lofty trees, comprised a quadrangle, with a strong tower pierced by a principal gateway facing W; had a passage over that gate, whence missiles could be showered upon assailants; was defended by several outworks; and is now extinct. The mausoleum of the Grahams is still in the parish churchyard.

Fintry, a small bay on the W side of Big Cumbræe island, Buteshire. It is a mere incurvature 5 furlongs long; but it has a fine beach of yellow sand nearly 300

yards broad, overlooked by a succession of pleasant natural terraces; and so it is well situated to become some day the site of a watering-place.

Finzean House, a mansion in Birse parish, S Aberdeenshire, 7 miles SE by E of Aboyne station, this being 32½ miles W by S of Aberdeen. A fine old building, forming three sides of a quadrangle, it stands amid large and richly wooded grounds. Its owner is Robert Farquharson, Esq., M.D., F.R.C.P. (b. 1837; suc. 1876), M.P. for West Aberdeenshire since 1880.—*Ord. Sur.*, sh. 66, 1871.

Fiodhaig. See FIAG.

Fionaven. See FOINAVEN.

Fionnachair or Fincharrn, a ruined fortalice in Kilmichael-Glassary parish, Argyllshire, on the steep SE margin of Loch Ave, 2½ miles ENE of Ford, near the loch's head. A small but strong keep, it is said by tradition to have belonged to a chieftain called Mac Mhic Jain, and to have been burned by a vassal whose wife he had wronged, and by whom he himself was slain.

Fionn Loch, a lake on the mutual border of Gairloch and Lochbroom parishes, NW Ross-shire, 3¼ miles N of Letterewe on Loch Maree, and 6 E of Poolewe. Lying 559 feet above sea-level, and 2238½ acres in area, it extends 5½ miles north-north-westward, has a varying width of ½ furlong and 1¼ mile, teems with trout, and sends off the Little Greinord 5½ miles north-by-eastward to the head of GREINORD Bay.—*Ord. Sur.*, sh. 92, 1881.

Firdon, a rivulet running to the sea in Applecross parish, Ross-shire.

Firhall, an estate, with a mansion, in Nairn parish, Nairnshire, on the left bank of the river Nairn, ¾ mile S of the station of that name.

Firkin Point, a small headland in Arrochar parish, Dumbartonshire, on the W side of Loch Lomond, 2¼ miles SSE of Tarbet.

Firmouth, a lofty mountain in Glentanner, on the S border of Aberdeenshire.

Firth, a bay in the Mainland of Orkney. Opening on a line westward from the String, or the sound between the mainland and Shapinshay, it measures 2¼ miles from N to S across the entrance, penetrates 3¾ miles west-south-westward, and contracts to a width of 11 furlongs, but re-expands presently to a width of 15. It is noted for its oyster beds; contains, in its upper part, the islets of Damsay and Grimbister Holm; sends off, from its NW corner, the little bay of Isbister; and is bounded on the lower reach of its northern side by Rendall parish, of its southern side by Kirkwall or St Ola parish.

Firth, a parish in the mainland of Orkney, bounded N by Rendall parish, E by Firth Bay and Kirkwall parish, S by Orphir and Stenness, and W by Harray. It includes the islets of Damsay and Grimbister Holm; contains FINSTOWN village; and is united to STENNESS. The united parish of Firth and Stenness, in its SW or Stenness portion, communicates by a bridge with Stromness parish, and is largely bounded by Stenness Loch and Hoy Sound. Its greatest length, from NE to SW, is 8½ miles; and its greatest breadth is 4½ miles. The shores of the united parish are undulating and fertile; but the interior consists largely of moor and hill, covered with heath and peat-moss. Between 1841 and 1879, however, the late Mr Robert Scarth of BINSARTH did much in the way of reclaiming, enclosing, draining, liming, and planting—improvements described at length in pp. 48-51 of *Trans. Highl. and Ag. Soc.* (1874). A lake and a singular Caledonian monument are noticed in our article on STENNESS. This parish is in the presbytery of Cairston and synod of Orkney; the living is worth £208. There are 2 parish churches, that of Firth built in 1813, and that of Stenness (*q. s.*) in 1793. There are also a U.P. church of Firth and Free churches of Firth and Stenness; and 2 public schools, Firth and Stenness, with respective accommodation for 160 and 121 children, have an average attendance of 113 and 59, and grants of £129, 13s. 10d. and £76, 5s. 7d. Valuation of Firth and Stenness (1881) £1752, 10s. 10d.; (1891) £3061, 15s. Pop. (1881) 1362, (1891) 1325.

Fishcross, a village near Sauchie in the detached portion of Clackmannan parish until 1891, when it with this detached portion was transferred to the parish of Alloa, Clackmannanshire. It is 2 miles NNE of the town of Alloa. Pop., together with Sauchie, (1871) 419, (1881) 320, (1891) 484.

Fisherie, a hamlet in King Edward parish, NW Aberdeenshire, 8 miles NNE of Turriff, under which it has a post office.

Fisherrow. See MUSSELBURGH.

Fisher-ton, a hamlet and a *quoad sacra* parish in Maybole parish, Ayrshire. The hamlet lies near the coast, 1½ mile SW of the Heads of Ayr, and 6 miles SW of Ayr, its station and post-town. The parish is in the presbytery of Ayr and synod of Glasgow and Ayr; the minister's stipend is £168. The church was originally a chapel of ease, and was preceded by a preaching station commenced about 1820. Pop. (1871) 609, (1881) 609, (1891) 598.—*Ord. Sur.*, sh. 14, 1863.

Fishertown, Banffshire. See CULLEN.

Fish-Holm, a small island in Delting parish, Shetland, 3 miles S of the southern extremity of Yell.

Fishie. See FESHIE.

Fishlin, a small island in the N of Shetland, 6 miles S of the southern extremity of Yell.

Fishwick, an ancient parish of SE Berwickshire, united to Hutton in 1614. Its small, long, narrow church, standing close to the left bank of the Tweed, 7 furlongs above the Union Chain Bridge, and 5½ miles WSW of Berwick, belonged for some time to the monks of Coldingham, and is now a picturesque ruin. The ancient cemetery lies around the ruin, and is still occasionally in use.

Fishwives' Causeway. See DUDDINGSTON.

Fitch, a village in the S of Shetland, 3½ miles from its post-town, Lerwick.

Fitful Head (Old Norse *fit-fjall*), a large bold headland in Dunrossness parish, Shetland, flanking the NW side of Quendale Voe, 6 miles NW of Sumburgh Head. It rises to a height of 923 feet; is seen at a great distance by vessels approaching from the SW; and consists chiefly of clay slate. In the *Pirate* Scott fixes here the abode of the prophetess, Norna.

Fithie, a beautiful lake (3½ × ½ furl.), with wooded shores, in Forfar parish, Forfarshire, 1½ mile ENE of the town. It contains perch and pike, and gives very good sport, but is not open to the public, though a limited number of permits are given on application to the proprietor. An object of interest near at hand is the Priory of Restennet.

Fithie, a rivulet of SW Forfarshire. It rises on Balcallo Hill at an altitude of 800 feet above sea-level, and running 8 miles south-eastward, through or along the borders of Tealing, Muirros, Dundee, and Monifieth parishes, falls into Dichty Water, 1½ mile above that stream's entrance to the Firth of Tay. It makes, in its lowermost reach, valuable alluvial deposits on its banks.—*Ord. Sur.*, shs. 48, 49, 1868-65.

Fittick, a place in Nigg parish, Kincardineshire, on Nigg Bay, 1¼ mile SE of Aberdeen. It was the site of an ancient church, St Fittick's, now extinct; and it once gave name to Nigg Bay.

Fitty, a lake on the mutual border of Dunfermline and Beath parishes, Fife, 3 miles NE of Dunfermline town. It measures 1 by ¼ mile; is rather shallow, and of tame aspect; receives a stream of 3½ miles in length of run from the Saline Hills; sends off Lochfitty Burn 4 miles east-north-eastward to the Orr; and contains pike, perch, and mussels.—*Ord. Sur.*, sh. 40, 1867.

Fitty, a hill in the W of Westray island, Orkney. The highest part of a range, called elsewhere Skea and Gallo, it rises to the height of 652 feet above sea-level, and was used in 1821 as a station of the Trigonometrical Survey.

Five Mile House, a hamlet in Liff and Benvie parish, Forfarshire, 5 miles NW of Dundee, under which it has a post office.

Fladda or Fladday, an island of Portree parish, Inverness-shire, in Raasay Sound, 4 miles E of the nearest

part of Skye, and 9 NE of Portree town. It measures $1\frac{1}{2}$ by $\frac{1}{2}$ mile, and is separated from Raasay only by a narrow strait, which is dry at half-tide. Pop. (1861) 45, (1871) 54, (1881) 54, (1891) 51.

Fladda, an island of South Uist parish, Outer Hebrides, Inverness-shire, immediately N of Rona island, and $2\frac{1}{2}$ miles SE of the nearest part of North Uist island. It measures $4\frac{1}{2}$ miles in circumference. Pop. (1861) 48, (1871) 76, (1881) 87, (1891) 76.

Fladda, a small island of Barra parish, Outer Hebrides, Inverness-shire, 2 miles S of Vatersay.

Fladda, the northernmost of the Treshinish isles in Kilninian and Kilmore parish, Argyllshire, 3 miles SW of Treshinish Point, a north-western extremity of Mull. Its surface is flat and monotonous.

Fladda or Pladda, an islet of Jura parish, Argyllshire, near Easdale. A lighthouse on it shows a fixed light visible at the distance of 11 nautical miles, red towards the Bogha-Nuadh rock, and white towards the mainland and channel to the S, but masked in other directions.

Fladda, a flat islet in the NW extremity of Harris parish, Outer Hebrides, Inverness-shire, in the mouth of Loch Reasort.

Fladda, an uninhabited pastoral islet of Kilmuir parish, Inverness-shire, $4\frac{1}{2}$ miles SE of Aird Point in Skye.

Fladdachuan, an uninhabited pastoral islet of Kilmuir parish, Inverness-shire, 6 miles NW of Aird Point in Skye. It measures $\frac{3}{4}$ mile in length and 300 yards in average breadth; is clothed with remarkably fine grass; had anciently three burying-places; and also, till a recent period, retained nine stones of an ancient Caledonian stone circle. A one-inch diameter ring, of plaited gold wires, was found in a moss here, and bought for the Edinburgh Antiquarian Museum in 1851.

Fladbister, a hamlet in Dunrossness parish, Shetland, 8 miles S of Lerwick.

Flanders Moss, a tract of low, flat ground in the NE of Drymen parish, SW Stirlingshire, on the southern bank of the Forth. Lying from 40 to 60 feet above sea-level, it is believed to have passed from the condition of a rich alluvial plain to that of a bog, through the overthrow of a forest on it by the Roman army in the time of Severus; and has, to a great extent, in recent times, been reclaimed by means of channel cuttings to the Forth. It is skirted, to the SE, by the Forth and Clyde Junction section of the North British railway.—*Ord. Sur.*, sh. 38, 1871.

Flannan Isles or Seven Hunters, a group of seven small uninhabited islands in Uig parish, Outer Hebrides, Ross-shire, 21 miles WNW of Gallon Head in Lewis. Called by Buchanan *Insulæ Sacrae*, they possess some monuments, supposed to be religious relics of the ancient Caledonians, but seemingly as late as the 7th or 8th century; and they are frequented by immense flocks of sea-fowl.

Fleet, a small river of SE Sutherland, rising at an altitude of 750 feet above sea-level, 2 miles E by S of Lairg church, and thence winding $16\frac{3}{4}$ east-south-eastward, till it falls below Little FERRY into the Dornoch Firth. Its principal affluent is the CAIRNAIG, and it intersects or bounds the parishes of Lairg, Rogart, Golspie, and Dornoch. In its upper and middle reaches it traverses a fine glen called from it Strathfleet; lower down it expands into a tidal lagoon, Loch Fleet ($3\frac{1}{2} \times 1\frac{1}{2}$ miles), similar to the lagoons of the Forfarshire South Esk and the Findhorn; but in the last mile above its mouth it again contracts to a width of from 1 to $2\frac{1}{2}$ furlongs. Its strath, from a point near the source all down to the head of the lagoon, is traversed by the Sutherland section of the Highland railway, in a gradient of 1 in 84; and its stream, $\frac{3}{4}$ mile NW of Rogart station, near the High Rock of Craigmore, is crossed by the railway on a stone viaduct with a single arch of 55 feet in span. The lagoon is crossed towards its head by the Mound, an embankment 1000 yards long, which, taking over the public road for the eastern seaboard of Sutherland, was completed in 1816 at a cost of £12,500,

and is pierced at its E end with four arches and sluices for the transit of the river and of tidal currents. Above the Mound the lagoon is now mainly a swampy flat, covered with alders; below, it has been curtailed to the extent of 400 acres, by the reclamation of its bed from the tides; and within its mouth it contains a harbour 260 yards broad, with 18 feet of water at ebb tide, perfectly sheltered in all kinds of weather, and serving for the importation of coals, lime, bone-dust, and general merchandise, and for the exportation of agricultural and distillery produce. The river is frequented by sea-trout, grilse, and salmon; and the neck of it between the lagoon and the sea contains a fine salmon cast—'the only spot in the kingdom where angling for salmon has been successfully practised in salt water.' The depth of water over the bar at the river's mouth is 18 feet at full spring tide, and $4\frac{1}{2}$ feet at ebb tide.—*Ord. Sur.*, shs. 102, 103, 1881-78.

Fleet Street. See ANWOTH and GATEHOUSE.

Fleet, Water of, a small river of Girthon parish, SW Kirkcudbrightshire. The Big Water of Fleet is formed at a point $2\frac{3}{4}$ miles above a 20-arch viaduct of the Dumfries and Portpatrick railway, by the confluence of Carrouch, Mid, and Cardson Burns, which all three rise on the eastern side of CAIRNSMORE OF FLEET (2331 feet). Thence it runs $6\frac{1}{2}$ miles south-south-eastward along the Kirkmabreck and Anwoth border, till it is joined by the Little Water of Fleet, which, issuing from triangular Loch Fleet (3×2 furl.; 1120 feet), has a south-by-easterly course of $7\frac{1}{2}$ miles. After their union, near Castramont, the stream, as Water of Fleet, flows $4\frac{3}{4}$ miles south-by-eastward, and then, a little below Gatehouse, expands over the last $3\frac{3}{4}$ miles of its course into the fine estuary of Fleet Bay. It traverses charming scenery throughout its middle or lower reaches, and is navigable by small vessels up to Gatehouse. Its waters are strictly preserved, and trout, sea-trout, and herlings are plentiful, but salmon nowadays are few and far between.—*Ord. Sur.*, shs. 4, 5, 1857.

Flemington, a village in Avondale parish, Lanarkshire, containing Strathaven station, and $\frac{1}{2}$ mile NE of the town.

Flemington, a village in Ayton parish, Berwickshire, near the North British railway, $\frac{3}{4}$ mile E by N of Ayton station.

Flemington, a burn in Newlands parish, Peeblesshire, running $4\frac{1}{2}$ miles south-westward, till, after a total descent of 700 feet, it falls into Lyne Water, 2 miles S by E of Romanno Bridge.

Flemington, an estate, with an old castle, in Aberlemno parish, Forfarshire, the property of Patrick Webster, Esq. of Westfield. The castle, standing 300 yards E of the parish church, presents a strong and stately appearance. It was inhabited by the proprietor till about 1830, and afterwards was occupied by farm-servants.

Flemington, a collier village, of recent growth, in Cambuslang parish, NW Lanarkshire, 1 mile from Cambuslang town. Pop. (1881) 691, (1891) 796.

Flemington, an estate, with a mansion, in Petty parish, NE Inverness-shire, $\frac{3}{4}$ mile NE of Fort George station on the Highland railway. Loch Flemington ($4\frac{1}{2} \times 1\frac{1}{2}$ furl.) lies 1 mile SSE on the Croy border, half in the county of Nairn and half in that of Inverness.—*Ord. Sur.*, sh. 84, 1876.

Fleurs. See FLOORS.

Flexfield, a hamlet in Mouswald parish, Dumfriesshire, $6\frac{1}{2}$ miles E by S of Dumfries.

Flint, an eastern offshoot of the Broughton Heights, on the mutual border of Stobo and Kirkcud parishes, Peeblesshire, $4\frac{1}{2}$ miles NNE of Rachan Mill. It has an altitude of 1756 feet above sea-level.

Flisk, a parish of N Fife, whose church to the NE stands 1 furlong S of the Firth of Tay, 6 miles ENE of Newburgh station, and $7\frac{3}{4}$ NNW of the post-town Cupar, whilst on its SW border is the little village of Glenduckie, $4\frac{1}{2}$ miles E by S of Newburgh. Bounded NW and N by the Firth of Tay, E by Balmerino, SE by Creich, S by the Aytonhill section of Abdie, and SW by Dunbog, it has an utmost length from ENE to WSW

of 4½ miles, a varying breadth of 4½ furlongs and 2 miles, and an area of 2854½ acres, of which 240½ are foreshore. The firth, expanding here from 1¼ to 3 miles, is fringed by a level strip 70 to 550 yards in breadth, beyond which the surface rises rapidly to 714 feet at Glenduckie Hill, 800 on the boundary with Abdie, and 600 on that with Creich, whilst from Glenduckie sinking again to less than 200 on the Dumbog border. The rocks are partly eruptive, partly Devonian, and the soil in general is a clayey loam. Rather more than one-tenth of the entire area is under wood, one-fifteenth is natural pasture, and all the rest is under cultivation. Ballanbreich Castle, a picturesque ruin, has been separately noticed. Two parsons of Flisk in the first half of the 16th century, John Waddell and James Balfour, were judges of the Court of Session; and another, John Wemyss, towards the close of that century, became principal of St Leonard's College, St Andrews. Giving off a portion *quoad sacra* to Dumbog, Flisk is in the presbytery of Cupar and synod of Fife; the living is worth £184. The parish church, which was built in 1790, was renovated in 1888; and a public school, with accommodation for 73 children, has an average attendance of 45, and a grant of £55, 18s. Valuation (1866) £3666, 16s. 3d., (1882) £4452, 2s. 10d., (1892) £3205, 17s. Pop. of civil parish (1802) 300, (1831) 286, (1861) 313, (1871) 280, (1881) 259, (1891) 248; of *g. s.* parish (1871) 212, (1881) 213, (1891) 192.—*Ord. Sur.*, sh. 48, 1868.

Float Bay or Port Flota, a small bay in Stoneykirk parish, Wigtownshire, 6 miles SE of Portpatrick. It is said to have got its name from the wreck here of some of the ships of the Spanish Armada or 'Flota,' but above it is the moss or flow of 'Meikle Float.'

Float Moss, a large expanse of low meadowy ground in Carstairs, Carnwath, and Pettinain parishes, Lanarkshire, along the banks of the Clyde, in the south-eastern vicinity of Carstairs Junction. It used to be frequently flooded by freshets of the river, so as at times to resemble a large and dreary-looking lake; and it took its name from a float or large boat which formerly served in lieu of a bridge across the Clyde, and which cost £500. The Caledonian railway goes across it, on works which were formed at great expense; and it has here timber viaducts for allowing free scope to the freshets of the river.

Flodda. See FLADDA.

Flodigarry, an ancient house in Kilmuir parish, Isle of Skye, Luverness-shire. A loud rumbling noise, heard from beneath an eminence in its close vicinity, is supposed to be caused by the roll of sea-billows into some natural tunnel or subterranean cavern.

Floors Castle, the seat of the Duke of Roxburgh, in Kelso parish, Roxburghshire, 3 furlongs from the N bank of the Tweed, and 1¼ mile WNW of Kelso town. As built for the first Duke in 1718 by Sir John Vanbrugh, a better playwright than architect, it was severely plain, not to say heavy-looking; but in 1849 and following years the whole was transformed by Playfair of Edinburgh into a sumptuous Tudor pile—one of the most palatial residences of the Scottish nobility. The gardens, too, already beautiful, were greatly extended (1857-60); the home farm, to the rear of the castle, was rearranged and in great measure rebuilt (1875); and no fewer than 120 model cottages were erected on the estate—all these improvements being carried out by James, sixth Duke (1816-79), who had the honour of receiving visits here from Queen Victoria (Aug. 1867), the Prince and Princess of Wales, the Duke of Edinburgh, the Duke of Albany, etc. John, third Duke (1740-1804), is remembered as a famous bibliomaniac. His library, numbering nearly 10,000 books, was sold in 1812, when the first edition of the *Decameron* (1471) brought £2260, and Caxton's *History of Troye* (1461) 1000 guineas. John Henry Innes-Ker is the present and eighth Duke since 1707 (b. 1876; suc. 1892)—*Ord. Sur.*, sh. 25, 1865. See ROXBURGH, KELSO, and CESSFORD.

Flotta, an island in the S of Orkney, lying nearly midway between Hoy and South Ronaldshay, and flanking part of the southern side of Scalpa Flow, 15 miles

SSW of Kirkwall. It has a post-office under Stromness. It measures 3½ miles in length from NE to SW, by 2½ miles in extreme breadth, and is deeply pierced on the north-eastern side by an elongated bay called Panhope, which forms an excellent harbour. The coast is mostly high and rocky; the interior low, tame, and heathy, consisting mainly of sandstone and sandstone-flag. Specially well situated for fishing, and famous for its excellent fishing boats, it was the residence of the ancient Norwegian historiographer, sent from Norway to collect information respecting Scotland, and gave name to his work, the *Codex Flotticensis*, from which Torfeus and subsequent historians drew much of their materials on the ancient condition of the northern districts of Scotland. In the parish of WALLS and Flotta the island has been erected into a *quoad sacra* parish. Pop. (1841) 405, (1861) 420, (1871) 423, (1881) 425, (1891) 423.

Flotta-Calf, a pastoral island of Flotta parish, Orkney, adjacent to the north-eastern extremity of Flotta island, and measuring 2 miles in circumference.

Flowerdale, an old-fashioned mausion of the middle of the eighteenth century, with beautiful grounds and finely-wooded policies, in Gairloch parish, NW Ross-shire, adjacent to Gairloch village, and to the head of the Gair Loch. It is the seat of Sir Kenneth-Smith Mackenzie of Gairloch, sixth Bart. since 1703 (b. 1832; suc. 1843). His ancestor, 'Eachin Roy' or 'Red Hector,' second son of Alexander, seventh chieftain of Kintail, obtained a grant of Gairloch barony from James IV. in 1494. Attached to the mansion is a deer forest, 10,000 acres in extent.

Flowerhill. See AIRDRIE.

Fluchter, a village in Baldernock parish, SW Stirling-shire, 2 miles E of Milngavie.

Fludha, an estate, with a mansion, in Kirkcudbright parish, Kirkcudbrightshire, 1¼ mile from the town.

Fochabers, a small town in Bellie parish, NE Elgin-shire. It stands, 140 feet above sea-level, on the right bank of the Spey, 4 miles above its mouth, with a terminal station on the Fochabers branch (opened 1893) of the Forres and Keith section of the Highland railway. The branch line connects at Orbliston junction, 3 miles WSW, 6¼ ESE of Elgin, 11¼ WNW of Keith. Its present site is an elevated gravel terrace in a deep wooded valley, but it stood in the immediate vicinity of GORDON CASTLE till the close of the eighteenth century, when, to improve the grounds of that noble mansion, it was rebuilt on the line of road from Aberdeen to Inverness, about a mile farther S. The ancient market-cross still stands in the ducal park. A handsome three-arch bridge, 382 feet long, that spans the Spey here, was partly swept away by the great flood of 1829, which raised the river nearly 9 feet above its ordinary level. The town has a quadrangular outline, with central square and streets at right angles one to another; presents a neat, well-built, and modern appearance; serves as a business centre for a considerable extent of surrounding country; communicates by coach with Fochabers station; and has a post office, with money order, savings bank, insurance, and railway telegraph departments, branches of the Union and Town and County Banks, a savings bank, insurance agencies, several hotels, a horticultural and industrial society, a company of the Elginshire Rifle Volunteers, a county police station (1869), a reading-room and library, and a gas-light company. Fairs are held on the third Thursday of January and February, the fourth Wednesday of March, the fourth Thursday of April and May, the first Thursday of July, the second Wednesday of August, and the first Thursday of October and December; and sheriff small debt courts sit on the Saturday after the second Monday of February, June, and October. Bellie parish church, on the S side of the square, is a handsome edifice of 1797, with a portico and a spire. Other places of worship are a Free church, a Roman Catholic church (1823), and an Episcopal church, which, built in 1835 at a cost of £1200, was, at a further cost of over £2000, internally restored in 1874. The antiquary, George Chalmers (1742-1825), and William Marshall

(1748-1833), whom Burns styles 'the first composer of Strathspeys of the age,' were both born at the old town. Milne's Free School arose from a bequest of £20,000 by Alexander Milne, another native, who died at New Orleans in 1838. Opened with great ceremony in 1846, it is a splendid edifice, finely situated, and comprises a hall (58 by 22 feet), 4 other class-rooms, and a rector's dwelling-house. It is conducted by a rector, two English masters, a science master, an arithmetic and writing master, and 3 mistresses—all appointed by a body of directors, and with accommodation for 516 children, it has an average attendance of 292, and a grant of £348, 10s. The town is a burgh of barony, governed by a baron baillie under the Duke of Richmond and Gordon. Pop. (1891) 1101.—*Ord. Sur.*, sh. 95, 1876.

Fodderty, a parish of south-eastern Ross and Cromarty, traversed for 6½ miles by the Dingwall and Skye branch of the Highland railway, from a point 1½ mile W by N of Dingwall to the foot of Loch Garve. Strathpeffer station, on a short branch line, lies 4½ miles WSW of Dingwall; and the parish also contains STRATHPEFFER SPA, AUCHTERNEED hamlet, and MARYBURGH village. It is bounded N by Kincardine, NE by Alness, Kiltearn, and Dingwall, SE by Urquhart, S by Urray, and SW by Contin. Its area is 64,230 acres, of which 988½ are water. Previous to 1891 the parish had two detached parts—one (containing 18,474 acres) situated at Dalbreac and almost surrounded by the parish of Contin, the other situated at Keithtown, and separated from the main portion by a strip of Dingwall parish two-thirds of a furlong broad at the narrowest. In that year the small portion of the Dalbreac detached part situated near Loch an Spardain was transferred by the Boundary Commissioners to the parish of Urray, and the remainder of this detached part given to the parish of Contin. The Keithtown detached portion of Fodderty parish was united to the main portion by the annexation of the intervening strip of Dingwall parish. The CONAN flows 1¾ mile north-north-eastward to the head of Cromarty Firth; whilst the PEFFER, rising at an altitude of 1750 feet, winds 7¾ miles south-south-eastward and east-by-northward, till, 1¾ mile above its mouth, it passes off into Dingwall. Lakes are Loch Ussie (6½ × 4¾ furl.; 419 feet); Lochs GAEVE (1½ × ½ mile; 220 feet) and Gorm (2 × 2¼ furl.; 1900 feet), on the Contin border; CROM Loch (¾ mile × 3½ furl.; 1720 feet), on the Kincardine border; and Loch Toll a' Mhuic (5¾ × 2 furl.; 880 feet), in the north-western interior. The surface declines to 20 feet above sea-level along the Peffer, and S of the railway attains 579 feet at conical Knockfarril, 801 at Creag Ulladail, and 874 at Creag an Fhithich; north-westward it rises to 1172 at Druim a' Chuilein, 1705 at Carn Gorm, 3106 at An Cabar, 3429 at huge lumpish *BEN WYVIL, 2206 at *Carn nan Con Ruadha, and 2551 at Meall a' Ghrianain, where asterisks mark those summits that culminate on the confines of the parish, the highest point in whose detached portion is 628 feet. A calcareo-bituminous rock—fish-bed schist of the Old Red sandstone series—occurs in large quantities in the lower parts of Fodderty. It emits, when broken, a peculiar foetid odour; and to it the Wells owe their ingredients and properties. A seam of soft friable bitumen in a hill above Castle-Leod is capable of yielding a high percentage of oil, though not enough to repay the cost of working, as proved by investigations of 1870-71. The rocks of the mountainous north-western region are gneissose chiefly, of Silurian age. The soil of the arable lands ranges from a strong reddish clay to a fine free loam, and great improvements have been carried out on the Earl of Cromartie's property since 1867 in the way of reclaiming, fencing, planting, building, etc.; still the arable area is small, compared with hill-pasture and moorland. A cairn, measuring 260 feet by 20, is on the lands of Hilton, where and on Cromarty estate are remains of two stone circles; two standing stones adjoin the parish church; and several kistvaens or ancient stone coffins have been found to the N of the churchyard. The chief antiquity, the vitrified fort on KNOCKFARRIL, is noticed separately,

as also is the chief mansion, CASTLE-LEOD. Giving off portions to the *quoad sacra* parishes of Caruach and Kinlochluichart, Fodderty is in the presbytery of Dingwall and synod of Ross; the living is worth £267. The parish church, 9 furlongs ESE of Strathpeffer station, was built in 1807, and, as enlarged in 1835, contains 640 sittings. There are two Free churches, one of Maryburgh and one of Fodderty; and two public schools, Fodderty and Maryburgh, with respective accommodation for 196 and 199 children, have an average attendance of 127 and 156, and grants of £143 and £186, 7s. 6d. Pop. of civil parish (1881) 2047, (1891) 1897, of whom 1317 were Gaelic-speaking; of ecclesiastical parish (1881) 1880, (1891) 1866.—*Ord. Sur.*, shs. 83, 93, 1881.

Foffarty, a property in Kinnettles parish, Forfarshire, 3 miles SSW of Forfar. A Roman Catholic chapel, with manse and offices, was built here soon after the Reformation, on the margin of a den at the foot of Kincauldram Hill; and, burned by a party of royal dragoons in 1745, was razed to the foundations in 1816.

Fogo, a hamlet and a parish of central Berwickshire. The hamlet lies on the right bank of Blackadder Water, 1½ mile E of Marchmont station, and 4½ miles S by W of its post-town, Duns.

The parish is bounded N and NE by Edrom, E by Swinton, S by Eccles, SW by Greenlaw, and NW by Polwarth. Its utmost length, from ENE to WSW, is 5¾ miles; its utmost breadth is 2 miles; and its area is 4669 acres, of which 17¼ are water. Blackadder Water winds 3¾ miles north-eastward through the north-western interior, and then for 1 mile traces the northern border; its channel is a sort of huge furrow here, between parallel ranges of low heights, that nowhere sink much below 300, or much exceed 500, feet above sea-level. Sandstone, the principal rock, was formerly quarried; and boulder clay lies so deep that the steep banks of the Blackadder can be ploughed within a few yards of the stream. The soil on the higher grounds is a deep black loam, extremely fertile; that of the lower grounds is thinner, and lies on till, yet is very far from being unproductive. Some 300 acres are under wood, 40 or so are natural pasture, and all the rest of the land is under cultivation. A Roman camp, crowning a commanding elevation (500 feet) at Chesters, near the south-western extremity of the parish, and approached by a causeway through a marsh, has been nearly obliterated by the operations of agriculture. Caldra and Charterhall, both separately noticed, are mansions. Fogo is in the presbytery of Duns and synod of Merse and Teviotdale; the living is worth £329. The parish church, on the Blackadder's bank, at the village, is an old and picturesque, ivy-mantled building, enlarged in 1853, and containing 278 sittings. A public school, also at the village, with accommodation for 95 children, has an average attendance of 65, and a grant of £67, 5s. 6d. Pop. (1881) 468, (1891) 420.—*Ord. Sur.*, shs. 26, 25, 1864-63.

Foinaven or **Foinne-Eheinn**, a mountain (2980 feet) on the mutual border of Eddrachillis and Durness parish, NW Sutherland, 5¾ miles WSW of the head of Loch Eriboll.

Folda, a hamlet in Glenisla parish, NW Forfarshire, 13 miles NNW of Alyth. It has a public school and a post office under Alyth.

Follart, Loch. See DUNVEGAN.

Foodiecast, a hamlet in the SW corner of Dairsie parish, Fife, 1¾ mile N of Cupar.

Footdee. See ABERDEEN.

Fopachy, a landing-place for vessels, but without any proper harbour, in Kirkhill parish, Inverness-shire, on the S side of Beany Firth, ¾ mile NW of Bunchrew station on the Highland railway.

Forbes, a hamlet and an ancient parish in Aberdeen-shire. The hamlet lies on the left bank of the river Don, at the Bridge of Alford, 1¾ mile WNW of Alford village, the terminus of the Alford Valley line, a branch of the Great North of Scotland railway, and under which Forbes has a post office. There is a good inn at the hamlet, the Forbes Arms. The parish was annexed in 1722 to Kearn, from which it is separated by a range of

hills; and has, since 1808, been united to Tullynessle. It has belonged, from the 13th century, to the noble family of Forbes of CASTLE FORBES.—*Ord. Sur.*, sh. 76, 1874.

Ford, a village in Borthwick and Cranston parishes, Edinburghshire, on the left bank of the river Tyne, $\frac{1}{2}$ mile W by N of Pathhead, $\frac{4}{5}$ miles ESE of Dalkeith, and $10\frac{1}{2}$ SE of Edinburgh. It practically forms one village with Pathhead, but it has a post office of its own name under Dalkeith, with money order, savings bank, and telegraph departments, and a United Presbyterian church, built in 1851. See CRANSTON and PATHHEAD.—*Ord. Sur.*, sh. 33, 1863.

Ford. See FORD-LOCHAWE.

Fordel, an estate, with a mansion, in Dalgety parish, Fife. The mansion, standing $2\frac{1}{2}$ miles NNE of Inverkeithing, is a castellated edifice, whose picturesque grounds contain a darkly wooded glen, with a cascade of 50 feet in fall. It was the seat of George William Mercer-Henderson, Esq. (1823-81), who owned 1955 acres in the shire, and on whose death Fordel passed to his youngest sister, Edith Isabella, married in 1866 to the Hon. Hew Adam Dalrymple Hamilton Haldane Duncan (second son of the first Earl of Camperdown), who added Mercer-Henderson to his name. Extensive coal mines, worked on the estate since 1600, still yield a large though a diminished output. They lie beneath a surface rising from a few feet to 420 feet above sea-level, being chiefly situated in the southern and south-eastern vicinity of Crossgates; and have a tram railway, called the Fordel railway, 4 miles in length, communicating with the seaboard village of St Davids, $1\frac{1}{2}$ mile E by S of Inverkeithing.—*Ord. Sur.*, shs. 40, 32, 1867-57.

Fordel Square, a collier village in Dalgety parish, Fife, contiguous to the boundary with Aberdour, and on the Fordel railway, near its northern extremity, $\frac{3}{4}$ mile ESE of Crossgates. Part of it is called Wemyss Square, and the whole is often called simply Fordel. Pop. (1861) 813, (1871) 641, (1881) 488, (1891) 589.

Ford-Lochawe, a village in Kilmartin and Glassary parishes, Argyllshire, $\frac{1}{2}$ mile SSW of the head of Loch Awe, and 12 miles N of Lochgilphead. It has a post and telegraph office. During the summer months it forms a point of communication between Ardrishaig and the foot of Loch Awe, a public coach running from the former to the pier at Ford, whence a steamer sails down the loch to Loch Awe station, at the north end. It has an inn, a public school, and a chapel of ease conjoint with one at Lochgair.—*Ord. Sur.*, sh. 37, 1876.

Ford of Frew, a ford in the river Forth, on the mutual boundary of Stirlingshire and Perthshire, 3 furlongs NE of Kippen station. It was formerly defended by a small fortress.

Ford of Pitcur, a hamlet in Kettins parish, Forfarshire, 3 miles SE of Coupar-Angus.

Fordoun, a parish in Kincardineshire, containing the post-office village of AUCHINBLAE, $5\frac{3}{4}$ miles N by E of Laurencekirk, and $2\frac{1}{2}$ NNW of Fordoun station, on the Scottish North-Eastern section of the Caledonian, which station is $27\frac{1}{4}$ miles SSW of Aberdeen, and 30 NE of Forfar, and at which is a post office of Fordoun, with money order, savings bank, insurance, and telegraph departments.

The parish is bounded NW and N by Strachan, NE by Glenbervie, SE by Arbuthnott, S by Laurencekirk and Marykirk, and W by Fettercairn. Its greatest length, from E to W, is $10\frac{1}{2}$ miles; its utmost breadth, from N to S, is $7\frac{3}{4}$ miles; and its area is 26,937 acres, of which 88 $\frac{1}{2}$ are water. BERVIE Water, gathering its four head-streams in the northern extremity of the parish, winds 11 miles south-eastward and south-by-westward, chiefly along the Glenbervie and Arbuthnott borders; LUTHER Water, from its source above Drumtochty, curves $5\frac{1}{2}$ miles south-eastward and southward, past Auchinblae, on its way to the river North Esk; and of two of its own little tributaries, Ferdun Water and Dourie Burn, the former traverses the western interior, the latter traces the boundary with Fettercairn. Sinking along Bervie Water to 170, along Luther Water to 190 feet,

above sea-level, the surface thence rises to 717 feet at Knock Hill, 725 at Herscha Hill, 1055 at Black Hill, 1358 at Strathfinella Hill, 1000 at Arnbarrow Hill, 1664 at *Whitelaws, 1488 at *Cairn O'Mount, 1194 at Hill of Annahar, 1527 at *Goyle Hill, 1146 at Aikenhead, and 1291 at the *Builg, where asterisks mark those summits that culminate right on the north-western border. The northern and larger portion of the parish, known as the Brae district, consists thus of ridges and spurs of the frontier Grampians, with intersecting glens and vales; and presents, especially along the course of Luther Water, and around the base of Strathfinella Hill, not a few scenes of more than common beauty. The southern district, part of the Howe of the Mearns, is all nearly level, nowhere attaining 300 feet above sea-level. The principal rocks of the uplands are clay slate, mica slate, and other metamorphic rocks; those of the Howe are New Red sandstone, sandstone conglomerate, and intruded trap; and limestone occurs at Drumtochty and Glenfarquhar. The soil of this, the most important agricultural parish in the county, is very various. A large proportion is strong clayey loam, a considerable extent good medium loam, and a pretty large area light loam. The subsoil is a mixture of clay and gravel in some parts, and hard gravel in others (*Trans. Highl. and Ag. Soc.*, 1881, pp. 115-117). Fully one-thirteenth of the entire parish is under wood, and rather less than one-half is arable. Near Fordoun House are traces of a Roman camp; the 'Priest's Wells,' in 'Friar's Glen,' above Drumtochty, mark the probable site of a religious house, said to have been a Carmelite friary; a stone circle stood on Herscha Hill, an ancient castle in Glenfarquhar; and Arnbarrow Hill was traversed by the Deer Dyke. Antiquities, noticed elsewhere, are PINELLA CASTLE, CASTLETON, and the site of the town of KINGARDINE, the former capital of the county. George Wishart, burned at St Andrews as a heretic in 1546, was of Pittarrow; and other natives of Fordoun were Alexander Hamilton, M.D. (1739-1802), an eminent physician, and the judge James Burnet, Lord Monboddo (1714-99), who anticipated Darwin in an evolution theory—of monkeys whose tails wore off with constant sitting. So, too, according to Camden, was John of Fordun, a 14th century chronicler, whose 'carefully manipulated fictions'—the *Scotichronicon*—have been edited by Dr Skene (Edinb. 1871) for the 'Historians of Scotland' series. To Fordoun this parish is mainly indebted for its supposed connection with the 'chief apostle of the Scottish nation,' St Palladius, whose name is preserved in Paldy Fair, and whose chapel, with a rude piscina, still stands in the parish churchyard. In 430, we are told, Pope Celestine sent him to Scotland ('*in Scotiam*') 'as the first bishop therein, with Serf and Terman for fellow-workers; and at Fordoun he founded a church, and shortly afterwards there was crowned with martyrdom.' But 'Scotia' in 430 could have meant Ireland only; and Skene, in vol. ii. of his *Celtic Scotland* (1877, pp. 26-32), shows that St Serf belonged to the latter part of the 7th century. His solution is, that Terman, and Terman alone, really was a disciple of Palladius, and brought his relics from either Ireland or Galloway to his own native district in the territories of the southern Picts, who had been converted by St Ninian, and that, as founder of the church of Fordoun in honour of Palladius he became to some extent identified with him. (See also BANCORRY-TERMAN and CULROSS.) Fordoun House, $1\frac{1}{4}$ mile SSE of Auchinblae, belongs to Viscount Arbuthnott, but is merely a farmhouse now. Other mansions, treated of separately, are DRUMTOCHTY CASTLE and MONBODDO HOUSE. Fordoun gives name to a presbytery in the synod of Angus and Mearns; the living is worth £308. The church, a little to the S of Auchinblae, is a good Gothic structure of 1829, with 1230 sittings, and a conspicuous tower 93 feet high. There is also a Free church. The 'Minstrel,' James Beattie (1758-1803), was parish schoolmaster from 1753 to 1758. Four public schools—Cocketty, Fordoun, Landsend, and Tipperly—with respective accommodation for 47, 245, 90, and 49 children, have an average attendance of 38, 179, 57, and 18, and grants of

£31, 13s. 6d., £177, 19s. 6d., £53, 2s. 6d., and £29, 9s. Valuation (1882) £21,610, 10s. 8d., (1892) £18,186, 15s. 5d., plus £1705 for railway. Pop. (1801) 2203, (1831) 2238, (1861) 2297, (1871) 2113, (1881) 1992, (1891) 2004.—*Ord. Sur.*, sh. 66, 1871.

The presbytery of Fordoun, now meeting at Lanrecekirk, comprises the *quoad civilia* parishes of Arbuthnott, Benholm, Bervie, Dunnottar, Fettercairn, Fetteresso, Fordoun, Garvock, Glenbervie, Kinneff and Caterline, Laurencekirk, Marykirk, and St Cyrus, with the *quoad sacra* parishes of Cookney and Rickarton, and the chapelries of Johnshaven, Stonehaven-St Bridget's, Stonehaven-St John's, and Luthermuir. Pop. (1871) 23,895, (1881) 23,830, (1891) 23,257, of whom 7859 were communicants of the Church of Scotland in 1895.—The Free Church also has a presbytery of Fordoun, with churches at Benholm, Bervie, Fettercairn, Fordoun, Glenbervie, Kinneff, Laurencekirk, Marykirk, St Cyrus, and Stonehaven, which together had 1546 communicants in 1894.

Fordyce, a village and a coast parish of Banffshire. The village, standing on the right bank of the Burn of Fordyce, 2½ miles SW of Portsoy and 4 ESE of Cullen, is a burgh of barony, having received its first charter in 1499, and another in 1592. Its nearest station is Glasshaugh. It has a post office under Banff, and a fair on the second Wednesday of November. On the E side of The Square stands a large castellated building bearing the date of 1592. Pop. (1881) 331, (1891) 316.

The parish contains also the town of PORTSOY, with the villages of Sandend and Newmills, and prior to the Reformation comprehended likewise the present parishes of Cullen, Deskford, and Ordiquhill. It is bounded N by the Moray Firth, E by Boyndie, SE by Ordiquhill, SW by Grange, and W by Deskford and Cullen. Its utmost length, from NNE to SSW, is 7½ miles; its utmost breadth, from E to W, is 5½ miles; and its area is 17,430 acres, of which 197½ are foreshore and 34½ water. The Burn of BOYNE, rising on the northern slope of Knock Hill, runs first across the southern interior, then 7 miles north-north-eastward along all the Boyndie border to the sea; DURN BURU runs 6 miles through the middle of the parish to the sea at Portsoy; and Fordyce Burn, rising at the boundary with Deskford, runs 3¼ miles across the north-western district to the sea at Sandend Bay. The coast, which, measured along its sinuosities, is 8¼ miles long, is somewhat bold and rocky, with bays at Portsoy and Sandend, and headlands called East Head, Redhythe Point, Crathie Point, and Logie Head (189 feet). It is pierced with several caves, the principal Dove, Kitty, Bow, Cloutty, and Findlater Caves, none of them of any great extent. The interior is partly a fine flat, with frequent inequalities or rising-grounds, and partly a series of hills, with intervening and flanking vales and dales. Chief elevations, from N to S, are Cowhythe (257 feet), Crannoch Hill (300), DURN Hill (651), Fordyce Hill (580), the Hill of Inverkindling (923), and Knock Hill (1409), the last of which, culminating at the meeting-point with Grange and Ordiquhill, presents a majestic appearance, and serves as a landmark to mariners throughout a considerable sweep of the Moray Firth. The rocks exhibit great diversity, at once of character and of interconnection; and, from the time of Hutton downward, have strongly attracted the attention of geologists. A beautiful serpentine forms two masses, respectively 73 and 1500 feet wide, in the vicinity of Portsoy, and is associated with syenite, hornblende, quartzite, clay slate, limestone, and talc or mica slate, whilst containing asbestos, amianthus, mountain cork, steatite, schiller-spar, magnetic iron, chromate of iron, and other minerals. Mostly greenish and reddish in hue, sometimes yellowish and greyish-white, it has often been called Portsoy marble, and is highly valued as a material for ornamental objects, having been exported in some quantity to France for adorning Versailles Palace. Veins of graphite granite, comprising quartz and felspar crystals in such arrangement that a polished section resembles rudely formed letters, occur in the same neighbourhood; and a beautiful

quartzite, suitable for use in potteries, has been quarried on the northern side of Durn Hill, and exported to England. Limestone has been worked in three quarries near Fordyce village, near Sandend, and at the mouth of the Burn of Boyne; and trap rocks, comprising common greenstone, syenitic greenstone, hypersthenic greenstone, and augitic greenstone, occupy most of the interior. The soil is variously a light or a clay loam, and a strong clay, very productive along the seaboard, but cold and wet towards the S. One-half of the entire area is regularly or occasionally in tillage; one-fifteenth is under wood; and the rest is either pastoral or waste. Glassaugh House is a chief mansion, and Findlater Castle a chief antiquity, both being separately noticed. Other antiquities are remains of an ancient camp on Durn Hill, and cairns, tumuli, and remains of ancient Caledonian stone circles in various places. The seat of a presbytery in the synod of Aberdeen, this parish is divided ecclesiastically into Fordyce proper and the *quoad sacra* parish of Portsoy, the former a living worth £328. Its parish church, at the village, was built in 1804, and contains 1100 sittings. At the village, too, is a Free church; and other places of worship are noticed under Portsoy. Fordyce Academy, an institution for the board and education of nine boys of the name of Smith, natives of the parish, was founded and endowed in 1790 by Mr George Smith of Bomhay. Besides two schools at Portsoy, the four public schools of Bogmuchsall, Brodiesford, Fordyce, and Sandend, with respective accommodation for 49, 70, 300, and 89 children, have an average attendance of 37, 47, 186, and 67, and grants of £31, 5s., £42, 8s. 6d., £205, 5s. 6d., and £51, 19s. 6d. Valuation (1882) £19,216, 4s., (1893) £22,204, 6s. 1d., including £3407 for railways. Pop. (1801) 2747, (1831) 3364, (1861) 4145, (1871) 4153, (1881) 4289, (1891) 4268, of whom 1994 were in the ecclesiastical parish and the registration district of Fordyce.—*Ord. Sur.*, sh. 96, 1876.

The presbytery of Fordyce comprises the *quoad civilia* parishes of Banff, Boyndie, Cullen, Deskford, Fordyce, Ordiquhill, and Rathven, and the *quoad sacra* parishes of Buckie, Enzie, Ord, Portsoy, and Scafield. Pop. (1871) 25,776, (1881) 26,345, (1891) 28,456, of whom 4890 were communicants of the Church of Scotland in 1895.—The Free Church also has a presbytery of Fordyce, whose ten churches of Banff, Boyndie, Buckie, Cullen, Deskford, Enzie, Fordyce, Ordiquhill, Portknockie, and Portsoy, together had 2566 communicants in 1894.

Forebank. See DUNDEE.

Foreholm, a small island of Sandsting parish, Shetland, ½ mile E of the nearest point of Mainland, and 5 miles S by W of the southern extremity of Yell.

Foreman or Fourman Hill, an eminence at the meeting-point of Fergie, Huntly, and Rothiemay parishes, on the mutual border of Aberdeen and Banff shires, above the right bank of the river Deveron, 5 miles NE by N of Huntly town. It rises to a height of 1127 feet above sea-level; has a beautiful form, somewhat conical; is finely wooded for a good way up; and commands an extensive and diversified view. Queen Mary, when on her way to Rothiemay House, passed over it by what is still called the Queen's Road.—*Ord. Sur.*, sh. 86, 1876.

Foreness, a small peninsula in Sandsting parish, Shetland, opposite Foreholm, and between Sand Voe and Sand Sound Voe.

Forestfield. See FORRESTFIELD.

Forestmill, a hamlet, with a public school, in Clackmannan parish, Clackmannanshire, on the left bank of the Black Devou, 3¼ miles ENE of Clackmannan town. The poet Michael Bruce (1746-67) taught a school here in 1766.

Forfar, a royal and parliamentary burgh, the seat of a presbytery, and the capital of Forfarshire or Angus, is situated in the centre of the southern portion of the county. By road it is 12½ miles SW of Brechin, 14 NNE of Dundee, and 54 NNE of Edinburgh; whilst, as the junction of the Dundee and Forfar branch (1870) of the Caledonian with its 'through' line to Aberdeen

(1839-50), it is 15½ miles WSW of Bridge of DUN Junction; 57½ SSW of Aberdeen, 17½ N by W of Broughty Ferry, 80 NNE of Edinburgh (by the Tay and Forth bridges), 32½ NE of Perth, and 95 NE of Glasgow. The country round is undulating; and the town stands, 200 feet above sea-level, in a kind of basin formed by the surrounding slopes. It is a burgh of great antiquity, having been a royal residence in the time of Malcolm Ceanmor, whose castle was situated on the Castlehill, a conical mound at the NE end of the town. This is alleged by Bocce and Buchanan to have been the meeting-place of the parliament held in 1057, at which surnames and titles were first conferred on the Scottish nobility. The castle, from remains in existence at the beginning of the nineteenth century, is supposed to have been very extensive, and the ruins furnished building material for the old steeple and the W entrance of the old church, as well as for many houses in the town. A figure of the castle appears in the common seal of the burgh as well as on the market-cross of 1684, which was removed about 1830 by the magistrates to the site of the old castle. Malcolm's queen, St Margaret, had also a residence on the Inch in Forfar Loch, a sheet of water which, lying in Glamis parish, but immediately W of the town, at an altitude of 171 feet, has been reduced by draining operations to an utmost length and breadth of 9 and 2 furlongs. The Inch, reduced now to a peninsula, was for many years regarded as wholly artificial, a 'crannog' in fact or lake-dwelling; but recent researches show that it is 'the highest part of a narrow ridge of natural gravel which runs into the loch, and the so-called causeway is a continuation of this ridge as it dips into the deep water' (*Ancient Scottish Lake-Dwellings*, Edinb. 1882). This causeway, which was supposed to run the whole length of the island, was said by tradition to have been used in former days as a means of passing from the island. Tradition, too, associates some weapons found in the loch in 1770 with the murderers of Malcolm II., who, after committing the crime in GLAMIS CASTLE, tried to cross Forfar Loch on the ice, and were drowned. Besides these scraps of questionable history, memorials of royal residence survive in the designations of such localities as the King's Muir, the Queen's Well, the Queen's Manor, the Palace Dykes, and so on. An annual *fête* in honour of Queen Margaret, held on the Inch, was long a vestige of the royal connection with Forfar. The charter elevating the town to the dignity of a royal burgh was granted by David I. (1124-53), and the records of the parliaments of Scotland show that assemblies were held there by William the Lyon, by Alexander II., and by Robert II. The town was almost totally destroyed by accidental fire in 1244. In 1291 King Edward I. of England was refused admission to the castle by Gilbert de Umfraville; but it was occupied by him and his suite from the 3d till the 6th of July 1296. In 1308, when 'stuffit all with Inglismen,' this castle was captured by Bruce and Philip, the forester of Plater, who, making an escalade under cover of night, slew all the garrison, and 'brek down the wall.' It was never rebuilt. In the Great Rebellion Forfar adhered to the King, so, after the English had taken Dundee, Colonel Ocky marched thence to Forfar with a considerable body of dragoons, and not only liberated an imprisoned spy, but pillaged and harassed the town. In 1665 a charter of confirmation of its early privileges was granted by Charles II. in requital of this plundering and of the protest of ex-Provost Strang in 1647 against the proposal to hand over Charles I. to the tender mercies of the English rebels. In 1684 the market-cross was erected at the expense of the Crown, and stood in its original position for a century and a half, till removed as before noted. In connection with Provost Strang, or rather with his posterity, a curious story is told. Two of this family had settled at Stockholm, where they prospered. About the end of the 17th century they sent home a fine-toned bell for the parish church steeple. When the gift arrived at Dundee, the magistrates of that place claimed it on the ground that it was too good for Forfar. A struggle

took place, in the course of which the tongue of the bell, said to have been of silver, was wrenched out and thrown into the river. After a time the Forfar folk got possession of their property, but the Dundee magistrates refused to let it be conveyed away unless the town of Forfar bought all the ground it would pass over between the quay and the boundary of Dundee. A large sum had to be paid, and the road is known still as the Forfar Loan. The townsfolk of Forfar turned out in holiday costume to welcome the gift on its arrival. A new tongue was not supplied for a century, and even now the clapper in use is regarded as insufficient to bring out the full tones of the bell. Dundee was not the only town with which Forfar got at loggerheads. The *sutors* of Forfar and the *weavers* of Kirriemuir had a long-standing feud, which often used to result in blows. Drummond of Hawthornden relates that, when he visited Forfar in 1648, he was refused shelter because he was a poet and a royalist. He passed on to Kirriemuir, where they equally abhorred these two 'crimes;' but, anxious to differ from the Forfarrians, they made him heartily welcome. In return he wrote a quatrain, in which Kirriemuir was praised and Forfar satirised. A body of William of Orange's forces, stationed at Forfar in 1689, ate and destroyed all kinds of victual to the value of £8000, forced horses, carts, and free quarters to the extent of £2000 more, and left the toll-booth and schoolhouse in a state of ruin. Another reminiscence of the 'good old times' is centred in a specimen of the 'branks' called the witches' bridle, which, long preserved in the old steeple, is now in the public library. It consists of a collar in four sections, hinged so as to enclose the neck. Behind is a short chain, and in front a prong, like the rowel of a spur, projects inwards, and was fixed in the mouth to act as a gag at the executions. The victims were led by the chain to the Witches' Howe, a small hollow N of the town, where the stake was erected. The bridle was picked up from the ashes after the execution. Nine women were burned at Forfar between 1650 and 1662; and 'Johne Kinked, pricker of the witches in Trent,' being brought to Forfar, was made a freeman of the burgh just ten days after that honour had been conferred on a cadet of the noble family of Keith-Marischal. A highwayman hanged on Balmashanner Hill in 1785 was the last person executed in Scotland by sentence of a sheriff. Patrick Abercrombie, physician and historian, was born at Forfar in 1656; and John Jamieson, D.D. (1759-1838), of 'Scottish Dictionary' fame, was minister of the Secession congregation from 1780 till 1797. Archibald Douglas, son of the second Marquis of Douglas, was in 1661 created Earl of Forfar, a title which devolved on the Duke of Douglas at the death of the second Earl from seventeen wounds received at Sheriffmuir (1715), and with the Duke it expired (1761). One curious thing in connection with Forfar is the fact that, down to 1593, its market-day was Sunday.

Before considering the present condition of Forfar, it is interesting to look at some details of its peculiarities given in the Old Statistical Account. The minister of the parish, writing there in 1793, tells that before 1745 there were not above seven tea-kettles and the same number of watches and pairs of bellows in the burgh; while in his time every house had a kettle and bellows, and 'almost every menial must have his watch.' In the middle of the 18th century, a Forfarian who bought a shilling's worth of butcher meat or an ounce of tea would hide the fact from his neighbour as if he had committed a crime. One ox, valued at forty shillings, supplied the flesh market for a fortnight, and indeed a carcase was seldom killed unless most of it were bespoken. Each man built his house as he chose, and the town was both irregular and dirty. The dirtiness of the burgh was the cause of a murder on 9 May 1728. Charles, sixth Earl of Strathmore, was returning from a funeral entertainment with a party of gentlemen, when Carnegie of Finhaven was jostled by Lyon of Brighton into a kennel in Spout Street. He rose covered with mud, and, making a thrust at Brighton, ran the Earl

through the body, for which he was tried, but acquitted through the ability of his counsel, Robert Dundas of Arniston.

On his progress to London in 1603, James VI., runs the story, was entertained with great magnificence by the mayor of one of the English burghs; and some of the English courtiers hinted that such open-handedness would be rare in Scotland. 'Fient a bit o' that,' said canny James, 'the Provost o' my burgh o' Forfar, whilk is by no means the largest town in Scotland, keeps open house a' the year round, and aye the mae that comes the welcomer.' The provost kept an alehouse. It was in Forfar that a neighbour's cow drank up the brovst which a brewster's wife had set to the door to cool. The alewife raised an action against her neighbour, who was assoltied, since, by immemorial custom, nothing was ever charged for a standing drink or stirrup-cup. And it was Forfar Loch that an Earl of Strathmore proposed to drain, by tumbling a few hog-heads of whisky into it, and setting the 'drucken writers of Forfar' to drink it dry.

In 1526 Boece speaks of Forfar as 'having in time past been a notable citie, though now it is brought to little more than a countrie village, replenished with simple cottages.' Down to the middle of the 18th century its 'sinuous and ill-compacted streets consisted chiefly of old thatched houses;' but the Forfar of to-day is a comfortable and well-built town with several good public buildings. The High Street, with West Port, extends irregularly, from SW to NE, to a length of about 1200 yards. Castle Street branches off to the northward, and contains the sheriff court-houses, built in 1869-71. They consist of a centre of two stories with wings and attics, and comprise a principal courtroom 50 feet long, 33 broad, and 26 high; and a smaller court-room 21 by 24 feet. The old county buildings were near these courts, and were built about 1830 at a cost of nearly £5000. In 1869, after the opening of the sheriff court-houses, they were condemned as unsuited to their purposes, and a difficulty arose as to what should be done with them. Ultimately they were pulled down, and new county buildings, designed by Mr. Wardrop, erected in their stead. They cost £4000, and include a county hall 65 by 35 feet, and other apartments, one of them a strong room for records. In the hall are portraits of the hero of Camperdown by Opie, of Henry Dundas, Lord Melville, by Raeburn, and others. The town-hall is close to the court-houses, and affords accommodation to the free library, which, opened on 7 Jan. 1871, contains 4450 volumes. The county police station stands at the E corner of the county buildings, with which it communicates on both stories. In 1869 a hall (the Reid Hall) for public meetings was erected by Mr Peter Reid, of 'Forfar Rock' celebrity, at a cost of £5000. Mr Reid is calculated to have spent upwards of £10,000 on this, including structural improvements, alterations, &c. During his lifetime he was to draw the revenues of the hall, keeping it in good repair, and in Dec. 1894, in his ninety-second year, he handed the hall over to the town. In Nov. 1870 a public meeting resolved to place a marble bust of Mr Reid in the hall, and this resolution was carried into effect, Mr J. Hutchison, R.S.A., being the sculptor. Mr Reid has also presented a public park to the town. The county prison was erected in 1843, legalised in 1852, and closed by order of the Home Office in 1852.

The Priory church of Restennet served for the parish church till 1591, when a church was built at the town. The present parish church was built in 1791, and, as altered in 1836, contains 1800 sittings. Its handsome spire, 150 feet high, was added in 1814; and an organ was introduced in 1881. St James's *quoad sacra* church, seating 1100 people, was built in 1836 at a cost of £1200. Of two Free churches—Forfar and East—the former is a fine new edifice of 1880-81, built in West High Street at a cost of £5000, and containing 1000 sittings. The handsome United Presbyterian church, with 500 sittings, was built in 1854; and the Congregational chapel, with 460, was built in 1836 at a cost

of about £650. The Episcopal church of St John the Evangelist, in East High Street, is in the Early English style, and was erected in 1879-81, at a cost of £12,000, from designs by Mr R. R. Anderson. It consists of a nave (90 feet by 31), with a N aisle (74 × 18½ feet) and a chancel (42½ × 21½ feet). The spire at the extremity is incomplete, 40 feet only of the projected 163 having been constructed. The building is seated for 600. The organ, by Conagher, stands in a chamber 24 by 12 feet, and the case, like the pulpit and choir stalls, is of carved oak. This is the third Episcopal church in Forfar since 1775. At the Revolution of 1688 the Episcopalians were not ejected from the parish church, but remained till the beginning of the 18th century, and communion was administered there by them at Christmas and Easter till 1721. After that, service was uninterruptedly held in the old Priory church of Restennet, and after 1745 in houses in secret till 1775, when a church was built. This building still stands, but it was only occupied by the Episcopal congregation till 1822, when Dean Skinner built the church that was pulled down in 1879 to make room for the present one. A Baptist chapel in Manor Street is an Early Gothic edifice, built in 1876 at a cost of £1700, and containing 400 sittings. In 1894 the following were the six schools under the burgh school-board, with accommodation, average attendance, and Government grant:—Academy (260, 122, £146, 6s. 6d), East (423, 393, £343, 17s. 6d.), Forfar (240, 234, £226, 19s.), North (400, 352, £334, 5s.), Wellbraehead (350, 300, £262, 10s.), and West (607, 589, £515, 7s. 6d.) Besides these there are two evening schools and a ladies' seminary in Academy Street, and science and art classes are managed by members of the School Board.

There are in the burgh an infirmary, a choral union, fire engine station, Young Men's Christian Association, the poorhouse, a mechanics' reading-room, building, golf, angling, cricket, bowling, football, and other societies and clubs, including two good templar lodges. A fine cemetery, 11 acres in extent, to the southward of the town, was opened in 1850, and contains a monument, erected in 1852 by subscription, to Sir Robert Peel. The figure stands upon a large pedestal, and is surmounted by a dome upborne on eight pillars. The gas-works are managed by the corporation; and a first-class supply of gravitation water was introduced into the town in 1881 from the Den of Ogil.

As regards manufactures Forfar makes a small show compared with other towns in the county. Coarse linen and jute manufacture, tanning, bleaching, ropemaking, ironfounding, brewing, etc., are the leading industries—the linen and jute works being of considerable number and extent. In old days Forfar was famous for the manufacture of wooden soled shoes or brogues, from which arises the appellation 'the sutors of Forfar,' above alluded to. There are three incorporated trades—glovers, shoemakers, and tailors, that of the shoemakers being the most ancient.

The incorporation of weavers was abolished by an Act of Parliament for the improvement of the linen trade. Forfar has a post office, with money order, savings bank, insurance, and telegraph departments, branches of the Bank of Scotland, and of the Royal, British Linen, National Union, and Commercial

Banks, a National Security savings bank, insurance agencies, several hotels, and two newspapers—*The Forfar Herald*, Liberal, and the *Review*, Independent,

Seal of Forfar.

(both on Friday). The burgh is governed by a provost, 3 bailies, a treasurer, and 10 councillors, who also act as police commissioners. The regular courts are the burgh or baillie courts, and the burgh police court. Forfar unites with MONTROSE, Arbroath, Brechin, and Bervie to return a member to parliament, its parliamentary constituency being 1711, and its municipal 2379 in 1896. The corporation revenue was £2771 in 1895. Annual value of real property (1866) £17,434, (1876) £28,255, (1882) £34,080, 15s. 3d., (1895) £38,558, exclusive of railways. The Forfar and Brechin railway was opened for passenger traffic in June, 1895. Pop. of royal burgh (1881) 13,579, (1891) 12,769; of parliamentary burgh (1841) 8362, (1851) 9311, (1861) 9258, (1871) 11,031, (1881) 12,817, (1891) 12,057, of whom 5291 were males and 6766 females.

The parish of Forfar, containing also Lunanhead, Carseburn, and Kingsmuir hamlets, $1\frac{1}{2}$ mile NE, $1\frac{1}{2}$ NNE, and $1\frac{3}{4}$ SE of the town, is bounded N by Rescobie, E by Rescobie and Dunnichen, S by Inverarity, SW by Kinnettles, W by Kinnettles and Glamis, and NW by Kirriemuir. Its utmost length, from N to S, is $4\frac{3}{4}$ miles; its breadth, from E to W, varies between $2\frac{1}{4}$ and $4\frac{1}{4}$ miles; and its area is 8379 $\frac{1}{2}$ acres, of which 26 $\frac{1}{2}$ are water. Loch Fithie ($3\frac{1}{2} \times \frac{1}{2}$ furl.), 2 miles ENE of the town, is a pretty little sheet of water, with wooded rising banks; Restennet Loch, near Lunanhead, was drained many years ago for its marl. Streams there are none of any consequence; but the drainage is partly carried eastward to the Lunan, and partly westward to Dean Water. The surface, all part of Strathmore or the Howe of Angus, is flat to the N of the town, sinking little below, and little exceeding, 200 feet above sea-level, but rises southwards to 572 feet at Balmashanner Hill and 761 near Lour. The rocks are Devonian, lower or Forfarshire flagstones; and the soil is mainly a fertile loam. There are traces of a 'Pictish camp' at Restennet, and of a 'Roman camp' a little more than $\frac{1}{2}$ mile NE of the town, the latter 'capable of holding upwards of 26,000 men;' but Restennet Priory is the chief antiquity. This is noticed separately, as also is the only mansion, Lour House. The seat of a presbytery in the synod of Angus and Mearns, this parish is ecclesiastically divided into Forfar proper and St James's *quoad sacra* parish, the former a living worth £477. Two landward public schools, Kingsmuir and Lunanhead, with respective accommodation for 135 and 147 children, have an average attendance of 90 and 111, and grants of £86, 10s. 6d. and £99. Valuation (1857) £7955, (1882) £12,346, 15s. 11d., (1892) £9832, plus £3645 for railways. Pop. (1801) 5167, (1831) 7049, (1861) 10,838, (1871) 12,535, (1881) 14,470, (1891) 13,665, of whom 3502 were in St James's and 10,163 in Forfar ecclesiastical parish.—*Ord. Sur.*, sh. 57, 1868.

The presbytery of Forfar comprehends the *quoad civilia* parishes of Forfar, Aberlemno, Cortachy, Dunnichen, Glamis, Inverarity, Kinnettles, Kirriemuir, Oathlaw, Rescobie, and Tannadice, the *quoad sacra* parishes of Clova, Forfar St James, Kirriemuir-South, and Glenprosen. Pop. (1871) 27,694, (1881) 35,201, (1891) 27,353, of whom 8993 were communicants of the Church of Scotland in 1895. The Free Church also has a presbytery of Forfar, with 2 churches in Forfar, 2 in Kirriemuir, and 4 in respectively Aberlemno, Dunnichen, Kinnettles, and Memus, which eight had together 2108 communicants in 1894.

Forfar and Arbroath Railway. See ARBROATH AND FORFAR RAILWAY.

Forfarshire, a large maritime and agricultural county, nearly corresponding to the ancient district of ANGUS, occupies the south-eastern corner of the central peninsula of Scotland, having for its seaboard the Firth of Tay on the S, and the German Ocean on the E, and for its inland boundaries, on the NE Kincardineshire, on the N Aberdeenshire, and on the W Perthshire. Its limits are, on the S, Dundee, 55° 27'; on the N, Mount Keen, 56° 58' N latitude; and on the E, the Ness, near Montrose, 2° 26'; on the W, at Blacklunans, 3° 24' longitude W of Greenwich. Eleventh in point of size

of the counties of Scotland, it has an utmost length from N to S of 36 miles, an utmost width from E to W of 36 $\frac{1}{2}$ miles, and an area of 890 square miles or 569,850 acres, of which 6486 are foreshore and 3178 water. It is divided into four well-marked natural divisions—the shore district, consisting chiefly of sandy dunes and links, 37 miles long, with a breadth of from 3 to 8 miles; the range of the Sidlaw Hills, 22 miles long by 3 to 6 miles broad; Strathmore, the 'great valley,' otherwise called the *Howe of Angus*, 32 miles by 4 to 6 miles broad; and the hilly district or *Braes of Angus*, rising into the Grampian range, and measuring 24 miles by 5 to 9 miles broad.

The Grampian district forms the north-western division, and includes about two-fifths of the superficial area. Like the rest of the range, the Grampian mountains here run from SW to NE, forming the barrier between the Highlands and the Lowlands of Scotland; and exhibit ridge behind ridge, with many intervening valleys cut out by streams and torrents, till they form, at their water-lie or highest ridge, the boundary line of the county. The portions of them included in Forfarshire are called the Benchinnin Mountains; and, viewed in the group, are far from possessing either the grandeur of the alpine districts of the West, or the picturesqueness and beauty of the highlands of the South. From the higher summits of the Grampians a brilliant view is obtained, not only of Forfarshire, and part of Perthshire, but of Fife, East Lothian, and the heights of Lammernuir.

The Strathmore district of Forfarshire is part of the great valley of that name, and stretches from the western boundary of the parish of Kettins, away north-eastward through the whole county, to the lower part of the North Esk. From its northern point south-westward it lies along the foot of the Forfarshire Grampians, till it forms the parish of Airlie; and it thenceforth, till the termination of the parish of Kettins, shares the continuation of Strathmore with Perthshire. Its surface is beautifully diversified by gentle eminences, fertile fields, plantations, villages, and gentlemen's seats. Small portions of it are covered with water during wet seasons, and, in other respects, have perhaps not received due attention from the cultivators of the soil.

The Sidlaw district of Forfarshire derives its distinctive features from the Sidlaw Hills. These are a continuation or offshoot of a range which runs parallel to Strathmore or the Grampians, from the Hill of Kinnoull near Perth, to the NE extremity of Kincardineshire. Seen from Fifeshire, the Sidlaws appear to rise at no great distance from the estuary of the Tay, and shut out from view the scenery of Strathmore and the lower Grampians. They culminate in Auchterhouse Hill at an altitude of 1399 feet above the level of the sea; and in some places are covered with stunted heath, while in others they are cultivated to the top. The Sidlaw district terminates at Red Head, a promontory on the coast, in the parish of Iverkeilor, between Arbroath and Montrose. From some of the detached hills, respectively on the north-western and the south-eastern sides of the range, brilliant views are obtained, on the one hand, of the whole extent of Strathmore, and, on the other, of the scenery along the Firth of Tay and the German Ocean.

The maritime district of Forfarshire is, for a brief way, in the parish of Iverkeilor, identified with the Sidlaw district, but extends from the Tay and the limits of Liff and Lundie on the S to near the mouth of the North Esk on the N. In its southern part it is at first of very considerable breadth; but it gradually narrows as it becomes pent up between the Sidlaw Hills and the ocean; and, overlapping the former, it thence stretches northward parallel to the Howe of Angus. This district is, with a few exceptions, fertile and highly cultivated. Excepting a few rounded jutting hills—some of which are designated by the Gaelic name of *Dun*—its surface slopes gently to the Firth of Tay on the S, and the German Ocean on the E. At Broughty Ferry, where the Firth of Tay is very much contracted,

an extensive tract of links or sandy downs commences, and thence sweeps along a great part of the parishes of Monifieth and Barry. Two other sandy tracts of considerable breadth stretch along the coast respectively between Panbride and Arbroath, and between the embouchures of the South Esk and the North Esk. In many places these downs evince, by extensive beds of marine shells, at heights ranging from 20 to 40 feet, that they were at one period covered with the sea. The maritime district is adorned with towns and villages, elegant villas and comfortable farm-steads, numerous plantations, and, in general, ample results of successful culture and busy enterprise.

The Tay, though it expands into an estuary 12 miles before touching the county, and cannot, while it washes its shores, be considered as a river, is greatly more valuable to Forfarshire than all its interior waters. Sandbanks in various places menace its navigation, but are rendered nearly innocuous by means of lighthouses and other appliances. From the mouth of the Tay to near Westhaven, the coast on the German Ocean is sandy; and thence north-eastward to near Arbroath, it cannot safely be approached on account of low, and, in many cases, sunken rocks. At a distance of 11½ miles SE of Arbroath, the BELL ROCK Lighthouse lifts its fine form above the bosom of the ocean. A mile north-eastward of Arbroath the coast becomes bold and rocky, breaking down in perpendicular precipices, and, in many places, perforated at the base with long deep caverns, whose floors are boisterously washed by the billows of the sea. The Red Head, a rocky promontory, 267 feet in almost sheer ascent, terminates this bold section of the coast, as it does the inland range of the Sidlaws. Lunan Bay now, with a small sweep inward, presents for nearly 3 miles a fine sandy shore, and offers a safe anchorage. The coast again becomes rocky and bold as far as to the mouth of the South Esk; and thence to the extremity of the county, it is low and sandy.

At BROUGHTY FERRY there is a rocky promontory on which stands Broughty Castle, and from this point to the boundary of Perth on the W the coast-line is flat and alluvial. Excepting a cantle cut out on the W by Perthshire, the county is nearly square, and lines intersecting the limit points named meet near Shielhill Bridge in the parish of Tannadice, where

'The waters of Prosen, Esk, and Carity
Meet at the birken bush of Inverquharity.'

The surface of Forfarshire is much diversified. Along the northern and western boundaries extends the Grampian range, having Glas Maol (3502) as the highest point, with upwards of sixty peaks exceeding 2000 feet. The Sidlaw Hills, on the S of the great glen, form a picturesque element in the scenery of the county. These are verdant hills, with a maximum height of 1399 feet at Auchterhouse Hill, and run down gradually to the eastward, where the range is cultivated to the top. Principal summits in the Grampian range are Cairn na Glasher (3484 feet), Cairn Bannoch (3314), Broad Cairn (3268), Tolmount (3143), Driesh (3105), Mount Keen (3077), Mayar (3043), Finalty (2954), Braidcairn (2907), Ben Tirran (2939), White Hill (2544), Carn Aighe (2824), Bonstie Ley (2868), Monamenach (2649), Mount Battock (2555), Black Hill (2469), Hill of Cat (2435), Cairn Inks (2483), East Cairn (2518), Mount Blair (2441), Cock Cairn (2387), West Knock (2300), the Hill of Wirren (2220), The Bulg (1986), Naked Tam (1607), and the White Caterthun (976). In the Sidlaw Hills, the Gallowhill (1242 feet), Gash (1141), Keillor (1088), and Hayston Hill (1034) are notable. Dundee Law, overlooking the town, is 572 feet in height. In the Braes of Angus the county presents much that is grand and characteristic in hill scenery; and in the southern parts the finely-wooded and richly-cultivated landscape presents great beauty and attractiveness. The lochs of the county, as well as its rivers, are insignificant in view of the large district drained, the course of the streams being necessarily short, as from the position of the watershed the county receives no streams from other districts, while it gives off some that increase in bulk

before augmenting the Tay, which reckons as a Perthshire river. Two mountain burns, the Lec and the Enoch or Unich, unite in Lochlee parish, 1½ mile above the lake of that name, which, measuring 9 by 2½ furlongs, is 'a wild lake closed in by mountains.' The Lec, flowing from the loch, joins the Mark at Invermark, forming the North Esk, a stream which, after a course of 29 miles, falls into the German Ocean, and traces, during the last 15 miles of its course, the boundary between Forfar and Kincardine. Its principal affluent in the county is West Water, rising in Lethnot parish, and joining the Esk at Stracathro. The South Esk, rising in Clova, has a course of 48½ miles, and runs into Montrose Basin. In its upper course it is a mountain stream, but, after receiving its principal tributaries, it runs due E through Strathmore as a quiet lowland river. Parallel with its upper course is Glen Prosen, whence the South Esk receives Prosen Water. The other main affluents are the Carity, the Noran, the Lemno, and the Pow. Further is the beautiful valley of Glen Isla, where the Isla has its rise. One-third of the total course of this stream is in Perthshire, where it joins the Tay, after receiving the waters of many small streams. On the Isla is a waterfall of 80 feet, the 'Reeky Linn,' so called from the cloud of spray constantly thrown up; and further down are the Slugs of Auchrannie, a dark channel where the river runs between steep rocks. One affluent of the Isla, the Dean, issues from FORFAR Loch; and one of the Dean's tributaries, the Arity, presents the peculiarity of rising within 7 miles of the mouth of the Tay, and running a course of 70 miles before it falls into the German Ocean. The smaller streams flowing direct to the sea embrace the Lunan, running into the bay of that name, the Brothock, the Elliot, the Dighty, rising in the Lochs of Lundie and receiving the Fithie, all of which reach the ocean between Arbroath and Broughty Ferry. The lochs and streams of Forfarshire afford excellent sport for the angler. The North Esk yields salmon, sea-trout, and common trout, the net fishings being very valuable, over 2000 salmon having been taken on the first day of the season below the bridge of Marykirk. The South Esk and its tributaries yield trout, while salmon (strictly preserved) are also plentiful from Brechin downwards. The Isla, both in its Forfarshire and its Perthshire sections, receives a high character from Mr Watson Lyall in his *Sportsman's Guide*; salmon penetrate to the Slugs of Auchrannie, and up to this point there are heavy pike and trout of very fine quality. Above the Reekie Linn the stream yields first-rate sport, Loch Wharral, in the same locality, is abundant in good small trout. Loch Brandy, situated amidst wild and beautiful scenery, 2070 feet above sea-level, is uncertain, but frequently gives good sport. Loch Esk, in Clova, affords large but shy trout. Dun's Dish, an artificial loch near Bridge of Dun, and private property, yields perch. Forfar Loch is famous for large pike and perch, the former running to 30 lbs. on occasion. Loch Lee, the largest in the county, yields trout of two kinds and char in abundance. The Lochs of Lundie, in the parish of Lundie, belong to Lord Camperdown, and yield perch and pike. The reservoirs of Monikie have been stocked with Loch Leven and other trout, and yield fair sport. Loch Rescobie yields perch, pike, and eels, and is open to the public. On the north-east coast in July and August large numbers of herring are taken by the fishermen engaged, besides haddock, cod, ling, soles, halibut, turbot, etc. The county contains several notable deer forests, including those of Clova, Caanlochan, Bachnagairn, and Invermark. In the latter the Mark stream flows, and at the 'Queen's Well,' formerly the *White Well*, and now named in commemoration of a visit of the Queen and Prince Consort in 1861, the Earl of Dalhousie erected a handsome monument. It bears an inscription in imitation of that in *Marmion*—

'Rest, weary traveller, on this lonely green,
And drink and pray for Scotland's Queen.'

The Queen describes the scene as very grand and wild, the 'Ladder Burn,' running down a steep and winding path, as 'very fine and very striking.'

Geology.—The county of Forfar is divided into two distinct geological areas by a line drawn from Lintrathen Loch NE by Cortachy Castle to near Edzell. The tract lying to the W of this line is occupied by metamorphosed Silurian strata; while to the E, the Old Red Sandstone formation stretches across Strathmore and the chain of the Sidlaws to the sea coast.

The Silurian rocks occurring along the margin of the Old Red Sandstone area are comparatively unaltered, consisting mainly of grey and green clay slates with occasional pebbly grits. These beds are inclined to the NW, but as we ascend the valleys of the Isla, the Prosen, and South Esk, they are thrown into a great synclinal fold, and they re-appear in a highly altered form with a SE dip. In their unmetamorphosed condition they consist of mica schists and gneiss, with bands of pebbly quartzite which are well displayed on the Braes of Angus. Beyond the area occupied by these stratified rocks, a great mass of granite stretches from Cairn Bannoch to Mount Battock along the confines of Forfarshire and Aberdeenshire.

The Old Red Sandstone of Forfarshire has long been celebrated for the fishes and enrypterids found in the shales and flagstones. The recent discovery of myriapods in the same strata has tended to increase the interest in the history of this formation as developed in the county. The researches of Lyell, Woodward, Lankester, Powrie, Page, Mitchell, and others, have amply revealed the nature of the organisms which flourished during that ancient period. The fossils occur on two distinct horizons, the position of which has now been accurately defined. But apart from the interesting series of organic remains, this formation claims attention on account of its remarkable development in Forfarshire and Kincardineshire. The total thickness of the Lower Old Red Sandstone in these two counties cannot be less than 20,000 feet, and yet neither the top nor the base of the series is visible. This vast series was deposited on the bed of an inland sheet of water to which the name of Lake Caledonia has been applied by Sir Archd. Geikie. The northern margin of that ancient lake was defined by the Grampian chain, and even during the deposition of the highest members of the series, a portion of that tableland must have remained above the water. One of the most interesting phases of that period was the display of volcanic activity which gave rise to great sheets of lavas and ashes, the igneous materials being regularly interbedded with the sedimentary strata. The volcanic series attains its greatest development in Perthshire, as will be shown in the description of the geology of that county.

The geological structure of the area occupied by the Lower Old Red Sandstone of Forfarshire is comparatively simple. Two great flexures, which can be traced far into Perthshire on the one side, and into Kincardineshire on the other, cross the county in a SW and NE direction. In Strathmore, the strata form a synclinal trough, the axis of which extends from the mouth of the burn of Alyth to Stracathro, and in the centre of this basin the highest beds in the county are exposed. Again the chain of the Sidlaws coincides with a great anticlinal fold which brings to the surface the oldest members of this formation in the county. It ought to be remembered, however, that in the Lower Old Red Sandstone of Perthshire we find strata which occupy a higher horizon. A line drawn from the neighbourhood of Longforgan NE to Montrose, marks the crest of the arch referred to, from which the strata dip in opposite directions at angles varying from 10° to 15°. The oldest beds, consisting of brown and grey sandstones, flagstones, and shales, are exposed along the crest of the anticline between Longforgan and Leysmills E of Frickheim. The well-known Arbroath paving stones belong to this horizon, but perhaps the most conspicuous member of this sub-division is a thin band of shale from 1 to 3 feet thick forming the lower fish bed. It can be traced along the NW side of the axial fold from Balruddery Den to Tealing, and on the SE side from Duntrune by Carmyllie to Leysmills. At all these

localities it has yielded fish remains, huge enrypterids, myriapods, and fragments of land plants. The strata just described are succeeded on both sides of the arch by the members of the volcanic series consisting of thick sheets of diabase-porphyrity which are interbedded with sandstones, flags, and thin bands of conglomerate. These ancient lavas are the northern prolongations of the volcanic series of the Ochils. Though they form prominent ridges in the Sidlaws, their thickness is insignificant when compared with their development in the former range.

The volcanic series is conformably overlaid along the NW side of the arch by sandstones and conglomerates containing an important band of shales and a bed of corncstone. This band of shales which constitutes the Upper or Turin fish bed has been traced from Turin Hill NE by Farnell to Canterland in Kincardineshire—a distance of 14 miles. Similar organic remains to those already described have been obtained from this bed at these three localities. The members of this subdivision are inclined to the NW at angles varying from 10° to 15°, and this dip continues till the centre of the basin is reached near Tannadice, where the highest beds in the county are exposed, consisting of red sandy marls. Though the latter resemble some of the strata belonging to the Upper Old Red Sandstone, they are in reality only a conformable portion of the lower division. At Coranside, N of Tannadice, they occupy a strip of ground about 2 miles broad, but when followed to the NE, the basin gradually widens till at the county boundary the sandy marls cover an area about 3 miles in breadth. They 'tail off,' however, near Tannadice, and the underlying sandstones and conglomerates occupy the centre of the syncline till we pass westwards to Alyth, where the sandy marls re-appear and are well developed in the Tay at Stanley.

Along the northern margin of the trough the strata rise rapidly to the surface. They are inclined at high angles owing to the great fault which runs along the flanks of the Grampians from Stonehaven to the Firth of Clyde. Throughout a great part of its course this dislocation throws the Old Red Sandstone against the crystalline rocks of the Highlands, but between Cortachy in Forfarshire and Crieff in Perthshire, it traverses the Old Red Sandstone area. In the latter case it brings different members of this formation against each other. At various localities between Cortachy and the county boundary near Edzell, the position of the fault is admirably defined. The coarse conglomerates and sandstones underlying the red sandy marls are tilted against the Silurian clay slates at angles varying from 60° to 80°. The same high angle is observable on the E side of the dislocation where it traverses the Old Red Sandstone W of Cortachy, particularly in the river Isla at Airlie Castle. On the W side of the fault between Cortachy and the Isla and onwards to the Tay the volcanic series reappears dipping to the SE at comparatively low angles. The members of this series rest unconformably on the Silurian rocks, but differ considerably in character from their representatives in the Sidlaws and the Ochils. Instead of great sheets of porphyry and tuffs we have massive trappean conglomerates with thin beds of lava. This difference is readily accounted for by their proximity to the margin of the ancient lake. Even the strata, which immediately underlie the red sandy marls W of Tannadice and Stracathro, are more markedly conglomeratic than the beds occupying the same horizon on the E side of the trough.

The following list comprises the fossils obtained from the two fish beds of Forfarshire:—(Fishes), *Acanthodes Mitchellii*, *Diplacanthus gracilis*, *Euthacanthus M'Nicolii*, *E. gracilis*, *E. elegans*, *E. grandis*, *E. curtus*, *Paracrus incurvus*, *P. falcatus*, *Climacanthus reticulatus*, *C. uncinatus*, *C. scutigera*, *Cephalopterus Pagei*, *Pteraspis Mitchellii*, *Eucephalaspis Lyellii*, *E. Powriei*, *E. Pagei*, *E. asper*, *Scaphaspis Loydii*. (Eurypterids), *Pterygotus Anglicus*, *P. minor*, *Stylonurus Pourcei*, *S. Scoticus*, *S. ensiformis*, *Eurypterus Brewsteri*, *E. pygmaeus*. (Myriapods); *Kampecaris Forfarensis*, *Archidesmus M'Nicolii*. The

occurrence of myriapods in these beds has only recently been proved. The genus *Kampecaris* or grub shrimp, which was discovered by the late Dr Page in the Forfarshire flagstones, and which could not be accurately described owing to the imperfect preservation of the fossils, was regarded by him as probably a small phyllopod or the larval form of an isopod crustacean. From specimens recently obtained, Mr B. N. Peach has pointed out that *Kampecaris* comprises two genera of myriapods which differ from all other forms in having their body segments free, and possessing only one pair of walking limbs. These are the oldest known air-breathers, and must have flourished when Upper Silurian forms were still in existence.

To the N of Dundee the axial beds are traversed by a series of intrusive dolerites which have altered the strata in immediate contact with them. Dundee Law is probably the site of an old 'neck' from which some of the contemporaneous volcanic rocks were probably discharged.

The only patch of Upper Old Red Sandstone in the county occurs on the shore about 1 mile N of Arbroath. The strata cover about $\frac{1}{2}$ mile of the coast-line at Cardingheugh Bay, and on the S side of the bay they rest unconformably on the members of the lower division, while to the N they are brought into conjunction with each other by a fault. They consist of soft honey-combed red sandstones and breccias which as yet have proved unfossiliferous.

During the glacial period the ice sheet moved down the glens of the Isla, the Prosen, and South Esk, crossing Strathmore and surmounting the Sidlaws in its march towards the sea. The general trend of the ice-flow was SE though its course was considerably deflected by the Sidlaws. In order to override this barrier the ice sheet must at least have been upwards of 1500 feet thick. The boulder clay which accumulated underneath the ice is well developed throughout the county. To the E of the Old Red Sandstone boundary, boulders of various metamorphic rocks from the Grampians are associated with Old Red conglomerates, sandstones, flagstones, and volcanic rocks in this deposit. This feature is observable not only in the sections throughout Strathmore, but even on the SE slopes of the Sidlaws. The latter fact clearly indicates that the *moraine profonde* must have been transported across the chain and deposited in the lee of the hills. But these foreign blocks are likewise met with, perched on the slopes and tops of various eminences in the Sidlaws, as for instance on the hills between Lunnely Den and Lundie at a height of 1000 feet, and on the summit of Craigowl at a height of 1500 feet. The widespread sheets of clay, sand, and gravel, and the long ridges of the same materials in Strathmore were probably formed by the vast torrents of water caused by the melting of the retreating glaciers. As the glaciers shrunk back into the glens they deposited moraines of which the great transverse barrier at Glenairn in the valley of South Esk is a remarkable example. An interesting description of this great terminal moraine has been given by Sir Charles Lyell. When seen from the S side it resembles an immense rampart about 200 feet high athwart the valley. Its breadth from N to S is about $\frac{1}{2}$ mile, and on the E side it has been denuded by the Esk for a space of 300 yards. The lower portion of this rampart, from 50 to 80 feet thick, consists of unstratified mud charged with boulders, while the upper portion, from 50 to 100 feet thick, is composed of finely stratified materials. The alluvial flat above the barrier represents the site of an ancient loch which was eventually drained by the water cutting a channel through the morainic deposits. The 100, 50, and 25 feet raised beaches are represented at various points on the coast. The lowest of them may be traced continuously from Broughty Ferry to Arbroath, swelling out into a broad plain to the S of Barry and Carnoustie, where it is covered in great part by sand dunes. The stratified sands and gravels composing this terrace contain shells identical with those now living.

The soils of Forfarshire may be classified into primary and secondary, or those formed by disintegration of native rocks, and those deposited from a distance by running water; and, in a general view, they are mostly of a red or reddish colour, frequently inclining to brown, dark brown, or black. The primary soils, on the uplands of the Grampian district, are generally moorish and thin, resting on whitish retentive clay, and frequently perforated by rocks. In other districts with gravelly bottoms the soil is generally thin, mossy, and encumbered with loose stones; while those districts with sandstone bottoms are chiefly of a tenacious clay, very unfertile, yet capable of being so worked as to produce excellent wheat. On clayey or tilly bottoms the soil is a strong clay, redder and decidedly better than those named, while those parts with trap rock below are generally friable and very fertile clays; but often on the northern declivity, and among the hollows of the Sidlaw Hills, too shallow to admit the plough. The secondary soils, in the glens of the Grampian district, are generally so sandy as to be loose and friable, or so strong as to be practically unmanageable. In the other districts these soils are often so intermixed with the primary soils that they can hardly be distinguished, yet occurring distinctively along the banks of streams, or in old beds of lakes and river-expansions, and frequently a considerable way up the slopes adjacent to these. In the Strathmore district, the low tracts range in character from sand, through different kinds of gravel, to trap *débris*, vegetable mould, and carse clay, and are comparatively unfertile. In hollows these soils have been saturated with moisture, and converted into fens or mosses. Around Montrose Basin are patches of a carse clay, similar to that of the carses of Gowrie and Falkirk. In the whole of Scotland the percentage of cultivated area is about 24.7; in Forfarshire it is 4.6, a percentage higher than that of twenty-two, and lower than that of ten, other Scottish counties. Less than one twenty-third of the whole of Scotland is under woods; in Forfarshire the proportion is more than one-seventeenth, viz., 32,739 acres. The finest of its trees are noticed under Kinnaird, Gray, and Panmure.

Agriculture continued long in Forfarshire to be as inert or rude as in most other parts of Scotland, but it shared early in the activity of the new agricultural era, and acquired vigour from the efforts of Dempster of Dinnichen and other extensive landowners, and from the Lunan, the Strathmore, the Angus and Mearns, and Angus and Perthshire, and the Eastern Forfarshire Agricultural Associations. For many years prior to 1872, it exhibited an energy, a skill, and a success little inferior to those of the Lothians. As indicating the progress of agriculture in Forfarshire in recent times, the following interesting summary is quoted from Mr James Macdonald's prize paper on Forfar and Kincardine, published in the *Transactions of the Highland and Agricultural Society*, fourth series, vol. xiii., 1881:—

'From the Rev. Mr Rodger's report on Forfarshire, drawn up in 1794, it appears that wheat was then cultivated in every parish in the lower part of the county; that Angus oats, still famous, had thus a wide reputation; that some grasses were used on almost every farm; that turnips were freely grown; and that potatoes were cultivated with great success, the yield in some instances being as high as from 50 to 60 bolls of 16 stones per acre. The number of cattle was estimated at 36,499—a small breed, ranging in weight from 16 to 20 stones avoirdupois, occupying the higher ground, and a larger breed, weighing from 40 to 70 stones, the lower parts. Sheep numbered 53,970, and were mostly of the black-faced, a few being of the ancient dun or white-faced kind, and others of mixed breeding. On some of the better managed farms, and around proprietors' residences, there was a good deal of enclosed land, mostly under pasture. Farm implements were still primitive, but improvements were fast being introduced. The clumsy old Scotch plough, modernised by metal boards, was still in use, but improved ploughs, chiefly of Small's make, were speedily superseding it. It was not un-

common to see four horses attached to a plough; and oxen were employed on many farms. Ploughmen's wages without board averaged about 1s. 3d. per day. There was then a large extent of wood in the county, and early in the present century the area was greatly increased by Lord Airlie, Sir James Carnegie, the Strathmore family, and others. The Rev. Mr Headrick states the number and rental of the farms in 1813 as follows—viz., under £20 of annual value, 1574 farms; £20 and under £50, 565; £50 and under £100, 682; £100 and under £300, 315; above £300, 86; total, 3222.

The spirit of improvement aroused in the last century has never been allowed to lie dormant. True, during the last 25 years a smaller extent of land has been reclaimed than during either the last 25 years of the 18th century or the first 25 of the present, but that has not been due to any flagging in the spirit of improvement, but simply to the fact that only a limited area of suitable land remained for the proprietors and tenants of the past 25 years to bring under cultivation. There has been less done lately simply because there has been less to do. No reliable data exist upon which to estimate the extent of land reclaimed during the first half of the present century. The Rev. Mr Headrick estimated the arable land in Forfarshire in 1813 at 340,643 acres, but it is clear that that far exceeded the actual extent; for the area at present under all kinds of crops—bere, fallow, and grass—falls short of it by nearly 90,000 acres.

Confining ourselves to the last 25 years, we find that there has been a substantial increase in the extent of arable land. The following figures afford a pretty correct indication: arable area in 1854, 219,721 acres; in 1870, 238,009; in 1880, 253,373. The percentage of the arable area in Forfarshire under cultivation in 1870 was 41.8, now it is 44.5. This increase, equal to 1246 acres a year, must be regarded as highly creditable, especially when it is considered that, as previously stated, agricultural improvement had been carried to a great length long before the period to which the above figures refer, so far, indeed, as to leave comparatively little to be done. The main portion of the new land lies in the Braes of Angus along the foot of the Grampians, but there is also a fair proportion on the Sidlaw range.

The reclamation of land, however, has not constituted the whole of the agricultural improvements in the county during the last 25 years. Indeed, it is doubtful if it has not in outlay been far exceeded by the improvement in farm buildings, draining, fencing, roadmaking, and other accessories which tend to develop the resources of the soil. There has been a great deal done in the improvement of farm buildings, and these are now, on the whole, fully abreast of the times. In several parts of Forfarshire re-draining might be carried out with advantage; but still, since 1854, a great improvement has been effected in the condition of the land in this respect. In the wheat and potato districts there is yet a large stretch of open laud, but in the parts where the pasturing of live-stock holds a prominent place in the economy of the farm, a great extent of fencing, mostly wire and stone dykes, has been erected within the last twenty-five or thirty years. In service or farm roads, too, as well as in the county roads, there has been considerable improvement, while not a little has been done in the way of straightening watercourses, squaring fields, draining small pieces of lake or swamp, clearing the land of stones, and in other small but useful works.

The areas under various crops are given in the following table:—

GRAIN CROPS—ACRES.

Year.	Wheat.	Barley.	Oats.	Total.
1854,	12,795	25,222	50,995	89,012
1870,	13,705	26,416	50,623	90,744
1881,	10,038	31,479	51,582	93,099
1891,	8,417	25,533	50,139	87,089
1896,	7,024	27,620	51,564	76,208

GRASS, ROOT CROPS, &c.—ACRES.

Year.	Hay, Grass, and Permanent Pasture.	Turnips.	Potatoes.
1854,	77,349	32,198	12,529
1870,	73,872	32,881	16,723
1881,	80,938	33,917	18,650
1891,	115,676	33,759	14,632
1896,	116,470	34,294	12,341

The agricultural live-stock in the county is shown in the following table:—

Year.	Cattle.	Horses.	Sheep.	Pigs.	Total.
1854	48,003	9,306	105,028	8442	170,779
1870	44,647	9,323	119,841	6516	180,327
1881	45,805	10,358	119,386	4964	180,513
1891	51,864	10,076	164,861	7489	234,287
1896	53,245	10,530	157,010	7272	228,057

The polled Angus breed of cattle has a history of peculiar interest, and the herds existing in the county are valuable and important. Mr Macdonald in his report on the agriculture of the county, says that in the 18th century the excellent beef-producing qualities of the herd had been discovered, and that several polled herds were formed. The credit of being the first to commence the systematic improvement of the breed belongs to Mr Hugh Watson, Keillor, an intimate friend of Sir Walter Scott, and associated with Booth, Wetherell, and other noted improvers of the cattle breeds of the kingdom. His herd was founded in 1808, and consisted of 6 cows and a bull left him by his father, and of 10 of the best heifers and the best bull he could find at Trinity Muir Fair. Although no complete record exists of Mr Watson's system, his theory was to 'put the best to the best regardless of affinity or blood.' His herd was dispersed in 1860. The entrance of rinderpest dealt a heavy blow to the cultivation of breeding herds, but there has been a revival, and the county contains several well-known herds, including that at Mains of Kelly, founded in 1810. The breeding of shorthorns was long carried on by Mr Lyall at Kincaig, near Brechin, and afterwards at Old Montrose, but this herd, nearly extinguished by rinderpest in 1865, was finally dispersed in 1874.

The breed of black cattle, previous to the introduction of turnips and sown grasses, was small, and the cattle were yoked in the plough in teams. The breed still remains smaller in the remote than in the more cultivated districts, but, as stated by Mr Macdonald, it has been improved throughout most of the county by crossings and importations, so as to correspond in progress with the progress in the arts of tillage. The distinction between the best feeding and the best milking breed, so essential to improvement in matters of the dairy, is much less maintained or observed than in Ayrshire and other dairy districts. The original breed of sheep was the small white-faced sheep, believed to have been the aboriginal breed of Britain; but in the early part of the 19th century, it was almost wholly superseded by the black-faced sheep, brought principally from Peeblesshire. Goats were at one time kept in the mountainous districts, but on account of the injury they did to plantations they were extirpated in the latter part of the 18th century.

The manufacture of coarse fabrics from flax, jute, and hemp, is carried on to a vast extent in Forfarshire, and comprises considerably more than half of the entire linen trade of Scotland. The spinning of yarn in large mills, and the working of canvas, broad sheetings, bagging, and other heavy fabrics in factories, are conducted on a vast scale in the large towns; and the weaving of osnaburgs, dowlas, and common sheetings employs an enormous number of handlooms in the smaller towns and villages. Besides the numerous linen factories in the larger towns of the county, the

spinning, weaving, and bleaching of linen are carried on in various other quarters, but chiefly for manufacturers in these towns. Manufactures of leather, gloves, soap, candles, hand cards, machinery, confectionery, and other articles also are carried on in considerable magnitude, but only or chiefly in the large towns, principally Dundee, Arbroath, and Montrose, and are noticed in our articles on these places. The railways of the county embrace the Dundee and Perth, which runs a few miles along the coast to Dundee; the Dundee and Arbroath; the Arbroath and Montrose, along the coast to Montrose; the Montrose and Bervie, going along the coast into Kincardineshire; the Tay Bridge connections at Dundee; and the connections and branches to Forfar, Brechin, Kirriemuir, etc. (See CALEDONIAN RAILWAY and NORTH BRITISH RAILWAY.)

Forfarshire, with a constituency of 12 154 in 1896, returns one member to parliament; Dundee returns two members; and Montrose, Arbroath, Brechin, and Forfar, forming with Bervie the Montrose Burghs, return one. Other towns are Kirriemuir, Broughty Ferry, and Carnoustie; and the principal villages are Auchmithie, Barnhill, Claverhouse, Downfield, Edzell, Ferryden, Fricockheim, Glamis, Hillside, Letham, Monifieth, Newtyle, and Northmuir. Mansions, all noticed separately, are Airlie Castle, Cortachy Castle, Ethie Castle, Glamis Castle, Kinnaird Castle, Brechin Castle, Auldbar Castle, Panmure House, Invermark Lodge, Caralston Castle, Rossie, Duntrune, Ochterlony, Hospitalfield, Stracathro, Bandirran, Lindertis, Linlathen, Baldovan, Invergowrie, Baldowrie, etc. A great proportion of the landed property of the county at the beginning of the 18th century was held by the Lyons, the Maules, the Douglasses, the Ogilvies, the Carnegies, and a few other ancient families; but much of the large estates, after the introduction of manufactures and trade, underwent subdivision, and passed into other hands. Not one-third of 40 barons recorded by Edward in 1676 as proprietors in the county are now represented by their descendants, and a portion of even the few ancient families who continue to be proprietors are now non-resident. So rapidly has landed property in many parishes passed from hand to hand, that the average term of possession by one family does not exceed 40 years.

The county is governed by a lord-lieutenant, a vice-lieutenant, 28 deputy-lieutenants, and 231 justices of the peace. It forms a sheriffdom, with resident sheriffs-substitute at Dundee, and Forfar and Arbroath, courts being held at Dundee on Wednesday and Friday, at Forfar on Thursday, and at Arbroath on Wednesday throughout the session. A sheriff small-debt court is also held at Forfar on Thursday, at Dundee on Tuesday, and at Arbroath on Wednesday. Small debt courts are held at Montrose on the third Friday, at Brechin on the third Tuesday, and at Kirriemuir on the third Monday during session. The County Council is composed of 50 members, for as many electoral divisions, and 4 others (including the lord-lieutenant) in virtue of section 109 of the Act. The elected members comprise representatives from the following four districts:—Dundee district, with 13 representatives; Forfar district, 14; Brechin district, 12; Arbroath district, 11. The Council is divided into the following committees:—Standing Joint Committee (composed of county councillors and commissioners of supply), committees for each of the above four districts (composed of county councillors and representatives of the parochial board), Executive Committee of Local Authority (including 8 non-councillors), Finance Committee, Public Measures and Parliamentary Bills Committee, Justice of Peace Committee, Valuation Committee, County Road Board, Property Committee, and Dundee Asylum Board. There is a burgh police force in Arbroath (18 men), Brechin (8), Broughty Ferry (9), Dundee (180), Forfar (9), and Montrose (12); the remaining police in the county comprise 47 men, under a chief constable, whose yearly pay is £308. The number of registered poor in the year ending 26 Sept. 1894 was 4062; of their dependants, 1664. The expenditure was £70,023. The number of pauper lunatics was 941,

their cost of maintenance being £24,564. The percentage of illegitimate births was 11·6 in 1871, 9·9 in 1880, 9·2 in 1892, and 8·9 in 1894.

The Boundary Commissioners in 1891 effected a considerable readjustment of the boundaries between Forfarshire and Perthshire. The Foffarty, Broughty Castle, and Balbeuchly detached parts of the Perthshire parish of Caputh—of 283, $\frac{1}{2}$, and 285 acres respectively—were transferred to Forfarshire, to the parishes of Kinnettles, Monifieth, and Auchterhouse respectively. The parish of Fowlis-Easter, which was wholly in Perthshire, but for ecclesiastical and educational purposes was joined to the Forfarshire parish of Lundie, has been altogether transferred to the county of Forfar; and Liff, Bervie, and Invergowrie parish, partly in both counties, was also placed wholly in Forfarshire. Alyth and Coupar-Angus parishes, however, which were likewise partly in both counties, have been placed wholly in Perthshire; and the Bandirran detached portion of the Forfarshire parish of Kettins (containing 335 acres) was also transferred to Perthshire (to the parish of Collace). No change has been made on the boundary between the counties of Forfar and Kincardine, the Kincardineshire part of the Forfarshire parish of Edzell having been transferred to the Kincardineshire parish of Fettercairn—Edzell thus being restricted to the Forfarshire portion. There has, however, been considerable readjustment of the boundaries of the interior parishes of Forfarshire, for which see the separate articles. The registration county, divided into 54 districts, had 280,098 inhabitants in 1891.

Although eleventh in size of the thirty-three Scotch counties, Forfar ranks as eighth in respect of rental roll, its valuation, exclusive of railways and burghs, being (1856) £370,519, (1866) £462,138, (1876) £554,407, (1886) £522,952, (1896) £507,419, plus £63,350 for railways, and £219,605 for the five parliamentary burghs. Total (1896), £790,374. In point of population it stands fourth, Aberdeen, Edinburgh, and Lanark shires alone surpassing it. Pop. (1801) 99,053, (1861) 204,425, (1891) 277,735, of whom 125,414 were males and 152,321 females. In 1891 the number of persons to each square mile was 317.

The county is divided into 55 civil parishes. There are 31 *quoad sacra* parishes, and these with the civil go to make up the presbyteries of Forfar, Brechin, and Arbroath, and partly to form those of Dundee and Meigle—all of them included in the synod of Angus and Mearns. The Free Church has similar divisions, with 66 charges within Forfarshire; and the United Presbyterian Church, in its presbyteries of Arbroath and Dundee, has 33 Forfarshire charges. The Scottish Episcopal Church has 18 churches; the Roman Catholic, 9; and other places of worship are—1 English Episcopal, 6 Evangelical Union, 9 Congregational, 4 Wesleyan, 8 Baptist, 1 Unitarian, and 5 United Original Seceders. In the year ending Sept. 1894 there were 208 schools (174 public), which, with accommodation for 53,687 children, had 49,418 on the rolls, and an average attendance of 40,296. Their staff consisted of 631 certificated, 171 assistant, and 241 pupil teachers.

The territory now constituting Forfarshire belonged to the Caledonian tribe of the Vernicomæ. It formed, till the time of Kenneth II., a part of Southern Pictavia; and from 935 and earlier to 1242 was included in the old Celtic *morraership* or earldom of Angus. Its civil history possesses hardly a distinctive feature; and, excepting a few facts which properly belong to the history of its principal towns, Brechin, Arbroath, Dundee, Forfar, and Montrose, and to its castles, as Finhaven, Edzell, and Airlie, it is blended in the general history of the counties N of the Forth. The chief immigrant barons, at the period of the Anglo-Saxon colonization, whose descendants continued to figure most conspicuously in the county, were the Lyons, the Maules, and the Carnegies. Sir John Lyon, a gentleman of Norman extraction, having married a daughter of King Robert II., obtained, among other grants, the castle and lands of Glamis, and was the founder of the noble family of Barons Glamis

Tannadice, Sidlaw, and Strathdighty; and Earls of Strathmore. Guarin de Maule accompanied William the Conqueror from Normandy to England; Robert de Maule, a son of Guarin, followed Earl David, afterwards King David, into Scotland; Roger, the second son of that Robert, married the heiress of William de Valoniis, Lord of Panmure and chamberlain of Scotland in the time of Alexander II.; and from them sprang the Maules, afterwards Earls of Panmure, and the Fox-Maule-Ramsays, now Barons Panmure and Earls of Dalhousie. The Carnegies ramified into several branches, two of which became respectively Earls of Southesk and Earls of Northesk.

Remains of vitrified forts are found on Finhaven Hill in Oathlaw parish; on Drumsturdy Moor in Mouifieth parish, and on Dundee Law. Ancient hill forts are traceable on White Caterthun and Brown Caterthun in Menmuir parish, at Denoon Law, 2½ miles SW of Glamis, and on Dunnichen Hill, Dumbarrow Hill, Car-buddo Hill, Lower Hill, and several other eminences. In many instances these forts are indicated only by heaps of loose stones. Cairns and ancient standing stones are in various places, particularly in Aberlemno and Monikie parishes. Vestiges of Roman camps are at Haerfaulds in Lour Moor, at a part in Forfar Moor about ½ mile NE of Forfar town, and at War Dykes or Black Dikes, 2½ miles N of Brechin. At DUNNICHEN the revolted Picts defeated and slew Egfrid, the Northumbrian king, recovering thus their independence, 20 May 685. Carved stones at Glamis are believed to refer to the drowning of the murderers of Malcolm II., who are said to have perished by falling through the ice on Forfar Loch. In Rescobie Castle, Donald Bane, brother to Malcolm Ceanmor, was tortured by his nephew Edgar, and died in 1097, his enemy dying ten years later. Queen Mary in her journey north visited, besides the abbey at Coupar-Angus, the castle of Edzell. Great mediæval castles were at Forfar and Dundee, but have long been extinct; and other mediæval castles, still represented by considerable remains, in various conditions of conservation or of ruin, are Broughty Castle at Broughty Ferry, Red Castle at the head of Lunan Bay, Airlie Castle in Airlie parish, Finhaven Castle in Oathlaw parish, Invermark Castle and Edzell Castle in Glenesk, Kelly Castle near Arbroath, and Affleck Castle in Monikie parish. A round tower, similar to the famous round towers of Ireland, and the only one in Scotland except one at Abernethy, is at Brechin. Interesting ancient ecclesiastical edifices, or ruins of them, are the parish church or quondam cathedral of Brechin, the tower of the town churches of Dundee, the abbey of Arbroath, the Priory of Restennet, and the churches of Kettins and Fowls. Several monastic edifices, of inferior note to Arbroath Abbey, were in Dundee, Montrose, Brechin, and other places, but have in most instances entirely disappeared. See Andrew Jervise's *Memorials of Angus and Mearns* (Edinb. 1861), and *Land of the Lindsays* (Edinb. 1853); William Marshall's *Historic Scenes in Forfarshire* (Edinb. 1875); T. Lawson's *Report on the Past and Present Agriculture of Forfarshire* (Edinb. 1881); James Macdonald's 'Agriculture of the County of Forfar' in *Trans. of the Highl. and Ag. Soc.* (1881); Alex. J. Warden's *Angus or Forfarshire, the Land and People* (4 vols., Dundee, 1880-83); and works referred to under ARBROATH, BRECHIN, DUNDEE, and MARTON.

Forfarshire Railway. See DUNDEE AND FORFAR RAILWAY.

Forgan, a parish in the N of Fife, on the Firth of Tay, containing the post-town of NEWPORT and the village of WOODHAVEN, the former 11 miles NNE of Cupar and 1½ mile SSE of Dundee (by steam ferry). It is bounded NW by the Firth of Tay, E by Ferryport-on-Craig and Leuchars, S by Leuchars, Logie, and Kilmarny, and W by Balmerino. Its utmost length, from E by N to W by S, is 5½ miles; its breadth varies between 1½ and 3 miles; and its area is 5082½ acres, of which 100 are foreshore. The Firth of TAY, contracting here from 2½ miles to 1½ mile, is crossed at Wormit

Bay, in the western extremity of the parish, by the Tay Bridge. The coast line, 3½ miles long, trends, with slight curvature, from SW to NE; and above and below Newport projects the small headlands of Pluck the Crow Point and Craig Head (formerly Skarness). The shore at ebb tide is entirely silt or clay, at high water shows a line of gravel or boulders; and the coast is all bold or rocky, rising rapidly in places to a height of 100 feet above sea-level. The interior presents an irregular and undulating surface, a series of heights and hollows that attains 300 feet near Northfield, Inverdovet, St Fort, and Wormithill, and 400 at Newton Hill in the SW corner of the parish. The land slopes generally towards the Tay; and the immediate seaboard is, to a large extent, studded with villas of Dundee merchants and manufacturers, and, finely adorned with gardens, shrubberies, and woods, commands magnificent views across and along the Tay. The principal rocks are sandstone, sandstone conglomerate, fine-grained greenstone-trap, and amygdaloidal greenstone, the last of which has been largely quarried, both for house-building and for enclosures. The soil, over the greater part of the area, consists of the *débris* of the trap rocks, being partly light and gravelly, but chiefly either a good black loam or a clayey earth. About four-fifths of the entire area are in tillage, the rest being pretty equally divided between grass and plantations. Cairns or tumuli, composed of small stones, were formerly numerous; and rude ancient urns have been found at Newport, at Westfield, and in Tayfield Park. At Inverdufatha or Inverdovet, in 877, the Danes, pursuing the Scots from DOLLAR, gained a great victory, in which King Constantine mac Kenneth was among the great multitude slain. St Fort and Tayfield are the chief mansions. In the presbytery of St Andrews and synod of Fife, this parish since 1878 has been ecclesiastically divided into Forgan proper and Newport, the former a living worth £362. Its old church standing in ruins at a beautiful sequestered spot, 2½ miles SE of Newport, was anciently held by St Andrews priory; the present one was built in 1841. In 1895 a hall was built at Wormit, and opened for public worship on 15 Sept. Four other places of worship—Established, Free, U.P., and Congregational—are noticed under NEWPORT; and two public schools, Forgan and Newport, with respective accommodation for 130 and 421 children, have an average attendance of 106 and 301, and grants of £90, 3s. 8d. and £333, 2s. 6d. Valuation (1892) £27,041, 9s. 5d. Pop. of civil parish (1801) 916, (1831) 1090, (1861) 1326, (1891) 3763; of ecclesiastical parish (1881) 1533, (1891) 1899.—*Ord. Sur.*, shs. 49, 48, 1865-68.

Forgandenny, a post-office village in Perthshire, and a parish formerly partly also in Kinross-shire. The village stands 130 feet above sea-level, 3 miles W of Bridge of Earn, and 1 mile S of the river Earn, and of a station of its own name on the Scottish Central section of the Caledonian railway, this station being 4½ miles SW of Perth.

The parish is bounded NW by Aberdalgie, NE by Perth and Rhind, E by Dunbarny and Dron, SE by Arngask, and SW and W by Forteviot. Its utmost length is 6½ miles; its utmost breadth 2½ miles. In 1891 the Boundary Commissioners transferred to Forgardenny parish the Hiltou detached part (1887 acres) of Forteviot parish, but transferred to that parish (and to Perthshire) so much of Forgardenny as lay south-west of the river May, thus uniting Forteviot parish with its remaining detached part. By this transference Forgardenny parish is now entirely within the county of Perth. The river EARN, winding eastward across the northern portion, describes some of those graceful curves, and forms some of those beautiful peninsulas, for which it has been so much admired; and the Water of MAY, its affluent, has a course of 3 or 4 miles north-westward along the boundary with Forteviot. Both the Earn and the May sometimes overflow their banks; but they amply compensate any damage they inflict by bringing down rich deposits of fertilising silt. One or two springs adjacent to the eastern boundary possess exactly

the same medicinal properties as the Pitcaithly wells. The northern district, from 30 to 150 feet above the sea, is part of the beautiful valley of Strathearn, and, though ascending gradually southwards, is on the whole level. The southern, beyond the village, comprises fully three-fourths of the entire area, and runs up among the Ochil Hills, attaining 300 feet on Dumbuils, 1028 on Castle Law, 624 near Ardgargie Mains, 797 near Rossieochill, and 1354 at Slungie Hill, whose summit, however, falls just within Orwell parish. It mainly consists of hill and upland, with little intersecting vale; yet has but a small aggregate of bare or rocky surface, and is mostly disposed in either good pasture or corn-fields. The rocks are partly Devonian, but principally eruptive; and they include some limestone, some ironstone, and great abundance of such kinds of trap as are suitable for building. The soil on some of the lauds adjacent to the Earn is carse clay, on others a sandy alluvium; further S is a rich, black, argillaceous loam; and on the arable lands of the centre and the S is variously a sandy earth, a black earth, and a reddish clay, better adapted for oats than any other sort of grain. Much land formerly pastoral or waste has been reclaimed. The mansions of Ardgargie, Condie, Freeland, and Rossie are separately noticed, as likewise are a small Roman camp on Ardgargie estate, an extensive Danish fortification on Castle Law, and remains of another ancient fortification on Dumbuils. Forgandenny is in the presbytery of Perth and synod of Perth and Stirling; the living is worth £208. The parish church at the village is very old, and contains 410 sittings. There is also a Free Church; and a public school, with accommodation for 135 children, has an average attendance of 81, and a grant of £83, 10s. Valuation (1882) £7913, 3s. 2d., (1892) £7007, 5s. 9d. Pop. (1801) 958, (1831) 917, (1861) 739, (1871) 632, (1881) 627, (1891) 575, of whom 16 were in Kinross-shire.—*Ord. Sur.*, shs. 48, 40, 1868-67.

Forglen, a parish of NE Banffshire, whose church stands 2½ miles W of Turriff, at which there is a station on the Aberdeen and Macduff branch of the Great North of Scotland railway, and under which there is a post office of Forglen. It is bounded N and NE by Alvah, E and S by Turriff in Aberdeenshire, and SW and W by Marnoch. Its utmost length, from NW to SE, is 5½ miles; its utmost breadth is 3½ miles; and its laud area is 6249 acres. The river DEVERON flows 3½ miles east-north-eastward along all the southern, then 3½ miles along all the eastern and north-eastern border. Sinking in the NE to 75 feet above sea-level, the surface thence rises to 400 feet at Todlaw Wood, 323 near Sawmill Croft, 557 at Auldton Hill, 600 near Craiglug, and 575 at Craig Aithry. It thus is beautifully varied with gently rising grounds, having a gradual slope towards the Deveron, and being well sheltered by woods and hills. Greywacke rock prevails in the W, and appears also in the N and the centre; whilst clay slate predominates in the lower grounds and towards the S. The soil is generally light—sandy along the Deveron, clayey in parts of the interior, and seldom loamy. Fully one-fifth of the entire area is under wood, and nearly all the rest of the land, partly in result of recent reclamation, is either regularly or occasionally in tillage. Forglen House, on the left bank of the Deveron, 2½ miles NW of Turriff, is a noble castellated edifice of 1839, successor to an older mansion that dated from the middle of the 15th century. It is the seat of Sir George William Abercromby of Birkenbog, chief of the clan Abercromby, and eighth Bart. since 1636 (b. 1886; suc. 1895). Carnousie, the other mansion, is noticed separately. Constituted a parish about 1640 out of portions of Alvah and Marnoch, Forglen was sometimes known as Tennan or St Eonan (Adannan) from an ancient chapel in it, remains of which still exist. This chapel or a predecessor was Adannan's principal church among the northern Picts towards the close of the 7th century; and in it was preserved the *Briobannoch*, or banner of St Columba. The parish of Forglen is in the presbytery of Turriff and

synod of Aberdeen, and the living is £175. The church was built in 1806, and greatly improved in 1894. In 1892 two stained-glass windows were put in to the memory of the late Mr and Mrs Harvey of Carnousie. A Free church stands 2½ miles to the WNW; and a public school, with accommodation for 166 children, has an average attendance of 116, and a grant of £121, 1s. 6d. Valuation (1860) £4470, (1882) £5378, 14s. 8d., (1893) £4759, 3s. 8d. Pop. (1801) 605, (1831) 820, (1861) 783, (1871) 845, (1881) 744, (1891) 714.—*Ord. Sur.*, sh. 86, 1876.

Forgue, a parish on the north-western border of Aberdeenshire. The church, near which a hamlet once existed, is situated 5½ miles E of Rothiemay station, and 7½ NE of Huntly, under which there is a post office, with money order and savings bank departments.

The parish is bounded N and NE by Inverkeithy in Banffshire, E by Auchterless, S by Culsalmond and Insh, W by Drumblade and Huntly, and NW by Rothiemay in Banffshire. Its utmost length, from N to S, is 7½ miles; its breadth from E to W varies between 2 and 5½ miles; and its area is 17,379½ acres, of which 25½ are water. The river DEVERON winds 9 furlongs along the Rothiemay border; Glen Water or the URY, flowing 2½ miles eastward through the Glen of Foudland, traces all the southern boundary; the YTHAN rises in the southern interior, and passes off into Auchterless; whilst Forgue and Fren draught Burns, uniting below the church, carry most of the drainage northward to the Deveron. The surface declines along the Deveron to 242 feet above sea-level, at the confluence of Forgue and Fren draught Burns to 232, along the Ury to 533, and along the Ythan to 508; and the interior is a fine alternation of vales and hillocks, holms and knolls. The north-western extremity is occupied by part of FOREMAN HILL (1127 feet); and in the S rise Broom Hill (1006), Wether Hill (943), and the Hill of Bainshole (1042). The chief rocks are greywacke, clay slate, limestone, granitic gneiss, and syenitic greenstone, of which the slate and limestone were formerly quarried at Lambhill and Pitfancy. The soils are various—sandy, gravelly, loamy, clayey, and mossy; some rich and grateful, others poor and barren; some yielding from eight to ten returns of the seed sown, others returning no more than two or less than three. Much of the land incapable of being turned to any better account is covered with plantations. An interesting ruin, famous in ballad and separately noticed, is Fren draught Castle; other antiquities are remains of several ancient Caledonian stone circles, and of what is conjectured to have been a Roman redoubt. The Admirable Crichton (1560-83) has been claimed as a native, falsely, since ELIOCK, in Dumfriesshire, was his birthplace; but in Forgue was born the eminent antiquary, John Stuart, LL.D. (1813-77). A large distillery is at Glendronach, and fairs are held at Hawkhall. In 1875 a neat cottage hospital was built in this parish by Mrs Morison of Bognie, for patients resident in the parishes of Forgue, Ythan-Wells, Auchterless, and Inverkeithy. In front of it is a granite cross 20 feet high, erected by the tenantry in 1876 as a memorial to her husband, the late Alexander Morison, Esq., in pursuance of whose wishes this hospital was founded. Mansions are Auchaber, Aucharnie, Boyne's Mill, Cobairdy, Corse, Drumblair House, Drumblair Cottage, Fren draught, Haddo, and Temple-land. In the presbytery of Turriff and synod of Aberdeen, this parish includes the chief part of YTHAN-WELLS *quoad sacra* parish, itself being a living worth £311. Its church, erected in 1819, is a substantial edifice, with 900 sittings, Gothic windows, and a fine-toned organ, presented by Walter Scott, Esq. of Glendronach, in 1872. The same gentleman presented a hall to the church in 1885. There are also a Free church of Forgue, and an Episcopal church, St Margaret's, which latter, rebuilt in 1857, is an Early English structure, with nave, chancel, and a tower and spire 110 feet high. Forgue public, Largue public, and Forgue Episcopal school, with respective accommodation for 140, 140, and 61 children, have

an average attendance of 101, 86, and 51, and grants of £92, 3s., £88, 15s., and £45, 2s. Pop. of civil parish (1801) 1768, (1831) 2286, (1861) 2686, (1871) 2623, (1881) 2422, (1891) 2239; of ecclesiastical parish (1871) 1332, (1881) 1303, (1891) 1258.—*Ord. Sur.*, sh. 86, 1876.

Forkings, a hamlet of S Roxburghshire, 9 miles E by S of Hawick.

Formal, Knock of, a hill near the SW border of Lintrathen parish, W Forfarshire, on the western shore of the Loch of Lintrathen, 4 miles N by E of Alyth. It rises to an altitude of 1153 feet above sea-level, and is covered with wood to the top.

Forman. See FOREMAN.

Formartine, a central district of Aberdeenshire. It is bounded on the NE by Buchan, on the E by the German Ocean, on the S by Aberdeen, on the SW by Garioch, on the NW by Strathbogie. It comprises all the seaboard from the Ythan to the Don; extends up the N side of the Ythan's basin and past Turriff to the Deveron; is separated by a ridge of low hills, near Old Meldrum, from Garioch; and has an area of about 280 square miles. It consists partly of a strong soil intersected by bogs, and partly of an excellent clay capable of a high degree of improvement; and it gives the title of Viscount to the Earl of Aberdeen. Formartine Castle, on the Ythan, is a complete ruin, with the exception of two modern rooms preserved for the accommodation of parties visiting the place. The Formartine and Buchan railway intersects the entire district, from the Don northward to the Ythan, and has stations at Parkhill, New Machar, Udney, Logierieve, and Esslemont.

Forneth, a hamlet in Clunie parish, NE Perthshire, 6 miles W by S of Blairgowrie, under which it has a post office. Forneth House, $\frac{1}{2}$ mile nearer Blairgowrie, crowns a fine elevation on the NW bank of the loch of CLUNIE, and commands a beautiful prospect of the lake, its islet, and surrounding scenes.

Fornoughty, a hamlet in Rathven parish, NW Bauffshire, $\frac{3}{4}$ miles S of Buckie.

Forres (Gael. *far-uis*, 'near the water'), a parish in the NW of the county of Elgin, is bounded on the NE by Kinloss, on the E, SE, and S by Rafford, on the SW by Edinkillie, and on the W by Dyke and Moy. The boundary on the SW and W is the river Findhorn; elsewhere it is artificial and excessively irregular. There is a long narrow strip running N and S, and from the middle of this a horn-like projection runs eastward into the parish of Rafford, and terminates near Calfermoss. The greatest length from the point on the N in Findhorn Bay, where Forres unites with the parishes of Kinloss and Dyke and Moy, to the point on the S where it unites with the parishes of Rafford and Edinkillie, is $6\frac{1}{4}$ miles; and the breadth, from E to W, from the most easterly point of the long projection already mentioned, to the point on the W on the river Findhorn, where the parishes of Forres, Edinkillie, and Dyke and Moy unite, is $5\frac{1}{2}$. Owing, however, to its irregular shape, the area is only 5440 acres. The surface in the northern district is low and level, and is highly cultivated, as is also that of the central district, which is diversified by small round hills crowned with clumps of trees that, along with the hedgerows, give to the neighbourhood of Forres a peculiarly English aspect. In the eastward projection the ground rises more steeply, and at Califer Hill attains a height of 700 feet above sea-level. The wooded ridge of Cluny Hill, close to the town of Forres, is noticed in the following article. The woods of Altyre in the S are extensive and, in some places, picturesque. The soil of the lower and central districts is mostly a good loam, but in parts it is light and sandy, and, like most of the 'Laich of Moray,' of which an old proverb says, that

'A misty May and a drappin' June
Put the bonnie Land o' Moray abune,'

it takes a good deal of rain in the earlier part of the season to bring the crops to full perfection. The soil of

the southern portion is poorer and in parts mossy. The underlying rocks are sandstone and impure limestone, a quarry in the latter in the extreme S of the parish, near Cothall, being sometimes worked. The climate is good, and the air dry and pure. The parish is drained by the river Findhorn, flowing $5\frac{3}{4}$ miles northward along all the western border, and by the Burn of Forres or ALTYRE, which, entering from Rafford parish, winds $5\frac{1}{2}$ miles northward past the W end of the town, till it falls into Findhorn Bay. Although the mouth of this burn and the mouth proper of the river Findhorn are a mile apart along the edge of the bay, and the edge of the bay is more than a mile and a half from the town of Forres, yet, during the great flood of the 3 and 4 Aug. 1829, so much were both river and burn swollen, that their waters united near the W end of the town at the Castle Hill, the whole of the low country to the N being under water. 'The view of the inundated plain of Forres,' says Sir Thomas Dick Lauder, 'from the Castlehill of the borough, on the morning of the 4th, though truly magnificent, was such as to overwhelm the mind of the spectator with dismay. From Mundole, about 2 miles to the W of Forres, and from Forres to Findhorn, about 5 miles to the N, the whole plain was under water. The river and the burn met under the Castlehill, and the inundation spread over the rich and variously cropped fields, and over hedges, gardens, orchards, and plantations. In this "world of waters" the mansions of proprietors, the farmhouses and offices, the trees, and especially the hedgerows, giving its peculiarly English appearance to the environs of Forres—the ricks of hay, and here and there a few patches of corn standing on situations more elevated than the rest, presented a truly wonderful scene. One-half of the bridge of Forres, over the burn immediately under the Castlehill, had disappeared during the night, having parted longitudinally; and, over the part that yet remained, the people on the W side of the burn were hastily removing their families, cattle, and furniture to the hill on which Forres stands, after having waded to the middle to rescue them from the flood.' The Loch of Blairs, measuring 3 by 2 furlongs, and lying $2\frac{1}{2}$ miles SSW of the town, is partly in Forres parish, partly in Rafford. The parish is traversed by the Highland railway system. The line from Inverness to Keith passes across the parish near the centre from SW to NE for a distance of 2 miles. At the W end of the town of Forres the Perth section of the line branches off and passes in a SE direction through the parish for more than $2\frac{1}{2}$ miles. At the SW end of the Inverness and Keith section, the Findhorn is crossed by a heavy plate-girder bridge with 3 spans of 150 feet each, the girders being supported by massive abutments on each side, and by 2 piers in the waterway of the river. The piers are founded on rock 15 feet below the bed. The great road from Aberdeen to Inverness passes through the parish a little to the S of the railway for a distance of $2\frac{1}{2}$ miles. It passes through the town of Forres, and crosses the Findhorn by an elegant suspension bridge, which was erected in 1831 from designs by Sir Samuel Brown, R.N. The river was formerly crossed at the same place by a handsome bridge of 3 arches, but it was swept away by the great flood of 1829, and, at the same time, a mile of the turnpike road to the E was destroyed, and 'left in deep holes full of salmon.' The present bridge cost nearly £10,000, and the pontage charged here was the last toll in the county to be abolished. The chains are supported at either side of the river by well proportioned Gothic towers. The industries of the parish are connected with the town of the same name, and are noticed in the following article. Sanquhar House, $\frac{3}{4}$ mile S of the town, is an Elizabethan structure, in plan resembling a double cross, and greatly enlarged in 1863. The main building is two stories high, and at the NW corner rises an octagonal three-story tower. There are good gardens, and in the park are a number of fine trees; whilst to the N of the house is a beautiful artificial lake. William Fraser-Tytler (1777-1853), eldest son of Lord WOODHOUSELEE, in 1801 married Margaret Cussans, only daughter and heiress of George

Grant of Burdsyards or Sanquhar; and his second son, Charles Edward Fraser-Tytler of Aldourie and Balmain (1816-81), left ALDOURIE in Inverness-shire to his eldest surviving son, Edward Grant, and Sanquhar to the third, William Theodore. Invererne House, which is $1\frac{1}{2}$ mile N by W of the town, is a quadrangular building of four stories, built in 1818. The old name of it was Tannachy, and it belonged to the family of Tulloch of Tannachy, who, however, had to part with it in 1772. The name has been changed since the present proprietor acquired it in 1834. It was at one time the residence of Charles St John, the well-known author of *Wild Sports of the Highlands* and of *Natural History and Sport in Moray*. Forres House, which is on the outskirts of the town, has a large garden and policies extending to the base of the Cluny Hill. The site was formerly occupied by a fine old mansion-house which also belonged to the Tannachy family. Drumduan House is near the E end of the town. The parish is in the presbytery of Forres and synod of Moray; the living is worth £309. The public, the infant public, Anderson's Endowed, and the industrial Episcopalian school, with respective accommodation for 400, 169, 227, and 167 children, have an average attendance of 442, 121, 194, and 162, and grants of £500, 7s., £98, 14s. 6d., £219, 5s. 6d., and £155, 2s. 6d. Pop. (1801) 3114, (1831) 3895, (1861) 4112, (1871) 4562, (1881) 4752, (1891) 4801, —*Ord. Sur.*, shs. 84, 85, 94; 1876-78.

Forres is the seat of a presbytery in the synod of Moray, comprehending the parishes of Forres, Dallas, Dyke, Edinkillie, Kinloss, and Rafford, and Darnaway mission church. Pop. (1871) 10,359, (1881) 10,202, (1891) 9628, of whom 874 were communicants of the Church of Scotland in 1895.—The Free Church has also a presbytery of Forres, including churches in the same six parishes, which together had 1836 members and adherents in 1894.

Forres, a town, with the privileges of a royal burgh, in the centre of the foregoing parish. It stands on a terraced ridge, extending from E to W, and sloping gently to the N and S. The site is pleasant and well sheltered, the surrounding country finely wooded and beautiful; and the sheltered situation combined with the dry soil makes it one of the healthiest places in Scotland, so much so, indeed, that it has sometimes been called the Montpelier of Scotland. Owing to the configuration of the country round about Forres, the burgh enjoys a remarkable immunity from rain, the rainfall having been ascertained from accurate observations to be about the lowest in Scotland. The large number of detached villas and the great extent of garden ground give the town the appearance of being much larger and having a great many more inhabitants than is actually the case. The station on the Highland railway, greatly improved in 1876-77, is the junction of the Inverness, the Keith, and the Perth sections of the system. The railway convenience thus afforded has greatly aided in the development of the town and the increase of its trade that have taken place in recent years. By rail it is 12 W by S of Elgin, 30 WNW of Keith, 83½ NW by W of Aberdeen, 25 ENE of Inverness, 166½ NNW of Edinburgh, and 182 NNE of Glasgow.

The name Forres is probably the Gaelic *far*, 'near,' and *uis*, 'water;' but however that may be, it is a place of considerable antiquity. It has been by many writers identified with the *Varais* of Ptolemy's chart, and mention is made by Boece that so early as 535 certain of its merchants were for some trifling cause put to death and their goods confiscated to the king. Malcolm I. is said to have resided in the neighbourhood; and Ulurun or Ulen, where, according to the later chronicles, he was killed in 954, has by some writers been identified with Blevie Castle, 4½ miles ESE of Forres. (See FETTERESSO.) King Dubh or Duffus, the son of Malcolm, is said to have been murdered in the castle at Forres by Donald, the governor, in 967; and there is a curious story that his body was hidden under the bridge of Kinloss, and that, till it was found, the sun did not

shine. At Forres, according to Boece, the 'gracious' King Duncan held his court, and Shakespeare, founding thereon, has made Macbeth and Banquo, going to the camp, meet the weird sisters on the Hard Muir, in the parish of Dyke close by—

'How far is't called to Forres?'

Though Forres thus early was evidently a place of as much importance as or even more than Elgin, it does not seem to have been able to keep pace with its rival after the foundation of the bishopric, when Elgin became the centre of ecclesiastical power and influence in the province. At what date Forres became a royal burgh is uncertain, as all the older charters have been lost, and the oldest now remaining is one of *De novo domus*, granted by King James IV., and dated 23 June 1496. It narrates that the king, 'understanding that the ancient charters granted to the town of Forres have been destroyed in time of war or by the violence of fire,' now grants anew in free burghage all the lands and rights formerly belonging to the community, with power to elect a provost and bailies, etc., who were to exercise jurisdiction within the burgh boundaries. Liberty was also given to erect a cross and to hold 'a weekly market on Friday, and an annual fair, beginning on the Vigil of St Lawrence, and to continue for eight days . . . with all and sundry other privileges and immunities of a free burgh.' The oldest notices of the place that exist from contemporary documents are in connection with the castle, which stood on a green mound at the W end of the town, now known as the Castle Hill. A northern bard has declared that

'Forres, in the days of yore,
A name 'mang Scotia's cities bore,
And there her judges o'er and o'er
Did Scotland's laws dispense;
And there the monarchs of the land
In former days held high command,
And ancient architects had planned,
By rules of art in order grand,
The royal residence.'

The older castle of Forres, where King Duffus is said to have been murdered, and which is said to have been razed after his death, was probably by no means so grand as this, and was very possibly of wood. 'Its keep and walls were no doubt strengthened, if not rebuilt, in the reign of David I., when the town which it protected is first mentioned as a king's burgh. It was then surrounded by a forest, in which the burgesses had the privilege of wood-bote granted to them by that monarch.' The castle was a royal residence, and William the Lyon dated charters here in 1189 and 1198, and Alexander II. dated a charter from the same place in 1238. In 1264 William Wiseman, sheriff of Forres, paid £10 for the erection of a new tower beyond the king's chamber; and in the chamberlain's accounts about the same time, in the reign of Alexander III., there are entries of expenditure for various articles for the king's table here. King David II. issued a writ at the castle of Forres in 1367, and it is mentioned again in 1371 under Robert II. The castle was the official residence of the hereditary sheriffs of Moray, and so was in the possession of the family of Dunbar of Westfield for more than 300 years. From them it passed to the Earl of Seafield, and now belongs to Sir James R. D. Macgrigor, Bart. The ruins which now stand on the Castle Hill are not the remains of the old castle, but the relics of a house projected and partly built by William Dawson, provost of Forres, about 1712. The foundations of the old castle were exposed when the NW slope of the hill was being planted with trees nearly thirty years ago. On the level space to the W of the ruins stands a lofty obelisk of polished Peterhead granite resting on a freestone base. This base is 24 feet square; the die of the obelisk is 9½ feet square; and the whole structure rises to a height of 65 feet. It was erected by public subscription, in 1857, in memory of Assistant-Surgeon James Thomson, who, as set forth in the inscription, was present with the 54th Regiment 'at the battle of Alma in 1854; and a few days afterwards,

when the British were leaving the field, volunteered to remain behind with 700 desperately wounded Russians. Isolated from his countrymen, endangered by the vicinity of large bodies of Cossacks, ill-supplied with food, and exposed to the risk of pestilence, he succeeded in restoring to health about 400 of the enemy and embarking them for Odessa. He then died from the effects of excessive hardships and privation. This public monument is erected as a tribute of respect for the virtue of an officer whose life was useful and whose death was glorious. Dr Thomson was a native of Cromarty, but the authorities there refused a suitable site for the obelisk, and the subscribers accepted the offer of Dr Thomson's friend, Sir Charles R. Macgrigor, of this site on the Castle Hill at Forres. Opposite the entrance to the Castle Hill, on the site now occupied by Auchernack Cottage, stood a humble house, where James Dick (1743-1828), the founder of the Dick Bequest, was born. Early in the nineteenth century Mr Dick had accumulated in America the large fortune of £140,000. This fortune he at his death bequeathed to trustees for the benefit of the parochial schoolmasters in the counties of Aberdeen, Banff, and Elgin. Besides the castle, other objects of antiquarian interest that may be mentioned are Sueno's Stone and the Witch's Stone. Both are at the E end of the town near the old toll-house, Sueno's Stone being to the E and the Witch's Stone to the W of it. Sueno's Stone is an elaborately carved pillar of hard reddish grey sandstone, about 23 feet high, 4 wide at the base, and 15 inches thick. The broad faces are towards the N and S. On the N side are three divisions. Below are two figures seemingly bending towards one another, while a smaller human figure stands behind each. In the upper division is a long cross, with a circle at the intersection of the arms. The cross and the whole of the centre division are covered with elaborate carving, forming so-called Runic knots. The edges are also covered with Runic knotting, and at the base of one of them are several figures, seemingly females. On the S side there are five divisions. The first shows groups of figures, with the walls of some building in the background; the second has a body of horsemen advancing at full gallop, and infantry following with spears in their hands and shields on their arms. The sculptured figures on the third are engaged in battle; at the top warriors seem to be attacking a gateway; and in one of the corners are a number of headless bodies. The fourth division shows bound captives, some apparently women, while above is a row of warriors with unsheathed swords. The last division is much worn, but seems to have contained a number of figures on horseback. The stone received its name from Boece's supposition that it was erected to commemorate a victory of Sueno, son of Harald, King of Denmark, gained at Forres over the forces of Malcolm II. in 1008. Dr Skene, however, inclines to the belief that it commemorates a fray in the year 900 between Sigurd the Powerful, Norwegian Earl of Orkney, and a Scottish earl, Melbrigda, in which the latter fell and all his men with him. Earl Sigurd and his men fastened their heads to the saddle straps in bravado, and so they rode home triumphing in their victory. As they were proceeding Earl Sigurd, intending to kick at his horse with his foot, struck the calf of his leg against a tooth protruding from Earl Melbrigda's head, which scratched him slightly; but it soon became swollen and painful, and he died of it. He was buried in a mound at Ekkialsbakki, which Dr Skene proceeds to identify with the river Findhorn (*Celtic Scotland*, i. 337, 1876). In 1813 eight human skeletons were found near the pillar; and in 1827 a large stone coffin was dug out of a steep bank above the Findhorn. Of the pillar there is an excellent drawing in the first volume of Stuart's *Sculptured Stones of Scotland* (Plates xviii.-xxi.) The Witch's Stone is at the foot of the hawthorn hedge on the S side of the turnpike road to the W of the old toll-house. It is the remaining one of three stones which traditionally marked the spot where three witches, accused of plotting the death of King Duffus, were put to death. The king,

according to the tradition preserved, after returning from one of his visits to Forres, was taken ill at Scone. His physicians, unable to check the disease, concluded that he had been bewitched while in the North, and instructions were sent to the governor of the castle to institute inquiries. The witches were surprised at midnight, and found with a wax image of the king slowly melting before the fire. They were immediately seized and taken to the top of Cluny Hill, and there each was placed in a barrel. The barrels were then sent rolling down the hill, and at the place where they stopped they and their contents were burned, and stones set up to mark the spot. The survivor at one time was broken up for building purposes, but the town authorities caused the pieces to be brought back, clasped with iron, and placed in the original position. A stone within the field on the opposite side of the road is said to be another of the three, but this is doubtful. Forres seems to have been, from the days of the weird sisters downwards, a place of note for witches; and the last of them, an old woman named Dorothy Calder, was, by the aid of fifteen cart-loads of peats, burned to death early in the 18th century on the top of Drumduan Hill, the common place of execution. Near the centre of the town stands the town-house, built in 1839 on the site of the old Toll-booth, which dated from 1700. The present building is in the Tudor style, with a handsome square tower. It contains the council chamber, the town-clerk's offices, and the court-room. Close to it, in the centre of the street, is a neat little market-cross, erected in 1844. It is an imitation of the great crosses of the Middle Ages, and somewhat resembles, though on a very small scale, the Edinburgh monument to Sir Walter Scott. A little to the W is the Falconer Museum (1870), a neat building in the Italian style. The expense of its erection was covered by a sum of money bequeathed for this purpose by Alexander Falconer in 1856, and a further bequest by his brother, the late Dr Hugh Falconer (another of the distinguished sons of Forres), so well known for his palæontological labours, who besides bequeathed to it a number of curiosities as a nucleus for the collection. It contains a number of the Sewallik fossils discovered and admirably described by Dr Falconer, and the collection of Old Red Sandstone fishes formed by the late Lady Gordon-Cumming of Altyre, many of them being specimens described and named by Agassiz. The Mechanics' Institute is on the N side of High Street. It is a massive quasi-classical building, with a good library, etc., and contains two large halls, which are used for public meetings, concerts, etc., and one of which is capable of seating 1000 persons. Anderson's Institution was erected in accordance with a deed of settlement of a native of Forres, Jonathan Anderson, who, in 1814, made over to the magistrates and town council the lands of Cowlairs, now forming part of the city of Glasgow, for the purpose of erecting a school and paying a teacher, so that the children of necessitous parents in the parishes of Forres, Rafford, and Kinloss might be instructed in reading, English, writing, arithmetic, and such other branches of education as the provost, magistrates, and town council should judge proper. It is a Grecian structure of 1824, remodelled in 1881, at a cost of over £3000, to meet the requirements of the Education Act. The Agricultural Hall was erected, in 1867, by a joint-stock company at a cost of £1700. It is an oblong building, Grecian in style, and measures 150 by 58 feet. In it are held the Christmas shows of the Forres and Northern Fat Cattle Club. A gallery along the sides and the N end gives space for the display of grain, seeds, farm-implements, etc. The market buildings were erected also by a joint-stock company in 1851; and an auction mart was opened in 1877. Gas was introduced in 1837, and water in 1848. The parish church was built in 1775, and repaired in 1839, and again in 1860; it is now (1897) proposed to build a new church. It stands on the site of the old church of St Lawrence. There are a Free church (783 sittings), a Gothic United Presbyterian church (1871), with several

stained-glass windows, superseding a building of date 1812, St John's Episcopal church (1840), Italian in style, an Evangelical Union church, a Baptist chapel (1860), and Salvation Army barracks.

To the SE of the town is the wooded ridge of the Cluny Hill, which belongs to the burgh, and is laid out for the recreation of the inhabitants. The ridge is covered with fine plantations, and walks wind along in all directions amid the trees. There are three distinct hills, and on the summit of the highest is an octagonal tower, erected by public subscription in 1806 to commemorate Lord Nelson and his victories. It is 24 feet in diameter, and 70 high. On panels on the outside are inscribed 'In memory of Admiral Lord Nelson,' 'Nile, 1 August 1798,' 'Copenhagen, 2 April 1801,' and 'Trafalgar, 21 August 1805.' There are a number of floors, and the room on the first contains a marble bust of Lord Nelson. The top is reached by a spiral stair, and the view therefrom is magnificent. The eye ranges over a wide expanse of country, beginning with the richly wooded plains of Kinloss, Forres, and Dyke and Moy, and passing over the Moray Firth to the distant blue hills of Ross and Sutherland. On the southern slope of the hill is the Cluny Hill Hydro-pathic Establishment, admirably situated on dry soil, with a sheltered and sunny exposure, and commanding an extensive and fine view.

Forres has a head post office, with money order, savings' bank, insurance, and telegraph departments, offices of the British Linen, National, Caledonian, and Royal Banks, a National Security Savings Bank, insurance companies, a cottage hospital (1889), a branch of the Bible Society, a number of religious and charitable societies, a cemetery, a property investment company, masonic lodges, the Forres Club, cricket, bowling, and Oddfellows clubs, angling and musical associations, public and Good Templar halls, etc. There are also a woollen and a boot and shoe manufactory, a chemical work, two flour-mills, several saw-mills, and granite, coach, and bobbin works. Since the discontinuance of the railway to Findhorn omnibuses for that place leave Forres several times daily. The *Liberal Forres, Elgin, and Nairn Gazette* (1837) is published on Wednesday. A weekly market is held on Tuesday, and fairs for cattle and other live stock are held on the first and third Tuesdays of January, February, March, April, May (also last Tuesday), June, July, August, September, October, and November, and on the first Tuesday of December, and a special fat-stock market on Tuesday at least four days before Christmas. Hiring fairs are held on the Saturday before 28 May, on the first Tuesday of August (for shearers), and on the Saturday before 28 November. Justice of Peace courts sit when required, and the sheriff holds a small debt circuit court on the second Monday of Feb., April, June, Aug., October, and Dec. The town is governed by a provost, 3 bailies, a dean of guild, a treasurer, and 11 councillors, who, under the Burgh Police Act of 1892, are also

Seal of Forres.

commissioners of police. The town possesses extensive lands, the boundary of which, extending over about 15 miles, was officially perambulated in 1840. The arms of the town are Saint Lawrence (the patron saint) in a long habit, holding a gridiron: round his head is a nimbus, at his right side is a crescent, and at the left a star of six points; in his right hand is a book. The motto is *Jehova tu mihi Deus; quid deest?* Forres unites with INVERNESS, NAIRN, and FORTROSE in return-

ing a member to parliament, its parliamentary constituency numbering 527, and its municipal 683 in 1896. Corporation revenue (1832) £620, (1854) £707, (1879) £2235, (1881) £1715, (1895) £1578. Burgh valuation (1867) £7796, (1875) £11,116, (1882) £14,498, (1895) £16,278. Pop. of parliamentary, royal, and police burgh (1851) 3468, (1861) 4112, (1871) 3959, (1881) 4030, (1891) 3971, of whom 2224 were females.—*Ord. Sur.*, sh. 84, 1876.

Forrestfield, a North British station, at the N border of Shotts parish, Lanarkshire, near the meeting-point with Linlithgow and Stirling shires, 6½ miles ENE of Airdrie, and 8 W by S of Bathgate.

Forrestmill. See FORESTMILL.

Forsa, a rivulet of Torosay parish, Mull island, Argyllshire. Rising on the skirt of Bentalloch, it runs 6½ miles north-north-westward along a glen called from it Glenforsa, and falls into the Sound of Mull at Pennygown, where its width is 22 yards. It contains both salmon and sea-trout. Glenforsa has an average width of ¾ mile, and is flanked by grassy or heathy hills, that rise with an acclivity of 30 degrees. Colonel Gardyne of Glenforsa, the proprietor, has formed a breeding-pond on the river for the improvement of line fishing, and sometimes allows anglers residing at Salen Hotel to fish in the river.

Forse, an estate, with a mansion, in Latheron parish, Caithness, 2½ miles W of Lybster. Forse fishing hamlet, 2 miles WSW of Lybster, has an inn; and on the cliffs here is the site of an old castle.

Forsinard, a station, an inn, and a post office on the Sutherland and Caithness section of the Highland railway, 20¼ miles SW of Halkirk, 24¼ NNW of Helmsdale, and 35½ WSW of Wick. Formerly in the Sutherland portion of Reay parish, it was transferred by the Boundary Commissioners in 1891 with this portion to the Sutherland parish of Farr.

Forss, a stream and an estate of NW Caithness. Forss Water, issuing from Loch Shurrery (321 feet), winds 12½ miles northward, through or along the borders of Reay, Halkirk, and Thurso parishes, till it falls into the North Sea at Crosskirk Bay. It is subject to great freshets, doing much injury to the lands near its banks; and is well frequented by sea-trout and grilse. Forss House, near the right bank of the stream, and about a mile from Crosskirk Bay, is 5½ miles W of Thurso town. Forss Hill lies to the south-east of Forss House a short way, both being in the parish of Thurso. There is a post office of Forss under Thurso.—*Ord. Sur.*, sh. 115, 1878.

Fort Augustus. See AUGUSTUS, FORT.

Fort Charlotte. See LERWICK.

Forter, an ancient castle of the Ogilvies in Glenisla parish, Forfarshire, on the right bank of the Isla, 4 miles NNW of Kirkton of Glenisla. Commanding the glen, together with passes leading to Glenshee and Braemar, it was plundered and destroyed by the Earl (later Marquis) of Argyll in July 1640—the month of the burning of the 'bonnie house of AIRLIE.' It appears to have been a place of considerable size and strength; and is now represented by walls partly almost entire, and partly ruinous.—*Ord. Sur.*, sh. 56, 1870.

Forteviot, a village and a parish of SE Perthshire. The village stands, 60 feet above sea-level, on the right bank of May Water, ½ mile above its influx to the Earn, and has a station on the Scottish Central section of the Caledonian, 7 miles SW of Perth, under which there is a post office of Forteviot. On a small eminence now called the Halyhill, at the W end of the village, overhanging May Water, stood Fortevioth, the ancient capital of Fortrenn. According to the legend of the foundation of St Andrews, Angus mac Fergus, King of the Picts (731-61), here built a church, his three sons having already dedicated a tenth of the city to God and St Andrew; and in his palace here Kenneth mac Alpin died in 860. The mill of Forteviot lies a little way to the N of the site of the palace. Wynton records a curious story that Malcolm Ceanmor was an illegitimate son of King Duncan by the miller of Forteviot's daughter: anyhow, Forteviot was a favourite residence with Mal-

colm; and on the 'Miller's Acre,' near the Halyhill, Edward Baliol's army encamped before the battle of DUPPLIN (1332).

The parish, comprising the ancient parishes of Forteviot and Muckersie, until 1891, consisted of three separate portions—the main body, containing the village; the Hilton section, immediately W of Craighend village, and 2 miles ENE of the main body; and the Whitehill section, $1\frac{1}{2}$ mile SE of the southern extremity of the main body. The Boundary Commissioners, in the year above-mentioned, united the Whitehill section with the main body of the parish by transferring to it (and to Perthshire) the intervening Kinross-shire portion of the parish of Forgandenny—that is, so much of the latter parish as lay to the south-west of the river May. The Hilton detached section, however (comprising 1887 acres) was at the same time transferred to the parish of Forgandenny. The parish is bounded N by Tibbermore, NE by Aberdalgie, E by Forgandenny, SE by Arngask, S by Orwell in Kinross-shire, SW and W by Dunning, and NW by Findo Gask. Its length from N to S is about 8 miles, and its greatest breadth, at the southern extremity, is 3 miles, contracting to a mile and a half at the northern extremity, and to about a mile towards the centre. The EARN winds east-north-eastward across the northern portion of the parish, then along the southern border of Aberdalgie parish; and its beautiful affluent, MAY Water, after forming the SW boundary with Dunning, crosses the parish in the southern portion and forms the eastern boundary with Forgandenny till it passes Ardargie House, when it re-enters the parish, and, running NW and N through the centre, falls into the Earn. Dupplin Lake ($3\frac{1}{2} \times 2\frac{1}{2}$ furl.) lies, at an altitude of 410 feet, towards the north-western corner. Along the Earn the surface declines to close upon 30 feet above sea-level, thence rising to 431 feet near Upper Cairnie, 504 near Invermay home farm, and 596 feet at Kirkton Hill. The rocks are chiefly eruptive and Devonian; and the soil along the Earn is of high fertility; whilst the southern and northern portions are finely wooded. INVERMAY, the chief mansion, is noticed separately. Forteviot is in the presbytery of Perth and synod of Perth and Stirling; the living is worth £254. The church, at the village, erected in 1778, contains 250 sittings; and the old church of Muckersie, on the May's left bank, 1 mile ESE of Invermay, was long the burying-place of the Belshes family. Two public schools, Forteviot and Path of Condie, with respective accommodation for 98 and 64 children, have an average attendance of 57 and 39, and grants of £67, 2s. 6d. and £54, 6s. 6d. Valuation (1843) £6301, (1882) £8261, 13s. 6d., (1892) £7111, 8s. 7d. Pop. (1801) 786, (1831) 624, (1861) 595, (1871) 567, (1881) 618, (1891) 538.—*Ord. Sur.*, shs. 48, 40, 1868-67.

Fort George. See GEORGE, FORT.

Forth, a mining village and a *quoad sacra* parish in Carnwath parish, E Lanarkshire. The village, standing 800 feet above sea-level, is 1 mile SSW of Wilsontown, to which there is a branch line from the Caledonian railway, and which is 3 miles W of Auchengray station, and $7\frac{1}{2}$ NNE of Lanark, under which it has a post office. At it are an Established church, a Free church, a hotel, and a public school, which, with accommodation for 250 children, has an average attendance of 113, and a grant of £107, 13s. 6d. The *quoad sacra* parish, in the presbytery of Lanark and synod of Glasgow and Ayr, was constituted in 1881. Pop. of village (1871) 784, (1881) 757, (1891) 563; of parish (1881) 2072, (1891) 1526.—*Ord. Sur.*, sh. 23, 1865.

Forth, a river and an estuary flowing through or between Stirlingshire, Perthshire, Clackmannanshire, Fife, and the Lothians. The river is formed by two head-streams, Duchray Water and the Avonduh ('black water'), rising $2\frac{3}{4}$ miles distant from one another, and effecting a confluence at a point 1 mile W of the hamlet of Aberfoyle. Duchray Water, rising, at an altitude of 3000 feet, on the N side of Ben Lomond (8192), $1\frac{1}{2}$ mile E of the shore of the loch, winds $13\frac{3}{4}$ miles north-north-eastward, south-eastward, and east-north-eastward

through the interior or along the borders of Buchanan, Drymen, and Aberfoyle parishes, for $6\frac{1}{2}$ miles tracing the boundary between Stirling and Perth shires. The Avonduh, rising, on the western border of Aberfoyle parish, at an altitude of 1900 feet, flows 9 miles east-south-eastward, and expands, in its progress, into Loch CHON ($1\frac{1}{2} \times \frac{3}{4}$ mile; 290 feet) and the famous Loch ARD ($2\frac{1}{4}$ miles \times $\frac{3}{4}$ mile; 103 feet). Both of the head-streams traverse a grandly mountainous country, and abound in imposing and romantic scenery. From their confluence, 80 feet above sea-level, the united stream winds east-south-eastward to Stirling, through or along the borders of the parishes of Aberfoyle, Drymen, Port of Monteith, Kippen, Gargunnoch, Kincardine, St Ninians, Lecropt, and Logie, during greater part of this course forming the boundary between Stirlingshire and Perthshire. At Stirling the river, from the confluence of its head-streams, has made a direct distance of about $18\frac{1}{2}$ miles, but measures 39 along the curves and meanderings of its bed. It flows principally through low, flat, alluvial grounds, but is overlooked everywhere, at near distances, by picturesque hills, and exhibits great wealth of scenery, embracing the softly beautiful as well as the brilliant and the grand. Two important and beautiful tributaries, the 'arrowy' TEITH and ALLAN Water, join the Forth $3\frac{3}{8}$ and $1\frac{1}{2}$ miles above Stirling. At the junction of the latter stream the Forth enters purely Stirlingshire territory, and winds on to near Cambus, when it forms the boundary between Stirling and Clackmannan shires, and about a mile from Kincardine constitutes thereafter the southern boundary of Fife; and while the direct line from Stirling to Alloa measures only $5\frac{1}{2}$ miles, the windings of the river, popularly called the Links of Forth, are $12\frac{5}{8}$ miles long. The stream is flanked by broad care lands, of such value that, according to the old rhyme,

'A crook o' the Forth
Is worth an earldom o' the north.'

Below Alloa the river becomes less remarkable for its sinuosity of movement, and, losing partly its fresh-water character, begins to expand slowly into a fine estuary, reaching the German Ocean at a distance of 52 miles from Alloa. The Firth of Forth, as it is now called, divides Clackmannanshire and Fife from Stirlingshire, Linlithgowshire, Edinburghshire, and Haddingtonshire; and has a width of $\frac{1}{2}$ mile at Alloa, $\frac{1}{2}$ mile at Kincardine, and $2\frac{1}{2}$ miles just above Borrowstounness. At Queensferry, in consequence of a peninsula on the N side, the basin suddenly contracts to a width of 1 mile, and is crossed here by that stupendous railway undertaking the FORTH BRIDGE (which see); but below Queensferry it again expands to $5\frac{1}{4}$ miles at Granton and Burntisland, and between Prestonpans and Leven to a maximum width of 17 miles. The Firth again contracts, between Dirleton and Elie Ness, to 8 miles; and enters the ocean, between Fife Ness and the mouth of the river Tyne, with a width of 19 miles. The islands, with the exception of Inchgarvie and two or three other rocky islets in the vicinity of Queensferry, are in the wider parts of the Firth, comprising INCHCOLM, CRAMOND island, and INCHKEITH. The last, measuring $6\frac{1}{2}$ by 2 furlongs, is crowned with a lighthouse, and in 1881 was rendered defensible by the erection of three batteries with heavy guns. Half a dozen small islands (FIDRA, CRAIGLEITH, etc.) lie off the Haddingtonshire coast; while the entrance is flanked by the romantic BASS Rock on the S and the Isle of MAY on the N. The estuary in mid channel has a maximum depth of 42 fathoms. Along the Fife shore the bed of the firth slopes down rapidly to a considerable depth, 10 fathoms being found at an average distance of $1\frac{1}{2}$ mile from land. A line drawn from Hound Point through Inch Mickry and Inchkeith to Fidra cuts off about one-third of the area to the south, which has scarcely a sounding of 10 fathoms or upwards. Off Musselburgh 10 fathoms is only found at a distance of 9 miles. At the mouth of the firth, almost from shore to shore, the channel is over 10 fathoms deep. The deepest point in the firth is

in the narrows between North and South Queensferry, when for a length of nearly 2 miles there is a trough more than 20 fathoms deep, at one point attaining the maximum of 42 fathoms. The tides are so affected by conflicting currents, by islands and shallows, and by the irregularities of the shores, as to vary much both in respect of velocity and time. The flowing tide, over the sands of Leith, runs $1\frac{1}{2}$ knot an hour, and appears to flow for only four hours, while the ebbing tide continues for eight hours. The tides on the N shore, opposite these Roads, run from 3 to $3\frac{1}{2}$ knots an hour, and have an equal duration in flow and in ebb. The flowing tide, from Kinghorn Ness to the promontory W of Aberdour, runs at the rate of $3\frac{1}{2}$ knots an hour; through the contraction at Queensferry it runs at the rate of 5 knots an hour, and, 6 miles above that contraction, at from 2 to $2\frac{1}{2}$ miles an hour. The ebb tide, at about 6 miles above Queensferry, runs at the same rate as the flow tide; but through the contraction at Queensferry it runs at the rate of 6 knots an hour; and in Inverkeithing Bay, immediately E of that contraction, turns for two hours to the W at the rate of $1\frac{1}{2}$ knot an hour. The estuary presents safe roadsteads at Elie Roads, Leith Roads, Burntisland Roads, Inverkeithing Bay, St Margaret's Hope immediately above Queensferry, and various other localities. It has good docks at Leith, Granton, Borrowstounness, Grangemouth, and Burntisland; good harbours at Dunbar, Anstruther, Cockenzie, and Fisherrow; and numerous harbours of varying character and capacity along the N shore from Crail to Alloa. The navigation was long regarded as dangerous; but, though shoally in various localities, and somewhat obstructed by sandbanks, it is now, with the aid of lighthouses on the islands of May and Inchkeith and of accurately drawn and minute charts, so signally safe as rarely to be marked with a shipwreck. Numerous industrial works are on the shores, from Alloa and Borrowstounness downwards; vast repositories of coal, limestone, and ironstone are so near it, on both shores and westward from its head, as to send down much of their output to it for shipment; and all these, along with the extensive and productive fisheries of LEITH and ANSTRUTHER districts, attract large numbers of vessels of all sizes.

The basin of the Forth is estimated at 645 square miles. The length of the river and its estuary, measured in a direct line from the Duchray's source on Ben Lomond to the entrance, is only 80 miles; but, following the bends of river and estuary, $117\frac{1}{2}$ miles, viz., $52\frac{3}{4}$ to Stirling, $12\frac{5}{8}$ thence to Alloa, and 52 thence to the German Ocean. The chief tributaries above Alloa are, on the right bank, Keltie Water, Boquhan Burn, and Bannock Burn; on the left bank, Goodie Water, the Teith, Allan Water, and the Devon; and the chief streams flowing into the estuary are, on the right side, the Carron, the Avon, the Almond, the Water of Leith, and the Esk; on the left side, the Leven. The river contains salmon, grilse, sea-trout, trout, pike, perch, and eels; and its salmon are large and delicate. Several good salmon casts for the angler occur about the influx of the Teith; but all the salmon fisheries below that point are held strictly as private property, and are let under stringent conditions. The estuary abounds with white fish of all kinds; and large fleets of fishing-boats from Newhaven, Fisherrow, Buchhaven, Anstruther, and other places procure abundant supplies for the daily markets of neighbouring and district towns. Of late years the use of steam trawlers has been introduced, and, while the catch is thus increased, the older style of fishers allege that the spawn and spawning beds are injured by the trawl nets. Herrings generally shoal into the Firth once a year, and have in some years yielded a prodigious produce; but they are esteemed in some respects inferior in quality to the herrings of the western coast. The extensive sand beds, together with immense quantities of seaweed, are favourable to the deposit of the spawn of fishes; and mussels, contributing so largely to the support of the finny tribes, are very abundant. Oysters formerly lay in beds adjacent to Cramond and

Inch Mickery, as well as near Prestonpans; but they were over-fished, almost to comparative exhaustion; and they are now inferior, both in quality and in size, to the oysters obtained in many other parts of the British coasts.

An ancient ferry crosses the river at Queensferry, and connects on the S side with a branch from the Edinburgh and Glasgow section of the North British railway at Ratho station, and with a line to Dunfermline on the N. A still more important ferry is that from Granton to Burntisland, which, until the opening of the Forth Bridge, formed the link between the southern and the northern portions of the North British Railway system. Both of the ferries named are in the hands of the North British Railway Company, but have been largely superseded by the great bridge. In former times the Queen's Ferry was on the line of the Great North Road, the mails crossing here *en route* for Kinross, Perth, and the North. The ferry between Leith or Newhaven and Kirkcaldy or Pettycur has long since been abandoned, as has also the 'Earl's Ferry,' from a place in Fife still bearing that name, to the nearest point in East Lothian. Many projects have been made to bridge the Forth or to tunnel it, the latter proposal being described in several pamphlets published early in the present century. Although there are, with the railway bridges, several structures now spanning the Forth there, the bridge of Stirling was at one time an important because almost solitary access to the North. A bridge is known to have existed here six centuries ago, and some remains of it, about $\frac{1}{2}$ mile above the existing 'old bridge,' are still, it is said, to be seen. Below Stirling a bridge was erected (1882-83) by the Alloa Railway Company, to connect with the South Alloa Branch of the Caledonian railway. The main feature of this bridge is a swing-opening by which the river, at high water, remains navigable by steamers and small vessels to Stirling as heretofore. Before the Forth bridge undertaking was begun, several plans had been drawn up for improving the crossing at Queensferry and below. See article FORTH BRIDGE.

The Firth of Forth has played a not unimportant part in the troublous history of Scotland, having been visited by hostile fleets at various times from 83 A.D. downwards. In 1549, the island of Inchkeith was seized and fortified by the English under the Duke of Somerset, from whom it was taken by the French commander, then in alliance with the Scots. In 1567, an act was passed for the demolition of the fort on Inchkeith, and though this was not fully carried out (since Johnson and Boswell found the fort in fair preservation in 1773), the Firth for three centuries remained defenceless. At the entrance to Leith harbour a Martello tower was erected, and there is, nominally, a fort in that town, but the former is disused, and both are inadequate for defence against modern ordnance. After many years' agitation, steps were in 1880-81 taken for the construction of three batteries on Inchkeith, and one on Kinghorn Ness, which, mounted with heavy guns, completely command the channels N and S of the island.—*Ord. Sur.*, shs. 38, 39, 31, 32, 40, 33, 41, 1857-71. See David M. Home's *Estuary of the Forth and adjoining Districts viewed geologically* (Edinb. 1871), and works cited under FIFE and STIRLINGSHIRE.

Forth Bridge, a stupendous steel cantilever railway bridge connecting the northern and southern shores of the Firth of Forth at Queensferry. Before this undertaking was designed several plans for improving the crossing at this point and below it were drawn up. As far back as 1818 it was proposed to span the Forth here by a cast-iron suspension bridge 90 feet above high water, the line of which was to begin at high-tide mark 'near Newall's Inn,' to traverse the island of Garvie at a point, and terminate at the Battery Rock on the north shore. In 1851 Sir Thomas Bouch perfected the 'floating railway' between Granton and Burntisland, a plan in which, by the use of adjustable loading apparatus and of large flat steamers, the railway company was enabled to carry goods trains over the ferry without breaking bulk; and this system remained in operation

for upwards of thirty years. In 1861 the same engineer proposed to extend the 'floating railway' idea to Queensferry in connection with a projected railway from Edinburgh to Perth. This plan not commending itself, three years later he proposed his first design for bridging the firth. The bridge was to be 3 miles long, crossing the broader but shallower part of the river a mile above Charleston, with a height of 125 feet above the river, and five spans of 500 feet each in the fairway. But in 1873, after the Tay Bridge had been begun, the bolder design of crossing at Queensferry, using the island of Inchgarvie as the central support for two spans of 1600 feet each, was put forward by him. The plan involved a double bridge, one for each set of rails. The two were to be braced together by lateral diagonal stays. This scheme was eagerly taken up, despite the fact that it was to be partly on the suspension principle, and required piers of 600 feet high to bear the chains, this elevation being about 100 feet above the highest existing structures. When the Tay Bridge fell, however, the feeling against the Forth Suspension Bridge became so pronounced that the idea was given up. A conference of engineers was held on the subject, and, after exhaustive consideration, it was resolved that a steel *cantilever* bridge, with central connecting girders, was the best, if not the only possible solution of the problem. Fortified by this unanimous and unqualified decision on the part of the best engineering authorities, the Forth Bridge Railway Company took the necessary steps to have the new project carried into effect, and in 1882 obtained powers to proceed with the plans of their chief engineers, Sir John Fowler and Mr Baker. The Midland and East Coast Railway Companies, along with the North British, interposed their credit for the necessary financial obligations; the North British being responsible for one-half of the four per cent. payable on the capital expenditure.

The cantilever principle is as old as the science of engineering, but never before has it been applied on so magnificent a scale. It is that of projecting brackets, gradually extended, till they come near enough to be connected by a central girder. The central or Inchgarvie cantilever is balanced by having a girder to support at both of its extremities; whereas the south and north cantilevers have at their shoreward ends about 1000 tons each of cast-iron ballast to counterbalance the half weight of the connecting girder each has to support at its other end. From each tower of tubes the great brackets had to be extended at an exactly equal rate, that the poise might be preserved. Each cantilever is in effect composed of two brackets—an ordinary and an inverted bracket, the former resting more directly on the pier foundation, and the latter suspended from the great steel tower.

To carry the tension parts of the cantilevers, it was necessary that the great steel towers should be 360 feet in height. Each of the three great towers includes four steel columns, 12 feet in diameter, and each of these columns rests on its own foundation of solid masonry, built from the rock or boulder clay, 70 feet in diameter at the bottom and tapering to 49 feet at the top. The foundations of the north and south cantilevers are 91 feet below high-water level, so that the total height of the structure from its base is fully 450 feet. The foundations of the central cantilever, at Inchgarvie, were cut out of the hard trap rock to 72 feet below the surface of the water. Two of the piers for the Fife cantilever were constructed practically on shore, and other four were erected without the aid of caissons; but the remaining six had to be laid in deep water by means of caissons, 70 feet in width and about 60 feet in height. These caissons were made on shore, launched, towed to the spot where they were wanted, and there ballasted till they sank to the bottom. The floor of each caisson was 7 feet above its lower or cutting edge, and below this floor the water was expelled by means of compressed air, leaving a working chamber 70 feet in diameter and 7 feet in height, in which the work of excavation was carried on. This working chamber communicated with the surface by three shafts, closed with air-tight double doors or

air-locks, on the principle of a canal lock. Two of these shafts were used to bring up the excavated material, and the third was for the use of the workmen and officials. The working chamber was lighted by electricity; and when the caisson was at the bottom of the foundations the pressure of air had to be maintained at 35 lbs. to the square inch. Most of the men employed at this part of the work were Italians who had acquired full experience of similar employment while constructing the foundations of the great new quays at Antwerp. They used dynamite for blasting, and took refuge some distance up the shaft when a shot had to be fired. To work in the boulder clay, which proved too tough for ordinary digging implements, Mr Arrol, the contractor, invented for them diggers with hydraulic rams in their hollow stems. When these diggers were placed against the roof of the working chamber, the men had but to turn on the hydraulic power, when the cutting part of the implement went down into the clay with a force of which human muscle is incapable. As the work went on round the cutting edge of the caisson, it gradually sank to the required depth; and when the foundation was found to be satisfactory the whole of the interior of the caisson was built full of solid masonry, for which the caisson itself is left as a temporary covering. One of the deep piers contains 20,000 tons of masonry. Into the upper part of the piers are built strong steel ties, 24 feet deep, and fixed to secure anchors in the masonry. By these ties the bed-plates are held down on the top of the masonry. These plates bear the enormously strong skew-backs, in which are combined the bases of all the limbs of the cantilevers—perpendicular, horizontal, and diagonal, amounting to 50,000 tons of steel. It took three years to lay the foundations, and, considering the nature of the task, the time was considered short by those competent to judge. They contain 120,000 cubic yards of concrete and 400,000 cubic feet of granite.

The piers that serve as the bases of the great vertebral steel columns are in pairs, 120 feet apart from east to west. The east columns of each tower are therefore that distance apart from the west at their base, but they approach to within 33 feet of each other at the top. This arrangement greatly enhances the stability of the bridge and its power to resist wind pressure. The piers of the Fife and of the Queensferry cantilevers are 150 feet apart from north to south; but those of the Inchgarvie cantilever have been placed 270 feet apart, because, the arms of the central cantilever being free, a greater thrust-resisting base has been deemed necessary for its support. Lengthwise the skew-backs, or boxes that receive the bases of all the great columns, are joined together by cylinders 12 feet in diameter; crosswise they are bound together by lattice girders. On these skew-backs all the thrusts, vertical and lateral, connected with the weight of the bridge meet and counterbalance each other. The construction of the great tubs columns was first gone about on shore. The steel plates of which they are composed had to be heated to a dull red and bent by hydraulic pressure into the exact curve needed. The edges of every plate had to be carefully planed, and they were fitted round a frame which had been prepared of the exact shape and dimensions of the great tube. The rivet holes were then all carefully drilled, and, after the tube had thus been completed, every plate was numbered and the whole taken to pieces for erection on its permanent site. The construction of the cantilevers began in the early part of 1886. Large temporary platforms for the workmen were used in the first instance, and gradually raised, as necessary, by hydraulic rams. When the work advanced, it served as the basis of its own scaffolding. Cranes rested on the rising vertical and extending horizontal members of the cantilever, making additions which, in their turn, became new supports for the cranes and starting points for further extension. Plates and other material, brought out in barges, were raised to the level of the viaduct by a crane stationed there. Goliath cranes lifted the plates into position, and held them there till they had been securely riveted. The columns

at the Fife and Queensferry sides were completed to their full height in the summer of 1887, less than half a year after they had been commenced, and those of the Inchgarvie cantilever reached their full height shortly after. In the summer of 1888 each of the first bays of the cantilevers had been fixed; and in the summer of 1889 they had been so far finished that they were only separated by the gaps left for the connecting girders. These girders were built out gradually, on the same principle as the cantilevers, one-half from each side, by means of cranes gradually advanced for the purpose. The completion of these girders was successfully accomplished on 14th November, 1889, and the bridge was complete from South to North Queensferry.

The great 12 feet tubes are stiffened by internal diaphragms, and provided with man-holes to facilitate inspection, painting, and repairs. For the same purpose they are traversed by internal steel ladders. The tubes are strengthened as well as held in position by strong struts and ties, which become lighter towards the extremity of the cantilever, where the end of the intermediate connecting girder rests on a rocking column, to allow for expansion and contraction of the bridge under changes of temperature. By this arrangement the rails are allowed to slip to and fro, if necessary, as much as 18 inches on the whole bridge. The rails of the permanent way, instead of being left a little apart at their ends, as is usually the case, to allow for expansion in hot weather, are constructed with tapered ends, which overlap and can slip past one way or the other, as expansion or contraction may require. Thus the jolt so often felt in passing a joint of the rails in travelling will be avoided on the Forth Bridge. There is similar provision made on the approach viaduct terminal piers for any movement due to the elasticity of the cantilevers under lateral wind pressure or by changes of temperature; and the girders of the approach viaduct—each 336 feet long—rest on a sliding bed-plate, which surmounts each column, to allow for contraction and expansion under changes of temperature. A space of 6 inches has been left between each girder for expansion, though the greatest variation yet noted has been but 2 inches, on one of the hottest days of 1889. The rails are 120 lbs. per yard, 50 per cent stronger than the strongest rails ordinarily in use. They rest on teak sleepers, sunk in a longitudinal trough formed by the upper members of the permanent way girder. The teak sleepers rest on a wooden asphalted bed; and as the rails are 1½ inch below the top of the trough, no other guiding rail is needed.

The bridge was formally inaugurated on 4th March, 1890, when the Prince of Wales, by turning the tap of a hydraulic rivetter, clinched the last bolt, immediately afterwards declaring the bridge open. At the luncheon which followed, His Royal Highness intimated that Her Majesty had been pleased to create Sir John Fowler, chief engineer of the company, a Baronet; Mr Benjamin Baker a Knight Commander of the Order of St Michael and St George; and Mr. William Arrol a Knight.

Forth and Clyde Canal or Great Canal, The, constructed to connect the Firths of Forth and Clyde, was opened for traffic in 1790. The possibility of making a short cut through this neck of Scotland was discussed as early as the reign of Charles II., and the plan was revived without success in 1723 and 1761. In 1766 some Glasgow merchants began a subscription of £30,000 for a canal 4 feet deep and 24 broad, but parliament refused to sanction the scheme, owing to the smallness of the sum, which had been fully subscribed in two days after the proposal. Another combination was made, and a new subscription for £150,000 set on foot. In 1767 parliament gave the required permission for the incorporation of 'The Company of Proprietors of the Forth and Clyde Navigation,' the stock to consist of 1500 shares of £100 each, with liberty to borrow £50,000. Work was begun in 1768 under the superintendence of Mr. Smeaton, the first sod being cut by Sir Lawrence Dundas on 10 July. In July 1775 the canal was completed up to Stockingfield, at which point a branch to Glasgow was con-

structed and was carried to Hamilton Hill near that city, where a basin and storehouses were made. By this time all the capital and the loan had been spent, as well as the income from other sources. The revenue from the part then opened was only £4000, and the prospects were gloomy all round, the shares falling to half their original price. In 1784 assistance was given by the Government, who handed £50,000 of the revenue from the forfeited estates of the Jacobites to the corporation. This was not a gift, for the Government stipulated that the Crown should draw the ordinary dividend for that sum. In July 1786 the cutting of the canal was resumed under the superintendence of Mr Robert Whitworth, and by July 1790 it was opened from sea to sea. The Hamilton Hill basin was found too small, and the large depot at Port Dundas was constructed to answer the needs of Glasgow. Here a junction was afterwards effected with the MONKLAND CANAL, and the two were amalgamated in 1846. Although the canal was planned to be only 7 feet deep, its depth was practically 10. Its length was 38½ miles—35 miles direct between the Forth and Clyde, 2½ miles of the branch to Port Dundas, and a mile of the continuation to the Monkland Canal. The greatest height of the canal above the sea is 156 feet, and this is attained by means of twenty locks on the eastern and nineteen on the western sides, a difference due to the different water-level of the two rivers. The locks are each 74 feet long and 20 broad, with a rise of 8 feet. They admit the passage of vessels of 68 feet keel, 19 feet beam, and 8½ feet draught of water. The average breadth of the canal on the surface is 56 feet, and at the bottom 27 feet. Above thirty bridges span the canal, and it in turn crosses about forty aqueducts, the largest of which is that over the Kelvin at Maryhill, consisting of four arches 83 feet high, which convey the waterway across a dell 400 feet wide. This work was begun in June 1787, and completed in April 1791, at a cost of £8500. Water for the canal is supplied from eight reservoirs, covering a space of 721 acres.

The canal begins, at the E end, about a mile up the river Carron at Grangemouth. Hence it goes south-westward to Grahamston and Bainsford, where a basin was made for the Carron Company's traffic. It then continues in the same direction to Camelon, and then trends to the W to Lock 16, where it is joined by the UNION CANAL from Edinburgh. Thence to Windford Loch, near Castlecary (where it attains its greatest elevation), it goes in a westerly and south-westerly direction. As it approaches the Kelvin viaduct the locks become numerous, and the scenery through which the canal passes is picturesque and romantic. Re-entering Dumbartonshire, it proceeds about 5 miles till it is joined by a junction canal, extending to the Clyde opposite the mouth of the Cart, formed in 1839 for the benefit of Paisley, but not now used. For 3½ miles the Forth and Clyde navigation follows the course of the Clyde in a north-westerly direction, finally joining the river at Bowling Bay, where a harbour and wharves were constructed at a cost of £35,000.

Considerable scientific and historical interest attaches to the Forth and Clyde Canal as the scene of early experiments in steam navigation. After Mr Patrick Miller and Mr Symington had, on Dalswinton Loch, proved the feasibility of using steam on the water, they came to Edinburgh, and had a boat of 30 tons burden constructed at Carron. In November 1789 this vessel was launched on the Forth and Clyde Canal. In presence of hundreds of people the vessel started, and attained a speed of 6 miles an hour. Ten years later Lord Dundas desired Symington to construct a steamer to be used as a tug on the canal, and in March 1802 the *Charlotte Dundas* towed two laden barges of 70 tons burden each a distance of 19½ miles with great ease. In consequence of the success of this experiment, a proposal was made to the proprietors to use steam tugs instead of horse power, but it was rejected on the ground that the wash from the paddles would destroy the banks of the canal.

In September 1839 another successful experiment in

the use of steam was made on the canal. This time the power was proposed to be supplied by an engine running along the bank; but as the application of the system to the whole canal would have been very costly, it was abandoned. Since then, however, screw-propelled steamers have been largely introduced. In 1867 the joint canals were taken over by the Caledonian Railway Company, when they were valued at £1,141,333.

Forth and Clyde Railway. See **NORTH BRITISH RAILWAY.**

Forthar, a place with extensive lime-works in Kettle parish, Fife, 2 miles S by W of Kettle village. The limestone at it contains 98 per cent. of pure lime; and the working of it gives permanent employment to a great number of men.

Forthar Castle, Forfarshire. See **FORTER.**

Forthill, an eminence in Monifieth parish, Forfarshire, $\frac{1}{2}$ mile NW of Broughty Castle. A fort, erected on it in 1548 as a flanking post of the English garrison in Broughty Castle, was dismantled in 1550; left remains 12 feet high till 1782; and is now completely obliterated. A camp was formed on the same eminence fully $\frac{1}{4}$ mile E of the fort, and has left slight traces of its entrenchments.

Forthie Water, a rivulet of Kincardineshire, rising in the W of Dunnottar parish, and winding 4 $\frac{1}{2}$ miles south-westward, chiefly along the mutual boundary of Glenbervie and Arbuthnott, till it falls into Bervie Water 1 mile S of Drumlithie.—*Ord. Surv.*, shs. 67, 66, 1871.

Forth Iron-works. See **CARNOCK** and **OAKLEY.**

Fortingall, a hamlet and a large highland parish of Athole and Breadalbane districts, NW Perthshire. The hamlet stands, 400 feet above sea-level, 3 furlongs N of the left bank of the Lyon, $1\frac{1}{2}$ mile N of the lower waters of Loch Tay, and 8 miles W by S of Aberfeldy, under which it has a post office. There is a good hotel. Fairs are held here on 9 August, *o.s.*, and 6 and 7 Dec., but when these dates fall on Saturday, Sunday, or Monday, then on Tuesday following.

The parish contains also **KINLOCH RANNOCH** village, 18 miles NNW of Fortingall by road, but only 8 $\frac{1}{2}$ as the crow flies, and Innerwick hamlet, 10 $\frac{1}{4}$ miles W; and until 1891 it comprised two detached portions. In that year the Boundary Commissioners rearranged the bounds of the parish, and added considerably to its area. There were transferred to it so much of Kenmore parish, on the north of Drummond Hill, so much of the Kenknock detached portion of the same parish, and so much of the detached parts of Weem parish, as lay in the basin of the river Lyon. The addition from the parish of Weem had the effect of uniting the Loch Lyon detached portion of Fortingall with the main portion. The other (Bolfracks) detached portion of Fortingall, however, comprising 4020 acres, was transferred to the parish of Dull. There were also transferred to Fortingall two detached portions of Logierait parish—the one, situated on the south side of Loch Rannoch, containing 9939 acres; and the other, situated near Lochgarry House, containing 4681 acres. On the northern boundary of the latter detached portion was an area marked on the Ordnance Survey maps as common to Blair-Athole, Fortingall, and Logierait; this area has been divided between Blair-Athole and Fortingall, the burn Allt Sleibh being the dividing line, and the part south of this being given to Fortingall. The parish is bounded NE by Blair-Athole, E by Dull, S by Kenmore and Killin, W by Glenorchy and Lismore in Argyllshire, NW and N by Kilmonivaig and Laggan in Invernesshire. Its utmost length, from E to W, is 27 miles; and its utmost breadth, from N to S, is 22 miles. In the south-western portion of the parish the river LYON rises close to the Argyllshire border at 2400 feet above sea-level, and runs 4 miles northward to Loch Lyon ($1\frac{1}{2} \times \frac{1}{4}$ mile; 1100 feet), after leaving which it has an east-by-northerly course through the entire length of the southern or longest part of the parish, until it enters Dull, at the junction of the Keltney, just previous to joining the Tay. Thus Fortingall claims all but 2 $\frac{1}{2}$

miles of its entire course (36 miles), during which its chief affluent is **KELTNEY** Burn, rising at 2700 feet upon Carn Mairg, and hurrying 5 $\frac{1}{2}$ miles east-by-northward through the interior, then 3 $\frac{1}{2}$ south-south-eastward along the boundary with Dull. Loch Laidon or LYDOCH ($5\frac{1}{4}$ miles \times $\frac{1}{2}$ mile; 924 feet), on desolate Rannoch Muir, belongs partly to Glenorchy, but mainly to Fortingall. From it the GAUIR winds 7 miles eastward to the head of Loch RANNOCH (9 $\frac{1}{2}$ miles \times 5 $\frac{1}{2}$ to 9 furl.; 668 feet). The river TUMMEL, issuing from the foot of Loch Rannoch, has here an eastward course of 6 $\frac{1}{2}$ miles; and to Loch Rannoch, towards its head, the ERICHT runs 5 $\frac{1}{2}$ miles south-south-eastward out of Loch Erich (1153 feet), whose lower 7 miles are partly in Laggan but chiefly in Fortingall. Such, broadly, are the drainage features of this parish, which, lying all within the basin of the Tay, at the very heart of the Grampians, offers rich variety of highland landscape—soft valley and rugged glen, jagged ridge and soaring summit, with, westwards, mile on mile of moorland plateau. Along the Tummel the surface sinks to 600, along the Lyon to 350 feet above sea-level; and from E to W the principal heights to the N of the Tummel, Loch Rannoch, the Gaur, and Loch Laidon, are **BEN MHOLACH** (2758 feet), **Stob an Aonaich Mhoir** (2805), ***Ben Chumhann** (2962), **BEN PHARLAGAIN** (2336), ***Sgur Gaibhre** (3128), ***Carn Dearg** (3084), and ***CRUACH** (2420); between Loch Rannoch and the Lyon, **Meall Crumach** (2217), conical **SCHIEHALLION** (3547), **CARN MAIRG** (3419), **Carn Gorm** (3370), **Ben Meggernie** (2158), **Garbh Mheall** (3000), and ***Stuchd an Lochain** (3144); to the S of the Lyon ***Meall Luaidhe** (2558), ***Ben nan Oighreag** (2978), and ***Meall Ghaordie** (3407), where asterisks mark those summits that culminate right on the confines of the parish. In the south-western detached portion, around Loch Lyon, rise **Meall Dail** (2858), and **BEN CREACHAN** (3540), ***BEN ACHALLADER** (3399), **BEN VANNOCH** (3125), ***BEN-A-CHAISTEIL** (2897), ***Creag Mhor** (3305), and **Ben Heasgarnich** (3530). The Moor of Rannoch lies, in large measure, upon granite; elsewhere the rocks are principally quartzose, of Silurian age. Clay slate, of fissile character, appears in a hill above Fortingall hamlet and on the eastern side of Schiehallion. Good limestone is plentiful in the E; and several veins of marble, of varied hues, occur in different parts. Rock crystals, spars, and pebbles of great variety and brilliancy are often found among the mountains; and a vein of lead ore in Glenlyon, seemingly of considerable richness, was worked for some time about the beginning of last century. The soil of the level strips along the vales is generally gravelly and dry; on the skirts and lower slopes of the hills, though cold, yields good enough pasture; and on the higher acclivities is for the most part bleak and barren moor. Very little of the land is arable, an enormous proportion being either sheep-walk, grouse-moor, or deer-forest. Still, great improvements have been made in the reclamation and enclosing of land, and in farm-buildings. Chief antiquities are an ancient Caledonian stone circle, near the parish church; a Roman camp between the hamlet and the Lyon, by Skene regarded as an outpost of the Emperor Severus beyond the Tay (208 A.D.); traces of fourteen wide circular forts; and the striking ruin of Garth Castle. This is separately noticed, as also are the chief mansions—**Glenlyon House**, **Garth House**, and **Chesthill**, near Fortingall hamlet; **Meggernie Castle**, above Innerwick; **Rannoch Lodge**, **Finnart Lodge**, and **Croiscrag**, at or towards the head of Loch Rannoch; and **Dalchosnie**, **Dun Alastair**, and **Innerhadden**, near Kinloch Rannoch. In the presbytery of Weem and synod of Perth and Stirling, this parish is ecclesiastically divided into Fortingall proper, Innerwick or Glenlyon, and Kinloch Rannoch—the first a living worth £183. Its church, at Fortingall hamlet, is a venerable building, containing 376 sittings; and in the churchyard, protected by iron rails, is the shattered torso of the famous yew-tree, supposed to be fully 3000 years old—'probably the oldest authentic specimen of vegetation in Europe.' In Pennant's day (1772) it measured no less than 56 feet in girth, but now

there are only two fragments and a part of the shell. These fragments still put forth branches and leaves, and outside the enclosure is a vigorous scion, 36 feet high, and fully 150 years old. A Free church stands on the same bank of the Lyon, $\frac{1}{2}$ mile E of the hamlet; and a public school, with accommodation for 100 children, has an average attendance of 59, and a grant of £74, 2s. Other churches and schools are noticed under GLENLYON and KINLOCH RANNOCH. Pop. of civil parish (1801) 3875, (1831) 3067, (1861) 2181, (1871) 1766, (1881) 1690, (1891) 1610, of whom 1131 were Gaelic-speaking; of ecclesiastical parish (1871) 700, (1881) 616, (1891) 527; of registration district (1881) 568, (1891) 773.—*Ord. Sur.*, shs. 55, 54, 46, 47, 1869-73.

Fortrose, a royal and parliamentary burgh in the parish of Rosemarkie, Ross-shire, is situated on the NW side of the inner Moray Firth, at the north-eastern extremity of the Black Isle Rock, nearly opposite Fort George, $8\frac{1}{2}$ miles S by E of Invergordon Ferry, 9 SSW of Cromarty, and $10\frac{1}{2}$ NNE of Inverness, under which it has a post office, with money order, savings bank, and telegraph departments. It is the terminus of the Black Isle section of the Highland railway, branching off at Muir of Ord station. Fortrose consists of two towns, CHANONRY and ROSEMARKIE, $\frac{1}{2}$ mile distant from each other, and first politically united under James II. in 1455, when they were constituted a free burgh in favour of the Bishop of Ross. The burgh lapsed to the Crown after the Reformation, but in 1590 Chanonry was enfranchised; and in 1592 the towns were re-united under the title of the royal burgh of Fortross, afterwards softened into the present name Fortrose. Chanonry Point, a long tongue of land, covered with fine links, and edged with sandy beach, which stretches into the sea between the towns, has suggested an etymology for the name, meaning 'fort of the peninsula;' other authorities explain it as 'strong fort.' A lighthouse of the second class was built in 1846 at the extremity of this point, whence also there is a ferry (1 mile broad) to Fort George and the Inverness coast. Fortrose (or at least one of its component parts) early appears in history as an ecclesiastical seat. Lugadins or Moluog, an abbot and bishop of Lismore, who died in 577, founded a Columban monastery in Rosemarkie. About the beginning of the 8th century, Albanus Kiritinus, surnamed Bonifacius, who seems to have been a bishop of the Irish-Roman Church, named Curitan, came to Scotland; and in 716, says Wynnton,

'In Ros he fowndyd Rosmarkyne,'

dedicating his church to St Peter. When David I. came to the throne in 1124 he founded the bishopric of Ross, and placed the diocesan seat at Rosmarkyn or Rosemarkie. The presence of an educated clergy raised the place to a high degree of culture; and famous schools of divinity and law flourished under the shadow of the cathedral. Down so late even as the time of Cromwell the little town enjoyed a considerable amount of general prosperity. Now, however, Fortrose has little or no trade; and its connection with the outer world is chiefly maintained through the summer visitors who are annually attracted by the beautiful situation of the town, its picturesque neighbourhood, its fine links, and its facilities for sea-bathing. New houses have recently begun to spring up for the better accommodation of these visitors. Its most interesting edifice is the ruined cathedral dedicated to SS. Peter and Bonifacius, situated within a wide, grassy enclosure in the centre of the town. The sole remains now are the S aisle of the chancel and nave, and a detached chapter-house; and an old bell is also preserved, dated 1460. When perfect the cathedral was a handsome red sandstone building, presenting a beautiful specimen of the pure Early Decorated style, and dating from about the beginning of the 14th century. Its total length was 120 feet; and it comprised a nave of 4 bays, with aisles 14 feet wide, and round-headed windows; a choir, with aisles, Lady-chapel, west-tower, quasi-transept, rood-turret, and, to the NE, a vaulted chapter-house over a crypt. The greater part of the cathedral and the whole of the former bishop's

residence were removed by Oliver Cromwell to provide building material for his fort at Inverness. Within the precincts of the cathedral stood the various residences of the high officials of the chapter, the archdeacon's house, the rectory of Kirkmichael, and the manses of the parochial charges of Cullicudden, Lemlair, Rosskeen, Alness, Kiltearn, Contin, Kilmuir, West Kilmuir, Kin-cardine, Logie, Obstill, and St Katherine's; but of these no vestiges remain. In Jan. 1880 a hoard of 1100 silver coins of Robert III. was discovered, buried in the cathedral green, halfway between the sites of Kiltearn manse and of the ancient tumulus (now levelled) known as the 'Holeridge.' A large Volunteer hall, capable of seating 400 persons, was erected in the town in 1881. Fortrose is the seat of the presbytery of Chanonry. It contains two Established churches. Rosemarkie parish church (1821; 800 sittings) is said to occupy the site of an ancient church built by, and dedicated to, St Bonifacius; Fortrose church from a chapel of ease was raised to *quoad sacra* status in 1873. The Free church is a tasteful edifice in the Pointed style. The Episcopalian church of St Andrew was built in 1812 at a cost of about £1100, and was renovated in 1891. It is Gothic in style, and looks well from the sea. There is also a Baptist chapel (1806) in the town. The historian, Sir James Mackintosh (1765-1832), who was born at ALDOURIE, was educated at Fortrose from 1775 to 1780. The Academy, which offers a very good secondary education, was founded in 1791. By a scheme under the Educational Endowments (Scotland) Act, 1882, approved on 28th November, 1887, the Academy was transferred to and vested in the School Board of the parish of Rosemarkie as the governing body thereof. Among other provisions 6 scholars are to be educated free. The Academy, Rosemarkie Public, and Fortrose Infant schools, with respective accommodation for 150, 130, and 50 children, have an average attendance of 117, 74, and 49, and grants of £168, 18s. 6d., £71, 5s., and £41, 8s. 6d. Science classes are conducted in Fortrose and Rosemarkie. The Mechanics' Institute possesses an excellent library and a reading-room. The town contains a branch of the Caledonian bank, several insurance agencies, a hotel, a combination poorhouse, golf and curling clubs, and a horticultural society. The Black Isle Farmers' Society meets here and at Munloch. The Black Isle Steam Shipping Company's steamer runs between Inverness and Fortrose twice a week during winter and spring, and daily during summer and autumn. The harbour is safe and convenient, and was thoroughly repaired in 1881; and at the same date a new wooden pier, about 250 yards long, was erected, at a cost of £3000. A red light was erected on the pier in 1881. There are markets at Fortrose for cattle, grain, and farm produce every month, on the Monday preceding the Beaully market, except in April and May, when the dates are respectively the first Wednesday of the month and the Monday before Beaully; and in June, besides the Monday before Beaully, on the third Wednesday. Hiring markets are combined with the above in August and November. Through the generosity of Mr Fletcher of Rosehaugh a water supply was introduced in 1893 to the burgh, and also to the village of Avoch, on easy terms. The water comes from a spring on the Rosehaugh estate about 5 miles distant, which is calculated to give 60 gallons per head per day. The reservoir, situated a little above Rosehaugh mansion house, holds 250,000 gallons, and the whole undertaking cost about £5000.

The burgh has an independent revenue, besides enjoying the benefit of various charitable mortifications, so that the rate of taxation is low. Under the Burgh Police Act 1892, which came into force May 15, 1893, it is governed by 9 commissioners, including a provost and 2 bailies. The sheriff-substitute of Dingwall holds quarterly circuit small-debt courts at Fortrose; and a justice of peace court is held on the first Wednesday of each month. With INVERNESS, FORRES, and NAIRN, Fortrose returns a member to parliament, its parliamentary constituency numbering 157, and its municipal 225, in 1896, when the annual value of real property

within the burgh amounted to £4127, its corporation revenue being £460. Pop. (1821) 932, (1841) 1082, (1851) 1148, (1861) 928, (1871) 911, (1881) 874, (1891) 871; of royal burgh beyond the parliamentary limits

Seal of Fortrose.

(1881) 117, (1891) 109; of Fortrose *quoad sacra* parish (1881) 492, (1891) 503.—*Ord. Sur.*, sh. 84, 1876. See the Rev. J. M. Neale's *Ecclesiological Notes on Ross* (Lond. 1848), and A. R. Scott's *Illustrations of Fortrose Cathedral* (Edinb. Architect. Assoc., 1873).

Fort-William. See WILLIAM, FORT.

Foss, a hamlet and a *quoad sacra* parish in Dull parish, Perthshire. The hamlet stands near the right bank of the river Tummel, $\frac{1}{4}$ mile WSW of the head of Loch Tummel, and 12 miles W of Pitlochry, under which it has a post office. Foss House, $\frac{3}{4}$ mile nearer the loch, is a seat of Sir Robt. Menzies, Bart. of CASTLE-MENZIES. The parish, constituted by ecclesiastical authority in 1830, by civil authority in 1845, is in the presbytery of Weem and synod of Perth and Stirling; its minister's stipend is £120. Pop. (1871) 270, (1881) 226, (1891) 210.—*Ord. Sur.*, sh. 55, 1869.

Fossway, a parish until 1891 chiefly in Perthshire, but partly in Kinross-shire, containing the villages of BLAIRINGONE, CROOK OF DEVON, and CARNBO, and comprising the ancient parishes of Fossway and Tullibole, united about 1614. The Boundary Commissioners, in the year mentioned, transferred to the Perthshire parish of Glendevon that portion of Fossway lying to the west of the Glendey Burn and of the road leading from Muckart to Dunning. Fossway parish, thus reduced, was then placed entirely in the county of Kinross. Very irregular in outline, it is bounded N by Dunning, NE by Orwell, E by Kinross, SE by Cleish, S by Saline in Fife, SW by Clackmannan and Dollar in Clackmannanshire, and W by Muckart and Glendevon. On the Glendevon and Muckart border, the 'crystal Devon' winds south-eastward and west-south-westward, from the junction of the Glendey Burn to near Pitgober. During this course it exhibits the finest of its famous scenery, described in our articles Devil's Mill, Rumbling-Bridge, and Caldron Linn. Other chief streams are Gairney Water and South Quich Water, both streams running to Loch Leven. Perennial springs of pure water are everywhere abundant; a petrifying spring is on the lands of Devonshaw; and a medicinal spring, erroneously known as Dollar Water, is on the lands of Blairingone. The surface declines along the Devon to close on 100 feet above sea-level, and S of Crook of Devon it, though undulating, nowhere much exceeds 600 feet; but northwards it rises to 734 feet near Knockintinny, 1496 at Lendrick Hill, 1134 at Cloon, 1573 at Mellock Hill, and 1621 at Innerdouny Hill—summits these of the Ochils. The rocks are partly eruptive, partly carboniferous. Trap and sandstone are quarried in several places; coal and ironstone has been worked, and limestone occurs in connection with both, whilst copper ore, not rich enough to repay the cost of working, is found near Rumbling-Bridge. The soils are variously clayey, loamy, gravelly,

and mossy; and some are fertile, others very inferior. ALDIE and Tullibole castles are interesting and prominent objects; mansions are Arndean, Devonshaw, Fossway Lodge, and Glen Tower; and an old circular ruin on the lands of Aldie, an oblong moated mound on the barony of Coldrain, the Gallow Knowe adjacent to Crook of Devon village, and the Monk's Grave between the lands of Gartwhinean and those of Pittar, are chief antiquities. Giving off a portion to the *quoad sacra* parish of Blairingone, this parish is in the presbytery of Kinross and synod of Fife; the living is worth £170. The parish church, near Crook of Devon village, was built in 1806, and an organ was introduced in 1892. There is also a Free church of Fossway; a post office, with money order, savings bank, and telegraph departments; and two public schools, Carnbo and Fossway, with respective accommodation for 83 and 170 children, have an average attendance of 35 and 83, and grants of £49, 4s. 6d. and £103, 2s. 6d. Pop. (1801) 1312, (1831) 1576, (1841) 1724, (1861) 1584, (1871) 1461, (1881) 1267, (1891) 1053; of ecclesiastical parish (1891) 785.—*Ord. Sur.*, shs. 40, 39, 1867-69.

Fotheringham, a Scottish Baronial mansion of 1859, designed by the late David Bryce, in Inverarity parish, Forfarshire, at the southern base of wooded Fotheringham Hill (800 feet), 6 miles S by E of Forfar. It is a seat of Walter Thomas James S. Stuart-Fotheringham, Esq. of POWRIE, Fotheringham, and TEALING (b. 1862; suc. 1864), whose ancestor settled in Forfarshire in the latter half of the 14th century.—*Ord. Sur.*, sh. 57, 1868.

Fouldland, an upland tract in Fergue, Inch, and Culsalmond parishes, Aberdeenshire. Flanking the upper basin of the Ury, and extending E and W, it rises to a maximum altitude of 1529 feet above sea-level, and has in main degree a bleak moorish surface. Slates of clear light blue colour and excellent quality abound in the Inch part of it; were long quarried to the amount of nearly a million pieces a year, chiefly for the market of Aberdeen; but ceased to be in high request, principally in consequence of the greater cheapness of sea-borne slates from the quarries of Easdale in Argyllshire.—*Ord. Sur.*, sh. 86, 1876.

Foula. See FOWLA.

Foulden, a village and a parish in the eastern part of Merse district, Berwickshire. The village stands 1 mile to the N of Whitadder Water, and $5\frac{1}{2}$ miles S of Ayton station, 4 E by S of Chirnside, and 5 WNW of Berwick-upon-Tweed, under which it has a post office. A pretty little place, it once was a burgh of barony and a place of considerable size and note, and had its Border peel-tower, whilst its church, on 23 March 1587, was the meeting-place of Elizabeth's commissioners with those of James VI., to vindicate the execution of Queen Mary.

The parish is bounded N by Ayton, E and SE by Mordington, S by Hutton, and W by Chirnside. Its utmost length, from E to W, is $2\frac{1}{2}$ miles; its utmost breadth, from N to S, is $2\frac{3}{8}$ miles; and its area is 3298 acres, of which 20 are water. WHITADDER Water winds $2\frac{1}{2}$ miles east-by-southward between steep banks along all the southern border, and receives three little burns from this parish, one of which traces most of the boundary with Mordington. The surface declines at the SE corner to less than 100 feet above sea-level, thence rising to 389 feet near Blinkbonny, 461 near Mossparck, 421 near St Johns, and 642 at Greenfield—heights that command a wide and magnificent view of Flodden and other famous historic scenes. The rocks are mainly Devonian; and the soil ranges from stony clay in the S to loamy towards the centre, and light and moorish in the N. Rather more than one-twelfth of the entire area is under wood, chiefly in the central district; one-ninth is natural pasture; and all the rest is in tillage. Foulden House, to the E of the village, is the seat of the chief proprietor. Another mansion is Nunlands House, $\frac{1}{2}$ mile N of the village. Foulden is in the presbytery of Chirnside and synod of Merse and Teviotdale; the living is worth £193. The church was rebuilt in 1786; and a public school, with accommodation for 72 children, has an average attendance of

FOULIS CASTLE

46, and a grant of £42, 12s. 6d. Pop. (1801) 393, (1831) 424, (1861) 431, (1871) 425, (1881) 393, (1891) 351.—*Ord. Sur.*, sh. 34, 1864.

Foullis Castle, a mansion in Kiltlearn parish, Ross-shire, standing $\frac{3}{4}$ mile NW of, and 200 feet above, the Cromarty Firth, close to whose shore is Foullis station on the Highland railway, 2 miles SSW of Evanton or Novar, and $4\frac{1}{4}$ NNE of Dingwall. A splendid pile, with beautiful grounds, it is the seat of Sir Hector Munro, eleventh Bart. since 1634 (b. 1849; suc. 1883), the chief of the clan Munro. The Foullis estate has been held by the Munros since early in the 12th century, on the tenure of furnishing a snowball, if required, at midsummer. They fought at Bannockburn, Halidon Hill, Harlaw, Pinkie, Fontenoy, and FALKIRK; and Robert Munro, the eighteenth or 'Black' Baron, with 700 men from his own estate, served under the 'Immortal' Gustavus, and died of a wound at Ulm in 1633. The Munros' slogan is 'Castle Foullis in flames.'—*Ord. Sur.*, sh. 93, 1881.

Foulshiels, a place in Selkirk parish, Selkirkshire, on the left bank of Yarrow Water, opposite Newark Castle, and $3\frac{3}{4}$ miles W by N of Selkirk town. A farmhouse (now ruinous) here was the birthplace of the African traveller Mungo Park (1771-1805), and the place of his residence on the eve of his second and fatal expedition.—*Ord. Sur.*, sh. 25, 1865.

Fountainbleau. See DUMFRIES.

Fountainhall, the seat of Sir Thomas N. Dick-Lauder, Bart., in Pencaitland parish, Haddingtonshire, $1\frac{1}{2}$ mile SW of Pencaitland village, and 5 miles SSE of Tranent. The lands of Fountainhall were acquired by Sir John Lauder, who in 1688 was created a baronet of Nova Scotia, and whose ancestors had been lairds of the Bass Rock from the 13th to the 16th century. His son, Sir John (1646-1722), an eminent lawyer and statesman, was appointed a lord of Session in 1689, with the title of Lord Fountainhall. He is remembered by his *Decisions*, as is his fourth descendant, Sir Thomas Dick-Lauder (1784-1848), by his fictions and other writings. The present and ninth baronet is Sir Thomas North Dick-Lauder (b. 1846; suc. 1867).—*Ord. Sur.*, sh. 33, 1863. See Sir T. Dick-Lauder's *Scottish Rivers* (Edinb. 1874).

Fountainhall, a hamlet in Stow parish, SE Edinburghshire, on the right bank of Gala Water, with a station on the North British railway, $4\frac{1}{4}$ miles NNW of Stow village, under which it has a post office.

Fourman Hill. See FOREMAN.

Fourmerkland, a place in Holywood parish, Dumfriesshire, 5 miles WNW of Dumfries. A small tower here was built in 1590.

Fourmilehouse, a village in Tealing parish, Forfarshire, 4 miles N by E of Dundee.

Foveran, a coast parish of E Aberdeenshire, containing the seaport village of NEWBURGH, which stands at the right side of the Ythan's embouchure, 5 miles SE of Ellon station, $6\frac{1}{2}$ E by N of Udney station on the western border, and $13\frac{1}{4}$ NNE of Aberdeen, under which it has a post office, with money order, savings bank, and telegraph departments, and with which it communicates by coach. It is bounded N by Logie-Buchan, NE by Slains, E by the German Ocean, S by Belhelvie, and W and NW by Udney. Its utmost length, from E to W, is $6\frac{1}{4}$ miles; its greatest breadth is $3\frac{1}{2}$ miles; and its area is 10,844 acres, of which 248 $\frac{1}{2}$ are foreshore, and 63 water. The YTHAN, in places here $\frac{1}{4}$ mile broad at high water, flows $1\frac{1}{2}$ mile south-south-eastward between Foveran and Slains to its bar-obstructed mouth in the German Ocean, and at Newburgh is joined by Foveran Burn, which, rising near Tillery, runs $7\frac{1}{2}$ miles through the interior; whilst another of its tributaries, Tarty Burn, traces most of the Udney border. The coast-line, $1\frac{1}{2}$ mile long, is low and sandy; and from it the surface rises gently inland to 300 feet at Hillhead of Ardo, 73 at the parish church, 212 near Davieshill, and 400 at the western border near Edgehill. The principal rocks are trap, gneiss, mica slate, and conglomerate; and the soil varies from a sandy loam to a rich clay loam and a strong clay. The

FOWLIS-EASTER

parish is poorly wooded, its eastern exposure stunting what trees there are; and nearly all the land is devoted to agriculture, large tracts of waste having been drained and enclosed about the beginning of the nineteenth century. The castle of Knockhall, 1 mile NNW of Newburgh, built by the Udney family in 1565, was captured by the Covenanters under the Earl Marischal and the Earl of Errol in 1639; and, accidentally burned in 1734, still stands in a ruinous state. Of Foveran Castle, near Foveran House, not a vestige remains. The oldest part bore the name of Turing's Tower, after its first possessors, from whom it passed, about the middle of the 17th century, to a branch of the Forbeses of Tolquhoun. A rhyme, ascribed to Thomas of Ercildoune, foretold—

'When Turing's Tower falls to the land,
Gladsmuir shall be near at hand;
When Turing's Tower falls to the sea,
Gladsmuir the next year shall be.'

The tower did fall not long before 1720, and in 1745 the Highlanders were for giving the name of Gladsmuir to their victory at Prestonpans (Chambers's *Popular Rhymes*, p. 219, ed. 1870). An ancient burying-ground near the village of Newburgh retains a fragment of the 'Red Chapel of Buchan,' or Chapel of the Holy Rood. Part of this building is now the burial-place of the Udney family. Foveran House, 1 mile SSW of Newburgh, is an old mansion; whilst Tillery, in the W of the parish, $1\frac{1}{2}$ mile SSE of Udney station, is a more recent Grecian edifice. Foveran is in the presbytery of Ellon and synod of Aberdeen; the living is worth £270. The parish church, $1\frac{1}{2}$ mile SW of Newburgh, is a plain edifice of 1794, altered and improved in 1894, and containing a marble monument with two fine busts of Col. John Augustus and Col. Robert Fullerton Udney, of Udney and Dudwick, who died respectively in 1859 and 1861. There is also a Free church, $1\frac{1}{2}$ mile further SSW; and three public schools—Cultercullen, Foveran, and Newburgh Mathers—with respective accommodation for 120, 180, and 253 children, have an average attendance of 110, 89, and 213, and grants of £98, 16s. 6d., £90, 11s., and £209, 6s. Pop. (1881) 2042, (1891) 1945.—*Ord. Sur.* sh. 77, 1873.

Fowla or Foula, a Shetland island belonging to Walls parish, 16 miles WSW of the nearest part of the Shetland mainland, and 35 NNE of the nearest part of Orkney. It measures $3\frac{1}{4}$ miles by $2\frac{3}{4}$ miles, and 5'15 square miles in area; and, viewed at a little distance, appears to consist of five conical hills, rising steeply from the water, till the highest attains 1372 feet. It is easily seen on a clear day from the northern parts of Orkney; and, tested by Tacitus' words in speaking of the utmost limits of Agricola's victories, it has better claims than any other island to be deemed the Ultima Thule of the ancients. Only one spot, the fishing station of Ham, situated on its E side, is available as a landing-place; the coast all round, except at that spot, is almost one unbroken precipice, rising sublimely and terribly to the shoulders or tops of the hills, from 1100 to 1220 feet high. The single landing-place is much frequented as a fishing-station; the cliffs are denized with myriads of cormorants, kittywakes, gulls, and other sea-fowl; and the rocks are sandstone, except where claystone slate occurs near Ham. Fowla is chiefly valued as a fishing and curing station, and the only agriculture practised in it is that of the Shetlander pure and simple. Yet it is capable of producing finer crops than any other island in the group. Much of the soil is naturally good, and the climate is manifestly more largely affected by the Gulf Stream than that of any other part of Scotland. The island belongs to Mr A. Ewing Gilmonr. Its islanders are remarkably hardy, have few wants, and feel strong attachment to their rugged home. There is an Established mission church, a Congregational church, and a public school on the island. Pop. (1837) 202, (1861) 233, (1871) 257, (1881) 267, (1891) 239.

Fowlis Castle. See FOULIS CASTLE.

Fowlis-Easter, a parish formerly on the eastern border of Perthshire, containing the village of Fowlis, 6

miles WNW of Dundee; and since 1618 united to the contiguous parish of LUNDIE in Forfarshire, for ecclesiastical and educational purposes. In course of the adjustment of the boundary between the counties of Forfar and Perth by the Boundary Commissioners in 1891, it appeared desirable to all parties that this parish should be transferred to the county of Forfar. This was accordingly done. The parish is bounded SW by Longforgan in Perthshire, and N by Lundie, E and S by Liff and Benvie, in Forfarshire. Its utmost length, from WNW to ESE, is $4\frac{3}{8}$ miles; its width from $\frac{1}{4}$ mile increases eastward to $2\frac{1}{4}$ miles; and its area is 2827 acres, of which nearly 3 are water. The surface ascends, from flat carse lands to the braes of the Carse of Gowrie, from less than 180 feet above sea-level near Mains of Fowlis to 929 at Blacklaw Hill, at the north-western extremity, which commands a beautiful view of the Carse and of the southern screens of the Tay. A lake of 55 acres, the Piper-Dam, lay in its upper part, but was drained about 1780 for the sake of its marl. About two-thirds of the land are in tillage; and the rest is mainly disposed in woodland and pasturage. By David I. Fowlis and other lands were granted, for gallantry at the Battle of the Standard (1138), to William of Maule, who was succeeded by his son-in-law, Roger of Mortimer. From the latter's descendant, Fowlis passed by marriage (1377) to Sir Andrew Gray of Broxmouth, the first Lord Gray; and by the ninth Lord it was sold, in 1669, to an ancestor of the present proprietor, Keith-Murray of Ochtertyre. Fowlis Castle stands to the S of the village, towards the head of the beautiful Den of Fowlis or BALRUDDERY, a favourite field alike for geologist and botanist. From 200 to 300 years old, it was suffered to go to decay towards the close of the 18th century, but has recently been rendered habitable for farm labourers. A church of Fowlis-Easter is first mentioned in 1180, and in 1242 was dedicated to St Marnan. The present church is commonly said to date from 1142, but is Second Pointed in style, and probably was built about 1452 by Andrew, second Lord Gray of Fowlis, who made it collegiate for a provost and several prebends. Measuring externally $89\frac{1}{2}$ by 29 feet, it is all of hewn stone, and retains a finely-sculptured ambry, a mutilated octagonal font (restored from Ochtertyre), and a curious carved rood screen, with paintings of the Crucifixion, the Virgin Mary and the infant Christ, St John Baptist and the Agnus Dei, St Peter, etc. Of three round-headed doorways, one has been blocked up; and one, the priest's, is enriched with a crocketed canopy. Carefully repaired in 1842, its interior was in 1889 restored as nearly as possible to its original condition at a cost of over £1200, the heating apparatus being provided by Sir P. Keith-Murray, and an organ introduced. In the churchyard are a cross-carved coffin-slab and a plain passion cross 6 feet high. A public school, with accommodation for 99 children, has an average attendance of 60, and a grant of £55, 18s. 6d. Pop. (1831) 322, (1861) 317, (1871) 291, (1881) 311, (1891) 283.—*Ord. Sur.*, sh. 48, 1868. See vol. ii. of Billings' *Baronial and Ecclesiastical Antiquities* (1852); T. S. Muir's *Descriptive Notices of Ancient Parochial and Collegiate Churches of Scotland* (Lond. 1848); and an article by Andrew Jervise in vol. vii. of *Proc. Soc. Ants. Scoll.* (1870).

Fowlis-Wester, a parish of central Perthshire, containing Fowlis village, $2\frac{3}{4}$ miles NNE of Abercainry station, and $4\frac{1}{2}$ ENE of Crieff, under which it has a post office. Gilmerton, 2 miles NE of Crieff, with another post office, lies on the western border of the parish, which until 1891 consisted of two slenderly united sections and a small detached north-westerly district extending for $4\frac{1}{2}$ furlongs along the river Almond, 5 miles WSW of Amulree. This detached portion (containing 590 acres) was transferred by the Boundary Commissioners in the above-mentioned year to the parish of Monzievaird and Strowan. That part of the parish, too, lying in the basin of the river Bran was transferred to the parish of Little Dunkeld, and that part of it lying to the north of the Almond was

transferred to the parish of Monzie. There were, however, added to the parish of Fowlis-Wester the Auchilanzie detached part of the parish of Crieff, and all the part of Crieff parish which lay in the basin of the Almond. The parish is bounded N by Dull and Little Dunkeld, E by Monzie, SE by Methven, S by Madderty, SW by Crieff, and NW by Monzievaird. Its utmost length, from N to S, is $8\frac{1}{2}$ miles; and its breadth varies between 4 and 7 miles. The ALMOND enters the parish in the NW, and has an east-by-southerly course across the northern half of the parish, and as it leaves Fowlis-Wester forms the boundary between it and Monzie. Other boundaries of the parish are traced by the Shiligan and Shaggie Burns, and sluggish Pow Water separates it from Madderty. Here, in the SE, along the Pow, the surface declines to less than 200 feet above sea-level, thence rising to 441 feet at Aldie, 706 near Drum Mick, 806 at Murray's Hill, 1098 at Stroness, 1153 at Meall Quhanzie, and 2117 at Meall Tarsuinn. The northern portion, whilst sinking to 490 feet along the N bank of the Almond, rises in a north-north-westward direction. The northern division of the parish, consisting of rugged spurs of the Grampians, and dividing Strathbran from Glenalmond, is, with trifling exception, all of it wild or pastoral. The southern, in a general view, has a singularly varied and unequal surface, flecked and clumped with coppices and groves; but along Pow Water, throughout the southern border, consists of an opulent and finely-sheltered valley. The dells and ravines of the hillier portions are graced in numerous places with tiny cascades, and abound throughout with other features of fine close scenery. The hills themselves, with their large extent of southern exposure, are so adorned with wood and fine enclosures as to present a very charming appearance; and from many points they command magnificent views of Strathearn. Granite, clay slate, and sandstone are the prevailing rocks; but columnar trap and limestone also occur. The slate, of beautiful dark blue colour, possesses superior properties for roofing purposes. The sandstone in places suits well for building, having a beautiful colour and a durable texture; admits of fine polish; and has been quarried on the lands of Abercainry and Cultoquhey. The soil, alluvial in the valley of the Pow, is elsewhere variously gravelly, sandy, loamy, and clayey. Not much of the entire area is in tillage; woods and plantation cover many acres; and the rest is pastoral or waste. The castle of the ancient Earls of Strathearn stood on the E side of a ravine $\frac{3}{4}$ mile E of Fowlis village, and is now represented by only a grassy knoll. Remains of a double concentric stone circle, comprising 40 stones in the exterior range, and measuring 54 feet in circumference, crown the brow of a hill to the N of the village; and three other ancient Caledonian standing stones and a cromlech are on the W; whilst in the middle of the village square stands the 'Cross of Fowlis,' transferred to its present site from Bal-na-croisk, near the mouth of the Sma' Glen, and sculptured with figures of men and animals. Buchanty has been noticed separately, as likewise are the four mansions, Abercainry, Cultoquhey, Glen Tulchan, and Keillor Castle. Sir David Moray of Gorthie, author of *The Tragical Death of Sophonisba* (1611), and governor to Prince Henry, was born at Abercainry; and at the parish school were educated the Rev. William Taylor, D.D. (1744-1823), principal of Glasgow University, and the Rev. Archibald Alison (1757-1839), author of the *Essay on Taste*. Fowlis-Wester gives off portions to Monzie and Logiealmond, and itself is a living, of £276 value, in the presbytery of Auchterarder and synod of Perth and Stirling. The church, at the village, is a long unsightly edifice of Reformation time, with a fine lych-gate, however, bearing date 1644, but evidently older. The patron saint was Beanus, born 'apud Fowlis in Stratherne;' and till 1877 a yearly market was held at Fowlis village on his birthday, 26 Oct. s. Balgowan public, Fowlis public, and Buchanty Glenalmond subscription school, with respective accommodation for 84, 114, and 67 children, have an average attendance of 58, 50, and 28, and

FOWLSHEUGH

grants amounting to £72, £60, 10s., and £40. Valuation (1883) £15,569, 19s. 11s., (1892) £13,374, 6s. 5d. Pop. of civil parish (1831) 1680, (1861) 1433, (1871) 1161, (1881) 1112, (1891) 968, of whom 74 were Gaelic-speaking; of ecclesiastical parish (1871) 850, (1881) 771, (1891) 662; of registration district (1871) 1028, (1881) 978, (1891) 853.—*Ord. Sur.*, sh. 47, 1869.

Fowlsheugh, a range of cliffs on the coast of Dunnotar parish, Kincardineshire, 2½ miles S of Stonehaven. Measuring upwards of a mile in length, and rising very boldly from the sea, it consists of Old Red sandstone and conglomerate, the latter containing nodules of quartz and limestone. Myriads of gulls, coots, and other sea-fowl here build their nests; and it is let to a tenant for the perilous privilege of taking the birds and their eggs by means of ropes lowered from the top.

Fowlshields. See FOULSHIELDS.

Foxhall, an estate, with a mansion, in Kirkliston parish, Linlithgowshire, near the left bank of the Almond, 3 furlongs E by S of Kirkliston village.

Foxton, an estate, with a mansion, in Cupar parish, Fife, 2 miles NE of the town.

Foyers or **Fechlin**, a small river of Boleskine and Abertarff parish, central Inverness-shire, issuing from Loch KILLIN (1½ × ¼ mile; 1050 feet), and thence winding 9 miles north-north-westward and northward, till it falls into Loch Ness, opposite the peak of Mealfourvie (2284 feet), and 10½ miles NE of Fort Augustus. Its course is chiefly along a high glen, with wild mountain screes, and during the last 1¼ mile it makes a total descent of 400 feet, including two surpassingly picturesque falls, amid grandly romantic accompaniments of rock and wood. Foyers House, the property of J. C. Cuninghame, Esq., stands at the left side of its mouth; and on the right side, above the steamboat jetty, is the Foyers Hotel, on the site of what was called the 'General's Hut,' from General Wade of road-making celebrity. A carriage-way ascends by easy traverses from the pier to the falls, and footpaths afford short cuts for pedestrians. The upper fall is a leap of 40, and the lower fall of 165 feet. Dr E. D. Clarke, the celebrated traveller, pronounced the lower fall to be a finer cascade than that of Tivoli, and inferior only to the Falls of Terni; and Robert Burns, as he stood beside it on 5 Sept. 1787, wrote:—

'Among the heathy hills and rugged woods,
The roaring Foyers pours his mossy floods,
Till full he dashes on the rocky mounds,
Where thro' a shapeless breach his stream resounds,
As high in air the bursting torrents flow,
As deep recoiling surges foam below.
Prone down the rock the whitening sheet descends,
And viewless echo's ear, astonish'd, rends.
Dim-seen, thro' rising mists and ceaseless showers,
The hoary cavern, wide surrounding, lowers;
Still thro' the gap the struggling river toils,
And still below the horrid caldron boils.'

'The fall of Foyers,' says Professor Wilson, 'is the most magnificent cataract, out of all sight and hearing, in Britain. The din is quite loud enough in ordinary weather—and it is only in ordinary weather that you can approach the place from which you have a full view of all its grandeur. When the fall is in flood—to say nothing of being drenched to the skin—you are so blinded by the sharp spray smoke, and so deafened by the dashing and clashing and tumbling and rumbling thunder, that your condition is far from enviable, as you cling, "lonely lover of nature," to a shelf by no means eminent for safety, above the horrid gulf. In ordinary Highland weather—meaning thereby weather neither very wet nor very dry—it is worth walking a thousand miles to behold for one hour the fall of Foyers. The spacious cavity is enclosed by "complicated cliffs and perpendicular precipices" of immense height; and though for a while it wears to the eye a savage aspect, yet beauty fears not to dwell even there, and the horror is softened by what appear to be masses of tall shrubs or single shrubs almost like trees. And they are trees, which on the level plain would look even stately; but as they ascend, ledge above ledge, the walls of that awful chasm, it takes the eye time to see them as they

FRASERBURGH

really are, while on our first discernment of their character, serenely standing among the tumult, they are felt on such sites to be sublime. Between the falls and the strath of Stratherrick, a space of three or four miles, the river Foyers flows through a series of low rocky hills clothed with birch, and presenting various quiet glades and open spaces." In 1894-95 the British Aluminium Company obtained power to construct reservoirs above the falls for the purpose of using the water power in the manufacture of aluminium by electricity, but arrangements were made by which the water could be restored to its ancient channel when it was desired to show the falls to visitors. The matter was referred to in Parliament, but the County Council being favourable to the scheme as promising employment to the people of the district, Parliament declined to interfere. See BOLESKINE AND ABERTARFF and chap. iv. of James Brown's *Round Table Club* (Elgin, 1873).—*Ord. Sur.*, sh. 73, 1878.

Fracafield, a village in Shetland, 3½ miles from Lerwick.

Fraisgill, a cavern in Durness parish, Sutherland, on the W base of Whiten Head and the E coast of Loch Eriboll, 6 miles NNE of Heillem ferry. Measuring 50 feet in height and 20 in width at the entrance, it runs about ½ mile into the bowels of the earth, and gradually contracts into lowness and narrowness. Its walls are variegated with a thousand colours so softly and delicately blended, as to outvie the finest productions of the painter's brush.—*Ord. Sur.*, sh. 114, 1880.

France, Little, a hamlet at the boundary between Liberton and Newton parishes, Edinburghshire, ½ mile S of Craigmillar Castle, and 3 miles SE of Edinburgh. It got its name from being the residence of some of Queen Mary's retainers, brought with her from France.

Frankfield, a lake (2½ × 2 furl.), near Millerston, on the mutual border of Barony and Cadder parishes, Lanarkshire, sending off a rill to Hogganfield Loch.

Fraoch Eilean, a small island in Loch Awe, Argyllshire, 2½ miles SW of Kilchurn Castle and ½ mile NE of Inishail. The hero Fraoch, going to gather its serpent-guarded apples, which the fair Mego longed for, slew and was slain by the monster—a legend which recalls the classic myth of the Hesperides, and which forms the theme of an ancient Gaelic poem, translated about 1770 by the Rev. Dr John Smith. In 1267 the islet was granted by Alexander III. to Gilbert Macnaughton; and it contains the ruins of a strong fortalice, in which the Macnaughton chieftains resided.—*Ord. Sur.*, sh. 45, 1876.

Fraochy, Loch. See FREUCHIE.

Fraserburgh, a town and a parish in the NE extremity of Aberdeenshire. Founded by Alexander Fraser of Philorth in 1569, at first the town was known as Faithlie, the name of a free burgh of barony erected by charter of Queen Mary five years earlier; but by a new charter of 1601, it was constituted 'a free port, free burgh of barony, and free regality, to be called in all time coming the Burgh and Regality of Fraserburgh.' It is built on the southern slope of Kinnaid's Head, and along the western shore of Fraserburgh Bay, by road being 22 miles E of Banff and 17½ NNW of Peterhead, whilst by rail, as terminus of the Formartine and Buchan branch (1865) of the Great North of Scotland railway, it is 16 miles NNE of Maud Junction, 41 NNE of Dyce Junction, 47¼ N by E of Aberdeen, 177½ NNE of Edinburgh (by Tay and Forth Bridges), and 200 NE by N of Glasgow. Kinnaid's Head (the *Promontorium Tacxalium* of Ptolemy), ¼ mile to the north, is a rocky headland, composed of mica slate, and 61 feet high. The Frasers' castle here, dating from 1570, is a rectangular four-storied tower, 39 feet by 27; on its roof a lighthouse was built in 1787, whose lantern, rising 120 feet above high water mark, shows a fixed light, red over Rattray Briggs, white in all other directions, and visible at a distance of 17 nautical miles. A sea-crag, 50 yards to the eastward, is crowned by the massive 'Wine Tower,' which, measuring 25½ by 20 feet, and 25 high on the landward side, contains two vaulted

apartments. The only doorway is on the upper story, and the wooden stair leading up to this is modern, so that how the tower was formerly entered, and what was its purpose, remain a puzzle to the antiquary. The style, however, of five freestone carvings, that adorn the roof and two windows, is thought to refer it to the 15th century. It is now used as a depot for the arms and stores of the rifle volunteers. Beneath it is a cave, the Selches Hole, believed to penetrate 100 feet, but now much choked with stones. Scarce a vestige remains of a square three-storied tower at the W end of the town, part of a college begun by Alexander Fraser, he having obtained a charter in 1592 to erect a university. The scheme fell through, but his building was once called into requisition, when, on the outbreak of the plague at Aberdeen in 1647, King's College for a time removed to Fraserburgh. The town itself, overlooking the harbour and bay, is neat and regular. Its principal streets run parallel to the bay, with others crossing at right angles; and recent shoreward improvements and northward extensions have also tended to enhance its symmetry. The Town House, built in 1855, is a handsome Grecian edifice, whose dome-crowned tower contains a niche, with a statue of Alexander Fraser, sixteenth Lord Saltoun (1785-1853), a hero of Waterloo and of the Chinese opium war. His portrait hangs in the town-hall, on the second floor, with one of his ancestor the founder of the town. A market-cross, erected by that founder, stood originally on a large hexagonal basement, with nine gradations of steps; and, as restored in 1853, is an oval stone shaft 12 feet in height, surmounting a pedestal, and itself surmounted by the Royal and Fraser arms. The prison since 1874 has served only for the detention of prisoners whose period does not exceed three days. The parish church, rebuilt in 1802 and restored in 1873-74, is a plain structure, with clock-tower and spire and 1000 sittings. An organ was introduced into it in 1892. The *West quoad sacra* church (1877; 800 sittings) cost £4000, and has a very effective spire. There are two Free churches, a U.P. church (1875), a Congregational church (1853), an Evangelical Union church (1854), a Baptist church (1880), Salvation Army barracks, a Roman Catholic church (1896), and St Peter's Episcopal church (1891; 400 sittings). The last, a building in Norman-Scottish style, entirely of pink granite, was built as a memorial to the saintly Bishop Alexander Jolly, D. D. (1755-1838), who for half a century, from 1788 till his death, was incumbent, and a life of whom, by the Rev. W. Walker (2d ed., Edinb., 1878), contains much of interest relating to Fraserburgh. On the north wall of the church stands a monument to the bishop. The Academy, opened in 1872, was built at a cost of £2700, and further endowed with £5000, by the late James Park, merchant; the Girls' Industrial school (1863) was mainly founded by the late Miss Strachan of Cortes, as a memorial to her brother, James Strachan, Esq., M. D., Inspector General of Army Hospitals, Madras; and a public school, costing over £6000, was opened in Sept. 1882. It has accommodation for 960 children, and superseded the former burgh school. The Hospital was built by the late Thomas Walker, fishcurer, and gifted by him to the town; whilst the Dalrymple Public Hall and Café was built at a cost of £4500, upwards of £2300 of which was given by the late Captain John Dalrymple. It is Scottish Baronial in style, and the hall has accommodation for 1100 persons.

The town has, besides, a post office, with money order, savings' bank, insurance, and telegraph departments, branches of the Bank of Scotland, the Town and County, North of Scotland, and Union Banks, several hotels, a gas-work, a water supply from Ardlaw, complete sewage works, formed at a cost of over £4000 in 1877, a custom-house, a coastguard station, a cemetery, a library and newsroom (in Dalrymple Hall), two building societies, the Batchan's Hall, a masonic lodge, a lifeboat (1880), two newspapers—the *Fraserburgh Advertiser* (1852, Friday) and the *Fraserburgh Herald* (Tuesday), etc. There is a weekly cattle auction; corn

markets are held on Tuesday and Friday; and a sheriff small debt court sits on the last Friday of each month during session, and also in September. Whale and seal fishing is quite extinct; and shipbuilding has dwindled away. Some employment is furnished by two breweries, rope and sail yards, saw-mills, a manure factory, oil works, fish-curing works, and the Kinnaird fresh herring and white fish tinning works; but herring fishing is the staple industry, Fraserburgh being the chief seat of the herring fishing industry in Scotland. New and improved buildings are steadily on the increase, the ground for feuing purposes being taken up at what are considered high rates—namely, £30 to £40 per annum per acre for 99 years' lease or perpetual feu.

The harbour, founded by Alexander Fraser in 1576, 'in the name of Father, Son, and Holy Ghost,' had only one small pier. The north, south, and middle piers were built between 1807 and 1837 at a cost of £30,000, the space within the pier heads being nearly 8 acres, with a depth, according to the tides, of 11 to 16 feet of water inside and along the quays, and of 6 to 20 feet at the entrance. In 1855 and following years a new N harbour of 8 acres of sheltered water, with a low-water depth of 10 feet at the entrance, was formed by the construction of a pier and breakwater, giving a total berthage of 8850 feet, of which 6025 are available for shipping. The estimated cost of this N harbour (£25,000) was more than doubled, and even then the breakwater was left unfinished till 1875, when, and in following years, it was carried to a length of 850 feet. The latest undertaking has been the deepening of both harbours and the widening of the quays, £70,000 having been expended for that purpose. This has had the effect of diverting to Fraserburgh most of the trade from neighbouring small ports, while a further deepening scheme is under the consideration of the Harbour Board. The number of vessels registered as belonging to the port in 1895 was 16, of an aggregate tonnage of 729 tons, namely, 14 sailing vessels of 575 tons and 2 steamers of 154 tons. Fraserburgh is now one of the finest and most commodious harbours on the east coast of Scotland.

The herring fishing of 1894 was the most successful in the district. The total catch exceeded that of the previous year, which was a record one. The season was remarkable in many respects. The fishing was executed in exceptionally fine weather, the herring were large and of superior quality, while the quantities landed had never been exceeded in the history of the district. The number of barrels of herrings salted or cured in Fraserburgh in 1893 and 1894 was 337,101 and 435,312 respectively, while in 1894 the number exported was 335,054—the largest quantity exported in the previous ten years. The number of cod, ling, and hake cured in 1894 was 29,005. The number of boats, decked and undecked (including beam trawl vessels), employed by Fraserburgh in 1894 in the herring and other sea fisheries was 617, giving employment to 1223 fisherman and boys; the number of curers was 76, and of coopers 509. The value of the boats was £48,205; of nets, £34,586; of lines, £12,842, giving a total estimated value of £105,573. There were altogether in 1894 about 876 fishing boats coming and going in a desultory manner. A pretty large trade is done in timber, imported from Norway and Sweden, the other chief imports being coals, salt, etc.; while the principal exports, besides herrings and white fish, cured and fresh, are grain, empty barrels, potatoes, etc.

The harbour is managed by 13 commissioners; and the town, as a burgh of barony, was governed by a hereditary provost (Lord Saltoun), a baron bailie, 12 councillors, a dean of guild, and a burgh fiscal. In 1893 the Burgh Police (Scotland) Act, 1892, came into operation, under which affairs are administered by an elected body of 9 commissioners, including a provost and 2 bailies. The municipal constituency numbered 1200 in 1892. Valuation (1892) £30,300. Pop. (1881) 6583, (1891) 7466, of whom 7360 were in the police burgh.

The parish of Fraserburgh, known as Philorth or Faithlie till early in the 17th century, consisted until

FREASGAL

1891 of a main body and a detached district, situated at Technuiry, and comprising 2747 acres. This detached district, lying 1½ mile SSW of the main body, was transferred by the Boundary Commissioners in the year mentioned to the parish of Strichen. The parish is bounded N by the Moray Firth, NE by Fraserburgh Bay, SE and S by Rathen, SW and W by Pitsligo. Its utmost length, from WNW to ESE, is 3½ miles; whilst its width, from NNE to WSW, varies between 2½ and 3½ miles. The area of the parish is now 5920 acres, of which 258½ are foreshore and 41½ water. The northern coast, extending 2½ miles along the Moray Firth, is low though rocky, but rises into bold headland at Kinnaird's Head (61 feet); the north-eastern, extending 2½ miles along Fraserburgh Bay, is most of it low and sandy, skirted by bent-covered hillocks. Fraserburgh Bay measures 2½ miles across the entrance, from Kinnaird's Head to CAIRNBURG Point, and 9 furlongs thence to its inmost recess; on a fine summer day, with a fleet of vessels riding at anchor in it, it presents a charming scene. The Water of Philorth creeps 2½ miles north-north-eastward, along all the south-eastern border, to its mouth in Fraserburgh Bay; and two burns, draining the rest of the parish, flow northward and north-eastward to the sea. The surface throughout rises from the coast, but so slowly as to appear almost flat, and attains its maximum altitude in the Sinclair Hills (167 feet). Mica slate, granite, limestone, and ironstone are plentiful; and there are several chalybeate springs. The soil in many parts is sandy and light, in others loamy and clayey; and nearly all the land, except 400 acres of plantations and 200 of moss in the detached portion, is arable. Philorth House, noticed separately, is the only mansion; and Lord Saltoun is much the largest proprietor. In the presbytery of Deer and synod of Aberdeen, this parish since 1877 has been divided into Fraserburgh proper and West Church *quoad sacra* parish, the former a living worth £367. Four schools—Fraserburgh public, the Girls' Industrial, St Peter's Episcopalian, and Broadsea General Assembly—with respective accommodation for 960, 188, 304, and 211 children, have an average attendance of about 860, 190, 260, and 200, and grants amounting to nearly £870, £165, £230, and £175. Pop. (1851) 7596, (1891) 8092, of whom 106 were on board vessels in the harbour, 4751 in the ecclesiastical parish of Fraserburgh, and 3601 in that of West Church.—*Ord. Sur.*, sh. 97, 1876.

Freasgal. See **FRAISGILL**.

Freeburn, a hamlet in Moy and Dalarossie parish, Inverness-shire, on the left bank of Findhorn river, 1½ miles SE of Inverness, and 1¼ mile NNW of Findhorn Bridge.

Freefield, an estate, with a mansion, in Rayne parish, Aberdeenshire, 4½ miles NE of Inch. Its plain mansion was built about the middle of 18th century, and has beautifully wooded grounds.—*Ord. Sur.*, sh. 86, 1876.

Freeland, an estate, with a mansion, in Forgandenny parish, SE Perthshire, ¾ mile SSE of Forgandenny station, and 2½ miles W of Bridge of Earn.

Frendraught, an estate, with an old mansion, in Forge parish, NW Aberdeenshire, 2¼ miles SSE of Forge church, and 11 ENE of Huntly. On the N side of the house is still a fragment of the older tower, whose basement story was vaulted with stone, the three upper floors being all of wood, and which, one October night of 1630, was the scene of the tragedy known as the 'Burning of Frendraught.' Sir James Crichton, great-grandson of the first Lord CRICHTON, chancellor of Scotland, about the close of the 15th century obtained the lordship of Frendraught, in the heart of the Gordon country. A feud between his descendants and the Gordons (whose chief was the Marquis of Huntly) had led to a skirmish on 1 Jan. 1630, in which Gordon of Rothiemay was slain; and this affair the Marquis had patched up by desiring Crichton to pay 50,000 merks to Rothiemay's widow. Some nine months later the Marquis again was called upon to act as arbiter, this time between Crichton and Leslie of Pitcaple, whose son had been wounded in another fray;

FREUCHIE

and this time he decided in Crichton's favour. Leslie rode off from Bog of Gight or Gordon Castle with threats of vengeance; and the Marquis, fearful for Crichton's safety, sent him home under escort of his eldest son, young Lord Aboyne, and others—one of them, strangely enough, the son of the slaughtered Rothiemay. 'They rode,' says Spalding, 'without interruption to the place of Frendraught, without sight of Pitcaple by the way. Aboyne took his leave from the laird, but upon no condition would he and his lady suffer him to go, and none that was with him, that night, but earnestly urged him (though against his will) to bide. They were well entertained, supped merrily, and to bed went joyfully. . . . About midnight this dolorous tower took fire in so sudden and furious a manner that the noble Viscount, the Laird of Rothiemay, and four others were cruelly burned and tormented to death, without help or relief.' The Marquis of Huntly, in the belief that the fire was no accident, but that gunpowder and combustibles had been piled in the vault below, instituted proceedings; and a commission, sent to inspect the premises, reported that the fire must have been raised from within; or if from without with aid from within. Crichton sought to fasten the crime upon Pitcaple, one of whose kinsmen, John Meldrum, was actually hanged and quartered as the perpetrator. In the evidence given at the trial it was proved that there had been a good deal of drinking that night, and that one of the servants had gone to the vault with a light for a drink. The burning seems to have been the result of an accident. Crichton had everything to lose—in fact, did lose everything—by it. He, however, had influence at court, Charles I. desiring to counterbalance Huntly's feudal sway; and in Crichton's own lifetime his eldest son, James, was created Viscount Frendraught (1642). The title expired with the fourth Viscount in 1698; and the lands of Frendraught now belong to Lt.-Col. F. de Lemare Morison, Esq. of Bognie, whose ancestor married the widow of the second Viscount.—*Ord. Sur.*, sh. 86, 1876. See vol. ii. of Chambers's *Domestic Annals* (1858); Sir A. Leith Hay's *Castellated Architecture of Aberdeenshire* (1849); an article by C. Rampini in the *Scottish Review* for July, 1887; and for the fine old ballad, 'The Fire of Frendraught,' Prof. Aytoun's *Ballads of Scotland* (1861).

Freswick, a township, a mansion, and a bay in Canisbay parish, Caithness. The township, near the coast, 4 miles S of John o' Groat's House, and 12 N of Wick, under which it has a post office, has a public school, and fairs on the second Tuesday of February and of December. Freswick House, on the SW shore of the bay, at the mouth of the Gill Burn, 1 mile SE of the school, is the property of Alexander-Sinclair of DUNBEATH. JOHN O' GROAT'S HOUSE and BUOHOLIE CASTLE are on the estate. Freswick Bay, measuring 1½ mile across the entrance between Skirsa and Ness Heads, and ¾ mile thence to its inmost recess, has a half-moon form, and lies completely exposed to the E.—*Ord. Sur.*, sh. 116, 1878.

Freuch or Fraoch. See **CLAIG**.

Freuchie, a loch in the SE of Dull parish, Perthshire, in Glenquaich, 1¾ mile W of Amulree. Lying 880 feet above sea-level, it has an utmost length and breadth of 1¾ and 3½ furlongs; sends off to the E the river Braan; and contains small, lively trout, with far too many pike. Glenquaich Lodge, a shooting-box of the Earl of Breadalbane, is on its south-western shore.—*Ord. Sur.*, sh. 47, 1869.

Freuchie, a village near the E border of Falkland parish, Fife, 1¼ mile NNW of Falkland Road station, and 2 miles E by S of Falkland town. A quaint old place, with narrow winding streets, small courts, and bullet-paved closes, it strikingly represents the times when folks travelled only on foot or on horseback, and when all goods were conveyed by pack-horses; and it anciently lay in such relation to the precincts of Falkland, that disgraced courtiers were sent hither on their dismissal, whence the proverbial saying, 'Go to Freuchie.' It has a post office, a branch bank of the British Linen Co., a hotel, power-loom linen factories,

a water company, a co-operative society, a *quoad sacra* church, a United Presbyterian church, a public school, Lumsden Memorial Hall, and a reading-room and library. Pop. of village (1881) 1059, (1891) 913; of *q. s.* parish (1881) 1117, (1891) 981.—*Ord. Sur.*, sh. 40, 1867.

Frew. See FORD OF FREW.

Friardykes, a place in Stenton parish, Haddingtonshire, the site of a cell of Melrose Abbey, used for rusticating refractory monks.

Friars Brae, an eminence in Linlithgow parish, on the S side of the town. It was anciently crowned by a Carmelite friary, founded in 1290, and dedicated to the Virgin.

Friars Carse, an estate, with a mansion, in Dunscore parish, Dumfriesshire, on the right bank of the Nith, 2 miles SSE of Auldgrith station, and 6½ NNW of Dumfries. It was the seat, in pre-Reformation times, of a cell of Melrose Abbey; and in the avenue leading to the mansion are a number of antique sculptured stones, believed to have belonged thereto. Passing at the Reformation to the Kirkpatrick, then the proprietors of Ellisland, it went in 1634 to the Maxwells of Tinwald, afterwards to the Riddels of Glenriddel, and later to Dr Crichton, who bequeathed a sum of £100,000 to found the Crichton Royal Institution, which acquired the estate in 1895. Built, about 1774, on a piece of rising ground, round which the Nith makes a graceful curve, the mansion often was visited by Robert Burns during his three years' tenancy of ELLISLAND. Here he foregathered with 'fine, fat, fodge' Grose, a brother antiquary of Captain Riddel's; and here he acted as arbiter in the great Bacchanalian tourney of the *Whistle*. 'As the authentic prose history,' says Burns, 'of the *Whistle* is curious, I shall here give it. In the train of Anne of Denmark there came over a Danish gentleman of gigantic stature and great prowess, and a matchless champion of Bacchus. He had a little ebony whistle, which at the commencement of the orgies he laid on the table, and whoever was the last able to blow it was entitled to carry it off as a trophy of victory. After many overthrow on the part of the Scots, the Dane was encountered by Sir Robert Lawrie of Maxwellton, who, after three days' and three nights' hard contest, left the Scandinavian under the table,

"And blew on the whistle his requiem shrill."

Sir Walter, son to Sir Robert, afterwards lost the *Whistle* to Walter Riddel of Gleuriddel; and on Friday, 16 Oct. 1790, at Friars Carse, the *Whistle* was once more contended for by Sir Robert of Maxwellton, Robert Riddel of Glenriddel, and Alexander Fergusson of Craigarroch, which last gentleman carried off the hard-won honours of the field.' Allan Cunningham adds that 'the Bard himself, who drank bottle and bottle about, seemed quite disposed to take up the conqueror when the day dawned.' Another of his poems was written in Friars Carse Hermitage, which, now a ruin, was then 'a snug little stone building, measuring 10½ feet by 8, and supplied with a window and fireplace. Captain Riddel gave him a key, so that he could go in and out as he pleased.' An autograph copy of the *Whistle* is in the Thornhill Museum; and the pane of glass from the Hermitage on which Burns wrote the opening lines of the ode is in the possession of Arch. Fullarton, Esq.—*Ord. Sur.*, sh. 9, 1863. See chap. i. of William M'Dowall's *Burns in Dumfriesshire* (Edinb. 1870).

Friars Croft. See DUNBAR.

Friars Dubb. See BERVIE.

Friars Glen, a sequestered glen in Fordoun parish, Kincardineshire, at the base of Strathfinella Hill, beyond Drumtochty Castle. A small Carmelite friary here is still represented by foundations.

Friockheim, a modern village in Kirkden parish, Forfarshire, on the right bank of Lunan Water, with a station on the Arbroath and Forfar section of the Caledonian railway, 6½ miles NW by W of Arbroath and 1½ mile ESE of Guthrie Junction. About the year 1830 operatives connected with textile manufactures were induced to feu houses at a cheap rate on the estate

of Middleton; and Friockheim acquired material increase of importance, first by the Arbroath and Forfar railway (1839) placing it on a grand thoroughfare between these towns, next by the Aberdeen railway (1850) making it a centre of transit of all places N of the Tay. It has a post office, with money order, savings bank, and telegraph departments, a branch of the North of Scotland Bank, insurance agencies, a police station, gas-work, a cemetery, an assembly hall, a library and reading-room, a Young Men's Christian Association, a curling club, a charitable association, Mr and Mrs Mudie's bequests for the poor, a horticultural society, and cattle, sheep, and hiring fairs on 26 May or the Thursday after, on the Monday in July after Arbroath fair, and on 22 November or the Thursday after. The *quoad sacra* parish, constituted in 1870, is in the presbytery of Arbroath and synod of Angus and Mearns; the stipend is £160, with a manse. Its church, built in 1836 and enlarged in 1840, is a neat edifice, with a steeple. In 1885 a handsome Established mission church was erected by public subscription. There are also a Free church and an Evangelical Union chapel; and a public school, with accommodation for 320 children, has an average attendance of about 220, and a grant of £190. Pop. of village (1881) 1098, (1891) 943; of *q. s.* parish (1881) 1501, (1891) 1265, of whom 298 were in Inverkeilor and 967 in Kirkden.—*Ord. Sur.*, sh. 57, 1868.

Frogden, a farm in Linton parish, Roxburghshire. A spot on it, marked with five or six upright stones in circular arrangement, is called the Tryste, and was a place of muster in the old times for Border forays into England.

Froon. See FRUIN.

Froutly, a burn in Teviothead parish, Roxburghshire, rising, as Linhope Burn, close to the Castleton border, at an altitude of 1480 feet, and running 5 miles north-north-westward, along a narrow glen, till, after a descent of 900 feet, it falls into the Teviot just below Teviot-head church.—*Ord. Sur.*, sh. 17, 1864.

Fruchie. See FREUCHIE.

Fruid Water, an upland burn in Tweedsmuir parish, SW Peeblesshire, rising close to the Dumfriesshire border, at an altitude of 2500 feet, on the N side of HARTFELL (2651). Thence it runs 8 miles north-north-westward, mainly along a beautiful glen, flanked by high green hills, till, after a total descent of 2626 feet, it falls into the Tweed 1¼ mile SSW of Tweedsmuir church. Vestiges of an ancient Border peel are on its right bank at Fruid farm, 3½ miles from its mouth.—*Ord. Sur.*, sh. 16, 1864.

Fruin Water, a troutful stream of W Dumbartonshire, rising on Maol an Fheidh (1934 feet), at an altitude of 1500, in the NW of Row parish, 2 miles NE of the head of Gare Loch, and thence winding 12½ miles south-eastward and east-north-eastward, through or along the borders of Row and Luss parishes, till it falls into Loch Lomond, nearly opposite the lower end of Inchmurrin island, and 2½ miles N by W of Balloch pier. Its upper glen, named after it Glenfruin, is flanked, on the NE side, by BEN CHAORACH (2338 feet), BEN THARSUINN (2149), and Balenock (2092), a mountain range that figures grandly in the sky-line of the views from the upper waters of the Firth of Clyde, and on the SW side by the Row hills (1183); whilst the last 4 miles of its course are through a low and luxuriant plain. Dumfin (200 feet), an eminence here, 3 miles ENE of Helensburgh, is crowned by traces of a 'Fingalian' fort; and on the right or opposite bank of the stream stands the ruined castle of Bannachra, where in July 1592 Sir Humphry Colquhoun, the Laird of Luss, was besieged by an invading party of Macfarlanes and Macgregors. The loophole still is shown through which he was shot dead by an arrow, guided by the traitorous torch of one of his own servants. At Strone, 3 miles ESE of Garelochhead, was fought the bloody clan conflict of Glenfruin in 1603. Early in that year Allaster Macgregor of Glenstra, followed by 400 men, chiefly of his own clan, but including also some of the clans Cameron

and Anverich, armed with 'halberschois, pow-axes, twa-handit swordis, bowis and arrowis, and with hagbutis and pistolitis,' advanced into the territory of Luss. Alexander Colquhoun, under his royal commission, granted the year before in consequence of the Macgregors' outrage at Glenfinlas, had raised a force which some writers state to have amounted to 300 horse and 500 foot. 'On 7 Feb. the Macgregors,' says Mr Fraser, 'were in Glenfruin in two divisions, one of them at the head of the glen, and the other in ambuscade near the farm of Strone, at a hollow or ravine called the Crate. The Colquhouns came into Glenfruin from the Luss side, which is opposite Strone—probably by Glen Luss and Glen Mackurn. Alexander Colquhoun pushed on his forces in order to get through the glen before encountering the Macgregors; but, aware of his approach, Allaster Macgregor also pushed forward one division of his forces and entered at the head of the glen in time to prevent his enemy from emerging from the upper end of the glen, whilst his brother, John Macgregor, with the division of his clan which lay in ambuscade, by a detour took the rear of the Colquhouns, which prevented their retreat down the glen without fighting their way through that section of the Macgregors who had got in their rear. The success of the stratagem by which the Colquhouns were thus placed between two fires seems to be the only way of accounting for the terrible slaughter of the Colquhouns and the much less loss of the Macgregors. The Colquhouns soon became unable to maintain their ground, and, falling into a moss at the farm of Auchingaich, they were thrown into disorder, and made a hasty and disorderly retreat, which proved even more disastrous than the conflict, for they had to force their way through the men led by John Macgregor, whilst they were pressed behind by Allaster, who, reuniting the two divisions of his army, continued the pursuit.' All who fell into the victors' hands were instantly slain; and the chief of the Colquhouns barely escaped with his life after his horse had been killed under him. Of the Colquhouns 140 were slain, and many more wounded, among them a number of women and children. When the pursuit was over, the work of plunder commenced. Hundreds of live stock were carried off, and many of the houses of the tenantry were burned to the ground. The reckoning, however, was speedy, for on 3 April the name of Gregor or Macgregor was for ever abolished by Act of the Privy Council; and by 2 March 1604 thirty-five of the clan Gregor had been executed, among them Allaster himself.—*Ord. Sur.*, shs. 38, 30, 1871-66. See Sir William Fraser's *Chiefs of Colquhoun and their Country* (Edinb. 1869).

Fuda, a small fertile island of Barra parish, Outer Hebrides, Inverness-shire, $\frac{1}{2}$ mile NE of the nearest point of Barra island. It exhibits a number of granite veins, impregnated with iron. Of its 6 inhabitants in 1871, 4 were males; of the same number in 1881, 5 were females; of 7 in 1891, 6 were females.

Fuinafort, a place in Kilfinichen and Kilvickeon parish, Mull island, Argyllshire, 6 miles from Buessan. It has a post office under Oban.

Fuirdstone, an ancient tower on Wester Balnabreich farm, in Caraldston parish, Forfarshire. Demolished early in the nineteenth century, it formerly gave its name to the parish.

Fulden. See FOULDEN.

Fulgaa, a lofty skerry of Shetland, on the NW coast of Papa Stour island. It rises almost murally from the sea and is pierced with caverns.

Fullarton. See MARYTON.

Fullarton, an Ayrshire burgh of barony within the bounds of the parliamentary burgh of Irvine, but lying in Dundonald parish, on the left or opposite bank of the river Irvine. With Irvine it is connected by a handsome stone four-arch bridge of 1746, and from 1690 to 1823 it was supposed to belong to Irvine parish, having in the former of those years been technically united thereto; but, an appeal being made to the Court of Session in 1823, it was found to have legally belonged all along to Dundonald. An Established church, built

as a chapel of ease in 1836 at a cost of £2000, contains 900 sittings, and in 1874 was raised to *quoad sacra* status, its parish being in Ayr presbytery and the synod of Glasgow and Ayr. There are also a Free church and 2 public schools. See IRVINE and DUNDONALD. Pop. of parish (1881) 4009, (1891) 4530.—*Ord. Sur.*, sh. 22, 1865.

Fullarton House, a seat of the Duke of Portland in Dundonald parish, Ayrshire, $1\frac{1}{2}$ mile ESE of Troon. The estate around it belonged to the Foulertouns or Fullartons of that ilk from the 13th century till 1805, when it was sold to the third Duke of Portland by Col. William Fullarton (1754-1808). This gallant soldier and author, immortalised in Burns's *Vision*, was born at Fullarton House, which was built by his father in 1745. It has since been twice enlarged by the addition of wings, and what was once the back is now the front—a great improvement, any sacrifice of architectural grace being more than compensated by the fact that the house now faces the Firth of Clyde and Isle of Arran. That Louis Napoleon stayed here in 1839 is not correct; but the fourth Duke's third son, the Conservative leader and sportsman, Lord George Bentinck (1802-48), passed much of his boyhood at Fullarton. William John Arthur Charles James Cavendish Bentinck is the present and sixth Duke since 1716 (b. 1857; suc. 1879).—*Ord. Sur.*, sh. 22, 1865. See LANGWELL and the Rev. J. Kirkwood's *Troon and Dundonald* (3d ed., Kilmarnock, 1881).

Fulton. See BEDRULE.

Fulwood Moss, a former peat-moss in Houston parish, Renfrewshire, a little W of Houston station, and $3\frac{1}{2}$ miles NW of Paisley. Extending over 98 acres, it was reclaimed by the Glasgow Corporation in 1879-80 at a cost of £4539, no fewer than 1882 waggons, or fully 12,000 tons, of city refuse being shot into the moss. The reclamation, besides giving work to 300 of the unemployed at the time, has proved a financial success, good crops of potatoes, &c., being now raised from what was previously worthless ground. The detritus from the macadamized roads of the city, and its surplus manure, are sent chiefly to this farm.—*Ord. Sur.*, sh. 30, 1866.

Funtack, a burn in Moy and Dalarossie parish, Inverness-shire, winding $2\frac{3}{4}$ miles east-south-eastward along Strathdearn, from Loch Moy to the river Findhorn.—*Ord. Sur.*, sh. 84, 1876.

Funzie, a bay of Fetlar island, Shetland, the only ling-fishing station in the island. It is overlooked by remains of a pre-Reformation chapel.

Furnace, a post-office village in Inverary parish, Argyllshire, on the shore of Loch Fyne, in the mouth of Glenleacainn, 8 miles SSW of Inverary town. It has a mission station in connection with the Scottish Episcopal church. It took its name from an iron smelting work established here towards the end of the 18th century, but it now depends on the great granite quarry of DUN LEACAINN, started in 1841, and rendered famous by its monster blasts. Crarae quarry, 2 or 3 miles farther down the loch, was the scene of a calamitous blast in 1886. Both quarries supply the Glasgow Statute Labour Department with granite, and on the occasion referred to a number of excursionists from the city and elsewhere, among whom were two city councillors, crowding in too soon after the explosion, succumbed to the fatal influence of the superheating gases.

Fushiebridge, a village in Borthwick parish, Edinburghshire, near the left bank of Gore Water, 1 mile S by E of Gorebridge. Across the stream lies Fushiebridge station on the Waverley route of the North British, $12\frac{3}{4}$ miles SSE of Edinburgh.

Fyne, a mountain rivulet and a large sea-loch in Argyllshire. The rivulet, rising on the south-western skirts of BENLOY, a little NW of the meeting-point with Dumbarton and Perth shires, runs $6\frac{1}{2}$ miles south-south-westward, along a wild Highland glen, called from it Glenfyne, and falls into the head of the sea-loch 7 furlongs NE of Cairndow.—*Ord. Sur.*, shs. 46, 45, 37, 1876.

The sea-loch first strikes 27 miles south-westward; then makes a sudden expansion, and sends off to the N the considerable bay of Loch GILP, leading into the CRINAN Canal; and then strikes 13½ miles south-by-eastward, till, opposite Ardlamont Point, it merges in the Sound of Bute, the Kyles of Bute on the left, and Kilbrennan Sound, all passing into the Firth of Clyde. Its breadth is 1½ furlong near Cairndow, 1½ mile at Inverary Ferry, 1 mile near Strachur, 2 miles at Lachlan Bay, 1½ mile at Otter Ferry, 4½ miles at Kilfinan Bay, 2½ miles at Barmore Island, and 5 miles at Ardlamont Point. Its screens, from head to foot, show great variety of both shore and height, and present many scenes of singular force and beauty; but as a whole they offer little of the grandeur and romance that characterise the screens of many others of the great Highland sea-lochs. Around the head, and downwards past Inverary, they have striking forms and lofty altitudes, attaining 2955 feet in BEN-AN-LOCHAIN and 2557 in BEN BHEULA; round Inverary, too, they have great masses of wood, and some strongly picturesque features of hill and glen and park. In most of the reaches thence they have much verdure, some wood, and numerous hills, but rarely exhibit stronger features of landscape than simply the beautiful; towards the entrance, however, they combine, into great variety and magnificence, with the islands of Bute and Arran. The waters have been notable from time immemorial for both the prime quality and the great abundance of their herrings. One of the twenty-seven fishery districts of Scotland has its headquarters at INVERARY; and two others have their headquarters at respectively ROHESAY and CAMPBELTOWN.—*Ord. Sur.*, shs. 37, 29, 1876-73. See pp. 124-132 of Dorothy Wordsworth's *Tour in Scotland* (ed. by Princ. Shairp, 1874).

Fyrish or **Cnoc Fyrish**, a wooded hill in Alness parish, Ross-shire, culminating 1¼ mile NNW of Novar House at an altitude of 1483 feet above sea-level. It seems to have been used in ancient times as a station for beacon fires; and is crowned by an artificial structure of upright stone blocks in rude form of an Indian temple.—*Ord. Sur.*, sh. 93, 1881.

Fyvie, a parish of Aberdeenshire, containing Woodhead village, 2¾ furlongs from the left bank of the river Ythan, and 3 miles E by S of Fyvie station on the Banff branch of the Great North of Scotland railway, this station being 7 miles SSE of Turriff, and 31½ NNW of Aberdeen. In 1673 Alexander, third Earl of Dunfermline, obtained a charter, erecting the lordship of Fyvie into a free burgh of barony, with a tolbooth and a market cross, at which should be held three annual fairs. With this burgh of Fyvie, Woodhead has been identified; and its dilapidated cross was rebuilt in 1846, some years before which date the tolbooth—long a dwelling-house—had been pulled down. The fairs have been discontinued, but a cattle market is held on the third Thursday of every month at Fyvie station, and on the second Monday of every month at Rothie station, also in Fyvie parish, 3¼ miles to the SW. Fyvie besides has a post office, with money order, savings' bank, and railway telegraph departments, a branch of the Town and County Bank, a horticultural association, and a cottage hospital built and endowed by Colonel and Mrs Cosmo Gordon for the benefit of the parish.

The parish is bounded N and NE by Monquhitter, E by Methlick, SE by Tarves, S by Meldrum, SW by Daviot and Rayne, W by Auchterless, and NW by Turriff. Its utmost length, from NE to SW, is 10½ miles; its breadth varies between 7 furlongs and 6½ miles; and its area is 29,650 acres, of which 64½ are water. From Towie Castle, at the NW corner of the parish, the YTHAN, a small stream here, first traces 2 miles of the boundary with Auchterless, next winds 8½ miles south-eastward and north-eastward through the interior, and lastly flows 2¾ miles east-by-northward along the Methlick border. It receives in its course a

good many little affluents, and divides the parish into two pretty equal parts. Where, below Gight Castle, it passes off into Methlick, the surface declines to 88 feet above sea-level, thence rising south-westward to 499 feet at the Hill of Blairfowl, 691 near Stonefield, 629 near Waulkmill, and 700 on the Rayne border; north-westward to 466 near Monkshill, 587 near Gourdas, and 585 at Deers Hill. The leading rocks are greywacke and slate in the SW, Old Red sandstone over a small portion of the NW, and elsewhere greenstone or basalt, often intersected by veins of quartz, calcareous spar, hematite, etc. The soil along the banks of the Ythan is a lightish loam of great fertility, especially in the part called the Howe of Fyvie; and in other parts is extremely various—gravelly, mossy, etc. Fully four-sevenths of the entire area are in tillage, one-fifth is under wood, one-tenth is pasture, and the rest is either moss or heath. Founded by Fergus, Earl of Buchan, in 1179 for Benedictines of Tiron, and subordinate to Arbroath Abbey, St Mary's priory stood in a meadow between the Ythan and the parish church, a cross, on a base of hewn stones, surmounting a rough round cairn, having been erected in 1868 on the site of its church, which was built by Prior Mason in 1470. GIGHT Castle, on the Ythan, towards the eastern extremity of the parish, is an interesting ruin, noticed separately; and a ruined mill, 1¼ mile NE of Fyvie Castle, was the scene of the ballad of *Mill o' Tifty's Annie*, or Agnes Smith, who died in 1673. On the outskirts of St John's Well farm are remains of a cairn, Cairnchedly, which has yielded a number of small earthen urns. To the NE of the Castle of Fyvie, Montrose, in Oct. 1644, was nearly surprised by Argyll with a greatly superior force—an episode known as the 'Skirmish of Fyvie.' This Castle, on the Ythan's left bank, ½ mile NE of Fyvie station, dates from remote antiquity, it or a predecessor having received a visit from Edward I. of England in 1296. It then was a royal seat, and such it continued till 1380, when the Earl of Carriek (later Robert III.) made it over to his cousin, Sir James de Lindsay. From him it passed in 1390 to Sir Henry Preston, his brother-in-law, and from him about 1433 to the Meldrums, who sold it in 1596 to Sir Alexander Seton, an eminent lawyer, created first Earl of Dunfermline in 1605. The fourth and last Earl being outlawed in 1690, his forfeited estate was purchased from the Crown in 1726 by William, second Earl of Aberdeen. It now belongs to A. J. Forbes Leith, Esq. The Fyvie Castle of today is a stately chateau-like pile erected at various periods, from the 13th on to the 18th century; and stands in the midst of a finely-wooded park, with an artificial lake (½ mile × ½ furl.) Other mansions are Rothie-Norman and Kinbroom. In the presbytery of Turriff and synod of Aberdeen, Fyvie comprises chief part of MILLBEX and a small part of Barthol Chapel *quoad sacra* parishes, and itself is a living worth £880. The church, originally dedicated to St Peter, stands near the left bank of the Ythan, 1½ mile SE of Fyvie station; and rebuilt in 1808, it was repaired in 1885, when a hall was presented to the church by Capt. Gordon of Fyvie Castle. St Mary's Established mission church, built and endowed by Colonel Gordon, is at Cross of Jackston. At Woodhead are a plain but commodious Free church, altered and decorated in 1878, and All Saints' Episcopal church, which, Early English in style, was built in 1849, and received the addition of a tower and spire in 1870. Another Episcopal church, St George's (1796-1848), is at Meiklefolia, 1½ mile SSE of Rothie station. Seven schools—Fyvie, Meiklefolia, Steinmanhill, Woodhead, All Saints', Fyvie female, and St Katherine's female—with total accommodation for 938 children, have an average attendance of over 580, and grants amounting to about £600. Pop. of civil parish (1881) 4403, (1891) 4049; of ecclesiastical parish (1881) 3235, (1891) 2977; of registration district (1881) 3317 (1891) 3050.—*Ord. Sur.*, sh. 86, 1876.

G

GADGIRTH, a hamlet and an estate, with a mansion, in Coylton parish, Ayrshire, on the left bank of the river Ayr, 4 miles SSW of Tarbolton. The estate was the property of the late Major-General Francis Cland Burnett.

Gadie, a burn of Aberdeenshire, rising in Clatt parish, and running 10½ miles east-by-northward through Leslie, Premnay, and Oyne parishes, till it falls into the Ury, 9 furlongs E of Oyne church. It is celebrated in several of the Latin poems of Arthur Johnston, and also in a fine old ballad, beginning—

'O an I were where Gadie rins,
'Mang fragrant heath and yellow whins,
Or brawlin down the hosky linnis,
At the back o' Bennochie.'

After the capture of Pondicherry in 1793, a Highland regiment, marching into the town, was suddenly arrested by hearing this ballad sung by a Scottish lady from an open window.—*Ord. Sur.*, sh. 76, 1874.

Gaick, a desolate alpine tract, a forest one, in Kingussie parish, Inverness-shire, around the head of Glentromie, contiguous to the Perthshire border. It touches, or rather overlaps, the watershed of the central Grampians, its mountain summits culminating at an altitude of 2929 feet above sea-level; and it abounds in grandly romantic scenery, including on its southern border one of the most accessible and picturesque of the passes over the central Grampians. It partly contains, partly adjoins, three lakes—Loch an Duin (10 × 1½ furl.; 1680 feet), Loch Bhradain (4½ × 1¾ furl.; 1460 feet), and Loch an t-Seilich (9 × 3½ furl.; 1400 feet). Wood there is none now, except some scattered birch copse; but the 'forest' is stocked by numerous herds of red deer, belonging to Sir George Macpherson Grant, Bart of Invereshie. Glentromie Lodge, the residence, is 4 miles from Kingussie.—*Ord. Sur.*, sh. 64, 1874.

Gainvich. See SANDA, Argyllshire.

Gairbridge. See GUARD BRIDGE.

Gairden. See GAIKEN.

Gairie, a rivulet of Kirriemuir and Glamis parishes, Forfarshire, flowing round two sides of Kirriemuir town, and, after a south-south-easterly course of 7¼ miles, falling into Dean Water 2 miles NE of Glamis village.—*Ord. Sur.*, sh. 56, 1870.

Gair Loch, a sea loch on the west coast of Ross and Cromarty. It strikes 6½ miles east-south-eastward from the North Minch, and measures 3½ across the entrance, where lies the island of Longa, whilst 3¼ miles higher up, near the southern shore, is the smaller island of Horrisdale.

Gairloch (Gael. *gearr-loch*, 'short loch'), a coast village and parish of west Ross and Cromarty. The village stands on the north-eastern shore of the loch that gives it name, by water being 30 miles NNE of Portree in Skye, by road 6 SW of Poolewe, 9 WNW of Talladale or Lochmaree hotel, 18 WNW of Kinlochewe hotel, and 28 WNW of Auchnasheen station on the Dingwall and Skye section (1870) of the Highland railway, this station being 25¼ miles NE of Strome Ferry and 27¼ WSW of Dingwall. It communicates with Auchnasheen by a daily coach, with Portree by weekly steamer (thrice a week in summer), and with Poolewe by mail-car thrice weekly. It has a post office, with money order, savings bank, and telegraph departments, a branch of the Caledonian Bank, a steamboat pier, and a good hotel. A market for horses and cattle is held on the Thursday before Beaulyn in October and November.

The parish, containing also Poolewe, Talladale, and Kinlochewe, is bounded NE by Greinord Bay and Lochbroom parish, E by Contin parish, SE by Lochalsh and Lochcarron parishes, S by Applecross parish and Loch Torridon, and W by the North Minch. It has an utmost length, from E to W, of 25 miles; an utmost width, from N to S, of 22 miles; and an area of 356 square miles, or 227,880½ acres, of which 1689½ are foreshore and 16,996½ water. The seaboard, 90 miles long, is

bold and rocky, rising rapidly to 100 and 400 feet above sea-level, and deeply indented by GREINORD Bay, Loch EWE, Gair Loch, and Loch TORRIDON. The river Coulin or A Ghairbhe, entering from Lochcarron parish, winds 6¾ miles northward, through Lochs Coulin and Clair, along the Lochcarron border and through the interior to Kinlochewe, where it is joined by a rivulet, running 3¼ miles north-westward down Glen Docherty. As Kinlochewe river, the united stream flows 2¾ miles north-westward to the head of famous Loch MAREE (12¾ miles × 3 furl. to 2¼ miles; 32 feet above sea-level), and from its foot, as the river Ewe, continues 2¼ miles north-north-westward, till at Poolewe it falls into Loch Ewe. Lochan Fada (3¾ miles × 5 furl.; 1000 feet), lying near the Lochbroom border, sends off a stream 4¾ miles south-south-westward to Loch Maree, near its head; and Fionn Looch (5¾ × 1¼ mile; 559 feet), lying right on the Lochbroom border, sends off the Little Greinord along that border 5½ miles north-by-eastward to the head of Greinord Bay. These are the principal streams and lakes of Gairloch parish, whose very large fresh-water area (more than fifteen times larger than that of the whole of Fife) comprises the 7090½ acres of Loch Maree, the 2238¾ of half of Fionn Loch, the 928 of Lochan Fada, the 203 of part of Dnbh Loch (9 × 3 furl.) at the head of Fionn Loch, the 345½ of Loch na h-Oidhche (1¼ mile × 3½ furl.), the 166 of Loch Tollie (7½ × 5 furl.), etc. The surface is grandly diversified by tall pyramidal quartz mountains, the chief being Ben Airidh a'Char (2593 feet), Ben Lair (2817), BEN SLEOCH (3217), and Ben a'Mhuinidh (2231), to the NE of Loch Maree; to the SW, Bus-bheinn (2869) and Ben Eay or Eighc (3309). The rocks are primary, of Laurentian, Cambrian, or Devonian age. Less than 5000 acres, or one-fortieth of the entire area, is returned as 'arable, woodland, or rough pasture,' the rest being all of it mountain, moor, and deer-forest. So that Gairloch depends far less on agriculture proper than on sheep-farming and the fisheries of the streams and lochs of the neighbouring seas. In 1823 Hugh Miller was sent to Gairloch village with a party of fellow-quarrymen, and chapters xii. and xiii. of *My Schools and Schoolmasters* give a graphic description of his sojourn here. 'For about six weeks,' he writes, 'we had magnificent weather; and I greatly enjoyed my evening rambles amid the hills or along the sea-shore. I was struck, in these walks, by the amazing abundance of wild flowers, which covered the natural meadows and lower hill-slopes. . . . How exquisitely the sun sets in a clear, calm summer evening over the blue Hebrides! Within less than a mile of our barrack there rose a tall hill (1256 feet), whose bold summit commanded all the Western isles, from Sleat in Skye to the Butt of the Lewis . . . The distaff and spindle was still in extensive use in the district, which did not boast a single spinning-wheel, a horse, or a plough, no cart having ever forced its way along the shores of Loch Maree. . . . They tell me, that, for certain, the fairies have not left this part of the country yet.' The chief antiquities of Gairloch are described under Loch Maree, which, from the 12th to the 19th of September 1877, received a visit from Queen Victoria. Mansions, both noticed separately, are FLOWERDALE and LETTEREWE; and Sir Kenneth Mackenzie owns rather more than two-thirds of the entire rental. In the presbytery of Lochcarron and synod of Glenelg, this parish since 1851 has been ecclesiastically divided into Gairloch and POOLEWE, the former a living worth £222. Its church was built in 1791; in the graveyard lies buried the Gaelic bard, William Ross (1762-90), who was schoolmaster here for the last four years of his life. There are Free churches of Gairloch and Poolewe; and ten public schools—Achtercairn, Bualnaluib, Inverasdale, Kinlochewe, Laide, Mellon Udregle, Melvaig, Opinan, Poolewe, and Sand—with total accommodation for 820 children, have an average attendance of about 500, and grants amounting to over £600. Pop. of civil parishes (1801) 1427, (1821) 4518, (1861) 5449, (1871) 5048,

(1881) 4594, (1891) 4181, of whom 3852 were Gaelic-speaking; of ecclesiastical parish (1871) 2426, (1881) 2277, (1891) 2071; of registration district (1881) 4479, (1891) 4090, of whom 2773 were in the southern division.—*Ord. Sur.*, shs. 91, 92, 81, 82, 100, 1881-82. J. H. Dixon's *Gairloch* (1888).

Gair Loch, Dumbartonshire. See GARE LOCH.

Gairloch, a hamlet in Kilmallie parish, Invernesshire, at the foot of Loch Lochy, 3 miles WNW of Spean Bridge. It has a post office under Spean Bridge.

Gairn, a small river of Crathie and Glenmuick parishes, SW Aberdeenshire, rising, on the eastern side of BEN AVON, at 3550 feet above sea-level, and thence winding 20 miles east-south-eastward along a mountain glen called from it GLENGAIRN, till, after a total descent of 2810 feet it falls into the Dee at a point $1\frac{1}{2}$ mile NW of Ballater. The Bridge of Gairn, on the line of road from Aberdeen to Castleton, spans it $\frac{1}{4}$ mile above its mouth, and here is a post office under Ballater.—*Ord. Sur.* shs. 75, 65, 1876-70.

Gairney Bridge, a farm at the NE verge of Cleish parish, Kinross-shire, on the left bank of Gairney Water, $1\frac{3}{4}$ mile SSE of Kinross. In a public house here, on the site of the farmstead stables, Ebenezer Erskine and the three other fathers of the Secession formed themselves into a presbytery, 15 Dec. 1733; and on the site of the farmhouse itself, the young poet Michael Bruce (1746-67) taught a small school in 1765-66.—*Ord. Sur.*, sh. 40, 1867.

Gairney Water, a burn of Glenmuick and Aboyne parishes, SW Aberdeenshire, rising at an altitude of 2500 feet, and running $5\frac{3}{4}$ miles north-north-eastward, through Glentanner Forest, till, after a descent of 1880 feet, it falls into Tanner Water at a point $5\frac{1}{2}$ miles SW of Aboyne village.—*Ord. Sur.* sh. 66, 1871.

Gairney Water, a rivulet partly of Perthshire, but chiefly of Kinross-shire. Rising among the hills of the western portion of Fossoway parish, it runs $3\frac{1}{4}$ miles east-south-eastward, and then proceeds $4\frac{1}{4}$ miles east-by-northward, chiefly along the boundary between Cleish parish on the right and Fossoway and Kinross parishes on the left, till it falls into Loch Leven 2 miles SE of Kinross town.—*Ord. Sur.*, sh. 40, 1867.

Gairnside. See GLENGAIRN.

Gairsay, an island of Evie and Rendall parish, Orkney, $1\frac{1}{4}$ mile E of the nearest part of Orkney mainland, and $1\frac{1}{2}$ NW of Shapinsay. It measures 2 miles in greatest length, and $1\frac{1}{2}$ mile in greatest breadth; consists chiefly of a conical hill of considerable altitude; rises steeply on the W side; includes, on the E and on the S, some low, fertile, well-cultivated land; contains, close to the S shore, remains of a fine old mansion, once the seat of Sir William Craigie; and has a public school and a small harbour, called Millburn, perfectly sheltered on all sides, mainly by Gairsay itself, and partly by a small island in the harbour's mouth. Pop. (1891) 33.

Gaitnip, a range of coast crags in the S of Kirkwall parish, Orkney, on the E side of the upper part of Scapa Bay. Several caverns penetrate it, all formed by the disintegrating action of the sea; and one, like a narrow winding tunnel, over 300 feet long, and from 12 to 20 feet high, is beautifully studded with stalactites.

Galashiels, a parliamentary burgh and parish of Selkirkshire. The town is situated on both banks of the river Gala, about a mile above the confluence of that river with the Tweed, and is 4 miles WNW of Melrose, 6 N of Selkirk, 18 ESE of Peebles, and 32 SSE of Edinburgh by road. It is a station on the Waverley section of the North British railway, and from it diverge branch lines to Selkirk and Peebles. The name, from *Gala* and *shiels* or *shielings*, signifying shepherds' huts, appears to have designated originally a small village, on the site of what is now called the old or high town, which had found its nucleus in the baronial seat of Gala, on the S bank of the river. This Gallowschel was a place of considerable antiquity, and is traditionally said to have contained a hunting-seat of the Scottish monarchs. Its name appears in a charter of the early part of the 14th century; it is mentioned as containing a tower of

Earl Douglas in 1416; and it figures in documents relating to the marriage of James IV. with the Princess Margaret of England. The old peel tower, known as 'Hunters' Ha', stood till the end of the 18th century; and ivy-clad ruins of the tolbooth, whose vane bore date 1669, were demolished in the summer of 1880. The decay of the village has been arrested by the prosperity of the modern town, and its site is now occupied by numerous handsome villas. The armorial bearings of Galashiels are a fox and a plum-tree, and are said to have been assumed in memory of an event that occurred during Edward III.'s invasion of Scotland (1337). A party of English, encamped in or near the town, had begun to straggle through the neighbouring woods in search of wild plums, when the inhabitants of Galashiels fell suddenly upon them, drove them headlong to a spot on the Tweed, nearly opposite Abbotsford, still known as the 'Englishmen's Syke,' and cut them down almost to a man. Congratulating themselves on

Arms of Galashiels.

an exploit that had proved to be sorer fruit for the invaders than the plums they had been seeking, the villagers dubbed themselves 'the Sour Plums o' Galashiels,' and are celebrated under that name in an old song. The arms of the town, however, seem to indicate some confusion of thought between this event and the fable of the fox and the grapes.

The modern town owes its origin, as well as its growth and prosperity, to the spirit of manufacturing enterprise which first seized the people in the 18th century. Galashiels has no history apart from the narrative of the development of its manufactures, and although mills on the Gala are mentioned early in the 17th century, it was not till the following century that a general move was made down to the banks of the stream which afforded such excellent water-power. Dorothy Wordsworth, speaking of the place in 1803, describes it as 'the village of Galashiels, pleasantly situated on the banks of the stream; a pretty place it once has been, but a manufactory is established there; and a townish bustle and ugly stone houses are fast taking the place of the brown-roofed thatched cottages, of which a great number yet remain, partly overshadowed by trees.' Since that time the prosperity and activity of the burgh have reached a very high pitch. An important factor in furthering the prosperity of the town was the opening of the various railways—to Edinburgh and Hawick, to Selkirk, and to Peebles—which at a lessened cost provided access to the best markets for the manufactures of the town.

The burgh of Galashiels stretches for 2 miles along both sides of the Gala, which flows through the narrow town from NW to SE. For the most part it is built on the alluvial ground along the banks, but it also sends offshoots, extending up the slopes of the adjacent hills. It is flanked or overlooked on the one side by Meikle Hill (1387 feet) and Gala Hill, and on the other by Buckholm and Langlee Hills; and the environs are picturesque and varied in their scenery. Situated previous to 1891 on the border between Selkirkshire and Roxburghshire, the burgh belonged to two parishes—Melrose and Galashiels—which were, however, for all civil and police purposes, regarded as one community in Selkirkshire, though for parochial matters each parish rated its own district. The Boundary Commissioners, in the above year, transferred the Melrose portion of the burgh to Galashiels, and placed the entire parish in the county of Selkirk.

The aspect of the town is unassuming. Most of it is either straggling or irregular; the central parts and both extremities, contiguous to the river, consist mainly of factories, shops, offices, and workmen's houses. The part S of the Gala is made up chiefly of one long irregular street, with several newer and shorter streets

and detached buildings, stretching along the narrow level strip that intervenes between the river and the hills. The southern part of the town, which is the quarter showing the greatest extension and improvements in recent times, has a number of short, irregular streets, and rows and clusters of buildings that reach up the face of the hill. The suburbs, especially Abbotsford Road, Melrose Road, and Windy Knowe, are adorned with large and elegant villas, offering one of the best and most visible evidences of the prosperity of the Galashiels manufacturers. The river, which is spanned by five bridges and two railway viaducts, is, in times of drought, almost entirely drawn off by the factories; but in times of freshet it is not always prevented by strong bulwarks from flooding the adjacent streets. Heavy floods on 12 July 1880, and again on 10 March 1881, were attended with great damage to property along its banks. Another flood on 21 September 1890 severely tested the bridge between the station and the town, the intercepted water rushing down the streets on the south side of the Gala for fully half a mile. There is no drainage system whatever, and at all times the Gala serves as a common sewer for the refuse of the town—a fact which at times is unpleasantly impressed upon the olfactory nerves. The railway within the burgh is crossed by one foot-bridge and three for wheeled traffic.

Galashiels has not many buildings of an imposing nature. The houses, with the exception of the suburban villas, are in a plain and unambitious style. The town-hall, built in 1860 at a cost of £3000, is a handsome edifice of two stories, with a large hall capable of containing 600 persons, besides a smaller hall and committee-rooms. The Corn Exchange was erected in 1860 at a cost of £1100, and has a hall with accommodation for 500 persons. The Volunteers' Hall was built in 1874, accommodates 1400, and cost £3500; the Masonic Hall buildings, including shops and small dwelling-houses, as well as the public rooms, were erected in 1876 for about £3000; this hall and the Good Templar Hall can accommodate 300 persons each. Union Street Hall and St Peter's Church Hall accommodate 400 and 450 persons respectively. The public hospital was projected in 1872. In 1893 a cottage hospital was erected at a cost of about £3800, containing 20 beds, besides convalescent and accident wards, dispensary and other offices, and ample accommodation for nurses. The free public library, with a lending department, was erected in 1873 at a cost of about £1000, and is managed by a committee chosen from among the town council and the householders. There is a very large number of associations and combinations for various purposes—social, commercial, helpful, and pleasurable—among the people of Galashiels. These include a Mechanics' Institute, a horticultural society, two farmers' clubs, two building societies, three co-operative societies, a manufacturers' corporation, Masonic, Foresters, Free Gardeners, Oddfellows, and Good Templar lodges, clubs for angling, cricket, football, cycling, bowling, curling, golf, etc., a literary society, and various religious societies, an ornithological society and club, an entomological society, several benefit societies, a Jubilee Institute for nurses, etc. The churches and meeting-houses are numerous and capacious. The parish church is a semi-Gothic edifice dating from 1813, and contains about 850 sittings. Ladhope church serves for a *quoad sacra* parish constituted in 1855, and comprising part of the town formerly within Melrose parish. It contains about 900 sittings. The West Church serves for a *quoad sacra* parish constituted in 1870, and was built at a cost of £1400. It has since been extended at a cost of £2300, and has now 900 sittings. In Nov. 1881 St Paul's church was opened, its erection, begun in 1878, being the result of the growing needs of the populous town. It serves as a consort to the parish church, the parish minister and his assistant holding alternate services in the two buildings. The style of the edifice is Early Decorated Gothic; and the cost, including the spire, which is 190 feet high, was £17,000. The church, which is seated for 950 persons, has a nave 83 feet long, besides aisles and

transepts; the height to the apex of the roof is 62 feet. A large organ was placed in this church at a cost of £1150. Galashiels Free church was built in 1875 at a cost of about £5150, to supersede a previous edifice. It is in the Gothic style, with two gables in the transept, and is seated for 650 persons. A hall in the same style adjoins it. Ladhope Free church contains 750 sittings, and besides good hall accommodation, it has stained-glass windows, the gift of members of the congregation and friends. The East United Presbyterian church, built in 1844, with 840 sittings, superseded a previous church that was nearly as old as the modern town. The West United Presbyterian church was opened in 1880, also on the site of a former church, and affords room for upwards of 800 hearers. The South United Presbyterian church, an edifice in the Early English style, with a square tower 70 feet high, was opened in Aug. 1880. It cost £4500, and accommodates between 750 and 800 persons. St Peter's Episcopal church, an Early English building dating from 1853, was enlarged by the addition of a new chancel and S aisle in 1881, when a new organ also was erected, and contains 390 sittings. In connection with this church a hall accommodating 450 persons was built in 1889 at a cost of £1400. The Gothic Roman Catholic church of Our Lady and St Andrew, opened in 1858, with 400 sittings, was not entirely completed till 1872. Other places of worship are an Evangelical Union chapel (rebuilt 1872); two Baptist chapels (1883 and 1875); and meeting-houses for Plymouth Brethren and Christadelphians.

There are five public schools within the burgh, also an Episcopalian and a Roman Catholic school, whose accommodation, average attendance, and grants are—for the burgh public, about 900, 775, £805; Ladhope public, 310, 245, £255; Old Town, 450, 400, £350; Glendinning Terrace public, 355, 330, £335; Episcopalian, 265, 245, £220; Roman Catholic, 280, 220, £220. The burgh public school in Gala Park was erected in 1875 at a cost of £4200; and a considerable sum was afterwards spent in providing additional accommodation. But in 1893 Gala Public School was erected, to accommodate 875 scholars. It has science and art class-rooms, and was estimated to cost about £8900. There are various private schools, including three young ladies' schools and the academy for boys; also a High School in Balmoral Place, just outside the Burgh boundary.

Galashiels contains a head post office, with all the usual departments, including a savings bank; but to meet the growing requirements of the town a new one, with greater accommodation, was erected in 1894. There are also three receiving offices. The banks comprise branches of the Bank of Scotland, British Linen Company, Commercial Bank, National Bank, and Royal Bank of Scotland, and a trustee savings bank. There are several inns and hotels. Two weekly newspapers are published at Galashiels—*The Border Advertiser*, established in 1848, and *The Scottish Border Record*, established in 1881. A weekly market is held each Tuesday, a fair on the third Wednesday in March, and a live-stock sale every alternate Wednesday.

Galashiels contains several iron and brass foundries, engineering works, dye-works, skinneries, one of which is perhaps the largest in Scotland, and establishments for the production of such mill furnishings as shuttles, reeds, heddles, etc.; other trades, besides the usual shops for the local trade of a country town, are those in connection with coal, corn, and timber. But by far its most important interest centres in the manufacture of woollen cloth; the greater part of the population is connected with it; the largest buildings in the town are its woollen mills, and the most ornate the mansions of its tweed manufacturers. The industry seems to have been followed in the district from an early period; for a charter of 1622 makes mention of certain waulk-mills (fulling-mills). But even in 1774, 150 years later, no great progress had been made, for only 170 cwts. of wool were used at Galashiels, and woven into blankets and coarse 'Galashiels Greys.' At the same date, the

united rental of the three waulk-mills in the town was £15, while the valued rental of mills in 1893 was £13,460. But before the close of the 18th century an advance was begun. In 1790 the first carding machine in Scotland was erected at Galashiels, and that was only the forerunner of many new machines and modes introduced by the active and enterprising manufacturers. In that year mills began to be erected for the reception of the new machinery; but by far the greater part of the 660 cwts. of wool used in the district in 1792 was woven in the dwellings of the weavers. Few years passed in the beginning of the 19th century without the introduction of some improvement that enhanced the quality of the cloth, or lessened the cost of production. The chief products up till 1829 were, as before, blankets and cloth of home-grown wool, with knitting yarns and flannels; but the depression of that year, co-operating with a change of fashion, inflicted a check on the prosperity of Galashiels. The manufacturers skilfully adapted themselves to circumstances, and introduced new fabrics, of which the chief were tartans and mixed trouserings in tweed. Thenceforward the prosperity of the town has been steady and uniform; and, notwithstanding the keen and growing rivalry of the mills in Selkirk, Hawick, Dumfries, Innerleithen, etc., the manufacturers of Galashiels, as they were the first to introduce the woollen manufactures into the south of Scotland, have constantly maintained their position at the head of the industry. The chief fabrics now produced at Galashiels are the world-renowned tweeds; but yarns, blankets, plaids, shawls, tartans, narrow cloths, grey and mixed crumbeoths, and blanket shawls of variegated patterns, also bulk largely in its trade returns. It has about 20 woollen-mills in operation, and several yarn-spinning mills. There are no factories for the manufacture of hosiery, although there are two or three stocking-makers in the town who do a little business privately. There are also 4 tweed warehouses, on a tolerably extensive scale, which carry on a home and foreign trade. The manufacturers are exceedingly averse to affording information concerning the extent of their operations; and it is difficult to obtain accurate returns as to the number of hands employed or the yearly value of goods manufactured. They and the weavers meet annually on the Friday nearest the 10th of October, for the purpose of electing a deacon of the trade, and conferring on matters connected therewith.

Galashiels proper was made a burgh of barony in 1599, and, till 1850, was administered by a baron-bailie under the Scotts of Gala, who succeeded the Pringles of Gala as superiors in 1632. In 1868 the town was constituted a parliamentary burgh, and it unites with Hawick and Selkirk in returning one member to parliament. In 1876 the boundaries of the burgh were extended for municipal purposes, though not for parliamentary election purposes. By the Burgh Police (Scotland) Act of 1892, which came into operation in May 1893, there are 12 commissioners, including the provost and 4 bailies. An Act of Parliament was obtained in 1875 for extending the limits of the police burgh, and for investing the governing body with efficient powers. A gas company was established in 1836, and a water company in 1839. The bill of 1875, however, authorised the corporation to construct waterworks, with a compensation reservoir on the Caddon, a clear water reservoir on Knowesdean, and a service reservoir to the S of Leebrae. These were completed in 1879 at a cost of about £60,000. The police force, in 1895, consisted of 13 men, and a superintendent, receiving a salary of £160, with other appointments by the corporation. Police courts are held as occasion may require. Small debt courts are held on the second Mondays of February, April, June, and December, on the last Monday of July, and on the first Monday of October. The valuation of the burgh in 1895 was £68,279, including £1745 for railways. The parliamentary constituency, in 1895, was 2554. Pop. of the parliamentary burgh (1881) 12,435, (1891) 17,252; of the entire town (1881) 15,330, (1891) 17,367, of whom 7997 were males and 9370 females, whilst 11,033 were in the parish and police burgh of

Galashiels and 6334 in Melrose parish. Houses (1891) inhabited 3500, vacant 44, building 47.

Galashiels parish until 1891 was situated partly in Selkirkshire and partly in Roxburghshire, its larger portion being in the former county. It includes the ancient parishes of Boldside in Selkirkshire, and Lindean formerly in Roxburghshire; and the union appears to have been carried through in 1640. The Boundary Commissioners, however, in the year above mentioned transferred to the parish of Galashiels the Selkirkshire part of the Roxburghshire parish of Melrose, the portion thus transferred being simply that part of Melrose parish situated within the police limits of the burgh of Galashiels. They then placed the parish wholly in Selkirkshire. By certain statutes it is secured that whatever part of the parish of Melrose may be at any time included within the police limits of the burgh of Galashiels, shall *ipso facto* become part of the county of Selkirk. The parish as it now exists is bounded on the NE and E by Melrose, on the SE by Bowden, on the S by Selkirk, on the W by Selkirk and the Selkirkshire section of Stow, and on the NW by the Selkirkshire section of Stow. Its greatest length, from NW to SE, is $6\frac{1}{2}$ miles; its greatest breadth is $3\frac{3}{4}$ miles. From Caddonfoot to the Ettrick's influx the river TWEED winds $3\frac{3}{4}$ miles east-south-eastward along the boundary with Selkirk parish, and then, bending $2\frac{1}{2}$ miles north-north-eastward, divides the Boldside from the Lindean portion and from the Abbotsford corner of Melrose. The ETTRICK, for the last $1\frac{3}{4}$ mile of its course, divides the Lindean portion from Selkirk parish. CADDON WATER, over its last $6\frac{1}{2}$ furlongs, traces the N half of the western border; and GALA WATER traces the boundary with Melrose parish on the NE. CAULDSHIELS LOCH ($2\frac{3}{4} \times 1$ furl.) is in the Lindean portion. The whole parish of Galashiels is hilly; but the hills expand on wide bases, and have in general rounded tops and a soft outline. They yield a good quantity of land to the plough and for plantation, and afford excellent pasture-land for sheep, and they are usually separated from each other by beautiful narrow valleys. The principal heights are, in the Boldside portion, Meikle Hill (1387 feet), Mossilee Hill (1264), Neidpath Hill (1203), Blakehope Hill (1099), and Gala Hill (904); in the Lindean portion, Cauldsheels Hill (1076 feet), White Law (1059), Lindean Moor (968), and Broad Hill (943). Greywacke and clay slate are the prevailing rocks, and these furnish most of the local building material. Ironstone has been found, but no quantity of sandstone, limestone, or coal. The soil along the river banks is sandy, on the rising-ground N of the Tweed dry and gravelly; and on similar ground S of the Tweed it has a considerable admixture of clay resting upon till. Some small patches of table-land, distant from the rivers, have black mould. Nearly one-third of the land is arable; most of the remainder is pasture, though a respectable number of acres is under wood. Antiquities are represented by the beginning of the CATRAIL, a reach of Roman road, the Rink camp on the Rink Hill, relics of various other Roman and Pictish fortifications, and FERNILEE Tower. Gala House, a little S of the town, is a recent Scottish Baronial edifice, one of the last works of the late David Bryce; and another mansion is FALDONSIDE; while a short distance from the town is ABBOTSFORD, the beautiful seat of Sir Walter Scott. In the presbytery of Selkirk and synod of Merse and Teviotdale, this parish is ecclesiastically divided into Galashiels proper, West Church *quoad sacra* parish, Ladhope *quoad sacra* parish, and part of the *quoad sacra* parish of Caddonfoot, the first a living worth £467. Under the landward school-board is Lindean public school, with accommodation for about 60 children, an average attendance of nearly 40, and a grant of £40. Valuation of landward portion (1892) £7256. Pop. (1891) 17,941, of whom 7460 were in the ecclesiastical division of Galashiels, 3991 in that of West Church, 6743 in that of Ladhope, and 156 in that of Caddonfoot.—*Ord. Sur.*, s. 25, 1865.

Gala Water, a river of Edinburgh, Selkirk, and Roxburgh shires, rising among the Moorfoot Hills in the

first-named county, and joining the Tweed near Melrose, after a course of 21 miles, during which it descends from 1100 to 300 feet above sea-level. From its source on the northern verge of Heriot parish, the Gala first flows for 2 miles eastward, and thence takes a south-south-easterly direction, which it maintains to the SE border of Edinburghshire, successively traversing the eastern portion of Heriot parish, tracing the boundary between Heriot and Stow, and traversing the main body of the last-named parish. At the junction of Heriot and Stow parishes it receives, on the right, the Heriot Water, and within the latter parish the Luggate Water—the former a tributary almost as large as the Gala itself; on the left, the smaller affluents, Armit or Ermet Water, Cockum Water, and Stow Burn. Its further course lies in a south-easterly direction, chiefly along the boundary between Roxburghshire and Selkirkshire, till it reaches the Tweed, into which it falls a little below Abbotsford, and about 2½ miles W of Melrose. The course of the Gala is remarkably sinuous; and the road from Edinburgh to Jedburgh and Carlisle, which traces the windings of the river along the E bank, is, says Chambers, at least a third longer than the crow-flight. An older road ran along the W bank; but the North British railway line, which traverses almost the entire length of the valley, crosses and recrosses the stream several times. The river-basin consists for the most part of a narrow valley flanked with rounded hills, and presents scenery with all the usual characteristics of the Scottish Lowlands, alternating agricultural and pastoral scenes with the rougher beauty of uncultivated nature. At the beginning of the nineteenth century the Gala dale was almost entirely pastoral and nearly destitute of trees, but since then much of the ground has been broken up by the plough, and numerous plantations have arisen, in many cases as the protection or ornament of the private mansions along the banks. Of these last the chief are Crookston, Burnhouse, Torsonce, Bowland, Torwoodlee, and Gala. As a fishing-stream, the Gala was once famous for the abundance of its trout; now, however, it has been so much over-fished that a considerable amount of time and skill are required, though very fair takes may be secured above Galashiels, the stream below the town being too dirty. The Gala waters Stow village, and 2 miles of its course lie through the busy town of Galashiels, whose mills sometimes in summer draw off almost all the water from its natural channel. There are several ruined castles and towers in the valley of the river, and traces of perhaps a dozen ancient camps. The name Gala has been connected with the Welsh *garu*, 'rough'; some authorities derive it from the Gaelic *guala*, meaning 'a full stream.' An ancient name for the valley was Wedale, sometimes explained as meaning the vale of woe, as having been the scene of some sanguinary prehistoric struggle; others connect it with the Norse *Ve*, a temple or church, and translate the name 'holy house dale.' In Wedale Dr Skene places Guinnion, the scene of one of the twelve battles of Arthur. Two ballads, one of them by Burns, celebrate the 'braw lads o' Gala Water.'—*Ord. Sur.*, sh. 25, 1865. See Sir Thomas Dick-Lauder's *Scottish Rivers* (Edinb. 1874).

Galatown. See GALLATOWN.

Galbraith. See INCH GALERAITH.

Galdry or Gaudry, a village in Balmerino parish, Fife, on a plateau on the centre of a ridge of hill, ¼ mile S of the Firth of Tay and 4½ miles SW of Newport. It has a Free church and a police station.

Gallangad, a burn of Dumbarton and Kilmarnock parishes, Dumbartonshire, rising near Dounnot Hill (1228 feet), and winding 8¼ miles north-by-eastward, till, near Drymen station, it falls into Endrick Water. During the last 2½ miles of its course it traces the boundary between Dumbarton and Stirling shires, and here bears the name of Catter Burn.—*Ord. Sur.*, sh. 30, 1866.

Gallary. See GALLERY.

Gallatown, a suburban village in Dysart parish, Fife, 5 furlongs NNW of Dysart station, commencing at the N end of Sinclairtown, and extending ¾ mile northward

along the road from Kirkcaldy to Cupar. It is included in the parliamentary burgh of Dysart, but (since 1876) in the royal burgh of Kirkcaldy. Originally called Gallowstown, it took that name either from the frequent execution at it of criminals in feudal times, or from the special execution of a noted robber about three centuries ago; and it long was famous for the making of nails. It now participates generally in the industry, resources, and institutions of Sinclairtown; and it has a Free church, a public school, and a post office under Kirkcaldy.

Gallengad. See GALLANGAD.

Gallery, an estate, with a mansion, in Logiepert parish, Forfarshire, on the right bank of the North Esk, 5 miles NNW of Dubton Junction. Its owner is David Lyall, Esq. (b. 1826). A hamlet, Upper Gallery, stands 3 miles nearer Dubton.—*Ord. Sur.*, sh. 57, 1868.

Gallow or Gala Lane, a rivulet of Kirkcudbright and Ayr shires, issuing from the Dungeon Lochs, and running 6½ miles north-by-eastward, chiefly along the mutual boundary of the two counties, to the head of Loch Doon.—*Ord. Sur.*, sh. 8, 1863.

Galloway, an extensive district in the south-western corner of Scotland, which originally and for a considerable period included also parts of Ayrshire and Dumfriesshire, but has for ages past been identified simply and strictly with the shire of Wigton and the stewartry of Kirkcudbright. The name, though inextricably interwoven with Scottish history, designates no political jurisdiction, and is unsanctioned by the strict or civil nomenclature of the country. The district is bounded on the N by Ayrshire and Dumfriesshire, on the E by Dumfriesshire, on the S by the Solway Firth and Irish Sea, and on the W by the Irish Channel and Firth of Clyde. Its greatest length, from E to W, is 63½ miles; and its greatest breadth, from N to S, is 43 miles. It is divided into three districts—Upper Galloway, including the northern and more mountainous parts of the two shires; Lower Galloway, embracing the southern and lowland sections E of Luce Bay; and the Rhinns of Galloway, consisting of the peninsula SW of Luce Bay and Loch Ryan. Galloway has long been famous as an excellent pastoral district; and though its unsettled condition long kept its agriculture in a backward state, the last hundred years have seen splendid progress made. The Galloway breed of horses is celebrated, and large droves of polled black cattle used to be reared for the southern markets. Of late, however, Ayrshire cattle have been superseding the native breed; and dairy-farming is coming into favour. The absence of coal, lime, and freestone has protected Galloway from the erection of busy industrial or manufacturing centres. The surface, on the whole, is undulating; and to quote Mr Henry Inglis, 'there is no district of Scotland more rich in romantic scenery and association, few which possess the same combination of sterile grandeur and arcadian beauty, and fewer still which are blessed with a climate equal in mildness of temperature to that of Galloway. The tulip-tree flourishes and flowers at St Mary's Isle, and the arbutus bears fruit at Kirkdale.' But for all save historical details, we must refer to our articles on KIRKCUDBRIGHTSHIRE and WIGTOWNSHIRE.

The district of Galloway was in early times held by tribes of the nation of the Brigantes. Ptolemy, writing in the 2d century of our era, calls them Novantes and Selgovæ. The former occupied the country W of the Nith, and had two towns—Lucopibia at Whithorn, and Rerigonium (see BEREGONIUM) on the E shore of Loch Ryan. The Selgovæ or Elgovæ lay to the E, extending over Dumfriesshire, and their towns were Trimonium, Uxellum, Corda, and Carbantorigum, whose sites Dr Skene finds respectively on Birrenswark Hill, on Wardlaw Hill, at Sanquhar, and at the Moat of Urr, between the Nith and Dee. A large amount of ethnological controversy has been waged over these peoples; some authorities recognising in them a Gothic, others a Cymric, and others a Gaelic race. The authority we have just named considers them to have been Celtic tribes of the Gaelic branch. Intercepted by the Britons of Strathclyde from their northern Gaelic relations, and

surrounded in their little corner by a natural girdle of sea and mountain, this people long retained their individuality. They were known as the Picts of Galloway centuries after the word Pict had disappeared elsewhere from the country; and they appeared under that name as a division of the Scottish army at the Battle of the Standard in 1138. We know little concerning Galloway in Roman times. Agricola, overrunning it in 79 A.D., added it to the Roman province in Britain, and Roman military remains are tolerably frequent in certain districts. In 397 it is related that St Ninian built a church at Candida Casa, formerly Lucopibia, dedicated it to St Martin of Tours, and began the conversion of the Picts. After the departure of the Romans from Britain, Galloway appears, from the evidence of topographical names and old chronicles, to have been governed by a series of Pictish kings; but probably early in the 7th century the Northumbrian rulers of Bernicia brought it under their sovereignty, and for several centuries remained the nominal superiors of its lords. There is no authority for the common narrative of immigrations of Irish Celts into Galloway during the 8th and following centuries. It is at this period that the modern name emerges. The district was known to the Irish as Gallgaidel or Gallgaidhel, and to the Welsh as Galwyddel, from the Celtic *gall*, 'a stranger'; and the name, besides indicating the land of strangers, seems to have some reference also to the fact that the Gaelic population was under the rule of the Anglian Galle or strangers. From the above terms came Gallweithia, Galwethia, and many other forms, Latinised as Gallowidia, and appearing now as Galloway. Towards the end of the 8th century the power of the Angles began to decline. Bede, who gives to the Gallowegian Picts the alternative name of Niduari from Nid or Nith, like Novantæ from Novius, the name under which Ptolemy knew the same river, relates that one of the four bishoprics into which Northumbria was divided had its seat at Candida Casa. The first bishop was appointed in 727; the Angles appear to have been too weak to appoint another after Beadulf about 796. The Northmen, who first appeared in England in this century, did not overlook Galloway; and there is some ground for believing that the Gallowegians themselves partly adopted a piratical life. During the next two or three centuries Galloway was probably ruled by native rulers in tolerably complete independence; and it had the honour of being the locality whence Keuneth mac Alpin emerged to obtain the throne of Scotia. About the middle of the 11th century the name Galweya was used to include the whole country from Solway to Clyde. In the Orkneying Saga, which narrates the history of the Norwegian Jarl Thorfinn, a contemporary of Macbeth, Galloway is referred to under the name of Gadgetdli; and it probably formed one of the nine earldoms that Thorfinn possessed in Scotland. Malcolm Ceanmor, who succeeded to the throne of Scotia in 1057, recovered Galloway from the Norse supremacy, though it is probable that many Northmen remained in the district. In 1107, David, youngest son of Malcolm Ceanmor, received Scotland S of the Forth and Clyde as an earldom; and in the charter which he granted in 1113 to the newly-founded monastery of Selkirk, he assigned to the monks the tenth of his 'can' or ducs from Galweia. David's ascent of the Scottish throne in 1124 may be regarded as the date of the union of Galloway with Scotland.

Various attempts have been made to furnish Galloway with a line of independent lords during the earlier parts of its obscure history, and we even hear of a certain Jacob, Lord of Galloway, as having been one of the eight reguli who met Edgar at Chester in 973. But all these efforts are entirely unauthentic, and are based upon comparatively modern authorities. From the reign of David I. we are on more historical ground. After the death of Ulgric and Duvenald, described as the native leaders of the Galwenses, at the Battle of the Standard in 1138, Fergus, who may possibly have been of Norwegian connections, was appointed first Earl of

Galloway. This powerful noble married Elizabeth, a natural daughter of Henry I. of England. In 1160 he joined Somerled, Norse ruler of Argyll, in a revolt against Malcolm IV., but was subdued after three battles and compelled to resign his lordship to his sons. He retired as canon regular to Holyrood, where he died in the following year. His gifts and endowments to Holyrood Abbey were very extensive; and that house possessed more lands in the stewardry than any other. Uchtred and Gilbert, sons and successors of Fergus, accompanied King William the Lion on his expedition to England in 1173; but when he was taken prisoner they hurried home, expelled with cruel slaughter the English and Norman inhabitants of Galloway, and attempted to establish their independence of the Scottish government, even offering to swear fealty to England. William, on his release in 1174, marched at once to Galloway, where, however, Gilbert, who had cruelly murdered his brother at Loch Fergus, made humble submission and gave hostages. Gilbert died in 1185, and Roland, son of the murdered Uchtred, succeeded, after first quelling a revolt under Gilpatrick, and subduing Gilcolm, a powerful freebooter, who had invaded Galloway. Duncan, the son of Gilbert, received the earldom of Carrick. Roland married Elena, daughter of the Constable of Scotland, and eventually succeeded to his father-in-law's high office. It is said that Roland swore allegiance to Henry II. of England for the lands of Galloway, and that the English monarchs continued to look upon that district as part of their lawful dominions. Alan succeeded his father in 1200 as Lord of Galloway. He assisted King John in his Irish expedition in 1211, and appeared as one of the barons who extorted the Magna Charta from that king. Later, however, he returned to his Scotch allegiance, and succeeded to his father's office of constable. He died in 1234, leaving three daughters and an illegitimate son. On the king's refusal either to accept the lordship himself or to prevent the partition of the land among the Norman husbands of the three heiresses, the Gallowegians rose in fierce revolt, and were with difficulty reduced to obedience in 1235. Roger de Quincy, husband of Elena, Alan's eldest daughter, received the lordship. This strict enforcement of the rule of legitimate succession marks the transition in Galloway from the Brehon law to feudalism. From that date lands began to be held by charter and lease, the rights of property began to be more secure, and agriculture began to be attempted. De Quincy died in 1264. In 1291, when the Scottish succession was disputed after the death of the Maid of Norway, one-half of the lordship of Galloway belonged to John Baliol, a son of Alan by Margaret, granddaughter of David I.; the other half was shared by William de Ferrers, Alan de Zouch, and Alexander Comyn, Earl of Buchan, husbands of the three daughters of De Quincy. Of the three last Comyn alone is of importance in the history of Galloway. The Gallowegians, during the wars of the succession, naturally sided with the Comyns and the Baliols, and speedily shared in their disasters. When John Baliol was obliged to resign his dependent crown, Edward I. considered Galloway as his own; and he immediately appointed over it a governor and a justiciary, disposed of its ecclesiastical benefices, and obliged the sheriffs and bailiffs to account for the rents and profits of their bailiwicks in his exchequer at Berwick. In 1296 he granted to Thomas of Galloway all the lauds, etc., that had been granted to him there by his father Alan; and at the same time he restored all their former liberties and customs to the men of Galloway. In 1297, Wallace is said to have marched into the west 'to chastise the men of Galloway, who had espoused the party of the Comyns, and supported the pretensions of the English; and a field in the farm of Borland, above the village of Minnigaff, still bears the name of Wallace's camp. During his campaign of 1300, Edward I. marched from Carlisle through Dumfriesshire into Galloway; and though opposed first by the remonstrances, and next by the warlike demonstrations of the people, he overran the

whole of the low country from the Nitl to the Cree, pushed forward a detachment to Wigtown, and compelled the inhabitants to submit to his yoke. In 1307, Robert I. marched into Galloway, and wasted the country, the people having refused to repair to his standard; but he was obliged speedily to retire. In the following year, Edward Bruce, the king's brother, invaded the district, defeated the chiefs in a pitched battle near the Dee, overpowered the English commander, reduced the several fortlets, and at length subdued the entire territory. Galloway was immediately conferred on him by the king, as a reward for his gallantry; but after the death of Alexander, his illegitimate son, whom the king had continued in the lordship, in 1333, it reverted to the crown. When Edward Baliol entered Scotland to renew the pretensions of his father, Galloway became again the wretched theatre of domestic war. In 1334, assisted and accompanied by Edward III., he made his way through this district into the territories to the N, and laid them waste as far as Glasgow. In 1347, in consequence of the defeat and capture of David II. at the battle of Durham, Baliol regained possession of his patrimonial estates, and took up his residence in Buittle Castle, the ancient seat of his family. In 1347, heading a levy of Gallowegians, and aided by an English force, he invaded Lanarkshire and Lothian, and made Scotland feel that the power which had become enthroned in Galloway was a scourge rather than a protection. In 1353, Sir William Douglas overran Baliol's territories, and compelled M'Dowal, the hereditary enemy of the Bruces, to renounce his English adherence and swear fealty to his lawful sovereign. After the restoration of David II. and the expulsion of Baliol, Archibald Douglas the Grim obtained, in 1369, Eastern and Middle Galloway, or Kirkcudbrightshire, in a grant from the crown, and, less than two years after, Western Galloway, or Wigtownshire, by purchase from Thomas Fleming, Earl of Wigtown. This illegitimate but most ambitious son of the celebrated Sir James Douglas obtained, at the death of his father, in 1388, on the field of Otterburn, the high honours and the original estates of the house of Douglas; and now, while holding in addition the superiority of all Galloway, became the most powerful as well as the most oppressive subject of Scotland. On an islet in the Dee, surmounting the site of an ancient fortlet, the residence of former lords of Galloway, he built the strong castle of Threave, whence he and his successors securely defied the enemies that their violence and oppression raised against them. About the middle of the 15th century one of those earls of Douglas and lords of Galloway carried his lawless insolence so far as, on the occasion of a quarrel, to seize Sir Patrick Maclellan of Bombie, the sheriff of Galloway, and to hang him ignominiously as a felon in Threave Castle. The Douglasses experienced some reverses, and were more than once sharply chastised in their own persons, yet they continued to oppress the Gallowegians, to disturb the whole country, and even to overawe and defy the crown, till their turbulence and treasons ended in their forfeiture. James, the ninth and last earl, and all his numerous relations, rose in rebellion in 1453; and, two years afterwards, were adjudged by parliament, and stripped of their immense possessions.

The lordship of Galloway with the earldom of Wigtown was annexed to the crown, and in 1469 was conferred, with other possessions, upon Margaret of Denmark, as part of her dowry when she married James II. But although the king had introduced a milder and juster rule, the troubles of Galloway were not yet over. For some time after the fall of the Douglasses it was occasionally distracted by the feuds of petty chiefs, familiarly known by the odd name of 'Neighbour Weir.' Early in the 16th century a deadly feud between Gordon of Lochinvar and Dunbar of Mochrum led to the slaughter of Sir John Dunbar, who was then steward of Kirkcudbright; and, during the turbulent minority of James V., another feud between Gordon of Lochinvar and Maclellan of Bombie led to the slaughter of the latter at the door of St Giles's Church in Edinburgh. In

1547, during the reign of Mary, an English army overran Eastern Galloway, and compelled the submission of the principal inhabitants to the English government; and after the defeat of Langside, Mary is incorrectly said to have sought shelter in DUNDRENNAN Abbey, previous to her flight into England across the Solway. In the following month (June 1568) the regent Moray entered the district to punish her friends; and he enforced the submission of some and demolished the houses of others. In 1570, when Elizabeth wished to overawe and punish the friends of Mary, her troops, under the Earl of Moray and Lord Scrope, overran and wasted Annandale and part of Galloway. As the men of Annandale, for the most part, stood between the Gallowegians and harm, they expected to receive compensation from their western neighbours for their service; and when they were refused it, they repaid themselves by plundering the district. The people of Galloway warmly adopted the Covenant, and suffered much in the religious persecutions of the time. The story of the martyrs of Wigtown will be told elsewhere. The rising that was crushed by General Dalziel, in 1666, at Rullion Green had its beginning at Dalry in Kirkcudbrightshire. Among the strict Cameronians and 'wild western Whigs' the men of Galloway were represented. In a happier age Loch Ryan sheltered William III.'s fleet on his voyage to Ireland in 1690; and since then the history of Galloway has mainly consisted in the advance of agriculture and of the social condition of the people.

Galloway gives name to a synod of the Church of Scotland, a synod of the Free Church of Scotland, and to a presbytery of the United Presbyterian Church. The former synod, meeting at Newton-Stewart, and including the presbyteries of Stranraer, Wigtown, and Kirkcudbright, comprises the whole of Wigtownshire and all Kirkcudbrightshire W of the river Urr, besides Ballantrae and Colmonell parishes in Ayrshire. Pop. (1871) 67,280, (1881) 66,738, (1891) 62,845, of whom 16,589 were communicants of the Church of Scotland in 1895. The Free Church synod, having the same limits, with the exclusion of the two Ayrshire parishes, and divided into three presbyteries of the same names as above, had 4480 members in 1894; whilst the United Presbyterian presbytery had 1452. The pre-Reformation Church of Scotland had a see of Galloway, with a church at WHIRHORN; and the present Roman Catholic Church has a diocese of Galloway, re-established in 1878. The Episcopal Church has a united diocese of Glasgow and Galloway.

Galloway House, the family seat of the Earls of Galloway, in Sorbie parish, SE Wigtownshire, within $\frac{1}{2}$ mile of Rigg or CRUGGLETON Bay, and $\frac{1}{4}$ SE of Garliestown station, this being $\frac{9}{10}$ miles SSE of Wigtown. Built in 1740, it is a plain large edifice, with projecting wings, a fine conservatory, beautiful gardens, and a nobly wooded park; and it commands a magnificent prospect of the shores of Wigtown Bay and the Solway Firth, away to the Isle of Man and the far, blue Cumberland mountains. Within hang thirty family portraits, beginning with Sir Alexander Stewart, who was thirteenth descendant of Alexander, fourth lord high steward of Scotland, through his younger son, Sir John Stewart of Bonkill or Bunkle, and the Stewarts of Dalswinton and GARLIES, and who in 1607 was created Lord Garlies, in 1623 Earl of Galloway. Alan Plantagenet-Stewart is the present and tenth Earl (b. 1835; suc. 1873).—*Ord. Sur.*, sh. 4, 1857.

Galloway, Mull of, a precipitous headland, forming the southernmost point of the Rhinns of Galloway, and

so of Scotland (lat. 54° 38' N, long. 4° 53' W), in Kirkmaiden parish, SW Wigtownshire. By water it is 26 miles E by N of Ireland, 22½ NNW of the Isle of Man, and 50 W by N of Cumberland; whilst by road it is 5 miles S by E of Drumore and 22½ SSE of Stranraer. Extending 1½ mile eastward, and from 1½ to 3 furlongs broad, it rises to 210 feet above sea-level at its eastern extremity, which is crowned by a lighthouse that, 86 feet high, was erected in 1828-30 at a cost of £8378. Its light, supplied by a new apparatus of 1880, is intermittent, visible for 30 and eclipsed for 15 seconds; and can be seen at a distance of 25 nautical miles. 'The prospect from the lighthouse,' says Mr M'Iraith, 'is very fine. To the N are the fields of Cardryne, Cardrain, and Mull. Away to the eastward stretches the bay of Luce, with the rocky scars looming through the sea mist; and beyond are the outlines of the Machars and Minnigaff Hills. Southward is the wild blue sea, and on the horizon, very plain in clear weather, is the Isle of Man. Ireland is discernible in the glittering west.' The *Novantæ* of Ptolemy, the Mull retains remains of considerable earthworks, Scandinavian probably; whilst, according to tradition, it was the last asylum of the two last of the Picts—'short wee men they were, wi' red hair and long arms, and feet sae braid that when it rained they could turn them up owre their heads, and then they served for umbrellas.' How they did not reveal their mystery of brewing heather ale is delightfully told in Chambers's *Popular Rhymes*, though there the story is not localised. Half a mile N of the narrow neck that joins the Mull to the mainland, at the foot of the steep cliffs, is St Medan's Cave or the Old Chapel at the Mull, of which the late Mr T. S. Muir wrote that 'the cave is very small, its length being only 11 feet, its greatest width rather over 9, and the roof so low as scarcely to admit of an upright posture under it. In the making of the chapel, which joins to in front as the nave, so to speak, of the chancel-like cell, it is curious to observe how largely the labour has been economised by using the rocks, which, rising perfectly upright and smooth, form its two side walls. The builded walls, which, with those of nature's furnishing, enclose an area of nearly 15 feet by 11½, are of great thickness, and are composed principally of clay slate, well put together, but without lime. That fronting the sea, now little more than breast high, has a narrow window at about its middle, and there is a pretty wide doorway, wanting the lintel, close to the rock-wall on the S. The rear wall, covering the face of the crag, rises much higher, and may perhaps be as high as ever it was; but on no part of it is there any trace of a roof.' Hard by is the Well of the Co, or Chapel Well; and here, on the first Sunday in May, the country people used to assemble, at no such remote period, to bathe in the well, leave gifts in the cave, and pass the day in gossiping and amusements.—*Ord. Sur.*, sh. 1, 1856. See pp. 253-255 of M. Harper's *Rambles in Galloway* (Edinb. 1876), and pp. 139-142 of W. M'Iraith's *Wigtownshire* (2d ed., Dumf., 1877).

Galloway, New, a royal and police burgh in the parish of Kells, Kirkcudbrightshire, is situated on the right bank of the Ken, at the intersection of the road from Kirkcudbright to Ayrshire with that from Newton-Stewart to Dumfries, 17½ miles NE by E of Newton-Stewart, 19 NNW of Kirkcudbright, 25 W of Dumfries, and 38 SE of Ayr. It stands, 200 feet above sea-level, at the foot of an irregular ridge of ground in the vicinity of Kenmure Castle; and it is surrounded by charming and picturesque scenery. Loch Ken, 1½ mile SSE, and the neighbouring streams are good trouting waters. Although New Galloway is a place of municipal dignity, it can hardly be described as more than a village. It consists for the most part of a main street running N and S, cut by a cross street about half as long running E and W, and a scanty sprinkling of detached houses; while the business of the place is confined to the local domestic and handicraft branches. The burgh is clean and neat. It has a post office, with money order, savings bank, and telegraph departments, a branch of the Clydesdale bank, a reading-room, and two hotels. At the centre or cross stands the

town-hall, with a neat spire, and a clock placed there in 1872 by subscription. Half a mile N, but not within the royalty, the parish church of Kells, built in 1822, raises its neat stone front and square tower. In the cemetery is an old monument in a granite setting to the memory of a martyred Covenanter. A handsome stone bridge of five arches, erected in the same year as the church, spans the river ½ mile to the E. The station of New Galloway is about 6 miles SSE of the town; and a bus runs between them daily. A sort of suburb of the burgh, in the form of a number of detached cottages, called the Mains of Kenmure, lies scattered to the E between the town and the bridge.

King Charles I. bestowed upon Sir John Gordon of Lochinvar a charter, dated 15 Jan. 1629, empowering him to create a royal burgh of Galloway on his estates in Kirkcudbrightshire. The site fixed upon was probably St John's Clachan of Dalry, but no settlement seems to have followed this first charter, which was changed by another charter under the Great Seal, dated 19 Nov. 1630, and confirmed by Act of Parliament in June 1633.

Seal of New Galloway.

Under this latter charter the present site was selected, and the burgh privileges seem to have soon attracted a few settlers; but the place could never acquire any trade or manufacture, and the inhabitants were for the most part simple mechanics, agricultural labourers, and a few ale-house and shop keepers, while the houses were, even at the beginning of the nineteenth century, low, ill built, straw-thatched, and often dilapidated. Since then, however, the appearance of the houses and the social condition of the people have made considerable advances. By charter the corporation of the burgh was to comprise a provost, 4 bailies, dean of guild, treasurer, and 12 councillors; but by the sett, as reported to and sanctioned by the convention of royal burghs on 15 July 1708, the council was then declared to consist of 1 provost, 2 bailies, a treasurer, and 15 councillors. In 1832 the entire parliamentary constituency, as enrolled, was 14, and consequently it was quite impossible to supply a council of the usual number. The burgh had a parliamentary constituency of 71, and a municipal of 105 in 1896, and formerly united with Wigtown, Stranraer, and Whithorn in returning a member to parliament; but in 1885, along with that of those burghs, its representation was merged in that of the county. By the Burgh Police (Scotland) Act, 1892, it has 9 commissioners, including a provost and 2 bailies. Fairs are held here on the first Thursday after 12 April *o. s.*, and on the Thursday of August before Lockerbie. The sheriff's court is held three times a year. The Kells parochial school, at New Galloway, with accommodation for 190 scholars, has an average attendance of about 100, and a grant of about £100. Valuation (1875) £896, (1882) £1044, (1896) £1262. Pop. of police burgh (1881) 422, (1891) 391, of whom 216 were females; and of royal burgh (1891) 374. Houses, inhabited 91, vacant 8, building 6.—*Ord. Sur.*, sh. 9, 1863.

Gallowflat, an estate, with a mansion, in Rutherglen

parish, Lanarkshire. It is now partly feued and built upon as an extension of the burgh of Rutherglen. An ancient tumulus here was surrounded by a fosse, out of which a fish-pond was formed in 1773, when a paved passage, 6 feet broad, was discovered leading up to the top of the tumulus.

Gallowgreen. See PAISLEY.

Gallowhill, a hamlet, with a public school, in Alford parish, Aberdeenshire, 1½ mile W by S of Alford village.

Galston, a town and a parish in the NE of Kyle district, Ayrshire. The town stands chiefly on the southern bank of the river Irvine, and on the Newmilns branch of the Glasgow and South-Western railway, 1 mile SSW of Loudoun Castle, 2 miles W by S of Newmilns, and 5 E by S of Kilmarnock, under which it has a post office, with money order, savings bank, insurance, and telegraph departments. Its site is low, surrounded by gentle rising-grounds, and overhung on the N by the woods and braes of Loudoun; and with its charming environs it presents a very pleasing appearance. A fine stone three-arch bridge across the Irvine unites a Loudoun suburb to the town, which long was a mere hamlet or small village, maintained chiefly by the making of shoes for exportation through Kilmarnock. It acquired sudden increase of bulk and gradual expansion into town by adoption of lawn and gauze weaving for the manufacturers of Paisley and Glasgow, and had 40 looms at work in 1792, 460 in 1828. Weaving is still the staple industry, there being several muslin and blanket factories, besides saw-mills and a paper-millboard factory; and Galston wields a considerable local influence as the centre of an extensive coalfield and of an opulent agricultural district. It has a station, branches of the British Linen Co. and Union banks, numerous inns and hotels, a gaswork, a cemetery, co-operative, temperance, and Good Templars' halls, and a newspaper, the *Weekly Supplement and Advertiser* (Fridays). Fairs are held on the third Thursday of April, the first Thursday of June, and the last Wednesday of November. The parish church, erected in 1808, has a spire and clock, and there is a mission church in connection with it. Other places of worship are a Free church (1888, costing £2500), a U.P. church, an Evangelical Union chapel, and St Sophia Roman Catholic church, in the Byzantine style, opened in 1886, and costing upwards of £10,000, the gift of the Marquis of Bute. Blair's Free School, an elegant massive edifice, affords education and clothing to 120 boys and girls for a term of four years; under the Endowment Act it is now incorporated with the public schools. Brown's Institute, built by Miss Brown of Lanfine in 1874 at a cost of over £3000, comprises reading and recreation rooms, with a library of nearly 3000 volumes. In 1893 the Burgh Police (Scotland) Act of 1892 came into operation, by which the town is governed by a provost, 2 bailies, and 6 commissioners. Pop. (1881) 4085, (1891) 4296, of whom 447 were in Loudoun parish.

The parish, containing also the hamlet of ALLANTON, with parts of the villages of NEWMILNS and DARVEL, is bounded N by Kilmarnock and Loudoun, E by Avondale in Lanarkshire, S by Sorn and Mauchline, and W by Riccarton. The Boundary Commissioners in 1891 effected an exchange of territory between the two parishes of Galston and Riccarton. So much of the former as lay to the west of the western fence of the Glasgow and South-Western railway from Kilmarnock to Dumfries was transferred to Riccarton, while so much of the latter as lay to the east of the west boundary of the estate of Milrig was transferred to Galston. Galston parish thus received the east portion of the former detached part of Riccarton, while the remainder of this detached part was joined to the main portion of Riccarton by the annexation of the intervening Galston portion. Avon Water, rising in the south-eastern corner, runs 4½ miles north-eastward along the Lanarkshire border. Cessnock Water, at three different points, traces 7½ furlongs of the boundary with Mauchline, 2¾ miles of that with Craigie, and 1½ mile of that with Riccarton; whilst the river IRVINE, from a little below its source,

flows 10 miles westward on or close to all the northern boundary, and from the interior is joined by Logan Burn, Burn Anne, and several lesser tributaries. Where, in the NW, it quits the parish, the surface declines to less than 140 feet above sea-level, thence rising to 359 feet near Millands, 566 near Sornhill, 618 at Molmont, 797 near Burnhead, 965 near Greenfield, 1054 near Hardhill, 982 at Tulloch Hill, and 1259 at DISTINKHORN. A strip of rich alluvial level, highly fertile and well cultivated, lies all along the Irvine; a belt of brae, largely covered with woodland, extends southward from the alluvial level to the distance of 2½ miles; and much of the remaining area consists of rising-grounds and hills which, bleak and sterile till 1810, are now variously arable land, good pasture, or covered with plantation. In the extreme E and SE is a considerable tract of high upland, mostly carpeted with heath or moss, and commanding magnificent prospects over all Cunninghame, most of Kyle, and a great part of Carrick, away to Arran and the dim distant coast of Ireland. Loch Gait, at the eastern extremity, was once a sheet of deep water, but now is a marsh; and Loch Bruntwood, too, in the south-western extremity, has been completely drained. The rocks are partly eruptive, partly carboniferous. Trap rock appears on the summits and shoulders of many of the hills; coal is largely mined in the W; sandstone, of a kind suitable for paving and roofing flag, is quarried; and limestone also is worked. Agate and chalcedony are often found at Molmont; and a beautiful stone, called the 'Galston pebble,' occurs in the upper channel of Burn Anne. The soil ranges in character, from rich alluvium to barren moor. Nearly two-thirds of all the land are arable; woods and plantations cover some 1000 acres; and the rest is either pastoral or mossy. An ancient Caledonian stone circle at Molmont has been destroyed; in the E of the parish a Roman coin of Cæsar Augustus was discovered in 1831; and here an extensive Roman camp above Allanton has left some traces. Sir William Wallace fought a victorious skirmish with the English at or near this camp; he had several places of retirement among the eastern uplands of Galston and Loudoun; and he has bequeathed to a hill in the former, and to a ravine in the latter, the names of respectively Wallace's Cairn and Wallace's Gill. The 'Patie's Mill' of song is in the neighbourhood of Galston town. There are also CESSNOCK CASTLE, Lanfine House, and Barr Castle, the ancient seat of the Lockharts, a stately pile, sometimes also called Lockhart's Tower. Giving off since 1874 a portion to Hurlford *quoad sacra* parish, Galston is in the presbytery of Ayr and synod of Glasgow and Ayr. The value of the living is returned as £386. Three public schools—Allanton, Barr, and Galston—and St Sophia Roman Catholic, with respective accommodation for 46, 436, 591, and 121 children, have an average attendance of about 13, 310, 512, and 62, and grants of about £15, £310, £533, and £58. Pop. of civil parish (1881) 5961, (1891) 6408; of ecclesiastical parish (1891) 6287.—*Ord. Sur.*, shs. 22, 23, 1865.

Galtway, an ancient parish in Kirkcubrightshire, united about the year 1683 to Kirkcubright, and now forming the central part of that parish. It contained the priory of St Mary's Isle, subordinate to Holyrood abbey, and its church and lands, till the Reformation, belonged to that priory. Its church stood on high ground, 2 miles SSE of Kirkcubright town, measured 30 feet by 15, and has left some traces of its walls; whilst the churchyard, now completely engirt by plantation, and presenting a very sequestered appearance, is still used by the Selkirk family.

Galval or Gouldwell Castle. See BOHARM.

Gamescleuch, a ruined tower in Ettrick parish, Selkirkshire, near the right bank of Ettrick Water, 1¼ mile E of Ettrick church. It was built about the middle of the 16th century by Simon, second son to Sir John Scott of Thirlestane, Lord Napier's ancestor; but, according to tradition, was never occupied, Simon having been poisoned by his stepmother the night before his marriage. A burn on which it stands has a north-westward

run of $1\frac{3}{4}$ mile, and is flanked, on the right side, by Gamescleuch Hill, rising to an altitude of 1490 feet above sea-level.—*Ord. Sur.*, sh. 16, 1864.

Gameshope, a small lake ($1 \times \frac{3}{8}$ furl.) and a burn in Tweedsmuir parish, Peeblesshire. Lying 1850 feet above sea-level, within $1\frac{1}{4}$ mile of the Dumfriesshire border, and 2 miles NE of the summit of Hartfell, it occupies a lofty upland hollow, and is the highest tarn in all the Southern Highlands. The burn, rising close to the Dumfriesshire border, 2 miles E by N of the summit of Hartfell, runs $4\frac{3}{8}$ miles north-by-westward; receives, at a point $1\frac{1}{2}$ mile from its source, a short small affluent from the loch; and falls into Talla Water at a point 3 miles SE of that stream's influx to the Tweed. Both the loch and the burn abound in excellent dark-coloured trout.—*Ord. Sur.*, sh. 16, 1864.

Gamhair. See GAUR.

Gamna, a lake in the W of Rothiemurchus, Inverness-shire, 1 furlong SE of Loch-an-Eilein. Lying 895 feet above sea-level, it has an utmost length and breadth of $3\frac{1}{2}$ and $1\frac{1}{2}$ furlongs, and is encircled by tall, dark Scottish pines.—*Ord. Sur.*, sh. 74, 1877.

Gamrie (12th century *Gameryn*), a coast parish of Banffshire, containing the post-town, seaport, and police burgh of MACDUFF, with the fishing villages of GARDENSTOWN and CROVIE. It belongs to Buchan district, and comprises in itself the north-easterly extension of Banffshire. It is bounded N by the Moray Firth, E and SE by Aberdeen in Aberdeenshire, S by King Edward in Aberdeenshire, and W by Alvah and Banff. Its utmost length, from E to W, is $8\frac{1}{2}$ miles; its breadth, from N to S, varies between $1\frac{3}{4}$ and $4\frac{1}{4}$ miles; and its area is 17,293 $\frac{1}{4}$ acres, of which 240 are foreshore and 11 water. Torr Burn, running to the sea, traces for $3\frac{1}{2}$ miles the eastern boundary; and Logie Burn, running in a landward direction to fall eventually into the Deveron, follows part of the Alvah border; whilst the Deveron itself, immediately above its influx to the sea, separates Gamrie from Banff. Numerous burns drain the interior, some of them running to the sea, others belonging to the Deveron's basin, and most of them traversing romantic dells. Not a drop of water runs into Gamrie from any other parish; but all its burns either rise within itself or merely touch its borders; and several of them are highly interesting for either the fitfulness of their course, the beauty of their falls, or the utility of their water-power. Towards the SE is a very small lake, the Standing Loch, which lies in a hollow engirt by hillocks, nearly the highest ground in the parish, and in early spring is a nightly resort of wild geese. A mineral spring, called Tarlair Well, is on the coast near Macduff, and has enjoyed considerable medicinal repute. The coast, if one follows its bends, measures fully 10 miles in extent, and is one of an exceedingly grand and picturesque character, attaining 366 feet at Troup Head, 363 at Crovie Law, 536 near More Head, and 404 at Melrose Law. A rocky rampart, in some places perpendicular, in nearly all precipitous, presents almost everywhere characteristics of considerable sublimity and grandeur. Parts of it are inaccessible to the foot of man, and others bend just enough from the perpendicular to admit a carpeting of greensward, and here and there are traversed by a winding footpath like a staircase, which few visitors would be venturesome enough to scale. The summits of this rampart are only a few furlongs broad, and variously ascend or decline towards the S, then break down in sudden declivities into ravines and dells, which run parallel to the shore; and they command sublime views of the ever-changing ocean to the N, and of a great expanse of plains and woods, of tumulated surfaces and mountain-tops, to the S and W. Several deep chasms cleave the rampart from top to bottom, and look like stupendous rents made by shock of earthquake; they open widely at the shore, and take the form of dells toward the interior, and they have zigzag projections, with protuberances on the one side corresponding to depressions or hollows on the other. The most easterly of these is at Cullykhan, near Troup House; another is

at Crovie fishing village; a third, the chief one, called Afforsk Den, is at Gamrie old church; and the most westerly, called Oldhaven, is between the lands of Melrose and those of Cullen. Several caverns pierce the sea-bases of the rocky rampart; and two of these, in the neighbourhood of Troup, are of great extent and very curious structure, and bear the singular names of Hell's Lum and Needle's Eye. The villages of Gardenstown and Crovie nestle on such contracted spots at openings of the great rampart as to have barely standing room, requiring even to project some of their houses into shelves or recesses of the acclivities; and are so immediately and steeply overhung by the braes, that persons on the tops of the braes might fancy that they could peer into the chimneys of the houses. The interior of the parish, all southward from the summit of the coast range of rampart, slopes away, mostly in a southerly or south-westerly direction, to the basin of the Deveron, and is finely diversified by hills, dells, and precipices, rising to 588 feet above sea-level at Troup Hill, 652 at the Torr of Troup, 643 near Dubford, 603 near Little-moss, 558 near Millhow, and 461 near Headtown. The rocks possess great interest for geologists, and have been specially discussed or noticed by Sedgwick, Murchison, Prestwick, Hugh Miller, and others. Granite has been occasionally worked; and greywacke, greywacke slate, and clay slate, in exceedingly tilted, fractured, and contorted positions and mutual relations, predominate on the seaboard and through much of the interior. The greywacke is quarried for building purposes, and the clay slate was formerly worked at Melrose as a coarse roofing slate and slab-stone. Old Red sandstone, Old Red conglomerate, and Devonian shales also occur, but rest so unconformably on the edges of the slates, and present such faults and dislocations, that their connections with one another and with related rocks cannot be easily determined. The soils vary from a fertile loam to a barren benty heath; and those on the sandstone and conglomerate are more fertile than those on the slate. Woods cover some 750 acres; and of the rest about one-half is under cultivation, the other either pastoral or waste. Findon Castle, near the old church, is said to have been garrisoned by a Scottish force to watch and resist invasions by the Danes, and now is represented by only a green conical mound. The ruins, too, of Wallace Tower, occupying the Ha' Hill upon Pitgair farm, consist only of two detached masses of wall. Vestiges and memoranda of Danish invasion are in numerous places. Troup House, the chief mansion, is separately noticed; and its owner divides the best part of the parish with the Duke of Fife. In 1874 the estate of Greenskare was presented by Dr James Taylor to Aberdeen University, the revenue to be applied to bursaries for students belonging to or educated in Banffshire. In the presbytery of Turriff and synod of Aberdeen, this parish is divided ecclesiastically into Gamrie proper, Gardenstown, and Macduff, the former a living worth £300. The ancient parish church of Gamrie, St John's, alleged to have been founded in 1004 by the Mormaer of Buchan in place of one demolished by invading Danes, and granted by William the Lyon to the monks of Arbroath between 1189 and 1193, is now an interesting ruin, situated at the head of Gamrie Bay, on a hill-terrace in the mouth of Afforsk Den, $\frac{1}{2}$ mile WSW of Gardenstown. It was used as a place of worship till 1830, when the present parish church, $1\frac{1}{2}$ mile SSW of Gardenstown, was built. Other places of worship are a Free church and those of Gardenstown and Macduff; and five schools—Bracoden, Clenterty, Longmanhill, Macduff, and Macduff Murray's Institution—with respective accommodation for 400, 159, 103, 700, and 95 children, have an average attendance of about 250, 100, 80, 750, and 60, and grants of nearly £234, £95, £70, £655, and £56. Valuation (1882) £80,633, 19s. 1d., (1891) £21,776, 0s. 3d., (1893) £23,458, 9s. 9d., of which £1259 was for railways. Pop. of civil parish (1831) 4094, (1861) 6086, (1871) 6561, (1881) 6756, (1891) 7003; of *q. s.* parish (1881) 2652, (1891) 1334; of registration district (1881) 3106, (1891) 2839.—*Ord. Sur.*, sh. 96,

1876. See chaps. viii., x., xi., of Samuel Smiles's *Life of a Scotch Naturalist* (1876).

Gannel Burn. See GLOOMINGSIDE.

Gannochy, Bridge of. See FETTERCAIRN.

Gannoh or Gaineimh, a triangular lake ($2 \times 1\frac{1}{2}$ furl.) in the upper part of Kildonan parish, Sutherland, 6 miles W of Forsinard station. It abounds with trout and char.—*Ord. Sur.*, sh. 109, 1878.

Garabost. See GARRABOST.

Garallan, a collier village, with a public school, in Old Cumnock parish, Ayrshire, 2 miles SW of Cumnock.

Garan or Garanhill. See MUIRKIRK.

Garan or An Garbh-eilean, an islet of Durness parish, Sutherland, $4\frac{1}{2}$ miles E by S of Cape Wrath, and $\frac{1}{4}$ mile from the shore. It measures 3 furlongs in circumference and 60 feet in height, and is a crowded resort of sea-fowl.—*Ord. Sur.*, sh. 114, 1880.

Garbh Allt, a mountain burn of Braemar, Aberdeenshire, formed by two head-streams that rise on Loch-nagar, and running 1 mile north-by-westward to the Dee, at a point $\frac{3}{4}$ mile E of Invercauld bridge. It is an impetuous stream, traversing a romantic glen; and it makes one splendid fall.

Garbh Allt, a mountain burn in Arran island, Bute-shire. It rises, 4 miles NW of Brodick, on the eastern side of Ben Tarsuina, and runs $2\frac{1}{2}$ miles south-south-eastward and east-by-northward down a wild and declivitous glen, careering and leaping along a granite channel in a series of striking falls, till it plunges head-long into confluence with Glenrosie Water, at a point 2 miles WNW of Brodick.—*Ord. Sur.*, sh. 21, 1870.

Garbh Bhreac, a lake ($2 \times 1\frac{1}{3}$ furl.; 926 feet) in Kiltarlity parish, Inverness-shire, $3\frac{1}{2}$ miles SSW of Erchless Castle. It abounds in trout.

Garbh dhun, a picturesque waterfall on the river Gaur, in Fortingall parish, Perthshire.

Garbh Mheall. See FORTINGALL.

Garbhreisa, an islet of Craignish parish, Argyllshire.

The largest of a group of five, it is faced with cliffs, and flanks one side of the strait called the Great Door. See CRAIGNISH.

Garbh Uisge, a reach of the northern head-stream of the river Teith in Callander parish, Perthshire. Issuing from Loch Lubnaig, and traversing the Pass of Leny, it winds $3\frac{1}{2}$ miles south-eastward, till, at a point 3 furlongs SW of Callander town, it unites with the Eas Gobhain to form the Teith.—*Ord. Sur.*, sh. 38, 1871.

Garchy. See DEE, Aberdeenshire.

Garchonzie, a tract of land on the mutual border of Callander and Port of Monteith parishes, Perthshire, between Loch Venacher and Callander town.

Garden, an estate, with a mansion, in Kippeu parish, Stirlingshire, $1\frac{1}{2}$ mile ENE of Bucklyvie.

Gardens, a village of central Shetland, 1 mile from Mossbank.

Gardenstown, a fishing village and a *quoad sacra* parish in Gamrie parish, Banffshire, in the mouth of a romantic ravine at the head of Gamrie Bay, 8 miles ENE of Banff, under which it has a post office, with money order, savings bank, and telegraph departments. Founded in 1720 by Alexander Garden, Esq. of Troup, it stands so close to the high overhanging cliffs as to be almost directly under the eye of any one standing on the top, and rises from an older part close upon the sea to a newer part on ledges and in recesses of the cliffs. At it are a harbour for fishing boats, a coastguard station, a hotel, a branch of the North of Scotland Bank, a National Security Savings Bank, an Established church, raised to *quoad sacra* status in 1885, and a U.P. church. A coach runs daily between Gardenstown and Banff. In 1895 the number of its fishing boats, together with those of the neighbouring village of Crovie, was 136. Gardenstown was the first herring fishing station on the Moray Firth, fishing having been commenced in 1812. Pop. (1881) 871, (1891) 1139; of *q. s.* parish (1891) 1505.—*Ord. Sur.*, sh. 96, 1876.

Garderhouse, a hamlet in Sandsting parish, Shetland, 15 miles WNW of Lerwick, under which it has a post office.

Gardnerside, a village near Bellshill in Bothwell parish, Lanarkshire.

Gare Loch, a branch of the Firth of Clyde, projects into Dumbartonshire between the parishes of Roseneath and Row, running off almost due N from the upper waters of the Firth. The part of the Firth of Clyde lying between a line drawn from Roseneath Point to Helensburgh, and one from Roseneath to Row Point, is not properly included in the Gare Loch, though frequently spoken of as forming part of it. This external portion is at first about $1\frac{1}{2}$ mile wide, but contracts tolerably rapidly to a breadth of $4\frac{1}{2}$ furlongs, just before it expands again into a rude circle, of which Roseneath Bay forms one hemisphere. At the entrance to the Gare Loch proper the breadth of the passage is only 1 furlong. The total length of the external portion is 2 miles. The Gare Loch proper extends for $4\frac{1}{2}$ miles in a north-north-westerly direction between the parishes of Roseneath on the W and Row on the E, to within $1\frac{1}{4}$ mile of Loch Long. For nearly its entire length it keeps an average breadth of 7 furlongs, but about $6\frac{1}{2}$ from its head it suddenly contracts to 3 furlongs, which breadth it retains to the northern extremity. Immediately before this contraction Farlane Bay, on the E side, increases the breadth temporarily to nearly $7\frac{1}{2}$ furlongs. The only other noteworthy bay is Stroul Bay, immediately to the NW of the narrow entrance to the loch. The shores of the Gare Loch are low and shingly, and, with the exception of Row Point, have no projections of importance. Carnban Point is the name given to a blunt angle just N of Shandon on the Row side. The tidal current is strong, and runs at the rate of 3 to 4 miles an hour, while off Row Point especially it is forced in varying directions. The depth in mid-channel varies from 10 to 30 fathoms.

The basin of the Gare Loch is a narrow and shallow cup among the Dumbartonshire hills. Along the Roseneath or W side the loch is flanked partly by the well-wooded and undulating grounds of Roseneath Castle, but chiefly by a softly outlined chain of moorland hills, that nowhere rises to a greater height than 651 feet. On the Row or easterly side a narrow belt of low-lying or gently-sloping ground intervenes between the beach and a chain of rounded summits that culminates nearly midway between Helensburgh and Garelochhead at a height of 1183 feet. Around the N end of the Gare Loch, and between the flanking ranges of hills, runs a semicircular connecting link in the shape of a heathy saddle, 256 feet high, over which tower the lofty containing mountains of Loch Long. The water-basin thus limited is not wider than from $2\frac{1}{2}$ to 4 miles, so that the streams which fall into the Gare Loch, though numerous, are small, the longest having a course of only $2\frac{3}{4}$ miles. The scenery on the Gare Loch, though by no means grand, is picturesque; the outlook from its mouth towards Ardmore and Erskine, and the view of the lofty Argyllshire hills over its northern end, especially so. The climate of the valley of the Gare Loch is mild in winter and spring, but it tends to become sultry and relaxing in summer. The rainfall is large; and the wind, though not frequent nor strong, is gusty; and as squalls coming down the valleys between the hills are not infrequent, the navigation of the loch is somewhat dangerous for small sailing boats. For large vessels, however, the Gare Loch affords excellent anchorage, with good shelter; and is much resorted to by vessels about to leave the Clyde, for the purpose of adjusting their compasses. The Clyde training ship *Empress* is permanently stationed off Row. Its predecessor, the *Cumberland*, after many years' service as a training ship, was destroyed by fire, February 1889. Fortunately no lives were lost. The various villages on the Gare Loch are favourite summer residences for sea-bathers and others. On the Row side of the loch are situated, to the S, the outlying portions of Helensburgh, and the villages of Row, Shandon, and Garelochhead; while the intervals between these are studded with mansions, villas, and ornate cottages, for the most part the country quarters of the rich merchants of Glasgow and its neighbourhood.

Among the best known of these is the mansion of West SHANDON, now occupied as a hydropathic establishment. On the opposite shore are the piers of Mambeg, Rachane, Baremman, and Roseneath, similarly separated from each other by private residences, though a great part of the coast lies within the policies of Roseneath Castle, the property of the Duke of Argyll.—*Ord. Sur.*, shs. 37, 38, 30, 1866-76. See Maughan's *Roseneath Past and Present* (1893).

Garelochhead, a village in Row parish, Dumbartonshire, just at its junction with Roseneath parish, is pleasantly situated at the head of the GARE LOCH, with a station on the West Highland railway, 2 miles SSE of Portincaple Ferry on Loch Long, and 7½ miles NNW of Helensburgh, under which it has a post office, with money order, savings bank, and telegraph departments. It has also steamboat communication with Helensburgh and Greenock. The village stands near the western entrance to Glenfruin, the 'glen of sorrows' (see FRUIN WATER), is small, and contains neat little houses standing amidst garden-plots and shrubberies, and it ranks as one of the favourite watering-places on the Clyde. Garelochhead has a water supply—a reservoir for collecting the waters of several hill-streams in the neighbourhood having been formed in 1893. The Established church, a neat modern edifice, enlarged in 1894, was built as a chapel of ease, and became in 1874 a *quoad sacra* parish church. There are also a Free church, a hotel, and a public school. Pop. of village (1871) 433, (1881) 460, (1891) 557; of *q. s.* parish (1881) 751, (1891) 904.—*Ord. Sur.*, sh. 38, 1871.

Garf Water, a rivulet of Wiston and Robertson parish, in the upper ward of Lanarkshire, running 6½ miles eastward along the southern base of the Tinto range, till it falls into the Clyde at a point 1¼ mile NNW of Lamington station.

Gargunnoch, a village and a parish in the N of Stirlingshire. The village stands 7 furlongs SW of Gargunnoch station on the Forth and Clyde Junction section of the North British, thus being 24½ miles ENE of Balloch, and 6 W by N of Stirling, under which there is a post and telegraph office. Occupying a pleasant site on the slope of a rising-ground, whose summit commands an extensive and beautiful view, it is a neat place, with little gardens attached to its houses, and has a distillery, some trade in basket-making, and a curling club.

The parish is bounded N by Kilmadock and Kincardine in Perthshire, E and SE by St Ninians, SW by Fintry, and W by Balforn and Kippen. Its utmost length, from N to S, is 5½ miles; its utmost breadth, from E to W, is 4 miles; and its area is 9913½ acres, of which 54½ are water. The river FORTH winds 11½ miles east-by-southward along all the northern border, though the point where it first touches and that where it quits the parish are only 3½ miles distant as the crow flies. It here has an average breadth of 60 feet, with a depth of 12 feet, and, at a point a mile from the eastern boundary, approaches close to Gargunnoch station. ENDRICK WATER, in two of its head-streams, traces much of the south-eastern and south-western borders; whilst BOQUHAN BURN, coming in from Fintry, runs 4 miles north-by-eastward to the Forth along all the western boundary, and traverses a glen so grandly romantic and so beautifully wild as to have been sometimes compared to the Trossachs. Several burns rise in the interior, and run, some to Endrick Water, more to Boquhan Burn, or to the Forth; and some of them have considerable volume, and rush impetuously down craggy steeps, forming in times of heavy rain far-seen and far-heard cataracts. Perennial springs are numerous, and two chalybeate springs are near Boquhan Burn. The northern district, all within the folds of the Forth, and a short distance southward thence, is carse land, from 35 to 44 feet above sea-level, and was covered for centuries by part of the ancient Caledonian Forest. Passing thereafter into a condition of moss so deep and swampy as to be almost worthless, it was in the eighteenth century completely reclaimed, and thenceforth possessed

a value and fertility similar to the carses of Stirling, Falkirk, and Gowrie. The middle district, down to a line from nearly 2 miles to nearly 3½ S of the Forth, rises gently from the carse district, and lay in a neglected state, mostly waste and wild, overrun with furze and broom, till towards the close of the 18th century it was thoroughly reclaimed by draining and hedging, and now is all an expanse of beauty, mostly under the plough, and largely embellished and sheltered with wood. The southern district consists entirely of the north-western portion of the Lennox range, called the Gargunnoch Hills, whose highest point, Carleatheran (1591 feet), is 2 miles SSW of the village. It once was all, or nearly all, a moorish waste, but now, as a result of improvements, is a capital sheep-walk, and commands from the summits and shoulders of its hills a wide, diversified, and splendid prospect. The rocks beneath the low lands include red and white sandstone, and are thought to be carboniferous; those of the hills are chiefly eruptive. The soil of the carse is a rich, loamy clay, on a subsoil of blue or yellow clay, with subjacent beds of sea-shells; that of the middle district, in parts adjacent to the carse, is a fertile loam, and elsewhere is clayey and sandy; whilst that of the hills is partly clay and partly wet gravel. Of the entire area, 1120 acres are in tillage, 574 are under wood, 3638 are in pasture, and nearly all the rest of the land is waste. Keir Hill, near the village, was a fortified place in the end of the 13th century, and appears to have been surrounded by a rampart, and defended by two confluent streams and a fosse. It rises to a considerable elevation, and measures 140 yards in circumference on the summit. Gargunnoch Peel, on a rising-ground, 50 yards from the Forth and 1 mile NE of the village, was erected seemingly to command a ford on the river, and was surrounded by a rampart and a fosse, but now is represented by only part of the fosse. Sir William Wallace, with a band of retainers, is said to have taken post upon Keir Hill, while an English garrison held Gargunnoch Peel; and he sallied from the hill, drove the English from the peel, and then crossed the Forth by the Bridge of Offers ¼ mile higher up. An ancient tower belonging to the Grahams stood on the lands of Boquhan; its ruins were removed about the year 1760. A battle between the Grahams and the Leckies was fought, at some unrecorded period, on the western border of the parish; and here a great quantity of human bones, with spearheads and fragments of brass armour, were exhumed about 1800. Gargunnoch House, 5 furlongs E by N of the village, is an interesting building, with a fine modern front, but a massive E wing of considerable antiquity; its owner is Col. John Stirling Stirling (b. 1832; suc. 1839). Other mansions, separately noticed, are Boquhan, Leckie, and Meiklewood. Gargunnoch is in the presbytery of Stirling and synod of Perth and Stirling; the living is worth £197. The parish church, at the village, was built in 1774, and renovated in 1891-92. There is also a Free church station; and a public school, with accommodation for 167 children, has an average attendance of about 90, and a grant of nearly £88. Valuation (1882) £8009, 19s. 6d., (1892) £6690, 4s., plus £1429, for railway. Pop. (1881) 698, (1891) 674.—*Ord. Sur.*, sh. 39, 1869.

Garie. See GAIRIE.

Garifad, a village in the Isle of Skye, Inverness-shire. Its post-town is Kilmuir, under Portree.

Garioch, an inland district of Aberdeenshire. It is bounded on the NE and E by Formartine, on the S by Mar, on the W by Mar and Strathbogie, and on the NW by Strathbogie. It has an area of about 150 square miles, contains 15 parishes, and gives name to a presbytery in the synod of Aberdeen. It is bounded or bordered by a range of hills, extending about 20 miles westward from the vicinity of Old Meldrum; it comprises fertile, warm, well-sheltered valleys, notable for the salubrity of their climate; is sometimes, on account of its fertility, called the 'giral' of Aberdeenshire; it has long been famed as a summer resort for invalids; it experienced great development of its resources from

the opening of the Inverurie Canal, and now enjoys better advantages from the superseding of that canal by the Great North of Scotland railway; and it has a farmers' club, dating from 1808, and the Garioch and Northern Medical Association, dating from 1854. The presbytery of Garioch, meeting at Inverurie and Insch, comprehends the parishes of Bourtie, Chapel of Garioch, Culsalmond, Daviot, Insch, Inverurie, Keithhall, Kemnay, Kintore, Leslie, Meldrum, Monymusk, Oyne, Premnay, and Rayne, with the chapelry of Blairdaff. Pop. (1871) 20,132, (1881) 20,136, (1891) 19,435, of whom 6259 were communicants of the Church of Scotland in 1895.—The Free Church also has a presbytery of Garioch, meeting at Inverurie, and comprising churches at Blairdaff, Chapel of Garioch, Culsalmond, Insch, Inverurie, Kemnay, Kintore, Leslie, Oyne, and Rayne, which ten churches together had 2040 communicants in 1894.

Garioch, Chapel of. See CHAPEL OF GARIOCH.

Garion, an estate on the NE border of Dalsell parish, Lanarkshire, 2½ miles SE of Larkhall. A bridge here over the river Clyde, erected in 1817, has three arches, each 65 feet in span, with a roadway 21½ feet wide; and measures 34 feet in height from the bed of the river to the top of the parapet.

Garleton, a range of porphyrite hills in the N of Haddington parish, culminating, 1½ mile N of the town, at an altitude of 590 feet above sea-level. A western spur is crowned by a conspicuous column, a monument to John, fourth Earl of Hopetoun (1766-1823), the Peninsular hero. Garleton Castle, at the N base of the range, was once a superb mansion, a seat of the Earls of Winton, but is now a fragmentary ruin.—*Ord. Sur.*, sh. 33, 1863.

Garlies, a ruined castle in Minnigaff parish, Kirkcudbrightshire, 2½ miles N by E of Newton-Stewart. From the latter half of the 13th century the seat of the ancestors of the Earl of Galloway, it gives to the Earl the title of Baron (cre. 1607). It has, for several hundred years, been in a state of ruin; and, though now in a fragmentary condition, it has walls so very tightly mortar-bound as to be nearly as solid as rock.

Garliestown, a small town in Sorbie parish, SW Wigtownshire. Founded about 1760, by John, seventh Earl of Galloway, then Lord Garlies, the town stands on the W shore of GARLIES TOWN BAY, in the northern vicinity of GALLOWAY HOUSE, with a station on the Wigtownshire branch (1875-77) of the Dumfries and Portpatrick railway, 5 miles NNE of Whithorn, and 9¼ SSE of Wigtown. It bends in the form of a crescent round the bay, and, consisting of neat substantial houses, built of whinstone, presents a pleasant appearance. Boatbuilding, fishing, chemical manufactures, and a saw-mill afford employment. A considerable commerce in the export of agricultural produce, and the import of coal, lime, manures, etc., is carried on from a harbour, which, naturally good, was artificially enlarged and improved about 1855; and Garliestown has a post office, with money order, savings' bank, and telegraph departments, two hotels, a Congregational chapel, and a public school. The parish church and a Free Church are at Millisle, about a mile WNW of the town. By steamboat it communicates once a fortnight with Liverpool. Pop. (1861) 685, (1871) 683, (1881) 699, (1891) 632.

Garliestown Bay, striking north-westward from the Irish Sea in the same direction as Wigtown Bay, has a breadth of ½ mile at the entrance between Eggerness Point and the breakwater, a length thence of 5 furlongs to its inmost recess, and a depth of from 20 to 30 feet at high water, though at low tide its upper part is all left dry. Engirt for the most part by flat sandy shores, but partly overlooked by rising grounds, it lies on a bed of such deep soft clay as to afford secure anchorage, and is admirably adapted to accommodate the coasting vessels between many points, particularly between Dublin and Whitehaven. The tide runs out from Wigtown Bay six hours, and takes the same time to return, but in Garliestown Bay it flows five hours from the S, and ebbs seven.—*Ord. Sur.*, sh. 4, 1857.

Garlogie, a village, with a public school and an extensive spinning and carding factory, in Skene parish, Aberdeenshire, 2½ miles SW of Skene Church, and 10 W of Aberdeen.

Garlpool. See GARPOL, Dumfriesshire.

Garmond, a village in Monquhitter parish, NW Aberdeenshire, on a rising-ground 1¼ mile N by E of Cuminstown, and 7 miles ENE of Turriff, on the Inveramsay and Macduff section of the Great North of Scotland railway. It was built in the latter part of the 18th century, and has a public school.

Garmouth, a seaport village in Urquhart parish, Elginshire, on the left bank of the river Spey, ¾ mile S of Kingston at its mouth, with a station on the Elgin and Portsoy branch of the Great North of Scotland railway, 4½ miles N by W of Fochabers. A burgh of barony, under the Duke of Richmond and Gordon, it chiefly consists of modern houses, neatly arranged in regular street lines; it has a harbour naturally good, but severely damaged by the great flood of 1829, and always subject to fresh shiftings and obstructions of ground from heavy freshets of the Spey; and it, at one time, conducted a remarkably large timber trade, in the export of tree-trunks floated down to it from the forests of Glenmore, Abernethy, Rothiemurchus, and Glenfeshie. It still deals largely in timber, both for exportation and for local shipbuilding; and it also imports coal, exports agricultural produce, and carries on a valuable salmon fishery, considerable quantities of the takes being despatched to London and the southern markets. Garmouth was plundered by the Marquis of Montrose in the February, and burned in the May, of 1645; and at it King Charles II. landed from Holland on 23 June 1650. It has a post office, with money order and savings' bank departments, a branch of the Caledonian Bank, a National Security Savings Bank, one or two hotels, a coastguard station, gas-work (1857), a fair on 30 June, a Gothic Free church (1845), with an octagonal tower, and a public school. The last, on an eminence between it and Kingston, is a handsome Elizabethan edifice, erected in 1875-76 at a cost of over £1600. Pop. (1831) 750, (1861) 802, (1871) 636, (1881) 626, (1891) 535.—*Ord. Sur.*, sh. 95, 1876.

Garnethill. See GLASGOW.

Garnagad Hill. See GLASGOW.

Garnkirk, a station, a seat of fireclay manufacture, and an estate near the southern border of Cadder parish, Lanarkshire. The station, on the Glasgow and Garnkirk section (1831) of the Caledonian railway, is 5¾ miles ENE of Buchanan Street Station in Glasgow, and 4 WNW of Coatbridge. The Garnkirk Fireclay Works, perhaps one of the largest and most complete works of the kind in the kingdom, in the near vicinity of the station, comprise extensive buildings, and produce bricks, furnace blocks, retorts and crucibles, water-pipes, chimney cans, vases, flower-pots, and other articles of remarkable elegance and durability. The Heathfield and Cardowan Fireclay Co. have also a large establishment for the manufacture of similar goods. The Garnkirk fireclay, occurring in beds from 4 to 19 feet thick, and equal if not superior to Stourbridge clay, resembles light-coloured sandstone in tint, and withstands a much stronger heat than any other fireclay known in Scotland. Its composition is 53·4 per cent. of silica, 43·6 of alumina, 0·6 of lime, 1·8 of peroxide of iron, and 0·6 of protoxide of manganese; while that of Stourbridge clay is 63·30 of silica, 23·30 of alumina, 0·73 of lime, 1·80 of oxide of iron, and 10·30 of water. Garnkirk House is ¾ mile NNW of the station. Pop. of Garnkirk, Crow Row, and Heathfield, (1881) 782, (1891) 971.—*Ord. Sur.*, sh. 31, 1867.

Garnock, a small river of Cunninghame district, Ayrshire, rising among the Mistylaw Hills, at an altitude of 1600 feet above sea-level, close to the Renfrewshire border, and winding 21½ miles southward till it falls into the Irvine, ½ mile above that river's influx to the sea, and unites with it to form Irvine harbour. It traverses or bounds the parishes of Kilbirnie, Dalry, Kilwinning, Stevenston, and Irvine; makes, before

reaching Kilbirnie village, a wild and lonely cataract, the Spout of Garnock; lower down proceeds slowly through a flat fertile country, over a gravelly bed, with an average breadth of 60 feet; and receives on its right bank Rye and Caaf Waters, on its left bank Lugton and Dusk Waters. Always subject to freshets, it sometimes overflows its banks in its lower reaches with devastating effects; and, on an autumn day of 1790, it rose 4 feet higher than it had ever been known to do before, destroyed a great quantity of standing corn, and carried away many sheaves to the sea. The trout fishing is very fair, the waters being everywhere preserved, but salmon are very scarce. A viscountcy of Garnock was created in 1703 in favour of John Crawford of Kilbirnie, whose grandson, the fourth Viscount, succeeded in 1749 to the earldom of Crawford. It became dormant in 1808.—*Ord. Sur.*, shs. 30, 22, 1866-65.

Garnqueen, a village, with brickworks, on the mutual border of New Monkland and Cadder parishes, Lanarkshire, near GLENBOIG station. Here are the immense works of the Glenboig Union Fireclay Co. Fire bricks are also manufactured at Gartverrie, half a mile distant, while coal is plentifully found in the district. Garnqueen Loch here receives a burn from New Monkland parish, and sends off one, by way of Croftfoot Mill, into confluence with the burns from Bishop and Johnston Lochs. Pop. with Glenboig (1871) 307, (1881) 934, (1891) 1360.

Garpel, a burn in Glenkens district, Kirkcudbrightshire, rising in Dalry parish, and running $5\frac{1}{2}$ miles south-westward, through that parish and on the boundary with Balmaclellan, to the river Keu, $1\frac{1}{4}$ mile N by E of New Galloway. It has, in some parts, a narrow rugged channel, overhung by lofty wooded precipices, and it makes a few fine falls, the most picturesque of which bears the name of Holy Linn, and is associated with events in the persecution of the Covenanters.—*Ord. Sur.*, sh. 9, 1863.

Garpel Water, a burn in Muirkirk parish, E Ayrshire. It rises, at an altitude of 1755 feet, close to the boundary with Lanarkshire, and runs $4\frac{1}{2}$ miles north-westward till it falls into the river Ayr at a point 1 mile WSW of Muirkirk town.—*Ord. Sur.*, sh. 15, 1864.

Garpol or **Garpool Water**, a burn of Kirkpatrick-Juxta parish, Dumfriesshire, rising close to the Lanarkshire border at an altitude of 1300 feet, and winding $5\frac{1}{2}$ miles east-by-southward, partly along the Moffat boundary, but mainly through the interior, till, after forming a cascade near Achincass Castle, it falls into Evan Water at a point $1\frac{1}{2}$ mile SW of Moffat town. A very strong chalybeate, called Garpol Spa, near it, is properly not a spa or spring, nor perennial, but is formed, fitfully and occasionally, in warm weather, by rain water imbibing and dissolving mineral constituents from ferruginous-aluminous soil.—*Ord. Sur.*, sh. 16, 1864.

Garr. See GARRY, Auchtergaven, Perthshire.

Garrabost, a village in the Eye peninsula, Stornoway parish, Lewis, Outer Hebrides, Ross-shire, 7 miles E by N of Stornoway town, under which it has a post office. A Free church was built here in 1881. Pop. (1861) 418, (1871) 482, (1881) 309, (1891) 385.

Garraghuisim Cave. See COLL, Stornoway.

Garrallan. See GARALLAN.

Garrel. See GARVALD.

Garrison, The. See MILLPORT.

Garroch, an estate, with a modern mansion, in Kells parish, Kirkcudbrightshire, 5 miles NW of New Galloway.

Garroch Head, a headland, 210 feet high, at the southern extremity of Bute island, Buteshire, $2\frac{3}{8}$ miles W of Little Cumbrae. The peninsula that it terminates is joined to the rest of Kingarth parish by a low sandy isthmus $9\frac{1}{2}$ furlongs wide, and, with an utmost length and breadth of $2\frac{1}{2}$ and 2 miles, attains 485 feet at Torr Mor, 119 at DUNAGOIL, and 517 at Suidhe Plantation, near the SW shore of Kilchattan Bay. See ST BLANE'S CHAPEL and DEVIL'S CAULDRON.—*Ord. Sur.*, sh. 21, 1870.

Garrochory or **Garchary**. See DEE, Aberdeenshire.

Garron, a headland in Fetteresso parish, Kincardineshire, flanking the N side of Stonehaven Bay. It consists of a light green coloured rock, of intermediate character between trap and serpentine, and passing into chloride slate.

Garry, a burn in Auchtergaven parish, Perthshire. It rises in boggy ground at the head of Glen Garr, a hill pass on the mutual border of Auchtergaven and Little Dunkeld parishes; runs $7\frac{1}{2}$ miles south-eastward, past Auchtergaven manse; receives the tribute of Corral Burn; and falls, at Loak, into Ordie Burn.—*Ord. Sur.*, shs. 47, 48, 1869-68.

Garry, a lake and a river of Blair Athole parish, N Perthshire. Lying 1330 feet above sea-level, and having a maximum width of $2\frac{3}{4}$ furlongs, Loch Garry extends $2\frac{5}{8}$ miles north-north-eastward to within $\frac{3}{4}$ mile of Dalnaspidal station on the Highland railway. It is screened, all round, by bare, lofty, rugged mountains; receives a dozen mountain torrents, flowing to it through gorges among the mountains; and exhibits a wild, sequestered aspect, being in some parts so closely beset by its mountain screens, as to have scarcely a foot-breadth of shore. Its trout are numerous, but small and shy. The river Garry, issuing from the foot of the lake, runs 22 miles east-south-eastward, mainly through Blair Athole parish, but in the last 3 miles of its course, below Blair Athole village, forming the boundary with Moulin parish, till, at Faskally House, below the Pass of KILLIECRANKIE, it falls into the Tummel, after a total descent of nearly 1000 feet. It receives, on its left bank, the Edendon, Ender, Bruar, Tilt, and Allt Girnaig, and on its right the Erichdie; is closely followed, from head to foot, by the Highland railway and by the great road from Inverness to Perth; and changes, in scenic character, from alpine wildness and dismal bleakness to a rich variety of picturesqueness. One of the most impetuous rivers of Scotland, it is, as the Queen writes, 'very fine, rolling over large stones, and forming perpetual falls, with birch and mountain-ash growing down to the water's edge.' In times of freshet it comes down with sudden burst and tumultuous fury, tearing up its slaty or gravelly bed, carrying off heavy fragments, and menacing the very cliffs upon its banks.—*Ord. Sur.*, shs. 54, 55, 1873-69.

Garry, a river and a lake in GLENGARRY district, Invernessshire. The river, issuing from the foot of Loch Quoich (555 feet above sea-level), runs $10\frac{1}{2}$ miles eastward to Loch Garry (258 feet), on emerging from which it winds $3\frac{3}{8}$ miles south-eastward and east-by-northward, till it falls into Loch OIGH (105 feet), on the line of the Caledonian Canal, at INVERGARRY, $7\frac{1}{2}$ miles SW of Fort Augustus. Loch Garry is thus an expansion of the river, having a length of $4\frac{1}{2}$ miles east-by-northward, with a varying width of 1 furlong and $\frac{1}{2}$ mile. It lies in a beautiful glen, with lofty receding mountains, and, immediately engirt by a series of low, swelling, birch-clad eminences, bursts into view, from foot to head, at a point near its eastern extremity. Towards its foot it contains a little island, by which and a peninsula it is almost divided in two. Both lake and river abound in salmon, salmo-ferox, and trout.—*Ord. Sur.*, shs. 62, 63, 1875-73.

Garrynahine, a hamlet in Uig parish, Lewis, Outer Hebrides, Ross-shire, at the head of Loch Roag, 14 miles W by S of Stornoway, with a hotel.

Garscadden, an estate, with a mansion and a village, in New Kilpatrick parish, Dumbartonshire. Held by successively the Flemings, the Erskines, and the Galbraiths, the estate passed about 1664 to the Campbell Colquhouns of Killermont. The mansion, standing $1\frac{1}{2}$ mile WSW of Bearsden station and 3 miles WNW of Maryhill, is remarkable for a castellated Gothic gateway, larger and more imposing than any similar structure in the W of Scotland. Pop. of the village (1871) 602, (1881) 649, (1891) 574.—*Ord. Sur.*, sh. 30, 1866.

Garscube, an estate, with a mansion, in New Kilpatrick parish, Dumbartonshire. The mansion, standing on the right bank of the river Kelvin, 1 mile NW of Maryhill station and 5 miles NW of Glasgow, was erected in

1827, after designs by W. Burn, in the Elizabethan style, and has very beautiful grounds. Acquired by the Colquhouns in 1558, the estate of Garscube passed about the middle of the 17th century to John Campbell of Snecoth, whose descendant, Islay Campbell, was created Lord Advocate in 1784, President of the Court of Session under the title of Lord Succoth in 1789, and a baronet in 1808. His son, Sir Archibald, became a Lord of Session in 1809, also under the title of Lord Succoth; and the widow of his grandson, Sir George (1829-74), is present owner. Sir George was succeeded as fifth Bart. by his cousin, Archibald Spencer Lindsay Campbell (b. 1852).—*Ord. Sur.*, sh. 30, 1866.

Gartcosh, a village and station in Cadder parish, Lanarkshire, on the Caledonian railway, 2½ miles NW of Coatbridge, and 7 ENE of Glasgow, under which it has a post office. Near it are Gartcosh Fire Clay Works. Pop. (1881) 356, (1891) 631.

Gartferry, an estate, with a mansion, in Cadder parish, Lanarkshire, 2½ miles NNE of Garnkirk station.

Garth, a village in Delting parish, Shetland, 2 miles from Mossbank.

Garth Castle or Caisteal Dubh, a ruined fortalice in Moulin parish, Perthshire, among a larch plantation ½ mile SE of Moulin village. It looks, from its style of architecture, to have been built in the 11th or 12th century, but is unknown to record.

Garth House, a mansion in Fortingall parish, NW Perthshire, on the left bank of the Lyon, 1½ mile ENE of Fortingall hamlet, and 7 miles W by S of Aberfeldy. It was the birthplace of Major-General David Stewart (1772-1829), Governor of St Lucia, and author of *Sketches of the Highlanders*; and the seat of Sir Archibald Campbell, G.C.B., Bart. (1770-1843), Governor of New Brunswick and commander-in-chief in the Burmese war. Now it is the property of Sir Donald Currie, K.C.M.G. (b. 1825), who purchased the estate for £51,000 in 1880, the year of his election as member of Parliament for Perthshire, and who has built a considerable addition, including a tower. Garth Castle, 2½ miles NNE, near the right bank of Keltney Burn, is a ruinous square keep, crowning a rocky promontory 150 feet high. It was a stronghold of Alexander Stewart, Earl of Buchan (the 'Wolf of Badenoch'), in the latter half of the 14th century.—*Ord. Sur.*, sh. 55, 1869.

Garthland, an estate, with a mansion, in Lochwinnoch parish, Renfrewshire, in the western vicinity of Lochwinnoch town. Purchased by his ancestor in 1727, it belongs to Henry Macdowall, Esq. (b. 1845; suc. 1882).

Garthland Mains, a farm in Stoneykirk parish, Wigtownshire, 3½ miles SSE of Stranraer. Here in 1840 was demolished a square tower, which, 45 feet high, bore on its battlements the date 1274, and was long the stronghold of the ancient and powerful family of the M'Dowalls.

Gartingqueen Loch. See GARNQUEEN.

Gartloch, an estate in Cadder parish, Lanarkshire, on the NW shore of Bishop's Loch, 1 mile SSE of Garnkirk station. Consisting of 347 acres, it was purchased in 1889, at a cost of £8500, by the Glasgow District Lunacy Board, who forthwith erected, at an estimated cost of £150,000, a magnificent pile of buildings to accommodate 500 inmates. The style of the architecture is 'François Premier,' and the architects were Messrs. Thomson & Sandilands, Glasgow. Gartloch Lunatic Asylum extends about 700 feet both ways, is arranged on the pavilion system, and is divided into two distinct parts— asylum and hospital. The asylum comprises four blocks, and the hospital block has accommodation for five classes of patients. Both sections are provided with a dining hall, kitchen, stores, etc., while the asylum section is provided besides with a spacious recreation hall, and with workshops for the male inmates on their side, and a laundry on the females' side. The official block is situated to the north, and is flanked by two towers about 130 feet high. Here are the board room, the doctor's room, waiting rooms, and attendants' quarters. There are also connected with the establishment a large farm, a chapel, a doctor's house, a gate lodge, and a mortuary.

Gartly, a parish of NW Aberdeenshire, containing near its southern border Gartly station on the Great North of Scotland railway, 5 miles S of Huntly and 35½ NW of Aberdeen, with a post and railway telegraph office. Previous to 1891 that part of the parish which lies east of the river Bogie formed a detached part of the county of Banff, surrounded wholly by Aberdeenshire. This portion is called the Barony; the Aberdeenshire portion, the Braes. In the above year the Boundary Commissioners transferred the Barony to the county of Aberdeen, so that Gartly parish is now wholly in Aberdeenshire. Bounded NE by Drumblade, SE by Insch, S by Kennethmont and Rhynd, W by Cadrach and Glass, and NW and N by Huntly, the parish has an utmost length from E to W of 10½ miles, an utmost breadth from N to S of 4½ miles, and an area of 18,126½ acres, of which 38½ are water, and 6348 belonged to Banffshire. The BOGIE winds 3½ miles northward through the interior, having the Barony section to the E and the Braes section to the W, and then proceeds 1½ mile NNW along the Drumblade border. The URV has its source in the E of the Barony; and the Braes section is drained to the Bogie by Kirkney Burn and by Lag Burn and Priest's Water, uniting to form Ness Bogie, whose lateral vales, as also Strathbogie itself, abound in charming scenes of quiet pastoral beauty. The surface is hilly, sinking along the Bogie to 386 feet above sea-level, and thence ascending in the Barony section to 632 feet at Birkenhill, 1029 at Wind's Eye, 1375 at Wishach Hill, and 1369 at the Hill of Corskie; in the Braes, to 1148 at the *southern shoulder of CLASHMACH Hill, 1069 at the Hill of Collithie, 1495 at the *Hill of Kirkney, 1263 at the *Hill of Bogairdy, 1248 at Slough Hill, 1086 at the Hill of Drumfergus, and 1724 at *Grumack Hill, where asterisks mark those summits that culminate right on the borders of the parish. Basalt or greenstone appears along Kirkney Burn, but the rocks are mainly Silurian—greywacke, with strata of limestone and laminate clay slate, which, grey or bluish-green in hue, has been largely quarried at Corskie. The soil in Strathbogie and in the transverse vales is for the most part a fertile clay loam; that of the Barony is light and sandy, incumbent on a hard retentive subsoil. From the 12th to the 16th century, the Barony of Gartly belonged to a branch of the Barclays, who, as hereditary high sheriffs of Banffshire, procured its annexation to that county; at their castle here (now in ruins) Queen Mary spent a night of October 1562, the month of the Battle of Corrichie. A number of cairns that formerly stood on Millhill farm, near the parish church, are believed to have been sepulchral monuments of a skirmish fought there after the Battle of Harlaw, and, being opened and removed about the year 1801, were found to contain some broken fragments of armour. Of other and more ancient cairns on Faichhill and Riskhouse farm, one was found to contain a funeral urn; in the Braes were four pre-Reformation chapels. The Duke of Richmond and Gordon is sole proprietor. Gartly is in the presbytery of Strathbogie and synod of Moray; the living is worth £287. The parish church, near the right bank of the Bogie, 2 miles N by E of Gartly station, is a handsome Gothic edifice of 1880, with 400 sittings and E and W gable rose-windows, filled, like the rest, with cathedral glass. Its predecessor was a plain old building of 1621, originally dedicated to St Andrew. A Free church stands, across the river, 9 furlongs to the NW; and Barony public, Braes public, and Gartly female schools, with respective accommodation for 135, 47, and 50 children, have an average attendance of about 50, 30, and 60, and grants of nearly £37, £43, and £46. Pop. (1801) 958, (1831) 1127, (1861) 1029, (1871) 972, (1881) 890, (1891) 928.—*Ord. Sur.*, sh. 86, 1876.

Gartmore, a village and a *quoad sacra* parish in Port of Monteith parish, SW Perthshire. The village stands on the peninsula between the river Forth and Kelty Water, 4½ miles NW of Buckleyvie, and 1 mile from Gartmore station on the Strathendrick and Aberfoyle railway (1882), under which it has a post office. It has a free library, the gift of Mr John M'Donald, a Glasgow

merchant. Gartmore House, $\frac{1}{2}$ mile NE of the village, is a commodious mansion and a seat of R. B. Cunningham-Graham, Esq. The parish, constituted in July 1869, is in the presbytery of Dunblane and synod of Perth and Stirling; its minister's stipend is £100, with a manse. The church, built as a chapel of ease in 1790 at a cost of £400, underwent great improvements in 1872, and contains 415 sittings. There is also a Free church; and Gartmore public and Dalmary sessional schools, with respective accommodation for 134 and 54 children, have an average attendance of about 70 and 40, and grants of nearly £70 and £30. Pop. of *g. s.* parish (1871) 353, (1881) 718, (1891) 816, of whom 413 were in Drymen parish, Stirlingshire.—*Ord. Sur.*, sh. 38, 1871.

Gartmorn Dam, a reservoir on the mutual border of Alloa and Clackmannan parishes, Clackmannanshire, 2 miles ENE of Alloa town. Formed about the year 1700, and repaired and improved in 1827 and 1867, it is fed from the Black Devon rivulet in Clackmannan parish, and supplies water to the town of Alloa.—*Ord. Sur.*, sh. 39, 1869.

Gartnavel. See GLASGOW.

Gartness, a village, with iron-works, in Shotts parish, Lanarkshire, on the left bank of North Calder Water, 2 miles ESE of Airdrie.

Gartness, a village and an estate on the W border of Stirlingshire. The village has a post office, two woollen cloth factories, and a station on the Forth and Clyde Junction section of the North British railway, $\frac{1}{2}$ mile ENE of Drymen station, and 22 miles WSW of Stirling. The estate lies around the station, along Endrick Water, on the mutual border of Drymen and Killearn parishes; and possesses much interest, both for its scenery and for association with the life and labours of John Napier of Merchiston (1550-1617), the inventor of logarithms. Endrick Water here, over a run of $\frac{1}{4}$ mile, traverses a natural cleft in the solid rock, and rushes vexedly over a series of mural ledges; in one part, it passes through a caldron-shaped cavity, the Pot of Gartness, and forms there a picturesque cascade. A woollen factory hard by succeeded an ancient mill, the noise of which, along with that of the cataract, disturbed the mathematician amid his studies. Though falsely claimed as a native of Gartness, he at least was the member of a family who held the estate from 1435, and he is known to have resided here at various periods of his life, and here to have prosecuted those studies which have immortalised his name. An old castle, overhanging the Pot of Gartness, was his place of residence, and has left some fragments; a stone taken from its ruins, and bearing the date 1574, is built into the gable of the factory; and some stones, with markings or engravings on them believed to have been made by him, are in possession of the present proprietor of the estate.—*Ord. Sur.*, sh. 30, 1866.

Gartney or Strathgartney, an upland tract in the W of Callander parish, Perthshire, along the northern shore of Loch Katrine.

Gartsherrie, a suburban town and a *quoad sacra* parish in Old Monkland parish, Lanarkshire. The town is partly identical with the E side of Coatbridge, partly extends about a mile to the NNW; and, lying along the Monkland Canal and reaches of the Caledonian and North British railway systems, presents an urban aspect throughout its identity with Coatbridge, and a strictly suburban aspect in its north-westward extension. It contains, in its urban part, the parish church and a large academy—in its suburban part, extensive iron-works and dwelling-houses for the operatives in these works, being collectively the most prominent of the seats of iron manufacture which give to Coatbridge district its characteristic aspect of flame and smoke and busy traffic. It has a station of its own name on the Caledonian railway, near the forking of the line towards respectively Glasgow and Stirling, $\frac{1}{4}$ mile NNW of Coatbridge station. The church, crowning an eminence $\frac{3}{4}$ mile S of the iron-works, was built in 1839 at a cost of £3300, chiefly defrayed by Messrs. Baird. A handsome edifice, with a spire 136 feet high, it figures

in the general landscape as a striking feature of Coatbridge, and contains 1050 sittings. The academy, near the church, is also a handsome and prominent edifice, and supplies a liberal course of instruction. It and a school at the iron-works, with respective accommodation for 659 and 369 children, have an average attendance of about 650 and 300, and grants of over £740 and £310. The iron-works of Messrs. Baird, first put in blast on 4 May 1830, are among the best organised manufactories in Scotland, and have long had a wide and high reputation for producing iron of superior quality. The furnaces, 22 feet in diameter and 60 high, stand in two rows, one on each side of the canal, and about 40 yards distant from it. There are several hundred workmen's houses, each with two or three apartments, a small garden plot, and a cheap supply of gas and water. Gartsherrie House, near the station, a modern mansion, was the residence and death-place of Alexander Whitelaw, Esq. (1823-79), M.P. for Glasgow from 1874 to 1879. The parish is in the presbytery of Hamilton and synod of Glasgow and Ayr, and was endowed entirely by the late James Baird, Esq. of CAMBUSDOON. Pop. of parish (1881) 9070, (1891) 12,155.—*Ord. Sur.*, sh. 31, 1867. See Andrew Miller's *Rise and Progress of Coatbridge and the Surrounding Neighbourhood* (Glasg. 1864).

Gartshore, an estate, with a mansion, in Kirkintilloch parish, Dumhartonsire. The mansion, standing 3 miles E of Kirkintilloch town, is a fine old edifice, with beautiful surrounding woods. The estate was purchased, a few years before his death, by Alexander Whitelaw, Esq., of Gartsherrie, and is now owned by his eldest son and namesake. See GARTSHERRIE.—*Ord. Sur.*, sh. 31, 1867.

Gart, The, a fine mansion in Callander parish, Perthshire, on the left bank of the river Teith, $\frac{1}{4}$ mile SE of the village. Built about 1832 by Admiral Sir William Houston Stewart, it now is the seat of Dan. Ainslie, Esq.

Garturk, a *quoad sacra* parish in the south-eastern district of Old Monkland parish, Lanarkshire. It was constituted in January 1870; and its post-town is Coatbridge, $\frac{1}{4}$ mile to the NW. It comprises a compact area, including the villages of Whifflet, Rosehall, and CALDER, and also the Calder Iron-works, belonging to the firm of William Dixon (Limited). These works are interesting, as the place where the famous and valuable blackband ironstone, which has proved such a source of wealth to Scotland, was first discovered. The discovery was made in 1805 by Robert Mushet, from whom it received the name of 'Mushet Blackband,' and as such it is still known. In this parish there are also several other large iron and engineering works, and numerous coal mines of considerable depth. The parish, which is in the presbytery of Hamilton and synod of Glasgow and Ayr, was endowed at a cost of upwards of £8000, of which £1500 was from the General Assembly's Endowment Fund, the remainder being raised by voluntary subscription. The church, erected in 1869 and renewed in 1880, is a handsome edifice—the interior, which is richly ornamented, being one of the finest specimens of the Decorated style to be seen in this part of the country. Adjoining the church and under the same roof with it is a very comfortable manse, prettily situated amidst a plantation of trees. The parish contains two good schools—one close beside the church, supported by the proprietors of Calder Iron-works; the other in Rosehall, maintained by the owners of Rosehall colliery. With respective accommodation for 227 and 170 children, these schools have an average attendance of about 220 and 160, and grants of over £240 and £160. Pop. (1871) 3883, (1881) 4266, (1891) 4551.—*Ord. Sur.*, sh. 31, 1867.

Garvald, a village and a parish in Haddingtonshire. The village stands towards the N of the parish, 450 feet above sea-level, on the left bank of Papan Water, $\frac{5}{8}$ miles S of East Linton station, and $5\frac{3}{8}$ ESE of Haddington; it has a post office under Prestonkirk. In 1893 a bill was introduced into Parliament for the construction of a deviation railway from the Macmerry branch of the North British to Gifford and Garvald.

The present parish, comprising the ancient parishes of Garvald and Bara, united in 1702, is bounded N, NE, E, and SE by Whittingham, S by Lauder in Berwickshire, W by Yester and Haddington, and NW by Morham. Its utmost length, from NNE to SSW, is $8\frac{1}{2}$ miles; its breadth varies between $1\frac{1}{2}$ and $4\frac{1}{4}$ miles; and its area is 13,422 acres. The northern division, comprising about one-fourth of the entire area, is a lowland tract, all rich in the characters of soil, cultivation, and beauty, that mark the great plain of East Lothian; but the other divisions consist of portions of the Lammermuir Hills, ascending to their watershed at the Berwickshire border, and are mostly bleak, heathy, and mossy, with occasional patches of verdure. In the N the surface declines to 390 feet above sea-level, and rises thence to 900 at Snawdon, 1250 at Rangely Kipp, and 1631 at Lowrans Lav. Hopes Water and two other head-streams of Gifford Water, descending from the southern heights, unite near the western boundary, and pass into Yester on their way to the Tyne. Papan Water rises on the south-eastern border, and, winding 5 miles northward through the interior, past the village, to the northern boundary, proceeds thence, under different names, to the sea at Belhaven Bay; within this parish it runs along a very rocky bed, and is subject to violent freshets, sweeping down stones of great weight, and overflowing portions of its banks. In 1755 it rose to so great a volume as to flood some houses in the village to the depth of 3 feet. The rocks in the N include excellent sandstone, which has been quarried; and those of the hills are chiefly Silurian. The soil in the N is a deep rich clay; in the NE is of a light gravelly nature; and on the hills is thin and spongy. An ancient circular camp, 1500 feet in circumference, is on Garvald farm, and four or five others are dotted over the hills. Whitecastle and Yester Castle are the chief antiquities; the two mansions, Hopes and Nunraw Castle, are noticed separately. Garvald is in the presbytery of Haddington and synod of Lethian and Tweeddale; the living is worth £253. The parish church, at the village, is an old building, enlarged in 1829, and containing 360 sittings. There is also a Free church; and a public school, with accommodation for 125 children, has an average attendance of 60, and a grant of about £57. Valuation (1883) £9320, 10s., (1892) £7254, 2s. 6d. Pop. (1881) 758, (1891) 600.—*Ord. Sur.*, sh. 33, 1863.

Garvald or Garrel, an ancient parish and a burn in Dumfriesshire. The parish was annexed, about 1674, partly to Johnstone, chiefly to Kirkmichael; and it continues to give name to the two farms of Upper and Nether Garrel. Its church, rebuilt so late as 1617, stood on the right bank of Garvald Burn, $3\frac{1}{4}$ miles NE of Kirkmichael church; and now is represented by ruined walls and an enclosed burying-ground. The burn, rising at an altitude of 1050 feet above sea-level, winds $7\frac{1}{2}$ miles south-south-eastward through all the length of the parish, till it glides into Ae Water, 2 miles NNW of Lochmaben. With a total descent of 860 feet, it forms a number of tiny cascades and cataracts, making in one place a fall of 18 feet over a mural rock.—*Ord. Sur.*, sh. 10, 1864.

Garvald or Garrel, a hill and a burn in Kilsyth parish, S Stirlingshire. The hill is part of the Kilsyth range, and culminates $2\frac{1}{2}$ miles NW by N of Kilsyth town at an altitude of 1381 feet above sea-level. The burn, issuing from a reservoir on a high plateau, $1\frac{1}{4}$ mile WSW of the hill's summit, and running $1\frac{1}{4}$ eastward under the name of Birken Burn, proceeds $2\frac{1}{2}$ miles south-eastward to Kilsyth town, during which course it makes an aggregate descent of 1000 feet, necessarily forming cataracts and falls. It next goes $1\frac{1}{2}$ mile south-westward across Kilsyth plain to the river Kelvin; but, in traversing the plain, is so drawn off for water-power and to a lake as to be generally dry except during a freshet.—*Ord. Sur.*, sh. 31, 1867.

Garvald or Garwald Water, a stream of Eskdalemuir parish, Dumfriesshire, rising, on the southern slope of **ERRICK PEN**, at an altitude of 1850 feet, close to the Selkirkshire border, and thence winding $6\frac{1}{2}$ miles south-

south-eastward and east-north-eastward till it falls into the White Esk, 2 miles NNW of Eskdalemuir church. It receives a number of mountain tributaries, and makes a magnificent waterfall, called Garvald Linn. This linn is a long descent over a stony channel, sloping here, and there precipitous, between rocky flanks, for the most part naked, but clothed at intervals with copse and brushwood; and forms now a cascade, now a capricious cataract, now a rushing rapid.—*Ord. Sur.*, sh. 16, 1864.

Garvald House, a mansion in Linton parish, NW Peeblesshire, near the left bank of South Medwin Water, $1\frac{1}{4}$ mile NW of Dolphinton station, and $4\frac{1}{2}$ miles WSW of West Linton. Having passed by marriage to the Dicks of Prestonfield from a family of the name of Douglas, it was purchased in 1827 for £11,650 by John Woddrop, Esq. of Dalmarock, whose son, William Allan-Woddrop, Esq. (b. 1829; suc. 1845), is present proprietor. See **BIGGAR**.—*Ord. Sur.*, sh. 24, 1864.

Garvald Point. See **GREENOCK**.

Garvan, a hamlet at the mouth of Glen Garvan, in the Argyllshire section of Kilmallie parish, on the southern shore of upper Loch Eil towards its head, $9\frac{1}{4}$ miles W by N of Fort William.

Garvary or Blar Garvary, a hill (864 feet) in Kincardine parish, Ross-shire, $2\frac{1}{2}$ miles SSW of the church.

Garve, a hamlet, river, and loch on the mutual border of Contin and Fodderty parishes, Ross-shire. The hamlet, with a hotel and a station on the Dingwall and Skye railway, is $11\frac{1}{4}$ miles W by N of Dingwall and about a mile NW of the loch, and has a post and railway telegraph office. The river rises on the Dirriemore Mountains, and runs about 18 miles to the Conan. The loch, lying 220 feet above sea-level, has an utmost length and breadth of $1\frac{1}{2}$ and $\frac{1}{2}$ mile, has finely wooded shores, is traversed by the **BLACKWATER**, and contains abundance of trout, running 2 or 3 to the lb. Through Strath Garve, which emerges here, lies the coach road to Ullapool, alongside of which the ground has been surveyed for a proposed Garve and Ullapool railway.—*Ord. Sur.*, sh. 83, 1881.

Garv-Eilan or Garbh-Eilean, the north-westernmost of the three Shiant Isles in the Outer Hebrides, Ross-shire, in the North Minch, $4\frac{1}{4}$ miles ESE of the nearest point of the Lewis, and 21 S of Stornoway. Triangular in shape, it has an utmost length and breadth of $7\frac{1}{2}$ and 3 furlongs; is separated from Eilan-na-Kelly only by a neck of rolled pebbles, commonly dry, except at a concurrence of spring tide and tempestuous wind; has a surface diversified with hollows and declivities; and abounds in rich pasture.—*Ord. Sur.*, sh. 99, 1858.

Garvellan. See **GARAN**.

Garvelloch, a group of four pastoral islets in Jura parish, Argyllshire, $2\frac{1}{2}$ miles W of Lunga. They extend 4 miles from NE to SW, and are nowhere more than $\frac{1}{2}$ mile broad; are now valuable solely on account of the excellence of their pasture for sheep and black cattle; but have yielded marble, a specimen of which exists at Inverary Castle. Adamnan terms them *Insula Hinba* or *Hinbina*, and in 545 St Brendan seems to have founded a monastery on the most westerly of the group, Eilean na Naoinh ('island of the saints'). Swept away by the defeat of the Dalriadan Scots in 560, this monastery was refounded a few years after by St Columba; and 'still,' says Dr Skene, 'there are remains of some very primitive ecclesiastical buildings which we can identify with Columba's monastery, the first he founded after that of Iona, and which, fortunately for us, owing to the island being uninhabited, not very accessible, and little visited, have not disappeared before the improving hand of man. The remains are grouped together about the middle of the island, on its north-eastern side. Here there is a small sheltered port or harbour, and near it a spring of water termed *Tobar Chailum na Chille*, or Columba's Well. Near the shore, S of this, in a sheltered grassy hollow, are the remains of the cemetery, with traces of graves of great age; and adjoining it a square enclosure, or small court, on the E of which are the remains of buildings of a domestic character. N of this is the church, a roofless building, formed of slates.

without mortar, and measuring 25 feet by 15. NE of this is a building resembling the cells appropriated to the abbots of these primitive monasteries. Farther off, on higher ground, are the remains of a kiln, and on a slope near the shore two beehive cells resembling those used by anchorites.' See Appendix to Dr Reeves' *Adamnan* (Edinb. 1874), and vol. ii., pp. 78, 97, 128, 246, of Dr Skene's *Celtic Scotland* (Edinb. 1877).

Garvel Point. See GREENOCK.

Garvock is a parish in Kincardineshire, bounded on the NE by the parish of Arbuthnott, on the SE by Benholm and St Cyrus, on the SW by Marykirk, and on the NW by Laurencekirk. Its extreme length, from NE to SW, is rather more than 7 miles; its greatest breadth, from NW to SE, about 4 miles; and its area is 7982 acres, of which 16 are water. The name is derived from two Celtic words denoting a 'rough marsh or meadow.' Though cultivation has done much in the way of improvement, there are still parts of the parish to which the original name is not inappropriate. It is intersected, but very unequally, by what is distinctively named the 'Hill of Garvock,' a range of high land covered with heath. On the NW of this ridge are Barnhill and the upper lands of several farms otherwise lying in Laurencekirk. On its S lies much the larger part of the parish, descending gently to form a hollow plain, chiefly of cultivated land, and rising again to higher ground (where it borders upon Benholm and St Cyrus), varied by a single narrow opening, the source of the romantic Den Finella. Bervie Water, well known to anglers, winds $1\frac{3}{4}$ mile along the border of Garvock, separating it from Arbuthnott. It receives two inconsiderable streams in the parish, one of them flowing, when not checked by drought, through the picturesque Woodburnden. The surface of the parish along the Bervie Water is 140 feet above the level of the sea. It rises thence, and at Denhead attains a height of 462 feet, falling on the SE border to 455 feet. The three highest points of the Hill of Garvock are cairns, situated from the parish church respectively 7 furlongs NE, 3 furlongs NW, and 12 furlongs SW, and their various altitudes being 854, 813, and 915 feet. On the last the tower of Johnston is built. Those cairns and others in different parts of the parish are supposed to be relics of the Druids; and several have been found to contain evidence of having been places of sepulture at a very early period. There is one on Barnhill, which tradition marks as the grave of two travelling merchants who, early in the 18th century, quarrelled and fought on the spot, and were both killed. Here it may be noted, in the words of Mr Jervise, that 'stone cists, flint arrow-heads, and curious stone balls have been found in various parts of Garvock; and in March 1875 there was discovered, at a depth of 15 inches, in a gravel hillock near Brownies' Leys, an oval-shaped vessel made of burned clay, about 11 inches deep by about 8 inches wide, and containing part of a skull and other human remains.' But the spot which has attained the greatest celebrity is that known as Brownies' Kettle, or Sheriff's Kettle, on the farm of Brownies' Leys and estate of Davo. Here was the caldron in which John Melville of Glenbervie, Sheriff of the Mearns, met his cruel fate at the hands of his brother barone, being 'sodden and suppit in bree,' in literal compliance with the too hasty sentence of his majesty James I. The story is too well known for a detailed account to be given here. The unnatural deed was perpetrated about 1420 or 1421, and on 1 Sept. of the latter year, Hugh Arbuthnott, George Barclay, Alexander Falconer, William the Graham, Gilbert Middleton, Patrick Barclay, and Alexander of Graham were received 'to the lawes of Clane Macduff for the deid of quhillone John the Malavillè, Laird of Glenbervie.' The chief actor, David Barclay, preferred to seek for safety by building the Kaim of Mathers, to the security of which he retired for a time. The soil has been described as 'mostly either thin or medium loam resting on a hard subsoil, or stiff clayey loam lying on a cold sour bottom. Considering that a large portion of this parish consists of uncultivated hilly ground, the

rise in rental must be regarded as very large. As already indicated a large extent of land has been reclaimed on the slope of Garvock Hill during the last twenty-five years' (*Trans. Highl. and Ag. Soc.*, 1881, p. 112). Tradition bears that a large part of Garvock was in ancient times a forest, and there are traces of the deer-dyke by which it was enclosed. It is uncertain how much interest was held in the parish by Hugh le Blond, who had owned the patronage, and land also in the neighbourhood, of the church, or how long that interest continued in the family of Arbuthnott. But in the first quarter of the 14th century the lands of Garuocis were among the gifts to Sir Alexander Fraser, Thane of Cowie, brother-in-law of King Robert I., and Great Chamberlain of Scotland, who fell at the Battle of Dupplin in 1329. His grand-daughter, Margaret Fraser, became the wife of Sir William Keith, founder of the castle of Dunnottar, and the barony of Garuocis was for several generations in possession of the Keiths-Marischal. It is included in charters to the first earl and the fourth, who died in 1581. In his time a lease of the lands of Shiells was given to James Keith, great-grandson of the second earl, 'a man of parts and merits,' devoted to Queen Mary, a favourite of his chief, and captain of the castle of Dunnottar. He was head of the family of Craig, and, though possessed of lands in several counties, including some in Garvock, he made his residence on Shiells. There he had virtually exercised the powers of baron, administering justice and holding councils on the Baron-hill (Barnhill); while the adjoining height, still known as Gallowbank, had been utilised by the grim 'finisher' of the law. The 17th century began the breaking up of the barony into various holdings. Before 1628, Bradieston ('town of the flat meadow land') was in possession of Robert Keith, grandson of the above-mentioned James, and Provost of Montrose, who subsequently acquired the barony of Scotston and Powburu and the lands of Haddo. He was commissioner from the burgh of Montrose in the Scottish Parliament of 1639, and he died in 1666. His initials, 'R. 1666 K.' with shield and crest, are still found on a stone which had been part of a funeral monument, and is now built into a wall of the church. The lands of Balhagarty ('town of the priest') are known to have belonged in 1637 to Earl Marischal, and they were in possession of Scott of Scotstarvet before 1672. There was a charter of the lands of Whitefield in 1617 to Sir Robert Arbuthnott and his wife, Mary Keith; and in 1677 the Hon. Alexander, younger son of the first Viscount Arbuthnott, had a charter of the lands of Tullochs ('little hills'). In the last quarter of the 17th century three branches of a distinguished family were conterminous proprietors. In 1672 the lands of Barnhill and Henslow were in possession of Lord Falconer of Haulkerton; in 1682 Smiddiehill and adjoining parts belonged to Sir David Falconer of Newton; and in 1684 the lands of Shiells were disposed to Sir Alexander Falconer of Glenfarquhar. The eldest branch succumbed, and the Haulkerton title and estates passed to Glenfarquhar, who enjoyed them only for three years, when David Falconer of Newton succeeded, as fifth Lord Falconer; and, coming into possession of the whole lands which had belonged to the three families, was probably the largest heritor of Garvock for the time. Space cannot be given for a detailed account of the transmission of the various lands to their present respective proprietors, but it may be stated that in course of this transition the parish numbered among its heritors more branches than one of the Barclays, descendants of the once powerful De Berkeleys. The church was rated in 1275 at 18 merks. In 1282 Hugh le Blond, Lord of Arbuthenoth, granted to the monks of Orbroath the patronage of the church of Garvock, with an ox-gang of land and some common pasture. The earliest recorded vicar was William, who did homage to King Edward in 1296. Coming to Reformation times, the church with three others was served, in 1574, by one minister, who had the Kirklands and a money stipend of £133, 6s. 8d. Scots. The reader had £20 Scots. There has been no vacancy in the office of parish minis-

ter since 1698, the successive incumbents having all had assistants and successors ordained before their death. The stipend is returned as £189; the manse (built in 1866) is valued at £25, and the glebe at £15. The church (built in 1778) is seated for about 300 people. The churchyard has a few old gravestones; and on the manse offices there is the fragment of one, with date 1603. The church was dedicated to St James; and a well in the den near the manse, called St James's Well, had the reputation once of working miraculous cures. St James's Fair, now at Laurencekirk, was long held near the church on Barnhill, where the site may still be traced by the turf seats which did service in the various tents. The parish has always been well provided with the means of education. The public school (built in 1866) has accommodation for 92 pupils, with an average attendance of about 50, and a government grant of over £60. The valuation of the parish, in 1856, was £4215. In 1883 it had reached £6270, 13s. 11d., but in 1892 it had fallen to £4548. The population, in 1755, was 755; in 1801 it was 468. The highest point it has reached since was 485 in the year 1811; the census of 1881 reduced it to 428; and in 1891 it was 415.—*Ord. Sur.*, shs. 66; 57, 1871-68.

Garvock, an estate, with a modern mansion, in Dunning parish, Perthshire, 1 mile ENE of the town of that name. Its owner is Robert Græme, Esq. (1841; suc. 1859).

Gascon Hall, an ancient castle, now a ruin, in the SE corner of Trinity Gask parish, Perthshire, on the N bank of the Earn, 1½ mile WNW of Dunning station. Tradition makes it the place where Sir William Wallace, according to Blind Harry's narrative, encountered the ghost of Faudon; but it must have been built long after Wallace's day. The real Gascon Hall appears to have stood about 1½ mile NE of this castle, on a spot amid the present woods of Gask.

Gask or Findo Gask, a hamlet and a parish in Strathearn district, Perthshire. The hamlet lies 1¼ mile SSE of Balgowan station, and 2½ miles N by W of Dunning station, this being 9½ miles WSW of Perth, and 4¼ NE of Auchterarder, under which there is a post office of Gask.

The parish, containing also CLATHY village, and having BALGOWAN station on its north-western border, is bounded NW by Madderty and Methven, E by Tibbermore and Forteviot, S by Dunning, SW by Auchterarder, and W by Trinity Gask. Its utmost length, from N to S, is 4 miles; its utmost breadth, from E to W, is 2¾ miles; and its area is 5227¼ acres, of which 42 are water. The river EARN, winding 3½ miles eastward roughly traces all the southern boundary; and the surface, sinking along it to close upon 30 feet above sea-level, thence rises gently to 382 feet near Charlesfield, and 427 near the manse, from which point it again slopes softly down to 190 feet along Cowgask Burn, flowing 1½ mile south-westward on the boundary with Madderty. Sandstone and grey slate have both been quarried, and marl occurs in several places. The soil is partly argillaceous, partly a fertile loam. More than 1200 acres are under wood. A Roman road, traversing the summit ridge, on the line of communication between two camps in Scone and Muthill parishes, has a breadth of 20 feet, and consists of compactly-built rough stones. It is flanked, at intervals, by traces of fortified posts, each to be garrisoned by from 12 to 19 men. One of these posts has from time immemorial been called the Witch Knowe, and is said to have been the scene of executions for the imputed crime of sorcery. William Taylor, D.D. (1744-1823), afterwards Principal of Glasgow University, was minister of Gask; and natives were Thomas Smeaton (1536-83), an early Presbyterian divine, and the sculptor, Lawrence Macdonald (1798-1878). So, too, was Carolina Oliphant, Lady Nairne (1766-1845), who was author of *The Laird o' Cockpen*, *The Land o' the Leal*, *The Auld House*, and others of Scotland's choicest songs. Her ancestor, Sir William Oliphant, about the beginning of the 14th century, acquired broad lands in Perthshire from Robert the Bruce, and became

the Lord of Gasknes and Aberdalgie; and Lawrence Oliphant, his descendant, was in 1458 created Lord Oliphant. The fifth of the title, 'ane base and unworthy man,' soon after 1600 sold all his great estates but Gask, which in 1625 was purchased by his cousin, the first of the 'Jacobite lairds.' On 11 Sept. 1745, Prince Charles Edward breakfasted at the 'auld house,' and a lock of his hair is still a family heirloom; in the following February Gask was ransacked by the Hanoverians. The present mansion, begun in 1801, stands 9 furlongs SW of the hamlet, amid finely-wooded grounds, and is the seat of Mr T. L. Kington Oliphant. Gask is in the presbytery of Auchterarder and synod of Perth and Stirling; the living is worth £193. The church, at the hamlet, was built in 1800. A public school, with accommodation for 75 children, has an average attendance of about 50, and a grant of nearly £60. Valuation: (1882) £5119, 8s. 6d., (1892) £4277, 13s. 10d. Pop. (1801) 601, (1831) 428, (1861) 399, (1871) 369, (1881) 364, (1891) 361.—*Ord. Sur.*, shs. 47, 48, 1869-68. See T. L. Kington Oliphant's *Jacobite Lairds of Gask* (Gram-pian Club, 1870).

Gask Hill. See COLLESSION.

Gask House, an old mansion in Turriff parish, Aberdeenshire, 1¾ mile S by E of the town. From the Forbeses it passed through several hands to the fourth Earl of Fife early in the 19th century, but now is merely a farmhouse.

Gasstown, a village in Dumfries parish, Dumfriesshire, 1½ mile SSE of Dumfries town, under which it has a post office. It was founded about 1810 by Joseph Gass. Pop., with Heathery Row, (1871) 521, (1881) 467; (1891) 368.

Gatehead, a collier village in the S of Kilmaurs parish, Ayrshire, near the right bank of the river Irvine, 2½ miles WSW of Kilmarnock. It has a station on the Kilmarnock and Ayr section of the Glasgow and South-Western railway.

Gatehope, a burn in Peebles parish, Peeblesshire, rising at an altitude of 1750 feet on the southern slope of Cardon Law (1928), near the meeting-point with Innerleithen and Eddleston parishes. Thence it runs 4½ miles south-south-westward, till, after a total descent of 1245 feet, it falls into the Tweed 5 furlongs ESE of Peebles town.—*Ord. Sur.*, sh. 24, 1864.

Gatehouse, a town of SW Kirkcudbrightshire, on the Water of Fleet, 9 miles WNW of Kirkcudbright and 6 SE by S of Drumore, with both of which it communicates twice a day by coach. Comprising Gatehouse proper on the left bank of the river in Girthon parish, and Fleet Street suburb on the right bank in Anwoth parish, it has picturesque environs, that ascend from luxuriant valley to an amphitheatre of distant hills, and commands navigable communication 1½ mile down Fleet Water to that river's expansion into Fleet Bay or estuary, and so to Wigtown Bay and the Irish Sea. It sprang, about the middle of the 18th century, from a single house situated at the gate of the avenue to CALLY House—hence its name Gatehouse-of-Fleet—and rapidly rose to manufacturing importance, so as to have, at the beginning of the 19th century, four cotton factories, a fair proportion of cotton-weaving hand-looms, a wine company, a brewery, a tannery, and workshops for nearly every class of artisans. It made a grand effort, too, by deepening Fleet Water to the sea and otherwise, to establish a great commercial trade, and seemed for a time to menace the Glasgow of the West with the energetic rivalry of a Glasgow of the South. Somewhat suddenly it suffered such arrest to further progress as has made it from 1815 stationary or retrograde; and now its only industrial works are 2 bobbin works, and several sawmills. Still, it consists of neat and regular streets, and presents, in its main body or Gatehouse proper, a sort of miniature of the original New Town of Edinburgh, being one of the handsomest towns in Galloway, equalled indeed by very few in Scotland. The town-hall, erected by subscription in 1835 at a cost of about £1000, is in the old Scotch style, with a front gable surmounted by saddle-backed crows-steps and

final. To the front of the vestibule is the entrance to the hall, which is 50 feet by 33, and can accommodate about 400 persons. To the right is the cloak-room, and to the left a stair leading to the second story, where is a room, 25 feet by 14, in which council, committee, and other meetings are held. At the farther end of the large hall is a raised platform, in an arched recess at the back of which is a very large and magnificent painting executed by Mr John Faed, R.S.A., and presented by him to the town. The subject is the town of Gatehouse and its surroundings, from the artist's residence of Ardmore. The view includes the old castle, Rutherford's Monument on a hill near the town, with the hills and sea in the background. Barlay Mill, a short distance from Gatehouse, is the birthplace of the donor, and of his two artist brothers James and Thomas. The town has a post office, with money order, savings bank, insurance, and telegraph departments, branches of the Bank of Scotland and the Union Bank, several insurance companies, 2 hotels, a handsome clock-tower, a fine stone bridge across the Fleet, the parish church, a Free church, a United Presbyterian church, an Episcopalian church, a public news-room, a gas company, a literary association, Masonic, Oddfellows', and Foresters' lodges, a Rechabite tent, bowling, cricket, and football clubs, a weekly market on Saturday, a cattle market on the second Saturday of every month, and hiring fairs on the Saturdays before Castle-Douglas fair. The clock-tower, of Craignair granite, built in 1871, stands at the N end of the principal street, and rises to a height of 75 feet. The bridge succeeded one of the 13th century, has twice been widened, and comprises two spacious arches. The parish church of Girthon was built in 1817; that of Anwoth, built in 1826, stands $1\frac{3}{4}$ mile W by S. The United Presbyterian church is in the Fleet Street suburb; and the Episcopalian church stands in the grounds of Cally. The improvement on the Fleet's navigation includes a canal or straight cut along the river, made at a cost of about £3000, and enables vessels of 60 tons burden to come up to the town. The exports are principally grain, timber, and wood, and the imports principally coal and lime. The town was made a burgh of barony, by royal charter, in 1795, and is governed by a provost, 2 bailies, and 4 councillors, while by the Burgh Police (Scotland) Act of 1892 it has 9 commissioners including the provost and two bailies. A justice of peace small debt court is held on the first Saturday of every month. Three schools—Girthon, Cally, and Fleetside—with respective accommodation for 188, 139, and 175 children, have an average attendance of about 130, 80, and 110, and grants of over £140, £76, and £118. The municipal constituency numbered 90 in 1892. Pop. (1851) 1750, (1861) 1635, (1871) 1503, (1881) 1286, (1891) 1226, of whom 330 were in Anwoth.—*Ord. Sur.*, sh. 5, 1857.

Gateside, a village in Beith parish, Ayrshire, 1 mile E by S of Beith town. Pop. (1881) 374, (1891) 326.

Gateside, a village in Neilston parish, Renfrewshire, on the left side of Levern Water, and on the Glasgow and Neilston railway, $1\frac{1}{4}$ mile WSW of the centre of Barrhead. One of the cluster of seats of manufacture now forming the police burgh of Barrhead, it had a cotton factory so early as 1786. Pop. (1861) 455, (1871) 399, (1881) 465, (1891) 446.

Gateside, a small village in Kirkgunzeon parish, Kirkcudbrightshire, 3 furlongs ESE of Kirkgunzeon church, and $4\frac{1}{2}$ miles NNE of Dalbeattie.

Gateside, a farm in Carladston parish, Forfarshire, near the N bank of the South Esk, $4\frac{1}{2}$ miles W by S of Prechin. It is supposed to adjoin the site of the Roman station *Æsica*, and to have got its name from a gate or port of the station towards the river.

Gateside, a village in Whitburn parish, Linlithgowshire, $\frac{1}{2}$ mile W by S of Whitburn town.

Gateside, a hamlet in Markinch parish, Fife, $1\frac{1}{2}$ mile NNW of Markinch village.

Gateside, a village in Strathmiglo parish, Fife, with a post office. See EDENSHEAD.

Gattonside, a village in Melrose parish, Roxburgh-

shire, on the left side of the Tweed, 1 mile N by W of Melrose town, under which it has a post office, and with which it communicates by a foot suspension-bridge. Lying scattered among groves and orchards, 300 feet above sea-level, it retains some traces of a large and beautiful pre-Reformation chapel; it is celebrated for both the quality and the quantity of its fruit; and it is overlooked, on the N, from Allen Water to Leader Water, by a range of softly outlined heights, the Gattonside Hills, that culminate at 927 feet. Gattonside was granted by David I. to Melrose Abbey in 1143, and places round it still bear such names as the Abbot's Meadow, the Vineyard, Friar's Close, the Cellary Meadow, etc. Gattonside House, $\frac{1}{4}$ mile to the W, is the seat of H. Mungall, Esq.—*Ord. Sur.*, sh. 25, 1865.

Gauhsness, a place on the W coast of Dunrossness parish, Shetland, near Fitful Head. A vein or bed of iron pyrites here was, many years ago, unsuccessfully worked with the view of finding copper ore; and then produced many hundred tons of iron pyrites, which were thrown into the sea.

Gaur or **Gaoire**, a stream of Fortingall parish, NW Perthshire, issuing from Loch LAIDON (924 feet), which at its head receives the BA, and winding 7 miles eastward to Loch RANNOCH (668 feet), mainly across bleak Rannoch Muir. It expands midway, in times of heavy rain, into a large temporary lake, Loch Eighach; forms several tumultuous far-sounding waterfalls; enters the head of Loch Rannoch by two channels, enclosing a green triangular islet; and contains abundance of trout, running from $\frac{1}{4}$ to 3 lbs.—*Ord. Sur.*, sh. 64, 1873.

Gauldry. See GADLRY.

Gavel. See GAIL.

Gavieside, a village of recent origin in West Calder parish, Edinburghshire, 2 miles N by E of West Calder town. Pop. (1871) 550, (1881) 456, (1891) 555.

Gavinton, a village in Langton parish, Berwickshire, 2 miles SW of Duns. Built in 1760 to supersede the ancient village of Langton, which stood $\frac{1}{2}$ mile to the N, it took its name from Mr Gavin, the then proprietor, and is a neat place, on a regular plan, with a post office under Duns and Langton parish church.

Gawreer or **Garrier**, a burn in Cunninghame district, Ayrshire, rising 2 miles S by W of Stewarston, and running $6\frac{1}{4}$ miles south-south-westward along the boundary between Dreghorn parish on the right and Kilmours on the left, till it falls into Carmel Water, $4\frac{1}{2}$ furlongs above the Carmel's influx to the river Irvine.—*Ord. Sur.*, sh. 22, 1865.

Gaylet Pot or **Geary Pot**, a cavern and a natural shaft on the coast of St Vigeans parish, Forfarshire, about a mile S of Auchmithie village. The cavern, piercing the base of a cliff 150 feet high, opens from the sea in a rude archway about 70 feet high and 40 wide, penetrates the land to the distance of 300 feet, and gradually contracts to a minimum height and width of 10 or 12 feet. The shaft opens in the midst of an arable field, goes perpendicularly down to the extremity of the cavern, is proximately circular at the mouth, measures there 150 feet in diameter, and, in its descent to the cavern, has an outline resembling that of an inverted urn. The sea enters the cavern, and takes up to the foot of the shaft the fluctuations of the tide; and when it is urged by an easterly wind, it bursts in at high water with amazing impetuosity, surges and roars with a noise which only the great depth and contractedness of the shaft prevent from being heard at a considerable distance, and then recedes with proportionate violence, and makes a bellowing exit from the cavern's mouth.—*Ord. Sur.*, sh. 57, 1868.

Geanach or **Gannoch**, a mountain in Birse parish, S Aberdeenshire, 4 miles WNW of Mount Battoek, near the meeting-point with Kincardineshire and Forfarshire. It belongs to the Grampian range, and has an altitude of 2396 feet above sea-level.

Geanies House. See FEARN, Ross-shire.

Gearr Abhainn, a river in Inverary parish, Argyllshire, running 5 furlongs southward from the river Shira's expansion of DOULOCK to Loch Fyne. Its

water is alternately fresh and salt, according to the ebb or flow of the tide; and is well stored with trout, salmon, white fish, and shell fish. Its name signifies 'short river,' and alludes to the shortness of its course.—*Ord. Sur.*, sh. 37, 1876.

Geary Pot. See GAYLET POT.

Geauly or Gieuly. See GELDIE BURN.

Geddes House, a mausion in Nairn parish, Nairnshire, 4 miles S of Nairn town. Standing amid highly embellished grounds, it is the seat of John Mackintosh-Walker, Esq. See NAIRN.—*Ord. Sur.*, sh. 84, 1876.

Geil or Glengavel Water, a rivulet in Avondale parish, Lanarkshire, rising close to the Ayrshire border, and running 5 miles north-north-westward, till it falls into the Avon at a point $5\frac{1}{2}$ miles SW of Strathaven.—*Ord. Sur.*, sh. 23, 1865.

Geldie Burn, a trout and salmon stream of Crathie and Braemar parish, SW Aberdeenshire, rising, at an altitude of 2300 feet above sea-level, 9 furlongs SE of the meeting-point of Aberdeen, Perth, and Inverness shires, and running $8\frac{1}{2}$ miles northward and eastward, till, after a total descent of 932 feet, it falls into the Dee at a point 3 miles WSW of the Linn of Dec. See FESHLE.—*Ord. Sur.*, sh. 64, 1874.

Geletra. See GOMETRA.

Gelly, Fife. See LOCHGELLY.

Gelston or Gilston, a village in Kelton parish, Kirkcudbrightshire, $2\frac{1}{2}$ miles SSE of Castle-Douglas, under which it has a post office. Gelston Castle, $\frac{1}{2}$ mile SE of the village, was built by the late Sir William Douglas, Bart., and is now the property of Major William F. M. Kirwan. An ancient parish of Gelston now forms the south-easterly district of Kelton. Its church stood adjacent to a ravine or gill, traversed by a brook, and has left some vestiges.—*Ord. Sur.*, sh. 5, 1857.

Gelt or Guelt Water, an Ayrshire burn formed by the confluence of Back Lane and Clocklowie Burn, and winding $4\frac{1}{2}$ miles west-north-westward along the boundary between New and Old Cumnock on the left and Auchinleck on the right, till it unites with Glenmore Water at Kyle Castle, 6 miles E of Cumnock town.—*Ord. Sur.*, sh. 15, 1864.

General's Bridge. See BOWHILL.

General's Hut. See FOYERS.

Genoch, an estate, with an old-fashioned mansion, in Old Luce parish, Wigtownshire, $1\frac{1}{2}$ mile SW of Dumragit station.

George, Fort, a strong regular fortress in Ardersier parish, Inverness-shire, on a promontory projecting into the Moray Firth, $3\frac{1}{2}$ miles NNW of Fort George station on the Highland railway, this being $5\frac{1}{2}$ miles WSW of Nairn and $9\frac{1}{2}$ miles NE of Inverness. Station and fortress have each a post office, with money order, savings bank, and telegraph departments. The fort, built three years after the rebellion of 1745, at an estimated cost of £120,000, but an actual cost of more than £160,000, covers 16 acres of ground; has a polygonal line, with six bastions; is defended, on the land side, by a ditch, a covert way, a glacis, two lunettes, and a ravelin; is bomb-proof and strong, yet could readily be assailed from neighbouring ground; and contains accommodation for 2000 men. It is the depôt of the Seaforth Highlanders; and its inmates numbered 1118 in 1891, of whom 904 were military. Pending the construction of the Highland railway's branch line to the fort from Fort George station on the main line, conveyances for passengers run in connection with all trains. A small pier projects from the fort for the use of the ferry boats which here communicate with the opposite or Black Isle shore.—*Ord. Sur.*, sh. 84, 1876.

Georgemas Junction, a station in Halkirk parish, Caithness, on the Sutherland and Caithness railway, 14 miles WNW of Wick, and $6\frac{3}{4}$ miles SSE of Thurso.

Georgetown, a village in Dumfries parish, Dumfries-shire, $2\frac{1}{2}$ miles ESE of the town.

Gerardine's Cave. See DRAINIE.

Geylet Pot. See GAYLET POT.

Gezyen Briggs, a shoal or broad bar across the Dornoch Firth, on the mutual border of Ross-shire and

Sutherland, 3 miles below Tain. It greatly obstructs navigation, and sometimes occasions a tumultuous roar of breakers.

Gharafata, a headland in Kilmuir parish, Isle of Skye, Inverness-shire.

Ghost's Knowe. See CRAIGENGELT.

Ghulbhuinn or Ben Gulabin, a hill (2641 feet) at the head of Glenshee in Kirmichael parish, NE Perthshire.

Giant's Chair, a picturesque spot on the river Dullan, in Morfalach parish, Banffshire. A beautiful small cascade here is called the Linen Apron.

Giant's Fort (Gael. *Dun-na-foghmhar*), one of two conjoint ancient circular enclosures in the southern division of Killean and Kilchenzie parish, Kintyre, Argyllshire. The other is called *Dun Fhinn* or Fingal's Fort. They have few characters definable by antiquaries; but they attract the attention of travellers, and are vulgarly regarded as ancient residences of Fingal and his giants.

Giant's Leg, a natural arch on the S coast of Bressay island, Shetland. It projects from a cliff into the sea, and stands in such depth of water that boats can pass through it in favourable weather.

Giant's Stone, a standing-stone in Tweedsmuir parish, SW Peeblesshire, near the right bank of the Tweed, $\frac{1}{2}$ mile SSW of the church. It is 5 feet high, and adjoins two smaller boulders.

Gibbieston, a village in Auchtergaven parish, Perthshire, $3\frac{1}{4}$ miles W by N of Bankfoot.

Gibbon. See CRAIG GIBBON.

Gibb's Cross, a place on the moors of Wedderlie farm in Westruther parish, Berwickshire, 3 miles NNE of Westruther village. It is traditionally said to have been the scene of a martyrdom for the Protestant faith.

Gifen. See BEITH.

Gifferton or Giffordtown, a village in Collesie parish, Fife, $1\frac{1}{2}$ mile NW of Ladybank. It is of modern erection, and consists of neat comfortable houses.

Giffnock, a hamlet in Eastwood parish, Renfrewshire, $1\frac{1}{2}$ mile S of Pollokshaws, with a post office under Glasgow. It has a station on the Glasgow and Busby railway, and lies near extensive quarries of an excellent building sandstone, popularly called 'liver rock.'

Gifford, a village in the N of Yester parish, Haddingtonshire, lying 340 feet above sea-level, on the right bank of Gifford Water, $4\frac{1}{2}$ miles SSE of Haddington. By a bill introduced into Parliament in 1893 it was proposed to construct a railway to Gifford and Garvald, deviating from the Macmerry branch of the North British at Ormiston. Set in a wooded vale, and sheltered by hills, Gifford is a pretty little place, its two streets of unequal length consisting chiefly of neat two-story houses, and one of them ending in the fine long avenue that leads up to Yester House. It has a post office under Haddington, with money order, savings bank, and telegraph departments, an inn, a public school, a public hall (1889), bowling and curling clubs, and fairs on the last Tuesday of March, the third Tuesday of June, and the first Tuesday of October. The old parish school is now used for lectures, &c. Here, too, are Yester parish church (1708) and a handsome new Free church (1880). The latter occupies a prominent position on the rising-ground above the village, and, built at a cost of £1700 in the Gothic style of the 14th century, has a NE tower and spire. Gifford has claimed to be the birthplace of John Knox, the great Reformer. Beza in his *Icones* (1580) calls him 'Giffordensis;' and Spottiswood states in his *History* (1627) that Knox 'was born at Gifford in the Lothians.' But two contemporary Catholic writers, Archibald Hamilton (1577) and James Laing (1581), assign to Haddington the honour in question; and recent investigation has proved, moreover, that no village of Gifford was in existence until the latter half of the 17th century. So that the late David Laing, who in 1846 had followed Knox's biographer, Dr. Thomas M'Crie, in preferring Gifford, reversed his verdict in 1864 in favour of the Giffordgate, a suburb of Haddington (article 'Knox' by the Rev. C. G. M'Crie, in *Encycl. Britannica*, 9th ed. vol. xiv., 1882). Two lesser divines at least were natives—James

Craig (1682-1744) and John Witherspoon, D.D. (1722-94), the president of Princeton College, New Jersey. Though the village thus is hardly two centuries old, it derived its name from the Giffords, who under William the Lyon (1165-1214) added Yester or Yester to their Lothian possessions, and after whom the parish itself is often, though not legally, called Gifford. Their male line failed with one Sir Hugh in 1409, but his daughter wedded an ancestor of the Marquis of Tweeddale, the present superior of Gifford. Pop. (1861) 458, (1871) 455, (1881) 382, (1891) 305.—*Ord. Sur.*, sh. 33, 1863.

Giffordgate. See HADDINGTON.

Giffordtown. See GIFFERTON.

Gifford Water, a burn of Haddingtonshire, rising, as Hopes Water, among the Lammermuirs, at an altitude of 1500 feet, in the southern extremity of Garvald and Bara parish, close to the Berwickshire border. Thence it winds $1\frac{1}{2}$ miles northward and north-westward through or along the borders of Garvald, Yester, Bolton, and Haddington parishes, till it falls into the Tyne, at a point $1\frac{3}{4}$ mile SSW of the town of Haddington, and 190 feet above sea-level. A first-rate trout-stream of much gentle beauty, it traverses the wooded grounds of Yester House, Eaglescarnie, Coalstoun, and Lennoxlove, and bears in its lower reaches the name of Coalstoun Water.—*Ord. Sur.*, sh. 33, 1863.

Gigalum. See GIGULUM.

Gigha, an island and a parish of Argyllshire. The island lies $1\frac{3}{4}$ mile W of the nearest point of Kintyre, and by ferry from Ardmintish is $2\frac{3}{4}$ miles NW of Moniemore, near Tayinloan. It has a post office, and communicates by boat from its northern extremity with the steamers on the passage between Tarbert and Port Ellen or Port Askaig in Islay. It measures 6 miles in length from NNE to SSW; varies in width between $1\frac{1}{2}$ furlong and $1\frac{1}{2}$ mile; and, with the neighbouring island of CARA, has an area of 3913 $\frac{1}{2}$ acres, of which 266 $\frac{1}{2}$ are foreshore. Its coast is so jagged as to measure 25 miles in extent; and, bold and rocky on the W side, has there two caverns, the Great and the Pigeons' Caves, the latter of which is coated with calcareous spar, and much frequented by wild pigeons. At the south-western extremity it is pierced by a natural tunnel 133 feet long, with two vertical apertures, and so invaded by surging billows in a storm as to emit dense vapour and loud noises. Much, too, of the E coast, although not high, is bold and rocky enough; and here are various sandy bays, very suitable for sea-bathing, whilst those of Ardmintish, Druimyeon, and East Tarbert afford good anchorage. The harbour, on the N side of the islet of GIGULUM, is much frequented by coasting vessels, and is considered safe in all sorts of weather. The interior westward attains 225 feet beyond the church, 260 at Meall a Chlamaidh, and 153 at Cnoc Loisgte. The rocks are mica slate, felspar slate, chlorite slate, and hornblende slate, with veins of quartz and a few transverse dykes of basalt. The soil, except on the hills, is a rich loam, with a mixture here and there of sand, clay, or moss. About three-fifths of the land are in tillage, but barely 7 acres are under wood. Springs of good water are plentiful, and two of them afford water-power to a corn-mill. Some ten boats are employed during three or four months of the year in cod and ling fishing on banks 2 or 3 miles distant. Dunchife or Keefe's Hill, towards the middle of the island, appears to have been anciently crowned with a strong fortification; and a hill, now used as a steamer signal-post, at the northern end of the island, is crowned by a cairn, called 'Watch Cairn,' and seems to have formerly served as a beacon station for giving alarm in case of invasion. Achamore House, 7 furlongs SSW of the church, is the Scottish seat of the proprietor, William James Yorke Scarlett, Esq. The parish comprises also the brownie-haunted island of CARA, 1 mile to the S of Gigha, and 185 feet high at the Mull of CARA, with the uninhabited islet of Gigulum in the sound between them, and bears the name of Gigha and CARA. It is in the presbytery of Kintyre and synod of Argyll; the living is worth £272. The

church, which stands at the head of Ardmintish Bay, was built about 1780, and contains 260 sittings. An ancient chapel, $\frac{1}{2}$ mile SSW, is now represented by ruined walls and a burying-ground. A public school, with accommodation for 75 children, has an average attendance of about 70, and a grant of over £80. Pop. (1801) 556, (1831) 534, (1861) 467, (1881) 382, (1891) 401, of whom 3 belonged to CARA.—*Ord. Sur.* sh. 20, 1876. See Captain Thomas P. White's *Archaeological Sketches in Kintyre and Gigha* (2 vols., Edinb., 1873-75).

Gighay, a small pastoral island of Barra parish, Outer Hebrides, Inverness-shire, 2 miles SW of Eriskay, and 3 NE of the nearest point of Barra island.

Gight, a ruined castle in Fyvie parish, N Aberdeen-shire, on the left bank of the Ythan, $3\frac{1}{4}$ miles ENE of Woodhead or Fyvie village, and 9 SE of Turriff. Crowning the brink of a rocky eminence, with the Braes of Gight on one side and the Braes of Haddo or Formartine on the other, it commands a circle of exquisite scenery, dates from remote times, and continued to be inhabited till the latter part of the 18th century. It figures commonly in history as the House of Gight, was plundered by the Covenanters in 1644, and now is remarkable only for the great strength of its remaining walls. The estate, having belonged for many generations to the Maitlands, became about 1479 the property of William Gordon, third son of the second Earl of Huntly. It remained in possession of his lineal descendants till 1785, when the last heiress, Catherine Gordon of Gight, married Hou, John Byron; so that it would have passed to their son, Lord Byron the poet, had it not been sold in 1787 to the third Earl of Aberdeen.—*Ord. Sur.*, sh. 87, 1876.

Eighty, a burn of Forfarshire, rising near Rossie Reformatory, and running $5\frac{1}{2}$ miles south-westward along the borders of Craig, Maryton, Lunan, Kinell, and Inverkeilor parishes, till it falls into Lunan Water at a point $1\frac{3}{4}$ mile E of Frickheim. It drives several mills.—*Ord. Sur.* sh. 57, 1868.

Gigulum, an uninhabited islet of Gigha parish, Argyllshire, in the sound between Gigha island and CARA. It measures $2\frac{1}{2}$ furlongs by 1.

Gilbertfield, a decayed mansion in Cambuslang parish, Lanarkshire, at the N base of Dechmont Hill, 1 mile SE of the town. Built in 1607, it was for some time the residence of Allan Ramsay's friend and brother-poet, Lieutenant William Hamilton of Gilbertfield (1670-1751).

Gil Burn, a rivulet in Borrowstounness parish, Lighthgowshire, rising near the centre of the parish, and running along a beautiful ravine to the Firth of Forth. Its glen, according to tradition, is haunted by the wraith of Ailie or Alice, Lady Lilburne, who threw herself down from the walls of Kinell House, and who was either the mistress of a Duke of Hamilton or the wife of the Cromwellian colonel for some time resident at Kinell.

Gilcomston. See ABERDEEN.

Gildermorry, a place in Alness parish, Ross-shire. It is the site of a pre-Reformation chapel; and near it are two huge stones of very extraordinary appearance, *Clach-nam-ban* ('stone of the women'), which are said to mark the spot where several women were smothered by a snowstorm on their way to the chapel.

Gillfillan, a place near the middle of Sorbie parish, Wigtownshire. It was the site of an ancient church.

Gill, a reach of the river Cree on the mutual boundary of Kirkecubrightshire and Wigtownshire, commencing about a mile NNW of Minnigaff church. It traverses a narrow gorge, richly fringed with wood, and romantically picturesque.

Gill or Port Gill, a small bay on the mutual border of Stonykirk and Kirkmaiden parishes, Wigtownshire, $8\frac{1}{2}$ miles SE by S of Portpatrick.

Gillander, a cave in the E of Golspie parish, Sutherland. It occurs on the face of a white sandstone rock.

Gillean, an island in Lochalsh parish, Ross-shire. A lighthouse was erected on the south-east point of the island in 1857. See KYLE-ARIN.

Gills, a village and a bay in Canisbay parish, Caithness. The village stands at the head of the bay, $1\frac{1}{2}$ mile W of the parish church, and $15\frac{3}{4}$ miles E by N of Thurso. The bay has a triangular outline, measuring 3 miles across the entrance, and 7 furlongs thence to its inmost recess. It is sheltered by Stroma island, but lies open to the NE and the NNW, and has a beach of flat rocks and shingles.—*Ord. Sur.*, sh. 116, 1878.

Gillyburn, a hamlet in Little Dunkeld parish, Perthshire, $\frac{1}{2}$ mile NW of Murthly station.

Gilmansleuch, a ravine, traversed by a burn, in Kirkhope parish, Selkirkshire, descending from Blackknowe Hill (1806 feet) $1\frac{1}{2}$ mile to the river Ettrick at a point $3\frac{1}{4}$ miles NE of Tushielaw Inn.

Gilmerton, a mansion in Athelstaneford parish, Haddingtonshire, 4 miles NE of Haddington, and $3\frac{1}{4}$ ESE of Drem Junction. It is the seat of Sir Alexander Kinloch, tenth Bart. since 1686 (b. 1830; suc. 1879).—*Ord. Sur.*, sh. 33, 1863.

Gilmerton, a modern, well-built village in Fowlis-Wester parish, Perthshire, 2 miles NE of Crieff, under which it has a post office.

Gilmerton, a village and a *quoad sacra* parish in Liberton parish, Edinburghshire. The village, the most considerable one in the parish, by road is 4 miles SSE of Edinburgh, and 3 WNW of Dalkeith; whilst its station on the Loanhead and Glencorse branch of the North British, $\frac{3}{4}$ mile SSE, is $8\frac{1}{2}$ miles from the former city. Standing high, 400 feet above sea-level, and commanding a fine view of Edinburgh, it comprises three streets, and mainly consists of low one-story cottages. At it are a post office, an inn, a police station, 2 schools, an institute and reading-room, a children's convalescent home (1881), and the *quoad sacra* church; whilst on its SW outskirts stands Gilmerton House, an old-fashioned white mansion, whose owner is Sir David Baird of NEWBYTH, Bart. Coal of prime quality has here been mined since 1627 and earlier, and down to the opening of the Dalkeith railway the carters or coal-bearers of Gilmerton, who largely furnished Edinburgh with fuel, formed a class by themselves. The humours of their annual horse races, 'My Lord's,' as they were called, are vividly sketched by Moir in *Mansie Wauch*. Ironstone, too, has been mined for a number of years. A little to the NW of the village is a limestone quarry of vast extent, the oldest perhaps in Scotland, at all events worked from immemorial time. At first it was worked from the surface, afterwards it was mined; and the produce was brought up in successive epochs by women, by asses, and by steam-power. Even with the aid of machinery it ceased at length to repay the cost of working, and since 1827 it has been almost entirely abandoned. Now, like a huge deep trench, $\frac{3}{4}$ mile long, it presents a shelving declivity, overgrown with brushwood and wild flowers, and sending off lateral caverns, whose roof of solid rock is upborne by massive piers, left as props in the process of mining. This vast colonnaded cavern, instead of proceeding far inwards, where the rapid dip of the stratum—at an angle of 45° —would have carried the miner too far beneath the surface, advances obliquely up the side of the ridge or hill, and thus one may wander some way underground and yet never lose the light of day. At the village itself, near the entrance from Edinburgh, is a singular cave, hewn from the solid rock during 1719-24 by a blacksmith named George Paterson. Rooms, beds, and a table bearing aloft a punch-bowl, all are nicely chiselled from the rock, which thus provided both dwelling-house and furniture. Several apertures in the roof served for windows to let in the light from above. The constructor of this strange subterranean abode had it fitted up with a well, a washing-house, and a forge; and here, pursuing his craft, he lived with his family till his death, about 1735. The cave was for years a great object of curiosity, and even yet has occasional visits paid to it. The *quoad sacra* parish is in the presbytery of Edinburgh and synod of Lothian and Tweeddale; the stipend, from endowment of 1860, is £185 with a manse. The church was built as a chapel of ease in 1837, and enlarged by two aisles

in 1882. The public and the Anderson female industrial schools have an average attendance of about 220 and 100, and grants of over £220 and £80. For the female industrial school an elegant schoolroom and teacher's house were built in 1882 at the expense of the Misses Anderson of Moredun. The Ravenscroft Convalescent Home (1879) was, in 1886, transferred to new buildings costing £2000. Pop. of village (1891) 1301; of *q. s.* parish, 1571.—*Ord. Sur.*, sh. 32, 1857.

Gilmilnscroft, a mansion in Sorn parish, Ayrshire, $2\frac{1}{4}$ miles E by S of Catrine. Its owner is Mr Farquhar, the representative of an old Ayrshire family.—*Ord. Sur.*, sh. 14, 1863.

Gilmour's Linn, a beautiful cascade on Touch Burn, in St Ninians parish, Stirlingshire.

Gilnockie, a station on the Langholm branch of the North British railway, in Canonbie parish, Dumfriesshire, $2\frac{3}{4}$ miles N by W of Riddings Junction, and $4\frac{1}{4}$ SSE of Langholm. The Border peel-tower of Gilnockie stood on a small promontory, washed on three sides by the river Esk, so steep and rocky as to be scarcely accessible except on the land side, and defended there by a deep ditch. It gave designation to Johnnie Armstrong, the Border freebooter of ballad fame, and puts in a claim against Hollows Tower, a little higher up the river, to have been his principal residence. Seemingly it became ruinous soon after Armstrong's execution by James V. at Caerlanrig (1529); and, eventually obliterated to make room for a bridge over the river, it is now not represented by even the slightest vestige. (See DURIE.) Distinct remains of a Roman station are on a rising-ground a little N of the station.—*Ord. Sur.*, sh. 11, 1863.

Gilp, a burn and a sea loch on the mutual boundary of Kilmichael-Glassary and South Knapdale parishes, Argyllshire. The burn has a brief course south-westward to the head of the loch. Loch Gilp descends from the burn's mouth, $2\frac{1}{4}$ miles south-south-eastward, into line with the great southward reach of Loch Fyne, and broadens gradually from 3 furlongs to $1\frac{1}{2}$ mile. It sends off, from its W side, the Crinan Canal; and is mostly so shallow as not to be navigable for boats of any considerable burden at low tide. See LOCHGILPHEAD, ARDRISHAIG, and CRINAN CANAL.—*Ord. Sur.*, sh. 29, 1873.

Gilston, Kirkcudbrightshire. See GELSTON.

Girdle Ness, a promontory in Nigg parish, Kincardineshire, flanking the S side of the mouth of the river Dee, and terminating 2 miles ESE of Aberdeen. It forms the eastern extremity of a spur of the Grampian mountains; and is crowned with a lighthouse, which, built in 1833 and altered in 1890, shows one double group flashing white light, giving two flashes in quick succession every twenty seconds, and visible at the distance of 19 nautical miles.—*Ord. Sur.*, sh. 77, 1873.

Girlsta. See TINGWALL.

Girnigoe. See CASTLES GIRNIGOE and SINCLAIR.

Girnock Burn, a rivulet in Crathie and Braemar parish, SW Aberdeenshire, rising at an altitude of 1800 feet, and running $6\frac{1}{4}$ miles north-north-eastward to the river Dee, at a point 3 miles W by N of Ballater.—*Ord. Sur.*, sh. 65, 1870.

Girthgate, an ancient bridle-road in Roxburghshire and Edinburghshire, leading northward from Old Melrose up the vale of Allen Water and over the moors to the ancient hospice of Soutra. Traces of it still exist.—*Ord. Sur.*, shs. 25, 33, 1865-63.

Girthhead, an estate, with a mansion, in Wamphray parish, Dumfriesshire, on the left bank of the Annan, $1\frac{1}{2}$ mile S by W of Wamphray station.

Girthon, a parish of SW Kirkcudbrightshire, containing the greater part of the post-town of GATEHOUSE, and traversed across its northern half by $4\frac{1}{2}$ miles of the Dumfries and Portpatrick railway. It is bounded N and NE by Kells, E by Balmaghie and Twynholm, SE by Borgue, SW by Wigtown Bay, W by Anwoth and Kirkmabreck, and NW by Minnigaff. Its utmost length, from N to S, is $14\frac{1}{4}$ miles; its breadth varies between $1\frac{1}{2}$ and $6\frac{1}{2}$ miles; and its area is 34,993 $\frac{1}{4}$ acres, of which 943 $\frac{1}{2}$ are foreshore and 675 $\frac{1}{2}$ water. The river DEE winds

6 miles east-south-eastward along all the boundary with Kells, and from Girthon is fed by a dozen or so of burns; but the drainage mainly belongs to the Water of FLEET, which, with its principal head-stream, traces all the western border, and from the interior receives Little Water of Fleet and numberless lesser tributaries. Four lakes, with their utmost length and breadth and their altitude above sea-level, are Loch Whinyeon ($4\frac{1}{2} \times 4\frac{1}{2}$ furl.; 725 feet), on the Twynholm border; Loch SKERROW ($5\frac{1}{2} \times 4$ furl.; 425 feet), close to the Balmaghie border; Loch Fleet (3×2 furl.; 1120 feet), in the north-western interior; and Loch GRENOCH (2 miles \times 3 furl.; 630 feet), on the Minnigaff border. Three-fourths of the land, comprising all the northern and most of the central division, with a strip along the eastern border, is bleak and heathy upland, with but few spots devoted to tillage or capable of producing corn. The upland consists rather of broad masses, irregularly intersected by water-courses, than of continuous ridges or distinct hills, and rarely rises to mountain altitude. Some of the principal summits, from S to N, are Cairntook Hill (1000 feet), Castramont Hill (700), White Top of Culreoch (1000), Craiglowrie (1079), Craigronald (1634), Craigwhinnie (1367), Auchencloy Hill (684), Shaw Hill (1255), and Round Fell (1319). The rest of the land, comprising a strip along the middle and lower reaches of the Fleet, is chiefly undulating, partly flat or gently sloping, and all of it fertile, finely cultivated, and highly embellished. Granite predominates throughout the uplands, and metamorphic rocks, chiefly clay slate, prevail in the lowlands. Slate has been quarried on Culreoch farm; and a vein of copper ore, on the lands of Enrick, was leased, and for some time worked, by a Welsh company. The soil of the uplands is very poor; that of the lowlands is naturally various, and has been highly improved. About 4000 acres are regularly or occasionally in tillage, and a fair proportion throughout the lowlands is under wood. Three small ancient moats are at Castramont, Enrick, and Bush Park; and at Enrick stood an occasional residence of first the abbots of Tongland, next the bishops of Galloway, which has bequeathed to its site the name of Palace Yard. The Rev. William Erskine, who figures among the worthies in Wodrow's *History of the Sufferings of the Church of Scotland*, was minister of this parish, in which, at Auchencloy, Claverhouse shot four Covenanters, 18 Dec. 1684. Besides the three Faeds, the celebrated artists, already noticed under BARLAY MILL, natives of Girthon were Captain James Murray Denniston (1770-1857), author of *Legends of Galloway*, and Thomas Murray, LL.D. (1792-1872), author of the *Literary History of Galloway*. Mansions, both separately noticed, are Cally and Castramont. Girthon is in the presbytery of Kirkcudbright and synod of Galloway; the living is worth £185. The old church, 2 miles SSE of Gatehouse, is a roofless ruin, with a graveyard, the Broughton vault, and the grave of 'Robert Lennox, who was shot to death by Grier of Lagg, in the parish of Tongland, for his adherence to Scotland's Covenants, 1685.' A little farther S is the site of the Mill of Girthon or the Lake, whose miller was fined in 1300 by Edward I. of England. The present parish church is noticed, with three other places of worship and the schools, under Gatehouse. Pop. (1801) 1727, (1831) 1751, (1861) 1702, (1871) 1536, (1881) 1415, (1891) 1354.—*Ord. Sur.*, shs. 5, 4, 8, 9, 1857-63.

Girvan, a police burgh and a parish in Carrick district, Ayrshire. The town stands on the coast, at the mouth of the Water of Girvan, 10 miles by sea E by S of Ailsa Craig, whilst by the Maybole and Girvan section (1860) of the Glasgow and South-Western railway it is 21½ miles SSW of Ayr and 62 SSW of Glasgow, and by the Girvan and Portpatrick section (1876) 45 NNE of Portpatrick. Its name originally was Invergarvan, in allusion to Girvan Water, which was formerly called the Garvan; and it seems to have been founded in the 11th century, but never till a recent period rose above the condition of a village. Extending southward from the river's mouth along the shore, and overlooked by hills that culminate a mile inland at 827 feet above sea-level,

it enjoys a delightful site, picturesque surroundings, a splendid view of the Firth of Clyde, with Ailsa Craig exactly opposite, and is one of the most delightful and health-giving resorts on the Ayrshire coast. Robert Heron, in his *Journey through the Western Counties of Scotland* in 1792, though liberal enough in praises generally, of Girvan wrote:—'The houses are huts more miserable than those of Ballantrae. They are so low as to seem, at the S end of the village, rather caves dug in the earth than houses built upon it; though, on the NW side and close upon the banks of the river, there are some more decent and commodious houses.' The town has been greatly extended and vastly improved since Heron's day, and it now contains some very fair public buildings and numerous commodious private houses. The sanitary condition of the town is good, a sewage scheme which cost about £5000 having been carried out in 1892. So that, with a fine beach, a good golf course, and many first-rate walks inland, the surrounding country being most interesting, Girvan is rapidly rising in public estimation as a watering-place. A steamer (G. & S.W. Ry. Co.) goes round Ailsa Craig once a week or oftener in summer. The parish church was rebuilt in 1883 at a cost of £4000. The South church, built as a chapel of ease in 1839, and containing 900 sittings, was raised in 1875 to *quoad sacra* status. Other places of worship are a Free church (1844), a U.P. church (1870), Wesleyan Methodists', St John's Episcopal church, and the Roman Catholic church of the Sacred Hearts (1860). Girvan has a post office, with money order, savings bank, insurance, and telegraph departments, branches of the British Linen Co., Commercial, National, Royal, and Union banks, several hotels, a town-hall, assembly rooms, a Young Men's Christian Association, an agricultural society, a lifeboat institution, a gas company, a weekly market on Mondays, and fairs on the first Monday of April and October. The M'Kechnie Institute was the gift of the late Mr Thomas M'Kechnie. It consists of library, ladies' and gentlemen's reading rooms, smoking and committee rooms, and was completed in 1883 at a cost of about £3000. The interest of £1000 left by the late Mrs Crawford of Ardmillan is divided annually among poor householders not receiving parish relief, except £12 to the precentor for teaching ten children sacred music. Hand-loom weaving is still carried on, though not as in 1838, when the number of looms, including a few in the neighbourhood, was no less than 1800, the fabrics woven being a variety of cotton and woollen goods for the manufacturers of Glasgow and Paisley. A harbour, at the mouth of Girvan Water, was formerly capable of admitting only vessels of small burden, but underwent great improvement in 1869-70; while further and more extensive improvements, undertaken by the harbour commissioners in 1881, and completed in 1883, at an expense of about £1200, included the carrying out of a pier from the W side, and of a breakwater from the NE side of the old harbour. As now completed, the harbour resembles that of Eyemouth, and from it large quantities of grain of various kinds are annually exported, chiefly to Glasgow and Liverpool. The trade in coal and lime is important, the mines and quarries for these being numerous in the neighbourhood. The principal trade of the place, however, is the herring fishing, which occurs twice a year, beginning in December and May. A steamer plies backwards and forwards to Glasgow once a week. The wooden bridge across the river has been replaced by an iron carriage bridge built by Sir William Arrol. A burgh of barony under the superiority of the proprietor of BARGANY, Girvan received its first charter in 1696, but did not enjoy burgh privileges till 1785. By the Burgh Police (Scotland) Act of 1892 it is governed by a provost, 2 bailies, and 6 commissioners, whilst the harbour is managed by 8 commissioners. Sheriff small debt courts are held three times a year; and a justice of peace small debt court sits on the first Monday of every month. Municipal constituency (1882) 310, (1895) 1071. Pop. (1871) 4791, (1881) 4505, (1891) 4081. Houses (1891) inhabited 979, vacant 103, building 11.

The parish of Girvan is bounded N by Kirkoswald, NE by Dailly, SE by Barr, S by Colmonell, and W by the Firth of Clyde. Its utmost length, from N to S, is $7\frac{1}{4}$ miles; its breadth, from E to W, varies between $1\frac{3}{4}$ and $5\frac{1}{2}$ miles; and its area is 14,954 acres, of which 322 are foreshore and 52 water. The coast-line, $8\frac{1}{2}$ miles long, is closely skirted by the road to Ballantrae, and, offering few and inconsiderable curvatures, over all but the southernmost $2\frac{1}{2}$ miles is low, with a boulder-strewn beach, covered thickly with seaweed. From Ardwell southwards to Pinhain it is bold and rocky, the road itself attaining 100 feet above sea-level at the southern extremity of the parish, and the surface thence rising rapidly inland to 973 feet at Grey Hill and 734 at Pinhain Hill. The WATER OF GIRVAN winds 1 mile south-south-westward along the Dailly border, then $3\frac{1}{2}$ miles west-south-westward through the interior to its mouth at Girvan harbour; and, at the SE corner of the parish, the STINCHAR traces 1 mile of the boundary with Barr and Colmonell, and from Girvan is fed by the Water of Assel, running 5 miles south-westward, southward, and south-eastward. The surface generally is hilly, from N to S attaining 275 feet above sea-level near Boghead, 639 near Brae, 970 at Saugh Hill, 923 at Trower Hill, 883 near Laggan, 701 at Byne Hill, and 971 at Kirkland Hill, which culminates right on the Barr border. The tract to the N of the town is flat in places, but on the whole presents an undulating appearance, and is fertile, well cultivated, and finely embellished. The southern district is to a large extent pastoral. Sandstone conglomerate is the predominant rock, and extends for a considerable distance along the beach; whinstone, both grey and blue, is sufficiently plentiful and accessible to furnish material for all the local buildings; and limestone has been worked pretty largely in the E. Coal, though abundant in Dailly, does not seem to pass within the limits of Girvan; but excellent copper ore has been found, and is supposed to exist in considerable quantity; whilst gypsum, shell marl, and coarse potter's clay are also found; and the last has long been extensively used for tile-work. The soil of the arable lands has much diversity of character, but is mostly a dry light mould on a sandy or gravelly bottom. Vestiges of five ancient camps occur near the sea, one of them engirt by two concentric ditches. Of several pre-Reformation chapels, the chief were Kirkdomine in the SE and Chapel-Donan in the N. St Cuthbert's itself, the ancient parish church, was held by Crossraguel Abbey; its graveyard in 1611 was the scene of a singular episode. A murdered retainer of Kennedy of Colzean had been buried here, when his master the laird was moved by a dream to have him disinterred, that all who lived near might come and touch the corpse. All did so but John Mure of Auchendrane and his son, whom none suspected, till young Mary Mure, his daughter, perceiving the crowd, went in among them. When she came near the dead body, the blood started from it, whereon her father was apprehended and put to the torture. ARDMILLAN is the chief mansion. Girvan is in the presbytery of Ayr and synod of Glasgow and Ayr; the living is worth £409. Four public schools—the Burgh, Assel, Donne, and Girvan—and a Roman Catholic school, with respective accommodation for 838, 50, 118, 301, and 181 children, have an average attendance of about 470, 50, 90, 240, and 100, and grants amounting to over £520, £64, £78, £250, and £100. Pop. (1801) 2260, (1831) 6430, (1861) 7053, (1871) 5685, (1881) 5480, (1891) 4906, of whom 2601 were in Girvan ecclesiastical parish, and 2305 in that of South Church.—*Ord. Sur.*, shs. 7, 8, 1863.

Girvan, Water of, a stream of Carrick, Ayrshire, rising in the E of Barr parish, at an altitude of 2050 feet above sea-level, $5\frac{1}{2}$ miles WSW of the head of Loch Doon. Thence it winds $17\frac{3}{4}$ miles north-north-westward to the neighbourhood of Kirkmichael village, and thence again 18 miles south-westward, till it falls into the Firth of Clyde at Girvan town, only 14 miles WNW of its source as the crow flies. It traverses or skirts the

parishes of Straiton, Kirkmichael, Maybole, Kirkoswald, Dailly, and Girvan; and in the first of these it flows through five lakes, the largest of which are Lochs Lure and BRADAN. The scenery hereabouts is bleak and cheerless, but lower down the Girvan's course lies through the fine demesnes of Blairquhan, Dalquharan, Bargany, and Killochan—boyish haunts these of the great landscape painter, Thomson of Duddingston. It is closely followed by the Maybo'e and Girvan railway, from a point $1\frac{1}{2}$ mile SW of Crosshill village; and it contains good store of trout, with occasional salmon.—*Ord. Sur.*, shs. 8, 14, 8, 7, 1863.

Girvan and Portpatrick Railway, The, extends from Girvan to a junction with the Castle-Douglas and Portpatrick railway at East Challoch, near Dunragit, in the parish of Glenluce and county of Wigtown. In 1846 there was projected the Glasgow and Belfast Union railway, a line proposed to leave Ayr for Girvan and proceed southwards into Wigtownshire. The powers then obtained only covered the line to Maybole and Girvan, although the extended line was in contemplation. The project was allowed to lapse, and the line to Maybole was not opened till 1856 (under an act obtained in 1854); in 1860, under a later act, the line was opened to Girvan. In 1865 the Girvan and Portpatrick railway was sanctioned, but the matter lay in abeyance; and in 1870 the time for completing the line was extended, a further extension of time being obtained in 1873. The first sod was cut in Sept. 1871, and in Oct. 1876 the railway was opened for traffic. The line is $30\frac{3}{4}$ miles long, with a single line of rails. Crossing Girvan Water, it ascends a steep gradient for 4 miles, passes through a tunnel of 500 yards, and crosses the Stinchar and the Dhuisk on important bridges. After passing Barrhill it follows the valley of Cross Water of Luce, and crosses the Luce by a viaduct of ten arches. In the course of the construction of the line, the works were seriously damaged by floods; and, from an estimated cost of £330,000, the capital expenditure advanced to a sum of £532,000. The railway was at first worked by the Glasgow and South-Western Railway Company under an experimental agreement, and afterwards on stated terms. The railway, however, having fallen into financial difficulties, a judicial factor was appointed by the Court of Session in 1881; and the line, which for a time was used as a rapid through route between Glasgow and Stranraer, was, after being shut for a brief period, resumed for the accommodation of local traffic. In 1882, under a new act, powers were obtained to reconstruct the company and to develop its capabilities as a through line. Again, in 1887, another act was obtained to incorporate a company for 'maintaining and working this line, and for other purposes. Finally, in 1892, it became the property of the Glasgow and South-Western Railway Co. The stations on the line are Girvan, Pinmore, Pinwherry, Barrhill, Glenwhilly, and New Luce.

Gizzen Briggs. See GEYZEN BRIGGS.

Glack, a mansion in Daviot parish, Aberdeenshire, $4\frac{1}{2}$ miles W by N of Old Meldrum. Erected in 1875 at a cost of £10,000, it is a Scottish Baronial edifice of block granite, with a tower 80 feet high.—*Ord. Sur.*, sh. 86, 1876.

Glack, a defile and pass between Newtyle and Hatton hills in Newtyle parish, Forfarshire, giving communication between Strathmore and Strathdeighty.

Glackharnis, a deep defile in Aberdour parish, Banffshire, between Ben Rinnes and the Conval mountains. It has an impressive character from at once its great length, its uniform bottom breadth, and the regular acclivity and vast height of its mountain flanks.

Glackingdaine, a small bay and a ruined Scandinavian castle in Ulva island, Argyllshire. The castle, crowning a high steep rocky islet, had a causeway leading from the rock to the island at low tide, and still is represented by walls and rubbish of its own structure and by remains of the causeway.

Gladhouse Reservoir, on the course of the principal head-stream of the South Esk river in Temple parish, Edinburghshire, was opened in 1879.

Gladney or **Gladney**, a village in the southern extremity of Cupar parish, Fife, adjacent to Ceres. Pop. (1861) 148, (1871) 229, (1881) 115, (1891) 118.

Gladsmuir, a village and a parish in the W of Haddingtonshire. The village stands 355 feet above sea-level, near the eastern verge of the parish, 2½ miles SSE of Longniddry station, on the Haddington branch of the North British railway, 4 W by S of Haddington, and 3½ E of Tranent, with a post office under Macmerry. Crowning the ridge between Haddington and Tranent, it commands a superb panoramic view of the Lothians, the Firth of Forth, and the southern shore of Fife.

The parish, constituted in 1692 out of portions of Haddington, Tranent, and Aberlady, contains also the villages of Longniddry, Samuelston, and Penston. It is bounded NW by the Firth of Forth, N by Aberlady, E by Haddington, S by Pencaitland, and W by Tranent. Its utmost length, from N to S, is 4½ miles; its utmost breadth is 4 miles; and its area is 7165½ acres, of which 120½ are foreshore. A small burn, running to the Firth, traces much of the Aberlady border; another traces for 1¾ mile the boundary with Tranent; two others rise in and traverse the interior; and the river TYNE winds 1½ mile east-north-eastward along the Haddington border. The coast-line, 1 mile long, is low but rocky; and from it the surface rises gently to 371 feet at Penston and 400 at the south-western corner of the parish, whilst sinking again south-eastward to 190 feet along the Tyne. So much of the area was in a marshy condition as to look almost like a continuous fen, but now has been so thoroughly reclaimed as to be everywhere in a state of high cultivation. The ridgy tract, too, was for ages an open moor, but that likewise has been well reclaimed. The rocks belong chiefly to the Carboniferous formation, but are intersected, from E to W, by a remarkable trap dyke, which has been largely quarried for road metal, and for building has abundant sandstone. Limestone and ironstone have been worked; and coal abounds of excellent quality, occurring in some places in seams from 4 to 5 feet thick. It seems, in the vicinity of Penston, to have been mined for upwards of five centuries. Fireclay also is plentiful. The soil is sandy on the immediate seaboard, a fertile loam towards Longniddry, clayey in the middle tract, and loamy along the Tyne. About 200 acres are under wood; nearly 1200 are in pasture; and all the rest of the land is either regularly or occasionally in tillage. The mansion of the Douglasses of Longniddry, who acted a distinguished part in the Reformation, and invited John Knox to their home when he was driven away from St Andrews, is now represented by only a low round mound. A ruined chapel, called John Knox's Kirk because the great Reformer sometimes preached in it, stands a little E of Longniddry village. A church was built, in 1650, at Thrieplaw, near the boundary with Pencaitland, but, on the constituting of the parish, fell into disuse, and has utterly disappeared. William Robertson, D.D. (1721-93), who became Principal of Edinburgh University, was minister of Gladsmuir from 1743 to 1758, and wrote here the greater part of his *History of Scotland*; and George Heriot (1563-1624), the founder of the hospital that bears his name in Edinburgh, was the son of a native of Gladsmuir, and himself has been claimed as a native. Under PRESNONPANS is noticed the battle, sometimes called of Gladsmuir. ELVINGSTON is the chief mansion. Gladsmuir is in the presbytery of Haddington and synod of Lothian and Tweeddale; the living is worth £300. The parish church, at the village, a handsome edifice of 1850, and successor to one of 1695, was destroyed by fire in 1886, and afterwards rebuilt. Four schools—Gladsmuir, Longniddry, Macmerry, and Samuelston—with respective accommodation for 113, 144, 140, and 61 children, have an average attendance of about 50, 90, 100, and 30, and grants of over £40, £80, £70, and £35. Valuation (1879) £18,648, 6s., (1883) £16,250, 18s., (1892) £13,044, 19s. 5d. Pop. (1801) 1460, (1831) 1658, (1861) 1915, (1871) 1863, (1881) 1747, (1891) 1604.—*Ord. Sur.*, sh. 33, 1863.

Gladney. See GLADNEY.

Glaisscean or **Glashan**, a lake in Kilmichael-Glassary parish, Argyllshire. Lying 340 feet above sea-level, it has an utmost length and breadth of 1¼ and ½ mile, abounds in smallish trout, lies on moorland, and sends off a stream 1½ mile south-south-eastward to Loch Awe at Lochgair.—*Ord. Sur.* sh. 37, 1876.

Glaitness. See KIRKWALL.

Glamaig or **Ben Glamaig**, a conical mountain (2670 feet) in Portree parish, Isle of Skye, Inverness-shire, on the S side of Loch Sligachan, in the immediate neighbourhood of the Cuchullin Mountains. It has round bronze-hued shoulders; its sides are channelled by innumerable water-courses; great heaps of shingle lie scattered around its base; and its summit is washed bare of soil and vegetation.

Glamis, a village and a parish of SW Forfarshire. The village stands, 300 feet above sea-level, on the left bank of Glamis Burn, 11 miles N of Dundee, and 1½ mile SSE of Glamis station on the Scottish Midland section of the Caledonian, this station being 5½ miles WSW of Forfar and 27 NE of Perth. It serves as a small centre of traffic for a tract of country around it, and has a post, money order, and telegraph office, a branch of the Royal Bank, 2 sawmills, a school, Established and Episcopal churches, a masonic hall, a hotel, and fairs on the first Wednesday of April and May, the Wednesdays after 26 May and 22 November, and the Saturday of October before Kirriemuir.

The parish contains also the villages or hamlets of Charleston, Newton, Milton, Thornton, Grasshouses, and Arniefoul. It is bounded N by Kirriemuir, NE by Forfar, E by Kinnettles and Inverarity, SE by Tealing, SW by Auchterhouse and Newtyle, W by Eassie and Nevay, and NW by Airlie. Its utmost length, from N to S, is 6¾ miles; its breadth varies between 2 and 5¾ miles; and its area is 14,483½ acres, of which 136½ are water. From the Loch of FORFAR (9 × 2 furl.; 171 feet) in the NE corner of the parish, DEAN Water flows 5¾ miles west-south-westward, chiefly through the northern interior, but 2 miles along the Kinnettles border, which also is traced for 2½ miles north-westward by ARRY or Kerbit Water, from just above Douglstown to its mouth. Glamis Burn, another of the Dean Water's affluents, rises close to the southern border at 910 feet above sea-level, and thence winds 6¾ miles north-by-eastward through the interior along Glen Ogilvie; just above Glamis village it breaks through a ridge of high ground, and forms a fine cascade. And EASSIE Burn curves 2½ miles northward through the south-western extremity, then 1¼ mile along the boundary with Eassie. (See DENOON.) Sinking along Dean Water to 160 feet above sea-level, the surface thence rises east-north-eastward to 224 feet at Broom Hill and 232 near Drumglay, southward to 664 at Hunters Hill, 700 at West Cram Hill, 925 at Berry Hillcock, 754 near Kilmundie, 1115 at Carlunie Hill, 1116 at Ark Hill, 1242 at Gallow Hill, and 1493 at Craigowl. The northern district, cut off by Dean Water, presents a gently undulating surface, and lies entirely within Strathmore, to which belongs also the northern portion of the central district. The rest of Glamis, lying among the Sidlaws, comprises three parallel hill-ranges, that extend from NNE to SSW, and enclose the two hill-vaies of Glen Ogilvie and Denoon. The northern district, as forming part of Strathmore, is all an unbroken belt of Old Red sandstone; in the southern or Sidlaw portion, the rocks are mainly eruptive. Both trap and sandstone have been largely quarried; and some veins of lead ore, in the eastern vicinity of Glamis village, were worked for a short time in the latter part of the 18th century. Traces of carbonate of copper occur in the trap rocks of the hills; and porphyry, jasper, and Lydian stone have been found. The soil in Strathmore is generally a deep, sound, reddish loam, heavier and richer on the lower slopes than in the bottom of the valley; on the Sidlaws, is chiefly of a moorish character, covered with heath or swampy. If Skene is right in maintaining that King

Malcolm was not murdered, the following is a curious instance of misapplied ingenuity. Before the manse door stands a sculptured obelisk—'King Malcolm's Gravestone'—'erected, as is generally supposed, in memory of the murder of Malcolm II. On one side of it is an elaborately carved Cross, and near the base are the figures of two men, who, by their attitude, seem to be forming the bloody conspiracy. A lion and a centaur, on the upper part, represent the barbarity of the crime. On the reverse, fishes of several sorts appear, a symbol of Loch Forfar, in which, by missing their way, the assassins were drowned. On Hunters Hill is another small obelisk or stone, on which are delineated various symbolical characters similar to those of the larger obelisk, and supposed to be intended as representations of the same facts. At a mile's distance from the village of Glamis, near a place called Cossans, is a third obelisk, vulgarly styled St Orland's Stone, still more curious than the others, and possibly akin to them in object. On one side is a cross rudely flowered and chequered; on the other, four men on horseback appear to be pursuing their way with the utmost possible speed, while the horse of one of them is trampling under foot a wild boar; and on the lower part of the stone is the figure of an animal somewhat like a dragon. Though no probable decipherment has been made of these symbols, they have been conjectured to represent the officers of justice in pursuit of Malcolm's murderers.' GLAMIS CASTLE is the chief feature of the parish; and the Earl of Strathmore is sole proprietor. Glamis is in the presbytery of Forfar and synod of Angus and Mearns; the living is worth £307. The parish church, at the village, was built in 1792. Glamis public and Glen Ogilvie or Milton public schools, with respective accommodation for 200 and 68 children, have an average attendance of about 130 and 50, and grants of nearly £120 and £50. Valuation (1857) £11,026, (1882) £13,934, 15s., (1892) £11,118, 19s., plus £2206 for railway and water-works. Pop. (1801) 1931, (1851) 1999, (1851) 2152, (1871) 1813, (1881) 1631, (1891) 1464.—*Ord. Sur.*, shs. 56, 57, 48, 1870-68.

Glamis Castle, the seat of the Earl of Strathmore, in Glamis parish, SW Forfarshire, near the left bank of Dean Water, 7 furlongs N by E of the village. Ascribed by tradition to the 10th or 11th century, it mainly consists in its present form of reconstructions and additions of the 16th, 17th, and 18th centuries, and is a stately pile in the style of Chautilly and other great French chateaux, such as the Chevalier, who stayed here in January 1716, declared he had not seen matched upon the Continent. The central part is a great square tower, whose top is gained by a flight of 143 steps, and from which project three wings; and the whole exterior is profusely adorned with sculptures, corbellings, battlements, pinnacles, pepper-box turrets, and the like. In front stands a curious old sun-dial, presenting an extraordinary number of faces to the sun. Withiu, the most interesting features are the great hall, bearing date 1621, and containing portraits of Charles II., James VII., Claverhouse, Lauderdale, etc.; a quaint little Jacobean chapel, with paintings by De Witt; and 'Sir Walter Scott's Bedroom,' of which, in *Demonology and Witchcraft*, Sir Walter writes:—'I was only 19 or 20 years old when I happened to pass a night in this magnificent baronial castle. The hoary old pile contains much in its appearance, and in the traditions connected with it, impressive to the imagination. It was the scene of the murder of a Scottish king of great antiquity, not indeed the gracious Duncan, with whom the name naturally associates it, but Malcolm II.* It contains also a curious monu-

* 'The later chronicles,' says Skene, 'state that Malcolm was slain by treachery at Glamis,—and Fordun adds by some of the stock of Constantine and Grym; but this tale is quite inconsistent with the early notices of his death, which clearly imply that he died a natural death. Thus the contemporary chronicler, Marianus Scotus, writes simply: "1034 Malcolm, king of Scotia, died 25 November."' In the secret chamber that follows, according to olden tradition, Earl Beattie, of the Crawford line, still drees his weird—to play at cards until the day of doom.

ment of the peril of feudal times, being a secret chamber, the entrance of which, by the law or custom of the family, must only be known to three persons at once, viz., the Earl of Strathmore, his heir-apparent, and any third person whom they may take into their confidence. The extreme antiquity of the building is vouched by the immense thickness of the walls and the wild and straggling arrangement of the accommodation within doors. I was conducted to my apartment in a distant corner of the building; and I must own that, as I heard door after door shut, after my conductor had retired, I began to consider myself too far from the living, and somewhat too near the dead. We had passed through what is called the "King's Room," a vaulted apartment garished with stags' antlers and similar trophies of the chase, and said by tradition to be the spot of Malcolm's murder, and I had an idea of the vicinity of the castle chapel. In spite of the truth of history, the whole night scene in Macbeth's castle rushed at once upon my mind, and struck my imagination more forcibly than even when I have seen its terrors represented by the late John Kemble and his inimitable sister.' The thange of Glamis possesses a fictitious interest from its imaginary connection with Macbeth; in history we do not hear of it till 1264 (Skene's *Celtic Scotland*, iii. 266, 1880). It seems to have been held by the Crown from the War of Independence till 1372, when Robert II. erected it into a barony, and granted it to John Lyon, whose grandson Sir Patrick was created a peer by the title of Lord Glamis in 1445. John, sixth Lord, who died in 1528, had wedded Janet Douglas, a sister of the banished Earl of Angus; and she, in 1537, was burned on the Castlehill of Edinburgh on a trumped-up charge of conspiring the destruction of James V. by poison. Her son, the young seventh Lord, was involved in the charge, and did not recover title and estates till 1543. John, eighth Lord, chancellor of Scotland, was shot at Stirling in a chance fray between his followers and the Earl of Crawford's (1578); his brother, the Master of Glamis, was a chief conspirator in the Raid of Ruthven (1582). Patrick, ninth Lord, was created Earl of Kinghorne in 1606; and in 1677 Patrick, third Earl, obtained a charter providing that himself and his heirs should in all future ages be styled Earls of Strathmore and Kinghorne, Viscounts Lyon, Barons Glamis, etc. This Patrick retired from public life at the Revolution (1688), and 'spent,' one is told, 'the last six years of his life in improving his estates and in repairing and modernising his castle of Glamis under the direction of the celebrated Inigo Jones,' who died, however, in 1652. John, fourth Earl, was father of 'four pretty boys,' who all in turn succeeded to the earldom—John, killed at Sheriffmuir, 1715; Charles, killed in a brawl at Forfar, 1728; James, died 1735; and Thomas, died 1753. John, ninth Earl (1737-76), married Mary Eleanor Bowes, heiress of £1,040,000; and the present and thirteenth Earl, Claude Bowes Lyon (b. 1824; suc. 1865), is their grandson. He is twenty-first Lord Glamis, but thirteenth only in descent from Patrick, first holder of that title. The Glamis estate—22,850 acres—comprises 16,850 acres of arable land, 4000 of natural pasture, and 2000 under wood. Since 1860, at an outlay of over £43,000, it has undergone great improvements in the way of building, draining, fencing, reclaiming, and road-making. Lord Strathmore's Clydesdale stud, dating from 1869, may also be noticed. See Andrew Jervise's *Glamis, Its History and Antiquities* (Edinb. 1861); James C. Guthrie's *Vale of Strathmore* (Edinb. 1875); and pp. 91-94 of *Trans. Highl. and Ag. Soc.* (1881).

Glanasnar, a pastoral islet of Southend parish, Argyllshire, adjacent to the NE side of Sanda island.

Glanderston, an estate, with a mansion of 1697, a farmhouse now, in Neilston parish, Renfrewshire, 2 miles S of Barrhead. It was given in 1507 by the first Earl of Lennox to his brother John Stewart, and, going by marriage to Mure of Caldwell, afterwards passed to other proprietors.

Glasbeinn. See GLASVEIN.

Glascune, an ancient baronial fortalice on the E border of Kinloch parish, Perthshire, crowning the steep bank of a ravine at the boundary with Blairgowrie parish. The stronghold of the powerful family of Blair, it was once a place of considerable strength, both natural and artificial, and is now represented by some what imposing ruins.

Glasford. See GLASSFORD.

Glasgow, the commercial and manufacturing capital of Scotland, was formerly for the most part in the lower ward of Lanarkshire and to a small extent in Renfrewshire. By the Orders of the Boundary Commissioners appointed under the Local Government (Scotland) Act 1889, it was placed wholly within Lanarkshire; and in 1893 the entire area within the municipal boundary was constituted a county of a city, with independent jurisdiction. As regards population it is, when taken with its suburbs, the second city of the British islands. It stands on both banks of the river Clyde, 14 miles from its mouth at Dumbarton; but the larger portion of the city is on the N side of the river; latitude $55^{\circ} 51' 32''$ N, and longitude $4^{\circ} 17' 54''$ W. Its distance as the crow flies from John o' Groat's House is 197 miles, and from London 348. It is NW by N of London and Carlisle, SW of Aberdeen, Perth, and Stirling, SW by W of Duudee, W by S of Edinburgh, and N by W of Dumfries. By road it is $42\frac{1}{2}$ miles from Edinburgh, 23 from Greenock, 34 from Ayr, 79 from Dumfries, and 396 from London; while by railway its distance is 7 miles from Paisley, 21 from Falkirk, 23 from Greenock, 29 from Stirling, 24 from Kilmarnock, $40\frac{1}{2}$ from Ayr, $47\frac{1}{2}$ from Edinburgh, $63\frac{1}{2}$ from Perth, $104\frac{1}{2}$ from Berwick-on-Tweed, 105 from Carlisle, 152 from Aberdeen, 207 from Inverness, $401\frac{1}{2}$ from London by the West Coast route, 423 by the Midland, and $448\frac{1}{2}$ by the East Coast route.

Site.—At no very remote time in the geological history of the country, but long before the historic period, the lower part of the valley of the Clyde formed the bottom of an estuary. This estuary opened to the sea by a narrow strait near Erskine, and embraced Loch Lomond and the valleys about on the one hand, while on the other it extended as far as Johnstone and Paisley. Narrowing at Ibrox and Pollokshields, it again widened out, and, sweeping round by the Cathkin and Cathcart Hills, formed a wide bay where Glasgow Green and Bridgeton now are. The mouth of the river was then probably about Bothwell or Rutherglen. That the estuary was marine the list of shells found in the deposits in the valley abundantly proves. That the levels of the land were much the same as at present during the Roman occupation is shown by the termination of the Roman Wall; but that prior to this, and yet subsequent to the first appearance of man in Clydesdale, there must have been an upheaval of the land is shown by relics dug up on the present site of Glasgow. Among other remains a number of canoes have been found, some of them 300 feet distant from the modern bed of the river and 19 feet below the present surface. In the eighty years prior to 1855, no less than seventeen canoes were dug out of the silt—one in 1780 in digging the foundations of St Enoch's Church, and another later near the Cross. In 1824 one was found at Stockwell Street, and another in the Drygate behind the prison. Twelve were found on the lands of Springfield, on the S side, and two at Clydehaugh in 1852. Of all these, one was in a vertical position, with the prow up, as if it had sunk in a storm; while another was bottom up, as if it had been capsized. Since 1855 other three at least have been found. All this points to a considerable rise within the human period, and accounts for the traces of ancient terraces that are to be seen along some portions of the higher grounds, as well as for the nature of the site of the lower part of the city, which, especially towards the E and S, is very flat, as it also is on the N along the side of the river. Nowhere in these districts is it more than a few feet above the level of spring tides. The ground on the N side of the river beyond the flat strip and to the W is variable and undulating, there

being a number of elliptical ridges mostly with their longer axes parallel to the course of the river, but in the W trending somewhat more in a N and S direction. They rise with considerable rapidity to heights of from 100 to 250 feet, the principal being Blythswood Hill (195), Woodlands Hill (153), Hillhead (157), Garnet Hill (176), the Observatory site (179), the Necropolis (225), and Garngad Hill (252). The city is intersected and divided into two unequal portions by the river Clyde, which has within it a course of about 6 miles, following the windings from the E at Dalmarnock Bridge to the mouth of the Kelvin on the W. The Molendinar Burn swept round the NE, passed between the Cathedral and the Necropolis in a deep ravine, and afterwards crossed the low ground to the Clyde; but this has now become an underground sewer, though the ravine still partially remains. The river Kelvin approaches from the NW through a picturesque and well-wooded dell, skirts the base of the height on which the Botanic Gardens are laid out, and, sweeping to the southward, passes through the West End or Kelvingrove Park, between the high grounds to the E of the Park and Gilmore Hill on the W, and then, bending to the SW, enters the Clyde opposite Govan at Govan ferry. Glasgow has about its site none of the picturesque features that give such beauty and well-marked character to Edinburgh. The features of the views within all the low parts of the city, and even in the suburbs, are mainly architectural, and always distinctly modified by the smoke and turmoil of a great seat of commerce and manufacture. From a few of the higher spots—particularly from Sighthill Cemetery, Garngad Hill, the Necropolis, Blythswood Hill, Garnet Hill, the upper part of Kelvingrove Park, and Gilmore Hill in front of the new University buildings—there are, however, in clear states of the atmosphere, views of considerable picturesqueness, the foreground of the city, with its streets and buildings and bustle, being backed by glimpses of the country and shut in by distant hills.

Extent.—The exact extent of Glasgow is somewhat difficult to define, as the districts to be embraced by the name are variously understood. The compact central portion of it measures about $2\frac{1}{2}$ miles by $1\frac{1}{2}$; the area covered by buildings, but exclusive of detached parts and straggling outskirts, measures about 4 miles from E to W and about 3 from N to S. The area comprehended in the returns of population includes, besides the separate burghs of Partick, Govan, and Kinning Park, the detached suburbs of Tollcross and Shettleston, and comprises $21,336\frac{1}{2}$ acres. It measures about $9\frac{1}{2}$ miles from E to W, and about $5\frac{1}{2}$ from N to S. The royal burgh lies all on the right bank of the Clyde, and comprises $988\frac{1}{2}$ acres. The old royalty also lies all on the right bank of the river, and includes the royal burgh as well as very considerable suburbs and some tracts of open country; it comprises $2336\frac{1}{2}$ acres. Prior to 1872 the municipal and parliamentary burgh excluded much of the old royalty, but included tracts beyond it both N and S of the Clyde, and comprised $5034\frac{1}{2}$ acres; but by an Act of Parliament passed in that year the boundaries were largely extended on the N and W, so that the total area within the line was increased to 6111 acres, the portions added including the Alexandra Park and parts of St Rollox, Sighthill, Springburn, Cowlares, Keppoch Hill, and the Kelvingrove Park, with the lands of Gilmore Hill belonging to the University, and the Western Infirmary. In 1891 six of the suburban burghs which had for nearly twenty years formed a tightly-undefinable girdle round the parent city, consented to annexation, and by an Act of Parliament to which the royal assent was given on 21 July, and which came into operation on 1 Nov. in the year mentioned, a large extension of the municipality was sanctioned, by which not only were the burghs of Govanhill, Crosshill, East and West Pollokshields, Hillhead, and Maryhill (1998 acres) added to the city, but also the residential districts of Polmadie, Mount Florida, Langside, Crossmyloof, Shawlands, Strathbungo, Bellahouston, Kelvinside, Possilpark, Springburn (including Barnhill), and West-

thorn (3752 acres), so that the area of what may be termed 'Greater Glasgow' now covers 11,861 acres. The burghs of Kinning Park, Govan, and Partick resisted annexation and still remain independent; but were these and the landward part of the parish of Govan to be added to the city, to which they naturally belong, the acreage would be increased to 15,659. The extension involved an addition of 9 to the 16 former wards of the city, the seventeenth being formed by Govanhill, the eighteenth by Polmadie and Crosshill, the nineteenth by Langside, Mount Florida, and Shawlands; the twentieth by Strathbungo, the twenty-first by Pollokshields and Bellahouston, the twenty-second by Hillhead, the twenty-third by Kelvinside, the twenty-fourth by Maryhill, Gilshochill, and Wyndford; and the twenty-fifth by the NE part of Springburn, Possilpark, Blochairn, Broomfield, Barnhill, and Balgray. The wards of the city were rearranged and reconstituted in 1896, and an act of Parliament was passed to bring the parliamentary boundaries into conformity with the new arrangement. The length of the municipality from Shettleston Sheddings on the E to beyond Jordanhill station on the W, and from the Kelvin near Sandyflat on the N to beyond Langside on the S is about 6 miles in each case, and the total length of the boundary line is over 24 miles....

Appearance.—A stranger entering Glasgow by any of the ordinary routes is not likely to be favourably impressed by it. By the Edinburgh and Glasgow branch of the North British system and by the northern branch of the Caledonian, he enters through dark and smoky tunnels. By the Bathgate branch of the North British, he enters through the dingy region of Parkhead, with its rolling-mill and forge; while, by the southern branch of the Caledonian, the approach lies through murky mineral fields, amid the blaze of iron-works. By the Glasgow and South-Western line, he approaches amid houses of an inferior description. If the visitor come by road—excepting the approach by the Great Western Road—it is much the same; while if he come by the river, long ere reaching the city he has left the beauties of the Clyde behind, and finds himself moving slowly along a river which is not at all pure or sweet, amid a motley array of shipbuilding yards and engineering establishments resounding to the rattling of many hammers. No sooner, however, does he reach the centre of the city than he finds a vast difference in the character of the streets and in the surroundings, and sees on every hand buildings displaying both beauty and taste. Few exterior views of the city or of parts of it are interesting; and from the fact that no exterior view of it as a whole can be got, it is difficult to carry away from Glasgow any general impression. The best of the exterior views is from the Cathkin Hills, and they are too far off (3 miles) to allow of a distinct idea.

Lines of Street and Districts.—The city had its origin on the high ground adjoining the western side of the Molendinar Burn ravine, nearly a mile N of the Clyde; and as any extension immediately eastward was impracticable in consequence of the opposite side of the ravine being flanked by steep rising ground, the earliest enlargements took place over rapid slopes to the SE and SW to the flat ground towards the bank of the river. From this the extensions, which, till the latter part of last century, constituted the main bulk of the city, passed southward to an ancient bridge across the Clyde on the site of the present Victoria Bridge. The central line of thoroughfare through these extensions was the Bell o' the Brae (High Street NE of its intersection with George Street), leading to the flat ground, and then continuously High Street, Saltmarket, and Bridgegate to the bridge. This was intersected at the S end of High Street at the Cross by a transverse line of streets running E and W, Gallowgate striking off to the E and Trongate to the W. The principal extensions of the latter part of the 18th century and the early part of the 19th century went westward, along the plain over all the space between the high ground and the river, the main thoroughfares being George Street, along the base

of the high ground; Argyle Street, a continuation of the Trongate westward; and a number of transverse streets running in a direction nearly parallel to High Street and Saltmarket. Other extensions of contemporary date went eastward along the sides of the Gallowgate, and thence spread still farther to the E and SE, forming suburbs; while a small suburb of ancient date, at the S end of the bridge across the Clyde, spread rapidly E and S and W. The more recent extensions which have taken place to the N and NE, very largely to the S, and most of all to the W, have been very wide, so much so indeed that they have not only taken in outlying suburbs of some antiquity, but have also created new ones of considerable size; whilst the lines of streets exhibit an amount of imposing architecture in public buildings, works, warehouses, and private houses of much greater account than that of all the previous portions of the city. The westward extension on the N bank of the river, which reaches from about the line of Hope Street to nearly 2 miles W of the Kelvin, is the finest of all, and, consisting mainly of elegant private residences, with places of business and public buildings interspersed, constitutes on the whole a West End somewhat similar to the West End of London. This portion of the city has the great advantage of including the heights at Blythswood Square and Garnet Hill, the high grounds to the E of Kelvingrove Park and Gilmore Hill, with the reaches of the Kelvin between; and is comparatively free from the smoke and turmoil that prevail in most of the other parts of the city. It offers indeed, along with the suburban districts, so many advantages for residence that probably ere long, out of business hours, the central portion of Glasgow will be as little inhabited as the city in London, and the whole area given over to business purposes.

From the outline of the growth of the streets of Glasgow just given, it will be evident that the older and more irregular part of the city, with the usual closes and narrow and crooked streets, will lie to the E of the Cross, while the districts to the W, N, and S show greater regularity of plan, the streets in most cases intersecting at right angles, though the branching of some of the main roads causes in many places minor deviations by the formation of triangular and irregularly shaped blocks. As might be expected from the course of the river Clyde, the main lines of thoroughfare run in a direction more or less from E to W, with cross streets from N to S; but this regularity is best marked in the districts on the S side and between Argyle Street and George Street and Argyle Street and Sauchiehall Street.

In the eastern district, extending for fully a mile in length and with an average breadth of 2½ furlongs, is the public park of Glasgow Green, all that now remains of the old common ground. It is bounded on the N partly by somewhat ordinary looking streets, with factories, and partly by neat terraces. The streets leading westward are spacious, and for more than half a mile are not encumbered by buildings next the river bank. Beyond this the sheds for the traffic at the harbour are close to the Clyde. The areas at the College Station E of High Street, and of George and St Enoch's Squares, break in this district the prevailing density of the street masses. The West End district displays a fine assemblage of handsome streets, terraces, and crescents, intermixed with open ground and spaces laid out with shrubs. The chief lines of thoroughfare from N to S are by Springburn Road, Castle Street, High Street, Saltmarket, Crown Street, and Cathcart Road in the E; and by Garscube or New City Road, Cowcaddens, Renfield Street, Union Street, Jamaica Street, Glasgow Bridge, Bridge Street, and Eglinton Street in the centre and towards the W; and subsidiary lines are by Port Dundas Road and Buchanan Street, and by Glassford Street, Stockwell Street, Victoria Bridge, Main Street (Gorbals), and Pollokshaws Road. The main line of thoroughfare from E to W is by Great Eastern Road, Gallowgate, Trongate, Argyle Street, Main Street (Anderston), and Dumbarton Road. There are also subsidiary lines along both banks of the river,

and by Stirling Road, Cathedral Street, Bath Street; by Parliamentary Road and Sauchiehall Street; and by Duke Street, George Street, St Vincent Place, Renfield Street, Cowcaddens, and Great Western Road. The great part of the streets on the S side are, as will be seen from the historical section, much more modern than the central part of the city. The compact districts of the city and the continuous suburbs on the outskirts have separate names, and were either originally separate villages or took their names from separate estates. On the N are Cowcaddens—which takes its name from being the part of the common land which was set apart for the feeding of the town's cattle—Port Dundas, St Rollox—a corruption of St Roche, who had in the district a chapel noticed in the historical section—and Dennistoun; farther N from W to E are Maryhill, Ruchill Park, Possilpark, Rockvilla, Sighthill, and Springburn; on the E Calton—an old barony—Camlachie, Mile-End, Bridgeton, and Parkhead; on the S Gorbals, which has various subdivisions. The lands of the last district, which form an old barony, were left in 1650 by Sir George Douglas in trust to the magistrates, one-half for Hutcheson's Hospital, one-fourth for the Trades House, and one-fourth for the city. The lands were divided in 1789, and the part acquired by the hospital was called Hutchesontown; what fell to the Trades House, Tradeston. Lauriston was built on the hospital ground in the beginning of the present century, and Kingston about the same time on the part belonging to the council. Still farther S from E to W are Polmadie, Govanhill, Crosshill, and Mount Florida; Strathbungo, Crossmyloof, Langside, and Shawlands; and East and West Pollokshields. On the W are Blythswoodholm—from the ancient barony of Blythswood; Anderston—from Mr Anderson, who was proprietor of the Stobeross lands in 1725, and laid out the plan of the original village; Finnieston—named after Mr Finnie, a tutor in the family of Mr Orr, who had bought the estate of Anderston, and who laid out a plan for a village about 1765; Sandyford, Kelvinhaugh, and Woodside. Anderston, Finnieston, Gorbals, Hutchesontown, Tradeston, and Kingston were quite recently detached country villages. The suburban villages and burghs connected with the main part of the city by chains of houses or by partly open road, are, on the E, Shettleston and Tollcross; on the WSW, Kinning Park and Govan; and on the W, Partick and Whiteinch.

Streets and Street Architecture.—The city is in general remarkably well built. The building material is a fine light-coloured sandstone, the masonry substantial, and the frontages in most parts lofty and good, though there is often a tendency towards too profuse ornamentation and to a rather factory-like arrangement of windows. The older districts are mostly squalid, and have little or none of the picturesqueness of the older Scottish architecture which gives such a characteristic and quaint aspect to portions of so many of the old towns of Scotland. Most of the other districts are plain in style, and with nothing to distinguish the appearance of the houses from that of dwellings in any of the other stone-built towns in Britain, though the newer districts show more ornament, some of it running to heaviness and in questionable taste. The older districts about Drygate, High Street, Gallowgate, Bridgeton, Saltmarket, Bridgegate, Trongate, the Wynds, Gorbals, and Calton have been much altered and improved between 1866 and the present time. The operations of the City of Glasgow Union railway and still more of the City Improvement Trust, acting under an act obtained in 1866, have removed altogether or greatly altered and improved a number of narrow and dirty courts, lanes, and streets that were in their old state mere hotbeds of disease and crime, and defied alike the efforts of sanitary inspector and police to improve them. The newest districts of all are ambitious and showy; some parts in very tasteful Italian; others abounding in pillared porches, projecting or divided windows, balconies, and balustrades; while the grand front range on the crown of the hill overlooking the West End Park is in the French style. A strong fondness is shown for pillar decoration even up to the

Corinthian and composite, but the type adopted is often poor. The great number of new buildings erected along the principal streets of the city since about 1840 shows a desire for variety of style and profusion of ornament which sometimes leads to rather striking results. Edifices of Norman, Italian, Flemish, and Scottish styles frequently may be seen standing side by side with one another and with old plain buildings; and occasionally a lofty ornate iron shell replaces stonework. High Street, Rottenrow, and Drygate retain but few signs of their former grandeur, though the last was once filled with the mansions of the aristocracy of the West. Alas, how are the mighty fallen! One of the best buildings in it now is a well-planned lodging-house erected by the City Improvement Trust, and containing accommodation for 200 persons. Rottenrow (originally *roottine* and *rue*, as it was the usual road of the church dignitaries to the Cathedral?) used formerly to contain the residences of several of the prebendaries of the Cathedral. The city gasworks were removed from it in 1872. At the E end is the Barony Church, and on the opposite side of the street a large block of one and two-room model dwellings, erected in 1892 by the Glasgow Workmen's Dwellings Company. This has a large hall, a common room, a common kitchen, and a library, as well as club-rooms and class-rooms for both men and women. The dividend is limited to 5 per cent., and the rent is fixed on a low scale to suit the means of the class for which the houses are intended. At the corner of the street is the hydraulic power pumping station of the Corporation. Cathedral Square, at the E end of Rottenrow, was formed partly by the operations of the City Trust and partly by the removal of the old Barony Church in 1889. The fountain in it was originally in the grounds of the Glasgow Exhibition of 1888, and was formally presented to the city in 1890 by the makers and exhibitors, Messrs. M'Dowall, Steven & Co., of the Milton Ironworks. Bell o' the Brae, the upper part of High Street, from which the buildings were removed by the Improvement Trust, and the slope of the street lessened, derived its old name from a bell placed in a small turret at its top, and always tolled at funerals.* Duke's Place, adjacent to Drygate, contained an ancient house at one time belonging to the Earl of Lennox, and afterwards to the Duke of Montrose, where Darnley's illness took place, and where Queen Mary visited him. It was removed in 1853. Its connection with the Duke gave name to Duke Street. John Knox Street, extending from Cathedral Square to Duke Street, was formed by the City Improvement Trust in 1872. It replaced a cluster of wretched houses called the Rookery, and is overlooked from the brow of the neighbouring Necropolis by John Knox's Monument. Ladywell Street, in the same neighbourhood, contains a small restored structure over a well anciently dedicated to the Virgin. Duke Street, a continuation of George Street eastwards to the suburbs, has to the N the district of Dennistoun with pleasant villas. It is not entirely built, and contains the Prison and the Cattle Market. A road branching off to the left leads to the Alexandra Park. George Street is in line with Duke Street to the W. It is a straight well-built street, and contains the buildings of some of the departments of the Glasgow and West of Scotland Technical College and the Inland Revenue offices. High Street has been very much altered by the action of the Improvement Trust, a number of densely populated buildings that stood nearly opposite the College station having been pulled down, and their site occupied by the E end of Ingram Street.

Saltmarket, extending about 2 furlongs S in a line

* The first 'deid bell' was fabled to have belonged to St Mungo, but the earliest historical mention of it is in 1321. It seems to have then been square, and was probably of considerable antiquity. Till the Reformation it was held in high esteem, but disappearing in the turmoil that attended the change from the old state of things to the new, it was not recovered till 1577, when the finder received 'ten pounds Scots money' and was made a burgess for his pains; but the relic again disappeared or became worn out, for in 1612 a new bell was cast, and this again was replaced in 1640 by another now in the Kelvingrove Museum.

with High Street to the river and to the Court House at Albert Bridge, was once the place of residence of the magnates of Glasgow—the Bailie Nicol Jarvies of their time—and gave lodging to James, Duke of York (afterwards James VII.), when he visited Glasgow. It became the rag fair of the city, and, with some of the streets leading from it, was the abode of people in a condition of the most squalid poverty. Prior to 1822 it contained some old houses, but in that year extensive reconstruction took place with a view to the improvement of the condition of the inhabitants. The effort failed, and no improvement was effected till the operations of the Improvement Trust and the Union railway cut off many of its closes, and almost revolutionised it. On the E side, at the N corner of Steel Street, was a house where Oliver Cromwell lived when he was in Glasgow. The site of the demolished buildings on the E side was, in 1887, occupied by blocks of model dwelling-houses erected by the Improvement Trust. Bridgegate, leading westward from the S part of Saltmarket, also was once a place of high note. It contained the mansions of several noble families, and afterwards the only banks of the city, the Merchants' Hall, and the Assembly Rooms where the Duchess of Douglas used to lead off the Glasgow civic balls in the last century. Here also the Union railway and the Improvement Trust have effected great improvements. St Andrew Square, 120 yards E of Saltmarket, and connected with it by St Andrew Street, was built in the latter part of the 18th century as an aristocratic quarter, and showed a symmetry worthy of its importance and purpose, an appearance enhanced by St Andrew's Church in the centre. It soon fell into disrepute, however, and its narrow dark approaches have since been partly supplanted by modern spacious entrances. London Street, extending ESE from the head of Saltmarket, a straight, open, well-built street, was formed at a comparatively recent period. It was intended as a convenient outlet to the SE districts to which it leads, partly by the line of Great Hamilton Street, partly by Monteith Row and Glasgow Green. The eastern districts are Bridgeton, Barrowfield, Mile-end, and Calton. These contain a considerable number of factories—cotton, linen, jute—and engineering and other works. They have been improved by the construction of spacious streets under the Improvement Act. Gallowgate, striking off eastwards from the Cross at an acute angle with London Street, leads to the district of Camlachie. It was formerly the principal outlet on the E, but now has little to attract attention except here and there some dwarfish old dwelling almost hidden by the neighbouring houses. To the W of Barrack Street were the old Barracks, which were superseded in 1876 by the new buildings at Maryhill, and which were demolished during the Bridgeton Cross extension of the North British Railway in 1889. Trongate, the early state of which is noticed in the historical section, was the seat of all the main business of the city so late as the time of the tobacco trade in the latter part of the 18th century. The buildings are stately, though some of them are old. It contains the Cross Steeple (the tower of the old Tol-booth) the Tontine buildings, the equestrian statue of William III., the Tron Steeple, and an imposing block of buildings (1858) in the Scottish Baronial style which occupies the site of a house where Sir John Moore was born. It was widened on the S side in 1892. Trongate and its continuation westward, Argyle Street, are the busiest thoroughfares in Glasgow. Candleriggs, at right angles to Trongate, on the N, is an old street (1722) of high houses on either side, and lately partly improved. It has on the E side the City Hall and Bazaar, and St David's church is at the top. Hutcheson Street and Glassford Street, parallel to Candleriggs, are handsome open streets. The former is named from Hutchesons' Hospital, which stands at its top. Glassford Street (1792) is named from a distinguished merchant of the times of the tobacco trade mentioned by Smollett in his *Humphrey Clinker*. On the W side is the Trades Hall. Stockwell Street, going S to Victoria Bridge, is older, and was long the SW verge of the city.

Argyle Street—mentioned under the name of West Street (as leading from the West Port) in the early part of the 18th century, and under its present name as early as 1777—extends from Trongate westward to Anderston. The centre dates from the beginning of the 19th century, and the western part is subsequent to 1820. The older part has been almost entirely reconstructed. It is a very crowded thoroughfare, and as a seat of business is scarcely surpassed by any street in Europe; though its appearance W of Jamaica Street has been sadly marred by the bridge that carries the lines of the Caledonian Railway at the S end of the Central Station. Virginia Street (N) was formed in 1753, and was then occupied by mansion-houses. It takes its name from a house called Virginia House, which belonged to a Virginia merchant named Buchanan, and stood on the site now occupied by the Union Bank. Miller Street (N) was opened in 1771, and got its name from the proprietor of the ground. It was also intended for mansions, and Mr Buchanan in his *Desultory Sketches of Glasgow* tells how when it was first laid out no fees were taken off for some time, as it was considered too far out of town, a statement that gives a far better idea of the increase in size of Glasgow within the last hundred years than pages of description. Dunlop Street (S) had at its head of old the Buck's Head Hotel, long a place of high city note. From 1840 to 1868 the Theatre Royal was also here. Queen Street (N) is on the line of the Cow Loan, by which the cows of the inhabitants (kept in a common byre on the site presently occupied by the Royal Exchange) passed to the public pastures at Cowcaddens. It was constructed at the end of the 18th century, and now contains the offices of the National Bank of Scotland, and the Royal Exchange. At the corner of George Square, opposite the N end, is the Queen Street station of the North British railway. Buchanan Street (N) is parallel to Queen Street. It was opened in 1778, and took its name from the owner of the ground. At first it was not intended to connect it with Argyle Street, but the plan was afterwards changed. The situation is described in an advertisement as being 'rural and agreeable.' Even so late as 1816 it was the western street of the city. It was occupied by villas, and was so quiet that grass grew abundantly on the carriage-way. It is now lined with shops and business tenements, and contains some of the finest buildings in the city, including the offices of the *Glasgow Herald*, the Western Club, the Stock Exchange, St George's Church, part of the Athenaeum buildings, and the original terminus of the Caledonian railway. The Argyle Arcade passes E from Buchanan Street, and then, turning off at right angles, enters Argyle Street. St Enoch Square (S) was originally an aristocratic quarter, with villas, and in the centre were shrubberies. It was gradually given up to business, and about 1850 the open central space was appropriated for a cab stand. At the S side is St Enoch's Church; on the E side is St Enoch's railway station and Hotel; and in the centre is a station of the Glasgow Subway. Union Street (N) is occupied by handsome and well-designed business premises; near the top of it are the offices of the *North British Daily Mail*. Jamaica Street (S) was formed about 1760, and was then in the country. Now it is quite as busy as Argyle Street, and thronged with people and machines passing and repassing to Glasgow Bridge. W of Union Street and Jamaica Street are booking offices in connection with the Caledonian central station, also the central station of the underground line of the same company. Anderston, to the W of Argyle Street, was founded in 1725. Originally occupied by weavers, it is now the chief seat of the marine engineering industry.

Ingram Street striking eastward from Queen Street opposite the Royal Exchange, was formed in 1777 on the line of the Back Cow Loan, and was by the Improvement Trust a century afterwards extended eastward to High Street. It contains the British Linen Company's Bank, the S wing of the General Post Office, the Union Bank, Hutchesons' Hospital, the N frontage of the County Buildings, and St David's Church. George Square (1782) was originally surrounded by aristocratic

private residences, with a spacious garden in the centre. It became in course of time the centre of crowded thoroughfares, and in 1865 numerous paths were formed across it. It now contains a number of monuments of those whom the city delights to honour. The post office is on the S side; the Queen Street station and hotel of the North British railway on part of the N. On the W side are the offices of the Bank of Scotland and the Merchants' House, while on the E are the City Chambers.

St Vincent Place, which runs W from the SW corner of George Square, is spacious and open, with fine buildings. It contains the main front of the Bank of Scotland, the Clydesdale Bank, the offices of the *Evening Citizen*, and a very handsome insurance office. St Vincent Street, a continuation of the Place westward, was one of the first of the new western streets, and outstripping the others passed over Blythswood Hill to Anderston. It was originally dwelling-houses, but most of it is now given up for business premises. At its highest point is the St Vincent Street United Presbyterian Church. West George Street, parallel to St Vincent Street to the N, has at the E end St George's Church, and at the Renfield Street corner is the handsome office of the Sun Fire and Life Insurance Co. (1892-3). Regent Street, parallel to West George Street, and a number of the cross streets in the same quarter, are handsome and airy and occupied by dwelling-houses; at the corner of Regent Street and Renfield Street is the office of the Prudential Assurance Co. (1890-92). On the summit of the high ground at the W end of Regent Street is Blythswood Square, a spacious opening surrounded by dwelling-houses. There is a central enclosure of grass. Bath Street runs W from Buchanan Street. The buildings at the E end are devoted to business, but the rest of it is occupied by substantial dwelling-houses, a number of hotels, and several churches. Parallel again, and N, is Sauchiehall Street, and on the S Bothwell Street, which, terminating at Hope Street at the Central Station, is continued eastward by Gordon Street to Buchanan Street. Bothwell Street is one of the widest, and promises by and by when fully built up to become one of the finest streets in Glasgow. It already contains on the S side the handsome offices of the Allan Steamship Co. (1891) and the Conservative Club (1893), while on the N are the over-ornamented offices of the Central Thread Agency, and the dignified home of the Christian Institute. This last is a very handsome building erected in 1879, and extended in 1896-97, the style being Early English Gothic. On corbelled niches above the doorway are statues of Knox and Tyndale, and above the windows of second floor are medallion busts of Luther and other reformers. The Bible Training Institute is E of it.

Sauchiehall Street, at first parallel to Bath Street and then turning WSW to the vicinity of Kelvingrove Park, was, till 1830, a quiet narrow suburban thoroughfare called Sauchiehall Road. The eastern part is now a spacious business street, while the western comprises a series of terraces and crescents, with lawns and shrubberies in front. It stands to Argyle Street very much in the same relation as Oxford Street in London does to the Strand. At the W end of the business part, at St George's Road, are the Grand Hotel and the imposing-looking and well-designed block of buildings known as Charing Cross Mansions (1890). On the S side of the street, near the centre of the business part, stands the Institute of the Fine Arts, where are held the Glasgow Art Exhibitions. It is a building in the Greek style, plain but dignified. At the E end are the Royalty and Empire Theatres. From the N side of Sauchiehall Street, opposite Wellington Street, there is communication with Cowcaddens by a series of arcades called the Wellington Arcade. They are much the same as the Argyle Arcade, but not quite in such good style. Cowcaddens was, as has been already mentioned, the common pasture for the cattle belonging to the citizens. It is now a compactly built and densely populated district. It contains the Theatre Royal, the Grand Theatre, and the Free Church Normal School. N of Cowcaddens on an elevated ridge

is Port Dundas, where is the harbour of the Forth and Clyde and the Monkland Canals. The appearance of the lines of boats amid lofty houses on the crest of a ridge some 60 feet above the adjacent level is somewhat peculiar. Port Dundas is mainly a place of commerce and manufacture, and has large warehouses and granaries. There are here a very large distillery, and grain, flour, and saw mills. Garnet Hill, flanking the N side of Sauchiehall Street, near the centre, rises so steeply in some parts as to be very inconvenient for carriages and traffic, but is nevertheless covered with streets of a good class. The western part of Sauchiehall Street and the districts round are known collectively as the Crescents. The district measures about 5 furlongs by 3, and contains numerous terraces, which are well and uniformly built with houses of good style, mostly varieties of Italian, set off by the lawns and shrubs. On the higher ground near Park Circus, and overlooking the whole district, rise the tower of Park Church and the campanile of the Free Church College. Sandyford, lying beyond, and occupying the district between the Clyde and the Kelvin, has a number of good streets.

From Cowcaddens the line of street is extended westward by the New City Road and the Great Western Road. The tract to the N of this was till 1830 quite open, but it is now largely built on. Across the Kelvin lies the district of Hillhead, the whole of which is of quite recent structure. The streets are wide and airy, and most of them have good houses; while there are a number of terraces, with grass plots and trees in front. Constituted a police burgh in 1869 Hillhead was annexed to Glasgow in 1891. To the W and SW of it are the large and important districts of Dowanbill and Kelvin-side, entirely occupied by self-contained houses, either in terraces or detached villas, these districts forming two of the most aristocratic quarters of suburban Glasgow. In Kelvin-side, on the N side of Great Western Road, are the Botanic Gardens, which became a public park belonging to the Corporation practically in 1887, but legally in 1891. To the SW of Kelvin-side is the burgh of Partick, extending towards the Clyde. It is large enough and populous enough to outrival many a provincial town that plumes itself on its importance. The part towards the river is occupied by densely-populated streets, the denizens of which are somewhat noted for their rough character; but on the rising-ground to the N are immense numbers of detached or semi-detached villas, which render this district one of the prettiest and pleasiest about Glasgow. To the W of Partick is the suburb of Whiteinch, with a considerable population employed in the adjoining shipbuilding yards. Govan, on the S side of the Clyde opposite Partick, was once almost a rival of Glasgow. It is fully 2 miles in length by about $\frac{1}{2}$ mile in breadth, and lies along the bank of the river. The older parts of it show plain cottages, now somewhat dingy; the newer parts show well-built streets and neat villas. The bank of the river is occupied by shipbuilding yards. Gorbals, which lies E of Govan along the S bank of the Clyde, is the largest and most populous district in the city, and is indeed large enough of itself to rival Aberdeen or Dundee. It might in every way be described as the Southwark of Glasgow. It measures about 2 miles by 1 mile, and has, in connection with new manufactures, with railway works, and with harbour works, spread rapidly and widely between 1835 and the present time. It comprises the districts of Plantation, Kinning Park, Kingston, Tradeston, Laurieston, and Hutchesontown. Some idea of the rapid growth of these districts may be gathered from the fact that, between 1861 and 1871, the population of Kinning Park increased from 651 to 7217, and between 1871 and 1891 again to 13,679. The streets are mostly regular, but vary very much in style. Eglinton Street and Victoria Road, leading from Glasgow Bridge to Queen's Park, is a fine line of thoroughfare.

Gorbals proper is a name sometimes given to the parts of Laurieston and Hutchesontown adjoining the Clyde near Victoria Bridge. Its chief thoroughfare used to be a wretched old, narrow, and tortuous street called

Main Street, ribbed with closes of the most squalid and dismal order, every house in which was overcrowded to an alarming extent. At that time it was such a hot-bed of quarrels and disturbance that it was known as 'Little Ireland.' The City Improvement Trust, however, drove a new street with a width of 70 feet straight over the old site of Main Street and its closes, and also formed a series of new streets from Kingstou Dock to the E end of Hutchesontown. At the intersection of this line with Main Street a sort of square has been formed, measuring about 200 by 180 feet, and known as Gorbals Cross. Hutchesontown, farther E still, is about 6 by 4 furlongs in extent, and was considerably modified by the operations of the City Union Railway, which passes through the western part of it. It contains a number of cottow factories, and an iron-work with blast furnaces. Some distance S of these is Govanhill, constituted a police burgh in 1877 and annexed to Glasgow in 1891. Under the name of 'No Man's Land' the district was in 1875 a bone of serious contention between the burgh of Crosshill and the parent city, both of which had cast envious eyes on it, and were anxious to include it within their boundaries. Between Govanhill and the Queen's Park is Crosshill (a separate burgh from 1871 to 1891) which, lately a mere village, has rapidly taken on a thriving town-like appearance, as have also the districts of Langside, Shawlands, and Crossmyloof to the SW of the Queen's Park. To the N of these and between them and Kinning Park and Kingston, are East and West Pollokshields. The first, consisting of ordinary tenements of a good class, was constituted a police burgh in 1880; the latter, which consists almost entirely of detached villas, in 1876; both were annexed to Glasgow in 1891. To the W of these is Bellahouston and Ibrox; and between them and Crosshill is Strathbungo.

History.—Unlike many of the populous and enterprising towns of the present day, Glasgow can boast of a history which proves that, even in those remote times when trade and commerce were unknown, it was a place of considerable importance. The name Glasgow does not appear till the 12th century, but there were two villages called Deschu and Cathures on the same site. These names, however, bore so little resemblance to the present form, that the connection was difficult to trace. M'Ure, the earliest historian of Glasgow, says that 'it is called Glasgow because in the Highland or Irish language Glasgow signifies a grayhound or a gray-smith.' The *New Statistical* takes gray-smith or dark glen, the latter referring to the ravine at the Melendinar Burn. Wade, in his *History of Glasgow*, gives Welsh *glas*, 'green,' and *coel*, 'a wood'—the green wood. But Mr Macgeorge, in his *Old Glasgow*, seems to have solved the difficulty. He suggests that the transcribers of the old MSS. mistook *cl* for *d*, and so wrote Deschu instead of Gleschu, from which comes Gleschu, and hence Glasgu and Glasgow (*Glas*, 'green,' and *ghru*, 'beloved,' the name being therefore the beloved green place). In the early part of the Christian era we find the district inhabited by a tribe called the Damnonii, who were, during the time the Romans held the Wall of Antoninus, under Roman rule within the province of Valentia. This wall, in its course from Old Kilpatrick on the Clyde to Blackness, passed a short distance to the N of Glasgow; and there are also the remains of a large camp, said to be Roman, on the lands of Camphill, near the battle-ground of Langside, about 2 miles S of the city. Probably there were Roman garrisons at stations scattered among the conquered tribes behind the wall, and of these one is said to have been at Glasgow; but nothing except the vague tradition of its existence is known, not even its name. When the Romans retired, the district became part of the Cumbrian British kingdom of Strathclyde; but the important place in this connection is DUMBARTON, then the chief town, and called Alclyde or the Rock of the Clyde. St Ninian—who was trained at Rome, and founded the church of WHITHORN in 397—according to the 12th century *Life of St Kentigern* by Jocelyn of Furness, established a primitive church and consecrated

a burial-ground at a place called Cathures, where Glasgow Cathedral now stands. This was about the beginning of the 5th century, but his influence seems to have passed away with himself; and when Deschu next emerges from obscurity, it is in connection with its later and locally more famous saint, Kentigern or Mungo, who made his appearance in the district somewhere near the middle of the 6th century, and probably about 543 A.D. St Kentigern or Mungo was the son of Ewen ap Urien or Eugenius, a prince of the Britons of Strathclyde—according to some the King of Cumbria—and Thenew, daughter of Loth, King of Northumbria, or, according to others, King of the Lothians, to which he is supposed to have given name. Though Loth was 'a man half pagan,' his daughter had become a convert to Christianity, and, according to the legend, in her zeal for her new faith, became desirous of rivaling the virginal honour and maternal blessedness of the Virgin Mary. In carrying out her purpose she scorned all suitors, Prince Eugenius, who had her father's influence to back him, among the rest. To escape from farther trouble, she at last fled to a remote part of the kingdom, and concealed herself in the lowly guise of a swineherd. Prince Eugenius, however, followed her and found her, and she returned to her father's court, only to be relentlessly condemned to death on account of her condition. Though she denied all crime, her father refused to listen to her prayers for life, and handed her over to the executioners to be stoned to death. They preferred the easier plan of casting her over a precipice, Dumpender or Traprain Law, but she escaped unhurt. This was considered clear proof of sorcery, and she was put into a coracle, which was taken down the Forth to the Isle of May and there set adrift; but this was no more fatal to her than the former attempt, for a shoal of fishes made their appearance at this opportune moment and carried the boat on their backs to the shallow water at Culross, on the N side of the Firth of Forth. Here Thenew landed and gave birth to a son, and both mother and child were brought by some of the country people to St Serf or Servanus, a disciple of St Palladius, who had here established a little monastery.* He received them into his household, where the infant received his nurture, and was taught the rudiments of his faith. The boy, named Kentigern (Welsh *cyn*, 'chief,' and *teyrn*, 'lord'), turned out so well as he grew up, that he became a great favourite with the aged Serf, who gave him the pet name of Munghu (Welsh *mwyn*, 'amiable,' and *cu*, 'dear'), whence came the second name of 'Mungo,' by which the saint is now probably better known than by the name of Kentigern. As he grew in years and knowledge, he displayed a faculty for working miracles which soon attracted attention. He restored to life a robin-redbreast whose head had been cut off; one winter night when the fire was quenched by his enemies, he kindled it again with a frozen branch which he blew into a flame; during harvest the cook died and there was no one to provide food for the reapers, whereupon St Serf himself came and enjoined his Mungo either to restore the cook to life or to fill his place, a command which he obeyed by bringing the cook to life again. Obeying a monition of the Spirit, he secretly left Culross to devote himself to work in other places, and went southward, the waters of the Forth opening to allow him to pass. He was followed by St Serf, who, looking forward to him as his successor, begged him to return; but feeling his duty to lie elsewhere, he would not go back. Journeying westward, he found, at a place called Kernach, an aged Christian named Fergus, to whom it had been revealed that he should not die until he had seen one who was to bring back the district to the faith of St Ninian, and who, almost as soon as he saw St Mungo, fell dead on the ground. Taking the body with him in a cart drawn by two wild bulls, the saint proceeded on his journey till he reached Deschu and Cathures on the banks of the Clyde,

* The anachronism involved in this portion of the legend has been already noticed under CULROSS.

and here, in the churchyard consecrated by St Ninian, he buried Fergus. His fame must have either gone before him or must have spread very rapidly, for he was almost immediately visited by the king and the leading men of Strathclyde, who begged him to become their religious guide. The saint, who was only twenty-five, pleaded his youth as an excuse; but they were determined to have him, and he was consecrated by a bishop brought from Ireland for the purpose. His habits were very ascetic, for he is said to have been in the habit of often rising in the middle of the night and rushing into the Molendinar Burn, where he remained in the water, no matter what the season or the weather, till he had recited the whole of the Psalms of David. He still retained miraculous power. A young man who scoffed at him was killed suddenly by a falling weight; he sowed sand and a crop of fine grain grew; he ploughed a field with a team consisting of a wolf and a stag. At length, however, he became involved in a quarrel with the king—Morken—because in answer to a mocking taunt of his majesty he had actually caused the Clyde to sweep the contents of the king's barns at Cathures up the Molendinar Burn to Deschu. Morken shortly after, using violence to the saint, was killed by being flung from his horse, and the saint, to escape the vengeance of the king's relatives, had to flee to Wales. Here, after remaining for a time with St David, he founded a monastery, and gathered about him a band of disciples at the place now known, from the most celebrated of his followers, as St Asaph's. The victory of Arthuret (573) placed Rydderch Hael on the throne of Strathclyde, and he at once despatched an embassy to Wales to St Mungo to urge him to return to his old abode on the banks of the Clyde, and, the effort succeeding, the saint's power became greater than before. His miraculous gift continued, and was exemplified in a very wonderful way in connection with the queen. This lady, named Langueith, had received from her husband at their marriage a peculiar ring, of which she was not so careful as she should have been, and which she had entrusted to the keeping of a soldier with whom she was in some way connected. The king one day found the soldier sleeping, and noticed the ring on his finger, and, his anger being roused at the small value the queen thus seemed to set upon the jewel, he took it from the man's finger, and casting it into the river, went straightway to the queen and told her he wished for the ring. She urged delay, and sent at once for it, but it was, of course, not to be found; and her majesty in great dismay applied to the saint, who forthwith came to her rescue. He told her to cause a fishing-line to be cast into the Clyde, when the first fish that was caught would be found to have the ring either in its mouth or in its stomach. This turned out exactly as he had said, and the ring being thus restored the jealous monarch was satisfied.

Seal of Glasgow.

This incident has given the city the main features of its armorial bearings, while other incidents in St Mungo's life have supplied the whole. The arms, as settled by the Lord Lyon King of Arms, and described in his

patent granted at Edinburgh on 25 Oct. 1866, are:—'Argent, on a mount in base vert an oak tree proper, the stem at the base thereof surmounted by a salmon on its back, also proper, with a signet ring in its mouth, or; on the top of the tree a redbreast, and on the sinister fess point an ancient hand-bell, both also proper. Above the shield is to be placed a suitable helmet, with a mantling gules, doubled argent, and issuing out of a wreath of the proper liveries is to be set for crest the half-length figure of S. Keutigern, affronté, vested and mitred, his right hand raised in the act of benediction, and having in his left hand a crozier, all proper: in a compartment below the shield are to be placed for supporters two salmon proper, each holding in its mouth a signet ring, or; and in the escrol entwined with the compartment this motto, "Let Glasgow flourish." The salmon and the ring are connected with the foregoing story; the tree is the branch with which the monastery fire was lighted; the bird is the robin that was miraculously restored to life; and the bell is the consecrated one that was brought from Rome by St Mungo when he visited the sacred city in his later years, and which was placed in the college buildings, and preserved in Glasgow till the Reformation, or perhaps to a later date. It was called St Mungo's Bell, and was tolled through the city to warn the inhabitants to pray for the repose of a departed soul. These tokens appear on the seals of the bishops of Glasgow in the 12th and 13th centuries, from which they were transferred to the common seal of the city in the beginning of the 14th. This at least seems a probable explanation, and as such it is now accepted in preference to the fanciful theory propounded by Cleland in his *Rise and Progress of Glasgow*, where he says, 'The tree is emblematical of the spreading of the Gospel: its leaves being represented as for the healing of the nations. The bird is also typical of that glorious event, so beautifully described under the similitude of the winter being passed, and the rain over and gone, the time of the singing of birds being come, and the voice of the turtle heard in our land. Bells for calling the faithful to prayers, and other holy ordinances of the Church, have been considered so important in Roman Catholic countries, that for several centuries past the right of consecration has been conferred on them by the dignitaries of the Church. That religion might not absorb the whole insignia of the town, the trade, which at that time was confined to fishing and curing salmon, came in for its share, and this circumstance gave rise to the idea of giving the salmon a place in the arms of the city.' The motto, which is said to have been in its original form 'Let Glasgow flourish by the preaching of the word,' traditionally takes its origin from a mound which the saint raised miraculously at the Dovehill, E of the Cross, to enable him to get an elevation from which to preach to the crowd. Glasgow was to rise and flourish as this mound had done. The motto does not, however, seem to have been in use previous to 1699.

The rest of the saint's life is little more than a record of the miracles he performed, not only in Strathclyde, but all over the country, his travels being widely extended, and on more than one occasion reaching as far as Rome, where he was kindly received by the Pope and confirmed in his bishopric. The one historic event of his later years appears to be his visit from Columba on the banks of the Molendinar about the year 584, when the saints interchanged their pastoral staves. His death took place probably in 612, and he was buried, according to the monkish chronicler, at the right hand side of the high altar of the cathedral. See the two Lives of St Kentigern edited by Bishop Forbes in vol. v. of *The Historians of Scotland* (Edinb. 1874), and vol. ii., pp. 197-198, of Dr Skene's *Celtic Scotland* (Edinb. 1877).

The successors of St Mungo are involved in obscurity, though no doubt the sanctity pertaining to the resting-place of the bones of so holy a man would for a time keep his establishment together, and help to increase the size of the village close by. It must have suffered, however, in the struggle against the supremacy of

the Roman Church, and probably also in the commotions and strife produced by the incursions of the Danes, as well as in the contest in which the kingdom of Strathclyde disappeared and the country passed under the sway of the king of the Scots. Whatever the cause, so at least it was; and, just as in the case of Lichfield, the records of the see of Glasgow disappear for full 500 years. 'After St Mungo,' says M'Ure, a quaint early historian of Glasgow, 'for many ages the Episcopal see was overrun with heathenism and barbarity till the reign of Alexander I.' When Alexander succeeded to the throne in 1107, he bestowed on his younger brother David, Prince of Cumbria, all the territory S of the Forth except the Lothians; and as David inherited all his mother's zeal for religion, he set himself to look after the spiritual condition of his subjects as vigorously as after their temporal welfare. The saintly character of St Mungo, and his connection with Glasgow, very soon attracted David's attention, and in 1115 he restored the see, and appointed his tutor and chaplain John (commonly called Achaius) the first of the new line of bishops. John, who was a man of learning and ability, as well as with considerable knowledge of the world, for he had travelled extensively on the Continent, was at first somewhat unwilling to accept the proffered promotion, but at last yielded to the prince's wishes, and was consecrated by Pope Paschal II., to whom he was well known. An inquisition 'concerning the lands belonging to the church of Glasgow,' a copy of which exists in the chartulary of Glasgow, was made in 1120. In this it is set forth that 'various disturbances, everywhere arising,' had 'not only destroyed the church and her possessions, but, wasting the whole country, driven the inhabitants into exile; and that the inhabitants, thus left to themselves, had followed the manners of the Gentiles and lived 'like brutes;,' but that now 'God sent unto them David as their prince,' who was to set this scandalous state of matters right, and who for that purpose had appointed John as their bishop. John, it goes on to say, was frightened at their barbarity and their abominable sins, but had been constrained by the Pope to enter upon the burdensome charge; and so the Prince had caused all the lands formerly belonging to the church of Glasgow to be found out and made over to the new bishop, that he might have sinews for his struggle with the wrong. The bishop had more trouble, too, than what merely arose from the condition of his see, for he got involved in a quarrel about church supremacy with the Archbishop of York, who claimed to be metropolitan of Scotland, and adduced in support of that claim a record (strongly, and with good cause, suspected of being a forgery) of three bishops of Glasgow consecrated at York in the 11th century. John resisted the York claims, and was so sorely tried that he quitted his see for the purpose of proceeding to the Holy Land. The Pope, however, ordered him to return, and 1124 found the good bishop not only settled again, but beginning to replace the primitive church of St Mungo by a statelier erection, of which some parts were of stone. The new cathedral was consecrated in presence of his royal patron, who was now King of Scotland, on 7 July 1136. The Prince had, on his accession to the throne, made large donations to the establishment, and he now further conferred on it the lands of Perdeyc [Partick], which still form part of the episcopal belongings, though they have passed into the hands of the University. According to the *Registrum Episcopatus Glasguensis*, 'the king, David I., gave to the church the land of Perdeyc [Partick], which was soon afterwards erected, along with the church of Guvan [Govan], into a prebend of the cathedral. In addition to the long list of possessions*

* Viz. :—Carlevien, Camcav, Camcaethyn, Lengartheyn, Pathel, Asserhe, Canclut, Cheferneuast, Carnetheyn, Carvil, Quendal, Abercarf, Meeheyn, Plannichel, Stobo, Penteiacob, Alnrumbs, Keveorum, Lilleseliva, Hodelim, Edyngalum, Abermele, Drivesdale, Colchtam, Kevertrole, Aschib, Brumeseheyd, Keversgyrt, in Peeblis, one carucate of land and a church; in Kincayrd, one carucate of land and a church; in Mereboda, one carucate of land and a church.

restored to Glasgow upon the verdict of the assize of inquest, this saintly King granted to the bishop the church of Renfrew; Guvan, with its church; the church of Cadihou [Cadzow]; the title of his cane or duties paid in cattle and swine throughout Strathgrif, Cuningham, Kyle, and Carrick; and the eighth penny of all pleas of court throughout Cumbria (which included the greater part of Scotland S of the Forth and Clyde, as well as the English county of Cumberland). The bishop also acquired the church of Lochorwort, near Borthwick in Lothian, from the Bishop of St Andrews, the King and Prince present and consenting.' David, the sainted son of St Margaret, was the greatest benefactor known in the annals of the see of Glasgow, and this is only one example of that liberality in gifting royal possessions to the Church which earned him from James VI. the character of 'ane sair sanct for the croon.' At the time of the consecration of the cathedral, 'the diocese was divided into two archdeaconries of Glasgow and Teviotdale, and for the first time there were appointed a dean, sub-dean, chancellor, treasurer, sacrist, chanter, and sub-chanter, all of whom had prebends settled upon them out of the gifts received from the King.' Bishop John died on 28 May 1147, after having held the see for the long period of thirty-two years. He was succeeded by Bishop Herbert, in whose time the strife with York was finally ended by Pope Alexander III., who decided that the only controlling power over the Church of Scotland was the see of Rome. He died in 1164, in which year also Malcolm IV. made proclamation that tithes were to be paid in the bishopric of Glasgow just as elsewhere. Herbert was succeeded by Ingram, who died in 1174; and was in turn succeeded by Joceline, abbot of the Cistercian monastery of Melrose, who was consecrated at Clairvaux, in France, on 1 June 1175, by Esceline, the Pope's legate. He is reputed on all hands to have been a worthy and liberal-minded prelate, and his actions prove him to have been one of the greatest, if not the greatest, of the occupants of the episcopal throne of Glasgow. Above all others ought he to be held in happy remembrance by the citizens of Glasgow, for, by a charter obtained from William the Lion about 1180, the first start was given to the growth of Deschu into something more than a village. By this charter Glasgow was constituted a burgh of barony, holding of the bishop; and the King granted and confirmed 'to God and St Kentigern, and Joceline, Bishop of Glasgow, and all his successors for ever, that they shall hold a burgh at Glasgow, with a weekly market on Thursday, fully and freely, with all freedoms, liberties, and customs which any of my burghs throughout the whole of my kingdom enjoy.' Subsequently, about 1190, the bishop obtained for his burgh the further privilege of 'a fair to be kept at Glasgow, and to be held every year for ever, from the octave of the Apostles Peter and Paul, for the space of eight days complete, with' the King's 'full protection, and with every freedom and all other liberties belonging and granted to fairs throughout the whole of' his 'dominions, as fully and freely as all fairs are or ought to be held in any of' his 'dominions.' The octave of St Peter and St Paul fell on 6 July, and on that date the fair is still kept up with unflinching regularity, the only difference from the olden time being, that, instead of being held for business purposes, it is now characterised by the total want of it, Glasgow Fair being in those days the annual holidays, when labour is suspended and the industrious thousands enjoy a few days' recreation. While thus mindful of the temporal benefit of those under his charge, he was no less diligent in matters relating to their spiritual care. In 1192 the church built by Bishop John was burned, and so complete was the destruction that it is evident the greater portion must have been constructed of wood, though, judging from the fragments of Norman architecture that have since been dug up, some part at least was of stone. Joceline at once set himself to the task of rearing a new and more substantial edifice. He obtained a royal edict from his ever-ready patron, King William, which expressed the King's sympathy with the ruined condition

of the church, which 'consumed by fire,' required 'the most ample expenditure for its repairs,' and charged all his servants throughout the kingdom to give what help they could to the 'fraternity' (a committee for gathering subscriptions?) appointed by the bishop. Aid was invoked from the pious all over Europe; and Joceline's appeal was so generously answered, that the present beautiful crypt known by his name was consecrated in 1197, on the octave of St Peter and St Paul, other two bishops besides Joceline himself taking part in the ceremony. In the crypt a tomb was erected, with a votive altar, dedicated to St Mungo. The merit has also been assigned to Joceline of having built the superincumbent choir and lady chapel; but it seems now proved that these were only commenced by him, and were completed by his successors. Still the honour belongs to him of being the founder of the existing magnificent and venerable structure, for it is certain that no part of the church built by Bishop John now remains above ground. After having held office for twenty-four years, Joceline died on 17 March 1199, and was buried on the right side of the choir. The next three bishops seem to have done little or nothing for the rising burgh; but in the time of the next bishop, Walter, a contest took place with Dumbarton and Rutherglen, both by that time royal burghs, with regard to tolls and customs. A royal charter had granted exemption to the bishop and his people from the dues levied by these places, and this the royal burghs resented and opposed as an infringement of their privileges; but, notwithstanding all their efforts, the bishop was powerful enough to obtain an edict declaring that his burgesses 'were entitled to trade in Lennox and Argyll as freely as the men of Dumbarton,' and Rutherglen was prohibited from levying toll or custom nearer Glasgow than the cross of Shettleston. Bishop Walter died in 1232, and was succeeded by William de Bondington, who pushed on the building of the cathedral, and in whose time the choir was either altogether or almost finished. A special canon was passed at a provincial council of the clergy, commending the work to the benevolence of the faithful, and promising certain indulgences to all who should contribute. This Bishop William, who also held the office of chancellor to King Alexander II. during the latter half of his reign, was a munificent prelate, and, besides his exertions on behalf of the cathedral, he aided, in 1246, in establishing at Glasgow a monastery of friars of the order of St Dominic (Black Friars). Their church, which is said to have rivalled the cathedral itself, was dedicated to the blessed Virgin and St John the Evangelist; and when the building commenced, Pope Innocent IV. issued a bull of forty days' indulgence to all who should contribute to its completion. The church stood on the E side of High Street, and must have been a fine old building. M'Ure declares that it was 'the ancientest building of Gothic kind of work that could be seen in the whole kingdom, as was observed by Mr Miln, the architect to King Charles I., who, when he surveyed it in 1638, declared that it had not its parallel in all Scotland, except Whittairn in Gallo-way.' Even in 1638, however, it must have lost some of its old grandeur, for at the time of the Reformation it was deserted and probably injured; and on 24 April 1574 it was 'statute, thocht gude, and ordainit, he the provest, baillies, and counsaile that the westir ruinous gavill of the Blackfreir kirk and the stanes thereof he tain down' and sold, and the proceeds applied to mending the windows and the minister's seat 'in the said kirk.' The latter building survived till 1670, when, having been struck by lightning, it was taken down and replaced by the old College or Blackfriars church, which is now also gone. The adjoining 'place' or monastery of the friars was largely and richly endowed. When King Edward I. of England remained in Glasgow for a fortnight in the autumn of 1301, he was lodged in the monastery of the Friars Preachers, from which it may be inferred that it was the only building in the town capable of accommodating the monarch and his train. Although his residence was with the friars,

however, Edward, as became one desirous of being reputed a pious king, was constant in his offerings at the high altar and the shrine of St Mungo. The accounts of Edward's wardrobe show that he requited the hospitality of the brethren with a payment of six shillings. No vestiges of the monastery now remain. It occupied the site of the old university, near the place now occupied by the Midland Railway Company's offices.

Bishop William died in 1258, and his two successors are of very little importance or influence, one of them being indeed so obnoxious to his flock that he resided at Rome. In 1273, however, Robert Wishart or Wischard, a man of eminence and a member of the council of Alexander III., became bishop. Unlike his predecessors his services were of a national rather than of a local nature. Being, after the death of the king, appointed one of the lords of regency, he took a vigorous part in the struggle for national independence; and in these perilous times no man exerted himself with more ardour or a purer patriotism towards the preservation of the independence of his country from the assaults of Edward I. It was in Glasgow during his episcopate that Wallace was captured on 5 Aug. 1305 by Sir Alexander Monteith, and carried off to Dumbarton, thence a week later to be taken to London for trial and execution; and Wisbart himself, although imprisoned by the English, and so cruelly treated that he became blind, yet lived to see the cause for which he had struggled entirely successful, and Robert the Bruce firmly seated on the Scottish throne. 'The affectionate sympathy expressed by the King (Robert the Bruce) for the bishop would serve to give us some insight into his character, even if the history of Robert Wischard were not so well known. It was a time when strong oppression on the one side made the other almost forget the laws of good faith and humanity. Our bishop did homage to the Suzerain and transgressed it; he swore fidelity over and over again to the King of England, and as often broke his oath. He kept no faith with Edward. He preached against him; and when the occasion offered, he buckled on his armour like a Scotch baron and fought against him. But let it not be said that he changed sides as fortune changed. When the weak Baliol renounced his allegiance to his overlord, the bishop, who knew both, must have divined to which side victory would incline, and yet he opposed Edward. When Wallace, almost single-handed, set up the standard of revolt against the all-powerful Edward, the Bishop of Glasgow immediately joined him. When Robert Bruce, friendless and a fugitive, raised the old war-cry of Scotland, the bishop supported him. Bruce was proscribed by Edward and under the anathema of the Church. The bishop assuaged him for the sacrilegious slaughter of Comyn (in the Greyfriars' Church at Dumfries), and prepared the robes and royal banner for his coronation. Wischard was taken prisoner in the castle of Cupar, which he had held against the English in 1306, and was not liberated till after Bannockburn. . . . The bishop had grown blind in prison.' Notwithstanding his activity in national matters he took also an interest in his cathedral, for he seems to have made arrangements for a supply of timber for the erection of a steeple, and part of this, curiously, he had procured from Edward himself; indeed one of the charges preferred by the English king against the bishop was 'that he had used timber which he [Edward] had allowed him for building a steeple to his cathedral, in constructing engines of war against the King's castles, and especially the castle of Kirkintilloch.' So greatly was Edward's anger roused against the patriotic bishop that, had not fear of exciting the ire and resentment of the Pope restrained his hand, he would probably have put him to death. Wischard was, along with Bruce's queen and daughter, exchanged for the Earl of Hereford, who had been captured in Bothwell Castle by Edward Bruce immediately after the Battle of Bannockburn. The severity of his treatment, however, had proved too much for him, and he died in Nov. 1316, and was buried in the cathedral between the altars of St Peter and St Andrew. During the earlier

part of the national strife, an English garrison was quartered in the bishop's castle near the cathedral, and many of the older historians, following Blind Harry, make Glasgow the scene, in 1300, of a desperate conflict between the English and the Scots. However much the details may be open to question, there is probably some foundation of fact for the incident, though the blind bard has undoubtedly indulged his usual tendency to such exaggeration as would magnify the exploits of his hero. Edward, it is stated, had appointed one of his creatures named Anthony Beck or Beik Bishop of Glasgow during the captivity of Robert Wishart, and a large English force, under Earl Percy, was stationed in the neighbourhood of the cathedral, both for the purpose of supporting the bishop in his new dignity and of overawing the discontented inhabitants of the western shires. Wallace, who was in possession of Ayr, after the burning of the barns, gathered his men and addressed them,—

'Ye know that thar wes set
Sic law as this now into Glaskow toune
Be byschope Beik and Pervse off renoun,
Tharfor I will in haist we thidder fair.'

He first summoned the men of Ayr,

'And gaiff commaund in general to thaim aw . . .
In keepyng thair suld tak the hous off Ayr,
And hold it haill quhill tyme that we her mayr.'

And that place being thus left safe, started with his company of 300 and made in hot haste for Glasgow. They pushed on so fast that they by

'Glaskow bryg that byggyt was off tree,
Weyll passit our or Sotheroun mycht thaim se.'

After crossing the bridge Wallace divided his followers into two bodies, one of which, led by himself, marched by the High Street; while the other, under the Laird of Auchinleck, 'for he the passage kend,' went by St Mungo's Lane and the Drygate. Percy had a force of 1000 men, and with these between Bell o' the Brae and the site of the old university he met the body under Wallace. While the battle was doubtful the other body came rushing on from the Drygate, Percy being cut down by Wallace himself. The English were seized with a panic, and fled in all directions, notwithstanding that they were 'gud men off wer' like 'all Northum- myrland.'

The three bishops who held the see from 1317 to 1336 need merely a passing mention, but the next bishop, William Rae, who held office from 1337 to 1367, has the honour of having erected the first bridge of Glasgow. From Blind Harry's account of the Battle of Bell o' the Brae, it would seem that there was a wooden bridge across the river; but this Bishop Rae was able, notwithstanding the impoverished condition of the diocese, between 1345 and 1350, to replace by a stone bridge of eight arches, which, though only 12 feet wide, was long looked on as a marvel of architectural skill. A pious lady of the family of Lochow, who had some property in the burgh, bore the expense of one arch, and besides erected a leper's hospital, afterwards known as St Ninian's Hospital, in the Gorbals district. The bridge, known as Stockwell Bridge, remained till 1777, when it was repaired and widened to 22 feet, and it was again repaired in 1821, but it had become so shaky and unsuitable that in 1845 it was condemned, and in 1847 was replaced by Victoria Bridge. The bishop who succeeded Rae was Walter Wardlaw, who died in 1387. He was followed by Matthew Glendinning, in whose time the wooden spire of the cathedral was struck by lightning and destroyed. He made preparations for the erection of a new stone spire, but died before anything was done. He died in 1403, and left the carrying out of the work to the new bishop, William Lauder. The spire, as then constructed up to the first battlement, still remains, and forms a magnificent and fitting monument of the taste and skill with which it was designed and carried out. Lauder also laid the foundation of the chapter-house. He died in 1425, and was succeeded by Bishop John Cameron (supposed to be of the family

of Lochiel), then Provost of Lincluden and secretary to the King. On his appointment to the bishopric he was promoted to the chancellorship, which he held till 1440. His generosity and large expenditure in connection with his see won for him the title of 'the Magnificent,' and he seems to have deserved it, though, according to Pitscottie, he was by no means an amiable man; for by this writer the bishop is described as 'the principal ruler of the prince and court to all mischief and innocent slaughter done in thir troublous times. . . . For he counselled them to exercise all such scathing and oppression upon the realm as he had done himself upon the poor tenants of Glasgow.' He resumed the building of the chapter-house, and either extended or completed various other portions of the cathedral (including the spire), as may be seen by the carvings of his arms still existing on several portions of the structure. Cameron also built the 'great tower' of the bishop's palace in Glasgow. During his incumbency the episcopal see was in the zenith of its temporal glory and power. The prebendaries, originally seven, now numbered thirty-two, and the revenues were very large. With a view of adding dignity to the episcopal court, he ordained that the prebendaries should reside in the neighbourhood of the cathedral church, and in consequence that portion of the city was extended and adorned by their comfortable mansions and orchards. A number of their houses remained in good condition till the close of the last century, and a few even later, though in a dingy and dilapidated condition. By contemporary writers the court of Bishop Cameron is spoken of as almost rivalling that of the monarch himself, from the great number of dignified ecclesiastics and noblemen of the first consideration whom he drew around him. 'He was,' says Pagan, 'fond of celebrating the great festivals of the Church, and on these occasions he entered the choir through the nave by the great western door (recently opened up), preceded by many high officials, one of whom bore his silver crozier or pastoral staff, and the others carried costly maces and other emblems. These were followed by the members of the chapter, and the procession moved on amidst the ringing of bells, the pealing of the great organ, and the vocal swell of the choristers, who were gorgeously arrayed in vestments of high price; the Te Deum was then sung and high mass celebrated. On certain highly solemn occasions it pleased the prelate to cause the holy relics belonging to the church to be exhibited for the edification of the faithful. These, according to the chartulary, principally consisted of the following objects of veneration:—(1st), The image of our Saviour in gold; (2d), the images of the twelve apostles in silver; (3d), a silver cross, adorned with precious stones and a small piece of wood of the cross of our Saviour; (4th), another cross of smaller dimensions, adorned with precious stones; (5th), one silver casket, gilt, containing some of the hairs of the blessed Virgin; (6th), in a square silver coffer, part of the scourges of St Kentigern and St Thomas of Canterbury, and part of the hair garment made use of by St Kentigern our patron; (7th), in another silver casket, gilded, part of St Bartholomew the Apostle; (8th), in a silver casket, gilded, a bone of St Ninian; (9th), in another silver casket, gilded, part of the girdle of the blessed Virgin Mary; (10th), in a crystal case a bone of some unknown saint, and of St Magdalene; (11th), in a small phial of crystal part of the milk of the blessed Virgin Mary, and part of the manger of our Lord; (12th), in a small phial a liquor of the colour of saffron, which flowed of old from the tomb of St Kentigern; (13th), one other silver phial with some bones of St Eugene and St Elaze; (14th), in another silver phial part of the tomb of St Catherine the Virgin; (15th), one small hide, with a part of St Martin's cloak; (16th), one precious hide with a part of the bones of St Kentigern and St Thomas of Canterbury; (17th), four other hides with bones of saints and other relics; (18th), a wooden chest with many small relics; (19th), two linen bags with the bones of St Kentigern and St Thew and other deceased saints. Indeed the paraphernalia of the

see had about this time extended so greatly that a new officer was appointed as keeper of the church vestments and furniture treasured within the "Gemma doors" entering the choir.' Cameron died on Christmas Eve 1446 at Lochwood, a rural retreat belonging to the bishops in the parish of Old Monkland, about six miles eastward of Glasgow. A number of the older writers hint that his magnificence was carried out by money extorted in cruel fashion from his people. Pitscottie's opinion of him has been already referred to, and Buchanan and Spottiswoode both speak of his death as fearful. Pitscottie describes minutely, how, 'on Yule-even, when he was sleeping, there came a thunder and a voice out of heaven crying "and summoning him to the extreme judgment of God, where he should give an account and reckoning of all his cruel offences without further delay." Through this he wakened forth of his sleep, and took fear of the novelty of such things unknown to him before; but yet he believed this to be no other but a dream, and no true warning for amendment of his cursed life; yet he called for his chamber-chiels, and caused them to light candles and to remain a while beside him till he recovered the fear and dreadour that he had taken in his sleep and dreaming. But by he had taken a book and read a little while the same voice and words were heard with no less fear and dreadour than was before, which made them that were present at that time about him to be in dread, so that none of them had a word to speak to another, thinking no less than sudden mischief hastily to befall them all; and, from hand, the third time, the same words were more ugously cried than before. This bishop rendered his spirit hastily at the pleasure of God, and shot out his tongue most wildly as he had been hanged upon a gallows. A terrible sight to all cruel oppressors and murderers of the poor.'

To Cameron succeeded William Turnbull, archdeacon of St Andrews and keeper of the privy seal, whose name will ever be held in honoured remembrance as the founder of the University of Glasgow. King James II. seems to have been the prime mover in the matter, and at his instigation a bull was obtained from Pope Nicholas V. in 1450, erecting a university at Glasgow after the model of the university at Bologna, 'Glasgow being a place well suited and adapted to that purpose on account of the healthiness of the climate, the abundance of victuals, and of every thing necessary for the use of man.' The university was opened for teaching in 1451, and on 20 April 1453 James himself granted a charter excepting all connected with the university save the bishop, 'from all tributes, services, exactions, taxations, collections, watchings, wardings, and all dues whatever.' Acting on this Bishop Turnbull granted to the members of the university the privilege of trading within the city without payment of customs, and also the power of jurisdiction in all but very important matters, a power which was claimed and exercised even in serious cases down to the beginning of the 18th century. Passing the episcopate of Muirhead, Laing, and Carmichael, important changes took place in the time of Bishop Robert Blackadder, who was consecrated in 1484. In 1488, by the exertions of the king, a bull was obtained from Pope Alexander VI., erecting the see of Glasgow into an archbishopric, and the erection was confirmed by Act of Parliament. Its suffragans were the Bishops of Dunkeld, Dunblane, Galloway, and Argyll. James IV., whose piety in early youth took an enthusiastic turn, had become a canon of the chapter of Glasgow, and loved to show favour to the cathedral of which he was a member. In the first year of his reign it was 'concluded and ordained be our sovereign lord and his three estates that for the honour and public good of the realm the see of Glasgow be erected in an Archbishoprick with sic privilegis as accordis of law and siclik as the Archbishoprick of York has in all dignities, emunities, and privilegis,' and besides, 'the king renewed and extended the privileges and exemptions and much valued civil jurisdiction of the bishop, with expressions that show both his attachment to Glasgow, and the commencement

of that high character of its chapter, which afterwards drew to the archbishop's court of Glasgow a great proportion of civil business.' Blackadder was the last of the prelates who lent a kindly hand to the extension and adornment of the cathedral, which had now been more than 370 years in existence since its foundation by Bishop John. 'He founded,' says M'Ure, 'several altarpieces in the choir, and caused place his arms above them in the roof of the lower area, illuminate in a small escutcheon, three cinquefoils on a bend without either a mytre or a crosier, and above it in large capital letters *Robertus Archiepiscopus*. He raised the ascents on each side of the church by steps from the nave to the floor of fine work, with effigies, as I take it, of the apostles, neatly engraved; and in the descent, on both sides, you will see the archbishop's arms, in several places at large, with his mytre and other *pontificalia* with the initials of his name. He likewise founded the great isle to the south of the church, of curious work, corresponding to the other parts of this most magnificent structure.' Though this southern aisle, known as Blackadder's crypt, remains unfinished, enough has been done to show the rudiments of a beautiful design. He is also believed to have erected the organ screen. According to Leslic the archbishop undertook a pilgrimage to the Holy Sepulchre in his old age, and died on 28 July 1508 when almost in sight of the Syrian shore.

Blackadder was succeeded by James Beaton, who in 1524 was translated to St Andrews, and was followed by Gavin Dunbar, tutor to King James V., who was consecrated in 1525. The spread of new doctrines had begun to show itself in Blackadder's time, for we find that, in 1503, thirty persons from the districts of Kyle and Cunningham were tried in the chapter-house of the cathedral on a charge of heresy, but were dismissed, 'with an admonition to take heed of new doctrines, and content themselves with the faith of the Church.' By the time of Dunbar, however, matters had gone farther, and the infallibility of the Church, the purity of the Romish faith, and the morals and precepts of the clergy began to be freely and boldly questioned. In the attempt to suppress these doctrines which caused the clergy to tremble, many pious persons suffered death at St Andrews and Edinburgh; and to such an extent had such heresies spread in the West—then, as ever after, a stronghold of the reformed doctrine—that it was at last deemed necessary to make an example in Glasgow, in order to intimidate the heretics, but the very means which were intended to crush the Reformation, namely, the martyrdom of Russel and Kennedy, greatly aided its progress in the West of Scotland. Dunbar, a man of kindly disposition and of sufficient good sense to know that the spirit of inquiry was not to be stilled, nor conscientious belief changed, by lacerating the flesh, recommended moderate measures; but the high powers of the Church thought otherwise, and accordingly, in 1538, a deputation, consisting of John Lawder, Andrew Oliphant, and Friar Maltman, was sent from Edinburgh to Glasgow to stimulate the archbishop, and assist in crushing the advancing Reformation by the help of stake and faggot. The victims were Jerom Russel, said to have been one of the Grey Friars in Glasgow, and noted for his learning and talent; and John Kennedy, a young man from Ayr, not more than 18 years of age. After a mock trial in which 'Mr Russel reasoned long, and learnedly confuted his accusers,' they were handed over—much against the will of Dunbar, who affirmed 'that these rigorous proceedings did hurt the cause of the Church more than in his opinion could be well thought of'—to the secular power for execution, and suffered martyrdom at a stake which had been erected near the E end of the cathedral. These were the only martyrs who suffered at Glasgow during the progress of the Reformation. Though gentle in spirit, Dunbar seems yet to have been tinged with some of the bigotry of his order, for, when in March 1542 Lord Maxwell brought into the Scottish Parliament a bill for the purpose of authorising the reading of the Bible in the vulgar tongue, he led the opposition, and

when to the credit of the legislature the bill passed he protested 'for himself and in name and behalf of all ye prelatys of yis realme,' and 'dissassentit thercto simple; and opponit yame yairto unto ye tyme yat ane provincial counsell myt be had of all ye clerge of yis realme, to avyss and conclude yairupon.' He died in 1547, and was buried in the choir of the cathedral in a stately tomb which he had caused to be built for himself, but which was entirely swept away when the Reformers obtained the mastery, and when the cathedral itself so narrowly escaped the fate of the other beautiful ecclesiastical structures, which for ages had adorned the kingdom.

In the midst of the civil and ecclesiastical turmoil that then disturbed the kingdom, it was some time before the vacant office of archbishop was filled up, but at last James Beaton, nephew of the cardinal, was consecrated at Rome in 1541. With this prelate came the crisis and the close. He was the last of the long line of spiritual princes who had held sway in Glasgow for so many centuries. The Reformation had now acquired an irresistible momentum, of which the archbishop speedily became fully conscious. He accordingly removed into the castle or palace all the portable valuables which the church contained, and summoned around him the gentlemen of the neighbourhood still attached to the old doctrines, who, by means of their servants and adherents, guarded the church and palace from any sudden onslaught on the part of the Reformers. As the Lennox family, who had long been strong supporters of the diocese, had gone over to the Protestants, he entered into an agreement in 1558 with 'James duke of Chatelrault, erle of Arran, lord Hamiltounne' to defend him and all the cathedral possessions 'againis quhatsoever person or personis within yis realme, except ye queans grace, prince or Kingis grace,' which bond the Duke did not long keep, for in the following year he passed over to the side of the Reformers, and not only caused 'all the images, altars, and relics within the church to be destroyed, but he also attacked and took possession of the palace of the archbishop, from which he was with difficulty expelled by a body of the Queen-Regent's French troops. It is believed that at this time the leaden roofing was stripped from the cathedral.' The defection of the Duke of Chatelherault seems to have convinced Beaton that further struggle was hopeless, and he quietly retired from the contest, and passed into France in 1560 escorted by some troops of that nation, probably those who had assisted in the expulsion of the Duke. The archbishop carried with him all the treasures and costly ornaments, chalices, and images of gold and silver, including the relics and their cases formerly mentioned, and what is of much greater importance, from a modern point of view, he also carried away all the valuable records of the see from the earliest period to his own time. These he deposited partly in the archives of the Scots College, and partly in the Chartreuse at Paris, where, at the time of the French Revolution, they were, along with other valuable MSS., saved by the patriotic exertions of Abbé Macpherson, one of the members of the college, and transmitted to Scotland. In 1843 they were arranged and printed under the superintendence of Mr Cosmo Innes, for the Bannatyne Club, at the expense of the late Mr Ewing of Strathleven. Long previous, however, to that date authenticated and notarial transcripts of the chartulary and other documents had been procured by the University of Glasgow (in 1738 and subsequent years); and the Magistrates of Glasgow, in 1739, obtained authenticated copies of the writs that were considered of most importance to the city. When the archbishop settled in France he was constituted ambassador to that court from his sovereign the unfortunate Mary, whom he served with unshaken fidelity throughout her chequered career and till her death at Fotheringay. Her son, James VI., respecting his fidelity, employed him and obtained for him, by special act of parliament in 1600, the restoration of the temporalities of the see which he had abandoned, 'notwithstanding,' as the act says, 'that he hes never maid con-

fession of his faith, and hes never acknowledgeit the religion profest within this realme.' His closing days were, therefore, affluent and easy, and he died on 24 April 1603, at the advanced age of 86. By his will he ordained that the archives and relics of the cathedral, which he had carried away, should be restored to Glasgow so soon as the inhabitants should return to the communion of the Church of Rome—'Which,' says M'Ure, 'I hope in God shall never be, but that His Church is so established here that neither the gates of Rome or hell shall ever be able to prevail against it.' In its prime the see of Glasgow was endowed with magnificent temporal possessions which fully warranted its title of the 'Spiritual Dukedom,' and at its final overthrow it may be fairly assumed that the anticipated scramble for the fair domains of the ancient church quickened the conversion of many of the Scottish nobles to the doctrines of the Reformation. The archbishops held the lordships of the royalty and baronies of Glasgow, and, besides, of 13 baronies of lands within the sheriffdoms of Lanark, Dumbarton, Ayr, Renfrew, Peebles, Selkirk, Roxburgh, Dumfries, and the stewardry of Kirkeudbright. 'It is impossible,' says Cosmo Innes, 'for a student of ecclesiastical antiquities not to look back with fond regret to the lordly and ruined church which we have traced from its cradle to its grave, not stopping to question its doctrines, and throwing into a friendly shade its errors of practice. And yet if we consider it more deeply we may be satisfied that the gorgeous fabric fell not till it had completed its work and was no longer useful. Institutions, like mortal bodies, die, and are reproduced. Nations pass away, and the worthy live again in their colonies. . . . In this view it was not unworthy of that splendid hierarchy, which arose out of the humble family of St Kentigern, to have given life and vigour to such a city as Glasgow, and a school of learning like her University.'

During the alternate rule of Episcopacy and Presbyterianism there were 15 Protestant archbishops, but, compared with their predecessors, they are by no means important. They and their doctrines were alien to the genius of the people among whom they were placed, and though some of them, like the amiable and virtuous Leighton (1670-74), were able and excellent men, others (numbered among the 'Tulchans') 'were the mere nominees of noble lay patrons, with whom, by a Simoniacal arrangement, they divided the temporalities of the see. None of them did anything to extend or beautify the cathedral which had so happily and miraculously survived the storms of the Reformation. Possibly little blame is attachable to the Protestant prelates for this seeming remissness. Their means were limited, and they might foresee that the decorations put up during an episcopalian reign would be shorn off when the Presbyterians came to rule the house. . . . Only two of the prelates put their hands to the fabric of the cathedral. Archbishop Spottiswood, the eminent church historian, commenced to renew the roof which had been stripped of its lead during the Reformation troubles, and had only been imperfectly repaired afterwards, and this work was completed after Spottiswood's translation to the Primacy of St Andrews in 1615.'

During the civil and religious troubles of the time of Queen Mary and the early years of King James VI., Glasgow was concerned in some of the numerous conflicts that were then so common all over the country. The most important were the 'Battle of the Butts' and the Battle of Langside. During the minority of Queen Mary, James Hamilton, Earl of Arran, then heir-presumptive to the throne, and the ancestor of the dual house of Hamilton, was appointed regent of the kingdom, but his appointment was strongly repugnant to the Earl of Lennox and the Queen-Dowager, and the hostile feeling at last became so strong that both parties resorted to arms. In 1544 Lennox garrisoned the bishop's palace in Glasgow, and retired himself to the stronghold of Dumbarton, and the Regent, having gathered together a numerous army at Stirling, marched to Glasgow and be-

sieged the palace or castle with the aid of cannon. After the siege had lasted for ten days, the garrison agreed to surrender on condition of receiving quarter; but no sooner had they laid down their arms than all were massacred, with the exception of two only who escaped. Lennox determined to revenge this treachery and their loss by striking a desperate blow, and, having associated with himself the Earl of Glencairn, at first determined to march into Clydesdale, and there desolate the lands of the Hamiltons by fire and sword. The Regent, however, was timeously apprised of the scheme, and resolved to counteract it by taking possession of Glasgow. Glencairn was, however, beforehand with him, and when Arran approached, the other had his forces already drawn out, amounting to 800 men, partly composed of his own vassals, and partly of the citizens of Glasgow. The armies met at the 'Butts,' the place where the 'weaponshaw' exercises were held, and now the site of the old infantry barracks. The onset of Glencairn was so furious that he beat back the first rank upon the second and captured the Regent's cannon, but, in the heat of the battle, while victory yet wavered, Robert Boyd, of the Kilmarnock family, suddenly arrived with a small party of horse and turned the scale in Hamilton's favour, for Glencairn's men, thinking that a new army had come against them, fled with great precipitation. Considering the comparatively small numbers engaged on both sides, the conflict must have been unusually sanguinary, for it is recorded that 300 men were slain or wounded on both sides, one of Glencairn's sons being among the slain. 'The Regent immediately entered the city, and in revenge for the part the citizens had acted, gave the place up to plunder; and so completely was it harried that the very doors and windows of many dwelling-houses were carried away, in fact they only spared the city in so far as they did not commit it to the flames.'

Glasgow is also closely connected with the decisive event of the times—the Battle of Langside, 13 May 1568—which, though it 'lasted but for three-fourths of an hour,' and was, from 'the number engaged and the nature of the contest,' more of the character of a skirmish than anything else, was yet, from the conditions under which it was fought, of a most decisive character, settling the fate of Scotland, affecting the future of England, and exerting an influence all over Europe. The Regent Murray was holding a court of Glasgow in the city when the startling intelligence reached him of the Queen's escape from LOCHLEVEN and of the assembling of her friends at Hamilton. 'The news whereof being brought to Glasgow (which is only 8 miles distant), it was scarce at first believed; but within two hours or less, being assured, a strong alteration might have been observed in the minds of those who were attending. The reports of the Queen's forces made divers slide away; others sent quietly to beg pardon for what they had done, resolving not to enter in the cause farther, but to govern themselves as the event should lead and direct them; and there were not a few who made open desertion, and not of the meaner sort, amongst whom my Lord Boyd was specially noted, and in the mouths of all men; for that being very inward with the Regent, and admitted to his most secret counsels, when he saw matters like to turn he withdrew himself and went to the Queen.' Though Murray was surprised by the rapid and unexpected course of events, which had not only rescued Mary from a prison but placed her at the head of an army, he was not dismayed; and having gained a breathing time by listening to overtures of accommodation from the Queen's party, he in the meantime sent word to his own friends and those of the young King, and was joined by the Earls of Glencairn, Montrose, Mar, and Monteith, the Lords Semple, Home, and Lindsay, by Kirkaldy of Grange, a soldier of great ability and skill, and many other gentlemen, in addition to a large body of the citizens of Glasgow, which placed him at the head of an army of upwards of 4000 men. With this force he encamped on the Burgh Muir (which extended along

the E from the Green by Borrowfield towards the cathedral), and there awaited the approach of the Queen's forces, as it was believed that her followers intended to place her Majesty in safety in the strong fortress of Dumbarton, which was then held by Lord Fleming. This was her own desire, as, once there, she hoped 'to regain by degrees her influence over her nobility and her people.' Murray was thus in a favourable position for intercepting the Queen's troops had they proceeded towards Dumbarton by the N bank of the Clyde; but news came that the royalists were marching W by the S bank of the river, intending to cross at Renfrew, and so reach the castle. Both sides were keenly alive to the importance of occupying Langside Hill, an eminence $1\frac{1}{2}$ mile S of Glasgow, and directly on the line of Mary's march from Rutherglen; but while Murray promptly moved forward, his cavalry being sent across the Clyde by a ford (each horseman with a foot soldier behind him), and his infantry following by the bridge, the Queen's forces were delayed by the illness of their chief commander, the Earl of Argyll; and when, therefore, they reached Langside, they found it already occupied by the Regent's cavalry and the hagbutters they had carried with them, who, disposed among the houses and along the hedges, poured a heavy fire into the Queen's troops as they advanced. The vanguard, however, confident in their numbers, pressed on, but were exhausted by the time they reached the top of the hill, and so but little fit to cope with Murray's first line which there awaited them, and which was composed of excellent pikemen. Notwithstanding this, the fighting was severe, 'and Sir James Melvil [of Halhill, who was present, and from whose account of the battle all subsequent accounts have been derived] describes the long pikes as so closely crossed and interlaced, that when the soldiers behind discharged their pistols, and threw them or the staves of their shattered weapons in the faces of their enemies, they never reached the ground, but remained lying on the spears.' The battle was wavering, and Murray's right wing beginning to give way, when Kirkaldy at the critical moment brought up the reserves, and such was the impetuosity of the new attack that the Queen's forces gave way, and the flight immediately became general. Three hundred of her followers perished, while the Regent's loss is set down as one man. On seeing the rout of her army, Mary, who had been watching the conflict from a hill near Cathcart House, about $1\frac{1}{2}$ mile in the rear, fled in such a state of terror that she never stopped till she reached Sanquhar, 60 miles from the field of battle, thence going on to TERREGLES, and thence crossing over to England.

The Regent 'returned in great pomp to the city, where, after going to church and thanking Almighty God in a solemn manner for the victory, he was entertained by the magistrates and a great many of the town council very splendidly, suitable to his quality, at which time the Regent expressed himself very affectionately towards the city and citizens of Glasgow; and for their kind offices and assistance done to him and his army, he promised to grant to the magistrates or any incorporation in the city any favour they should reasonably demand.' Several requests were in consequence made and granted to the incorporations. The deacon of the incorporation of bakers was at the time Matthew Fauside, and he, being 'a very judicious and projecting man, who had an extraordinary concern for the good and advancement of the incorporations,' took occasion to say that, as the mills at Partick, which were formerly the property of the archbishop, now belonged to the crown, and the tacksman exacted such exorbitant multures that it raised the price of bread to the community, a grant of these mills to the corporation would be regarded as a public benefit; and, moreover, the bakers were not altogether undeserving of favour in another respect, as they had liberally supplied the army with bread while it remained in the neighbourhood of Glasgow. Fauside's well-timed address had the desired effect, and the five flour-mills at Partick, on the banks of the Kelvin, are possessed by the incorporation of

bakers till this day. The citizens have, however, never been able to discover that in virtue of this gift bread is to be had cheaper in Glasgow than elsewhere.

In May 1570 the Hamiltons, with others of the Queen's supporters, had again mustered sufficient force to attack the castle or bishop's palace at Glasgow, which was now held for the Earl of Lennox, who had become Regent after the murder of Murray at Linlithgow by Hamilton of Bothwellhaugh. They first attempted a surprise, and when that failed they opened fire with cannon to make a breach, so that the position might be stormed. The garrison, though it numbered only twenty-four, and had no head, as the governor was absent, held out so bravely, however, that the besiegers failed, and, after losing a number of men, were forced to retire. Probably they had not much heart left, and they may besides have been alarmed by the approach of the troops sent to avenge the murder of Murray on the Hamiltons. These, under Lennox and Sir William Drury, reached Glasgow two or three days after the attack, and says Tytler, 'commenced a pitiless devastation of Clydesdale and Linlithgowshire, razing their [the Hamiltons'] castles, destroying their villages, and making a desert of the whole territory.' Hamilton Palace, Linlithgow and Kinneil Castles, and the estates and houses of the Duke's kindred, were completely wasted. 'In these days,' says Pagan, 'the citizens of Glasgow looked upon the castigation of the Hamiltons with no small satisfaction, for they had not forgotten the grievous ills which the town had suffered from their party at the Battle of the "Butts," and the remembrance of their slaughtered kinsmen and plundered homes nerved many a stout arm against the party of the Hamiltons and the Queen at the field of Langside.'

Up to the Reformation the progress and prosperity of Glasgow had been solely dependent on the progress and power of the see, and, no doubt, to some extent on the personal character of its ecclesiastical head for the time being, and as the overthrow of the Roman Catholic system thus forms a great break in the history of the city, it may be well here to depart from strict chronological order and go back and trace the development of the place in its proper municipal aspect. Mention has been already made of the privileges granted to Glasgow when it was constituted a burgh of barony by William the Lyon in or about 1180, and in 1242 another advance was made, and the burgesses and men of the bishop became as free to trade in Lennox and Argyll as the men of Dumbarton. In 1450, in the time of Bishop Turnbull, James II. granted a charter raising the burgh to one of regality, with all the increased privileges thereto belonging. In return for this grant, the bishop and his successors were to give 'a red rose upon the Feast of the Nativity of the Blessed John the Baptist at Glasgow in name of Blanchfarm, if asked only, and the assistance of their prayers.' The bishop was permitted to appoint a sergeant for making arrestments and executing the edicts of his court, and this officer was to bear a silver staff having the royal arms blazoned on the upper end, and the arms of the bishop at the other. Previous to the regality privileges, and the foundation of the university, the village of 'Deschu' had grown so that it reached from the cathedral on the N to the Blackfriars' monastery on the S, and from Drygate on the E to near the site of the modern Balmano Street on the W, but the two changes just mentioned soon brought considerable increase in size to the place, as the accommodation was insufficient for the 200 students who soon gathered, and also for the growing numbers who flocked into it in order to engage in trade. One extension, therefore, took place southward from the Blackfriars' monastery to the cross along the line of High Street, and another eastward over the Gallow Muir in the line of the Gallowgate, while, to the W, streets were extended as far as the Tron. The town was not walled, but it had ports at the ends of the principal streets. These seem to have been shifted from time to time. The Stable Green Port was near the castle, and on the opposite side was the Castle Port, the site of which is now occupied by part

of the Barony Church. There was a port 'between the Gyrtburn and the street called the Drygate,' a port known as the Subdean Port, and there was also one at the E end of the Drygate, one at the Gallowgate, one at the foot of the Saltmarket, and others elsewhere at later dates. Of the bishop's palace or castle which stood near the Stable Green Port, not far from the western entrance to the cathedral, no trace now remains. The original castle was very old, for it is mentioned in 1290, and it seems to have been extended and strengthened from time to time. Bishop Cameron is said to have added a tower to, and otherwise improved, it. Archbishop Beaton strengthened it with a stone wall, with a bastion at one angle, and a tower with battlements on the angle facing High Kirk Street. In 1515 it must have been a place of importance, for it seems to have been the depot for the King's cannon. When Arran and others broke out in rebellion against Albany's rule, it was stormed and plundered by Mure of Caldwell, but Albany compelled him to give it up. In 1554 Archbishop Dunbar added a stately and handsome gatehouse and an arched gateway with his arms on it. In 1570 the castle again underwent a siege as is told elsewhere, and after this under the poor Protestant archbishops it seems to have begun to fall into decay. It was partially restored in 1611 by Archbishop Spottiswoode, but Sir William Brereton, who was there in 1634, describes it as a 'poor and mean place,' while, on the other hand, Ray, whose notions were probably not so high-flown, says it was 'a goodly building.' It must, however, have been ruinous, for Morer, in his *Short Account of Scotland* (1689), speaks of it as 'formerly without doubt a very magnificent structure, but now in ruins.' In 1720, Robert Thomson, a merchant in Glasgow, represented to the Barons of the Exchequer that 'bad men' were carrying off stones, timber, etc., from the ruins, but no action seems to have been taken, and a drawing of it, made about 1750, shows part of it in a very ruinous condition. The magistrates themselves showed their barbarity, for when the Saracen's Head Inn was erected in the Gallowgate in 1755, they allowed the contractor to take stones from the archbishop's castle. In 1778 part of it was again removed to widen Castle Street, but, judging from a drawing made in 1783, the fine square tower was almost entire. The crowning act of Vandalism of the long series was committed in 1792, when the last of the remains of it were cleared away to make room for the foundations of the Royal Infirmary.

To the N, on the burgh muir at the modern St Rollox, was a little chapel dedicated to St Roche the Confessor. It was founded about 1508 by Thomas Muirhead, one of the canons of Glasgow. The burying-ground which surrounded it was, during a pestilence in 1647, used for the reception of the infected poor, who were placed there in wooden huts. The houses of the canons were about the cathedral from the Stable Green Port round by the Molendinar, High Kirk Street, the Drygate, Rottenrow, and Balmano Street. The Drygate contained the mint, which seems to have dated at least from the time of Alexander II., for coins of his struck here exist, and M'Ure describes some coins of Robert III. struck here as having a representation of the King crowned, but without a sceptre, with the motto *Robertus Dei Gratia Rex Scotorum*, and, on the other, on an inner circle, *Villa de Glasgow*, and on an outer *Domini Protector*. The site is now occupied by part of Duke Street Prison. Not far from Stable Green, on the W side of Castle Street, stood St Nicholas' Hospital, which was founded by Bishop Muirhead about 1460, and which was pulled down in 1808. Originally it was endowed for twelve indigent old men, and a priest to perform divine service at the canonical hours, and Archbishop Leighton subsequently, in 1677, bequeathed £150 for its further endowment. In Brown's *History of Glasgow*, in 1795, the chapel of the hospital is mentioned as existing, but in ruins, and converted into a cow-house! Farther N was the Back Almshouse, erected by Roland Blackadder, subdean of Glasgow, as a sort of casual ward, which seems to have been afterwards united to

St Nicholas' Hospital. In 1590 John Painter, master of the Sang school, left £3 to the twelve poor men in St Nicholas' Hospital, and 20s. to the four poor men in the Back Almshouse. Of the revenues of these, only £380 of capital, and £15 per annum from grain and ground rents, now remain to be administered by the magistrates and town council.

The Cross stood at the junction of Rottenrow, Drygate, and High Street. In the latter street were the buildings and church of Blackfriars' Monastery, the seminary of the canons regular, and a small building belonging to the Grey Friars. The new cross was at the junction of High Street and the Gallowgate beyond the Saltmarket Port. There was a road by the Saltmarket (the Fuller's Gate) and Bridgegate to Bishop Rae's bridge, near which, at the lower end of the present Stockwell Street, were a number of fishermen's huts. These were called the Fishergate. The modern name is taken from a well in the district called the Stok Well, which is mentioned in 1478. On the other side of the river was the leper hospital already mentioned. Part of Glasgow Green was covered with wood, and known as the Bishop's Forest. It is difficult to arrive at any idea of the population of the city at this time. The presence of the plague twice within the preceding century would tend probably somewhat to diminish it, but, allowing for this, an estimate has been made that it might number about 2000, of which from two to three hundred would be connected with the University. Fish seem to have been exported, and the name Fuller's Gate points at the manufacture of cloth, but the trade was still so small that, practically, by far the greater part of the inhabitants were dependent on church and churchmen for their means of making a living. In the time intervening between this and the Reformation the burgh of regality had gone on thriving notwithstanding temporary drawbacks. Mr Macegeorge estimates the population in the middle of the 16th century as about 4500, which shows that the place was still growing, but all on the lines already laid down, and, no doubt, in a great part along further extensions of those main streets. It still had no more than the one principal street and the five or six lesser ones. High Street, occupying in the main the same line as it did till recent years, stretched in an irregular line downwards to the Cross from whence it was continued by the Waulker or Fuller's Gate (now the Saltmarket) to the Bridgegate. From the Market Cross the Gallowgate, opened early in the 14th century, went E, and the Trongate (both now more closely built than in 1450) went W. On the N side of the Gallowgate stood the church or chapel of St Mungo's-in-the-Field or Little St Mungo's, built and endowed about 1500 by David Cunningham, provost of the collegiate church of Hamilton. It was surrounded by a cemetery—all traces of which have long vanished, although the site is still known—and close by it stood certain trees bearing the name of St Mungo. The Trongate was then better known by its original name of St Thenew's Gate. It got this title from its leading to the well and chapel of St Tanew or Thenew (the mother of St Mungo) which stood in the region outside the West Port, now occupied by St Enoch's Square, the name Enoch being merely a corruption of the older one, after a passage through the intermediate stage of St Tennoch's. Both well and chapel were near the site of the present church.

The chapel marked the spot where Thenew was supposed to have been buried, and contained her tomb. In Oct. 1475 James III., by a charter, granted to the cathedral church of Glasgow half a stone of wax from the lands of 'Odingstoune' in the lordship of Bothwell for lights to be burned at the tomb of 'St Tenew' in the chapel where her bones are buried. The chapel was entire in 1597, and some traces of it remained in the beginning of last century. The name of Trongate was just beginning to come into use, the term being derived from the 'trone' or weighing-machine having been erected in it near the end of the 15th century. The first public mention of it is in a deed of seisin of 30 May

1545, where a tenement is described as being in 'le Troyne Gait.' On the S side of the Trongate stood the collegiate church of the blessed Virgini Mary and St Ann, founded prior to 1528 by James Houston, sub-dean of Glasgow. Round it there was a large burying-ground, which, after the Reformation, was used as a market for grass and straw. No memorial of the old building (upon the site of which the Tron Church now stands) has been preserved, and the burying-ground has long since been built over, the property which was held in trust by the Corporation having been parted with in 1588 in a time of need. To the W of the collegiate church was the Song School, which was taught by one of the prebendaries of the church, who was required to be a good organist, and capable of training the youth 'in plain song and descant.' The church lay empty and unused for a long time after the Reformation, but about 1592 it began to be resorted to as a place of Presbyterian worship, and continued to be used as such with the status of a parish church till 1793, when it was destroyed by fire. In the Trongate stood also two other chapels, one called our Lady Chapel, on the N side of the street, not far from the Cross, founded as early as the year 1293; the other dedicated to St Thomas-a-Becket, which seems to have been endowed in 1320 by Sir Walter Fitz Gilbert, the progenitor of the Hamiltons. Except, then, for its ecclesiastical connection, Glasgow was as yet a place of no very great importance; and indeed, in the taxation of royal burghs in the time of Queen Mary, it is rated only as the eleventh; but the successful outcome of the Reformation, by depriving the citizens of their former great mainstay, turned their industry into the new, permanent, and more profitable channels that were to lead to future greatness.

The first outlook, however, was far from promising, for the loss of the clergy and of the university students and the confusion of the times brought ruin and suffering to many in Glasgow, especially of the middle and lower classes, and caused much distress. The burgh records for 1563 state that 'there was a grit dearth approaching to a famine,' and that all the necessaries of life were more than treble their ordinary value. The magistrates tried to regulate prices and weights, but probably they were not very successful. In 1576 a humble supplication was presented to the King and parliament by the freemen and other indwellers of the city of Glasgow above the Greyfriars' Wynd thereof, and makes mention that 'whereas that part of the said city that afore the Reformation of the religion was entertained and upholden by the resort of the bishops, pastors, and others of the clergy for the time, is now becoming ruinous, and for the maist part altogether decayit, and the heritors and possessors thereof greatly depauperit, wanting the means not only to uphold the same, but for the entertainment of themselves, their wyffis, bairnies, and families. . . . And seeing that part of the said city above the Greyfriars' Wynd is the only ornament and decoration thereof, by reason of the great and sumptuous buildings of great antiquity very proper and meet for the receipt of his highness and nobility at such times as they shall repair thereto,' and so on, and generally claiming some amelioration of their condition. Commissioners were accordingly appointed to take measures for the relief of their necessity, and as one of the complaints had been that there was 'ane great confusion and multitude of markets togidder in ane place about the croce,' they ordered the markets to be removed farther up the street for the benefit of the petitioners. There is no reason to believe that the shifting of the markets compensated for the banishment of the Roman Catholic clergy, and the desired amelioration took place only when the inhabitants, learning to rely on themselves, began to direct their industry into new channels. It is indeed somewhat remarkable to find that, even thus early, and while the place was still so poor and so limited, Glasgow began to possess the germs of commercial eminence in so far as it was not destitute of shipping, for there is an order of the Privy Council to the effect that vessels belonging to Glasgow should not

annoy those belonging to Henry VIII., the Queen's grand-uncle.

Subsequent to the Reformation the glimpses of the social and moral condition of the people, which previously were drawn mostly from the archives of the see, come to be taken from the records of the presbytery, kirk-session, and town council, and the picture they present is certainly very curious, though fresh and truthful. There is no doubt that, notwithstanding the amount of suffering caused by the change, the citizens adhered firmly to the doctrines they had embraced with such cordiality and sincerity, for in 1581 the negative Confession of Faith, with the National Covenant annexed, was signed at Glasgow by 2250 persons, men as well as women—a total which, considering the probable number of the population, must have included almost every one above the condition of childhood. As the old bishops and archbishops had never been legally divested of their temporalities, it became necessary to employ a legal fiction in order to get possession of the revenues; and for this purpose the bishops known as the 'Tulchans'—since they were employed merely as dummy calves, while the court favourites or the great officers of state milked the benefices—were appointed. In 1581 the king promoted Robert Montgomery, minister at Stirling, to be Protestant Archbishop of Glasgow, on the understanding that the larger portion of the temporalities were to be paid to the Lennox family, an appointment and arrangement in the highest degree distasteful to the people. It was resolved to oppose his induction by sending Mr Howie, one of the Presbyterian preachers, to take prior occupation of the pulpit of the cathedral. Howie went, but while he was, on the day set apart for the induction of the prelate, engaged in the ordinary service of the day, Sir Matthew Stewart of Minto, provost of the city, determined to enforce the royal warrant, pulled him out of the pulpit, and in the course of the struggle a handful of hair was torn from the minister's beard, some of his teeth were knocked out, and his blood was shed. This assault was regarded by the citizens of Glasgow as a most sacrilegious one; and as Mr Howie denounced the judgment of God upon Sir Matthew and his family, it was remarked that in seventy years this once potent race had been reduced to impoverished circumstances in the city in which for many generations they had been lords. How much of this was due to Mr Howie's curse it is unnecessary to inquire, but it may be remarked in passing that this was the first sign of that stubborn opposition to Episcopacy which the western shires afterwards so strongly exhibited. Montgomery was forced to resign, and he afterwards became minister of the parish of Stewarton, where he died, but his retirement did not prevent the appointment of other episcopal prelates in due season. The power of the Presbyterian clergy having been meantime fairly established, they proceeded to exercise a system of discipline which now-a-days would be considered of a very stringent and oppressive character, but, considering the superstition and looseness which marked the former papal rule, there is no doubt that it was necessary for the regeneration of the people, especially those of what were termed 'the meaner sort.' If the sacerdotal power were supreme before the Reformation the Church power, cleric and lay, now became equally so, and even if possible still more so. There are cases of Church interference and discipline which might hardly be credited had we not the records before us, and curiously enough we find the general kirk-session—a body appointed in 1572, and possessing a power as despotic and secret as that of the Venetian Council—so powerful as often to set presbytery and corporation alike at defiance. In perusing the ecclesiastical injunctions and sentences, the large number of cases in which jurisdiction usually belonging to the civil power was exercised by the Church courts is very remarkable. In 1582 it was ordered that 'the booth doors of merchants and traffickers were to be steaked [shut] on Wednesdays and Fridays in the hour of sermon, and the masters of booths were enjoined to keep the hour of preaching under the penalty of twenty

pounds Scots, without a lawful cause admitted by the session.' On 26 Dec. five persons were appointed to make repentance, because they kept the superstitious day called Yuil [Christmas]. 'The baxters [bakers] to be inquired at, to whom they baked Yuil bread.' In 1587 the session laid down the following tariff in Scots money to meet cases of immorality:—'Servant women, for a single breach of chastity, twenty pounds for her relief from cross and steeple; men servants, thirty pounds, or else to be put in prison eight days and fed on bread and water, thereafter to be put in the jugs [stocks].' As for the richer sort of servants, the fines were to be exacted at the arbitrement of the Kirk. 'This act not to extend to honest men's sons and daughters, but they to be punished as the kirk shall prescribe.' The Kirk could, however, afford to be tender when it had to deal with a transgressor whose rank was above the common sort; for in 1608 the laird of Minto, a late provost, was in trouble by reason of a breach of chastity, but it was resolved to pass him over with a reprimand. Harlots were to be carted through the town, ducked in the Clyde, and put in the jugs at the cross on a market-day. The punishment for adultery was to 'satisfy six Sabbaths on the cuckstool at the pillar, barefooted and barlegged, in sackcloth, then to be carted through the town and ducked in the Clyde from a pulley fixed in the bridge.' The presbytery enjoined the ministers to be serious in their deportment and modest in their apparel, 'not vain with long ruffles and gaudy toys in their clothes.' The session directed that the drum should go through the town to intimate that there must be no bickerings or plays on Sundays, either by young or old. Games—golf, alley-bowls, etc.—were forbidden on Sundays, and it was enjoined that no person should go to Rutherglen to see the plays on Sunday. Parents who had children to be baptized were to repeat the commandments distinctly, the articles of faith, and the Lord's Prayer, or to be declared ignorant, and some other godly person present their bairn, with further punishment as the Church shall see fit. In 1588 the session intimated to the presbytery that, the latter body could not hold 'exercise' in Blackfriars' church on Friday, as it interfered with the regular Friday sermon, and the presbytery had to yield. The time of assembling on the Sabbaths of the communion was four o'clock in the morning, and it must have been rather hard on the magistrates who had to 'attend the tables,' and keep order. The collectors assembled on these occasions in the High Kirk at three o'clock in the morning. On 3 March 1608 the session enacted that there should be no meetings of women on the Sabbath in time of sermon, and that no hostler should sell spirits, wine, or ale in time of sermon, under pain of twenty pounds, and that there should be no buying of timber on the Sabbath at the Water of Clyde from sunrise to sunset. In 1588 a number of ash trees in the High Kirk churchyard were ordered to be cut down to make forms for the folk to sit on in the church. Women were not permitted to sit on these, but were directed to bring stools with them. It was also intimated that 'no woman, married or unmarried, should come within the kirk door to preachings or prayers with their plaids about their heads, neither to lie down in the kirk on their faces in time of prayer, with certification that their plaids be drawn down, or they be raised by the beadle.' The beadles were to have 'staves for keeping quietness in the kirk and comely order;' for each marriage they were to get 4d., and for each baptism 2d. On 9 March 1640 the session intimated that all masters of families should give an account of those in their families who have not the Ten Commandments, the Lord's Prayer, Creed, etc., and that every family should have prayers and psalms morning and evening; and some of the fittest men were appointed to assist the elders in promoting this work. On 13 July 1643 the kirk-session appointed some of their number to go through the town on the market-day to take order with banners, swearers, etc. (till the magistrates provide one for that office); swearers were to pay twelve pence, and, along with blasphemers and

mockers of piety, were to be, for the second offence, rebuked at the bench in front of the pulpit; and for the third at the pillar, over and above the fine. Swearing seems to have been hard to eradicate, for it had been attracting attention from the time of the Reformation onward; and the women were as bad as, or even worse than, the men. In 1589 there was a special meeting of the town council to consider blasphemies and evil words used by 'sindrie wemen,' and the result was that 'ane pair joges' was set up. Morality, too, was still poor; for on 5 Aug. 1643 it was found necessary again to make enactments about offenders against the seventh commandment, and it was decreed that they should be imprisoned, and then drawn through the town in a cart with a paper on their face; thereafter to stand three hours in the jugs and be whipped; and the punishment seems to have been by no means rarely inflicted.

The magistrates and town councillors were no less zealous in the good work of encouraging piety and purity of morals (to which, indeed, they were often stirred up by requests, which had all the force of commands, from the kirk-session), in promoting order and cleanliness in the town (which from the records would seem to have been much in want of improvement), in practising charity and hospitality now and then, and in keeping up a martial spirit amongst the people by means of 'wappon-shaws' or periodical training in the use of arms. Some of their decisions are very curious, and, from a modern point of view, decidedly *ultra vires*. One of the most remarkable illustrations of the extent of their authority is a composition for the slaughter of one of the burghesses, which is entered on the books of the burgh as having the 'strength of aue decret of the provest and baillies.' In this their authority is interposed to an agreement, by which the widow and representatives of a murdered man agree to pass from any criminal action against the murderer on condition of his making 'repentance' within the High church, and paying the 'sowme of three hundred merkis money in name of kynbute' or reparation. In 1547 the baillies and council ordained 'every buythholder to have in reddiness within the buyth aue halbert, jak, and steel bonnet, for eschewing of sick inconvenients as may happen.' And again, in 1577-78, we find the following:—'Quhilk day it is condendit be the provest, baillies, counsall, and dekyne, that the act maid aent the hagbuttis be renewit; that every aue substantialis and habill men sall have aue hagbut with graitht, halder, and bullet effeing thairto; and that every uthers nocht beand habill thairfor sall have aue lang speir, by [besides] jakkis, steilbonetis, sword, and bukler.' On 28 Oct. 1588 it is 'statut and ordaint be the baillies and counsall, in consideratioun of the pest now in Paislay, that no person, indweller within the town, because of the markets of Paisley and Kilmacollm approaching, shall pass furth of the town thereto, under the paine of five pounds, to be taken of every person repairing thereto, and banished furth of the said town for a year and a day, without leif askit and gevin be the baillies.' On 1 June 1589 the council met to consider the King's letter, charging this burgh and all others to arm men to go to the North on his Majesty's service; and, considering that his Majesty was then at Hamilton, directed the three baillies, the treasurer, and a deputation of the citizens to proceed thither and speak to the King and the chaucellor, with the view that they may 'get aue licent of his grace to abyd fra this present raid'—*i.e.*, to be allowed to abstain from sending men to form part of the King's army then mustering against the popish earls in the North. The appeal was, however, unsuccessful, for at a subsequent meeting of council it was resolved to send 'fyftie hagbutteris to await on his Majesties service in the north.' In the same year, 1589, it is ordained that 'na middingis [dunghills] be laid upon the hiegate, nor in the meil or flesche mercattis. And that na flescheowris teme uschavis [empty offal] in the said places under the pane of xvj s.' It is also ordained that 'na breiding of flesche nor blawing of matton be under the pane of xvj s.' The magis-

trates of these times appear to have regulated the price of commodities, and enactments are made fixing the price of ale, candles, and viands, and vivers generally. Candlemakers are enjoined to sell either pounds or half-pounds and to sell penny or twopenny candles. On 26 July 1612, 'Matthew Thomesoun, hielandman fiddler,' is apprehended on suspicion of assaulting 'ane young damesell, named Jonet M'Quhirrie.' It appears that the charge was 'denyt be him and hard to be verefeit;' but the baillies did not give the fiddler the benefit of the insufficiency of evidence, for, 'fuding him aue idill vagabound,' they ordered him to be put in the stocks until the evening, and thereafter to be put out of the town at the West Port and banished for ever, and should he, afterwards be found in the town of his own consent, he was to be 'hangit but [without] aue assyze.' In the treasurer's accounts for 1609, various queer items are given under the heads of charity, entertainments, etc. Sums are paid to sundry persons in the town 'for vyue desart, sukar, and fruitis, and other expenses made and waitit upon the Duke of Wirtinbrig and James, Master of Blautyre, for his welcum furth of Ingland;'; 'to two puir Inglismen at command of the baillies;'; 'pulder and lead,' supplied to the men of war who were sent to the Isles; 'to schipbrokin Inglismen, puire Poliaus, Inlandmen;'; 'to aue pure crippill man that come out of Paslay;'; and also to 'ane pure man that geid on his kneis.' In 1643 a sum is given for James Eogle, a burges's son, to help to pay his ransom, 'being taken with the Turks.' A gift is made to 'Johnne Lyoun's wyf in Greenock, to help to cut aue bairne of the stone.' On 21 March 1661, the council agrees to pay yearly to Evir M'Neil, 'that cuts the stone,' one hundred merkis Scots for cutting 'all the poor for that frielie.' Various presents of wine and herrings are given to the town's friends; and so late as 20 April 1695 the council 'appoints the treasurer to have allowance in his hands of two hundred merkis payed out be him as the price of aue hogsheid of wyne given to a friend of this toune, whom it is not fitt to name.'

There are various entries regarding the meeting of the celebrated General Assembly of 1638; and, during the civil troubles in the reign of Charles I. and subsequently, 'wappon-shaws' are ordered for the training of the people in arms, and munitions are purchased, for the price of which the inhabitants are assessed, and 150 men are ordered to the border 'for the common defence.' George Porterfeld was to be captain, and the Glasgow men were to march in Lord Montgomery's regiment. On 25 April 1646, the Treasurer is ordered to 'pay to Daniel Brown, surgeon, twelve pounds money, for helping and curing certain poor soldiers hurt at Kilsyth, at command of the late magistrates.' On 18 June 1660, 'aue congratulatioune' is kept on account of the happy return of 'our dread sovereign the King's majestie.' In 1663 the Dean of Guild and convener are ordered to appoint some of their number as they think convenient 'to taist the seek now cellered be Mr Campsie,' preparatory to the 'toun's denner' then about to take place. On 20 June 1674, it was represented to the council that Mrs Cumming, mistress of manners, was about to leave the town on account of the small employment which she had found within it, 'quhilk they fund to be prejudicial to this place, and, in particular, to theis who hes young women to bried therin,' and, therefore, for the further encouragement of Mrs Cumming, if she will stay, she was to be paid 'one hundred merkis yearly' so long as she keeps a school and teaches children as formerly. On 1 Feb. 1690, the council ordains 'ane proclamation to be sent throw the toune prohibiting and discharging the haill inhabitants and others residing within this burgh, that they, nor nane of them, driuk in any tavern after ten o'clock at night on the week days, under the paine of fourtie shillings Scots to be payed be the furnisher of the drink, and twentie shillings Scots be the drinker, for each failzie *toties quoties*, whereof the one-half to the informer, and the other to be applied to the use of the poor.' Sabbath was to be strictly observed. By a minute of the Session,

on 14 April 1642, the magistrates and ministers were directed to search the streets on Sabbath night for persons who absented themselves from church, and, by another, they were to disperse all jovial companies, even in private houses, late on Saturday night, and on Sunday they were to watch the streets during service time, and compel those who were out to go to church. At a later date the Sunday walkers had the choice of going home. The watchers had the power of arresting offenders, and 'this practice,' says Mr Macgeorge, 'was continued till so late as the middle of last century, when the searchers having taken into custody Mr Peter Blackburn, father of Mr Blackburn of Killearn, for walking on the Green one Sunday, he prosecuted the magistrates, and succeeded in his suit. This caused the practice to be abandoned.'

The town appears, in early times, to have been sadly afflicted with a class of diseased unfortunates called lepers. Reference has been already made to the hospital erected for them by Lady Lochow, daughter of Robert, Duke of Albany, and mother of Colin, first Earl of Argyll, and it is further recorded that on 7 Oct. 1589 there were six lepers in her lepers' house at Gorbals. In 1610 the council ordained that the lepers of the hospital should go up the causewayside near the gutter, and should have 'clapperis' in their hands to warn the people to keep away, and a cloth upon their mouth and face, and should stand afar off while they received alms, under the penalty of being banished from the town and hospital. In 1635 the magistrates purchased from the Earl of Glencairn the manse of the prebendary of Cambuslang, which had been gifted to him after the Reformation, which they fitted up as a house of correction for dissolute women, and the Kirk Session was cruel enough to enjoin that the poor creatures there confined should be 'whipped every day during pleasure.'

Glasgow had its full share of those trials and calamities which began in the time of Charles I., and only terminated on the accession of William III. One of the leading events in connection with this period was the meeting of the General Assembly of the Church of Scotland at Glasgow in 1638, an assembly of the very highest national interest and importance, and which throughout its meetings exhibited a degree of independence and determination not exceeded by the Long Parliament of England in the most vigorous period of its existence. Externally, the Church of Scotland was at this period regulated by the Episcopal form of Government, but the mass of the people, and a great majority of the nobility and gentry, were devoutly attached to the Presbyterian principles that had been introduced among them by Knox and the early Reformers. The country tolerated Episcopacy, but neither acquiesced in it nor loved it. When the King, Charles I., therefore, in 1637, ordered a new service book to be used in the Scottish churches, and a report spread abroad that this book was tainted by the mass, the people exclaimed that this was neither more nor less than an attempt to insinuate Popery amongst them under the shallow disguise of a Protestant ritual; and the long smothered dislike to 'prelacy' burst forth into a storm of opposition which eventually became destructive to the whole system, and fatal to the King. The attempt to introduce Laud's liturgy was followed by a closer and more hearty bond of union among the Scottish Presbyterians, who exerted themselves towards the calling together of a General Assembly to consider the state of the Church, and, the King's reluctant assent having been obtained, the Assembly was finally summoned to meet at Glasgow on 21 Nov. 1638. The service book had already produced commotion in Glasgow, for, one day in 1637, 'at the outgoing of the church about thirty or forty of our honestest women in one voice before the bishop and magistrates fell a railing, cursing, scolding with clamours on Mr William Annan' (who had, before the synod of Glasgow, preached a sermon in defence of the liturgy), and the same night, while he was walking in the dark, 'some hundreds of enraged women of all qualities are about him, with naeves, staves, and peats, but [to their credit be it said]

no stones. They beat him sore; his cloak, ruff, and hat were rent, and though he escaped all 'bloody wounds' he was in danger of being killed. 'Some two of the meanest' of those who had been engaged in the disturbance in the earlier part of the day were put in prison, but the other 'tumult was so great that it was not thought meet to search either the plotters or actors of it, for numbers of the best quality would have been found guilty.' Next day the poor man had the further misfortune to fall with his horse above him in 'very foul mire' in presence of an angry crowd of women, who, no doubt, showed their exultation at the accident, so that his sermon cost him a good deal of grief. With the citizens in a temper like this, and considering the weighty and vexed questions to be debated, it is not surprising that the magistrates looked forward to the convocation of the Assembly with some anxiety. They passed a number of wholesome regulations, ordaining, among other things, that 'no inhabitant expect more rent for their houses, chambers, beds, and stables, than shall be appointed by the provost, bailies, and council, and ordains the same to be intimated by sound of drum, that no person may plead ignorance.' They also purchased muskets with 'stalfs and bandelieris,' pikes, powder, and match, with which to arm 'ane gaird of men keepit' to mount guard day and night while the town was filled with strangers. The council representative too was ordered not to give his vote on any important matter without first deliberating with his fellow councillors. The Assembly accordingly met on the day appointed, in the nave of the cathedral, which had been fitted up for the occasion, the 'vaults' or narrow galleries above being set apart for ladies and persons of humble degree, while one was reserved for young noblemen, not members of the house. The majority of the aristocracy of the country were present either in the capacity of officers of the crown, or as elders and assessors from the burghs—'Rothes, Wemyss, Balmerino, Lindsay, Yester, Eglinton, Loudon, and many others, whose sole word was still law for large districts of Scotland.' From each of the four universities there were three representatives, and 'thair cam out of ilk presbitrie within the Kingdome to this assemble, ane, tua, or thrie of ablest covenanting ministeris, with ane, tua, or thrie reulling elderis, who sould voice as they voiced.' There were altogether present '140 ministers, 2 professors, not ministers, and 98 ruling elders from presbyteries and burghs. Of these ruling elders, 17 were noblemen, 9 were knights, 25 were landed proprietors, and 47 were burgesses—all men of some consideration.' The great crowd, however, that had gathered to Glasgow consisted of the trains or 'following' of the nobles, which were made very large on the pretext that as there might be an inroad of Highland robbers, a strong guard of armed men was absolutely necessary. This immense crowd of retainers caused great confusion, pressure, and unseemly scenes, which have been caustically described by Robert Baillie, afterwards Principal of the University of Glasgow, who was a member of the Assembly. 'Our rascals,' says he, in his *Letters and Journals*, 'without shame in great numbers make such din and clamour in the house of the true God, that if they "minted" to use the like behaviour in my chamber, I would not be contented till they were down the stairs.' Burnet in his *Memoirs of the Dukes of Hamilton* says it was the greatest gathering that had ever met in these parts, and that the Marquis of Hamilton, who was the royal commissioner, 'judged it was a sad sight to see such an assembly, for not a gown was among them all, but many had swords and daggers about them,' so that there was more of an armed conference than anything else. Mr John Bell of the Laigh Kirk, 'the most auncient preacher of the toune,' preached the opening sermon, and after some preliminary quarrelling about the conduct of business, Mr Alexander Henderson, minister of Leuchars, was appointed moderator, and thereafter several days were spent in keen discussion as to the constitution of and powers vested in the Assembly; and it soon became pretty evident that the court was determined to remodel the whole government

of the Church. The commissioner, a man of steady judgment and sharp and clear wit, did his best to stop what he deemed a high-handed and unauthorised proceeding; but he had arrayed against him all the best men of the time, for whom single-handed he was no match in argument, and at length, on Wednesday, 28 Nov., at the seventh sitting, when the members were about to vote on the question whether the Assembly was competent to judge the bishops, the marquis, declaring that he could not give his countenance to their proceedings, produced the King's instructions and warrant to dissolve the Assembly, which he accordingly did, and left the Assembly accompanied by his assessors and a few of the members, and 'immediate causes and herald to go to the Cross of Glasgow in his cot armes, with an proclamation maid w^{ch} be him and the lordis of secreit counsell and subscrivit with these handis and givin wnder his Majesteis signet, daitit the 29th of November, and be sound of trumpet dischargeit the said generall assemble and in his Hines name eommandit the said preteudit moderatour, commissioneris, reulling elderis, and all other memberis thairof, not to treat, consult, or conclude any farder in the said assemble wnder the pane of tressoun, and that they should ryss w^{ch} and dissolue out of the toune of Glasgow within 24 houris.' The General Assembly held at Glasgow in 1610 had declared that all general meetings of the Church were unlawful without the licence of the King, but the men of 1638 were of different mind and in another temper. While the commissioner was leaving the meeting, instruments were being taken and a protest read declaring that the work of the Assembly would not be interrupted; and protest was again made at the Cross against the proclamation, claiming that the Assembly being once convened could not be dissolved without its own consent. The loss of the royal representative was encouraged to be compensated for by the adherence and encouragement of the Earl of Argyll, who now definitely cast in his lot with the Covenanters; and so the Presbyterians, left to themselves, proceeded with earnestness and devoted courage to do the work for which they had assembled. 'They passed an act declaring the Assemblies of 1606, 1608, 1616, 1617, and 1618 to have been so vitiated by kingly interference as to be null and void.' They condemned 'the service book, the book of canons, the book of ordination, and the Court of High Commission. They abjured Episcopacy and the five articles of Perth,' and then proceeded to the trial and deposition of the bishops and some other ministers besides for professing the doctrines of Arminianism, Popery, and Atheism; for urging the use of the liturgy, bowing to the altar, and wearing the cope and rochet; for declining the Assembly, and for being guilty of simony, avarice, profanity, adultery, drunkenness, and other crimes. The Bishop of St Andrews, for instance, was found guilty of riding through the country on the Lord's Day, of carding and dicing during the time of divine service, of tipping in taverns till midnight, of falsifying the acts of Assembly, of slandering the Covenant, and of adultery, incest, sacrilege, and simony! It is difficult to believe all this of a venerable man like Spottiswoode, and probably his real fault was that he was a bishop. Thomas Foster, minister of Melrose, was deposed on the charge 'that he used to sit at preaching and prayer, baptise in his own house; that he made a way through the church for his kine and sheep; that he made a waggon of the old communion table to lead his peats in; that he took in his corn, and said it was lawful to work, on the Sabbath; and that he affirmed the Reformers had brought more damage to the Church in one age than the Pope and his faction had done in a thousand years.' One of the counts against the Bishop of Orkney was 'that he was a curler on the ice on the Sabbath day;' while the Bishop of Moray was convicted of all 'the ordinary faults of a bishop,' and was besides charged by Mr Andrew Cant with having danced in his nightshirt at his daughter's wedding! And so the Archbishops of St Andrews and Glasgow, and the Bishops of Edinburgh,

Aberdeen, Galloway, Ross, Breechin, Dunblane, Dunkeld, Moray, Orkney and Lismore and the Isles, were deposed and excommunicated; the Covenant was ordered to be signed by all classes of the people; and thus 'the whole fabric which James and Charles in a long course of years had been rearing with so much care and policy fell at once to the ground.' The government of the Church by kirk sessions, presbyteries, and synods was restored; and the work of the Assembly being over, it adjourned on 20 Dec., having held eighteen meetings after the commissioner retired, and the last day is stated to have been a 'blithe day to all.' As to the part the Glasgow representative took there can be no doubt, for it is recorded that, after duly consulting the council as he had been ordered, he was instructed to vote for all the resolutions put and carried.

Soon after the meeting of the Assembly the great civil war broke out, and the Earl of Montrose, having abandoned the Covenanting party and attached himself to the cause of the King, raised an army in the North, and, after defeating the troops of the Covenanters at a number of battles, marched southwards to Kilsyth, a few miles from Glasgow, where, on 15 Aug. 1645, he inflicted a decisive defeat on General Baillie at the head of 7000 Covenanters. The authorities in Glasgow heard of the triumph of Montrose with no small uneasiness, but, though strong Covenanters, and opposed therefore to the cause for which the marquis had fought and conquered, they were men of policy; and so, making a virtue of necessity, they sent a deputation, consisting of Sir Robert Douglas of Blackerston and Archibald Fleming, Commissary of the City, to Kilsyth to invite Montrose, in the name of Provost Bell and the magistrates, to honour the city by his presence and to partake of their hospitality. The marquis accepted the invitation, and marched to Glasgow, where he and his army were welcomed with much solemnity and outward respect, his lordship and his officers being sumptuously entertained by the magistrates and higher classes of the inhabitants at a banquet, during which their apologies for their former want of loyalty were tendered and received in good part. A 'pest' then prevailed in the city, however, and Montrose left it on the second day and moved to Bothwell; not, however, without leaving a memorial of his visit in a forced loan to assist in carrying on the war on the King's behalf to the extent of £50,000 Scots, which was, of course, never repaid. Within a month after, Montrose was surprised and defeated at Philiphaugh by General Leslie, who, in his turn, visited Glasgow, where the town council had meanwhile got into difficulties over their conduct towards Montrose, the Earl of Lanark having, in virtue of a warrant from the committee of the estates, suspended the whole council, and the estates themselves having selected a new one, which was accepted, though not without protest against such an invasion of the privileges of the burgh. Leslie was very civil, and even moderate, but, with a very grim joke about money being necessary to pay the interest of the loan to Montrose, he also borrowed from them £20,000 Scots, so that the city probably lost more than it would have done if it had left the matter alone. Montrose, as the King's lieutenant, had summoned a parliament to meet at Glasgow on 20 Oct., but now, instead of the bustle of a meeting of the estates, the citizens had the spectacle of an execution, for three of the prisoners taken at Philiphaugh—Sir William Rollock, Sir Philip Nisbet, and Alexander Ogilvie of Iuverquarity—were put to death within the city, Rollock on 28, and his two companions on 29 Oct. That the spectacle of the execution of these unfortunate royalists was a pleasing one to a large number of the citizens there can be no reason to doubt, and some idea may be obtained of the bitter feeling of the contending parties, when we remember the remark of so presumably pious a man as the Glasgow Professor of Divinity for the time being, Mr David Dickson, who, when he heard of the executions, exclaimed, 'The work gangs bonnily on,' a saying which became proverbial, and was long significantly used in Glasgow.

Montrose, with a small force he had succeeded in collecting, made a demonstration on Glasgow at the time in the hope of averting the fate of his unhappy friends, but he had not sufficient strength to accomplish anything, and after a few days retreated to Athole.

After Charles had surrendered to the Scots and had been handed over to the English army, Scotland became, when too late, frightened at the triumph of the ambitious and uncompromising Independents of England, and the consequent danger to its beloved Presbyterianism. To meet the supposed danger, levies were ordered by the Scottish parliament; but Glasgow, influenced by the clergy, many of whom preferred the unknown danger of the ascendancy of the Independents to the known danger of the royal power, was found amongst the number of those contumacious burghs which declined to furnish their quota. Provost Stewart, with the other magistrates and members of council, were in consequence summoned before parliament, imprisoned for several days, and deprived of their offices. But a heavier infliction still awaited them, inasmuch as five regiments of horse and foot were sent to the town, with orders that they should be quartered exclusively on the magistrates, members of council, ministers, members of the kirk-session, and their friends. Some of these gentlemen were burdened with 10, 20, and 30 soldiers each, who not only lived on the best the place could afford in the way of meat, brandy, and wine, but exacted from their compulsory entertainers their daily pay into the bargain. During the short period these five regiments 'sorned' upon the inhabitants, the latter sustained a loss of £40,000 Scots; and Principal Baillie pathetically remarks that their 'loss and danger was not so great by James Graham.' The failure of the expedition and the defeat at DUNBAR are matters of history. Shortly after the latter battle the Protector took possession of Edinburgh, and thence marched to Glasgow by way of Kilsyth. On his arrival he took up his residence at Silvercraigs House, which stood till about thirty years ago (though Oliver's levee chamber had latterly degenerated into a furniture sale-room), on the S side of the Saltmarket at the N corner of Steel Street, and nearly opposite the Bridgegate. Finding the magistrates had all fled, he sent for Patrick Gillespie, the influential minister of the Outer High church, and subsequently principal of the university, whom he hospitably entertained, and then treated to such a long and fervent prayer, that the worthy minister, quite overcome, gave out among the town-folks that 'surely he must be one of the elect.' On the following Sunday Cromwell made a formal procession to the cathedral to hear sermon. Zachary Boyd, so well known in connection with his paraphrases, minister of the Barony parish (who was one of those courageous enough to remain), occupied the pulpit in the forenoon, and, in his preaching, boldly and severely inveighed against Cromwell and the Independents. The Protector himself bore it patiently, but his followers were angry. 'Shall I pistol the scoundrel?' whispered his secretary Thurloe. 'No, no,' replied Cromwell, 'we will manage him another way.' And so he invited the bold divine to sup with him, and concluded the entertainment with a prayer of some hours' duration, which is said by contemporary chroniclers to have lasted till three o'clock in the morning, and Boyd left rather pleased, no doubt, than otherwise. He remained in Glasgow for only a few days, but visited it again on 18 April 1651, when he had a more friendly reception, and, along with General Lambert, discussed matters with Mr James Guthrie and Mr Patrick Gillespie. This time he remained ten days. On both occasions his conduct was distinguished by a great degree of moderation, and testimony is borne to this by those not otherwise inclined to speak favourably of him. His visit to Glasgow was, indeed, beneficial in more ways than one, for some of his soldiers, tradesmen who had been called away from their peaceful callings by the frenzy and enthusiasm of the times, ultimately settled in Glasgow, and contri-

buted to foster the spirit of trade and to introduce improvements in some of the handicrafts.

In its previous history Glasgow had more than once suffered by fire, privation, and pestilence; but on Thursday, 17 June 1652, a conflagration broke out, which exceeded all former visitations of the kind in its extent and in its painful effects upon the citizens. It began about two o'clock in the afternoon on the E side of High Street. While everybody was busy there, some sparks, carried by the wind, set fire to houses on the W side of the Saltmarket, where the conflagration ran from house to house with great rapidity, spreading to both sides of the street and into the Tron-gate, Gallowgate, and Bridgegate. It burned for about eighteen hours, and on the following Sunday it again broke out in the Tron-gate, and burned for about five hours. It is said to have been caused by intense heat; and Law, in his *Memorials*, says that the great spread was caused by the frequent changes of wind that took place during its progress. About a third of the city was destroyed ('fourscore bye-lanes and alleys, with all the shops, besides eighty warehouses,' according to the council report); 1000 persons were burned out; and, from the destruction of property and the loss of furniture by fire or by theft, many previously in comfortable circumstances were cast destitute on the world. The wretched inhabitants—some through necessity, others through fear—were, for many days and nights, compelled to encamp in the open fields, and, altogether, the calamity was the worst that had ever befallen Glasgow. The loss was estimated at £100,000, a very large sum in those days, and contributions were made for the sufferers from all parts of the country. Like London, however, under a similar affliction, Glasgow rose from her ashes purified and beautified, and the ruined houses, which had been built or faced with wood, were replaced by substantial stone edifices, which were constructed in a more open and commodious manner than the buildings they replaced. It is recorded that after this fire the magistrates ordered the church doors to be opened, not to give the unfortunate people shelter, but for the convenience of those who had no chambers to retire to 'for making of their devotions.' In 1677 another great fire took place in Glasgow, which destroyed 136 houses, and rendered between 500 and 600 families homeless. It originated at the head of the Saltmarket, near the Cross, and was caused by a smith's apprentice, who had been beaten by his master, and who, in revenge, set fire to his smithy during the night. Law, in his *Memorials*, says, 'The heat was so great that it fyled the horologe of the tolbooth,' the present Cross steeple. There were some prisoners in it at the time—among others the laird of Kersland, who had been concerned in the Pentland rising; but they were rescued by the people, who broke open the tolbooth doors and set them free.

The restoration of Charles II., in 1660, was celebrated in Glasgow with a good deal of outward respect and enthusiasm; but it is pretty certain that most of the people rejoiced 'that the King had come to his own again' simply because it was fashionable to do so, and because the absence of health-drinking and bonfires might give a character of disaffection to the place. With a full remembrance of the troubles and desolations of the time of the first Charles, the citizens were well contented with the order and security which the Protector had established among them, and would by no means have been disinclined to a continuance of the government upon similar principles. The Presbyterians had therefore no high expectations from the new order of things, and they were ere long confirmed in their misgivings. It soon became apparent that the policy of Charles II. would be similar to that of his father in his efforts to force Episcopacy upon an unwilling people; and, as Glasgow was the headquarters of the Presbyterians in the West, the city shared in all the pains and persecutions of that iron time. The King having appointed Mr Andrew Fairfoul, minister of Duns, to be archbishop of Glasgow, he arrived in Edinburgh in April 1662, having been previously consecrated in West-

minster Abbey. Despite his efforts, and notwithstanding the civil power with which he was armed, the existing clergy and laity in Glasgow, with trifling exceptions, refused to conform to the new order of things, and the Earl of Middleton came to Glasgow, on 26 Sept. 1662, with a committee of the Scottish Privy Council to enforce Episcopacy. They were well received, and proceeded to investigate the complaint of the archbishop—that none of the ministers who had entered the Church since 1649 had acknowledged his authority as bishop, and his prayer that the council should issue and enforce an act and proclamation banishing all those clergymen from their houses, parishes, and presbyteries, unless they should, before a certain date, appear and receive collation from him as their bishop. The matter was considered at a meeting of the Privy Council, held in the fore-hall of the college on 1 Oct., and it was resolved—Sir James Lockhart of Lee dissenting, and declaring that the act would desolate the land and excite to fever heat the dislike and indignation with which the prelates had already begun to be regarded—that all such ministers were to remove from their parishes within a month, and the people were not to acknowledge them as their ministers, nor to repair to hear their sermons. The meeting was, according to Wodrow, known as ‘the drunken meeting at Glasgow, and it was affirmed that all present were flustered with drink save Sir James Lockhart of Lee.’ In their subsequent visits to the other towns of the West, they were not much better, for it is recorded that in one of their debauches they drank the devil’s health at midnight at the Cross of Ayr; yet to such debauchees was entrusted a task that resulted in more than 400 Presbyterian ministers being ejected from their parishes, and led to all the wild work of persecution that followed.

Early in 1678 the committee of council returned to Glasgow, and had a sederunt of ten days. They were accompanied by a band of Highlanders, about 5000 in number, who came to be known as the Highland Host, and whose presence was intended to enforce the wishes of the committee. They arrived in Glasgow on 13 Jan. 1678 in the time of public worship, and were quartered on the inhabitants. Their presence was only to be got rid of by the subscription of a bond by which the heritors, and the better classes of the community, bound themselves that they, their wives, families, and servants, with their tenants, cottars, etc., would not be present at any of the field preachings, or hold any communication with the ‘outed’ ministers. Though this made men in prominent stations responsible for the doings of hundreds of people over whom they had no control, yet such was the desire to get rid of the plundering and extortionate Highland Host, that the bond was subscribed by the provost, bailies, members of council, and the leading men of the city to the number of 153. After their ten days’ stay in Glasgow they passed on to Ayrshire, where damage to the amount of £137,499 Scots was done, and then as the Covenanters would not rise to give colour to a charge of rebellion, nor yet sign the bond, except in very insignificant numbers, the plunderers were sent to their homes. ‘When the Highlanders,’ says Sir Walter Scott in his *Tales of a Grandfather*, ‘went back to their hills, which was in Feb. 1678, they appeared as if returning from the sack of some besieged town. They carried with them plate, merchant-goods, webs of linen and of cloth, quantities of wearing apparel and household furniture, and a good number of horses to bear their plunder.’ As they were returning, the Glasgow people had, however, an opportunity of revenge, for about 2000 of the Highlanders had to return by way of Glasgow, and when they arrived on the S, or Gorbals side, the Clyde was so swollen that it was unfordable. Thus favoured by chance, the students of the college, and many of the inhabitants, who, either by themselves or friends, had suffered from the former ravages of the host, blocked the bridge, and opposed their passage. Only 40 of the Celts were allowed to pass at a time, and these were led along and dismissed by the West Port, after they had been deprived of their plunder.

A building near the bridge is said to have been nearly filled with the ‘pots, pans, bed-cloths, wearing clothes,’ coats, cloaks, etc., that were taken.

After the victory of the Covenanters at DRUMCLOG a party of them marched to Glasgow, and attempted to take it from Graham of Claverhouse, who, with the Royal forces, had retired thither. In anticipation of an attack the streets had been barricaded, and though the Covenanters, attacking by the Gallowgate and Vennel, fought bravely, they were repulsed. Their dead were most inhumanly left lying in the streets, it is said, by Claverhouse’s express orders. After the battle of Bothwell Brig, the Duke of Monmouth was eagerly pressed by some of his officers to burn Glasgow, or at least to give it up to three hours’ plunder, but he would sanction neither, and thus Glasgow escaped what meant utter ruin. In March 1684 a number of Covenantant martyrs suffered death at the Cross, their heads being afterwards cut off and placed on the tolbooth. They were buried on the N side of the cathedral. Some others suffered at the foot of the Howgate, where the martyrs’ fountain stands. The tolbooth was so crowded with prisoners at the time, that they had to sleep by turns, and a great many of the poor people, convicted without evidence, were banished to the plantations. When James II. succeeded to the throne, the Council sent to the King their expressions of ‘sincere joy,’ and, when late in the end of Oct. 1688 he was in difficulties, a body of 1200 men was raised for his assistance; but these, refusing to obey the magistrates, never left the city, and had to be disbanded in January 1689. On the 24th of the same month, a loyal address was prepared to Prince William of Orange, and, still later, a body of 500 men (the foundation of the regiment now known as the Cameronians) embodied according to tradition in one day, was placed under the command of the Earl of Argyll, and sent to Edinburgh to assist in guarding the Estates then engaged in deliberating upon the settlement of the Crown in favour of William and Mary.

After William’s accession, when the Darien scheme was projected, Glasgow, which had already experienced to some extent the advantages of commerce, entered into the speculation with great alacrity. The Council, on behalf of the burgh, took stock to the value of £3000 sterling; the citizens subscribed largely of their means—many of them their all; and not a few embarked personally in the expedition. The last of these sailed from Rothesay Bay on 14 Sept. 1699, the four frigates that went carrying 1200 emigrants, among whom was the last of the old family of Stewart of Minto, once the municipal chiefs of Glasgow, and whose decay has already been referred to. The unhappy sacrifice of the scheme to English jealousy, and William’s faithlessness are well known. Of all the emigrants, but a score or two of broken-down and beggared men ever reached their native land again, and hundreds of families at home, who had been in affluent circumstances, were ruined. The news reached Glasgow about the middle of 1700, and so severely did the city suffer from the shock, that it was not till 18 years after that her merchants again possessed ships of their own.

Here, on the eve of the Union of the two kingdoms, which, disastrous as it was in its first results, has since tended to promote so greatly the prosperity of the country, we may again pause and consider the progress that Glasgow had made since the time of the Reformation, and that notwithstanding the famine, fires, plagues, and disasters that we have recounted. The city seems not to have extended its limits very far beyond the earlier bounds, though, from the great increase in population, the old parts must have been much more closely built, and spaces formerly open covered with houses. *The Dictionnaire Geographique*, published at Paris in 1705, says it ‘was large enough, but thinly peopled,’ and Clelland asserts that at the Union, Glasgow had not extended beyond its old ports, viz.:—on the E, the Gallowgate Port, near St Mungo’s Lane; on the W, the West Port, at the head of Stockwell Street; on the S, the Water Port, near the old bridge; on the N, the Stable Green

Port, at the Bishops' Palace; on the NW, Rottenrow Port; while all the adjoining ground now occupied by Bell Street, Candleriggs, King Street, and Princes Street was occupied by corn-fields; but yet, notwithstanding this, there had been a very marked change in its position and condition. As we have seen, it was, at the time of the Reformation, eleventh on the roll of Scottish burghs, and was stented for £13, 10s. Scots; in 1695 it stood second (Edinburgh being its only superior), and was stented for £1800 Scots. The population, which at the Reformation was about 4500, had, by 1600, become about 7000. In 1660 this had grown to 14,678, but the troubles of the next 28 years had such an injurious effect that, in 1688, this had decreased to 11,948. In 1701 there were 9994 'examinable persons' recorded in the city, and this name must have applied apparently to younger people than would now be termed adults, for a little later (1708) the total population is returned at 12,766. A new tolbooth had been erected near the Cross in 1626, superseding the old one at the foot of the High Street. It was a fine picturesque building, is described by a contemporary writer as 'a very sumptuous, regulated, uniform fabric, large and lofty, most industriously and artificially carved from the very foundation to the superstructure, to the great admiration of strangers,' and as, 'without exception, the paragon of beauty in the west.' All that now remains of both structures is the Cross steeple, which has been happily preserved from the destruction that has overtaken so many of the old buildings of Glasgow, though, in 1814, it had a narrow escape, and such a fate was only averted by a majority of votes in the council of the day. The Cross itself, which had replaced the older one at the end of Rotten Row, was removed in 1659 as 'altogether defaced,' and all trace of it is lost. The houses along the streets leading from the Cross had piazzas. Defoe, writing of Glasgow, in 1723, says 'The City consists of Four principal Streets in the Form of a Cross, with the Town-House and Market Place in the Middle, where as you walk you see the whole Town at once. The Houses are of Free Stone, of an Equal height, and supported with Pillars, and the Streets being spacious and well pav'd, add to the Beauty of the Place.' He also adds that 'this City is strictly *Presbyterian*, and is the best affected to the Government of any in Scotland.'

It is a somewhat curious contrast to the present state of affairs that in the 17th and the beginning of the 18th centuries Glasgow was noted for its beauty. One of Cromwell's soldiers describes it, in 1650, as 'not so big or rich yet, to all 'a much sweeter and more delightful place than Edinburgh.' Another English traveller named Franck, whose opinion of the tolbooth has been already given, and who visited the city a little later, speaks in high terms of 'the splendour and dignity of this city of Glasgow, which surpasseth most, if not all, the corporations in Scotland,' and also mentions with approval 'the exact decorum in every society.' This praise may be accepted with the less hesitation when we consider that the writer was not on the whole favourably impressed with Scotland, and did not hesitate to say so. 'A satirist,' says Sir Walter Scott, 'with regard to every other place Franck describes Glasgow as the "nonsuch of Scotland," where an "English florist may pick up a posie."' Morer, who wrote in 1689, says, in the work already quoted, that 'Glasgow has the reputation of the finest town in Scotland, not excepting Edinburgh;' and Defoe, in his *Journey Through Scotland*, published in 1723, says almost enthusiastically, 'Glasgow is the beautifullest little City I have seen in Britain; it stands deliciously on the banks of the river Clyde, over which there is a fair Stone Bridge of Eight Arches.' And in a subsequent edition he says still more in its praise, 'the four principal streets are the fairest for breadth and the finest built that I have ever seen in one city together. The houses are all of stone, and generally uniform in height as well as in front. The lower stories for the most part stand on vast square Doric columns with arches which open into the shops, adding to the strength as well as beauty

of the building. In a word, 'tis one of the cleanliest, most beautiful, and best built cities in Great Britain.' Defoe's description is later than the Union, and about the time when it was beginning to bear fruit, but the others are earlier, and yet alike they give us a picture of Glasgow still rural, but beginning to have the germs of its future greatness in its increasing trade, which was, in Defoe's time, quickly outgrowing the little commencement that had, in the beginning of the 18th century, been made in the manufacture of tobacco, the refining of sugar, and the making of soap.

The growing importance of the city is evident from the fact that in 1702 the provost, Hugh Montgomerie of Busby, was one of the commissioners appointed to go to London to carry on negotiations for a treaty of Union, and the council agreed that the city should bear the expense of his journey. Notwithstanding this little mark of attention, the Union proposal was received by the inhabitants of Glasgow, particularly by the lower orders, with as much bitterness as elsewhere throughout the country. The populace of Glasgow, with a pet grievance of their own because, instead of returning a member of parliament for themselves, they were in future only to share one with Dumbarton, Renfrew, and Rutherglen, became so much excited that the magistrates deemed it necessary to issue a proclamation that not more than three persons should assemble together after sunset. A most injudicious and inflammatory sermon, preached by the Rev. James Clark, minister of the Tron Church, on 7 Nov. 1706, a sacramental Fast-day, was regarded as a direct encouragement and injunction to insurrection, and caused the murmurs of discontent, to which the opposition had been hitherto confined, to rise into open violence. Within two hours after the sermon drums were beat through the streets, and the people, gathering in immense numbers, fairly overturned the authority of the magistrates. Finding that the magistrates and council refused their request to present a remonstrance to parliament on the subject of the Union, they attacked the council-house and the residence of the provost, Mr Aird. After a short lull there was a fresh outbreak, when the mob disarmed the town-guard, stormed the tolbooth, and seized the town's arms, which consisted of 250 halberets. With these they marched about the streets, forcing their way into the houses of those supposed to be favourable to the Union, searching for arms, and plundering at the same time. The house of the provost was rifled, and he himself, attacked on the street, only escaped with his life by timely concealment and subsequent flight to Edinburgh. The rioters, who had adopted a sort of rude military system, then formed the bold resolution of marching to the capital and dispersing the parliament, and they actually set out for this purpose under the leadership of a Jacobite publican named Finlay. Starting with a body of men by no means numerous, Finlay was met at Kilsyth by the intelligence that cavalry and infantry were already on their way from Edinburgh to put down the riot. At first, nothing dismayed, he determined to fight, and sent to Glasgow for 400 men who had been left behind; but as they did not come, the disappointed leader and his companions returned to Glasgow, and, laying down their arms, separated. This was the end of disturbances that had lasted for four weeks, and the publican and some of the other leaders were arrested immediately after and carried to Edinburgh. Technically they had forfeited their lives, as being guilty of high treason; and it says much for the strength and moderation of Queen Anne's government that shortly after the Union Act passed into law, they were all liberated without further punishment than their temporary imprisonment. Had there been competent leaders the insurrection might have proved formidable, but no man of mark and influence in the W of Scotland had any connection with it, and but a very short time elapsed before the Glasgow citizens became fully alive to the advantages the Union had brought them in the opening of the American trade, etc.; in fact we may almost say that it was at this time that Glasgow entered

upon that successful career of industry and enterprise which, in due course, rendered it the chief seat of the commerce and manufactures of Scotland.

The rebellion of 1715 did not much affect Glasgow, excepting in so far as it gave the city an opportunity of displaying its liberality and loyalty and its sincere attachment to the principles of the revolution of 1688. The citizens raised a regiment of 600 men, which they drilled and maintained at their own expense, paying the common men at the rate of 8d. per day. This regiment was placed at the disposal of the government, and it rendered good service by performing the important duty of guarding Stirling Castle, town, and bridge, while the Duke of Argyll marched northward to meet the Highlanders under the Earl of Mar at Sheriffmuir. In the meantime the inhabitants had zealously provided for the safety of the city by constructing rude fortifications, protected by a ditch 12 feet wide and 6 deep. The town's accounts at the time contain numerous entries of payment to artificers and labourers, who were employed in the operations of forming the trenches and barricades, of planting the guns which they already possessed, of the freight of eight great guns from Port Glasgow, etc. On 5 Dec. the Duke of Argyll came to Glasgow and took up his lodgings with Mr Campbell of Shawfield, and on the following day, accompanied by the magistrates and several of the nobility and gentry, he reviewed the troops then lying in the town and inspected the defensive preparations made by the inhabitants. Although the war did not come to their own doors, the rebellion was nevertheless a costly affair to the citizens; and amongst other grievances we find the magistrates complaining to the Duke of Argyll that they had to maintain and guard 353 rebel prisoners, 'who are lying in the town's hand and in custody in the castle prison' (the old bishop's palace, which could not have been a very secure prison, for they required a guard of about 100 men). Notwithstanding, however, all the heavy charges to which it was subjected, the city could afford to be grateful to those who had assisted it in time of trial. In 1716, on the suppression of the rebellion, an order was made that 'a silver tankard, weighting forty-eight ounce, thirteen drop, at 7s. sterling per ounce; and a sett of sugar boxes, weighting nineteen ounce, fourteen drop, at 8s. per ounce; and a server wing, weighting thirty-one ounce and twelve drop, at 6s. 4d. per ounce, be presented to Colonel William Maxwell of Cardonald 'as a mark of the town's favour and respect towards him for his good service in taking upon him the regulation and management of all the guards that were kept in the city during the rebellion and confusions in the neighbourhood.

Within a few years after the rebellion, viz., in 1725, a riot broke out in the city, which was so painful and fatal in its consequences, that for half a century after its occurrence it called up to every son of St Mungo reminiscences of the most bitter and exciting kind. This disturbance was caused by the imposition of the first malt tax. As most of the people then drank beer, the new duty was by no means very popular; and in Glasgow, on 23 June, the day on which the operation of the tax began, the mob arose, obstructed the excisemen, and assumed such a threatening attitude, that on the evening of the next day Captain Bushell entered the town with two companies of Lord Dcloraine's regiment of foot. This did not, however, prevent the mob from assailing the house of Daniel Campbell of Shawfield, who was then M.P. for the Glasgow district of burghs, and who had rendered himself particularly obnoxious in connection with the matter by his support of the tax. The house stood in the Trongate on the site of Glassford Street, and was by far the finest in the city, but the rioters completely dismantled it and destroyed the furniture. The magistrates, not dreading such acts of violence, had retired to a tavern to spend the evening, when about eleven o'clock p.m. tidings were brought them of the work of havoc and demolition then in progress, while at the same time a sergeant came from Bushell to inquire if he should beat to arms; but the

provost, who appears to have been either a timid man or one averse to proceed to extremities, declined the proffered military aid. Next day the mob was still in a very excited state, and so annoyed Bushell's sentinels by throwing stones at them, that the captain ordered out all his men and formed a hollow square in the vicinity of the guardhouse, at the SW corner of Candleriggs. This movement was followed by another shower of stones directed against the soldiers, and Captain Bushell, without any authority from the civil power, ordered his men to fire, when two persons in the crowd were killed on the spot and others wounded. This so roused the inhabitants that, thirsting for vengeance, they assailed the town-house magazine, carried forth the arms, and rang the fire-bell to arouse the city. The provost—Miller—being alarmed at the probable results of a further collision between the military and the people, requested Bushell to remove his soldiers, which he accordingly did in the direction of Dumbarton Castle. This did not, however, avert further catastrophe, for the mob, still excited and inflamed, followed on the line of retreat in great force, and by-and-by began to act upon the offensive, when the captain again ordered his men to fire, and several persons fell. In all there were nine persons killed and seventeen wounded in this unfortunate affair, and as usually happens in such cases it was not merely the assailants or rabble who suffered, but many respectable persons were shot down who happened to be in the crowd or its neighbourhood either accidentally or from motives of curiosity. The military reached the castle of Dumharton in safety, with the exception of two of the soldiers who were captured by the mob, and only one of whom suffered any ill-treatment. Previous to the attack on his house Mr Campbell had removed with his family to his country-house at Woodhall, about 8 miles distant from the city, whither he had gone on 22 June. It has been asserted that private threats or hints had reached him of the coming attack, and that, had he given this information in sufficient time to the magistrates, all the unhappy mischief might have been prevented. As soon as word of the serious nature of the disturbances reached headquarters, General Wade set out with a considerable force of horse, foot, and artillery, and took possession of the city. He was accompanied by Duncan Forbes of Culloden, the Lord Advocate, who proceeded to make an investigation into the case, the result of which was that nineteen persons were apprehended and delivered over to Captain Bushell, and by him and the two companies under his command they were taken to Edinburgh and lodged in the castle. On the same day, the 16th of July, the whole of the magistrates, from the provost down to the deacon-convener—including even some who had been absent from Glasgow during the time of the riots—were apprehended at the instance of the Lord Advocate, and imprisoned first in their own tolbooth and then in Edinburgh Castle, whither they were escorted by a considerable body of horse and foot. The charge against them was that they had favoured the riots and winked at the destruction of Campbell's house, but it is plain that the utmost that can be laid to their charge was want of due preparation and energy in repressing the disturbance. After one day's detention the Lords of Justiciary granted their application for bail, and they were liberated and set out on their return to Glasgow. Six miles from the city they were met by about 200 of the inhabitants, who escorted them home with every demonstration of respect, amid the joyous ringing of bells. The magistrates were afterwards freed from blame, but of the nineteen persons of inferior rank who had been arrested, two were banished for ever, while nine were whipped through the streets of Glasgow, and eight were liberated after considerable terms of detention. An attempt was made by the magistrates to bring Bushell to trial for the murder of nine of the citizens, but he was screened by 'the powers that be,' for he not only got out of the difficulty, but was promoted in the service. To aggravate the already sufficiently distressing case, Campbell was, on application to

parliament, granted indemnity for his loss of £6080, which the city had to pay, besides other expenses amounting to over £3000. The inhabitants long regarded this Shawfield affair with a burning sense of injustice suffered by them, and the compensation granted was universally considered as excessive. With his compensation money Mr Campbell purchased the fine estate and island of Islay, which passed from the family about thirty years ago.

The painful recollection of the Shawfield slaughter and its heavy fines did not prevent the citizens of Glasgow from coming forward with alacrity in defence of the reigning family during the rebellion of 1745. On this occasion they raised two battalions of 600 men each for the service of the government. In Sept. 1745 Charles Edward wrote to the magistrates demanding that the sum of £15,000 sterling, all the arms in the city, and the arrears of taxes due to the government should be forwarded to him for the use of his army. The magistrates did not comply at the time, as they had hopes of relief from the army of Sir John Cope, but the demand of the Prince was soon enforced by John Hay—formerly a Writer to the Signet, and then quarter-master in the Highland army—and the Clan MacGregor under Glengyle. The magistrates with much difficulty induced Mr Hay to accept a composition of £5000 in money and £500 in goods, with which he departed on 30 Sept., after his followers had been quartered on the city for four days. After the unfortunate march to Derby the Prince in his retreat entered Glasgow on 26 Dec., his advanced guard having arrived the day before. The necessities of the mountaineers were at this time extreme. The great majority of them were bareheaded and barefooted and their garments in rags, and these with their matted hair, long beards, and keen and famished aspect, imparted to them an appearance peculiarly savage and ferocious. At this time the volunteers equipped at the expense of the city were posted at Edinburgh for the defence of the capital. Alike to punish the city for appearing in arms against him and to clothe his naked host, the Chevalier ordered the magistrates forthwith to provide 6000 short-cloth coats, 12,000 linen shirts, 6000 pairs of shoes, 6000 pairs of hose, 6000 waistcoats, and 6000 blue bonnets, the greater portion of which articles were by great exertions supplied in a few days. He also exacted large contributions in bestial, corn, hay, and straw. The Pretender evacuated the city on 3 Jan. 1746 after a sojourn of ten days, and took with him hostages for the supply of the remaining portion of the clothing still unfurnished, and which was afterwards duly forwarded to the rebel camp at Bannockburn.

While in Glasgow the Chevalier lodged in the house formerly belonging to Campbell of Shawfield, which, notwithstanding the treatment it had suffered during the malt-tax riots, was still the most elegant in the city, and which now belonged to Mr Glassford of Dugalston. The Prince was conciliatory. He sat down to table twice a day accompanied by some of his officers and a few devoted Jacobite ladies, whose sympathies he was much more successful in enlisting than those of their male relatives. After his men had been got into better condition by being fed and clothed, Charles treated the inhabitants to a grand review on the Green, but they looked coldly on, and indeed so odious was his cause that almost all the principal inhabitants suspended business by closing their shops and counting-houses during his stay. He remarked with bitterness that nowhere had he made so few friends as in Glasgow, for he only procured sixty adherents during his sojourn, and these were the very scum of the place. Indeed the provost of the time—Cochrane—allows him even less, for he says the Prince's only recruit was 'ane drunken shoemaker, who must soon have fled his country for debt, if not for treason.' So keenly did Charles feel the Whiggism of the city that it is matter of tradition in Glasgow that but for the manly and generous resistance of Cameron of Lochiel the place would have been sacked and burned. The Glasgow volunteers were engaged in

the Battle of Falkirk, where they suffered severely, and seem to have behaved with some courage, for a contemporary song says, that the cavalry ran away,

'But the Glasgow militia they gave a platoon,
Which made the bold rebels come tumbling down.'

Thrown into confusion by the precipitate retreat of Gardiner's dragoons, they were severely handled by the Highlanders, who always regarded those who *voluntarily* took up arms against them with much stronger feelings of hostility than they evinced towards the regular troops whose proper trade was fighting. Dugald Graham, a pedlar, and afterwards bellman of Glasgow, who accompanied the Pretender's forces and published a rhyming *History of the Rebellion*, after narrating the defeat of Hawley's Horse, proceeds,—

'The south side being fairly won,
They faced north as had been done,
Where next stood to bide the brush
The Volunteers, who zealous
Kept firing close till near surrounded,
And by the flying horse confounded,
They suffered sair into this place;
No Highlander pity'd their case;
"Ye curs'd militia," they did swear,
"What a devil did bring you here?"'

On receipt of the news of the victory of Culloden there were great rejoicings throughout the city. Apart from their Whiggism, some satisfaction was no doubt felt by the inhabitants in the ruin of a cause that had cost them over £14,000, and no doubt still more was felt when Parliament, in 1749, granted £10,000 to the city as part indemnification for the losses sustained from the rebels.

There are some interesting accounts of Glasgow towards the middle of the 18th century, which we may refer to in passing; Defoe's account of it has been already mentioned, and his sketches of its commercial condition will be further referred to in the section regarding *Trade*. In 1736 M'Ure's *History of Glasgow* appeared. In his time the city was 1½ mile in length and about ¾ mile in width. There were 20 stone bridges, only one of which, however, was across the Clyde, 8 gates, 10 principal streets, and 17 wynds. There were 3 parks—the Fir park on the banks of the Molendinar Burn (now the Necropolis), the New Green (the present Green), and the Old Green to the W of it. All three had trees, the first firs, the others elms. All around were corn-fields, gardens, and orchards. There were 144 shopkeepers, 5 sugar-works, a rope-work, 3 tanyards, a brewery, an iron-work, a linen manufactory, and a tobacco spinning factory. While M'Ure thus describes the outward condition of the city, the late Rev. Dr Alexander Carlyle of Inveresk furnishes some interesting glimpses of its social condition in his *Autobiography* published in 1860. Carlyle attended the University in 1743 and 1744. In point of knowledge, he says Glasgow had the advantage over Edinburgh, as 'learning seemed to be an object of more importance, and the habit of application much more general,' but he considered Edinburgh superior in 'manner of living, and in those accomplishments, and that taste that belong to people of opulence and persons of education.' There were few gentry, and the manner of living was 'coarse and vulgar;' not half-a-dozen families in town had men servants, and 'some of these were kept by the professors who had boarders. The principal merchants took an early dinner with their families at home, and then resorted to the coffee-house or tavern [which explains how the magistrates came to be in a tavern at the time of the malt-tax riot] to read the newspapers which they generally did in companies of four or five in separate rooms, over a bottle of claret or a bowl of punch.' Female society he does not seem to have found very enchanting, for he says that there was no teacher of French or music in the city, and that the young ladies had very ungenial manners, and nothing to recommend them but good looks and fine clothes. The aristocracy had not yet come to the conclusion that intellectual culture was only to be had in a more southern clime,

for among Carlyle's fellow-students were Lord Blantyre, Lord Cassillis, and Andrew Hamilton, afterwards Earl of Selkirk, of whom the latter was so studious that Carlyle describes him as more fit for a professor than an Earl. In the *New Statistical Account* Mr Dugald Bannatyne has furnished some further particulars of the same nature, and applying to the same period, with one a little later. He says the first main-door houses as apart from flats were built about 1735. Living was cheap—a fact noticed also by Dr Carlyle, who says it was possible to dine on roast beef, potatoes, and small beer for 4d.—and simple dinners with two courses were introduced about 1786. The people were in general religious—at least in the observance of Sunday, on which day some 'did not sweep or dust the house, nor make the beds, nor allow any food to be cooked or dressed,' while others 'opened only as much of the shutters of their windows as would serve to enable the inmates to move up and down, or an individual to sit at the opening to read.' Smollett, who was born at Bonhill in Dumbar-tonshire in 1721, and educated and apprenticed to a surgeon in Glasgow, has also left on record his opinions of the city in the middle of the 18th century in *Roderick Random* (1748), and still more in *Humphry Clinker* (1771). In the former it figures merely as the place of Roderick's education and apprenticeship, but from the descriptions given of it in the chapters of the books relating thereto, Smollett seems to have entertained a very poor opinion of the social and moral condition of Glasgow, and he is rather hard on the town council, for in the last chapter he makes Roderick say, 'We got notice that the magistrates intended next day to compliment us with the freedom of their town, upon which my father, considering their complaisance in the right point of view, ordered the horses to the coach early in the morning.' In *Humphry Clinker* the opinions are much more favourable, and Bramble describes the city as 'one of the prettiest towns in Europe,' and 'one of the most flourishing in Great Britain. In short, it is a perfect beehive in point of industry. It stands partly on a gentle declivity, but the greatest part of it is in a plain watered by the river Clyde. The streets are straight, open, airy, and well paved, and the houses lofty and well built of hewn stone. At the upper end of the town there is a venerable cathedral that may be compared with York Minster or Westminster, and about the middle of the descent from this to the Cross is the College, a respectable pile of building, with all manner of accommodation for the professors and students, including an elegant library and an observatory well provided with astronomical instruments.' The number of the inhabitants is set down as 30,000, and notice is taken of certain defects in Glasgow matters. 'The water of their public pumps is generally hard and brackish—an imperfection the less excusable as the river Clyde runs by their doors. . . . And there are rivulets and springs above the Cathedral sufficient to fill a large reservoir with excellent water, which might be thence distributed to all the different parts of the city. It is of more consequence to consult the health of the inhabitants in this article than to employ so much attention in beautifying their town with new streets, squares, and churches. Another defect not so easily remedied is the shallowness of the river. . . . The people of Glasgow have a noble spirit of enterprise. . . . I became acquainted with Mr Cochran, who may be styled one of the sages of this kingdom. He was first magistrate at the time of the last rebellion. I sat as member when he was examined in the House of Commons, on which occasion Mr P[itt] observed he had never heard such a sensible evidence given at that bar. I was also introduced to Dr John Gordon, . . . who is the father of the linen manufacture in this place, and was the great promoter of the city workhouse, infirmary, and other works of public utility. . . . I moreover conversed with Mr G[lassford], whom I take to be one of the greatest merchants in Europe. In the last war he is said to have had at one time five-and-twenty ships with their cargoes his own property, and to have

traded for above half a million sterling a year. The last war was a fortunate period for the commerce of Glasgow. The merchants, considering that their ships bound for America, launching out at once into the Atlantic by the north of Ireland, pursued a trade very little frequented by privateers, resolved to insure one another, and saved a very considerable sum by this resolution, as few or none of their ships were taken.' He again has a fling at the council, for Melford says that the party was at once 'complimented with the freedom of the town.' The comparative map given in Mr MacGeorge's *Old Glasgow* shows that about the same time, in 1773, the city extended along both sides of High Street and Saltmarket, and was closely built from Saltmarket to Stockwell Street, while buildings extended westward along Argyle Street as far as Jamaica Street; northward as far as Castle Street, about the site of the Royal Infirmary, and along Drygate, and as far as Ark Lane opening off Duke Street; eastward along Gallowgate as far as Barrack Street, and along New Street and Kirk Street; and southward along both sides of Main Street, Gorbals, and along a part of Rutherglen Loan, Norfolk Street, and Clyde Terrace.

After the '45 the next important affair in which we find the citizens of Glasgow engaged is the cordial effort which they made to assist government at the outbreak of the American war of independence. Now-a-days, however, these exertions are attributed not so much to patriotism, as to a feeling of self-interest, for Glasgow had long enjoyed a lucrative and lion's share in the tobacco trade, the very existence of which was threatened by the war that had broken out. Upon the news of the first determined stand made by the Americans at Lexington and Bunker's Hill in 1775 reaching Glasgow, the magistrates convened a meeting of the inhabitants, when it was resolved to give all support to government in its efforts to break the spirit of the colonists. A body of 1000 men was accordingly raised at an expense of more than £10,000, and placed at the disposal of the Crown. The determination to subdue the Americans took so strong a hold on the minds of the Glasgow people, that many of the principal citizens formed themselves into a recruiting corps for the purpose of completing the numbers of the Glasgow regiment. Mr James Finlay, father of Mr K. Finlay, afterwards of Castle-Toward, played the bagpipes in the recruiting band; Mr John Wardrop, a Virginia merchant, beat a drum; and other 'citizens of credit and renown' officiated as fifers, standard bearers, etc.; Mr Spiers of Elderslie, Mr Cunningham of Lainshaw, and other merchants hired their ships as transports, but Mr Glassford of Dugaldston, who was then the most extensive foreign merchant in Glasgow, and had twenty-five ships of his own, disapproving of the coercive measures then in progress, laid up most of his vessels in the harbour of Port Glasgow.

After being at peace internally for a long time there was a fresh outburst of the mob spirit in 1779. There were two 'No-Popery' riots in January and February, in the first of which the rioters attacked the congregation of a Roman Catholic chapel in High Street and destroyed the altar piece. On the second occasion their violence was directed against Robert Bagnal, a potter, who was a Roman Catholic. His house near the Gallowgate was set on fire and burned down along with several adjoining houses, and his warehouse in King Street was wrecked. Much damage was done during the two days the city was in possession of the mob, and the community had afterwards a heavy bill to pay for the havoc which these thoughtless men committed. In the same year a demonstration of weavers against the proposal to remit the duties on French cambric was peacefully dispersed, but the same good fortune did not attend the magistrates in 1787, when the weavers, after agitating in vain for an increase of wages, tried to gain their point by force. After many acts of violence had been committed against the persons and property of the men who continued working at the old rate—webs being cut, and the contents of warehouses flung into the street to be burned—and the magistrates them-

selves stoned, the intervention of the military became necessary, and a detachment of the 39th regiment under Lieutenant-Colonel Kellet was summoned. Near Park-house, in Duke Street, the soldiers were assailed with brickbats by the mob, and the Riot Act having been read they fired, killing three persons and wounding several others. The riotous spirit was fairly subdued by this painful measure, and it is a curious fact that afterwards many of the weavers enlisted into the very regiment that had inflicted punishment on their brethren.

In the first quarter of the nineteenth century, and particularly during the 'Radical Times' from 1816 to 1820, Glasgow was from time to time in a somewhat threatening condition, more especially in 1819 and 1820, when the citizens were kept in a state of the most painful excitement and suspense, as the working classes were in great distress and strongly imbued with a revolutionary spirit. Nearly all who were taken prisoners at Bonny-muir were men from Glasgow, and two of them were executed at Stirling for high treason; while on 30 Aug. 1820, James Wilson, a weaver from Strathaven, was hanged and beheaded on Glasgow Green, for his share in the insurrectionary movements of the time.

From this time till 1848 the history of the city is a record of progress and gradual growth in size and trade, almost the only exciting episode being the fire attending the Disruption, and the subsequent second meeting of the Free Church General Assembly in Glasgow in October 1843. The year 1848 was, however, marked by the outbreak of what was probably the most serious burst of violence that ever occurred in Glasgow, not so much on account of the events which actually took place as from the disaster threatened and prevented, and from the circumstance also that for a day or two a feeling of the greatest insecurity and alarm prevailed over the whole kingdom. In the first days of the month of March so much distress existed amongst the lower orders in Glasgow, from lack of work, that the authorities engaged many of them to break stones until labour on a more extensive scale could be provided. On the afternoon and evening of Saturday 4 March meal was distributed at the City Hall to almost all who chose to apply for it. Meanwhile large meetings (ostensibly of the unemployed) were daily held on the Green, and on Sunday, 5 March, at one of these great gatherings, political harangues of a very inflammatory description were delivered by designing demagogues, who urged the people to demand food or money as a right, irrespective of any equivalent in the shape of labour. On Monday the 6th another great meeting was held on the Green, swelled by this time by all the thieves and desperadoes in the city, who, from their usual dens in the wynds, vennels, and closes, had scented the mischief that was brewing, and sallied out to originate or augment confusion and disorder that they might profit by the consequences. After some hours had been spent in making and listening to wild speeches, in which the mob were counselled to 'do a deed worthy of the name of France,' the whole multitude moved off to the City Hall to ascertain what measures the magistrates and relief committee were taking on behalf of the unemployed. It was soon evident, however, that it was neither food nor labour that they wanted. After some of the Green Market stalls had been overturned, the leaders drew them off towards the Green, whence, armed with bars torn from iron railings and with bludgeons, they, about four o'clock in the afternoon, once more entered the city, sacked the bakers' and provision shops in London Street as they passed along, and, reaching Trongate, attacked a gun-maker's shop and took from it all the guns, pistols, and ammunition. Hardware shops shared the same fate, and the mob, now partially armed, dispersed in various directions, but the main body, rifling the shops as they went along, found their way by various avenues into Ingram Street. From this the rioters spread all over the city, constantly receiving accessions to their numbers from all the thieves' haunts they passed, and devoting their attention to every shop they came to where any plunder was likely to be obtained. It was emphatically

a thieving raid on a most daring and majestic scale, perpetrated in the light of open day. The more experienced thieves confined themselves to gold watches, jewellery, and other valuables, and sneaked off when their pockets were full; but the scum of whatever neighbourhood the mob approached took advantage of the general license, and men, women, and children were seen running through the streets to their own houses with cheeses, chests of tea, firkins of butter, new boots and shoes, and in short anything which came most readily to hand. Had a body of 50 or 100 policemen been led against the mob at the outset, the rioters would have been scattered, but the whole matter was so sudden that everybody was panic-stricken, police officials and all. At length as the afternoon wore on, dragoons, brought from the old cavalry barracks in Eglinton Street, Gorbals, and the 1st Royal Regiment, made their appearance on the scene, the Riot Act was read, and the cavalry cleared the streets by making repeated charges, in the course of which they destroyed three barricades (formed by overturned carts) in King Street, Gallowgate, and High Street, these being the first creations of the kind ever seen in Glasgow. The citizens hurried in hundreds to the Exchange, where they were sworn in as special constables, after which they patrolled the streets in strong parties dispersing the rioters in all directions. Next morning the military, reinforced by two companies of the 71st regiment (sent from Edinburgh by special train), were distributed throughout the city, and strong bodies of special constables patrolled the streets; but about mid-day word was brought that, notwithstanding these preparations, the mob had resolved to stop the public mills and dismantle the gasworks, with the intention of utterly destroying the industrial and social order of the city. A small body of veterans, aided by some special constables and police officers, attacked a party of the mob who were assailing the silk mill of Messrs Campbell in John Street, but were unable to cope with the force against them. In their retreat along John Street they were so pressed that they at last fired, killing one man and wounding several others, of whom five subsequently died; and this volley, though fired somewhat illegally, without the presence or order of a magistrate, ended the disturbances. The value of property destroyed and carried away and the expenses connected with the riots amounted to £7111, 9s. 5d. Thirty-five of the ringleaders were convicted at the Spring Circuit, and received sentences varying from eighteen years' transportation to one year's imprisonment.

In 1857 the failure of the Great Western Bank, brought about by a commercial panic in America, caused much anxiety, and so disturbed was the condition of things that the magistrates sent to Edinburgh for additional troops, which, however, were not required. The call per share was the ruinous one of £125.

In 1875, at the O'Connell celebration on 5 August, serious riots occurred in Partick, a procession having been attacked while passing through some of the streets. The burgh was in a disturbed state for two days, during which it was found necessary to read the Riot Act. Though in the suppression of the disturbance there were no lives lost many persons were severely injured. In 1878 the greatest of the city's modern misfortunes befel in the failure, on 2 October, of the City of Glasgow Bank, which, established in 1839, was—with the exception of a very brief period in 1857, at the time of the panic caused by the failure of the Western Bank—up almost to the very day of its suspension, considered to be sound and successful. The stoppage was followed by the failure of a number of commercial firms with liabilities to the City of Glasgow Bank of about £12,000,000, while an investigation of affairs brought out the fact that the bad debts, which would have to be paid up by the shareholders, amounted to £7,345,359, and subsequent calls by the liquidators of £2750 per £100 of stock, left but few solvent contributories. A fund of about £400,000 was raised throughout the country for the relief of ruined shareholders, and its distribution brought some comfort in many cases, while a charitable fund of over £27,000

was expended in relieving the distress among the working classes.

Glasgow has, however, in the face of all disaster invariably shown great power of recovery—for as we shall see in the section on *Trade*, as one industry declined and ruin impended another has always arisen to take its place—and since 1878 the history of the city has been, in the main, one of continued prosperity established on a sounder basis than during the period of inflation that preceded the failure of the City Bank. The few disasters that have occurred may be noticed before reference is made to the more pleasing features of progress. Of matters of minor importance may be mentioned—first, the explosions which occurred in connection with the gasworks on 20 January 1883, and again on 5 January 1891. By the former, one of the three great gasometers on the south side was completely shattered, while almost simultaneously other explosions took place at the canal bridge at Maryhill and at the Buchanan Street Station; and official investigation proved that all the outrages had been perpetrated by Irish agitators, of whom ten were ultimately arrested and tried, five being sentenced to penal servitude for life, and the others to penal servitude for seven years. By the explosion of 1891 two of the gasometers at the works at Dawsholm were completely wrecked, but this time the occurrence was thought to be due to some accidental cause. Second, the capsizing of the *Daphne* steamer while being launched from Linthouse yard on 3 July 1883, by which 124 of the workmen employed on board were drowned. Third, a panic and crush following on a false alarm of fire at the Star Music Hall on 1 November 1884, when 14 persons were killed and 20 injured. Fourth, an extensive strike among the employees of the various railway companies at Christmas, 1890, which caused considerable inconvenience and even danger. Of more serious commercial import was the great falling off in the shipbuilding trade in 1884-87, which not only caused a great deal of distress among the workmen immediately concerned, but also brought about stagnation among kindred industries. In 1883 the maximum tonnage ever recorded was reached (404,383 tons), 'activity in every yard was at its height, and masters and men were perhaps too busy, it may be too sanguine, to take sufficient note of the fact, patent to others, that the demands of a depressed commerce, then and within a measurable prospective distance, did not seem to justify so extraordinary an output. The ship-owning concerns, great and small, seemed suddenly to pause and take a survey of the times, to find that the carrying capacity and speed-power of the shipping afloat were greatly in excess of immediate requirements. Thereupon fresh orders to the shipbuilder ceased with never-to-be-forgotten suddenness, and speedily it became apparent that bad times were in store for the trade, for master and workman alike. From the middle of 1883 the contracts on hand were numerous enough to contribute a fair amount of labour during some months thereafter; but as one vessel after another was put into the river, its place in the yard remained vacant, and those employed on it were discharged.' In 1884 the tonnage launched was only 262,000, and worse times were in store, as it was still lower in the following year. (See CLYDE.) The industry revived considerably in 1888 and the succeeding years, but is still subject to great fluctuations, the number of vessels built in 1895 having been only 227, including 44 sailing and 183 steam vessels.

On 16 June 1887 the citizens celebrated with the heartiest loyalty the Jubilee of Queen Victoria. The city was gaily decorated throughout, and the day's celebrations began with a thanksgiving service in the Cathedral, conducted by ministers connected with the Established, Free, and U.P. Churches, and officially attended by the Town Council and the other leading public bodies. Thereafter 6000 poor people were entertained to dinner by the Corporation; a grand review of regulars and volunteers took place on the Green, a banquet was given in the Corporation Galleries, per-

formances of vocal and instrumental music were given on the Green and in Kelvingrove, Queen's, and Alexandra Parks, and a great ball was given by the Corporation in St Andrew's Halls. For the Imperial Institute, Glasgow made the highest contribution (£7404) of any town in the kingdom, and was over all only surpassed in the amount by the counties of Sussex and Surrey; while Her Majesty was pleased to direct that a replica of the statue of the Prince Consort in George Square should be erected in Windsor Great Park as a personal memorial of the Women's Jubilee Offering. Similar rejoicings again took place in 1897, Her Majesty's Diamond Jubilee, on the completion of her 60th year's reign. The school children of the city were entertained on Saturday, June 19, in the various public parks; the magistrates attended divine service on Sunday the 20th in the Cathedral; a military tournament and review took place in the Queen's Park on Tuesday; over 6000 poor received a dinner and many others were treated at home; a banquet was held in the City Chambers, the city was gaily decorated, and numerous pyrotechnic displays were given in the evening. It was resolved to rebuild the older part of the Royal Infirmary as a memorial of the Diamond Jubilee. During these sixty years of Queen Victoria's reign the population of Glasgow increased from 249,000 to 833,000, and the revenue of the various departments of the Corporation, the tonnage of registered shipping, and the revenue of the Clyde have increased enormously.

The year 1888 is memorable for the International Exhibition of Industry, Science, and Art, which, opened in buildings erected for the purpose on the S side of Kelvingrove Park, on 8 May, and closed on 10 November, was, during that period, visited by 5,748,379 persons. The buildings, erected at a cost of £83,800, covered a space of 13½ acres, and the whole ground enclosed (including part of the University grounds) was 77½ acres, while the total amount drawn was £225,928. After deduction of expenses a surplus remained of £47,000, which was appropriated as the nucleus of a fund for the erection of public Art Galleries. The Exhibition was opened by the Prince and Princess of Wales, was visited by the Queen in state on 22 and privately on 24 August, and had among its other distinguished visitors the King of Belgium, the Princess Louise and the Marquis of Lorne, Princess Beatrice and Prince Henry of Battenberg, and the Duke of Cambridge. The other leading incidents of municipal progress have been the erection (1883-89) and occupation of the new Municipal Buildings or City Chambers, which were formally opened by the Queen on the occasion of Her Majesty's state visit to the Exhibition, and saw their second official function when the Shah of Persia was presented with an address of welcome in 1889; the extension of the municipal boundary (already noticed) in 1891; the introduction of electric lighting for part of the city in 1893, which was much extended and spread over a wider area in 1897; and the constitution, by Act of Parliament in 1893, of the whole municipal area as a County of a City, with lord-lieutenant, deputy-lieutenants, a commission of the peace, and a court of general and quarter-sessions for itself, under the same existing enactments, laws, and usages, as are applicable to the County of the City of Edinburgh.

Commerce.—According to M'Ure, the first 'promoter and propagator' of trade in Glasgow was William Elphinstone, a cadet of the noble family of Elphinstone, who settled in the city in the reign of King James I. of Scotland about 1420, and became a merchant. He is mentioned as a curer of salmon and herrings for the French market, for which brandy and salt were brought back in return. The name of Fuller's Gate, applied at an early period to the Saltmarket, seems also to imply that there was some manufacture of cloth; and a small trade in dyeing is indicated by an early prohibition of any but a burghess from dyeing cloth. The person mentioned as the second 'promoter' of trade is Archibald Lyon, son of Lord Glamis, who, coming to Glasgow with Archibald Dunbar, undertook great adventures and

voyages in trading to Poland, France, and Holland.' At this time, however, the foreign trade must have been of an extremely limited character; but from the occasional mention in the council records of merchants proceeding to the English markets and bringing home 'merchand waires,' it is evident that in the early part of the 17th century the inhabitants conducted a fair amount of inland traffic. In 1597 the shipping of Glasgow seems to have been 6 ships, the largest of 92 tons, and the smallest of 33 tons, the total tonnage being 296. In 1650 Franck says that the commercial transactions of the Glasgow merchants were extensive. He mentions particularly the free trade with France, and adds that 'the staple of the country consists of linens, friezes, furs, tartans, pelts, hides, tallow, skins, and various other small manufactures and commodities.' Commissioner Thomas Tucker, in reporting to Cromwell in 1656 'on the settlement of the Revenues of Excise and Customs in Scotland,' says, that Glasgow was a considerable burgh both for structure and trade. With the exception of the students of the college all the inhabitants were 'traders and dealers—some for Ireland with small smiddy coals in open boats from four to ten tons, from whence they bring hoops, rungs, barrel staves, meal, oats, and butter; some for France with pladding, coals, and herring, of which there is a great fishing yearly in the western sea, for which they return salt, pepper, rosin, and prunes; some to Norway for timber; and every one with their neighbours the Highlanders, who come hither from the Isles and Western parts in summer . . . into the Clwyde with pladding, dry hides, goats, kid, and deere skins which they sell, and purchase with their price such commodities and provisions as they stand in neede of from time to time. There have been likewise some who have ventured as far as the Barbadoes, but the losse which they sustained by being obliged to come home late in the year has made them discontinue going thither any more.' The mercantile genius of the people is strong, if they were not checked and kept under by the shallowness of their river, every day more and more diminishing and filling up, 'soe that noe vessel of any burden can come up nearer than within 14 miles, where they must unlade and send up their timber and Norway trade in rafts or floats, and all other commodities by three or foure tons of goods at a time in small cobbles or boats of three, four, or five, and none above six tonnes a boat. There is in this place a collector, a cheque, and four wayters. There are twelve vessels belonging to the merchants of the port, viz.: three of 150 tons each, one of 140, two of 100, one of 50, three of 30, one of 15, and one of 12, none of which come up to the town—total, 957 tons,' so that in little more than half a century the shipping had increased more than three times. In 1665, during the war with the Dutch, the *George* of Glasgow sailed under letters of marque, and, though of little more than 60 tons, was dignified by the name of a 'frigate.' She carried 60 men, and was provided with 5 pieces of ordnance, 32 muskets, 12 half pikes, 18 pole axes, 30 swords, 3 barrels of powder, and provisions for six months. There seem to have been also other privateers belonging to the city, for in the *London Gazette* of Nov. 8, 1666, it is noticed that a 'privateer of Glasgow, one Chambers, has lately brought in a Dutch caper of 8 guns, with a prize ship laden with salt.' In 1674 a company for carrying on the whale fishery and soap-making was formed in Glasgow. The company employed five ships, and had extensive premises at Greenock for boiling blubber and curing fish, known by the name of the Royal Close. An advertisement from the company appeared in the *Glasgow Courant* on 11 Nov. 1715, being the first advertisement in the first newspaper published in the W of Scotland, intimating that 'any one who wants good black or speckled soap may be served by Robert Luke, Manager of the Soaperie at Glasgow, at reasonable rates.' The soaperie then stood at the head of Candleriggs. In relating the progress of trade in Glasgow subsequent to 1668, M'Ure instances the case of Walter Gibson, who, in one year, packed and

cured 300 lasts of herrings at £6 sterling per last of 12 barrels, and having freighted a Dutch ship, called the *St Agatha*, of 450 tons, he despatched ship and cargo to St Martin's in France, where he got for each barrel of herring a barrel of brandy and a crown, and the ship at her return was loaded with salt and brandy. The produce came to a very large sum, with which he bought this vessel and other two large ships and traded to France, Spain, Norway, Sweden, and Virginia. This enterprising merchant was the first who brought iron to Glasgow, the shopkeepers having previously been supplied from the ports on the E coast.

After the Restoration Scotland was treated by the English Parliament as an alien country, and the English ports were practically closed against Scotch traders, and it was the Union, to which it had offered such violent opposition, that first brought a fresh great stimulus to the commerce of Glasgow. In 1692 there were fifteen ships belonging to Glasgow, the burden varying from 30 to 160 tons, and the total tonnage being 1182, or an increase in 40 years of about one-fourth. The Union, however, opened up the trade with the colonies, and soon thereafter we find the Glasgow merchants sending out their 'adventures' to Virginia and Maryland, and bringing back tobacco leaf in return. They did not at this time possess any suitable ships of their own, and were accordingly obliged to charter them, which they did principally from the port of Whitehaven. In these early enterprises a supercargo, sent out with each vessel, disposed of the goods and purchased the tobacco, all the transactions being for ready money. This mode of managing business prospered, and the Glasgow merchants, instead of hiring from their neighbours, began to build ships of their own, and in 1718 the first vessel that belonged to Glasgow owners crossed the Atlantic. She was built at Greenock, and registered only 60 tons. From the economy of this ready-money system, and probably also from the merchants being contented with moderate profits, the Glasgow tobacco-houses ere long not only secured the lion's share of the foreign export trade, but even undersold the English merchants in their own home markets, and this led to a combination against them by the dealers of London, Liverpool, Bristol, and Whitehaven, and a complaint to the Government that the Glasgow traders conducted their business upon, and reaped their advantages from, a system of fraud on the public revenue. A searching investigation, held in 1721, resulted in the Lords of the Treasury finding 'that the complaints of the merchants of London, Bristol, Liverpool, Whitehaven, etc., are groundless, and proceed from a spirit of envy, and not from a regard to the interests of trade or of the King's revenue.' The English merchants, not satisfied with this finding and rebuke, made in the following year formal complaint to Parliament, and the commissioners who were sent down to the Clyde imposed so many vexatious restrictions on the trade that it languished and struggled for its very life. Expensive and harassing lawsuits followed, and it was not till 1735 that the Glasgow traders were able fairly to beat off the annoyance of the English ports. Defoe, in his tour through Scotland in 1723, says that there twenty or thirty ships came every year from the plantations with tobacco and sugar, and later, in the edition of 1727, he says, 'they now send near fifty sail of ships every year to Virginia, New England, and other English colonies in America;' and he points out the great advantage Glasgow had over London, by the ships not having to go down the Channel, so that they were often 'at the Capes of Virginia before the London ships got clear of the Channel,' and thus saved a month or six weeks on the whole voyage.

From the time of the final victory of the Glasgow houses over their English rivals, the trade was conducted on more liberal principles, partners or resident agents being established throughout the tobacco-producing colonies; the trade increased prodigiously, and princely fortunes were realized. Soon after this time the number of ships, brigantines, and sloops belonging to Glasgow

amounted to sixty-seven; and besides an important coasting trade, voyages were made to Virginia, Jamaica, Antigua, St Kitts, Barbadoes, Gibraltar, Holland, Stockholm, and Ireland. The halcyon era of the tobacco trade is reckoned from 1740 till the declaration of American Independence, and during this period by far the greater portion of the whole disposable capital of the city was embarked in it. In 1771, of the 90,000 hogsheads of tobacco imported into Great Britain, over 49,000 came to Glasgow alone, while about the same time the shipping belonging to Glasgow and the Clyde was about 60,000 tons. This seems to have been the culminating year of the tobacco trade, for in 1774 the number of hogsheads imported was 40,543, and in the following year the outbreak of the American War ruined the trade and most of those engaged in it. The importance of this traffic explains the alacrity and seeming patriotism displayed in raising troops to assist the government in their efforts to suppress the rising.

Although the ruin of the great tobacco trade had thus come, the Glasgow merchants, so far from sitting down and weeping, immediately proceeded with characteristic energy to seek fresh fields for their enterprise and capital, and the West India trade, which had for some time back been engaging their attention, was extended and developed so greatly that it soon took the place of the lost tobacco trade, and the West India magnates took the place of the fallen tobacco lords. The application of steam to navigation, which was by-and-by to work such wonders for the Clyde, took place at Glasgow about 1801, when Symington constructed for Lord Dundas a steamboat called the *Charlotte Dundas*, which plied for a short time on the Forth and Clyde Canal, but was stopped, as the directors were afraid the banks might be damaged. In 1811 Henry Bell, a millwright, a native of Torphichen, made a still further advance in a boat 40 feet long and 12 feet of beam, called the *Comet*, which was built from designs by himself, with an engine made by John Robertson of Glasgow, and a boiler by David Napier. It plied between Glasgow, Greenock, and Helensburgh, and was the pioneer of the busy fleet that now throng the waters of the river. Within the next two years other three steamers, with much more powerful engines, also began to ply. The number of vessels owned in Glasgow at this time was thirty-five, with a tonnage of 2620.

In 1816 still another trade was opened up, when James Finlay & Co. despatched a ship of 600 tons (the *Earl of Buckingham*) to Calcutta—the first vessel that cleared direct from a Scottish port to the East Indies. Other merchants followed the example of this enterprising firm, of which the well-known and able Kirkman Finlay was then the head, and the trade soon became a valuable and extensive one, and now employs some of the largest and finest of both the sailing vessels and sea-going steamers of the Clyde, from Glasgow, Greenock, and Port Glasgow. Of late years it has increased very rapidly. The trade to China and a new trade to France have since been added, and the intercourse with Canada, South America, Australia, New Zealand, and other parts has become vastly extended. The trade with the United States has latterly grown to such magnitude as to be exceeded only by that of London and Liverpool. In 1840 Messrs Burns founded the great Cunard Line of steamers, with the *Sirius*, a fine vessel of 2000 tons, and the first steamer that crossed the Atlantic. So well did they succeed that by-and-by another was built for the same trade, and in 1856 Messrs Handyside & Henderson founded the Anchor Line, also plying to New York, while the Allan Line had been founded to carry on trade by steam with Canada. Since then other lines have been formed, and now there is regular steam communication with almost every part of the world at frequent intervals—with Aberdeen, Belfast, Girvan, the West Highlands, Liverpool, Londonderry, Portugal, Spain, all the Mediterranean ports, the Black Sea, New York, Boston, Philadelphia, Halifax, St John, New Brunswick, and various ports in South America, the West Indies, India, China, and

Japan. Glasgow has likewise been, since 1842, very prominent as an emigration port for British North America, the United States, and Australia. The number of emigrants varies of course with the state of trade. The total number in the period 1876-80 was 86,380 (27,962 foreigners); 1881-85, 182,779 (72,468 foreigners); and 1886-90, 174,442 (62,697 foreigners). Of those leaving, about 60 per cent. are Scotch, and over 30 per cent. foreigners; while 70 to 80 per cent. of the emigrants go to the United States and 10 per cent. to Canada. The number of English and Irish emigrants from Glasgow has in recent years shown a marked falling off, as has also the proportion of those who go to Canada and Australasia. The smallest number leaving from Glasgow in recent years was 10,007 in 1877, and the largest 49,097 in 1882.

The commerce of Glasgow with other countries and with the British Colonies is indeed about as comprehensive and widespread as any profitable commerce with them can well be made, while the coasting trade, both by steamers and by sailing vessels, is at once minute and enormous. As an illustration of how some branches increase, we may mention that an export trade to France, which hardly existed before 1860, rose in one year to the large value of £367,000; and while in 1877 only fourteen ships with 7197 tons of grain arrived in the harbour, in 1895 the quantity imported, including maize and flour, was 435,771 tons.

The following table shows the vessels registered as belonging to Glasgow, at intervals from the 16th century onwards:—

Year.	Sailing Vessels.	Tonnage.	Steam Vessels.	Tonnage.	Total Vessels.	Total Tonnage.
1597	6	296	6	296
1656	12	957	12	957
1692	15	1,182	15	1,182
1810	24	1,956	24	1,956
1820	77	6,131
1830	217	39,432
1841	431	95,062
1851	508	145,684
1861	508	173,146	171	45,658	679	218,804
1871	557	281,844	338	152,172	895	433,016
1881	575	373,767	683	453,668	1,258	827,435
1891	563	502,436	1,013	814,373	1,576	1,316,809

In 1895 there were 571 sailing-vessels of 572,568 tons, and 1099 steam-vessels of 952,758 tons.

The following table shows the arrivals in the harbour, at intervals of ten years, for the last fifty years:—

Year.	ARRIVALS.					
	Sailing Vessels.	Tonnage.	Steam Vessels.	Tonnage.	Total Vessels.	Total Tonnage.
1841	5,785	314,262	9,421	828,111	15,206	1,142,373
1851	6,212	424,785	11,062	1,021,821	17,274	1,446,606
1861	4,504	474,740	11,281	1,029,489	16,058	1,504,220
1871	3,087	461,009	12,713	1,588,689	15,800	2,049,708
1881	1,948	369,563	15,815	2,687,970	17,763	3,057,533
1891	1,250	239,334	14,855	3,135,775	16,135	3,375,109

In 1895 there were 947 sailing-vessels of 145,441 tons, and 8947 steam-vessels of 2,993,430 tons.

The rapid rise since about 1820 and present condition of the whole foreign commerce of the port, will be best seen from these and the other tables, especially in that giving the customs revenue. Some of the results are very striking, especially when it is kept in mind that about 1861 a large department of the commerce sustained a severe shock from the effects of the American war. It is also worthy of notice, and in contrast to the experience of most of the other ports of the United Kingdom, that Glasgow commerce possesses an elasticity which has almost always exhibited a progressive increase of customs revenue, and seldom, leaving the abnormally high years of 1866 and 1867 out of account, a large falling off, in spite of the frequent remissions of heavy duties which have taken place since the inauguration of the free trade era of 1844.

The value of British and foreign produce and manufacture exported and the customs revenue have been:—

Year.	Value of British and Foreign Produce and Manufacture.	Customs Revenue at Glasgow.
1811	£2,007,192	£526,100
1851	...	675,044
1861	5,259,887	924,445
1871	9,853,057	999,572
1881	12,148,500	1,036,611
1891	14,459,866	1,096,311

In 1895 they were £13,406,927 and £1,268,469.

The revenue in 1656 was £554, and in 1812, when Glasgow became a port independent of Port Glasgow, only £3124; in 1820, £11,000; in 1830, £59,014. The highest customs revenue obtained at Glasgow was in 1868, when it reached the sum of £1,352,246, 12s. 5d.; and in 1867, 1869, 1872, 1873, 1876, 1877, 1881, 1890, 1891, 1892, and 1893 it exceeded one million of pounds sterling; while in intermediate years it fell but little below that sum, the smaller amounts being due to the abolition or reduction of duties.

Manufactures and Industries.—The manufactures and industries of Glasgow present a most wonderful combination. So singularly varied and extensive are they, that the city 'combines several of the special characteristics of other cities. It has the docks and ports of Liverpool, the tall chimneys and manufactories of Manchester, with the shops of Regent Street, and the best squares of Belgravia.' 'Glasgow,' says Dr Strang, 'unites within itself a portion of the cotton-spinning and weaving manufactories of Manchester, the printed calicoes of Lancashire, the stuffs of Norwich, the shawls and mousselines of France, the silk-throwing of Macclesfield, the flax-spinning of Ireland, the carpets of Kidderminster, the iron and engineering works of Wolverhampton and Birmingham, the pottery and glass-making of Staffordshire and Newcastle, the shipbuilding of London, the coal trade of the Tyne and Wear, and all the handicrafts connected with, or dependent on, the full development of these. Glasgow has also its distilleries, breweries, chemical works, tan-works, dye-works, bleachfields, and paper manufactories, besides a vast number of staple and fancy handloom fabrics which may be strictly said to belong to that locality.' The textile factories lie to the E, while the engineering shops and foundries lie to the N, NE, and S, and the ship-building yards are to the W.

We have already seen that there are some traces of early manufacture of cloth in Glasgow, but in all probability it was very small. When the letter of Guildry was granted in 1605, we have evidence in it that silk, linen, and hardware, etc., from France, Flanders, and England, were dealt in, and that there were manufactories of wool and linen cloth. The first manufactory the city possessed was a weaving establishment started in 1638 by Robert Fleyming, who obtained from the magistrates a lease of some premises in the Drygate. It was not till after the Union, however, that any of them attained prominence, when linen and cotton cloth and plaidings were tried. The manufacture of plaiding indeed, as we have already seen from Mr Commissioner Tucker's report, seems to have made some progress in the middle of the 17th century; but it must have greatly advanced, for in the close of the century Glasgow plaids had attained some celebrity in Edinburgh, then the aristocratic centre of the kingdom. The inhabitants were proud of their handiwork, for we find that in 1715 the magistrates presented to the Princess of Wales, afterwards the Queen of George II., 'a swatch of plaids as the manufactory peculiar only to this place for keeping the place in Her Highness' remembrance, and which might contribute to the advantage thereof, and to the advancement of the credit of that manufactory'—a gift which Her Royal Highness graciously received, and returned her 'hearty thanks to the magistrates of Glasgow for their fyne present.' The commerce with America seems to have first suggested and encouraged the intro-

duction of manufactures into the city on a more extended plan than the home trade which had previously existed. Defoe, in the first edition of his *Journey*, in 1723, makes no mention of any industry, excepting tobacco and sugar; but in a subsequent edition, 1727, he mentions, besides two sugar-baking houses and a distillery, that 'Here there is a manufacture of plaiding, a stuff crossed-striped with yellow, red, and other mixtures, for the plaids or veils worn by the women in Scotland,' and also 'a manufacture of muslins, which they make so good and fine that great quantities of them are sent into England and to the British plantations, where they sell at a good price. They are generally striped, and are very much used for aprons by the ladies, and sometimes in head-cloths by the meaner sort of English women.' He says there also was 'a linen manufacture, but as that is in common with all parts of Scotland, which improve in it daily, I will not insist upon it as a peculiar here, though they make a very great quantity of it and send it to the plantations as their principal merchandise.' The importance of the linen weaving in Glasgow is said to date from 1700, and to be somewhat peculiar. Ure, in his *History of Rutherglen and East Kilbride*, tells of a William Wilson, a native of East Kilbride, who took the name of William Flakefield from the place at which he had lived. Along with his father and brother he went to Glasgow near the close of the 17th century, but ere he had been there long he joined the Scottish Guards and went to the Continent, where his attention was attracted by a German handkerchief woven in blue and white chequers. So much was he struck by it that, having been brought up as a weaver, he determined to weave one like it whenever he had an opportunity. When he at length returned to Glasgow in 1700 he brought his handkerchief with him, and after many patient trials and failures he succeeded in making a number like it—the first of the kind ever woven in Great Britain. They were at once successful and met with a ready sale, looms multiplied, and in a few years Glasgow had become famous for this new branch of the linen trade. Everyone who engaged in it made money except the unfortunate who introduced it, and who, whether from want of capital or from some return to his early roving habits, died in poverty, with the appointment of town drummer.

The legislature granted great encouragement to the making of linen in Scotland, and by this the trade in Glasgow was so fostered that the city began to assume importance as a manufacturing town. An Act of Parliament passed in 1748—prohibiting the importing or wearing of French cambrics under severe penalties—and another passed in 1751—allowing weavers in flax or hemp to settle and exercise their trades in any part of Scotland, free from all corporation dues—conjoined with the bounty of 1½d. per yard on all linens exported at or under 1s. 6d. per yard, contributed largely at the outset to the success of the linen trade. Between 1730 and 1745 many new industries were introduced into the city. Glasgow was the first place in Great Britain in which inkle wares were manufactured. In 1732 a Glasgow citizen named Harvey brought away from Haarlem, at the risk of his life, two inkle looms and a workman, and by this means fairly succeeded in establishing the manufacture in Glasgow, and breaking the Dutch monopoly in the article. The Dutch workman he had brought with him afterwards took offence and went to Manchester, and introduced the inkle manufacture there. Gibson, in his *History of Glasgow*, gives an account of the manufactures and industries in 1771, and it is worth noticing, as he seems to have taken great pains to make it exact. He mentions different kinds of linen, checkered handkerchiefs, diaper, damask, cambric, lawn, muslin handkerchiefs, 'Glasgows' or lawn mixed with cotton, and carolines, which are the chief things. Besides these there were industries in brushes, combs, horn, and ivory; copper, tin, and white iron; delf and stonewares; gloves, handkerchiefs, silk, and linen; men's hats, jewellery, inkles, iron, tanned leather,

printed linens, ropes, saddlery, shoes, stockings, and thread; and Spencer, in his *English Traveller* (1771), mentions as the industries the herring trade, the tobacco trade, the manufacture of woollen cloth, stockings, shal-lons, and cottons; muslins, the sugar trade, distilling, the manufacture of boots and shoes, and other leather goods, including saddles; and the manufacture of house furniture.

The vast improvements which were effected in the production of cotton yarn by the inventions of Hargreaves and Sir Richard Arkwright gave still a fresh impulse to the manufactures affected, and capital, seeking new outlets after the failure of the tobacco trade, was invested largely in cotton manufacture. Through the subsequent improvements effected on the steam engine by James Watt, it became no longer necessary for mills to be erected only where a large water supply was available, and it was possible to raise them in the midst of a rich coal field, and alongside of a navigable river with a port. The first steam engine used in Glasgow for spinning cotton was erected in Jan. 1792. It was put up at Springfield, on the S side of the Clyde, opposite the lower steamboat quay. This work, which at that time belonged to Mr Todd, and later to Todd and Higginbotham, was removed at immense expense, in virtue of the Clyde Trustees Act of 1840 to afford space for the extension of the harbour. The works of Messrs S. Higginbotham & Co. are now to the E, opposite Glasgow Green, and at them spinning, weaving, dyeing, and printing are carried on very extensively. A power-loom had, however, been introduced previously. According to Pagan, 'the power-loom was introduced to Glasgow in 1773 by Mr James Louis Robertson of Dunblane, who set up two of them in Argyle Street, which were set in motion by a large Newfoundland dog performing the part of a gin horse.' This statement has since, however, in 1871, in letters to the *Glasgow Herald*, been disputed by Mr John Robertson, a Pollokshaws power-loom tenter, who asserts that a man named Adam Kinloch, whom he met in 1845, and who was then eighty-five years of age, 'made the first two power-looms that ever were made in the world, and drove them with the use of a crank by his own hand in a court off the Gallowgate' in 1793. About 1794 there were 40 looms fitted up at Milton, and in 1801 Mr John Monteith had 200 looms at work at Pollokshaws near Glasgow, and the extension of power-loom factories and of the cotton trade generally became so rapid as almost to exceed belief. In 1818 there were within the city 'eighteen steam weaving factories, containing 2800 looms, and producing 8400 pieces of cloth weekly.' There were altogether 52 cotton mills in the city, with 511,200 spindles, the total length woven being over 100,000,000 yards, and the value upwards of £5,000,000. There were also in the city 18 calico printing works and 17 calendering houses. In 1854 the number of cotton spinning factories was 39, of cotton weaving factories 37, of cotton spinning and weaving factories 16, the number of spindles was 1,014,972, the number of power-looms 22,335, and the number of persons employed 24,414.

The woollen manufactures in most of their departments are much less prominent in Glasgow and its neighbourhood than in many other parts of Scotland. The manufacture of carpets, introduced first in 1757, is, however, carried on to a considerable extent, and employs a number of hands. In 1854 there were 7 worsted, spinning, and weaving factories, with 14,392 spindles, 120 power-looms, and 800 hands. In 1861 there were 11,748 spindles, 14 power-looms, and 1422 hands; 'and though since then considerable fluctuations have been caused by the disturbed condition of trade arising from the state of the coal and iron industries in 1873-74, and subsequently from the failure of the City of Glasgow Bank in 1878, there has been on the whole a proportional increase.' One work alone at Greenhead now employs upwards of 500 hands, and the annual value of the trade is nearly £200,000. There are also a number of silk and rope, flax and jute factories, which, in 1854, had 74,705 spindles and 2050 hands. In 1861 they had

44,224 spindles, 231 power-looms, and 2206 hands; and here again a fitting increase has taken place.

Altogether about one-eighth of the population of Glasgow, between the ages of 10 and 40, are employed in connection with these factories with their accompanying processes of bleaching, dyeing, and printing. An establishment for the manufacture of bandanas was started at Barrowfield in 1802 by Messrs Monteith, Bogle, & Co., and the superior manufacture of the article itself and the successful application of the Turkey-red dye have given to Glasgow bandanas a fame and a preference in almost every commercial mart in the world, and rendered this one of the staple industries in the city, for the manufacture, now shared in by other companies, is carried on upon a scale of great magnitude. Independently of this the manufacturing operations of various other parts in Scotland are kept in motion by Glasgow capital, and even in the North of Ireland large numbers of the muslin weavers are in the direct and constant employment of Glasgow houses. The manufacture of sewed muslin is carried on by over 50 firms in Glasgow, and employs more than 10,000 women. In 1891 the textile factories in Glasgow were:—7 cotton spinning—3 often not fully employed—46 cotton weaving, 3 worsted spinning, 4 weaving unions of cotton and wool, 4 sewing thread, 12 cotton wuinding and warping, 6 cotton doubling and twisting, 6 silk winding and throwing, 4 silk weaving, 3 roperies, 2 lace, 8 carpet, 4 hair, 3 jute, 7 heddle makers, 10 waste (wool and cotton); total, 129. Of the other industries the chief were—3 calico printing works, 26 bleaching and dyeing works, 73 calendering and finishing works, 15 boot and shoe works, 20 underclothing and mantle works, 2 blast furnaces, 19 boiler makers, 127 foundries, 129 makers of machinery, 12 iron and steel shipbuilders, 11 soap manufacturers, 23 paint and varnish makers, 22 oil and oil-cake makers, 11 glass makers, 32 chemical works, 63 bread and biscuit bakers, 10 preserve (fruit) makers, 35 aerated water makers, 21 flour and grain millers, 37 furniture makers, 59 saw-millers, 20 potteries, 26 brick and tile makers, 117 letterpress printers, 48 lithographers, 21 box and packing-case makers, 20 tobacco manufacturers, 3 iron tube makers.

The soft goods trade is, as might be expected, largely developed in Glasgow, and the retail and wholesale trades are often united, the merchants importing goods largely from England and abroad, and sending them out wholesale to smaller traders situated in almost every village and town in Scotland, and not a few in Ireland; and, notwithstanding the magnitude of such transactions, the poorest customer is supplied as readily and courteously with a piece of tape as the richest with an order of a very much more extensive nature. Of the two gentlemen, brothers, who originated this mixed wholesale and retail soft goods trade, one filled the office of chief magistrate of the city, and was knighted. For the purposes of their business they, in 1858, erected in Ingram Street a large block of buildings in the old Scottish style. Another firm who started about 1850 at first occupied rented premises, but ultimately purchased these, and by additions and extensions are now perhaps the largest soft goods traders in the kingdom.

Chemical manufactures were commenced in Glasgow in 1786, when Mr Charles Macintosh, so well-known for some of his discoveries in applied chemistry, introduced into Glasgow from Holland the manufacture of sugar of lead. This article had been previously imported from the latter country, but in a very short time the tables were turned, and instead of importing it Glasgow sent considerable quantities to Rotterdam. About the same time the firm established the manufacture of cudbear, an article of great importance in connection with dyeing. In 1799 Mr Macintosh also made the first preparation of chloride of lime in a dry state, which has since been so extensively prized and used as a bleaching powder, and still later he established the well-known manufacture of waterproof cloths, which has, however, latterly been transferred to Manchester. In 1800 the chemical manufactures of Glasgow received a fresh great

impulse from the erection by Messrs Tennant, Knox, and Co., of a chemical work at St Rollox, in the northern district of Glasgow, for the manufacture of sulphuric acid, chloride of lime, soda, soap, etc. This is now one of the most extensive chemical works in the world, and the firm have connections and agencies in every considerable mart both at home and abroad. In 1843 the company erected a 'monster chimney' for the purpose of carrying off, and preventing injury from, any noxious gases that might arise in the process of their manufacture. It was erected at a cost of about £12,000, and measures 40 feet in diameter at the base, and is 435½ feet high above ground. It is still counted one of the sights of the city, though since 1857 it has been overtopped by the chimney of Messrs. Townshend's chemical works, which though only 32 feet in diameter has a height of 454 feet above ground.

The manufacture of bottles and bottle glass was commenced at Glasgow in 1730, the first bottle-house being about where the S end of Jamaica Street now is, and probably near the site of the Custom House. At first the trade does not seem to have been very brisk, for the workmen were only employed for four months in the year, but now the manufacture is carried on very extensively in Anderston and Port Dundas. The manufacture of flint glass was begun in 1777 by Messrs Cookson & Co. of Newcastle, and under other firms is still carried on with great vigour. The earthenware manufacture was commenced at Delftfield, near the Broomielaw, in 1748. This was the first pottery in Scotland, but for a long period the quality was decidedly inferior to the English make, and the goods produced only of the lowest quality, and the consumption in consequence mostly local. Since, however, about 1829, and more especially since 1842, the manufacture has been greatly increased and improved. New establishments have been erected, and the productions have attained a beauty of design and a delicacy of finish which now enable them to compete successfully in all departments, and in both the home and foreign markets, with the well-known Staffordshire ware. There were in 1896 about twenty potteries within the city, the largest being at Garnagad Hill, where about 1000 hands are employed. The manufactures include every kind of product from the coarsest earthenware to the finest porcelain, and the exports, both coastwise and foreign, amount to over 12,000 tons a year. The rope manufacture, which dates from 1696, is considerable, and so is the brush trade, which was first introduced in 1755. The tanning of leather on a considerable scale began soon after the Union, and a shoe trade that followed it had attained in 1773 such importance that there were two firms in that year each employing over 300 hands. The trade is now of large extent for both home and foreign supply. The brewing business is very old, and Glasgow was in the 17th century noted for the excellence of its ale. It has greatly increased in later times, and Messrs Tennent, of the Wellpark Brewery in Duke Street, are among the largest exporters of porter and bitter ale in the kingdom, their produce bearing the highest character in the foreign markets. There are twelve breweries. The first distillery was established in Kirk Street, Gorbals, in 1786, by William Menzies, his licence being the fourth granted in Scotland. At that period the duty little exceeded one penny per gallon, and the best malt spirits sold at about 3s. per gallon. The trade both by distilleries and agencies for houses situated elsewhere has now become a very extensive one, the premises of the distillery at Port Dundas being almost the largest in the world. There are many other industries, too numerous to be particularly noticed, and, in short, Glasgow may be set down as the workshop of Scotland, there being, with a very few exceptions, hardly an article useful to mankind that is not made in the city of St Mungo.

All the iron trade of Scotland, with small exception, belongs directly or indirectly to Glasgow, concentrating here its business, commercially and financially, and drawing hence almost all the articles of consumpt connected with its works and workers. The iron in-

dustry, now of such importance to the city, seems to have been introduced in 1732 by the Smithfield Company, for the manufacture for export of all sorts of hard ware. M'Ure describes their warehouse as 'built on an eminence near the north side of the great key or harbour at the Breamielaw,' and says that it contained 'all sorts of iron work, from a lock and key to an anchor of the greatest size.' The trade went on in a fair way, for in 1772 there were imported into the Clyde 836 tons of bar iron and 896 tons of pig iron, while the exports of manufactured iron were 671½ tons, of which a little over 489 tons went to Virginia. The trade had not increased to a very great extent, though it was growing, but about 1839, or perhaps a little earlier, it began to show signs of greater development, which rapidly took place in consequence of the introduction of the hot-air blast, devised by Mr James B. Neilson, manager of the Glasgow gasworks, and of the greater demand for iron of all sorts following on the introduction of the railway system. A great deal of the iron reaches Glasgow in the form of pig iron, and at different works within the city it is rolled and manufactured. The six furnaces of the Govan Ironworks—popularly known as 'Dixon's Blazes,' from Mr Dixon who erected them about 1837—form a curious feature in the district S of the Clyde. Besides the Govan works, some of the other large premises are the Glasgow Ironworks at Garnagad Road, the Blochairn Steel Works near the Alexandra Park, the Parkhead Forge at Parkhead, and the Govan Forge and Steel Company, who manufacture the heaviest class of forgings for ships, marine and ordinary engines, and mild steel castings and forgings of all descriptions. For castings of various sanitary and architectural appliances, the very large Saracen (at Possilpark) and other foundries have a wide and well-earned reputation. The increase of the iron trade in Glasgow corresponds with that for the whole of Scotland. In 1788 over the whole country there were only eight furnaces at work, and their produce was only one-sixth of what it would be now for the same number, such has been the improvement that has taken place in the methods of operation.

The following table shows the increase since—

Year.	No. of Furnaces.	Tons produced.
1806	18	22,840
1823	22	30,500
1833	31	44,000
1843	62	248,000
1851	114	740,000
1861	122	1,040,000
1870	...	1,206,000
1879	97	932,000
1889	85	998,000

In 1890, in consequence of the strike of furnacemen, the production fell to 798,000 tons; but the average amount may be taken at close on a million tons. From 80 to 90 steel furnaces annually produce also nearly half a million tons of Siemens steel.

The prosperity of the trade between 1833 and 1851 is well shown by the great increase in the number of the furnaces, and the improvements in manufacture by the increased output that these furnaces could produce. From an average output of nearly 1400 tons per furnace in 1833, the quantity rose, in 1843, after the introduction of the hot blast, to 4000, and this has since again more than doubled. In place of the 489 tons that had been sent to Virginia in 1772, there were sent in 1860, to America alone, no less than 78,000 tons, and though this in 1861 fell in consequence of the war to 35,000 tons, France increased its consumption by 14,000 tons, and Spain increased hers by the same amount. In 1895 the total shipments of iron from Glasgow amounted to 248,515 tons.

Another of the great sources of Glasgow's prosperity and success has been the abundance of coal in the surrounding district, which has not only provided fuel for the ironworks, the factories, and the steamships, but

has also formed in itself an important article of export. When the coal in the neighbourhood began to be worked is not exactly known, but we know that in Scotland in the 14th century coal was a common article of merchandise, and was exported and sometimes taken as ballast for ships. The first notice we find of the Glasgow coal-field is in 1578, when the Archbishop let the 'coil-heuchtis and colis within the baronie of glasgow' for the space of three years at the yearly rent of £40 Scots (equal to about £5 sterling at the time), and 270 'laid's of coal (the 'laid' being, according to Mr Macegeorge, about 320 pounds). These coal pits were probably in Gorbals. In 1655 the town council let these pits, or others probably in the same quarter in 'the muir henghe,' at a rent of £33, 4s., the tenants to employ eight hewers, and not to charge more than 4d. for nine gallons. In 1760 the price per cart of about half a ton was 1s. 3d., but they became after this rapidly dearer, for in 1778 they were 3s. for about the same quantity. In the latter year the whole quantity taken to Glasgow, including what was used for Glasgow, Greenock, and Port Glasgow, as well as what was exported elsewhere, was only 181,800 earts, or about 82,000 tons. In 1836 there were 37 pits in the neighbourhood, from which 561,049 tons of coal were brought to Glasgow, of which 124 were exported, and 437,047 tons were used in the city. In 1852 the exports were 200,560 tons, and the whole quantity brought into the city was probably about 1,074,558 tons. In 1878 the exports were 566,720 tons, 1,122,543 tons in 1890, and 808,075 tons in 1895.

The coal and iron combined have made the Clyde also the great centre for the construction of iron and steel ships, marine steam engines and boilers, and a vast amount of kindred work, as is highly fitting, seeing that it was the cradle of steam navigation. Henry Bell, as has been already mentioned, had the *Comet* built at Port Glasgow by Messrs John Wood & Co. in 1811. The *Comet* made her trial trip on 18 Jan. 1812, and on her first trip from Glasgow to Greenock she made 5 miles an hour against a head wind. She was only of 28 tons burden and with an engine of 4 horse-power, and cost but £192; yet from this small beginning dates the great and important shipbuilding industry on the Clyde. Bell's invention was not patented, and was promptly seized by able, enterprising, monied men to be copied and improved. By 1813 she was followed by the *Elizabeth* (10 horse-power), by the *Clyde* (14 horse-power), and the *Glasgow* (14 horse-power), all built by Wood at Port Glasgow, and engined respectively by Thomson of Tradeston, by Robertson, and by Bell. The new method of navigation was at first supposed to be suitable only for smooth inland waters, and did not for a little pass beyond the Clyde; but a steam vessel of better build was put on trial by David Napier to carry goods and passengers in the coasting trade in the open Channel, and the trial proved so successful that its results are now apparent in every sea that has been navigated by civilized men. The building of sailing vessels on the Clyde went on increasing with the increase of commerce, and now the building of steam vessels became of rapid importance. During the eighteen years, however, after the *Comet's* first voyage, all the vessels were small and mostly of timber, and the whole aggregate did not exceed 5000 tons, but then many large ones came to be required, and both small and large were eventually constructed of iron. Many other improvements in construction were also made, a considerable number of them being due to David Napier, who had made the boiler of the *Comet*, and who ultimately combined shipbuilding with his former trade of marine engine-making, and started on a career that was highly successful from every point of view. Besides his many improvements in boilers and engines, Napier first suggested the improved clipper bow by making the stem taper instead of coming in with a sharp round bend. Details of the shipbuilding output will be found in the section on *History* and also in the article *CLYDE*, but it may here be mentioned that in

recent years some of the largest steam-vessels afloat were launched from the Fairfield and Clydebank shipbuilding yards. From the latter there was launched on 1 March 1892 the *Ramillies*, a first-class battle-ship of 14,300 tons displacement, 330 feet long, and having a steel armour-belt 18 inches thick. From the Fairfield yard in August of 1892 and February 1893 came the twin Cunard liners *Campania* and *Lucania*, which are the largest ships that have been built since the *Great Eastern*, and are therefore now the largest ships in the world. Measuring 620 feet long by 65½ wide and 43 deep, they have a gross tonnage of 13,500 tons.

The Harbour.—The harbour and docks of Glasgow afford one of the most magnificent illustrations that can be found of the assistance that may be given to nature by the artifice and skill of man. 'Nowhere,' says M. Simonin, in an article on Glasgow and the Clyde published in the *Novvelle Revue* of Nov. 1880, 'as at Glasgow is there revealed in such luminous traits all that can be done by the efforts of man, combined with patience, energy, courage, and perseverance, to assist nature, and if necessary to correct her. To widen and deepen a river previously rebellious against carrying boats, to turn it into a great maritime canal, to bring the waters where it was necessary to bring the largest ships, and, finally, to gather a population of 750,000 inhabitants, all devoted to commerce and industry upon a spot where only yesterday there was but a modest little town, almost destitute of every species of traffic—such is the miracle which in less than a century men have performed at Glasgow.' Within the last hundred years or so the Clyde navigation works have, says Mr Deas, the engineer to the Trust, converted the river Clyde 'between Glasgow and the sea, from a shallow stream, navigable only by fishing wherries of at most 4 or 5 feet draught, and fordable even 12 miles below Glasgow, to a great channel of the sea, bearing on its waters the ships of all nations, and of the deepest draught, bringing to this City of the West the fruits and ores of Spain, the wines of Portugal and France, the palm-oil and ivory of Africa, the teas, spices, cotton, and jute of India, the teas of China, the cotton, cattle, corn, flour, beef, timber—even doors and windows ready-made—and the numerous notions of America, the corns of Egypt and Russia, the flour and wines of Hungary, the sugar, teak, and mahogany of the West Indies, the wools, preserved meats, and gold of the great Australian colonies, the food supplies of the sister Isle, and the thousands of other things which go to make the imports of the two-mile harbour of Glasgow.'

The details of the deepening of the river Clyde have been already given in the article *CLYDE*, and the particulars here given will be confined to the harbour proper. The harbour extends along the river for a distance of practically over two miles and a half. It is for this distance from 400 to 500 feet wide; and, besides the natural basin of the river, includes three tidal docks, one of them the largest in Scotland. It is divided into two parts, known as the Upper Harbour and the Lower Harbour—the former extending from Albert bridge to Glasgow Bridge, the latter from Glasgow Bridge down to the mouth of the river Kelvin. The quays on the N bank of the river are as follows:—In the Upper Harbour the Custom House Quay extending from Victoria Bridge to Glasgow Bridge, Broomielaw or the Steamboat Quay, Anderston Quay, Lancefield Quay, Finnicross Quay, Stobercross Quay, Stobercross Slip Docks, Yorkhill Wharf, and Govan and Partick Wharf. On the S side, from Glasgow Bridge downwards, are Clyde Place Quay, Windmilleroft Quay, Springfield Quay and Terminus Quay, Mavisbank Quay, and Plantation Quay. The water area is about 180 acres. The average depth at high water of spring tides varies in different parts from 19 to 35 feet, the shallowest berth being in Kingston and the deepest in Cessnock Dock. Over the rest of the harbour the ordinary depth is from 24 to 30 feet. The total length of quays, which was 382 yards in 1800, 697 in 1820—in both cases all on the N side of the river—1973 in 1840 (1233 on N side), 4376 in 1860, 7464 in 1880,

10,079 in 1885, 10,956 in 1890, upon the completion of the Cessnock docks, will be 14,793 yards, of which fully half is allocated to various lines of steamers trading with different parts of the world, while the rest is available for general purposes of trade. The river steamers and coasting steam lines find accommodation mostly along the upper quays on the N side, while the large American and foreign steamers have their berths along the lower quays. To the W of the Queen's Dock is Yorkhill Wharf, which is set apart for the discharge of timber, and has large wood-storage yards connected with it. At its W corner are lairs and slaughter-sheds for cattle from the United States, while similar accommodation for the Canadian cattle trade is provided at Shieldhall, to the W of Govan, on the opposite side of the river, about a mile farther down. Terminus, Springfield, and Mavisbank quays, on the S side, and part of the Queen's Dock, are almost entirely given up to the loading and unloading of ore and coal.

Though docks apart from the river basin had been recommended as early as 1806, and Acts of Parliament for their construction obtained in 1840 and 1846, it was not till 1867 that the first one was constructed. This was Kingston Dock, on the S bank of the river behind Windmillcroft Quay. It is an oblong basin, with $5\frac{3}{4}$ acres of water space, surrounded by a timber wharf giving 830 lineal yards of quayside. The entrance is between Windmillcroft and Springfield Quays, and is about 90 feet wide. The site cost £40,000, while £115,000 was expended on construction. In 1846 permission was obtained from Parliament to erect a tidal basin and a wet dock at Stobcross on the N side of the river below Finnieston Quay, and land was there acquired for this purpose, but nothing was done, as it was deemed easier and cheaper to extend the quays along the river. When this became no longer easily possible the Stobcross plan was revived, but on a much larger scale, the Edinburgh and Glasgow railway (now part of the North British Railway system) having in the meantime received permission to erect a station at the proposed dock. Parliamentary sanction was in 1870 obtained for the new plan, which showed a total area used of 61 acres (of which $33\frac{1}{2}$ are water space), and a quayside of 3334 lineal yards. The works were begun in 1872, and finished so far that the dock could be opened in 1877. The last stone of the entire work was laid in 1880, and the basin, by express permission of the Queen, received the name of the Queen's Dock. It comprises three Basins—the North, 1866 feet long by 270 wide; the South, 1647 feet long by 230 wide, with a quay between them 195 feet broad; and an Outer, 695 feet wide at its widest part by 1000 feet long. The entrance is at the SW corner, and is 100 feet wide. It is crossed by one of Armstrong's hydraulic swing-bridges 40 feet 6 inches wide, 181 feet 6 inches long, and constructed to carry a rolling load of 60 tons on any part of its roadway. The total cost of the dock (inclusive of land) was about a million and a half, while accommodation is provided for about 1,000,000 tons of shipping. In 1883 parliamentary sanction was obtained for the construction of additional docks at Cessnock behind Plantation Quay, on the opposite side of the river from the Queen's Dock, where 100 acres had been acquired by the Trust for this purpose long before. In consequence of the depression of trade that prevailed for some years after the passing of the act, operations were not begun till 1886, while minor alterations of plans were made in 1890. The entrance is at the NW corner and leads into a large canting basin measuring 700 by 685 feet, and with a 120 ton crane on the centre of the quay wall to the W. To the E of the canting space are three basins running E and W, parallel to each other and to the river, of which the two to the S are 200 feet wide and that to the N varies from 200 to 240 feet. They are separated by quays 250 feet wide. The extreme length of the water area is 2000 feet, and the width 1100, and the water space covers $34\frac{3}{4}$ acres, while the available quayside is 3760 yards. The depth at low water of ordinary spring tide will be 25 feet, and at high water

36 feet; but along the W wall there will be berths with depths under similar conditions of 28 and 39 feet, so as to provide accommodation at the 120 ton crane for men-of-war and the largest vessels afloat. The sheds are two-storey, the upper parts for inward and the lower for outward cargo, so that vessels may be unloaded and loaded at the same time. In order to avoid the necessity of any bridge across the entrance the Renfrew Road, which here formerly was parallel to the river, was in 1891 diverted to the extent of 1565 yards round the E, S, and W sides. The total cost, exclusive of land, was about £1,500,000. Close to the entrance, on the W, are three graving docks, of which that next the river, No. 1 (1869-75) is 560 feet long, 72 feet wide at entrance, and has a depth of 22 feet 10 inches of water on the sill at high water of ordinary spring tides. No. 2 (1882-86) is 575 feet long, 67 feet wide at entrance, and has the same depth of water on sill as No. 1. No. 3 (begun 1890) is the largest in the kingdom and is 900 feet long, 85 feet wide at entrance, and has 26 feet of water on the sill. By far the greater portion of the whole of the harbour quays is built with solid stonework, and considerable pains have been taken, and sums of money expended, in repairing many of the older erections which had, owing to the constant dredging and deepening of the bed of the river, in many places shown signs of a tendency to slip into the river. For the quay walls it has been in many places very difficult to obtain suitable foundations, as the subsoil consists largely of water-bearing sand, gravel, and mud, but the difficulty has latterly been got over by the use of groups of concrete cylinders—a plan here first adopted and carried out with great success.

To the W of the entrance to the Queen's Dock are the Kelvinhaugh slip docks, and there are also other two private slip docks—one at Pointhouse Shipbuilding Yard, and one at Meadowside Shipbuilding Yard. At the latter, at the mouth of the Kelvin, there is also a private graving dock, constructed in 1856 by Messrs Tod & Henderson, but now in possession of Messrs W. & D. Henderson & Co., to whom the adjoining Meadowside Shipbuilding Yard belongs. It is 500 feet long, 56 wide at the entrance, and has 18 feet of water on the sill at spring tides and 16 at neaps.

There are a number of cranes connected with the harbour, some of a powerful and elaborate description. The largest, as well as one of the most powerful in the country, is that erected at Finnieston in 1891-93 for the purpose of enabling the marine engineers of the district to tender for, and place on board steamers, the increasingly heavy boilers and machinery required. It is a pillar crane with framing, shafting, and jib of mild steel, and gearing of cast steel. The holding-down bolts, which are $38\frac{1}{2}$ feet long, are 5 inches in diameter and weigh 8 tons, while the washer-plates are each 6 feet square and weigh 13 tons. The frame, which turns on a centre pin 17 inches in diameter and weighing 6 tons, is 27 feet high and weighs 50 tons; the jib, consisting of two tubes each $3\frac{1}{2}$ feet in diameter at the centre, is 90 feet long and weighs 45 tons. The total weight of crane (exclusive of back balance box of 100 tons) is 270 tons, and the height above the quay 110 feet. The cost was £16,000. It has been tested up to 150 tons, but is meant to lift loads not exceeding 130 tons. The lift is from 20 feet below quay level to 60 above the seat, or 100 feet in all. At Stobcross Quay, a little to the W, is a 75 ton crane, and at Plantation Quay one of 60 tons. At other parts are 40 steam and hydraulic cranes lifting from $1\frac{1}{2}$ to 40 tons, and besides these there are, on allocated wharves, belonging to private proprietors, 32 other cranes lifting from $1\frac{1}{2}$ to 30 tons. The 120 ton crane at Cessnock has been already mentioned. The heavy cranes at Finnieston, Stobcross, and Plantation Quays rest on a foundation such as no other cranes in the world have, viz., a cluster of concrete cylinders sunk into and resting on a quicksand. These cylinders reach to more than 50 feet below the level of the quay, and are finished at 3 feet below water-level, while the seat is formed of ashlar masonry.

Within the limits of the harbour there are ferries at York Street, Clyde Street, Stobeross, and Kelvinhaugh. These have screw steam ferry boats of from 6 to 7½ horse-power, and carry from 93 to 110 passengers. Steam was first used in 1865, but now it would be impossible to overtake the traffic without it. At Stobeross Ferry is the unique elevating platform steamer *Finnieston*, designed and built by Messrs William Simons & Co., Renfrew, and placed here in 1890. Her distinguishing feature is a deck which can be raised or lowered to the extent of 15 feet by means of six large and powerful steel screws with bevel gearing, so that the upper movable deck is always kept at the same level as the quay whatever be the state of the tide. Built of steel the vessel is 80 feet long, 44 wide, and 12 deep, with a draft of 9½ feet when loaded, and has two propellers at each end driven by triple-expansion engines of 56 horse-power, and independent engines for elevating or lowering the deck. The movable deck is 78 feet long by 32 wide, and can carry eight loaded carts and horses with 300 passengers, while if no carts be carried the number of passengers may be increased to 700. The necessity for the increase of cross-harbour conveyance thus provided is shown by the fact that during the first year after the *Finnieston* began to ply the number of vehicles carried across the river was 201,524, against 69,473 for the year before. At Govan, above the mouth of the Kelvin, is a ferry boat of 20 horse-power also worked by steam, in which carriages, carts, live stock, etc., may cross the river. It carries 8 horses and carts and 140 passengers, or 500 passengers alone. The boats at Clyde Street, Stobeross, and Govan ply both day and night; the others work from five A.M. to eleven P.M. There are also ferries at Meadowside below the mouth of the Kelvin, at Whiteinch below the harbour, and at Oatlands near the S end of Glasgow Green above. At Stobeross there is also a subway for both cart and foot traffic. Nine of the steam ferry boats can be used as floating fire engines.

In 1884 a number of passenger steamers called *Cluthas*, from *Clutha*, the Celtic name of the Clyde, began to ply up and down the harbour from Victoria Bridge to Whiteinch, a distance of 3½ miles. These vessels are of from 12 to 18 horse-power, and designed to carry from 235 to 360 passengers. They ply at intervals of ten minutes, calling at floating piers on both sides of the harbour, the fare for the whole distance being one penny. The number of passengers carried during the year exceeds three millions, while cross-river ferries in the same period carry about nine million passengers, besides vehicles, etc., the gross revenue being nearly £20,000. Glasgow is the third largest shipowning port in the kingdom, and holds the sixth place as regards clearances to foreign countries and British possessions.

The Clyde Trust.—All the improvements on the harbour and river have been carried out under the care of the Trustees of the Clyde Navigation, whose jurisdiction extends from the upper harbour for more than 18 miles down the river to a line drawn from Newark Castle to Cardross, beyond this the care of deepening the channel rests on the Lighthouse Trust. Under an Act of Parliament, passed in 1759, power was given to the magistrates and town council of Glasgow 'to cleanse, scour, straighten, and improve' the river Clyde from Dumbuck Ford to the Bridge of Glasgow, and further empowering them to charge certain duties for defraying the expenses, these to be levied as soon as the locks recommended by Smeaton were finished. Fortunately for Glasgow no locks were ever built, and in 1770 the town council procured another act, which declared that the magistrates and council were 'now advised that by contracting the channel of the said river Clyde, and building and erecting jetties, banks, walls, works, and fences in and upon the same river, and dredging the same in proper places between the lower end of Dumbuck Ford and the Bridge of Glasgow, the said river Clyde may be further deepened and the navigation thereof more effectually improved than by any lock or dam,' and then went on to provide that the former duties, which were not to be payable till the

locks were erected, should now be payable as soon as the Clyde should be 'navigable from the lower end of Dumbuck Ford to the Bridge of Glasgow aforesaid, so as there shall be at least 7 feet of water at neap tides in every part of the said river within the bounds aforesaid.' By a third act, obtained in 1809, the depth was fixed at 9 feet, and the magistrates and council were appointed Trustees of the Clyde Navigation. In 1825 power was given by a fourth act to deepen the river to 13 feet, and the constitution of the Trust was widened by the addition as Trustees of 'five other persons interested in the trade and navigation of the river and firth of Clyde,' which persons were to be appointed by the magistrates and council. In 1840 a further act was obtained providing for the deepening of the river to 17 feet at neaps, and between 1846 and 1882 various acts were obtained arranging for the construction of docks, the borrowing of money, and the provision of harbour tramways, and for the construction of graving docks. One of these, obtained in 1858, and known as the Consolidation Act, materially affected the constitution of the Trust, which, however, remains, as it has always been, one of the most public-spirited and business-like bodies in Scotland. By this act the number of Trustees was fixed at twenty-five, consisting of the Lord Provost and nine members of the town council, two members chosen by the Chamber of Commerce, two of the matriculated members of the Merchants' House, two chosen by the members of the Trades' House of Glasgow, and nine by the ship-owners and ratepayers, the qualification of the latter members of the trust being ownership to the extent of at least 250 tons, or payment of rates to at least the extent of £25 per annum; and the qualification of those who elect them, ownership to the extent of at least 100 tons or payment of £10 of rates or upwards. The last great improvement carried out by the Trust in connection with the deepening of the river was the removal of Elderslie rock, a volcanic dyke 320 feet broad, which extends across the Clyde a short distance above Renfrew, and the existence of which was first made known by the grounding on it, in 1854, of the *Glasgow*, one of the first steamers trading between Glasgow and New York. During 1860-67 blasting operations removed enough to give a depth of 14 feet at low and 23½ feet at high water over half the channel, but in 1880-90 the whole waterway was cleared so as to give a uniform depth of 20 feet at low and 30½ feet at high water of spring tides, the boring being done by diamond drills and the blasting with dynamite. The offices of the Trust are in a handsome red stone building (1885) in Robertson Street, between Argyle Street and the Broomielaw. Projecting from the front in high relief are representations of the prows of two ancient galleys; while the entablature has figures representing the Eastern and Western hemispheres bringing their merchandise to the Clyde, over which is a gigantic Neptune, trident in hand, seated on a car drawn by plunging sea-horses. Two boyish figures support the arms of the Merchants' House. Further details in connection with the deepening of the river and the Clyde Trust will be found in the article CLYDE.

The care of the river below the limits of the jurisdiction of the Clyde Trust is in the hands of the Clyde Lighthouse Trust, who attend to the dredging and lighting as far as a line drawn due E and W across the Firth of Clyde, at the southmost part of the Little Cumbrae, from the coast of Ayr to the coast of Kintyre. This body consists, under the act of 1890, of 20 members, of whom 11 are elected from among ratepayers, as defined by the act, in Glasgow (6), Greenock (3), and Port-Glasgow (2); and five are appointed by the Merchants' House, Glasgow, the Chamber of Commerce, Glasgow, and Chamber of Commerce, Greenock; while the chairman of the Clyde Navigation Trust and of the Trustees of Greenock and Port-Glasgow Harbours are members *ex officio* along with Sir Michael Shaw Stewart of Ardgowan and his heirs male in the estate of Greenock. Besides dredging the lower channel the Lighthouse Trust maintains the lighthouses and fog-signals at Cloch, Toward, and Cumbrae, and the gas buoys at

Roseneath, Skelmorlie, Greenock, Garvel Point, Ganlocks, Burnt Isles, and Toward. The dredgings lifted amount to over 4,000,000 tons, and the income and expenditure to about £15,000 per annum.

Bridges.—Within the limits of the city the river is crossed by ten bridges. The one farthest down the river, immediately below Glasgow Bridge, is a large and massive iron lattice-girder bridge, by which the Caledonian railway traffic is carried to the Central station. It was finished in 1879. Proceeding up the river the next bridge is Glasgow Bridge, one of the busiest places in Glasgow, as continuing the line of Jamaica Street to Bridge Street and Eglinton Street. It forms the principal communication with the S side. The original structure, known as the Broomielaw Bridge, founded in 1768, had seven arches. About 1830 it was found inadequate for the traffic, and in 1833 was replaced by a granite-cased structure, also of seven arches, designed by Telford. This, which was 60 feet wide, remained till 1893, when, becoming in its turn insufficient for the increased traffic, and showing signs of failure in its foundations, it was decided to rebuild it. It was at first proposed to erect a bridge of four spans, but for reasons connected with the navigation of the upper harbour, the proposed piers not being in line with those of the contiguous railway bridge, it was agreed to rebuild it on the same plan as Telford's bridge, but 20 feet wider, thus making the extreme width between the parapets 80 feet. Operations were begun in 1895. The caissons supporting the arches are sunk to a depth of about 75 feet, so as to be beyond the influence of any probable scour in the river. The centre span is 53 feet 10 inches, the one on each side of this 57 feet 9 inches, the next on each side 55 feet 7 inches, and the side spans 52 feet each. Granite is used throughout. The Portland Street Suspension Bridge, a little to the E of Glasgow Bridge, was erected at the expense of the heritors of Gorbals in 1853, and altered and improved in 1870-71. Still farther E, and forming an important link between the N and S side of the river, is Victoria Bridge. This erection occupies the site of the old and first bridge of Glasgow. We have already seen that a bridge, probably of wood, is mentioned as existing here in the time of Wallace. It was about 1350 replaced by Bishop Rae's Bridge, a great work for the time, consisting of eight stone arches, 12 feet wide between parapets. In course of time this naturally became somewhat decayed, and in 1658 an order was made that no cart was to cross on wheels, but was to have the wheels removed and to be 'harled' across—a method which hardly commends itself to us now-a-days as likely to be better for the bridge. In 1671, during the Fair, the arch at the S end fell. It seems to have been merely rebuilt, but in 1777 the bridge was widened by 10 feet added to its eastern side; and to narrow the river, and so assist in the prevention of floods, two of the arches on the N side were built up. In this condition it remained till 1821, when it was again repaired; but in 1845 an Act of Parliament was obtained for the erection of a new one on the same site, and it was finally pulled down in 1847, and replaced by the present bridge, which was opened in the beginning of 1854. Named Victoria Bridge in honour of the Queen, it cost £40,000, and is 60 feet wide, with five arches of from 67 to 80 feet in span. The next bridge is a high lattice-girder bridge, opened in 1870, by which the Union and the Glasgow and South-Western railways cross to St Enoch's station. Next is the Albert Bridge, which has replaced what was known as the Hutchesontown Bridge. The first bridge that was erected here was one built in 1792, when the Hutchesontown lands were fenced; but it was hardly finished when, in 1795, it was destroyed by a flood on the river. In 1803 there was a light wooden bridge for foot passengers, free during the week, but with a pontage of 1d. on Sunday. The third bridge, a very plain structure, with five arches, was not erected till 1829, and the foundations having become insecure it was closed in 1863, and was in 1868-71 replaced by the present bridge. Named in honour of the Prince Consort, it crosses the river in three

magnificent spans, the centre one being 114 feet wide, and the others 108 feet. The foundations rest on cast-iron cylinders filled with cement, and sunk deep in the bed of the river. The abutments and piers are of white and red granite. The parapet is of open work, and has in the centre a close space with the city arms. On the abutments are panels, with medallions of the Queen and Prince Consort. It is 410 feet long, and the roadway is 60 feet wide. Opposite the middle of the Green is a foot suspension bridge, erected in 1856, for the accommodation of factory hands in the east end. It is known as Harvey's Suspension Bridge (from the promoter of its erection, Baillie Harvey), or as St Andrew's Suspension Bridge, the latter being the authorized name. Before its erection there was a ferry here, in times of spate a scene of great excitement. Still farther up, opposite the line of Main Street, Bridgeton, is Rutherglen Bridge. The old and not very beautiful structure of 1776 having become unsafe was removed in 1893 and replaced by the present three-arch stone bridge, which has a length of 330 feet and is 60 feet wide. Next comes the Caledonian Railway Bridge at Dalmarnock, constructed in 1861; and last the bridge at Dalmarnock, which continues the line of Dalmarnock Road towards Rutherglen. The first Dalmarnock Bridge, which was of wood and was erected in 1821, lasted till 1843, when it was replaced by another of the same material. This was removed in 1889, when the present bridge was erected. It is 320 feet long and 50 feet wide, with five steel-girder spans each 54 feet 8 inches long, the girders resting on granite piers. The last three bridges are partly in Glasgow and partly in the county of Lanark. At both Rutherglen and Dalmarnock there were originally fords.

Besides the bridges over the Clyde there is an elegant one-arch bridge, fancifully called the Bridge of Sighs, leading across the Molendinar ravine to the Necropolis. It has a span of 60 feet, and was erected in 1833 at a cost of £1240. The Kelvin is crossed by a number of bridges. Proceeding upwards from the mouth there is first a girder bridge, by which the Stobeross railway crosses; then a bridge, for a continuation of Bridge Street, Partick, to Old Dumbarton Road. New Dumbarton Road crosses the stream by a handsome iron bridge (1877) resting on stone abutments, while a stone arch carries the roadway over the adjoining mill-lade. Within the limits of the West End Park the Kelvin is crossed by three bridges—one of stone; one a strong lattice-girder bridge for carriage traffic, finished in 1831; and one known as the Prince of Wales Bridge, from the original wooden structure having been erected for the use of the Prince of Wales when he laid the foundation-stone of the University buildings. To the N of the park are two bridges on the line of Woodlands Road and of Great Western Road. The first, a steel bridge of one span, resting on masonry abutments, and 60 feet wide, was erected in 1892-94 to replace the old one of 1853. The other, which replaced one erected originally in 1838-40 and enlarged in 1858-59, is 60 feet wide, and was erected in 1889-91. It is constructed of iron and has four spans, the two central each 91 feet wide, that on the W 34 feet, and that on the E 20 feet. There are iron balustrades between the piers, which are carried up all the way in a casing of Aberdeenshire granite, and finished at the top with handsome capitals bearing lamps. Close by is the girder bridge of the GLASGOW CENTRAL RAILWAY. Two handsome single-arched stone bridges at Belmont and Queen Margaret College, erected in 1870, were taken over by the Corporation at the time of the extension of the city boundary to be maintained as public property. The other bridges do not call for particular notice.

Cemeteries.—Some ancient cemeteries in the city have been converted into building ground or market places; while others, at the Cathedral, St David's, Gorbals, Calton, and Bridgeton still remain, but are not now important for their original purpose, but as lungs for the city. The cathedral cemetery is the oldest, the first part of it that was used being very

much crowded with gravestones and monuments; the newer parts are laid out in somewhat more modern taste. There are a number of interesting monuments, including one to some martyrs of the Covenanting times. The other old cemeteries show no peculiar features. Inside the city there were also intramural cemeteries at North Street and Main Street in Anderston, Cheap-side Street in Anderston, Christ Church in Mile End, Greendyke Street Episcopal Church, and for Roman Catholics in Abercromby Street; but most of these are now closed and the others are used only in very special circumstances. The cemeteries in use are—the Necropolis, which is now, however, owing to the growth of Dennistoun and the extension of the northern district eastward, almost wholly surrounded by houses; Sighthill Cemetery, the Eastern Necropolis or Jane-field, the Southern Necropolis, Craigton at Paisley Road, Sandymount at Shettleston, Dalbeth at London Road, Cathcart at New Cathcart, the Western Necropolis at Maryhill, and Lambhill Cemetery, near Possilpark. The Necropolis is the parent of all the garden cemeteries throughout Scotland. It lies E of the cathedral, from the grounds of which it is separated by the ravine of the Molendinar Burn, partly filled up, and now forming a delightful roadway. The entrance (greatly improved in 1891-92 when Cathedral Square was remodelled) is by a Tudor gateway at the Bridge of Sighs, already referred to. The site lies along the slope and brow of a steep hillside—formerly known as Craig's or the Fir Park, the property of the Merchants' House—rising to a height of 225 feet above the level of the Clyde, and commanding from its summit an interesting and beautiful view, with the city and its spires to the SW, and a long stretch of finely diversified and wooded country to the E. It was begun in 1828, the intention being to lay it out after the model of Père Lachaise at Paris, to which, in point of situation, it bears some resemblance, and was opened in 1833. It is beautifully laid out and kept, and has, with its trees, flowers, shrubs, and gravel walks, the appearance of a fine terraced garden. Many of the monuments show considerable architectural and artistic taste. One of the oldest and most conspicuous is a monument to John Knox. It consists of a Doric column of somewhat heavy proportions, rising from a square base, and with a broad capital on which is placed a statue of the Reformer, 12 feet high, by Forrest. The sides of the base are nearly covered with an inscription, giving information relative to Knox and the Reformation. Another conspicuous monument is a Tudor structure on a quadrangular base, with a colossal statue, also by Forrest, to the memory of William M'Gavin, author of the *Protestant*. Other interesting monuments are a beautiful Ionic structure to the memory of the Rev. Dr John Dick; a large circular Norman mausoleum for the late Major Monteith; a mausoleum for Mr Houldsworth, with fine figures of Faith, Hope, and Charity; a pretty façade at the sepulchre of the Jews at the lower NW corner of the grounds; and statues or other structures to perpetuate the memory of Charles Tennant of St Rollox, Colin Dunlop of Tollcross, Colonel Patterson, the Rev. Dr Heugh, the Rev. Dr Wardlaw, the Very Rev. Principal Macfarlane, the Rev. Edward Irving, the Rev. Dr Black, the Rev. Dr W. Anderson, James Ewing of Strathleven, Sheridan Knowles, William Motherwell the poet, Dr Macnish, J. H. Alexander of the Old Theatre Royal, Michael Scott, the author of *Tom Cringle's Log*, and John Elder the well-known shipbuilder.

Sighthill Cemetery, near Springburn, on the NE, laid out in 1840 by a joint stock company, occupies a sloping situation, rising to a height of nearly 400 feet above sea-level, and contains 46 acres of land available for burial purposes. The grounds are entered by a fine gateway—close to which is a tasteful chapel designed and used for burial services—and are well laid out with winding walks and shrubberies. There is a magnificent view extending from Tinto to the Grampians. There are a number of fine monuments, including an obelisk erected to the memory of Hardie and Baird, who were executed

at Stirling in 1820 on a charge of high treason in connection with the early Chartist troubles. More interments take place at Sighthill than at any of the other cemeteries in Glasgow. The Eastern Necropolis is on the E at Parkhead, off the Great Eastern Road. It contains about 10 acres laid out with walks intersecting at right angles. The Southern Necropolis on the lands of Little Govan is about $\frac{1}{2}$ mile SSE of Albert Bridge. The ground, which extends over some 12 acres, is flat, and is laid out with flower-beds and walks. The Western Necropolis is on undulating ground at Lochburn Road, Maryhill. It belongs to a joint stock company, and covers 54 acres, of which only a small portion is as yet taken up. It is tastefully laid out, and there are extensive views to the N and W along to the Campsie and Kilpatrick Hills, with Ben Lomond and the Gleniffer Braes. None of the other cemeteries call for particular comment.

Public Parks.—Glasgow is well supplied with public parks, which are well laid out and kept, and carefully tended. The oldest of these is the Green, which lies along the river in the eastern part of the city for a distance of more than a mile, and covers a space of about 136 acres. It is all that now remains of the extensive commonity belonging to the city, which at one time swept all round the E side from this point to Cowcaddens, but which has from time to time been appropriated for building purposes. In some of the earlier charters the Green is mentioned under the name of the Bishop's Forest, but probably at that time but little of it was available for the use of the citizens. The Old Green extended from the present Green to Stockwell Street, but was given up for buildings in the end of last century. The first part of the present Green devoted to the amusement of the people was the E portion, known as the King's Park, which was granted by James II. in 1450 for the use of the community. Parts of it seem, however, to have been alienated, for in 1574 the community protested against any further encroachments, and in 1576 the magistrates and council resolved that thereafter no parts of the city, 'commoun muris,' were to be given to any one. Notwithstanding this, fresh efforts at alienation on the part of the council had again to be resisted by popular effort in 1600 and in 1745. In 1756 the town council gave off a portion of the ground for a saw-mill, which, however, they had to send men to destroy, so strong was the popular outcry; and the tenacity of the citizens in resisting all encroachments has been shown many times since. In 1847 resistance was successfully made against a bill promoted by the Glasgow and Airdrie Railway Company to enable them to lay a line across the Green. In 1868 the citizens had to resort to interdict, in order to prevent their own town council from throwing more than 2000 yards of the Green into Greenhead Street, and though there are valuable seams of coal and iron known to exist beneath, yet nothing short of the bankruptcy of the city would allow of their being worked.

The Green was enlarged in 1773 by the purchase of about 30 acres from various persons, and the addition then made came to be known as the High Green; and in 1792 a still further addition was made of the land lying between the King's Park and the bend of the river, and known as the Provost's or Fleshers' Haugh. This last was formerly lower in level than the rest of the ground, but was raised in 1892-93 by depositing the soil excavated during the formation of the Central Railway. For generations the Green was allowed to remain almost in a state of nature, being cut up with springs, runnels, and marshy places; latterly it has, however—especially for the purpose of providing employment for workmen in times of distress in 1820 and in 1875—been drained and improved as to level and laying out, and has now a fine sward, with numbers of excellent paths and drives crossing it in various directions. Near the centre is a public gymnasium furnished with all the common appliances. A large space westward from the gymnasium and round the obelisk erected to the memory of Lord Nelson, is used for great

open-air public meetings. In summer the river here is studded with pleasure boats of all sorts, and on the river bank close to the St Andrew's Suspension Bridge is the Humane Society's House. Previous to those modern days when wealth and fashion moved westward, the Green used to be the summer rendezvous of the pride and beauty of the city, but now it is often far from being a pleasant place, for the forest of factory chimneys on both sides, in certain states of the wind, roll over on the Green volumes of smoke in black and bitter abundance. The number of springs that abounded in it made it from an early date a public washing and bleaching green, and part of it is still set aside for this purpose. It was the field for all grand military exercises and displays. Here Regent Moray's army encamped before Langside; here Prince Charles Edward reviewed his army on the retreat from Derby; here, in the stirring times when George III. was king and almost every shopkeeper was a soldier, drill was carried on; and here the modern volunteers, too, parade from time to time, about 6000 of them having been reviewed on the Green by the Prince of Wales in 1876. At the W entrance, opposite the Justiciary Court-House, is a small granite drinking fountain erected by some temperance advocates to commemorate the services of Sir William Collins to the temperance cause. It has, on the W side, a bronze panel with a medallion portrait of Sir William. Farther E is a handsome terra-cotta fountain, shown at the Industrial Exhibition of 1888 as a specimen of Doulton work and afterwards presented to the city by Sir Henry Doulton, and erected here at his expense in 1890. Designed after the style of the time of Francis I., it is for size and elaboration of treatment unrivalled in this material. The scheme of modelling is intended to represent the British Empire, the groups at the base being emblematic of India, Canada, South Africa, and Australia, while in niches round the central shaft are statues of a sailor and of soldiers of the Grenadier Guards, the Black Watch, and the Royal Irish Fusiliers, the whole being surmounted by a statue of the Queen. The diameter of the outer basin is 70 feet, and the height of the whole is 46 feet. Farther E is the Macdonald Fountain, originally erected by some admirers of Hugh Macdonald on Gleniffer Braes at 'the bonnie wee well on the breist o' the brae,' but afterwards removed by the subscribers to its present position on account of the vandalism with which it was treated in its place of solitude. A fountain in memory of Bailie James Martin was erected in 1895 on the slope facing Monteith Row. The gateway at the London Street entrance on the N, erected in 1893 at the expense of one of the magistrates, is an adaptation of the Ingram Street front of the old Assembly Rooms, removed to make way for the south wing of the General Post Office. A People's Palace, after the style of the Crystal Palace at Sydenham, was erected on the Green in 1895-97, and it is further proposed to enlarge the park by the acquisition of the vacant ground opposite it on the S side of the river, the two portions to be connected by foot bridges.

The Kelvingrove or West End Park lies along the banks of the Kelvin, between Woodside and Sandyford. Originally the park was only on the E side, and was formed from lands on the old estates of Kelvingrove and Woodside, purchased by the town council in 1853 for this purpose at a cost of £99,569. A portion of the ground was, however, set aside for feus in so judicious a manner that it affords fair promise of ultimately reimbursing the total cost. The lands comprise a tabular hill on the E side, with rapid slopes on the N and S, and a longer but still sharp slope on the W down to the Kelvin, from which there is an undulating rise to Gilmorehill with the University buildings. The portion of the ground on the W side of the Kelvin was acquired from the University authorities. The part set apart for feuing includes all the top of the hill to the E, which is now occupied by the magnificent houses that form Park Circus, Park Street, Park Terrace, and Park Quadrant. The ground was laid out, and the walks, drives, and shrubberies arranged according to

designs by Sir Joseph Paxton. On the crest of the high ground opposite Park Street West is a lofty flagstaff, with—at its base—a mortar and two cannons captured at Sebastopol. From this point, as well as from the higher walks and terraces, there are good views along the river and across to Renfrewshire. In 1881 the lands of Clayslaps, Overnewton, and Kelvinbank (comprising 19 acres) were added to the park at an expense of £66,626. The total area now is 85 acres, and the total cost was £144,571.

The Queen's Park lies on the S side, about $1\frac{1}{2}$ mile straight S from Glasgow Bridge, along Bridge Street, Eglinton Street, and Victoria Road, and close to Crosshill. It was opened in 1862, and occupies chiefly a rising-ground or low broad-based hill. The entrance is at the end of Victoria Road, and from a highly ornamental gateway a broad path, broken near the centre by a massive granite staircase, leads to the flagstaff on the summit of the hill. The plans for laying it out were prepared by Sir Joseph Paxton. A considerable portion of it is under grass, on which visitors may wander as freely as on the Green, while the rest is covered with shrubberies and clumps of young trees resembling those in Kelvingrove Park. From the flagstaff on the summit there is a very fine view. On the N the city of Glasgow spreads out in all its length from Partick to Tollcross, while beyond are the Campsie Hills. Farther to the left are the wooded heights above Kilpatrick, and if the atmosphere be clear the distant Ben Lomond may be seen above and beyond them. On the right is the Vale of Clyde, the valley of the Cart, and the Cathkin Braes. The wooded knoll of Camphill, where Regent Murray encamped, and the view westward from which is very fine, is now included in the park, and the ground on the SE was the scene of the battle of Langside. The estate of Camphill (58 acres) was in 1894 purchased by the city from the patrons of Hutchesons' Hospital for £63,000. The area of the park is now 148 acres. A little beyond the S gate of the park a handsome pillar was erected by public subscription in 1887 as a memorial of the battle of Langside.

Alexandra Park lies at the E end of the city, adjacent to the NE side of Deunistoun, and about $1\frac{1}{2}$ mile NE of the junction of High Street and Duke Street. Part of it, extending to 74 acres, was opened in 1870-72, and other 16 acres were added in 1891 by purchase, when the boundary was extended to the Cumbernauld Road—the remaining 26 acres of the purchase being reserved for feuing. The ground was purchased, and this park formed, by the City Improvement Trust under the 1866 Act, but the care of it has since devolved on the council under the 'Glasgow Public Parks Act, 1859.' The approach from the W from Castle Street, known as the Alexandra Parade, nearly a mile long and 80 feet wide, was constructed chiefly at the expense of the late Mr. Dennistoun of Golfhill.

In 1886 a park of 49 acres on the ridge of Cathkin Braes, some 3 miles to the SE of Glasgow, was presented to the city by Mr James Dick, with the condition that it should in all time coming be kept in its natural state; and in 1895 a piece of ground at Bellahouston, 178 acres in extent, was acquired by the corporation from the Steven Trustees. It was formally opened in 1896. The inhabitants of Govan and Kinning Park also benefit by this the largest of the Glasgow Parks. In the same year Tollcross House and grounds (82 acres) were acquired by the Glasgow authorities as a public park, which was opened by the Lord Provost in 1897.

The Royal Botanic Gardens in Kelvinside, on the N side of Great Western Road, were long carried on by the Royal Botanic Institution; but, owing to lack of support, this society became involved in pecuniary difficulties, and the feuing of the ground was only avoided by the aid of the Corporation of the unextended city of Glasgow. When the extension of the municipal boundaries took place in 1891, the Gardens passed into the full possession of the city as one of the public parks, and they have since been extended by the incorporation within them of the open slope on the E side of the

Kelvin. The area is now 30 acres. Part of the ground is laid out with collections of plants arranged in natural families and orders, and there are also large ranges of conservatories. To the NE of the main entrance—close to which is one of the stations of the Central Railway—is the Kibble Crystal Palace, erected here in 1872 and extended in 1874, and taking its name from the donor, Mr. Kibble. There are two domes rising to a height of about 40 feet, while the larger is about 150 feet in diameter. Originally used as a concert and lecture hall, it is now appropriated for use as a winter garden. The present garden, first laid out in 1842, and enlarged in 1875, took the place of an older one formed in 1819 off Sauchiehall Road, now Sauchiehall Street, and that in its turn had replaced the original Botanic Garden at the old College.

Maxwell Park (21 acres), SW of West Pollokshields, presented to the quondam burgh by Sir John Stirling Maxwell of Pollok in 1890, was taken over by the city under the Extension of Boundaries Act, by which also provision was made for the acquisition of such further recreation grounds and public parks as might be deemed necessary. Advantage was taken of these powers by the purchase, in 1891, of over 90 acres at Ruchill, and 56 acres at Springburn, as well as by the provision of smaller recreation grounds at Govanhill, at Garscube Road (the Phoenix Recreation Ground, 1893) for the Cowcaddens district, and at Rutherglen Road (Gorbals Recreation Ground, 1893) for the Gorbals district—the last two being intended mainly for children. Of the Ruchill estate, which lies between Maryhill and Possilpark, 53 acres are devoted to recreation purposes, while the remaining 35 are utilized for the erection of an infectious diseases hospital similar to the one at Belvidere. Of the Springburn land at Balgray Hill a small portion ($\frac{1}{2}$ acre) is to be feued and the rest given over to park purposes. The band-stand in this park was presented in 1892 by Mr. James Reid of the Hydepark Locomotive Works. Besides these, one or two minor parks, about a dozen squares or open places, and five graveyards are kept up by the Parks department, and are open to the public.

The parks are managed by the town council, acting as trustees under the Glasgow Public Parks Acts of 1859 and 1878. The borrowing powers of £200,000 are exhausted. The maximum rate of assessment is 2d. per £, and a sinking fund of 'one pound per cent. per annum on amount of sums borrowed and owing at time' has to be set aside every year. The revenue and expenditure amount to over £31,000 a year.

Monuments.—A large number of the public monuments in Glasgow are collected in George Square, but there are others in various parts of the city. In George Square there are no fewer than twelve statues. In the centre is a colossal figure of Sir Walter Scott, by Ritchie, placed on the top of a fluted Doric column 80 feet high, erected in 1837. This was the first of the many monuments erected to the 'Wizard of the North.' On the E in the centre line of the square is a bronze equestrian statue of Prince Albert, by Baron Marochetti, erected in 1866, to correspond with a bronze equestrian statue of the Queen by the same artist on the W side. The latter originally stood at the W end of St Vincent Place, where it was erected in 1854, but it was removed to its present position in 1866, when that of the Prince Consort was erected. They both stand on granite pedestals. At the NW corner of the square is a bronze statue of Sir Robert Peel, by Mossman, erected in 1858. At the NE corner is a bronze statue of James Oswald, one of the members for Glasgow in the first parliament after the Reform Bill. It was erected in 1856, and long stood at Charing Cross, but was afterwards removed to George Square. At the SE corner of the square is a bronze statue of Dr Thomas Graham, Master of the Mint, seated, by Brodie (1872). At the SW corner is a bronze statue of James Watt, also seated, by Chantrey (1832). Between Watt and Graham on the S side are bronze statues of Sir John Moore and Lord Clyde, both natives of Glasgow. The former, which

is by Flaxman, was erected in 1819; the latter, by Foley, in 1868. It at first stood on the W side of the square. A little behind Sir John Moore is a bronze statue of Burns, by Ewing, which was unveiled in 1877 in presence of some 30,000 spectators. The pedestal has bas-reliefs. The companion statue—a little behind Lord Clyde—is a bronze figure of Campbell, the poet, also a native of Glasgow. The last of the statues in the square is one of Dr Livingstone, in the middle of the W side; all the pedestals are of granite. In front of the Tontine Buildings in the Trongate is an equestrian statue of William III., erected and presented to the city in 1735 by James Macrae, a native of Glasgow, who had been governor of Madras. On Glasgow Green is a sandstone obelisk, 144 feet high, to the memory of Lord Nelson. It was erected in 1806 at a cost of £2075. On the four sides of the base are inscribed the names of his greatest battles. In Cathedral Square is a bronze statue, by Mossman, of James Lumsden, Lord Provost of Glasgow in 1843, and long honorary treasurer of the Royal Infirmary. It is 8½ feet high, stands on a pedestal 10½ feet high, and was erected in 1862. Near by is a bronze statue of Dr Norman Macleod, erected in 1881; and on one side the entrance to the Necropolis is a statue of James White, father of Lord Overton, and on the other a statue of James Arthur, of Barshaw.

In front of the Royal Exchange in Queen Street is a bronze equestrian statue of the Duke of Wellington by Marochetti, one of the finest monuments in Glasgow. It stands on a granite pedestal, and was erected in 1844 at a cost of £10,000. On the pedestal are four bronze bas-reliefs, those at the sides representing the battles of Assaye and Waterloo, while those at the end represent the peaceful life of a peasant before he is called away to war, and his happy return to his home and kindred at the conclusion of peace. In niches in the Ingram Street front of Hutchesons' Hospital are two ancient and somewhat primitive-looking statues of the brothers Hutcheson. Near the centre of the S part of Kelvingrove Park is a tasteful and beautiful—excepting the gilding of the surmounting bronze figure—fountain erected in commemoration of the introduction of the water supply from Loch Katrine into Glasgow, and in honour of Lord Provost Stewart, who took a prominent part in the carrying out of the scheme. It was inaugurated in 1872. The outer basin is 60 feet in diameter, and the fountain, which rises to a height of 40 feet and is richly sculptured, is surmounted by a bronze figure by John Mossman, representing the Lady of the Lake. There are also bronze panels, one with a medallion portrait of Lord Provost Stewart, the others with allegorical designs representing the introduction of the water supply. On a granite pedestal, a short distance off, is a bronze group, representing a tigress carrying a dead peacock to her lair, and her cubs greedily welcoming the prey. It was presented to the city by John S. Kennedy, a native of Glasgow, who made a large fortune in New York. Close by is a small bronze group of a girl playing with a dog, and intended to illustrate the lines from Coleridge:—

'He prayeth best who loveth best
All things both great and small,
For the dear God who loveth us,
He made and loveth all.'

There is a marble statue of Pitt, by Flaxman, in the Corporation Gallery, and one, by Gibson, of Kirkman Finlay, who did so much to develop Glasgow trade, in the Merchants' Hall. The Martyrs' Memorial Fountain has been already noticed, as well as some of the numerous monuments in the Necropolis and other cemeteries.

Public Buildings—Municipal Buildings.—The City Chambers are bounded by George Square on the W, George Street on the N, John Street on the E, and Cochrane Street on the S, and measure 230 feet from N to S, and 245 from E to W. Designed in the style of the Italian Renaissance, by Mr William Young, London, the buildings, which were erected in 1883-89, at a cost (including site) of £520,000, are four storeys in height all round, with a domed tower at each corner; and over the centre of the principal façade, which is towards George

Square, is a massive tower, rising to a height of 237 feet. The ground floor and first storey have square-headed windows, and form a grand rusticated basement for the whole pile. The second storey is treated as the principal feature in the composition, and while the general treatment is preserved on all the four fronts, each has characteristics of its own, the whole of the George Square façade having Venetian windows between coupled Corinthian columns with minor columns of the Ionic order, the centre being crowned by a wide pediment flanked by cupolas. On the pediment is a magnificent piece of sculpture, 50 feet long and 11 high, by G. A. Lawson, London, emblematic of the Jubilee of Queen Victoria. The central figure is that of the Queen, supported on each side by female figures representing England, Scotland, Ireland, and Wales. 'The spaces at each side of the middle group are occupied with carvings illustrative of the various British possessions. On one side Canada is represented, an American Indian being introduced; Australia is shown by a gold digger; New Zealand by a female figure suggesting agriculture, with sheep and cattle about her; and there are numerous other carvings representing the other colonies of the empire, to the west of Great Britain. At the other side of the pediment are sculptures of East Indians, a native chief being one of the subjects, with the head and front of an elephant shown behind. After India comes Africa, symbolized by a white man having his arm round the neck of a negro. Farther on, and extending out to the end of the pediment, our Mongolian and other dependencies to the east of Europe are indicated. The figures are 8 feet high, sufficient to show them at life-size when viewed from the street.' At the apex of the pediment is a figure of Liberty supported by Riches and Honour. The main entrance has three arched bays separated by coupled Ionic columns with bands of sculpture, having in the centre the city arms, with Faith and Hope on one side, and Truth and Charity on the other; while on the left of this are representations of the Fine Arts, and on the right of the Sciences. Central gateways on the N, W, and S sides lead into a central quadrangle; on the ground and first floors accommodation is provided for the offices of the different municipal departments; while on the upper floors are the Council Chamber, banqueting-hall, and reception rooms, the first 60 feet long, 30 wide, and 25 high to the top of the domed ceiling; the second 110 feet long, 50 wide, and 50 high. These two rooms are approached from near the entrance by two magnificent staircases—that to the former of white sandstone with Breccia marble and alabaster balustrading set in white-veined marble bases and copings, while the walls are pillared with marble and have alabaster panels. The halls and reception rooms are richly fitted with mahogany, teak, satin, and amber woods. The whole building is lit by electricity.

County Buildings.—These occupy the block bounded by Ingram Street, Hutcheson Street, Wilson Street, and Brunswick Street, of which the southern part was erected for municipal and county purposes in 1842-44. The centre portion was at the same time erected as a hall for the Merchants' House, but was compulsorily acquired for county purposes by the Court House Commissioners in 1869, and the accommodation being still too small for the increasing demands of the various departments, the northern block was erected in 1874 for purely municipal purposes, for which it was used till the City Chambers were occupied in 1890. The building was extensively altered in 1895-96 for the purpose of giving increased accommodation to the sheriff courts. The front to Hutcheson Street has a hexastyle Corinthian portico. Towards Wilson Street is a grand hexastyle Ionic portico with sculptured basement wall. Accommodation is here provided for the county courts and public offices; and on the W side are standard measures of length.

Courts are held in the County Buildings by the sheriff or one of his substitutes, for criminal and summary business on Tuesday, Wednesday, Thursday, and Friday every week, and also appeal courts on Monday, Tuesday, Wednesday, and Friday. There is a small debt court

on Monday, Wednesday, and Thursday, and a court under the Debts Recovery (Scotland) Act on Monday. Justice of peace courts are held in the Justices Hall, County Buildings, for cases of crime and cases under the Revenue, Roads, Weights and Measures, etc., laws every Monday and Thursday, at 11 a.m., and for small debt cases every Tuesday and Friday.

Police Buildings.—The first police office was in the Laigh or Tron Church session-house, and was thence removed to the N corner of Bell Street and Candle-riggs, where it was one stair up! In 1825, however, more suitable buildings were erected at the angle of Bell Street and South Albion Street, midway between High Street and Candleriggs, at a cost of £15,000, and an addition to this was made in 1851 at a cost of £8000, the whole, as altered and improved in 1885 and 1893, now constituting the Central Police Office. The situation was originally very central for the police business, but, till sweepingly altered by the operations of the City Improvement Trust subsequent to 1875, was also eminently disagreeable and unsanitary. Bell Street was a narrow, squalid thoroughfare, with dingy houses. South Albion Street was a mere lane or narrow alley, and both were surrounded by a densely populated part of the city. Though erected in such an unfavourable locality, the buildings themselves are very substantial, forming a large quadrangular block, enclosing a court of 50 feet by 34. An adjoining building which formerly contained barracks and other accommodation for the unmarried members of the force, was altered and added to the City Hall in 1893, the necessary barrack accommodation being provided at East Clyde Street (1892-93) and Southern Police Offices (1893-95). A building at the W end of College Street, a little to the NNE, accommodates the Central Fire Brigade, and contains a number of steam fire-engines and other necessary apparatus in connection with fire brigade work. The lighting department has also its headquarters close by. The cleansing department has its headquarters in extensive premises in Parliamentary Road. These were mostly erected in 1873, have a handsome front, and contain ample accommodation for water carts, sweeping machines, horses, and stores.

Besides the Central or Head Office, there are offices known as the Western, Eastern, Southern, Northern, St Rollox, Queen's Park, Maryhill, and Marine Division, in respectively Anderston (Cranston Street), Calton (Tobago Street), Gorbals (Oxford Street), Cowcaddens (Maitland Street), St Rollox (Teunant Street), Govanhill (Belleisle Street), Maryhill (Gairbraid Avenue), and Broomielaw (M'Alpine Street). Besides these there are police stations at East Clyde Street, Dalmarnock Road, Camlachie, Paisley Road, South Wellington Street, Camperdown Street, Springburn, and Hillhead (Byars Road). Police courts are held every lawful day at the Central, Western, Eastern, Southern, Northern, St Rollox, Queen's Park, and Maryhill Offices at 10 a.m.; and about 350 cases are disposed of on an average every day, about one-third being due to drunkenness. The baillie of the River and Firth of Clyde holds a court in the hall in M'Alpine Street on Mondays, Wednesdays, and Fridays at 9.30 a.m. The police force and fire brigade are separately noticed.

Prisons.—The first prison of Glasgow is said to have been in a dungeon attached to the cathedral, but mention is made as early as 1454 of a tolbooth at the corner of the Trongate and High Street, on the site of the present Cross Steeple, but no account of it has been preserved. There was also a prison known as 'the heicht tolbuyth' in the end of the 16th and the beginning of the 17th centuries. The Cross Tolbooth, having become decayed and ruinous, was pulled down in 1626, and a new one erected. Franck's account of this latter building has been already noticed. M'Ure describes it as 'a magnificent structure, being of length from E to W sixty-six feet, and from the S to the N twenty-four feet eight inches; it hath a stately staircase ascending to the justice court hall, within which is the entry of a large turnpike or staircase ascending to the town council hall,

above which there was the dean of gild's hall. . . . The first story of this great building consists of six rooms, two whereof are for the magistrates' use, one for the dean of gild's court, and another for the collector of the town's excise. . . . In this great building are five large rooms appointed for common prisoners; the steeple on the E end thereof being one hundred and thirteen foot high, adorned with a curious clock, all of brass, with four dial plates; it has a large bell for the use of the clock, and a curious sett of chymes and timeable bells which plays every two hours, and has four large touretts on the corners thereof, with thanes finely gilded, and the whole roof is covered with lead. Upon the frontispiece of this building is his majesty's arms finely cut out with a fine dial, and below the same is this Latin inscription:—

"Hæc Domus odit Nequitiam	Amat Faciem	Punit Crimina	Conservat Jura	Honorat Prohos."
------------------------------	----------------	------------------	-------------------	---------------------

This being translated means—

This House hates Iniquity	Loves Peace	Punishes Crimes	Preserves the Laws	Honours the Upright.
------------------------------	----------------	--------------------	-----------------------	-------------------------

The steeple still stands as the Cross Steeple. It is 126 feet high, and the top has flying buttresses meeting and forming an open crown. The old chime contained twenty-eight bells, commencing at F sharp and ending at C natural; but a new chime of sixteen bells was inaugurated on 25 Dec. 1881. They vary in size from 21 to 40 inches, with notes G, A, B flat, B, C, D, E flat, E, F, F sharp, G, A, B flat, B, C, D. There is a chiming apparatus, and they are played every day from one to two, and from six to seven o'clock. The old steeple bell passed to Calton parish church, but was afterwards placed in the Kelvingrove Museum. The building erected in 1626 remained in use down to the beginning of the 19th century. After the Reformation the house of the prebendary of Cambuslang was fitted up as a house of correction; this becoming unsuitable, in 1792 a building in High Street was used instead, but was discontinued when the Duke Street Prison was erected.

The *Glasgow Prison* is on the N side of Duke Street, a short distance to the E of High Street. The first erection, which, judging from Howard's account of it, must have been a very miserable place, passed into the hands of the city authorities in 1798, and was greatly enlarged in 1823-24. It was partly rebuilt in 1853 and again altered 1870-72; but as it was still far from meeting modern requirements as to prison accommodation almost the whole of the buildings were removed and new ones built between 1875 and 1890, when new residences were also constructed for the governor and warders as well as a chapel—all the unskilled and part of the skilled labour having been performed by male prisoners. The prison proper is now composed of a central portion and three wings, with accommodation for 400 prisoners. Two of the wings are used entirely for women, while the wing next Drygate is set apart for male prisoners awaiting trial or after conviction before they are drafted off to Barlinnie General Prison. This last, which is outside the city boundary on the E near the Cumbernauld Road, consists of four blocks, each with cell accommodation for 200 men.

The old *South Prison*, now only used for sheriff and circuit courts, is on the W side of the Saltmarket, near the river, to which it has its S flank, while the main front is towards Glasgow Green. It was erected in 1814 at a cost of £34,800, and is a quadrangular pile measuring 215 feet along the front, and 144 from E to W. It has in the centre of its main front a lofty Doric portico, with a double row of fluted columns—six in front and four behind—with corresponding pilasters. There is a plain frieze and a tympanum with the city arms. The imposing appearance of the portico is, however, much marred by the low ground on which it stands. At each end of the main front is a projecting wing, with a double pair of pilasters. It is enclosed by massive iron railings. It originally provided accommodation for the circuit justiciary court—which sits here in two divisions in what are known as the Old Court and the New Court—for the county court, and for the

municipal courts and offices; but in 1840 it was found too small for so many bodies, and was so altered as to leave it almost entirely devoted to court purposes.

Exchanges.—A public newsroom, for the perusal of newspaper and other periodicals, was opened in Glasgow about 1770, but conferred its benefits upon only a few. A coffee-room or exchange reading-room was founded in the Tontine Buildings at the Cross in 1781, but was gradually superseded by the Royal Exchange, and became extinct about 1870. The Royal Exchange stands in an open area called Exchange Square, on the W side of Queen Street opposite Ingram Street. The site was formerly occupied by a house belonging to Cunningham of Lainshaw, which was bought by the New Exchange Company and converted into offices, to which the other buildings were added. The structure, which is one of the finest in Glasgow, was erected in 1829 at a cost of £60,000. The style is Corinthian, and in front is a magnificent octostyle portico, with a double row of columns. Behind this and extending half-way down each side are five pilasters with a rich cornice, and from this to the W end of the building is a colonnade with fluted Corinthian pillars. There is a cyclastyle lantern clock-tower, with a low-domed roof. The principal apartment is a great newsroom, 130 feet long, 60 wide, and 30 high, with an arched roof panelled and decorated, and supported on two rows of Corinthian columns. There are also a number of smaller apartments, used as magazine-room, newspaper file and directory consulting-rooms, merchants' office, secretary's room, sale-rooms, telegraph, telephone, and underwriters' offices. The subscription is £3 for members who have residences or offices within six miles of it, and £1, 10s. from others, and it is free for four weeks to strangers introduced by a subscriber, and always to officers in garrison. The wide paved space on both sides communicates with Buchanan Street through openings spanned by Doric archways.

The Stock Exchange is situated between the Western Club and St George's Church, at the SE corner of St George's Place and Buchanan Street, and was erected between 1875 and 1877 at a cost of £45,000, including site. It has at the SE corner a highly ornamental tower, rising to a height of 112 feet. The frontage to Buchanan Street is 85 feet and to St George's Place 74 feet, the height embracing three storeys. The façade is supported at the street by Gothic pillars, and above the arches carried on these runs a broad band of carved lattice work, somewhat after the Moorish fashion. The two upper flats also show traces of Gothic feeling, and the wall is surmounted by a stone balustrade with carved supports. The ground floor is occupied by shops; on the first floor is the great hall, 60 feet long, 50 wide, and 32 high. The Clearing House, which occupies the greater part of the top storey, measures 80 by 50 feet, and is lighted from the top by a large glass dome. There are also a large reading-room and a telegraph office, besides a number of smaller apartments. The Corn Exchange stands at the corner of Hope Street and Waterloo Street. It was rebuilt in 1896 on an improved plan, the material being red sandstone.

Post Office.—In 1736 the Post Office was in Princes Street, then called Gibson's Wynd or Lane. It was removed to St Andrew Street about 1800, and again in 1803 to back premises in a court at 114 Trongate. In 1810 it was again moved to convenient premises in South Albion Street, which were rented by the government from the then postmaster. It was thereafter in small premises in Nelson Street, which were found inconvenient, and in 1840 it was removed first to Wilson Street, and then to larger but very plain buildings in Glassford Street, where it remained till 1856, when it was removed to Manhattan Buildings, at the corner of South Hanover Street and George Square. The building it then occupied was a very plain Italian erection, very poor as compared with the amount of business done or the great importance of the city. It was in 1872 extended by a very plain wing to the E, but complaints nevertheless still continued as to the utter inadequacy

of the old structure, and at length in 1876 the buildings and ground to the E of the old Post Office towards South Frederick Street were acquired by government, and the N part of the present buildings on the S side of George Square between South Frederick Street and South Hanover Street took shape in 1876-81. The introduction of the Parcel Post in 1883 and the great increase of general business soon brought again a demand for more room, and in 1890-93 a south wing was added extending to Ingram Street and occupying the site of the old Assembly Rooms, afterwards the Athenæum. The main front to George Square is Italian in style, very plain and severe, but handsome and dignified. It extends to a length of 190 feet, and the length along the side streets is 120 feet; the height is 75 feet, divided into four storeys. All along the top is a massive cornice, with panelled balustrade and a series of carved vases. In the centre is a pediment crowned with the royal arms. In the centre of the front is the main entrance and letter boxes, in a lobby entered from the street by three arched openings, with polished granite pillars, and entablature. At the sides, entering from the George Square lobby, are the various departments—the postmaster's office, the telegraph office, the postal and telegraph inquiry office, and the stamp, registered letter, private box, money order and savings bank offices, and the *poste restante*. Behind and entered by a side door from South Hanover Street is the postmen's and sorting department. The basement floor contains the engine-house and pneumatic apparatus, with dynamos and accumulators. The apartment forming the telegraph machine room is in the upper flat of the south building. Most of the departments are lit by the electric light. There are throughout the city numerous branch and sub-offices with money order, savings bank, and telegraph departments, as well as 163 pillar and wall boxes. At the end of the 18th century the staff consisted of a postmaster, two assistants, and two letter-carriers; there were in 1896 a postmaster, 65 superintendents, assistant-superintendents, and clerks, and 228 sorting clerks, while the distribution of the letters, etc., through the city and suburbs is carried out by 524 carriers, and 202 auxiliary letter-carriers, acting under an inspector and 12 assistant-inspectors. The telegraph department is conducted by 3 superintendents, 20 assistant-superintendents, 22 clerks, 484 telegraphists, 18 adult messengers, 59 house messengers, and 301 docket messengers, besides 10 ladies engaged in the supervision of female clerks, and 4 inspectors of boys. The first regular Edinburgh mail coach was started in 1758, letters before that being conveyed on foot or on horseback, and the first London mail coach about 1790; there are now 30 despatches and over 50 arrivals every day to and from various parts of the kingdom, while mails are made up for and arrive from all parts of the world at intervals varying from a week to a month. In 1838 the number of letters and packets that passed through it was 22,834, and the money orders granted numbered 1469, of the value of over £1922, while the number of letters, newspapers, post cards, and book packets that passes through it now averages over three millions every week, and of parcels nearly 60,000; while the number of money and postal orders averages over a million and a half in both number and amount per annum. The number of telegraph messages that passes through averages nearly seven millions per annum.

Revenue Offices.—The Inland Revenue Office, Italian in style, is at the corner of George Street and Frederick Street, and has a frontage of 90 feet to each street. The height is 60 feet, and at the corner is a tower terminating in a Mansard roof. The telling-room, for the collection of taxes and excise duties, is 86 feet long, 40 feet wide, and 22 feet 6 inches high. There is also a large room for the sale of stamps, and rooms for the collector, surveyors of taxes, supervisors, and other officers of the excise branch.

The first *Custom House* was erected about the beginning of the 17th century, for in 1601 the council 'ordainit æt lytill custome hous to be biggit upoun the Brigend.'

The present building is in Great Clyde Street, on the terrace between Glasgow Bridge and the Suspension Bridge. It dates from 1840, but has neither the size nor the appearance worthy of the importance of Glasgow and of the large revenue here collected.

Market Places.—The flesh and fish markets, which dated from the middle of the 18th century, were in King Street, and were long regarded as both spacious and handsome, but they were gradually forsaken, for as the wealthier classes moved westward the butchers and fishmongers followed them and occupied ordinary shops, and the old markets being deserted, were used for different purposes, and were not replaced by other buildings destined for the same purposes. The wholesale fish-market, originated in connection with clearances made by the City Improvement Trust, and occupying the space between Guildry Court, off Bridgegate, and the property known as Park Place, at the corner formed by Bridgegate, Stockwell Street, and East Clyde Street, is most conveniently situated with reference to the river traffic. It was constructed between 1872 and 1875, and was altered and enlarged in 1890. The walls, rising to a height of two storeys, are surmounted by an iron roof, which at the ridge is 90 feet high. There are good frontages containing shops both to the N and to the S. In the interior are stalls on the ground floor, and there is a gallery all round for the storage of boxes. The City Bazaar adjoins the S side of the City Hall, and has entrances from Candleriggs, Ingram Street, South Albion Street, and Bell Street. It occupies the site of the old Glasgow Bowling Green, and covers an area of 2377 square yards. It was greatly enlarged and improved in 1885, when Bell Street and Candleriggs were altered, and is now mostly used as a wholesale fruit and vegetable mart. The Old Clothes Market occupies a space shaped like the letter L, between Greendyke Street and Lanark Street, near the W end of the Green. The principal front, which is plain Italian in style, is toward Greendyke Street. One limb of the L is 78 feet long and 70 wide, while the other is 172 feet long by 63½ wide. The building is divided into stalls and fitted with galleries, is lighted mainly from the roof, and has ample lavatory and other conveniences promotive of the greatest possible cleanliness. It was erected in 1875, and superseded an unsightly structure at the foot of the Saltmarket. The Dog and Bird Market is at the N side of the South Prison, and formerly occupied a stance adjoining the Bazaar. It contains accommodation for dealers in dogs, fancy birds, poultry, pigeons, rabbits, etc.

The Cattle Market, Abattoirs, etc.—In 1740—a happy time when beef was 2d. a pound—the cattle market was outside the West Port, a little to the westward of the Trongate end of Stockwell Street; but in 1818 it was transferred to the ground, nearly ¼ mile E of the Cross, intended for the formation of Graham's Square, off the Gallowgate, where at that time 9281 square yards were enclosed by a stone wall, and cattle sheds, sheep pens, and other conveniences provided. It has excellent arrangements of stalls and other appliances, good railway connections, and serves for the sale of about 400,000 head of live stock in the year. Great alterations took place between 1878 and 1882, when the dead meat market, the horse bazaar, bank premises, and the new gateway were completed. The total home carcasses exposed for sale in it yearly number about 40,000. The principal abattoir is in Moore Street close by, and the cattle market, dead-meat market, and abattoir cover together an area of over 11 acres. Under the authority of an Act obtained in 1865, the abattoir was greatly enlarged and improved in 1868-70, and again in 1896-97, and is now one of the most extensive and efficient in Great Britain. There are other smaller ones at Milton Street and Victoria Street, both opened in 1868. The first covers a space of 12,482 square yards, extended by the clearing away of adjoining house property; the second, a space of 2968 square yards; and the third, a space of 4260 square yards, exclusive of adjoining house property. The total number of animals slaughtered at Moore Street averages over 200,000 per annum, at Milton Street about

40,000, and at Victoria Street about 36,000. For the accommodation of the large and increasing trade in live cattle with America lairs and slaughter-houses have been provided, as already noticed, at Pointhouse and Shieldhall wharves, at each of which places provision is now made for dealing with 2000 head of cattle at one time. The number of cattle arriving at each wharf is over 40,000 every year. The market places and abattoirs are managed by the town council in the capacity of market commissioners, under consolidated powers granted by the Glasgow Markets and Slaughter-houses Acts, 1865, 1871, and 1877. For the year ending 31 May 1896 the revenue was £24,266, the expenditure £18,779, the assets £263,956, and the debts £159,436. The borrowing powers of the Commissioners are £180,000, of which £127,440 have been exercised. There is a public Skin Market in Greendyke Street, erected in 1890 by Mr Robert Ramsey.

Public Halls.—The *City Hall* stands on the E side of Candleriggs, close to the Bazaar. It was in 1885 much improved, both internally and externally, when the handsome Italian façade towards Candleriggs was added. The large hall, which is used for great public meetings of almost every description and for concerts, rests on a series of massive stone pillars and strong arches on the N side of the Bazaar, and contains accommodation for about 3000 persons. It is lit by electricity, and has a platform, galleries, an orchestra, and a very powerful organ. There are also small halls, committee rooms, and a well-constructed kitchen. *St Andrew's Halls* in the W end present frontages to Berkeley Street, Granville Street, and Kent Road. The buildings, which are very handsome, were erected by a limited liability company between 1874 and 1877, but as they did not prove a profitable speculation, they were in 1890 acquired by the Corporation for public purposes at a cost of £37,000—little more than half the original outlay. There are two floors and an entresol. The chief entrance is by a triple door from Granville Street. On the ground floor is a vestibule 29 by 28 feet, an inner octagonal hall 36 feet in diameter, two side halls each 75 by 40 feet and 30 feet high. On the E side is the main or grand hall. On the N side of the same floor is a series of retiring rooms for ladies, and on an entresol above these a series of rooms for ordinary meetings. On the upper floor are two halls, each 70 by 54 feet, and a complete suite of arrival and retiring rooms. On the basement floor are artistes' rooms, servants' waiting-rooms, kitchen, keeper's residence, and store-rooms. The main hall contains a large organ, an orchestral platform for 100 performers, a chorus gallery for 500 singers, and accommodation for an audience of 3000 persons. The *Queen's Rooms* stand in La Belle Place, at the Clairmont Gardens entrance to Kelvingrove Park, and off the N side of the W part of Sauchiehall Street. They were erected in 1850, and have a massive appearance. The style is modified classic. On the N and E fronts are a number of admirable sculptures by Mossman. On the E front on the frieze is a series of tableaux emblematic of the rise, progress, and culmination of civilization, and over the windows are fine medallions of James Watt, David Hamilton, Sir Joshua Reynolds, Flaxman, Handel, Sir Robert Peel, and Burns, representing respectively Science, Architecture, Painting, Sculpture, Music, Politics, and Poetry. On the frieze of the N front Minerva is shown as receiving the homage of figures representing the arts and sciences. In the interior are a large hall and several small ones all tastefully decorated. These are used for assemblies, concerts, and miscellaneous entertainments.

The *Corporation Galleries* are on the N side of Sauchiehall Street, between Rose Street and Dalhousie Street. They were erected in 1854 by Mr Archibald Maclellan for the reception of a collection of paintings which he proposed to bequeath to the public as the commencement of a Glasgow Gallery of Art. Mr Maclellan died before the buildings were finished, and they were purchased by the corporation, along with the pictures, in 1856. The buildings, which are plain Italian in style,

contain galleries for pictures and sculpture belonging to the city, and accommodation for the Government School of Art and Haldane Academy. The paintings and sculpture are contained in six rooms, and among the examples are many of the greatest interest and importance. There are also floor cases containing objects of art. The pictures number nearly 600, and consist mainly of pictures belonging to three collections—the original Maclellan one having been supplemented first by Mr William Ewing, who presented 36 pictures, and subsequently in 1877 by Mrs Graham-Gilbert of Yorkhill, who bequeathed to the city the valuable collection of pictures formed by her husband, John Graham-Gilbert, R.S.A.,—but there have been numerous other donations and bequests to a smaller extent. Mr J. C. Robinson, F.S.A., Her Majesty's Surveyor of Pictures, who reported on the collection to the town council in 1882, characterised the collection of authentic pictures by the old masters as 'the most interesting and valuable provincial public collection of such works in the kingdom,' and further said, that the Corporation Gallery would, when better known, 'take rank as a collection of European importance,' and that the pictures of the Venetian school 'would be held to be notable ornaments of any, even the most celebrated galleries.' Among the more important pictures may be mentioned the *Woman taken in Adultery*, by Giorgione; the *Virgin and Child enthroned*, attributed, but doubtfully, to the same artist; the *Virgin and Child with Saints*, and *Danae*, by Titian; the *Holy Family*, two different pictures, by Palma Vecchio; the *Holy Family*, by Bordone; a very fine painting of the *Adoration of the Magi*, by Antonello da Messina; the *Annunciation*, by Botticelli; an *Allegory of Abundance*, by Rubens; a view, *Katwyck*, by Ruysdael; *Tobit and the Angel*, and the *Painter's Study*, by Rembrandt; a *Landscape in Storm*, by Hobbema; as well as other genuine works by Rembrandt, Ruysdael, Berghem, Teniers, Cuyp, Wouvermans, Wynants, Adrian Van de Velde, Backhuysen, Van Huisum, Netscher, Vanduyck, Willem Van de Velde, Jan Steen, Egdon Van der Neer, Hobbema, and Andrew Both. Among the more modern pictures may be mentioned several portraits by Sir Joshua Reynolds; the *Relief of Lucknow*, by T. Jones Barker, with portrait figures of all the leading men engaged; the *Death of John Brown* of Priesthill, by Thomas Duncan; many pictures by Graham-Gilbert; a *Coming Storm*, by John Linnell, sen.,—a fine picture, where the rush of the wind through the trees can almost be heard; Turner's picture of *Hero and Leander*; Whistler's portrait of Carlyle; a series of typical examples of water colours by Cox, De Wint, Catermole, etc., presented in 1892 by Mr James Orrock, London; and pictures by Westall, Wilkie, Pettie, and others. The chief examples of sculpture are the statue of Pitt, by Flaxman; busts by Chantrey, W. Brodie, Mossman, Ewing, and Nollekens; the *Nubian Slave*, by A. Rossetti; and the *Oriental Slave*, by Tadolini. The galleries are open to the public on Monday, Friday, and Saturday, free of charge, and on Tuesday, Wednesday, and Thursday, which are students' days, at a charge of 6d.

The galleries for the exhibitions of the Glasgow Institute of the Fine Arts are on the S side of Sauchiehall Street, and contain rooms for the exhibition of pictures. The design is Greek, plain but dignified, and the walls have panels with sculptures. In the centre, over the entrance, the façade has six fluted Ionic columns, with a pediment surmounted by a statue of Minerva. The building was erected in 1880. The erection of new public Art Galleries and Museum was begun in 1893, the surplus of £46,000 from the Exhibition of 1888 having been augmented by public subscriptions, etc., to the sum of £116,000. Situated in the SW portion of the West End Park, on the site of part of the Exhibition structure, the building, which is about 200 feet square, is Jacobean in design, with freely treated details, and the total cost was estimated at nearly £200,000. Over the main entrance two towers will rise to a height of 150 feet, and the central hall will measure 125 by 58 feet. When the municipal boundary was extended in 1891 the police

commissioners became bound to maintain the burgh buildings of Maryhill, Hillhead, and Pollokshields, and either to acquire the Dixon Halls in Cathcart Road for public purposes in Crosshill and Govanhill, or erect other suitable buildings for the purpose. The Dixon Halls form a handsome building in the old Scottish style, and were gifted to the district in 1879 by W. S. Dixon of Govanhill.

The Trades' Hall and Merchants' House.—The Trades' Hall stands on the W side of Glassford Street confronting Garthland Street. Begun in 1791 and finished in 1794, it was improved and greatly enlarged in 1891. It has a pleasant façade with Doric columns, sculptures, and Venetian windows, and is surmounted by a fine dome, containing a bell cast by Mears of London in 1796. It contains a vestibule, a main hall, and a number of smaller apartments. The large hall is 70 by 85 feet and 23 feet high, with sitting accommodation for about 600 people; round the sides are the armorial bearings of the trades, and there are also several statues and civic portraits. The trade incorporations of Glasgow date from a very early period, and on several occasions have taken notable action in civic affairs, particularly in connection with the preservation of the cathedral, which is alluded to hereafter. The incorporations took their rise from the regulative made by the magistrates for the conduct of trades within the burgh, and for the provision of funds 'for the support of the decayed brethren of the crafts and their widows and children.' Before the Reformation the Roman Catholic Archbishop of Glasgow, as the superior of the burgh and regality, had enacted or had confirmed regulations made by the magistrates and town council, associating several classes of the craftsmen of Glasgow with the right to elect deacons, collectors, and masters; and after the Reformation charters were granted by the Crown, and seals of cause (*i.e.*, regulative) by the magistrates and councillors of Glasgow incorporating other classes of craftsmen. The present incorporations are hammermen, tailors, cordiners, maltmen, weavers, bakers, skimmers, wrights, coopers, fleshers, masons, gardeners, barbers, dyers. All these were represented in the beginning of the 17th century, except the gardeners; and at that time there was also an incorporation of bonnet-makers. The masons claim to be the oldest, relying on a royal charter from Malcolm III., dated 1057, and said to have been discovered among the archives of the Glasgow Masonic Lodge of St John's in the beginning of the nineteenth century; but the authenticity of the document is more than doubtful. This incorporation originally included the coopers and the wrights, but the coopers became a separate body in 1567, and the wrights (whose numbers include wrights, glazing-wrights, boat-wrights, painters, bowyers, and sawyers) in 1600. The cordiners (including tanners) were incorporated before 1460, the skimmers and furriers in 1518, the weavers in 1528, the hammermen (including goldsmiths, silversmiths, blacksmiths, tinmiths, and saddlers) in 1536, the bakers previous to 1556, the fleshers in 1580, the dyers and bonnet-makers in 1597, and the barbers in 1656. The original charter of the gardeners is lost, as their deacon died of plague in 1649, and his papers were destroyed, but their present seal of cause bears date 1790. The total funds of the Trades' House, including those of the incorporations, amount to about £538,000, most of the revenue from which is expended in charitable allowances to decayed members and their families. The first *Merchants' House* was a handsome two-storey erection in Bridgegate, built between 1661 and 1669. It had a steeple 164 feet high, which still remains, and is now known as the Bridgegate Steeple. The building was sold in 1817 for £7500, and was removed in 1818. The second hall was in Hutcheson Street, and has been already noticed under the County Buildings. From 1869 till 1877 temporary buildings in Virginia Street were used till the present Merchants' House, which was erected between 1874 and 1877 at the NW corner of George Square, was ready for occupation. It is in a mixed Italian style, and resembles the Bank of Scotland which it adjoins, but is

somewhat more elaborate. The building has three storeys, besides basement and attics, the principal external feature being a large tower at the corner of George Square and George Street, which rises to a height of 122 feet, and terminates in a dome surmounted by the insignia of the house—a globe surmounted by a ship. There is also a smaller tower at the western end of the block. The frontage to George Square is 96 feet, as also is that to George Street. Inside are a main hall, a dining hall 29 by 25 feet, a board room 21 feet square, and numerous business and private rooms besides. The main hall, which is adapted for assembly purposes, measures 61 by 33 feet 6 inches, and the height, which extends from the second floor to the roof, is 52 feet to the ridge. The roof is of open pitch pine, with corbels showing emblematic figures. It is lighted by oriel windows and an octagonal lantern. The orchestra occupies a recess about 12 feet from the floor. The basement contains strong rooms, and in the centre of the block is a well-hole for light and ventilation. The site cost £31,998, and the building itself cost over £35,000. There were merchant burghesses in Glasgow at a very early date, and the office of dean of guild, like that of deacon convener of the trades, dates from 1605. The Merchants' House is entirely an open corporation, any gentleman paying 10s. of entry money being admissible to the membership and privileges. For 1895 the revenue was £8675 and the expenditure £6863, while the stock amounted to £214,813. The Merchants' and Trades' Houses, in their corporate capacity, take a prominent part in almost every measure affecting the city, and jointly they return the members of the dean of guild court.

In the present Merchants' House building are also the offices of the Chamber of Commerce, which was incorporated by royal charter in 1793, and at present numbers over 1000 members, representing the principal merchants, manufacturers, and shippers in the city and neighbourhood. It is recognised as the medium of communication with the government and legislature on all commercial questions.

Professional Halls.—The Procurators' Hall stands behind St George's Church, with fronts to St George's Place and West Nile Street. It is an elegant edifice in the Italian style, erected in 1856. The ornamentation is very florid but picturesque. On the keystones of the doors and windows are carved heads, by Handyside Ritchie, of the distinguished lawyers and law lords, Rutherford, Cockburn, Jeffrey, Moncrieff, Millar, Reddie, Duncan Forbes, Kames, Stair, Erskine, Blair, Brougham, and Mansfield. This is the place where public sales of heritable property take place. The business hall is on the lower floor, and measures 59 by 30 feet, and is 17 feet high. The library is on the upper floor, and has the same length and breadth as the business hall. It is divided into three portions by two rows of square Corinthian pillars which run lengthwise. The Faculty of Procurators was incorporated by charter in 1796, and the number of members in 1896 was 304. The Physicians' and Surgeons' old hall stood on the E side of St Enoch Square, and was a two-storey structure, with rusticated basement, pillars, and balustrade. The new hall is in St Vincent Street, and is a large Italian building. The Faculty of Physicians and Surgeons of Glasgow was incorporated by royal charter granted by James VI. in 1599. It was recognised by the Medical Practitioners' Act of 1858, and had 114 resident fellows and 95 resident licentiates in 1896. The Accountants' Hall is in a plain Italian building in West Nile Street.

Libraries.—The Free Libraries Act not having yet been adopted by Glasgow there are no free public lending libraries or news-rooms like those organised under the Act in nearly every other town of importance in the kingdom. Such free public libraries as exist are due to private benefaction. *Stirling's and Glasgow Public Library* is a plain but substantial building erected in 1864 in Miller Street. The Glasgow Public Library was long in George Street, and afterwards in Bath Street,

but was amalgamated with Stirling's Library in 1871. The latter collection of books was founded in 1791 by the late Walter Stirling, merchant in Glasgow, and has since received many very valuable additions from various donors. It is estimated that the library contains about 50,000 volumes, including a full set of the publications of the Patent Office, for the consultation of which, as also of other books, free of charge, accommodation is provided in the library hall. The library is open from 10 A.M. till 10 P.M. The managing directors are chosen from the Town Council, from the Presbytery of Glasgow, from the Faculty of Physicians and Surgeons, from the Merchants' House, and from the subscribers. The *Athenæum*, instituted in 1847, occupies handsome buildings erected 1887-92 in St George's Place and Buchanan Street. The aim of the institution is 'to furnish the fullest and most recent information on all subjects of general interest; to provide an agreeable place of resort in the intervals of business; and to excite, especially among young men, a taste for intellectual and elevating pursuits;' and this it endeavours to carry out through a library containing about 20,000 volumes, a reading-room, recreation rooms, writing rooms, a restaurant, a gymnasium, day and evening classes in commercial subjects, art and music, and various social clubs. There is a ladies' department. The *Mitchell Library* was founded in terms of a bequest by the late Mr Stephen Mitchell, who died in 1874, and left the sum of £67,000 for the institution of a large library, to be accessible to the public free of charge. The library was opened in temporary premises in Ingram Street in the end of 1877, and there it remained till May 1890. In October 1891 it was reopened in the premises in Miller Street formerly occupied by the Water Trust, the interior of the building having been entirely reconstructed for the purpose. While the books are in the widest sense representative of every department of letters, Scottish literature has naturally received particular attention, and special collections have been formed of works relating to Burns and Scottish Poetry (5000 volumes), Glasgow (5000 volumes), and early Glasgow printing (1300 volumes). The total number of volumes in 1896 was about 120,000, while the magazine room was supplied with 400 periodical publications. The library is managed by a committee of the Town Council, and the rules and regulations have been drawn up with the view of giving the largest and freest use of the store of knowledge consistent with the due protection of property and the maintenance of good order. The only request that is urgently made is for clean hands—not a high price for the value of the commodity supplied. The privileges offered have been largely taken advantage of, and in the winter months, even in the new buildings, there is often much pressure on the available space, the daily number of readers rising sometimes as high as 2500, while the average daily issue of volumes is about 1800. The library is open daily from 9.30 A.M. till 10 P.M., and the books may not be taken away but must be read on the premises. By the purchase and fitting up of the new premises the stock has been reduced to a little over £40,000. The Mitchell Library has received many valuable bequests and gifts, the most important being those of the late Bailie Moir of his library of 4000 volumes, and £11,000 to be expended in the purchase of books. Other bequests have been received from Councillor Logan, Mr Richard Chalmers, and Mr Alexander Gardyne. The *Baillie Fund* consists of a sum of £18,000, given in 1863 by Mr George Baillie, but not to become available for twenty-one years after the date of the deed of gift. This fund was to be applied—first, to 'aid the self-culture of the operative classes from youth to manhood and old age, by furnishing them with warm, well-lighted, and every way comfortable accommodation at all seasons for reading useful and interesting books in apartments of proper size attached to one or more free libraries provided for them;' and second, 'for the instruction of children of the same class in unsectarian schools gratuitously or on payment of very small fees.' The libraries were to be open on Sundays. The Dean, Council, and Clerk of the Faculty of Procurators in

Glasgow were perpetual preceptor, patrons, and directors of the institution, which was incorporated by royal charter in 1867; but by a scheme formulated by the Educational Endowment (Scotland) Commission in 1889 the administration was transferred to a body of twelve governors, seven elected by the Faculty of Procurators, and one each by the Town Council, the Senatus of the University, the Faculty of Physicians and Surgeons, the Merchants' House, and the Trades' House. The purposes are now confined to the establishment and endowment of the free public library which was opened in 1887, and is at present housed in part of the buildings belonging to the Stirling Library. It contains some 12,000 volumes, and has a daily average of about 200 readers. The Bridgeton Working Men's Club and Reading-Room, for facilitating social intercourse, mutual improvement, and rational recreation among working men, is open from 9 A.M. till 10 P.M. The library contains about 2000 volumes, the reading-room is well supplied with newspapers and periodicals, and there are halls for the usual games. The Calton, Mile-End, and Bridgeton Mechanics' Institution, in Canning Street, has for its object instruction in the sciences, particularly in their practical application. Connected with it are classes for music, French, German, botany, elocution, arithmetic, mathematics, phonography, grammar, and composition. The library contains 3000 volumes, and the reading-room is supplied with the leading newspapers and magazines. It is open daily from 8 A.M. till 10 P.M. The South Side Working Men's Club is a similar institution in Paisley Road, open from 10 A.M. to 10.30 P.M. The large and valuable library at the University is noticed under that head. There are also libraries in connection with the Philosophical and kindred societies.

Museums.—The Hunterian Museum is noticed under the University, and there falls to be noticed here only the public Industrial Museum in the West End Park. This, the Kelvingrove Museum, stands close to the Kelvin on the S side of the park, and is formed of two parts. That to the N is the old mansion-house of Kelvingrove, which was altered and adapted for this purpose as well as possible in 1871. It has since been enlarged by the erection of a new wing running E and W at its S end. The old part contains four galleries, each measuring 40 feet by 18½, and contains specimens in natural history, manufacturing products, and miscellaneous curiosities. The new part, which was erected between 1874 and 1876 at a cost of about £10,000, is a plain massive building in the Doric style. The principal entrance is to the E, and the pediment is surmounted by a huge but ill-designed and ill-proportioned figure of Minerva. The entrance hall is fitted up with columns and panels on which are bronze ornaments. The S and N walls have entablatures surmounted by balustrades, with pedestals at intervals, and are pierced by seven windows. The W wall is rustic ashlar, with an entablature. The large hall in this new wing is 100 feet long and 40 wide, with galleries all round 14 feet above the floor. The galleries at the sides are 11½ feet wide and at the ends 15 feet wide. The room is lit partly from the roof, partly by the side windows. It contains specimens of all the industries carried on in Glasgow, the examples illustrating the processes in all the stages from the crude to the finished production. At the W end is a room, 40 feet long by 20 wide, fitted up as an aquarium, with 16 tanks containing specimens of the various fresh-water fishes found in Scottish lakes and streams. Outside, at the SW corner of the building, are an old walking-beam engine constructed by James Watt, and the engines of some of the early Clyde steamers.

Barracks.—Up to nearly the end of the 18th century the troops stationed in Glasgow were billeted on the inhabitants, but in 1795 the old infantry barracks, on the N side of the Gallowgate, to the E of the Cross, were erected. They cost £15,000, comprised a spacious parade ground, and provided accommodation for 1000 men. In 1821 cavalry barracks were erected on the W side of the upper part of Eglinton Street in Gorbals. These were

disused in consequence of no cavalry being quartered in the city, and in 1850 they were sold to the Parochial Board of Govan, and were converted into a poorhouse. Shortly after this the infantry barracks were pronounced unusable as regarded situation, arrangement, and desirable or requisite appliances for convenience, comfort, and health, and it was decided to remove them. In 1869 the government fixed on a site of 30 acres at Garrioch, near Maryhill, about $2\frac{1}{2}$ miles from the centre of the city, and accepted estimates of £100,000 for the erection of new barracks. A dispute with the contractor stopped all work from 1871 to 1873, when the War Office purchased an additional 27 acres to the SW of the former site, and took the extension and completion of the works into their own hands, the operations being carried out under the superintendence of the Royal Engineers. The buildings were finished in 1876, and accommodation is now provided for a regiment of infantry, a squadron of cavalry, and a battery of field artillery. The infantry barracks are to the SE, and consist of three blocks two storeys in height for the married men, and four three-storey blocks for single soldiers, accommodation being provided for 824 men and 38 officers. Quarters for warrant officers were added in 1893. The infantry parade is in front to the N. The cavalry and artillery barracks and stables are to the W of the infantry parade ground, and consist of seven blocks, with accommodation for 302 men and 12 officers. The stables have room for 200 horses and 19 officers' horses, while a separate building accommodates 14 sick horses, and provides cover for 8 field guns. The cavalry and artillery parade ground lies to the N of their barracks. There are buildings for officers' quarters and guardrooms, for staff-sergeants' and married sergeants' quarters, and for quarter-masters' stores, barrack stores, and washing-houses, as well as an extensive canteen, amusement-rooms, library, reading-rooms, chapel, school-rooms, gymnasium, etc. To the W of the infantry barracks is an hospital, with accommodation for 60 patients, and the prison has cells for 21 offenders. The ground to the SW towards the Kelvin, and embracing a third of the whole site, is used as exercise ground.

Theatres.—The first theatre in Glasgow was a temporary booth, fitted up in 1752, in the ruins of the archbishop's palace or castle, but was superseded in 1762 by a regular theatre erected in the district then known as Grahamstown. It stood on ground now occupied by the Central Railway Station, and was opened in 1764 by a company which included Mrs Bellamy. It seemed doomed to misfortune, for on the opening night it was much damaged by fire, and after a career of varied but generally indifferent success it was burned to the ground in 1782, when the whole wardrobe and properties, valued at £1000, were destroyed. The next theatre, built in 1785, was in Dunlop Street, and was opened by a company that included Mrs Siddons, Mrs Jordan, and other distinguished performers. In the beginning of the following century it was found too small, and a new one was erected, partly by subscription, on the W side of Queen Street at a cost of £18,500. It was one of the largest and most elegant theatres then in Great Britain, but it was destroyed by fire in 1829. The Dunlop Street theatre, which had been rebuilt in 1839-40, was now a building of showy but tasteless exterior, with statues of Shakespeare, Garrick, and Mr Alexander. In 1849, during a panic caused by a false alarm of fire, a rush for the doors caused the death of 65 people, and injury to a great many more. It was destroyed by fire in 1863, but underwent such repair as rendered it still the principal theatre in the city; but it had to be finally relinquished in 1868, in consequence of the operations of the Union Railway Company. The Theatre Royal in Cowcaddens then took its place as the leading theatre. It had been erected in 1867 as a great music hall, called the Colosseum. It was opened in 1869 as the Theatre Royal, and was in 1879 entirely destroyed by fire, the loss amounting to between £35,000 and £40,000. The second Theatre Royal was then erected on its site, and was opened in the end of 1880 with a company includ-

ing Miss Marie Litton, Mr Hermann Veziu, and Mr Lionell Brough. The stage was 74 feet wide and 56 feet deep, while the proscenium was 31 feet wide and 36 feet high. The auditorium, which contained accommodation for about 3200 persons, consisted of three tiers of galleries and the pit. Behind the orchestra were rows of stalls. This theatre was unfortunately completely gutted by fire in 1895, but rebuilding for the second time was promptly undertaken, and the theatre was re-opened within less than a year of the fire; the internal accommodation being materially improved, though little external architectural display is attempted. The theatre is almost wholly surrounded by other buildings, and its side entrances are placed in a narrow lane running from Cowcaddens Street to Hope Street. The Gaiety Theatre, at the SW corner of West Nile Street and Sauchiehall Street, was opened in 1874 as a music hall, and was the result of alterations on a block of buildings which included the Choral Hall, and which was purchased at a cost of £12,500. It was taken down and entirely rebuilt in 1896-97, and this very handsome building is called the Empire Theatre. A little to the W, on the opposite side of Sauchiehall Street, is the Royalty Theatre in a block of buildings with a good Italian front to Sauchiehall Street; and the Grand Theatre is in Cowcaddens, at the point where New City Road and Garscube Road branch off. The Royal Princess's Theatre is on the S side in Main Street, Gorbals. The same building contains the theatre and a public hall called the Grand National Hall. The front is in the Roman Doric style, with six fluted columns. On the top are six statues, two representing Shakespeare and Burns, and the others allegorical. In Wellington Street is Hengler's Cirque. There are also a number of music halls in the city, but they do not call for particular notice, except perhaps the People's Palace at Watson Street near the Cross, where attempts are being very successfully made to popularise and refine this class of entertainment for the more respectable portion of the 'masses.'

Banks.—Two years after the Bank of Scotland was established in 1695, the governors attempted to establish a branch in Glasgow, but the effort was unsuccessful, as all the accommodation required by the merchants was in the hands of private bankers or money-changers, who negotiated bills of exchange and provided loans, and the branch was withdrawn in 1698. In 1731 another effort was made, and after a time with better success, for the company obtained a foothold. The first banking company belonging to Glasgow itself was the Ship Banking Company, now merged in the Union Bank, which was established in 1749, and as trade was rapidly increasing, it seems to have thriven so well that in 1753 another company started a bank called the Glasgow Arms Bank. It was followed in 1758 by a third, called the Thistle Bank, and in 1809 the Glasgow Banking Company was formed. All these were, it must be remembered, private banks, and it was not till 1830 that the joint-stock companies began to be formed. In that year the Glasgow Union Bank, now the Union Bank of Scotland, was founded, and was followed by the Western Bank in 1832, the Clydesdale Bank in 1838, and the City of Glasgow Bank in 1839. The failures of the Western Bank and the City of Glasgow Bank have been already referred to. The banking offices of the city in 1896 were, the head office of the Clydesdale Banking Company, and 17 branch offices; the head office of the Union Bank of Scotland, and 13 branches; a principal office of the Bank of Scotland, and 20 branches; a principal office of the British Lioen Company Bank, and 23 branches; a principal office of the Commercial Bank of Scotland, and 12 branches; a principal office of the National Bank of Scotland, and 15 branches; the office of the Mercantile Bank of Scotland; the office of the North British Bank; a principal office of the Royal Bank of Scotland, and 18 branches; and 9 offices of the National Security Savings Bank of Glasgow. There were, besides, the savings bank in connection with the post office, and no fewer than 140 branches of the

Penny Savings Bank, and 16 Foundry Boys' Religious Society banks.

The old head office of the Clydesdale Bank was the building in Queen Street afterwards occupied as the Inland Revenue Office. When this was sold to the government in 1858, the bank moved to buildings in Miller Street, which had been erected for and occupied by the Western Bank, which failed in 1857. The structure here was Italian with a fine façade and an elaborately carved frieze. This, too, proved insufficient for increasing business, and new buildings were erected in St Vincent Place between 1872 and 1874 at a cost of £35,000, the business being transferred thither in the latter year. These stand on the N side of the street, and have a frontage of 134 feet, while they extend backwards from the street for 109 feet. The style is Paladian, and the building is three storeys high, the basement being rusticated, the second storey Ionic, and the third Corinthian. The entrance portico is two storeys high, supported on each side by syenite columns with sandstone Ionic capitals, and on the pediment are the arms of the city of Glasgow, with at each side groups of sculpture representing industry and commerce. The telling-room is 61 by 56 feet and 40 feet high. There are also all the other appurtenances of a great banking establishment, including, of course, an ample safe, the walls of which are of granite 6 feet thick. The head office of the Union Bank is on the S side of Ingram Street at the N end of Virginia Street, and occupies the site of a famous mansion belonging to one of the tobacco lords. The original building was erected in 1842 by the partners of the Glasgow Bank, now incorporated with the Union. It has since been extensively remodelled. The style is Roman Doric, with base and pillars of polished red granite, the rest of sandstone. The portico is hexastyle, and is surmounted by six statues, representing Britannia, Wealth, Justice, Peace, Industry, and Glasgow, from the chisel of John Mossman. The Bank of Scotland's principal office was formerly on the N side of Ingram Street opposite Glassford Street. It had a good front, and over the entrance was a shield bearing the city arms and supported by two figures. The present building is at the corner of George Square and St Vincent Place, with chief entrance from the latter. It was erected in 1867 and extended in 1874, and is a massive and handsome building. The chief entrance and principal front, to St Vincent Place, has an entablature, supported on each side by a massive figure of Atlas, sculptured by William Mossman. The British Linen Company's principal office is at the N corner of Queen Street and Ingram Street, opposite the Royal Exchange. It is of considerable height, and is a specimen of modern Italian architecture of a very ornate kind. At the top is a fine old balustrade. One of the branches, at the corner of Eglinton Street and Oxford Street, is also a good building, Italian in style. The principal office of the Commercial Bank is at the corner of Gordon Street and Buchanan Street. The portion in Gordon Street was erected in 1857, after the model of the Farnese Palace at Rome, and rises to a height of three storeys, surmounted by a balustrade. The whole of the front is profusely adorned with rich carvings, after designs by Handyside Ritchie of Edinburgh. The corner portion was added in 1887. The principal office of the National Bank of Scotland is on the W side of Queen Street. It is not very well seen, but the front looks somewhat too rich for the size of it. The style is modern Italian, and it is very highly ornamented. The building rises to a height of two storeys, the lower being adorned with a range of Ionic columns, and the upper with a similar row in the Corinthian style, surmounted by a rich entablature and cornice. Above the cornice is a group of sculpture, consisting of the royal arms, flanked by a statue on either side—one representing Peace, the other Commerce. Over the doorway are the city arms. The telling-room is large and handsome. The Royal Bank's principal office stands at the W end of Exchange Place, behind the Royal Exchange, by which its handsome front is unfortunately entirely

concealed. It is a tasteful and chaste structure in the Ionic style, with a fine hexastyle portico supporting a massive entablature. The interior was greatly altered in 1874 at a cost of £14,000. The telling-room is now 50 by 40 feet, and 40 feet high. This is separated from side spaces, which are only 20 feet high, by screens between a series of Composite columns, the arches of which are filled in with fan-work, surmounted by a cornice and frieze. The office of the North British Bank is in Bath Street, but calls for no particular notice. The principal office of the National Security Savings Bank, which was established under Act of Parliament in 1836, was originally in John Street, and afterwards in Hutcheson Street. It was then transferred to a building, erected for it in 1853, which stood at the N corner of Virginia Street and Wilson Street. It was again removed in 1865 to a plain but substantial three-storey block in Glassford Street, which was extended to Ingram Street by a handsome addition erected in 1896, with an entrance from the latter street. The Savings Bank was instituted to 'provide for the safe custody and increase of small savings belonging to the industrial classes.' Sums of from 1s. to £30 are received in one year from individuals, and larger sums from societies. The interest allowed is at the rate of £2, 10s. per cent. per annum. The number of depositors has increased from 13,792 in 1842 to 182,793 in 1895, and in the same time the funds have increased from £176,130 to £7,007,368. There are also eight district branch banks. In connection with this institution district penny savings banks were first established under the late Mr William Meikle, the actuary and cashier. These banks were established subsequent to 1851, but by 1861 there were in connection with the Glasgow parent establishment 53 banks, with deposits to the amount of £6220, and in 1892 there were 224, with deposits to the amount of £67,355 and 79,159 depositors. The Savings Bank provides for the penny branches, cash-books, ledgers, and ordinary cards, either gratis or at a reduced rate, and no doubt reaps a rich reward for its encouragement in the increased number of depositors drawn from the young people thus trained to save. Many places have copied the Glasgow scheme, and it might with very great advantage be adopted in many more.

Insurance Offices.—There are about 150 insurance offices in Glasgow, exclusive of agencies. The City of Glasgow Life Assurance Company's office was formerly in St Vincent Place, but is now on the site once occupied by St Mary's Episcopal Church in Renfield Street. Erected in 1870-71, it is Italian in style, with a series of columns serving as piers to the arches of the windows in the centre of its front. The façade has carved decorations, and at its sides are two large niches with colossal statues of St Mungo and St Andrew, the former by Ewing, the latter by W. Brodie. The principal office of the Scottish Widows' Fund and Assurance Society is at the NE corner, at the intersection of Renfield Street and West George Street. It is a massive building in the Italian style, with a rusticated basement, and has over the windows a series of sculptured masks with a succession of massive entablatures. Along the top is an open balustrade, surmounted at intervals by vases. The Scottish Amicable Life Assurance Society office, on the S side of St Vincent Place, was erected in 1872-73, and is ornate Italian in style. There are three fine statues of Justice, Truth, and Amity, from the chisel of William Mossman. The Standard Life Assurance Company has a good office at the corner of Gordon Street and Hope Street erected in 1891, and the Scottish Legal a building in Wilson Street. The Royal and Lancashire have handsome new buildings erected in 1897.

Clubs.—The Western Club has a clubhouse at the NW corner of the intersection of Buchanan Street and St Vincent Street. The club was formed in 1824. The building, which is extensive and massive, is of a plain Italian style. The principal entrance is from Buchanan Street, under a broad and graceful tetrastyle portico, with square Corinthian columns, and the windows have decorations similar to those of the portico, while the

building terminates all round in an imposing entablature. There is a fine vestibule and staircase, and a magnificently furnished dining-room. The club includes among its members most of the noblemen and gentlemen of the West of Scotland. The New Club was organised about 1865, and till 1878 occupied the greater portion of the Scottish Widows' Fund buildings already described. In 1877 the club acquired ground at what is now 144 West George Street, and erected a clubhouse for themselves at a total cost of about £30,000. The building is modern French in style, and presents to West George Street a front of five storeys, besides attics. The Conservative Club had for a number of years accommodation in Renfield Street in the building containing the principal office of the Scottish Widows' Fund Insurance Society, but erected in 1893-94 a commodious clubhouse at the corner of Bothwell Street and Wellington Street. The building, a very handsome one of red sandstone, is modified Tudor in style. The other clubhouses do not call for special mention.

Railway Stations.—Queen Street station was originally the Dundas Street station of the Edinburgh and Glasgow railway, opened in 1842. The old station was very dingy, and became thoroughly unsuitable for the large amount of traffic it had latterly to accommodate. About the year 1880 great changes were made, and there are now four double platforms, covered by a glass roof 450 feet long, 80 high, and 250 in span, supported by semicircular lattice girders; but much still remains to be accomplished before the external frontages will be worthy of the North British system. The cab-stand is at the E side, and beyond are lines and offices for the accommodation of the goods traffic. Beneath there is a low-level station for the traffic on the GLASGOW CITY AND DISTRICT RAILWAY. Adjoining the station, in George Square, is the North British Railway Hotel. The chief station of the Caledonian railway is the Central, covering the greater portion of the ground between Gordon Street, Union Street, Argyle Street, and Hope Street, from all of which there are entrances. The roof is carried on cross iron lattice girders, with a span of 250 feet, and placed about 30 feet apart; running across these are small ridges with glass, extending for a length of 600 feet. The principal entrance is from Gordon Street, but there is also an entrance from Argyle Street, where the underground station of the Glasgow Central Railway is placed. The two stations are designed to be connected by means of lifts. The cabstand is to the W, and the cab entrance is from Hope Street. Along Gordon Street and part of Hope Street are the imposing buildings of the Central Hotel, also belonging to the Caledonian Railway Company. They are six storeys high, with large arched openings below for access to the station. The entrance is at the NW corner, and close to it rises a lofty and massive clock tower. The chief station of the Glasgow and South-Western Railway is in handsome buildings on the E side of St Enoch's Square. They are domestic Gothic in style, and rise to a height of five storeys, with basement and attic floors besides. A sloping road leads up from the NE corner of the square to the principal entrance to the station. Large doorways lead into a hall containing the booking offices, while a large general waiting room opens off on the left. In 1893 additional booking offices were opened on the E side of Dunlop Street, under the railway bridge. The glass roof is formed by ridged portions supported on semicircular lattice girders, the covered portion being 525 feet long, 205 wide, and 84 high. At the NE corner is an excellent hotel in connection with the station. There is a handsome porch, and the buildings (1870-80) as a whole form one of the most imposing structures in Glasgow. In the centre of St Enoch Square stands a handsome building forming the principal booking office and station of the Glasgow Subway—a species of underground tramway worked by wire-rope traction, and passing twice under the Clyde to make a circuit of the western part of the city. Bridge Street station is a high-level station in Eglinton Street, a short distance S of Glasgow Bridge.

It was erected in 1891 by the Caledonian Railway Company to replace the old Bridge Street station a little farther N, which before the St Enoch Square station was opened was the principal station of the Glasgow and South-Western Company. The principal station of the Caledonian Company for their N traffic is an old ungainly structure at the N end of Buchanan Street. All the railways are separately noticed.

Hotels.—There are upwards of 50 hotels in Glasgow, of which the principal, architecturally—the St Enoch's and the Central—have just been noticed, but many of the others are tasteful and handsome buildings.

Infirmaries, Hospitals, and Dispensaries.—The *Royal Infirmary* was projected in 1787 by George Jardine, professor of logic in Glasgow University. At a public meeting a committee was appointed to collect subscriptions and look for a site, and in 1788 the site of the archbishop's castle was fixed on. In 1791 George III. granted a charter of incorporation, fixing the number of governors at twenty-five, containing among others representatives from the town council and the University; and the wished-for site having been obtained, the foundation stone of the buildings was laid on 18 May 1792, with great ceremonial and full masonic honours, and in the end of 1793 the first part of the building, which stands to the NW of the Cathedral, was erected. This, the original portion of the existing structure, is a large building in the Roman style, with four storeys above ground and one below. In front is a tetrastyle Corinthian portico, and rising above all is a fine ribbed cupola. It contained 8 wards and 136 beds, and was in 1816 extended by a wing to the N with 72 beds. The second block of buildings, originally the fever hospital, with 220 beds, erected in 1825-32, stands a little to the N of the former block, and is much plainer. The third building was erected in 1857-61; but though the actual size is thus increased, rearrangements, rendered necessary by improved ideas of accommodation, have taken away so much of the original supposed space, that accommodation is now provided for only 542 patients in all. It is proposed to reconstruct the older building as a memorial of the Queen's Diamond Jubilee. The institution is mainly supported by voluntary contributions, which always include a large quota from the working-classes. It has also a permanent stock capital. Connected with the institution is a medical school—founded in 1876 under a supplementary charter, and incorporated in 1889 as St Mungo's College, which is noticed afterwards. Buildings for its accommodation immediately to the N of the Infirmary buildings were opened in November 1882. They are plain Italian, and contain all the necessary accommodation for lectures and practical work. The total number of indoor patients treated in the Infirmary every year is over 5000, and the number of outdoor patients over 20,000, while on an average over 800 children are vaccinated. The wards are generally full, but now an arrangement exists by which patients are sent from the Royal Infirmary to the Western, or *vice versa*, when either has no bed to spare. The ordinary expenditure is over £30,000, which, however, is not nearly met by the ordinary revenue, and thus annual drafts have to be made from the stock account, which had thus in 1895 been reduced to £163,421.

The *Western Infirmary* stands on a rising-ground to the W of the new University buildings at Gilmorehill, with the entrance from Dumbarton Road, a little to the W of the bridge over the Kelvin. It was founded in 1871, part of it completed and opened in 1874, and the rest of the infirmary proper by the erection in 1879-81 of the Freeland wing by means of a bequest of £40,000 made in 1879 by the late Mr Freeland. The Nurses' Home was in 1891-92 extended northward to University Avenue. In 1892 the Infirmary was incorporated by special licence of the Board of Trade. It has now accommodation for about 400 patients. The buildings, which are Jacobean in style, are constructed on the block and pavilion system, and have cost about £100,000. They are 460 feet long from E to W, and 260 feet from

N to S, and may be described generally as consisting of nine blocks which intersect one another at three places, the stairs, hoists, and shoots being placed at the intersections. The ventilating and sanitary arrangements are of the most improved description. The wards are lighted by windows at the sides, and vary in size, containing from 14 to 18 beds each. They are 15 feet high, and their width is 26 feet, affording from 105 to 110 square feet of floor space and 1575 cubic feet per bed. On the basement is the kitchen, which measures 40 by 26 feet, store-rooms, laboratory, nurses' dining-rooms, etc. To the N are the washing department, engine-room, and heating apparatus. There are also theatres for pathological and *post-mortem* examinations, and one for operations and lectures, the last with accommodation for 300 persons. The Western Infirmary is managed by a board of directors chosen from various public bodies, and from the general subscribers. It is attended by students from the University and from the Western Medical School. The annual number of indoor patients is about 4000, and of outdoor patients over 12,000, while the ordinary expenditure is over £22,000, which is met from ordinary and extraordinary revenue. The stock account in 1895 was £57,485.

The *Victoria Infirmary*, on the south side, to the S of the Queen's Park, was begun in 1887 and opened in 1890. The idea of an infirmary for the south side had been mooted as early as 1871, and a subscription fund for the purpose started, but the movement did not take practical shape till 1881, when the Corporation granted a site of 4½ acres to the S of the Queen's Park. While the necessary funds for building were being slowly raised by public subscription, it was announced that Mr Robert Couper of Cathcart had bequeathed the residue of his estate for the erection of an Infirmary and Convalescent Home for the south side, and £10,000 having thus become available, with a prospect of a reversion of £40,000, it was finally decided to commence operations, and this was accordingly done in 1887, when the Queen was pleased to grant permission that in honour of her jubilee the institution should be called the *Victoria Infirmary of Glasgow*. The buildings, which were designed by Messrs Campbell, Douglas, & Sellars, are plain in style, and will, when finished, have four main ward blocks of three storeys, with accommodation for 250 patients. There are also blocks for administrative purposes, nurses' home, stores, etc. The first portion (one pavilion), with accommodation for 80 patients, was opened in 1890, and additions have since been continued as funds permitted. Connected with the Infirmary there is a dispensary in St James Street, off Paisley Road. In 1895 the number of indoor patients treated was 1494, and at the dispensary 9326, while the income was £6166, the expenditure £7958, and the capital account was £29,719. The institution is incorporated by Act of Parliament, under which the managers have power to grant facilities for the teaching of medicine and the allied sciences, and workmen representatives have the privilege of electing four of their number as managers.

In connection with the infirmaries are the Glasgow Convalescent Home at Lenzie (Royal and Western); the Schaw Convalescent Home at Bearsden (Royal), dating from 1893, the cost of erection and endowment being met out of a sum of £40,000, gifted for the purpose by Miss Marjory Schaw in memory of her brother, Mr Archibald Schaw; the Lady Hozier Convalescent Home at Lanark (for the Western), presented by Sir William Wallace Hozier, Bart. of Mauldslie Castle; and a Convalescent Home for the Victoria Infirmary was opened at Largs in 1897, the funds being provided under the bequest of Mr. Couper already mentioned.

The *Hospital for Sick Children* in Scott Street, Garnethill, was opened in 1882 and enlarged in 1887, while a dispensary in connection with it was started in 1888 in a building at the corner of Cambridge Street and West Graham Street. The Hospital has 70 cots. There is a Cottage Home for Convalescent Children at Helensburgh with 10 cots, where boys of from 4 to 10 are received, and girls of from 4 to 12.

The old *City Fever Hospital* (1865) is in the St Rollox district, SW of St Rollox Chemical Works. It covers a considerable space, bounded by Baird Street, Black Street, Kennedy Street, and Oswald Street, and consists of eight main detached blocks, besides the usual out-buildings. It has 120 beds, and is retained as a reserve hospital, but it will be abolished when the buildings at Ruchill (see *Parks*) are erected. The new *City Fever and Smallpox Hospital* is at Belvidere, to the E of the city, S of London Road. The smallpox hospital was finished in 1877 at a cost of about £30,000. The building consists of five detached pavilions, with out-houses, one storey high, constructed of brick and with open roofs. There are 150 beds, each isolated pavilion containing 30. The fever hospital, to the N, is similar in construction, with 13 pavilions and 390 beds. There are ample grounds for convalescents, with well grown trees and flower plots. At one corner is the central washing and disinfecting establishment for the city. In order that there may be free circulation of air, the enclosing wall is built on a novel plan, being placed in a trench, with the ground sloping up on either side to a height of about three-fourths of the wall. There is a joint fever and smallpox hospital for the burgh of Partick and the districts of Hillhead and Maryhill at Knightswood, about 2 miles to the W of Hillhead. The Glasgow Public Dispensary is in Dundas Street, and was established for the purpose of giving gratuitous advice to poor people not receiving parochial relief. There are clinical classes in connection with it, and patients unable to come to the dispensary are visited by the students at their own homes. The Glasgow Central Dispensary, in George Street, formerly connected with Anderson's College, was instituted to provide free medical and surgical advice, and when necessary, as the funds permit, medicine also to the sick poor. Both institutions are entirely supported by voluntary contributions. The Glasgow Eye Infirmary was originally in Charlotte Street, and has still a branch there for East End patients, but in 1873-74 fresh accommodation was provided in the West End, where a building of two storeys was erected, with waiting, surgical, dispensing, ophthalmoscopic, and attendants' rooms. It is French Gothic in style, and has a centre and two wings with fronts to Berkeley Street West, and to Claremont Street. It contains 56 beds for operation cases, while the Charlotte Street branch has 24 for the same purpose. There are clinical classes, and the institution is recognised by the faculty of physicians and surgeons as a public dispensary. The number of cases treated in 1895 was 18,636. There is also an Ophthalmic Institution connected with the Royal Infirmary in West Regent Street, which treats cases among the poor by performing operations, treating indoor cases, and giving gratuitous advice and medicine to outdoor patients. Three patients a year may be sent by each subscriber of a guinea a year or donor of £5, at any time. There are clinical classes in connection with it. In 1895 there were 2508 outdoor and 444 indoor patients admitted. The Dispensary for Skin Diseases is in Elmbank Street, and is entirely supported by voluntary contributions. Gratuitous advice is given three days a week, and in connection with the dispensary are two wards in the Western Infirmary, to which the directors have power to send the more serious cases. There is a summer clinical class in connection with the institution. On an average 1200 patients are treated every year. The Ear Institution is in Buchanan Street. The number of patients treated annually is over 1000. The Hospital and Dispensary for Diseases of the Ear is in Elmbank Crescent. It has 12 beds for indoor cases, and there is clinical instruction for students. The number of patients treated annually is over 1000. Both institutions are supported by voluntary contributions. The Dispensary for Diseases of the Chest is in Dundas Street. Gratuitous advice is given to poor patients twice a week. The Hospital for Diseases Peculiar to Women is in Elmbank Crescent. Founded in 1877 for giving advice and treatment to poor but respectable women, who are admitted without

certificate in the order of application, it is supported by voluntary contributions. Clinical lectures are given. Over 3000 outdoor cases are treated annually. Glasgow Maternity or Lying-in Hospital was established in 1835, and stood originally in St Andrew's Square, but was subsequently removed to the corner of North Portland Street and Rottenrow. It was amalgamated with the University Lying-in Hospital in 1873. It is supported by voluntary contributions. There are clinical classes. New buildings were erected and opened in 1881. They form a plain but handsome structure in the Early English Domestic Gothic, the principal entrance being from North Portland Street, by an arched doorway with pediment having the city arms, and the dates when the institution was founded and rebuilt. In 1895 the number of patients aided was 2967. The Glasgow Samaritan Hospital for Women, in Coplaw Street, off Victoria Road, S.S., provides for the free medical and surgical treatment of women afflicted with disease, and more especially with disease peculiar to their sex unsuitable for the wards of a general infirmary. It has also a dispensary. There are clinical lectures, and training is given to women's nurses. The Glasgow Cancer and Skin Institution is in St Vincent Street, where over 300 patients suffering from cancer and allied diseases are annually under observation and treatment, and there is an hospital—the only one in Scotland—in Hill Street, Garnethill. There is also a Dental Hospital and School at 5 St Vincent Place, and a Medical Institute home visitation of the sick poor by senior medical students at Cranston Street. The Glasgow Medical Mission has a dispensary in Oxford Street, where about 6000 patients are treated annually, and over 1000 poor visited at their own homes. The headquarters of the mission are in Moncur Street. There is also a Medical Mission in Cowcaddens. The Lock Hospital in Rottenrow was incorporated by seal of cause from the magistrates in 1805, for the treatment of unfortunate females. It is supported by voluntary contributions. The average number of patients is about 350 every year.

The *Glasgow Royal Lunatic Asylum* is at Gartnavel, near the western boundary of the city. The original Lunatic Asylum was begun in 1810 and opened in 1814, and stood on what was at that time a secluded site in the northern outskirts of the city, but which is now on the N side of Parliamentary Road with all its bustle. It lost the requisite quiet and amenity, first by the tunnelling of the Edinburgh and Glasgow railway beneath it, and next by the encroachments of the public streets, and in 1841 was sold for £15,000, to be converted into the City Poorhouse. The present edifice, which is about 1 mile W of the Botanic Gardens, and stands on a broad low eminence commanding a splendid view, was founded in 1842 and opened in 1843, at a cost, including the site of 66 acres, of £75,950. It is a very large, but far from beautiful, pile, in a poor Tudor style. There is accommodation for over 500 patients, from all grades of society, and at all rates of board. The first-class division or West House consists of three sides of a quadrangle, the principal one 492 feet long, and each of the others 186 feet; the second-class division or East House also consists of three sides of a quadrangle, the principal one 285 feet long, and each of the others 196 feet. The asylum is incorporated by Royal Charter, and managed by a board of 22 directors, partly composed of representatives from various public bodies, and partly appointed by the qualified contributors to the funds. The parochial lunatic asylums are noticed afterwards.

Religious and Philanthropic Societies and Institutions.

—The Night Asylum and Soup Kitchen for the houseless or utterly destitute is in North Frederick Street. It was first opened in 1837, and now admits yearly about 40,000 persons, and provides nearly 200,000 meals. It is managed by directors, a superintendent, and a matron, and has connected with it a house of industry for indigent women. The House of Shelter in Hill Street was instituted in 1850 as a home for women liberated from prison and desirous to reform and support themselves by honest industry. The house is under the charge of a matron, and the inmates are lodged, fed, and clothed in

return for their labour at needlework. The average number of inmates is about 50. There is a Mission Shelter at Whitevale Street, with similar objects, but the inmates are not required to remain in it for a year as in the Hill Street Shelter. The Glasgow Institution for Orphan and Destitute Girls has a home at Whiteinch (see GOVAN). Quarrier's City Orphan Home, Working Boys' Home, Children's Night Refuge, Young Women's Shelter and Mission Hall is in James Morrison Street. It is in connection with the homes at Bridge of Weir, where there are about 1100 inmates, who are maintained and lodged at an expense of about £18,000 a year, entirely supplied by private benevolence. The City Home has over 500 inmates every year. The Home for Deserted Mothers in Renfrew Street was instituted in 1873, and is supported by voluntary subscriptions. The Magdalene Institution, incorporated by royal charter, is partly self-supporting, and partly maintained by subscriptions; and has a probationary home at Stirling Road, where there is accommodation for 62 inmates. The well conducted are transferred thence to the reformatory and industrial house at Lochburn near Maryhill, where there is accommodation for 120 inmates. The Asylum for the Blind was originally founded, in 1804, by John Leitch, a citizen of Glasgow, who had suffered injury of sight, and who bequeathed £5000 towards commencing and maintaining the institution. It was for many years watched over by John Alston, one of the city magistrates, who introduced many contrivances for aiding the instruction of the inmates. Since its first start it has been greatly aided by legacies and donations, and now the work done in it is such as to render it almost self-supporting. The buildings in Castle Street near the Royal Infirmary, originally erected by voluntary subscription in 1827-28, were renewed in 1882-83. Externally the buildings are plain, but at the SW angle is a good semi-detached, hexagonal tower. The statue of Christ restoring sight to the blind was presented by Sir C. Tennant of The Glen. The institution is managed by a large board of directors, partly chosen from various public bodies, and partly from the contributors, and includes a school for educational training and a large manufactory for making baskets, cordage, sacking, and other articles. There are several shops in different parts of the city for the sale of the articles manufactured. The number of inmates is nearly 200. There is a city mission for the out-door blind, and connected with it is a ladies' auxiliary association for visiting blind women and teaching them knitting. The mission has under its care about 1400 people. The Glasgow Convalescent Home is at Lenzie, as has been already noticed. There is accommodation for 75 patients, of whom 30 are taken from the Royal Infirmary, 35 from the general public resident in Glasgow and its neighbourhood, and 10 from the Western Infirmary. There are also convalescent seaside homes at Dunoon and Kilmun for the provision of good food, baths, and sea air for the necessitous and deserving of the industrial classes who are recovering from illness. The former has accommodation for 200 and the latter for 100 inmates. The Mission Coast Home (hydropathic) is at Salcoats. There are Dorcas Societies in connection with the Royal Infirmary, and in connection with the City of Glasgow and other fever and smallpox hospitals, and a Samaritan Society in connection with the Western Infirmary, for the purpose of supplying warm and sufficient clothing and surgical appliances, as well as for giving temporary help to the families of poor patients who are leaving hospital. The Poor Children's Dinner Table Society provides deserving and destitute children with one meal daily during the winter months. During the winter of 1895-96 seventeen tables in different parts of the city were in operation daily. The Glasgow Widows' Friend Society gives assistance to about 900 widows annually. It is supported by voluntary contributions. The Training Home for Nurses is in Renfrew Street, and was established for the purpose of educating women of high character to nurse the sick. There is accommodation for 51 nurses, 19 rooms for private patients, and 7 patients in

two wards, with beds in each. The Association for the Relief of Incurables has offices in St Vincent Street and an hospital at Broomhill Home, Kirkintilloch, Dumbartonshire, with accommodation for about 100 patients; about 200 patients are also assisted at their own homes every month. There is also a Colquhoun fund of £23,000, from the income of which annual payments or donations are made to necessitous persons afflicted with incurable diseases. The Little Sisters of the Poor have a building known as St Joseph's Home for the Aged at Garngad Hill. It was founded in 1862, and now contains 285 aged poor of both sexes, entirely dependent on public charity, as the Sisters have no funds. There is a Sailors' Home on the Broomielaw, a Soldiers' Home at Maryhill, and a Canal Boatmen's Institute at Port Dundas. Besides these there is an Evangelisation Society, a United Evangelistic Association, an auxiliary to the London Missionary Society, an Abstinents' Union, a Scottish Band of Hope Union, a Permissive Bill and Temperance Association, a branch of the Scottish Temperance League, lodges of the Independent Order of Good Templars, a branch of the National Bible Society, a West of Scotland Bible Society, a United Young Men's Christian Association, * a Young Women's Christian Association, the Grove Street (Home Mission) Institute in the street of that name—an auxiliary to churches of all denominations in evangelistic, benevolent, and temperance work—a Protestant Association, a Protestant Laymen's Association, a Glasgow, a Southern District, a Govan District, a Western, and a Middle District Sabbath School Union, a Foundry Boys' Religious Society, with 80 branches and a membership of 20,000 boys and girls; a battalion of the Boys' Brigade, with nearly 100 companies; a Home Mission Union, a City Mission, with a ladies' auxiliary; a Cabmen's Mission, a Seamen's Mission, a Canal Boatmen's Friend Society, a Medical Mission, a Mission to the adult Deaf and Dumb, a Continental Society, with a ladies' auxiliary; an Aged Women's Society, an Association for Providing Trained Nurses for the West of Scotland, St Andrew's Ambulance Association, a Day Nurseries Association, with 5 homes for children whose parents require to leave them to go out to work; branches of the Humane Society and the Society for the Prevention of Cruelty to Animals, a Society for the Prevention of Cruelty to Children, a Children's Refuge, a Home for Infirm Children, at East Park, Maryhill, with 80 beds; a number of Clan Societies and County Associations, a Seaman's Friendly or Benevolent Society, a Sailors' Orphan Society, a Clerks' Association, a lodge of Oddfellows, a Court of the Order of Free Foresters, an Association for Organising Charitable Relief, and branches of the St George's Commercial Travellers', Railway Benevolent, and Scottish Wine and Spirit Merchants' Societies, &c.

Charitable Bequests.—Mitchell's mortification (1729) is for old men and women in decayed circumstances. M'Alpine's mortification (1811) was founded by Mrs M'Alpine, for the maintenance of poor men and aged women of the description mentioned in her will. The former get £10 a year, the latter £5. Black's bequest for domestic servants, founded by Dr James Black in 1834, has about 200 pensioners, who are faithful domestic servants settled in Glasgow or its neighbourhood who have been for ten years or upwards in one situation, and each of whom receives £2, 10s. per annum. The Robertson bequest, founded by Miss Robertson in 1844, affords pensions of £15 a year to each of ten decayed gentlewomen over 45 years of age, unmarried, and who have resided in Glasgow for at least ten years and pensions of £7, 10s. a year to each of ten female servants over 50 years of age, unmarried, and who have been seven years in one situation in Glasgow, but who, when elected, are out of service. The Ewing bequests

* The Glasgow United Young Men's Christian Association was instituted in 1824, and has Central, Southern, Eastern, Govan, and Partick sections, with over 200 branches and a membership of over 9000. There are a gymnasium, library, reading-rooms, and educational classes; and the central rooms are in Bothwell Street. The Young Women's Christian Association has a building in Bath Street.

were founded in 1860 by James Ewing of Strathleven, the total amount being £30,000, less legacy-duty, the income of which is to be divided—one-third among decayed Glasgow merchants, one-third in educating, training, and settling their sons in business, and the remaining one-third among their widows and daughters. It is under the management of the Merchants' House. The Buchanan Retreat near Bearsden—a picturesque red-stone building in the Venetian style, with accommodation for 16 inmates and staff—was built in 1883 under a bequest of about £40,000 from the Misses Buchanan of Bellfield, Ayrshire, for old men of the name of Buchanan, burghesses of Glasgow, who were in decayed circumstances; but as no applicants could be got who fulfilled the conditions of the Trust it remained empty till 1892, when, under a new scheme, beneficiaries were appointed who were either decayed or infirm burghesses of Glasgow, or who were men who had been twenty-five complete years resident in Glasgow, or who had been ten years in business in Glasgow for their own behoof, and who have a private income of not less than £15 nor more than £30 a year, and who are too old or infirm to earn a livelihood. Preference is given to those of the name of Buchanan or whose mother was so named. The provost and magistrates have been the governors since 1890. The Marshall Trust manages the income of a capital sum of £228,000 bequeathed by Mr William Marshall and his sister Janet, for the erection of an hospital or educational institute for children in Lanarkshire or Stirlingshire, who might be orphans or fatherless or whose parents had an income of less than £70 a year. Under the scheme, as fixed by the Educational Endowments (Scotland) Commission, the income of over £8000 a year is applied in paying for—(1) books for scholars in the elementary standards; (2) fees and books for children beyond the fifth standard in day schools; (3) 110 high school scholarships of £10 for two years; (4) fees in evening classes; (5) grants of £5 a year to orphans or fatherless or necessitous children; (6) industrial training grants of £5 a year for four years to former Trust scholars for evening classes; (7) 40 bursaries for higher education of £20 a year for four years; and (8) 20 University bursaries of £30 a year for five years. About 3000 children in Glasgow are benefited, 3200 in Lanarkshire, and 800 in Stirlingshire. Other bequests are noticed elsewhere.

Scientific and Literary Societies.—The Philosophical Society of Glasgow was instituted in 1802, for the advancement of the mathematical, physical, and natural sciences. It meets fortnightly from November to April, has a very fine scientific library, containing about 6000 volumes, and publishes proceedings. The Natural History Society of Glasgow was instituted in 1851, for the purpose of encouraging the pursuit of natural history in all its branches, and promoting the love of science by meetings for the exhibition of specimens, the reading of papers, and the arrangement of excursions. It meets once a month from September to April, and fortnightly during summer. The Glasgow Geological Society, founded in 1858 for the advancement of geological science by meetings for the reading of papers, the exhibition of specimens, and the arrangement of excursions, is one of the most hard-working societies in Scotland. It has a small museum and a fine library, and publishes valuable volumes of transactions. It meets once a month from October to April, and once a fortnight in April, May, and June. The Glasgow Archaeological Society was founded in 1856 for the encouragement of the study of archaeology, particularly in Glasgow and the West of Scotland. It meets once a month from November to April. The Institution of Engineers and Shipbuilders in Scotland was founded and incorporated to promote the advancement of science and practice in engineering and shipbuilding. It has a good library, and publishes transactions. It meets once a month from October to April. All these societies have their rooms and libraries jointly in a building in Bath Street. The Glasgow Eastern Botanical Society, instituted in 1876, meets in the Bridgeton Mechanics' Institute once a month. The Glas-

gow Art Club was founded in 1867 for the advancement of art in Glasgow and the West of Scotland, by means of life classes and an annual exhibition of the works of its members; and the St Mungo Art Society was instituted in 1874 to carry out the same object in the same way. The Glasgow Juridical Society was instituted in 1847 for the discussion of legal and cognate subjects, and the consideration of questions of juridical interest. Members must belong to the legal profession or be law students. The Glasgow Legal and Speculative Society was founded in 1852 for conducting debates on legal and speculative questions. There are also a Ruskin Society—for the promotion of the study of Mr Ruskin's works, and of 'such life and learning as may fitly and usefully abide in this country'—an Institute of Accountants and Actuaries, an Insurance and Actuarial Society, and an Institute of Architects. Among the miscellaneous societies may be mentioned the Royal Clyde Yacht Club, the distinguishing flags of which are 'blue burgee with red lion on yellow shield, surmounted by crown, and blue ensign;' the Royal Northern Yacht Club, distinguished by 'blue burgee with yellow crown and anchor, and blue ensign;' the Royal Western Yacht Club, 'blue burgee with yellow thistle on a red shield bordered with yellow, surmounted by Crown, and blue ensign;' The Clyde Corinthian Yacht Club, 'red burgee with white St George's cross and red lion rampant on a yellow shield, and a red ensign;' the Model Yacht Club; golf clubs, golf courses in the Alexandra and at Cathkin Braes Parks; various bowling, cricket, and football clubs, the Rambles round Glasgow Club, the Glasgow Chess Club, the Glasgow Draughts Association, the Trout Preservation Association, the Caledonian Apian Society, the Tonic Sol-Fa Choral Society, the Glasgow Choral Union, the Glasgow Amateur Orchestral Society, a Scottish Orchestra Company (for providing a resident orchestra), the Clyde Amateur Rowing Club, a number of trade associations, the Glasgow Agricultural Society, and the Maryhill Agricultural Society. Glasgow occupies a prominent position in football matters.

Volunteers.—Notices of the early Glasgow Volunteers have already been given in the historical section, where mention has been made of the two battalions of 600 men each raised during the Rebellion of 1745, and the regiment of 1000 men raised in 1775, and sent on active service during the American War of Independence. In 1794, during the spread of the revolutionary movement in France which culminated in the events of 1798, an Act of Parliament was passed empowering the raising of five companies of volunteers in Glasgow, and these were accordingly enrolled to the strength of 500 men, and named the Royal Glasgow Volunteers. The men maintained and clothed themselves, but were provided with arms by the government. After the war with France began three additional regiments were raised—a second regiment of Royal Glasgow Volunteers of 800 men formed into 10 companies, who were both maintained and armed by the government; the Royal Glasgow Volunteer Light Horse, of one troop of 60 rank and file, who maintained and armed themselves; and the Armed Association, of two companies. These were disbanded in 1802 at the conclusion of the peace of Amiens, but when the war again broke out in 1803 eight battalions of infantry and a squadron of cavalry were formed—the 1st Regiment of Glasgow Volunteers with 900 men; the 2d or Trades Battalion, 600 men; the 3rd or Highland Battalion, 700 men; the 4th or Sharpshooters Battalion, 700 men; the 5th or Grocers Battalion, 600 men; the 6th or Anderston Battalion, 900 men; 7th, the Armed Association, 300 men; and 8th, the Canal Volunteers (artillery with two field pieces), 300 men; while the cavalry were about 100 strong. These were, with other troops in the district to a total of about 7000 men, reviewed in grand state on the Green in 1804 by the commander-in-chief of the forces in Scotland, and created a great sensation in the city by firing off ten rounds of blank cartridge per man, the effect of which we are told was 'exceedingly impressive, and so great and terrible as to be sublime.' The

present volunteer movement originated about 1858, and Glasgow soon showed a zeal in no way inferior to what had been exhibited on former occasions; and when the volunteers were reviewed by the Prince of Wales in 1876 on the Green, the muster from Glasgow and the district was 6000 men. Since then the movement has become still more popular, and there are now in the city seven regiments of Infantry Volunteers—the 1st, 2d, 3rd, and 5th volunteer battalions of the Highland Light Infantry, authorised strengths 1205, 1005, 1205, and 1205 respectively; and the 1st, 3rd, and 4th volunteer battalions of the Cameronians (Scottish Rifles), authorised strengths, 1606, 1205, and 904 respectively—besides a regiment of Artillery Volunteers, authorised strength 1870; of Engineer Volunteers, strength 906; a division of Submarine Mining Engineers, strength 196; and two companies of the Volunteer Medical Staff Corps. Connected with them is the West of Scotland Tactical Society, instituted for the study and practice of tactics, the discussion of military subjects, and the promotion of social intercourse among officers of the auxiliary forces in the West of Scotland.

Publications, etc.—Letterpress printing was first introduced into Glasgow in 1638 by George Anderson, who came from Edinburgh, and who had there printed several books in the University in 1637-38. He came to Glasgow in the year of the famous General Assembly, and seems to have received a salary from the magistrates. One of the earliest, and probably the earliest, productions of the Glasgow press is *The protestation of the Generall Assemblie of the church of Scotland, and of the noblemen, barons, gentlemen, burrowes, ministers, and commons; subscribers of the covenant, lately renewed, made in the high kirk, and at the mercate crosse of Glasgow, the 28, and 29, of November, 1638. Printed at Glasgow by George Anderson in the yeare of grace, 1638.* Anderson died in or about 1648, and his heirs gave up the Glasgow business and returned to Edinburgh, where they printed from 1649 to 1652, after which the business was carried on by a son till 1656. In that year the Glasgow Town Council, anxious again to have a printing press in their midst, made a proposal to young Andrew Anderson that he should come to Glasgow, offering him at the same time the yearly subsidy of 100 merks that had formerly been paid to his father, and this offer was accepted. Anderson remained for a time, but he does not seem to have been kept very busy, or to have published much of importance, and in 1661 he returned to Edinburgh. In the same year Robert Sanders became the burgh printer, with an annual allowance of £40 Scots, in return for which the council printing was to be done without payment. In virtue of his appointment he used the city arms on many of his title pages; and he seems, in spite of the annoyance he received from his predecessor Anderson, to have done a good business, and published a large number of works. In 1666 he printed an edition of the New Testament, and in 1667 he began the issue of Glasgow almanacs. In 1671 he was engaged on another edition of the New Testament, when Anderson, who had been appointed the king's sole printer for Scotland, induced his men to desert him, and set up the claim to be the sole person in Scotland who was entitled to produce the New Testament. This led to an appeal to the Privy Council, who decided that any printer in Scotland was entitled to do what Sanders had done. A subsequent complaint by Anderson's heirs in 1680 against Sanders, to the effect that he had broken the privilege by selling bibles imported from Holland, and had reprinted several works in divinity, led to his being ordained to give up to them the books complained of; but this caused him to enter into negotiations for a purchase of a share in the royal patent, and thereafter he brought workmen and materials from Holland, and executed many books. He died about 1696, and was succeeded by his son Robert, who published a number of works. In 1718 type-making was introduced into Glasgow by James Duncan; but the types, which were used for the first edition of M'Ure, were cut by himself, and were rough and ill-shaped.

From the beginning of the 18th century up till about 1740 printing in Glasgow was at a low ebb, though there were still town's printers, who, however, do not seem to have been very good, for complaints were made that to get anything rightly printed the work had to be sent to Edinburgh. There was a printer to the University, but he seems to have been little better than his neighbours. About 1740 Robert Urie & Co. did some better work, their most noteworthy productions being an edition of the *Spectator* and a Greek New Testament; and the following year, 1741, saw the establishment, as a bookseller, of Robert Foulis, who, along with his brother Andrew, was to give Glasgow printing a character somewhat different from its former one, and to win for the firm the name of 'the Elzevirs of Scotland.' Their types were also made in Glasgow by Messrs Wilson & Bain. In 1743 Robert Foulis was appointed printer to the University, and under its patronage some of the finest productions of the Foulis press were issued. Of these we may notice *Demetrius Phalereus de Elocutione* (1743), the first Greek book printed in Glasgow, the so-called 'immaculate' edition of *Horace* (1744), and the folio editions of the *Iliad* and *Odyssey* (1756-58), the *Iliad* being considered one of the finest specimens of printing in existence. The brothers also founded a fine art academy, but they unfortunately did not prosper, for the academy was broken up in 1770, and in 1776 the insolvent estate was wound up by Robert Chapman, printer, and James Duncan, printer, both the brothers Foulis being then dead. Andrew left a son and namesake, who was also a printer, and who published, in 1788, a fine edition of the *Gentle Shepherd*, with aquatint engravings by David Allan. Among the printers of the latter part of the 18th century also was Dugald Graham the pedlar, whose rhyming narrative of the events that occurred during the Rebellion of 1745 is of some importance. From Graham's press came the Glasgow chap books, now so highly prized, of many of which he was himself the author. He abandoned printing in 1770 and became city bellman. During the present century printing has gone on thriving and increasing like other industries, and there are now over 200 printing firms within the city, exclusive of newspaper offices. The first Glasgow Directory was published in 1783. The population was classified into town council, ministers, numbering 18, professors, faculty of procurators, officers of excise, physicians, numbering 16, midwives, numbering 10, messengers-at-arms, numbering 11, and then merchants, manufacturers, grocers, vintners, lint-hecklers, hucksters, etc., all together. The sheriff-substitute lived in the Saltmarket, the town-clerk in the Gallowgate. It is a small volume, and the compiler offers many apologies for its imperfections. Even the second directory, published in 1790, was only a small crown 12mo of 82 pages, while the modern directory is a dense 8vo volume of over 1300 pages, with an appendix of over 240 pages.

The citizens seem to have become desirous of keeping pace with the events of the outer world as early as 1657, for we find that in that year the council appointed 'John Flying to wryt to his man quha lyes at London to send hom for the tounes nse weiklie ene diurnal,' and twenty years after a Colonel 'Walter Whytfoord' undertook to provide coffee for the lieges, and to supply newspapers as well; but it was not till 1715 that Glasgow could boast of a newspaper of its own. In the end of that year a paper called the *Glasgow Courant* was published retail at three halfpence, but wholesale at one penny; and an effort was made to get local news and a shipping list, by appealing to gentlemen in various parts to send news, and particularly at shipping ports of ships arriving and departing. At the fourth number the name was changed to the *West Country Intelligenc*. It was published on Tuesdays, Thursdays, and Saturdays, and was a small quarto twelve-page paper; but it does not seem to have succeeded, for it stopped after about 67 numbers had been published, and for a quarter of a century afterwards Glasgow was without a newspaper. In 1741 the *Glasgow Journal* appeared, edited by Andrew Stalker, but during the rebellion Mr Stalker's

courage failed, and he retired because he could not with safety publish to please the generality of his readers; but the paper was continued by Urie the printer, and did not become extinct till about 1846. The year 1745 witnessed the appearance of the second *Glasgow Courant*, in which advertisements made a considerable figure; the paper lived for only a very short time. The *Chronicle* was commenced in 1766, the *Mercury* in 1775, and the *Advertiser* in 1783. In 1801 the *Advertiser* had its name changed to the *Herald and Advertiser*, which a few years later was again changed to the *Herald*, and from 1805 to 1810 the proprietors also published the *Clyde Commercial Advertiser*. In 1807 a weekly called the *Caledonia* was established, and in 1808 it became a bi-weekly with the name of the *Western Star*. Several attempts were also made to establish other papers, but none of them was permanently successful, though the *Reformers' Gazette* had a lengthened existence. The *Glasgow Citizen* was established in 1842, and has still a large circulation, but has been, since 1864, broken up into two papers—the one an evening halfpenny paper, the *Evening Citizen*; the other a weekly literary penny paper, the *Weekly Citizen*. The *North British Daily Mail* (1847) was the first daily newspaper in Scotland; its principles are Radical. The *Evening Citizen* was the first Glasgow evening paper. The *Herald* became a daily paper of moderate Liberal opinions in 1859. The *Glasgow News* (Conservative), established in 1873, was in 1885 converted into the *Scottish News*, and finally ceased to exist in February, 1888. The old name, however, partly exists in connection with a second evening paper which, established in 1868 as the *Evening Star*, became in 1875 the *Evening News and Star*, and has been since 1888 the *Evening News*. A comic weekly called the *Bailie* was started in 1872, and still flourishes; a third evening paper, the *Evening Times*, belonging to the proprietors of the *Herald*, was started in 1876, and a fourth, the *Glasgow Echo* (Radical and Labour), in 1893, which gave place in 1895 to the *Daily Record*, a halfpenny morning paper.

The papers at present published in Glasgow are the *Glasgow Herald* (daily), *North British Daily Mail* (daily), *Evening Citizen* (daily afternoon), *Evening News* (daily afternoon), *Evening Times* (daily afternoon), *Daily Record* (daily), *Christian Citizen* (monthly), the *Christian Herald* (every Wednesday), the *Christian Leader* (every Thursday), the *Christian News* (every Saturday), the *Glasgow Weekly Herald* (every Friday), the *Glasgow Weekly Mail* (every Friday), the *Glasgow Weekly Citizen* (every Friday), the *Glasgow Observer* (every Saturday), the *Glasgow Examiner* (every Saturday), the *Labour Leader* (every Saturday), the *League Journal* (every Friday), the *Mercantile Advertiser and Shipping Gazette* (every Tuesday), the *Property Circular* (every Tuesday), *Quiz* (every Thursday), the *Bailie* (every Tuesday), the *Clyde Bill of Entry* (every Tuesday, Thursday, and Saturday), the *National Guardian* (every Wednesday), the *Scottish Referee* (Monday and Friday), *Scottish Sport* (Tuesday and Friday), *Scottish Cyclist* (Wednesday), the *Scottish Farmer* (Saturday), and the *Reformer* (Friday). The following, mostly monthlies, are also published in Glasgow:—The *Advertiser*, the *Amateur*, the *Celtic Monthly*, the *Children's Messenger*, the *Christian Scotsman*, the *Dew Drop*, the *Guide*, the *Good Templar*, the *Leather Trader*, the *Mercantile Age*, the *Sabbath School Magazine*, the *Scottish Law Review*, the *Scottish Sanitary Journal*, the *Reformed Presbyterian Witness*, besides *Murray's*, *Fraser's*, *Malcolm's*, *Stoddman's*, and the *A B C Time Tables*, and *Henderson's Conveyance Guide*. Quarterly is the *Evangelical Repository*, while the annual publications are the *Post Office Directory* and the *Glasgow Almanac*.

Educational Institutions—*The University*.—The University, the second in Scotland, was, as we have already seen, founded in 1450, and opened in the following year with a chancellor, rector, and masters and doctors in the four faculties. There were at first no buildings, but all the meetings were, by permission of the bishop, held in the crypt of the cathedral, and ultimately the teaching was transferred to a house belonging to the

parson of Luss, which stood on the S side of the Rottenrow near the High Street, and was afterwards known as 'the auld Pedagogy.' Though this building survived till the middle of the present century, the University did not long remain in it. Probably it became too small for the increasing number of students, for in 1458 a piece of land was rented on the E side of High Street for the erection of a new Pedagogy. The endowment was, however, so poor that the governing body could not provide money to pay for their accommodation, and this having been brought under the notice of the proprietor of the new site, James, first Lord Hamilton, he in 1459 made them a present of the ground—on which afterwards the old University buildings, on the site of the College Station, were erected—together with four acres of land in Dow Hill or Dove Hill, adjoining the Molendinar Burn, on condition that twice every day the regents and students should pray for Lord Hamilton's soul, and also that of his wife Euphemia; and that, if a chapel were built in the college, the regents and students should therein on their bended knees sing an ave to the Virgin, with a collect and remembrance for the same persons. No buildings probably were erected on this ground; but the existing houses having been adapted as well as possible for their new purpose, the University migrated thither in 1465. In 1475 the grounds were still farther enlarged by the addition of land on the N belonging to Sir Thomas Arthurlie, and bequeathed by him to the University. On the front portion of this, houses were afterwards erected for the professors. The Reformation almost ruined the struggling home of learning, for as it was, like all the universities of the time, chiefly supported by, and an instrument of, the Church, the students disappeared when the churchmen fled. In 1563 Queen Mary made over to some of the confiscated lands of the Church, being moved thereto, as the charter narrates, by the half-finished condition of the buildings, and the fact that all provision for the poor bursars and masters had ceased, so that the whole place had rather the appearance of the decay of a university than an established foundation. By this charter five bursaries were founded for poor youths, and the manse and 'kirk-room' of the Black Friars, with 13 acres of land in the Dove Hill and certain rents that had belonged to the friars, were granted for the maintenance of the masters. Notwithstanding this, however, the University had in 1571 only about a dozen students and an income of about £25 sterling, and in that year the magistrates, taking its state into pitiful consideration, granted it some of the church lands which they had received at the Reformation, a grant which was confirmed by Parliament. It does not seem to have been popular among the common people, for we find mention of a charge made against three Glasgow bailies named Colin Campbell, William Heygate, and Archibald Heygate, who were alleged to have been ringleaders of a mob that burst into the University and shed the blood of several of the students who successfully resisted their attempts to set the building on fire. In 1574 Andrew Melvil became principal, and tried to throw some new spirit into matters; but nothing could be done without money, so the Regent Morton, stirred up by him, in 1577 advised King James VI., then in his minority, to issue a new deed of erection, and to make a considerable grant in aid of the college revenue, consisting of the tithes, manse, glebe, and church lands of the rectory and vicarage of the parish of Govan. The new regulations following on the new constitution provided that the students were to use Latin as their ordinary language, and were to rise at five in the morning and be in bed at a quarter-past nine. They were allowed to play golf and to practise archery and dramatic representations, but not to play with cards or dice or at billiards, nor were they to bathe. Some buildings are said to have been erected in 1593, but nothing is known of them, and the old college buildings, entirely demolished to make way for the College station, were not erected till 1630. Meanwhile private individuals had been increasing the

funds of the authorities. In 1610 one of the regents, named Boyd, bequeathed 1000 merks to aid in the erection of buildings; and in 1617 a large bequest was also made by a citizen named Wilson for the same purpose, while Archbishop Law increased the revenues, and presented many books to the library. In 1626 Dr John Strang became principal, and by his exertions considerable funds were obtained in aid of the building fund. The subscriptions were mostly from the nobility and gentry in the W, and amounted to the sum—for those days a very large one—of £2000 sterling. There was a contribution of £200 promised by King Charles I., and, curiously enough the sum was paid by Oliver Cromwell in 1654, the Protector further granting £500 on his own behalf. The buildings were begun in 1632, and carried on as the funds permitted, work never being stopped altogether, though sometimes it proceeded but slowly. Some thought the structure was on too magnificent a scale, and, notwithstanding the extra money obtained from the grant by Cromwell of the revenues of the bishopric of Galloway, and a further sum of 200 merks yearly from the customs of the city, the governing body found themselves by-and-by over 15,000 merks (more than £1300) in debt. The old buildings were Jacobean in style, and before the Union Railway Company took possession they showed three quadrangular courts, the upper storeys being reached by staircases with massive stone balustrades. The front was 305 feet long; the grand archway was surmounted by a stone balcony supported on corbels, and the upper storey had dormer windows with carved pediments. Over the entrance were the royal arms of the time of Charles II. The first quadrangle was all old, and a stone staircase in one of the corners led up to a large panelled hall used for business meetings, and containing a few portraits. The second quadrangle was entered by an archway beneath the steeple, which was 148 feet high, and the buildings in it presented a somewhat incongruous mixture of ancient and modern. The steeple was not a very elegant structure, but some interest attached to the lightning conductor, which was erected in 1772 under the auspices of the famous Benjamin Franklin. The third quadrangle contained the library and one or two class-rooms, but the greater portion of it was merely separated from the college park by railings. Standing apart in it was the building containing the Hunterian Museum, a classical structure erected in 1804, and adorned in front with a hexastyle Doric portico. Besides these three quadrangles, there was at the N side, with a separate entrance from High Street, a fourth containing thirteen dwelling-houses for professors. The college park spread away to the E, with pleasant walks shaded with trees. It was used for the recreation of the students, and is the spot selected by Sir Walter Scott in *Rob Roy* as the scene of the duel between Francis and Rashleigh Osbaldistone. Of the buildings just mentioned there had been erected, between 1632 and 1660, the inner court, the steeple, three professors' houses—for the principal and the two divinity professors—and a portion of the W front, towards the roofing of which the town council contributed £2000 Scots. The number of students was considerable, and their intellectual wants were attended to by a principal, eight professors, and a librarian. The Restoration brought with it fresh troubles for Glasgow University, for the re-introduction of Episcopacy brought with it the loss of the revenues granted by Cromwell, and the debt contracted in the building operations proved such a heavy burden that three out of the eight professorships had to be abolished and the emoluments of the five that were left considerably reduced. From 1660 onwards the University continued to receive many benefactions, but most of them took the form of foundations of new bursaries, the most important being the foundation of the valuable Snell Exhibitions. This was in 1677, when John Snell of Uffeton, a Scotchman and an alumnus of Glasgow, bequeathed the funds arising from an estate in Warwickshire for the education of Glasgow students at Balliol College, Oxford,

and students still go from Glasgow to Oxford every year holding Snell Exhibitions. The pious founder is said to have been more anxious to encourage the spread of Episcopacy than the cause of learning, and to have thought that an Oxford education was an excellent thing for his purpose. The foundation is at present worth £133 a year to each exhibitor. In 1693 the University was, in common with all the other Scottish Universities, at length aided once more by a grant of £300 a year, given by Government from the confiscated bishops' rents, and from this time till now its progress has been one of uninterrupted improvement and success. In the beginning of the 18th century the teaching staff consisted of a principal and seven professors, while there were about 400 students; but by 1720 the number of professors had increased to twelve—the chair of Oriental Languages having been founded in 1709, that of Physic (a revival of a chair instituted in 1637, but long suppressed from want of revenue) in 1713, that of Civil Law and the Law of Scotland in 1713, that of Anatomy in 1718, and that of Ecclesiastical History in 1720. About 1720, steps were also taken for the erection of houses for the other professors in addition to those formerly mentioned. A lectureship on Chemistry was founded by the celebrated Dr Cullen in 1746, and the chair of Astronomy was founded in 1760, an observatory in connection with it being erected in the college garden about the year 1790. The last of the buildings on the old site were erected about 1812.

From the first foundation of the University down to the 18th century many of the students resided within the college, but the students increasing more rapidly than the accommodation, a number of them began, as early as the 15th century, to live outside. Among the subscriptions for the new buildings, at the beginning of the 17th century, some of the contributions had the condition attached that certain accommodation was to be provided for the use of the donor's family, and if none of them attended it was to be at the disposal of the faculty. Up till 1712 no charge seems to have been made for the rooms, but from that time onward a charge was made of from 4s. to 10s. a room, according to the situation. Dr Carlyle of Inveresk says in his *Autobiography* that when he attended the college in 1743 he furnished his room himself, and one of the college servants lit his fire and made his bed, while 'a maid from the landlady who furnished the room came once a fortnight with clean linens.' The beginning of the 19th century saw considerable additions again made to the teaching staff, no fewer than five new chairs, all endowed by the crown, being added between 1800 and 1820. These were the chair of Natural History, founded by George III. in 1807; that of Surgery, by the crown in 1815; that of Midwifery, by the crown in the same year; the lectureship in chemistry was erected into a professorship by the crown in 1817, and the chair of Botany was founded by the crown in 1818, while in 1820 the number of students had increased to nearly 1000. Between 1820 and 1840 four new chairs were again added—*Materia Medica* in 1831, *Institutes of Medicine* and *Forensic Medicine* both in 1839, and *Civil Engineering* in 1840. The old buildings were in 1860 condemned by the Executive University Commission appointed in 1858, and it became necessary to look out for a site for a new erection. The University authorities had long recognised the unsuitable nature of the buildings, and been desirous of a change, and in 1846 they had even obtained an Act of Parliament authorising their sale and the erection of a new university on a site at Woodlands, but nothing had been done. Stirred now to fresh efforts, they in 1864 sold their old premises to the City of Glasgow Union Railway Company, who in 1870-85 erected the College station on the site, the old College Green being now covered by a network of rails. In the same year there were purchased for the University, on the W bank of the Kelvin, the lands of Gilmorehill and Donaldshill, and the lands of Clayslaps—the latter being for the erection of a hospital—for a total sum of £98,400—

there being also an understanding, since carried out, that part of Clayslaps should be acquired by the corporation to be added to Kelvingrove Park. To pay for this and to erect their buildings, the University had a total sum of £138,900, consisting of £100,000 received from the railway company for the old premises, £17,500 the principal sum and interest obtained from the Monkland Junction Company in 1846 for breach of bargain, and £21,400 promised by government on condition that a further sum of £24,000 be raised by public subscription for the erection of an hospital in connection with the University Medical School. With this sum it would have been possible to erect buildings, but 'of the plainest design and on a scale quite inadequate to provide for the future extension of the University,' so it was resolved to attempt something more, and the preparation of plans for a building on a very extensive scale was entrusted to the late eminent architect, Sir George Gilbert Scott, who produced a magnificent design in the domestic Early English style with Scoto-Flemish features of later date. The carrying out of these would, it was estimated, cost nearly half a million of money, and so well was the demand for the extra sum required responded to, that before the end of 1868 £130,000 had been raised by public subscription—a sum since increased to £256,429 for the University buildings and Western Infirmary, including £45,000 from the Marquis of Bute, while the government grant had been increased to £120,000. Meanwhile operations had been begun on 2 June 1866, when Professor Allen Thomson, chairman of the building committee, cut the first turf. The foundation-stone was laid on 8 Oct. 1868 by the Prince of Wales amid great rejoicings, and by the beginning of the winter session of 1870-71 portions of the buildings were ready for occupation. They were formally opened on 7 Nov. 1870. They advanced still further towards completion in 1871 and 1872; and in 1877 the Marquis of Bute offered to build at his own expense and present to the University the handsome common hall (since known as the Bute Hall) in Sir George Gilbert Scott's design. This work, which cost nearly £60,000, was accomplished in 1878-84, during which period also the Randolph Hall and Staircase to the N was added at the expense (£40,000) of Mr Charles Randolph, the eminent shipbuilder. In 1885 Sir William Pearce, shipbuilder, offered to present to the University authorities, at a cost of nearly £5000, the main entrance and part of the front of the Old College (which was then being removed to make way for the new College Street Station of the North British Railway Company), and this has now been re-erected at the chief entrance to the University grounds, and forms an interesting link between the old college and the new. In 1885 a gift of £5000 was made by Dr M'Intyre of Odiham, Hampshire, an alumnus of the University, for the purpose of erecting a Students' Union—a centre of corporate and social life among the undergraduates. This was erected in 1886-90, and opened in the latter year, an endowment fund having been secured by means of a bazaar held in 1889, the free proceeds of which amounted to £12,250. The building, which is a plain example of Domestic Gothic, contains a debating hall, dining-room, &c., and stands at the NW entrance to the grounds. It was considerably enlarged in 1893. In 1886 a bequest of £5000, made by Mr Andrew Cunninghame, deputy town clerk, added to a similar benefaction of £1000 from Mr James Marshall, enabled the spire of the great central tower to be undertaken and finished.

The buildings, which have a magnificent and commanding position, form an imposing rectangular pile, 532 feet in length from E to W, and 295 feet in breadth from N to S. The Bute Hall, running across the centre of the rectangle from N to S, divides the inner open space into two quadrangles, of which the eastern is entirely surrounded by buildings, but the western has the W side clear, and opens on to a grass plot, round the N, S, and W sides of which are residences for the professors known as college professors, *i.e.*, all those holding chairs founded before 1800. These are in a

style harmonising with the University buildings. The main front is to the S, and has a symmetrical outline. In the centre is a grand tower 150 feet high, topped by a spire of open stone work, which brings the total height to 278 feet. The wings, extending from this on both sides, terminate to the E and W in square towers. The corner towers are four storeys high, the rest of the front is three storeys. In the base of the centre tower, which rises to a height of six storeys, is the main entrance, with a deeply moulded Gothic arch, leading to a richly groined vestibule; and two minor entrances of similar design, leading to the eastern and western quadrangles respectively, are midway between the central and side towers. Over the central arch the front of the tower is broken by fine windows and balconies, and at the corners of the top are round turrets supported on corbelling and surmounted by small spires. The eastern elevation is plainer. The northern elevation, towards University Avenue, has its long many-windowed outline broken by a projecting portion, with a beautiful semicircular bay, and contains two great sections for respectively the University Library and the Hunterian Museum, each measuring 129 feet in length, 60 in breadth, and 100 in height. The Bute Hall extends from the rear of the centre of the S elevation to the front of the centre of the N block, and has a basement storey of cloisters with groined roof. Above is the hall proper, 115 feet long by 70 wide and 62 high, with a high-pitched roof.

The University Library was founded in the 15th century, and contains an extensive and valuable collection of books now amounting to about 140,000 volumes, and it is constantly being increased by donations and by books purchased with the allowance of £707 per annum as compensation for the loss of Stationers' Hall privilege. Among the contents may be noted a MS. paraphrase of the Bible by Zachary Boyd. The Hunterian Museum passed into the possession of the Glasgow University in 1783. It was the bequest of Dr William Hunter, an alumnus of Glasgow, who had acquired great celebrity and a large practice in London, and who, at his death in 1783, bequeathed his magnificent anatomical and general collection to his *alma mater*. The first building for it at the old University was erected in 1804, and it was opened in 1808. The collection was even then valued at £65,000, and now it is worth more than double that sum. The library, of 12,000 volumes, contains many rare and valuable books and manuscripts, including an illuminated MS. Psalter of the 12th century, a MS. of Boethius of the 14th century, MSS. of a breviary, of ten books of Livy, and of a French translation of Boccaccio of the 15th century. The series of coins and medals is almost unrivalled, and there are pictures by Murillo, Guido, Rembrandt, Rubens, Kneller, Correggio, Salvator Rosa, Sir Joshua Reynolds, Raeburn, and other artists of lesser note, as well as good engravings by Strange and others. There is a noteworthy collection of Roman altars and legionary tablets. The cabinet of medals may be consulted on previous notice being given, and the rest of the collection is open to visitors from 11 to 3 o'clock in winter, and from 11 to 4 o'clock in summer, at a charge of 6d.

Previous to the Universities Act of 1858 the University had two governing bodies, viz.:—(1.) The *Senatus*, which consisted of the rector, the dean, the principal, and the whole of the professors, who conferred degrees and managed the affairs of the library, etc.; (2) the *Faculty*, which consisted of the principal and the college professors, *i.e.*, all the professors whose chairs were founded before the 19th century. The faculty administered the funds; elected occupants to the eight chairs, whose patronage was vested in the college; presented a minister to the parish of Govan; and made appointments to certain bursaries. Besides these there was a *Comitia*—consisting of the rector, dean, principal, professors, and matriculated students of the University—which met to elect and admit the rector, to hear the inaugural addresses of the principals and professors, and to promulgate the laws of the University; and a court

called the *Jurisdictio Ordinaria*, consisting of the principal, the professors of Greek, Latin, logic, ethics, and physics, and the gowned students, which met for the purpose of exercising discipline. By the Act of 1858 the distinction between the Senate and the Faculty was abolished, and the University Court and the General Council instituted. Further changes were made by the Universities Act of 1889, when a Universities Committee of the Privy Council was instituted, and an executive commission created with full power to alter and modify the whole Scottish University system. The University Court consists of the rector, the principal, the lord provost of Glasgow for the time being, and assessors appointed by the chancellor, rector, town council, general council, and *senatus academicus*. In it is vested all the University property and patronage, and it acts as a court of appeal and supervision for the *senatus*. The General Council consists of the chancellor, the members of the University Court, the professors, and all graduates of the University who have been registered; and since 1881 this registration has been compulsory. The officials of the University are the chancellor (appointed for life by the General Council), the rector (appointed for three years by the matriculated students), the principal, and the professors of the four faculties of arts, divinity, law, and medicine. The professorships, lectureships, etc., with the dates of their foundation, are: logic and rhetoric, 1577; moral philosophy, 1577; natural philosophy, 1577; Greek, 1581; humanity, previous to 1637; mathematics, revived in 1691; practical astronomy, 1760; civil engineering and mechanics, 1840; English language and literature, 1861; Arnott and Thomson demonstratorship in experimental physics, 1875; Young assistantship in engineering, 1876; naval architecture and marine engineering, 1883; Gifford lectureship on natural theology, 1887; lectureship on political economy, 1892; history, 1894; divinity, 1640; oriental languages, 1709; ecclesiastical history, 1716; Biblical criticism, 1861; law, 1718; conveyancing, 1861; lectureship on public law, 1878; lectureship on constitutional law and history, 1878; lectureship on civil law; lectureship on mercantile law; lectureship on education; practice of medicine, 1637; suppressed, but revived in 1713; anatomy, 1713; natural history, 1807; surgery, 1815; midwifery, 1815; chemistry, 1817; botany, 1818; materia medica, 1831; institutes of medicine, 1839; medical jurisprudence, 1839; clinical surgery, 1874; clinical medicine, 1874; pathology, 1894; lectureship on insanity, 1880; Waltonian lectureship on diseases of the eye, 1823; lectureship on diseases of throat and nose; lectureship on diseases of ear; lectureship on physics to medical students; Honyman Gillespie lectureship, 1876; Muirhead demonstratorship in physiology, 1876; William Baxter demonstratorship in geology; and lectureships on the French and German languages. The patronage of the chairs of practical astronomy, civil engineering and mechanics, English language and literature, ecclesiastical history, Biblical criticism, law, practice of medicine, anatomy, natural history, surgery, midwifery, chemistry, botany, materia medica, institutes of medicine, and medical jurisprudence, is vested in the Crown; that of humanity, Greek, logic, moral philosophy, natural philosophy, mathematics, divinity, oriental languages, clinical surgery, and clinical medicine in the University Court; and that of conveyancing in the dean and council of the Faculty of Procurators. The income of the University is derived (1) from tithes, arising from grants by James, Archbishop of Glasgow in 1557; by James VI. in 1577 and 1618; by Charles I. in 1630; by Charles II. in 1664 and 1670; (2) from feu-duties, etc., of lands granted by James, Lord Hamilton, in 1459; William and Thomas Arthurlie, 1466; Queen Mary, 1563; of the lands, etc., of the Friars Preachers granted by Queen Mary in 1566 to the town for pious uses, and conveyed by the town, under Act of Scottish parliament, in 1572 to the College; and from some other bequests of old date; (3) interest on investment of the surplus rents of the Archbishopric of Glasgow from 1694 to 1839; (The lease of the archbishopric was first granted by William III. in 1690 for

nineteen years, for payment of the then debts of the University and other purposes, and was renewed by successive rulers till 1825, when £100 per annum from this source was added to the salary of the Regius professor of botany: from 1825 till 1839 £800 per annum was still allowed for general purposes, but then ceased, though in 1841 it was applied to the provision of salaries for some of the Crown chairs; (4) from the interest of investments of balances from year to year in favour of the University; and (5) share in the Treasury Grant.

Formerly each professor received his own class-fees, but the University Commission proposed in 1893 that in future all these shall be paid into a general Fee Fund, from which the occupants of the chairs for the time being shall receive the sum necessary to bring their incomes up to certain fixed amounts. The sums (the first figures representing the normal, and those in brackets the minimum salary) thus assigned will be— for the principal, £1100 and an official residence; the professor of natural philosophy, £1000 (£700) and an official residence; logic and rhetoric, £800 (£600) and an official residence; moral philosophy, £800 (£600) and an official residence; Greek, humanity, mathematics, £1000 (£700) each with official residences; Hebrew and Oriental languages, £500 (£400); astronomy, £600 (£500) and an official residence; engineering, £800 (£600); English language and literature, £900 (£700); naval architecture, £700 (£500); history, £900 (£700); law, £700 (£500) and an official residence; conveyancing, £600 (£400); chemistry, physiology, and pathology, £1200 (£800) each; anatomy, £1100 (£700) and an official residence; natural history and botany, £800 (£600) each; medicine, £600 (£500) and an official residence; surgery, midwifery, *materia medica*, and medical jurisprudence, £600 (£500) each. Separate provision is made, where necessary, for the salaries of assistants and for class expenses. The professors of divinity, ecclesiastical history, and Biblical criticism receive respectively about £750, £600, and £700 a year.

Connected with the University there are bursaries and fellowships worth about £13,000 per annum, of which £780 is shared with the other Scottish Universities, and £800 belongs to the Snell Exhibitions at Oxford; of the rest £2800 per annum go for 40 fellowships or scholarships, ranging from £10 to £180 a year; while in connection with the Arts classes there are 251 bursaries worth about £6200, and ranging from £6, 13s. 4d. to £45; with divinity, 33 bursaries, worth £846, and ranging from £11 to £42; with law, 4 bursaries, worth £25 and £18; with medicine, 25 bursaries, ranging from £16 to £42; with any faculty, 31, worth £758, and ranging from £5 to £80; with arts and divinity, 21, worth £492, and ranging from £9 to £40; with arts or divinity, one bursary of £12; with arts, or law, or medicine, 2 bursaries of £14 each; with divinity, law, or medicine, 4, ranging from £11 to £25. There are also 36 important prizes of books, gold medals, or sums of money, ranging from £5 to £38. The winter session begins in the middle of October, and ends in the middle of April; the summer session begins towards the end of April, and ends near the close of July. The students are divided into togati and non-togati, the former—attending the classes of logic, Greek, moral philosophy, natural philosophy, and humanity—wearing a scarlet gown, while the others do not. The Students' Representative Council is elected to promote social and academic unity among the students, and to form a recognised means of communication between the students and the University authorities. The matriculated students in arts, divinity, law, and medicine have in recent years exceeded two thousand in number. An interesting custom is the election by the students of a Lord Rector, for which honorary position a distinguished statesman is generally selected, though sometimes eminence in literature or science is more suitably considered. For the election the students are divided into four groups or nations, according to their places of birth. The *natio Gtottianna* consists of all matriculated students born within the county of Lanark; the *natio Transforthana*

consists of all matriculated students born within any of the counties of Orkney and Shetland, Caithness, Sutherland, Ross and Cromarty, Inverness, Nairn, Moray, Banff, Aberdeen, Perth, Forfar, Kincardine, Clackmannan, Fife, Kinross, Argyll, Stirling, and Dumbarton; the *natio Rothseiana* consists of all matriculated students born within the counties of Bute, Renfrew, and Ayr; and the *natio Loudoniana* consists of all matriculated students not included in any of the other nations. The practical medical instruction is given mostly in the Western Infirmary. The list of graduates in 1895-96 gave the following results:—In arts 69 took the degree of M.A., and 14 the degree of bachelor of science (B.Sc.); in divinity 11 took the degree of bachelor of divinity (B.D.); in law 12 took the degree of bachelor of laws (LL.B.), and 11 the degree of bachelor of law (B.L.); in medicine 27 took the degree of doctor of medicine (M.D.), 123 the double degree of bachelor of medicine and master of surgery (M.B. and C.M.); while 3 received the certificate in engineering science. The General Council meets twice a year, on the last Wednesday of October and the first Wednesday of April, and considers all questions affecting the well-being and prosperity of the University, and from time to time makes representations on these subjects to the University Court. Under the Reform Act of 1867 Glasgow University unites with Aberdeen in returning a member to serve in parliament, the electorate consisting of the members of General Council.

There is an excellent gymnasium a little to the W of the main building, built in 1872 at a cost of £2500, raised by public subscription. There are the usual students' societies. Among the distinguished men who have held Snell Exhibitions have been Adam Smith, Sir William Hamilton, J. G. Lockhart, Archbishop Tait, and Lord President Inglis; and among the distinguished men who have either studied or taught in the University have been Bishop Elphinstone, John Major, Spottiswoode, George Buchanau, Andrew Melvil, James Melvil, Robert Boyd, John Cameron, Zachary Boyd, Robert Baillie, James Dalrymple, the first Viscount Stair, Bishop Gilbert Burnet, Bishop John Douglas, Dr Robert Simpson, the historian Wodrow, Francis Hutchison, Dr William Hunter, Dr Thomas Reid, Dr William Cullen, Dr Joseph Black, Dr Matthew Baillie, Professor John Millar, Professor Young, Professor Wilson, Lord Jeffrey, Sir William Hooker, Smith of Jordanhill, Professor Anderson, Professor Jardine, Sir Daniel Sandford, Dr Lushington, Professor Macquorn Rankine, Professor Allen Thomson, and Professor Lord Lister.

The Women's department of the University is at *Queen Margaret's College*, to the E of the Botanic Gardens. This institution, the outcome of the efforts of the Glasgow Association for the Higher Education of Women, had buildings* provided for it in 1884 through the munificence of Mrs. John Elder (the widow of the eminent shipbuilder—see GOVAN), and was, in 1893, transferred to the University Court, on condition that the buildings, grounds, and endowments should be devoted to the establishment and maintenance of University classes for women exclusively. The offer was accepted under an Ordinance of the University Commissioners, dated Feb. 1892, by which the Scottish University Courts were empowered to make provision within the Universities for the instruction of women, either by admitting them to the ordinary classes, or by instituting separate classes for their instruction. In Arts there are lectures on logic and metaphysics, moral philosophy, political economy, natural philosophy, English language and literature, French language and literature, German language and literature, Latin and Greek, and mathematics. In the medical school, which dates from 1889, there are lectures on anatomy, chemistry, *materia medica*, physi-

* The building selected was formerly known as North Park House, and was built by Mr John Bell for the housing of his extensive art collection. Mr Bell unfortunately died before he had carried out his intention of bequeathing both house and collection to the citizens.

ology, medicine, surgery, obstetrics, pathology, zoology, botany, and diseases of the eye. The managers of the Royal Infirmary have reserved 110 beds there for the clinical instruction of women only, and clinics are also given at the Maternity and Sick Children's Hospitals. The college was in 1888 honoured by a visit from the Queen as an evidence of her interest in all schemes to further the higher education of women.

The University has also organised an *Extension Scheme* for giving, by means of local lectures and classes, the advantages of university education to those whose circumstances do not permit their attending a university. Specially intended to meet the wants of ladies, of clerks and others engaged in business, and of artisans of all classes, the scheme is under the management of a board consisting of members of seate and a large number of ladies and gentlemen interested in education.

The Observatory.—The observatory first sprang from a bequest to the University in 1757, of a number of astronomical instruments, and in 1760 George II. founded the chair of practical astronomy, the professor of which was also to be the observer in the University of Glasgow; and the first observatory was erected in College Gardens. In 1808 a society, called the Glasgow Society for Promoting Astronomical Science, was formed and incorporated by seal of cause from the magistrates, and in connection with it an observatory was built on Garnet Hill. It had a revolving roof, and contained a sidereal clock, an azimuth instrument, a large mural circle by Troughton, and a 14-foot Herschelian telescope, while a similar instrument, only, however, 10 feet long, stood on the terrace in front. Both the old observatories found their localities getting too much built up and involved in smoke, and a new observatory was erected on an eminence in Downhill, about $\frac{1}{2}$ mile to the NW of the new University buildings and immediately behind the curve of Victoria Crescent. It is an excellent building, and includes a residence for the professor of astronomy. The principal instruments are—a meridian circle of 3 feet 6 inches diameter by Ertel of Munich, and an equatorially-mounted refractor of 9 inches aperture and 13 feet focal length, made by Cooke of York. The latter instrument was presented by a few private gentlemen of Glasgow.

Anderson's College Medical School, &c.—Anderson's College, an institution for the promotion of knowledge, and particularly of scientific knowledge, was founded in terms of a bequest by Dr John Anderson, at one time professor of natural philosophy in the University of Glasgow. Dr Anderson was a son of the minister of Roseneath, and was educated at Stirling and Glasgow. He was appointed professor of Oriental languages in 1756, and this chair he in 1760 exchanged for the more congenial one of natural philosophy. In 1786 he published his *Institutes of Physics*, which was so popular that it went through five editions in the space of ten years. He also published a number of articles on natural science, antiquities, and military art; and in 1790 he invented a gun, the recoil of which was deadened or stopped by air stored in its carriage. The British government was not alive to its merits, and in 1791 he went to Paris and presented it to the National Convention, who accepted it, and ordered it to be hung up in their hall, with the inscription, 'The gift of science to liberty.' A posthumous work on the *Roman Antiquities between the Forth and Clyde*, gave an account of the valuable collection of Roman altars and legionary stones made by him, and now in the Hunterian Museum. During the time Dr Anderson was professor of natural philosophy he visited many of the workshops about the city, and seeing that a knowledge of the principles of natural philosophy would be invaluable to mechanics, he established a class for popular lectures, which he continued all the remainder of his life, every Tuesday and Thursday during his winter session, and, on his death in 1796, it was found that he had bequeathed nearly all his property 'to the public for the good of mankind and the improvement of science, in an institution to be denominated "Anderson's University,"

and to be managed by eighty-one trustees.' He named the first trustees in his will, and divided them into nine classes—viz., tradesmen, agriculturists, artists, manufacturers or merchants, mediciners, lawyers, divines, natural philosophers, and kinsmen. Dr Anderson's original scheme embraced the four faculties of arts, medicine, law, and divinity, each with nine professors, and an elementary school besides; but the funds bequeathed—only £1000, inclusive of library and collection—were quite inadequate for the purpose, though, by means of contributions from many citizens of Glasgow and other friends of science, his object has now been gained. The institution was incorporated by seal of cause from the magistrates in 1796, and began with a single course of lectures on natural philosophy and chemistry, delivered by Dr Thomas Garnett, the well-known author of the *Tour Through the Highlands*. In 1798 a professorship of mathematics and geography was added, and in 1799 Dr Garnett, having gone to London as the first professor in the Royal Institution, was succeeded by the eminent Dr Birkbeck, who in the following year instituted a class expressly for artisans—the first of the kind ever established and the forerunner of the Mechanics' Institutes now spread all over the country. The class was taught the first session gratuitously, and afterwards a very low fee was charged. The buildings were originally in John Street, but were very small and cramped, and in 1828 new premises in George Street—originally erected in 1782 as a grammar school—were obtained, and these are still occupied. They are the reverse of beautiful, and are now also becoming cramped and too small, but they have seen and are seeing much good and useful work. When it removed to George Street the institution took the name of Anderson's University, which, under an Act of Parliament obtained in 1877 for incorporation, etc., was changed to Anderson's College. In 1829 the resources of the institution were increased by a donation from the late James Yeats of a fifth part of the island of Shuna, which is worth about £40 a year. In 1870 the 'Young' chair of technical chemistry was founded; and in 1876, through the liberality of a few gentlemen in Glasgow, a chair of applied mechanics, with a suitable endowment, was founded in connection with the faculty of arts. A large addition was made to the funds in 1861 by Mr John Freeland, who bequeathed the institution £5000 for general purposes, and £7500 for the purpose of establishing popular lectures on chemistry, mechanical and experimental physics, and anatomy and physiology; and again, in 1866, when Mr William Euing bequeathed to it £6000 for general purposes, £3000 for the establishment of a lectureship of music, along with the whole of his musical library, and £1200 for the provision of a fire-proof building in which the books should be kept. The faculties of law and divinity have always remained in abeyance, but a medical school has been in existence since the closing years of the eighteenth century, when John Burns began to lecture on anatomy and surgery. These subjects were separated and a professor for each appointed in 1828, when chairs of midwifery, materia medica, and practice of medicine were also instituted. These were followed by medical jurisprudence in 1831, institutes of medicine in 1840, ophthalmic medicine and surgery in 1869, hygiene and public health in 1878, and aural surgery in 1879. The chair of botany dates from 1819, and lectureships on dental anatomy, surgery, and mechanics were established in 1879. Many of the most distinguished physicians and surgeons in Glasgow have been connected with it, and many of the medical practitioners trained in it have attained to fame, two names—those of Dr Livingstone and Sir B. W. Richardson—being particularly noteworthy. By an Order of Council issued in 1886, under a scheme prepared by the Commissioners under the Educational Endowments (Scotland) Act, the Arts faculty of the College was combined with other institutions to form the Glasgow and West of Scotland Technical College, while the Medical School became a separate institution, and was incorporated in 1887 as Anderson's College Medical School. The museum

collections were subsequently transferred to the Hunterian Museum in the University. For the medical school handsome new buildings were provided in Dumbarton Road, near the SW corner of the West End Park, close to the Western Infirmary, and there instruction is now given by professors of anatomy, chemistry, physics, zoology, botany, physiology, surgery, practice of medicine, materia medica, midwifery, medical jurisprudence, ophthalmic medicine, hygiene and public health, aural surgery, diseases of throat and nose, and mental diseases.

St Mungo's College took its rise, as has been already noticed, from the Royal Infirmary Medical School. The Royal Infirmary having, in consequence of the removal of the University and the opening of the Western Infirmary, been forsaken by students, had practically ceased, much to its detriment, to be a medical school, and the managers in 1875 took steps to remedy the evil by a supplementary charter which empowered them 'to afford facilities and accommodation to individual teachers for instructing students' in the branches of science usually comprehended in a medical education; but the classes so established in 1876 did not, through difficulties connected with graduation, prove so successful as was expected, and in 1889 the name of the school was changed to *St Mungo's College*, the promoters being incorporated under a special licence from the Board of Trade. The deed of constitution is wide, providing not only for the absorption and continuance of the Royal Infirmary Medical School, but also for the instruction of students in science, literature, art, law, and divinity. As a first instalment of the scheme, the governors have instituted a faculty of medicine calculated to meet modern needs as regards curriculum and to utilize to the full the clinical resources of the infirmary, and also a faculty of law of wider range than any hitherto attempted in Scotland. In medicine there are professors of anatomy, chemistry, physiology, zoology, materia medica, surgery, medicine, midwifery, medical jurisprudence, clinical surgery, clinical medicine, ophthalmology, and botany, and lecturers on pathology, operative surgery, gynaecology, dermatology, otology, diseases of the throat and nose, psychological medicine, hygiene, bacteriology, and surgical and medical diseases of children; in law there are classes of Roman, Scots, commercial, international, and constitutional law, conveyancing, evidence and law procedure, medical jurisprudence, and political economy. Of the five years of study necessary for a university degree, three years may be spent at Anderson's College Medical School or at *St Mungo's College*.

The Western Medical School is the extra-mural school in connection with the Western Infirmary. It has its premises in University Avenue in Hillhead, and has lecturers on chemistry, surgery, practice of medicine, public health, midwifery, and diseases of the throat and nose.

The Glasgow Veterinary College is in Buccleuch Street. It was founded in 1861, and was, under the Royal Sign Manual, incorporated with the Royal College of Veterinary Surgeons. The patrons are the Dukes of Argyll and Hamilton, the provost and magistrates of the city, the professors of the University, the Highland and Agricultural Society, etc. There are chairs of veterinary medicine and surgery, materia medica, anatomy, obstetrics, pathology, chemistry, physiology, and botany; and clinical instruction is given at the college.

The Glasgow and West of Scotland Technical College was established by an Order in Council dated November 1886, following a scheme under the Education Endowments (Scotland) Act, whereby the non-medical departments of Anderson's College, the Young chair of Technical Chemistry in connection with it, the College of Science and Arts, Allan Glen's Institution, and the Atkinson Institution were all combined. The early history of Anderson's College has been already given, and mention is made of Allan Glen's Institution in the section on Miscellaneous Public Schools, so that there remains here to be noticed the *College of Science and Arts* and the Atkinson Institution. The former had its origin in the Glasgow Mechanics' Institute, founded in

1822-23, and was incorporated by seal of cause. It had good buildings bought for it in North Hanover Street in 1831, but these were in 1859 purchased by the Edinburgh and Glasgow Railway Company for extension of their terminus, and new buildings were in 1860 erected for the Institute near the E end of Bath Street, between Renfield Street and West Nile Street. These, which cost about £4000, are rectangular in form, extend 50 feet along Bath Street and 96 feet backwards, and rise to a height of four storeys. They are very handsome, with finely proportioned pillars in front, and a statue of James Watt in the centre on the top. In 1879 the name was changed to the College of Science and Arts. When it was established it was meant to promote the culture of the artisan class; but the evening classes maintained by the School Board and other institutions having taken this field up, the literary classes were entirely discontinued, and the limited resources of the College concentrated, after 1879, on providing 'education in such branches of science as have an immediate application to the practical arts on which so large a section of the community is dependent, and also to some extent in the arts themselves.'

The Atkinson Institution was founded by Thomas Atkinson, bookseller in Glasgow, who bequeathed almost his whole means to trustees who were to allow the capital to accumulate till the annual income was at least £400, and then to apply the funds to the establishment of an institution for the instruction of artisans and members of the middle classes. In 1861 the surviving trustees obtained an Act of Parliament by which a fresh body of trustees was incorporated and provision made for the continued accumulation of the capital, and under the present scheme an annual sum of not less than £300 from the trust income is spent in providing Atkinson bursaries at the Technical College.

The College as now organised receives annual subsidies of not less than £800 from Hutchesons' Educational Trust, and of not less than £1400 from the City Educational Endowments Board. It now aims at providing a suitable education for those who wish to qualify themselves for following an industrial profession or trade, and for training teachers for technical schools. There are professors of natural philosophy, chemistry, engineering, mechanical engineering, technical chemistry, mathematics, applied mechanics, metallurgy, and agriculture, and lecturers on agricultural chemistry, physiology and hygiene, mathematics, theory of music, physiography, phonography, geology, architectural drawing, plumbing, building construction and architecture, botany, economic entomology, agricultural botany, naval architecture, mining, vocal music, civil engineering, and sanitation. Regular courses of instruction are given in day classes in civil engineering, mechanical engineering, electrical engineering, architecture, naval architecture, chemical engineering, metallurgy, mining and geology, agriculture, mathematics and physics, and chemistry; and in evening classes in mathematics and physics, chemistry, mechanical engineering, naval architecture, electrical engineering, architecture, building construction, mining, metallurgy, agriculture, chemical industries, textile industries, art industries, and commerce.

The Technical College of Glasgow originated in an influential meeting held in the Council Chambers in February 1872, at which a scheme was proposed for providing technical instruction in the theory and practice of the various great industries of the city. The instruction was to be given, as far as practicable, to men whose early scientific education had been neglected, and who were already engaged in the active duties of life. In 1876 the whole scheme had to be abandoned for want of funds, except a Weaving College, for which £3230 had been subscribed. This was afterwards erected in Well Street, Calton, with ten steam-power looms and two hand-looms. There is an instructor and several assistants, and instruction is given in plain and figured weaving, and in making working plans and drafts for the use of mounters, weavers, enterers, harness tyers, and designers. The students are made familiar with the

working of both hand and power looms, as well as with their construction; and they are also taught to sketch patterns, draw designs, and analyse woven fabrics. There are day classes on Mondays, Wednesdays, and Fridays, and evening classes on Mondays, Tuesdays, Thursdays, and Fridays.

The Free Church Theological College.—This building, which also includes the Free College Church, stands on the high ground to the E of Kelvingrove Park, with frontages to India Street and Lynedoch Street. The two form a solid pile—which has, however, a somewhat dull look—and were erected at different times down to 1862. The style is plain Italian, with a handsome and well-proportioned campanile at the W end, with a balustrade and pointed roof. The church fronts the N, and has an octostyle portico with two towers in miniature uniformity with that at the W end, but these are entirely spoiled by the ornamentation on the top. The platform near the top of the high campanile is accessible, and commands a magnificent bird's-eye view of the greater part of the city, but particularly to the W, where the eye passes over the suburbs to the open country beyond, along the basin of the Clyde. The college was instituted after the Disruption, for the purpose of preparing students in the West of Scotland for the Free Church ministry, and has a principal, and professors of apologetics and New Testament exegesis, divinity and church history, Hebrew and Old Testament exegesis, natural science, systematic theology, and evangelical theology. There are a considerable number of bursaries, varying from £10 to £30 per annum, and scholarships varying from £40 to £112 per annum. The session commences in November, and lasts for five months.

Normal Schools.—The Normal Institution in connection with the Church of Scotland was founded in 1827 for the purpose of training teachers, and is the parent institution of its kind in the kingdom. The building, which stands on the N side of New City Road at the Cowcaddens Street end, was erected in 1827 at a cost of £15,000. It has a principal front 128 feet long to the S, with wings running northward for 110 feet; in the centre is a tower rising 45 feet above the roof. The Students' Hall has lectureships on the principles of teaching, religious knowledge, mathematics and science, English, natural science and drawing, classics and history, pianoforte music, vocal music, needlework, and French, and a gymnastic master. The practising schools are carried on by a headmaster and a full staff, and the number of students varies between one and two hundred. A boarding-house for the accommodation of 70 female students was erected in 1874 not far from the school, at a cost of £1700.

The Normal Seminary in connection with the Free Church originated immediately after the Disruption, and has accommodation on the S side of Cowcaddens Street E of the Church of Scotland's institution. The building, which is in a mixed style of Tudor Gothic, was erected in 1846. There is a rector with lecturers on mathematics, history, and geography, a master of method, and a full staff. The numbers using the seminary are nearly the same as those in the Normal Institution.

The High School of Glasgow.—This institution, at one time known as the Grammar School, dates from the 12th century, and is descended from the Sang School, which has been already mentioned. Till 1782 the buildings were in Greyfriars' Wynd, but in that year the school was removed to buildings erected for it in George Street, and now occupied by the Technical College. It was again moved in 1819 to a site on the rising ground behind this college, between John Street and Montrose Street, a situation which was at that time both open and airy. It gradually got blocked in by houses, and after the management of it passed from the town council to the school board—under the Education Act of 1872, in which it was scheduled as one of the eight secondary schools for Scotland—the desirability of a fresh removal was pressed forward, and finally, in 1878, the school board acquired for the High

School the buildings in Elmbank Street up till that time occupied by the Glasgow Academy. These are plain Italian in style, two storeys high, and have over the doorway and adjoining windows four statues, representing Homer, Cicero, Galileo, and James Watt. An addition to the N was built in 1887. The staff consists of a rector, nine masters, and eighteen assistants. Connected with it is the High School Club, formed of old pupils desirous of promoting the interests of the school, especially by providing scholarships.

The Glasgow Academy was originally instituted in 1846, and when the directors in 1878 sold the old buildings in Elmbank Street to the school board, the Academy was moved to a new site to the N of the Great Western Road where it crosses the Kelvin. The new building is a handsome square block in the Italian style. It contains sixteen class-rooms, a rector's room, a masters' room, a large gymnasium, a lecture-room, a laboratory, a music-room, and a dining-room, besides a covered hall with compartments for cloak and cap rooms. The school is worthy of notice for its internal arrangement, all the class-rooms opening off galleries communicating with one another by corner staircases, and looking out on a large central well, lit from the roof. Including 5 acres of ground, all laid out as playground, it cost about £30,000. The staff consists of a rector, eight masters, assistant masters, and lady teachers for the initiatory departments and for music. It belongs to a limited liability company. In connection with it is the Academic Club. The *Kelvinside Academy*, farther W, dating from 1877, is a similar institution, and there are a number of other high-class schools in different parts of the city.

Hutchesons' Hospital was founded in 1639-41 by two brothers, George and Thomas Hutcheson, who were notaries and writers in Glasgow in the early part of the 17th century. George died in 1639, and bequeathed a site and a sum of money for founding an hospital for aged citizens; while Thomas gave and bequeathed further sums for the same purpose, and also for educating poor boys. The whole value of the original bequests amounted to £3817, 1s. 8d., but so judiciously has this been nursed and added to by other benefactors that the clear assets are now worth nearly half a million. The original building, of which the foundation was laid by Thomas Hutcheson in 1640, was on the N side of the Trongate, at the foot of Hutcheson Street, and had to be taken down to allow that thoroughfare to be formed. Drawings of it that have been preserved show a plain Jacobean two-storey building, with a clock spire, according to M'Ure, 100 feet high. The frontage had an extent of 70 feet, with the principal entrance in the centre. There was a wing at the back, and accommodation for 12 old men and 12 boys, and a school where the boys were taught. The 12 old men used to go together to the church, and sit together in a 'convenient easie seat.' When the old buildings were removed in 1802, new ones were begun at the corner of Ingram Street and John Street, and finished in 1805; and here is still the building known distinctively as Hutchesons' Hospital. It has a rusticated basement and a Corinthian superstructure, surmounted by an octagonal spire 156 feet high, and in niches at the sides of the Ingram Street front are quaint statues of the two brothers. It is now occupied by the offices of the various Glasgow Educational Endowment Trusts. The funds are designed for the aid of citizens of Glasgow, or of persons who have engaged in trade there on their own account with credit and reputation, but who have, by misfortune, fallen into reduced circumstances, and also for the aid of the wives and daughters of such, preference being given *ceteris paribus* to persons enrolled as burgesses of Glasgow previous to 13 Jan. 1871. Applicants must be 50 years of age, but widows with two or more children are eligible at 40. There are over 100 male and nearly 800 female pensioners. The charity was greatly widened by an Act of Parliament obtained by the governors in 1872, by which the governing body was enlarged, so that it now consists of the Lord Provost, Magistrates,

and Council, the ministers of the ten city parishes, three members elected by the Merchants' House, three by the Trades' House, and six ministers elected by the patrons from the ministers in Glasgow other than those of the Established Church, and not more than two from any denomination. Powers were then conferred on the directors to take certain steps for the promotion of secondary education, and under these Hutchesons' Boys' Grammar School in Hutchesontown and Girls' Grammar School in Gorbals were erected and organised. Under a subsequent scheme prepared by the Education Endowments (Scotland) Commission, it was settled that of the net revenue, which is about £16,000, three-fifths should be set aside for pensions and two-fifths for educational purposes, while subsidies of £300 a year and £100 a year were granted to the Technical College and School of Art respectively. The educational portion of the income is, under the management of Hutchesons' Educational Trust, applied to the maintenance of the higher-class schools mentioned, the education of foundationers (who are the children of those who might be themselves qualified as pensioners), and to free scholarships, school bursaries, university and technical college bursaries, and higher education bursaries for girls. Smaller modifications (Blair's, Baxter's, Scott's, Hood's, and White's) in the hands of the trust have an income of nearly £1000 a year, which is applied in a similar way.

Board Schools.—The Burgh School Board consists of 15 members, and was constituted in 1872 by the Education Act passed in that year. When the first board came into office they found that the children of school age within the limits of their district numbered 87,294, while in 1873 to meet this there was school accommodation for only 57,290 scholars (31,000 in inspected schools), while the school attendance was only 52,000, leaving 35,000 children of school age unaccounted for. The school accommodation in 164 schools for 46,749 scholars was good, in 36 for 7664 scholars indifferent, and in 25 for 2306 it was bad. The board decided that 41 schools with accommodation for 7300 pupils should be abandoned, and this left aggregate accommodation for 49,919, which left a deficiency of over 34,000. To meet this the board acquired nine permanent day schools in Anderston, Bridgeton, Buchan Street, Dobbie's Loan, Finnieston, Hozier Street, Old Wynd, Rose Street, and St Rollox, and opened temporary schools in various places till 30 schools with accommodation for 22,000 scholars should be erected. Such has, however, been the amount of progress in educational matters, and the increased demands of the education department, that since that time they have again abandoned as unsuitable schools with accommodation for more pupils than those which they at that time proposed to build. As will be seen from the adjoining table the total accommodation provided in the 67 board schools was in 1895 over 66,000, and in the same year other schools within the board district brought the total number of schools up to 114 and of available places up to 94,256, with 90,269 on the roll and 78,216 in average attendance, as against 228 schools with 57,290 places, 52,644 on the roll, and 42,655 in average attendance at the passing of the Education Act in 1873. Besides the grants given above, the sum of over £3000 was also received in 1892 from the Science and Art Department. Needlework is taught in all the schools, cookery in most, and laundry work in six, while in 1892 there were evening classes in 24 schools, attended by over 10,000 pupils, and earning grants of over £3500. The staff in 1892 numbered 1517, of whom 68 were head-masters, 45 second masters, 219 assistant masters, 418 assistant mistresses, 15 university trained mistresses, 53 special teachers of cookery, music, shorthand, etc., and the rest ex-pupil teachers, pupil teachers, and monitors. The salaries of head-masters vary from £200 to £600 a year, of second masters from £110 to £185, of assistant masters from £65 to £150, of assistant mistresses from £35 to £120, the total of salaries in the year noted being £93,726. The income in 1891-92 was £204,231, of which £96,916 was derived from grants in relief of

fees and grants from the Education and from the Science and Art Departments, £85,429 from rates, £6319 from evening schools, and about £7973 from fees. The cost of the day schools in the same year was £131,070, of the evening schools £7662, and there was spent on office salaries and expenses £9921, and interest and repayment of loans £50,127. The following are the schools under the board in 1894-95, with the accommodation, and the average attendances and grants for 1894-95:—

	School.	Accommodation.	Average Attendance.	Grant.
1	Ahbotsford,	1826	1000	£1104 0 0
2	Adelphi Terrace,	597	462	568 15 0

67	Woodside,	1035	870	1125 9 1

Of the schools erected by the board the cost per unit of accommodation has varied from over £8 to over £23, and has averaged over £14. All the board schools are at least two storeys in height, and are mostly built on the square principle with the stairs in the centre, the school-rooms and class-rooms running off to the right and left. They are all mixed schools, but have the separate entrances, etc., for boys and girls prescribed in the Education Department's rules. Inside, the boys and girls form separate subdivisions of the classes. The board meets on the second Monday of each month. The school-board district is coterminous with the parlia-

mentary and not the municipal boundary, so that many of the schools now within the city are still under the care of the neighbouring boards in whose charge they were prior to the Extension Act of 1891.

Miscellaneous Public Schools and Educational Trusts.—A number of what were formerly miscellaneous public schools are now, under schemes prepared by the Education Endowments (Scotland) Commission, managed by the *Glasgow City Educational Endowments Board* and the *Glasgow General Educational Endowments Board*. Under the charge of the former are the funds of Anderson's, Murdoch's, Hood's, Maxwell's, and Macfarlane's schools, and Bell's, Coulter's, the Scotstarvit, Alexander's, M'Grigor's, and M'Millan's bequests. The scheme provides for the maintenance of a school for boys, for scholarships, school bursaries, bursaries for technical and higher education, and for university bursaries, while, as has been already noticed, a subsidy is paid to the West of Scotland Technical College. The bursaries are awarded among pupils of public or state-aided schools in Glasgow, or of any school maintained under the scheme. The revenue is nearly £7000 a year. The Glasgow General Educational Endowments Board manages Muir's School Fund and the sums bequeathed for Miller and Peadie's, Wilson's, Gardner's, M'Lachlan's, and Graham's schools. The scheme provides for the awarding of free scholarships, school bursaries, technical and higher education bursaries, bursaries for evening classes, etc. The bursaries are awarded among pupils of public or state-aided schools in Glasgow, or public or state-aided schools in the district of the school-board of Cathcart, or of any school-board contiguous to and immediately adjoining the district of the school-board of the City of Glasgow. The revenue is over £3000 a year. The Buchanan Institution in Greenhead Street was founded by the late James Buchanan for the maintenance, education, and industrial training of destitute boys. They reside with their parents at night, but have three substantial meals daily at the institution, and are taught the elementary branches of knowledge, and also the elements of navigation, gymnastics, tailoring, shoemaking, and carpentry, to fit them for the army, for the sea, or for emigration to the colonies. It is managed by directors chosen from the Town Council, the Merchants' House, the Trades' House, and the School-Board. To the E of it, at the corner of Greenhead Street and James Street, is the Logan and Johnston School of Domestic Economy, founded by William Logan and his wife, Jean Johnston, for the education, upbringing, and assistance in life, of poor or destitute step-children or orphans of Scottish extraction, those bearing the name of Logan or Johnston to be preferred. It is now conducted under a scheme framed by the Education Endowments Commission, and is equipped as a school of domestic economy, where instruction is given in sewing, cooking, washing, laundry work, and other similar branches. A certain number of girls admitted on the foundation, receive their education free, have their meals on the premises, and receive an allowance for clothing. The classes are open to the public on payment of fees. The income is about £1100. The present building, Scottish baronial in style, with oriel windows and a central tower, was erected in 1891-93, in the last of which years it was opened, and the new scheme came into operation. There is accommodation for boarders. Allan Glen's Institution, at the corner of Cathedral Street and North Hanover Street, was established in 1853 under the will of Allan Glen, wright in Glasgow, and at it was given, till 1876, gratuitously, a good practical education to about 50 boys, sons of tradesmen or persons in the industrial classes of society. By an Act of Parliament obtained in 1876 the powers of the trustees were extended, and the institution ceased to supply gratuitous elementary education, and became a secondary and technical school with special reference to the training of boys for industrial and mercantile pursuits. This purpose was confirmed by the scheme of the Education Endowments Commission in 1886, by which Allan Glen's Institution became an integral, though educationally

distinct, part of the West of Scotland Technical College. The aim of the school now is to give its pupils a careful and extensive science and workshop training. The subjects taught are: the ordinary branches of a good English education, Latin, French, German, mathematics, geometrical, frechand, mechanical, and architectural drawing; and the elements of chemistry, physics, and mechanics—the classes in the last three branches being in all cases associated with proper experimental and laboratory training. The use of tools is taught in suitable workshops, but not the practice of any specific trade. There are sixty free scholarships, about fifty bursaries, and three University or Technical College bursaries, connected with the school. The fees range from £2, 10s. to £6 per session. The building was enlarged in 1875, 1889, and in 1895. The Glasgow Deaf and Dumb Institution was commenced under the same auspices, and on the same system, as the Deaf and Dumb Institution at EDINBURGH, and became at an early period of its career distinguished for its great efficiency and success. It long occupied a plain house a short distance NW of the Cathedral, but in 1870 removed to its present home, at Prospect Bank, Crosshill, in a fine Venetian building close to the Queen's Park. The structure is 240 feet long and 150 wide, and has beautiful surroundings and excellent internal arrangements. There is accommodation for 170 pupils, and the charge for board and education is £10 per annum; but, where necessary, children are admitted gratuitously. Visitors are admitted on Wednesdays at 2 p.m.

Reformatories.—The Reformatory and Industrial Schools were for a time entirely dependent on voluntary contributions, but came eventually to receive support from an assessment imposed by Act of Parliament. They are governed by a board of 12 commissioners and 37 directors, appointed under the Glasgow Juvenile Delinquency Prevention and Repression Act passed in 1878. The Girls' House of Refuge and Reformatory originated about 1840, and is for the reception of juvenile thieves and neglected children, giving them a good education, and training them to self-support. The building was originally in Parliamentary Road, was thence moved to Reddrie, and new premises were again opened in October 1882 at East Chapelton, about 3 miles NW of Glasgow. This is an Italian building of two storeys, with a frontage of 78 feet, and side wings running back for 82½ feet. On the lower flat are the school-rooms, work-rooms, dining-room, kitchen, and the matron's room; while on the upper storey are two large dormitories, sick-room, lavatory, and other accommodation. In outbuildings are a washing-house, laundry, and dairy. There is accommodation for 60 girls, and the total cost including site was £9570. The average number of inmates is about 26. The Refuge and Industrial School for Boys, providing food, education, religious instruction, and industrial training for destitute children, whether admitted on private application or under a magistrate's warrant, is at Mossbank, Hogganfield, on the S side of the Caledonia railway. It was erected in 1869, and was burned down in 1873, the loss being estimated at £14,000; but it was rebuilt in 1874-75, and is a large well-arranged edifice. There are generally about 375 inmates. The Girls' Industrial School was from 1855 in Rottenrow, but was in 1882 transferred to buildings at Maryhill. The number of girls in it is on an average about 200. About 85 per cent. of both boys and girls are found to do well after leaving. There are day industrial schools at Green Street, Calton, Rottenrow, and Rose Street, Hutchesontown, which have on an average 500 inmates every year. Since the institution of these schools there has been a gradual decrease in the number of juvenile offenders and destitute children dealt with by the police. The income of the Commissioners under the Act of 1878 is over £17,000 a year. All the schools mentioned are Protestant; but there are also a Roman Catholic Reformatory for boys at Parkhead (average number, 165); industrial schools for boys and girls at Abercromby Street, Gallowgate (387, including both), Slatefield for boys,

also in the Gallowgate (150), and Dalbeth, near Glasgow, for girls (150).

Parishes and Parochial Affairs.—The whole of Glasgow on the N side of the Clyde, with a considerable landward tract around it, formed at the time of the Reformation only one parish, though the cathedral was in 1588 made a collegiate charge. In 1592 the church of St Mary and St Anne, now the Trongate, was repaired and a third minister was added. In 1595 a fourth was added, who officiated in the crypt of the cathedral, known as the Laigh Kirk; and in 1596 the landward portion above alluded to was set apart for this last minister as a separate parish, and was called the Barony. This quadruple division of parishes lasted till 1701, when other two were added, and thereafter divisions still went on till the original city parish of the High Church had been divided into the ten parishes of Inner High or St Mungo's, the Outer High or St Paul's, St Andrew's, St David's or Ramshorn, St Enoch's, St George's, St James', St John's, St Mary's or Tron, and Blackfriars or College, which constitute what are now known as the City churches and City parishes, the maintenance of which costs the city about £2200 a year, which is generally supposed to be provided from the common good; but it is just possible that if all the funds bequeathed of old to the corporation were thoroughly investigated, less of this sum than is imagined might be found to come from that source. Modern Glasgow is divided *quoad sacra* into a large number of parishes, as will be seen in the section on ecclesiastical affairs, but *quoad civilia* it is included most largely within the Barony, City, and Govan parishes. On the N side of the river, beginning at the E end, is the parish of Shettleston, and NW of this is the parish of Springburn, adjoining which on the W is Maryhill. The parish of Calton on the E adjoins Shettleston. Its limits are along Great Eastern Road to Crownpoint Street, along Crownpoint Road, Abercrombie Street, Millroad Street, King Street, in an irregular line to Great Hamilton Street, along which it runs irregularly till it reaches the edge of the Green at the public baths. It then proceeds, by Greenhead Street and Newhall Terrace, to the river, which is the boundary, back to the original starting-point. The City parish follows this line reversed, from Newhall Terrace to the corner of Great Eastern Road near Camlachie Foundry, then goes irregularly to a point in Duke Street, near the corner of Bluevale Street, along Duke Street to John Knox Street, then along Wright Street, and from that in an irregular line N to the canal. The boundary turns along the canal to a point opposite the old fever hospital, and thence back in an irregular line to the corner of Castle Street and Gargad Hill, then along Castle Street, Glebe Street, Albert Street, and behind St Mungo Street to Stirling Road, along which it passes to St James' Road, and along St James' Road to M'Aslin Street, then along it to Parliamentary Road; from this it proceeds in an irregular line down West Nile Street to Argyle Street, along which it turns westward to a point midway between M'Alpine Street and Washington Street, where it turns straight down to the river, and back along the river to the SE corner of the Green. The SE boundary of the main part of the Barony is the line just given, from the point on the canal opposite the old fever hospital to the point on the river midway between M'Alpine Street and Washington Street; from that the line follows the river down to the shipbuilding yard at the E side of the mouth of the Kelvin. It passes along the E and N sides of the yard to the river Kelvin, up which it turns to the Great Western Road, then passes along the Great Western Road, by an irregular line passing from the corner of Scotia Street and New City Road to the corner of Cowcaddens Street, and then along Ann Street to the canal. From the line of the Kelvin the parish of Govan sweeps W and S, crossing the river and extending up the S side as far as Malls Mire Burn, beyond which is the parish of Rutherglen. Still farther S are the parishes of Eastwood, in which are the districts about Shawlands and Pollokshaws, and Cathcart with the Queen's Park and Crosshill.

Under the Local Government Act (1894) parish councils took the place of parochial boards. The parish councils for the city are those of the City, the Barony, and Govan. The City Parish Council consists of 7 members from the first and fourth wards, 6 from the second and fifth wards, and five from the third ward. Some sort of poor-rate must have been levied in Glasgow from 1595, for we find that in that year a committee of the general kirk-session was appointed to consider who were able to contribute for the relief of the poor, and in 1638 we find that the poor had, during the sitting of the General Assembly, been kept off the streets, an arrangement which so delighted the magistrates, that they determined that the inhabitants should be stented or taxed for the purpose of keeping them always off the street (as beggars presumably), and maintaining them in their houses, and this plan was carried out, for in 1639 all who had not paid were to have their goods seized to double the value, and were to have their names proclaimed in church; and in 1697 it was further determined to augment the assessment by church-door collections. In 1774, however, the kirk-sessions found they were no longer equal to the demands made on them, and on this being intimated to the council, the latter appointed 15 assessors who were to impose a rate to produce £1305, 10s. 10½d., and this board was the forerunner of parochial boards. The first poorhouse that existed in the city was erected in 1733 on a site in Clyde Street, near the present St Andrew's Roman Catholic Church. It was built at the joint expense of the Town Council, General Session, Merchants' House, and Trades' House. It was meant for 152 inmates, according to M'Ure, who declares that it was finer than any other hospital in the world except Heriot's Hospital in Edinburgh. The present City Poorhouse or Town's Hospital is an irregularly disposed pile of buildings near the W end of Parliamentary Road. It was originally built for the Royal Lunatic Asylum, but passed by sale to the City Parish Parochial Board for £15,000 in 1843, when the Asylum was removed to Gartnavel. The main buildings are a spacious octagonal structure with four radiating wings and a central dome. There is accommodation for 1587 inmates, and there are on an average about 1400 paupers, while there are generally over 5000 poor on the roll. Formerly the City and Govan parishes were united with Lanarkshire for lunacy purposes under the Glasgow District Board, but this was dissolved in 1888, and each parish became a separate district. The City parish board accordingly, in 1891-97, erected an asylum at Gartloch, 6 miles NE of Glasgow, where they had purchased an estate of 347 acres. Early French in style, the building consists of 9 pavilion blocks, and has accommodation for 550 patients. The income of the council in 1895-96 was over £59,000 of which over £42,000 was derived from rates. The gross rental of the parish for the same year was £1,350,000.

The Barony parish is the largest and most populous in Scotland. The parish council consists of 4 rate-payers from the 1st ward, 4 from the 2d, 2 from the 3d, 3 from the 4th, 4 from the 5th, 3 from the 6th, 2 from the 7th, 2 from the 8th, and 2 from the 9th. There is also a landward committee, consisting of 2 representatives from Possil, 2 from Millerston and Springburn, 3 from North Shettleston, and 3 from South Shettleston. The poorhouse is at Barnhill in Springburn, in the NE of Glasgow, stands within extensive grounds, and has accommodation for 1348 inmates, and contains on an average 1100 paupers, the total number of poor being over 5000. The lunatic asylum for the Barony parish is an extensive range of buildings erected in 1872 and the following years, the first portion having been opened in 1875 at Lenzie, on the N side of and close to the North British line near Lenzie Junction station. The main building, Elizabethan in style, has the administrative block in the centre, and was, by new wing buildings erected in 1891-93, extended so as to have a total length of 1430 feet. From its pavilions project to the S, and to the N are wings extending from N to S. The workshops and laundry, etc., occupy detached build-

ings behind, while standing apart, opposite the centre of the front and connected with the main building by conservatory corridors, is a handsome little chapel, where there is daily service. The male wards are to the E of the entrance and the female wards to the W. The additions of 1891-93 enable 850 patients to be accommodated. A thoroughly equipped farm succursal was added in 1879 for the cultivation of the 459 acres in connection with the asylum, and at the same time a new method of dealing with the sewage was introduced, under which it is distributed over the fields by a special system of irrigation—a plan which has greatly improved the land without injurious effects on the sanitary condition of the institution. The income of the board in 1896-97 was about £90,000, of which over £63,000 was derived from rates. The gross rental of the parish for the same year was £1,734,227. The Govan Parish Council is noticed in the article on Govan.

Registration.—The districts into which for registration purposes Glasgow, Kinning Park, Govan, and Partick are now divided, with their populations in 1891, are:—Bridgeton (44,342), Camlachie (43,690), Dennistoun (63,888), Calton (36,154), Blackfriars (31,610), St Rollox (50,426), Blythswood (29,311), Milton (38,737), Kelvin (67,634), Anderston (42,263), Hutchesontown (59,750), Gorbals (49,939), Tradeston (27,436), Kinning Park (33,291), Maryhill (26,674), Partick (50,466), Cathcart (16,589), Plantation (22,980), Govan (41,735), Eastwood (16,042, of whom, however, the greater portion are in the landward division), and Shettleston (12,591, of whom, however, only 18 are in the Glasgow portion of the parish).

Ecclesiastical Affairs.—Established Churches.—The early division of Glasgow ecclesiastically has been noticed in the last section, and since then the separation of *quoad sacra* parishes has gone on apace in City, Barony, and Govan parishes, as well as in Calton and the parts of Springburn and Maryhill adjoining the city, till there were in 1896 in the city and suburbs 75 charges and 9 mission churches, a number of which are at present in course of conversion into separate ecclesiastical districts. The original City parish, which comprised 988·624 acres, has now been carved into the Inner High, the Robertson Memorial, St Paul's, St James', St George's, St Andrew's, St David's, St Enoch's, St John's, Tron (St Mary's), Blackfriars (College), St Peter's, Chalmers' Memorial, and Bridgetate *quoad sacra* parishes. Macleod, Martyrs', St-George's-in-the-Fields, and Wellpark have been formed partly from the City parish and partly from the Barony. Barony itself, which comprised 3295·612 acres, has been broken up into Barony (proper), Kelvinside, Kelvinhaugh, Sandyford, Park, St Vincent's, Anderston, St Mark's, St Matthew's, Blythswood, St Stephen's, Milton, Port Dundas, St Columba's, Dalmarnock, St Clement's, Bluevale, Parkhead, Possil Park, and Shettleston. The divisions of Govan are noticed in that article. Calton, SE of the City parish, has been divided into Calton (proper), St Luke's, Newlands, Greenhead, Barrowfield, Bridgeton, Newhall, and St Thomas. Springburn has had cut off from its SW corner the parish of Townhead.

The Cathedral.—The parent church of Glasgow, the Cathedral, is particularly interesting as being, along with the churches at Kirkwall and Old Aberdeen, one of the few perfect examples of early architecture which the zeal of the Reformers and the more praiseworthy, but equally objectionable, zeal of the early restorers of the nineteenth century have left for us in anything like the original condition. Like all cathedral churches the form is that of a Latin cross, with nave, aisles, transepts, choir, lady-chapel, crypt, and chapter-house. Here the outline has rather an unwonted bareness arising from the fact that the transepts, owing to the non-completion of the original design, project but so slightly beyond the aisles that the long straight sweep of the side walls is hardly broken by them at all. That they were intended to project farther is evident from the Blackadder crypt, which would have afforded support to a S transept. The style is Early English, and all competent authorities are agreed that the build-

ing is a very fine example of that period. The best views of the exterior are to be had from the SE corner and from the Bridge of Sighs leading to the Necropolis. The entire length of the building is 319 feet, the breadth 63 feet, and the height 90 feet; while at the junction of the nave and transepts a massive square tower with octagonal spire rises to a height of 225 feet. This central tower measures 30 feet each way in the basement, and rises about 30 feet above the lofty roof of the nave and choir. It presents a four-light window on each of its faces, and terminates in a balustrade with pinnacles at the corners, while the spire rises in four successive stages, with ornamental bands between. The aisles are narrow but lofty, and have a row of windows with double mullions. The clerestory windows are much the same, but have not all double mullions. Over the principal doorway at the W end is the great western window, with four openings separated by beautifully carved mullions, and the great windows of the N and S transepts are much the same. There are massive buttresses all round. On the wall above the spaces between is a line of gargoyles, each showing a monstrous mouth, with a grotesque face sculptured on the under side. However bare may be the look of the exterior all idea of such a feeling vanishes at once on reaching the interior, and taking in at one glance the whole majestic sweep of the nave, which is 155 feet in length, 30 in breadth between the columns, and 90 high. On each side is a series of seven elegant, but massive, clustered columns supporting the triforium, and above this is a row of clerestory windows. At the intersection of the nave, transepts, and choir are four pillars supporting the arches of the tower, and from the angles groins spring towards the centre, leaving there, however, a circular opening for the purpose of raising heavy materials or bells to the upper part of the tower. Up till 1835 a partition wall of rough masonry, constructed in 1648, cut the nave in two from N to S, and the western section was fitted up as a church for the congregation of the Outer High parish. This was, however, removed, together with the fittings of the church, on the erection of the new church of St Paul's, and the nave is now once more to be seen in all its original grandeur. At the E end of the nave beneath the arches supporting the tower is a richly carved rood-screen separating the nave and choir. On either side are niches, and flights of steps, with carved balustrades, leading to the crypt. In the centre is a low elliptic-arched doorway, through which a flight of steps leads to the higher level of the choir, which is 127 feet long, 30 wide between the columns, and about 80 high. On each side are five arches supported on clustered pillars, with beautiful and richly carved capitals with the usual foliage designs, and each differing from all the others. In the restoration operations carried out previous to 1856, this portion of the building was judiciously and successfully altered. The old unseemly seats and galleries were removed, and their place supplied by richly-carved oak fittings in the modern cathedral style; and a fine pulpit constructed from the old oak beams of the roof now occupies the site of the high altar. The floor is executed in tessellated tile-work. During the restoration operations the grave of one of the old bishops was found near the site of the high altar. The remains, which were possibly those of Bishop Joceline, had been wrapped in a cloth embroidered with gold, some of which still adhered to the bones.

At the E end of the choir is the Lady chapel, which is one of the most beautiful parts of the building. Externally it is a low flat-roofed building resting on the eastern part of the crypt. Internally there is a profusion of elaborate ornament, while the columns consist of clusters of slender and graceful shafts, with richly carved and beautiful capitals. It contains a monument to the Protestant Archbishop Law (1615-32). Opening from the N side of the Lady chapel is the chapter-house. It also rests on the crypt, but it is crowned by a high-pitched roof. The interior is 28 feet square, with the roof supported by a central pillar, on which are the arms of the founder,

Bishop Lauder (1408-1425). The floor is now laid with tessellated tile-work, and all round arc oak seats. Beneath the buildings just described is a series of magnificent crypts, forming in themselves a beautiful and perfect structure. These, which vary very much in height, extend beneath the choir, the Lady chapel, the chapter-house, and beyond the S transept. The portion under the first two is known as Joceline's crypt, that under the chapter-house as Lauder's crypt, and that under the unfinished S transept as Blackadder's crypt. The latter has the roof supported by three richly clustered columns with fine capitals, and exhibits some of the best work in the whole cathedral, while all three show such solidity of construction, such richness of groining, and such beauty of detail in the pillars and varied capitals, as render them artistically of the highest value, and the finest thing of the kind in the kingdom. The crypt known as Blackadder's, under the S transept, ought more properly to be called Fergus' aisle or crypt, for it seems to have been dedicated to the Fergus whose body St Mungo brought with him to Cathures; Mr Macgeorge having pointed out that on a stone in the roof over the entrance is carved a rude representation of the dead saint extended on a vehicle, and beside it the inscription cut in long Gothic letters, 'this is the ile of car fergus.' At the E end of Joceline's crypt on a raised platform is a tomb with headless and handless recumbent effigy, which tradition, without the slightest grounds, indicates as the tomb of St Mungo himself. There are also two stone coffins, one of them with a shamrock round the margin, dug up within the building, and believed to be as old as the 6th century. In the SE corner is a well 24 feet deep, and with 3 to 4 feet of water in it, known as St Mungo's Well. It was supposed to possess special healing qualities. Originally a place of sepulture, the crypt became after the Reformation, as we have already seen, the church of the Barony parish, and from that time till the beginning of the nineteenth century it was one of the most extraordinary places of worship in the country. Sir Walter Scott in *Rob Roy* makes it the meeting-place of the outlaw himself and Francis Osbaldistone. 'We entered,' he makes Francis say, 'a small, low-arched door, secured by a wicket, which a grave-looking person seemed on the point of closing, and descended several steps as if into the funeral vaults beneath the church. It was even so; for in these subterranean precincts—why chosen for such a purpose I know not—was established a very singular place of worship. Conceive an extensive range of low-browed, dark, and twilight vaults, such as are used for sepulchres in other countries, and had long been dedicated to the same purpose in this, a portion of which was seated with pews and used as a church. The part of the vaults thus occupied, though capable of containing a congregation of many hundreds, bore a small proportion to the darker and more extensive caverns which yawned around what may be termed the inhabited space. In those waste regions of oblivion, dusky banners and tattered escutcheons indicated the graves of those who were doubtless "princes in Israel." . . . Surrounded by these receptacles of the last remains of mortality, I found a numerous congregation engaged in the act of prayer.' After the erection of a separate church for the Barony congregation in 1801 the crypts again became a place of burial, and got into such an unsightly condition that the shafts of the fine columns were covered to a depth of 5 feet by the accumulation of *débris*, while the walls were daubed over with unsightly marks—a state of matters which lasted till about 1835.

After the restoration operations had been completed in 1856, a proposal was made to fill the windows of the cathedral with stained glass, and this was taken up so readily by a large and influential body of subscribers that in 1859 the first window was placed in the church, and in 1864 all the windows were filled except those in the clerestory, and that, too, has now been in part similarly treated. In all 113 windows are thus filled—44 in the nave, transepts, choir, and Lady chapel, 14 in the

clerestory, 7 in the chapter-house, 27 in Joceline's crypt, 12 in Lauder's crypt, and 9 in Blackadder's crypt. The great E window was furnished by the Queen, the great W window by the Bairds of Gartsherrie, and the N and S transept windows by respectively the late Duke of Hamilton and Mrs Cecilia Douglas of Orbiston. These represent in order (1) the Four Evangelists; (2) the Giving of the Law; the Entrance into the Promised Land; the Dedication of the Temple, and the Captivity of Babylon; (3.) the prophets Moses, Isaiah, Jeremiah, Ezekiel, Malachi, and John the Baptist; (4.) in the lower divisions Noah issuing from the ark, the gathering of manna, Melchisedec offering bread and wine, Isaac ascending Mount Moriah with the wood of sacrifice, and the priest offering the first fruits; and, in the corresponding compartments above, Christ baptized, Christ the true bread from heaven, Christ instituting the Sacrament, Christ bearing His cross to Calvary, and Christ rising from the dead. The windows in the nave beginning at the NW angle contain a series of Old Testament characters in chronological order; the choir, illustrations of the parables and precepts of Christ; the Lady chapel, the apostles; the chapter-house, acts of charity and mercy; Joceline's crypt and Blackadder's crypt, various scriptural incidents mainly relating to the life of Christ; and two showing King Rhydderch, St Mungo, and St Columba, and Archbishops Boyd, Burnet, and Paterson; while Lauder's crypt has a series of representations of angels bearing emblems of Christ and the Evangelists. Many of the windows were executed at the royal glass-painting factory at Munich, but a few were made in London and Edinburgh. The fine organ was made in London, and was erected in 1880, having been presented by the minister of the church, the late Rev. Dr Burns. The oak communion table (1891) was the gift of a member of the church, and the somewhat out-of-place looking marble reredos (1893), with figures of St Ninian and St Kentigern, was erected by Dame Jane Maxwell in memory of her husband, the tenth baronet of Calderwood.

In dealing with the bishops in the historical section, notice has already been taken of the early history of the cathedral. Mr Honeyman, in his *Age of Glasgow Cathedral*, is of opinion that the only portion of the building of 1197 is a small pillar and part of the vaulting in the SW corner of the crypt, and the probability is that the present building was commenced by Bishop Bondington (1233-58), in whose time the crypt and choir were completed. The building was still unfinished in 1277, in Wyschard's time, and the erection of the steeple was begun by Bishop Lauder, and continued and probably completed by Bishop Cameron. The date of the nave cannot be determined, but it was probably built subsequently to the crypt and choir. At the NW end of the nave there was formerly a massive and imposing square tower, 120 feet high and having on each side near the top two fine windows, with rounded arches, and also some grotesque sculptures now lying in the crypt. At the SW corner was another erection not carried up into a tower but finished with gables. It was called the consistory house, and was probably of the same date as the tower opposite, the lower stage of which Mr Billings regarded as forming, along with the W door of the nave, the oldest part of the whole building. The consistory house was picturesque and interesting, but, this notwithstanding, and though both it and the tower were in a perfect state of preservation, they were in 1854 removed by order of Her Majesty's First Commissioner of Works as excrescences on the original building—a removal which, notwithstanding all that has been alleged to the contrary, must, we fear, be regarded as an act of great barbarity and vandalism. The buildings were old enough and intimately enough associated with the history and original design of the cathedral to have inspired greater reverence, and, besides, Mr Macgeorge asserts, and probably rightly, that 'the tower was really essential to the proper balance of the structure.'

Soon after the Reformation the cathedral was 'purged'

of all its altars, images, and other appendages that might remind the people of the old ritual and worship; and so zealous or rather furious were the Reformers in this work of purification, that they also swept away all the monuments which had been erected not only to patriotic prelates, but to eminent laymen, with the single exception of the tomb of the Stewarts of Minto, a family which had supplied provosts and magistrates to the city through several generations. Though this insane destruction was not altogether the work of a rabble glorying in mischief, under any pretext, it is but fair to state that the government, in issuing an order for the destruction of all 'monuments of idolatry,' strongly enjoined the preservation of the buildings themselves, as will be seen from the order:

'To the Magistrates of Burghs.

'Our traist freindis, after maist hearty commendation, we pray ye fall not to pass incontinent to the Kirk [of Glasgow or other such edifice as might require attention] and tak down the hail images thereof, and bring furth to the Kirkyard, and burn them openly. And siclyke cast down the alteris, and purge the kirk of all kynd of monuments of idolatrye. And this ye fall not to do as ye will do us singular empler; and so committis you to the protection of God.

(Signed) 'AR. ARGYLE.
'JAMES STUART.
'RUTHVEN.

'From Edinburgh the xii of August, 1560.

'Fail not bot ye tak guid heyd that neither the dasks, windocks, nor durris be ony ways hurt or broken, either glassin work or iron work.'

Though the occurrence of such an important part of the mandate in a postscript might perhaps be considered as a little significant, yet it was probably the desire of the Lords of the Congregation at this time that the work of demolition should go a certain length, and no farther; but they had raised a spirit which they could not lay again, and the harangues of any furious preacher were received with much greater acceptance than the comparatively moderate injunctions of the civil rulers. The more ardent among the Reformers were not content with a partial demolition, and they resolved that every trace of the Romish superstition should be swept away at the expense of those magnificent structures which had been long the pride and glory of the land. An act was accordingly passed in 1574 by the Estates, at the instigation of the Assembly, authorising a still further purification or dismantling of those churches which had hitherto escaped, and 'thereupon,' says Spottiswoode, 'ensued a pitiful devastation of churches and church buildings throughout all parts of the realm, for every one made bold to put to their hands—the meaner sort imitating the ensample of the greater, and those who were in authority. No difference was made, but all the churches either defaced or pulled to the ground. The holy vessels, and whatsoever else men could make gain of, as timber, lead, and bells, were put up to sale. The very sepulchres of the dead were not spared. The registers of the church and bibliothèques cast into the fire. In a word, all was ruined, and what had escaped in the time of the first tumult did now undergo the common calamity, which was so much the worse, that the violences committed at this time were coloured with the warrant of publick authority. Some ill-advised preachers did likewise animate people in these their barbarous proceedings crying out—"That the places where idols had been worshipped, ought, by the law of God, to be destroyed, and that the sparing of them was the reserving of things execrable."

The execution of the above-mentioned act for the West was committed to the Earls of Arran, Argyll, and Glencairn, and they, at the intercession of the inhabitants of Glasgow, had spared the cathedral, but Andrew Melvil, acting with more zeal than discretion, kept urging the magistrates to order it to be pulled down so that three churches might be built with the materials. They at length consented, and the narrow escape of the cathedral in 1579 is thus told by Spottis-

woode: 'In Glasgow the next spring there happened a little disturbance by this occasion. The magistrates of the city, by the earnest dealing of Mr Andrew Melvil and other ministers, had condescended to demolish the cathedral, and build with the materials thereof some little churches in other parts for the ease of the citizens. Divers reasons were given for it; such as the resort of superstitious people to do their devotion in that place; the huge vastness of the church, and that the voice of a preacher could not be heard by the multitudes that convened to sermon; the more commodious service of the people; and the removing of that idolatrous monument (so they called it), which was, of all the cathedrals of the country, only left ruined and in a possibility to be repaired. To do this work a number of quarriers, masons, and other workmen was conduced, and the day assigned when it should take beginning. Intimation being given thereof, and the workmen by sound of drum warned to go unto their work, the crafts of the city in a tumult took armes, swearing with many oathes that he who did cast down the first stone, should be buried under it. Neither could they be pacified till the workmen were discharged by the magistrates. A complaint was hereupon made, and the principals cited before the council for insurrection, when the king, not as then thirteen years of age, taking the protection of the crafts, did allow the opposition they had made, and inhibited the ministers (for they were the complainers) to meddle any more in that business, saying, "That too many churches had been already destroyed, and that he would not tolerate more abuses of that kind." The truth of this statement has been questioned, as no entry regarding the intended destruction of the cathedral stands in the council minutes of the day, and because no other historian mentions the affair. It may be presumed, however, that there were good reasons why no notice of the destructive resolution of the magistrates, and of the events which followed, should be placed on the records; and further Spottiswoode is a trustworthy chronicler, and the tradition has been one of almost universal acceptance in Glasgow for nearly three centuries. The details may be slightly inaccurate, but the main fact of the great peril to the cathedral and of its rescue by the crafts seems to be worthy of all credit. There is indeed reason to believe that the silence may arise from the consent of the council having been passive rather than active, and that Captain Crawford of Jordanhill, then provost of Glasgow, and the other magistrates yielded even thus far with considerable reluctance, and only that they might clear themselves from any imputation of having an undue tenderness for the memorials of Popery. Newte, in his *Tour in England and Scotland* (1791), goes farther, and says that the chief magistrate remonstrated and said, 'I am for pulling down the High Church, but not till we have first built a new one.' The respect that the greater part of the citizens bore to it is evidenced by the provost and council having in 1574 met with the deacons of the crafts and others to consider the ruinous condition of the cathedral, 'through taking awaye of the leid sclait and wther grayth thair of in thir trubless tyme bygane, sua that sick ane greit monument will all uterlie fall down and dekey without it be remedit, and becaus the helping thair of is so greit . . . all in ane voce has consentit to ane taxt and imposition of twa hundredth pundis money to be taxt and payit be the tounschip and fremen thair of for helping to repair the said kirk and haldyng it watirfast.' In *Rob Roy* Sir Walter Scott gives a slightly different but decidedly picturesque account of the incident: 'Ay!' says Andrew Fairservice, 'it's a braw kirk—name o' your whigmaleries, and curliwurlies, and open steek hems about it—a' solid, well-jointed mason-wark, that will stand as lang as the world, keep hands and gunpowther aff it. It had amais a douncome langsyne at the Reformation, when they pu'd down the kirks of St Andrews and Perth and thereawa', to cleanse them o' papery, and idolatry, and image worship and surplises, and siclike rags o' the muckle hure that sitteth on seven hills, as if ane wasna braid enuech for her auld hinder

end. Sae the commons o' Renfrew, and of the Barony and the Gorbals, and a' about, they behoved to come into Glasgow, ae fair morning, to try their hands in purging the High Kirk of Papish nick-nackets. But the tounsmen of Glasgow, they were feared their auld edifice might slip the girths in gaun through siccan rough play, sae they rang the common bell, and assembled the train-bands wi' tuck o' drum. By good luck, the worthy James Rabat was Dean o' Guild* that year (and a guid mason he was himself, made him the keener to keep up the auld biggin'); and the trades assembled and offered downright battle to the commons, rather than their kirk should coup the crans, as others had done elsewhere. It wasna for love o' Papery—na na—nane could ever say that o' the trades o' Glasgow. Sae they sune cam to an agreement to tak a' the idolatrous statues o' saints (sorrow be on them) out o' their neuks. And sae the bits o' stane idols were broken in pieces by Scripture warrant and flung into the Molendinar Burn, and the auld kirk stood as crouse as a cat when the flaes are kaimed aff her, and a' body was alike pleased.'

The repairs continued to occupy the attention of the council from time to time during the rest of the 16th and the early part of the 17th centuries, and the minutes on the subject are numerous, and, before the meeting of the General Assembly in 1638, considerable repairs and improvements were actually made by them, while some of the Protestant archbishops seem to have also, out of their scanty revenues, done what they could; but the building remained in a very dilapidated condition till 1829, when Dr Cleland called attention to its state, and a subscription was started for the repair of the nave. It was in some way interrupted, and nothing more was done till 1854, when the Commissioners of Woods and Forests took up the matter, and under their care the restoration was, by 1856, completely effected, in a manner which—excepting for the removal of the W tower and the consistory house—is worthy of the highest praise. The building is the property of the Crown, but the corporation draw the seat-rents of the High Church—it being one of the ten city churches—and they have also the care of the churchyard. There are several bells in the tower, and the largest one has an inscription somewhat worthy of notice: 'In the year of grace 1594, Marcus Knox, a merchant in Glasgow, zealous for the interest of the reformed religion, caused me to be fabricated in Holland for the use of his fellow-citizens of Glasgow, and placed me with solemnity in the tower of their cathedral. My function was announced by the impress on my bosom, and I was taught to proclaim the hours of unheeded time. One hundred and ninety-five years had I sounded these awful warnings, when I was broken by the hands of inconsiderate and unskilful men. In the year 1790 I was cast into the furnace, refounded at London, and returned to my sacred vocation. Reader, thou also shalt know a resurrection: may it be unto eternal life!' In 1897 John Garroway, Esq., presented a fine-toned new bell to the Cathedral.

In the interior, on the lower part of the walls, there are a number of military and other monuments. One is a memorial to the officers and men of the 93rd Sutherland Highlanders who fell during the Crimean campaign. Over it are placed the old colours of the regiment, presented to it by the first Duke of Wellington. Another marble is inscribed to the officers and men of the 71st Highlanders who fell on the NW frontier of India in 1863; and another (with a spirited representation of Tel-el-Kebir) to the officers and men of the 2nd Battalion Highland Light Infantry (74th) who were killed or mortally wounded at the battle of Tel-el-Kebir. It was erected in 1884, and is surmounted by the old colours of the regiment, including the original 'Assaye' flag—the special honorary colour which this regiment, along with the 78th, is entitled to carry; these having been the only two European regiments employed on the 'glorious occasion' of the battle from which the banner takes its name. In a case is the last stand of colours

carried by the 26th Cameronian regiment before it became the 1st Battalion of the Cameronians. In the NE corner of the nave is a marble bust of Dr Chrystal, rector of Glasgow Grammar School, who died in 1830, and on the opposite side a bust of Sir James Watson (1801-89). On the S side of the nave is the memorial brass of the Stewarts of Minto—one of the oldest brasses in Scotland. The oldest stone in the churchyard is said to date from 1223 and the next from 1383. On the E side of the S entrance to the cathedral is the tomb of Thomas Hutcheson, one of the founders of Hutchesons' Hospital. The monument dates from 1670, but was restored in 1857. On the opposite side of the doorway is the tomb of the founder of the Baillie Trust, who died in 1873. Rudely scratched on the wall near the N transept is a representation of a gallows, with a figure dangling from it, and the date 1769. It marks the 'malefactors burying-ground.' The monument of Dr Peter Low, founder of the Faculty of Physicians and Surgeons, near the SW corner of the ground, bears date 1612, and has the following curious inscription:—

'Stay, passenger, and view this stone,
For under it lyes such a one
Who cured many will be lieved,
So gracious he no man grieved,
Zea when his phisics force oft fayled,
His pleasant purpose then prevailed,
For of his God he got the grace
To live in mirth and dye in peace.
Heaven has his soul, his corps this stone.
Sygh, passinger, and so be gone.'

And beneath:—

'Ah me, I gravell am and dust,
And to the grave desend I must;
O painted peice of liveing clay,
Man, be not proud of thy short day.'

On another belonging to the Hamiltons of Holmhead, with the date 1616, the following tribute is paid to a wife:—

'Yee gazers on this trophie of a tomh,
Send out ane grone for want of her whose life
Once horn of earth, and now lies in earth's womb,
Liv'd long a virgin, then a spotless wyfe,
Here lyes enclosed man's griefe, earth's loss, friends' paine,
Religion's lampe, virtne's light, heaven's gaine.
Dumb senseless statue of some lyfeless stones,
Rear'd up for memorie of a blessed soule.
Thou holds but Adam, Adam's blood bemones
Her loss, she's fled, none can her joys controule.
O happy thou, for zeale and christian love,
On earth beloved, and now in heaven above.'

Other Established Churches.—St Paul's Church, built in 1835-36 for the congregation of St Paul's or the Outer High parish, which formerly worshipped in the nave of the cathedral, is in John Street. It is a plain building with a belfry. Blackfriars or Colledge Church stood on the E side of High Street, close to the S side of the old University buildings. It was a quaint edifice, built in 1699, on the site of the previous Gothic building (already described), which was destroyed by lightning in 1688. When this site had to be abandoned to the Union railway, the new church was erected at Wester Craigs Street in 1876-77, and received a chime of bells in 1885. The steeple of the old church was at one time used as a prison. St Mary's or the Trou Church stands on the S side of the Trongate behind the Tron steeple, and is on the site of the old church of St Mary's already described. After the Reformation the latter building fell into disrepair, but was in 1592 ordered to be set to rights, and from that date till 1793, when it was destroyed by fire, it was in use as a place of worship. The present plain structure was erected in 1794, and the pulpit was from 1815 till 1819 occupied by Dr Chalmers. St David's or the Ramsborn Church is on the N side of Ingram Street. It is cruciform in shape, has a massive square pinnacled tower, 120 feet high, and is a good example of florid Perpendicular Gothic. The name Ramsborn is taken from the old name of the lands, and is tradition-

* An anachronism. There was no Dean of Guild till 1605.

ally derived from a miraculous incident connected with St Mungo. A sheep belonging to the Saint's flock having been carried off and killed by some robbers, one of them found his hand permanently encumbered with the head of the animal, and he had to go to St Mungo and confess his crime before he could get rid of his uncomfortable burden, and the lands where the incident took place received the name of 'Ramys Horne.' The first St David's Church—which was then the fifth in Glasgow—was built in 1724 on the same site as the present edifice, which was erected in 1824. Extensive internal changes were made in 1887, when a number of stained-glass memorial windows were inserted. St Andrew's Church stands in the centre of St Andrew's Square, and was built in 1756. With the exception of the tower, it presents a general resemblance to the church of St Martin's-in-the-Fields in London, and has a hexastyle composite portico, with the city arms sculptured on the tympanum of the pediment. The tower has three stages, and is crowned with a cupolar spire. St Enoch's Church stands at the S end of St Enoch's Square. The chapel in this quarter, dedicated to St Thenew, has been already noticed. The first Presbyterian church, of which the small but elegant steeple still remains, was erected here in 1780-1782, and was in 1827 replaced by the present building. St George's Church is in St George's Place, on the W side of Buchanan Street, in a line with George Street and West George Street, and was erected in 1807. It is an oblong classic building, and has a steeple 162 feet high, of a rather peculiar design, there being four obelisk finials on the angles, while another surmounts the open cupolar centre. The bell is about 3 feet in diameter, and is inscribed 'I to the church the people call, and to the grave I summon all, 1808.' St John's Church, in Grème Street, was erected in 1817-19 at a cost of about £9000, and the parish had for its first minister from 1819 to 1824 Dr Chalmers, who here inaugurated his celebrated movement in support of the opinion that it was the duty of each parish voluntarily to maintain its own poor. The building is Decorated Gothic, and it has a massive square tower with pinnacles. St James' Church is on the S side of Great Hamilton Street. It was built in 1816 as a Methodist Chapel, but when St James parish was constituted in 1820 it became the parish church. It is a very plain building. The above-mentioned nine parish churches, along with the cathedral—which is the parish church of the Inner High Parish—constitute the churches of the original divisions of the old City parish, and the whole are known as the ten city churches, and are under the charge of the town council. Although the Barony was erected into a parish in 1599, and a minister had been appointed in 1595, the erection was made on the condition that the town was not to be 'burdenit with seaten or biggin of kirks, nor furnishing nae mae ministers nor they hae already,' and so the congregation worshipped in the crypt of the cathedral, and had no separate church till 1798, when a very ungainly building was erected in what is now Cathedral Square. This was pulled down in 1889, when the new church, in Castle Street, opposite the old site, was opened. It is one of the handsomest ecclesiastical edifices in the city, is Early English in style, and built of red sandstone. One hundred feet long and 60 wide, it has 1300 sittings arranged in nave, transept, and chancel, with overflow chapel, session-house, vestry, and congregational hall. The Barony parish has had connected with it a number of eminent ministers, one of the earliest being the celebrated Zachary Boyd, and one of the later, the eloquent, genial, and warm-hearted Dr Norman Macleod. Besides these there are the churches of Abbotsford, Anderston, Barrowfield, Bellahouston, Bluevale, Blythswood, Bridgegate, Bridgeton, Calton, Chalmers, Dalmarnock, Dean Park, Elder Park, Gorbals, Govan, Govanhill, Greenhead, Hillhead, Hogganfield, Hutchesontown, Kelvinhaugh, Kelvinside, Kingston, Kinning Park, Laurieston, Macleod, Martyrs', Maryhill, Maxwell, Milton, Newlands, Newhall, Oatlands, Park, Parkhead, Partick and Partick St Mary's, Plantation, Pollokshields, Port Dun-

das, Possil Park, Queen's Park, Robertson Memorial, St Bernard's, St Clement's, St Columba's, St George's-in-the-Fields, St Kieran's, St Luke's, St Mark's, St Matthew's, St Ninian's, St Peter's, St Stephen's, St Thomas', St Vincent's, Sandyford, Shettleston, Springburn, Strathbungo, Townhead, Wellpark, and Whiteinch parishes. There are also the chapels of ease (gradually being converted into *quoad sacra* parishes) of Garnethill, in Barony; Woodside, in Park; Hyudland and Titwood, in Govan; Langside, in Cathcart; Brownfield, in St George's; Belmont, in Hillhead; Cowlairs, in Springburn; and Cobden Street, in Townhead. Few of these fabrics call for particular comment, though many of them are very beautiful examples of different styles of Gothic architecture. The number of communicants in the whole of the Established churches in Glasgow was, in 1895, over 67,000.

The *Established Church Presbytery of Glasgow* comprises all the above-mentioned parishes, and also the adjoining parishes of Banton, Cadder, Campsie, Carmunnock, Cathcart, Chryston, Condorrat, Cumbernauld, Eaglesham, Kilsyth, Kirkintilloch and Kirkintilloch St David's, Lenzie, Rutherglen, Wardlawhill, and West Rutherglen, the Milton of Campsie chapel of ease, and the mission station of Greenhill Road (Rutherglen). Extension schemes are in progress both in connection with the Established and Free Churches, by which several new churches are to be built in the city.

The *Synod of Glasgow and Ayr*, which meets at Glasgow and Irvine, comprises the Presbyteries of Ayr, Irvine, Paisley, Greenock, Hamilton, Lanark, Dumbarton, and Glasgow, which in 1895 included 356 charges and mission stations.

Free Churches.—The Free College Church has been already noticed in connection with the Free Church divinity hall, beside which it stands. The most prominent of the others are St George's, in Elderslie Street, a quasi-cruciform structure; St John's, in George Street, opposite the Technical College, which has a lofty and well-proportioned steeple, and is a good specimen of modern Gothic; St Matthew's, at the W end of Bath Street, a handsome church with a very good spire; St Peter's in Mains Street, in the Blythswood district; Renfield, in Bath Street, E of St Matthew's, a Decorated Gothic building with pierced octagonal spire; Tron, in Dundas Street; Kelvinside, in Hillhead, near the Botanic Gardens, which has a very fine steeple; Wellpark, in Duke Street; Barony, an ambitious Norman edifice with a square tower; Anderston, in University Avenue, a fine Early English building, with a beautiful interior; Cowcaddens, in the Italian style; and Blochairn, at the junction of Garngad and Blochairn Roads; and connected with this denomination, there are also the Argyle (Gaelic), Augustine, Barrowfield, Bridgegate, Bridgeton, Buchanan Memorial, Campbell Street, Candlish Memorial, Chalmers', Cranstonhill, Cunningham, Dennistoun, Duke Street, Eastpark, Fairbairn, Finnieston, Gorbals (formerly the parish church), Great Hamilton Street, Hope Street, Hutchesontown, John Knox's, Jordauhill, Kinning Park, Langside, London Road, Lyon Street, Macdonald, Martyrs', Maryhill, Millerston, Milton, North Woodside, Paisley Road, Partick, Partick Dowanvale, Partick Gaelic, Partick High, Pollokshields, Possil Park, Queen's Park, Renwick, Rose Street, St David's, St Enoch's, St George's Road, St James's, St Luke's, St Mark's, St Paul's, St Stephen's, Sherbrooke, Shettleston, Sighthill, Somerville Memorial, Springburn, Stockwell, Tollcross, Trinity, Union, Victoria, West, Westbourne, Whiteinch, White Memorial, Whitevale, Wynd, and Young Street churches.

The *Free Church Presbytery of Glasgow* comprises all the above churches, and also those at Bearsden, Bishopbriggs, Busby, Campsie, Carntyne, Cathcart, Chryston, Cumbernauld, Glenboig, Govan, Govan St Columba's, and Govan St Mary's; Kilsyth, Kirkintilloch St Andrew's and Kirkintilloch St David's, Rutherglen, and Rutherglen East. The presbytery meets on the first Wednesday of the month at Holmhead Street, in the presbytery house at St Mary's (Free Tron) Church.

The *Free Church Synod of Glasgow and Ayr*, which

meets at Glasgow on the second Tuesday of April and Oct., comprises the presbyteries of Ayr, Irvine, Paisley, Greenock, Hamilton, Lanark, Dumbarton, and Glasgow, and in 1893 included 256 charges and mission stations.

United Presbyterian Churches.—Albert Street church is a French Gothic building, with medallions of Knox, Ebenezer Erskine, and Dr Chalmers on the front gable. Anderston church, built in 1839, is in the E end of Anderston. It is a plain Italian building, and superseded a previous building erected in 1769 by the first Relief congregation in Glasgow. Greyfriars Church is on the E side of North Albion Street, and is a handsome edifice with a Grecian portico. It superseded a previous church in Shnttle Street, built in 1740 by the first Secession congregation in Glasgow. John Street church stands at the corner of John Street and Cochran Street. It has a handsome Ionic colonnade, and superseded a Relief church built on the same site in 1798. Lansdowne Church, on the N side of the Great Western Road, is a cruciform Gothic building, with a spire rising to a height of 220 feet, of good design except for its excessive slenderness. It has a beautiful interior, and a number of stained glass memorial windows. Kelvingrove Church is at the S side of the Kelvingrove Park at the corner of Derby Street and Kelvingrove Street, and is a very handsome Gothic building. St Vincent Street church is on the S side of St Vincent Street at nearly the highest point, and cost about £15,000. It forms an imposing feature in the western views of the city, and has a lofty Egyptian cupola-capped tower. The style is partly Egyptian and partly Ionic. Woodlands Church is at the corner of Woodlands Road and Woodlands Street, and is one of the most handsome and tasteful Gothic churches in the city. It cost about £14,000, exclusive of the site. There is a well-proportioned and tasteful spire. Wellington Church, formerly in Wellington Street but now in University Avenue, Hillhead, is one of the handsomest ecclesiastical buildings in Glasgow. Erected in 1881-84 at a cost of about £30,000, it is a massive structure in the Corinthian style, with five lofty fluted columns along each side, while the chief entrance, to the S, has a large portico with a double row of columns (the same as those at the sides, the first row with six and the second with four pillars with pilasters behind) surmounted by entablature and pediment. The site is commanding, and the main entrance is approached by two flights of steps, which terminate at a platform half-way up, whence there are rows of steps the whole width of the portico. The number of sittings is about 1100. Caledonia Road church is a Græco-Egyptian building, with a lofty campanile surmounted by a Latin Cross. Besides these there are also the Alexandra Parade, Bath Street, Belhaven, Bellgrove, Berkeley Street, Burnbank, Calton, Cambridge Street, Campbell Street, Camphill, Cathedral Square, Claremont, Cranstonhill, Cumberland Street, Dalmarnock Road, Dennistoun, Eglinton Street, Elgin Street, Erskine, Gillespie, Govanhill, Greenhead, Hutchesontown, Ibrox, Kelvinside, Kent Road, Laugside Road, London Road, Maryhill, Mount Florida, Nithsdale, Oatlands, Overnewton, Parkhead, Plantation, Pollok Street, Pollokshields, Pollokshields Trinity, Queen's Park, Regent Place, Renfield Street, Rockvill, St George's Road, St Rollox, Sauidyford, Shamrock Street, Springbank, Springburn, Sydney Place, Tollcross, and Whitevale churches.

The U.P. Presbytery of Glasgow meets on the second Tuesday of every month in the hall, St Vincent Street, and comprises all the above congregations, as well as those at Airdrie (2), Baillieston, Barrhead, Bishopbriggs, Bothwell, Busby, Cambuslang, Campsie, Cathcart, Coatbridge (3), Eaglesham, Govan (2), Kirkintilloch, Lenzie, Lismore, Mearns, Milngavie, New Kilpatrick, Oban, Partick (4), Pollokshaws, Portree, Rutherglen, Stornoway, Thornliebank, and Uddingston.

The United Original Secession Church have three churches in Glasgow at Bedford Street, Laurieston; Mains Street, off Argyle Street; and William Street, in Bridgeton. The presbytery of Glasgow includes these

churches and also others at Kirkintilloch, Paisley, Pollokshaws, and Shottsburn. The divinity hall is in Glasgow, and the session opens in the beginning of June. The synod meets at Edinburgh in May. *The Reformed Presbyterian Church of Scotland* has one congregation in Nicholson Street, and this charge, along with those of Paisley, Greenock, and Stranraer, forms the presbytery of Glasgow. The synod meets in Glasgow early in May. There are also congregations of the *Free Episcopal Church of England* (Croft Street, Camachie, and Trinity Church, Keppochhill Road), of the *Church of Christ* (Brown Street, Cathcart Road, Great Wellington Street, Gallowgate, and Windsor Street), of the *Old Scots Independents* (Oswald Street), of the *Society of Friends* (North Portland Street), of the *John Knox Kirk of Scotland* (Margaret Street), of the *Free Gospel Church* (Govanhill), of the *Catholic Apostolic Church* (Catherine Street and Butterbiggins Road), and of the *Swedenborgians* or New Jerusalem Church (Cathedral Street and Queen's Drive), as well as two congregations of *Unitarians* (St Vincent Street and South St Mungo Street), a *German Protestant Church* (Woodside Road), a deaf and dumb congregation, a Jewish Synagogue (Garuehill), a seamen's chapel (Brown Street), and barracks in various parts of the town for the Salvation Army, which has its headquarters in Hope Street.

The United Evangelistic Hall is at the corner of Steel Street and James Morrison Street, the main front being to the former. It was erected in 1876-77 at a cost of about £13,000, provides accommodation in the area and galleries for over 2000 persons, and contains, besides, 3 large committee rooms, 2 rooms for workers, etc.

Congregational Churches.—There are in Glasgow eleven places of worship in connection with the Congregational Union. These are at Elgin Place, Hillhead, Great Hamilton Street, Eglinton Street, New City Road, Claremont Street, Bellgrove Street (Wardlaw), Bernard Street (Bridgeton), Overnewton (Immanuel), Hutchesontown, and Parkhead. Elgin Place church (1856), at the corner of Elgin Place and Bath Street, is a large and massive, but dignified and handsome, Ionic building, with a good hexastyle portico. Claremont Street church is Decorated Gothic, with a square tower and a lofty octagonal spire. Hillhead church, at the corner of Gibbon Street and University Avenue, is a good building, Early English in style, opened in 1889.

Evangelical Union Churches.—There are in Glasgow in connection with this denomination congregations at North Dundas Street; Muslin Street, Bridgeton; Montrose Street; Meadowpark Street; Moncur Street (Guthrie Memorial); West Street, Calton; Nelson Street, Tradeston; Cathcart Road, Govanhill; Springburn; and Pitt Street (Ebenezer)—10 in all. The pulpit of the Dundas Street church was occupied till his death in 1893 by the Rev. Dr. Morison, the originator of the Union in 1843, when he quitted the Secession Church, in which he had formerly been a minister, his charge being at Kilmarnock. The Theological Hall of the body is also at Glasgow, and has a principal and professors of New Testament Exegesis, Systematic Theology, and Hebrew. The Congregational and Evangelical Union churches were amalgamated in Jan. 1897.

Baptist Churches.—There are in Glasgow, in connection with the Baptist Union of Scotland, congregations at Adelaide Place (Bath Street), Cambridge Street, North Frederick Street, Gorbals, Govan, Hillhead, Hutchesontown, John Street, John Knox Street, Queen's Park, Sister Street, Calton; and Springburn.

The Wesleyan Methodists have places of worship in Sauchiehall Street (St John's), Claremont Street, Gallowgate (St Thomas'), Cathcart Road, Paisley Road, and Windsor Halls (Great Western Road)—6 in all. The Methodists rented a hall in Stockwell Street in 1779, and there John Wesley himself preached from time to time. St John's Church was built in 1880 in Sauchiehall Street. There is also in the city one church connected with the *Church of England*, viz., St Silas.

The Episcopal Church in Scotland.—There are in Glasgow 8 charges, viz.,—St Andrew's at Willowacre,

near the Green; St Barnabas, Bath Crescent; Christ Church, in Brook Street, Mile-End; St John the Evangelist, in Dumbarton Road; St Luke's, Grafton Street; St Mary the Virgin, Holyrood Crescent; St Michael's, Whitefield Road, Govan; St Ninian's in Pollokshaws road; and a number of missions. St Andrew's, dating from 1750, is the oldest church of the Scottish Episcopal communion. Its altar, crucifix, and candlesticks are made of oak from Bishop Rae's 14th century bridge; and in the centre of the altar is the last piece of the high altar of Iona. St Mary's, on the N side of the Great Western Road, a little E of the bridge across the Kelvin, belongs to the Second Pointed style, and was built in 1870-71 after designs by Sir George Gilbert Scott. The estimated cost was £35,000, and the steeple, a massive square tower, with pinnacles and octagonal spire rising to a height of 205 feet, was added in 1892-93. The church consists of a nave (100 feet long), with aisles, transepts, and chancel, and has a fine interior, with some handsome memorial windows. These churches are in the *United Diocese of Glasgow and Galloway*, which also contains the Episcopal charges at Annan, Ardrossan, Ayr, Baillieston, Castle-Douglas, Challoch (Newton Stewart), Coatbridge, Dalbeattie, Dumbarton, Dumfries, Girvan, Gourock, Greenock, Hamilton, Helensburgh, Johnstone, Kilmarnock, Lanark, Largs, Lenzie, Moffat, Motherwell, Newton, Paisley, Port-Glasgow, and Uddingston; missions at Carstadyke, Clydebank, Dalry, Ecclefechan, Maybole, Harthill, Irvine, Kipford, Kirkcudbright, Maxwelltown, Lockerbie, Maybole, New Galloway, Portpatrick, Renfrew, Vale of Leven, West Kilbride, and Wishaw; and private chapels licensed by the bishop at Ardgowan, Cally, Colzium, Coodham, Dolphin-ton, Douglas Castle, Lamington, Langholm Lodge, and Glaisnock House.

Roman Catholic Churches.—The Roman Catholic Church has a strong following in Glasgow, in the poorer, and particularly in the Irish, quarters of the town. There are altogether the following 20 churches in Glasgow and the suburbs:—St Andrew's Pro-Cathedral, in Great Clyde Street; St Alphonsus', in Great Hamilton Street; St John's, in Portugal Street; St Joseph's, in North Woodside Road; St Aloysius', at Garnethill; St Mary's, in Abercromby Street; St Mungo's, in Parson Street; St Patrick's, in Hill Street, Anderston; St Vincent's, in Duke Street; St Francis', in Cumberland Street; Sacred Heart, in Old Dalmarnock Road; Our Lady and St Margaret's, in Kinning Park; St Michael's, at Parkhead; St Peter's, at Partick; St Aloysius', at Springburn; Immaculate Conception, at Maryhill; St Agnes, Lambhill; St Paul's, at Shettleston; Holy Cross, at Govanhill; and St Antony, Govan. St Andrew's Church, in Great Clyde Street, superseded an old church built in the Gallowgate in 1797, and the first open place of Roman Catholic worship in the city subsequent to the Reformation. At the time of its erection it cost £13,000, but since 1871 a large sum of money has been spent in altering and improving it. The style is Decorated Gothic, and the building has a fine S front with a richly carved doorway and window, crocketed pinnacles, two graceful octagonal turrets, and, in a niche, a figure of St Andrew. St Mungo's was erected in 1869 to the NW of Glasgow Cathedral, and has, adjoining it, a monastery (St Mungo's Retreat), erected in 1890-92, for the Passionist Fathers in charge of the church. It is a handsome red sandstone building, with accommodation for sixteen priests. The Franciscan church of St Francis, designed by Messrs Pugin & Pugin, at present consists of only an aisled six-bayed nave, Early Decorated in style, but it will, when completed, form one of the finest ecclesiastical structures in the city. There are also a Convent of Mercy, at Garnethill; Franciscan convents, in Charlotte Street and Orchard, Crosshill; the Convent of Notre Dame, Downhill; the Convent of the Good Shepherd, at Dalbeth; St Peter's College, Bearsden; and a Reformatory at West Thorn. The churches in Glasgow, with others at Airdrie, Alexandria, Baillieston, Bar-head, Blantyre, Busby, Cadzow, Cambuslang, Cardowan, Carfin, Carluke, Chapelhall, Cleland, Clydebank, Coat-

bridge (2), Dalry, Dumbarton, Duntocher, Gourock, Greenock (2), Hamilton, Helensburgh, Houston, Johnstone, Kilbirnie, Kirkintilloch, Lanark, Largs, Larkhall, Longriggend, Milngavie, Mossend, Motherwell, Neilston, Paisley (2), Pollokshaws, Port-Glasgow, Renfrew, Rutherglen, Saltcoats, Shieldmuir, Sbotts, Strathaven, Uddingston, Whifflet, and Wishaw, form the *Diocese of Glasgow*, presided over by an archbishop.

Municipal Affairs.—*The Corporation.*—We have already seen that Glasgow was, by William the Lion, raised to the dignity of a burgh of barony holding of the bishop, and doubtless it was, from that time, governed by a provost and magistrates, but the first mention of these still remaining is in 1268, when a conveyance of land is stated to have been made in presence of the provost, bailies, etc. In 1454 the city was constituted a burgh of regality, and the provost and magistrates would then reside either personally or by deputy in the court of regality. In the early times they were not selected from among the citizens, but were noblemen or gentlemen whose power might at any moment have proved useful to the bishop, and so the list of early provosts includes the names of Lord Belhaven (1541-43), Lord Boyd (1574-77), Crawford of Jordanhill (1577-78), the Earl of Lennox (1578-80), the Earl of Montrose (1583-84), Sir George Elphinstone (1600-1607), and, above all, different members of the family of Stewart of Minto. At a late period it even became customary for the provost to be appointed during the life of the archbishop, as in the case of Lord Boyd, who so held office. The provosts did not reside in the city, but came there only when special occurrences required their presence. The bailies seem, however, at an early period to have become jealous of church jurisdiction, for in 1510 we find three of them excommunicated for having recorded in their books that 'none of the citizens of Glasgow ought to summon another citizen before a spiritual judge respecting a matter which could be competently decided before the bailies in the court-house of Glasgow,' and this statute had been considered by the chapter to be an infringement of the rights of the Church. The Earl of Lennox, who was provost at the time, and the bailies themselves, at first boldly stood up for their rights and liberties, but finally gave way, and were absolved in the beginning of 1511. In 1560 the right of nomination by the archbishop disappeared along with himself; the council, meeting after the flight of Beaton, declared that the archbishop had been searched for, and that, as there seemed to be no chance of finding him, they were compelled to elect the magistrates themselves; but in 1574 mention is again made of leets of names being submitted to the 'Tulchan' Archbishop Boyd for his selection, and the same is the case in 1575. In 1578 and 1579 the Earl of Lennox was made provost by the same selection, but in 1580 the bailies had hardly been appointed when an act of the Privy Council was issued, intimating that, as these officials had resigned at the king's request, three others had been appointed. By Act of Parliament in 1587 the lands of the barony were annexed to the Crown, and in the same year they were granted to the commendator of Blantyre, to whom also the right of selection passed, for we find him nominating the provost and bailies in 1589. In 1600, however, by royal charter, the right of selection was given to the Duke of Lennox, and between 1601 and 1605 the council had the right granted it of electing its own magistrates, but this only brought dissension, and in 1606 the king had to name the bailies himself, while in the following year the right of nomination was handed by the council back to the archbishop. In 1611 a new charter of confirmation was granted by the king, dispoing the burgh of Glasgow to the magistrates, council, and community, but reserving to the archbishop his right to elect magistrates and exercise jurisdiction within the regality, and in 1633 and again in 1636 other acts were obtained ratifying all privileges, but still reserving to the archbishop the rights before-mentioned. In 1639 the archbishop had to flee, and in that year and 1640 the council elected their own magistrates, but in 1641 the king interfered

and made the selection himself, and though the council protested and sent commissioners to Edinburgh on the subject, no redress was obtained; and so matters remained till 1690, when a royal charter of William and Mary confirmed all former charters, and granted to the city the 'full power, right, and libertie to choise and elect their Proveist, Bailiies, and hail other Magistrats in the ordinar manner and at the ordinar tyme, as freele as any other royall burgh in the said kingdome.' The provost has borne the courtesy title of 'my lord' and 'the honourable' since 1688, and the first recorded allowance made to him 'to keep up a post suitable to his station,' was in 1720 when the sum of £40 was allowed yearly, and this payment lasted till 1833. In 1627 the provost, as is duly recorded, had a 'hatt and string' purchased for him, so he probably wore a hat of office, and in 1720 an act of council was passed providing that his official dress was to be a court suit of velvet. After 1767 the provost and bailies wore cocked hats and gold chains of office: the latter are still in use, but the former disappeared in 1833. In 1875 official robes were adopted for the provost, bailies, and town-clerk. In early times the number of the council seems to have varied, and, in place of the opposite method now in use, the council was elected by the magistrates. In 1586 we find there was a provost, 3 bailies, and 21 councillors, but additions and removals were made at any time in the most haphazard manner. Prior to 1801 the executive of the council consisted of the lord provost, 3 bailies, the dean of guild, the deacon-convener, and the treasurer. In that year two other bailies were added—one from the merchants' rank and the other from the trades' rank. Until the passing of the Municipal Reform Bill the council was composed exclusively of members from the Merchants' and Trades' Houses, self-elected here as elsewhere; but when that measure became law the royalty was divided into five wards, which returned thirty members by election, and to these two *ex officio* members were added, viz., the dean of guild, elected by the Merchants' House, and the deacon-convener, elected by the Trades' House.

Prior to 1846 the three districts of Gorbals, Calton, and Anderston* had burgh jurisdictions of their own, but an Act of Parliament passed in that year provided that these should be abolished, and that these places should in future return their proportion of members to the city council—thus raised to 50. Since 1891 there have been 77 members, of whom 75 are elected in the proportion of 3 by each of the 25 wards into which the municipal burgh is now divided, and the remaining 2 are the dean of guild and the deacon-convener, elected as before. The ward councillors retain office for 3 years, one-third of them retiring annually by rotation, and the dean of guild and deacon-convener are elected annually, but are generally elected for a second year. The council chooses out of its own members an executive, consisting of a lord provost, 14 bailies, a treasurer, a master of works, a river bailie, and a depute river bailie. It also appoints the city clerk, city chamberlain, burgh fiscal, burgh registrars, and other officials, with salaries ranging from £200 to £1200 a year. The committees are those on finance, accounts, etc.; on the bazaar and city halls, clocks, bells, etc.; on churches and churchyards, on parliamentary bills, on tramways, on libraries, on new municipal buildings, and on gas and electric lighting; while there are various sub-committees. The council also act as trustees under the Parks and Galleries

* Gorbals was originally subject to the archbishop, but became in 1647 subject to the town council of Glasgow; and its magistrates were, down till 1832, appointed by the council, but from 1832 to 1846 were elected by the inhabitants subject to the subsequent approval of the council. The original burgh comprised only 13 acres. Calton was constituted a burgh of barony by Crown Charter in 1817, and had a town council, consisting of a provost, 3 bailies, a treasurer, and 11 councillors elected by burgesses, whose qualification was a payment of £2, 2s. Anderston was constituted a burgh of barony by Crown Charter in 1824, and had a town council of the same constitution as that of Calton, elected, however, by proprietors or life-renters of heritable subjects, and by tenants paying £20 or upwards of annual rent.

Trust Act of 1859, the business being managed by a committee, with sub-committees on each of the different parks, the Corporation Galleries and City Industrial Museum, Music in the parks, and Finance; as Commissioners for Markets and Slaughter-Houses, the affairs being managed by a committee, with a sub-committee on Finance; as Local Authority under the Contagious Diseases (Animals) Act, 1878-90, with an executive committee and a sub-committee on Foreign Animals Wharves; as Trustees under the Glasgow Improvement Act of 1866, the business being managed by a committee, with sub-committees on Lodging-Houses, Finance, and Repairs. They are also Commissioners under the Glasgow Corporation Waterworks Act of 1855, the business being managed by a committee, with sub-committees on Finance, Works and Water-supply, claims for compensation for lands and damages, and appeals. The council also act as Commissioners of Police under the Glasgow Police Acts (1866-91), the business being managed by a magistrates' committee; committees on Finance, on Statute Labour, on Watching and Lighting, on Health, with sub-committees on Cleansing and Hospitals; on Sewage Disposal; for disposing of objections to assessments; on Gunpowder Magazine; on Street Improvements; on Building Regulations; and on Public Baths and Wash-houses, as well as a number of sub-committees. They are also Bridge Trustees, and return members to the Clyde Navigation Trust, the Court-House Commissioners, and managers for various institutions that have been already noticed. In the year 1700 the corporation income was in round numbers £1764, while the expenditure was £2024, but generally, even in the most corrupt days of the council, the affairs were well managed and cared for. The income is derived mainly from feu duties and ground-annuals, bazaar dues and rents, seat rents of the parish churches, assessments, and miscellaneous properties. The income of the Common Good alone, in 1861, was £18,480, 7s. 8d., the ordinary expenditure, £15,457, 17s. 0½d., the extraordinary expenditure, £3046, 7s. 2d., and the debts, £64,098, 19s. 7d. The income in 1871 was £15,916, 1s. 6d., the ordinary expenditure, £14,808, 1s. 3d., the extraordinary expenditure, £2465, 1s. 9d., the debts, £183,921, 9s. 9d., the assets, £426,116, 14s. 5d. The income in 1881 was £25,562, 12s. 2d., and the expenditure £18,871, 7s.; the debts were £896,032, 19s. 1d., and the assets £1,298,249, 13s. 9d. The income in 1891 was £54,625, 7s. 3d., and the expenditure £48,953, 15s. 5d.; the debts were £878,313, 2s. 2d., and the assets £1,232,685, 7s. 2d. The income in 1895 was £56,378, 16s. 5½d., and the expenditure £45,900, 14s. 9½d.; the debts were £970,039, 9s. 7d., and the assets £1,330,204, 6s. 3d., exclusive of the tramways sinking fund, which may be regarded as only a book-keeping liability and really as a free asset of the Common Good of the City. The assessment for municipal buildings in 1895 amounted to £15,461, 1s. 8d.; for the registration of births, deaths, and marriages, £4984, 6s. 2d.; for registration of voters, to £5934, 2s. 5½d.; for lands valuation, &c., to £6640, 8s. 4d.; for Contagious Diseases (Animals) Act, £1182, 19s. 11d.; for lunacy acts, £7117, 3s. 11½d., and for prisons, £1932, 16s. 6d. The debts under the Municipal Buildings Act of 1878 were £592,588, and the assets £538,559 (including site, £172,953).

Tramways.—The corporation have the management of the Glasgow Corporation Tramways authorised by an Act of Parliament passed in 1870, and extended and confirmed by acts and agreements in 1871, 1873, 1875, and 1881. By these acts the corporation were empowered to construct certain specified lines of traunway, their borrowing powers for the purpose being fixed first at £200,000 and then at £300,000. These lines they were empowered to lease to a company, formed at the same time, for a period of twenty-three years from 1 July 1871; and under a lease entered into on 21 Nov., the corporation agreed to raise the money for, and to construct, the lines, while the company agreed to pay all expenses of the act, interest on the cost of construction at 3 per cent. per annum; to set aside the same percentage as a sinking

fund for the extinction of the original cost; to pay £150 per annum for every mile of street over which the traffic went; and finally, to deliver up the lines and the street between them in good order at the termination of the lease, and then also to hand over any balance of receipts that may exist. The first portion of the lines authorised within the city was opened in 1872, and extension has been going on from time to time ever since, till there was, in 1896, a total length of nearly 33 miles exclusive of stable connections. When the lease of the Tramway Company came to an end in 1894, the lines were taken over by the Corporation. Among many improvements introduced by them are improved cars, halfpenny half-mile stations, and through routes. The traffic receipts for the year ending May, 1896, amounted to £328,827, other receipts £5550, and working expenses £251,110. The amount of the capital expenditure at same date was £582,993. Starting from the junction of Jamaica Street and Argyle Street as a centre, lines extend westward along Argyle Street, Main Street (Anderston), and Dumbarton Road to Whiteinch, and eastward along Argyle Street and Trongate to the Cross. Here they break off into three branches, one of which runs by Saltmarket, Albert Bridge, Crown Street, and Cathcart Road to Mount Florida; a second goes SE by London Street, Great Hamilton Street, and Canning Street to Bridgeton Cross, and there breaks off into three branches, one of which runs along the Dalmarnock Road to near Dalmarnock Bridge, another runs along London Road to Fielden Street, and the third runs down Main Street, close to the Rutherglen Bridge, where it terminates. The third branch from the Cross runs along Gallowgate and Great Eastern Road to Parkhead. From this line a branch turns off to the N at East John Street and passes along Bluevale Street, at the N end of which it turns to the W, and passes along Duke Street and George Street, through George Square and along St Vincent Place to Renfield Street; this line is united to the Trongate line by a branch which passes along the S side of George Square and on to Glassford Street, crosses the Trongate, passes along Stockwell Street, Victoria Bridge, Main Street, Gorbals, on to Mount Florida.

Returning to our original starting point, another line passes S by Jamaica Street, Glasgow Bridge, Bridge Street, and Eglinton Street, to the W end of Crosshill, and then eastward by Queen's Drive to the Mount Florida and Glasgow Cross section. At the S end of Bridge Street it is intersected by a line which, starting from Braehed Street at the E end of Caledonia Road, runs westward along Rutherglen Road and Paisley Road to the Corporation terminal station. Here, however, the line connects with two branches, one extending along Paisley Road to Ibrox, and the other by the Govan Road to Govan. The lines within Govan burgh are worked by a private company. From Jamaica Street another line passes northwards by Union Street and Renfield Street to the corner of Sauchiehall Street, where one branch turns along Sauchiehall Street, and turning down Derby Street joins the Whiteinch line; a second branch passes through Cowcaddens Street and along New City Road and Great Western Road to Hyndlands Road. It gives off two branches, one at the NW end of Cowcaddens, which proceeds by Garscube and Possil Roads to the canal at Rockvillia, from whence it extends to Saracen Cross, Possilpark; while the second, turning off at St George's Cross, passes by New City Road to Maryhill. A branch from St George's Cross southward along St George's Road to Charing Cross connects the Great Western Road and Sauchiehall Street lines; another, by Cambridge Street, the Sauchiehall Street and Cowcaddens lines; another, by Gordon Street, Hope Street, Bothwell Street, and Elmbank Street, the Renfield Street and Sauchiehall Street lines, a branch from this line connecting by St Vincent Street the Bothwell Street and Dumbarton Road lines; and another from Charing Cross by Woodlands Road, Eldon Street, and Park Road, the Sauchiehall Street and Great Western Road lines. A line from Springburn passes along Springburn Road, Castle Street, Parliamentary Road, Sauchie-

hall Street, West Nile Street, and connects with Gordon Street line. Depots are situated at Coplawhill, Kinning Park, Partick, Kelvinhaugh, Dennistoun, Whitevale, Dalmarnock Road, Maryhill, Cowcaddens, and Sighthill.

Parks and Galleries Trust.—The results of the operations of the council under this act have been already given in the notices of the Public Parks, Galleries, and Museum.

Markets and Slaughter-Houses.—The operations of the council under this trust have been also noticed.

The City Improvement Trust.—The City Improvement Act, obtained in 1866, and amended in 1873 and again in 1880, empowered the Town Council to alter, widen, divert, or altogether efface a number of old streets, and to construct new ones, and compulsory powers were given for the purchase of property and the levying of assessments. The number of streets to be altered, widened, or diverted was 12, while 39 new streets were to be formed; the act was to be in force for 15 years; and the assessment for the first five years was not to exceed 6d. per £1, while for the remaining ten it was not to exceed 3d. per £1. The borrowing limit was fixed at £1,250,000. The state of certain parts of the city had been attracting notice for many years previous to 1866, but from the high value of ground in the densely populated parts nothing had been done, and one of the results was an abnormally high death-rate. What the wynds of Glasgow were may be gathered from the following extract from the report of the 'Commission for Inquiring into the Condition of the Hand-loom Weavers in the United Kingdom,' issued in 1841:—'The wynds of Glasgow comprise a fluctuating population of from fifteen to twenty thousand persons. This quarter consists of a labyrinth of lanes, out of which numberless entrances lead into small courts, each with a dunghill reeking in the centre. Revolting as was the outside of these places, I was little prepared for the filth and destitution within. In some of these lodging-rooms (visited at night) we found a whole lair of human beings littered along the floor—sometimes fifteen and twenty, some clothed and some naked—men, women, and children huddled promiscuously together. Their bed consisted of a lair of musty straw intermixed with rags. There was generally no furniture in these places. The sole article of comfort was a fire. Thieving and prostitution constituted the main source of the revenue of this population. No pains seem to be taken to purge this Augean pandemonium, this nucleus of crime, filth, and pestilence existing in the centre of the second city of the empire. These wynds constitute the St Giles of Glasgow; but I owe an apology to the metropolitan pandemonium for the comparison. A very extensive inspection of the lowest districts of other places, both here and on the Continent, never presented anything half so bad, either in intensity of pestilence, physical and moral, or in extent proportioned to the population.' Almost twenty years later there was but little improvement, for in 1860 a high local authority said at the Social Science Congress respecting some of the portions of the city about the High Street, Saltmarket, Gallowgate, and Trongate:—'From each side of the street there are narrow lanes or closes running like so many rents or fissures backwards to the extent of sometimes 200, sometimes 300 feet, in which houses of three or four storeys stand behind each other, generally built so close on each side that the women can shake hands with one another from the opposite windows; and in each of many of these lanes or closes there are residing not fewer than 500, 600, and even 700 souls. In one case we observed 38 families, or nearly 300 persons, occupying one common stair; and in the Tontine Close, on the N side of Trongate, there are nearly 800 of the most vicious of our population crowded together, forming one immense hotbed of debauchery and crime.' The preamble of the act itself states—'Various portions of the city of Glasgow are so built, and the buildings so densely inhabited, as to be highly injurious to the moral and physical welfare of the inhabitants; and many of

the thoroughfares are narrow and circuitous and inconvenient, and it would be a public and local advantage if various houses and buildings were taken down,' etc. Besides the references already made to the operations of the Trust, we may here notice the feuing of lands at Overnewton and Outlands in 1871 for the construction of new suburbs, with dwelling-houses adapted to the needs of the working-classes; the prolongation of the line of Ingram Street to High Street, the continuation of Græme Street to High Street, the alteration of the Tontine and the widening of Trongate, the alterations on the Gallowgate, the opening up of Watson Street, Sister Street, and Park Lane, the formation of James Morison Street, John Knox Street, the improvement of the Bell o' the Brae from a gradient of 1 in 14 to 1 in 29 $\frac{1}{2}$, the enlargement of the open space in front of the Royal Infirmary, and the formation of Bridgeton Cross. In no town in the kingdom have changes of the same magnitude and importance taken place in the same time. The improved condition of things is shown by the fact, that while the city death-rate for the five years before the operations of the act was 30 per 1000, it has fallen to under 24 for the old city and to over 23 for the extended municipality. In 1866-67 the tax was at the rate of 6d. per £, from 1867 to 1873 it was 4d. per £, in 1874 it was reduced to 3d., and was thereafter gradually reduced to $\frac{3}{4}$ d. per £. The borrowing powers, originally fixed at £1,250,000, were by the Act of 1880 extended to £1,500,000, and of this, in 1895, use was made to the extent of £1,149,592. For the year ending 31 May 1895 the ordinary revenue of the Trust was £55,898, the ordinary expenditure £47,545, the extraordinary revenue £3568, and the extraordinary expenditure £1609.

In the course of the displacement of the population in the old haunts, and the provision of accommodation for it elsewhere, the trustees erected model lodging-houses in different parts of the city. The latest addition to the number of such lodgings marks a new departure in the municipal housing of the poorest class. It is a handsome and commodious building in St Andrew Street called a Family Home, and has been specially designed to meet the needs of men or women who have children dependent on them. It was opened in 1896, and the rates of rental fixed on for men 3s. 6d., for women 2s. 6d., for one child 8d., two 1s. 4d., three 1s. 6d. per week. Arrangements for boarding are also made, and children are taken care of in the absence of their parent. The net return for lodging-houses in 1895 was £5539, and the total net return on a cost of £92,028 (£11,232 having been written off for depreciation) has for the last ten years averaged close on 5 per cent.

As the active operations of the Trust have now ceased, we may glance briefly at the results of its work. The cost of the property acquired by the Trust has been (1) within compulsory areas £1,621,336; (2) at Outlands £42,284; (3) at Overnewton £42,927; (4) cost of erection of the model tenement in Drygate, including site, £1713, 1s. 4d.; (5) expenditure on formation of streets, squares, sewers, covering Molendinar and Camlachie Burns, etc., £105,714; (6) lands of Kennyhill, and cost of forming Alexandra Park £40,000; (7) cost of buildings and sites of seven lodging-houses £101,247; (8) new tenements, Family Home, and labourers' dwellings £128,519; (9) property and feu duties acquired from Police Commissioners £103,245, or a total outlay of £2,186,986. Against this the Trust has disposed of ground and feu-duties to the amount of £1,072,680; while the value of the property and feu-duties still held is estimated at £691,161. This leaves a deficiency on realisation of £423,144, and if to this be added the excess of liabilities over assets £98,301, and the total assessments from 1866 to 1895, the total cost to the ratepayers is brought up to £691,381, in return for which they have obtained (1) Alexandra Park; (2) 98,929 square yards of ground employed in the formation of 30 new streets, and the improvement of 26, the total space being 34,259 square yards of street surface beyond what was contemplated in the

original scheme; and (3) the great improvement in the sanitary and social condition arising from the alterations in the sewers, streets, and public works, at a cost of £105,714.

Water Supply.—Originally all the water the city required was procured from wells, of which there was a considerable number. The most noted seem to have been St Thenew's Well near St Enoch's Square, the Deanside or Meadow Well, Bogle's Well, the Barras-yett Well near the foot of Saltmarket, one in Trongate, the Priest's or Minister's Well on the banks of the Molendinar near the Bridge of Sighs, and not far off, on the opposite bank, the Lady Well, a well at the Cross, one at the Vennel, one on the Green, and no doubt many of less note elsewhere, some being private. M'Ure says that in 1736 there were 'sweet water wells in several closes of the town, besides sixteen public wells which serves the city night and day as need requires.' There were seemingly about thirty in all. In 1776 the magistrates ordained the treasurer 'to pay to Dr Irvine £8, 8s. for his trouble in searching round Glasgow for water to be brought into the city,' but nothing seems to have come of the search; and though in 1785 the magistrates employed Mr James Gordon to examine the water at Whitehill, the scheme was again abandoned. By 1804 the supply had become still scantier, and in that year one of the citizens named William Harley brought water from his lands at Willowbank into his yard at what is now West Nile Street, and thence the water was distributed through the town in barrels mounted on wheels and was sold at a halfpenny the 'stoup.' In 1806 an Act of Parliament was obtained incorporating the Glasgow Waterworks Company, with a capital of £100,000 (afterwards increased) in £50 shares. The engineer of the company was Telford, and their operations were carried on by means of reservoirs at Dalmar-nock, from which mains passed through the city. In 1808 the Cranstonhill Waterworks Company was formed, with a capital of £30,000 in £50 shares, and borrowing powers to the extent of £10,000. The reservoirs were at Cranstonhill, and the supplies in both cases were drawn from the as yet unpolluted Clyde. In 1806 the former company had over 17 miles, and the latter company about 9 $\frac{1}{2}$ miles, of mains in the city, and in the following year there was a sufficient supply to permit of watering the streets with water carts, all former efforts in the direction of keeping down the dust having been limited to men with watering cans. These companies, after competing with one another for a time, at length amalgamated, and by extending their works to meet the increasing demand, continued to supply the whole of the water used till 1846, when the Gorbals Waterworks Company, formed under an Act passed in 1845, brought in an additional gravitation supply from the hills, 7 miles to the S, where there is a contributing area of about 2800 acres and a storage capacity of 150,000,000 cubic feet; the water is filtered and delivered at Gorbals with a pressure of about 200 feet, and the average daily supply for 1895-96 was 4,640,499 gallons. The quality of the water supplied by the old companies was rapidly becoming bad from the increasing impurity of the Clyde, and as the works were also inadequate to supply the higher parts of the city, it again became necessary in 1853 to introduce a further supply, and in that year the Glasgow Waterworks Company applied to parliament for a bill for the introduction of water by gravitation from Loch Lubnaig. This was successfully opposed by the town council, who, in 1854, introduced a bill asking for power to acquire the works of the Glasgow and Gorbals companies, and to bring in a fresh supply from Loch Katrine. It was defeated, but having been re-introduced the following year was then successful, and though the works were immediately begun, the long distance from Loch Katrine to Glasgow (34 miles) prevented their completion till 1859, when on 14 Oct. the new water supply was inaugurated by the Queen, who opened the sluice admitting the water to the tunnel at the loch. The water supply is drawn from a water surface of about 4000 acres, with a drainage area of about 45,800 acres.

The commencing tunnel at the loch is 8 feet beneath the surface, at a point $2\frac{1}{2}$ miles E of Stronachlachar. It has a diameter of 8 feet, and has to Loch Chon a length of 6975 feet. From this the water is carried by a series of works—comprising numerous aqueducts, some of them from 60 to 80 feet high; 69 tunnels, aggregately 13 miles long; and lines of well-protected iron pipes, 4 feet in diameter, and also extending over a distance of 13 miles—past Loch Ard, and across the valley of the Endrick to a collecting reservoir at Mugdock, in the vicinity of Strathblane. This reservoir lies 317 feet above the level of the sea, and originally occupied 70 acres, with storage accommodation for 500,000,000 gallons of water, but has since been greatly enlarged and improved so as to be capable of receiving and emitting 50,000,000 gallons a day, which is the maximum amount of supply from Loch Katrine, Loch Venachar, and Loch Drunkie. From Mugdock originally two lines of pipe, and since 1872-73 four, 3 feet in diameter, and about 8 miles long in each case, bring the water to the city, where it is distributed to the various districts, to the suburbs, and to other places in the vicinity, including Rutherglen and Renfrew, through a length of mains which in the city alone is over 120 miles. In order to meet the constantly increasing demand of the city and district, the Water Commissioners in 1882 obtained an Act for the construction of an additional service reservoir at Craigmaddie to the E of Mugdock, and in 1885 another Act to increase the capacity of Loch Katrine and form a connection with Loch Arklet, and an additional aqueduct $23\frac{1}{2}$ miles long between Loch Katrine and the new reservoir. The reservoir at Craigmaddie was completed and water turned on in June 1896. It is the same height above sea-level as Mugdock, has a water-surface of $86\frac{1}{2}$ acres, and contains 700,000,000 gallons. One main from the reservoir to the city is already completed, and another is still in progress. The works at the source of supply involved—(1) the raising of the surface of Loch Katrine 5 feet above the present top level, giving a command of 12 feet of water of this loch; and (2) the raising of Loch Arklet 25 feet, and the formation of a tunnel to Loch Katrine, so as to direct thither the flow of surplus water which formerly went to Loch Lomond. Now that these works are completed the two lochs have storage accommodation for 15,000,000,000 gallons, the available supply is at the rate of 75,000,000 gallons a day, and Loch Katrine contains 140 days' supply, and Loch Arklet 175; while, should it be in the future necessary to further increase the amount available to 100,000,000 gallons a day, an additional supply will be obtained from the northerly branch of the river Teith. The new connecting aqueduct follows the same route as the original one, but it is considerably larger. The new main pipes from the service reservoirs approach the city by the north-east district. The average daily amount sent in from Loch Katrine in 1895-96 was 43,923,786 gallons. The water is the purest in the kingdom, containing only .25 gr. of impurities per gallon. Some of the manufacturers who formerly got water from the Clyde above Albert Bridge, having had their supply taken away by the removal of the weir that formerly crossed the river there, the Corporation erected for their service a pumping station at Harvey's Dyke, a little above the old waterworks. Over half a million gallons of other water are also pumped every day for the supply of the high portions of Springburn and Garngad Hill and of Hogganfield. The revenue for 1895-96 was £189,713, and the expenditure £147,859, exclusive of £36,027 carried to sinking fund. The rate inside the compulsory area is 6d. per £ for domestic purposes and 1d. for public purposes, and outside the compulsory area 10d. per £.

Hydraulic Power Supply Works were completed and opened 30 May 1895, by which water at high pressure is supplied to the business parts of the city for working hydraulic machinery and lifts. The water is obtained from the Clyde by pumping.

Police.—Till the commencement of the present century Glasgow was protected by the 'watch and ward system,'

conducted by a force of thirty or more householders patrolling the streets. In 1644 the council appointed 'ane wachte to be keptit nightlie heireffir' from six o'clock at night till five in the morning. This does not seem to have been working satisfactorily, for in 1659 the order was repeated, and proclaimed by tuck of drum, with the addition that the watch was 'to be sett ilk nicht, be the baillies in dew time,' and that a penalty was to be exacted from those who neglected to take their turn. This lasted till about 1778, when a superintendent, with a small force of men, was appointed; but this method seems to have again failed, as there was no power of assessing for its support, and a return was made to the old system. In 1788 there was also a small force under a superintendent, but they appear to have been merely to assist the watch kept by the citizens. In 1789 a bill was introduced into Parliament, in which it was proposed to extend the royalty, and to impose an assessment for police purposes, but it was strongly opposed, and was finally thrown out; and in 1790 the city was divided into four districts, and all male citizens between eighteen and sixty whose rents were over £3 took turns of guard duty, 36 being on patrol every night. By 1800, however, the step could no longer be delayed, and in that year an act was passed authorising the organisation of a police force. New lamps were then erected; sentry boxes were put up for the watchmen; a cleansing department was organised to replace the 3 men who had hitherto been employed in that service; and a force consisting of a superintendent, a clerk, a treasurer, 3 sergeants, 9 officers, and 68 watchmen, was put in working order. The original assessment was 4d. per £ on rents between £4 and £6; 6d. between £6 and £10; 9d. between £10 and £15; and 1s. on rents of £15 or upwards. The expenditure the first year was about £5400. By 1820 the expenditure had increased to nearly £12,000, and there were then 20 officers, 100 watchmen, and 16 scavengers. In 1842 proposals were made to annex the burghs of Gorbals, Anderston, and Calton, the lands of Milton and the village of Port Dundas, to Glasgow for police purposes; but the scheme met with the most violent opposition. In 1845, on another quarrel of the same sort arising, it was intimated in parliament that unless Glasgow was prepared to put its police force into proper order, the government would have to take the matter in hand, and this led to the police bill of 1846, which, though amended from time to time, formed the basis of all police legislation prior to the great act of 1890, and the further amending act of 1892. In 1870 the available force consisted of 1 chief constable, 7 superintendents—one for each of the seven divisions then existing—namely, the A or Central, the B or Western, the C or Eastern, the D or Southern, the E or Northern, the F or St Rollox, and the 'Anchor' or marine division—and 825 subordinate officers and men; while there were in 1896 a chief constable, 10 superintendents—two additional for the divisions (G Maryhill and H Queen's Park) added on the enlargement of the municipality in 1891—and 1293 subordinate officers and men. In 1895-96, for the year ending 15 May, the ordinary income of the police department was, for police purposes (including lighting and cleansing), £403,978; for statute labour, including revenue under Roads and Bridges Act (1878), County Road Debt, and Glasgow Bridges Act (1886), £116,134; for the sanitary department £83,615; and for sewage purification, £19,078—a total of £622,806. The expenditure was respectively for the same departments £391,973, £119,751, £79,101, and £18,282, a total of £609,108. The assets in the same year were £1,968,317, and the debts £1,942,952, against which the various sinking funds amounted to £669,632.

The fire brigade now forms an important and valuable part of the police system. The first fire engine was acquired by the city in 1657, being one of the results of the fire experience of 1652, and it was constructed on the model of the Edinburgh one of that date. In 1725 a new one was purchased in London for £50. The

appliances thus provided look puny when compared with the apparatus of the present day, but the fire brigade itself is of still later growth. In 1818 there were 48 men and 6 fire engines, and in 1870 the force consisted of 70 men, of whom 30 were stationed at the central brigade station, and the others distributed at the district stations. There are now a firemaster, three superintendents, and upwards of 100 men, with 10 steamers, and 40,000 feet of hose. The average yearly number of fires is nearly 600, of which about two-thirds are attended by the engines.

Connected with the police department there are also a medical officer of public health, 3 city analysts, and 9 district surgeons; a master of works, a sanitary inspector and inspector of common lodging-houses, an inspector of cleansing, and an inspector of lighting.

Lighting.—Glasgow, like all other places, was formerly dependent on the moon for its night light, and when that was wanting those of the inhabitants who were abroad at night had to grope their way as best they could, or provide hand-lights for themselves. During the meeting of the General Assembly in 1638 orders were given for the inhabitants to hang out lights, but this was a mere temporary matter, and though there was a feeble attempt in 1718 to make darkness visible by means of conical lamps with tallow candles in them, it was not till 1780 that public lamps were fairly introduced. In that year the magistrates and council ordered nine lamps to be placed on the S side of the Trongate, from the Tron Steeple to Stockwell Street, and expressed their willingness to extend the line to the W on condition that the proprietors there laid down a foot pavement. Lighting with gas commenced in the streets in 1818, and now the number of lamps in streets and courts is nearly 14,000, in common stairs about 30,000, and lit by the Clyde Trust about 600, or nearly 45,000 lights every night altogether.

In pursuance of an Act of Parliament obtained in 1817, the Glasgow Gas Light Company was formed in 1818, with an authorised capital of £40,000 and a subscribed capital of £30,000, and in 1843 another was started called the Glasgow City and Suburban Gas Light Company, the former having works at Tradeston, Townhead, and Partick, and the latter works at Dalmarnock. These companies supplied gas for the whole district till 1869, by which time, however, they had been experiencing the greatest difficulty in meeting the ever-increasing consumption. In that year they both found it necessary to apply to parliament for powers to increase their capital and extend their works, and the corporation then stepped in and obtained an Act empowering them to acquire all the old works, of which they got possession in the following year, and another Act has since, in 1871, still further enlarged their powers. The capital of the two companies jointly was, at the date of transference, £415,000; and the annuity fixed to be paid on it was 9 per cent. on £300,000 and 6½ per cent. on £115,000. Prior to 1872 the council had so improved and extended the works at Tradeston, Dalmarnock, Townhead, and Partick (the last two of which have, however, since been abandoned) as to make them capable of turning out 9,000,000 cubic feet every 24 hours, and in 1872-74 new works were erected on a large site that had been purchased for the purpose at Dawsholm near Maryhill, while on the extension of the municipal boundary the corporation acquired the undertakings of the Partick Hillhead and Maryhill, the Old Kilpatrick, and the Pollokshaws gas light companies at a cost respectively of £107,532 (£20,841 for meters, etc.), £6852, and £6063 (£2421 for meters, etc.). The Partick, Hillhead, and Maryhill works (Temple Works), which were separated from the Dawsholm works by the canal, were connected with them by a tunnel, and at them there was also erected in 1893 a very large new gasometer. The gas is conveyed to the city in a main 4 feet in diameter. The gas revenue in 1895-96 was £605,794, the expenditure £539,134, while the sinking fund amounted to £313,827. In 1830 the quantity of gas manufactured was 100,068,200 cubic feet, while in 1896

there were 4,259,169,000 cubic feet made and accounted for, besides over 10 per cent. of loss through leakage of pipes, etc. The corporation in 1891, under the Electric Lighting Act of 1882, procured a provisional order for lighting the central area of the city from Glasgow Cross to Charing Cross, and from the Broomielaw to Sauchiehall Street, by electricity. The generating stations are in Waterloo Street and in John Street. The current is low tension, and the conductors are strips of rolled copper one inch broad and a quarter of an inch thick. The street lamps are placed on iron pillars 18 feet high and 160 feet apart. The light was first used in February 1893, and by 1896 the gross revenue of the department amounted to £25,862, and the working expenses to £11,590. After allowing for interest, sinking fund, and depreciation, the net profit earned was £2280—the price charged for current being 6d. per Board of Trade unit. A reduction to 4d. to all consumers using upwards of a certain amount was consequently agreed on.

Paving.—Under the department of statute labour the Corporation attend to the paving of the streets, etc. The original condition of the thoroughfares must have been very poor, but the authorities were at a very early date alive to the necessity of something being done for their improvement, for in 1577 a 'calsaye maker' was appointed for two years, and as no one in the place had sufficient skill a man to fill the post was brought from Dundee. In 1662 the street from the West Port to St Enoch's Square was causewayed, and from that time operations went on slowly. In 1728 a contract was entered into by which the magistrates were to get the causeways of the whole of the public streets, lanes, etc., for fifteen years at the rate of £66 per annum, which shows that there could not have been much causeway to uphold. Now the carriage ways of all the principal streets are paved with granite, greenstone, or wood cubes. The sum expended for paving during the period from 16 Sept. 1884 to 31 May 1896 was £146,118. The first footpath was laid in 1777 on the E side of Candleriggs, between Trongate and Bell Street, while now there are footpaths all over the city and suburbs, and even extending some distance into the country round, most of them well laid with stone or with some variety of the many artificial pavements now so widely employed, while on the outskirts such paths are laid with firm gravel.

Sewage.—Under the health department are hospitals, sewage, and cleansing. The various hospitals have been already noticed. Up till 1790 the Glasgowwegians managed to exist and defy disease, despite of their having no proper drainage; but in that year the first sewers were formed, and within the following 25 years they were laid down in some 45 of the streets, and now there is a thorough sewer system over the whole of the city and suburbs, though in this department much remains to be done to abate the nuisance caused by the condition of the Clyde and Kelvin. The enormous amount of drainage throughout the city, including the issue of poisonous and putrid matter from public works, and the pouring of the whole of this volume into the harbour, rendered sluggish by the depth of the water and the slow flow of the tide, used to render the river for miles downward from Albert Bridge but little better than one vast open common sewer. The Kelvin is in the same condition, though the construction of a cross intercepting sewer on the east side in 1880-83 somewhat improved its condition. The nuisance from the open river sewer has occasioned much discussion as to the devising of some grand scheme for the conveyance of the sewage to a point near the head of the frith, and the nuisance created by the sluggish flow and the oxidation of the contents of the sewers beneath the streets has also given rise to arguments as to methods of flushing and ventilation. In 1892-93 the corporation began at last to try practically to grapple with the difficulty, and erected on a site of over 6 acres, on both sides of Swanston Street, in the bend on the N side of the Clyde between Dalmarnock and Rutherglen bridges, experimental works for dealing with the sewage of part of the

city by means of chemical precipitation and filtration. The sewage area dealt with is to the N of the Clyde and E of Mitchell Street. A main sewer 7 feet in diameter empties the sewage into a deep catch pit (in the precipitation works on the E side of Swanston Street), whence it is pumped by steam to a higher level and chemicals (lime, sulphate of alumina, etc.) added. It then passes into wide open channels communicating by sluices with rows of precipitation tanks, each 50 feet long, 45 wide, and 6 deep. Here in 20 minutes perfect precipitation is obtained, and the effluent is run off by float valves into rows of aerating tanks corresponding in number and size with the precipitating tanks. From these it passes by a central channel and siphon pipe under the street to the filtration portion of the works (which consists of 96 tanks, each 36 feet square and 4 feet deep), out of which it flows into the river clear and odourless. The sludge in each precipitation tank settles into one corner, from which it falls into an underground channel, which conveys it to sludge tanks, from which the matter is taken and pressed by hydraulic machinery into cakes, which are sold as manure. Should this method prove successful for the whole sewage of the city will be treated at four such stations.

Cleansing.—The street sweeping is chiefly done during the night by means of horse-drawn revolving-brush machines, and sweepings and other refuse are collected in the way customary in all large towns, by means of morning dust-carts. By these the whole rubbish collected is carried to one of the refuse despatch works, of which there are three in different parts of the city. Here the refuse is shot from the carts on to a revolving screen, from which the finer materials pass into a mixer, where, along with other manurial matter, it is formed into a sort of compost, which is thrown into railway waggons and despatched to the country for agricultural purposes. By an ingenious catching arrangement the cinders are taken out and used up in the furnaces of each establishment. The rougher rubbish falls on to an endless web of iron plates and chains, which travels along at the rate of about 36 feet a minute, and whence meat tins, old iron, &c., are picked off as they pass along. The tins are treated in a special furnace for the recovery of the solder. Utterly worthless matter is destroyed in cremating furnaces. The surplus manure and macadamised road scrapings are sent to the corporation estates of Fulwood Moss and Ryding. The former is separately noticed. The latter, near Coatbridge, extends to 565 acres, and was acquired in 1891. The crops produced at both farms do fairly well, and yield a return of about 4 per cent.

Public Baths, Wash Houses, etc.—Under the police commissioners there are public baths with swimming ponds, public wash-houses, etc., at Greenhead (1878), North Woodside (1882), Cranstonhill (1883), Townhead (1884), and Gorbals (1885). At the latter is a Kosher or Jewish bath.

The corporation in 1883, under a Loans Act of that year, had the borrowing powers under various acts consolidated and the loans converted into stock. Apart from the amount available for police general purposes under the City of Glasgow Act of 1891, the total borrowing powers at 31st May 1896 was £7,642,874, of which £1,013,826 remained unexhausted, while the amount of 3½ per cent. stock redeemable in 1914 was £1,250,000, of 3½ irredeemable stock £1,170,000, of 3¼ per cent. stock redeemable in 1907 £1,100,000, and of 3 per cent. stock redeemable in 1921 £194,820. In 1893 the city unsuccessfully tried to get Parliament to municipalize the telephone system, and in 1896 a proposal was brought forward to institute a fire insurance fund for all rents under £10. The members of the corporation also manage, in whole or in part, the following charitable funds:—Lieutenant-Colonel Alexander Maclean's Trust, founded in 1859 for the education of poor and deserving boys in Scotland of the name of Maclean; income, £702; capital, £24,677. William Lamb's bequest, founded in 1869, the proceeds to be divided among the Glasgow Royal Infirmary, the Blind Asylum, the Deaf

and Dumb Institution, and the deserving poor; income, £814; capital, £13,099. One-fifth of the free rent of the island of Shuna, bequeathed in 1829 by James Yates to the magistrates of Glasgow for aiding in the erection or improvement of any public building, or for any other useful or charitable purpose. The whole rental is about £150, and the remaining four-fifths are disposed of in the proportion of one-fifth to Anderson's College, one-fifth to the Royal Infirmary, and two-fifths to increase the salaries attached to the University chairs of natural philosophy, moral philosophy, botany, and mathematics. St Nicholas' Hospital (already mentioned); 17 pensioners at £3 each; capital, £962. Robert Buchanan's mortification, founded in 1873, for the aid of poor but respectable males or females, not being paupers, natives of Scotland, of Scottish extraction, resident in Glasgow for at least five years continuously before the date of their application, and 60 years of age complete; income, £276; capital, £5031. James Coulter's mortification, founded in 1787, for worthy and deserving persons in indigent or narrow circumstances—preference being given to relatives, however remote, of the name of Coulter or Peadie; income, £55; capital, £1211. The bequest of Admiral Archibald Duff of Drummair and Hopeman, dating from 1858, for the support in all time coming of protestant scripture readers of the Church of Scotland; income, £40; capital, £1068. The bequest of Mrs Gibson, niece of the Rev Hugh Blair, made in 1828, the interest of the capital sum to be paid annually to some popular minister of the Church of Scotland for preaching on a Sunday in March a sermon against cruelty to animals; income, £5; capital, £134. Robert Govan's mortification, founded in 1698, for the relief of honest poor burghesses and their relicts, half of merchant rank and half of trades rank; income, £6; capital, £162. John Gray of Scotstoun's mortification, half to the Royal Infirmary and half to the Glasgow Aged Women's Society; income, £50; capital, £1000; and William Mitchell's mortification, founded in 1729, for four old burghesses, two widows and two unmarried daughters, of merchant rank, and three old burghesses, three widows and one unmarried daughter, of trades rank; income, £125; capital, £2500.

Property.—The rental of the city in 1712 was £7840; in 1803, £81,484; in 1806, £152,738; in 1816, £240,232; in 1856, £1,362,168; in 1860, £1,573,165; in 1865, £1,778,728; in 1870, £2,055,388; in 1875, £2,740,032; in 1880, £3,432,112; in 1885, £3,406,372; in 1890, £3,404,403; in 1891, £3,455,510; and in 1892, £3,438,747. All these are for the unextended city, but had allowance been made in 1892 for the extended area, the total would have been about £4,046,726. The total rental for 1896 as compared with this was £4,283,926. The number of dwelling-houses in 1896 was 147,883, with a rental of £1,975,665; of shops, warehouses, etc., 29,491—rental, £1,945,732. The rise between 1803 and 1806 is very noteworthy, being, as will be seen, nearly double in the three years. Previous to 1712 there was no authoritative rental, but in that year the magistrates and council had a sworn valuation made, by command of the Commissioners of the Convention of Royal Burghs, so that the cess might be properly stented. The rise since the close of the 18th century has been very marvellous, as has also the increase in the value of property. In 1776 the property of Stobcross was sold at the rate of £50 per acre; some of it has since been sold at 35s. per square yard. When Ingram Street, Virginia Street, Buchanan Street, Jamaica Street, St Enoch's Square, and Argyle Street were laid out, the ground was sold for from 2s. 6d. to 4s. 6d. per square yard. Some sites in Argyle Street have been purchased at £50, £80, and £100 per square yard.

Population, etc.—The population of the city was in 1300, about 1500; in 1450, about 2000; in 1600, about 7000; in 1660, 14,678; in 1708, 12,766; in 1757, 23,546; in 1791, 66,578; in 1801, 77,385; in 1811, 100,749; in 1821, 147,043; in 1831, 202,426; in 1841, 255,650; in 1851, 329,096; in 1861, 395,503; in 1871, 477,732; in 1881, 511,415; and in 1891, 565,839. This last was the population of both the municipal and parliamentary

burgh in that year at the time of the census, but by the action of the Extension of Boundaries Act a population of 92,359 was added to that given, so that the population within the municipal area became 658,198, as against 577,419 within the same area in 1881; while to the end of 1895 the number was estimated at 695,000. If the population of the burghs of Govan, Kinning Park, Partick, and of Govan parish landward (all of which naturally belong to Glasgow) were added, the total for 1891 would be nearly 780,000. Of the population of 658,198 in the extended area in 1891, 320,081 were males and 338,117 females; while 53 persons spoke Gaelic only, and 17,925 both Gaelic and English. Of the males, 112,723 were under 15 years of age, 145,529 between 15 and 20, 107,632 between 20 and 40, 52,539 between 40 and 60, and 14,381 over 60; of the females, 112,634 were under 15, 147,281 between 15 and 20, 111,434 between 20 and 40, 58,113 between 40 and 60, and 21,289 over 60. Of the 207,358 males over 15 years of age, 95,137 were bachelors, 102,061 husbands, and 10,160 widowers; and of the 225,483 females over 15, 92,433 were spinsters, 104,962 wives, and 28,088 widows; while of the whole population, 561,074 had been born in Scotland—349,597 of them being natives of the city itself—and 66,071 in Ireland, the latter number being the smallest proportionally since 1851, when the maximum (18 per cent.) was recorded. Of the total population, 83,472 were under 5 years of age and 141,885 between 5 and 15, and of the latter number 104,910 were at school. There were in 1891 within the enlarged municipal boundary 144,634 separate families, 134,753 houses inhabited, 6472 uninhabited, and 1089 being built; and the number of rooms with one or more windows was 348,890. Of the 126,262 separate families residing in 1891 within the parliamentary burgh (for which alone detailed statistics are available), 2385 lived in houses of 7 or more rooms with windows, 1412 in houses of 6 rooms with windows, 1953 in houses of 5 rooms with windows, 6094 in houses of 4 rooms with windows, 18,295 in houses of three rooms with windows, 53,988 (262,427 persons) in houses of 2 rooms with windows, 42,134 (123,643 persons) in houses of 1 room with windows, and one family of 2 persons in a house of one room without a window, while in what was suburban Glasgow at the same date, out of 18,212 separate families, 5520 (27,238 persons) lived in houses of 2 rooms with windows, 2418 (7358 persons) in houses of one room with windows, and one family of one person in a house of 1 room without a window. In other words, over 76 per cent. of the families, and over 68 per cent. of the population of the parliamentary burgh lived in houses of 1 or 2 rooms, and this constitutes one of the most serious features in dealing with the sanitary and social condition of the citizens, though since 1871 there has been a great improvement, inasmuch as the number of houses of one apartment has greatly decreased, and of those of 2 and 3 apartments greatly increased. Leaving 'Institutions' and 'Shipping' out of account, over 26 per cent. of the houses were of 1 room, and contained 18 per cent. of the population; while over 45 per cent. were of 2 rooms, containing over 47 per cent. of the population. The average number of rooms per house in 1891 was 2.33 (2.32 in 1881), and each house contained 4.727 people or 2.033 persons to each room (2.040 in 1881); while the average house rent was slightly over £10, 12s. 'The secret of the health of Glasgow,' says Dr Russell, 'lies within the one and two room houses,' and he points out that over 81 per cent. of the deaths from zymotic diseases and of children, and nearly 74 per cent. of the total deaths occur in such dwellings. Under the Police Act 'houses of not more than three rooms, and not exceeding an aggregate capacity of 2000 cubic feet, exclusive of lobbies and recesses,' must not have more than 5 adult inmates, or children and adults to make up that number, 2 children under 10 being reckoned as equal to one adult; and of these dwellings—which, marked by tin-plate tickets affixed to the door, are known as 'ticketed houses'—there are in Greater Glasgow some 24,000, with accommodation for over 81,000

inmates. They are always full, and were it not for the rigid system of night inspection they would be constantly overcrowded. The system has led to a great diminution in the number of cases of typhus fever. The average death rate in 1892 was 22.8 for the extended municipality, and 23.6 for the parliamentary burgh. Of the average yearly number of deaths, nearly half are cases where the age was five years or under; about $\frac{1}{3}$ between five and twenty; about $\frac{1}{3}$ between twenty and sixty; and about $\frac{1}{6}$ upwards of sixty. More than $\frac{2}{3}$ of the average number of deaths is due to consumption and acute diseases of the lungs; about $\frac{1}{3}$ to nervous diseases of children; about $\frac{1}{4}$ to scarlet-fever, and other diseases that mainly affect children; and more than $\frac{1}{4}$ to various other diseases; while about 1 death in every forty is due to accident, or some other form of violence. The average yearly number of marriages for the last ten years is about 4800. The average rainfall is about 40 inches, but in many years rain falls to a greater or less degree on 200 days in the year. The average mean temperature is about 48°.

Parliamentary Representation.—The first mention of Glasgow as being represented in the Scottish Parliament is in 1546, and from that time to the Union it fifty-four times sent a representative to the various parliaments held down to 1703, the member, on many occasions, being the provost. After the Union, for a period of 125 years, it had only a fourth part of a member, as the representative was returned by Rutherglen, Renfrew, Dumbarton, and Glasgow conjointly. This came, however, to an end in 1832, when the Reform Bill provided that there were to be two members returned entirely by the electors in the city within the parliamentary boundary, which was then enlarged; and by the Reform Act of 1868 the number of members was further increased to three. By the Redistribution of Seats Act of 1885 the city was divided into seven parliamentary districts each returning one member, and these with the numbers of the electors in 1896 were:—Bridgeton, 10,652; Camlachie, 10,191; St Rollox, 14,944; Central, 14,990; Colledge, 15,137; Tradeston, 10,128; Blackfriars and Hutchesontown, 10,221. Of the total electorate 1811 were qualified as owners, 77,603 as tenants or occupiers, and 3641 as lodgers. The municipal electors in 1896 numbered 122,678, of whom 20,437 were females, and the school-board electors in 1894 was 145,193.

Royal Visits, etc.—The first royal visit to Glasgow after the overthrow of the kingdom of Strathclyde seems to have been in 1136, when King David was present at the consecration of the original Cathedral, and from that time there are no indications of a visit again till 1510, when James IV. visited the place in high state. The next royal visit was the historical one paid by Queen Mary to Darnley when he was lying ill in Glasgow in 1567. James VI. seems to have been in Glasgow in 1601 and again in 1617, but details of his visits do not seem to have been preserved. In 1681 the Duke of York, afterwards James VII., paid a visit of two days, during which the council spent a sum equal to £333, 17s. 10d. in his entertainment, including the cost of the gold box in which his Burgess ticket was presented; and from that time none of the sovereigns seem to have honoured the city with their presence till 1849, when the Queen, on 14 Aug., landed at the foot of West Street and drove through the principal streets, being everywhere welcomed with the greatest enthusiasm. She came again in 1888, as already noticed, to visit the International Exhibition, and a second time received a most cordial reception. In 1866 the Duke of Edinburgh, as representing the Queen, came to unveil the statue of the Prince Consort in George Square; in 1868 the Prince and Princess of Wales visited the city to lay the foundation stone of the new University Buildings; they came again in 1876, when the Prince laid the foundation stone of the new Post Office; and in 1888, when the Prince opened the Exhibition; while finally, in 1882, the Duke and Duchess of Albany paid it a visit for the purpose of opening the Exhibition of the branch of the Royal School of Art-needlework in Glasgow.

The General Assembly of the Church of Scotland met in Glasgow in 1610, and again in 1638; and the Free Church Assembly met here in Oct. 1843, and again in 1878. The British Association has met at Glasgow three times—in 1840, in 1855, and in 1876. The Social Science Congress met in Glasgow in 1860, and again in 1874; and the British Medical, the Archæological, and the Libraries Associations in 1888.

The distinguished natives of Glasgow have been so numerous that a considerable space would be occupied by a mere list of them. The city has given the title of Earl in the Scottish peerage since 1703 to the noble family of Boyle. From 1699 till 1703 the title was Baron Boyle of Kelburn, Stewartoun, Cumbræes, Finnick, Largs, and Dalry; from 1703 Viscount Kelburne and Earl of Glasgow, in the peerage of Scotland; and from 1815 Baron Boyle of Hawkhead, in the peerage of England. His lordship's seat is at Kelburne, Fairlie. Connected with Glasgow are also the titles of Lord Clyde (better known perhaps as Sir Colin Campbell) and Lord Kelvin (so well known to science as Sir William Thomson; created, 1892), whose jubilee as a professor in the University was celebrated in June 1896.
