Glasgow District Subway, an underground circular railway completed in 1896. It consists of two separate parallel tunnels, each with its line of rails, so that the traffic can be conducted in opposite directions without risk of collision. The tunnels in Buchanan Street and under the river are iron tubes formed of uniform sections, three-quarters of an inch thick. On the north side of the river they are in rock, and on the south side they are formed by cut and cover. The district traversed lies on both sides of the river W of St Enoch Square. Leaving the station here and going northwards the tunnels at Argyle Street pass 6 feet beneath the underground Central Railway. Proceeding by way of Buchanan Street they turn NW under Cowcaddens Street, New City Road, and Great Western Road. Crossing the Kelvin, and traversing Hillhead westward by way of Glasgow Street, they turn southwards under Byars Road, run a short way west by Dumbarton Road, then southwards again to the Clyde, crossing the river somewhat diagonally at Govan Wharf. After traversing the Govan district in a south-easterly direction they run due east by Scotland Street, after which they turn to the north-east, crossing under Eglinton Street, then running straight north to the Clyde again, under which they cross to the starting point by way of Dixon Street. The total distance traversed is $6\frac{1}{2}$ miles, and there are numerous stations on the route—namely, St Enoch Square, Buchanan Street (at Athenæum), New City Road (at Cowcaddens end), St George's Cross, Kelvin Bridge, Hillhead (at the middle of Byars Road), Partick East, Partick West, Govan, Copeland Road, Cessnock, Kinning Park, Shields Road, West Street, and Bridge Street. The line is worked by cable haulage, the *locus* of the motive power being at Kinning Park, and the two 'endless' steel ropes being worked by a pair of 1400 horse-power engines. The trains consist of two cars designed to accommodate 40 persons each. The entrances to the stations at the greater depths are supplied with hoists for the convenience of passengers, and as there is no consumption of fuel in the tunnels, the frequent and speedy running of the trains is expected to create a clear current of pure air through their whole length. The fare is to be a penny for any distance on the line, whether long or short. While altogether there were no very serious difficulties, in the ordinary sense of the term, to contend with, there was trouble in almost every section of the work, caused by intersecting sewers and gas and water pipes. The excavations, too, had to be carried on with great care, air compressors having to be employed to keep down the water. Owing to its peculiarity of construction the Glasgow Subway is a work of some engineering importance.

Glasgow and South-Western Railway, a railway in Lanarkshire, Renfrewshire, Ayrshire, Dumfriesshire, Wigtownshire, and Kirkcudbrightshire. The system is an amalgamation of various lines constructed at various times, and as it now embraces the first railway made in Scotland under an Act of Parliament, the line may claim to be the oldest railway enterprise in the country. This line, connecting the Duke of Portland's coal-fields near Kilmarnock with the port of Troon, was authorised by an Act passed in 1803, with a share capital of £55,000 and loans of £10,500, and was long worked by horse haulage, while a passenger car conveyed the inhabitants of the inland weaving town to the 'saut watter,' this being at one time a favourite trip from Kilmarnock. Aiton, in his survey of the agriculture of Ayrshire, speaks of this railway as 'of magnitude unequalled in Scotland,' it being in course of formation when he wrote. The total length of this early railway was about $9\frac{1}{2}$ miles, or, with branches subsequently made, 12 miles 1 furlong. The construction of this line was of cast-iron rails resting on stone blocks, a method of laying the line which subsisted down to and after the making of the Edinburgh and Glasgow railway, but was discarded in favour of wooden sleepers laid under both rails, and steadied by 'ballast.'

As early as 1835 the scheme of connecting Glasgow with Carlisle through Nithsdale was advocated in the

Ayr Advertiser and the *Dumfries Courier*, and some years previously there had been proposals made for a railway between Glasgow and Paisley. The first proposal in the latter direction was to convert the Glasgow, Paisley, and Johnstone Canal into a railway, and what was proposed in 1830 was not sanctioned for fifty years thereafter, and was only carried into effect in 1883-85. In April 1836 a meeting was held in Glasgow to promote the construction of the Glasgow, Paisley, Kilmarnock, and Ayr railway, a line which, it may be remarked, only came within 5 miles of Kilmarnock, although bearing that name in its title, the prospectus stating that 'the high ridge which lies to the S of Glasgow' rendered a more direct line impossible. Thirty years later, however, when the art of making and working railways had advanced, a direct line to Kilmarnock was constructed, being the joint property of the Glasgow and South-Western and the Caledonian Companies.

The first act for the construction of part of the system, eventually combined under the general title of Glasgow and South-Western, received the royal assent on 15 July 1837, the capital being fixed at £625,000, with borrowing powers £208,300. The first section of the line, that between Ayr and Irvine, was opened on 5 Aug. 1837, and on 11 Aug. 1840 the line was opened through between Glasgow and Ayr, amidst great rejoicing. In 1844—the intervening period being occupied by the directors in consolidating the line, constructing branches to Irvine, Ardrossan, etc., acquiring and strengthening the Kilmarnock and Troon line, and other works—a movement was made towards the construction of the Dumfries and Carlisle connection. Although promoted as a separate undertaking, the Glasgow, Dumfries, and Carlisle was supported by the Ayrshire company and its board, and in 1850 the lines were amalgamated. The Act was obtained, after much opposition, in 1846; and on 16 July 1847 the foundation-stone of the bridge over the Nith at Martinton was made the occasion of a great public demonstration at Dumfries. The line was opened on 28 Oct. 1850, when the two systems became one, the first meeting as the 'Glasgow and South-Western railway' being held in March, 1851.

By a series of constructions and amalgamations, the system at the end of Jan. 1896 consisted of 355 $\frac{1}{2}$ miles wholly the property of the company, 121 partly owned (the Kilmarnock joint line, etc.), 8 $\frac{1}{2}$ leased or rented, and 16 worked by the company. Of the lines maintained by the company there were 287 $\frac{3}{4}$ miles of double and 97 $\frac{1}{2}$ of single line. At the same date the authorised capital of the company was £12,411,710 in stock and shares, and £3,509,800 in loans, and a total of £14,707,504, 14s. 11d. was given as the capital sum expended in the construction and equipment of the railway and steamboats, including subscriptions to allied or subsidiary railways. As with other companies it is difficult now to say what amount in actual cash was expended in making the line, as a certain amount of nominal stock is comprised in the above totals, including a sum of £1,163,710 added on the consolidation on an equal dividend basis of certain guaranteed stocks, and an amount of £442,250 created as 'deferred' stock, to carry certain contingent dividends that were payable to stock of equal amount, neither of those sums representing actual outlay on the line. Of the share capital, £4,927,920 stood as consolidated ordinary stock, £748,360 as 'guaranteed' stock (increased to £935,450 on equalisation as above described), and £4,681,090 as 'preference' stock at 4 per cent.

In the half-year last reported upon the company carried 252,568 first class, and 6,439,526 third class passengers, besides issuing 6391 season tickets, making a total of 6,692,094 passengers, yielding a revenue of £242,246. For parcels, horses, and mails, the company received £52,172, and the goods and live stock traffic (merchandise 661,129 tons, minerals 2,560,904 tons) yielded a revenue of £392,215. With some miscellaneous items of receipt the revenue for the half-year was £701,421. To carry this traffic the company owned 345 locomotives, 1132 passenger vehicles (including

horse-boxes, carriage trucks, post office vans, etc.), and 14,349 waggons, 8651 of the latter being mineral waggons, and 198 break-vans for goods trains. In the half-year those vehicles traversed 1,678,947 miles in the passenger, and 1,341,546 in the goods department. The gross revenue per train mile was 54'56d., and of this the passenger traffic yielded an average of 42'08d., and the goods traffic an average of 70'17d. per train mile. The affairs of the company are controlled by a board of directors, with a chairman and deputy-chairman.

As constructed up to the end of 1895, the Glasgow and South-Western railway served a district admirably described by its title, and having for its termini Glasgow, Greenock, Largs, Kirkcudbright, Whithorn, Portpatrick, and Carlisle, with a vast network of inter-communication between the various parts of the district comprised within those limits. The parent line, that from Glasgow to Ayr, passes from Glasgow through a level country sprinkled with villas, villages, towns, and manufactories. At Ibrox a short branch runs to Govan. Paisley, the first station of importance, is approached by a bridge over the White Cart, with the castellated buildings of the jail prominent in the foreground, and a glimpse is got of the venerable remains of the abbey, 'the cradle of the Empire,' for to the birth of the son of Marjory Bruce, the Queen Blearie of the ringing aisle, the present reigning house traces its right to the British throne. In 1883-85 the canal was drained, and a railway laid in its bed, as already stated. At Paisley the branch to Renfrew diverges. Before reaching Johnstone, the line to Bridge of Weir and Greenock branches off, the section to Bridge of Weir, 3½ miles, having been sanctioned in 1862, and the Greenock and Ayrshire, 15 miles, in 1865. The former was absorbed in 1865, and the latter in 1872. By the construction of this line the Glasgow and South-Western obtained an independent access to Greenock, running their passenger trains to Princes Pier, at the W end of the port, where steamers call regularly. At Johnstone a short loop-line connecting the Greenock line to the main line gives direct access to Ayrshire. From Johnstone the main line proceeds through a fine verdant district, passing Loch Semple, with a station for Lochwinnoch, and immediately entering Ayrshire, where it skirts Kilbirnie Loch, and passes through a picturesque country, with its beauties somewhat marred, however, by the mineral operations which bring the railway and the county their wealth. At Dalry there is a separation of the lines, that to the right proceeding to Kilwinning, from which a branch runs to Saltcoats (with a branch to the harbour) and Ardrossan. Extensions of the latter branch were opened to West Kilbride in 1878, to Fairlie in 1882, and to Largs, farther N on the Ayrshire coast, in 1885. A direct line from Dalry to Fairlie was at one time projected, but owing to the magnitude of the works involved, the powers to make this line were abandoned, and the circuitous route to the favourite watering-place of Largs took its place. A modified proposal, however, to construct a line from near Dalry to near West Kilbride was introduced into Parliament in 1892, but only to be rejected. Leaving out of view some mineral lines in this part of the county, we next on the main line reach the town and harbour of Irvine, from beyond which a cross line by Dreghorn connects, for the first time, the two principal parts of the system, forming a short route between Kilmarnock and Ardrossan. This line skirts the coast, affording a fine view of the lower waters of the Clyde estuary, with Holy Island and the bold hills of Arran to fill up the background, and Ailsa Craig visible in the far distance. On approaching Troon, the old line to Kilmarnock, already spoken of, is met, and a branch strikes off, or rather, the original Troon line, strengthened to suit later requirements, strikes off to the town and harbour. Approaching Ayr, the village of Prestwick is passed, the links round which have been rendered accessible by the railway, and have been adopted as a favourite golfing ground.

S of Ayr we encounter a very interesting chapter of railway history. In the great railway promotion of

nearly fifty years ago, when the through routes of the county were elaborately reported upon by the Board of Trade, and the merits of various routes were keenly canvassed, an Act was passed in 1846 for the formation of the Glasgow and Belfast Union railway. Although promoted with this comprehensive title, and originally intended as the nucleus of a short route to Ireland *via* Stranraer, the line was only 22½ miles in length, reaching to Girvan by a branch to Maybole. The capital was £440,000 in shares and loans. In 1847 an Act for the construction of the 'Ayrshire and Galloway' railway was obtained, this line reaching to Dalmellington, and being intended to inaugurate a southern route through the Glenkens into Galloway. Although last promoted the Dalmellington line was first constructed. An Act passed in 1853 authorised the formation of this line, 13 miles in length, 4 miles of this being available for the proposed line to Girvan and Maybole should the latter be proceeded with. In 1854 the Ayr and Maybole Junction was promoted, 5½ miles in length, and the two lines were opened in 1856. In 1858 the Dalmellington railway was amalgamated with the parent line. The Ayr and Maybole Company to this day preserves its autonomy, being worked by the Glasgow and South-Western railway under a perpetual lease agreed to in 1871, at an annual rent of 7 per cent. on the capital, with a lien on the revenue (see Ayr and Maybole Railway). The extension to Girvan, 12½ miles, was promoted by a company in 1856: capital £90,600, eventually (owing to the works proving more expensive than had been estimated) increased to £145,600. The line was opened in 1860, and amalgamated with the parent line in 1865, the Maybole section, as already mentioned, standing as a separate property between the two parts of the line then amalgamated; while an Act of Parliament in 1892 authorised the Glasgow and South-Western Company to acquire the GIRVAN AND PORTPATRICK RAILWAY. This acquisition, with the share the company has in the Castle-Douglas and Portpatrick railway, gives it a terminus at Portpatrick. In 1865 powers were obtained to construct several important junctions in Ayrshire, embracing a cross line from Mauchline to Ayr—to bring Ayr into nearer connection with the S—a cross line from the Dalmellington branch to Cumnock, and a transverse railway connecting these two lines through the parishes of Ochiltree and Coynton. Those connections were opened in 1872.

Returning to Dalry, the point of divergence noticed in an earlier paragraph, we proceed to Kilmarnock, an important centre. After many negotiations and struggles, the Glasgow, Barrhead, and Kilmarnock joint line was sanctioned, and it is held in equal shares by the Caledonian and the Glasgow and South-Western Railway Companies. This was a compromise, on the abandonment of the Kilmarnock direct, and comprised the Barrhead and Neilston railway, and the Crofthead and Kilmarnock, with junctions and extensions, making a through line, which was opened in 1873. The line from Dalry to Kilmarnock (still an important passenger route, although the expresses take the direct line) was opened in 1843. It was followed by the extensions to Mauchline and Auchinleck, opened in Aug. 1848, and to New Cumnock, opened in May 1850. Meantime, as part of the Glasgow, Dumfries, and Carlisle railway, the line had been opened from Dumfries to Gretna, 24½ miles, in Aug. 1848, and from Dumfries to Closeburn, 11½ miles, in Oct. 1849. The completing line between Closeburn and New Cumnock, 25½ miles, was opened, as already stated, in Oct. 1850, and at the end of that month the original Glasgow, Paisley, Kilmarnock, and Ayr, and Glasgow, Dumfries, and Carlisle companies were, under agreements previously made, amalgamated under the title at the head of this article. A branch from Auchinleck to Muirkirk, 10½ miles, was opened in Aug. 1848, and a line from the neighbourhood of Kilmarnock to Galston and Newmilns was opened in May 1850. There are various mineral lines in this district that need not be particularised. By the Caledonian extension from Douglas to Muirkirk, authorised in 1865, a short route

from Edinburgh to Ayr, *via* Carstairs and Lanark, was established, using the lines of the Glasgow and South-Western from Muirkirk by Cumnock. From Dumfries the Glasgow and South-Western company runs to Castle-Douglas and Kirkcudbright. To the former town a railway, 19½ miles in length, was sanctioned by an Act passed in 1856, and the Kirkcudbright railway, 10½ miles in length, was sanctioned in 1861. Both were amalgamated with the Glasgow and South-Western in 1865. The company are also joint owners (with the Caledonian, the London and North-Western and the Midland) of the line from Castle-Douglas to Stranraer and Portpatrick. In 1893 the company constructed a short curve connection between the North British Bridgeton Cross extension and the Union railway, thereby affording the eastern inhabitants of Glasgow direct access to St Enoch station, and by Shields Road to the coast and their system generally.

While the engineering works on the system present no feature of world-wide fame, there is throughout an average amount of difficult and costly works in tunnels, bridges, etc. There is a long tunnel at Drumlanrig, rendered necessary by the line being carried along the side of the hill so as to preserve the amenity of Drumlanrig Castle. Between Dumfries and Annan the unstable character of the Lochar Moss gave considerable trouble. But as a rule the line was comparatively easy to construct, its gradients being generally moderate, while its course, laid out in the earlier days of railway construction, formed detours rather than short cuts.

The principal station of the railway, at St Enoch Square in Glasgow, was opened by the Prince of Wales in Oct. 1876; but the works of the station, and the hotel fronting it, were not completed till 1879, when the hotel was opened. Previous to the erection of the new station, the company had its headquarters and principal terminus in Bridge Street, at the S end of Glasgow Bridge, but in 1891 the company sold their share in this station to the Caledonian Railway Company. In 1896 the company obtained powers from Parliament to widen the railway approaches to St Enoch Station, which involved the taking down of a good deal of property on both sides of the river and the widening of the railway bridge.

The hotel and station at St Enoch Square take rank with the largest works of the kind in the kingdom. The hotel front to the square presents a splendid façade in Early English Gothic, 240 feet long, with a total height from the street level of 130 feet. The platform level is approached by a sloping carriage-way, and is 20 feet above street level, the lower front of the terrace thus formed being used as shops. At the NW corner, under a lofty tower, is the entrance to the hotel, and in the centre, under an iron and glass roof, are the entrances to the booking-hall, a fine apartment 90 by 60 feet. The usual luggage-rooms, waiting-rooms, etc., are on this floor, and bounding the N side of the station is a wing 600 feet long, occupied as the headquarters of the company. The offices of the company were largely extended in 1893 by the erection of a new building on the east side of Dunlop Street, from which street also fresh means of access to the station platforms were at the same time provided. In the angle subtended by the hotel and this wing is found the station, covered in a one-arched span of iron and glass, presenting a vast airy aspect, and fully accommodating the large traffic brought into the station. The main ribs of this splendid roof, built up in eleven sections, weigh 54 tons each. In the basement of the hotel is a spacious kitchen, 85 by 32 feet in size, and with a roof 20 feet high, and its remaining appointments are in keeping with this enlarged view of the needs of a first-class modern hotel. Electric-bells, speaking-tubes, and a hoist to carry visitors to the higher floors, are amongst the facilities offered by this finely equipped hotel.

The goods station of the company in College Street, adjoining the College (passenger) station of the North British railway, takes its name from having been built

on the site of the old Glasgow University. This district, once crowded with mean streets and narrow closes running down to the Molendinar Burn, was levelled up for railway purposes at great expense. The College and St Enoch stations and the lines connecting them were constructed by the GLASGOW UNION RAILWAY; but St Enoch station was subsequently purchased by the Glasgow and South-Western Railway, and in 1896 the entire City Union Railway was divided between the North British and the Glasgow and South-Western Railway Companies, the former taking what may be called the north-east portion, and the latter the south-west. In the half-year last reported upon, the Glasgow and South-Western Company paid £27,532 for the rent of the two stations, and received £7500 as dividend upon its shares in the City of Glasgow Union. At Kilmarnock, Ayr, and Dumfries the company has excellent station buildings, and commodious goods yards, engine sheds, etc. The locomotive works at Kilmarnock are extensive, employing some 1500 persons, and performing all work necessary in building and repairing engines, carriages, waggons, etc. At Irvine the company has an establishment connected with the maintenance of the permanent way. Here signal posts and all the apparatus for the conduct and protection of the traffic are cared for, as well as the rails, sleepers, fish-plates, bolts, etc., required for the line itself. In 1891 the Glasgow and South-Western Co. became the owners of a splendid fleet of steamers which plies between Princes Pier (Greenock), Fairlie, and Ardrossan, and the various watering-places on the Firth of Clyde.

It remains to notice that one of the features of the Glasgow and South-Western railway is, that it holds complete possession, so to speak, of the 'land of Burns.' To Ayr, his birthplace, to Dumfries, where he died, to Kilmarnock, Mauchline, Tarbolton (near which is Lochlee), Dalrymple (where the poet attended school), to Ellisland, to Lugar, to nearly every place that can be named in association with Burns, this railway forms the access, and in consequence it presents many attractions to the tourist and to the pilgrim to Burns shrines. The line presents besides many other points of interest, affording access to such places of historic interest as Caerlaverock Castle, Sweet Heart and Lincluden Abbeys, St Mary's Isle at Kirkcudbright—the 'Selcraig Ha,' of Paul Jones' well-known exploit—Drumlanrig Castle and the valley of the Nith, the many fine castles on the Ayrshire coast, many places associated with Wallace and Bruce, the island of Arran by steamer from Ardrossan, etc., etc. See *Glasgow and South-Western Railway, its History, Progress, and Present Position*, by William M'Ilwraith (Glasg. 1880), and *Guide to Glasgow and South-Western Railway*.

Glasgow Central Railway, an undertaking for which a company was incorporated in 1888, was taken over in the following year by the Caledonian Railway Company. Connecting in the east-end with the company's Bridgeton branch from Rutherglen on the main line, it enters the city underground at Dalmarnock station, pursuing its course westward through the centre of the town by way of Dalmarnock Road, Bridgeton Cross, Canning Street, the Green at Monteith Row, London Street, Trongate, Argyle Street, and Stobocross Street; then turning to the north-west it proceeds northward by Kelvingrove Street and the West-end Park, crossing the Kelvin a little south of the Great Western Road. Under this road it proceeds westward to the Botanic Gardens, under which it again turns north-westward, and reaching another bend of the Kelvin crosses it to the north-east and joins a section of the Lanarkshire and Dumbartonshire railway skirting the northern and eastern suburbs of the city. From the Bridgeton Cross station a branch runs eastward along London Road and through Tolleross, at a short distance from which it joins the main line, and an extension from Stobocross Street westward joins the Lanarkshire and Dumbartonshire line a little to the east of Sawmill Road, Partick, thereby affording a more direct route for the traffic between the two counties than that by the northern outskirts. The various stations along the

route arc those at Dalmarnock, Bridgeton Cross, Glasgow Green, Trongate (the Cross), Central station, Anderston Cross, Stobcross, Kelvin Bridge, Botanic Gardens, Kirklee, Maryhill, and Dawsholm. The railway was opened for passenger traffic in August 1896, its cost having been at the rate of £250,000 per mile. Ventilation is carried out by means of a powerful fan. The long excavation rendered necessary by the nature of the line was carried out with great difficulty. Not only had the work to be done to a great extent in the night-time, in order not to interfere with the street traffic, but pile-driving along all the streets traversed had to be carried on.

Glasgow City and District Railway, a circular railway belonging to the North British system, and partly underground in the city or southern section of the line. The tunnel begins on leaving College station going west, and turning slightly to the north-west crosses under George Street, when it pursues a westward course far below the streets and houses of this high-lying quarter, and under the company's Queen Street terminus, where there are high and low level stations, along the line of West Regent Street, Elmbank Crescent, and Kent Road, where it emerges into the light at Finnieston station. Bending here slightly to the south the line joins the company's Stobcross railway and skirts the north basin of the Queen's Dock for half its length. Turning soon after in a north-westerly direction, it crosses the Kelvin and passes through Partick; then skirting the western side of Dowanhill and Kelvinside districts it leaves the Stobcross railway at the junction of the latter with the Yoker and Clydebank line, shortly after which it turns north-eastward. Taking an eastern turn next, it crosses under the Forth and Clyde Canal, and unites with the company's Helensburgh railway at the bridge across the Kelvin, a short distance from Maryhill station. Skirting the northern bounds of Maryhill and Possilpark, it joins for a short way the North British main line, soon after leaving which it meets the Union railway, and crossing under the Monkland Canal returns to the College station by Alexandra Park and Bellgrove. This was the first of the Glasgow underground railways, and its great success financially has led to similar city schemes by other companies. It was at first projected by a private company to be worked by the North British, but was eventually taken over by the latter company. The stations on the route, beginning as before and following the outer circle, are—College station, Queen Street (low level), Charing Cross, Finnieston, Yorkhill, Partick, Great Western Road, Maryhill, Lochburn, Possilpark, Springburn, Barnhill, Garngad, Alexandra Park, Duke Street, and Bellgrove.

Glasgow Union Railway, incorporated by Act of Parliament in 1864, unites the North British and Glasgow and South-Western railways at several of their approaches to the city, thus affording special opportunities for the interchange of through traffic. With the former railway it connects at Bellgrove on the east with the direct line to Edinburgh *via* Bathgate; while by the Sighthill extension on the north it joins the main line of the same company's system. With the Glasgow and South-Western Railway it connects on the south-west at Shields Road with that company's western and Ayrshire sections, and at Gorbals station on the south of the city with the same company's main line. The railway has a length of line in operation of 7 miles, and runs through extensive cuttings and under and over numerous street bridges. The Clyde is crossed by an iron bridge supported on concrete-filled tubular pillars. The whole shares of the City Union Railway were originally held in equal portions by the North British and Glasgow and South-Western railway companies, but in 1896 a Bill was passed by Parliament which authorised the absorption of the City Union line by these two companies, and it accordingly ceased to be a separate undertaking.

Glasgow, Yoker, and Clydebank Railway, incorporated by Act of Parliament in 1878, and worked by the North British Railway Company, starts from the

Stobcross Railway a little east of Jordanhill station at Crow Road, and has stations at Whiteinch, Yoker, and Clydebank. In order, among other things, to afford a more direct route to the coast a bill was introduced into parliament in 1893, after having been passed by the House of Commons and rejected by the House of Lords in 1892, authorising the company to double the line and extend and connect it with their Helensburgh branch near Dalmuir.

Glashmore. See DRUMOAK.

Glasletter or Lungard, a deep lake in Kintail parish, Ross-shire. Lying 761 feet above sea-level, it has an utmost length and breadth of $1\frac{1}{2}$ mile and $2\frac{3}{4}$ furlongs, contains both trout and pike, and sends off a stream 2 miles east-by-northward to the head of Loch Mullardoch.—*Ord. Sur.*, sh. 72, 1880.

Glas Maol, a summit of the Grampians, at the meeting-point of Glenisla, Kirkmichael, and Crathie parishes, in respectively Forfarshire, Perthshire, and Aberdeenshire. It has an altitude of 3502 feet above sea-level, and is crowned with a cairn at the meeting-point of the counties. Its eastern shoulder is traversed by a foot-path leading up Glen Isla and down Glen Clunie to Castleton of Braemar.—*Ord. Sur.*, sh. 65, 1870.

Glasnock or Glaisnock, an estate, with a handsome modern mansion, in Old Cumnock parish, Ayrshire, on the left bank of Glasnock Burn $1\frac{3}{4}$ mile SSE of Cumnock town. Its owner is Robert Mitchell Campbell, Esq. of Auchmannock (b. 1841; suc. 1869). Glasnock Burn, issuing from a lake in New Cumnock parish, $2\frac{1}{2}$ miles WNW of New Cumnock village, runs 3 miles NNW to Cumnock town, after intersecting which it falls into the Lugar.—*Ord. Sur.*, sh. 14, 1863.

Glass, a parish previous to 1891 partly of Aberdeenshire and partly of Banffshire, whose church stands $8\frac{1}{2}$ miles W of Huntly, under which there is a post office of Glass. In that year, however, the Boundary Commissioners placed the parish wholly in the county of Aberdeen. It is bounded N by Cairnie, E by Cairnie and Huntly, SE by Huntly and Gartly, in Aberdeenshire, SW by Cabrach, and W by Mortlach and Botriphnie, in Banffshire. Its utmost length, from NE to SW, is $6\frac{3}{4}$ miles; its breadth, from NW to SE, varies between $1\frac{3}{8}$ and $4\frac{1}{2}$ miles; and its area is $12,655\frac{1}{2}$ acres, of which $111\frac{3}{4}$ are water, and 4732 belonged to the Banffshire or south-western portion. The rapid DEVERON has here a north-north-easterly and east-north-easterly course, along a deep narrow vale, of $7\frac{3}{8}$ miles, at two points (3 furl. and $\frac{1}{2}$ mile) tracing the Cabrach and Mortlach boundaries, but elsewhere traversing the interior. Along it the surface declines to 530 feet above sea-level, thence rising westward to 931 feet at Newton Hill, 1000 at Both Hill, 1124 near Upper Hill-top, 1056 at Crofts of Corsemaul, and 1839 at *Tips of Corsemaul; south-westward to 1281 at Evron Hill, 1586 at Brown Hill, and 1540 at *Craig Watch, where asterisks mark those summits that culminate on the confines of the parish. Syenite occupies a good deal of the valley and lower hill-sides, but the rocks are mainly Silurian—greywacke, clay slate, and quartz, with veins of crystalline limestone; the prevailing soil is a fertile yellow loam incumbent on gravel throughout the lower grounds, but poorer and lighter over all the uplands. Less than a third of the entire area is in tillage; plantations of Scotch firs and larch cover about 150 acres; and the rest is pastoral or heathy waste. Two pre-Reformation chapels stood within the bounds of this parish, which, small originally, has twice been enlarged by annexations—from Mortlach in the 13th or 14th century, and towards the close of the 17th from Drumdelzie or Potterkirck, now incorporated with Cairnie. The Duke of Fife is the chief proprietor, and the shooting-lodge of Glenmarkie is the only mansion. Glass is in the presbytery of Strathgogie and synod of Moray; the living is worth £309. The parish church was built in 1732. There is also a Free church; and Glass public and Beldorney public schools, with respective accommodation for 162 and 100 children, have an average attendance of about 120 and 40, and grants of over £126.

and £46. Pop. (1881) 1020, (1891) 964.—*Ord. Sur.*, shs. 85, 86, 1876.

Glass, a picturesque loch on the mutual border of **Alness** and **Kiltearn** parishes, Ross-shire, at the north-eastern base of **Ben Wyvis**. Lying 713 feet above sea-level, it curves 4 miles south-eastward to within 7 miles of **Novar** or **Evanton** station, has a maximum width of 5 furlongs, and from its foot sends off the river **Glass** or **AULGRANDE**, running 8 miles east-south-eastward to **Cromarty Firth**, at a point 9 furlongs ESE of **Novar** station. Both loch and river afford good trout fishing.—*Ord. Sur.*, sh. 93, 1881.

Glass, a river of **Kiltarlity** and **Kilmorack** parishes, **N Inverness-shire**, formed, 2½ miles SW of **Glenaffric Hotel**, by the confluence of the river **Affric** and the **Amhuinn Deabhaidh**. Thence it winds 12 miles north-eastward along wooded **Strathglass**, till, near **ERCELESS Castle**, it unites with the **Farrer** to form the river **Beauly**. During this course it descends from 250 to 160 feet above sea-level, and is a fine fishing stream for salmon and trout.—*Ord. Sur.*, shs. 73, 83, 1878-81.

Glass. See **GLASS-ELLAN**.

Glassalt (Gael. 'grey stream'), a mountain torrent of **Crathie** and **Braemar** parish, SW **Aberdeenshire**, rising on the southern side of **Lochnagar** at an altitude of 3450 feet, and running 3 miles east-south-eastward, till it falls into **Loch Muick** (1310 feet) near its head, and 2½ miles SW by S of **Alt-na-Giuthasach**. 'The falls,' writes the **Queen** under date 16 Sept. 1852, 'are equal to those of the **Bruar** at **Blair**, and are 150 feet in height; the whole height to the foot of the loch being 500 feet. . . . We came down to the **Shiel** of the **Glassalt**, lately built, where there is a charming room for us, commanding a most lovely view.'—*Ord. Sur.*, sh. 65, 1870.

Glassary. See **KILMICHAEL-GLASSARY**.

Glassaugh, a mansion in **Fordyce** parish, **Bauffshire**, 2½ miles WSW of **Portsoy**. Much enlarged in the first half of the present century, it is the property of **Mr Robert W. Duff**, of **FETTERESSO**, who succeeded his father, the **Right Hon. Sir Robert W. Duff**, in 1895.—*Ord. Sur.*, sh. 96, 1876.

Glassel, a station and an estate, with a mansion, on the W border of **Banchory-Ternan** parish, **Kincardineshire**. The station is on the **Deeside** railway, adjacent to the boundary with **Aberdeenshire**, 4½ miles WNW of **Banchory** village.

Glass Ellan or **Green Island**, a low grassy islet of **Glenshiel** parish, SW **Ross-shire**, in **Loch Alsh**, adjacent to **Lochalsh** parish. It measures 30 acres in area, has flat sandy shores, and is separated from the mainland on both sides by only a narrow strait.

Glassert. See **GLAZERT**.

Glasserton, a coast parish of SE **Wigtownshire**, whose church stands 1¼ mile inland, and 2½ miles SW of **Whithorn**. It is bounded N by **Kirkcubbin**, NE by **Sorbie**, E by **Whithorn**, SW by **Luce Bay**, and W by **Mochrum**. Its utmost length, from NW to SE, is 6½ miles; its breadth varies between 1½ and 5¼ miles; and its area is 13,889 acres, of which 514½ are foreshore and 90 water. The coast-line, 6½ miles long, is a chain of green-topped hills, various in height, and rocky, bold, and beetling towards the sea; it rises on **Carleton Fell** to a maximum altitude of 475 feet above sea-level. Many of its hills are abrupt and precipitous, overhanging the shore in projecting cliffs; others slope gently down to the water's edge, and several are pierced to no great depth by caverns. Of these **St Ninian's Cave**, near **Physgill House**, is said to have served as an oratory to that early apostle of the **Southern Picts**; and carved on a panel, 25 feet SW of its entrance, the figure of a cross, 9 inches high, was discovered by a party, which comprised the late **Dr John Stuart** and **Dean Stanley**. (See **WHITHORN**.) **Monreith Bay**, at the boundary with **Mochrum**, and two or three spots elsewhere, are available for the unloading of sloops in fine weather; but nowhere is there any safe harbourage. The interior exhibits an uneven, broken, and knolly appearance, a constant succession of heights and hollows, with scarcely

a level field; and, rising at many points to 200 or 300 feet above sea-level, culminates on the **Fell of Barhullion** at an altitude of 450 feet. **DOWALTON LOCH**, now drained, lay at the northern extremity, and has been separately noticed. The rocks are various, but chiefly **Silurian**; and they yield hard material for road-metal. The soil, too, varies much, and often, on one and the same ridge, ranges from light dry earth to loam and moss; but rich soil prevails, much interspersed with till. Between 200 and 300 acres are under wood, and more than a fourth of the entire area still is waste, though great improvements have been carried out, especially on the estate (677 acres) of **Craiglemino** and **Apleby**, purchased in 1847 by **George Guthrie, Esq.**, who expended on it considerable sums. He 'found it a wilderness, and left it a garden.' **Glasserton House**, 3 furlongs SW of the church, stands in the midst of a large, well-wooded park, and is a red stone building, successor to a seat of the **Earls of Galloway**, which was destroyed by fire in 1730. It and the older mansion of **Physgill**, 1 mile to the SE, are both the property of **Robert Hathorn Johnston-Stewart, Esq.** (b. 1824; suc. 1865). Another mansion is **RAVENSTONE**. It is in the presbytery of **Wigtown** and synod of **Galloway**; the living is worth £218. The church was built in 1732, and, as repaired and enlarged in 1837, contains 400 sittings; whilst three public schools, **Glasserton**, **Knock**, and **Ravelstone**, with respective accommodation for 107, 91, and 74 children, have an average attendance each of about 50, and grants amounting to nearly £57, £56, and £63. Pop. (1881) 1203, (1891) 1154.—*Ord. Sur.*, shs. 2, 4, 1856-57.

Glassford, a parish in the **Middle Ward** of **Lanarkshire**, containing **Glassford** station on a branch line of the **Caledonian**, 1½ mile N by E of **Strathaven**, and also containing the villages of **WESTQUARTER** and **CHAPELTON**, which are respectively 1 mile ESE and 2 miles N by W of that station, whilst **Chapelton** by road is 5½ miles SSW of **Hamilton**, under which it has a post office. With an irregular outline, rudely resembling an hourglass, the parish is bounded N by **Hamilton**, NE and SE by **Stonehouse**, S by **Avondale**, SW by **East Kilbride**, and NW by **East Kilbride** and **Blantyre**. Its utmost length, from **WNW** to **ESE**, is 7 miles; its width varies between 2½ furlongs and 2½ miles; and its area is 6459½ acres, of which 17 are water. **AVON** Water winds 2 miles north-north-eastward along the south-eastern border, and **CALDER** Water 3¾ miles north-north-westward and north-eastward along the south-western and north-western border. By the former stream the surface declines to 490, by the **Calder** to 680 feet above sea-level; and between them it rises to 804 feet near **Glassford** station, 857 at **Beuts**, and 853 near **Craighall**. The rocks are mainly trap and carboniferous; and coal, freestone, and limestone have all been worked. The soil is variously light loam, clay, and moss; and during this century a good deal of barren moorland has been reclaimed. Just to the N of **Westquarter** is the site of an ancient castle; and ½ mile to the E are remains of the old church of 1633, with a tombstone bearing this epitaph: 'To the Memory of the very worthy **Pillar of the Church**, **Mr William Gordon** of **Earlston**, in **Galloway**, shot by a party of dragons on his way to **Bothwell Bridge**, 22 June 1679, aged 65. Inscribed by his great-grandson, **Sir John Gordon, Bart.**, 11 June 1772.' **John Struthers** (1776-1853), author of *The Poor Man's Sabbath*, for three and a half years was a cowherd in **Glassford** parish. Mansions, noticed separately, are **Avonholm**, **Craighornhill**, **Crutherland**, **Hallhill**, **Muirburn**, and **West Quarter House**. In the presbytery of **Hamilton** and synod of **Glasgow** and **Ayr**, this parish, since 1875, has been ecclesiastically divided into **Glassford** and **Chapelton**. The stipend for **Glassford** is £305; its present church was built in 1820. Two public schools, **Chapelton** and **Glassford**, with respective accommodation for 188 and 119 children, have an average attendance of about 100 and 110, and grants amounting to over £100 each. Pop. of civil parish (1801) 953, (1831) 1730, (1861) 1938,

(1871) 1430, (1881) 1452, (1891) 1317; of ecclesiastical parish (1881) 670, (1891) 630.—*Ord. Sur.*, sh. 23, 1865.

Glassie, a Perthshire lake in Weem parish, Perthshire, 2½ miles N by W of Aberfeldy. Lying 1200 feet above sea-level, it has an utmost length and breadth of 3½ and 1½ furlongs, and contains pike.—*Ord. Sur.*, sh. 55, 1869.

Glassmount, an estate, with a modern mansion, in Kinghorn parish, Fife, 2 miles NW of Kinghorn town, and 3 NNE of Burntisland. Two rough standing stones, supposed to commemorate the last battle fought between the Scots and the Danes, are in a field to the W of the mansion.

Glasvein or **A'Ghlas-bheinn**, a mountain (3006 feet) in Kintail parish, SW Ross-shire, flanking the N side of the BEALACH Pass, 5 miles ENE of Invershiel.

Glasvein or **Glas Bheinn**, a mountain (2541 feet) on the NE border of Assynt parish, Sutherland, flanking the upper part of the northern shore of Loch Assyut, and culminating 3 miles N of Inchnadamff.

Glasvein, a village in the Isle of Skye, Inverness-shire. Its post-town is Kilmuir, under Portree.

Glaudhall, an estate, with a mansion, in Cadder parish, Lanarkshire, 1 mile NE of Garnkirk station.

Glazert, a rivulet of Campsie parish, Stirlingshire. Formed by the confluence of Pow, Fyglun, and Kirk-tou Burus, near Campsie Glen station, it thence runs 4½ miles south-eastward past Lennoxton and Milton, till it falls into the Kelvin opposite Kirkintilloch. It traverses, over much of its course, a rocky channel fretted by the floods of ages; receives no fewer than sixteen little affluents; and affords such abundant water-power as to have been a main cause, along with the plenteousness of coal, why manufactures have taken root and flourished in Campsie.—*Ord. Sur.*, shs. 30, 31, 1866-67.

Glazert, a troutful burn of Dunlop and Stewarton parishes, Ayrshire, rising close to the Renfrewshire border, 2¾ miles NNE of Dunlop village, and winding 10¼ miles south-south-westward till it falls into Annick Water at Watermeetings, 4½ miles NW of Kilmarnock.—*Ord. Sur.*, sh. 22, 1865.

Glen, an estate, with a mansion, in Traquair parish, Peebleshire, near the left bank of Quair Water, 5 miles SW by S of Innerleithen. Sold for £10,500 in 1796, and for £33,140 in 1852, the estate is now the property of Sir Charles Tennant, Bart. (b. 1823; suc. 1878), who sat as Liberal member for Peebles and Selkirk shires from 1880 to 1886, and whose baronetcy dates from 1885. The mansion, erected in 1854, and enlarged in 1874, is a stately Scottish Baronial edifice, from designs by the late David Bryce, with beautiful gardens, vineries, an artificial lake of 3 acres, etc. A short way higher up is the 'frightful chasm' of Glendean's Banks, which, ¾ mile long, is flanked on either hand by lofty shelving cliffs, and takes up a mountain footpath into Yarrow.—*Ord. Sur.*, sh. 24, 1864.

Glen, a village in Falkirk parish, Stirlingshire, 1¼ mile S of Falkirk town.

Glenae, a mansion in Tinwald parish, Dumfriesshire, near the left bank of Park Burn, 1¼ mile NNW of Amisfield station, and 6 miles N by E of Dumfries. It superseded an ancient baronial fortalice, now a ruin, on Wood farm in the parish of Kirkmichael, 4 miles N by W; and it gave designation to three baronets from 1666 to 1703 belonging to a branch of the family of Dalzell, who, in the latter year, succeeded to the earldom of Carnwath. Its present owner is R. Stuart Dalzell, Esq.—*Ord. Sur.*, sh. 10, 1864.

Glenaffric. See AFFRIC.

Glenafton. See AFTON.

Glenaladale, a glen in Moidart district, SW Inverness-shire. Descending 3¾ miles east-south-eastward and south-by-eastward to the middle of Loch Shiel, it has a flat bottom about 300 yards broad, and is flanked by green rounded hills.

Glenalbert, a farmhouse in Little Dunkeld parish, Perthshire, near the right bank of the Tay, ¾ mile NNW of Dalguise station. It is the scene of Mrs Brunton's

novel *Self Control* (1811), and near it is a beautiful waterfall.

Glenalla Fell, a hill (1406 feet) in the S of Kirkmichael parish, Ayrshire, 3 miles SW by S of Straiton.

Glenalmond, either all, or much, or a small part of the vale of the river ALMOND, in Perthshire. The small part lying formerly in the northern section of Crieff parish, but transferred by the Boundary Commissioners in 1891 to the parish of Fowls-Wester, and extending 2¾ miles south-eastward to Fendoch Camp in the vicinity of Buchanty, is a deep, narrow defile, only wide enough to afford passage to the river and a road, and flanked by bare rocky acclivities rising to the height of from 1600 to 2117 feet above sea-level. It is commonly designated the Sma' Glen, and contains an old stone-faced excavation noticed under CLACH-NA-OSSIAN. The section of the vale eastward of the Sma' Glen, to the extent of about 3 square miles, bears the distinctive name of Logie-Almond; but contains, 7 miles NNE of Crieff, Glenalmond post office under Perth, as also Glenalmond House on the CAIRNIES estate, and the Scottish Episcopal College of the Holy and Undivided Trinity, commonly known as Glenalmond College. The last stands on the right bank of the winding Almond, 4½ miles NW of Methven station, and 10 NW of Perth. It was originated in 1841, 'to embrace objects not attainable in any public foundation hitherto established in Scotland, viz.—the combination of general education with domestic discipline and systematic religious superintendence;' and until 1875 it comprehended a theological department, now removed to Edinburgh. There are a warden and twelve assistant masters; whilst the governing council consists of the bishops of the Scottish Episcopal Church and seven others, amongst them the Right Hon. W. E. Gladstone, whose father, Sir John Gladstone of Fasque, was a principal founder of the college. It is divided into Senior and Junior Schools—the latter for boys of 9 years of age and upwards. In the Senior School the boys are prepared for the army and Indian civil service. There is a cadet corps, which wears the Highland dress—that of the Black Watch. A shooting range is provided near the school, and an eight is sent annually to Bisley for the public schools competition. Its site and grounds, 20 acres in extent, were given by the late Lord Justice-Clerk Patton of Cairnies; the chapel was built (1851) at the sole expense (over £8000) of the first Warden, the late Rev. Charles Wordsworth, Bishop of St Andrews; and the entire cost of the work had been £90,000, when, on 26 Oct. 1875, a further large outlay was entailed by a disastrous fire that destroyed the W wing and did other damage to a total amount of £20,000. The buildings, designed by the late Sir G. Gilbert Scott, were opened in 1847. In the Domestic Gothic style of the 15th century, they offer a very fine frontage to the W, and form, apart from the chapel, a quadrangle 190 feet square. The entrance is through an arched gateway, surmounted by an embattled tower; opposite, on the E side, is the handsome dining-hall; and from the SE corner the chapel projects to the eastward. It is Decorated or Middle Pointed; has a graceful SW tower and spire; and is richly adorned with beautiful stained glass to the memory of old Glenalmondians and others. A new wing containing Master's house, class-rooms, etc., was completed in 1895.—*Ord. Sur.*, sh. 47, 1869.

Glenample, a glen in Balquhiddar parish, Perthshire, traversed by the Burn of Ample, which, rising at an altitude of 1050 feet above sea-level, runs 5 miles north-by-eastward till, ½ mile below its beautiful cascade and 1¾ ESE of Lochearnhead, it falls into Loch Earn (306 feet) in the grounds of EDINAMPLE.—*Ord. Sur.*, sh. 46, 1872.

Glenapp, a picturesque glen in BALLANTRAE parish, SW Ayrshire, with a post office, 4½ miles N of Cairnryan, and 6¼ S of Ballantrae village. It is traversed by the shallow Water of App, descending from Beneraid 6 miles south-westward to Loch Ryau, and followed over the last 3¾ miles of its course by the road from Ayr and Girvan to Stranraer. Glenapp estate was purchased from the Earl of Orkney in 1864 by the late James

Hunter, Esq., for whom a Scottish Baronial mansion, Glenapp House, was built by the late Mr David Bryce in 1870. The estate extends to over 8000 acres, and affords excellent grouse and low-ground shooting. Both estate and mansion were sold in 1894 to a Yorkshire gentleman at a price between £60,000 and £70,000. Glenapp *quoad sacra* parish, constituted in 1874, is in the presbytery of Stranraer and synod of Galloway. Its church ('Butters Church') and school arose more than 50 years ago from a bequest of £4500 and 15 acres of land by a lady of the name of Caddall. Pop. of *g. s.* parish (1881) 192, (1891) 144.—*Ord. Sur.*, sh. 7, 1863.

Glenaray. See ARAY and INVERARY.

Glenarbuch, a ravine in Old Kilpatrick parish, Dumbartonshire, running down the face of the Kilpatrick Hills from Craigrestie (1166 feet) $\frac{1}{2}$ mile southward to the Clyde in the eastern vicinity of Bowling Bay. Glenarbuch House stands on a slope between its foot and the Clyde, and is a fine mansion, embosomed in wood.—*Ord. Sur.*, sh. 30, 1866.

Glenarchaig. See ARCHAIG, LOCH.

Glenarklet. See ARKLET.

Glenartney, a beautiful sylvan glen in Comrie parish, Upper Strathearn, Perthshire, traversed by the last $\frac{7}{8}$ miles of hazel-fringed RUCHILL Water, which, after a north-easterly course, falls into the Earn, opposite Comrie village. Itself descending from 700 to 200 feet above sea-level, it is flanked on its left side by mountainous Glenartney deer forest, the property of the Earl of Ancaster, which culminates at 2317 feet, and in which Prince Albert shot his first Highland stag on 12 Sept. 1842. The region along all its right side was anciently a royal forest; and here in 1589 the Macgregors murdered James VI.'s forester, Drummond of Drummoud Ernoch. Scott wove the episode into his *Legend of Montrose*, and it led to the outlawry of the Macgregor clan.—*Ord. Sur.*, sh. 47, 1869.

Glenaven, the upper part, or the whole, of the Highland vale of the river AVEN, in S Banffshire. On 5 Sept. 1860 the Queen and Prince Consort rode 8 miles up it from Tomintoul to Inchroy, and thence 3 miles onward to Loeh Buiig. Her Majesty describes 'the road winding at the bottom of the glen, which is in part tolerably wide, but narrows as it turns and winds towards Inehroy, where it is called Glenaven. The hills, sloping down to the river side, are beautifully green. It was very muggy—quite oppressive—and the greater part of the road deep and sloppy, till we came upon the granite formation again. . . . We passed by Inchroy—seeing, as we approached, two eagles towering splendidly above, and alighting on the top of the hills.' The upper part of the vale, called specially Glenaven, constitutes the southern or alpine division of Kirkmichael parish, and is disposed as a deer forest of the Duke of Richmond and Gordon.—*Ord. Sur.*, shs. 74, 75, 85, 1877-76.

Glenavon, an estate, with a mansion, in Stonehouse parish, Lanarkshire, on the left bank of Avon Water, $\frac{2}{3}$ miles N of Stonehouse town.

Glenays, an old baronial fortalice, now a fragmentary ruin, in Maybole parish, Ayrshire, $\frac{4}{2}$ miles S by W of Ayr.

Glenbarr Abbey, a mansion in Killean parish, W Kintyre, Argyllshire, on the left bank of Barr Water, 5 furlongs above its mouth and $6\frac{1}{2}$ miles S by W of Tainloan. It is the seat of Major C. B. Macalister. Across the stream is Glenbarr village, having a post office, with money order, savings bank, and telegraph departments, and a public school.—*Ord. Sur.*, sh. 20, 1876.

Glenbarry, a station on the Banffshire section of the Great North of Scotland railway, in Ordiqhill parish, $\frac{4}{2}$ miles NE of Grange Junction, and $11\frac{1}{2}$ SW of Banff.

Glenbeg, a glen in Glenelg parish, NW Invernesshire, extending 5 miles west-north-westward to the head of Sleat Sound, $\frac{1}{2}$ mile SW of Glenelg village. It contains two well-preserved Scandinavian round towers—the one 25 feet high, and 54 in circumference; the other 30 feet high, and 57 in circumference.

Glenbeich, a glen in the W of Comrie parish, Perth-

shire, traversed by Beich Burn, which, rising at an altitude of 2000 feet above sea-level, runs $7\frac{1}{2}$ miles south-south-westward, till it falls into Loch Earn (306 feet) at a point $1\frac{1}{2}$ mile E by N of the head of the lake, and which in one place forms a beautiful cascade.—*Ord. Sur.*, shs. 47, 46, 1869-72.

Glenbennan Hill, a heathy ridge in the W of Kirkpatrick-Irongray parish, NE Kirkcudbrightshire, flanking the right side of the Old Water of Cluden, and rising to an altitude of 1305 feet above sea-level.

Glenbervie (anciently *Overbervie*), a parish of central Kincardineshire, containing DRUMLITHIE village, with a station on the Caledonian railway, $7\frac{1}{4}$ miles SW of Stonehaven. It is bounded N by Durris, NE by Fetteresso, E by Dunnottar, SE by Arbutnott, SW and W by Fordoun, and NW by Strachan. Its utmost length, from N to S, is $5\frac{1}{2}$ miles; its utmost breadth, from E to W, is $5\frac{1}{2}$ miles; and its area is 15,071 $\frac{1}{2}$ acres, of which 30 are water. BERVIE Water flows $4\frac{3}{8}$ miles east-south-eastward along the Fordoun border; CARRON Water rises in the middle of the western district, and runs eastward into Dunnottar; and COWIE Water, rising at the NW corner, runs east-by-northward across the northern district. The land descends southward and eastward from the frontier Grampians, and presents an uneven, hilly, and ridgy appearance, being naturally divided into four districts, first by a sort of ravine separating the W from the middle, then by an abrupt sandbank separating the middle from the SE, and lastly, by a narrow range of the frontier Grampians separating the middle from the N. The surface sinks in the extreme S to 262 feet above sea-level, thence rising to 732 feet at Droon Hill, 736 near Upper Kinmonth, 543 near Kealog, 746 at Mid Hill, 1231 at Leachie Hill, 1163 at Craiginour, 951 at the Hill of Three Stones, and 1231 at Monluth Hill, which culminates right upon the Durris border. The rocks are mainly trap and Devonian; and the soils are extremely various, comprising some good clay loam and a good deal of thin reddish land that yields only moderate crops, with here and there deposits of moss. Within the last forty years important improvements, in the way of draining, reclaiming, planting, etc., have been effected on both the Glenbervie and Drumlithie estates, upwards of £10,000 having been expended thereon since 1855 by the proprietor of the former, James Badenach Nielson, Esq. (b. 1832). His seat, Glenbervie House, on the left bank of Bervie Water, $1\frac{3}{8}$ mile WSW of Drumlithie, is an old mansion, whose grounds are well wooded, like the other estates in the parish. Giving off a small portion to Rickarton *quoad sacra* parish, Glenbervie is in the presbytery of Fordoun and synod of Angus and Mearns; the living is worth £237. The parish church, near Glenbervie House, was built in 1826. A Free church and an Episcopal church have been noticed under Drumlithie; and two public schools—Brae and Glenbervie—with respective accommodation for 72 and 169 children, have an average attendance of about 40 and 100, and grants of over £50 and £100. Valuation (1856) £5651, (1882) £8135, 15s. 2d., (1892) £7145, plus £1833 for railway. Pop. (1801) 1204, (1841) 1296, (1861) 1219, (1871) 1073, (1881) 972, (1891) 887.—*Ord. Sur.*, sh. 66, 1871.

Glenboig, a village at the western verge of New Monkland parish, Lanarkshire, with a station on the Caledonian, $2\frac{1}{2}$ miles N by W of Coatbridge, and a post, money order, and telegraph office. Here are the works of the Glenboig Union Fire-clay Co., Limited. In the formation of this company the Glenboig, the Glenboig Star, and the Cumbernauld works were amalgamated, and they are probably the largest manufacturers of fire-bricks, blocks, etc., in the world. Glenboig has also a public school, a Roman Catholic school (1881), and the Roman Catholic church of Our Lady and St Joseph (1880). A mission chapel here was erected into a chapel of ease to the parish, and a new place of worship (seated for 300 persons) was built in 1893-4. Pop., with GARNQUEEN (1871) 307, (1881) 934, (1891) 1360.

Glenboltachan, a glen in Comrie parish, Perthshire, descending $3\frac{1}{4}$ miles south-eastward from Loch Bor-

TACHAN to the river Earn, at a point $3\frac{1}{2}$ miles WNW of Comrie village. It is the glen up which Hogg's 'Bonny Kilmeny' went, and was the scene of the final and almost exterminating victory of the Macnabs over the Neishes in the early part of the 17th century.—*Ord. Sur.*, sh. 47, 1869.

Glenborrodale Castle, a modern mansion in Ardnarmurchan parish, Argyllshire, near the N shore of Loch Suart, 7 miles WSW of Salen. Its owner is Mr Rudd.

Glenbriarachan. See BRIARACHAN.

Glenbrighty. See BRIGHTY.

Glenbuck, a village and a *quoad sacra* parish amid the hills of Muirkirk parish, E Ayrshire, within 7 furlongs of the Lanarkshire border, and near a station of its own name on the Douglasdale branch of the Caledonian, $3\frac{1}{2}$ miles ENE of Muirkirk. There are large coal and lime works, a post office under Douglas, with money order, savings bank, and telegraph departments, a public school, and the parish church (1881). Near the station are two reservoirs—the Upper ($5\frac{1}{2} \times 2$ furl.) and the Lower (4×1 furl.) They were formed about 1802 to furnish water-power to cotton works at Catrine. The House of Glenbuck is a mansion of recent erection, the seat of Charles Howatson, Esq. of Glenbuck. Pop. of village (1851) 237, (1871) 311, (1881) 858, (1891) 1079.—*Ord. Sur.*, shs. 23, 15, 1865-64.

Glenbucket, a parish on the western border of Aberdeenshire, containing, near its SE corner, Bridge of Bucket post office, $14\frac{1}{2}$ miles W of Alford station, and $44\frac{1}{2}$ WNW of its post town, Aberdeen. It is bounded E and SE by Towie, S and SW by Strathdon, and NW and N by Inveraven and Cabrach in Banffshire. Its utmost length, from WNW to ESE, is $7\frac{1}{4}$ miles; its breadth varies between $1\frac{1}{2}$ and $3\frac{1}{2}$ miles; and its area is 11,083 $\frac{1}{2}$ acres. The N is drained by head-streams of the DEVERON; and the Allt Sughain and Coullins Burn, rising in the extreme W at 1900 and 2100 feet above sea-level, and running $2\frac{1}{2}$ miles south-eastward and $2\frac{1}{2}$ miles east-by-southward, unite to form the Water of Bucket, flowing $5\frac{3}{4}$ miles east-south-eastward through the middle of the parish to the DON, which itself winds 7 furlongs north-eastward along the border. The surface, sinking along the Don to 774 feet above sea-level, thence rises to 1561 feet at *Millbuie Hill, 1831 at *Meikle Forbridge Hill, 2073 at *Creag an Innean, 1901 at *Clashentepie Hill, 1998 at *Ladylea Hill, 1525 at White Hill, 2159 at *Moss Hill, 1886 at the Socach, 1862 at Allt Sughain Hill, and 2241 at *Geal Charn, where asterisks mark those summits that culminate right on the borders of the parish. Greywacke, mica slate, and serpentine prevail throughout the upper portion of the parish; the lower is rich in primary limestone and gneiss, the former of which, containing 70 per cent. of lime, has been largely worked. The soil of the middle glen is much of it a fertile yellow loam; but that of the higher grounds is mostly poor gravelly clay; whilst near the Deveron's sources are vast deposits of peat. Glenbucket Castle, near the Don's left bank, $\frac{1}{2}$ mile W of Bridge of Bucket, is a picturesque ruin, with its turrets and corbie-stepped gables. Built in 1590, it was the seat of the Gordons of Glenbucket, the last of whom fought at both Sheriffmuir (1715) and Culloden (1746). From place to place he was hunted, till, letting his beard grow and assuming the garb of a beggar, he at length effected his escape to Norway. Glenbucket shooting-lodge, 7 miles WNW of Bridge of Bucket, was built in 1840 by the Earl of Fife, on or near the site of the dwelling of 'John o' Badenyon,' the hero of a capital song by the Rev. John Skinner. One other memory has Glenbucket, that here on the moors of Glencairney, 'among the bonny blooming heather,' died, just as he had hoped to die, the last of the 'old poachers,' Sandy Davidson, 25 Aug. 1843. Glenbucket estate, comprising the entire parish, was sold by the Duke of Fife in 1883 to Mr H. Burra, Rye, Sussex, for £50,000. Glenbucket is in the presbytery of Alford and synod of Aberdeen; the living is worth £165. The church is 2 miles W of Bridge of

Bucket. Two schools, Glenbucket public and Balloch public, with respective accommodation for 109 and 35 children, have an average attendance of about 110 and 40, and grants of about £50 and £30. Pop. (1801) 420, (1831) 539, (1861) 552, (1871) 570, (1881) 506, (1891) 408.—*Ord. Sur.*, sh. 75, 1876.

Glenbuckie, a glen in Balquhiddier parish, Perthshire, extending 5 miles north-by-westward to the foot of Loch Voil at Balquhiddier hamlet, and traversed over the last $2\frac{3}{4}$ miles by the lower reaches of CALAIR Burn.—*Ord. Sur.*, shs. 38, 46, 1871-72.

Glen Burn, a rivulet of Newabbey parish, Kirkcubrightshire, rising on the W shoulder of Criffel at an altitude of 1500 feet, and running $3\frac{1}{2}$ miles north-north-eastward, past CARSEGOWAN, till, after a descent of 1350 feet, it falls into Newabbey Pow in the western vicinity of Newabbey village.—*Ord. Sur.*, sh. 5, 1857.

Glenburnie, a hamlet in Abdie parish, Fife, $1\frac{1}{2}$ mile SE of Newburgh.

Glencainail. See CAINAIL.

Glencairn, a parish on the W border of Nithsdale, Dumfriesshire, containing the village of MONIAIVE, $7\frac{1}{2}$ miles WSW of Thornhill, under which it has a post office, with money order, savings bank, and telegraph departments. It is bounded N by Tynron, E by Keir, SE and S by Dunscore, and SW and W by Balmaclellan and Dalry in Kirkcubrightshire. Its utmost length is $14\frac{1}{2}$ miles from NW to SE, viz., from Coranbae Hill on the Kirkcubrightshire border to Dalgoner Mill on Cairn Water; at Moniaive it has an utmost width of $5\frac{1}{2}$ miles, and tapers thence north-westward and south-eastward; and its area is 30,239 acres, of which $155\frac{1}{2}$ are water. From 1680 feet on Coranbae Hill, DALWHAT Water runs 10 miles east-south-eastward; CRAIGDARROCH Water, from 1500 feet on Cornharrow Hill, runs 6 miles east-by-southward; and CASTLEFEARN Water, from 1200 feet on Troston Hill, runs 7 miles south-eastward and north-eastward along the Kirkcubrightshire border and through the interior, till, $\frac{1}{2}$ mile S of Moniaive, it joins Craigdarroch Water. Their confluent stream, $\frac{1}{2}$ mile lower down, falls into Dalwhat Water, and thenceforth called CAIRN Water, winds $6\frac{1}{2}$ miles south-eastward through the south-eastern interior, then $2\frac{1}{2}$ miles southward along the Dunscore border. Loch URR (5×4 furl.) lies, 680 feet above sea-level, at the meeting-point of Glencairn, Dunscore, and Balmaclellan. In the SE, where Cairn Water quits the parish, the surface declines to 250 feet above sea-level, and rises thence to 886 feet at Slatehouse Hill, 1171 at Beauchan Moor, 1416 at Bogrie Hill, 942 at Peulton Hill, 1102 at Terreran Hill, 1045 at Craigdarroch Hill, 1367 at Big Morton Hill, 1747 at Cornharrow Hill, 1900 at Benbrack, and 1961 at Colt Hill, whose summit, however, falls just within Tynron. Old Red sandstone is the prevailing rock, and a sort of slato was formerly worked near Moniaive. Some 7000 acres are regularly or occasionally in tillage, about 800 are under wood, and the rest of the parish is pastoral or waste. An oblong artificial mound, the Moat, rises 5 furlongs WSW of the church; and $1\frac{1}{2}$ mile SW of Moniaive is Kirkcubright, the site of a chapel dedicated to St Cuthbert. The Rev. James Renwick (1662-88), last of the Scottish martyrs, was born near Moniaive; and a monument to him, 25 feet high, was erected on a rising-ground in 1828. Another native was Robert Gordon, D.D. (1786-1853), a Disruption worthy. In the latter half of the 15th century Sir William Cunningham of KILMAURS wedded Margaret, daughter and co-heiress of Sir Robert Dennistoun of that ilk, and thereby acquired Glencairn and lands in Renfrew, Dumbarton, and Edinburgh shires. His grandson, Alexander, was in 1445 created Lord Kilmaurs, and in 1488 Earl of Glencairn, a title which became dormant at the death of the fifteenth Earl in 1796, and now is claimed by Sir William James Montgomery-Cunninghame of Corsehill and by Captain William Cunningham. Alexander, the fifth or 'good' Earl, who died in 1574, was among the first of the Scots nobility that favoured the Reformation; and

James, the fourteenth Earl (1750-91), is remembered as a patron of the poet Burns. Auchencheyne, 3 miles SW of Moniaive, is the seat of James Walter Ferrier Connell, Esq. (b. 1853; suc. 1876). Other mansions, noticed separately, are Craighdarroch, Crawfordton, and Maxwelton. Glencairn is in the presbytery of Penpont and synod of Dumfries; the living is worth £304. The parish church, 2 miles E by S of Moniaive, was built in 1836. At Moniaive are a chapel of ease and Free and U.P. churches; and three public schools—Craigmuir, Crossford, and Moniaive—with respective accommodation for 40, 78, and 241 children, have an average attendance of about 20, 50, and 200, and grants amounting to over £30, £50, and £220. Pop. (1801) 1403, (1851) 2068, (1861) 1867, (1871) 1749, (1881) 1737, (1891) 1647.—*Ord. Sur.*, sh. 9, 1863. See the Rev. J. Monteith's *Account of the Parish of Glencairn* (1876).

Glencanisp, a deer forest, about 30,000 acres in extent, near the village of Loch Inver. The house is situated on the shore of Loch Sourdlan, about a mile from the village of Loch Inver, amid scenery of great beauty and grandeur.

Glencannich, the glen of the rivulet CANNICH, in Kilmorack parish, NW Inverness-shire. Glencannich deer-forest, to the N, is let by Mrs Chisholm for £1350 a year.—*Ord. Sur.*, shs. 72, 82, 83, 73, 1878-82.

Glencaple, a seaport village in Caerlaverock parish, Dumfriesshire, on the left bank of the Nith, 5 miles S by E of Dumfries, under which it has a post office. Founded 1747, it presents a tidy and cheerful appearance, commands a charming view across the Nith to Criffell, and serves in a small way as a sea-bathing quarter to families of the town and neighbourhood of Dumfries. Its shipbuilding is quite extinct; and, ranking as a sub-port of Dumfries, it has scarcely any trade of its own, but serves for such vessels to discharge their cargoes as are unable to sail up to the burgh. At it are two inns, a tolerably good quay, a police station, a public school, a convalescent home (opened in 1894), and a Free church.—*Ord. Sur.*, sh. 6, 1863.

Glencarradale. See CARRADALE.

Glencarrick, a reach of the basin of Duncow Burn, in Kirkmahoe parish, Dumfriesshire, 6½ miles N by W of Dumfries. A pretty cascade is on the burn here, and a distillery was formerly in the neighbourhood of the cascade.

Glencarron, a vale of Lochcarron parish, SW Ross-shire, traversed by the river Carron, which, issuing from Loch Scaven (491 feet), flows 14 miles south-westward to the head of salt-water Loch Carron, and about midway in its course expands into Loch Dule or Dhughail (1½ mile × 3 furl; 100 feet). The vale takes down the Dingwall and Skye railway, with a station thereon, Strathcarron, 17 miles NE of Stromeferry and 36 WSW of Dingwall.—*Ord. Sur.*, sh. 82, 1882.

Glencarse, a hamlet close to the south-eastern border of Kinfauns parish, Perthshire, with a station on the Dundee and Perth section of the Caledonian, this being 6 miles E by S of Perth, under which it has a post office, with money order, savings bank, and telegraph departments. There are an inn and an Episcopal church, All Saints (1878), a Domestic Gothic edifice of pitch pine and concrete erected at a cost of £1500. Glencarse House, 7 furlongs N by W of the station, on the SE slope of wooded Glencarse Hill (596 feet), is a modern mansion, the seat of Thomas Watson Greig, Esq.—*Ord. Sur.*, sh. 48, 1868.

Glencatacol, a pastoral and romantic glen of Kilmore parish, in the NW of the Isle of Arran, Buteshire, descending 3½ miles northward and north-westward, from an altitude of 1040 feet to Kilbrannan Sound at Catacol Bay, 2½ miles SW of Loch Ranza.—*Ord. Sur.*, sh. 21, 1870.

Glenceitlein. See GLENKETLAND.

Glenchalmadale. See GLENHALMADALE.

Glenclova, the upper part of the basin of the South Esk, in CORTACHY AND CLOVA parish, Forfarshire.

Glencloy, a glen in Kilbride parish, on the E side of

the Isle of Arran, Buteshire. Commencing as Glenn Dubh at an altitude of 1480 feet, it descends 4 miles north-eastward to a convergence with Glensherrig and Glenrosie, in the vicinity of Brodick, and for the first 2 miles is a deep, dark ravine, flanked by high hills, and traversed by an impetuous streamlet.—*Ord. Sur.*, sh. 21, 1870.

Glencunio. See CLUNIE, LOCH; and GLENSHIEL.
Glencoe (Gael. *gleann-cumhann*, 'narrow vale'), a desolate defile in Lismore and Appin parish, N Argyllshire, commencing at a 'col' (1011 feet) that parts it from Gletive and the basin of the Tay, and thence descending 7½ miles west-by-northward to salt-water Loch Leven at Invercoe, 1½ mile ENE of Ballachulish. It is traversed from head to foot by the turbulent Coe, the 'Cona' of Ossian, which midway expands into sullen Loch Triochatan (3 × 2 furl; 235 feet); and it takes up a road leading 17 miles east-by-southward from Ballachulish Pier to Kingshouse Inn. As one ascends this road, on the left stand Sgor na Ciche or the Pap of Glencoe (2430 feet), Sgor nam Fiannaidh (3168), and Meall Dearg (3118); on the right Meall Mor (2215), BENVEEDAN (3766), and BUACHAILLE-ETIVE-BHEAG (3129)—porphyritic, conical mountains that rise 'on either side nearly as abruptly as the peaks of the Alps burst out of the coating of snow. There is a narrow strip of grazing ground in the main glen, watered by the Cona; there are a few, still narrower, scattered here and there in the upper levels, whence start the scours and mural precipices.' Of many descriptions of Glencoe, none is so fine and graphic as that in Dorothy Wordsworth's Journal, under date 3 Sept. 1803:—'The impression was, as we advanced up to the head of this first reach, as if the glen were nothing, its loneliness and retirement—as if it made up no part of my feeling: the mountains were all in all. That which fronted us—I have forgotten its name—was exceedingly lofty, the surface stony, nay, the whole mountain was one mass of stone, wrinkled and puckered up together. At the second and last reach—for it is not a winding vale—it makes a quick turning almost at right angles to the first; and now we are in the depths of the mountains; no trees in the glen, only green pasturage for sheep, and here and there a plot of hay-ground, and something that tells of former cultivation. I observed this to the guide, who said that formerly the glen had many inhabitants, and that there, as elsewhere in the Highlands, there had been a great deal of corn where now the lands were left waste, and nothing fed upon them but cattle. I cannot attempt to describe the mountains. I can only say that I thought those on our right—for the other side was only a continued high ridge or craggy barrier, broken along the top into petty spiral forms—were the grandest I had ever seen. It seldom happens that mountains in a very clear air look exceedingly high, but these, though we could see the whole of them to their very summits, appeared to me more majestic in their own nakedness than our imaginations could have conceived them to be, had they been half hidden by clouds, yet showing some of their highest pinnacles. They were such forms as Milton might be supposed to have had in his mind when he applied to Satan that sublime expression—

"His stature reached the sky."

The first division of the glen, as I have said, was scattered over with rocks, trees, and woody hillocks, and cottages were to be seen here and there. The second division is bare and stony, huge mountains on all sides, with a slender pasturage in the bottom of the valley; and towards the head of it is a small lake or tarn, and near the tarn a single inhabited dwelling, and some unfenced hay-ground—a simple impressive scene! Our road frequently crossed large streams of stones, left by the mountain-torrents, losing all appearance of a road. After we had passed the tarn the glen became less interesting, or rather the mountains, from the manner in which they are looked at; but again, a little higher up, they resume their grandeur. The river is, for a

short space, hidden between steep rocks: we left the road, and, going to the top of one of the rocks, saw it foaming over stones, or lodged in dark black dens; birch-trees grew on the inaccessible banks, and a few old Scotch firs towered above them. At the entrance of the glen the mountains had been all without trees, but here the birches climb very far up the side of one of them opposite to us, half concealing a rivulet, which came tumbling down as white as snow from the very top of the mountain. Leaving the rock, we ascended a hill which terminated the glen. We often stopped to look behind at the majestic company of mountains we had left. Before us was no single paramount eminence, but a mountain waste, mountain beyond mountain, and a barren hollow or basin into which we were descending. . . . At Kingshouse, in comparing the impressions we had received at Glencoe, we found that though the expectations of both had been far surpassed by the grandeur of the mountains, we had upon the whole both been disappointed, and from the same cause; we had been prepared for images of terror, had expected a deep, den-like valley with overhanging rocks, such as William has described in his lines upon the Alps. The place had nothing of this character, the glen being open to the eye of day, the mountains retiring in independent majesty. Even in the upper part of it, where the stream rushed through the rocky chasm, it was but a deep trench in the vale, not the vale itself, and could only be seen when we were close to it.

Glencoe has been claimed for Ossian's birthplace; but its chief, everlasting fame arises from the massacre of 13 Feb. 1692. To break the power of the Jacobite Highlanders, a plan was concerted between John Campbell, Earl of Breadalbane, and Sir John Dalrymple, Master of Stair—a Highland chieftain the one, a Lowland statesman the other. The Earl obtained £20,000 from government to bribe the allegiance of the chiefs, while a proclamation was issued by the Privy Council declaring all to be traitors who did not take the oath to William and Mary on or before 31 Dec. 1691. Not till that very day did old Macdonald of Glencoe, surnamed Mac Ian, repair with his principal clansmen to Fort William and offer to be sworn. At Fort William, however, there was no magistrate; the sheriff of Argyllshire at Inverary was the nearest; and this caused a further delay of six days. The roll was then sent into Edinburgh, with a certificate explaining the circumstances of the case; but that certificate was suppressed, and Glencoe's name deleted from the roll. Stair was the man that did this hateful deed, and Stair it was who straightway procured the signature of William to an order 'to extirpate that sect of thieves.'

On 1 Feb. 120 soldiers, Campbells mostly, and under the command of Captain Campbell of Glenlyon, were approaching Glencoe, when they were met by John Macdonald, the elder son of the chief, at the head of some 20 men. To his question as to the reason of this incursion of a military force into a peaceful country, Glenlyon answered that they came as friends, and that their sole object was to obtain suitable quarters, where they could conveniently collect the arrears of cess and hearth-money,—a new tax laid on by the Scottish parliament in 1690,—in proof of which, Lieutenant Lyndsay produced the instructions of Colonel Hill to that effect. They thereupon received a hearty welcome, and were hospitably entertained by Glencoe and his people till the fatal morning of the massacre. Indeed, so familiar was Glenlyon, that scarcely a day passed that he did not visit the house of Alexander Macdonald, the younger son of the chief, who was married to Glenlyon's niece, the sister of Rob Roy, and take his morning dram, agreeably to the most approved practice of Highland hospitality.

In pursuance of fresh instructions from Dalrymple, on 12 Feb. Lieut.-Col. Hamilton received orders forthwith to execute the fatal commission. Accordingly, on the same day, he directed Major Robert Duncanson of Argyll's regiment to proceed immediately with a detachment of that regiment to Glencoe, so as to reach the

post which had been assigned him by five o'clock the following morning, at which hour Hamilton promised to reach another post with a party of Hill's regiment. Whether Duncanson, who appears to have been a Campbell, was averse to take an active personal part in the bloody tragedy about to be enacted, is a question that cannot now be solved; but it may have been from some repugnance to act in person that immediately on receipt of Hamilton's order, he despatched another order from himself to Captain Campbell of Glenlyon, then living in Glencoe, with instructions to fall upon the Macdonalds precisely at five o'clock the following morning, and put all to the sword under seventy years of age.

Glenlyon himself appears to have been a man equal to any kind of loathsome work, especially against a Macdonald. With this sanguinary order in his pocket, and with his mind made up to execute it rigorously, he did not hesitate to spend the eve of the massacre playing at cards with John and Alexander Macdonald, the sons of the chief, to wish them good night at parting, and to accept an invitation from Glencoe himself to dine with him the following day. Little suspecting the intended butchery, Glencoe and his sons retired to rest at their usual hour; but early in the morning, while the preparations for the intended massacre were going on, John Macdonald, the elder son of the chief, hearing the sound of voices about his house, grew alarmed, and jumping out of bed threw on his clothes and went to Inverriggen, where Glenlyon was quartered, to ascertain the cause of the unusual bustle which had interrupted his nocturnal slumbers. To his great surprise he found the soldiers all in motion, as if preparing for some enterprise, which induced him to inquire of Glenlyon the object of these extraordinary preparations at such an early hour. Glenlyon endeavoured by professions of friendship to lull his suspicions, and pretended that his sole design was to march against some of Glengarry's men. As Alexander Macdonald, younger son of Glencoe, was married to Glenlyon's niece, that crafty knave referred to his connection with the family, and put it to the young man, whether, if he intended anything hostile to the clan, he would not have provided for the safety of his niece and her husband. Macdonald, apparently satisfied with this explanation, returned home and retired again to rest, but he had not been long in bed when his servant informed him of the approach of a party of men. Jumping out of bed he ran to the door, and perceiving a body of 20 soldiers with muskets and fixed bayonets coming in the direction of his house, he fled to a neighbouring hill, where he was joined by his brother Alexander, who had escaped from the scene of carnage, after being wakened from sleep by his servant.

The massacre commenced about five o'clock in the morning at three different places at once. Glenlyon undertook to butcher his own hospitable landlord and the other inhabitants of Inverriggen, where he and a party of his men were quartered, and despatched Lieutenant Lyndsay with another party of soldiers to Glencoe's house to cut off the unsuspecting chief. Under pretence of a friendly visit, he and his party obtained admission. Glencoe was in bed, and while in the act of rising to receive his visitors, was shot through the head by two of the soldiers. His wife was already up and dressed, but the ruffians stripped her naked, tore the rings off her fingers with their teeth, and so maltreated her that she died the following day. The party also killed two men whom they found in the house, and wounded a third named Duncan Don, who came occasionally to Glencoe with letters from Braemar.

While the butchery was going on in Glencoe's house, Glenlyon was busy with his bloody work at Inverriggen, where his own host was shot by his order. Here the party seized nine men, whom they first bound hand and foot, and then shot one by one. Glenlyon was desirous of saving the life of a young man twenty years old, but Captain Drummond shot him dead. He too it was that, impelled by a thirst for blood, ran his dagger through the body of a boy who had grasped Glenlyon by the legs and was imploring mercy.

A third party under the command of Sergeant Barbour, which was quartered in the hamlet of Auchnaion, fired on a body of nine men whom they observed in a house in the village sitting before a fire. Among these was the laird of Auchintriaten, who was killed on the spot, along with four more of the party. This gentleman had at the time a protection in his pocket from Colonel Hill, which he had received three months before. The rest of the party, two or three of them wounded, escaped by the back of the house, with the exception of a brother of Auchintriaten, who, having been seized by Barbour, asked as a favour to be killed in the open air. The sergeant consented, on account of having shared his generous hospitality; but when brought out he threw his plaid, which he had kept loose, over the faces of the soldiers who were appointed to shoot him, and in a moment was lost in the darkness.

Besides the slaughter at these three places, there were persons dragged from their beds and murdered in other parts of the Glen, among them an old man eighty years of age. In all, 88 were slaughtered. The whole male population under 70 years of age, amounting to 200, would in all likelihood have been cut off, if, fortunately for them, the party of 400 men under Lieutenant-Colonel Hamilton, who was principally charged with the execution of the sanguinary warrant, had not been prevented by the severity of the weather from reaching the Glen till eleven o'clock, six hours after the massacre, by which time the whole surviving male inhabitants, warned of their danger and of the fate of their chief and other sufferers, had fled to the hills. Ignorant of this latter circumstance, Hamilton, on arriving at the pass, appointed several parties to proceed to different parts of the Glen, with orders to take no prisoners, but to kill all the men that came in their way. They had not, however, proceeded far when they fell in with Major Duncanson's party, who informed them of the events of the morning, and told them that as the survivors had escaped to the hills, they had nothing to do but to burn the houses, and carry off the cattle. They accordingly set fire to the houses, and having collected the cattle and effects in the Glen, carried them to Inverloch, where they were divided among the officers of the garrison. That Hamilton would have executed his commission to the very letter, is evident from the fact, that an old man, above seventy, the only remaining male inhabitant of the desolate vale they fell in with, was by his orders put to death.

After the destruction of the houses, a heart-rending scene ensued. Aged matrons, women with child, and mothers with babes at their breast and children toddling after them, might be seen wending their way, half-naked, towards the mountains in quest of some friendly hovel, beneath whose roof they might seek shelter from the pitiless tempest and deplore their unhappy fate. But as there were no houses within the distance of several miles, and as these could only be reached by crossing mountains deeply covered with snow, a great number of these unhappy beings, overcome by cold, fatigue, and hunger, dropped down and perished miserably in the snow.

The tale of perfidy and blood excited widespread indignation. A parliamentary inquiry was only averted by the nomination of a royal commission, which found (1695) that William's instructions 'offered no warrant for the measure.' Stair was severely censured, but was left to be dealt with by the king, who was addressed to prosecute Glenlyon, Major Duncanson, Captain Drummond, etc., then in Flanders. And so the affair ended.

In 1884 Mrs Archibald Burns-Macdonald of Glencoe, a direct descendant of Mac Ian, erected on a picturesque knoll at Bridge of Coe, close by the ancient village of the glen, a Celtic cross to the memory of the slain. It is 18 feet in height, stands on a cairn 7 feet high, and is of dark red granite, richly carved with Runic scrolls.

Glencoe gives name to a post office, a *quoad sacra* parish (St Munda), St Mary's Episcopal Church (1880; 250 sittings), and St Mun's Roman Catholic Church (1836). There is a school (Carnock, St Mary) in con-

nection with the Episcopal church. Invercoe House, on the Coe's right bank, immediately above its mouth, is the seat of Sir Donald Smith. Pop. of registration district of Ballachulish and Glencoe (1861) 1824, (1871) 1529, (1881) 1444, (1891) 1480, of whom 1221 were Gaelic-speaking.—*Ord. Sur.*, sh. 53, 1877. See pp. 170-179 of Dorothy Wordsworth's *Tour in Scotland* (ed. by Princ. Shairp, 1874); chap. xviii. of Lord Macaulay's *History of England* (1855); and vol. vii., pp. 394-413, of Dr Hill Burton's *History of Scotland* (ed. 1876).

Glencona. See CONA.

Glenconrie. See CONRIE.

Glenconvinth, a glen in Kiltarlity and Convinth parish, Inverness-shire, traversed by Belladrum Burn, which, rising at an altitude of 780 feet above sea-level, winds $7\frac{1}{2}$ miles northward, till, after a descent of 758 feet, it falls into the river Beauly, just below Beaufort Castle, 4 miles SSW of Beauly town. Glenconvinth takes up a road from Strathglass to Glenurquhart and Loch Ness. It received its name from an ancient nunnery, traces of whose chapel may still be seen $2\frac{1}{2}$ miles S of Kiltarlity church, and near which is Glenconvinth public school.—*Ord. Sur.*, sh. 83, 1881.

Glencorse, a parish towards the middle of Edinburghshire, containing, near its eastern border, Auchindinny village and the Glencorse terminus of the Roslin branch of the North British, $14\frac{1}{2}$ miles S of Edinburgh, from which by road the parish is only 6 to 8 miles distant. Its post office is Milton Bridge, and Penicuik is the nearest town—within 5 furlongs of its southern extremity. Bounded NW by Colinton, N and E by Lasswade, and S and W by Penicuik, it has an utmost length from WNW to ESE of $3\frac{1}{2}$ miles, an utmost breadth from NNE to SSW of $2\frac{1}{2}$ miles, and an area of 4292 $\frac{3}{4}$ acres, of which 17 are water. Near Auchindinny the river North Esk winds $1\frac{3}{4}$ mile east-north-eastward along the Lasswade border, and here is joined by Glencorse Burn, which, rising in Penicuik as Logan Burn at an altitude of 1400 feet, in Penicuik has an east-north-easterly course of $3\frac{1}{2}$ miles, through a false 'HABBIE'S HOWE' and Loganlee Reservoir ($\frac{1}{2}$ mile \times $\frac{1}{2}$ furl.). In Glencorse it first runs $5\frac{1}{2}$ furlongs along the Penicuik border to crescent-shaped Glencorse Reservoir or the Compensation Pond ($\frac{1}{2}$ mile \times $1\frac{1}{2}$ furl.), and then winds $3\frac{1}{2}$ miles east-south-eastward across the interior. From source to mouth it is a pretty little stream; and its expansion, Glencorse Reservoir, has much of the beauty of a natural lake, with its wooded islet and its girle of big green rounded hills. It was formed in 1819-28, at a cost of nearly £200,000, by damming the burn's glen with a huge embankment, 128 yards long, 140 yards broad at the base, and 180 feet high. Along the North Esk the surface sinks to a trifle less than 600 feet above sea-level, thence rising west-north-westward to the Pentlands, of which Castletlaw (1595 feet) and Turnhouse Hill (1500) stand N and S of Glencorse Reservoir, whilst Carnethy Hill (1890) falls just within Penicuik parish. The rocks of the hills are mainly eruptive, including clinkstone, greenstone, claystone, and porphyry; those of the lower grounds are carboniferous—sandstone, limestone, coal, and shale. Ironstone of fine quality is worked by the Shotts Iron Co. at Greenlaw; and Dalmore paper-mill at Auchindinny employs a large number of families. The soil ranges from moss to stiff clay, from gravel to the finest loam; and much that formerly was barren moor is now either arable or under wood. Submerged beneath the waters of the reservoir is the site of St Catherine's chapel, said incorrectly to have been founded by Sir William St Clair, who fell in battle with the Moors of Audalusia, along with the Good Sir James Douglas (1330). Logan House or Tower, although in Penicuik parish, may from its close proximity be noticed here. Supposed, on no good evidence, however, to have been a royal hunting-seat, it consisted originally of a single tower, built in 1230 or thereby, to which another was added on the N side early in the 15th century by William St Clair, third Earl of Orkney. By the St

Clairs of Roslin it was occasionally occupied down to the middle of the 17th century. About $\frac{1}{2}$ mile higher up the glen are remains of what was probably a chapel. Rullion Green, the scene of the Covenanters' overthrow (1666), and House of Muir, where formerly great sheep-markets were held, are both in the S of the parish, and both are treated of in separate articles. Greenlaw or Glencorse has been formed into the 1st Regimental district, and its barracks made the depot, of the Royal Scots (Lothian Regiment). An old mansion here was converted, in 1804, into a depot for French prisoners of war; and in 1813 a suite of buildings, to accommodate 6000 prisoners and their guard, was erected at a total cost of £100,000. From 1845 until 1888 Greenlaw served as the military prison for Scotland (which was in the latter year transferred to Stirling), and in 1875-77 it was altered and extended to serve also as the central brigade depot of the army of the south-east of Scotland. On 17 January 1881 the new Douglas Barrack, a wooden two-story pile, which measured 140 by 108 feet, was wholly destroyed by fire; but the damage was repaired by the end of April 1882, stone in the restoration taking the place of wood. A public recreation park, of about 10 acres in extent, beautifully situated above 'Auehindinn's' hazel glade and haunted Woodhouselee, was in 1839 presented to the parish by A. W. Inglis, Esq. Logaubank, son of the late Right Hon. John Inglis, Lord President of the Court of Session. Glencorse House, near the right bank of Glencorse Burn, $2\frac{1}{2}$ miles NNE of Penicuik, was the property of the late Lord President Inglis, whose father, the Rev. John Inglis, D.D. (1763-1834), an eminent divine, was resident here. Other mansions, noticed separately, are Belwood, Bush, Loganbank, Maurice-wood, and Woodhouselee. Formed, in 1616, out of the ancient parishes of Pentland and Penicuik, Glencorse is in the presbytery of Dalkeith and synod of Lothian and Tweeddale; the living is worth £230. A handsome new parish church was erected in 1885 about a mile N of the station, and opposite Loganbank House. It is seated for 505 persons, and superseded the old one of 1699, which replaced a former one almost wholly burned down in 1695, and stands on a knoll in the burying-ground, surrounded by trees. There are chapels for the military in connection with the Episcopal and Roman Catholic churches. A public school, with accommodation for 200 children, has an average attendance of about 160, and a grant of over £134. Pop. (1881) 1500, (1891) 1451, of whom 295 were soldiers in the barracks.—*Ord. Sur.*, sh. 32, 1857. See an article by Andrew Kerr on 'Glencorse and its Old Buildings' in *Proc. Soc. Ants. Scotl.* (1879).

Glencoul, a glen in Eddrachillis parish, W Sutherland, traversed by Glencoul river, which, issuing from Loch an Urchoill ($5\frac{1}{2} \times 1\frac{1}{2}$ furl.; 1200 feet), runs $2\frac{1}{2}$ miles north-westward to the head of salt-water Loch Glencoul. At one point the impetuous Glencoul is joined by a yet more impetuous tributary, making a waterfall of nearly 700 feet in leap. Loch Glencoul, one of the two arms of KYLESKU, the other being Loch GLENDHU, with a varying width of $2\frac{3}{4}$ and 7 furlongs, extends $2\frac{3}{4}$ miles south-eastward, or $3\frac{3}{8}$ if one includes Loch Beag (7×3 furl.) at its head; and is overhung by hills that rise steeply to 1722 feet on the north-eastern and 902 on the south-western side. It is famous for its productive herring fishery.—*Ord. Sur.*, shs. 108, 107, 1880-81.

Glenereran, an Argyllshire glen on the mutual border of Ardehatten parish and Lismore and Appin. It is traversed by the CREAN, descending $11\frac{1}{2}$ miles west-south-westward to the head of salt-water Loch Creran. A mission-station of the Church of Scotland, conjoint with another in Glenetive, is in Glenereran, and has a schoolhouse as its place of worship. There is also an Episcopal church, St Mary's (1878; 60 sittings), a 13th century Gothic edifice, with good stained glass.—*Ord. Sur.*, shs. 53, 45, 1877-76.

Glencroe, an alpine glen of Lochgoilhead parish in the N of Cowal district, Argyllshire. Commencing at a col

(860 feet) between the heads of Loch Fyne and Loch Long, it descends $4\frac{1}{2}$ miles south-eastward to Loch Long at Ardgartan, $2\frac{1}{2}$ miles SW of Arrochar; is flanked on the N side by BEN ARTHUR or the Cobbler (2891 feet), on the S side by the Brack (2500) and Ben Donich (2774); and is traversed by the impetuous Croe Water, and by the road from Loch Lomond to Inverary by way of Arrochar and Glenkinglas. The rocks consist almost entirely of mica slate, shining like silver, beautifully undulated, and in many parts embedded in quartz. Large masses, fallen from the mountains, lie strewn on the bottom of the glen; others, of every shape, jut from the mountains' side, and seem every moment ready to fall; and torrents descend the cliffs and declivities in great diversity of rush and leap, and make innumerable waterfalls. The road was formed by one of the regiments under General Wade, immediately after the Rebellion of 1745; it descends for $1\frac{1}{2}$ mile in declivitous zig-zag, and, though proceeding thence at an easier gradient to the foot, is everywhere difficult and fatiguing. A stone seat, inscribed 'Rest and be Thankful,' is placed at its summit; it superseded a plainer one placed on the same spot by the makers of the road, and is sung as follows by Wordsworth:—

'Doubling and doubling with laborious walk,
Who that at length has gained the wished-for height,
This brief, this simple, wayside call can slight,
And rest not thankful?'

And Dorothy, his sister, describes 'the narrow dale, with a length of winding road, a road that seemed to have insinuated itself into the very heart of the mountains—the brook, the road, bare hills, floating mists, scattered stones, rocks, and herds of black cattle being all that we could see.'—*Ord. Sur.*, shs. 37, 38, 1876-71.

Glencross. See GLENCORSE.

Glencul. See GLENCOUL.

Glendale, a vale in Duirinish parish, Isle of Skye, Inverness-shire, extending 5 miles north-north-westward from Maelod's Tables to the head of salt-water Loch Pooltiel. Its bottom is 4 to 6 furlongs broad; its sloping sides are covered with very rich pasture; and it contains a post office under Portree, and a modern mansion, Glendale, the seat of the late Right Hon. Sir John Macpherson Maelod (1792-1881), of Indian celebrity.

Glendaruel, a beautiful valley in Kilmodan parish, Cowal, Argyllshire, traversed by the Ruel, a salmon and trout stream which, formed by two head-streams at an altitude of 90 feet above sea-level, winds $10\frac{1}{2}$ miles south-by-westward to the head of salt-water Loch Riddan. It takes down a road from Strachur Ferry to Colntraive, and contains a post office of its own name under Greenock. Glendaruel House, 19 miles NNW of Rothesay, is the seat of Robert Hume Campbell, Esq. (b. 1846; succeeded 1875).—*Ord. Sur.*, shs. 37, 29, 1876-73.

Glendean's Banks. See GLEN, Peeblesshire.

Glendearg, a glen in the N of Blair Athole parish, Perthshire, descending $4\frac{1}{2}$ miles south-south-eastward from the eastern skirts of Ben Dearg to Glen Tilt.—*Ord. Sur.*, shs. 64, 55, 1874-69.

Glendearg, Roxburghshire. See ALLEN.

Glendelvine, an estate, with a modern mansion, in Caputh parish, Perthshire, $1\frac{1}{2}$ mile NNE of the village of Caputh.

Glen Derry. See DERRY, Aberdeenshire.

Glendevon, a parish in the Ochil district of Perthshire, containing Burnfoot hamlet on the right bank of the river Devon, 3 miles NNW of Muckart and 7 NNE of Dollar, under which it has a post office. It is a capital trouting station, and has a wool mill.

The parish is bounded N by Aueherarder, NE by Dunning, E by Fossoway in Kinross-shire, SE by Muckart, S and W by Dollar and Tillicoultry in Clackmannanshire, and NW by Blackford. Its length, from E to W, varies between 3 and 6 miles; its utmost breadth, from N to S, is 4 miles; and its area previous to 1891 was 9154 $\frac{1}{4}$ acres, of which 21 $\frac{3}{8}$ were water. This area was, however, considerably enlarged in that year by the

Boundary Commissioners, who added to the parish the Perthshire portion of the Kinross-shire parish of Fossoway, or that part of Fossoway to the west of the Glendey Burn and the road leading from Muckart to Dunning. They also transferred to Glendevon parish that portion of the parish of Blackford (containing 450 acres) situated south of the river Devon and adjoining the parishes of Tillicoultry and Dollar. The 'clear winding Devon,' at 4½ miles from its source, begins to trace for some three miles the boundary with Blackford; then runs eastward and south-eastward across the entire parish till it is joined by the Glendey Burn, receiving by the way, on its right bank, the Frandy, Glensherup, and Glenuhe Burns, then tracing for half a mile the boundary with Fossoway. Throughout this course its glen or narrow vale—Glendevon proper, from which the parish takes its name—is flanked immediately by broomy braes and swelling pastoral hills; remotely, toward the boundaries, by summit-lines of the Ochils. Opposite what is called the Black Linn is a conical knoll, much frequented by picnic parties, and commanding a beautiful view of the main reaches of the glen. In the extreme E the surface declines to 660 feet above the sea; and the chief elevations to the right or S of the Devon are Innerdownie (2004 feet), Tarmangie Hill (1868), Bald Hill (1636), and Ben Shee (1691), whilst to the left or N rise the Seat (1408), and, on the Auchterarder border, Sim's Hill (1582) and Carlownie Hill (1522). The rocks are chiefly eruptive. The arable land, consisting of scattered patches along the bottom of the glen, amounts to little more than 200 acres, and has a light dry soil, inclining to gravel. Glendevon House is surrounded by pleasure grounds, containing a small eminence, called Gallows Knowe. An old castle stands on the Glendevon estate; is said to have belonged to William, eighth Earl of Douglas, slain in 1452 by James II, at Stirling; and continues in a state of good preservation. A spot on the hillside near the hamlet was covered once with a huge congregation, assembled from great distances to hear a sermon by the Rev. Ebenezer Erskine. Glendevon is in the presbytery of Auchterarder and synod of Perth and Stirling; the living is worth £170. The church is plain and very small, and was repaired in 1836. A public school, with accommodation for 46 children, has an average attendance of about 20, and a grant of over £40. Valuation (1882) £3152, 15s. 6d., (1892) £3144, 12s. Pop. (1881) 147, (1891) 141.—*Ord. Sur.*, sh. 39, 1869.

Glendhu (Gael. *gleann dubh*, 'dark valley'), the upper glen of DUCHRAY WATER, on the easterly slope of Ben Lomond, in Buchanan parish, W Stirlingshire.

Glendhu, a glen and a sea-loch in the S of Eddrachillis parish, W Sutherland. The glen takes down a rivulet, issuing from Loch Strath nan Asinnteach (5½ × 1 furl.; 870 feet above sea-level), and running 2¾ miles west-by-northward to the head of the sea-loch; it is flanked, on the S side, by Ben Leoid (2597 feet). Loch Glendhu extends 2½ miles westward into junction with Loch Glencoul, forming with that loch the head of KYLESKU; measures from 1¾ to 4½ furlongs in breadth; and is flanked by steep hills 1700 feet high. It has great depth of water; and is so frequented by herring-shoals that no less than £30,000 worth of herrings have been caught in it in the course of a year.—*Ord. Sur.*, shs. 103, 107, 1880-81.

Glendhu, a glen in Ardchattan parish, Argyllshire, traversed by the Abhainn Teithil, which, rising at an altitude of 1750 feet, winds 3¼ miles westward till it falls into Loch Creran, at a point 1 mile N of Barealdine House. Its lower section is luxuriantly clothed with wood.—*Ord. Sur.*, sh. 45, 1876.

Glendhu, the glen of the Black Water in Morvern parish, Argyllshire, descending 8½ miles south-south-westward to the head of salt-water Loch Aline. Lead ore of considerable richness occurs in it at Lurg, and was worked for some time in the first half of the 18th century by a company called the Morvern Mining Company.

Glendinging, an estate in Westerkirk parish, NE Dumfriesshire, on Megget Water, 5 miles N by W of

the church. It belongs to Sir F. J. W. Johnston of Westerhall, Bart., and contains remains of an old castle. An antimony mine was worked on it from 1793 till 1798, and produced, in that time, 100 tons of regulina of antimony, worth £8400.—*Ord. Sur.*, sh. 10, 1864.

Glen Diridh. See GLENDEARG, Perthshire.

Glendochart. See DOCHART.

Glendochart, a hill-farm in the NE of Penninghame parish, NE Wigtownshire. It is traversed by the ancient rampart called the Deil's Dyke; and it contains also a circular hill-fort, 190 yards in diameter.

Glendoick, an estate, with a mansion, in Kinfauns parish, SE Perthshire, on the southern slope of the Sidlaws, 2 miles NNE of Glencarse station. It was purchased in 1726 by Robert Craigie (1685-1760), who became lord advocate in 1742, lord president of the Court of Session in 1754, and by whom the mansion was built. Glendoick hamlet, in Errol parish, 1 mile S of Glendoick House, and 1¼ NE of Glencarse station, has a public school, and a post office under Perth.—*Ord. Sur.*, sh. 48, 1868.

Glendoll. See DOLL.

Glendorch Burn, a stream in Crawfordjohn parish, Lanarkshire, running 2½ miles north-north-westward to Snar Water at a point 2¾ miles SSW of Crawfordjohn village. Glendorch Castle stood at its mouth.

Glendouglas. See DOUGLAS, Lanarkshire, Dumbar-tonshire, and Argyllshire.

Glendow. See GLENDHU.

Glendowachy or **Glenquithle**, a ravine adjacent to the mutual boundary of Gamrie parish, Banffshire, and Aberdour parish, Aberdeenshire, 3 miles E of Gardens-town. It has a wild romantic character, debouching near a waterfall of 30 feet in leap; and it gave name to an ancient thanage granted by Robert I, in the third decade of the 14th century to Hugh, fifth Earl of Ross, and by Robert II, in 1382 to John Lyoun, knight. Glendowachy was its ancient, and Glenquithle is its modern name.—*Ord. Sur.*, sh. 97, 1876.

Glendowran Burn, a stream in Crawfordjohn parish, Lanarkshire, running 1½ mile north-westward to Snar Water at a point 1¾ mile SSW of Crawfordjohn village. Lead ore has been found in its basin.

Glendronach, a place with a large distillery in Fergie parish, NW Aberdeenshire, 9 miles ENE of Huntly.

Glendubh. See GLENDHU.

Glenduckie. See FLISK.

Glenduror. See DUROR.

Glendye. See DYE WATER, Kincardineshire.

Gleneagles, a romantic glen in BLACKFORD parish, SE Perthshire, traversed by the first 2½ miles of RUTHVEN WATER, and descending north-north-westward from 950 to 400 feet above sea-level. It carries up a road from Strathearn and Strathallan to Glendevon; and some suppose it to have been the route by which Agricola led his troops into Strathearn prior to their encampment at Ardoch. Towards its foot, 3¼ miles S by W of Auchterarder, stands a plain mansion of 1624, Gleneagles House. The estate belonged to the Haldanes from the 12th century till 1799, when it devolved on Admiral Lord Duncan, whose great-grandson, third Earl of CAMPERDOWN, is the present proprietor.—*Ord. Sur.*, sh. 39, 1869.

Glenearn, an estate, with a modern mansion, in Dron parish, SE Perthshire, 2¼ miles SW of Bridge of Earn. It was purchased about 1873 from Charles Maclean, Esq., by W. Ross, Esq., and belongs now to Mr. Macduff.

Gleneffock. See EFFOCK WATER.

Glenelchaig. See ELCHAIG.

Glenelg, a coast village and parish of NW Inverness-shire. The village stands on a small bay of its own name at the head of Sleat Sound, 3 miles SSE of Kyle-Rhea ferry, 43 WNW of Invergarry, and 7 S by W of Lochalsh, and has a post, money order, and telegraph office. Occupying a picturesque site in the mouth of a grand glen, it comprises a principal street and numerous thatched cottages; is embellished with interspersed trees and adjacent plantation; contains a good inn and some well-stocked shops; enjoys facility of communica-

tion by West Coast steamers, touching at its new quay of 1881; and has fairs on the Fridays after the last Tuesday of May and the third Tuesdays of August and September. It gave, in 1835, the title of Baron, in the peerage of the United Kingdom, to the distinguished statesman, Charles Grant (1778-1866). Glenelg Bay, of small extent, lies open to the W, yet affords good anchorage in easterly winds; but a better harbour on the Skye side of the Sound, $1\frac{1}{2}$ mile distant, affords shelter in all winds. A fortified barrack, erected in 1722 at Bernera, near Glenelg village, was commonly occupied by one or two companies of infantry till 1745, and is now a ruin. A road goes from the village eastwards towards Glenshiel, passes over the mountain Mam-Rattachan, and commands a very grand view; another goes south-eastward to the head of Loch Hourn, leads off thence towards Inverness, strikes towards the Pass of CORRYVARLIGAN (2000 feet), and there commands a most impressive view.

The parish, containing also the village of Arnisdale and the hamlet of Inverie, comprises the three districts of Glenelg proper, Knoydart, and North Morar. It is bounded NE and E by a lofty water-shed which divides it from Ross-shire; SE and S by lofty water-sheds, which divide it from the heads of Glengarry and Glenarchaig in Lochaber; SW by Loch Morar, which divides it from Arasaig in Ardnarnurchan; and NW by Sleat Sound, which divides it from Skye. Its utmost length, from NE to SW, is 22 miles; its utmost breadth in the opposite direction is 15 miles; and its land area is 134,778 acres. The coast, along Sleat Sound, is about co-extensive both with that sound and with the greatest length of the parish; and, except in Glenelg Bay, is generally high and rocky. Loch Hourn divides Glenelg proper from Knoydart; Loch Nevis divides Knoydart from Morar; and both lochs have strikingly grand scenery, and contain good anchoring ground, but they, and the districts of Knoydart and Morar, are separately noticed. Fresh-water lakes are numerous and well supplied with trout, but none challenge notice for either extent or character. Glenelg proper comprises two glens, Glenmore and Glenbeg, each watered by a streamlet of its own, and the former extends north-westward to Glenelg Bay, has few or no trees except at the foot, and is clothed with green pasture to the very summit of its hill-screens; while the latter has been separately noticed. The inhabitants, in all the districts, are mostly congregated on the coasts. The principal rocks are gneiss, mica, slate, quartzite, hornblende slate, granite, syeuite, serpentine, and limestone. The serpentine includes veins of asbestos and amianthus; the limestone occurs in beds, but is not worked; and the other rocks contain actinolite, tremolite, and some other rare minerals. The soil, in the arable parts of Glenelg proper, is loamy and fertile; but in those of Knoydart, is much lighter. About 1000 acres are regularly or occasionally in tillage; about 2000 acres are under wood; and a very large area is richly pastoral for either black cattle or sheep. The only mansion is INVERIE; the principal large farm-houses are Ellanreach, Beolary, and Barrisdale; and the chief antiquities are two Scandinavian dunes in Glenbeg, and vestiges of two others in Glenmore. In the presbytery of Lochcarron and synod of Glenelg, this parish is divided ecclesiastically into Glenelg and Knoydart, the former a living worth £340. Its church contains 400 sittings; and in the churchyard is a granite obelisk, erected in 1876 to the memory of the Rev. John Macrae, for 35 years parish minister. Other places of worship are Knoydart *quoad sacra* church, Glenelg Free church, and three Roman Catholic churches—Inverie (1886), and Sandaig (1850), both in Knoydart, and Beoraid (1889), in North Morar. Six public schools—Arnisdale, Brinacory, Earir, Glasnacardock, Glenelg, and Inverie—with total accommodation for 307 children, have an average attendance of about 160, and grants amounting to over £310. Pop. of civil parish (1801) 2334, (1831) 2874, (1861) 1843, (1871) 1653, (1881) 1601, (1891) 1503, of whom 1871 were Gaelic-speaking; of ecclesiastical

parish (1871) 1154, (1881) 1164, (1891) 1088; of registration district (1881) 658, (1891) 644.—*Ord. Sur.*, shs. 71, 72, 61, 62, 1878-83.

The synod of Glenelg, meeting alternately at Strome Ferry and Portree on the third Wednesday of April, comprises the presbyteries of Lochcarron, Skye, Uist, and Lewis. Pop. (1871) 88,211, (1881) 89,189, (1891) 79,069, of whom 1065 were communicants of the Church of Scotland in 1895. There is also a Free Church synod of Glenelg, which, meeting at Portree on the second Wednesday of April, comprises the presbyteries of Lochcarron, Abertarff, Skye, Uist, and Lewis, 48 of whose 53 churches had 28,266 members and adherents in 1894.

Glenennich, an alpine glen in the Rothiemurchus portion of Duthil parish, E Inverness-shire. Lying among the central Grampians, it takes down a stream $10\frac{1}{2}$ miles northward from Loch ENNICH to the Spey at Craigellachie, and affords, throughout much of its extent, good pasturage for sheep.—*Ord. Sur.*, shs. 64, 74, 1874-77.

Glenrichdie. See ERICHDIE.

Glenricht House, a mansion in Rattray parish, NE Perthshire, on the left bank of the Ericht, 5 miles NNW of Blairgowrie. Its owner is Alexander D. Grimmond, Esq. See ERICHT.

Glenesbuig, a wild sequestered glen of the island of Arran; Buteshire, descending $2\frac{1}{2}$ miles south-westward to the head of the valley of Machrie Water.

Glenesk, the basin of the upper or mountain reaches of the North Esk river, on the northern border of Forfarshire. It comprehends all Lochlee parish and part of Edzell; comprises the convergent glens of Glenmark and Gleneflock, together with a number of small lateral glens; and concentrates into one glen on the eastern border of Lochlee parish, $3\frac{1}{2}$ miles S of Mount Battock.—*Ord. Sur.*, sh. 66, 1871.

Glenesland Burn, a rivulet of Dunscore parish, Dumfriesshire, running $4\frac{1}{2}$ miles east-north-eastward to Cairn Water.

Glenetive House, a modern mansion in Ardchattan parish, Argyllshire, towards the foot of the glen of the river ERIVE, 14 miles NNE of Taynuilt station. It is the Scottish seat of Edward Seymour Greaves, Esq. (b. 1849; suc. 1879). Near it is a public school.

Glenfalloch (Gael. *Gleann-falaich*, 'valley of concealment'), a glen of Killin parish, Perthshire, and Arrochar parish, Dumbartonshire. It is traversed by the FALLOCH, which, rising on BEN-A-CHROIN at an altitude of 2600 feet, winds $11\frac{1}{2}$ miles north-by-westward and south-south-westward, till it falls into the head of Loch Lomond (23 feet) at ARDLUI. The West Highland railway, from Helensburgh to Fort-William by way of Gare Loch, Loch Long, and Loch Lomond, after leaving Ardlui station, traverses Glenfalloch to Crianlarich, the next station, thence north-westward by Strathfillan to Tyndrum station. Glenfalloch House, near the stream's right bank, $2\frac{1}{2}$ miles N of Ardlui and 7 SW of Crianlarich station, belongs to the Marquis of Breadalbane; $\frac{1}{2}$ mile lower down is Inverarnan Hotel. On 12 Sept. 1803, Wordsworth and his sister walked up Loch Lomond from Inversnaid to Ardlui, and thence crossed over the hills into Glengyle; and Dorothy writes in her Journal—'It is one of those moments which I shall not easily forget, when at that point from which a step or two would have carried us out of sight of the green fields of Glenfalloch, being at a great height on the mountain, we sate down, and heard, as it from the heart of the earth, the sound of torrents ascending out of the long hollow glen. To the eye all was motionless, a perfect stillness. The noise of waters did not appear to come this way or that, from any particular quarter: it was everywhere, almost, one might say, as if "exhaled" through the whole surface of the green earth. Glenfalloch, Coleridge has since told me, signifies the Hidden Vale; but William says, if we were to name it from our recollections of that time, we should call it the Vale of Awful Sound.—*Ord. Sur.*, shs. 46, 38, 1872-71.

Glenfarg. See FARG.

Glenfarquhar. See FORDOUN.

Glenfearnach, a verdant glen in the E of Moulin parish, Perthshire, traversed by the Allt Fearnach, which, rising at an altitude of 2250 feet, runs 10½ miles south-south-eastward, till, after a descent of 2000 feet, it unites at Enochdhu hamlet with the Allt Doire to form Airdle Water.—*Ord. Sur.*, shs. 64, 55, 56, 1869-74.

Glenfender. See FENDER.

Glenfeochan, an estate, with a modern mansion, in Kilmore and Kilbride parish, Argyllshire, at the head of Loch Feochan, 4½ miles SSE of Oban. Its owner is Thomas William Murray-Allen, Esq. (b. 1828). The scenery all around is fine, and the place an attractive one. A saurian-shaped mound was excavated here by Mr John S. Phené in 1871, when the cairn-formed head was found to enshrine a megalithic chamber, containing burned bones, charcoal, a flint instrument, and burned hazel-nuts.—*Ord. Sur.*, sh. 45, 1876.

Glenferness, a mansion in Ardclach parish, Nairnshire, on the right bank of the winding Findhorn, 8½ miles SW of Dumiphaill station. Founded in 1837 by Sir James Montgomery Cuninghame, Bart., it stands amid finely-wooded grounds, and is now the seat of Ronald Ruthven Leslie-Leven, thirteenth Earl of Leven since 1641, and tenth of Melville since 1690 (b. 1835; suc. 1889).—*Ord. Sur.*, sh. 84, 1876.

Glenfernisdale, a glen in Kingussie and Insch parish, Badenoch, Inverness-shire, traversed by a stream that, issuing from Loch Etteridge (2½ × 1 furl.; 1000 feet), runs 6½ miles north-north-eastward till, after a descent of 230 feet, it falls into the Spey at a point 1 mile SSW of Kingussie village. The old military road, which is still the best for pedestrians, deflects from Glentruim at Etteridge Bridge, and goes down Glenfernisdale to the Spey.—*Ord. Sur.*, sh. 64, 1874.

Glenfeshie. See FESHIE and ALVIE.

Glenfiag. See FIAG.

Glenfiddich Lodge, a shooting-box of the Duke of Richmond and Gordon in Glenfiddich Forest, Mortlach parish, Banffshire, on the left bank of the FIDDICH, 6 miles S of Dufftown.

Glenfinart, a glen in the N of the Kilmun portion of Dunoon and Kilmun parish, Cowal, Argyllshire. It is traversed by the Finart, which, rising on Ben Bhreac at an altitude of 1750 feet, runs 4½ miles south-eastward till it falls into Loch Long at a point 5 furlongs N of ARDENTINNY. Over its lower and finely-wooded half it takes down the road from Whistlefield Inn on Loch Eck; and in its mouth, at a distance of 4½ miles N by W of Blairmore, is Glenfinart House, a Tudor edifice of the first half of the nineteenth century. Its owner is H. P. Leschallas, Esq.—*Ord. Sur.*, sh. 37, 1876.

Glenfinglas (Gael. *gleann-fionn-glas*, 'grey white valley'), a rocky glen in Callander parish, SW Perthshire, traversed by Turk rivulet, which, rising at an altitude of 2250 feet close to the Balquhiddy border, runs 6½ miles south-south-eastward, till, after a descent of 1980 feet, it falls into the Dubh Abhainn at Bridge of Turk, ¼ mile below the foot of Loch Achray and 6½ miles W by S of Callander town. An ancient deer-forest of the Scottish kings, Glenfinglas retains vestiges of having once been clothed with wood; and it now belongs to the Earl of Moray. Its flanks include much savage alpine scenery, yet are largely relieved by wood and verdure; and much of its bottom is under cultivation. The Turk is fed, in its upper course, by tumultuous torrents; passes along the middle parts as a peaceful, meandering stream; but lower down suddenly plunges into a profound chasm, to run some distance underground, emerge next towards a gorge in the glen, and then make a long romantic waterfall. The hermit Brian performed, beneath this waterfall, the 'taghairm' that mysteriously foreshadowed the fate of Roderick Dhu; and an outlaw once lived in the recess behind the fall, receiving his provisions from a woman, who lowered them from the crest of the overhanging precipice, and procuring water for himself by lowering a flagon into the pool below. The glen is also the scene of a wild and well-known tale that bears its name.—*Ord. Sur.*, sh. 38, 1871.

Glenfinnan. See FINNAN.

Glenfintaig, an estate, with a mansion, in Kilmonivaig parish, Inverness-shire, towards the foot of Glengloy, 19 miles NE of Fort-William.

Glenfishie. See FESHIE and ALVIE.

Glenforsa House, a modern mansion in Torosay parish, Mull island, Argyllshire, 3½ miles ESE of Aros. It is the seat of Colonel Charles Greenhill-Gardyne of Finavon (b. 1831; suc. 1867). See FORSA.

Glenfoudland. See FOUJLAND and INSCH.

Glenfruin. See FRUIN WATER.

Glenfyne. See FYNE.

Glegaber Burn, a rivulet in what until 1891 was the Megget section of Lyne and Megget parish, S Peeblesshire, but which was then transferred by the Boundary Commissioners to the Selkirkshire parish of Yarrow. The burn rises at an altitude of 1800 feet, and runs 2½ miles south-by-eastward, till, after a descent of 910 feet, it falls into Megget Water, at a point 1½ mile W of St Mary's Loch. It is flanked, on the left side, by Deer Law (2065 feet) and Broomy Law (1750); and it retains faint traces of ancient searches for gold, said to have been not altogether unsuccessful.—*Ord. Sur.*, sh. 16, 1864.

Glegairn, a glen, an ancient *quoad civilia* parish, and a modern *quoad sacra* parish, in Aberdeenshire. The glen, commencing among the Cairngorm Mountains, in the N of Crathie and Braemar parish, adjacent to Banffshire, takes down the GAIRN 20 miles east-south-eastward to the river Dee, in Glenmuick parish, 1½ mile NW of Ballater. The ancient *quoad civilia* parish lay chiefly along both banks of the lower half of the Gairn's course, but included also a small tract, called Strathgirn, on the right bank of the Dee, and is now incorporated with Glenmuick and Tullich. Its church, which stood below the bridge of Gairn, was dedicated to St Mungo or Kentigern, by whom it was probably founded in the latter half of the 6th century. The modern *quoad sacra* parish consists mainly of the ancient *quoad civilia* parish, but includes part of Crathie. It is in the presbytery of Kincardine O'Neil and synod of Aberdeen; the minister's stipend is £145. Its church stands 6 miles NW of the post-town Ballater, 2 miles nearer which is the Roman Catholic church of St Mary Immaculate (1868; 200 sittings). There is also a public school. Pop. (1871) 588, (1881) 454, (1891) 406, of whom 10 were in Crathie parish.—*Ord. Sur.*, shs. 75, 65, 1876-70.

Glegap Burn. See TWYNHOLM.

Glegarnock, a village and a ruined castle in Kilbirnie and Dalry parishes, Ayrshire. The village stands at the foot of Kilbirnie Loch, and 5 furlongs NE of Kilbirnie station on the Glasgow and South-Western railway, this being 2¾ miles NNE of Dalry Junction. Founded about 1844 in connection with Glegarnock Iron-works, it has a post office, with money order, savings bank, and telegraph departments, a mission station of the Church of Scotland, a U.P. church (1870), a public school, a wincey factory, flax-spinning and fishing-net mills, coal mines, and steel and iron works. The last, occupying a remarkably eligible site, were planned and erected with much skill and taste, and include 14 furnaces. Glegarnock Castle, crowning a precipitous knoll on the left bank of the winding Garnock, 2 miles N by W of Kilbirnie village, appears to have been a stately pile of high antiquity. The barony, of which it was the seat, was held by Riddells till the middle of the 13th, and by Cunninghams till the beginning of the 17th century. Since 1680 it has formed a valuable portion of the Kilbirnie property. Pop. of village (1871) 1228, (1881) 1276, (1891) 1628, of whom 406 were in Dalry parish.—*Ord. Sur.*, sh. 22, 1865.

Glegarr. See GARRY, Auchtergaven, Perthshire.

Glegarrel, the glen of GARVALD Water, in Eskdalemuir parish, Dumfriesshire.

Glegarry, a beautiful Highland glen in Kilmonivaig parish, W Inverness-shire, traversed by the river GARRY, winding 18½ miles eastward, out of Loch Quoich, and through Loch Garry, till it falls into Loch Oich at Invergarry, 7½ miles SW of Fort Augustus. From the beginning of the 16th century Glegarry was held by

the Macdonnells, the last of whose chiefs, Col. Alexander Ranaldson Macdonnell, maintained to the day of his death (1828) the style of living of his ancestors, and is deemed the prototype of Fergus Mac Ivor in *Waverley*. His son was compelled to dispose of Glengarry to the Marquis of Huntly, and emigrated to America. By the marquis it was resold in 1840 for £91,000 to Lord Ward (afterwards Earl of Dudley), and by him in 1860 for £120,000 to the late Edward Ellice, Esq. of Glenquoich (1810-80), who sat as Liberal member for the St Andrews burghs from 1837 till his death, and who held 99,545 acres in Inverness-shire, now owned by his widow. This acreage includes the 50,000 acres of Glenquoich deer forest, to the N of Loch Quoich and the upper waters of the Garry. Let for £3022 a year to Lord Burton (b. 1837; c. 1886), Glenquoich forest is estimated to yield in an ordinary season about 100 stags, besides hinds. The seats of the Glengarry property, old and new, are noticed under INVERGARRY. A *quoad sacra* parish of Glengarry, with a mission station at Glenquoich, is in the presbytery of Abertarff and synod of Argyll; the minister's stipend is £200. Its church, $7\frac{3}{4}$ miles W of Invergarry, is an Early English edifice of 1865. Four public schools, Aberchalder, Glenquoich, Inshlaggan, and Invergarry, with respective accommodation for 35, 24, 111, and 32 children, have an average attendance of about 24, 12, 30, and 10, and grants of over £40, £30, £43, and £14. Pop. of *g. s.* parish (1871) 692, (1881) 627, (1891) 657, of whom 502 were Gaelic-speaking.—*Ord. Sur.*, shs. 62, 63, 1875-73.

Glengarry. See GARRY, Perthshire.

Glengavel Water, a stream in the SW of Avondale parish, Lanarkshire, running 5 miles north-north-westward among wild uplands, till it falls into the river Avon at a point $5\frac{1}{2}$ miles SW of Strathaven. Here is the reservoir of the Glengavel Water-works, for the supply of the Middle Ward of Lanarkshire.—*Ord. Sur.*, sh. 23, 1865.

Glengaw Burn. See AYR.

Glengloy, a deep mountain glen in Kilmonivaig parish, Inverness-shire. From a col (1172 feet) it extends 7 miles south-westward between Glenroy and the Great Glen, parallel to both, and then, deflecting suddenly to a right angle with its former direction, descends $1\frac{1}{2}$ mile northward to the Great Glen at Loch Lochy, at a point $3\frac{1}{2}$ miles NE of the loch's foot. A terrace line runs along the glen's flank at an elevation of from 1156 to 1173 feet above sea-level.—*Ord. Sur.*, shs. 63, 62, 1873-75.

Glengollie, a glen in the S of Durness parish, Sutherland, traversed by a stream that, rising at an altitude of 1270 feet, winds $7\frac{1}{2}$ miles south-south-eastward till, after a descent of 1176 feet, it unites with two other streams, at the head of Strathmore, to form the river HOPE. It is sung by the poet Donn as a favourite hunting-ground.—*Ord. Sur.*, shs. 114, 109, 1880.

Glengonner Water, a stream of Crawford parish, SE Lanarkshire, rising close to the Dumfriesshire border at an altitude of 1480 feet above sea-level, and running 7 miles north-north-eastward, till it falls into the Clyde, at a point 5 furlongs S of Abington, after a total descent of 665 feet. In the first mile of its course it flows through Leadhill village, and over the last $2\frac{1}{2}$ miles it traces the Crawfordjohn border. Its mineral wealth is noticed under LEADHILLS.—*Ord. Sur.*, sh. 15, 1864.

Glengulbin, an alpine glen of Kilmonivaig and Laggan parishes, in the E of Lochaber, Inverness-shire, traversed by a stream which first, as the Amhainn Ossian, winds $3\frac{1}{2}$ miles northward from Loch Ossian ($1\frac{1}{4}$ mile \times 3 furl.; 1269 feet) to Loch Gulbin ($7 \times 3\frac{1}{4}$ furl.; 1155 feet), and thence, as the Amhainn Ghuilbinn, runs $6\frac{3}{8}$ miles northward till, after a total descent of 650 feet, it falls into the Spean at a point $1\frac{1}{2}$ mile below that river's efflux from Loch Laggan.—*Ord. Sur.*, shs. 54, 63, 1873.

Glengyle, a glen on the mutual border of Perthshire and Stirlingshire. Commencing near the meeting-point with Dumbartonshire, at an altitude of 1750 feet, it descends $3\frac{1}{2}$ miles south-eastward to the head of Loch Katrine (364 feet); is overhung by mountains over 2000

feet high; and from head to foot is traversed by Glengyle Water. It was anciently a possession of the Macgregors, and contains a ruined fortalice.—*Ord. Sur.*, shs. 46, 33, 1872-71.

Glenhalmadale, a glen of Kilbride parish, in the N of Arran, Buteshire, winding $2\frac{1}{4}$ miles north-north-westward to Glenranza, at a point 5 furlongs SE of the head of Loch Ranza. It is traversed by the road from Sannox to Loch Ranza, and contains a slate quarry.—*Ord. Sur.*, sh. 21, 1870.

Glenhead. See LOCHWINNOCH.

Glenhinisdale or **Glenhinistil,** a glen, with a small village, in Snizort parish, Isle of Skye, Inverness-shire. **Glenholm.** See BROUGHTON.

Gleniffer, Braes of, a range of trap hills in the S of Abbey parish, Renfrewshire, culminating $3\frac{1}{2}$ miles SSW of Paisley at Sergeantlaw (749 feet). A rough and undulating country—masses of grey crag interspersed with whinny knolls—they embosom the reservoirs of the PAISLEY Water-works, formed in 1837-81, and are seamed by pretty ravines, each with its brawling stream. Upon these braes the poet Tannahill, who wedded them to song, was wont to stray on week-day evenings or on the Sabbath day, musing on the various objects of beauty scattered profusely around. Here it was he noted 'the breer wi' its saft faulding blossom,' 'the craw flower's early bell,' and 'the birk wi' its mantle o' green.' Here he now listened to the warble of the mavis rising from 'the shades of STANLEY-shaw,' now gazed, with rapt delight, on the gorgeous scenery of the lower Clyde, his native town in the foreground, and the far-away frontier Grampians. And here annually for many years have been held the Tannahill open-air concerts—the proceeds of which are devoted to some prominent local purpose.—*Ord. Sur.*, sh. 30, 1866.

Gleniorsa, the glen of Iorsa Water, on the W side of Arran, Buteshire. It commences at Loch na Davie (1182 feet above sea-level), $3\frac{1}{2}$ miles NW of the summit of Goatfell, and descends $8\frac{3}{8}$ miles south-south-westward to the N side of Machrie Bay. Its upper parts are grandly mountainous; its right side is joined by two ravines, the upper one embosoming Loch Tanna; and its left side is overhung at the middle of Ben Tarsuinn, and receives a streamlet issuing from Loch Nuis.—*Ord. Sur.*, sh. 21, 1870.

Glenisla, a hamlet and a parish of NW Forfarshire. The hamlet, Kirkton of Glenisla, stands 780 feet above sea-level, on the left bank of the river Isla, 9 miles N by W of Alyth, its post-town and station. It has a post office, a hotel, and a sheep and cattle fair on the Thursday before the last Wednesday of September.

The parish is bounded NW by Crathie and Braemar in Aberdeenshire, NE by Cortachy and Clova, E by Kirriemuir and Lintrathen, S and SW by Alyth, and W by Kirkmichael in Perthshire. Its utmost length, from N by W to S by E, is $16\frac{3}{4}$ miles; its breadth varies between $1\frac{1}{2}$ and $5\frac{1}{2}$ miles; and its area is $41,373\frac{1}{2}$ acres, of which $133\frac{1}{2}$ are water. The river ISLA, rising close to the Aberdeenshire border at 3100 feet above sea-level, winds $17\frac{1}{4}$ miles south-south-eastward through the middle of the parish, then 7 miles south-eastward along the boundary with Lintrathen. It receives in its progress numerous tributaries from the lateral glens, and exhibits a wealth of romantic scenery, forming the magnificent cataracts of the REEKIE LINN and the Slugs of ACH-RANNIE. Where it quits the parish, at its south-eastern corner, just opposite Airlie Castle, the surface declines to less than 400 feet above sea-level, thence rising to 701 feet near Cotton, 1061 near Dykehead, 1322 at the Hill of Fernyhirst, 1605 at *Knockton, 1487 at Druiem Dearg, 1275 at Cairn Hill, 1692 at *Hare Cairn, 2441 at *Mount BLAIR, 2297 at Duchray Hill, 2429 at Badanden Hill, 2325 at Craig Lair, 2649 at *Monamcnach, 3238 at *Creag Leacach, 2954 at Finalty Hill, and 3484 at *Cairn na Glashd, where asterisks mark those summits that culminate right on the borders of the parish. The Queen and Prince Consort lunched at Canlochan, near the source of the Isla, on the 16 October 1861. The rocks are variously eruptive, metamorphic, Silurian, and

Devonian, and include some beds of limestone which have been worked; whilst in the low grounds of the southern district they are thickly overlaid by strong, stiff, argillaceous drift. The soil of the arable lands ranges from moss to gravel, and from stiff clay to fine friable loam; but barely 4000 acres are in tillage, about 500 being under wood. Glenisla House, on the left bank of the Isla, 13 miles NNW of Alyth, is a plain modern mansion, a seat of Sir John George Smyth Kinloch of KINLOCH, second Bart. since 1873 (b. 1849; suc. 1881). Of old the Ogilvies were sole proprietors, and here had two fortalices, Forter and Newton, the former of which still stands in a state of ruin. Giving off its southern portion to the *quoad sacra* parish of Kilry, Glenisla is in the presbytery of Meigle and synod of Angus and Mearns. The church, erected in 1821, contains 500 sittings. There is also a Free church; and three public schools—Glenisla, Kilry, and Folda—with respective accommodation for 73, 68, and 81 children, have an average attendance of about 22, 56, and 10, and grants of over £34, £68, and £30. Valuation (1857) £6823, (1882) £11,856, 12s. 10d., (1892) £10,569, 7s., including £724 for railways. Pop. of civil parish (1801) 996, (1831) 1129, (1861) 1008, (1871) 925, (1881) 791, (1891) 676; of ecclesiastical parish (1881) 464, (1891) 396.—*Ord. Sur.*, shs. 56, 65, 1870.

Glenkens, the northern district of KIRKCUDBRIGHTSHIRE. Consisting mainly of the basin of the river KEN, it comprehends the parishes of Carsphairn, Dalry, Balmaclellan, and Kells; and, over great part of its extent, is celebrated for the picturesqueness of its mountain landscapes.

Glenketland, a glen in Ardoch parish, Argyllshire, descending 3 miles west-north-westward to Glenetive, at a point 3 miles NE of the head of Loch Etive.

Glenkill Burn, a rivulet of Kirkmichael parish, Annandale, Dumfriesshire, rising at an altitude of 1255 feet, and running 6½ miles south-by-westward, till, after a descent of 910 feet, it falls into the Water of Ae at a point 3 furlongs SSW of Kirkmichael church.—*Ord. Sur.*, sh. 10, 1864.

Glenkillock, a wooded ravine in Abbey and Neilston parishes, Renfrewshire, intersecting the Fereneze Hills, and taking down Killock Burn east-south-eastward to Levern Water nearly opposite Neilston village. It contains three waterfalls, respectively 12, 12, and 20 feet in leap, and all so beautiful as to have been pronounced perfect miniatures of the three falls of Clyde. Both glen and burn have been sung by Tannahill and other poets.—*Ord. Sur.*, shs. 30, 22, 1866-65.

Glenkindie (Gael. *glèann-cinn-dubh*, 'valley of the dark head'), a former detached section of Strathdon parish, W Aberdeenshire, but transferred by the Boundary Commissioners in 1891 to the parish of Towie, 11 miles SSW of Rhynie. Bounded NW by Cabrach, NE by Kildrummy, and W by Glenbucket, it has an utmost length, from NNW to SSE, of 4½ miles; an utmost width, from E to W, of 2 miles; and an area of 3557½ acres. The DON winds 1½ mile east-south-eastward along all the southern border, and here is joined by the clear-flowing Kindie, running 4½ miles south-south-eastward. Along the Don the surface declines to 750 feet above sea-level, thence rising to 1151 at Millhuie Hill, 1831 at Meikle Forbridge Hill, and 2073 at Creag an Innean, on the western, and to 1857 at Peat Hill on the eastern, boundary. Glenkindie contains remains of five pre-historic 'earth-houses,' and it gives name to the Aberdeenshire version of the ballad of *Glaskyrion*—'Glenkindie, he was a harper gude,' etc. It has a post office (Inverkindie, S.O.), an inn, and fairs on 27 May, the Saturday of September after Banchory, and 23 November. Glenkindie House, on the Don's left bank, is a commodious old mansion with some fine trees, and belongs to Alexander H. Leith, Esq.—*Ord. Sur.*, sh. 75, 1876.

Glenkinglas, a glen in Kilmorich parish, towards the northern extremity of Cowal district, Argyllshire. It is traversed by Kinglas Water, which, rising close to the Dumbartonshire border at an altitude of 1100 feet, runs

7 miles south-westward and westward to the E side of Loch Fyne at Cairndow, 1½ mile SW of the head of the loch. It takes down the Gleneroc road from Loch Lomond to Inverary, and by Dorothy Wordsworth is said to resemble 'the lower part of Gleneroc, though it seemed to be inferior in beauty. But when we were out of the close glen, and near to Cairndow, the moon showed her clear face in the sky, revealing a spacious vale, with broad Loch Fyne and sloping cornfields, the hills not very high.' At the foot of Glenkinglas are the mansion and pleasure-grounds of Ardkinglas.—*Ord. Sur.*, shs. 38, 37, 1871-76.

Glenkinglass, a glen in Ardoch parish, Argyllshire, traversed by the Kinglass, a capital salmon and trout stream, which, rising on the northern skirt of BEN-NAN-AIGHEAN, at an altitude of 2200 feet above sea-level, curves 12½ miles east-south-eastward, south-westward, and west-by-northward, till it falls into Loch Etive, at a point 5 miles NE by N of Bunawe. So winding is the glen that little of it can be seen from Loch Etive; Inverkinglass, at its foot, had once an iron smelting furnace, some vestiges of which still exist. The N side of the glen is bleak and rocky, but the S yields excellent pasture. A pine forest covered a large portion of its area, but was cut down towards the middle of the 18th century to serve as fuel for the iron furnace.—*Ord. Sur.*, sh. 45, 1876.

Glenkirk, a small glen in Glenholm parish, Peeblesshire.

Glenlacht, a ravine and burn in Keir parish, Dumfriesshire.

Glenlaggan, an estate, with a modern mansion, in Parton parish, Kirkcudbrightshire, near the E shore of Loch Ken, 7½ miles NW of Castle-Douglas. Its owner is Colonel Patrick Sanderson (b. 1844; suc. 1873).

Glenlair, a mansion in Parton parish, NE Kirkcudbrightshire, romantically situated on the right bank of Urr Water, 7 miles N by W of Castle-Douglas. It was the seat of the distinguished physicist, Prof. James Clerk-Maxwell (1831-79), and is now held by Andrew Wedderburn-Maxwell, Esq., of Middleby.—*Ord. Sur.*, sh. 9, 1863.

Glenlatterach, a glen on the mutual border of Dallas and Birnie parishes, Elginshire. It is traversed by the ANGRY or Lennac Burn, flowing 4 miles northward to the Lossie, and forming, at a point 1½ mile above its mouth, a waterfall 50 feet high, the Ess of Glenlatterach.—*Ord. Sur.*, sh. 85, 1876.

Glenlean, a glen in Dunoon parish, Cowal, Argyllshire, descending from a 'col' (406 feet) 4½ miles east-south-eastward to Dalinlongart, near the head of Holy Loch. Traversed by a road from Sandbank and Kilmun to the head of Loch Striven, it commands from the shoulders and summits of its hill-screens a splendid view, and it contains the hamlet of CLACHAG. Lower down, towards its foot, 1½ mile NW of Sandbank, Ballochyle House stands prettily embosomed among trees, at the southern base of Ballochyle Hill (1253 feet). Its owner is Maciver Forbes Morison Campbell (b. 1867).—*Ord. Sur.*, sh. 29, 1873.

Glenlednock, a deep-cut glen of Comrie parish, Perthshire, traversed by the LEDNOCK, which, rising at an altitude of 1980 feet between Ruadh Bheul (2237) and Creag Uigeach (2840), hurries 11 miles south-eastward to the Earn at Comrie village. It has a total descent of nearly 1800 feet, and forms a number of cataracts, one of which falls into the DEVIL'S CAULDRON.—*Ord. Sur.*, sh. 47, 1869.

Glenlee, a mansion in Kells parish, NE Kirkcudbrightshire, near the right bank of the Ken, 3 miles NW of New Galloway. Much enlarged in 1822, it stands in a level park, adorned with fine old oaks, and was the seat of the two eminent judges, father and son, Sir Thomas Miller (1717-89) and Sir William (1755-1846), who both bore the title of Lord Glenlee, and who were ancestors of Sir William Miller of Barskimming. The present proprietor of Glenlee is Prince Smith, Esq.—*Ord. Sur.*, sh. 9, 1863.

Glenlichd, a glen in Glenshiel parish, SW Ross-shire descending, from an altitude of 180 feet above sea-level,

5½ miles west-north-westward to the head of salt water Loch Duich. It takes down the clear-flowing Croe, and is flanked on the left hand by BENMORE (3505 feet), on the right by BEN ATTOW (3383).—*Ord. Sur.*, sh. 72, 1880.

Glenlivet (Gael. *gleann-tiobh-aite*, 'valley of the smooth place'), the southern portion of INVERAVEN parish, S Banffshire, consisting of the basin of Livet Water, a stream that is formed by the confluence of Suie and Kymah Burns, both rising at an altitude of 2300 feet above sea-level, and winding—the former 3¾ miles southward, and the latter 5½ miles north-by-westward. From the point of their union (1100 feet), the Livet itself flows 8¾ miles west-north-westward and north-north-westward, till it falls into the Aven at Drumin (700 feet), 5 miles S of Ballindalloch station. Its principal affluents are CROMBIE Water on the left, and the Burn of Tervie on the right; its waters contain abundance of trout, with occasional salmon and grilse; and its basin is rimmed by lines of mountain watershed, whose principal summits are Ben Rinnes (2755 feet), Corryhabbie (2563), Carn Mor (2636), Carn Dulack (2156), and Carn Daimh (1795). Glenlivet post office, with money order, savings bank, and telegraph departments, stands 5¾ miles S by E of Ballindalloch; and there are also a branch of the North of Scotland Bank, Glenlivet *quoad sacra* church, and the famous Glenlivet distillery of Messrs. G. & J. G. Smith. At the close of the 18th and the beginning of the 19th century, whisky of exquisite flavour was made in fully 200 illicit stills, or on almost every burn among the hills. The Distillery Act of 1824 changed all this; and Glenlivet's smuggling bothies gave place to five legal distilleries—a number now reduced to only one. Fairs fall on the day before Dufftown in Jan. Feb. Mar. April, May, Oct. Nov. and Dec. An ancient barony, Glenlivet belongs now to the Duke of Richmond and Gordon, and gives the title of Baron in the peerage of Scotland to the Marquis of Huntly. The *quoad sacra* parish is in the presbytery of Aberlour and synod of Moray; the minister's stipend is £150. Glenlivet still is largely Catholic, there being two churches at CHAPELTOWN and TOMBAE; whilst four schools—Glenlivet public, Tomnavoulin public, and Chapelton and Tombae Catholic—with respective accommodation for 98, 74, 195, and 144 children, have an average attendance of about 60, 20, 80, and 30, and grants of over £76, £17, £72, and £32. Pop. (1871) 1718, (1881) 1616, (1891) 1477.

A spot near the right bank of ALLTACOILEACHAN Burn, 4 miles E by N of the post office, was the battle-field where, on 4 Oct. 1594, the loyal Protestant army under the Earl of Argyll was defeated by the insurgent Roman Catholic army under the Earl of Huntly. Argyll disposed his army on the declivity of a hill, in two parallel divisions. The right wing, consisting of Macleans and Mackintoshes, was commanded by Sir Lachlan Maclean and The Mackintosh; the left, of Grants, Macneills, and Macgregors, by Grant of Gartenbeg; and the centre, of Campbells, etc., by Campbell of Auchinbreck. This vanguard consisted of 4000 men, one-half of whom carried muskets. The rear of the army, 6000 strong, Argyll commanded in person. The Earl of Huntly's vanguard was composed of 300 gentlemen, led by the Earl of Errol, Sir Patrick Gordon of Auchindoun, the lairds of Gight and Bonnitoun, and Captain, afterwards Sir, Thomas Carr. The Earl himself brought up the rest of his forces, having the laird of Clunie upon his right hand and the laird of Abergeldie upon his left. Six pieces of field-ordnance under the direction of Captain Andrew Gray, afterwards colonel of the English and Scots who served in Bohemia, were placed in front of the vanguard. Argyll's position on the slope of the hill gave him an advantage over his assailants, who, from the nature of their force, were greatly hampered by the mossiness of the ground at the foot of the hill, which was interspersed by pits from which turf had been dug. But, notwithstanding these obstacles, Huntly advanced up the hill with a slow and steady pace. It had been arranged between him and Campbell of Lochnell, who had pro-

mised to go over to Huntly as soon as the battle commenced, that, before charging Argyll with his cavalry, Huntly should bring his artillery to bear on the yellow standard. Campbell bore a mortal enmity to Argyll, who had murdered his brother, Campbell of Calder, in 1592; and as he was nearest heir to the Earl, he probably had directed this firing at the yellow standard in the hope of cutting him off. Campbell himself, however, was shot dead at the first fire of the cannon, and on his fall all his men fled from the field. Macneill of Barra was also slain at the same time. The Highlanders, who had never before seen field-pieces, were thrown into disorder by the cannonade, which being perceived by Huntly, he charged the enemy, and rushing in among them with his horsemen increased the confusion. The Earl of Errol was directed to attack Argyll's right wing; but as it occupied a very steep part of the hill, and as Errol was greatly annoyed by volleys of shot from above, he was forced to make a detour, leaving the enemy on his left. Gordon of Auchindoun, disdaining so prudent a course, galloped up the hill with a small party of his own followers, and charged Maclean with great impetuosity—a rashness that cost him his life. The fall of Auchindoun so exasperated his followers that they set no bounds to their fury; but Maclean received their repeated assaults with firmness, and manœuvred his troops so well as to succeed in cutting off the Earl of Errol and placing him between his own body and that of Argyll, by whose joint forces he was completely surrounded. At this important crisis, when chance of retreat there was none, and when Errol and his men were in danger of being cut to pieces, the Earl of Huntly came up to his assistance and relieved him from his perilous position. The battle was now renewed, and continued for two hours, during which both parties fought with great bravery, 'the one,' says Sir Robert Gordon, 'for glorie, the other for necessitie.' In the heat of the action the Earl of Huntly had a horse shot under him, and was in imminent danger of his life; but another horse was straightway got for him. After a hard contest the main body of Argyll's army began to give way, and retreated towards the Burn of Allta-coileachan; but Maclean still kept the field, and continued to support the falling fortune of the day. At length, finding the contest hopeless, and after losing many of his men, he retired in good order with the small company that still remained about him. Huntly pursued the retiring foe beyond the burn, when he was hindered from following them farther by the steepness of the hills, so unfavourable to the operations of cavalry. His success was mainly due to the treachery of Lochnell and of John Grant of Gartenbeg, one of Huntly's own vassals, who, in terms of a concerted plan, retreated with his men as soon as the action began, whereby the centre and left wing of Argyll's army were completely broken. On Argyll's side 500 men were killed, including Macneill of Barra and the Earl's two cousins, Lochnell and Auchinbreck. The Earl of Huntly's loss was trifling—fourteen gentlemen were slain, among them Sir Patrick Gordon of Auchindoun and the laird of Gight; whilst the Earl of Errol and a considerable number of persons were wounded. At the conclusion of the battle the conquerors returned thanks to God on the field for the victory they had achieved. This battle is commonly known as the battle of Glenlivet, but in its own neighbourhood it is called the battle of Allta-coileachan.—*Ord. Sur.*, shs. 75, 86, 1876.

Glenlochar. See BALMAGHIE and CROSSMICHAEL.

Glenlochy, a beautiful glen in Breadalbane district, W Perthshire, traversed by the river LOCHY, which, rising at an altitude of 2050 feet, curves 17½ miles east-north-eastward till, near Killin, it falls into the DOOHART, ½ mile above the influx of the latter to Loch Tay. On the S Glenlochy is flanked by Meall Chuirn (3007 feet), and lesser mountains separating it from Strathfillan and Glendochart, on the N by another lofty range culminating towards the foot in Meall Ghaordie (3407); and it contains, 2¾ miles NW of Killin, a series of six cataracts in two groups, with a deep round pool between.

Formerly distributed territorially into detached portions of Kenmore, Weem, and Killin parishes, since 1891 it belongs wholly to Killin.—*Ord. Sur.*, sh. 46, 1872.

Glenloch, a bleak, bare glen in Glenorchy and Innishail parish, Argyllshire, traversed by the LOCHY, which, issuing from Lochan Bhe (822 feet) on the eastern verge of the county, near Tyndrum, runs $8\frac{3}{4}$ miles west-south-westward, till, after a descent of 676 feet, it falls into the Orchy, at a point $1\frac{1}{2}$ mile above Dalmally. It takes down a high road and the Callander and Oban railway.—*Ord. Sur.* shs. 46, 45, 1872-76.

Glenlogan, a village, with iron-works, in Sorn parish, Ayrshire, near the S side of the river Ayr, 3 miles E of Catrine. Near it is Glenlogan House.

Glenlogie, a lateral glen in Cortachy and Clova parish, Forfarshire, descending $3\frac{3}{4}$ miles southward to Glenprosen at Balnaboth.

Glenlora, a mansion in Lochwinnoch parish, Renfrewshire, $1\frac{1}{2}$ mile W of Lochwinnoch town.

Glenloth, a glen in Loth parish, SE Sutherland, traversed by a rivulet that, rising on the western slope of Beinn na Meilich (1940 feet) at an altitude of 1500, winds $5\frac{3}{4}$ miles south-by-eastward to the sea near Loth station.—*Ord. Sur.*, sh. 103, 1878.

Glenluce, a village, a ruined abbey, and a valley of Wigtownshire. The village, in Old Luce parish, stands on the Lady Burn, at the NW base of pine-clad Barlockart Fell (411 feet), and 9 furlongs N by E of the influx of Luce Water to Luce Bay; its station on the Castle-Douglas and Portpatrick joint line is $8\frac{3}{4}$ miles E by S of Stranraer, and $14\frac{3}{4}$ WSW of Newton-Stewart. Sheltered by gentle hills and by the wooded policies of BALKAIL, it is a pleasant little place, for the most part modern, though one of its houses bears date 1736, and though we hear of it so long ago as 1654, when the 'Devil of Glenluce' took up his quarters in a weaver's cottage, and, like a Land-leaguer, would not be put out—not even by the prayers of all the presbytery (Chambers's *Domestic Annals*). There now are a post office, with money order, savings bank, and telegraph departments, a branch of the National Bank, several inns, a handsome public school, and a mechanics' institute and reading-room. The parish church (erected in 1814), a Free church (erected in 1847), and a U. P. church, all in Main Street, are all plain buildings. The former Kirk of Glenluce is memorable as the scene (12 Aug. 1669) of the bridal of Janet Dalrymple, the prototype of 'Lucy Ashton.' (See CARSECREUGH and BALDOON.) A fine Celtic cross from Glenluce churchyard, with a fragment of another from Cassendeoch, was placed in 1880 in the Edinburgh Antiquarian Museum, which has further been enriched by a splendid collection of over 4000 stone and bronze implements, collected and presented by the Rev. George Wilson, Free Church minister here. These, which are described in a paper read to the Society of Antiquaries on 13 June 1881, are some of them very rare, e.g., a small bronze bell, a bronze knife-dagger, etc. Pop. of village (1871) 899, (1881) 901, (1891) 922.

Glenluce Abbey, on the left bank of Luce Water, $1\frac{1}{2}$ mile NW of the village, was founded in 1190 by Roland, Lord of Galloway and Constable of Scotland, for Cistercian monks from Melrose. It covered more than an acre of ground, and attached to it were a garden and orchard, 9 Scots acres in area, which now form the glebe of Old Luce parish. In 1214 one William was abbot, known only as the author of an extant letter to the Abbot of Melrose, wherein he describes a strange appearance in the heavens, beheld by two of his monks. In 1235 the abbey was plundered by the rude soldiery of Alexander II., despatched against the Gallowegian rebels; and to the 13th century belongs the reported sojourn here of Michael Scott, the warlock, who, to keep his familiars employed, set them to spin ropes out of the sea-sand—ropes that are still from time to time laid bare by wind and tide at Ringdoo Point. In 1507, when James IV. with Margaret his queen, was returning from a pilgrimage to Whithorn, he lay a night at Glenluce, and made its gardener the present of four

shillings; in 1514 died Cuthbert Baillie, the abbot, who for the two previous years had been lord-treasurer of Scotland. Thomas Hay, ancestor of the Hays of Park, was by papal bull of 1560 appointed commendator or collector of the abbey's revenues, which, amounting to £666, were in 1575 leased to Gilbert, fourth Earl of Cassillis, him of Crossraguel infamy. The Earl, we are told, had dealt with a monk to forge the late abbot's signature, then had hired a carle called Carnochan to stick the monk, next had wrought on his uncle, Bargany, to hang the carle, and 'sa had conquest the laudis of Glenluce.' Park Place is said to have been partly built in 1590 with stones from the abbey, which yet so late as 1646 is mentioned in the presbytery records of Stranraer as having sustained little injury, and of which Symson in his *Description of Galloway* (1684) wrote that 'the steeple and part of the walls of the church, together with the chapter-house, the walls of the cloyster, the gate-house, and the walls of the large precincts, are still standing.' Of the church itself, Early English in style, little now remains save the S transept gable, with eastern side-chapels; but the cloister walls are fairly entire to the height of some 16 feet, and the Decorated chapter-house is singularly perfect, its arched roof still upborne by a central octagonal pillar, 18 feet in height. The lands of Glenluce, vested in the Crown in 1587, were in 1602 erected into a temporal barony in favour of Laurence Gordon, second son of the Bishop of Galloway; and at his death in 1610 passed to his brother John, the Dean of Salisbury. Transferred by him in the same year to his son-in-law, Sir Robert Gordon of Gordonstoun, they were bought back in 1613 by the Crown, and annexed to the see of Galloway. In 1641, on the temporary abrogation of Episcopacy, they were transferred to the University of Glasgow, and, having from 1681 to 1689 been restored to the re-erected bishopric of Galloway, they were finally once more made a temporal barony, in favour of Sir James Dalrymple, who in the following year was raised to the peerage as Viscount STAIR and Lord Glenluce and Stranraer (P. H. M'Kerlie's *Lands and their Owners in Galloway*).

The valley of Glenluce, commencing at New Luce village, extends $6\frac{1}{4}$ miles south-by-eastward to the head of Luce Bay; is traversed from head to foot by LUCE Water, formed at New Luce village by the confluence of Main and Cross Waters; and is mostly included in the parishes of New Luce and Old Luce. It is called, in ancient Latin documents, *Vallis Lucis* ('the valley of light'), a name as to whose origin opinions differ. The flora and the marine molluscs present an interesting blending of northern and southern forms. Glenluce was all one parish till 1647, when it was separated into Old and New Luce.—*Ord. Sur.*, shs. 3, 4, 1856-57.

Glen Lui, the glen of LUI Water in the upper part of Braemar, Aberdeenshire, descending $9\frac{1}{2}$ miles south-eastward from the eastern shoulder (3400 feet) of Ben Macdhui to the valley of the Dee (1168 feet) at a point $\frac{2}{3}$ mile below the Linn of Dee. The upper $5\frac{3}{4}$ miles, above the Derry's confluence with the Lui, bear the name of Glen Lui Beg, and the whole exhibits some striking alpine scenery.—*Ord. Sur.*, shs. 64, 65, 1874-70.

Glenlyon, a long narrow glen and a *quoad sacra* parish in Breadalbane district, Perthshire. The glen, commencing among alpine mountains at the Argyllshire border, 5 miles NNE of Tyndrum, descends 24 miles east-north-eastward to the vale of Fortingall, $4\frac{1}{2}$ miles WNW of Kenmore; contains at its head Loch LYON; and takes down thence the river Lyon towards its confluence with the Tay. Stretching from west to east along the southern portion of Fortingall parish, it contains a number of ancient Caledonian forts ascribed to Fingal by the voice of tradition; was the scene of a sanguinary conflict between the clan M'Ivor and the Stewarts of Garth; and gives the title of Baron in the peerage of the United Kingdom, and that of Viscount in the peerage of Scotland, to the Duke of Athole. Its southern flank comprises Meall Ghaordie (3407 feet), BEN LAWERS (3984), and the mountains connecting them; its northern flank

consists of mountains similar in character, though not so lofty, and both rise with such rapid acclivity as to shut out the sunbeams and render it a valley of shadows throughout the livelong winter, and during great part of the other months of the year. Yet its sides, to the very summits, are generally clad in verdure, and dotted with hundreds of sheep; display a ribwork of ravine and dell, traversed by limpid brooks or leaping cataracts; and form, in many points of view, fine blendings of soft beauty and savage grandeur. Its bottom, beginning on the high elevation of over 1100 feet above sea-level, is seldom more than a furlong wide, and has no carriage outlet except at and near the foot; yet acquires such picturesqueness from its vista-views and its flanks, that, in the language of Miss Sinclair, 'not a feature could be altered without injury, and a painter might advantageously spend his whole life in taking views, every one of which would appear completely different.' One mansion, noticed separately, is MEGGERNIE Castle; another, Glenlyon House, 9 miles W by S of Aberfeldy, is a seat of Sir Donald Currie, K. C. M. G., of Garth, M. P. Archibald Fletcher (1745-1828), the 'father of burgh reform,' was born in Glenlyon. The *quoad sacra* parish, constituted by the ecclesiastical authorities in 1833, and by the court of Teinds in 1845, is continuous with the glen and its flanks; and bears the name of Innerwick in Glenlyon, from the hamlet of Innerwick, on the left bank of the Lyon, 18½ miles W by S of Aberfeldy, under which it has a post office (Glenlyon). It is in the presbytery of Weem and synod of Perth and Stirling; the minister's stipend is £120. The parish church, at Innerwick, was built in 1828 at a cost of £673, and contains 550 sittings. Glenlyon Free church stands 2 miles lower down the glen; and Meggernie public school, with accommodation for 44 children, has an average attendance of about 25, and a grant of over £60. Pop. (1841) 570, (1871) 393, (1881) 355, (1891) 297, of whom 242 were in Fortingall and 55 in Weem.—*Ord. Sur.*, shs. 46, 54, 55, 1869-73.

Glenmanno Burn, a stream of Penpont parish, NW Dumfriesshire, rising, 4 miles to the E of the meeting-point with Ayr and Kirkeudbright shires, at an altitude of 1500 feet, and running 3½ miles east-by-southward till, after a descent of 870 feet, it falls into Scar Water at a point 6¾ miles NW of Penpont village. Its pastoral valley is associated with curious and stirring anecdotes of a sheep farmer, known only as Glenmanno (1621-1705), who performed wonderful feats of physical strength.—*Ord. Sur.*, sh. 15, 1864.

Glenmark, a glen of Lochlee parish, N Forfarshire, traversed by the Water of Mark, a troutful stream that, rising at an altitude of 2420 feet close to the Aberdeenshire border, winds 10½ miles north-north-eastward and south-eastward till, after a descent of 1600 feet, it unites with the water of LEE at Invermark, near Lochlee church, 17 miles NW of Edzell, to form the river North Esk.—*Ord. Sur.*, shs. 65, 66, 1870-71.

Glenmarlin, a picturesque cataract in the course of Scar Water, on the mutual boundary of Penpont and Tynron parishes, Dumfriesshire, 1 mile W of Penpont village. It presents some resemblance to the Rumbling Bridge Falls, near Dunkeld.

Glenmassan, a glen in the Kilmun portion of Dunoon parish, Cowal, Argyllshire, traversed by the turbulent Massan, which, rising at an altitude of 800 feet above sea-level, on the north-western slope of BENMORE, runs 8½ miles southward and south-eastward till it falls into the Eachaig, near Benmore House. Its scenery has been said to be that of Switzerland in miniature, wanting only the snow; its lower portion being finely wooded, its upper bare and grand. Glenmassan is mentioned in the ancient Irish story of the Sons of Uisneach.—*Ord. Sur.*, shs. 37, 29, 1876-73.

Glenmavis. See NEW MONKLAND.

Glenmill. See CAMPSIE.

Glenmillan, an estate, with a mansion in Lumphanan parish, Aberdeenshire, 1 mile N by E of Lumphanan station. Here were some ancient sepulchral cairns;

and two bronze rings or armlets found in one of them were gifted in 1832 to the Edinburgh Antiquarian Museum.

Glenmore, a glen of Fortingall parish, Perthshire, extending 3 miles eastward along the southern skirts of conical SCHIEHALLION, then 1¼ mile south-south-eastward along the Dull border into junction with Strath Appin. It takes down the Allt Mor rivulet to Keltney Burn; and was anciently covered with the forest of Schiehallion, the roots of whose pine trees long served the neighbouring peasantry as excellent fuel, whilst those of its oaks were manufactured into hones for scythes, and were readily bought in the surrounding country.—*Ord. Sur.*, sh. 55, 1869.

Glenmore, a glen in Abernethy, Kincardine, and Duthil-Rothiemurchus parishes, E Inverness-shire, commencing among the Cairngorm Mountains, and embosoming pine-girt Loch Morlich (8 × 5 furl.; 1046 feet), out of which the Luineag winds 3½ miles west-north-westward, and then, as the Drude, 1½ mile west-north-westward to the Spey, nearly opposite Aviemore station. The trees of the forest round Loch Morlich were sold in 1784 for £10,000 by the Duke of Gordon to Messrs. Dodsworth & Osborne, wood merchants, of Kingston-upon-Hull, and by them were nearly all felled and floated down the Spey to Garmouth, at first in single logs, but afterwards in rafts. Many of them were so large as to measure from 18 to 20 feet in girth of bole; and several yielded planks of nearly 6 feet in breadth. A vast trade speedily sprang up, £40,000 worth of timber being shipped in the course of a twelvemonth, besides what was used in local ship-building. The havoc then done has been in great measure repaired, several thousands of acres having been replanted since 1845.—*Ord. Sur.*, sh. 74, 1877. See Sir Thomas Dick-Lauder's edition of Gilpin's *Forest Scenery* (1834).

Glenmore, a mountain defile in Torosay parish, Mull island, Argyllshire. Extending 10 miles westward from the head of Loch Don to the head of Loch Scridain, it forms the line of communication between the eastern and western coast of the southern half of Mull; is narrow, winding, gloomy, and sublime; and rises, in the highest part of its bottom, to an elevation of about 300 feet above sea-level, being flanked with cliffs and acclivities, overhung by Bentalloch, Benmore, and other lofty mountains.

Glenmore, a village in Portree parish, Isle of Skye, Inverness-shire.

Glenmore Burn, a stream of Bute island, Buteshire, running 4½ miles south-south-eastward to Etterick Bay.

Glenmore House, a modern mansion in Kirkmichael parish, Ayrshire, 4½ miles SSE of Maybole. It is the seat of Sir William James Montgomery-Cuninghame of Corsehill, ninth Bart. since 1672 (b. 1834; suc. 1870), who sat as Conservative member for the Ayr burghs from 1874 to 1880.

Glenmore-nan-Albin or **Great Glen of Scotland**, a magnificent Highland valley, chiefly in Inverness-shire, but partly on the mutual border of Inverness and Argyll shires. Commencing in the south-western vicinity of Inverness, it extends 60½ miles south-westward to Loch Eil in the vicinity of Fort-William; forms, with the Upper Moray Firth in the NE, and Loch Eil and Loch Linne in the SW, a continuous and straight opening through the mountains from side to side of the Scottish mainland; and is traversed from end to end, within its own proper limits, by the CALEDONIAN CANAL navigation. It contains, within these limits, Lochs Dochfour, Ness, Oich, and Lochy, constituting about three-fifths of the entire length of that navigation; is overhung at Loch Ness by Mealfourvie, at Fort-William by Ben Nevis, and in other parts by other lofty mountains; receives into its waters picturesque streams through the lateral glens of Urquhart, Farigaig, Foyers, Moriston, Garry, Archaig, and Spean; exhibits, almost everywhere, a rich, diversified, picturesque display of Highland scenery; and is noticed

in detail in our articles on its various parts and objects. —*Ord. Sur.*, shs. 84, 83, 73, 63, 62, 1873-81.

Glenmore Water, a stream of Auchinleck parish, E Ayrshire, rising at an altitude of 1600 feet near the meeting-point with Lanark and Dumfries shires, and running first $5\frac{3}{4}$ miles west-south-westward across the bleak uplands of the Glenmuirshaw or the eastern interior, then $4\frac{3}{4}$ miles west-north-westward along the Old Cumnock border, till, just above Lngar Iron-works, it unites with Gass Water to form the LUGAR. —*Ord. Sur.*, shs. 15, 14, 1864-63.

Glenmoriston (Gael. *gleann-mor-easan*, 'valley of the great cascades'), a beautiful glen in Urquhart and Glenmoriston parish, NW Inverness-shire, traversed by the impetuous river MORISTON, flowing $19\frac{1}{4}$ miles east-north-eastward from Loch CLUNIE (606 feet above sea-level) to Loch Ness (50 feet) at INVERMORISTON, 7 miles NNE of Fort Augustus. The falls on the river are very pretty, and the district around exceedingly attractive. Near Invermoriston House and Hotel is Glenmoriston post office, with money order, savings bank, and telegraph departments; and near Torgyle Bridge and Inn, 9 miles higher up, are an Established church, a Free church, and a Roman Catholic church (1841), all three designated of Glenmoriston. From Torgyle downwards the glen is finely wooded with birch and fir; and it takes up a road to Glenshiel, Glenelg, and Skye. The ancient parish of Glenmoriston, at one time annexed to Abergarf, has been united to Urquhart since the Reformation era, and is now a *quoad sacra* parish in the presbytery of Inverness. The minister's salary is £140. Pop. of registration district (1871) 565, (1881) 425, (1891) 377. —*Ord. Sur.*, shs. 72, 73, 1880-78.

Glenmuick, Tullich, and Glengairn, a Deeside parish of SW Aberdeenshire, containing the post office village and railway terminus of BALLATER, $43\frac{1}{2}$ miles WSW of Aberdeen, and 4 and $6\frac{1}{2}$ miles WSW of Cambus o' May and Dinnet stations, both of which also are within its bounds. Comprising the ancient parishes of Glengairn to the NW, Tullich to the NE, and Glenmuick to the S, the two first on the left and the last on the right side of the Dee, it is bounded N by Strathdon and Logie-Coldstone, NE by Logie-Coldstone, E by Aboyne-Glentanner, SE by Lochlee and SW by Clova in Forfarshire, and W by Crathie-Braemar. Its utmost length, from N to S, is $17\frac{1}{4}$ miles; its width, from E to W, varies between $4\frac{1}{2}$ and $12\frac{1}{2}$ miles; and its area is 88,798 $\frac{1}{2}$ acres, of which 1437 $\frac{1}{2}$ are water. From a point $\frac{3}{4}$ mile E of Crathie church to the Mill of Dinnet, the DEE winds $15\frac{1}{2}$ miles east-north-eastward—first $4\frac{1}{2}$ miles along the Crathie border, next $8\frac{1}{4}$ miles through the interior, and lastly $2\frac{1}{2}$ miles along the Aboyne border—during which course it descends from 850 to 505 feet above sea-level. A stream that rises on Cairn Taggart, in the SE extremity of the parish, at 3150 feet, thence dashes $1\frac{1}{4}$ mile east-south-eastward to wild and picturesque DHU Loch ($5\frac{1}{2} \times 1\frac{1}{8}$ furl.; 2091 feet), thence hurries 2 miles east-by-southward to dark Loch MUICK ($2\frac{1}{4}$ miles \times $\frac{1}{2}$ mile; 1310 feet), and thence, as the river Muick, runs $9\frac{1}{2}$ miles north-north-eastward along Glen Muick proper, till, $\frac{1}{2}$ mile above Ballater bridge and at 665 feet of altitude, it falls into the Dee. Through the north-western or Glengairn portion of the united parish, the GAIRN, entering from Crathie, winds 9 miles east-south-eastward to the Dee, at a point $1\frac{1}{2}$ mile NW of Ballater; whilst the Water of TANNER, rising close to the Forfarshire border, at 2050 feet, runs 7 miles north-eastward through Glenmuick, and passes off into the Glentanner division of Aboyne. In the Tullich portion are Lochs CANNOR (1 mile \times 5 furl.; 570 feet) and DAVEN ($6 \times 4\frac{3}{4}$ furl.; 480 feet), the former belonging wholly to this parish, the latter partly to Logie-Coldstone. Save for the broadening valley of the Dee and the wide dreary Muir of Dinnet in the NE, the surface almost everywhere is mountainous. Chief elevations, westward, N of the Dee are Cullbean Hill (1750 feet), Crannach Hill (1824), *Morven Hill (2862), wooded Craigandaroch (1250), Geallaig Hill (2439), and *Carn a' Bhacain (2442), where asterisks mark those summits

that culminate on the confines of the parish. E of the Tanner rise Cloch an Yell (2053) and *Mount KEEN (3077); between the Tanner and the Muick, Black Craig (1742), Pananich Hill (1896), Cairn Leughan (2293), *Fasheilach (2362), Black Hill (2470), *Lair of Aldararie (2726), *Broad Cairn (3263), *Carn Bannoch (3314), and *Cairn Taggart (3430); and W or left of the Muick, Creag Phioibaidh (1462), the Coyle (1956), *Conacheraig Hill (2827), and the *lower summit (3765) of LOCHNAGAR. The rocks include grauite, gneiss, trap, and primary limestone; lead-mining operations were carried on at Abergairn in 1874; and other minerals are fluor-spar, amianthus, asbestos, serpentine, etc. The soil along the Dee and in the lower glens is mostly boulder gravel or sandy loam. Barely a thirtieth of the entire area is in tillage; as much or more—chiefly along the Dee and the Muick—is clad with woods and plantations of Scotch fir, larch, birch, oak, aspen, etc.; and the rest is all either sheep-walk or deer-forest, moss or heathy moorland. All the chief spots of interest, of which there are many, have articles to themselves, as ALT-NA-GRUTHASACH, BALLATRICH, BRACKLEY and KNOCK Castles, PANANICH, and the VAT. Glenmuick House, on the Muick's right bank, 2 miles SSW of Ballater, was built in 1872 from designs by Sir Morton Peto, and is a striking Tudor edifice of native pink-coloured granite, with a massive square tower 75 feet high. Its owner is Sir Allan Russell Mackenzie, second baronet since 1890 (b. 1850; suc. 1890). Cambus o' May House, near the station of that name, is a pretty gabled and verandahed mansion of 1874; and other residences, noticed separately, are BIRKHALL and MONALTRIE. The chief proprietors are the Queen, the Marquis of Huntly, Mr Farquharson of Monaltrie, and Sir A. R. Mackenzie. Giving off portions to the *quoad sacra* parishes of GLENGAIRN and DINNET, Glenmuick is in the presbytery of Kincardine O'Neil and synod of Aberdeen; the living is worth £282. The churches are noticed under BALLATER, GLENGAIRN, and DINNET. Five public schools—Ballater, Birkhall female, Inchmarnock, Kinord female, and Glengairn, the last under a separate school board—with respective accommodation for 316, 42, 40, 49, and 80 children, have an average attendance of about 215, 20, 30, 30, and 20, and grants amounting to over £215, £32, £42, £40, and £33. Pop. of civil parish (1801) 1901, (1831) 2279, (1861) 1668, (1871) 2160, (1881) 2109, (1891) 2299; of ecclesiastical parish (1871) 1602, (1881) 1672, (1891) 1600; of registration district (1871) 1995, (1881) 1946, (1891) 2152. —*Ord. Sur.*, shs. 65, 66, 75, 76, 1870-76.

Glenmuir or Glenmuirshaw, a wild moorish vale on the eastern border of Auchinleck parish, Ayrshire, at the head of Glenmore Water, near the meeting-point with Lanark and Dumfries shires, and immediately S of Cairntable. It contains ruins of an ancient baronial fortalice; and it was the scene, at Dalblair, of the boyhood of the author of the *Cameronian's Dream*, beginning,—

'In Glenmuir's wild solitudes, lengthened and deep
Were the whistling of plovers and bleating of sheep.'

Glennevis, a Lochaber glen in Kilmallie parish, SW Inverness-shire, traversed by the Water of Nevis, a clear and rapid trout stream, which, rising at an altitude of 2750 feet, sweeps $11\frac{3}{4}$ miles south-westward, westward, north-north-westward, and westward, till at Fort-William it falls into Loch Eil. A carriage drive, opened in 1880, leads 7 miles up the glen, objects of interest in which are a vitrified fort, a rocking-stone, Samuel's Cave (a hiding-place of fugitives from Culloden), and the Ben Nevis waterfall, by some deemed finer than the Falls of Foyers. 'High masses of rock towering to the very clouds, and covered here and there with moss, line both sides of the glen; while streams innumerable come rushing down the hillside to increase the volume of the crystal Nevis.'—*Ord. Sur.*, sh. 53, 1877.

Glennoe, a Glen in Archhatten parish, Argyllshire, traversed by the Noe, which, formed by head-streams that rise on the northern skirts of Ben Cruachan, runs $2\frac{1}{2}$ miles west-north-westward, till it falls into Loch

Etive at a point $4\frac{1}{2}$ miles NE of Taynuilt station.—*Ord. Sur.*, sh. 45, 1876.

Glenney, a burn in Port of Monteith parish, Perthshire, running 2 miles south-south-westward to the Lake of Monteith along a deep and tortuous ravine.—*Ord. Sur.*, sh. 38, 1871.

Glenney Law. See ABERNRYE.

Glenogil, an estate, with a modern mansion, in Tannadice parish, Forfarshire, 10 miles NE by N of Kirriemuir. Its owner is Stephen Williamson, Esq., M.P. for the St Andrews burghs from 1880 to 1885, and for the Kilmarnock burghs from 1886 to 1895. Another estate of Glenogil, also in Tannadice parish, and also with a mansion, belongs to the Misses Lyon.—*Ord. Sur.*, sh. 57, 1868.

Glenogilvie, an estate in Glamis parish, Forfarshire. Bestowed on the Ogilvies about 1163, it belonged in the 17th century to the notorious Graham of Claverhouse, reverted then to the Douglasses, and, in 1871, was sold by the Countess of Home to the Earl of Strathmore. See GLAMIS.

Glenogle (Gael. *gleann-eagal*, 'valley of dread'), a glen of Balquhiddier parish, Perthshire, commencing $\frac{1}{2}$ mile SSE of Killin station, at an altitude of 980 feet, and descending $3\frac{1}{2}$ miles south-south-eastward to Lochearnhead. Traversed by the road from Callander to Killin, and by the Callander and Oban railway, it forms a close, gloomy defile, and is flanked on the E side by Beinn Leathan (2312 feet), on the W by Meall Sgziata (2250). Hundreds of runnels streak its cliffs, which look to have been shattered by shock of earthquake; its bottom is encumbered by thousands of fallen rocks; and it commands, towards its mouth, a romantic view of the mountains around the upper waters of Loch Earn.—*Ord. Sur.*, sh. 46, 1872.

Glenorchy and Innishail, a large Highland parish in the Lorn district of Argyllshire, almost surrounding the lower waters of Loch Awe, and containing BUNAWE village, on Loch Etive; CLADICH hamlet, on Loch Awe; KING'S HOUSE Inn (Glencoe), at the northern boundary; and DALMALLY village, on the left bank of the Orchy. The last has a station on the Callander and Oban railway (1880), 12 miles W of Tyndrum and 9 E by S of Taynuilt, these stations lying just beyond the eastern and western borders of Glenorchy. Comprising the ancient parishes of Glenorchy to the NE and Innishail to the SW, united in 1618, it is bounded NW by Ardchattan, N by Lismore and Appin, NE and E by Forthingall and Killin in Perthshire, SE by Kilmorich and Inverary, and SW by Kilchrenan and Muckairn. Its utmost length, from NE to SW, is $31\frac{1}{2}$ miles; its breadth varies between $5\frac{1}{2}$ and $13\frac{1}{2}$ miles; and its area is now 231 square miles or 147,903 acres, of which 6 acres are tidal water, 37 foreshore, and 5898 $\frac{1}{2}$ water. This large water area is made up by parts of Lochs Awe (2865 $\frac{1}{2}$ acres) and Laidon (356 $\frac{1}{2}$), and the whole of Lochs Tulla (697 $\frac{1}{2}$), Ba (612 $\frac{1}{2}$), Na h-achlaise (183 $\frac{1}{2}$), Docharid (84 $\frac{1}{2}$), etc. The Boundary Commissioners in 1891 transferred to this parish a detached portion of the parish of Kilchrenan and Dalavich, consisting of the island of Innishail in Loch Awe. The Water of Tulla, rising in the extreme E of the parish at 2700 feet above sea-level, winds $10\frac{1}{2}$ miles north-north-westward and west-south-westward to Loch Tulla ($2\frac{1}{2}$ miles \times 5 furl.; 555 feet), flows $1\frac{1}{2}$ mile through that lake, and, issuing from it as the river ORCHY, runs $16\frac{1}{2}$ miles south-westward to Loch AWE (118 feet). The Orchy's chief affluents are the LOCHY, running $8\frac{1}{2}$ miles west-south-westward from Lochan Bhe (6×1 furl.; 822 feet), at the eastern border, near Tyndrum, to a point $1\frac{1}{2}$ mile above Dalmally; and the STRAE, running $8\frac{1}{2}$ miles south-westward to opposite Kilchurn Castle. Through Loch Awe our stream steals $4\frac{1}{2}$ miles south-westward and west-north-westward; and out of Loch Awe, as the river Awe, it hurries 5 miles north-westward, along the Ardchattan border, through the wild Pass of Brander, till at Bunawe it falls into Loch Etive. Through the river Ba, rising at 2300 feet, and running $4\frac{1}{2}$ miles east-by-northward to isletted Loch Ba (957 feet), thence $1\frac{1}{4}$ mile to Loch LAIDON (924 feet),

the drainage of the northern or desolate Rannoch Muir portion belongs to the basin of the Tay; whilst from the SE several burns run southward towards Loch Fyne. Those parts of Glenorchy around Loch Awe, though hilly everywhere, are hardly mountainous, the Bunawe section culminating at 899 feet above sea-level, and the Cladich section at 1846, while lake and stream are fringed by a broadish belt that nowhere rises to 500 feet. Elsewhere the parish is grandly alpine, being mainly made up of the three convergent glens—'Glenstrae, deep, hollow, and sombre, and still full of memories of the lawless MacGregors; Glenorchy, rock-bound, green, and grand; and Glenloch, bleak, cold, and bare. Each has its own dark history, and its home-spun collection of clan legends, fairy traditions, and fatherless myths.' Glenstrae, coming down it, is flanked on the right hand, by *Ben Lurachan (2346 feet), *Meall Copagach (2656), *Ben Eunaich (3242), and *BEN CHOCHAIL (3215), offshoots these of huge Ben Cruachan; on the left by BEN MHIC-MHONAIIDH (2602), Ben Donachain (2127), and Creag Mhor (1162), where asterisks mark those summits that culminate right on the confines of the parish. Glenloch, again, on the right is flanked by Ben Udlaidh (2529) and Ben na Sroine (2070); on the left by *Meall Odhar (2046), *Ben Chuirn (2878), *BEN LOY (3708), and Ben Bhalgairan (2085). Higher up, on or close to the Perthshire border, rise *BEN ODHAR (2948), Ben Bhreac-liath (2633), *BEN-A-CHAISTEIL (2897), BEN DORAN (3523), *BEN CREACHAN (3540), and *BEN ACHALLADER (3399); towards King's House is *Clach Leathan (3602). The rocks belong to the Lower Silurian period; under Bunawe are noticed the granite quarries. The soil of the lower grounds is mostly light and sandy, not wanting in fertility; but of the entire area less than 3000 acres are arable or woodland, sheep walks and deer-forests making up the rest. (See BLACKMOUNT.) Natives were the Rev. John Smith, D.D. (1747-1807), translator of the Scriptures into Gaelic, and Duncan 'Ban' M'Intyre (1724-1812), 'sweetest and purest of Gaelic bards,' to whose memory a Grecian temple of granite has been reared on a hill (544 feet) $1\frac{1}{2}$ mile SW of Dalmally. The chief antiquities are noticed separately, under Kilchurn Castle, Innishail, Fraoch-Eilean, and Achallader; as likewise are the mansions of Ard-vrecknish, Inverawe, and Inchedrynich. Much the largest landowner is the Marquis of Breadalbane, who takes from Glenorchy the title of Baron. This parish is in the presbytery of Lorn and synod of Argyll; the living is worth £216. There are three Established places of worship—Glenorchy (1811), on an islet in the Orchy at Dalmally, a plain octagonal church, with stumpy square tower and many curious gravestones; Innishail (1773), 9 furlongs NE of Cladich and 5 miles SW of Dalmally; and Bridge of Orchy, 12 miles NE of Dalmally and $6\frac{1}{2}$ NNW of Tyndrum. There are also a chapel of ease at Lochawe and a Free church at Dalmally; and four public schools—Blackmount District, Cladich, Dalmally, and Kilchrenan—with respective accommodation for 26, 36, 121, and 59 children, have an average attendance of about 5, 5, 80, and 35, and government grants amounting to over £19, £18, £141, and £58. Fairs are held on the third Wednesday of March (feeing), on the Thursday after last Wednesday in May (catle), and on the last Friday of October (feeing and cattle). Pop. of parish (1881) 1105, (1891) 1641, of whom 1094 wore Gaelic-speaking; of Glenorchy registration district (1881) 761, (1891) 1252.—*Ord. Sur.*, shs. 45, 46, 53, 54, 1872-77. See pp. 134-184 of Dorothy Wordsworth's *Tour in Scotland* (ed. by Prince Shairp, 1874); 'The Heart of the Highlands' in the *Cornhill* for Jan. 1881; and 'Traditions of Glenorchy,' by Archd. Smith, M.D., in vol. vii. of *Procs. Soc. Ants. Scoll.* (1870).

Glenormiston House, a mansion of the first quarter of the 19th century in Innerleithen parish, Peeblesshire, within $\frac{1}{2}$ mile of the Twiced's left bank, and 2 miles NW of Innerleithen village. The estate, which extends from the Tweed to the top of Leo Pen (1647

feet), is finely wooded, and during the last hundred years has been improved at a cost of over £30,000. Held by the Stewarts of Traquair from 1533, it was sold in 1789 for £8400, and in 1849 for £25,000 to Sir William Chambers (1800-83), the well-known author and publisher, and is now the seat of Michael G. Thorburn, Esq.—*Ord. Sur.*, sh. 24, 1864.

Glenprosen, a glen and a *quoad sacra* parish in what, until 1891, formed the northern division of Kirriemuir parish, NW Forfarshire, this division being in that year transferred by the Boundary Commissioners to the parish of Cortachy and Clova. The glen is that of PROSEN Water, rising at an altitude of 2750 feet on the western slope of Mayar, and running 18 miles south-eastward through the western portion of the extended parish of Cortachy, and along the borders of that parish and the parishes of Kingoldrum and Kirriemuir till, after a total descent of nearly 2400 feet, it falls into the South Esk at a point $1\frac{1}{2}$ mile SE of Cortachy Castle. The *quoad sacra* parish, comprising the transferred KIRRIEMUIR division, was constituted in 1874, and is in the presbytery of Forfar and synod of Angus and Mearns. Its church stands on the left bank of the Prosen, $9\frac{1}{2}$ miles NNE of Kirriemuir town; and a public school, with accommodation for 50 children, has an average attendance of about 25, and a grant of over £30. Pop. (1881) 175, (1891) 175.—*Ord. Sur.*, sh. 56, 1870.

Glenquaiach. See GLENGARRY.

Glenquaiach, a glen stretching east and west across the southern portion of Dull parish, Perthshire. It is traversed by the Quaiach, which, rising at a point $5\frac{1}{2}$ miles S by E of Kenmore village and 2700 feet above sea-level, winds $7\frac{1}{2}$ miles eastward to the head of Loch FREUCHIE (880 feet).—*Ord. Sur.*, sh. 47, 1869.

Glenquharry, a burn in Kirkeconnel parish, NW Dumfriesshire, rising close to the Ayrshire border at an altitude of 1420 feet, and winding $4\frac{1}{2}$ miles southward, till, after a descent of 900 feet, it falls into the Nith at Kirkeconnel village. Its upper cleuch is a deep and sequestered recess, flanked by desolate moorlands, and formed a frequent retreat of Covenanters in the days of the persecution.—*Ord. Sur.*, sh. 15, 1864.

Glenquicken, a moor in Kirkmabreck parish, SW Kirkcudbrightshire, $3\frac{3}{4}$ miles E by N of Creetown. A cairn here in 1809 yielded a rude stone coffin, containing an uncommonly large skeleton; and Glenquicken is traditionally said to have been the scene of a very early battle, probably between the Caledonians and the Romans. Near it are a stone circle and a well-preserved Roman encampment.—*Ord. Sur.*, sh. 4, 1857.

Glenquiech, an estate, with a mansion, in Tannadice parish, Forfarshire, 7 miles NNE of Kirriemuir. Its owner is John Alex. Sinclair-Maclagan, Esq.

Glenquithle. See GLENDOWACHY.

Glenquioch or **Glenquiech**. See GLENGARRY and QUOICH.

Glenranza, a narrow glen on the mutual border of Kilmore and Kilbride parishes, in the N of Arran, Buteshire. It is traversed by the Ranza, an impetuous stream, which, issuing from tiny Loch na Davie (1182 feet), runs $3\frac{3}{4}$ miles north-north-westward till it falls into the head of Loch Ranza. It is joined on the right side by GLENHALMADALE, and above that point is sometimes known as Glen Easan Biorach.—*Ord. Sur.*, sh. 21, 1870.

Glenrath Burn, a rivulet in Manor parish, Peeblesshire, rising on the NW side of Blackhouse Heights at an altitude of 2000 feet, and running $3\frac{3}{4}$ miles north-north-westward till, after a descent of 1240 feet, it falls into Manor Water opposite Posso, 7 miles SSW of Peebles.—*Ord. Sur.*, sh. 24, 1864.

Glenrinnies, the narrow vale of DULLAN WATER, and a *quoad sacra* parish in Mortlach and Aberlour parishes, Banffshire. The *quoad sacra* parish, constituted in 1865, is in the presbytery of Aberlour and synod of Moray; its minister's stipend is £100. The church, originally a mission chapel under the royal bounty, was erected in 1884, and stands towards the head of the glen, $5\frac{1}{2}$ miles SSW of Dufftown; and a public

school, with accommodation for 102 children, has an average attendance of about 65, and a grant of over £77. Pop. (1871) 466, (1881) 401, (1891) 374, of whom 281 were in Mortlach parish.—*Ord. Sur.*, sh. 85, 1875.

Glenrosie, a glen in the middle of the E side of Arran, Buteshire. Commencing at an altitude of 1750 feet, it descends $5\frac{1}{2}$ miles south-south-eastward to the sea at Brodick Bay, and a little above its mouth is joined by Glensherrig and Glenclouy. With Goatfell (2866 feet) on the E and Ben Tarsuinn (2706) on the W, its upper reach exhibits sublimely picturesque scenery; its middle reach displays a blending of grandeur and loveliness; and its lowest reach is so exquisite as to be called Glen-shant—'vale of enchantment'.—*Ord. Sur.*, sh. 21, 1870.

Glenrothes. See ROTHES.

Glenroy, a narrow precipitous glen in Kilmonivaig parish, Inverness-shire, traversed by the Roy, a salmon and trout stream that flows $14\frac{1}{2}$ miles south-westward, till at Keppoch, $3\frac{1}{2}$ furlongs below the Bridge of Roy and $12\frac{3}{4}$ miles NE of Fort-William, it falls into the Spean, descending in this course from 1100 to 290 feet above sea-level. It lies in the Lochaber district; and its great interest arises from the three distinctly-marked terraces, known as the 'Parallel Roads of Glenroy,' which can be traced almost continuously on both sides of the valley. Each forms a gently sloping shelf from 3 to 30 feet wide, and the most striking characteristic of all is their absolutely constant level. The highest (1144 to 1155 feet) can be traced from the col (1151 feet) at the head of Glenroy—which forms the lowest part of the watershed between the Roy and the Spey—to Bohuntine Hill, near the mouth of the glen. The second shelf (1062 to 1077 feet) runs parallel to the first, but can be traced round Glen Glaster, which opens into Glenroy, just below where the first road terminates. This second road corresponds in height to the col (1075 feet) at the SE end of Glen Glaster, which is part of the watershed between the Glaster and the Feitheil, a small tributary of the Spean. The third and lowest shelf (850 to 862 feet) can be traced right round Glenroy, Glen Glaster, and Bohuntine Hill, and away eastward along Glen Spean to a little below Loch Laggan. It corresponds in height to the col (848 feet) at Muckall above Loch Laggan, which forms part of the watershed between the Spean and Mashie Water, a tributary of the Spey. In Glen Gloy, to the W of Glenroy, is another similar road at a height of from 1156 to 1173 feet. The col at the head of this glen, which looks over to Glenroy, is 1172 feet above sea-level.

The constant level at which each of these roads remains suggests at once that they have been the shores of former lakes or seas. The marine theory advanced by Darwin, who regarded the glens as former arms of the sea, is not now generally accepted. The hypothesis which ascribes them to fresh-water lakes was first brought forward by Macculloch (*Trans. Geol. Soc. Lond.*, vol. iv., 1st ser.), and taken up by Sir T. Dick-Lauder (*Trans. Roy. Soc. Edinb.*, vol. ix.) They were forced to assume the former existence of gigantic barriers of *débris*, which were washed away by the water, after it had been kept for long periods at the heights of the various shelves. The difficulties of this theory are, first, where did the *débris* come from? and, secondly, where did it disappear to, without leaving even the slightest trace of its existence? Such difficulties do not exist in the bold speculation of Agassiz, who finds the necessary barrier in a huge glacier which slid down from Ben Nevis. This theory is supported by the numerous evidences of former glaciers in the district. Suppose a glacier to fill all the lower portion of Glenroy up to where the highest road terminates above Glen Glaster; the water collected in the glen could escape only at the col at the head of Glenroy. Let the glacier now recede till it reaches the points where the second road terminates on Bohuntine Hill; Glen Glaster will now be open, and the waters will be discharged over the lower col at the head of that glen. Let the glacier now recede quite out of Glenroy, and stretch across Glen Spean below the bridge of Roy; the water will then fall to the level of

the lowest possible outlet, which is the col at Muckall above Loch Laggan. See R. Chambers' *Ancient Sea-Margins* (1848), and Prof. Tyndall's Lecture in the *Popular Science Review* (1876), with authorities there cited.—*Ord. Sur.*, sh. 63, 1873.

Glensalach, a glen in Ardchattan parish, Argyllshire, extending $5\frac{1}{2}$ miles north-north-westward from Loch Etive, near Ardchattan House, to Loch Creran, near Barcaldine. It takes down the last 9 furlongs of the ESRAGAN to the former sea-inlet, and $4\frac{1}{2}$ miles of the Dearg Abhainn to the latter, the 'col' between these streams having an altitude of 516 feet.—*Ord. Sur.*, sh. 45, 1876.

Glensanda. See CASTLE-MEARNAIG.

Glensannox, a glen in the NE of Arran, Buteshire, commencing among the stupendous western buttresses of Goatfell at an altitude of 1680 feet, and winding round the northern skirts of that mountain $3\frac{7}{8}$ miles east-north-eastward, till it opens to the Sound of Bute at Sannox hamlet, 7 miles N of Brodick. The grandest glen in Arran, surpassed in all Scotland by only Glencoe and Coruisk, it was pronounced by Dr Macculloch 'the sublime in magnitude, simplicity, obscurity, and silence.' Near its mouth is the burying-ground of a small pre-Reformation monastery; and a barytes manufactory was located in it in the first half of the 19th century.—*Ord. Sur.*, sh. 21, 1870.

Glensassunn, a little glen in the E of Fortingall parish, Perthshire, 3 miles S by W of Kinloch Rannoch. Its name, signifying the 'Englishman's glen,' arose from the fact that during the War of Independence, a body of English passed this way to meet an opposing force of Robert Bruce at Innerhadden.—*Ord. Sur.*, sh. 55, 1869.

Glensax, a burn of Peebles parish, rising in the S of its former Selkirkshire section (the parish having in 1891 been placed by the Boundary Commissioners wholly in Peeblesshire), at an altitude of 2100 feet above sea-level, and running $6\frac{7}{8}$ miles north-north-eastward, till, after a total descent of nearly 1600 feet, it falls into the Tweed, at a point $1\frac{1}{2}$ mile ESE of Peebles town. It stands in high repute as a trout-stream.—*Ord. Sur.*, sh. 24, 1864.

Glenschant. See GLENROSE.

Glenshee, a hamlet, a glen, and a *quoad sacra* parish in Kirkmichael parish, NE Perthshire. The hamlet, Spittal of Glenshee, lies 1125 feet above sea-level, at the head of the glen, $5\frac{1}{2}$ miles SSW of the meeting-point with Aberdeen and Forfar shires, 31 NE of Pitlochrie, and 20 N by W of Blairgowrie, under which it has a post office. Formerly a stage on the great military road from Perth to Fort George, it was a halting-place for refreshment of the Queen and Prince Albert, on the earliest occasions of their journeying to and from Balmoral (1848); and it has a good inn, and a fair on the third Tuesday of October o. s. The glen, commencing at the convergence of Glenbeg, Glenhaintneich, and Glenloch, in the vicinity of the hamlet, is traversed by the Shee or Black Water, flowing $14\frac{3}{4}$ miles south-by-eastward through Kirkmichael, southward along the border of Alyth for about 2 miles, then traversing the Dalruthian section of Kirkmichael parish again till it is joined by the Drumturn Burn, when it proceeds southward for a few miles along the Alyth and Blairgowrie border, till at Strone House, 6 miles NNW of Blairgowrie town, it unites with the Ardlie to form the Erich, having in this course descended from 1125 to 480 feet above sea-level. Glenshee takes up the public road from Blairgowrie, through grand mountain scenery; contains three old castles, a famous rocking stone, and numerous cairns and ancient Caledonian stone circles; and has, at its head, the mountain BEN GULBUINN (2641 feet). The *quoad sacra* parish comprises the Kirkmichael or upper portion of the glen, and is in the presbytery of Dunkeld and synod of Perth and Stirling; the minister's stipend is £100. Its church, at the hamlet, was built as a chapel of ease in 1831 for a population of 400, and contains nearly 400 sittings. A public school stands $1\frac{1}{2}$ mile SSE. Pop. of *q. s.* parish (1871) 241, (1881) 226, (1891) 163.—*Ord. Sur.* sh. 56, 1870.

Glenshee, the glen of the upper part of SHOCHIE Burn,

in E central Perthshire, commencing $4\frac{1}{2}$ miles E by S of Amulree, and descending 7 miles east-south-eastward, traversing or skirting in its course the parishes of Monzie, Moneydie, and Redgorton.—*Ord. Sur.*, sh. 47, 1869.

Glensheil. See GLENSHIEL.

Glenshellish, an estate, with a modern mansion, in Strachur parish, Argyllshire, $3\frac{1}{2}$ miles NNE of the village.

Glensherrig or **Glenshurtg**, a romantic glen in the E of Arran, Buteshire, descending $2\frac{1}{2}$ miles east-north-eastward to Glenrosie at Brodick church.—*Ord. Sur.*, sh. 21, 1870.

Glenshiel, a Highland parish of SW Ross-shire, containing Clunie and Shiel inns, the former of which, standing $2\frac{1}{2}$ miles above the head of Loch Clunie, is 52 miles SW of Inverness, 25 WSW of Invermoriston on Loch Ness, 22 WNW of Invergarry on Loch Oich, 12 ESE of Shiel Inn at the head of salt-water Loch Duich, 21 ESE of Glenelg on Sleat Sound, and 28 ESE of Balmacarra on Loch Alsh. The parish is bounded NW by Kyle Rhea Strait and Loch Alsh, dividing it from the Isle of Skye, N by Loch Duich and Kintail, and on all other sides by Inverness-shire, viz., NE by Kilmorack, E by Kiltarlity, S by Kilmonivaig, and SW by Glenelg. Its utmost length, from WNW to ESE, is 24 miles; its width varies between $5\frac{1}{2}$ furlongs and $9\frac{1}{4}$ miles; and its land area is 57,320 acres. Loch a' Bhealaich ($\frac{2}{3} \times \frac{1}{2}$ mile; 1242 feet) lies just beyond the northern border, in Kintail; and the northern part of Glenshiel is drained by the clear-flowing Croe, formed by two head-streams at an altitude of 180 feet, and running $6\frac{1}{2}$ miles north-westward and westward through Glen Lichd and along the Kintail border to the head of Loch Duich; whilst the river Lyne, with its expansion, Loch Lyne, winds $7\frac{3}{4}$ miles eastward along the southern boundary on its way to the Clunie. The river Shiel, rising on Sgurr Coire na Feinne, close to the southern border, at 2900 feet above sea-level, runs $1\frac{3}{4}$ mile north-north-eastward, then $8\frac{1}{2}$ miles north-westward, till below Shiel Bridge it falls into the head of Loch Duich. Hill Burton describes its glen—'a narrow valley, pierced by the deep, roaring torrent, with precipitous mountains rising on either side to a vast height, and only to be crossed by rugged winding footpaths, unknown except to the natives.' Also on Sgurr Coire na Feinne, within 5 furlongs of the Shiel, the Clunie rises at 2500 feet, thence running $1\frac{1}{2}$ mile north-north-eastward, next $5\frac{1}{2}$ miles east-by-northward and east-south-eastward to the head of Loch CLUNIE ($4\frac{3}{4}$ miles \times $\frac{1}{2}$ mile; 606 feet), whose upper and broader $1\frac{1}{2}$ mile belongs to Glenshiel parish. Thus on the self-same mountain these two streams have their source—the Shiel flowing towards the Atlantic, the Clunie towards the Moray Firth; which shows that here is the very backbone of the country. And truly the scenery is grandly alpine, chief summits eastwards to N of the Shiel and the Clunie being Sgurr na Moraich (2870 feet), pyramidal Sgurr Fhuaran or Scour Ouran (3505), *Beinn Fhada or BEN ATTOW (3383), *Sgurr a' Bhealaich (3378), and *Garbhleac (3673); to S, *Sgurr Mhic Bharraich (2553), the *Saddle (3317), *Aonach air Chrith (3342), and Creag a' Mhaim (3102), where asterisks mark those heights that culminate right on the confines of the parish. Up Glen Clunie and down Glenshiel runs the old military road from Fort Augustus, with a summit-level of 889 feet—a height exceeded by that of the pass (1500 feet) between Strathaffric and Shiel inn, and of the Ratagan Pass (1072) between Shiel inn and Glenelg. The western division consists of Letterfearn district, extending from the foot of Glenshiel proper to Kyle Rhea, and exhibiting a charming mixture of valo and upland, gentle slopes along Lochs Alsh and Duich, bold headlands, precipitous ravines, rocky eminences, cultivated fields, and clumps of natural wood. Gneiss, occasionally alternating with mica slate, is the predominant rock; a coarse-grained granite, of a reddish hue, occurs on the shores of Loch Clunie; and two beds of limestone, very impure in quality, are in the S of Letterfearn. The soil in the arable parts near the sea is generally a coarse gravel, and in the best parts of the bottom of the glens is

vegetablemould incumbent on gravel and sand. A spot in Glenshiel, where the stream is now crossed by a bridge, $5\frac{1}{2}$ miles SE of Shiel inn, was the scene, on 11 June 1718, of the so-called 'Battle of Glenshiel,' between 1500 Jacobites, under the Earls Marischal and Seaforth and the Marquis of Tullibardine, and 1600 Hanoverians, under General Wightman. The latter lost 21 men, besides 121 wounded; but on the following day the Highlanders dispersed among the mountains, whilst their Spanish auxiliaries, 274 in number, surrendered as prisoners of war (J. Russell's *Jacobite Rising of 1719*, Scot. Hist. Soc., 1893). Down into the 19th century the entire parish belonged, with Kintail and Lochalsh, to the Seaforth family; but now Glenshiel alone is divided among several proprietors. It is in the presbytery of Lochcarron and synod of Glenelg; the living is worth £178. The church, in the eastern part of Letterfean, on the shore of Loch Duich, 3 miles NW of Shiel inn and 8 SE of the post-town Lochalsh, was built in 1758. There is also a Free church, and a post office under Strome Ferry. Two public schools of recent erection, Letterfean and Shiel, with respective accommodation for 35 and 37 children, have an average attendance of about 25 and 22, and grants of over £31 and £38. Pop. (1881) 424, (1891) 394, of whom 353 were Gaelic-speaking.—*Ord. Sur.*, sh. 72, 1880.

Glenshira, a glen in Inverary parish, Argyllshire, traversed by the Shira, which, rising on BENBUI at an altitude of 2760 feet, winds 11 miles south-south-westward to Loch Fyne, $1\frac{1}{2}$ mile NNE of Inverary town. Its population has much decreased since the introduction of sheep-farming. See DOULOCH and GEARR ABHAINN.—*Ord. Sur.*, shs. 45, 37, 1876.

Glenshirra Lodge, a shooting-box in Laggan parish, Inverness-shire, at the foot of Loch Crunachan and near the right bank of the Spey, $4\frac{3}{4}$ miles W by S of Laggan Bridge. It is on the Ardverikie property.

Glenligachan, the glen of the rivulet SLIGACHAN and of Loch Sligachan, in the Isle of Skye, Inverness-shire. Commencing on the eastern skirts of the Cuchullins, it descends $5\frac{1}{2}$ miles northward to the head of Loch Sligachan, and thence $3\frac{1}{2}$ miles north-eastward to the sea opposite the S end of Raasay island. 'Desolate Glenligachan, to which Glencoe is Arcady,' in its upper reaches is all narrow and partly a gorge, flanked on the left hand by Scur-na-Gillean (3183 feet), on the right by Glamaig and Marscow (2000).

Glensloy, a glen in the N of Arrochar parish, Dumbartonshire. Commencing $1\frac{1}{2}$ mile S of the meeting-point with Argyllshire and Perthshire, it descends $4\frac{1}{2}$ miles south-south-eastward and $1\frac{3}{8}$ mile eastward to Loch Lomond, opposite Inversnaid; contains Loch SLOY, and takes down thence INVERUGLAS Water to Loch Lomond; is overhung, near the head, by mountains rising 1611 and 1614 feet above sea-level; on the upper part of the E side, by Ben Vorlich, with two summits 3055 and 3092 feet high; on the lower part of the E side, by a mountain 2465 feet high; on the lower part of the W side, by Ben Vane, 3004 feet high; holds Loch Sloy at an elevation of 812 feet above sea-level; and exhibits, from head to foot, a series of imposing scenes.—*Ord. Sur.*, sh. 33, 1871.

Glen Spear, a Lochaber glen of Kilmonivaig parish, SW Inverness-shire, traversed by the SPEAN, which, issuing from Loch Laggan (819 feet), winds $20\frac{1}{2}$ miles westward till, after a descent of 728 feet, it falls at Bridge of Mucomir into the river Lochy at a point 3 furlongs below its efflux from Loch Lochy. It is ribbed by several lateral glens, chiefly Glengulbin and Glentreig on the left, and Glenroy on the right; and has all a grandly Highland character, but presents much variety of feature in its successive reaches. The upper part is narrow, moorish, and desolate; the middle parts have some amenities of wood and culture; and the lower part, besides having a comparatively well-peopled breadth of bottom, derives much sublimity from the immediate flanking of Ben Nevis. Many spots, particularly opposite the mouth of Glentreig, show scorchings and polishings by ancient glæcier action; a short reach

between Glentreig and Glenroy exhibits, at an altitude of from 850 to 862 feet, an ancient line of water level, similar to the Parallel Roads of GLENROY; and a reach of 2 miles immediately above the mouth of Glenroy is a rocky gorge traversed by the Spean in deep tumultuous current.—*Ord. Sur.*, shs. 63, 62, 1873-75.

Glen-Stewart, a seat of the Marquis of Queensberry in Cummertrees parish, S Dumfriesshire, 5 miles W by N of Annan. See KINMOUNT.

Glenstrae, a deep and sombre glen in Glenorchy and Innishail parish, Argyllshire, traversed by the Strae, which, rising at an altitude of 1250 feet above sea-level, runs $8\frac{1}{2}$ miles south-westward to a confluence with the Orchy, 5 furlongs above the influx of the latter to Loch Awe at Kilchurn Castle. Down to 1604 it was the principal fastness of the clan Macgregor, who held it as vassals of the Earl of Argyll.—*Ord. Sur.*, sh. 45, 1876.

Glenstrathfarrer, the glen of the river FARRER in Ross and Inverness shires. Commencing 9 miles E of the head of Loch Carron, and descending $27\frac{1}{2}$ miles eastward to Strathglass in the vicinity of Erchless Castle, it communicates, at the head, with a wild mountain pass (1800 feet) to Lochalsh, and is traversed, in its middle and lower reaches, by a carriage road to Strathglass. It contains, immediately above the upper end of that road, Loch Monar; forms, in the bottom of its lower reach to the extent of about one-third of its entire length, a chain of circular, meadowy spaces, flanked by bold, rocky mountains, with scenery little inferior to that of the Trossachs; contains, in two of these circular spaces, the lakes Miulie and Bunacharan; and, except for having the mansion of Monar Lodge at the foot of Loch Monar and a shooting-box of Lord Lovat on Loch Miulie, is nearly all uninhabited, and reserved for deer forests.—*Ord. Sur.*, shs. 82, 83, 1882-81.

Glentaggart (Gael. 'vale of the priest'), a small glen in the S of Douglas parish, Lanarkshire, descending $2\frac{1}{2}$ miles north-eastward to Glespin Burn. It anciently contained a chapel.

Glentanner. See ABOYNE.

Glentarf. See TARF WATER.

Glentarken, a glen in Comrie parish, Perthshire, descending from an altitude of 1150 feet 2 miles south-by-eastward to Loch Earn (306 feet) at a point $1\frac{3}{4}$ mile W by N of St Fillans. It contains a huge monolith, the 'Great Stone of Glentarken.'—*Ord. Sur.*, sh. 47, 1869.

Glentendal. See GLENDHU, Ardehattan, Argyllshire.

Glenterra or **Glentirrow**, a moorish tract in Inch parish, Wigtownshire, $5\frac{1}{2}$ miles ENE of Stranraer, and $2\frac{1}{2}$ SW of New Luce. It contains four standing stones, supposed to be remains of an ancient Caledonian stone circle; whilst embedded in a peat moss, 3 feet below the surface, is a regular line of stepping-stones about $\frac{1}{4}$ mile long, an artificial passage seemingly through a swamp formed previous to the growth of the peat moss.—*Ord. Sur.*, sh. 3, 1856.

Glentilt, a glen in Blair Athole parish, N Perthshire, traversed by the TILT, which, formed by TARB Water and two other head-streams at an altitude of 1480 feet, runs $13\frac{1}{2}$ miles south-westward, till, after a descent of nearly 1100 feet, it falls into the Garry at Blair Athole village. Flanked along most of its south-eastern side by the huge mass of BENGLO (3671 feet), this glen is distinguished from every other in the Highlands by its straightness, depth, and narrowness, and by the striking contrast of savage wildness at the upper end and the beautiful birch and alder woods at the lower. Marble, grey, white, and green, was discovered here about the year 1818; and to the geologist Glentilt is classic ground, as having towards the close of the 18th century furnished evidence for the Huttonian or denudation theory. It is interesting, too, as a favourite hunting-ground of Scottish sovereigns—notably of James V. (1529) and of Queen Mary (1564). And Queen Victoria writes in her *Journal* (12 Sept. 1844):—'At a little before four o'clock Albert drove me out in the pony phaeton till nearly six—such a drive! Really, to be able to sit in one's pony carriage, and to see such wild, beautiful scenery as we did, the farthest point being

only 5 miles from the house, is an immense delight. We drove along Glentilt, through a wood overhanging the river; and as we left the wood, we came upon such a lovely view—Benglo straight before us, and under these high hills the river Tilt gushing and winding over stones and slates, and the hills and mountains skirted at the bottom with beautiful trees; the whole lit up by the sun; and the air so pure and fine. But no description can at all do it justice, or give an idea of what this drive was. Oh! what can equal the beauties of nature? What enjoyment there is in them! Albert enjoys it so much; he is in ecstasies here. He has inherited this love for nature from his dear father. We went as far as the Marble Lodge, a keeper's cottage, and came back the same way.' Once more, in the 'Third Great Expedition,' on 9 Oct. 1861, the Queen and the Prince Consort, with Prince Louis of Hesse, drove up Glentilt as far as Forest Lodge (8 miles), thence rode on ponies to Bynack Lodge (10 more), and thence again by carriage to Balmoral—in all having travelled 69 miles since starting that same morning from Dalwhinnie.—*Ord. Sur.*, shs. 64, 55, 1874-69.

Glentirrow. See GLENTERRA.

Glentoo, a lake in Balmaghie parish, Kirkcudbrightshire, 5 miles W of Castle-Douglas. Lying 220 feet above sea-level, it has an utmost length and breadth of 4 and $2\frac{3}{4}$ furlongs, and contains pike and perch.—*Ord. Sur.*, sh. 5, 1857.

Glen Tower, a mansion in Fossoy parish, Kinrossshire, romantically seated on a gorge of the river Devon, 4 miles above the Caldron Linn, and 6 ENE of Dollar. It was built in 1881, and is in the Swiss chalet style.

Glenratheren. See LINTRATHEN.

Glenreig. See TREIG.

Glentromie, a glen in Kingussie and Insch parish, SE Inverness-shire, traversed by the Tromie, which, issuing from Loch an t-Seilich (1400 feet) in GAICK Forest, winds $10\frac{3}{4}$ miles north-by-eastward till, after a descent of 675 feet, it falls into the Spey at a point $1\frac{1}{2}$ mile ENE of Kingussie station. Overhung around its head by rounded summits of the Grampians, rising to altitudes of from 2500 to 3000 feet above sea-level, Glentromie presents, in its middle reach, a somewhat outspread and unattractive aspect; but contracts, for the last 4 miles, into a picturesque wooded defile, flanked by an imposing precipitous acclivity. It takes down a road from Blair Athole to Strathspey.—*Ord. Sur.*, sh. 64, 1874.

Glentrool. See TROOL.

Glentruim, a glen on the mutual border of Kingussie and Laggan parishes, Inverness-shire, traversed by the Truim, which rises among the central Grampians, at an altitude of 2100 feet, close to the Perthshire border, and thence runs $15\frac{3}{4}$ miles north-north-eastward, till, after a descent of 1280 feet, it falls into the Spey at Invernahaven, 6 miles SW of Kingussie village. From nearly its head to its foot it takes down the great high road from Perth to Inverness, and also the Highland railway, with DALWHINNIE station thereon, and presents, for the most part, a moorish, bleak, and cheerless aspect. Glentruim House, in the angle between the Spey and the Truim, 7 miles SW of Kingussie, is the seat of Lieut.-Col. Lachlan Macpherson (b. 1835; suc. 1868). Near it are a post office of Glentruim under Kingussie and a public school.—*Ord. Sur.*, shs. 63, 64, 1873-74.

Glen Tulchan, a modern mansion in Fowlis-Wester parish, central Perthshire, on the right bank of the Almond, between Buchanty and Glenalmond College, 5 miles WNW of Methven station.

Glen turret, a glen of Monzievaird and Strowan parish, Perthshire, traversed by Turret Burn, which, rising on the eastern side of BEN CHONZIE at an altitude of 2000 feet above sea-level, runs $8\frac{1}{2}$ miles south-eastward and southward (for the last 2 along the Crieff border), till, after a descent of 1800 feet, it falls into the Earn at a point $\frac{1}{2}$ mile W of the town of Crieff. It embosoms, within the first three miles, Lochan Uaine ($1 \times \frac{1}{2}$ furl.; 1523 feet) and Loch Turret ($1 \text{ mile} \times 2\frac{3}{4}$ furl.; 1127 feet); presents, till $2\frac{1}{2}$ miles below the latter, a con-

tracted, rugged, bleak, and wild appearance; but thereafter opens into a beautiful vale. Glenturret Lodge, at the NE corner of Loch Turret, 7 miles NNW of Crieff, is a castellated shooting-box of Sir Patrick Keith Murray of Ochertyre.—*Ord. Sur.*, sh. 47, 1869.

Glenurchy. See GLENORCHY.

Glenure, a glen in Ardchattan parish, Argyllshire, descending $3\frac{3}{4}$ miles west-north-westward to Glen Creran at a point $3\frac{3}{4}$ miles NE of the head of Loch Creran. Its upper part exhibits sterile grandeur. Its lower part contains Glenure House, which, occupied now by a farmer, with Barcaldine still gives designation to Sir Duncan Alexander Dundas Campbell, third Bart. since 1831 (b. 1856; suc. 1880).—*Ord. Sur.*, sh. 53, 1877.

Glenurquhart, a finely-wooded glen in Urquhart and Glenmoriston parish, Inverness-shire, extending 9 miles eastward from CORRIEMONY to DRUMNADROCHT on Loch Ness, and traversed from head to foot by the ENRICK, which, 6 miles above its mouth, expands into Loch MEIKLIE. From its head to that lake Glenurquhart widens into a fine oval vale, and, afterwards contracting into a rocky gorge, continues for some little distance to be a defile, till it again expands with increasing breadth towards its mouth. It is joined on the right at a sharp angle, near its mouth, by the glen of the COILTIE; contains a number of mansions; abounds, in its middle and lower reaches, with picturesque natural scenery, richly enhanced by artificial embellishment; and is overhung, along most of the right, by Mealfourvie (2284 feet) and other heights of Balmacaan deer-forest. A road runs up it 14 miles westward to Invercannich in Strathglass. There is an Episcopal mission house, St Ninian (open only in autumn), and a post office under Inverness. See URQUHART.—*Ord. Sur.*, sh. 73, 1878.

Glenury, a glen, descending for $2\frac{1}{2}$ miles SSE to Cowie river, about a mile and a half WNW of Stonehaven, Kincardineshire, and containing a large distillery.

Glenvale, a deep romantic ravine on the mutual border of Strathmiglo parish, Fife, and Portmoak parish, Kinross-shire, $3\frac{3}{4}$ miles ENE of Milnathort. Flanked on the N by the West Lomond (1713 feet), on the S by Bishop Hill (1292), and itself having an average elevation of 500 feet, it offers some resemblance to the ravine of Mouse Water at CARTLAND Crags, and was a refuge of Covenanters in the days of the persecution.—*Ord. Sur.*, sh. 40, 1847.

Glenwhurry. See GLENQUHARRY.

Glespin, a burn in Douglas parish, Lanarkshire, running 5 miles north-by-westward to Douglas Water, at a point $1\frac{3}{4}$ mile SW of Douglas town.

Glesterlaw, a place on Bolshan estate, in Kinnell parish, Forfarshire, 3 miles NE of Fricockheim. Cattle fairs are held at it on the last Wednesday of April, the fourth Wednesday of June, the third Wednesday of August, and the Monday in October after Falkirk.

Glimsholm, a small island in the S of Orkney, in the W end of Holm Sound, adjacent to the NW corner of Burray, and $2\frac{1}{2}$ miles W of Roseness in Pomona.

Glitness, a small island in the east of Shetland, in the lower part of Catfrith Voe, $6\frac{1}{2}$ miles N by E of Lerwick.

Glomach or **Allt a'Ghlomaich,** a mountain burn in the E of Kintail parish, SW Ross-shire, issuing from Loch a'Bhealaich ($5\frac{1}{2} \times 2\frac{1}{4}$ furl.; 1242 feet), close to the Inverness-shire border, and winding $3\frac{3}{4}$ miles north-north-westward till it unites with the Allt na Doire Gairbhe to form the ELCHAIG. In an alpine ravine it makes a profound waterfall, the highest and wildest in Scotland, at a point 7 miles ENE of Kintail church. With a total descent of 350 feet, the fall is all a sheer leap till 50 feet from the foot, encountering there a bisection or slight interruption from an outjutting ledge of rock; and it terminates in a pool lying 750 feet below the crests of the ravine. During times of drought it is too trivial in volume to be striking in itself, but in connection with its overhanging heights and other surroundings it always presents a most impressive scene. The approaches to it, on any side, are at all times difficult and

often dangerous, and ought never to be attempted without a guide.—*Ord. Sur.*, sh. 72, 1880.

Gloom Castle. See CASTLE CAMPBELL.

Gloomingside, Cannel's, or Gannel Burn, a stream of Tillicoultry parish, Clackmannanshire, springing from Maddy Moss, on the NW shoulder of King's Seat Hill, and running $1\frac{3}{4}$ mile south-south-westward, till, after a total descent of 1100 feet, it unites with Daiglen Burn to form the Burn of Tillicoultry, at a point $\frac{2}{3}$ mile N by W of the town. Its waters were thought to be deadly to trout owing to the presence of some mineral, till in 1833 Mr Archibald of Tillicoultry (then a boy of 14) fished it by accident one misty day, and was rewarded by a fine basketful. For two or three years he and his brother-in-law, Mr John Ure, preserved the secret, and caught many a trout of from $\frac{1}{4}$ to $\frac{3}{8}$ lb.; but now the burn has been so fished that it is no better than any of its neighbours.—*Ord. Sur.*, sh. 39, 1869.

Glorat, a mansion in Campsie parish, Stirlingshire, 1 mile E of Lennoxton, and $1\frac{1}{4}$ NW of Milton. The lands of Glorat came by marriage to Sir John Stirling, armour-bearer to James I., by whom he was knighted in 1430; and his descendant, Sir Charles Elphinstone Fleming Stirling, eighth Bart. since 1666 (b. 1832; suc. 1861), is the present owner. A finely timbered demesne lies around the house, and contains vestiges of two ancient Caledonian forts.—*Ord. Sur.*, sh. 31, 1867.

Gloup, a sea-washed cavern in a cliff of St Andrews parish, Orkney. Opening from the sea, it measures 60 feet in length by 56 in width, and in the reign of James V. was the scene of the suicide of Sir James Sinclair, natural son of the Earl of Orkney.

Glupe. See DUNCANSBAY HEAD.

Goales, a deep romantic fissure in Kilmany Hill, Kilmany parish, Fife. It is traversed by a brook, almost dry in summer, but considerably voluminous in winter, and it is adorned with plantations and beautiful walks.

Goatfell (an English corruption of the Gael. *gaoth-ceann*, 'windy head'), a mountain of Kilbride parish, in the E of Arran, Buteshire. Extending $4\frac{1}{2}$ miles northward from Brodick Park to Glensannox, and 3 westward from the coast to Glenrosie, it attains an altitude of 2877 feet at a point $3\frac{1}{2}$ miles NNW of Brodick church; forms a grand feature in the scenery of the Firth of Clyde; and contains many striking close scenes among its own glens and ravines. Its summit commands an almost unrivalled view—north-westward to the Paps of Jura; northward to Ben Cruachan; north-eastward to Ben Lomond; eastward to Ayrshire; southward to Ailsa Craig and the coast of Ireland; and westward to the neighbouring jagged ridges of Caisteal Abhail (2735 feet), Cir Mhor (2618), and Ben Tarsuinn (2706). Its S end is bold and rugged, yet can be readily scaled by one or other of two paths from Brodick; its E side, flanking a narrow belt of sea-board, rises thence with abrupt and rugged sternness, and presents an imposing aspect to the Firth; its N end and its W side ascend in mural cliffs and tremendous acclivities from engirdling glens; its shoulders converge in three lines, from S, E, and W, into a heaving plateau; and both its highest summit and another one 694 feet lower have the form of conical peaks. For a fine description of the mountain and its ascent see *Days at the Coast*, by the late Hugh Macdonald.—*Ord. Sur.*, sh. 21, 1870.

Goatmilk, a hill (561 feet) in Kinglassie parish, Fife, on the S side of the Vale of Leven, 9 furlongs S by W of Leslie. An ancient fort that stood on it is said to have been one of a chain of Danish forts extending from Fife Ness to Stirling.—*Ord. Sur.*, sh. 40, 1867.

Goblin's Cave. See BEALACH-NAM-BO.

Goblin's Dell. See ARDTUN.

Gockstane or Goukstane, a burn in the E of Closeburn parish, Dumfriesshire, rising on Gavin Moor, and running $5\frac{3}{8}$ miles south-eastward, chiefly along the Kirkmahoe border, till it falls into the Water of Ae at a point $\frac{1}{2}$ mile SSW of Kirkmichael church.—*Ord. Sur.*, shs. 9, 10, 1863-64.

Gogar, a village, a quondam parish, and a burn in the W of Edinburghshire. The village, pleasantly situated

on the banks of the burn, is about a mile from the railway station, and $5\frac{1}{2}$ miles WSW of Edinburgh. The parish since 1599 has been incorporated partly with Ratho, partly with Kirkliston, and chiefly with Corstorphine; and contains Gogar House, Gogar Burn House, Gogar Mount, Gogar Park, Gogar Green, Gogar Mains, Gogar Bank, Gogar Nursery, and Over Gogar—all within 1 or 2 miles of the station. Its church was older than that of Corstorphine, and, having long been used only as a mausoleum, was reopened after restoration on the 26 of May 1891. On 27 August 1650, twenty-five days before the Battle of Dunbar, Gogar was the scene of an artillery duel between the Scotch under General Leslie and the English under Oliver Cromwell, a skirmish thus described by the Protector himself:—'We marched westward of Edinburgh towards Stirling, which the Enemy perceiving, marched with as great expedition as was possible to prevent us; and the vanguards of both the Armies came to skirmish—upon a place where bogs and passes made the access of each Army to the other difficult. We, being ignorant of the place, drew up, hoping to have engaged; but found no way feasible, by reason of the bogs and other difficulties. We drew up our cannon, and did that day discharge two or three hundred great shot upon them; a considerable number they likewise returned to us; and this was all that passed from each to other. Wherein we had near twenty killed and wounded, but not one Commission Officer. The Enemy, as we are informed, had about eighty killed, and some considerable Officers. Seeing they would keep their ground, from which we could not remove them, and our bread being spent—we were necessitated to go for a new supply; and so marched off about ten or eleven o'clock on Wednesday morning'—first to the camp at the Braid Hills, and thence to Musselburgh (Carlyle's *Cromwell*, part vi., letter 138). Gogar Burn, rising near the middle of Kirknewton parish, winds 13 miles north-north-eastward through or along the borders of Kirknewton, Ratho, Currie, Corstorphine, and Cramond, till it falls into the river Almond at a point $3\frac{1}{2}$ miles WNW of Corstorphine village. It abounds with excellent trout, but is strictly preserved.—*Ord. Sur.*, sh. 32, 1857.

Gogo Water, a burn in Largs parish, Ayrshire, rising in two head-streams on Box Law (1543 feet), and running 5 miles west-south-westward to the Firth of Clyde at Largs town. It receives midway the tribute of Greta Water, flowing $4\frac{1}{4}$ miles south-westward from the Hill of Stake (1711 feet) at the Renfrewshire border.—*Ord. Sur.*, shs. 30, 29, 1866-73.

Goil, a fine sea-loch in Lochgoilhead parish, Cowal, Argyllshire, extending 6 miles south-south-eastward to Loch Long at a point directly opposite the head of Gare Loch, and just on a line therewith. Its breadth varies between 2 and $6\frac{1}{2}$ furlongs. At its head and along part of its eastern shore is the village of LOCHGOILHEAD; and it is flanked along most of that side by the rugged and lofty mountain group of ARGYLL'S BOWLING-GREEN, whose cliff-like heights rise so abruptly as to leave no space for a road. On the western side Loch Goil is flanked by BEN BHEULA (2557 feet), and lesser intermediate eminences; and here, towards the foot, stand ruined CARRICK Castle and a watering place of recent growth.—*Ord. Sur.*, sh. 37, 1876.

Goin, Loch, or Blackwoodhill Dam, a lake partly in Fenwick parish, Ayrshire, but chiefly in Eaglesham parish, Renfrewshire, $3\frac{1}{2}$ miles SW of Eaglesham village. Lying among moorlands, 880 feet above sea-level, it has an utmost length and breadth of 7 and 3 furlongs, and served as a dam and reservoir to send off water-power, through Dumvan Dam and Holehall Burn, to the now silent mills of Eaglesham. Lochgoin farm has been noticed under FENWICK. On 27 June, 1896, a monument was unveiled to the memory of John Howie, author of the 'Scots Worthies,' who was born at the farm.—*Ord. Sur.*, sh. 22, 1865.

Goldberry, a precipitous seaward hill (456 feet) in West Kilbride parish, Ayrshire, 9 furlongs N by E of Farland Head. Tradition says that a detachment of

Haco's Norwegian army, in 1263, was attacked and routed here by a body of Scotch under Sir Robert Boyd.—*Ord. Sur.*, sh. 21, 1870.

Goldielands, a Border peelhouse in Hawick parish, Roxburghshire, on the right bank of the Teviot, nearly opposite the influx of Borthwick Water, 2 miles SW of Hawick town. It is still inhabited, and one of the best preserved peels in Scotland—square, massive, and of venerable aspect, with almost as much masonry in its walls as open space within. Grose's *Antiquities* (1789) shows two towers; and the site of the one since demolished, close by the other, is still visible. Its lairds were descendants of Walter Scott (1532-96), natural son of the famous Sir Walter of Buccleuch; and, the last of them dying without male issue towards the close of the 17th century, the estate reverted to the Buccleuch family. The first of the line was probably the 'Laird's Wat' of the Raid of the Reidswyre (1575); and his son it may have been that helped in the rescue of Kinnmont Willie (1596). 'Gaudilands,' too, is prominently mentioned in the ballad of *Jamie Telfer o' the Fair Dodhead*; but it seems a baseless tradition that the last of its lairds was hanged for reiving over the gateway of his own tower.—*Ord. Sur.*, sh. 17, 1864.

Goldielea, an estate, with a mansion, in Troqueer parish, Kirkcudbrightshire, 3 miles SW of Dumfries.

Gollanfield, a mansion in Petty parish, NE Invernesshire, 1½ mile ENE of Fort George station, ½ mile nearer which is Gollanfield village.

Gollochy, a burn in Rathven parish, NW Banffshire, running 4 miles north-by-westward to the sea.

Golspie, a village and a parish on the E coast of Sutherland. The village, standing at the mouth of Golspie Burn, has a station on the Sutherland section of the Highland railway, 84½ miles N by E of Inverness. It ranks as a sub-port and a place of considerable trade, but consisted of only a few mean fisher huts, till, early in the 19th century, it began to undergo great change, and now is the most important and prosperous village in the county, and one of the neatest and largest in the N of Scotland. A pier partly of wood and partly of stone was erected in 1894 for the purpose of providing a shelter for the fishing boats. It reaches from the shore a distance of 200 feet, then bends southwards for 80 feet more. The estimated cost of the works was £2000, of which Government gave £1400, and the late Duke of Sutherland £500, the balance being made up locally. Golspie has a post office, with money order, savings bank, insurance, and telegraph departments, branches of the British Linen Co. and Town and County Banks, a grain mill, a commodious and picturesquely-situated hotel, a handsome memorial fountain of the late Duchess of Sutherland, a stamp office, a public reading-room and library, a gaswork, a drill hall, and fairs on the Saturday of April, of May, of August, of October, and of November before Beaully. Golspie is the headquarters of the First Sutherland Highland Rifle Volunteers, and has a battery of the First Caithness Artillery Volunteers. The parish church, at the NE end of the village, beside Golspie Burn, was built in 1738, enlarged in 1751, and is kept in good repair. A Free church stands at the SW end, near the shore. Pop. (1841) 491, (1861) 876, (1871) 1074, (1881) 956, (1891) 935.

Anciently called Culmailie, the parish contains also the hamlet of BACKIES and the village of Little Ferry, 3½ miles SSW of Golspie village at the mouth of Loch Fleet, where the Duke of Sutherland has built a convenient pier, accessible at low water. It is bounded W by Rogart, N and NE by Clyne, SE by Dornoch Firth, and S and SW by Loch Fleet and the river Fleet, dividing it from Dornoch. Its greatest length, from ENE to WSW, is 7½ miles; its utmost breadth, from NW to SE, is 6½ miles; and its area is 21,125½ acres, of which 768½ are foreshore and 240½ water. The FLEET flows 2 miles east-south-eastward along the Dornoch border to the head of salt-water Loch Fleet, which, 3½ miles long and from 1½ furlong to 1½ mile broad, opens to Dornoch Firth beyond Little Ferry, where there is a harbour and a pier

accessible at low water; and to Loch Fleet, near Balblair, Culmailie Burn runs 4½ miles south-eastward, rising at an altitude of 1000 feet, and passing through Loch Lundie (7×1½ furl.; 556 feet). Golspie Burn issues from Loch nan Corn (4½×3½ furl.; 1155 feet), near the northern border, and thence runs 5½ miles south-eastward to the sea along Dunrobin Glen, which, flanked by mountains in its upper and middle reaches, expands in its lower into a beautiful vale. Three lakes besides those mentioned are Loch Unes (1½×½ furl.), on Ferry Links; Loch nan Caorach (2×¾ furl.), towards the middle of the parish; and isleted Lochan t-Salachaidh (5×1½ furl.; 552 feet), on the Rogart border. Except for a flat triangular tract to the SE of the high road and the railway, the surface, almost all of it, is hilly or even mountainous, attaining 600 feet at Creag Mhor, 700 at Silver Rock, 902 at Aberscross Hill, 1256 at staturcrowned BEN-A-BERAGIE, 1464 at BEN LUNDIE, 1220 at Cnoc na Gamha, 1239 at Cagar Feosaig, 1706 at BEN HORN, and 1326 at Meall Odhar, of which the three last culminate right on the Clyne border. The landward part of the parish consists of gneissose rocks dipping SE, overlaid unconformably by rocks belonging to the middle division of the Old Red sandstone, of which all the hills here mentioned are composed. Above these there lies a belt of Jurassic rocks, forming reefs exposed at low water, and extending from Lower Lias to Upper Middle below Dunrobin, and Lower Oolite sandstone (white) at the eastern boundary of the parish. The soil on the arable lands ranges from very light sand to medium clay, the best and most general being loam with a slight admixture of clay. The parish is a better agricultural district than any in the county, extensive reclamations having been carried out since 1809. The coast to the NE of Golspie village is mostly rocky; to the SW, is low and sandy, fringed with links. Gillander's Cave is in the NE district, and Torquil's Cave in a hill above Dunrobin Castle. Very good red sandstone has been worked in two quarries, white sandstone in one, and coal also exists. The chief antiquities are remains of an ancient Caledonian stone circle, hut-circles, and graves, an eirde-house, vestiges of five Pictish towers, a richly carved stone, with cross, and ruins of a chapel. Dunrobin Castle has been noticed separately; and the Duke of Sutherland holds nearly all the parish. It is in the presbytery of Dornoch and synod of Sutherland and Caithness; the living is worth £256. The public school at Golspie, with accommodation for 357 children, has an average attendance of about 200, and a grant of over £245. Pop. (1801) 1616, (1831) 1149, (1861) 1615, (1871) 1804, (1881) 1556, (1891) 1451, of whom 713 were Gaelic-speaking.—*Ord. Sur.*, sh. 103, 1878.

Golyn. See GULLANE.

Gometra, an island in Kilninian and Kilmore parish, Argyllshire, on the S side of Loch Tuadh, immediately W of Ulva, and 2 miles NNE of Staffa. Measuring 2 miles by 1, it is separated from Ulva by only a narrow strait, oftener dry than under water, and comprises a considerable extent of arable land, with fertile loamy soil. Elsewhere it consists of eruptive rocks, that rise to a height of 800 feet, and present a skirt of basaltic columns, with a receding series of terraces. It has two harbours, one on the N, the other on the S; and is an excellent fishing station. Pop. (1837) 168, (1861) 23, (1871) 26, (1881) 30, (1891) 31.

Gonachan, a hamlet and a burn in Fintry parish, Stirlingshire. The hamlet lies at the mouth of the burn, 5 furlongs E by S of Fintry church. The burn, rising near the watershed of Campsie Fells, at an altitude of 1550 feet, close to the boundary with Campsie parish, runs 3¾ miles north-eastward to Endrick Water at the hamlet.—*Ord. Sur.*, shs. 30, 31, 1866-67.

Gonar, a burn of Strichen and Tyrie parishes, NE Aberdeenshire, running 2 miles south-south-eastward to North Ugie Water at a point 2½ miles ENE of New Pitligo.

Goodie Water, a sluggish stream of S Perthshire, issuing from the Lake of Monteith, and winding 8½ miles east-south-eastward through the parishes of Port

of Monteith and Kincardine, till it falls into the Forth at a point $1\frac{1}{2}$ mile NW of Gargunnoch station. For about 2 miles of its course, from a point a little above Goodiebank, it forms the boundary between Kincardine and Kilmadock. It contains fine red-fleshed trout; expanded formerly into a lacustrine marsh, called Goodie Lake; and was the scene of a serious disaster to the Argyll men in the military events of 1646.—*Ord. Sur.*, shs. 38, 39, 1871-69.

Goranberry. See CASTLETON, Roxburghshire.

Gorbals. See GLASGOW.

Gordon, a village and a parish in the W of Merse district, SW Berwickshire. The village, West Gordon, stands 500 feet above sea-level, 8 miles NW by N of Kelso; whilst its station, on the Berwickshire loop-line of the North British, is $10\frac{1}{2}$ miles NNE of St Boswells, 6 ENE of Earlston, 4 WSW of Greenlaw, and $11\frac{1}{2}$ WSW of Duns. It consists of a long street, containing some good shops and dwelling-houses; is surrounded with small enclosures belonging to the inhabitants; and has a post office and a small subscription library.

The parish anciently comprehended Dirrington Laws district, now annexed to Longformacus, and another district now forming part of Westruther. It is bounded NE and E by Greenlaw, SE by Hume, S by Earlston, W by Legerwood, and NW by Legerwood and Westruther. Its utmost length, from E by N to W by S, is $6\frac{3}{4}$ miles; its utmost breadth, from N to S, is $4\frac{1}{2}$ miles; and its area is 9739 acres, of which $25\frac{3}{4}$ are water. EDEN Water winds $2\frac{3}{4}$ miles east-north-eastward along the north-western border, then $4\frac{1}{2}$ miles south-by-eastward across the interior; whilst BLACKADDER Water traces $1\frac{1}{2}$ mile of the boundary with Greenlaw. The surface, gently undulating, but higher for the most part than any district in the eastern division of the Merse, declines to 450 feet above sea-level along the Eden, thence rising to 666 feet near East Gordon, 782 near Rumbleton Law, 731 near Hexpath, 619 near Fallside, 891 at an ancient camp near the NW border, and 788 near Huntlywood. The rocks are partly Devonian, chiefly Silurian; and much of the land has, within the last hundred years, been reclaimed from moss or moor to a state of high cultivation. Some two-thirds of the entire area now are arable, 500 acres are under wood, and the rest is pastoral or waste. From the 12th till early in the 14th century this parish was the original seat of the Gordons, ancestors of the Duke of Richmond and Gordon and of the Marquis of Huntly; and two farms retain to this day the name of Huntly and Huntlywood. Greenknowe Tower, now a fragmentary ruin, was before the Union frequently used as a place of refuge by the inhabitants when suddenly surprised by incursions of the English, and later was the residence of Walter Pringle, a zealous Covenanter. Gordon is in the presbytery of Earlston and synod of Merse and Teviotdale; the living is worth £197. The ancient church, St Michael's, was, in 1171, transferred by the monks of Coldingham to those of Kelso in exchange for the church of Earlston. The present parish church was built in 1763; there is also a Free church; and a public school, with accommodation for 194 children, has an average attendance of about 160, and a grant of over £162. Pop. (1801) 800, (1831) 882, (1861) 931, (1871) 876, (1881) 832, (1891) 843.—*Ord. Sur.*, sh. 25, 1865.

Gordon Arms, an inn in Yarrow parish, Selkirkshire, on Yarrow Water, at the intersection of the road from Selkirk to Moffat with that from Tushielaw to Innerleithen, 13 miles WSW of Selkirk. It is a favourite anglers' haunt.

Gordon Castle, the Scottish seat of the Duke of Richmond and Gordon, in Bellie parish, Elginshire, 5 furlongs E of the Spey's right bank and 1 mile NNE of Fochabers. Alexander Seton, elder son of the daughter and heiress of Sir Adam Gordon, took the name of Gordon in 1449, when he was made first Earl of Huntly. He acquired, through marriage, the lands of Boggygeich or Bog-of-Gight; and by his son and successor, George, high chancellor of Scotland in 1498, Bog-of-Gight

Castle was founded. Richard Franck describes it in the 17th century as a 'palace all built with stone, facing the ocean; whose fair front—set prejudice aside—worthily deserves an Englishman's applause for her lofty and majestic turrets, that storm the air and seemingly make dints in the very clouds.' As Bog-of-Gight the castle figures in the history of the six Earls of Huntly (1449-1599) and the four Marquises of Huntly (1599-1684), as Gordon Castle in that of the five Dukes of Gordon (1684-1836), the fourth of whom was author of *Cauld Kail in Aberdeen*, while his butler, William Marshall, composed the famous air of *Tullochgorum*. The 'Cocks of the North' or 'Gudemen of the Bog,' as these northern magnates were styled, were a dynasty famous for adherence to the Catholic faith and to the house of Stuart; their names are associated with those of Brechin (1452), Flodden (1513), Pinkie (1547), Corrichie (1562), Donibristle (1592), Glenlivet (1594), Frenedraught (1630), Edinburgh Castle (1639), and Sheriffmuir (1715). The dukedom expired with the fifth Duke in 1836, when the marquise of Huntly devolved on his fifth cousin once removed, the Earl of Aboyne; but the greater part of the Gordon estates were inherited by his maternal nephew, Charles, fifth Duke of Richmond and LENNOX (cre. 1675). In 1876 the title Duke of Gordon, in the peerage of the United Kingdom, was revived in favour of Charles Henry Gordon-Lennox, present and sixth Duke of Richmond (b. 1818; suc. 1860), who holds large estates in Bauflshire, Aberdeenshire, Elginshire, and Inverness-shire.

Almost rebuilt by the fourth Duke of Gordon towards the close of the 18th century, from designs by Baxter of Edinburgh, and consisting of hard white Elgin freestone, Gordon Castle presents a northern façade 568 feet long—a four-storied centre, connected by galleries with E and W two-storied wings. The whole is battlemented; and, behind, the original six-storied tower of Bog-of-Gight rises to a height of 84 feet. The interior contains a valuable library, magnificent dining and drawing rooms, etc.; and is richly adorned with marble statues and busts, portraits, and other paintings. The family portraits include one of the Princess Annabella, James I.'s daughter and second Countess of Huntly, and another, by Sir Joshua Reynolds, of the beautiful fourth Duchess. A beech, a lime-tree, and two sycamores divide the honours of the beautifully-wooded deer-park and policies, the former 1300 acres in extent. The chief approach, on the high road between the Spey and Fochabers, is by a lofty battlemented archway between two domes. Thence the road winds for a mile through lawn and shrubbery and spreading trees until it is lost in an oval before the castle, which, though it stands on a flat nearly 4 miles distant from the Moray Firth, commands a finer view than one might look for—of the wooded plain, the Spey glittering onwards to the sea, and the village and shipping of Garmouth.—*Ord. Sur.*, sh. 95, 1876. See HUNTLY, ABOYNE, and ALVIE; the *History of the Family of Gordon*, by William Gordon (2 vols., Edinb., 1726-27) and C. A. Gordon (Edinb. 1754); and Lachlan Shaw's *History of the Province of Moray* (1775; 3d ed., Glasg., 1882).

Gordon Place, formerly a village, now part of Dyce village, in Dyce parish, Aberdeenshire, adjacent to Dyce Junction, for the Buchan and Formartine branch of the Great North of Scotland railway, $6\frac{1}{2}$ miles NW of Aberdeen. Pop., with Dyce village, (1891) 727.

Gordon, Port. See PORT GORDON.

Gordonsburgh. See MARYBURGH.

Gordon's Mills, a small village in Resolis parish, Cromartyshire, on the S shore of Cromarty Firth, at the mouth of Resolis Burn, 2 miles S of Invergordon. It had an establishment which was first a snuff manufactory, and afterwards a wool-carding mill.

Gordonstown, a mansion in Drainie parish, Elginshire, $1\frac{1}{2}$ mile from the coast, and $5\frac{1}{2}$ miles NNW of Elgin. The estate was purchased in 1636 and following years by the second son of the eleventh Earl of Sutherland, Sir Robert Gordon, vice-chamberlain of Scotland.

and a lord of the privy council, who, on 26 May 1625, had been created a baronet, this being the premier Scottish baronetcy. His grandson is famous in Morayshire legend as 'Sir Robert the Warlock,' and his grandson, the sixth baronet, dying unmarried in 1795, the title passed to Gordon of Letterfourie, the estate to Alex. Penrose Cumming, Esq. of ALTYRE, who himself was created a baronet in 1804. His nephew, Roualeyn George (1820-66), is remembered by his *Five Years' Adventures in the Far Interior of South Africa*; and his great-grandson, Sir William Gordon Gordon-Cumming, present and fourth Bart. (b. 1848; suc. 1866), holds large estates in Elginshire and Nairnshire. A building mainly of 1775-76, Gordonstown consists of a large square central block of masonry, with E and W turreted wings, dining and drawing rooms each 60 feet long, a good many fine paintings, etc.—*Ord. Sur.*, sh. 95, 1876.

Gordonstown, a small straggling village in Auchterless parish, Aberdeenshire, 3 miles W by S of Fyvie station.

Gorebridge, a village of E Edinburghshire, on the right bank of Gore Water, 4½ miles S by E of Dalkeith and 10 SE by S of Edinburgh, or 12 by railway. Immediately W of it is the ruinous square tower of Newbyres Castle; Stobs Mills, across the stream, erected in 1793, were the earliest gunpowder works in Scotland; and around are the rich mineral fields of Arniston, Dalhousie, Newbattle, and Vogrie, by the opening of which, and the railway, the village, consisting some sixty years ago of but a few houses, has become of much more importance. It has a station on the Waverley section of the North British, a post office, with money order, savings bank, and telegraph departments, a corn mill, a hotel, a police station, a gas company, a new water supply (1884), a girls' school, a library and reading-room, a public hall, a Free church, and a U.P. church, whilst near it are STOBHILL *quoad sacra* church and public school. When the Boundary Commissioners, in 1891, transferred the Gorebridge detached part of the parish of Temple to the parish of Borthwick, the villages of Gorebridge, Stobs Mills, Stobhill, and Mossend changed parishes. Pop. (1841) 240, (1861) 446, (1871) 966, (1881) 1143, (1891) 1363, of whom 849 were in Temple, 485 in Borthwick, and 29 in Newbattle.—*Ord. Sur.*, sh. 32, 1857.

Gore Water, a rivulet of Borthwick parish, Edinburghshire, formed by the confluence of Middleton North and South Burns just beneath Borthwick Castle, and winding 3½ miles north-westward through the interior and along the boundary with Newbattle, till it falls into the South Esk, at the picturesque locality of Shank Point, 1 mile WNW of Gorebridge village. It is followed throughout its course by the Waverley branch of the North British railway, and, together with its head-streams, abounds in small trout.—*Ord. Sur.*, sh. 32, 1857.

Gorgask, a burn, occasionally swelled into an impetuous torrent, in Laggan parish, Inverness-shire.

Gorgie, a village in St Cuthbert's parish, Edinburghshire, near the right bank of the Water of Leith, 1½ mile SE of the General Post Office. It has a station on the Suburban railway, and a money order, savings bank, and telegraph post office. Robert Cox, Esq., M.P., of Gorgie Mills, erected in 1894 fine model cottage dwellings for his workpeople. Pop. (1881) 656, (1891) 807.

Gorm, Loch. See GURM.

Gorthie. See FOWLIS-WESTER.

Gortleach or Gorthlick, a hamlet of Dores parish, Inverness-shire, in Stratherrick, 3½ miles SE of Inverfarigaig, and 20 SSW of Inverness, under which it has a post office.

Goseland, a hill (1427 feet) in the Kilbucho section of Broughton parish, W Peeblesshire, 2½ miles WSW of Broughton village.

Gosford, the seat of the Earl of Wemyss, in Aberlady parish, Haddingtonshire, 3 furlongs E of a small bay of its own name, 2 miles NNE of Longniddry station, and 5½ NW of Haddington. The estate was purchased, and the mansion built, in the latter half of the 18th century by the sixth Earl, whose great-great-grandson Francis

Wemyss-Charteris Douglas, ninth Earl of Wemyss since 1633, and sixth of March since 1697 (b. 1818; suc. 1833), as Lord Elcho, may be said to have created the volunteer movement in 1859, and holds large estates in Haddingtonshire, Peeblesshire, Edinburghshire, Berwickshire, and Perthshire. Standing amid extensive and finely planted grounds, Gosford lifts its top into charming vista view, as seen from the North British railway; is approached on the W side of the grounds by a fine lodge, designed by Mr Billings; and contains a large collection of pictures, many of them by the old masters. An hospital in connection with Dunglass collegiate church anciently stood at Gosford Spital, but has entirely disappeared. See WEMYSS, AMISFIELD, NEIDPATH, ELCHO, and BARNS.—*Ord. Sur.*, sh. 33, 1863.

Goshen, a village near Larbert station, Stirlingshire.

Gossaburgh, a hamlet in Yell island, Shetland.

Goukstone Burn. See GOCKSTONE.

Goules. See GOALES.

Gour or Ghobhair, Loch. See CREICH, Sutherland.

Gourdie, an estate, with a mansion, in a detached portion of Clunie parish, Perthshire, until 1891, when this detached portion was transferred by the Boundary Commissioners to the parish of Caputh. The mansion, 4½ miles NNE of Murthly station, is large and substantial; and occupies a charming site near the eastern base of Gourdie Hill (517 feet) and the northern shore of a crescent-shaped lake. It commands a delightful view, and is the seat of Charles Young Kinloch, Esq.

Gourdon, a coast village in Bervie parish, Kincardineshire, 1½ mile S by W of Bervie town. It has a station on the Bervie section of the North British railway, a post office under Montrose, with money order, savings bank, and telegraph departments, a public school, a tolerable harbour, and a boatbuilding yard. A shipping-place for the export of grain, and the import of coals, lime, and suchlike bulky articles, it carries on an extensive fishing and fish-curing industry. The harbour, improved a number of years ago at a cost of £2000, admits at ebb tide vessels drawing 12 feet of water, and affords them anchorage till the flood carries them inward to its quay. Gourdon Hill, 3 furlongs W by S of the village, on the mutual border of Bervie and Benholm parishes, rises to a height of 436 feet above sea-level, and is seen by mariners at a great distance. Pop. of the village (1831) 238, (1871) 714, (1881) 919, (1891) 1091.—*Ord. Sur.*, sh. 67, 1871.

Gourock, a burgh and watering-place in Innerkip parish, NW Renfrewshire, the older portion, or Gourock proper, lying in the bay of the same name, and the whole extending some 2 miles along the southern shore of the Firth of Clyde. By water it is 1½ mile S of Kilcreggan at the narrowest, and 4¾ miles SW of Helensburgh; whilst by road it is 2½ miles ENE of Cloch Lighthouse, and 2¼ WNW of the centre of Greenock, with which it communicates by a tramway opened on 1 July 1873. It lies along the firth, right and left from Kempoch Point, opposite the mouth of Loch Long, where the firth broadens out into its full beauty and magnificence. A hill called Barnhill (490 feet), precipitous on the western flank, and descending and narrowing to a point at Kempoch, cuts Gourock into two villages—Gourock proper and Ashton, the E and W ends of the place—each with its own bay. Gourock proper looks mainly up the Clyde, towards Rosencath and Helensburgh. Ashton, round the point, looks across the firth westward to Strone, Holy Loch, and Dunoon. Gourock Bay, measuring ¾ mile across the entrance and 3¼ furlongs thence to its inmost recess, affords good anchorage for yachts, being free from rock and shoal. West Bay is hardly a bay in the proper sense of the term, so slight is its incurvature; but its rocky or shingly beach is adapted for bathing. An extension of the Caledonian railway from Greenock, opened in 1889, and emerging from a long tunnel here, has its terminus at a new pier at Kempoch Point, while a fleet of saloon steamers connects with the watering-places on the opposite shores of the firth and with Rothesay. By the erection, however along the foreshore, of a massive embankment to

accommodate the railway station, hotel, and steamboat pier, the aspect of the bay has been greatly altered and rendered less picturesque.

The greater portion of Gourock proper is a continuous, well-built terrace-line, fully $\frac{1}{2}$ mile long, and standing on nearly a dead level close to the beach; but a considerable portion consists of short streets and separate houses on the face of the brae behind. A small portion of Ashton, joining on to the lower end of Gourock proper, and sometimes called Kempoch, is a double line of houses or short street, of similar character to the main part of Gourock proper; the greater portion is an array of villas or neat two-story houses, in terrace-line, confronting the West Bay; and a conspicuous portion consists of separate villas on a high line of road along the crest of a steep overhanging brae, with gardens and garden walls running almost precipitously down its face. The site of all the beachward portions of the town is the narrow, low platform of the old sea-margin that fringes nearly all the Firth of Clyde; and the site of the higher portions is a range of braes, abrupt or sloping, formed by the upheaval of eruptive rocks. The seaward view from the town is everywhere charming and diversified, ranging over an extensive reach of the Dumbartonshire and Argyllshire hills, mountains, and sea-lochs; the roads from its two extremities, towards Greenock and Innerkip, are delightful carriage-drives; and the steep grounds behind afford delightful rambles to pedestrians, and command magnificent views. The gentlest part of the ascent, southward from the E end of Gourock proper, is traversed by a carriage-road towards the vale of Kip Water; and the dingle thence to Greenock is partly occupied by the park and mansion of Gourock House, and contains some exquisite scenery. It was a sea-bathing resort in times long prior to the introduction of steam navigation, and it continues to be frequented more or less throughout the year, being always crowded during the summer months.

The town has a post office (R.S.O.), with money order, savings bank, insurance, and telegraph departments, a branch of the Union bank, several hotels, a gaswork (1849), a water supply (with new reservoir at Larkfield), police and coastguard stations, a bowling club, a young men's Christian association, temperance and other societies, a masonic lodge (1878), and the Gamble Institute, erected in 1874-76 at a cost of £8000 by Mrs Henry Gamble of Ashburn. Besides two public halls, with accommodation for 350 and 100 persons, this handsome building contains a public library, coffee and smoking rooms, and baths. The *quoad sacra* parish of Gourock, constituted in 1857, is in the presbytery of Greenock and synod of Glasgow and Ayr. Successor to a chapel of ease of 1776, its church was built in 1832-33 at a cost of £2300, being a neat structure with a square battlemented tower. In 1882 it was enlarged, and greatly improved by the introduction of an organ and a stained-glass window. A hall and rooms behind were added in 1874, and a manse was purchased in 1877. The Free church (1855-57) is a handsome Gothic edifice whose tower was completed in 1877. There are also a Gothic U.P. church (1848), a Congregational church (1879), a Scotch Episcopal church, St Bartholomew's (1857), and a Roman Catholic, St Ninian's (1880), which, Early English in style, is divided into two flats—the upper one the church, the lower a schoolroom. Two handsome new public schools, the Central and the Eastern, were built in 1877, and, with respective accommodation for 517 and 262 children, have an average attendance of about 340 and 240, and grants of nearly £380 and £270. The R.C. school has accommodation for 297, an average attendance of about 80, and a grant of over £74.

A monument of prehistoric times is a monolith of grey mica schist, 6 feet high and 2 in diameter, which stands between the edge of the cliff and modern Gourock Castle. It bears the sobriquet of 'Granny Kempoch,' and for ages was looked upon with superstitious awe. Sailors and fishermen would pace seven times around it, carrying a basketful of sea-sand and chanting an eerie strain, thereby to ensure a prosperous breeze; whilst a

newly-wedded pair must also make the round of it, if they would have good luck. In 1662 Mary Lamont, a girl in her 'teens, was, with other women of Gourock and Greenock, condemned and burned as a witch. She confessed, among other things, to having been present 'at a meeting at Kempoch, where they intended to cast the long-stone into the sea, thereby to destroy boats and ships; where also they danced, and the devil kissed them when they went away.'

This is not the first mention of Gourock, since James IV. sailed hence on his expedition to the Western Isles (1494); and its vanished old castle, small and unimportant though it was, is known to have been held by the powerful Douglasses down to their forfeiture in 1455. Forming the western part of Finnart barony, the lands of Gourock were thereafter held by the Stewarts of Castlemilk till 1784, when they were sold for £5000 to Duncan Darroch, once a poor Innerkip herd-boy, whose great-grandson, Duncan Darroch, Esq. (b. 1836; suc. 1864), holds estates in Renfrewshire and Ross-shire. (See TORRIDON.) To him belongs Gourock House, with its beautiful grounds, although he has never made it his home; another mansion, modern Gourock Castle, was built near the site of its predecessor in 1747, and is a plain edifice, with later additions.

So early as 1694 Sir William Stewart of Castlemilk obtained a charter incorporating the lands of Gourock into a free barony, and Gourock itself into a burgh of barony, with power to rear, build, and enlarge the same town, and to hold a court and market every Tuesday, with two annual fairs on 12 June *o. s.* and 10 Nov. *o. s.* A rope-walk, started in 1777, was removed to Port Glasgow in 1851; a copper-mine was suuk in 1780 in the valley behind Tower Hill; and the first red herring ever cured in Great Britain was cured at Gourock in 1688. These industries all are things of the past; but still, after upwards of sixty years, whinstone is largely exported from Craigmuschat Quarry. The Police Act of 1850 was adopted in 1858, the General Improvement (Scotland) Act of 1862 in 1877 and 1884; and under the Burgh Police Act of 1892 Gourock is governed by a provost, two bailies, and six other commissioners. In 1893 efforts were made unsuccessfully to extend the boundaries of the burgh. Pop. of town (1841) 2169, (1861) 2116, (1871) 2940, (1881) 3336, (1891) 4475, of whom 4431 were in the police burgh and 1949 were males; of *quoad sacra* parish (1871) 3291, (1881) 4296, (1891) 5521, of whom 5355 were in Innerkip and 166 in Greenock West Parish. Houses in town (1891) inhabited 1037, vacant 217, building 3.—*Ord. Sur.*, shs. 30, 29, 1866-73. See the Rev. David Macrae's *Notes about Gourock, chiefly Historical* (Ediub. 1880).

Gourock Burn, a rivulet of West Kilbride parish, N Ayrshire, rising at an altitude of 650 feet on the eastern border of the parish, and running $2\frac{3}{4}$ miles south-south-westward to the Firth of Clyde at Ann's Lodge.

Govan, a parish and a burgh in the lower ward of Lanarkshire, and in the extreme NW of that county. A portion of the parish which was formerly in the county of Renfrew, was, by the Boundary Commissioners, in 1892, transferred to Lanarkshire. At the same time a small strip situated within the police burgh of Renfrew was added to the parish of Renfrew; and another part—bounded on the E by the municipality of Glasgow (as fixed by the Extension of Boundaries Act of 1891), on the S by the parish of Eastwood, on the W by the parish of Abbey, and on the N partly by the parish of Abbey and partly by the then existing boundary between Lanarkshire and Renfrewshire—was transferred to Eastwood parish. Neither of these two portions had any population. Govan is bounded N by Dumbartonshire, NE by Maryhill and Barony, E by City and Rutherglen, all in Lanarkshire; S by Cathcart and Eastwood, SW by Abbey and Renfrew, and NW by New Kilpatrick, all in Renfrewshire. The Clyde divides the parish into two unequal parts, the larger extending along the S side of the river with a length of $6\frac{1}{2}$ miles, and a breadth at its widest part, near the centre, of $1\frac{1}{2}$ mile; the smaller on the N bank of the Clyde—all W of the Kelvin, ex-

cept a small patch just at the mouth—and measuring in its greatest length (along the Great Western Road, W of Kelvin Bridge) 2½ miles, and in its greatest breadth (from Whiteinch on the SW to the point on the N where the county of Dumbarton reaches the Kelvin) 2½ miles. The total land area is about 6200 acres. Govan is here taken as including the small parish of Gorbals, which has been for a long time ecclesiastically distinct, and also had, for a considerable period, as is noticed in the article GLASGOW, a separate jurisdiction. The inhabitants of Gorbals, about 1727, found themselves numerous enough to think of building a church for themselves, and, this having been begun, the heritors of Govan granted the prayer of a petition from the feuars, elders, and inhabitants of Gorbals, asking that their district should be formed into a new parish. The church was opened in 1730, but, owing to opposition from the magistrates of Glasgow—who were superiors of the barony of Gorbals, and who had offered to ‘pay the expense of the building of the church, and to give a stipend and manse to the entrant’ if the inhabitants of the Bridgend would only ‘bear scot and lot with them’—and from the University authorities, who were patrons of Govan, it was not till 1771 that the new parish of Gorbals was disjoined and erected. The lands of Little Govan and Polmadie were in the same year joined to it *quoad sacra*, and so matters remained till 1873 when the Board of Supervision reunited the two for poor law purposes in what is now known as Govan Combination. The parish of Gorbals is very small, having an area of only 28·489 acres, but it is very densely populated.

The surface of Govan is irregular. Along the Clyde it is low and flat, varying in height from 19 (Clyde View) to 24 feet (Govan burgh) above sea-level, but from this it rises to the N and S, reaching in the former direction a height of 214 feet near the county boundary, and, in the latter, of 165 feet at Ibroxhill, 170 at Haggbowse, and 137 at Titwood. With the exception of Barony parish in Glasgow, Govan is the most important and populous parish in Scotland, as well as the most valuable. This arises from the great change that has, within little more than half a century, taken place in its industries. Prior to 1840 there were on an average 4320 acres under crops of various kinds, and, besides this, there were many gardens and orchards, the produce of which went to Glasgow for sale. Now the agricultural area is very materially diminished, and is becoming less from year to year, while the area occupied by buildings of various kinds has rapidly and largely increased. Of the total valuation of the parish the portion set down as arising from agricultural land is only about the one-hundredth part, while the remaining 99/100 arise from the built area, and this will ere long, when the new docks at Cessnock in the Plantation district are finished, be materially increased. The built area includes, on the N side of the Clyde, the burgh of Partick, the Glasgow districts of Hillhead, Downhill, and Kelvinside, as well as Whiteinch; and on the S side of the river the burghs of Govan and Kinning Park, the districts of Plantation and Ibrox, and the Glasgow districts of Hutchesontown, Gorbals, Laurieston, Tradeston, Crosshill, Govanhill, East and West Pollokshields, Strathbungo, and Dumbrack.

History, etc.—The etymology of the name is uncertain. In 1518 we find it spelled Gwuan; and Leslie, in his *Scottish Descriptio* (1578), says that the parish got its name from the excellence of its ale (Anglo-Saxon *God-win*), while Chalmers, in his *Caledonia*, advances the Gaelic *Ganhan*, meaning a ditch. How the parish came to be divided between two counties is not known. It has been asserted that the whole lay originally within the county of Lanark, but that in 1677 the lands of Hagg, Titwood, and Shields were transferred to the county of Renfrew ‘for the convenience of Sir George Maxwell’ of Pollok, to whom they belonged. This, however, cannot be the case, as these lands are, in the original charter granted by the Archbishop of Glasgow in 1581, described as in Renfrewshire. The appearance of the

district in late prehistoric times has already been alluded to in the article GLASGOW, but in connection with this it may here be noticed that in the parish of Govan there are beds of finely laminated clay and sand at different places at considerable heights above the sea. In beds of clay at Balshagray and Gartnavel, about 90 feet above sea-level, the late Mr Smith of Jordanhill found marine shells, of which 10 per cent. were of types now living in colder seas. Whiteinch was, as the name implies, formerly an island, as was also part of the lands of Meadowside, and islands they remained till late in the historic period. There is mention made of the islands between Govan and Partick in one of the documents in the chartulary of Glasgow, and in the map in Blaeu’s Atlas, published in 1654, Whiteinch and a number of islands adjacent are shown, as are also villages at Partick, ‘Little Gouan,’ at the S end of Glasgow Bridge, and ‘Mekle Gouan,’ where the present burgh stands. This map also shows the parish intersected by a small stream which entered the Clyde opposite Stobeross. The land at Whiteinch was, till near the middle of the nineteenth century, very low, but about 1840 the Clyde Trustees got permission to deposit dredged material on it, and in this way the level over a space of 69 acres was raised from 10 to 15 feet.

The earliest notices of Govan that are to be found are in connection with church matters. In 1136, when Glasgow Cathedral was formally consecrated, King David gave to the See the lands of Perteye and also of Govan (*Govan cum suis divisis*), and Bishop Herbert (1147-64) erected the church into a prebend and bestowed it on his chaplain; and from this time onward to the Reformation we find frequent mention of various prebendaries of the parish. In 1319 we find Edward II. playing with the assumption of the power over Scotland that had been lost for ever, and nominating ‘*Johannes de Lund*,’ or Lundy, prebendary of Govan, but the presentee probably never appeared in his benefice. In 1525 Walter Betoun was ‘*Rector de Govan*,’ and in 1527 he assisted at St Andrews at the trial of Patrick Hamilton. His successor, Stephen Beatoun, presented to the charge by Queen Mary in 1561, was the last of the Roman Catholic clergymen. He was permitted to retain the temporalities of the benefice as long as he lived, and as, immediately before his death, he gave a lease of the teinds to his brother, the latter managed to retain them for other nineteen years, to the great loss of the University of Glasgow, to which they had been granted.

After the Reformation Govan had a succession of eminent ministers. When the revenues of the vicarage of Govan were granted to the University, one of the conditions attached was that the principal of the University should preach at Govan every Sunday, and so practically be minister of the parish, though there was also an ‘exhorter.’ ‘We have,’ says the king in the charter, ‘thought it to be right, when our college is supported out of the tythes and revenues of that church, that they who provide temporal things should receive spiritual things, and not be defrauded of the bread of life, which is the word of God.’ The principal of the University, when this grant was made, was the celebrated Andrew Melvil, and according to the account given by his nephew, James, in his *Diary*, the Regent Morton was in his action in the matter exercising some political *finesse*. James Melvil says that this ‘guid benefice, paying four-and-twentie chalders of victuall,’ was offered to his uncle, if he would only keep his views of church government in the background. When this was refused the appointment was kept open for two years, dangling as a sort of bait before the eyes of the worthy principal. Morton finding this all in vain, at length granted the revenues to the University with the above-mentioned condition as regards the church services, hoping thus in an indirect way ‘to demearit Mr Andro, and cause him relent from dealing against bischopes; but God keptit his awin servant in uprightnes and treuthe in the middis of manie heaveie tentationes.’ When Melvil was transferred to St Andrews

in 1580 he was succeeded by Thomas Smeton, after whom came Patrick Sharpe, and Robert Boyd the last of the principals of the University who also was minister of Govan. Complaint had been made as early as 1596, and again in 1606, that there was no one 'to teiche ye youthe of ye parochin of Govane dwellant besyde ye kirk yairrof,' and when Charles I. granted a charter of confirmation to the University in 1630 (ratified 1633) special power was given to the University authorities 'of electing, nominating, presenting, and accepting for the proper service of the cure at the said church of Govan, a minister who shall take up his actual residence at the said church.' This power had been acted on previously, for a James Sharpe had been appointed minister in 1621; and in 1637 the stipend was assigned of 'fyve hundredth merks usuall money of the realme, twentie-four bollis bere, and eight bollis meil . . . togedder with ye whole mailis and duties to be payed to ye tacksman of ye vicarage of the small teinds,' while the University connection was maintained by the condition that the minister should in the 'common schools' of the college read a public lecture on some subject prescribed by the authorities. Of the succeeding ministers, the most eminent were Hugh Binning (1649-54), Alexander Jamieson (1659-62), William Thom (1746-91), and M. Leishman (1821-74). Mr Binning became, in 1646, at the age of nineteen, Regent of Philosophy in Glasgow University, and minister of Govan three years later. He is said to have been one of the ministers who was present at a dispute held at Glasgow with Owen and Caryl, the chaplains of Oliver Cromwell, during the Protector's visit to Glasgow in 1651, and on that occasion his boldness and quickness were too much for the Independent divines, and caused Cromwell to inquire who that learned and bold young man was. On being told, his remark was 'He hath bound well, indeed, but this [his sword] will loose all again.' Mr Thom was an active and vigorous minister, and became popular, notwithstanding a considerable amount of feeling caused by a dispute about his settlement.

In Mr Thom's time, little more than a hundred years ago, the interests of the parish were centred in farming. 'Once upon a time,' says Mr Wallace, writing in 1877, 'and that too almost within the lifetime of our immediate forefathers, the parish of Govan was almost entirely an agricultural parish, and its population were a plain simple rural population. Only a century ago the population of the entire parish, even including Gorbals, which, as we have seen, was at that time incorporated with it, was only 4389. It will be easily seen from this fact that the greater portion of the parish which is now teeming with myriads of human beings, and resounding from one end to the other with the clanking of hammers, the roar of traffic, and the incessant hum of general business and activity, was then reposing in all the quietude and somnolency of purely primitive life. The now large and populous south-side of Glasgow was then an insignificant country village, with no industry greater than a distillery for the brewing of ale, a bottle-work, or a few handloom factories. The dwelling-houses of the people were thatched with straw, and most of them had small gardens attached to them, where the cottagers reared their own potatoes and cabbages. Many of the inhabitants kept their own cows and pigs, and they earned their scanty livings either in tilling the land or in those other trades, such as tailoring, shoemaking, coopering, and weaving, which are essential even to the most simple modes of existence. There was a thriving village, then situated at a considerable distance, to the south of the Clyde, known as "Little Govan," consisting of a number of weavers' cottages, but which afterwards, through the enterprise of two families of the names of Rae and Dixon, became the centre of a large coal and iron district, which gave a great impetus to the growth and prosperity of that portion of the parish, and even contributed largely to the importance of the city of Glasgow itself. Dixon's Ironworks, or "Dixon's Blazes," as they are commonly called, were at

the time of their first erection situated far out in the open country, whereas now the buildings and population extend beyond them for more than a mile. Close to the river Clyde where Carlton place now stands there was an extensive rope-work, while opposite the present Gorbals Church there was a shallow ford, where horses were led to the watering, and where horses and carts were driven across to the city when the Glasgow bridge was too rickety or too crowded to accommodate the influx of traffic from the country on the market-days; and then, too, the schoolboys could wade across the river without thinking they had done any wonderful feat. Afterwards the Lauries of Laurieston and other leading gentlemen erected a few commodious mansion-houses by the river side, which might then be almost termed country residences. A fine avenue of trees was formed, and these mansions were guarded against the public by a gateway erected near the present Broomielaw Bridge. In those days the male villagers of Govan and Gorbals took their turn nightly in acting as voluntary police and guardians of the peace. Their funds were raised by a voluntary tax, called "Reek Money," and by another small tax upon malt.'

But this sleepy state of existence was soon to come to an end. The deepening of the Clyde was just begun; and now, in place of the fords already mentioned, and another at the W, where the parish boundary crosses the Clyde, known as Marline Ford, there is a depth of 24 feet of water. The *Comet* was by-and-by to make her first adventurous voyage from Greenock to Glasgow, and to be the forerunner of the great fleet that now sweeps up and down the river, and that has brought such prosperity to Glasgow, and, above all, drawn the shipbuilding yards in its train. And yet all this came at first slowly; for when Dr Leishman wrote the article on Govan in the *New Statistical Account*, in 1845, the industries, etc., he mentions are—agriculture, which was the main occupation in the parish; the salmon fishery in the Clyde, which was rapidly falling off, the rent paid by the tacksman having decreased from over £300 in the beginning of the century to £60 at the time of his writing; cotton bleaching and printing factories in Hutchesontown and Tradeston; a silk factory at Tradeston, and a carpet factory at Port Eglinton, employing altogether over 5000 hands; Mr Dixon's ironworks, with four furnaces and an annual output of 4000 tons of pig-iron; a dye-work in the village of Govan, and handloom weaving also in the village. He mentions besides a new granite-faced quay on the south side of the river, and says that it will soon have to be enlarged; and this is all. This quay was to the W of Glasgow Bridge, and was erected first of timber in 1823, and in 1837 the timber, to the extent of 405 yards, was replaced by stone. Since then the harbour accommodation on the Govan side of the river has increased till there are now nearly 3000 lineal yards of quays along the river, exclusive of Kingston and Cessnock docks and of the graving docks (see GLASGOW). In 1840 shipbuilding seems to have been undreamt of, for there is not the slightest mention of it; and yet it is to this and to the shipping that Govan owes by far the greater part of its increased value and importance. The whole of the shipbuilding yards immediately connected with Glasgow on both sides of the Clyde are in the parish of Govan; and the burgh of the same name, as well as Partick and the large district of Whiteinch, are mostly inhabited by an artisan population engaged in this industry, and finding employment in the various yards adjoining. Of the total tonnage of new vessels built and launched on the Clyde every year (for which see articles CLYDE and GLASGOW), about one-half, on an average, comes from yards in the parish of Govan. There are also in the parish large bakeries, large ironworks, a number of boiler works and foundries—including the Plantation Foundry and the Govan (Helen Street) Tube Works—steam crane and launch works, railway engineering works, tool works, bolt and rivet works, oil works, a rope and twine work, silk, cotton, dye, and bleaching works; and brick works.

The part of the parish within the municipal and parliamentary boundary of Glasgow has already been noticed in the article GLASGOW, and to what is there said but little falls here to be added. The Leper Hospital, built by Lady Lochow, daughter of Robert, Duke of Albany, has been already noticed. It was dedicated to St Ninian, and the ground on which it stood and by which it was surrounded—known as St Ninian's Croft—is now occupied by part of the district of Hutehesontown. A chapel, belonging to the hospital, was 'rebuilt and endowed in 1494 by William Stewart, prebendary of Killearn and rector of Glasford. The chaplain was the master of the grammar school of Glasgow.' He was responsible for the safe keeping of the missals and silver chalices, and had also to supply fuel for the hospital, and to 'give twenty-four poor scholars two shillings Scots each to sing seven penitential psalms, with the *De profundis*,' on the anniversary of the founder's death, for his soul's repose. The barony and regality of Gorbals passed in 1587 from the Archbishop of Glasgow to Sir George Elphinstone, who seems to have retained for his own use funds really belonging to the hospital, and the care of building and inmates fell to the charge of the kirk-session of Glasgow, for in November 1587 we find this body ordering disbursement of money 'to repair ye pair lipper folkis hous beyonde the brig of Glasgow,' but with the saving clause that this was not to bind the session in time coming, nor to 'derogate or abstract ye burden fra these persones, gif ony be, quha hes ben or may be fund astricted to repair ye samen.' They at the same time ordered a return within eight days of the 'number of ye pair in ye said hospitale and quha are yai yt aucht to haif place yairin.' The site of the hospital itself was near the S end of Victoria Bridge, between Main Street (Gorbals) and Muirhead Street, and part of the buildings remained till early in the nineteenth century, and was known by the name of the Leper Hospital. The burying-ground was close by. The chapel was in Main Street (Gorbals) on the E side, and was standing till after the middle of the nineteenth century, but all trace of it, or even of its site, is gone since the alterations on Main Street (see GLASGOW). In the *Old Statistical Account* mention is made of 'vestiges of religious houses' near Polmadie, but these traces also have long since vanished. The districts of Govan, to both the S and W of Glasgow, have long been favourite localities for suburban residences, and as long ago as 1840 it was said that the parish was 'studded with the villas of the opulent merchants of Glasgow.'

Communications.—Lying close to, and indeed including part of Glasgow, the parish is naturally traversed by a number of the great roads leading from that centre. The various ferries and bridges across the Clyde have been noticed in the article GLASGOW. The northern part of the parish is touched at the extreme NE corner by the Forth and Clyde Canal on its course to Bowling, and is also traversed by the lines of the Great Western Road and the Dumbarton Road, which unite near Yoker (in New Kilpatrick) and pass on to Dumbarton and away to the W Highlands. The southern portion of the parish is traversed by a road continuing the line of Eglinton Street and Pollokshaws Road, which passes to Kilmarnock and Ayr; and by two roads which continue the line of Nelson Street and Morrison Street westward, one branching off to Paisley, the other running parallel to the Clyde and passing through Govan and Renfrew on its course to Greenock. The Glasgow, Paisley, and Ardrossan Canal, which formerly passed from Port Eglinton, on the W side of Eglinton Street, westward and south-westward through the parish for nearly 3 miles, is now converted into one of the lines of the Glasgow and South-Western railway. The northern division of the parish is intersected by the Stobcross railway, the Yoker and Clydebank railway, and the Lanarkshire and Dumbartonshire railway. The southern portion is traversed by the Caledonian railway on its way to the various stations belonging to it in Glasgow; by the different sections of the Glasgow and South-Western railway system, with a branch from the Glasgow and Paisley Joint Line

from Ibrox to Govan; and by stretches of the City of Glasgow Union Railway. Both portions are traversed by the Glasgow District Subway.

The burgh of Govan, formerly the village of Meikle Govan, is a place of considerable antiquity. According to Fordun, Constantine, King of Cornwall (traditionally a son of Rhydderch and Langueth, for whom see GLASGOW), resigned his crown, and becoming a follower of St Columba, founded a monastery at Govan in 565 A.D., and was the first abbot of it himself. Subsequent notices of it, down to the latter part of the 16th century, are confined to ecclesiastical affairs, but the 'kirktion' must have flourished, whatever the cause, for then we find Bishop Lesley, in the *Scotichronicon* of Fordun, describing it as 'the largest village on the banks of the Clyde.' In 1595 it is mentioned as Meikle Govan, and was then what it remained for two hundred years afterwards, a mere country village, with inhabitants of the agricultural class and possibly a few salmon fishers. In 1775 the population of the whole parish, inclusive of Gorbals and Partick, was 4389; so that the village itself could not have had more than about 1500 inhabitants. Towards the beginning of the nineteenth century handloom weaving was introduced, and in spring, when salmon fishing began, the weavers left their looms and fished all the spring and summer months. By 1836 the population of the village had increased to 2122, and in 1839 there were 340 handloom weavers in the place, weaving being the staple industry. Govan village was then, and indeed remained down to 1856 (when it was still more than a mile distant from the nearest part of Glasgow on the S side of the Clyde), a quiet village with old-fashioned thatched houses, some of them with quaint circular inside stairs. A few of these still remain, but they are fast disappearing to make room for 'tall and imposing "lands" of houses, and the "canny natives"' are now 'outnumbered by the more vigorous and enterprising, if not quite so steady-going, members of the engineering, boiler-making, and other trades.' These last, along with the shipbuilding, have, since about 1860, caused such a rapid enlargement of the limits of Govan, that it is now practically conterminous with Glasgow through the burgh of Kinning Park. Under the Lindsay Act the police burgh of Govan was formed in 1864, and has an extent of 1124 acres. It successfully resisted proposals for annexation to Glasgow in 1891, and its municipal affairs are now managed under the Burgh Police Act of 1892. The principal street extends for more than a mile along the Glasgow and Greenock Road, and from this streets branch off on both sides, the newer ones mostly at right angles. The burgh buildings in Albert Street, erected in 1867, and restored after a fire which destroyed part of them in 1882, have a good front, Italian in style, and are internally convenient and commodious. They contain a large hall (used also as a court-room), 60 feet long, 34 wide, and 23 high, capable of accommodating an audience of some 600 persons, a commissioners' room, a magistrates' room—in which hang some characteristic views of the quaint houses of 'Old Govan'—accommodation for the chief-constable, police cells, etc. In buildings connected with them are also some of the offices of the different burgh departments (the rest of which were in 1893 in Hillock House, on the N side of Govan Road, farther to the W), and the chief fire station. The police barracks (1869) contain good quarters for the sergants and constables, both married and single. There are sub-offices at Plantation (purchased and altered 1874-75, and extended 1892-93) and Fairfield (1883-84). At the last, which, though small, may be termed a model building, there is a mortuary. At the fire stations at Albert Street and Plantation there are steam fire-engines, and besides these two, other four 'steamers' are within call. The police force consists of a chief-constable, a deputy superintendent, 2 lieutenants, and 76 inspectors, sergants, and constables. All the municipal establishments are connected by telephone, and for police and fire purposes the system is so carefully elaborated that there are nearly 40 telephonic connections between the

police offices and all corners of the burgh and its outskirts. For the benefit of the large working population of the burgh, who are so liable to meet with serious accidents while engaged in their daily employment, a fully equipped ambulance waggon is maintained at the public expence, while more than half of the constables are fully trained to give first aid to the injured. In connection with the cleansing department there is a refuse destructor at Ibrox, erected in 1892-93. The tramway lines through Govan proper and to Ibrox were purchased by the Police Commissioners in 1893, but are worked by the Glasgow Corporation. The parish church, towards the W end of the bridge, was built in 1884-88. Plain Early English in style it has about 1500 sittings. It stands in the midst of the churchyard, on the site of the old church, which was, when the new church was built, removed and re-erected in John Street as Elder Park church, erected *quoad sacra* in 1892. This has a graceful spire modelled after that of the church at Stratford-on-Avon. The Gaelic church (1866), originally a mission charge, became in 1888 a *quoad sacra* parish church—St Kieran. There is also Dean Park *quoad sacra* church. The Govan Free church is in Summertown Road. Govan St Mary's Free church is at Govan Cross. Built in 1872-73, it has a tower and spire 150 feet high, and contains 1100 sittings. There is also a Free Gaelic church (St Columba's) in Wiudsor Street. The United Presbyterian church, at the corner of Copeland and Govan Roads, is a very ornamental, though somewhat uneccelesiastical-looking, building, and there is another U.P. church at Fairfield. The Baptist church (1876) is in the Early English style, and contains 650 sittings, while adjoining it is a hall with accommodation for 450 persons. The Roman Catholic church (St Anthony's) is a handsome Byzantine edifice built in 1877-78, in lieu of a temporary chapel of 1864, and contains 1500 sittings. There are also charges in connection with the Episcopal church (St Michael's), the Free Evangelical church, Wesleyan Methodists, and the Congregational church. There are the usual social, religious, and philanthropic societies. Thom's Library, founded by the widow of the Rev. William Thom, minister of Govan from 1746 to 1791, which was open to parishioners on payment of a very small subscription, ceased to exist about 1884, and the books were handed over to the Young Men's Christian Association. There is a newspaper, *The Govan Press*, which was established in 1880, and is published every Saturday.

To the W of the burgh, immediately to the S of Fairfield Shipbuilding Yard, on the S side of the Renfrew road, is the Elder Park, gifted to the inhabitants in 1885 by Mrs John Elder in memory of her husband, the famous shipbuilder (1824-69), and of his father, David Elder (1785-1866). The latter was a native of the county of Kinross, and came to Glasgow in 1817 to practise as a mechanical engineer and millwright. Becoming associated with Robert Napier, he was entrusted with the construction (1822) of the first marine engine turned out from Napier's works, and all the engines of the early Cunard liners were constructed under his superintendence. John Elder became, in 1852, a partner in the firm of Randolph, Elder & Co., millwrights, and the co-partners became shipbuilders in 1860, the famous Fairfield yard being opened in 1863. Mr Elder 'gained great prominence in engineering circles by his adoption of the compound high-pressure and low-pressure engine, and he carried the compound principle still further, to embrace the now favourite triple-expansion engine, and also an extension to quadruple expansion. He did not live to see these developed into actual practice. He brought to perfection Watt's idea of the steam jacket, adopted various appliances which saved fuel to the extent of 30 to 40 per cent., and perfected appliances for the balancing of driving forces, and the reduction of strain and friction in engines. To the inventions of Mr Elder may be attributed the placing of steam vessels on the Pacific, Australian, African, and other distant services.'

Mr Elder had intended to lay out part of the large

tract of ground round his shipbuilding yard for the erection of workmen's houses and other public purposes, and Mrs Elder, always a keen sharer in her husband's lofty ideal of duty, endeavoured to carry out part of his plans by setting aside 37 acres of the land as a public park, at a total cost, inclusive of laying out, of some £50,000. The ground has a frontage to Renfrew Road of 1550 feet, and a width from N to S of 800 feet on the E, and 1200 on the W side. At the NE corner is the main entrance, with six imposing pillars, the two at the sides of the central opening being surmounted by standards and ornamental lamps. A wide carriage drive sweeps all round, and there is a centre path 30 feet broad. On the N side is an oval model-yacht sailing pond, lined with concrete, 330 feet long, 165 wide, and 2½ deep in the centre. On the S is a nicely laid out garden, and there are a number of drinking fountains. The park was opened by Lord Rosebery on 27th June, 1885, with considerable public ceremonial. Near the main entrance is a bronze statue of Mr Elder, 10 feet high, executed by Boehm. Erected by public subscription, at a cost of over £2000, in 1888 (when the ceremony of unveiling it was performed by the Marquis of Lothian, then Secretary of State for Scotland), it represents the well-known shipbuilder standing beside the model of one of the compound engines invented by his genius, and which, according to the inscription on one of the sides of the granite pedestal, 'effected a revolution in engineering second only to that accomplished by James Watt, and in great measure originated the development in steam propulsion which has created modern commerce.' At Govan Cross there is a very handsome memorial to Sir William Pearce, also of the Fairfield Yard. Provided from a fund of over £2000 raised by public subscription, the statue, nearly 10 feet high, was executed by Onslow Ford of London; it surmounts a handsome pedestal of Aberdeen granite 12 feet high, and was unveiled in 1894 amid great popular enthusiasm.

The burgh has a post office, with money order, savings bank, insurance and telegraph departments; a railway station, offices of the Union, Royal (2), National, and British Linen Company's Banks; a branch of the Glasgow Savings Bank, and agencies of a number of insurance companies. Prior to 1893 the burgh was divided into four wards, each of which returned three commissioners; but subsequent to that date there were six wards, and burghal affairs were managed by a provost, six magistrates, and eleven commissioners; the yearly income is nearly £37,000. Valuation (1864-65, when the burgh was first constituted), about £5000; (1881-82), £202,362; (1892-93), £240,820, inclusive of railways, tramways, and gas and water pipes. Pop. (1864), 9000; (1871), 19,200; (1881), 50,492, of whom 49,426 were in the police burgh; (1891), 63,625, of whom 61,589 were in the police burgh. Houses (1891) 12,613 inhabited, 511 uninhabited, and 7 building.

For particulars regarding the other two burghs of the parish, see KINNING PARK and PARTICK.

Educational Affairs.—The inhabitants of Govan in the 17th century seem to have been advanced in their educational views, for in the records of the kirk-session of the parish for 1653 it is recorded that 'the session does ordain that everie elder in their several qrters do search who have children able and fit to come to schoole, and does not send them, to deal wt. them for that effect, and to signifie that if they prove deficient hereinto, according to an old act of session, they will be obliged to pay their qrtter, as well as if they came to this schooll;' but it is somewhat to be feared that their descendants were not so strict, for when the Govan school-board came into existence in 1873 it found 11,082 children of school-age in the parish, with accommodation in 46 schools for only 6583, and only 6049 children of school-age on the rolls. Of these schools only one was a public school (the old parish school at Govan Cross), and the board at once proceeded with the erection of new schools, and it had in 1896 under its charge 22 schools, one of which received a very large extension. These, with their accommodation, and average attendance and

amount of grant (inclusive of drawing) for 1894-95, are given in the following table:—

	School.	Accommodation.	Average Attendance.	Grant.
1	Albert Road,	883	698	£724 9 6
2	Bellahouston Academy,	1133	590	698 19 6
3	Broomloan Road,	963	890	622 15 8
4	Calder Street,	950	922	1023 10 6
5	Church Street,	883	808	589 19 4
6	Copeland Road,	1040	967	954 3 6
7	Downhill,	1679
8	Fairfield,	1775	1360	1468 12 6
9	Govanhill,	1010	1007	1197 5 4
10	Hamilton Crescent,	890	543	676 6 0
11	Harmony Row,	1009	539	819 15 10
12	Hillhead,	1155	755	1002 7 5
13	Kinning Park,	1322	1197	1430 15 4
14	Lambhill Street,	1515	1118	1222 13 0
15	Lorne Street,	1414	1359	1235 18 9
16	Pollokshields,	788	678	609 10 10
17	Polmadie,	1184	705	634 15 10
18	Rosevale Street,	934	1013	1736 0 9
19	Rutland Crescent,	971	654	746 18 0
20	Stewartville,	1450	1410	1784 4 11
21	Strathbungo,	1438
22	Whiteinch,	1447	1029	1363 12 3

The schools at Downhill, Lorne Street, and Strathbungo were erected in 1893-94; the accommodation provided at Lambhill Street, Rosevale Street, and Church Street, which had previously been increased by the use of temporary premises, has been permanently and substantially increased; and Broomloan Road school, which had been temporarily occupying a hall with accommodation for 128, received in 1896 an addition capable of accommodating 959. There is now accommodation in the board schools for 25,641 scholars; while 5 other elementary schools under government inspection—Abraham Hill's Trust School (853), and the Roman Catholic schools at Govan (1143), Govanhill (342), Kinning Park (1234), and Partick (686)—provide places for 4258 more, and 25 higher-class schools have 4499 places—a total of 34,398 places, as against 6583 at the time of the passing of the Education Act; while in 1891 the number of children in the parish between 5 and 15 years of age was 62,457, of whom 47,245 were receiving instruction. In 1891 the population of the parish within the school board district (*i.e.*, outwith the Glasgow parliamentary boundary) was 158,233. Besides the grants noted above, the sum of £822, 18s. 4d. was in 1894-95 received from the Science and Art Department. Needlework and cookery are taught in all the schools; while in 1894-95 there were evening classes in 13 schools, with an average attendance of 1665 pupils, who earned in grants £1637, 7s. 6d. from the Education Department for ordinary subjects and for drawing. Certain reductions, amounting to £189, 15s., brought the total grant down to £1447, 12s. 6d., or at the rate of 17s. 4½d. per scholar. The net cost to the rates was £533, or 7s. per scholar. The staff numbers over 500, of whom 21 are head-masters, 21 mistresses, 270 certificated teachers, and 136 pupil teachers. The salaries of head-masters vary from £250 to £500 a year; of principal male certificated assistants, £96 to £144; of principal female assistants, £78 to £108; other male assistants, £66 to £90, and other female assistants, £48 to £72, but the board may, in exceptional circumstances, fix a rate of salary higher or lower than these. The total salaries of teachers in 1894-95 was £31,910. The income for 1892-93 was £61,414, of which £19,800 was derived from the school rate, £20,546 from the annual grant (including drawing), £10,498 from the grant in relief of fees, £4498 from fees, and £1238 from science and art classes. Of the expenditure of £60,188 more than half went for teachers' salaries, as given above, while the other leading items of outlay were (for schools only) £3867 for repairs to buildings and furniture, £2350 for rents, rates, insurance, &c., £1548 for science and art classes, £11,250 for interest and repayment of loans, and £2534 for administration. Of total loans of about £200,000 received down to 1893, over £50,000 had been repaid by the same date.

Of the schools erected by the board the cost has varied from about £7 to over £15 per unit, the average being over £9. The buildings vary in style, but are mostly handsome and tasteful, forming square blocks, with the stairs in the centre, and the school-rooms and class-rooms running off on either hand. They are all mixed schools, but have the separate entrances, &c., for boys and girls prescribed in the Education Department rules. Inside, the boys and girls form separate subdivisions of the classes. The board, which consists of 15 members, has over 40 monthly and special meetings every year. Under the management of the board is the 'Alexander Stephen' bursary, of the annual value of £20 a year, and tenable for two years, two bursars being thus benefited every year. It was founded by Mr Alexander Stephen, shipbuilder, Lint-house, and chairman of the board from 1873 to 1885, who in 1881 gifted £1000 for the purpose of enabling deserving boys to attend the University. Candidates must be at the time, and have been for two years previously, pupils at one of the Govan board schools. The selection is made by competitive examination, and the subjects in which papers are set include Latin, French, mathematics, and English or French. Abraham Hill's Trust Fund, the income of which is now used for the Abraham Hill Trust School and general educational purposes in the parish, originated in a sum of £200 mortified for educational purposes by Abraham Hill of Wolverhampton, a native of Govan, in 1757. The money was invested in land in the W of Govan, which, in course of time, so increased in value that when it was sold in 1871 it produced a sum, the income derived from which is now more than three times the amount of the original benefaction.

Ecclesiastical and Parochial Affairs.—Ecclesiastically the parish is in the presbytery of Glasgow and synod of Glasgow and Ayr, and, besides the parish proper, includes the 22 *quoad sacra* parishes of Abbotsford (pop. 1891, 9872), Bellahouston (8376), Dean Park (3175), Elder Park (erected since census of 1891), Gorbals (5457), Govanhill, Hillhead (10,435), Hutchesontown (9125), Kingston (8008), Kinning Park (15,422), Laurieston (10,557), Maxwell (14,104), Oatlands (erected since census of 1891), Partick (11,736), Plantation (13,615), Pollokshields (8516), Queen's Park (9457), St Bernard's (11,765), St Kieran's (2327), St Mary's (9096), St Ninian's (10,938), Strathbungo (3811), and Whiteinch (6488). A very small part of Kelvinhaugh *quoad sacra* parish belonging to the civil parish of Govan had, in 1891, a population of 14; and the ecclesiastical parish of Govan itself had, at the same date, the large population of 109,711. There are mission charges at Hyndland, Belmont, and Titwood. Fifteen of the *quoad sacra* parishes and the four mission churches have been established since 1875. The stipend of the parish is nearly £1000 a year.

In 1893 there were 26 Free churches in the parish—Augustine, Buchanan Memorial, Candlish Memorial, Cunningham, Gorbals, Govan, Govan St Mary's, Govan St Columba's, Hutchesontown, Kelvinside, Kinning Park, Knox's, Paisley Road, Partick, Partick Downvale, Partick High, Plantation (White Memorial), Pollokshields, Pollokshields Stockwell, Queen's Park, Renwick, Rose Street, Union, Victoria, Westbourne, and Whiteinch. In the same year there were 21 U.P. churches—Belhaven, Caledonia Road, Cumberland Street, Eglinton Street, Elgin Street, Erskine, Govan, Govan Fairfield, Govanhill, Hutchesontown, Ibrox, Oatlands, Partick Downhill, Partick East, Partick Newton Place, Partick Victoria Place, Plantation, Pollok Street, Pollokshields, Pollokshields Trinity, and Queen's Park. There were, besides these, 5 Roman Catholic churches, 3 Congregational, 3 Evangelical Union, 3 Baptist, 2 Wesleyan Methodist, and 1 Original Seceder churches, a John Knox Kirk of Scotland, and 6 Episcopal charges and missions. For registration purposes the parish is divided into the districts of Govan (pop. 1891, 41,735), Plantation (22,980), Kinning Park (33,291), Tradeston (27,436), Gorbals (49,939), Hutchesontown (59,750), and Partick (50,466).

For parochial affairs the parish has been united with Gorbals since 1873, as has been already noticed, in what is known as Govan Combination. The original poorhouse was in the old cavalry barracks in Gorbals. The present poorhouse is at Merryflats, to the W of Govan, and was finished in 1872, at a cost of £100,000. It has accommodation for over 700 paupers and over 200 lunatics; but the Court of Session having decided in 1882 that the Glasgow District Board of Lunacy was not bound to take over the Merryflats Asylum, and was, notwithstanding its existence, entitled to impose a lunacy assessment within the Govan Combination district, difficulties followed, which practically resulted in the dissolution of the District Board in 1888. Thereafter, in 1889, in consequence of the premises at Merryflats being deemed by the General Lunacy Board for Scotland too small in view of the great increase of population since 1871, the Govan Lunacy Board acquired the Hawkhead estate, extending to 171 acres, in Abbey parish, Paisley, as a site for a new asylum. There, handsome buildings, Italian in style, with a central tower, begun in 1892, are now in progress, and will, when finished, provide accommodation for 500, and ultimately, if needed, 600 patients. The cost will meanwhile be about £102,000, but the total sum ultimately necessary may amount to nearly £160,000. The asylum at Merryflats will, after the completion of the new building, become a second-class establishment with not more than 180 inmates (the number for which it was originally designed), all of the harmless incurable class. There is also a Combination Fever Hospital at Shieldhall, near Merryflats, for the burghs of Govan and Kinning Park and portions of the Govan parochial district. The hospital was opened in 1883, and is under the care of a resident medical superintendent with the requisite staff of nurses. As the establishment is maintained from the rates admission is free, and patients are sent for whenever notice is given to the authorities.

Of a total of 4345 paupers on the roll at 15 May 1896, 2467 were registered out-door poor, 151 casual out-door poor (including Irish, suspense, &c., poor), 696 were in-door poor (including Irish, suspense, &c., poor), 114 were dependants of the in-door poor, 684 were lunatics, and 233 were other parish poor. Of 4506 applications for relief during the year, 878 were from natives of the parish, 2063 from natives of other parts of Scotland, 144 from natives of England, 1346 from natives of Ireland, and 75 from foreigners. The income of the board for the same year amounted to £65,294, of which £47,545 came from ordinary poor and poorhouse building rates, £6466 from the Government Lunacy grant, £3597 from other parishes for their poor, and £2095 from the relatives of paupers, including lunatics. The expenditure on the out-door poor was £36,613, and on the in-door poor £10,480. The parish council consists of 33 members, 4 from the first ward, 3 from the second, 3 from the third, 2 from the fourth, 2 from the fifth, and 3 from the sixth, 6 from Govan burgh, 5 from Partick burgh, and 2 from Kinning Park burgh, 1 from the landward district, and 5 comprising the landward committee. The out-door staff consists of 69, and the indoor of 27 persons.

Rental (1839) £100,913, 3s. 2d., (1861) £380,000, (1879) £1,135,257, 12s. 7d., (1880) £1,151,687, 15s. 7d., (1881) £1,178,463, 6s., (1891) £1,357,733, (1895) £1,541,785, of which £978,081 was within the municipal boundary of Glasgow, and the rest in the suburban burghs and landward part of the parish. Pop. (1775) 4389, (1793) 8318, (1831) 26,695, (1861) 105,716, (1871) 151,402, (1881) 232,896, (1891) 280,275. Houses, 57,202 inhabited, 2982 uninhabited, and 323 building. Of the total population of 280,275 in 1891, 135,627 were males and 144,648 were females; while 57 persons spoke Gaelic only, and 10,297 both Gaelic and English.—*Ord. Sur.*, sh. 30, 1866.

tion of the Sheriffdom of Lanark and Renfrew (Maitland Club, 1831); *Registrum Episcopatus Glasguensis* (Maitland Club, 1843); a valuable article by the late Dr Leishman in the *New Statistical Account of Scotland* (Vol. for Lanarkshire, 1845); Strang's *Glasgow and its Clubs* (1856); Reid's (Senex) *Old Glasgow and its Environs* (1864); Wallace's *The Parish of Govan as it was and is* (1877); Wallace's *Popular Sketch of the History of Glasgow* (1882); Wallace's *Popular Traditions of Glasgow* (1889); and Craig's *The Elder Park* (1891).

Govanhill. See GLASGOW.

Govel, or **Elrick Burn**, a rivulet of New Machar parish, SE Aberdeenshire, running 8 miles south-south-eastward till it falls into the Don, $\frac{1}{4}$ mile above the bridge of Dyce. It is crossed, near its mouth, by a stone bridge built and endowed by a travelling merchant, who nearly lost his life here in a snow-storm.—*Ord. Sur.*, sh. 77, 1873.

Gowanbank, a village in St Vigeans parish, Forfarshire, $3\frac{1}{2}$ miles NW of Arbroath, under which it has a post office.

Gower, Port. See PORT GOWER.

Gowkhal, a village in Carnock parish, Fife, 3 miles W of Dunfermline.

Gowland or **Gowling.** See STIRLING.

Gowrie. See CARSE OF GOWRIE, BLAIRGOWRIE, and PERTSHIRE.

Goyle. See GOIL.

Graden, a burn in Coldstream parish, S Berwickshire, rising 2 miles NNW of Coldstream town, and running $3\frac{1}{2}$ miles east-north-eastward to the Tweed at Milne-Graden. At the beginning of the 18th century a village of Graden stood not far from its mouth.—*Ord. Sur.*, sh. 26, 1864.

Graden, a farm in Linton parish, NE Roxburghshire, 4 miles WNW of Yetholm, on the southern border of the parish. The Kerrs of Graden figure prominently in border warfare, and traces still exist of Graden Place, their ancient fortalice.—*Ord. Sur.*, sh. 26, 1864.

Graemsay, an island of Hoy and Graemsay parish, Orkney, in Hoy Sound, $\frac{1}{2}$ mile S of Stromness and $\frac{1}{2}$ mile E of Bowkirk in Hoy island. Measuring $1\frac{1}{2}$ mile in length from NW to SE, and 1 in breadth, it is all low and level; lies, almost throughout, on a bed of schistose rock, and is mainly covered with excellent soil, much of it being arable. Two lighthouses, guiding the navigation of Hoy Sound, were erected on the island in 1851 at a cost of £15,880. They bear from each other SE $\frac{1}{4}$ E and NW $\frac{1}{4}$ W; and they show lights visible at the distance of 12 and 16 nautical miles. The higher light, towards the western entrance of Hoy Sound, is a fixed red light, illuminating an arc from SE by E to SE $\frac{1}{2}$ S towards SE; and also shows, towards Stromness, a bright fixed light from SSE $\frac{1}{4}$ E to WSW; and towards Cava, an arc from NNW $\frac{1}{2}$ W to N $\frac{1}{2}$ W southerly. The lower light is a fixed bright light from E $\frac{1}{2}$ S to W $\frac{1}{2}$ N, facing northward. The island was anciently a vicarage united to Hoy rectory, and served every third Sunday by the minister of Hoy; but it has now a chapel of ease to Hoy and Graemsay parish church. Pop. (1831) 225, (1861) 230, (1871) 250, (1881) 236, (1891) 223.

Graham's Castle, a ruined fortalice on the western border of St Ninians parish, Stirlingshire, near the left bank of Endrick Water, $3\frac{1}{2}$ miles E of Fintry hamlet, and 9 SW of Stirling. It belonged to Sir John de Graham, who co-operated with Sir William Wallace and fell on the battlefield of FALKIRK (1298), and it is said to have often served as a retreat of Wallace. It must, in his time, have been difficult of access; and it appears, from the extent of its moat and the thickness of its walls, to have been a structure of considerable size and great strength.—*Ord. Sur.*, sh. 31, 1867.

Graham's Dyke. See ANTONINUS' WALL.

Graham's Knowe. See NEWTYLE.

Grahamslaw, a hamlet in Eckford parish, Roxburghshire, 5 miles S of Kelso. Several artificial caves near it, on the banks of the river Kale, were retreats or hiding-places of the Covenanters in the times of the

persecution. Haughhead, notable as the meeting-place of one of the greatest conventicles of the Covenanters, is also adjacent to the hamlet, and occasions it to be sometimes called *Grahamslaw-Haughhead*.—*Ord. Sur.*, sh. 25, 1865.

Grahamston, a *quoad sacra* parish in Falkirk parish, Stirlingshire. Constituted in 1875, it is in the presbytery of Linlithgow and synod of Lothian and Tweeddale; the minister's stipend is £120. Church, iron-works, etc., are noticed under FALKIRK. Pop. (1881) 5203, (1891) 6224.

Grahamston. See BARRHEAD.

Graitney. See GRETNA.

Grampians, the broad fringe of mountain that extends along the eastern side of the Highlands of Scotland, overlooks the western portion of the Lowlands, and forms the natural barrier or boundary between the two main divisions of the kingdom. In early times this range was always called the *Mounth* or *Mound*, and Hector Boece (1520) was the first to apply to it the name of *Grampians* or *Mons Grampius*, which he found mentioned in Tacitus' *Agricola* (97 A.D.) as the scene of Agricola's crushing defeat of Calgacus or Galgacus in 86 A.D. This, the original *Mons Grampius* (or rather *Grampius**), appears to have been situated beyond the Tay; but it is difficult, if not impossible, to fix its exact locality. Gordon placed it at Dalginross, Chalmers at Ardoch, others in Fife, others again at Urie in Kincardineshire; but Dr Skene inclines to the opinion that it was at the peninsula formed by the junction of the Isla with the Tay. Here are remains of a strong and massive vallum, called Cleaven Dyke, before which a plain extends to the foot of Blair Hill ('mount of battle'). Be this as it may, the name Grampians is so loosely applied in popular usage, and has been so obscured by injudicious and mistaken description, as utterly to want the definiteness of meaning essential to distinct topography. The most current account of the Grampians describes them as 'a chain' of mountains extending from Dumbarton, or from the hills behind Gareloch opposite Greenock, or from the district of Cowal in Argyllshire, to the sea at Stonehaven, or to the interior of Aberdeenshire, or to the eastern bounds of Elginshire and Banffshire; but that account, besides containing a three-fold or a six-fold alternative within itself, is utterly inaccurate in treating the mountains as 'a chain.' No definition will include all the mountains popularly called Grampians, and at the same time exclude others not so called, except one which regards them simply as the mountain front, some files deep, which the Highlands, from their southern continental extremity to a champaign country on their flank E of the Tay, present to the Lowlands. But thus defined, or even if defined in any other way which shall not limit them to at most a comparatively small part of their central portions, they are far from being, in the usual topographical sense of the word, 'a chain.' From Cowal, north-eastward to the extremity of Dumbartonshire, they rise in elevations so utterly independent of one another as to admit long separating bays between their parts, and are of such various forms and heights and modes of continuation as to be at best a series of ridges and of isolated masses, some of them contributing the length, and others contributing merely the breadth, to their prolongation. E and N of Loch Lomond in Stirlingshire their features are so distinctive and peculiar, and their amassment or congeries is so dominated by the monarch summit of Ben Lomond, as to have occasioned them to be known scarcely as part of the Grampians, but distinctively as the Lomond Hills. Along Breadalbane and throughout the greater part of the other upland districts of Perthshire, they consist chiefly of lateral ridges running from W to E or from NW to SE, entirely separated from one another by long intersecting valleys, and occasionally standing far apart on opposite sides of long and not very narrow

sheets of water; and they even, as in the instances of Schiehallion and Benglo, include isolated, huge, conspicuous monarch mountains, which possess not one character of alliance to any of the groups or ridges except their occupying areas within the Highland frontier. In the NW and N of Forfarshire, in the adjacent parts of Aberdeenshire and Perthshire, and along part of the mutual border of Perthshire and Invernesshire, they at last assume the character of a chain or broad mountain elongation, with aggregately such loftiness of summits and such comparative uniformity and distinctiveness of character as to be well entitled to some designation peculiarly their own, and there they are commonly denominated the Central Grampians. In Kincardineshire they fork into detached courses, and almost lose what is conventionally understood to be a Highland character; and, where they are popularly said to terminate on the coast, are of so comparatively soft an outline and of so inconsiderable an elevation, that a stranger who had heard of the mountain grandeur of the Grampians, but had not learned to trace them hither, might here pass over them without suspecting to be nearer them than scores of miles. Northward, or rather westward and north-westward, of the low Kincardineshire ranges, which loose popular statement very frequently represents as the terminating part of the chain, they consist partly of some anomalous eminences, but mainly of two ridges, one of which flanks the district of Mar on the SW, while the other extends along the mutual border of Aberdeenshire and Banffshire.

A mountain region so extensive and diversified cannot be described with even proximate accuracy, except in detailed views of its several parts. Yet if only the main portion of it be regarded, or that which extends from the SW of Perthshire to the mutual border of Forfarshire and Aberdeenshire, the following description will, as a general one, be found correct:—'The front of the Grampians toward the Lowlands has in many places a gradual and pleasant slope into a champaign country of great extent and fertility; and, notwithstanding the forbidding aspect at first sight of the mountains themselves, with their covering of heath and their rugged rocks, they are intersected in a thousand directions by winding valleys, watered by rivers and brooks of the most limpid water, clad with the richest pastures, sheltered by thriving woods on the sides of lakes and streams, and are accessible in most cases by excellent roads. The valleys, which exhibit such a variety of natural beauty, also form a contrast with the ruggedness of the surrounding mountains, and present to the eye the most romantic scenery. The rivers in the deep defiles struggle to find a passage; and often the opposite hills approach so near that the waters rush with incredible force and deafening noise in proportion to the height of the fall and the width of the opening. These defiles are commonly called passes; and they are strikingly exemplified in the Pass of Leny, the Pass of Aberfoyle, the Pass of Killiecrankie, and the Spittal of Glenshee. Beyond these plains of various extent appear filled with villages and cultivated fields. In the interstices are numerous expanses of water connected with rivulets stored with a variety of fish, and adorned on their banks and flanks with wood. The craggy tops of the heights are covered with flocks of sheep, and the pastures in the valleys maintain numerous herds of black cattle. The height of the mountains varies from 1400 to 3500 feet above the level of the sea, but rises, in several instances, still higher; and the N side, in general, is more rugged than the S, and exhibits huge masses piled on one another in most awful magnificence.' Long reaches of them can only be crossed on foot; but most are traversed through the passes by good carriage roads, and two sections of nearly the boldest character are now traversed by railways—the one through the Pass of Leny and Glenogle, the other the Pass of Killiecrankie and Glengarry. The range, whose highest summit-line forms the western and northern boundary of Forfarshire, bears the distinctive name of BENCHINNIN, and has been noticed in our article under that title; and

* Wex, in his edition of the *Agricola* (1852), adopted the reading *Mons Grampius*, a reading accepted by Dr Hill Burton, and rejected by Dr Skene.

a great culminating group around the meeting-points of Perth, Aberdeen, Banff, and Inverness shires, forms the eastern and grandest part of what are called the Central Grampians, and bears the distinctive name of the CAIRNGORM Mountains. See G. F. Robson's *Scenery of the Grampian Mountains* (1814).

Grandholm, a village, with woollen works, in Old Machar parish, Aberdeenshire, on the left bank of the Don, opposite Woodside, and 2 miles NNW of Aberdeen. Grandholm Cottage, long the residence of James Hadden, Esq., the principal proprietor of the mills, and provost of Aberdeen, stood on the brow of a rising ground commanding an extensive view of the Don's valley, and about 1849 was replaced by a handsome edifice. Grandholm House, an older mansion, stands higher up the Don, 2 miles N of Auchmill.—*Ord. Sur.*, sh. 77, 1873.

Grandiscole, a village in Bressay parish, Shetland, distant $\frac{1}{2}$ mile from Lerwick.

Grandtully Castle. See GRANTULLY.

Grange. See EDINBURGH.

Grange, a parish in the Strathisla district of Banffshire, containing, towards its southern extremity, Grange Junction on the Great North of Scotland railway, $4\frac{1}{2}$ miles E by S of the post-town Keith, $16\frac{1}{4}$ SW of Banff, $3\frac{3}{4}$ SW of Knock (another station in Grange), $8\frac{1}{2}$ NNW of Huntly, and $48\frac{3}{4}$ NW of Aberdeen. It is bounded N by Deskford, NE by Fordyce and Ordiquhill, E by Marnoch, SE by Rothiemay, S by Cairnie in Aberdeenshire, and SW and W by Keith. Its utmost length, from E to W, is 6 miles; its utmost breadth, from N to S, is $5\frac{1}{2}$ miles; and its area is 15,093 acres, of which 52 are water. The river ISLA winds 7 furlongs eastward along the Keith border, then $3\frac{1}{2}$ miles east-south-eastward through the southern interior, on its way to the Deveron; and to the Isla run ALTMORE Burn $4\frac{3}{4}$ miles southward along all the western border, Shiel Burn $4\frac{1}{2}$ miles south-westward along all the boundary with Rothiemay, and two lesser burns that drain the interior. The surface is somewhat hilly, sinking to 295 feet above sea-level at the Shiel's influx to the Isla, and rising thence to 913 and 1199 feet at *Little and *Meikle Balloch, 810 at Sillyearn Hill, 537 near Crannach, 1409 at *Knock Hill, 1028 at *Lurg Hill, and 860 at *Black Hill, where asterisks mark those summits that culminate on or close to the confines of the parish. The rocks are mainly Silurian; and limestone has been largely quarried; whilst plumbago—a comparatively rare mineral—occurs at Seggiecrook. Much of the arable soil is excellent; but much, again, rests upon such stubborn subsoil as to resist all efforts at improvement. Most or all of the land was anciently covered with forest; and there is now a largish extent of peat-moss, embedding roots and trunks of primeval trees. Grange Castle, once the residence of a section of the Kinloss community, under a sub-prior, who here had a large farm or grange that gave the parish its name, stood on the rising-ground now occupied by the parish church, and overlooked extensive haughs along the course of the Isla. A stately edifice, surrounded by a narrow moat, it left, till a comparatively recent period, considerable remains. The Gallow or Green Hill was the place of capital execution by sentence of the Abbots of Kinloss, and figures dismally in local tradition. Remains of several trenches or encampments, supposed to have been formed by either the ancient Caledonians or the Picts, are on the haughs of the Isla; and scenes of ancient battles are pointed out by dim tradition on the N side of Gallow Hill, on the S side of Knock Hill, and at Auchincove near the Isla. EDINGERTH is the chief mansion; and the Duke of Fife shares most of the parish with Sir John Innes and the Countess-Dowager of Seafield. Grange is in the presbytery of Strathgogie and synod of Moray; the living is worth £229. The parish church, $1\frac{1}{2}$ mile WNW of Grange Junction, was built in 1795, and a mural tablet in memory of its late minister, the Rev. J. Russell, M.A., was placed in it in 1891, when also a library for the parish was founded. There are also Free and U.P. churches; and three public schools—Crossroads, Grange,

and Sillyearn—with respective accommodation for 168, 144, and 170 children, have an average attendance of about 100, 65, and 70, and grants amounting to nearly £88, £64, and £57. Valuation (1894) £6808, with £2153 for railways. Pop. (1801) 1529, (1831) 1492, (1861) 1909, (1891) 1685.—*Ord. Sur.*, sh. 86, 1876. See the Rev. Dr J. F. S. Gordon's *Book of the Chronicles of Keith, Grange, etc.* (Glasg. 1880).

Grange, a hamlet in St Andrews parish, Fife, 1 mile SSE of St Andrews city.

Grange. See PENNINGHAME.

Grange, an estate in Burntisland parish, Fife, 1 mile N of the town. It belonged to Sir William Kirkaldy, commonly called Kirkaldy of Grange, who in 1573 was hanged at Edinburgh in the cause of Queen Mary; and it now is annexed to the estate of Raith. An extensive distillery is on it, and excellent sandstone is largely quarried.—*Ord. Sur.*, sh. 40, 1867.

Grange, an estate, with a modern mansion (now a farmhouse), in Monifieth parish, SE Forfarshire, $2\frac{1}{2}$ miles NE of Broughty Ferry. An ancient mansion, on the same site as the present one, was the seat of Durham of Grange, an influential agent in the work of the Reformation, and a near kinsman of Erskine of Dun, who often visited him, and here is said to have narrowly escaped being taken prisoner by his enemies. In 1650 the great Marquis of Montrose, on his way from Assynt to be tried at Edinburgh, lay a night at Grange; and the laird's lady made a futile attempt to smuggle him out, disguised as a woman, past the drunken sentinels.—*Ord. Sur.*, sh. 49, 1865.

Grange. See ST. VIGEANS.

Grange or Westquarter Burn, a rivulet of Falkirk and Polmont parishes, SE Stirlingshire. Rising near Barleyside at an altitude of 580 feet, it first runs 4 miles east-north-eastward through Falkirk parish to a point 5 furlongs S by E of Callendar House, and then winds $4\frac{1}{4}$ miles north-eastward and northward along the boundary between Falkirk and Polmont, till it falls into the Carron at Grangemouth.—*Ord. Sur.*, sh. 31, 1867.

Grange Beil. See BEIL-GRANGE.

Grange, East. See CULROSS.

Grange Fell, a hill in the E of Tundergarth parish, Dumfriesshire, rising 1045 feet above sea-level.

Grange Hall, a modern mansion in Kinloss parish, NW Elginshire, $2\frac{1}{4}$ miles NE of Forres. A fine four-storied freestone edifice, it is the seat of James Grant-Peterkin, Esq. (b. 1837; suc. 1878).—*Ord. Sur.*, sh. 95, 1876.

Grange House, an old mansion in Carriden parish, Linlithgowshire, $1\frac{1}{2}$ mile E of Borrowstouness. It is the seat of Henry M. Cadell, Esq.—*Ord. Sur.*, sh. 32, 1857.

Grange House, a mansion in Maybole parish, Ayrshire, $3\frac{1}{4}$ miles NNE of the town.

Grangemouth, a seaport and post-town in the parishes of Falkirk, Bothkennar, and Polmont, SE Stirlingshire. Built about the entrance of the FORTH AND CLYDE CANAL, where the Grange Burn falls into the river Carron, it is 7 furlongs above the confluence of the latter stream and the Forth, and 3 miles ENE of Falkirk, with which and Larbert it is connected by branch lines of the North British and the Caledonian. The town was founded in 1777 by Sir Lawrence Dundas, in connection with the formation of the canal, which was opened in 1790; and it soon became a place of some importance through the canal traffic, the neighbourhood of the Carron Iron-works, and the convenience of the situation. All the trade of Stirlingshire speedily found its way to the new port, and its trade was benefited by the high shore-dues levied at Leith. Till 1810, Grangemouth was a creek of Bo'ness, but, in that year, it was recognised as a head port by the custom house. In 1836 permission was obtained from parliament by the councillors of the Forth and Clyde Navigation, to construct a dock; and this, now known as the old dock, was opened in 1843. It covers an area of $7\frac{1}{2}$ acres; and one half of it has a depth of 17 feet, the remainder

GRANGEMOUTH

GRANTON

drawing only 13 feet of water. Up till 1859, when another basin was formed, the trade was mostly coast-wise; but there has since arisen a considerable foreign and colonial trade, as shown by the following table, which gives the tonnage of vessels that entered from and cleared to foreign and colonial ports and coast-wise with cargoes and in ballast:—

	ENTERED.			CLEARED.		
	British.	Foreign.	Total.	British.	Foreign.	Total.
1853	95,486	...	95,486	95,650	...	95,050
1867	153,378	78,422	231,800	136,613	74,375	210,988
1873	194,899	144,337	339,236	199,143	149,122	348,265
1881	302,599	79,826	382,725	306,164	76,916	383,080
1892	573,372	357,765	931,337	576,752	379,369	956,121
1895	658,506	329,016	987,522	687,537	355,963	1,043,500

Of the total vessels, 2274 of 987,822 tons, that entered in 1895, 1855 of 883,548 tons were steamers, 728 of 399,556 tons were in ballast, and 1056 of 390,260 tons were coasters; whilst the total, 2391 of 1,043,500 tons, of those that cleared, included 1950 steamers of 938,101 tons, 567 ships in ballast of 213,333 tons, and 879 coasters of 309,924 tons. Again, the total tonnage of vessels registered as belonging to the port was 9080 (only 828 steamers) in 1853, 12,649 in 1869, 8270 in 1874, 10,499 in 1881, and 13,984 in 1895, viz., 10 sailing vessels of 520 tons and 45 steamers of 13,464. The fact that it was a common experience to have from 40 to 80 vessels lying in the Roads waiting for room in the docks showed the necessity of extending the harbour accommodation, and in 1876 the necessary powers for the construction of the new dock were obtained. After considerable engineering difficulties, arising from the nature of the soil, the dock was formally opened on 3 June 1882 amid much enthusiasm, the interest of the occasion being enhanced by the inauguration, on the same day, of a public park presented to the burgh by the Marquis of Zetland. The new works, which cost £300,000, give a water area of 19½ acres for the new dock and timber basins, 10½ acres being the actual extent of the dock. The entrance is 55 feet wide, with a depth on the sill of 26 feet. Outside the gates, on the E side, is a wall 850 feet long, where ships can unload should they be hindered from entering the dock by lack of water. At the entrance there is a depth at low water of 8 feet; the rise in spring tides is 18 feet and 14 in neap tides. The quayage extends to 900 yards, and the length of the dock is 1100 feet, its breadth 400. The timber-basin, at the S end, is 8 acres in extent, and has a depth of 8 feet. The total area of the timber basins is 17 acres. A channel, 70 feet wide and 15 feet deep, passing through the new timber basin, connects the old and the new docks, and a substantial swing bridge, laid with rails, spans the entrance to the dock. The quays of the dock have been fully equipped with hydraulic coal-hoists on an admirable system and with Armstrong cranes. At the bridges hand power is provided besides hydraulic machinery, in case of a breakdown of the latter. Sheds to the extent of 600 feet are provided, and the railways in connection with the works have a total length of 32 miles. The accommodation of the port having again become taxed to its utmost capacity, in 1892-95 a new deep-water entrance and new docks were provided to meet the demand. The principal imports are timber, metals, flax, grain, sugar, fruit, chemicals, paper, and provisions. In spite of its proximity to the great iron-producing districts of Lanarkshire, large quantities of pig-iron are now imported. Of coals 64,208 tons were shipped to foreign countries and coast-wise in 1860, 104,939 in 1869, 101,359 in 1881, and 993,928 (including cinders and patent fuel) in 1892. In 1895 the total value of foreign and colonial imports was £2,298,032 (£2,382,853 in 1894), and of exports £1,485,429 (£1,393,068 in 1894). The trade between Grangemouth and London, amounting to 100,000 tons annually, is wholly in the hands of the Carron Iron Company, while other steamship lines trade with

ports in Norway, Sweden, the Baltic, and elsewhere. Two vessels of 2492 tons were launched here in 1895, both of them steel steamships. There is a graving dock in connection with the shipbuilding yard. Employment is also afforded by saw-mills, brick and tile works, and a rope and sail factory.

Apart from its trade and manufactures, Grangemouth is a place of little note. It is regularly and substantially built, but is far from picturesque. This chiefly arises from the situation, which is low and flat; and this, with the prevalence of so much water in river, canal, and docks, has led to Grangemouth being likened to a Dutch town. It has a post office, with money order, savings bank, insurance, and telegraph departments, branches of the Bank of Scotland and the Commercial Bank, National Security savings bank, 3 hotels, a gaswork, a good water supply, the Traders Building Company, Co-operative Building and Investment Society, Model Building Society, Shipwrecked Fishermen and Mariners' Royal Benevolent Society, a free library (1889), Young Men's Christian Association, a public hall, and a public bath. The Public Institute, erected in 1876-77 at a cost of £2100, contains a lecture-room, with accommodation for 450 persons; the public park, 8½ acres in extent, is adorned with a handsome spray fountain; the Victoria Library, including site, cost about £1800, defrayed by assessment. The Town-hall, with a frontage of 67 feet and a height of 40 feet 6 inches, was opened in 1885. The style adopted is classic, after the Greek school. It contains, besides other rooms, the Council Chamber and two halls, the larger of which accommodates about 900 persons and the smaller upwards of 100. In 1880 Grangemouth was constituted a *quoad sacra* parish in the presbytery of Linlithgow and synod of Lothian and Tweeddale. Its church is an Early English edifice, with a spire 60 feet high, having been erected in 1866 as a chapel of ease, in lieu of one built by the first Earl of Zetland in 1837. There are two Free churches—Grangemouth and West, the former a handsome edifice of 1833 in the Gothic style; and there are two United Presbyterian places of worship. Two public schools, Dundas (1875) and Zetland (1827), with respective accommodation for 820 and 371 children, have an average attendance of about 720 and 420, and grants of over £630 and £384. Under the Burgh Police Act of 1892 Grangemouth is governed by nine commissioners. In 1881 the Marquis of Zetland, whose seat, KERSE HOUSE, stands 5 furlongs SW of the town, asserted his superior rights over the burgh by pointing out that the feu-charters he had granted forbade the establishment of public-houses. The attempt to suppress such houses gave rise to a litigation which was carried on in the Supreme Courts of Scotland and the House of Lords for a long time. In the Court of Session it was held that such powers in a feu-charter were contrary to public policy, and could not be enforced; but on appeal the House of Lords reversed this decision, holding that the only question to be tried was whether the superior's rights had lapsed by disuse. Pop. (1831) 1155, (1861) 2000, (1891) 6354, of whom 4003 were in Falkirk parish, 2109 in Bothkennar, and 242 in Polmont.—*Ord. Sur.*, sh. 31, 1867.

Grangemuir, an estate, with a handsome modern mansion, in Anstruther-Wester parish, Fife, 1½ mile NNW of Pittenweem.—*Ord. Sur.*, sh. 41, 1857.

Grangepans, a coast village, with a public school, in Carriden parish, Linlithgowshire, adjoining the eastern extremity of Borrowstounness. It formerly had extensive salt-pans and a chemical work, but now it merely shares in the industry of Borrowstounness. Pop. (1861) 747, (1871) 876, (1881) 792, (1891) 1120.

Grannoch, Loch. See GRENNOCH.

Grant Castle. See CASTLE-GRANT.

Granton, a seaport and post-town in the parishes of Cramond and St Cuthbert's, Edinburghshire, 5½ miles S by E of Burntisland, 2 W by N of Leith, and 2½ NW by N of Edinburgh Post Office. Historically it is notable as the point where English troops landed in 1544 under the Earl of Hertford before they ravaged

Leith. The real importance of the place dates from 1835, when the Duke of Buccleuch, recognizing the then unsuitability of the port of Leith for the reception of vessels at low water, began the extensive harbour works. The Duke, who is superior of the place, applied part of his large revenues to a purpose which has proved greatly to the public benefit as well as a most remunerative investment of capital. A beginning was made in Nov. 1835, and the harbour was partly opened on 28 June 1838, memorable as the coronation day of Queen Victoria. On account of this coincidence one of the jetties is called Victoria Jetty; and on 1 Sept. 1842 the Queen and Prince Albert landed here. The pier was completed in 1845 at a cost of £80,000; and the two magnificent E and W breakwaters, 3170 and 3100 feet long, were constructed at a later period, at a cost, with accessory works, of £150,000. The pier itself is 1700 feet long, and from 80 to 160 broad. There are four pairs of jetties, each 90 feet long, and two slips, 325 feet in length, for the landing of goods at all stages of the tide. A strong wall runs down the middle of the pier; and it is well furnished with railway lines, goods sheds, cranes, and other necessary appliances. Granton, though still a ferry station connected with Burntisland on the north side of the Forth, as such has suffered severely by the opening of the Forth Bridge undertaking. The E side of the pier was previously, since 1848, the starting point of the North British ferry steamers for Burntisland. The most interesting feature of the ferry was the arrangement by which loaded trucks were shipped upon large steamers and conveyed across, thus saving the loading, unloading, and reloading of the goods. Granton is besides connected with the Caledonian railway by a branch used only for goods traffic. At the W end of the harbour is an extensive patent slip and ship building yard. From the central pier eastward to Trinity a substantial sea-wall was erected in connection with the harbour; and along the top of this the railway from Edinburgh approaches the pier. The depth of water at the entrance to the harbour is nearly 30 feet at spring tides, and it is accessible at most times to vessels of considerable burden, affording one of the safest and easiest anchorages on the E coast of Scotland. The port is the headquarters of several lines of steamers trading to Aberdeen and other northern Scottish ports, London, Christiania, Gothenburg, etc., as well as of the Forth Steam Trawling Fleet, which now carries on an extensive business, a large proportion of the catch being conveyed from the ship's side by rail to Glasgow. There are over a dozen powerful steamers engaged in the industry. Granton is also the headquarters of the Royal Forth Yacht Club and of yachting in general on the Forth. At first it ranked as a sub-port to Leith, but in 1860 the customs authorities constituted it a head port. The following table gives the tonnage of vessels that entered and cleared from and to foreign countries and coastwise with cargoes and in ballast:—

	Entered.			Cleared.		
	British.	Foreign.	Total.	British.	Foreign.	Total.
1870	152,235	96,701	248,936	148,546	80,766	229,312
1881	146,950	89,221	236,171	145,670	88,819	235,489
1895	138,635	79,416	218,051	114,830	75,849	190,679

Of the total, 412 vessels of 218,051 tons, that entered in 1895, 271 of 197,698 tons were steamers, 41 of 10,117 tons were in ballast, and 151 of 87,727 tons were coasters; whilst the total, 360 of 190,679 tons, of those that cleared included 246 steamers of 173,176 tons, 65 ships in ballast of 33,750 tons, and 189 coasters of 103,256 tons. The total tonnage of vessels registered as belonging to the port was 1348 (648 steam) in 1869, 1792 (271 steam) in 1873, 2561 (233 steam) in 1881, and 1446 in 1895—viz. 8 sailing ships of 113 and 33 steamers of 1333 tons. The total value of foreign and colonial imports was £646,198 in 1895, against £584,982 in 1894; of customs revenue £118,025 in 1895, against £111,815

in 1894; of exports £194,305 in 1895, against £176,343 in 1894. The trade is in coal, grain, timber, iron, tobacco, etc.; and Granton has extensive bonding warehouses, containing large quantities of tobacco and spirits, besides a saw-mill, a foundry and forge, a ropework, and the extensive printing ink and chemical works of CAROLINE PARK.

In comparison with the importance of the port the town of Granton is most insignificant. Facing the shore end of the pier is a square or rather *place*, one side of which is entirely occupied by a commodious hotel, another consists of substantial stone dwelling-houses, while the third remains unbuilt. The rest of the town is almost all composed of brick houses. Granton *quoad sacra* church, close to the hotel, is an elegant edifice of 1879, founded by the Duke of Buccleuch, for which a manse was purchased in 1891; while Granton and Wardie Free church, 1 mile SSE, was erected in 1880-81, and is adorned with several stained-glass windows. There are a county police station, a public school, a branch of the Royal Bank, and a reading room (1881). To the W is a small six gun battery used for the practice of the City of Edinburgh Artillery Volunteers, and still further in the same direction is Granton Quarry, from which the stone for the pier and breakwaters was excavated, and which was suddenly submerged by the sea one night about forty years ago. Pop. (1861) 661, (1871) 976, (1881) 927, (1891) 915.—*Ord. Sur.*, sh. 32, 1857.

Grantown, a small town in the Inverallan district of Cromdale parish, Elginshire, within $\frac{2}{3}$ mile of the Spey's left bank. Standing 700 feet above sea-level, $\frac{3}{4}$ mile NNE of one station on the Highland railway, and $1\frac{1}{2}$ N by W of another (across the river) on the Strathspey section of the Great North of Scotland, by road it is 34 miles ESE of Inverness, 23 SSE of Nairn, and 34 SW by S of Elgin, whilst from its two stations it is 23 $\frac{1}{2}$ miles S of Forres, 96 N by W of Perth, 143 $\frac{1}{2}$ N by W of Edinburgh, and 24 SW of Craigellachie Junction. It was founded on a regular plan in 1776 by Sir James Grant, Bart. of CASTLE GRANT; and a large number of its inhabitants retain the name of Grant to the present day. Comprising a central rectangle 700 by 108 feet, it mainly consists of small neat houses of whitish fine-grained granite, so as to equal or excel nearly all other places of its size in Scotland. The site, too, is a pleasant one, in broad Strathspey, with its hills and mountains; and the views are beautiful, away to the far Cairngorms. Surrounded on all sides by forests of pine and birch stretching away southward and eastward, and joining the forests of Ballindalloch and Rothiemurchus, the whole district around Grantown is of the most salubrious character. In no other part of Scotland are there more octogenarians and nonagenarians to be met with. Castle Grant, the seat of the Countess-Dowager of Seafield, stands 2 $\frac{1}{2}$ miles NNE of the town, in the midst of a demesne of more than 1000 acres in extent, thickly planted with pines of various kinds, and brought from all the pine-bearing regions of the world—from the slopes of the Himalayas of Bengal and the Rocky Mountains of America. The surrounding forests, belonging also to the Countess-Dowager, were traversed by a commission delegated by the French Government in 1881, and, as to management and arrangement, were reported on as being perfect. In spring and summer the climate is warm, but mildly bracing rather than exhausting; in winter it is cold, and occasionally intense, the thermometer ranging from 2° to 10° below zero. Sudden atmospheric changes are, however, infrequent; and hence, while in summer it is favourable for invalids, and highly recommended by the leading physicians of London and Edinburgh, in winter it is even exhilarating to debilitated constitutions. Hence it is finding increasing favour as a holiday resort, and numerous handsome villas have been erected. In 1877, a public hall, seated for 400, was built at a cost of £1500; a gravitation water supply, giving 68 gallons a head per diem, was introduced in 1881; and in 1887 a new and commodious station was erected by the Highland Railway Co. Grantown besides has a post office, with money order,

savings bank, and telegraph departments, branches of the Caledonian, National, and Royal Banks, the Strathspye National Security Savings Bank (1846), several hotels, a court-house, a gaswork, an orphanage (1824), a cottage hospital, erected by the Countess-Dowager of Seafield in 1834 in memory of the late Earl Ian Charles, curling and cyclists' clubs, Freemasons' and Oddfellows' lodges, a public library (1859), an agricultural society (1812), a horticultural society, the Strathspye Highland Gathering, and in the vicinity a distillery. Friday is market-day, and numerous fairs are held in the course of the year. The great event in Grantown's history is the visit paid to it by the Queen and Prince Albert during the 'First Great Expedition' to Glen Feshie (4 Sept. 1860), a visit thus described in the Queen's *Journal*:—"On and on we went, till at length we saw lights, and drove through a long and straggling "toun," and turned down a small court to the door of the inn [the Grant Arms]. Here we got out quickly—Lady Churchill and General Grey not waiting for us. We went up a small staircase, and were shown to our bedroom at the top of it—very small but clean—with a large four-post bed which nearly filled the whole room. Opposite was the drawing and dining room in one—very tidy and well sized. Then came the room where Albert dressed, which was very small. The two maids (Jane Shackle with me) had driven over by another road in the waggonette. Made ourselves "clean and tidy," and then sat down to our dinner. Grant and Brown were to have waited on us, but were "bashful," and did not. A ringleted woman did everything; and, when dinner was over, removed the cloth and placed the bottle of wine (our own which we had brought) on the table with the glasses, which was the old English fashion. The dinner was very fair, and all very clean—soup, "hodge-podge," mutton broth with vegetables, which I did not much relish, fowl with white sauce, good roast lamb, very good potatoes, besides one or two other dishes, which I did not taste, ending with a good tart of cranberries. "After dinner I tried to write part of this account (but the talking round me confused me), while Albert played at "patience." Then went away, to begin undressing, and it was about half-past eleven when we got to bed.—(*Wednesday, Sept. 5.*) A misty, rainy morning. Had not slept very soundly. We got up rather early, and sat working and reading in the drawing-room till the breakfast was ready, for which we had to wait some little time. Good tea and bread and butter, and some excellent porridge. Jane Shackle (who was very useful and attentive) said that they had all supped together, namely, the two maids, and Grant, Brown, Stewart, and Walker (who was still there), and were very merry in the "commercial room." The people were very amusing about us. The woman came in while they were at their dinner, and said to Grant, "Dr Grey wants you," which nearly upset the gravity of all the others; then they told Jane, "Your lady gives no trouble;" and Grant in the morning called up to Jane, "Does his lordship want me?" One could look on the street, which is a very long wide one, with detached houses, from our window. It was perfectly quiet, no one stirring, except here and there a man driving a cart, or a boy going along on his errand. General Grey bought himself a watch in a shop for 2*l.* At length, at about ten minutes to ten o'clock, we started in the same carriage and the same way as yesterday, and drove up to Castle Grant, Lord Seafield's place. It was drizzling almost the whole time. We did not get out, but drove back, having to pass through Grantown again, where evidently "the murder was out," for all the people were in the street, and the landlady waved her pocket-handkerchief, and the ringleted maid (who had curl-papers in the morning) waved a flag from the window. Our coachman evidently did not observe or guess anything. As we drove out of the town, turning to our right through a wood, we met many people coming into the town, which the coachman said was for a funeral. We passed over the Spey, by the Bridge of Spey.' Besides the parish church of

Cromdale there is a *quoad sacra* church, a handsome stone edifice built in 1884 by the Countess-Dowager of Seafield. There are also a Free church, a Baptist chapel dating from 1805, but restored in 1882, and an Episcopal mission station opened in 1870. A public school, with accommodation for 442 children, has an average attendance of about 300, and a grant of over £308. Pop. (1841) 814, (1861) 1334, (1871) 1322, (1881) 1374, (1891) 1423.—*Ord. Sur.*, sh. 74, 1877.

Grant's House, a hamlet near the western verge of Coldingham parish, Berwickshire, on the left bank of Eye Water, 4½ miles ESE of Edinburgh, and 16 NW of Berwick-upon-Tweed. It has a station on the North British railway, a post office, with money order, savings bank, and railway telegraph departments, and a hotel.—*Ord. Sur.*, sh. 34, 1864.

Grantully Castle, a fine old baronial mansion in Logierait parish, central Perthshire, near the right bank of the Tay, 2¾ miles ENE of Aberfeldy, and 2 SW of Grantully station, midway between that town and Ballinluig Junction. Formerly in Dull parish, it was, with the entire Grantully district, transferred by the Boundary Commissioners in 1891 to the parish of Logierait. Supposed to have been built in 1560, and surrounded by noble elm trees, it mainly consists of two five-storied towers, with walls 9 feet in thickness, and with additions of 1626 in the shape of gables, pepper-box turrets, and the like. With Traquair, Craigebrook, Ravelston, and Craighall-Rattray, it claims to be the prototype of 'Tully-Veolan' in *Waverley*; and now, for several years unoccupied, it is left to desolation and decay. The lands of Grantully were first possessed as a separate estate towards the close of the 14th century by Sir John Stewart, Lord of Innermeath and Lorn, who was third in descent from Sir John Stewart of Bonkill and fourth from Alexander, lord high steward of Scotland. Erected into a free barony by a charter of 1538, renewed in 1623 and 1671, they now belong to Walter T. J. S. Stewart Fotheringham, Esq. The original castle of 1414 or thereby, 1 mile to the E, has left some vestiges of its foundations; whilst St Mary's church, ¾ mile SSW, which is known to have existed in 1533, retains its roof with twelve medallions (1636) painted on wood. This was the burial place of the Barons of Grantully before they acquired MURLY in 1615. Grantully chapel of ease, raised to *quoad sacra* status in 1883, was rebuilt in 1892 by Lady Stewart, as a memorial of her late husband, Sir A. Douglas Stewart of Grantully, Bart. Grantully inn stands within 200 yards of the station.—*Ord. Sur.*, sh. 55, 1869. See Sir William Fraser's *Red Book of Grantully* (2 vols., Edinb., 1868).

Grapel. See GARPEL.

Grassmarket. See EDINBURGH.

Grassy Walls, a Roman camp, now all but obliterated, in Scone parish, Perthshire, on the left bank of the Tay, 3¾ miles N by W of Perth. Oblong in shape, and 535 yards in circumference, it seems to have been formed by Agricola (83 A.D.), and by Severus (208) to have been connected by a road with Stirling to the SW and BATTLE DYKES to the NE.—*Ord. Sur.*, sh. 48, 1868. See Gen. William Roy's *Military Antiquities of the Romans* (Lond. 1793).

Gray House, a mansion in Liff and Benvie parish, Forfarshire, 5 miles WNW of Dundee. Built by the tenth Lord Gray in 1715, it is a turreted edifice in the manorial style, and stands in a finely wooded park of 200 acres. An oak, an ash, and a sycamore have a respective height of 65, 110, and 81 feet, and a girth of 26½, 18½, and 15½ feet at 1 foot from the ground. With KINFAUNS CASTLE, Gray House passed in 1878 to E. A. Stuart-Gray, Esq.—*Ord. Sur.*, sh. 48, 1868.

Graystone, a village in Carmyllie parish, Forfarshire, 7½ miles W by N of Arbroath, under which it has a post office.

Greanlin, a village in the Isle of Skye, Invernessshire. Its post-town is Kilmuir, under Portree.

Greannoch. See GRENNOCH.

Great Cave. See GIGHA.

Great Colonnade. See STARFA.

Great Door. See CRAIGNISH.

Great Glen. See GLENMORE-NAN-ALBIN.

Greatmoor Hill. See GRITMOOR.

Great North of Scotland Railway, a railway supplying the counties of Aberdeen, Banff, and Elgin, and part of Inverness-shire, and embracing a total of 315½ miles of line. The history of the railway between 1846, when the first Act was obtained, and 1866, when its component parts were consolidated into one, presents the usual features of railway enterprise in Scotland, embracing a series of Acts of Parliament and frequent additions, extensions, and internal working arrangements. The first Act authorised the formation of a railway from Aberdeen to Inverness, with a capital of £2,000,000, but the terminus of the railway is at Elgin, between which point and Inverness the Highland railway (see HIGHLAND RAILWAY) provides the connection. In the same year Acts were passed authorising the Great North of Scotland Extension railway, reaching by two lines to Fraserburgh and Peterhead, with a capital of £533,333, and the Deeside railway, Aberdeen to Aboyne, with a capital of £293,333. Although those Acts were obtained in 1846, it was not until Nov. 1852 that the construction of the main line was begun, and the railway was opened to Huntly in Sept. 1854, and to Keith in Oct. 1856. The Deeside was re-incorporated in 1852 and constructed to Banchory, in 1857 the extension from Banchory to Aboyne was authorised, and under an Act of 1865 the extension to Braemar was sanctioned, making 43½ miles in all. In 1866 the Deeside line was leased for 999 years by the Great North of Scotland, and in 1876 was amalgamated with that railway. At Kintore the Alford Valley line, 16 miles, branches off, and at Inverurie there is a branch to Old Meldrum, 5½ miles. From Inveramsay the Macduff and Banff railway, 29½ miles, leaves the main line, and a second line to Banff strikes off from Grange Junction, subdividing at Tillynaught into the Banff and Elgin sections. Beyond Keith the railway reaches to Craigellachie and through Speyside to Boat of Garten, 48 miles in all; and the Morayshire railway, also first projected in 1846, and amalgamated with the Great North of Scotland in 1880, proceeds from Craigellachie to Elgin and Lossiemouth, a distance of 18½ miles. In 1882 powers were obtained for the construction of a railway from Portsoy via Buckie to Elgin, and this line was opened throughout in 1886. The system is thus seen to be very much divided, while the Deeside, leaving Aberdeen in a south-westerly direction, is virtually a separate line. The trunk line from Aberdeen to Keith gives off so many branches that the railway has termini at ten different places—namely, on the left at Alford, Keith, Boat of Garten, and Lossiemouth, and on the right at Peterhead, Fraserburgh, Old Meldrum, Macduff, Banff, and Elgin. The railways here described were constructed as single lines, but the main line has been doubled from Aberdeen to Insch, 23 miles, the Deeside line from Aberdeen to Culter, 7 miles. At Jan. 1896 the total capital expenditure of the company was £6,090,684, of which there had been raised in shares £4,460,758 (ordinary stock £920,132, the remainder preference stocks at various rates), in debentures and debenture stock £1,272,760, and in premiums received on issue of stocks £114,132, with a balance of £242,984 spent in excess of the amount raised. As with many other railways, the capital is to a certain extent fictitious, so far as it can be held to represent money actually spent in the formation of the line. In 1873, when an arrear of preference dividends pressed hardly on the prospects of the company, power was obtained to convert the arrear into a preference stock, to the amount of £40,916, and to bear 4 per cent. interest, and to be redeemed by a half-yearly payment of £500 from the revenues of the company. The result of this was at once to bring the ordinary stock into receipt of a small dividend, no dividend having been paid to the ordinary shareholders for nine years preceding. In 1887 the remaining unredeemed portion of this stock was by Parliamentary authority merged in one of the preference stocks. Previous to this, in 1882, an Act was obtained to consolidate

and convert the share capital of the company, which added nominally £703,964 to the capital. The total nominal additions to the capital amount to £1,063,602. In July 1878 the ordinary shareholders received no dividend, but in 1879 a small dividend was paid, and except in 1881, 1882, and 1883, dividends have been regularly paid, the average for the last year being 3¼ per cent.

In the half year last reported, the railway carried 58,227 first-class and 1,558,787 third-class passengers, yielding, with 1485 season-ticket holders, a revenue of £86,623. For parcels and mails the company received £24,383, for goods and mineral traffic £96,062, and miscellaneous £5620, making a total revenue for the half year of £212,690. To carry this traffic the company employed 99 locomotive engines, 652 passenger vehicles (including horse boxes, break vans, etc.), and 2888 waggons of various descriptions. In the half year the engines traversed, with passenger trains, 712,420½ miles, and with goods and mineral trains 386,641½, being a total of 1,099,061½ miles. The working expenses per train mile are 20·88d., and on traffic receipts 45·48d. per cent. The affairs of the company are conducted by a chairman, deputy-chairman, and 11 directors.

In the formation of the company and its connections the main object was to supply local communications, and to furnish an outlet to the S for the produce of the agriculture, the fishing, and other industries of the district; and the minute ramifications of the system, although costly financially, have realised in a large degree this object. The railway starts in Aberdeen from the joint-station constructed for the use of the Caledonian and the Great North of Scotland railways, and proceeds by the Denburn Valley line, a railway 1½ mile in length, constructed in 1864, to afford a through communication at a capital cost of £231,600. The first stations are Kittybrewster 1½, Woodside 2¼, Buxburn 4½, Dyce Junction 6½, Pitmedden 8½, and Kinaldie 10½ miles from Aberdeen. At Kintore, 13½ miles from Aberdeen, the junction of the branch to Alford, there was removed, in constructing the station, a conical mound called the Castle Hill, in destroying which several sculptured stones were discovered that are figured in the *Sculptured Stones of Scotland*, published by the Spalding Club. The railway partly follows the course of the Aberdeen and Inverurie Canal, a work projected in 1793, and made at a total cost of £50,000, and which, in a distance of 18 miles, was crossed by 56 bridges, ran across 5 aqueducts and 20 culverts, and ascended 17 lochs. Its termination was Port Elphinstone, named after Elphinstone of Logie Elphinstone, Bart., and now a station (15½ miles) on the railway. After leaving Port Elphinstone, the railway crosses the Don on a handsome granite and iron bridge, rebuilt in 1880. Inverurie, 16½ miles, at the confluence of the Urie and Don, forms the centre of a district of great interest, embracing the Bass of Inverurie, spoken of by Thomas the Rhymer, Caskieben Castle, Roman camps, etc. Here the Old Meldrum branch runs to the right. Near Inveramsay station, 20½ miles, the junction for the Macduff branch is the scene of the Battle of Harlaw, and near it the visitor will find Balquhain Castle, visited by Mary Stuart in 1562; and Pitcaple, the next station, 21½ miles, is the best point from which to ascend the Hill of Bennachie, a conspicuous landmark in the district of Buchan. At Oyne station, 24½ miles, the traveller is in the immediate neighbourhood of the Gadie, famous in song. Insch is 27½ miles, and farther on, where Warehouse station, 31 miles from Aberdeen, is reached, the summit level of the line is attained. Kennethmont 32½, Gartly 35½, and Huntly 40½ miles, are in the Gordon country and valley of the Bogie. Huntly stands at the junction of the Bogie with the Deveron, on a rising ground; and conspicuous in the front street are the Gordon Schools, built as a memorial of the last Duke of Gordon, and forming the entrance to Huntly Castle. The railway on leaving Huntly crosses the Deveron on a fine viaduct of 5 spans, 70 feet in height, and here enters Banffshire—Rothiemay, 45½ miles, being the first station in that county. Traversing

the valley of the Islay, and passing Grange Junction, 48 $\frac{3}{4}$ miles, where the Banff and Elgin branch runs off, the line terminates in the town of Keith, 53 $\frac{1}{4}$ miles from Aberdeen. The Deeside railway next claims attention as a line apart from the principal part of the system. It gives access, as its name implies, to the beautiful district of Deeside, and forms the route to Braemar and Balmoral, the favourite resort of Queen Victoria. Two miles from Aberdeen is Ruthrieston, a suburban station; Cults is two miles farther; and Murtle, 5 $\frac{1}{2}$ miles from Aberdeen, gives access to the hydropathic establishment at, and the Roman Catholic College of, Blairs. The succeeding stations are Milltimber 6 $\frac{3}{4}$, Culter 7 $\frac{3}{4}$, Drum 10, Park 11, Crathes 14, and Banchory 17 miles from Aberdeen. From this point to Aboyne the railway leaves the Dee, taking a wide curve northward. The stations on this loop are Glassel 21 $\frac{1}{2}$ and Torphins 24, in the valley of the Beltie, Lumphanan 27, and Dess 29 $\frac{1}{2}$ miles from Aberdeen. Between the latter place and Aboyne (32 $\frac{1}{2}$) the line skirts the Loch of Aboyne, and passing the latter place it traverses the Muir of Dinnet; and after passing that station (37) and Cambus O'May (39 $\frac{1}{2}$), a magnificent portion of the district is reached, opening to view many of the finest hills of this beautiful district. Ballater, the terminus of the railway, is 43 $\frac{3}{4}$ miles from Aberdeen. The Formartine and Buchan railway, leaving the main line at Dyce Junction, was opened to Mintlaw in 1861, to Peterhead in 1862, and to Fraserburgh in 1865. Parkhill station, 1 $\frac{1}{2}$ mile, and New Machar station, 5 $\frac{1}{2}$ miles from Dyce, having been passed, the railway enters a deep cutting through the Hill of Strypes, which is a mile in length, and reaches a depth of 50 feet. We next reach Uday 8 $\frac{1}{2}$, Logierieve 10, Esslemont 11 $\frac{1}{2}$, and Ellon 13 $\frac{1}{2}$ miles from the junction. The last-named town is reached after passing a deep cutting through Woolaw Hill, and crossing the Ythan on a bridge of four arches, 50 feet high. The falling in of this bridge in February 1861, owing to some subsidence of the foundations, considerably delayed the opening of the line. From Ellon the line strikes inland by Arnage 16 $\frac{3}{4}$, Auchnagatt 20 $\frac{3}{4}$, and Maud Junction (at the village of Bank) 25 miles from Dyce. From this junction the line to Peterhead passes Mintlaw and Old Deer station (the centre of a district of much interest) 29, and Longside 32, New Seat 34 $\frac{1}{2}$, and Inverurie 36 miles from Dyce, reaching Peterhead, the terminus, distant 38 miles from Dyce, and 44 $\frac{1}{4}$ from Aberdeen. From Maud Junction the Fraserburgh section pursues a winding course northerly, passing Brucklay 1 $\frac{3}{4}$, Strichen 5 $\frac{3}{4}$, Mormond 8 $\frac{1}{2}$, Lonmay 10 $\frac{3}{4}$, Rathen 13 $\frac{1}{4}$, and Philorth 14 $\frac{1}{2}$ from the second junction, and reaching Fraserburgh 16 miles from Maud, 41 from Dyce Junction, and 47 $\frac{1}{4}$ from Aberdeen. The Alford branch, leaving the main line at Kintore, is 16 miles long, and was opened in 1859. The stations are Kemnay 4 $\frac{1}{2}$, Monymusk 7 $\frac{1}{2}$, Tillyfourie 10 $\frac{3}{4}$, Whitehouse 13, and Alford 16 miles from the junction, and the line presents no features of constructive interest, though the district opened up is a beautiful one. The old Meldrum branch, on the right from Inverurie, was opened in 1856, and has two stations, Lethenty 2 $\frac{3}{4}$ and Old Meldrum 5 $\frac{3}{4}$ miles from the junction. At Inveramsay the Macduff and Turriff railway and Banff extension leave the main line. The line to Turriff was sanctioned in 1855 and opened in 1857, and the extension, authorised in the latter year, was opened in 1860. Crossing the Ury a mile from the junction, the line proceeds to Wartle 3 $\frac{3}{4}$, Rothie-Norman 7 $\frac{1}{2}$, and Fyvie 10 $\frac{3}{4}$ miles, the station at the last-mentioned place being a mile from the village of that name. On this part of the line a bridge fell in Dec. 1882, carrying a mixed passenger and goods train, and killing five persons. At Auchterless, 14 miles from the junction, is Towie-Barclay, an ancient castle reduced and modernised in an unhappy way. Turriff 18 miles, Plaidy 22 $\frac{1}{4}$, and King Edward 24 $\frac{3}{4}$ —the latter a corruption of Kin-Edar—are passed, and the Banff station, 1 $\frac{1}{2}$ mile from the burgh, and on the other side of the Eden, is reached. A quarter of a mile farther on is Macduff terminus, 29 $\frac{3}{4}$ miles from the junction at

Inveramsay and 49 $\frac{1}{2}$ from Aberdeen. The Moray Firth Coast railway, proceeding on the right from Grange Junction, was opened throughout in 1886.

Before the construction of the Moray Firth Coast railway, the Banffshire line was a separate branch off the main line from Grange, running to Banff and Portsoy. It is now, however, a portion of the through main line to Inverness and the Highlands by the coast. There are stations on the Banffshire line at Knock, Glenbarry, Cornhill, and Tillynaught, the latter being the junction for Banff. From Tillynaught there is a branch line to Banff, with an intermediate station at Lady'sbridge; and from Tillynaught, also, the main line sweeps round *via* Portsoy into the heart of Moray. The stations after passing Portsoy are Glassaugh, Tochineal, Cullen, Portnockie, Findochty, Portessie, and Buckie, one of the largest fishing towns in the North. Westward from Buckie, about 3 miles, is Port-Gordon, and further west still lies Fochabers-on-Spey Station, from which a splendid view of the Spey valley is obtained. Gordon Castle, the magnificent residence of the Duke of Richmond and Gordon, is seen about 3 miles up the strath from the station. An iron viaduct, built on piers of solid masonry, carries the railway over the river Spey a little to the west of Fochabers-on-Spey Station. It is a magnificent structure of about 950 feet in length, and consists of seven spans. The centre span is a bow-string, and measures 350 feet. There are three spans on each side of the central span, of 100 feet each. The bridge was a most difficult piece of engineering, chiefly on account of the difficulty of obtaining a proper foundation. About half a mile from Speymouth stands Garmouth, a quaint and clean-looking village, which figured often in ancient history. On leaving Garmouth, the railway passes through the pretty parish of Urquhart on to the royal burgh of Elgin, where the line joins the Highland railway.

While the through route to Inverness is at Keith carried on by the Highland railway, there extends from the latter town, starting in a south-westerly direction, railways traversing on one hand the district of Strathspye, and on another an important portion of Morayshire. The section to Dufftown, sanctioned in 1857 and opened in 1862, passes Earlsmill $\frac{3}{4}$ mile, Auchendachy 3 $\frac{1}{2}$, and Drummuir 6 $\frac{1}{2}$ miles from Keith. A mile beyond the latter station the railway skirts the Loch of Park, a narrow water about a mile long, with abrupt banks, on a narrow ledge of which the line is carried. Here the summit level of this section of the line is reached. The Fiddich is crossed by a handsome bridge of two 60-foot spans leading to Dufftown station, 1 mile from the village, 10 $\frac{3}{4}$ miles from Keith, and 64 by rail from Aberdeen. Leaving Dufftown, the Strathspey makes a rapid descent of 300 feet within 4 miles. A freestone bridge of three spans crosses the gorge of the Fiddich, and the descent is made in a series of short sharp curves, many of them supplied with guard-rails, and a series of cuttings and embankments with a deep cutting through the Corbie's Crag mark a very costly and laborious bit of railway engineering. At Craigellachie the Morayshire railway branches off, and here is seen the famous iron bridge over the Spey designed in 1815 by Telford. A short distance from the station a tunnel through Taminurio is found, itself high above the river, but topped by the post road at a higher elevation, the road at both ends of the tunnel looking down a sheer precipice to the railway. Aberlour is 3 $\frac{1}{4}$ miles from Craigellachie, and Carron station is 3 $\frac{1}{2}$ miles farther, the line here traversing the narrowing valley of the Spey, the scene of the 'Moray Floods' of 1829. Knockando Burn is crossed by a viaduct of three large spans, 50 feet in height, carrying road and railway; and its foundation was a work of great difficulty. An extensive cutting is traversed, and Black's Boat station is then reached, 4 $\frac{3}{4}$ miles from Carron. Before reaching Ballindalloch the Spey is crossed by a lattice-girder bridge with one span of 198 feet and two lesser spans. Advie station, 3 $\frac{1}{4}$ miles from Ballindalloch and Cromdale, is 5 $\frac{1}{4}$ miles farther, bringing us to the 'crooked

plain' on which a struggle took place in 1690 between a body of Scots troops favourable to James VII. and King William's forces, that has been rendered famous in ballads of the time. Between Cromdale and Grantown is situated Castle Grant, belonging to the Countess-Dowager of Seafield, a magnificent pile, from the tower of which a splendid range of country is visible. The station of Grantown on this line is $1\frac{1}{2}$ mile S by E of the village, which lies in a triangle formed by the two railways, the station on the Highland line being $\frac{3}{4}$ mile to the SSW. Grantown station is in Inverness-shire, the railway here traversing a projecting angle of that county; and so too is Nethy Bridge, which is $96\frac{1}{2}$ miles from Aberdeen, and which was originally the terminus of the railway. It was afterwards carried $4\frac{3}{4}$ miles farther to Boat of Garten, running for some part of the distance parallel with the Highland railway, with which it here forms a junction. Here is attained the maximum distance from Aberdeen on the system, Boat of Garten being distant from the headquarters of the line 101 miles. Turning back to Craigellachie station, the Morayshire railway there branches off, crossing the Spey by a viaduct of four spans—three of 57 and one of 200 feet—on stone piers supported on concrete foundations, carried far down below the river's bed, with lattice girders of $17\frac{1}{2}$ feet depth over the main span. Dandaleith station is $\frac{3}{8}$ mile from the viaduct, and at Rothes (3 miles) the line leaves the Spey and follows the Glen of Rothes, by some thought to have been originally the course of the larger river. Near Rothes there is a branch of the railway to Orton, now disused, and affording a junction with the Highland railway at Boat of Bridge. The romantic valley of the Rothes is traversed for a considerable distance before another station is reached, this being Longmorn, $9\frac{3}{4}$ miles from Craigellachie, and 3 miles farther the cathedral town of Elgin is reached. The town, however, has its principal railway connection E and W by means of the Highland railway. Proceeding northwards, the Morayshire line passes the Castle of Spynie, a picturesque ruin, on the borders of the loch of Spynie, formerly an arm of the sea, and now almost entirely reclaimed and converted into fertile farms. At an expenditure of about £20,000, land to the extent of 762 acres has been brought from the sea to cultivation. The railway terminates at Lossiemouth, on the coast, $5\frac{1}{2}$ miles from Elgin, $18\frac{1}{4}$ from the junction at Craigellachie, and $86\frac{1}{2}$ from Aberdeen.

The Great North of Scotland railway is seen from the above description to consist of an intricate series of forks and branches, almost wholly local in character, but serving very fully the district over which the line extends. Excepting the struggle in 1832 with the Highland company for the right of supplying new railways in the coast district between Portsoy and Lossiemouth, and the competition naturally existing between the two companies for the traffic from the Elgin and Keith districts to the S and through portions of Morayshire, the Great North of Scotland possesses a monopoly of the railway traffic over an extensive and important territory. Many important fishing towns are touched on the north-eastern point of Central Scotland, and the favourite tourist district of Deeside is only accessible over this system of railway. Over the whole extent of the railway there are to be met many picturesque spots, with castles, churches, and fortalices innumerable, each famous in song or legend or historical reminiscence. See *The Great North of Scotland Railway*. By W. Ferguson of Kinnmundy (1881).

Greenan, a ruined fortalice on the coast of Maybole parish, Ayrshire, standing on a precipitous cliff at the southern extremity of Ayr Bay, three-quarters of a mile E by N of the Heads of Ayr. Overlooked by Brown Carrick Hill, it figures conspicuously in a considerable extent of coast landscape, and presents a weird appearance.—*Ord. Sur.*, sh. 14, 1863.

Greenan, a loch at the mutual border of Rothesay and North Bute parishes, Isle of Bute, $1\frac{1}{4}$ mile WSW of Rothesay town.—*Ord. Sur.* sh. 29, 1873.

Greenbank, an estate, with a mansion, in Mearns

parish, Renfrewshire, $1\frac{3}{4}$ mile W of Busby. The *quoad sacra* parish of Greenbank was constituted in 1889, and comprises portions of Cathcart, Eastwood, and Mearns parishes.—*Ord. Sur.*, sh. 22, 1865.

Greenbrae, a village in Dumfries parish, Dumfriesshire, contiguous to Stoop village, 1 mile ENE of Dumfries town. Pop., together with Stoop, (1891) 743.

Greenburn. See CROFHEAD and FAULDHOUSE.

Greenburn, a place in Newhills parish, SW Aberdeenshire, $1\frac{1}{4}$ mile NW of Auchmill.

Greencraig. See CREICH, Fife.

Greenend, a village in Old Monkland parish, Lanarkshire, $1\frac{1}{2}$ mile ESE of Coatbridge.

Greenend, a hamlet in Liberton parish, Edinburghshire, $\frac{3}{4}$ mile E by N of Liberton village.

Greenfield. See HAMILTON.

Greenford, a village in Monikie parish, SE Forfarshire, 8 miles ENE of Dundee.

Greengairs, a collier village in New Monkland parish, Lanarkshire, 4 miles NNE of Airdrie, under which it has a post office. It was erected into a *quoad sacra* parish in 1894. At it are an Established church, Norse Gothic in style, a Free church, and a public school. Pop. (1891) 877.—*Ord. Sur.*, sh. 31, 1867.

Greenhall, a mansion in Blantyre parish, Lanarkshire, on the right bank of the Rotten Calder, 5 furlongs W by S of High Blantyre station.—*Ord. Sur.*, sh. 23, 1865.

Greenhead, a village in Caerlaverock parish, Dumfriesshire, near the old castle, $8\frac{1}{2}$ miles SSE of Dumfries.

Greenhead, a village in Auchterderran parish, Fife, $4\frac{1}{2}$ miles NW by N of Kirkcaldy.

Greenhill, a village in Lochmaben parish, Dumfriesshire, $3\frac{1}{4}$ miles SW by W of Lockerbie.

Greenhill, a villa of the Duke of Roxburgh in Hounam parish, E Roxburghshire, $1\frac{1}{2}$ mile SSE of Hounam church. It stands between two confluent burns, Capehope and Heatherhope, at an elevation of 580 feet above sea-level, with Green Hill (1244) behind it, amid prettily-wooded grounds.—*Ord. Sur.*, sh. 18, 1863.

Greenhill, a station on the western verge of Falkirk parish, Stirlingshire, at the western junction of the Edinburgh and Glasgow section of the North British railway with the Scottish Central section of the Caledonian, $15\frac{1}{2}$ miles NE by E of Glasgow.

Greenholm. See NEWMILNS.

Greenholm, an island of Tingwall parish, Shetland, 1 mile E of the nearest part of Mainland, and 6 miles NNE of Lerwick. It is 3 miles in circumference.

Greenholm, Little and Meikle, two islets of Stronsay and Eday parish, Orkney, $1\frac{3}{4}$ mile SW of the southern extremity of Eday.

Green Island. See GLASS-ELLAN.

Greenknowe, a ruined tower in Gordon parish, SW Berwickshire, $\frac{3}{4}$ mile NW of Gordon station. It was the residence of the famous Covenanter, Walter Pringle of Greenknowe, whose Memoirs were published at Edinburgh in 1723.—*Ord. Sur.*, sh. 25, 1865.

Greenknowe, a *quoad sacra* parish in Annan parish, Dumfriesshire, comprising part of the burgh. Constituted in 1873, it is in the presbytery of Annan and synod of Dumfries. Its church was built in 1842; and there is also a public school.—*Ord. Sur.*, sh. 6, 1863.

Greenknowes, a former crannoge or artificial oval mound in the midst of a bog in Culter parish, Lanarkshire, to the NW of Cow Castle. A promiscuous heap of stones, strengthened by a great number of vertical oaken piles, it communicated by a stone causeway with the firm ground at the side of the morass.—*Ord. Sur.*, sh. 24, 1864.

Greenland, a village in Walls parish, Shetland, 25 miles WNW of Lerwick.

Greenland, a hamlet in Dunnet parish, Caithness, 3 miles E by S of Castletown. It has a post office under Wick, and a public school.

Greenlaw, an estate, with a mansion, in Crossmichael parish, Kirkcudbrightshire, $1\frac{1}{2}$ mile NNW of Castle-Douglas.

Greenlaw. See GLENCORSE.

Greenlaw, a small town and a parish in Berwickshire.

The town, standing 500 feet above sea-level, on the left bank of Blackadder Water, has a station on the Berwickshire loop-line of the North British, $14\frac{1}{2}$ miles NE of St Boswells, and $7\frac{1}{2}$ SW of Duns. A burgh of barony, it was the county town from 1696 till 1853, but now divides that dignity with Duns. The original town stood $1\frac{1}{2}$ mile to the SSE on the 'green,' round, isolated 'law,' or hill, that gave it name. The present town was founded towards the close of the 17th century, and, for a short time promised to become a central seat of trade for the county, but never, in point of either size or commerce, has risen to be more than a village. Its market cross, supposed to have been erected in 1696 by the celebrated Sir Patrick Hume of Polwarth (afterwards Earl of Marchmont), was taken down in 1829 to make room for the County Hall, but in 1831 was discovered in the basement part of the church tower, and was again set up on the W side of the town. Shaft and Corinthian capital were entire; but the surmounting lion-rampant, the Marchmont crest, was gone. Greenlaw comprises a spacious square, with three or four short radiating streets, and has a post office, with money order, savings bank, and telegraph departments, a branch of the Royal Bank, insurance agencies, one or two inns, a library, a Good Templar hall, curling and angling clubs, horticultural and ornithological societies, a grain mill, and an agricultural implement and a woollen manufactory. On the S side of the square stand the old county court and jail—the latter, a narrow gloomy structure. The new jail, to the W, was built in 1824, and has served since August 1880 for prisoners whose period does not exceed a fortnight. The new court-house, erected in 1834, is a handsome edifice in the Grecian style, with a hall 60 feet long, 40 wide, and 28 high; and is used for jury courts and county meetings. The parish church, a venerable building, adjoins the old jail, of which the under part of its tower formerly was part, known as the Thieves' Hole. There are also a Free and a U.P. church. A sheriff court, and one for the recovery of small debts, are held monthly. The justice of peace courts for the Greenlaw district are held at Duns. Pop. (1831) 895, (1861) 800, (1871) 823, (1881) 744, (1891) 669.

The parish is bounded N by Longformacus, NE by Polwarth, E by Fogo, SE by Eccles, SW by Hume, and W by Gordon and Westruther. Its utmost length, from NNW to SSE, is 8 miles; its breadth varies between $1\frac{1}{2}$ and $3\frac{1}{2}$ miles; and its area is 12,200 acres, of which 51 are water. BLACKADDER Water, formed by two head-streams in the NW of the parish, winds $3\frac{1}{2}$ miles south-south-eastward along the Westruther and Gordon border, and $3\frac{1}{2}$ miles south-eastward through the interior to the town, thence bending $1\frac{1}{2}$ mile east-north-eastward to the boundary with Fogo, which it traces for 7 furlongs north-north-eastward. Fangrist Burn, coming in from Longformacus, drains most of the northern district to the Blackadder; and Lambden Burn, a little tributary of Leet Water, flows $2\frac{3}{4}$ miles north-eastward along the boundary with Eccles. The surface declines along Lambden Burn to 260, along the Blackadder to 290 feet above sea level. Between these streams it rises to 563 feet near Elwarthlaw, 633 at Old Greenlaw, and 680 at Foulshotlaw; beyond the Blackadder, to 677 feet near Whiteside, 786 near Hallyburton, 780 near Hule Moss, 813 at Hurd Law, and 1191 at DIRINGTON Little Law, a summit of the Lammermuirs on the northern border. A moorish tract occupies most of the northern district, and an irregular gravelly ridge, called the Kaimes, 50 feet broad at the base, and from 30 to 40 feet high, extends fully 2 miles in semicircular form across the moor, whilst on the S side of the Kaimes lies Dogden Moss, 500 acres in extent, and in some parts 10 feet deep. The southern district, comprising rather more than one-half of the entire area, presents, for the most part, a level appearance, but is diversified with several isolated, rounded hillocks of the kind called Laws. Sandstone has been quarried at Greenside; and peats, nearly as good for fuel as coal, are cut and dried upon Dogden Moss. The soil of the

southern district is deep and fertile; that of the northern is mostly moorish and barren. In the NW are several cairns or barrows; remains of an ancient camp, called BLACKCASTLE, are at the confluence of Blackadder Water and Fangrist Burn; and a number of gold and silver coins of Edward III. were found in 1832 in the line of a trench running southward from this camp. Two religious houses, subordinate to Kelso Abbey, were formerly in the parish, but have entirely disappeared, as also has a castle near Old Greenlaw, which, in the 12th, 13th, and 14th centuries, was a seat of the Earls of Dunbar, ancestors of the noble family of Home. Mansions are Lambden, Old Greenlaw, and Rowchester. Much the largest proprietor is Sir J. H. P. Hume-Campbell, Bart., of Marchmont House, who is also superior of the burgh. Greenlaw is in the presbytery of Duns and synod of Merse and Teviotdale; the living is worth £411. Its public school, with accommodation for 292 children, has an average attendance of about 170, and a grant of nearly £160. Pop. (1801) 1270, (1831) 1442, (1861) 1370, (1871) 1381, (1881) 1245, (1891) 1110.—*Ord. Sur.*, sh. 25, 1865.

Greenlaw, a hill in Insch parish in the county of Aberdeen.

Greenloaning. See ARDOCH.

Greenmill, a village in CAERLAVEROCK parish, Dumfriesshire, containing the parish church.

Greenock, a parish of NW Renfrewshire, bounded N by the Firth of Clyde, E by Port Glasgow, S by Kilmalcolm, and W by Innerkip. Extending $4\frac{1}{2}$ miles along the Firth, and from $1\frac{1}{2}$ to $5\frac{1}{2}$ miles inland, it has an area of 6247 $\frac{1}{2}$ acres, of which 166 are foreshore and 230 water. The last is made up by two or three rivulets running direct to the Firth, by Whinhill Reservoir, and by the upper part of Gryfe Reservoir (2 miles \times $\frac{1}{2}$ mile). Loch Thom ($1\frac{1}{2}$ \times $\frac{1}{2}$ mile), also belonging to the Greenock Waterworks, falls just within Innerkip parish. The shore is fringed by a strip of level ground, 5 to 7 furlongs in breadth, that marks the old sea-margin of the Firth. The soil of this level portion is light, mixed with sand and gravel; but has been rendered very fertile, owing to the great encouragement given to cultivation from the constant demand for country produce by the numerous population. Beyond, the surface is hilly, attaining 400 feet at Caddle Hill, 813 at Whitelees Moor, 727 near Gryfe Reservoir, and 1175 in the extreme S. The lower slopes are diversified with patches of loam, clay, and till. Farther up, and towards the summits of the hills, the soil for the most part is thin and in places mossy, the bare rocks appearing here and there. The land in this quarter is little adapted for anything but pasturage for cattle and sheep. On the other side of the heights, except a few cultivated spots on the southern border of the parish, chiefly on the banks of the infant Gryfe, heath and coarse grass prevail. The views from the Greenock hills are varied, extensive, and grand, combining water, shipping, the scenery on either shore of the Clyde, and the lofty Highland mountains. The declivities of the hills overlooking the town and the river are adorned with villas, and diversified with thriving plantations, so that they present a very pleasant appearance. The part of the hills directly behind the town, too, is cloven to a low level by a fine narrow valley, through which run the road and the railway to Wemyss Bay. The contour of the declivities both towards this valley and towards the Clyde is rolling and diversified; and the general summit-line, in consequence of being at such a short distance from the shore, looks, from most points of view, to be much higher than it really is. Hence the landscape of the parish, particularly around the town, is decidedly picturesque. The rocks are chiefly the Old Red sandstone, with its conglomerate, near the shore, and various kinds of trap, principally basalt and whinstone, throughout the hills. The sandstone and the trap are quarried for building purposes.

The Clyde opposite the parish of Greenock varies in width from $1\frac{1}{2}$ to 4 miles. In the middle of the Firth there is a sandbank called the Pillar Bank, which, com-

mencing almost immediately below Dumbarton Castle, or $7\frac{1}{2}$ miles above Greenock, and running longitudinally, terminates at a point nearly opposite the western extremity of the town, well known to mariners and others by the name of the 'Tail of the Bank.' During spring tides, part of the bank opposite to the harbour is visible at low water; and the depth of the channel on the south side of this bank is such as to admit vessels of the largest class. Between Port Glasgow and Garvel Point, a remarkable promontory at the E end of the burgh, the high part of the bank is separated from the upper portion (part of which, opposite to Port Glasgow, is also dry at low water) by a narrow channel significantly called the 'Through-let,' through which the tide, passing from the lower part of the Firth in a north-easterly direction, and obstructed in its progress by Ardmore, a promontory on the Dumbartonshire side, rushes with such impetuosity as to produce high water at Port Glasgow a few minutes earlier than at Greenock. The submarine island which is thus formed, and which is commonly called the Greenock Bank, to distinguish it from the high part of the bank opposite to Port Glasgow, was granted by the Crown to the corporation of the town of Greenock for an annual payment of 'one penny Scots money, if asked only.' The charter by the Barons of Exchequer on behalf of the Crown, dated 5 July 1816, contains the following words expressive of the object which the corporation had in view in applying for the grant:—'Pro proposito edificandi murum, vel acquirendi ad ripam antedictam ex australi latere ejusdem quantum ad septentrionem eadem possit acquiri,'—'for the purpose of building a wall or of gaining to the foresaid bank from its S side as much as can be gained to the N.' The southern channel is the only one for vessels passing to and from the different ports on the river, the greatest depth of water in the 'Through-let' being quite insufficient in its present state to admit of vessels of any considerable burden passing that way. The width of the navigable channel, opposite to the harbour of Greenock, does not much exceed 300 yards. Ascending, it rapidly diminishes in width—a circumstance which, but for the application of steam to the towing of ships, must continually have presented an almost insuperable obstacle to the progress of the shipping trade of Glasgow.

Prior to the Reformation Greenock was comprehended in the parish of Innerkip, and being at a great distance from the parish church, the inhabitants had the benefit of three chapels within their own bounds. One of them, and probably the principal, was dedicated to St Lawrence, from whom the adjacent expanse derived its name of the Bay of St Lawrence. It stood on the site of the house at the W corner of Virginia Street in Greenock, belonging to the heirs of Mr Roger Stewart. In digging the foundations of that house, a number of human bones were found, which proves that a burying-ground must have been attached to the chapel. On the lands still called Chapelton there stood another chapel, to which also there must have been a cemetery attached; for when these grounds were formed into a kitchen-garden many gravestones were found under the surface. A little below Kilblain there was placed a third religious house, the stones of which the tenant of the ground was permitted to remove for the purpose of enclosing his garden. From the name it is apparent that this was a cell or chapel dedicated to St Blane. After the Reformation, when the chapels were dissolved, the inhabitants of Greenock had to walk to the parish church of Innerkip, which was 6 miles distant, to join in the celebration of public worship. To remedy this inconvenience, John Shaw, the Superior of Greenock, obtained a grant from the King in 1589, authorising him to build a church for the accommodation of the people on his lands of Greenock, Finnart, and Spangock, who, it was represented, were 'all fishers, and of a reasonable number.' Power was also given to build a manse and form a churchyard. This grant was ratified by parliament in 1592. The arrangement resembled the erection of a chapel of ease in our own times. Shaw having, in 1592, built a church

and a manse, and assigned a churchyard, an Act of Parliament was passed in 1594, whereby his lands above mentioned, with their tithes and ecclesiastical duties, were disjoined from the parsonage and vicarage of Innerkip, and erected into a distinct parsonage and vicarage, which were assigned to the newly erected parish church of Greenock; and this was ordained to take effect for the year 1593, and in all time thereafter.

The parish of Greenock continued, as thus established, till 1636, when there was obtained from the Lords Commissioners for the Plantation of Churches a decree, whereby the baronies of Easter and Wester Greenock, and various other lands which had belonged to the parish of Innerkip, with a small portion of the parish of Houstoun, were erected into a parish to be called Greenock, and the church formerly erected at Greenock was ordained to be the parochial church, of which Shaw was the patron. The limits which were then assigned to the parish of Greenock have continued to the present time; though, for some purposes, it has been subdivided since 1754 and 1809 into the three parishes of Old or West Greenock, New or Middle Greenock, and East Greenock. Ecclesiastically, again, it is distributed among the following parishes:—Cartsburn, East, Gaelic, Ladyburn, Middle, North, South, Wellpark, and West. Pop. of entire parish (1801) 17,458, (1821) 22,008, (1841) 36,936, (1861) 43,894, (1871) 59,794, (1881) 69,238, (1891) 66,247, of whom 39,035 were in West parish, 5311 in Middle parish, and 21,901 in East parish, whilst 11,104 were in Cartsburn *quoad sacra* parish, 8485 in East, 2312 in Ladyburn, 5311 in Middle, 3401 in North, 10,685 in South, 921 in Wellpark, and 23,962 in West.—*Ord. Sur.*, sh. 30, 1866.

The presbytery of Greenock, in the synod of Glasgow and Ayr, comprises the parishes of Cumbrae, Erskine, Fairlie, Gourcock, Greenock (with its ecclesiastical subdivisions), Innerkip, Kilmalcolm, Langbank, Largs, Newark, Port Glasgow, and Skelmorlie; the chapelries of Augustine and St Paul's (Greenock), and a mission church (Newark). Pop. (1881) 96,876, (1891) 97,258, of whom 10,713 were communicants of the Church of Scotland in 1895. The Free Church presbytery of Greenock embraces 20 churches, 10 being in Greenock, 3 in Port Glasgow, and 7 in Cumbrae, Erskine, Fairlie, Gourcock, Innerkip, Kilmalcolm, and Largs. The U.P. Church presbytery embraces 22 charges, viz., 7 in Greenock, 2 in Port Glasgow, 2 in Rothesay, and 11 at Campbeltown, Dunoon, Gourcock, Innellan, Inveraray, Kilcreggan, Kirn, Largs, Millport, Southend, and Wemyss Bay.

Greenock, a parliamentary burgh, seaport, and seat of manufacture, the seventh town of Scotland in point of population. It is situated in the parish of the same name in Renfrewshire, in N latitude $55^{\circ} 57' 2''$, and W longitude $4^{\circ} 45' 30''$, by water being $2\frac{1}{2}$ miles WNW of Glasgow, $7\frac{1}{4}$ W of Dumbarton, 4 S of Helensburgh, and $7\frac{1}{2}$ E of Dunoon, whilst by rail it is $22\frac{1}{2}$ miles WNW of Glasgow, $15\frac{3}{4}$ WNW of Paisley, and 3 W by N of Port Glasgow. According to the popular view, Greenock received its name from a 'green oak' which once stood on the shore; but this derivation has no other foundation than the obvious pun, the oak being wholly apocryphal. Even when this etymology is disposed of, there is considerable doubt as to the origin of the name. One suggestion is the ancient British *graen-ag*, 'a gravelly or sandy place'; another, the Gaelic *grian-aig*, 'a sunny bay'; and a third, the Gaelic *grian-chnoc*, 'the knoll of the sun.' The two first derivations receive some countenance from circumstances, the soil of Greenock being gravelly, while the Highland portion of the present inhabitants pronounce the name like *Grian-aig*. The Gaelic etymology also receives acceptance in some quarters, because of supposed confirmation of it found in other places, such as Greenan in Ayrshire, and a farm of the same name in Perthshire, which are conjectured to have been seats of sun worship. The bay on which Greenock lies is a comparatively narrow one seaward, but it is long and expanded along the shore, and

thus the view up and down the Firth is open. For about $\frac{1}{2}$ mile inland the ground is flat and not much above high-water level, and this portion is occupied by docks, quays, business streets, and lines of villas for about 5 miles. Further inland, the ground begins to rise, in some parts more steeply than others, but in every case adding picturesqueness to the town as seen from the river. Terraces of villa residences are planted here and there, and generally the slopes are pleasantly variegated with garden-plots and other concomitants of the suburban districts of a large town. Charming as is the site of Greenock, the view commanded by the town is much more so. Associated in the public mind with all the customary smokiness and dirt of manufacturing centres, Greenock is nevertheless striking for the airiness and freshness of its surroundings. Looking across St Lawrence's Bay (so called from an ancient religious house) the eye rests on the fringe of the magnificent scenery of the Western Highlands. 'But a few miles off, across the Firth of Clyde,' remark the Messrs Chambers, 'the untameable Highland territory stretches away into Alpine solitudes of the wildest character; so that it is possible to sit in a Greenock drawing-room amidst a scene of refinement not surpassed, and of industry unexampled in Scotland, with the cultivated lowlands at your back, and let the imagination follow the eye into a blue distance where things still exhibit nearly the same moral aspect as they did a thousand years ago. It is said that when Roh Roy haunted the opposite coasts of Dumbar-tonshire, he found it very convenient to sail across and make a selection from the goods displayed in the Greenock fairs; on which occasion the ellwands and staves of civilisation would come into collision with the broadswords and dirks of savage warfare in such a style as might have served to show the extremely slight hold which the law had as yet taken of certain parts of our country.' Leaving out the more imaginative portions of this picture it still shows how Greenock stands on the threshold of the rather prosaic haunts of industry and the freer but less remunerative wilds of the Highlands. Pennant, who visited Greenock in the course of one of his tours, gives the following graphic account of the view from an eminence in the neighbourhood—'The magnificence of the prospect from the hill behind the towns of Greenock and Port Glasgow, and even from the quays of these towns, deserves notice. Immediately before you is the river Clyde, having all the appearance of a fresh-water lake (as the outlet to the sea is not visible), with numbers of large and small vessels sailing upon it. Next to this, the opposite coast of Dumbar-ton and Argyllshire, abounding in gentlemen's seats, meets the eye, and the prospect is terminated by the western range of the Grampian Mountains at unequal distances, and so ragged and craggy on the tops, that, by way of contrast, they are called here by the emphatical name of the Duke of Argyll's Bowling Green. Along the skirts of the hills there are many eligible situations for those who have a relish for the heauty and magnificence of nature. Below them, the towns of Greenock and Port Glasgow, with their convenient and crowded harbours. On the opposite side of the Firth are in view the parishes of West Kilpatrick, Dumbar-ton with its rock and castle, Cardross, Row, and the peninsular parish of Roseneath, on the SE of which is a castle of the Duke of Argyll with flourishing plantations. In ascending the Greenock hills, the prospect is still varied and extending. From Corlic, the highest ground in the locality, may be seen in a clear day, besides that of Ren-frew, part of the counties of Bute, Arran, and Argyll, with the western part of the Grampian Mountains, of Perth, Stirling, Lanark, and Ayr.' The view, too, from the top of Lyle Road overlooking Gourrock Bay (opened 1 May 1880) embraces parts of the shires of Ayr, Argyll, Bute, Dumbar-ton, Lanark, Perth, and Stirling.

Of the origin of Greenock nothing definite is known, though it might be safe to conjecture that the village grew up round the religious establishment which gave its name to the bay. There were three chapels in the neighbourhood, that of St Lawrence, which stood at the

W corner of Virginia Street, and of which traces were extant till 1760; a second at Chapelton at the extremity of the eastern boundary of the East parish; and a third, dedicated to St Blane, a little below Kilblain. The castle of Easter Greenock stood about 1 mile E of the present town; and that of Wester Greenock on the site of the mansion-house of the family of Shaw of Greenock, with whom the fortunes of the town were for a long time bound up. The Caledonian railway having acquired this elevated ground the mansion-house was taken down, the tunnel of the Gourrock extension railway now running under the site. John Shaw received permission from James VI. in 1589 to erect a church in Greenock. The parish was disjoined from Innerkip and erected into a separate charge in 1594, and was legally constituted a parish in 1636. (See GREENOCK parish.) The same John Shaw obtained a charter from Charles I. in 1635 (the king acting for his son Baron Renfrew, a title still held by the Prince of Wales), conferring upon Greenock the rights and privileges of a burgh of barony, including permission to hold a weekly market on Friday and two fairs annually. This charter was confirmed by the Scottish Parliament in 1641. A haron haille was appointed, and regular courts were instituted immediately on the granting of the charter. The laird was not content with these endeavours, and further benefited the young burgh by building a dry stone pier for the accommodation of the passage boats for Ireland and of the fishermen. The next notice of the town is in a report by Thomas Tucker, a customs official, deputed in 1656 by Cromwell's government to examine into the revenues of the Clyde ports. He speaks of Greenock, whose inhabitants are 'all seamen or fishermen trading for Ireland or the Isles in open boats, at which place there is a mole or pier where vessels might ride or shelter in stress of weather.' In 1670 a French traveller, M. Jorevein de Rocheford, visited 'Krinock,' which he says is 'the town where the Scots post and packet boats start for Ireland. Its port is good, sheltered by the mountains which surround it, and by a great mole by the sides of which are ranged the harks and other vessels for the conveniency of loading and unloading more easily.' The first charter of Greenock expressly denied permission to engage in foreign trade, which was the exclusive privilege of royal burghs. So jealous were the latter of this right that John Spreule, representative of Renfrew in Parliament, made a stipulation before its confirmation, that 'the charter to Greenock was to be in no ways prejudicial to our antient privileges contained in our infetment as accords of law.' Shaw of Greenock endeavoured to remove this restriction, and in spite of the opposition of the royal burghs, he was successful in 1670, owing chiefly, it is said, to the services rendered by his son to the King at the battle of Worcester. This second charter, granting the privileges of buying and selling wine, wax, salt, brandy, pitch, tar, and other goods and merchandise, was not confirmed by Parliament till 1681, but the knight acted on it before this, and in consequence a Greenock ship with foreign produce on board was seized by agents of the royal burghs and conveyed to Newark, the place now called Port Glasgow. Roused at this, about a hundred inhabitants of Greenock, under the command of Sir John Shaw, Laird of Greenock, and Mr Bannatyne of Kelly, rowed to Newark to recapture their vessel. A number of armed men were on board, and after a tough struggle, in which several of both parties were wounded, the Greenock men had to retire discomfited. A complaint concerning the whole matter was made to the Lords of Secret Council by the royal burghs of Glasgow, Dumbar-ton, and Renfrew, and, though the charter of 1670 saved Greenock from any penalties, the town was forced to pay an 'unfree trade cess' to the royal burghs for permission to retain the foreign trade. A commissioner was appointed to fix the sum of this cess, and eight shillings Scots was named, the amount to increase with the number and size of the vessels engaged in the trade. This assessment in 1879 was about £75; it is now abolished. The evidence taken by the commissioner gives an

idea of the shipping owned in Greenock at that period. The baron baillie explained that only one vessel, the *John*, was wholly owned in Greenock, the *Neptune* belonged partly to Greenock and partly to its suburb Cartsdyke, and two others, the *George* and the *Hendrie*, were owned in Glasgow and Greenock. Fishing boats were excluded from the commissioner's calculations. In 1670, the year of the disputed charter, a company for curing herrings was started, and among the shareholders was Charles II., from which circumstance the corporation adopted the title of 'Royal.' This company selected Greenock as one of its principal stations. Cellars and stores were built, and the company thrived for a time, its charter putting certain restrictions upon all other fish-curers, and thus giving it a practical monopoly. The injury done to others was found to outweigh the benefits of the society, and it was dissolved in 1690. To give an idea of the extent of the herring fishing industry at Greenock about this time, it may be noted that in 1674 as many as 20,400 barrels were exported to La Rochelle alone, besides quantities to other parts of France, to Dantzic, and to Swedish and Baltic ports. The number of herring fishing boats, or 'busses' as they were called, belonging to Greenock and neighbouring Clyde towns was over 300, about one-half belonging to Greenock, and the value and extent of the fishery was indicated by the motto then adopted by Greenock, 'Let herrings swim that trade maintain.' Fifty-seven other kinds of fish were caught in the surrounding waters, but none of them approached the herring in importance. Cargoes of grain and timber began to come into Greenock about this period and thus helped to lift the place into importance, for stores and offices became requisite, and the town thus increased in size and wealth. An interesting incident in the history of the port was the first voyage made across the Atlantic by a Greenock ship. This was the *George*, which sailed in 1686 with a cargo and twenty-two non-conforming prisoners sentenced to transportation for life to Carolina for disaffection to the Government and for attending conventicles. In 1696 one of the ships of the Darien expedition was fitted out at Cartsdyke, the eastern suburb of Greenock, which had been erected into a burgh of barony in 1636. Cartsdyke, which was famed for red herring curing, is called 'the Bay of St Lawrence on the Clyde,' in the account of the unhappy expedition. The closing years of the 17th century were notable, as far as Greenock was concerned, for the repeated efforts made by Sir John Shaw and his son to obtain parliamentary powers and assistance to extend the harbour accommodation of the port, and to levy dues to cover this expense. Three times these endeavours were defeated by the combined resistance of the royal burghs on the Clyde, assisted by other burghs all over Scotland. Sir John Shaw died in 1702, and his son, weary of the constant contest in Parliament, proposed to the feuars of Greenock to erect a harbour at their own expense. He suggested that quays should be built out into the bay enclosing a space of over 8 acres. The funds, he thought, should be provided by a tax on all malt ground at the mill of Greenock, by an annual sum of £15 to be raised by the feuars, and by the anchorage dues of all foreign vessels in the bay, Sir John reserving to himself the dues of all ships belonging to the town. He was to advance the money required as the work went on. A contract to this effect was drawn up and signed in 1703, and, after some money had accumulated, the work was begun in 1707, gardeners and masons being brought from Edinburgh, the former being at that period universally employed in Scotland for excavating. In 1710 the harbour and quays were finished amid general rejoicing, the whole having cost £5555, 11s. 1d. The breasts connecting the quays were not built till 1764, the harbours having been transferred to the town council by the charter of 1751. In 1710 Crawford describes Greenock as 'the chief town upon the coast, well built, consisting chiefly of one principal street, about a quarter of a mile in length.' About this time the houses were covered with thatch; in 1716 there were only 6 slated houses in the place. The har-

bour is alluded to by a writer in 1711 as 'a most commodious, safe, and good harbour, having 18 feet depth at spring tide.' The bonds given to Sir John Shaw in return for the money advanced by him are still extant, and show that the first sum handed over by the laird was 1000 merks on 25 May 1705; the second, on 28 Feb. 1707, £750, 12s. Scots; the third, on 20 April 1710, 2000 merks; and the fourth, £2439, 12s. 3d. Scots, advanced on 25 Sept. 1710. The immediate increase of revenue consequent on the extension of the harbour accommodation made it possible to pay these off very soon, the first bond being redeemed on 22 Nov. 1720, and the last on 5 Dec. 1730. In July 1703 Sir John Shaw, then member for Renfrewshire, applied to Parliament for the establishment of a branch of the custom house at Greenock. The petition was granted, and Greenock was made a creek of Port Glasgow, then the principal customs station on the Clyde. In due time this relationship was reversed, and Port Glasgow became officially subordinate to Greenock, as it had then become in reality. The rapid increase of foreign trade now stirred up more formidable enemies to the rising port than the Scottish royal burghs had been. Merchants of London, Liverpool, Bristol, and Whitehaven found that they were being cut out of continental commerce, and they sought to prove that Greenock was favoured by collusion between the customs officials and the merchants of the town. A bill was introduced to take away the foreign trade privileges of Greenock, and it required the reports of two commissions, which wholly exonerated the town from the charges, backed by the strenuous exertions of the Scottish representatives in the British Parliament, to avert the threatened calamity. The customs officials, who were Englishmen, were changed, a fresh body of officers from England being installed to collect the revenues of Greenock. In 1715, the year of the Earl of Mar's rising in favour of the Chevalier St George, Greenock espoused the Hanoverian cause, and ninety-two of its citizens volunteered to the Duke of Argyll's army. They were taken in boats to Glasgow and marched thence to Stirling, where they joined the Hanoverian forces. While Sir John Shaw was away fighting the Jacobites Rob Roy created a diversion at Greenock by capturing all the boats on the N shore of the Clyde, and 'lifting' cattle from the parishes of Cardross, Erskine, and Houston. He conveyed the cattle up the river Leven at Dumbarton to Loch Lomond, landing them at Rowardennan, thence driving them into his retreats in the Braes of Balquhider. A hundred Greenock men, assisted by arms and men from a 74-gun ship in the roads pursued the caterans, but only succeeded in regaining the stolen boats. The episode of the Rising of 'The Fifteen' cost the burgh of Greenock £1529, 5s. 4d. besides much anxiety. In 1728, the first year the returns were published, the customs revenue of Greenock amounted to £15,231, 4s. 4d.; and at that time 900 large boats were engaged in the herring fishery, these figures amply showing the prosperity of the place.

Till 1741 the burghal affairs of Greenock were superintended by the laird, the feudal superior, or by a baron-baillie appointed by him. By a charter dated 30 Jan. in that year, and by another dated in 1751, Sir John Shaw gave power to the feuars and sub-feuars to meet yearly for the purpose of choosing 9 feuars residing in Greenock, to be managers of the burgh funds, of whom 2 were to be bailies, 1 treasurer, and 6 councillors. The charter of 1751 gave power to hold weekly courts, to imprison and punish delinquents, to choose officers of court, to make laws for maintaining order, and to admit merchants and tradesmen as burgesses on payment of 30 merks Scots—£1, 13s. 4d. sterling. The qualification of councillor was being a feuar and resident within the town. The election lay with the feuars, resident and non-resident; the mode of election of the magistrates and council being by signed lists, personally delivered by the voter, stating the names of the councillors he wished to be removed, and the persons whom he wished substituted in their room. In the interval between these two charters, the second Jacobite insurrection

occurred, and the part taken by Greenock in 1715 naturally draws attention to its action in 1745. This time the citizens were more passive in their adherence to the *de facto* government, and Sir John Shaw, now old and infirm, but always active, raised and drilled a body of volunteers for the defence of the neighbourhood. In these days it may be difficult to understand the deep feeling which moved Greenock on the death of Sir John Shaw, so long the feudal superior, patron, advocate, and leading spirit of the town, which sad event took place on 5 April 1752. In 1825 a portrait of this public-spirited benefactor was subscribed for and placed in the public reading room of Greenock.

After this date the history of Greenock is best told in an account of the numerous harbour extensions rendered necessary by the constantly increasing prosperity and importance of the port. But, before taking up this, some notice must be taken of the burgh of Cartsdyke, which has been already alluded to. In 1636, the date of the first Greenock charter, Cartsdyke (so called from the dyke or quay there, and said to be contracted from Crawforddyke) was an important place, so jealous of its neighbour burgh that, when Greenock received a charter, it too got itself erected into a burgh of barony, with the privilege of a weekly fair. The poll-tax roll of 1696 bears evidence of the prosperity of the herring trade of Cartsdyke, and a writer describes the burgh, in 1710, as possessing a very convenient harbour for vessels, and the town as chiefly feued by merchants, seamen, or loading men. In 1752 a white-fishing station was established at Cappelow, near Garvel Point, and about the same time some Dutch whalers settled at Cartsdyke, four vessels being despatched to the Greenland seas in one year. The success of this venture was not great enough to justify its continuation, and in 1788 the industry was abandoned altogether. In earlier days the two burghs were separated, not only by jealousy, but by two considerable streams, Dailing or Delling Burn, and Crawford's or Carts Burn. A road between the two townships was maintained at their joint expense, but the extension of both, and the course of time, obliterated the distinction between them, and the fusion was completed in 1840 by an Act of Parliament, which united them in one burgh. While Greenock has practically swallowed up Cartsdyke, the latter possesses all the greater and later harbour works, as will be seen further on.

The year 1760 deserves to be noted as the date of the launch of the first square-rigged vessel built in Greenock. This was the brig *Greenock* built by Peter Love. In 1782 the merchants of Greenock became aware of the necessity for a graving-dock, and consultations between the merchants and the town council resulted in the formation of a company with funds to the amount of £3500, of which £580 was subscribed by the town. The dock was completed in 1786, and cost about £4000. It is 220 feet long at the floor-level, 33 feet 11 inches wide at the entrance, and is fitted for vessels drawing 10 feet of water. The next move in the direction of increasing the accommodation for vessels was the erection of what is now known as the Steamboat Quay. A resolution to add a new eastern arm to the E quay was come to in 1788, and the work was carried out at an expense of £3840, which covered the cost of the eastward extension and the reconstruction of the westward arm of the E quay. When these were completed it was found that a rock called the Leo hindered the access of vessels to the quay, and in consequence a new contract for a work to cover this was entered into in 1791. Further improvements on the Steamboat Quay were made between 1809 and 1818, when new breasts were built round all the harbours, and the quays were advanced a few feet riverwards. The quays of the Steamboat Quay, or Customhouse Quay, as it is sometimes styled, is 1000 feet. A considerable time now elapsed before another actual extension of the harbour was undertaken, and the 29th of May 1805 was signalled by the ceremony of laying, with masonic honours, the foundation-stone of the East India Harbour, extending from the

Steamboat Quay on the W to the Dailing Burn on the E. It was designed by John Rennie, who estimated the cost at £43,836 exclusive of the site. Its area was 9 statute acres, and it was built, as its name indicates, for the accommodation of the East India trade. Its extent has been diminished by the broadening of the quays, and by the construction of the New Dry Dock close by. It is now only 6½ acres in area, and the quay frontage is 3380 feet. The next increase of harbour accommodation was brought about by the building of the New Dry Dock begun in 1818. The plan was a modification of another design prepared in 1805 by Mr Rennie, but rejected by the harbour trustees on account of the estimated expense (£36,000). This dock is situated at the SW corner of the East India Harbour, and cost £20,000. The work was executed by Mr Mathieson, the contractor who had built the Custom House. The dock is 356 feet long on the floor-level, 38 feet wide at the entrance, and at high water has a depth on the sill of 11 feet 10 inches. The want of still greater accommodation for vessels began to be felt in course of time, and in 1846 the Victoria Harbour, designed by Mr Joseph Locke, M.P., and constructed by Messrs Stephenson, M'Kenzie, and Brassey, was begun. It cost £120,000, and was finished in 1850. The area is over 6 acres, the depth at low water 14 feet, and at high water 24 feet, and the quays extends to 2350 feet. The soil excavated for this harbour was conveyed to where the Albert Harbour now stands, and when the latter was constructed the earth was taken still farther down the river, where, with a substantial retaining-wall in front, it forms a handsome esplanade, 1¼ mile in length and 100 feet broad. Before the commencement of this harbour there was a dispute as to whether it should be made down the river or in the direction of Cartsdyke, and the latter opinion prevailed. The letting-in of the water into the Victoria Harbour, 17 Oct. 1850, was the occasion of a great public demonstration, the foundation-stone of Sir Gabriel Wood's Mariners' Asylum being laid on the same day. The next harbour was built farther seaward than any other, and occupies the site of the Albert Quay and of Fort Jervis, erected to protect the Clyde during the Napoleonic wars. The foundation-stone of the Albert Harbour was laid with great ceremony on 7 Aug. 1862. In its construction some engineering novelties were introduced with successful results. Exclusive of sheds it cost £200,000, and, with the ground, sheds, and other appliances, the expense was over £250,000. Its extent is 10½ acres, the quay accommodation 4230 feet, the depth at low water 14 feet, and at high tide 24 feet. The establishment of a railway terminus close by, by the Glasgow and South-Western Railway Company, gave additional importance to this large harbour. In 1882 the harbour trustees resolved to improve and dredge the harbour, to widen its NW arm, and to erect new sheds on the latter at an estimated cost of £15,230. Greenock's next addition to its spreading quay system was the Princes Pier, running W from the Albert Harbour, principally used as a stopping place for railway and river steamers. It has cost nearly £100,000, and the frontage is 2206 feet, of which the sea frontage, available for deep-sea steamers, constitutes 1600 feet, the remainder being in the form of an enclosed boat harbour. The depth at low water is fully 16 feet. We have to turn again to Cartsdyke to find a series of stupendous undertakings rendered necessary by the continued increase of the commerce of Greenock, and calculated to still further stimulate that prosperity. First in order of time is the Garvel Graving Dock, built on the Garvel estate, acquired by the harbour trustees in 1868 for £80,000. The foundation-stone of the dock was laid on 6 July 1871. It is a magnificent specimen of marine engineering, and was designed by Mr W. R. Kinipple, the trustees' engineer. Costing £80,000, it is built of Dalbeattie granite, and has a specially designed caisson at the entrance. It is 650 feet long, 60½ feet wide at the gate, and has 20 feet of water on the sill at ordinary spring tides. The James Watt Dock is also built on

the Garvel estate, and this work was begun by the cutting of the first sod on 1 Aug. 1879, the foundation-stone being laid on 6 Aug. 1881, on the same day as that of the new municipal buildings, and it was opened for traffic in 1886. The dock was designed by Mr Kinipple, and built by Mr John Waddell, of Edinburgh, at a cost of £650,000. It is 2000 feet in length, 400 feet wide, with a depth of 32 feet at low water, and the breadth of the entrance at the coping level is 75 feet. In further extension of the harbour accommodation of Greenock, an Act was obtained in 1880, giving power to build a massive river-wall from Garvel Point to Inchgreen, an extensive work, in the prosecution of which the electric light was for the first time used in Scotland for any public purpose. This wall embraces two large tidal harbours, the Northern Harbour, of 7 acres, and the Great Harbour of 46 acres, both of which have a depth of 25 feet at low water. These later works in all involved an expenditure of about £500,000. The total harbour accommodation of Greenock amounts to upwards of 100 acres, of which the later works will present an average depth of 25 feet at low water, while the James Watt Dock has a depth, as stated, of 32 feet at low water. The Esplanade, formed at a cost of upwards of £20,000, has, as already mentioned, a length of about a mile and a quarter. It has a substantial palisaded parapet, numerous seats along its course, and contains a fountain erected by a number of admirers to the memory of the poet Galt, who resided and is buried in the town. Fort Matilda, with a torpedo battery for the protection of the river, stands at the river side.

The following table gives the aggregate tonnage of vessels registered as belonging to Greenock at different periods during the present century:—

Dec. 31.	Sailing.	Steam.	Total.
1825,	29,054	...	29,054
1837,	47,421	...	47,421
1853,	71,866	2,012	73,878
1867,	101,584	2,335	103,919
1874,	149,014	3,537	152,551
1881,	168,614	50,572	219,216
1895,	165,072	138,271	303,343

The increase shown here is due more to the size than to the number of the vessels, this having been 241 in 1825, 386 in 1837, 418 in 1853, 384 in 1867, 444 in 1881, and 300 in 1895, viz., 186 sailing and 114 steam. The next table gives the tonnage of vessels that entered from and cleared to foreign countries and coastwise:—

	ENTERED.			CLEARED.		
	British.	Foreign.	Total.	British.	Foreign.	Total.
1791	55,060	3,778	58,838	47,991	2,390	50,381
1829	123,513	2,572	126,085	88,367	2,130	90,497
1837	177,344	8,267	185,611	228,621	6,521	235,142
1852	170,584	2,133	172,717	73,378	2,666	76,044
1860	291,743	20,513	312,256	161,920	10,124	172,044
1867	387,260	34,752	422,012	214,306	21,561	235,867
1874	1,124,461	59,214	1,183,675	512,132	72,526	584,658
1881	1,389,459	71,191	1,470,650	739,890	66,895	806,725
1892	1,496,542	114,126	1,610,668	1,719,635	114,516	1,834,151
1895	1,637,291	59,792	1,697,083	1,839,955	70,463	1,910,418

Of the total, 8558 vessels of 1,697,083 tons, that entered in 1895, 7967 of 1,609,323 tons were steamers, 839 of 104,661 tons were in ballast, and 8317 of 1,483,550 tons were coasters; whilst the total, 8879 of 1,910,418 tons, of those that cleared included 8431 steamers of 1,809,582 tons, 1351 ships in ballast of 257,345 tons, and 8690 coasters of 1,722,614 tons. The total value of foreign and colonial imports was £2,458,588 in 1891, £2,690,598 in 1892, £2,231,797 in 1893, £1,591,643 in 1894, and £1,912,596 in 1895, in which last year they comprised 2,230,536 cwts. of unrefined and 127,342 of refined sugar, 112,766 loads of timber, 24,200 cwts. of corn, etc. Of exports to foreign ports the value in 1831 was £1,493,405, in 1851 £491,918, in 1872 £861,065,

in 1880 £423,092, in 1888 £176,585, in 1890 £231,448, in 1892 £259,601, in 1894 £171,146, and in 1895 £200,279, this last including £4153 for refined sugar, £49,790 for coal, £5574 for iron, and £5174 for gunpowder. The customs revenue collected here amounted to £211,081 in 1802, £592,008 in 1831, £410,206 in 1851, £1,484,972 in 1867, £1,006,449 in 1872, £47,034 in 1881, £43,124 in 1891, £37,798 in 1892, £39,053 in 1894, and £35,673 in 1895.

Greenock is head of the fishery district between those of Rothesay and Ballantrae, in which in 1895 the number of boats was 287, of fishermen and boys 488, of fish-curers 27, and of coopers 38, whilst the value of boats was £2872, of nets £2828, and of lines £681.

The manufactures of Greenock are various and extensive. Shipbuilding was commenced soon after the close of the American war, and has since risen to great prominence, Caird & Co.'s yard being one of the most complete in the kingdom. A former manager of this work was Mr. Scott Russell, celebrated as the builder of the *Great Eastern*. The premises of Scott & Co., shipbuilders and engineers, and Russell & Co., shipbuilders, are also of a most extensive kind. During a number of years previous to 1840, from 6000 to 7000 tons of shipping were annually launched; and in that year 21 vessels, of the aggregate tonnage of 7338, were built. The tonnage of vessels built in the port in the last five years, exclusive of those built for firms abroad, was as follows:—(1891) 28,889, (1892) 50,746, (1893) 21,966, (1894) 32,781, (1895) 31,318. Of vessels built for foreign firms in the latter year, there was 1 steel steamship, of 2518 tons. Nearly all the vessels built indeed are either steel or iron, and the majority of them are steamers. A timber sale hall is situated on Princes Pier, and there a large business is transacted in that branch, the timber floats on the margin of the river above Greenock and Port Glasgow being a marked feature in the shore scenery as viewed from railway or steamboat. Iron-working is carried on in numerous establishments for all sorts of cast-iron work and machinery, but particularly for the construction of steam-boilers, steam-engines, locomotives, and steel and iron steam-vessels. The making of anchors and chain-cables is carried on in several separate establishments. Sugar refining is prosecuted here to a greater extent than anywhere else in Scotland. The first house for this purpose was erected in 1765; formerly there were a dozen sugar-refineries, but on account of the decline in this industry the number has been reduced. There are also in the town or neighbourhood sail-cloth factories, roperies, sail-making establishments, woollen and worsted factories, saw-mills, grain-mills, tanneries, a large cooper work, distilleries, a brewery, a dyework, a pottery, and chemical works. In 1897 the British Aluminium Co. started a factory for the manufacture of carbon.

In the town the principal central thoroughfare follows the original coast outline, and is in consequence tortuous, and, for the character of the town, narrow. Cathcart Street and Hamilton Street, the chief streets, are separated by Cathcart Square, a small space which, as nearly as possible, marks the centre of the town, and in these places the best shops are found. Under the Artisans' Dwellings Improvement Scheme the local authorities acquired the property on the west side of East Quay Lane—a narrow thoroughfare that led from Cathcart Street to the Custom-House Quay. This has been widened to 40 feet, rebuilt, and named Brynmor Street, in memory of the first chairman of the improvement trust. It is now one of the handsomest streets in the town. The other narrow cross streets leading to the quays, and the partly spacious, partly narrow, and altogether irregular and crowded roadways facing these, from the west side of Brynmor Street to the east side of William Street, have almost wholly been swept away and replaced with ranges of modern shops and dwelling-houses. Most of the streets in the W, and some on the face of the rising ground in the centre, are regular, airy, and well built. The western outskirts, abounding in villas, look freely out to the firth, and combine a series of fine foregrounds with a diversified perspective.

At the corner of Cathcart Square stand the new municipal buildings and town-hall, designed by H. and D. Barclay, Glasgow, which were completed in 1886, a stately Renaissance pile, with a dome-capped tower 300 feet high. Their cost was £225,000, and they embrace town and council halls, municipal and school board offices, and harbour, fire brigade, police, cleansing, and sanitary departments. The old town's buildings, removed to make room for the modern pile, were designed by the father of James Watt, at the time a bailie of the town. The County Buildings, in Nelson Street, were erected in 1867 at a cost of £8500. Designed by Messrs Peddie and Kinnear in the Scottish Baronial style, they form a three-storied structure 100 feet long, with a massive central tower and spirelet rising to a height of 112 feet. Behind is the new prison, legalised in 1870, and containing 70 cells. The Custom House, fronting the broad open esplanade of the upper steam-boat pier, was built in 1818, from designs by Burn of Edinburgh, at a cost of £30,000. It is a spacious edifice, with a fine Doric portico. The Theatre Royal, a plain but commodious house in West Blackhall Street, was opened in 1858 by Mr Edmund Glover.

Greenock has 41 places of worship, belonging to 11 denominations, viz., 11 Established, 10 Free, 7 United Presbyterian, 2 Congregational, 2 Roman Catholic, 2 Episcopal, 2 Evangelical Union, 2 Baptist, and 1 Reformed Presbyterian, 1 Wesleyan, and 1 Primitive Methodist. The Middle Kirk, in Cathcart Square, was erected in 1757; its steeple, a notable landmark in the town, 146 feet high, was added in 1787. The West Kirk, situated in Nelson Street, and built in 1840, has also a handsome spire of 1854; and the East Kirk (1853), in Regent Street, is similarly distinguishable in the prospect of the town. The Old West Kirk, near Albert Harbour, built in 1592, was restored in 1864 at a cost of £2500 to serve as a place of worship for the North Church *quoad sacra* parish. It is a low cruciform structure, with a small belfry; in its churchyard Mary Campbell (Burns's 'Highland Mary') was buried in 1786. A monument by Mr John Mossman was erected over her grave in 1842. It represents the parting at Coilsfield, and above is a figure of 'Grief,' whilst beneath are the lines—

'O Mary! dear departed shade!
Where is thy place of blissful rest?'

St Paul's, opened in 1893, is built on a site adjoining that of an iron church erected when the congregation was formed in 1878. It consists of a nave 90 feet long and 31 broad, with north and south aisles. There is a gallery at the west end of it, over a spacious vestibule. The tower, at present incomplete, is to be 115 feet high, and 180 to the vane. The cost of the edifice was over £10,000. Of the Free churches the West is a First Pointed edifice of 1862, with French features, whilst the Middle, Grecian in style, was erected in 1870-71 at a cost of £16,000, and has a tower and spire 200 feet high. St Thomas's Free Church has a hall accommodating 200 persons—the gift of Mr Erskine Orr, of the *Greenock Telegraph*—and costing about £2000. One may also notice Greenbank U.P. Church (1881-82); the Baptist Chapel (1878; cost £5000); St John's Episcopal, rebuilt (1878) from designs by Mr Anderson in Early Middle Pointed style at a cost of £8000; and St Mary's Roman Catholic (1862), a plain First Pointed fabric.

How exclusively devoted the townfolk of Greenock were to commerce, and how little countenance they gave to literature or science, is instanced by the following story, which, however, has been challenged as 'quite unreliable.' In 1769, when John Wilson, a poet of considerable merit, the author of the well-known piece on 'the Clyde,' was admitted as master of the grammar school of Greenock, the magistrates and ministers made it a condition that he should abandon 'the profane and unprofitable art of poem-making,'—a stipulation which thirty years afterwards drew from the silenced bard the following acrimonious remarks in a letter addressed to his son George when a student at Glasgow College:—'I once thought to live by the breath of fame, but how miserably was I

disappointed when, instead of having my performances applauded in crowded theatres, and being caressed by the great—for what will not a poetaster in his intoxicating delirium of possession dream?—I was condemned to bawl myself to hoarseness to wayward brats, to cultivate sand and wash Ethiopians, for all the dreary days of an obscure life—the contempt of shopkeepers and brutish skippers.' Leyden, writing of this prohibition, says:—'After his unhappy arrangement with the magistrates he never ventured to touch his forbidden lyre, though he often regarded it with the mournful solemnity which the harshness of dependence and the memory of its departed sounds could not fail to inspire.' Since that time a better taste, and more liberality of sentiment, have prevailed, and some attention has been paid to the cultivation of science. In 1783 the Greenock Library was instituted; and with it was incorporated in 1834 the Foreign Library, founded in 1807. Special libraries have since from time to time been added, including the Watt Scientific Library, founded in 1816 on a donation of £100 from James Watt; the Spence Mathematical Library, presented by Mrs Spence, the collector's widow; the Williamson Theological Library, the gift of the Rev. J. Williamson; the Fairrie Library, bought with a bequest of £100 left by Mr Thomas Fairrie; the Buchanan Library, mechanical and scientific, presented by Dr Buchanan of Kilblain Academy; and the Caird Library, chiefly of theological works, presented by Miss Caird. The librarian is Mr Allan Park Paton, a well-known member of the numerous band of minor lyric poets Scotland has produced. The Greenock Library now contains upwards of 15,000 volumes, and occupies a Tudor edifice, called the Watt Institution and Greenock Library, in Union Street, erected by Mr Watt, of Soho, son of James Watt, in 1837 at a cost of £3000. The site was given by Sir Michael Shaw Stewart. A fine marble statue of Watt, by Sir Francis Chantry, the expense of which (£2000) was raised by subscription, adorns the entrance to the Institution. On the front of the pedestal of the statue is the following inscription from the pen of Lord Jeffrey:—'The inhabitants of Greenock have erected this statue of James Watt, not to extend a fame already identified with the miracles of steam, but to testify the pride and reverence with which he is remembered in the place of his nativity, and their deep sense of the great benefits his genius has conferred on mankind. Born 19th January 1736. Died at Heathfield in Staffordshire, August 25th, 1819.' On the right of the pedestal is a shield, containing the arms of Greenock, and on the left are emblems of strength and speed. On the back is an elephant, in obvious allusion to the beautiful parallel drawn by the writer of the inscription between the steam-engine and the trunk of that animal, which is equally qualified to lift a pin or to rend an oak. Behind the Institution stand the Watt Museum and Lecture Hall, endowed by Mr James McLean of West Bank, and erected in 1876 at a cost of £7000. The Mechanics' Institute, in Sir Michael Street, was built in 1840, and contains a good library and news-room. The Public Baths occupy part of the same building, but have their entrance in Tobago Street.

The educational arrangements of Greenock are in the hands of a school-board of 11 members, elected under Lord Young's Education Act. The burgh records abound in notices of the Grammar School of the town, and from them we learn that in 1751 the master of the school was reckoned 'a genteel appointment,' with £20 a year, payable as follows:—Sir John Shaw and his heirs, £3, 1s. 1½d.; Crawford of Cartburn £1, 2s. 2½d.; old kirk session, £4, 5s. 9½d.; new kirk session £3, 0s. 6½d.; and the remainder from the burgh. In 1772 the English teacher received £20, with school fees of 3s. per pupil and the 'Candlemas offerings,' calculated at £40. In 1835 the teacher of the grammar School received a salary of £50 with fees. In 1855 Greenock Academy, a large and commodious edifice in Nelson Street, was opened at a cost of £7243, half of the directors being

appointed by the town council and half by the proprietors. It was transferred to the school-board in 1881. It is governed by a rector, assisted by a lady superintendent, 13 masters, 4 mistresses, etc. Besides this academy, the burgh school-board has under its control eleven public schools, upwards of £70,000 having been spent in the erection of new schools, in addition to those taken over by the board. A handsome new school (Ardgowan) was erected by the board in 1896-97. The other schools in the town embrace a number of ladies' and other 'adventure' schools, 2 schools maintained by the Episcopalian church, a charity school in Ann Street, and 2 schools maintained by the Roman Catholic Church. There are also a school of art and a school of navigation and engineering, to afford scientific training to the seafaring men, of whom the burgh is so productive.

There are in the town an industrial school, a night asylum for poor persons, a philosophical society, a medical and chirurgical association, a horticultural society, an agricultural society, a society for promoting Christian knowledge, Sailors' Home and reading-room, public baths, etc. Letterpress printing was established here in 1765 by Mr MacAlpine, who was also the first bookseller. It was confined to handbills, jobbing, etc., till 1810, when the first book was printed by William Scott. In 1821 Mr John Mennons began the printing of books; and many accurate and elegant specimens of typography, original and selected, issued from his press. There are two newspapers published in the town—the *Greenock Telegraph*, with which is incorporated the *Greenock Advertiser* (1802), a halfpenny evening newspaper established in 1857, the first in Great Britain; and the *Greenock Herald*, established in 1852, issued on Saturday at a penny.

Sir Gabriel Wood's Asylum for Mariners, already referred to, is an edifice in the Elizabethan style, in Newark Street, on the high road to Gourock, beyond the western outskirts of the town, built in 1851 at a cost of about £60,000, and liberally endowed for the maintenance of aged, infirm, and disabled seamen belonging to the counties bordering on the Clyde. This fine institution arose out of a bequest of £80,000 by Sir Gabriel Wood, who died in London in 1845. A beautiful new cemetery, extending to 90 acres, and already well decorated with tasteful monuments and other designs, has been laid out in the western outskirts of the town. From its higher points magnificent views are to be had. It contains a handsome memorial to Mr Robert Wallace, M.P., another, with bust, to Mr Walter Baine, provost and M.P., and other good monuments, notable among them being one in the form of a cairn, to the memory of Watt, embracing stones in marble, granite, freestone, etc., sent from many parts of the world, and many of them bearing appropriate inscriptions.

There are in Greenock branches of the Bank of Scotland, the Royal Bank (two offices), the British Linen Co.'s Bank, the Clydesdale Bank (two offices), the Commercial Bank (two offices), a Provident Bank, the National Bank of Scotland, and the Union Bank. The Greenock Bank, founded in 1785, was in 1843 amalgamated with the Western Bank of Scotland, which failed in 1857. The Renfrewshire Bank, established in 1812, continued to do business for 30 years, and was sequestered in 1842. The town has numerous insurance agencies, a Lloyd's register, a Lloyd's agent, a local marine board, a chamber of commerce, a merchant seamen's fund, a fishery office, and full staffs of officials connected with the harbour and the public revenue. A weekly market is held on Friday; and fairs are held on the first Thursday of July and the third Tuesday of November. Nearly opposite the new post office, in Cathcart Street, are the Exchange buildings, finished in 1814 at a cost of £7000, and containing two assembly rooms and other accommodation. A news-room, coffee-room, and exchange was opened in Cathcart Square in 1821. Greenock Club is a handsome building in Ardgowan Square, part of which Square is occupied by the Ardgowan Bowling Club. The gas-works were constructed on the Glebe in 1828, and cost £8731, but in

1872 new gas-works were erected on Inchgreen, at the E of the town, at a cost of £150,000. The gas supply is in the hands of the corporation. There are three gasometers, with a total capacity of 1,750,000 cubic feet, the latest addition to this number having been made in November 1892, at a cost of over £6000. Its dimensions are 125 feet in diameter by 50 feet deep, with a capacity of 60,000 cubic feet. The new poor-house and lunatic asylum for Greenock and the Lower Ward of Renfrewshire is a large and imposing building in the Scottish Baronial style, erected in 1874-79 on an elevated position at Smithston, to the S of the town. They were estimated to cost £50,000, but were only erected at a cost of £100,000. The infirmary in Duncan Street was built in 1809, and enlarged in 1869, from a legacy of £30,000 left by the late Mr Ferguson, sugar refiner. The Craigieknowes Hospital for smallpox is situated in Sinclair Street above the town to the E, where also provision is made for a cholera hospital. The Eye Infirmary, in the cottage-hospital style, and erected in 1893, at the corner of Nelson Street and Brisbane Street, was virtually the gift of Mr Anderson Rodger, shipbuilder, Port-Glasgow, and cost about £2000. Extensive and elegant premises were erected in the same year in Roxburgh Street for the Greenock Central Co-operative Society, at a cost of over £10,000.

Greenock is well provided with places of public recreation. Well Park was presented to the town in 1851 by Sir Michael Shaw Stewart, who later, in 1872, gifted the Wellington Park, on the higher ground behind, with cricket, bowling, and play grounds. The summit of the Whin Hill, beyond the Wellington Park, is also open as a public park. In 1879-80, during a depression of trade, the burgh police board gave employment to a large number of men in constructing Lyle Road, now one of the most delightful resorts of the people. It proceeds over the hill behind the Mariners' Asylum; and at 'Craig's Top,' 500 feet above sea-level, it affords a magnificent view. The road is 2 miles long, and descends in zigzag fashion to its termination at Gourock toll bar. The ground was gifted by Sir Michael Shaw Stewart, and the cost of the work was £17,000.

The railway passenger arrangements of Greenock, which were at one time of a rather unsatisfactory nature, the difficulty of the site preventing good station accommodation from being obtained, are now very complete. The Glasgow, Paisley, and Greenock railway was one of the earliest in Scotland, and now forms part of the Caledonian system. (See CALEDONIAN RAILWAY.) The old Cathcart Street station has now been remodelled, and almost entirely rebuilt, and the line continued on to Gourock. Cartsluke station and Bogston, on this line, accommodate the most eastern portion of the town, where the new docks are situated. These are well provided with railway accommodation by both the Caledonian and South-Western companies. The last-named company is proprietor of a line on a higher level, which brings passengers to Lynedoch station, at the top of Dellingburn Street, on the southern elevated part of the town, and thence runs down to Princes Pier through two tunnels. From Princes Pier the Anchor line of steamers to America embark their passengers, who travel from Glasgow by special train upon this line. A third railway access to Greenock is provided by the Wemyss Bay section, the connection being at Upper Greenock, where there is a passenger station. From the two principal railways service lines run down to the various harbours and basins, so that the facilities for loading and unloading goods at the port are of a comprehensive kind. The Vale of Clyde Tramway Company has a line through Greenock, extending to Gourock and Ashton along the coast a distance of about 4 miles, the Greenock portion of which is owned by the corporation, who have also, by an Act of Parliament in 1893, acquired power to purchase the Gourock section of the line.

The water supply of Greenock is copious and excellent. The rainfall at the gauges at the waterworks shows great diversity, but in every year the fall is large. The Shaws Waterworks, incorporated as a private com-

pany in 1825, but now, like the other works, in the hands of the corporation, were opened in April 1827. The largest reservoir, called Loch Thom, after Mr Robert Thom, the engineer, had at first a depth of 48 feet and a capacity of 284,678,550 cubic feet, but this has been raised to 56 feet, giving an additional capacity of 110,000,000 cubic feet. A compensation reservoir on the Gryfe, built (1873) when the waters of that stream were impounded by the Water Trust, two large reservoirs on that water, the Whinhill reservoir, and thirteen smaller reservoirs, give a total capacity of 642,379,230 cubic feet of water. The original intention of the engineer of the Shaws Water Scheme was to bring an aqueduct round the face of the hill so that water power might be given off to public works, and this has been steadily kept in view in the extensions of the water supply. The aqueduct is about 7 miles in length, and provides a favourite and beautiful walk. There are twenty-five falls, varying in power from 21 horse-power in Scott's sugar refinery to 578 horse-power in the six falls connected with the mills of Fleming, Reid, & Co. The falls have a supply of 1300 cubic feet per minute, 12 hours a day, 310 days a year, and ground to the extent of 2 acres Scots goes with each fall, at a nominal feu duty. One of the sugar refineries has a water-wheel of 240 horse-power. It is 70 feet in diameter, and has buckets of 12 feet in breadth. The Shaws Water was acquired by the corporation in 1867, and in 1892 the revenue was £25,435. In 1815 the dam of a reservoir built in 1796 to drive the machinery of the Carlsburn Cotton Spinning Company burst, but without serious results. It was restored in 1821, and in 1825 the reservoir was taken over by the Shaws Water Company. In November 1835 an unhappy accident occurred. There had been an unusually heavy rainfall, reaching 3½ inches in 48 hours, unparalleled even in Greenock. About eleven at night the dam burst, rushing down the gorge of the Carlsburn to the town, and besides destroying much property, causing a loss of thirty-eight lives.

The new post office is a handsome pile of buildings situated near the centre of the town. It formerly occupied a building erected in 1880 by the corporation, and leased to the Crown, in Wallace Square, an open space adjoining the municipal buildings and town-hall on the W, and created by clearing away a number of squalid alleys. This square takes its name from Mr Robert Wallace (1773-1855), who represented the burgh from 1833 to 1845, and whose labours in parliament to promote the penny post—of which he almost disputes the parentage with Rowland Hill—are, as already stated, commemorated in a fine monument on a prominent point in Greenock cemetery. There are eleven branch post offices, in Blackhall Street, Brougham Street, Cathcart Street, Eldon Street, James Watt Dock, Lynedoch Street, Morton Terrace, Nelson Street, Roxburgh Street, Rue End Street, and Shore Street. Telegraph messages are also received at Princes Peir railway station. The National Telephone Company has an 'exchange' in Greenock, and a wire to Glasgow brings a limited number of subscribers into communication with the large Telephone Exchange system in that city.

Greenock's most famous son, James Watt (1736-1819), is commemorated, as already seen, in many ways—in statue, monument, institution, etc., bearing his name. John Galt (1779-1839), author of *The Ayrshire Legatees*, etc., resided here from 1790 till 1804, and again from 1832 till his death, in a house in West Burn Street, marked by a bronze medallion (1887). Jean Adams (1710-65), who contests with Mickle the authorship of *There's Nae Luck about the House*, was a native; and so too was Principal Caird of Glasgow University (b. 1820), and Hamish MacCunn the composer (b. 1868). As already mentioned, a monument to Burns's 'Highland Mary' stands in the old churchyard, commemorating the fact that here she died in 1786. James Melville M'Culloch, D.D. (1801-83), educational writer, was minister of the West Parish from 1843 till his death.

Till 1751 the affairs of Greenock continued to be superintended by the superior, or by a baron bailie

appointed by him. The commissioners on municipal corporations stated in their report, in 1833, that the manner of electing the magistrates by signed lists was much approved of in the town. They also reported, that 'the affairs of this flourishing town appear to have been managed with great care and ability. The expenditure is economical, the remuneration to officers moderate, and the accounts of the different trusts are clear and accurate.' The municipal government and jurisdiction of the town continued to be administered under the charter of 1751, without any alteration or enlargement, until the Burgh Reform Act of 1833 came into operation. Under that Act, the town council consisted of a provost, 4 bailies, a treasurer, and 10 councillors, for the election of whom the town was divided into five wards. Four of these returned 3 councillors each, and one returned 4, this latter having a preponderance of electors. By the Corporation and Police Act of 1882, the town council now consists of a provost, 6 bailies, a treasurer, and 17 councillors, for the election of whom the town is divided into eight wards, seven of

Seal of Greenock.

which return 3 each, whilst the West End ward, with a preponderance of voters, returns 4. Greenock is one of the five burghs exempted from the operation of the Burgh Police (Scotland) Act of 1892. The bailie court of Greenock has the jurisdiction, both civil and criminal, competent to a royal burgh. In 1894-95 the corporation revenue, including all the public trusts, was £106,976. The magistrates and town council, together with nine persons elected by the feuars, householders, and ratepayers, are a board of trustees for paving, lighting, cleansing, and watching the town, and for supplying it with water. Previous to the passing of the Reform Act of 1832 Greenock had no voice in the parliamentary representation, but since then the burgh has sent one member to Parliament. In 1895 its parliamentary constituency numbered 8094; and its municipal, under the 'Greenock Burgh Extension Act, 1882,' 9371. Till 1815 the sheriff court for the whole of Renfrewshire was held at Paisley, but in that year an additional sheriff-substitute, to be resident at Greenock, was appointed; and by an act of court promulgated by the sheriff-depute, dated 3 May, it was declared that the district or territory falling under the ordinary jurisdiction of the court at Greenock should be termed 'the Lower Ward,' and that it should consist of the towns and parishes of Greenock and Port Glasgow, and the parish of Innerkip. To this ward the parish of Kilmalcolm has since been annexed. The court-houses occupy a fine building in Nelson Street, with the prison in rear. A sheriff court is held every Friday, a sheriff small debt court every Wednesday, and a justice of peace court every Thursday. Annual value of real property (1862) £142,422, (1872) £271,946, (1882) £369,081, (1895) £374,140. The valuation of the town reached its highest point in 1884, when it was £412,030. Pop. of the burgh (1735) 4100, (1841) 35,921, (1851) 36,689, (1861) 42,098, (1871) 57,146, (1881) 63,902, (1891) 63,096; of burgh and suburbs (1871) 57,821,

(1881) 66,704, (1891) 63,423, of whom 31,761 were males and 31,662 females. Houses (1891) inhabited 12,761, vacant 1315, building 46. See D. Weir's *History of the Town of Greenock* (Greenock, 1829); G. Williamson's *Memorials of James Watt* (1856); Provost Dugald Campbell's *Historical Sketches of the Town and Harbours of Greenock* (2 vols., 1879-81); and *Old Greenock* (1888).

Greenock, Upper, a station in Greenock parish, in the southern outskirts of Greenock town, Renfrewshire, on the Wemyss Bay section of the Caledonian railway, $\frac{1}{2}$ mile S by W of Cathcart Street Station, and 3 miles W of Port-Glasgow.

Greenstone Point, the northernmost extremity of Rumore promontory in Gairloch parish, NW Ross-shire, between Loch Ewe and Greinord Bay.

Greeta Water. See GOGO WATER.

Greigston, a mansion in Cameron parish, E Fife, 3 miles E of Ceres. It is the seat of Major Henry John Cowan Graham Bonar (b. 1825; suc. 1868).—*Ord. Sur.*, sh. 41, 1857.

Greinord or Gruinard, a bay, an island, and two streams of NW Ross-shire. The bay, forming the southern portion of the outward reach of Loch Broom, to the W of the mouth of Little Loch Broom, is flanked on the E side of its entrance by Stattic Point, on the W by the promontory of Rumore; and measures $5\frac{1}{2}$ miles across that entrance, and $4\frac{1}{2}$ thence to its southernmost recess. Fringed with numerous picturesque creeks and small headlands, it is screened by multitudes of rocky hillocks, the highest being Carn Dearg an Droma (607 feet) on the E, and Meall nam Meallan (478) on the W; its waters abound with haddock, cod, whiting, and shell-fish. The island, within a mile of the eastern shore of the bay, has an utmost length and breadth of $11\frac{1}{2}$ and $5\frac{1}{2}$ furlongs; attains an altitude of 345 feet; belongs to Lochbroom parish; and had 6 inhabitants in 1881, but none in 1891. Of the two streams, belonging both to Lochbroom parish, the Meikle Greinord flows $5\frac{1}{2}$ miles north-north-westward out of Loch Sheallag (279 feet) to the eastern side of Greinord Bay, which at its head receives the Little Greinord, running $5\frac{1}{2}$ miles north-by-eastward along the Gairloch border out of Fionn Loch (559 feet). Both are capital salmon and trout streams. Greinord House, a modern mansion, stands at the mouth of the former, 15 miles NE of Poolewe.—*Ord. Sur.*, shs. 101, 100, 92, 1881-82.

Greinard Castle. See GREENAN.

Greenoch, Loch, a lake on the Minnigaff or NW border of Girthon parish, Kirkcudbrightshire, 4 miles N by W of Drumore station, and $8\frac{1}{2}$ ENE of Newton-Stewart. Lying 680 feet above sea-level, and extending 2 miles north-by-eastward, it has an utmost breadth of 3 furlongs, and sends off a streamlet $2\frac{1}{2}$ miles northward to the Dee. Its waters, containing char and many small trout, are preserved. Round it rise rugged hills and solitary moorlands to heights of from 1300 to 2000 feet above sea-level, and at its SW corner stands Loch Greenoch Lodge, a wooden shooting-box, prettily engirt with rhododendrons.—*Ord. Sur.*, shs. 4, 8, 1857-63.

Gress or Ghriais, a salmon and trout stream of Stornoway parish, Lewis, Outer Hebrides, Ross-shire, issuing from Loch Ghriais ($4 \times 1\frac{1}{2}$ furl.; 350 feet) in Barvas parish, and running 7 miles south-south-eastward till it falls into Broad Bay. The scenery along its banks is uninteresting, and the fishing being let with the fishings of Gress it is closed to the public. At its mouth, 9 miles NNE of Stornoway town, stand Gress House and St Aul's chapel, the ruined walls of which still remain; and on the coast here are two caverns, of which the larger, Seal Cave, is about 220 yards long, and is beautifully adorned with stalactites.—*Ord. Sur.*, sh. 105, 1858.

Gretna or Graitney, a Border village and parish of SE Dumfriesshire. The village, comprising Gretna Green and Springfield, the latter $\frac{1}{2}$ mile E by N of the former, and near the right bank of the Sark, by road is $9\frac{1}{2}$ miles NNW of Carlisle, under which it has a post office, with money order, savings bank, and telegraph departments; whilst, from neighbouring stations on the Caledonian, the Glasgow & South-Western, and a branch

line of the North British, it is 65 miles SSE of Carlisle, $24\frac{1}{2}$ ESE of Dumfries, and $3\frac{1}{2}$ W by S of Longtown. Once a burgh of barony, with market cross and cattle markets, this village long was famous for the celebration of runaway marriages, whose sole formality was the subscribing of a certificate by the officiating 'priest' and witnesses. After the abolition of Fleet marriages by Lord Hardwicke's Act (1754), English persons wishing to marry secretly required to get out of England, to which alone that Act had reference. Thus the practice arose of posting to the Border and crossing into Scotland, where Gretna Green, as the nearest and most convenient spot, had so early as 1771 become 'the resort of all amorous couples whose union the prudence of parents or guardians prohibits' (Pennant). The 'priest,' usually a blacksmith, might be any one—ferry-man, toll-keeper, landlord; his fee ranged from half a guinea to £50, according to the parties' circumstances; and the customary 'church' was the toll-house or the King's Head inn till 1826, and afterwards Gretna Hall. At the toll-house alone 1300 couples were united within six years; and the traffic continued till the English marriage law was relaxed by allowing marriage to be contracted before a registrar, and the Scottish law altered. By 19 and 20 Vict., c. 96, after 1 Dec. 1856 all irregular marriages entered into in Scotland were rendered invalid unless one of the parties had been residing in Scotland for twenty-one days before. At Gretna, Thomas, Lord Erskine (1750-1823), Lord High Chancellor of England, wedded, late in life, his second spouse, Miss Buck; and here too in 1826 were married Edward Gibbon Wakefield and Ellen Turner—a marriage that next year brought the bridegroom and his brother three years' imprisonment for abduction, after a celebrated trial at Lancaster.

The parish, since 1609 comprising the ancient parishes of Gretna and Renpatrick or Redkirk, contains also Rigg village, on the right bank of Kirtle Water, 2 miles WSW of Gretna Green and 6 E of Annan, under which it has a post office. Bounded N by Half-Morton, E and SE by Cumberland, S by the upper waters of the Solway Firth, W by Dornock, and NW by Kirkpatrick-Fleming, it has a varying length from E to W of $1\frac{1}{2}$ and $4\frac{3}{8}$ miles, a varying breadth from N to S of $1\frac{1}{2}$ and 4 miles, and an area of 9089 $\frac{1}{2}$ acres, of which 1075 $\frac{1}{2}$ are foreshore and 150 $\frac{3}{4}$ water. The SARK winds $4\frac{1}{2}$ miles south-south-westward along all the Cumberland border, and KIRTLE WATER $2\frac{3}{4}$ miles across the interior, both to the SOLWAY FIRTH, which here is from $7\frac{1}{2}$ furlongs to $3\frac{1}{2}$ miles broad, but which at low water is all an expanse of sand, except for the Esk's and Eden's narrow channels. The shore-line, 4 miles in extent, is low, rising to only 25 and 35 feet at Redkirk and Torduff Points. Inland, the SW portion of the parish, to the right of Kirtle Water, is almost a dead level, its highest point 68 feet; the NE portion ascends—but very gradually—to 105 feet at Floshead, 130 near Boghead, 156 near Goldieslea, and 200 near Cowgarth Flow. These upper grounds command a glorious view of the Firth and the mountains of Annandale, Eskdale, Liddesdale, and Cumberland. The predominant rock is Old Red sandstone; and the soil on a strip of the seaboard is a fine rich loam, in some other parts is wet and clayey, but mostly is dry and sandy, mixed with stones, and fertile. About 300 acres are pastoral or waste; some 60 are under wood; and all the rest of the land is either regularly or occasionally in tillage. Remains of an ancient Caledonian stone circle stood, till the latter part of the 18th century, on the farm of Gretna Mains; of Stonehouse Tower and other old Border fortalices, with massive walls, the site can be barely identified. The entire parish, lying as it did on the frontier of Scotland, contiguous to the Debatable Lands between the Sark and the Esk, was long the scene of almost incessant forays; and it continued, down to the latter part of the 18th century, to be the retreat of numerous bands of desperate and incorrigible smugglers. Gretna is in the presbytery of Annan and synod of Dumfries; the living is worth £393. The parish church, at Gretna Green, was built in 1790. There is here also a Free church,

and at Rigg a U.P. church (1832); and two public schools, Gretna and Mount Pleasant, with respective accommodation for 155 and 160 children, have an average attendance of about 112 and 100, and grants of nearly £110 and £90. Pop. (1801) 1765, (1831) 1909, (1861) 1620, (1871) 1395, (1881) 1212, (1891) 1141.—*Ord. Sur.*, shs. 6, 10, 1863-64. See P. O. Hutchinson's *Chronicles of Gretna Green* (2 vols., Lond., 1844).

Gretna Green. See GRETNA.

Greyfriars. See EDINBURGH, GLASGOW, DUMFRIES, ELGIN, STIRLING, PERTH, and ST ANDREWS.

Greyhope, a small bay in Nigg parish, NE Kincardineshire, between Nigg Bay and Girdleness lighthouse. The Greenland ship, the *Oscar*, was wrecked here in 1813, when 55 lives were lost.

Grey Mare's Tail, a splendid waterfall on the north-eastern verge of Moffat parish, NE Dumfriesshire, formed midway by the Tail Burn, which, running $1\frac{3}{8}$ mile south-east-by-southward out of Loch SKENE (1680 feet), falls, after a total descent of 900 feet, into Moffat Water at a point 10 miles NE of Moffat town and $1\frac{1}{4}$ mile SE of Birkhill Inn. Its volume is trivial in time of drought, but very considerable after heavy rains; it is so flanked and overhung by wild and gloomy scenery as to possess imposing interest in its mere surroundings; it rushes in one unbroken column over a stupendous precipice of rocks, with aggregate descent of 350 feet, between lofty, mural, rocky hills; and whenever in considerable volume, it has the form of a cataract lashed into foam by obstructions, and rendered of a greyish tint by intermixing glimpses of the background of dark rock. A short distance below it is a hollow space called the Giant's Grave; and a spot at a high elevation on one of its sides, and reached by a footpath, overlooks both the entire waterfall itself and the stream rushing away from its foot. Any spectator on that spot, like the palmer in Sir Walter Scott's *Marmion*—

'Just on the edge, straining his ken,
May view the bottom of the den,
Where deep, deep down, and far within,
Toils with the rocks the roaring inn;
Then, issuing forth one foamy wave,
And wheeling round the Giant's Grave,
White as the snowy charger's tail,
Drives down the Pass of Moffatdale.'

A footpath leads up to the pool into which the waterfall plunges.—*Ord. Sur.*, sh. 16, 1864.

Grey Mare's Tail. See CLOSEBURN.

Griam or Loch a' Ghriama, a lake near the NW border of Lairg parish, Sutherland. It receives one stream running $1\frac{3}{8}$ mile south-south-westward from Loch Merkland, and sends off another 3 furlongs southward to the head of Loch SHIN; and, lying 304 feet above sea-level, has an utmost length and breadth of $1\frac{3}{8}$ mile by 3 furlongs. Its trout run up to 3 lbs., its salmo-ferox up to 12.—*Ord. Sur.*, sh. 108, 1880.

Gribon, a promontory on the W side of Mull island, Argyllshire, between Loch-na-Keal and Loch Scridain. It presents a front of about 7 miles in length to the Atlantic; shows a rough rocky shore-line and a high range of cliffs; recedes, in trap terraces, till it attains an altitude of 1621 feet above sea-level; lies well in view of steamers on the passage from Staffa to Iona; and is pierced by a remarkable cavern called Mackinnon's Cave, separately noticed.

Gribton, an estate, with a mansion, in the Baronial style, in Holywood parish, Dumfriesshire, on the left bank of Cairn Water, 5 miles NW of Dumfries. It was sold in 1897 to H. Lamont, Esq.—*Ord. Sur.*, sh. 9, 1863.

Grieff. See GRYFE.

Grimersta, a salmon streamlet of Lochs parish, on the W side of Lewis, Outer Hebrides, Ross-shire, running $1\frac{1}{4}$ mile north-north-eastward from Loch Eaoghail an Tuim to the head of salt-water Loch Roag.—*Ord. Sur.*, sh. 105, 1858.

Grimes' Dyke. See ANTONINUS' WALL.

Grimisay, an island of North Uist parish, Outer Hebrides, Inverness-shire. Lying in the middle of the

eastern part of the Sound between North Uist island and Benbecula, it has an utmost length and breadth of 3 and $1\frac{1}{2}$ miles, and was formerly considered barren and of trivial value, but has been turned to good habitable account. There are a post office under Lochmaddy and a public school (1879), with accommodation for 70 children. Pop. (1841) 269, (1861) 305, (1871) 283, (1881) 292, (1891) 281.

Grimisay, a small island of South Uist parish, Outer Hebrides, Inverness-shire. Pop. (1881) 28, (1891) 39.

Grim Ness. See RONALDSHAY, SOUTH.

Grimshadar, a sea-loch in Lochs parish, E side of Lewis, Outer Hebrides, Ross-shire. It enters $4\frac{1}{2}$ miles S of Stornoway, and penetrates the land $2\frac{1}{4}$ miles west-by-southward, having a varying width of 3 furlongs and barely 100 yards. Near its northern shore is a triangular fresh-water lake of the same name, which measures $2\frac{1}{2}$ by $1\frac{1}{4}$ furlongs.—*Ord. Sur.*, sh. 105, 1858.

Gritmoor or Greatmoor, a hill near the meeting-point of Teviothead, Cavers, and Castleton parishes, Roxburghshire, 9 miles S by W of Hawick. It forms part of the mountain chain of watershed between Teviotdale and Liddesdale, and rises to an altitude of 1964 feet above sea-level.—*Ord. Sur.*, sh. 17, 1864.

Groay, an islet, 2 miles SW of the southern extremity of Harris, Outer Hebrides.

Grogport, a coast village in Saddell parish, E Kintyre, Argyllshire, 5 miles N of Carradale.

Grove, The, a mansion on the eastern verge of Kirkpatrick-Irongray parish, Kirkcudbrightshire, $3\frac{1}{2}$ miles WNW of Dumfries. Built about 1840, after designs by Rickman, it is an elegant and commodious edifice, surmounted by a square tower, that commands a fine view of the town and environs of Dumfries. Its owner is Maxwell Hyslop Maxwell, Esq. (b. 1818; suc. 1867).—*Ord. Sur.*, sh. 9, 1863.

Grucula or Agricola, a place on the west coast of Shapinsay, Orkney, said to have been fatal to one of Agricola's ships.

Grubbit Law, a hill (1071 feet) in Morebattle parish, E Roxburghshire, $1\frac{1}{2}$ mile ESE of the church.

Grudie. See DURNESS.

Gruinard, Ross-shire. See GREINORD.

Gruinnard or Gruinart, a hamlet and a sea-loch on the NW side of Islay island, Argyllshire. The hamlet lies towards the head of the loch, 7 miles NW of Bridgend, and has a post office. The loch, entering 8 miles SW of Rudha Mhail Point, penetrates $4\frac{1}{2}$ miles southward to within 3 miles of the upper part of Loch Indal, and is dry over great part of its area at low water. It receives at its head the Anaharty, winding $7\frac{1}{2}$ miles south-westward and north-by-westward, and depositing as much silt as to maintain a bar across the loch's mouth; and it has, even at high water, an intricate channel, yet serves as a safe haven for small vessels. A strong party of the Macleans of Mull, landing here in 1588, fought a sanguinary skirmish with the Macdonalds of Islay.

Gruna, a small uninhabited island in Fetlar and North Yell parish, Shetland, $1\frac{1}{4}$ mile N of Fetlar island.

Gruna Skerries, a group of small islands in Nesting parish, Shetland. Pop. (1861) 17, (1871) 19, (1881) 25, of whom 10 were males and 15 females, (1891) 25, of whom 14 were males and 11 females.

Gruver, a village in Lochs parish, Lewis, Outer Hebrides, Ross-shire. Pop. (1881) 368, (1891) 389.

Gryfe or Gryffe Water, a stream rising on the north side of Creuch Hill, flowing through the Gryfe Reservoir (2 miles \times $\frac{1}{4}$ mile; 530 feet) of the GREENOCK Water-works, and winding 16 miles east-south-eastward, till it falls into the Black CART at Walkinshaw House, 2 miles NNW of Paisley. It intersects or bounds the parishes of Greenock, Kilmaccolm, Houston, Kilbarchan, Erskine, Inchinnan, and Renfrew; traverses first bleak heathy uplands, and then the broad Renfrewshire plain; is fed by at least a dozen little affluents; and contains trout, with a few grayling, its waters being preserved. 'Anciently it gave the name of Strathgryfe either to its own proper basin or to all the territory now forming Renfrewshire. Gryffe Castle, near its left bank, $\frac{1}{2}$ mile NNW of Bridge

of Weir, is a seat of A. H. Freeland Barbour, M.D.—*Ord. Sur.*, sh. 30, 1866.

Gualann. See BUCHANAN.

Gualin House, a shooting box at the mutual border of Edrarchillis and Durness parishes, NW Sutherland, $4\frac{1}{2}$ miles NE of Rhiconich and 45 NW of Lairg. It was built as a shelter for belated wayfarers. The ground extends over 20,000 acres, and contains grouse, woodcock, ptarmigan, etc. Stags are almost always on the ground. There is plenty of trout-fishing in lochs on the ground, and salmon fishing on the river Dionard.

Guard Bridge, a village in Leuchars parish, NE Fife, on the left bank of the broadening Eden, 4 miles WNW of St Andrews. It takes its name from a six-arched bridge, built in the first half of the 15th century by Bishop Henry Wardlaw; and it has a post office, a station on the St Andrews branch of the North British, brickyards, a public school, and a U.P. church (1882). Pop. (1881) 320, (1891) 524.—*Ord. Sur.*, sh. 49, 1865.

Guay Station. See DOWALLY.

Guel. See GELT.

Guidie. See GOODIE.

Guildtown, a village, with a public school, in St Martin's parish, Perthshire, 6 miles N by E of Perth, under which it has a post office.

Guldy, a village in Monikie parish, SE Forfarshire, 8 miles NW of Carnoustie.

Guinach, Loch. See GYNAG.

Guirm, a lake in the NW of Islay island, Argyllshire, 7 miles WNW of Bridgend. Measuring 1 by $\frac{1}{2}$ mile, and abounding in half-pound trout, it contains a small island, crowned with remains of a fortalice of the Macdonalds. The caves of Sanaig and the cliffs of Braigo are at a short distance. The former are very interesting from their winding rocky galleries and passages, with chambers communicating. Some fine old carved crosses exist at Kilchoman church, near this loch. Ardnave House, which is historically interesting, is near; so is a small loch called Ghuinnard, and a sea loch of the same name, which used to be a great resort of seals.

Guisachan, a large and fine mansion, with beautiful grounds, in Kiltarlilly parish, Inverness-shire, near the right bank of the Amhuinn Deabhaidh, a head-stream of the Glass, 22 miles SW of Beauly. It is the seat of Edward Marjoribanks, second Baron Tweedmouth (b. 1849; suc. 1894), member of Parliament for the county of Berwick from 1880 till 1894; Parliamentary secretary to the Treasury 1892-94; Privy Seal and Chancellor of the Duchy of Lancaster 1894-95.—*Ord. Sur.*, sh. 73, 1878.

Guisachan or **Geusachan**, an early affluent of the river Dee in Crathie and Braemar parish, SW Aberdeenshire, rising on Cairntoul and running $4\frac{1}{2}$ miles south-eastward, during which course it descends from 3480 to 1640 feet above sea-level.—*Ord. Sur.*, sh. 64, 1874.

Guisachan or **Allt Ghiusachan**, a rivulet in Ardchattan parish, Argyllshire, running 3 miles westward to upper Loch Etive at Invergusachan.

Gulberwick, a village in Lerwick parish, Shetland, 3 miles S of the town, with a public school. An ancient parish of Gulberwick was annexed in 1722 to Lerwick, having previously been united to Dingwall. It contains either sites or vestiges of several pre-Reformation chapels.

Gulbin or **Amhainn Ghuilbinn**, a troutful stream in Kilmornaig parish, S Inverness-shire. Issuing from Loch Ossian ($3\frac{1}{2}$ miles \times 3 furl.; 1269 feet) near the Perthshire border, it winds $3\frac{1}{2}$ miles northward as the Amhainn Ossian to Loch Gulbin ($7\frac{1}{2}$ \times $3\frac{1}{2}$ furl.; 1150 feet), on emerging from which it continues $6\frac{1}{2}$ miles northward through a wild upland region, till it falls into the river Spean at a point $1\frac{1}{2}$ mile WSW of the foot of Loch Laggan.—*Ord. Sur.*, shs. 54, 63, 1873.

Gullane (anc. *Golyne*), a village in Dirleton parish, N Haddingtonshire, $\frac{1}{2}$ mile SE of the head of Gullane Bay, with a station on the Aberlady and North Berwick section of the North British railway, and 4 miles NW of Drem Junction. The sandy links, burrowed by swarms of rabbits, form excellent golf-links and a coursing ground; and there are a horse-training establishment, 2 inns, a

public school, and a post and money order office under Drem. Its church, St Andrew's, given early in the 13th century to Dryburgh Abbey by Sir William de Vaux, and made collegiate by Sir Walter de Haliburton in 1446, is roofless now and much dilapidated. Imperfect at both extremities, it comprised a nave and an apsidal chancel, 71 and 20 feet long, which retain a zigzagged chancel arch of advanced Norman character, and a broad trigonal string-course on the outer N wall of the nave and the S side of the chancel. The ruins are figured in Grose's *Antiquities* (1789), and described in T. S. Muir's *Notices of Ancient Churches in Scotland* (1848). A new church, a chapel of ease to the parish, was opened here in 1888, and in 1893 initiatory steps were taken to improve the drainage and water supply of the village and district. Till 1612 Gullane gave name to the parish of Dirleton. See Ferrier's *Guide to North Berwick and Vicinity*.—*Ord. Sur.*, sh. 33, 1863.

Gullane Point, a low basaltic headland in Dirleton parish, Haddingtonshire, $1\frac{1}{2}$ mile W by N of Gullane village, and $10\frac{1}{2}$ miles S of Kincaig Point, near Earlsferry, in Fife.

Gull Rocks. See DUN-NA-FEULAN.

Gumscleuch, a mountain on the mutual border of Traquair and Yarrow parishes, Peeblesshire and Selkirkshire.

Gunister, a bay and an islet in Northmaven parish, Shetland.

Gunna, a small island of Tiree and Coll parish, Argyllshire, in the sound between Tiree and Coll islands. It measures 1 by $\frac{1}{2}$ mile, and is low, pastoral, and uninhabited.

Gungreen, a mansion in Ayton parish, Berwickshire, on the right bank of the Eye at its mouth, $3\frac{1}{2}$ miles NNE of Ayton village and 1 mile E of Eyemouth town. It is said to have been built by a wealthy smuggler, and to contain a number of hiding-places. The estate—520 acres—was sold in 1881 for £22,000, having 50 years earlier cost £18,000.

Guthrie, a hamlet and a parish in the Sidlaw district, Forfarshire. The hamlet lies, 160 feet above sea-level, on the left bank of Lunan Water, $\frac{1}{2}$ mile N of Guthrie Junction on the Caledonian, this being 7 miles E of Forfar, $7\frac{3}{4}$ NW of Arbroath, and $8\frac{1}{2}$ SW of Bridge of Dun Junction; and has a post and railway telegraph office.

The parish formerly consisted of two sections, the main or north-eastern and the Kirkbuddo or south-western, lying 6 miles asunder. Kirkbuddo, anciently a separate parish, was annexed to Guthrie at the Reformation. The Boundary Commissioners, however, in 1891 transferred the latter section (containing 1435 acres) to the parish of Inverarity, but gave to Guthrie the detached Middletonmoor section of the parish of Kirkden (containing 421 acres). The area of Guthrie parish is now 2810 $\frac{3}{4}$ acres, and it is bounded on the NE by Farnwell, on the E by Kinnell, on the SE by Inverkeilor, on the S by Kirkden, on the SW by Rescobie, and on the W and N by Aberlemno. LUNAN WATER flows $3\frac{1}{2}$ miles east-by-southward along the Rescobie and Kirkden border of the parish, which, towards its western boundary, 7 furlongs NW of Guthrie hamlet, attains 494 feet in Guthrie Hill, a steepish round-backed mass of trap, declining towards the E. Sandstone is the prevailing rock; and the better soil is a free black loam, with clayey or gravelly subsoil. Over 200 acres are under wood, and, with the exception of a remnant of unreclaimed moor, all the rest of the parish is regularly or occasionally in tillage. Guthrie Castle, on the Lunan's left bank, 1 mile NW of the junction, is a stately old pile, with massive walls 10 feet thick and 60 high, whose battlements out-top a mass of embosoming wood. Repaired and enlarged in 1848 from designs by the late Mr David Bryce, it was founded in 1468 by Sir David Guthrie of Guthrie, comptroller of the exchequer, whose son, Sir Alexander, fell at Flodden (1513), and whose descendant, the present owner, is John Douglas Maude Guthrie, Esq. (b. 1856; suc. 1877). Guthrie is in the presbytery of Arbroath and synod of Angus and Mearns; the living is worth £165. Its church, St Mary's, be-

longed originally to Arbroath Abbey, but was purchased therefrom by Sir David Guthrie, who refounded it in 1479 as a collegiate establishment for a provost and five prebendaries. The present church, at the hamlet, was built in 1826; and a public school, with accommodation for 112 children, has an average attendance of about 70, and a grant of over £70. Valuation (1857) £3464; (1882) £5040, 7s. 2d.; (1892) £2554, 7s. plus £996 for railway. Pop. (1801) 501, (1831) 528, (1861) 476, (1871) 404, (1881) 439, (1891) 267.—*Ord. Sur.*, sh. 57, 1868.

Guynd, The, an elegant mansion in Carmyllie parish, SE Forfarshire, near the left bank of Elliot Water, 5 miles W by N of Arbroath. The Den of Guynd here contains a pretty strong chalybeate spring and vestiges of an ancient camp.—*Ord. Sur.*, sh. 49, 1865.

H A', a mound, nearly 50 feet high, on Auchinbadie farm, in Alvah parish, Banffshire, 5 miles S of Banff. It appears to be artificial, but it neither figures in tradition nor has furnished any relics of antiquity.

Haafgrunie, an island of Unst parish, Shetland, 1 mile S of the southern extremity of Unst island. It measures 3 miles in circumference, and is pastoral and uninhabited.

Habbie's Howe, the scene of Allan Ramsay's *Gentle Shepherd*. This has been contended by many persons to be a spot in Penicuik parish near the head of Logan or GLENCORSE Burn, 10½ miles S by W of Edinburgh and 4 WNW of Penicuik town. Towards the upper part of a glen, a streamlet falls, from between two stunted birches, over a precipitous rock, 20 feet in height, and inaccessible on either side of the linn; beneath, the water spreads into a little pool or basin. So far the scenery answers exactly to the description—

'Between twa birks, out o'er a little linn,
The water fa's, and makes a singan din;
A pool breast-deep, beneath as clear as glass,
Kisses, with easy whirls, the bord'ring grass.'

But though there may be one or two other coincidences close enough to satisfy an easy critic, the Habbie's Howe of Glencorse is far from being a place like the Habbie's Howe of the pastoral—

'Where a' the sweets o' spring and summer grow.'

The spot is bare, surrounded with marshes, and it has hardly a bush or a shrub, except a solitary stunted thorn or rowan-tree, projecting from a fissure as if dropped from a rock by chance; it is adorned with not a flower or patch of lively verdure, but only, where the soil is dry, with a few tufts of whins; and it seems never to have claimed connection with Ramsay, and probably never met the gaze of his eye, or was mentioned in his hearing.

Tytler, the celebrated antiquary, the restorer of Ramsay's fame, and the proprietor of Woodhouselee in Glencorse parish, had no difficulty in identifying all the scenery of the *Gentle Shepherd* with the exquisite landscape in and around the demesne of NEWHALL, lying near the head of the North Esk, partly within the parish of Penicuik in Midlothian, and partly within that of Linton in Peebleshire, 4½ miles WSW of Penicuik town. 'While I passed my infancy at Newhall,' says he in his edition of *King James's Poems*, 'near Pentland Hills, where the scenes of this pastoral poem were laid, the seat of Mr Forbes, and the resort of many of the *literati* at that time, I well remember to have heard Ramsay recite as his own production different scenes of the *Gentle Shepherd*, particularly the two first, before it was printed.' Between the house and the little haugh, where the Esk and the rivulet from the Harbour Craig meet, are some romantic grey crags at the side of the

Gylen, an ancient castle in Kilmore and Kilbride parish, Argyllshire, on a romantic promontory in the extreme S of Kerrara island. Dating probably from the 12th century, it was long a stronghold of the Macdougalls of Lorn; was captured in 1647 by a detachment of General Leslie's army; and is now a strong, tall, roofless tower. The famous Brooch of Lorn, rent from King Robert Bruce at Dalry, was in the castle at the time of its capture, and became the spoil of Campbell of Inverawe.

Gynag or Guinach, a lake in Kingussie parish, Inverness-shire, 1½ mile NNW of the village. Lying 1045 feet above sea-level, and measuring 4½ by 1½ furlongs, it contains an islet, with vestiges of what is thought to have been a fortalice. Pike are its only fish.—*Ord. Sur.*, shs. 74, 64, 1877-74.

H

water, looking up a turn in the glen, and directly fronting the south. Their crevices are filled with birches, shrubs, and copsewood; the clear stream purls its way past, within a few yards, before it runs directly under them; and, projecting beyond their bases, they give complete bield to whatever is beneath, and form the most inviting retreat imaginable—

'Beneath the south side of a craggy bield,
Where crystal springs the halesome water yield.'

Farther up, the glen widens, immediately behind the house, into a considerable green or holm, with the brawling burn, now more quiet, winding among pebbles in short turns through it. At the head of this 'howm,' on the edge of the stream, with an aged thorn behind them, are the ruins of an old washing-house; and the place was so well-calculated for the use it had formerly been applied to, that another more convenient one was afterwards built on the same site, and is still to be seen—

'A flowery howm between twa verdant braes,
Where lassies use to wash and spread their claes;
A trotting burnie wimpling through the ground;
Its channel-pebbles shining smooth and round.'

Still higher up, agreeable to the description in the dialogue of the second scene, the hollow beyond Mary's Bower, where the Esk divides it in the middle, and forms a linn or leap, is named the Howe Burn; a small enclosure above is called the Braehead Park; and the hollow below the cascade, with its bathing-pool and little green, its birches, wild shrubs, and variety of natural flowers in summer, its rocks and the whole of its romantic and rural scenery, coincides exactly with the description of Habbie's Howe. Farther up still, the grounds beyond the Howe Burn, to the westward, called CARLOPS—a contraction for Carline's Loup—were supposed once to have been the residence of a carline or witch, who lived in a dell at the foot of the Carlops Hill, near a pass between two conical rocks, from the opposite points of which she was often observed at night bounding and frisking on her broom across the entrance. Not far from this, on a height to the E, stood a very ancient half-withered solitary ash-tree, near the old mansion-house of Carlops, overhanging a well, with not another of thirty years' standing in sight of it; and from the open grounds to the S, both it and the glen, with the village and some decayed cottages in it and the Carline's Loup at its mouth, are seen. Ramsay may not have observed or referred to this tree; but it is a curious circumstance that it should be there, and so situated as to complete the resemblance to the scene, which seems to have been taken from the place—

'The open field;—a cottage in a glen,
An auld wife spinning at the sunny end;—
At a small distance, by a blasted tree,
With faulded arms and half-raised look, ye see
Bauldy his lane.'

See also ECKFORD; and the editions of *Allan Ramsay's Poems* by George Chalmers and Lord Woodhouslee (Edinb., 1848), and the one published by Alex. Gardner (Paisley, 1877).

Habchester, a hill (712 feet) on the mutual border of Ayton, Mordington, and Foulden parishes, Berwickshire, 1½ mile SSE of Ayton station on the North British railway. It is crowned with very distinct vestiges of a singular Danish camp.

Habrahelia, a cavern in Mnil Head, at the northern extremity of Papa-Westray island, Orkney. With a width of from 48 to 60 feet, it rises, in a manner resembling an archway, to a height of over 70 feet; is formed, on the sides, by successive projecting strata, with a regularity similar to that of a stair; and has a smooth even floor, slightly ascending from the entrance inward.

Hackness, a headland at the southern extremity of Shapinshay island, Orkney, flanking the N side of the eastern entrance of String Sound.

Hadden, an ancient village, now reduced to a single farmhouse, in Sprouston parish, NE Roxburghshire, 7 furlongs E of the English border, 5 furlongs SSW of Carham station on the North-Eastern railway, and 5 miles ENE of Kelso. In olden days it was a frequent meeting-place of Scottish and English commissioners, to adjust boundaries and to settle disputes. Hadden Rig, a ridge of elevated land that runs through the middle of the parish, and culminates at an altitude of 541 feet, was the scene in 1540 of the defeat of 3000 mounted English troops by a Scotch force.—*Ord. Sur.*, sh. 26, 1864.

Haddington, a royal (and formerly a parliamentary) burgh and a parish of Haddingtonshire, is said to derive its name from the Gaelic *hofdingia-tun*, or in more modern form *heudeinge-town*, meaning 'princes' town; while earlier etymologists derive it from Haden, a Saxon chief who is said to have settled on the banks of the Tyne. Lying 150 feet above sea-level, the town occupies a pleasant situation, almost in the centre of the county, on the left bank of the river Tyne, which here makes a semicircular sweep; and it is overlooked by the GARLETON Hills (590 feet) 1½ mile to the N. By road it is 17 miles E of Edinburgh and 11 WSW of Dunbar; whilst, as terminus of a branch line of the North British, it is 4½ miles ESE of Longniddry Junction, this being 13½ miles E by N of Edinburgh and 44 WNW of Berwick-upon-Tweed. Though still a comparatively small place, and though for a long period of a somewhat mean appearance, it now is one of the neatest and cleanest towns of Scotland, with spacious and straight main thoroughfares, containing an abundant array of shops, and with good, sometimes even handsome, edifices, among which a few curious ancient houses still remain. The town of Haddington is lighted by gas, the gaswork being situated at the west end of the burgh, and comprises three principal streets and various minor thoroughfares connecting those with each other and with the outlying parts of the town. Court Street, leading from the West Port to the Town Hall, was formerly named King Street. Across the river to the E lies the ancient barony of Nungate, now included in the burgh of Haddington, and chiefly inhabited by the poorer classes; at the western extremity of the High Street is the suburb of Gallow Green; and the outskirts of the town are adorned with pleasant villas. The rich agricultural landscape surrounding Haddington, and the graceful curve made by the Tyne, which here first begins to assume the dimensions of a river, render the situation and appearance of the local capital very pleasing. The Tyne is spanned at Haddington by four bridges. The Abbey Bridge, a structure of three arches dating from mediæval times, spans the river 1 mile E of the town near the site of the old abbey; and the Nungate Bridge, also an ancient erection, has three arches over the river, and two smaller ones across Giffordgate. The Waterloo Bridge was built in 1817, and spans the Tyne to the S of the town. Stevenson Bridge, a useful iron foot-bridge, crosses the Tyne at the W end of the Haugh. The river, though

adding much to the beauty and comfort of Haddington, has at various dates occasioned great damage in times of flood. In 1358 the convent (mentioned further on) was on the point of being swept away by one of those inundations; but, according to legend, was preserved by the courageous conduct of one of the nuns, who seized an image of the Virgin Mary and threatened to throw it into the flood, unless the impending destruction was averted. A tablet erected in the town commemorates a great flood that took place on 4 Oct. 1775, when the river rose 17 feet in one hour. 'Thanks be to God,' concludes the Latin inscription, 'that it was not in the night-time, for no one perished.' The part of the river near Haddington was formerly preserved by the Earl of Wemyss, but he has liberally thrown it open as far as his property extends.

At the west end of the town stand the County Buildings, erected in 1833 from a design by Mr Burn of Edinburgh at a cost of £5500. They are in the Tudor style of architecture, and are built chiefly of stone procured near the town, though the façade is constructed of polished stone from Fife. They contain the sheriff and justice of peace court rooms, and the various county offices. Immediately to the E stands the Corn Exchange, erected in 1854 at a cost of upwards of £2400 after designs by Mr Billings. This spacious edifice, said to be exceeded in size among buildings of its class in Scotland only by the Corn Exchange in Edinburgh, measures within walls 128 feet in length and 50 in breadth. Its front elevation, though somewhat plain, is massive and not inelegant. The Town Buildings, situated at the junction of High Street and Back Street, were erected in 1748 from a plan of William Adam, the celebrated architect. They were enlarged in 1830-31 by the addition of a spacious town-hall and an ornamental spire 170 feet high, from designs by Mr Gillespie Graham. They contain the town-council room, the assembly room, and public reading room. In Hardgate Street is situated Bothwell Castle, an old town house of the Earls of Bothwell. Near the town stands the County Lunatic Asylum, a handsome building opened in 1866, with accommodation for 90 patients. In the vicinity of the railway a monument to Robert Ferguson of Raith, who was member of Parliament for Haddingtonshire from 1835 to 1837, was raised in 1843 at a cost of £650. It consists of a statue, by Robert Forrest, surmounting a Doric fluted column, whose base is adorned with four life-size figures of mourners. In 1880, at a cost of over £1000, a memorial was erected to George, eighth Marquis of Tweeddale (1787-1876). Designed by Mr Rhind of Edinburgh, it is a reproduction of the beautiful old Elizabethan well at Pinkie House, and consists of an arch with a marble bust of the Marquis, surmounted by an elaborate open crown, the height of whose finial is 25 feet. In 1880, too, a new cross 10 feet high, resting on three steps, and bearing the Haddington arms, was presented to the burgh by Messrs Bernard.

The chief ecclesiastical edifice in Haddington is the Abbey (parish) church. Of dark red sandstone, this building dates from about the 12th or 13th century, and it stands in an open area to the SE of the town, close beside the river. The choir and transepts are in a ruinous condition; but the square tower, 90 feet high, is still entire, and the aisled, five-bayed nave or western part of the cross is used as the parish church, having been fitted up in a superior manner in 1811 with 1233 sittings at a cost of £6000. This church underwent an entire renovation in 1890-93, when an organ was put in, and a pulpit, communion table, font, lectern, and pictorial window were presented by the Misses Aitchison, Alderston. Originally a cruciform edifice in the Decorated style, with earlier Transition and even Norman features, the Abbey church measured from E to W 210 feet, and from N to S, across the transepts, 110 feet. The breadth of the nave was 62 feet. It long has borne the title *Lucerna Loudoniae*, or Lamp of Lothian, though that name seems originally to have belonged to the now vanished church of the Franciscan monastery, on account both of its beauty and of the distance at which its lights

were visible. In the aisle is the splendid monument of the Lauderdale family. The parish consists of two charges—the first with a stipend of £352 and a manse, the second of £383 and a manse. St John's chapel of ease is a neat Gothic building, erected in 1838 at a cost of £1600. There are also one Free church (St John's), two United Presbyterian churches, the East and the West, a plain Gothic Episcopal chapel of 1770, dedicated to the Holy Trinity, renovated in 1843, and seated for 300; and St Mary's Roman Catholic church, built in 1862, and seated for 360. In Nungate there is a ruined chapel dedicated to St Martin. A handsome new building, known as the Knox Memorial Institute, and bearing a life-size statue of the great reformer on its tower, which is 14 feet square and 80 high, was erected in 1878-80 at a cost of £10,000. It comprises, besides the school, a lecture room to hold 400. The old and once famous grammar school of Haddington is included in the Institute, whose endowment of £112 has been largely increased by recent subscriptions, over £1000 having been subscribed for bursaries. The primary and a Roman Catholic school, with respective accommodation for 639 and 165 children, have an average attendance of about 480 and 120, and grants of over £535 and £100. The former mathematical school, where Edward Irving was teacher in 1810-12, was incorporated with the grammar school. Among other means of culture are a law library, a town and county library, and a free town library and reading room, originating in a bequest of books about 1717 by the Rev. John Gray of Aberlady;* and it should be mentioned that Haddington was the headquarters of the itinerating libraries organised in 1817 for the good of the people of East Lothian by the philanthropic Samuel Brown. Amongst the various associations that have their seats or headquarters at Haddington are the United East Lothian Agricultural Society, the East Lothian Agricultural Club, the Haddington New Club, clubs for curling, golf, bowling, cycling, football, and cricket, lodges of Good Templars, Freemasons, Oddfellows, Foresters, and Free Gardeners, the East Lothian and the Haddington horticultural societies, a naturalists' club, an ornithological society, a female society for the relief of the poor, and a rifle association. It is also the headquarters of the 7th Volunteer Battalion Royal Scots. Two weekly papers—*The Haddingtonshire Advertiser* (1880) and *The Haddingtonshire Courier* (1859)—are published in the town on Friday. There are branch offices of the Bank of Scotland, British Linen Company's Bank, the Commercial Bank of Scotland, and the Royal Bank, besides a savings bank; and numerous insurance companies are represented in Haddington by agents or offices.

The drainage and the water supply are now excellent. Till 1874 the town depended for its water upon local wells; but in Oct. 1874 it acquired a supply of more than 100,000 gallons per day of pure spring water from works constructed, at a cost of about £5000, on the Earl of Wemyss's estate; and in 1893 a supplementary supply was introduced, costing between £6000 and £7000.

Haddington can boast of no great manufacturing industry, though it does a large amount of retail trade in supplying the surrounding district, and though a vast amount of agricultural produce changes hands at its weekly markets. A woollen manufactory on an extensive scale was begun in 1681 in the suburb of Nungate by a company employing English workmen. It purchased some of the lands that had formerly belonged to the monastery, erected fulling-mills, dye-houses, and other premises, and gave the whole the name of Newmills. The company was exempted by various Scottish Acts of Parliament from certain taxes, and Colonel Stanfield, the chief partner, received the honour of knighthood for his exertions; but after his death the prosperity of the company came to an end,

* On occasion of an effort to establish an adequate library in the town, the *Athenaeum* of 20 Aug. 1861 gave a list of 44 of the rarer works in this bequest, including three missals of 1497, 1510, and 1529, two black-letter prayer-books of 1615 and 1637, an Aldine Pliny (1603), an Elzevir Martial (1622), Beza's *Icones* (1580), a large collection of Scottish pamphlets of the 17th century, etc.

and Colonel Charteris, purchasing their lands, changed the name from Newmills to Amisfield, after the ancient seat of his forefathers in Nithsdale. In 1750, and again at a later date, vigorous attempts were made to revive the industry, but both proved abortive. The industrial establishments that are now situated in the town or its immediate neighbourhood include one or two small woollen mills, breweries, foundries, coach works, corn mills, agricultural implement factories, and a tannery and skinery. The chief commercial interest, however, centres in its grain markets, which were the largest in Scotland until the construction of railways enabled those of Edinburgh to excel them. Markets are held at Haddington in the Corn Exchange every Friday. Oats are sold at 12 o'clock, barley at 20 minutes past 12, beans and pease at 15 minutes to 1, and wheat at one o'clock. A hiring market for farm servants is held at Haddington on the first Friday of February, and an Autumn fair on the Friday before the second Tuesday in October.

Haddington is a royal burgh of very ancient standing, and by the Burgh Police (Scotland) Act of 1892 is governed by a provost, 2 bailies, and 6 councillors. Prior to the date of the Burgh Reform Act, the town council, according to an act of the Convention of Royal Burghs in 1665, consisted of 16 merchant and trades councillors. The council nominates a baron-bailie of Nungate, another of a portion of Gladsmuir parish which holds feu of the burgh and two Burlaw bailies, but none

Seal of Haddington.

of these functionaries hold courts. The municipal constituency in 1896 was 849, of whom 185 were women. The income of the town is derived from lands, houses, feu-duties, customs and market dues, and fees on the entry of burgesses. It amounted in 1831-32 to £1422; in 1860-61 to £1173; in 1881-82 to £1334; and in 1894-95 to £1736. At one time Haddington was the seat of a circuit justiciary court; but it now sends all its justiciary business to Edinburgh. The sheriff court meets at Haddington every Thursday during session for ordinary, debt recovery, and small debt business. A justice of peace court is held on the second Tuesday of every month, and a court of quarter-sessions is held on the first Tuesday of March, the third Tuesday of April, the first Tuesday of August, and the last Tuesday of October. The burgh and county are united for police purposes; and the burgh has also an officer who unites the functions of inspector of nuisances, sanitary inspector, lodging-house inspector, and inspector under the Explosives Acts. In 1880 the royal burgh was extended so as to include the whole of the parliamentary burgh, which formed one of the Haddington group of burghs until 1885, when by the Redistribution of Seats Act of that year the group was abolished and the representation merged in that of the county. The annual value of property in the burgh in 1871 was £13,392; in 1882-83, £16,202, 17s.; and in 1895-96, £17,278. Pop. (1831) 3857, (1841) 3777, (1851) 3883, (1861) 3897, (1871) 4007, (1881) 4043, (1891) 3771,

of whom 1974 were females. Houses (1891) inhabited 850, vacant 92.

Haddington is mentioned as a burgh in David I.'s confirmation charter to Dunfermline Abbey (1130); and Ada, daughter of the Earl of Surrey and Warren, received it in 1139 as dower on her marriage with Prince Henry, David's son. On her death, in 1178, William the Lyon inherited it as a royal demesne; and here, in 1198, was born his son Alexander II. Under the reign of this last the town seems first to have felt the miseries of war, for in 1216 it was burned by King John of England during his incursion into the Lothians. In 1242 the Earl of Athole was assassinated within its walls, in revenge for his having overthrown Walter de Bisset in tournament. Two years later Haddington was again destroyed by the flames, on the same night, we are significantly told, as several other Scottish towns. Though formally demanded in 1293 from John Baliol by Edward I., it does not seem to have suffered much in the wars of the succession. In 1355-56 Edward III. invaded Scotland to avenge the seizure of Berwick by the Scots, and Haddington was a third time reduced to ashes. In 1400 Henry IV. of England entered Haddington, but did no damage; and in 1503 the Princess Margaret, daughter of Henry VII., spent one night there on her way to Edinburgh. But the most famous event in the history of the town is its siege. In April 1548, the year after the Battle of Pinkie, the English seized Haddington, fortified it, and left a strong garrison to defend it under Sir James Wilford. The Scots, largely reinforced by foreign troops, and commanded by the French general, André de Montalembert, Sieur D'Essé, immediately laid siege to the town. The garrison made a long and gallant resistance, repulsed assaults, and led sallies, during one of which Wilford was captured. At last, however, plague appeared among the garrison, and the English determined to evacuate the place. To prevent the soldiers and military stores from falling into the hands of the besieging army, the Earl of Rutland marched into Scotland with 6000 men, entered Haddington by night, and on 1 Oct. 1549 safely conducted all the soldiers and artillery to Berwick. No vestiges of the fortifications now remain. There is a full contemporary account of the siege of Haddington in Jean de Beaugué's *Histoire de la Guerre d'Écosse*.

In 1598 Haddington was again burned. The calamity having been occasioned through the carelessness of a maidservant in placing a screen covered with clothes too near a fire-place during the night, the magistrates enacted that a crier should perambulate the town during the winter evenings, warning the people to guard against fire. The ceremony got the name of 'Coal an' Can'le,' from the following rude verses which the crier recited:—

'A' guid men's servants where'er ye be,
Keep coal an' can'le for charitie!
Baith in your kitchen an' your ha',
Keep weel your fires what'er befal!
In bakehouse, brewhouse, barn, and byre,
I warn ye a' keep weel your fire!
For oftentimes a little spark
Brings many hands to mickle wark!
Ye nourrices that hae bairns to keep,
See that ye fa' nae o'er sound asleep,
For losing o' your guid renoun,
An' banishing o' this barrous toun
'Tis for your sakes that I do cry:
Tak' warning by your neighbours bye!'

A privy council order of 10 Nov. 1636, anent some Egyptians or Gypsies, prisoners in Haddington tolbooth, ordained 'the men to be hanged, and the women to be drowned, and such of the women as have children to be scourged through the burgh and burned in the cheek.' Beyond the visit from Oliver Cromwell on 30 Aug. 1650, already narrated under DUNBAR, the later history of Haddington contains little more of interest. The great Reformer, John Knox (1505-72), was born at Haddington; and the site of his birthplace in Giffordgate is marked by a tree which was planted in 1881 in accordance with one of the last wishes of Thomas Carlyle. (See GIFFORD.) John Brown (1722-87), author of the *Self-Interpreting Bible*, was minister of the Secession

congregation from 1751 to his death; and at Haddington were born his son, the Rev. John Brown (1754-1832), the author of various works, and his grandson, Samuel Brown, M.D. (1817-57), an able chemist. Other illustrious natives were Johu Heriot (1760-1833), miscellaneous writer and editor of the *Sun* and *True Briton*, David Scott (1675-1742), author of a *History of Scotland*, Samuel Smiles (b. 1816), author of *Self Help*, etc., and Jane Welsh (1801-66), whose tombstone in the abbey churchyard records how 'for forty years she was the true and ever-loving helpmate of Thomas Carlyle, and, by act and word, unweariedly forwarded him, as none else could, in all of worth that he did or attempted.'

Haddington gives the title of Earl, in the peerage of Scotland, to the descendants of the Hamiltons of Innerwick, the remote kiusmen of the ducal family of Hamilton. In 1606, Sir John Ramsay, brother of George Lord Ramsay of Dalhousie, and the chief protector of James VI. from the conspiracy of the Earl of Gowrie, was created Viscount Haddington and Lord Ramsay of Barns; in 1615 he was raised to a place among the peers of England, by the titles of Earl of Holderness and Baron Kingston-upon-Thames; but dying, in 1625, without issue, he left all his honours to be disposed of at the royal will. In 1627 Thomas Hamilton of Priestfield—who was eminent as a lawyer, and had become Lord-President of the Court of Session, and Secretary of State, and had been created Baron of Binning and Byres in 1613, and Earl of Melrose in 1619—obtained the king's permission to change his last and chief title into that of Earl of Haddington. In 1827, Thomas, ninth Earl, while only heir-apparent, was created Baron Melrose of Tynninghame in the peerage of the United Kingdom; and this nobleman, during the brief administration of Sir Robert Peel in 1834-35, was Lord-Lieutenant of Ireland. The family seats are Tynninghame House, 2½ miles NE of East Linton, and Mellerstain and Lennel House in Berwickshire.

The parish of Haddington occupies the centre of Haddingtonshire, and is bounded on the N by the parish of Athelstaneford, on the E by Prestonkirk and Morham, on the S by Yester, Boltou, Saltou, and Gladsmuir, and on the W by Gladsmuir and Aberlady. Its form is exceedingly irregular, consisting of a main body 4½ miles long by 3 broad, with five projections radiating therefrom. Its greatest length, from NNW to SSE, is 8½ miles; its greatest breadth, at right angles to its longer axis, is 7 miles; and its area is 12,113 acres, of which nearly 50 are water. Except in the N which is occupied by the rounded summits of the Garleton Hills, the surface of the parish presents a beautifully undulating landscape, covered with prosperous farms or dignified private grounds. The southern slopes of the Garleton Hills are clothed with fine plantations; and on the top of Byres or Byrie Hill, one of the summits, stands a monument, erected in 1824 to John, fourth Earl of Hope-toun, one of the heroes of the Peninsular War. It has an ascent of 132 steps, and is visible from Edinburgh, 17 miles distant. The river Tyne traverses the parish from SW to NE in a sinuous course that maintains an average breadth of from 50 to 56 feet. Trap rock forms the mass of the Garleton Hills, though on the southern slopes that is overlaid by calciferous sandstone; and sandstone of various kinds and qualities prevails in the rest of the parish. The soil towards the SW border is shallow and inferior, but elsewhere it is good and in high cultivation. About 1250 acres are under wood, and more than 500 in pasture; while the rest is cultivated. Coal has been sought for but not found. There is a weak chalybeate spring, called Dobson's Well, about ½ mile W of the burgh. The industries of the parish, besides agriculture, are restricted to the town of Haddington.

Besides the burgh of Haddington the parish contains the hamlets of Abbey and St Lawrence. A mile and a quarter S of Haddington stands Lennoxlove House, anciently called Lethington, the seat of Lord Blantyre. Part of it dates from very antique times, and was a very strong fortalice. Lethington was the home of Sir

Richard Maitland and of James VI.'s chancellor, Secretary Lethington, and for a long period it was the chief seat of the Lauderdale family. The first park wall, 12 feet high, enclosing an area of more than 1 square mile, is said to have been raised in six weeks by the Duke of Lauderdale, in order to save his country from the reproach of the Duke of York, that there was not a single deer park in it. The other chief seats, all noticed separately, are AMISFIELD, STEVENSON HOUSE, MONKRIGG, COALSTOUN, CLERKINGTON, LETHAM, ALDERSTON, and HUNTINGTON. The North British railway traverses one of the projectious of the parish, and there is a branch of that railway to the burgh within the parish. Six miles of the great road from Edinburgh to the E of England lie within its limits, besides a section of a road to North Berwick, and numerous subordinate roads. Haddington parish is in the presbytery of Haddington and the synod of Lothian and Tweeddale. The churches have already been noticed. The origin of the parish is difficult to trace. At the accession of David I. in 1123 it was a clearly defined district, though both then and afterwards of a larger extent than now. Till 1674 it comprehended a considerable part of Athelstaneford, and till 1692 of Gladsmuir also. The ancient church, dedicated to the Virgin, was granted about 1134 by David I. to the priory of St Andrews, which held it with all its endowments, including the lands of Clerkington on both sides of the Tyne, till the Reformation. Six chapels also were situated in the parish—those of St Lawrence, which has given its name to a hamlet, St Martin, St Catherine, St Kentigern, and St John, and one in the barony of Penston, which, previous to the erection of Gladsmuir parish, lay within the limits of Haddington. At the Reformation the property of all these chapels, with that of the church to which they were attached, belonged, as part of the immense possessions of the priory of St Andrews, to James Stewart, the notorious Earl of Moray, the bastard brother and the minister of Mary of Scotland. The possessions were soon after usurped by the Earl of Morton, during the period of his regency; and when he was put to death for his participation in the murder of Darnley, they were forfeited to the Crown. Esme, Duke of Lennox, the cousin and favourite of James VI., next obtained them, as a temporal lordship, from the king. Later, Thomas, the first Earl of Haddington, purchased the Haddington portion of the lordship—consisting of the patronage and property and emoluments of the church and its chapels—from Ludovic the son of Esme, and in 1620 obtained from the king a confirmation of his purchase. In the 18th century the patronage and property were transferred, by another purchase, to Charles, the first Earl of Hopetoun, and they have since continued in the possession of his descendants. From the Reformation till 1602 the churches of Haddington and Athelstaneford and the chapel of St Martin were all served by one minister, and not long afterwards St Martin's was abandoned. In 1633 Haddington church was appointed one of the twelve prebends of the chapter of Edinburgh, and in 1635 a second minister was appointed. From the 12th or 13th century to the Reformation, Haddington gave its name to a deanery. The parish also contained a Franciscan monastery, dating probably from the 12th century. Edward I. is said to have destroyed it, and there are now no vestiges of it extant, unless the present church may be held as having formed part of it. At the village of ABBEY there stood a convent of Cistercian nuns, founded in 1178 by Ada, Countess of Northumberland and mother of Malcolm IV. and William the Lyon. It was dedicated by her to the Virgin, and it was endowed with extensive and valuable possessions, of which the lands of Nunside or Nunlands, now Huntington, and the church of Athelstaneford with its teinds were only a part. In 1296, Eva, the prioress, made submission to Edward I., and obtained the restoration of her rights. James II. granted a charter to the priory in 1458, confirming one previously obtained from the bishop of St Andrews in 1349. In 1471 the lairds of Yester and Makerston

forcibly seized part of the Abbey lands, and the nuns had to seek the aid of parliament against them. In 1548 the Estates held a parliament in the convent, at which it was resolved to send the infant Queen Mary to France. At the Reformation the number of nuns in the convent was 18; and its revenues amounted to £308, 17s. 6d., besides various contributions paid in kind. The lands were conferred by Mary on her secretary, William Maitland of Lethington; and afterwards they were converted into a temporal lordship in favour of John, Master of Lauderdale. Valuation, excluding burgh, (1872) £28,061, 4s., (1883) £22,888, 6s., (1892) £19,442, 3s. 2d. Pop. of entire parish (1801) 4049, (1831) 5883, (1841) 5452, (1871) 5735, (1881) 5660, (1891) 5216.—*Ord. Sur.*, sh. 33, 1863.

The Established presbytery of Haddington comprises the parishes of Aberlady, Athelstaneford, Bolton, Dirleton, Garvald, Gladsmuir, Haddington, Humble, Morham, North Berwick, Pencaitland, Prestonpans, Salton, Tranent, and Yester, and the *quoad sacra* parish of Cockenzie, with the chapelries of St John's (Haddington) and Gullane. Pop. (1871) 25,545, (1881) 25,742, (1891) 25,474, of whom 6370 were communicants of the Church of Scotland in 1895.—The Free Church has also a presbytery of Haddington and Dunbar, with churches at Cockburnspath, Cockenzie, Dirleton, Dunbar, Garvald, Haddington, Humble, Innerwick, North Berwick, Pencaitland, Prestonkirk, Prestonpans, Salton, Tranent, and Yester, which 15 together had 2483 members in 1894.

See Dr Barclay's 'Account of the parish of Haddington' in *Trans. Soc. Ants. Scotl.* (1792); James Miller's *Lamp of Lothian, or the History of Haddington* (Had. 1844); an article on p. 926 of the *Builder* (1878); the two works cited under CRAIGENPUTTOCH; James Purves's 'Tynningtown' in *Fraser's Magazine* (March 1881); the chapter on 'A Typical Scotch Town' by Francis Watt, in *Picturesque Scotland* (Lond. 1882); and James Robb's *Guide to the Royal Burgh of Haddington, Past and Present*.

Haddingtonshire or East Lothian, a maritime county in the south-east of Scotland, is situated between 55° 46' 10" and 56° 4' N lat., and between 2° 8' and 2° 49' W long., and is bounded on the NW and N by the Firth of Forth, on the NE and E by the German Ocean, on the SW and S by Berwickshire, and on the W by Edinburghshire. With the exception of four small streamlets which divide it towards the SW, NE, and SE angles from Berwickshire and Edinburghshire, and the summit line of the Lammermuirs, which forms about one-half of the march with Berwickshire, the county has, along its SE, S, and W frontiers, no natural or geographical features to mark its boundary. It has a total coast-line of 31½ miles, of which 15½ lie along the Firth of Forth to the W of North Berwick, and present a flat and generally sandy beach; while the 16½ miles that extend along the German Ocean rise in irregular and bold cliffs. There are harbours at Prestonpans, Cockenzie, Port Seton, North Berwick, and Dunbar. The only bays of any size are Aberlady Bay, a wide sandy flat at low water, and Tynninghame Bay, at the mouth of the Tyne. Its land boundaries on the S and W extend respectively for 16 and 13 miles. The greatest length of Haddingtonshire, from E to W, is 26½ miles; its greatest breadth, from N by W to S by E, is 19 miles towards the middle of the county, but at the west end it is only about 12 miles across, and at the east not more than 10; and its circumference is roughly about 80 miles. Its total area is about 280 square miles. The Bass Rock (313 feet in height and about a mile in circumference), lying 1½ mile off the coast, is in this county. See BASS.

Haddingtonshire has on the whole a northern exposure, stretching from its highest point in the S, where the Lammermuir Hills rise, in a gradual though not unbroken slope to the seaboard on the N. The land in the higher region is almost entirely pasturage, of the Lowland Scotch hill character, though the skirts of the hills are to a considerable extent brought under cultiva-

tion. About one-third of the entire area of the county is occupied by this district, which commences at the E coast in Oldhamstocks and Innerwick parishes, and extends westwards across the southern part of the county to the boundary of Edinburghshire. The average height is not great, and the general aspect is not mountainous; for the Lammermuirs present a series of softly rounded hills, and their greatest elevation is attained in Lammer Law, which rises to a height of 1733 feet above sea-level. Other summits are Clints Dod (1307 feet), Lowrans Law (1631), and Soutra Hill (1209). The northern plain between the base of the hill country and the sea has its surface interrupted by the Garleton Hills (590 feet) on the W, by Gullane Hill on the NE coast, and by the conspicuously isolated cones of North Berwick Law (612 feet) on the N coast and Traprain or Dumpender Law (724) near the centre. The county, owing to its geographical position and limited extent, has few streams of any kind, and only one—the Tyne—of any importance. This last, 7 miles from its source, crosses the Edinburghshire border, 8 miles SW of Ormiston, and flows through Haddingtonshire to the NE seaboard, where it falls into the German Ocean at Tynninghame. Good trout, and in some places salmon, are caught in the Tyne. Among the smaller streams may be mentioned the Salton Water and the Gifford Water, flowing from the uplands to the Tyne; Peffer Burn, running to the German sea, about 2 miles SE of Tantallon Castle; and the Belton Water, which debouches at Belhaven, near Dunbar. The Berwickshire stream—the Whitadder—has its source and upper course for some miles in East Lothian. The chief lakes are Presmennan and Danskine Lochs, both of small extent. The former was artificially made in 1819 by damming up a ravine through which a streamlet used to discharge its waters. Mineral springs are found in the parishes of Spott, Pencaitland, Humbie, and Salton, and some of them have had a certain medicinal repute.

Geology.—In this county the ancient Silurian tableland is sharply defined from the area occupied by the younger palæozoic rocks. The steep slope presented by the chain of the Lammermuirs towards the NW, roughly coincides with the boundary line between the Silurian and Old Red Sandstone strata on the one hand and the members of the Carboniferous system on the other. This prominent feature crosses the county diagonally from Dunbar to the village of Fala. The smooth-flowing outline of the Lammermuirs is due to the occurrence of thick masses of shales of Lower Silurian age which are associated with flagstones, greywackes, and grits. Possessing a persistent NE and SW strike in harmony with the trend of the chain, these strata have been thrown into a series of folds by means of which the same beds are repeatedly brought to the surface. Beyond the county boundary at the head of Lauderdale, bands of black shales, yielding graptolites in profusion, rest in narrow synclinal troughs of the shaly series. One of these bands is exposed on the S slope of Lammer Law, near the source of the Kelphope Burn, which can be followed SW to the Headshaw Burn, near Carfrae Common; while still further to the N another band is met with on the Soutra Hill. The Silurian strata exposed in the Lammermuirs are the NE prolongations of the grey shales and greywackes which are so characteristically developed in the Lowther range in the N of Dumfriesshire. In the latter area there are fewer intercalations of greywackes and grits, but with this exception the general character of the beds in these widely separated ranges is identical.

Throughout the area occupied by these rocks numerous veins and bosses of felstone are met with, which have been injected mainly along the lines of bedding. There is one small triangular area, however, of highly crystalline rock, which has attracted considerable attention among geologists on account of the evidence which it affords of its metamorphic origin. It is situated at the junction of the Fassney Water with the Whitadder. From the description of this mass given by Sir Arch.

Geikie, it is apparent that a gradual passage can be traced from the unaltered greywackes and shales into the granitic rock of Priestlaw. Along the margin of the altered area, the stratified rocks are compact and sub-crystalline breaking with a conchoidal fracture. These, when followed towards the centre of the area, merge into felspathic rocks with quartz granules, which are indistinguishable from ordinary felstones. The alteration culminates in the felspathic mass of Priestlaw, which, by the crystallisation of the feldspar and quartz, and by the addition of mica and hornblende, presents the character of a typical granite.

Only the upper division of the Old Red Sandstone is represented within the county. As in other districts in Scotland we have here striking evidence of the complete discordance between the members of this division and the older rocks. Prior to the deposition of the Upper Old Red Sandstone, the Lammermuir chain had undergone extensive denudation. Deep valleys had been excavated in the ancient tableland, which were subsequently filled with conglomerates and sandstones belonging to this period. On the S side of the range one of these ancient valleys is represented by Lauderdale, which, though formerly filled with Old Red deposits, has been excavated anew by the Leader and its tributaries. Another striking example occurs in the E part of the chain, where a belt of conglomerate, stretching from Dunbar to Dirington Law, divides the Silurian rocks into two separate areas. From the relations which the conglomerate bears to the underlying rocks, there can be little doubt that it fills an old hollow which completely traversed the Silurian tableland from N to S. The belt of conglomerate now referred to forms the largest area of Upper Old Red Sandstone strata within the county. It has an average breadth of 4 miles between Dunbar and Oldhamstocks, tapering off to 2 miles near the county boundary, and again swelling out towards the wide area occupied by this deposit in the Berwickshire plain. The conglomerates along this belt rest unconformably on the Silurian rocks, the pebbles being mainly composed of these materials. At Oldhamstocks a narrow band branches off from the main mass, and extends E by Cockburnspath to the sea-coast at Siccar Point, where the complete unconformability between the Old Red Sandstone and Silurian formations is admirably displayed. In this latter area the strata mainly consist of red sandstones and shales, the underlying conglomerate having thinned out to small dimensions. The beds are inclined to the N at angles varying from 10° to 30°. Again, along the NW slopes of the Lammermuirs from Dunbar to near the village of Gifford, a belt of red sandstones and marls can be traced, having an average breadth of about 1 mile. This belt is bounded on the N and S by two parallel faults, both of which have a downthrow to the N. One of these dislocations, that which forms the S boundary, is of great importance, as it completely traverses the county from the sea-coast near Dunbar to the village of Fala. Between Dunbar and Gifford it brings the Old Red Sandstones and marls against the Old Red conglomerate and Silurian rocks, while beyond Gifford towards Fala it throws the members of the Carboniferous system against the Old Red Sandstone and Silurian formations. About 1 mile to the S of Gifford and about ½ mile S of Fala church, there are two small semicircular areas of Old Red conglomerate resting unconformably on the Silurian rocks, and bounded on the N by the great fault just described. Equally interesting and suggestive is the small outlier of conglomerate of this age, forming a flat cake on the crest of the ridge E of Soutra Hill. Within the county no fossils have been obtained from this formation, but at Siccar Point, beyond the county boundary, the red sandstones have yielded scales of *Holoptychius* and other fishes, which serve to define the age of the beds.

The strata next in order belonged to the Calciferous Sandstone series, but, strange to say, at no point in Haddingtonshire are these beds seen in contact with the Upper Old Red Sandstones without the intervention of a

fault. But beyond the county boundary at Siccar Point the perfect passage between the two formations is well seen. The members of this series occupy the whole of the coast-line between Cockburnspath and Thorntonloch, where they pass below the Carboniferous Limestone. Near the base, the sandstones have yielded *Cycadites Caledonicus*, which, from recent investigations, appears to be a fragment of a Eurypterid. The strata exposed along the coast-line consist of alternations of sandstones, shales, and thin limestones, which, on the whole, are markedly fossiliferous. Numerous land plants have been obtained from the shales, chiefly *Lepidodendron (Sagenaria) Vellheimianum*, *Sigillaria*, *Cyclopteris*, and *Sphenopteris*, while the limestones contain abundant remains of encrinetes, with *Schizodus*, *Sanguinolites*, *Arca*, *Pteronites*, *Athyris ambigua*, etc.

The broad tract of country extending from Dunbar to Aberlady, and from North Berwick to Gifford, is occupied with the members of this series, but differing in a marked degree from those just described. The type represented in this area is characterised by a remarkable development of volcanic rocks, which, indeed, cover the greater portion of the tract. Towards the beginning of the Calciferous Sandstone period volcanic activity commenced in the East Lothian district, and continued with little cessation to near the close. During this long interval the volcanoes discharged sheets of lava and showers of ashes till they reached a thickness of well-nigh 1500 feet; but so local was the development that no trace of these volcanic materials is to be found in the Calciferous Sandstone area between Cockburnspath and Thorntonloch. The following is the succession of the strata given in descending order:—(a) sandstones, shales, and thin limestones; (b) thick sheets of porphyritic lavas, becoming more augitic towards the bottom of the series; (c) coarse ash and volcanic breccia; (d) red and white sandstones and marls. The sedimentary strata underlying the volcanic series are exposed on both sides of the mouth of the Tyne, where they are thrown into an anticlinal arch, the axis of which extends from Belhaven Bay SW to Traprain Law. On the N side of this anticline the strata dip to the NW, and pass underneath the great pile of lavas and tuffs of the Garleton Hills, while on the S side they are succeeded only by a portion of the volcanic series. The earliest ejections in Haddingtonshire consisted of tuffs and coarse breccias, which occupy the greater part of the coast-line between North Berwick and Tantallon Castle. The base of the series is exposed on the shore at the Gegan about $\frac{1}{2}$ mile to the E of Tantallon, where the tuff is underlain by sandstones and marls dipping to the W at a low angle. In places the ash forms prominent cliffs, as at the Gin Head, near Canty Bay, which afford excellent opportunities for studying the features of the deposit. Its general character is somewhat varied. On the whole, it is well stratified, showing alternations of coarse breccia and layers of fine tuff, with small felspathic lapilli. The volcanic breccia contains numerous bombs of porphyrite, the largest measuring 2 feet across, with fragments of sandstones, shales, and thin limestones. A characteristic feature of this deposit is the intercalation of thin seams and lenticular patches of sandstones, shales, and limestones, clearly proving the submarine character of the eruptions. One of these bands of limestone occurs near the base of the series at the Gegan, and another at the Rhodes quarry about 1 mile E of North Berwick. In places they emit a fetid odour. The tuff and volcanic breccia which cover such a great extent of coast-line W of Tantallon Castle extend inland as far as Traprain, forming a belt of variable width round the base of the overlying lavas. They reappear on the S side of the anticline at Traprain Law, and can be followed E to the Biel Burn N of Stenton church, where they are truncated by the dislocation which brings the Calciferous Sandstones into conjunction with the Upper Old Red Sandstones and marls. Between Belhaven Bay and Dunbar, however, the tuffs are again exposed with a SE inclination, where they present the characteristic features just described.

The tuffs and volcanic breccias are overlaid by a great succession of porphyritic lavas which have no intercalation of ash or sedimentary deposits. They form the range of the Garleton Hills, and as they are inclined to the W at gentle angles, they present slight escarpments towards the E. The lavas first ejected, which rest on the tuff, are more augitic than the overlying sheets, the augite crystals being large, and the triclinic feldspars being well striated. The later ejections, on the other hand, are less basic, and present the characteristic microscopic characters of porphyrites. The lavas pass conformably below a limited thickness of sandstones, shales, and cementstones, filling the interval to the base of the Carboniferous Limestone. From the ashy character of the sandstones, it is evident that they were in a great measure formed from the trituration of the underlying volcanic materials, while the presence of thin sheets of tuff indicates faint volcanic outbursts after the main ejections had ceased. These sedimentary deposits stretch S by Aberlady, Bolton, and onwards to Fala, in all cases graduating upwards into the Carboniferous Limestone. They also cover a considerable tract of ground round Haddington, where they are associated with some thin seams of coal.

Within the volcanic area and in the immediate vicinity there are numerous examples of 'necks' from which the igneous materials were discharged. Some of these are filled with crystalline rocks, such as basalt, porphyrite, or felstone, others with tuff and volcanic agglomerate. Perhaps the two most conspicuous examples of the former group are North Berwick Law (612 feet) and Traprain Law (724). These eminences rise considerably above the level of the surrounding ground—a feature which is due to the unyielding nature of the compact felstone filling the vent. In the case of North Berwick Law the felstone penetrates the stratified ash at the base of the volcanic series, while the mass on Traprain Law pierces the underlying Calciferous Sandstones. On the shore to the E of Dunbar there is a remarkable example of a vent filled with volcanic agglomerate, and similar instances occur between North Berwick and Tantallon Castle.

The Carboniferous Limestone of Haddingtonshire presents the triple classification which is characteristic of this group of strata in other parts of Scotland, viz.—(1.) an Upper Limestone series; (2.) a middle series with coals and ironstones; (3.) a Lower Limestone series. The members of the lowest subdivision occur in a small isolated area between Dunbar and Thorntonloch, where they are thrown into a small synclinal trough. As the basin is truncated by the sea, we have only a portion of the syncline represented, but the order of succession is admirably displayed on the coast section. This outlier comprises five separate limestones, of which the Skateraw bed is the most important. It is 12 feet thick, and is underlain by a thin seam of coal. On the shore N of Thorntonloch the lowest bed rests conformably on the Calciferous Sandstones, but inland to the N of Innerwick the Limestone series is brought into conjunction with the Upper Old Red Sandstone by means of a fault.

Between Aberlady and the county boundary, near Musselburgh, the three subdivisions are represented in regular succession. At the former locality the members of the Lower Limestone series crop out on the shore with a gentle inclination to the W, graduating downwards into the Calciferous Sandstones. From this point they extend S by East Salton to the county boundary at Pathhead, preserving the same inclination to the W and NW, and passing below the members of the middle division. By means of an anticlinal arch the Lower Limestones are again brought to the surface on the Roman Camp Hill N of Gorbidge. The middle series includes the coals and ironstones of the East Lothian coal-field, which are evidently the equivalents of the Edge coals of Midlothian. The Haddingtonshire coal-field is upwards of 30 square miles in extent, and comprises no fewer than ten seams of coal of more or less importance. The beds are thrown into a great

synclinal trough, the axis of which runs from the shore at Port Seton S by Tranent to Elphinstone Tower. Hence on the E side of the basin the coal seams dip to the W, only to reappear with an E dip along the anticlinal arch of the Roman Camp Hill. In the centre of this trough at Port Seton, there are two thin bands of limestone belonging to the highest division of the Carboniferous Limestone.

The Lower Limestone series in Gosford Bay is traversed by a sheet of intrusive dolerite, and similar sheets are met with to the N of Aberlady in the Calciferous Sandstones. A few basalt dykes, probably of Tertiary age, pierce the Haddingtonshire coal-field, of which the most important is that extending from Prestonpans E by Seton Mains to near Longniddry.

The trend of the ice flow during the glacial period over the low-lying portion of Haddingtonshire was E and ENE, but a portion of the ice sheet surmounted the chain of the Lammermuirs, and moved in a SE direction towards the Berwickshire plain. That such was the course of the ice sheet is not only proved by the ice markings, but also by the transport of the materials in the boulder clay. This deposit varies considerably in character, according to the nature of the underlying rocks; in the Silurian area it is a stiff fawn-coloured stony clay, while in the Old Red and Calciferous Sandstone districts it is sandy and has a reddish tint. The sands and gravels are found partly flanking the hills in the form of more or less continuous sheets or ridged up in mounds, and partly in connection with the 100-foot terrace. The 25-foot beach is visible at various points on the coast, though its development is but limited. It occurs at North Berwick, where it is partly obscured by blown sand, and also near Seacliff Tower. Tracts of blown sand are met with at the mouth of the Tyne, near Tynninghame, and again between Gullane Hill and North Berwick.

East Lothian is not rich in coal, although the coal beds at Prestonpans are said to have been worked by the monks of Newbattle so early as the beginning of the 13th century. Limestone is abundant throughout the county. In 1866 a rich deposit of hematite of iron was discovered in the Garleton Hills, and for several years was worked successfully. Iron is found in Gladsmuir parish, and was formerly worked at Macmerry.

As is to be expected, the soils in the various parts of the county differ much from each other. On the hills much of it is thin and mossy; but of late years crops of turnips and oats have been obtained on what was before untilled land, covered with whins or heather. Along the base of the hills stretches an extent of rich and valuable grain and pasture land, from which heavy crops are reaped that contribute no small amount towards enhancing the agricultural reputation of the county. To the N of this, and extending across the shire is a band of heavy tenacious yellow clay, resting on a basis of till or boulder clay, and presenting some of the worst agricultural land in Scotland. This soil, however, is not unfavourable to the growth of such timber as oak, beech, larch, and fir. The most fertile parts of the whole county are in the E, near Dunbar, where rich loam is abundant, and clay and light sand not rare. Wheat and beans, and the famous kind of potatoes known as 'Dunbar Reds,' are the heaviest crops of this district. The farms of W Haddingtonshire have lighter loam soils and mixtures of clay and sand that are annually made to yield very excellent harvests. The climate of Haddingtonshire is also well suited for an agricultural district. The proximity of the sea and the extent of coast-line prevents the extremes of either heat or cold being experienced in the shire, though a cold and searching E wind prevails in late spring and early summer. The rainfall is exceedingly small, and the county is more exposed to agricultural loss from too little than from too much rain, though the Lammermuirs are often covered with cold and wetting mists that are not taken into account in calculating the rainfall. According to observations at seven stations extending over several years the annual rainfall is 25.12 inches; at

the town of Haddington it is 25 inches. The extremes were observed at Yester, in the SW, 420 feet above sea-level, where 32.72 inches were registered; and at Smeaton, in the NE of Midlothian, 100 feet above sea-level, where the return was 18.62. The temperature is on the whole equable. The annual mean observed at Yester (420 feet above sea-level, as already mentioned) for thirteen years was 46.5°, and at Smeaton, 47.2°; whilst at East Linton, 90 feet above sea-level, it was 47.4°. Snow, though not infrequent, seldom lies many days in the lowlands of Haddingtonshire. The spring is, in general, dry, with only occasional severe showers of hail and rain from the NE; in summer and autumn the only rainy points are the S and E.

The natural advantages of soil and climate in East Lothian are of themselves almost enough to ensure its agricultural prosperity; but its present pre-eminence, as perhaps the richest grain-producing district of Scotland, is also due not a little to the industry, enterprise, and skill of its farmers and landowners. East Lothian has been an agricultural county for centuries, and the monks of the Middle Ages may perhaps be regarded as the founders of its agricultural greatness. A curious fact is that, along the coterminous line of the uplands and lowlands, the parishes were anciently, just as at present, so distributed that each, while stretching into the fertile plain, had attached to it a section of the Lammermuirs, as a necessary adjunct to its agricultural practice of summer pasturage. Mills were numerous, and their number and activity are proofs of the quantity of grain raised in the district. The Lammermuirs at all times fostered the pastoral calling. Hay also was raised in abundance, and so early as the 13th century was subjected to tithes; and in 1298 the English soldiers, who were besieging Dirleton Castle, found a means of sustenance in the pease that grew in the neighbouring fields. Although the troubles and wars of the succeeding centuries inflicted a check upon the arts of peace in Haddingtonshire as well as in the rest of Scotland, the shire recovered its former position; and, according to Whitelocke, the English soldiers who entered Scotland with Cromwell in 1650 were astonished to find in East Lothian 'the greatest plenty of corn they ever saw, not one of the fields being fallow.' The real beginning of the agricultural pre-eminence of Haddingtonshire dates from about the period of the Union of the parliaments of Scotland and England in 1707. Lord Belhaven contributed to improve the theory of agriculture by his *Advice to the Farmers in East Lothian*, published in 1723; while Thomas, sixth Earl of Haddington, improved its practice by introducing skilled labour from England. James Meikle, a mechanic who had been despatched to Holland in 1710 by Fletcher of Salton to acquire the art of making decorticated barley, introduced from that country the use of fanners in sifting grain; and in 1787 Andrew Meikle, his son, invented the thrashing-mill. Improvements came in thick and fast after the introduction of fanners; landowners vied with each other in adopting new inventions and new-machinery, and their farming tenants zealously co-operated. Lord Elibank, Sir Hew Dalrymple, the Marquis of Tweeddale, and Sir George Suttie deserve to be mentioned in the former class; and Wight, who introduced horse-hoeing in 1736, Cunningham, Hay, who first raised potatoes in the fields about 1754, John Walker of Prestonkirk, who was the first to adopt the English practice of fallowing, and George Rennie of Phautassie, are worthy representatives of the second class. John Cockburn of Ormiston, a politician who had in his later years turned his attention to 'agricultural improvements, the classic diversion of a statesman's care,' founded about 1743 perhaps the earliest farmers' club in Scotland. In 1804 General Fletcher of Salton organised another farmers' society, which in 1819-20 was amalgamated with a more extensive association, under the name of 'The United East Lothian Agricultural Society.' Under such auspices and supported by such enterprise, the agriculture of Haddingtonshire has made rapid and sure advances in every department. In 1811 steam power was first

applied to threshing corn in East Lothian, and now steam power is used on almost every farm in the county. The social condition and physique of the hinds have both improved to a very marked degree. In the words of Mr Hope of Fentonbarns, speaking in 1835 of the close of the preceding century, 'a married ploughman was paid in farm produce, but he received 24 bushels less oats than is now given; besides, the grain was fully 10 per cent. inferior to the produce of the present time; and the cow, from want of sown grass, was often scarcely worth the milking, and, still more, potatoes were then hardly known. The consequences were, that the poor hind was miserably fed, poorly clad, feeble, and particularly liable to sickness. At that period, regularly in the spring in every hamlet and village, the ague made its appearance in almost every family, and there can hardly be a doubt of that sickness having often been the natural effects of poverty and filth more than anything else.' Now the average wage of a farm-servant is £20 or £25 in money, and meal, potatoes, grass for a cow, together with a cottage and a little garden-ground, estimated together to be equivalent to £20 or £25 more. Within the present century the most powerful impetus to farming was derived from the high price of grain during the Crimean war. In 1853, 1854, and 1855 the fair prices of wheat per quarter in East Lothian were £3, 15s. 10d., £3, 12s. 11d., and £3, 18s. 3d.; while in 1851 it was only £1, 18s. 8d.; and in 1864, again, £1, 16s. 10d. In 1894 the average price was £1, 3s. 6d. The farms of East Lothian are larger than the average Scottish holdings. Most of them are from 200 to 500 acres; some range so high as 1200. The rents, of course, vary according to the fertility of the soil in the different parts of the county. The 19 or 21 years' lease is the most usual duration of holding. A six-course shift is the rule—(1) grass (pasture or hay), (2) oats, (3) potatoes, turnips, or beans, (4) wheat, (5) turnips, (6) barley; but the only principle is that of making a grain and green crop succeed each other, pulse being always reckoned a green crop in this succession.

In the whole of Scotland the percentage of cultivated area is only 25·2; in Haddingtonshire it rises as high as 65·3—a figure exceeded only by Fife (79·6), Linlithgowshire (76·7), and Berwickshire (66). The following table exhibits the acreage of land under the several crops in various years:—

	1880.	1881.	1882.	1891.	1892.	1895.
Grain Crops—						
Wheat, . . .	9,453	8,748	9,989	6,034	7,453	3,519
Barley, . . .	17,116	17,525	15,492	14,944	13,656	16,231
Oats, . . .	17,271	17,061	17,478	16,785	17,289	18,704
Beans, . . .	1,375	2,003	2,438	4,262	847	416
Root Crops—						
Potatoes, . .	9,943	9,282	7,656	7,649	7,742	7,809
Turnips, . .	15,157	15,447	15,827	15,711	15,754	16,514
Carrots, . .	211	186	167	132	117	151
Green Crops—						
Grass under Rotation, .	27,068	27,970	...	29,313	28,553	28,124
Permanent Pasture (not Heath), . .	16,242	16,083	...	19,403	19,051	19,018
Live Stock—						
Farm Horses, .	3,192	3,442	3,259	3,521	3,582	3,263
Cattle, . . .	8,237	9,062	8,279	8,196	8,109	9,506
Sheep, . . .	111,886	111,928	114,496	133,705	134,014	127,483
Pigs, . . .	2,490	2,330	2,827	2,198	1,668	2,138

Less than one-twenty-third of the whole of Scotland is under wood; in Haddingtonshire the proportion is more than one-seventeenth, viz., 9909 acres, in addition to which 302 acres of plantations have been planted within the last ten years. Its woods, indeed, are tolerably extensive, and a good deal has been done in the way of artificial planting. The sixth Earl of Haddington was the first great planter, and the trees he planted in 1705 and subsequent years on his estate at Tynninghame now form one of the most beautiful forests in the south of Scotland. They suffered,

however, enormous havoc from the gale of 14 Oct. 1831. The woods of Humbie and Salton, lying adjacent to each other, are also noteworthy. In *Trans. Highl. and Ag. Soc.* for 1879-81 are five tables giving the dimensions of 119 old and remarkable Spanish chestnuts, ash-trees, sycamores, beeches, and oaks in the county. In 1895, 113 acres were devoted to orchards, 622 to market gardens, and 2 to nursery gardens. The East Lothian farmers do not as a rule bestow much of their attention on breeding cattle, though here and there small herds are reared and fattened. Enormous numbers of sheep, on the other hand, are fed on the fine pastoral farms of the Lammermuirs and elsewhere, and there are several well-known breeders of sheep both among the proprietors and tenants. Border Leicesters are the most usual variety raised, though there are also several flocks of Southdowns; and in the Lammermuirs Cheviots and blackfaced flocks are maintained. Dairy farming is quite at a discount in the county, and pigs are fed only for domestic purposes.

Notwithstanding the favourable position of the seaboard, the proximity of the metropolis, and the presence of coal, manufactures have never flourished in Haddingtonshire, though they have been introduced at various periods and in several districts. Repeated efforts to establish a woollen manufactory in the town of Haddington resulted in failure. A variegated woollen fabric, known as the Gilmerton livery, seemed for a time to have become a staple at Athelstaneford, but it has long ceased to be produced. In 1793 a flax-mill was erected at West Barns, and in 1815 a cotton factory was started at Belhaven, but both entailed loss on their proprietors; and their stoppage made paupers of many of the operatives. A paper-mill, a starch work, the earliest factory in Britain for the manufacture of Hollands, the first bleachfield of the British Linen Company, and the earliest manufactory of decorticated or pot barley were situated in Salton parish, but all have failed and have disappeared. The Macmerry Iron-works in Gladsmuir parish are also stopped; so that now the only noticeable existing manufactories in the county are a pottery and a fire-clay work at Prestonpans, two or three engineering establishments in Dunbar and Tranent parishes, two or three extensive distilleries, some nine or ten breweries, of which the chief are at Prestonpans, two or three tan-works, and one or two establishments for the preparation of bone-dust and rape-cake. Fishing and fish-curing are carried on at Dunbar, Cockenzie, and other coast villages; and there are salt-pans at Prestonpans and Cockenzie.

The roads of Haddingtonshire are numerous and good, though before 1751 the county was sadly deficient in means of communication. The County Road Board is composed of a section of the County Council. One good line of turnpike runs along the whole coast of the Firth of Forth eastward to North Berwick; another runs southward from Dirleton to Haddington; another—the great quondam mail line between Edinburgh and London—runs along the whole breadth of the county eastward through Haddington to Dunbar, and then along the coast till it enters Berwickshire; a fourth leaves the former at Tranent, and passes through Salton and Gifford, and over the Lammermuir Hills to Duns; and a fifth, the post-road between Edinburgh and Lauder, intersects the SW wing of the county at Soutra. The North British Railway affords to the greater part of the lowlands of the county exceedingly valuable facilities of communication; entering from Edinburghshire a little N of Falside, passing between Prestonpans and Tranent, proceeding north-eastward to Drem, sending off two branches respectively from Longniddry eastward to Haddington, and from Drem northward to Dirleton and North Berwick, and curving from Drem through all the north-eastern districts, by way of East Fortune, East Linton, Dunbar, and Innerwick, to Dunglass, while a deviation line has been proposed from the Macmerry branch at Ormiston to Gifford and Garvald. The harbours of the county are all, in point of commerce, very inconsiderable, and even in point of commodious-

ness are very inferior. Their extent and other particulars will be found noticed under PRESTONPANS, COCKENZIE, BERWICK (NORTH), and DUNBAR.

The royal burghs in Haddingtonshire are Haddington, the county town, Dunbar, and North Berwick. The only other towns are Tranent, Prestonpans, and Cockenzie and Seton, which, as well as part of East Linton, are police burghs. The other villages and principal hamlets are Aberlady, Athelstaneford, Belhaven, Bolton, Dirleton, Drem, East Barns, West Barns, Elphinstone, Garvald, Gifford, Gladsmuir, Gullane, Humble, Innerwick, Kingston, Macmerry, Oldhamstocks, Ormiston, Pencaitland, Penston, Prestonkirk, Salton, Samuelston, Spott, Stenton, Tynninghame, and Whitekirk. The chief seats are Broxmouth Park (Duke of Roxburgh), Yester House (Marquis of Tweeddale), Coalston House (Lady Susan Broun Ramsay), Gosford and Amisfield House (Earl of Wemyss), Tynninghame House (Earl of Haddington), Biel and Archerfield House (Mr and Mrs Ogilvy), Ormiston Hall (Earl of Hopetoun), Humble (Lord Polwarth), Ballencriff House, Lennoxlove House, Prestongrange, Dunglass House, Seton House, Fountainhall, Gilmerton House, Lochend, Newbyth House, Nunraw House, Phantassie, Salton Hall, Whittinghame House, Herdmanston House, Winton House, Pencaitland House, Woodcot House, Balgone, Letham House, Stevenson House, Clerkington House, Eaglescairn House, Alderston House, Bower House, Cockenzie House, Drummore House, Elphinstone Tower, Gifford Bank, Gullane Lodge, Nolyn Bank, Hopes House, Huntington House, Leaston House, Luffness House, Monkrigg House, Morham Bank, Newton Hall, Pilmore, Pogie House, Redcoll House, Rockville House, Ruchlaw House, Skedobush House, Spott House, St Germain's, Thurston House, and Tynholm House.

The county contains 24 *quoad civilia* parishes and 2 chapels of ease. The parishes of Aberlady, Athelstaneford, Bolton, Cockenzie, Dirleton, Garvald, Gladsmuir, Haddington, Humble, Morham, North Berwick, Pencaitland, Prestonpans, Salton, Tranent, and Yester form the presbytery of Haddington; and those of Cockburnspath (Berwickshire), Dunbar, Belhaven, Innerwick, Oldhamstocks, Prestonkirk, Spott, Stenton, Whitekirk and Tynninghame, and Whittinghame form the presbytery of Dunbar; while Ormiston parish belongs to the presbytery of Dalkeith. All are in the synod of Lothian and Tweeddale. The Free Church of Scotland also has a presbytery of Haddington and Dunbar, with congregations at Cockenzie, Dirleton, Garvald, Yester, Haddington, Humble, North Berwick, Pencaitland, Salton and Bolton, Tranent, Prestonpans, Dunbar, Prestonkirk, Innerwick, and Cockburnspath; besides a church at Ormiston in connection with its Dalkeith presbytery. Other congregations in the county are 7 U.P.—2 at Haddington, and 1 each at Dunbar, East Linton, Tranent, North Berwick, and Aberlady; 4 Scottish Episcopal—1 in each of the royal burghs, and a private chapel at Biel; 4 Roman Catholic—1 each at Haddington, Dunbar, North Berwick, and Tranent; and 1 Methodist at Dunbar. In the year ending 30 Sept. 1894, the county had 45 schools (42 of them public), which, with accommodation for 7779 children, had 6548 on the registers, and 5339 in average attendance. The certificated, assistant, and pupil teachers numbered respectively 84, 14, and 28. Among the benevolent institutions of the county are Stiel's Hospital in the parish of Tranent, and Gilbert Burnet's Fund in Salton parish. In 1882 Schaw's Hospital in Prestonpans was leased as an institution for training girls as domestic servants, under the will of the late Miss Murray, and known as Miss Mary Murray's Institution.

The county is governed by a lord-lieutenant, a vice-lieutenant, 35 deputy-lieutenants, a sheriff, a sheriff-substitute, and between 60 and 70 justices of the peace, besides the chief magistrates of the royal burghs and East Linton. The County Council is composed of 51 elected members, comprising 20 representatives for as many parish districts, 7 for the royal and police burghs, and 24 parochial board representatives. It is divided

into the County Road Board and the District Lunacy Board. Ordinary sheriff courts and also courts under the Debts Recovery and Small Debt Act are held at Haddington every Thursday during session. Debts recovery and small debt circuit courts are held at Dunbar on the third Tuesdays of February, March, May, October, and December, and the first Tuesday of July; at Tranent on the fourth Tuesdays of January, March, and November, and second Tuesdays of May and October; and at North Berwick on the third Wednesday of January, and second Wednesdays of May, July, and October. General quarter-sessions of justices of the peace are held at Haddington on the first Tuesday of March, third Tuesday of April, first Tuesday of August, and last Tuesday of October, and adjourned sessions of the peace on the second Thursday of January. Meetings of justices are also held at Dunbar, North Berwick, and Tranent for the disposal of cases under the Education Acts. The annual general meeting of the commissioners of supply is held in the county town. The police force in 1896 comprised 38 men, whose superintendent's salary was £100. The annual value of real property was (1811) £250,126, (1843) £258,743, (1879) £363,137, (1882) £348,653, (1892-93) £303,974, of which £16,888 was for railways, and £44,637 was within the 3 royal burghs, leaving for the county £242,449, (1895-96) £246,233, railways £17,582. Haddingtonshire returns one member to parliament, having been represented by Lord Elcho, of volunteer celebrity, from July 1847 till Jan. 1883, when he succeeded his father as ninth Earl of Wemyss. The county constituency in 1896 was 6398. Between 1881 and 1891 the population of Haddingtonshire decreased by 1017, or 2·64 per cent. Between 1871 and 1881 there was an increase of 731. In 1891 522 persons, or 1·39 per cent. spoke Gaelic in Haddingtonshire, as compared with the percentage of 5·23 for all Scotland. The proportion of females to males in the county in 1891 was 105·71 to 100, Haddingtonshire being twenty-sixth among the Scottish counties in this respect. The average of the whole country was 107·2 to 100. Pop. (1801) 29,986, (1811) 31,050, (1821) 35,127, (1831) 36,145, (1841) 35,886, (1851) 36,386, (1861) 37,634, (1871) 37,771, (1881) 38,502, (1891) 37,377, of whom 19,208 were females. Houses (1891) inhabited 7981, vacant 1077, building 26.

The boundaries of Haddingtonshire were readjusted by the Boundary Commissioners in 1891 in connection with the adjoining counties of Edinburgh and Berwick. The parish of Humble and the parish of Fala and Soutra were both situated partly in the county of Haddington and partly in that of Edinburgh. The Blackshields detached portion of the parish of Humble (containing 450 acres) was transferred to the parish of Fala and Soutra, which, thus enlarged, was placed wholly in Edinburghshire. Part of the main portion of the Haddingtonshire parish of Oldhamstocks (containing 930 acres), and the Butterdean detached portion of the same parish (containing 1417 acres), were in Berwickshire. The detached part was transferred to the parish of Coldingham and to the registration district of Grants-hire, thus remaining in Berwickshire; and Oldhamstocks, as thus altered in area, was then placed wholly in the county of Haddington. There was also some readjustment of the boundaries of the interior parishes, for which, however, see the separate articles. The population of the registration county in 1891 was 37,414. All the parishes are assessed for the poor; eleven of them, with one in Berwickshire, form East Lothian combination, with a poorhouse at Prestonkirk; and eight, with two in Edinburghshire, form Inveresk combination. The Haddington old parochial hospital had 8 patients in April 1891; and the Haddington County Asylum contained 125 lunatics.

The history of what is now known as Haddingtonshire will be found under the articles LOTHIAN and DUNBAR, for its fate has always been closely connected with that of the Earls of Dunbar. It is enough to say here that Haddingtonshire shows traces of Roman occupation, and that, after for a time forming part of

the Saxon kingdom of Northumbria, it passed under the sceptre of Malcolm II. of Scotland in 1020. It enjoyed undisturbed repose during the reigns of David I., Malcolm IV., and William the Lion; but in the struggles of Scotland with the English in the 13th and following centuries it had its full share of troubles and fightings. The numerous ruined towers and castles in every part of the lowlands of the county bear ample testimony to the troublous times of that and the succeeding periods of history. Within the limits of the shire are the battlefields of Dunbar, where Cromwell defeated the Scottish army in 1650, and of Prestonpans, where Prince Charles Edward met the English forces under General Cope in 1745. In connection with its more private history, some of its famous families and celebrated men should be mentioned. Among the former are the Fletchers of Salton, the Setons of Seton, the Hamiltons of Preston, the Maitlands of Lethington (now Lennoxlove), and the Dalrymples of Hailes. Walter Bower or Bowmaker, the continuator of Fordun's *Scotichronicon*; Andrew de Wyntoun, the metrical chronicler; and John Mair or Major, also a chronicler—are each claimed as East Lothian men. Sir R. Maitland, who lived at Lethington, was a court poet in the days of Queen Mary; and James VI.'s Chancellor Maitland was born within the walls of the same old castle. Garmylton (now Garleton) Castle disputes with Fifeshire the honour of being the birthplace of Sir David Lindsay; and the poet's latest editor (D. Laing's *Works of Sir David Lindsay*, 3 vols., 1879) rather inclines to favour the claim of Garleton. William Dunbar, the poet, is claimed as a native by Salton parish, and George Heriot by Gladsmuir. John Knox is undoubtedly the most famous of East Lothian men; and others are noted in the local articles on the different towns and villages. Among the famous clergymen who have held charges in Haddingtoushire there may be mentioned Bishop Gilbert Burnet, who was parish minister of Salton from 1665 till 1669, and who left a bequest to the parish; Blair, author of the *Grave*, and Home, author of *Douglas*, were successive ministers at Athelstaneford; David Calderwood, author of the *History of the Church of Scotland*, was minister of Pencaitland; and William Robertson, the historian, and afterwards principal of Edinburgh University, filled the pulpit at Gladsmuir. George Wishart, the martyr, was seized by Bothwell at Ormiston.

The antiquities of the county are both numerous and interesting, though some, as for example, a Caledonian stone circle in Tranent parish, and the traces of a Roman road from Lauderdale to the Forth, have been destroyed or removed. There are still extant tumuli, probably Caledonian, in Garvald and Innerwick parishes, and traces of ancient camps in Whittinghame, Garvald, Innerwick, Spott, Salton, and Ormiston parishes. Ruins and vestiges of mediæval towers and castles are peculiarly numerous in this shire. The chief are those at Dunbar, Tantallon, Innerwick, and Dirleton; and there are others at Prestonkirk, Whittinghame, Garvald, Herdmanston, Redhouse, Fenton, Falside, Elphinstone, Hailes, and Stoneypath. The 'Goblin Hall,' mentioned in Scott's *Marmion*, is identified in an old stronghold of Sir Hugo de Gifford, near Yester House. The fortress on the Bass Rock attained a celebrity as the prison of some of the most noted Covenanters. The ecclesiastical remains in the county are deeply interesting. They include the abbey at Haddington, of which the present Nunraw House was an appanage, a Cistercian convent at North Berwick, and several very ancient chapels and parish churches, that at Pencaitland, for example, being said to date from about 1213, while the collegiate church of Seton in Tranent was built before 1390, and the old disused church at Gullane was abandoned in 1612 for a newer one at Dirleton.

See D. Croal's *Sketches of East Lothian* (Hadding. 1873); R. Scot-Skirving's essay on 'The Agriculture of East Lothian,' in vol. v. of the fourth series of *Trans. Highl. and Ag. Soc.* (1873); and works cited under

BASS, BERWICK (NORTH), DUNBAR, HADDINGTON, PRESTONPANS, TRANENT, and TYNE.

Haddo House, the seat of the Earl of Aberdeen, in Methlick parish, Aberdeenshire, 2 miles SSE of Methlick village, 6½ WNW of Ellon, and 7 NE of Old Meldrum. A Palladian edifice by Baxter of Edinburgh (*temp.* George II.), it suffered considerable damage from a fire of August 1881, having just undergone such improvements as re-roofing, the redecoration of its drawing room, etc. The pictures include a number of portraits by Lawrence; but the gem of the collection is Delaroche's portrait of Guizot as a young man, presented by Guizot himself to that fourth Earl (1784-1860), who, as a statesman, distinguished himself by his non-intervention policy. The park and policies, more than 1000 acres in extent, are beautifully wooded with Scotch firs of great age, spruce and hardwood trees, fine limes, and foreign pines, being further adorned by two triangular artificial lakes, each measuring 2½ furlongs by 1. A former 'Hous of Haddoche' or 'Place of Kellie'—'whairon thair was no rooffe, but the wallis stronglie built, standing on volt'—was forced to capitulate to 6000 Covenanters under the Marquis of Argyll, after a three days' siege (8 May 1644), when Sir John Gordon of Haddo, first Bart., was taken to Edinburgh and beheaded. This affair is known as the 'Raid of Kellie.' John Campbell Hamilton Gordon, seventh Earl of Aberdeen and Baron Haddo since 1682 (b. 1847; suc. 1870), is thirteenth in descent from Patrick Gordon, who was slain at the battle of Arbroath (1446), and claims to represent the male line of the Gordons, whereas the other noble families of the name succeeded by female right. (See GORDON CASTLE.)—*Ord. Sur.*, sh. 87, 1876.

Haddo, House of, an estate, with a good mansion, in Forgue parish, Aberdeenshire, near the left bank of the Burn of Forgue, 8 miles NE of Huntly.—*Ord. Sur.*, sh. 86, 1876.

Haddon. See HADDEN.

Haer, a moorish tract on the mutual border of Blairgowrie and Lethendy parishes, Perthshire, 2¼ miles S of Blairgowrie town. It contained a great number of tumuli, many of which, being destroyed in the course of modern agricultural improvements, were found to contain two stone coffins and great quantities of human bones; hence it is thought to have been the scene of some unrecorded battle.—*Ord. Sur.*, sh. 48, 1868.

Haerfaulds. See GUTHRIE.

Hafton, an estate, with a mansiou, in Dunoon parish, Argyllshire, near the SW shore of Holy Loch, midway between Sandbank and Hunter's Quay, and 2¼ miles NNW of Kinn.

Hagghill. See HAGHILL.

Hags, a village and a *quoad sacra* parish in Denny parish, SE Stirlingshire. The village, ¾ mile N by E of Castleary station, and 3¼ miles SSW of Denny town, includes Hollandbush, and is conjoint with Longcroft, Parkfoot, and Dennyloanhead villages, extending 1½ mile along the road from Kilsyth to Falkirk. It acquired in 1836 a neat row of collier cottages, terminating at one end in a large building, intended for a store. The *quoad sacra* parish, constituted in 1875, is in the presbytery of Stirling and synod of Perth and Stirling; the minister's stipend is £170. The church, erected as a chapel of ease in 1840, presents a handsome appearance. There is also a subscription school. In the neighbourhood of Hollandbush was fought, on the 15th of August, 1645, the battle of Kilsyth. Pop. of villago (1891) 623; of registration district and *q. s.* parish (1891) 1560.—*Ord. Sur.*, sh. 31, 1867.

Hagge Castle, a baronial fortalice in Eastwood parish, Renfrewshire, 1 mile W of Pollokshaws. Built by Sir John Maxwell of POLLOK in 1585, it was long the jointure house of his descendants, and figures in connection with their sufferings for adherence to the Covenant. Apparently it was a structure of considerable strength, and now it is a picturesque ruin. See Hugh Macdonald's *Rambles Round Glasgow*, and Sir William Fraser's *Memoirs of the Maxwells of Pollok* (1865).—*Ord. Sur.*, sh. 30, 1866.

Haghill, an estate, with a mansion, in Shettleston parish, Lanarkshire, $\frac{3}{4}$ mile N by W of Parkhead railway station.

Hagsthorpe, a village in Kilbirnie parish, Ayrshire, $1\frac{1}{2}$ mile N by E of Dalry.

Hailes, an estate with a mansion, a village, and a great quarry, on the NW border of Colinton parish, Edinburghshire. In 1104 Edelrad, Earl of Fife, bequeathed the lands of Hailes to the Church of the Holy Trinity at Dunfermline; and the abbot and monks of Dunfermline retained the superiority of Easter Hailes down to the Reformation. St Cuthbert's Church, however, of Hailes or Colinton, was soon transferred to Holyrood Abbey, and later, in 1445, to the Knight Templars' Hospital of St Anthony at Leith. Hailes House, above the left bank of the Water of Leith, 1 mile SW of Slateford, and $\frac{3}{4}$ mile NW of Colinton village, is thought by some persons to occupy the site of the ancient church, and is the property of Sir Thomas David Gibson-Carmichael, Bart. of CASTLE-CRAIG. Hailes village, 3 furlongs N by W, stands close to Kingsknowe station on the Caledonian, and to the N bank of the Union Canal. The quarry, near it, consists of dark grey sandstone, of slaty conformation, easily divisible into blocks for steps and paving flags. During the great building period in Edinburgh, from 1820 to 1826, it yielded no fewer than 600 cart-loads of building stone daily, and brought its owner £9000 a year; but since then the demand has fallen off considerably.—*Ord. Sur.*, sh. 32, 1857.

Hailes, a ruined baronial fortalice in Prestonkirk parish, Haddingtonshire, on the right bank of the Tyne, 4 $\frac{1}{2}$ miles ENE of Haddington. A stronghold of the notorious Earl of Bothwell, it was the first place whither he brought Queen Mary after seizing her at Fountainbridge (24 April 1567); afterwards it came to the Dalrymples of Hailes; and in 1835 it was partially used as a granary.—*Ord. Sur.*, sh. 33, 1863.

Hailes, New. See NEWHAILES.

Hailes Quarry. See HAILES, Colinton.

Haining Castle. See ALMOND.

Haining, The, a mansion in Selkirk parish, Selkirkshire, $\frac{1}{2}$ mile S by W of the town. Standing amid finely-wooded grounds, with a beautiful sheet of water ($2\frac{3}{4} \times 1$ furl.), it is the seat of Mrs Pringle Pattison (suc. 1868). The estate was purchased in 1702 by her maternal ancestor, John Pringle, advocate, who in 1729 was admitted a lord of session under the title of Lord Haining, and five of whose descendants sat in parliament for Selkirkshire.—*Ord. Sur.*, sh. 25, 1863.

Hairlaw Dam, an irregularly-shaped reservoir on the mutual border of Neilston and Mearns parishes, Renfrewshire, 2 $\frac{1}{2}$ miles S of Neilston village. With an utmost length and breadth of $5\frac{1}{2}$ and $4\frac{3}{4}$ furlongs, and a depth of 16 feet, it receives a rivulet running $1\frac{1}{2}$ furlong northward out of Long Loch.—*Ord. Sur.*, sh. 22, 1865.

Hairyres, a station, in East Kilbride parish, Lanarkshire, on the Glasgow, Busby, and East Kilbride railway, $1\frac{3}{4}$ mile W by S of East Kilbride village.

Halbeath, a collier village in Dunfermline parish, Fife, with a station on the Dunfermline and Thornton section of the North British, 2 $\frac{1}{2}$ miles ENE of Dunfermline town, under which it has a post and telegraph office. Pop. (1861) 568, (1871) 800, (1881) 918, (1891) 767.—*Ord. Sur.*, sh. 40, 1867.

Halborn Head. See HOLBURN HEAD.

Halbury Castle. See CLYDE.

Halen, a *quoad sacra* parish in Duirinish parish, Isle of Skye, Inverness-shire. It comprises the peninsula of Vaternish, and its post-town is Portree. Constituted by the Court of Teinds in July 1847, it is in the presbytery of Skye and synod of Glenelg; the minister's stipend is £120, with a manse and a glebe worth each £11 a year. Pop. (1871) 1068, (1881) 1006, (1891) 877.

Half-Davoch, a place with a public school of 1874 in Edinkillie parish, Elginshire, 3 miles NNE of Duniphaill station, on the Highland railway.

Half-Morton, a Border parish of SE Dumfriesshire, containing Chapelknowe hamlet, 3 miles NE of Kirk-

patrick station on the Caledonian railway, and 6 WSW of Canonbie. The ancient parish of Morton, comprising the present parish of Half-Morton, and about a third of what now is Canonbie, in the year 1621 was annexed in its eastern half to Canonbie, in its western half to Wauchope. Wauchope, in turn, was subsequently annexed to Langholm, under the condition that the minister of Langholm should officiate every fourth Sunday at Half-Morton. That condition fell into neglect, insomuch that during twelve years prior to 1833 Half-Morton had no parochial ministry. A temporary arrangement was then made, that an assistant to the minister of Langholm should devote his whole time to Half-Morton; and this arrangement in 1839 was transmuted into a permanent recognition of Half-Morton as a separate parochial charge. The present parish is bounded N by Middlebie, E by Canonbie, SE by Cumberland, S by Gretna, and SW and W by Kirkpatrick-Fleming. Its utmost length, from N to S, is $3\frac{5}{8}$ miles; its utmost breadth, from E to W, is 3 miles; and its area is 6100 $\frac{1}{2}$ acres, of which 16 $\frac{1}{2}$ are water. Woodside or All-for-nought Burn, tracing the northern boundary, and Hall Burn, out of Canonbie, unite at the NE corner of the parish to form the river SARK, which, winding $6\frac{3}{4}$ miles south-south-eastward along all the Canonbie and Cumberland border, is joined by wood-fringed Cadgill Burn from the interior; whilst another of its affluents, the Logan or Black Sark, after traversing the south-western district, and at two points tracing the western and south-western boundary, passes off into Gretna. The surface sinks in the extreme SE along the Sark below Corries Mill to 95 feet above sea-level, and rises gently thence to 281 feet near Chapelknowe, 353 near Hillhead, 408 near Cadgillhead, 458 near Berceles, 476 near Solway Bank, and 500 near Highstenries. The rocks are Permian, consisting of red sandstone strata; and much of the soil is of fair fertility. Half-Morton is in the presbytery of Langholm and synod of Dumfries; the living is worth £200. The parish church, built in 1744, enlarged in 1833, and renovated in 1889, stands 7 furlongs NE of Chapelknowe, a little nearer which is a Free church (1843), whilst at Chapelknowe itself is a U.P. church (1822). A public school, with accommodation for 148 children, has an average attendance of about 70, and a grant of over £70. Pop. (1831) 646, (1861) 716, (1891) 484.—*Ord. Sur.*, sh. 10, 1864.

Halgreen, a large castellated pile in Bervie parish, Kincardineshire, on an eminence near the sea, at the southern extremity of Bervie burgh. Founded in 1376, and enlarged at subsequent periods, it bears above a doorway in its court the date 1637. It seems to have been defended by a moat, with drawbridge and portcullis; has very thick walls, pierced with numerous arrow slits; and still is well preserved, being the seat of Mr. James Farquhar (b. 1836; suc. 1875).—*Ord. Sur.*, sh. 67, 1871.

Halgreen. See CANONBIE.

Halin. See HALEN.

Halkerton or Haulkerton, an estate in Laurencekirk parish, Kincardineshire, 1 mile N by W of the village. Held by the Falconers from the beginning of the 13th century it gave them their baronial designation from 1647; and in 1778 the eighth Lord Falconer succeeded as fifth Earl of Kintore. A mansion, now extinct, is represented by fine old trees that adorned its grounds.

Halkirk, a village and a parish of Caithness. The village, regularly built, stands 135 feet above sea-level, on the right bank of the river Thurso, $\frac{3}{4}$ mile N of Halkirk station on the Sutherland and Caithness section (1874) of the Highland railway, this station being $1\frac{1}{2}$ mile WSW of Georgemas Junction, $8\frac{1}{2}$ S by E of Thurso, and $15\frac{1}{2}$ WNW of Wick. It has a post office, with money order, savings bank, and telegraph departments, and a police station. A fair is held here on the third Tuesday of December; and on the opposite side of the river, $\frac{3}{4}$ mile to the N, stands Thurso Combination Poorhouse, which, built in 1855, contains accommodation for 149 inmates. Pop. (1881) 372, (1891) 432.

The parish contains also Scotscauder and Altnabreac stations, $2\frac{3}{4}$ and 12 miles SW of Halkirk. It is bounded N by Thurso, NE by Thurso and Bower, E by Watten, SE and S by Latheron, SW by Farr in Sutherland, and W by Reay. The Dorrery detached portion of the parish of Thurso, containing 7074 acres of Crowu land, was in 1891 transferred by the Boundary Commissioners to the parish of Halkirk. The utmost length of the parish, from NNE to SSW, is $21\frac{3}{8}$ miles; its breadth varies between $3\frac{1}{2}$ and 13 miles; and its area is now 102,837 acres exclusive of water. Of fully fifty lakes and lakelets the larger, from N to S, are Lochs CALDER ($2\frac{3}{8}$ miles \times $7\frac{1}{2}$ furl.; 205 feet), Olginney ($5\frac{1}{2}$ \times 3 furl.; 235 feet), CAILAM (5×4 furl.; 435 feet), Madie (1 mile \times 3 furl.; 372 feet), and More ($5\frac{3}{4}$ \times 4 furl.; 381 feet). Glut or Strathmore Water, rising in the extreme SW at an altitude of 1400 feet, winds $14\frac{1}{2}$ miles north-eastward to Loch More, and, issuing thence as the river Thurso, continues 19 miles north-north-eastward through the interior, then $2\frac{1}{2}$ miles north-north-westward along the boundary with Thurso. It is joined in this course by a number of affluents, and drains the greater portion of the parish, whose NW border, however, is traced or skirted for 5 miles by Forss Water. The surface, which sinks to 70 feet above sea-level along the Thurso, is much of it flat and monotonous, the higher points of the northern district being the Hill of Sour (359 feet), the Hill of Calder (306), and, on the Watten boundary, Spital Hill (577); but to the SW, at the Latheron and Sutherland borders, rise BEN ALISKY (1142) and the Knockfin Heights (1442). The rocks, of the Old Red Sandstone system, furnish plenty of 'Caithness flag' for home use and exportation; limestone too has been quarried, and marl has been raised from Calder Loch, whilst ironstone and lead ore are also known to exist. The soil ranges from clay or loam mixed with moss to gravel resting on a cold rocky bottom, being mostly wet and difficult to dry; still, great improvements have been effected in the way of reclamation and building. Little more than a tenth of the entire area is under cultivation, by far the greater part being moor or flow-moss. The arable holdings are for the most part small; the sheep farms, on the other hand, are large. Several 'Picts' houses' and standing stones are dotted over the parish, in which stood two pre-Reformation chapels, special features of which are noticed separately under ACHAVARN, BRAAL, and DIRLOT. The present parish comprises the two ancient parishes of Halkirk and Skinneth. Skinneth church was dedicated to St Thomas, and that of Halkirk to St Fergus, a Pictish bishop of Ireland who came to Caithness in the 8th century. It is in the presbytery of Caithness and synod of Sutherland and Caithness; the living is worth £282. The parish church, at the village, was built in 1753 and enlarged in 1833. There is also a Free church (1885); and six public schools—Calder, Halkirk, Harpsdale, Leurey, Spital, and Westerdale—with total accommodation for 698 children, have an average attendance of about 440, and grants amounting to over £530. Pop. (1801) 2545, (1841) 2963, (1861) 2864, (1871) 2664, (1881) 2705, (1891) 2577, of whom 511 were returned as Gaelic-speaking.—*Ord. Sur.*, shs. 116, 117, 109, 110, 1877-78.

Halladale, a river of Farr parish, NE Sutherland. The portion of the parish through which the river flows formed prior to 1891 the western half of the Caithness parish of Reay, but the Boundary Commissioners in that year transferred this portion of Reay to Farr parish, thus confining Reay parish to its Caithness portion, and extending the bounds of Farr parish eastwards to the county boundary. Rising at an altitude of 1200 feet above sea-level, close to the Caithness border and $4\frac{1}{2}$ miles SSE of Forsinard station on the Sutherland and Caithness section of the Highland railway, it runs $22\frac{1}{2}$ miles north-north-westward and northward along Strath Halladale between ranges of hills, 500 to 747 feet high, till it falls into the North Sea at the Bay of Bighouse, to the E of Portskerry village. Dyke Water is the chief of its many tributaries; its

current is rapid till within 3 miles of its mouth, below which point it forms a chain of about ten pools, being tidal over the last 2 miles, yet navigable only by boats. Its waters contain salmon, large sea-trout, and river trout; but the fishing—always uncertain—is rarely much worth except in spring. Tradition records that Halladha, son of Rognward, first Jarl of Orkney, was slain and buried in Strath Halladale, to which he bequeathed his name. The scene of the battle is towards the middle of the strath, near Dal-Halladha.—*Ord. Sur.*, shs. 109, 115, 1878.

Hallbar Tower. See BRAIDWOOD.

Hallcraig, an estate, with a mansion, in Carluke parish, Lanarkshire, 2 miles W by S of the town.

Halleath, a mansion in Lochmaben parish, Dumfriesshire, on the right bank of the Annan, $1\frac{3}{4}$ mile E by S of the town. Enlarged by David Bryce in 1866, it is the property of A. J. S. Johnstone, Esq.—*Ord. Sur.*, sh. 10, 1864.

Hallforest, a ruined castle in Kintore parish, Aberdeenshire, $1\frac{1}{2}$ mile WSW of Kintore town. Said to have been built as a hunting-seat by King Robert Bruce, and by him to have been granted to Sir Robert de Keith, great marischal of Scotland, it came to his descendants, the Earls of Kintore, and in 1562 received a visit from Queen Mary. It was chiefly a battlemented tower four stories high, and now retains two very lofty arched apartments, one above the other.—*Ord. Sur.*, sh. 76, 1874.

Hallgreen. See CANONBIE.

Hallguards, a romantic spot at the W border of Hoddam parish, Dumfriesshire, on the left bank of the river Annan, 2 miles WSW of Ecclefechan. Here stood the original Hoddam Castle, which is said to have been a seat of the royal Bruces, and was demolished some centuries ago in terms of a Border treaty.

Hallhead, an estate, with a decayed mansion of 1688, in Leochel and Cushnie parish, Aberdeenshire, $5\frac{1}{2}$ miles WNW of Lumphanan station. It belongs to the owner of ESLEMONT.

Hallhill, an estate, with a mansion, in Glassford parish, Lanarkshire, 2 miles NE of Strathaven. An ancient baronial fortalice, near the site of the mansion, contained an arch so spacious that a hundred men could be arrayed beneath it; but, falling into ruin, was taken down about 1828, and then was found to contain fragments of very beautiful china, with other relics.

Hallin. See HALEN.

Hallodale. See HALLADALE.

Hallrule, a mansion in Hobkirk parish, Roxburghshire, near the left bank of Rule Water, 3 miles E of Hawick. It is included in the WELLS estate.

Hallside, a village on the SE verge of Cambuslang parish, Lanarkshire. It is of recent origin, having arisen in connection with large steel works. There is a chapel of ease here. Pop. (1881) 955, (1891) 1041.

Hallside House, a mansion in Cambuslang parish, Lanarkshire, near the left bank of the Rotten Calder, $1\frac{1}{2}$ mile ESE of the town. It was built by Prof. George Jardine, of Glasgow University (1742-1827), and later was for some time occupied by Prof. John Wilson (1785-1854).—*Ord. Sur.*, sh. 31, 1867.

Hallyards, an old-fashioned mansion in Manor parish, Peeblesshire, on the left bank of Manor Water, 3 miles SW of Peebles. During the close of the 18th and the beginning of the 19th century it was tenanted for fourteen years by Prof. Adam Ferguson (1724-1816), historian of the Roman Republic, who here in 1797 received a visit from Sir Walter Scott, and took him to see the 'Black Dwarf'.—*Ord. Sur.*, sh. 24, 1864.

Hallyards, a ruined mansion in Auchtertool parish, Fife, $1\frac{1}{2}$ mile SE of Lochgelly. A seat of the Kirkaldys of Grange, it gave a night's lodging to James V. on his way to Falkland after the defeat of Solway Moss (1542); and it is said to have been the rendezvous of the leading Fife Jacobites at the rebellion of 1715.—*Ord. Sur.*, sh. 40, 1867.

Hallyburton House, a mansion in Kettins parish, Forfarshire, 3 miles ESE of Coupar-Angus. It is the seat of

HALMYRE HOUSE

W. D. Graham Menzies, Esq., of Pitcur, and was purchased from the Marquis of Huntly in 1879 for £235,000.—*Ord. Sur.*, sh. 48, 1868.

Halmyre House, a 16th century mansion, handsomely renovated in 1858, in Newlands parish, Peeblesshire, 3 miles SW of Leadburn station. Purchased in 1808 for £16,000, the estate is now the property of Charles Gordon, Esq.

Halstaneden. See HASSENDEAN.

Halyburton. See HALLYBURTON.

Halyhill. See FORTEVIVOT.

Hamer. See WHITEKIRK.

Hamilton, a parliamentary and police burgh, and a parish in the middle ward of Lanarkshire. The town is situated in the midst of a pleasantly diversified region, sloping on the whole to the east-north-eastward, and about 1 mile WSW of the junction of the AVON and the Clyde. It is 2 miles WSW of the railway junction at Motherwell, $9\frac{3}{4}$ miles by railway and $10\frac{3}{4}$ by road SE of Glasgow, and 36 by road WSW of Edinburgh. The environs present a pretty undulating landscape, with fine woods and picturesque dells through which three burns run to the Clyde and six to the Avon. The outskirts are extensive, and comprise numerous handsome villas and mansions, besides remains of older historical houses. The original town occupied a site within the Duke of Hamilton's park, to the ENE of the present position, and bore the name of Netherton. The oldest parts of the present town stand near the public green, and date from the early part of the 15th century, but they have undergone considerable improvement in more modern times. The main thoroughfare of the newer part, a street about 700 yards long, was laid out in 1835, and is carried 60 feet above the bed of Cadzow Burn by Cadzow bridge, which is supported on 3 spans of 60 feet each. The Burgh Buildings were erected near the centre of the town in 1861-63. They are built in the modernised Scotch Baronial style, with a clock-tower nearly 130 feet high; and they contain a public hall 63 feet long by 36 wide, besides smaller halls and official apartments. The County Buildings, classical in style, stand upon high ground towards the W end of the town. Originally founded in June 1834, they have been subsequently almost entirely renewed, the court-hall and county-hall being new, and the latter occupying the site of the disused prison. This prison, erected at the same time as the County Buildings, superseded the older prison, which stood in the lower part of the town, now included in the ducal park. This old prison is adorned with a steeple, and dates from the time of Charles I.; it was dismantled about 1834, but was repaired in 1861. The Trades' Hall was built in 1816, and is used for meetings and as a reading-room. The Victoria Halls, in Quarry Street, were erected in 1887, at a cost of £4000, the larger hall being capable of accommodating 1500 persons. The Barracks, formerly used for cavalry, but now solely for infantry, stand near the County Buildings. The Caledonian railway has two stations at Hamilton—the West and the Central—the latter a handsome and spacious building, from which the line runs to Larkhall, Stonehouse, Lesmahagow, etc.; and the North British has also two stations, one at Peacock Cross and the other the terminus, nearly opposite the Roman Catholic church. The corporation gas-work was erected in 1831 at a cost of £2400, and a water supply by gravitation was introduced into the town, under authority of Act of Parliament, in 1853.

The parish church occupies a site upon high ground, and, though originally beyond the town to the S, is now embraced by the town extension. It was built in 1732 from designs by the elder Adam, consists of a circular body with four cross aisles, and has a fine stained glass window by the Messrs Ballantine, representing our Lord and Martha and Mary, placed there in 1876 in memory of Mrs James Stevenson. The old parish church was built by way of excambion at the head of Church Street by Duchess Anne. Auchingramont Established church was built in 1860, and ranks as a collegiate charge with the parish church, the two minis-

HAMILTON

ters preaching alternately in the two churches. The stipends of these two churches are—first charge, £794; second charge, £393, and augmentation; the former has a manse and a glebe of 36 acres, valued at £82, and the latter a manse, valued at £30. Halls in connection with the parish were erected in 1886, at a cost of £3000, one of them to serve as a presbytery hall. Cadzow *quoad sacra* church was built in 1876-77 at a cost considerably exceeding the estimate, £4000, and renovated in 1892. Besides which there is Burnbank *quoad sacra* church. St John's Free church is a modern edifice. Burnbank Free church, erected in 1875 at a cost of nearly £3000, was built for the use of the mining population of Greenfield and other villages. It was pulled down and its site occupied by the West Free church, which was opened in May 1882, at a cost of £4000. Its style is 14th century Gothic, and the spire is 100 feet high. There are five United Presbyterian churches in Hamilton. That at Burnbank was opened in August 1884. Built at a cost of over £3000, this is an Early Gothic edifice with a spire 127 feet high. The Congregational chapel, a neat Gothic building, was built in 1872 at a cost of £1400, to supersede a former chapel in Campbell Street. There are also an Evangelical Union chapel, one for Baptists, St Mary's, St Outhbert's (Burnbank), and Our Lady and St Aune (Cadzow) Roman Catholic churches, and the Episcopal church, an early English Decorated structure of 1847, added to in 1878 and 1889, dedicated to St Mary. The burgh school board consists of a chairman and eight members. The following are the four schools under the burgh school board, with accommodation, average attendance, and government grant:—The Academy (144, 100, £110), Beckford Street public (842, 600, £530), Beut Road (654, 460, £405), and Townhead public (692, 520, £470). There are also St John's Free church (636, 540, £512) and St Mary's Roman Catholic schools (486, 350, £360). The Academy is of old date, and till 1714 stood near the old churchyard adjoining the palace. It was rebuilt by Anne, Duchess of Hamilton, in Grammar Square, and again in 1848 removed to a new site. It includes a rector's residence, with room for 10 or 12 boarders. Other schools are St John's Grammar School for boys, a boarding-school for girls, etc. The Mechanics' Institute was founded in 1846, and has a library. Besides the Hamilton Combination Hospital there is a fever hospital, and the Hamilton Combination Poorhouse, on the Bothwell and Hamilton road, east of the Barracks, with accommodation for 170 inmates, and wards for 40 lunatics. The Duke's Hospital is an old building, with a belfry and bell, situated at the Cross, and erected in lieu of the former one, which stood in the Netherton. The pensioners do not now reside here; but it contributes to the support of a dozen old men, at the rate of £8, 18s. yearly, with a suit of clothes biennially. Aikman's Hospital in Muir Street was built and endowed in 1775 by Mr Aikman, a proprietor in the parish, and formerly a merchant in Leghorn. Four old men are here lodged, have £4 per annum, and a suit of clothes every two years. Rae's, Robertson's, and Lyon's, and Miss Christian Allan's mortifications also produce considerable sums for the support of the poor, and some other funds have been placed at the disposal of the kirk-session for similar purposes. Other institutions are a choral union, agricultural, horticultural, and farmers' societies, an auxiliary Bible society, and a variety of economical, philanthropic, religious, and other associations; a library and reading-room at Quarter, bowling and curling clubs, and the Hamilton Park race-course. Besides a savings bank at the post office, Hamilton contains branches of the Bank of Scotland, British Linen Company's Bank, the Clydesdale, Commercial, Royal, and Union Banks, and the Mercantile Bank of Scotland. The *Hamilton Advertiser* (1856) is published every Saturday, and the *Hamilton Herald* on Friday. A handsome granite drinking fountain (the gift of Mr Watson of Earnock), with bronze group, was erected in 1893 at the junction of Cadzow Street and Muir Street. In 1894 the Duke of Hamilton presented 20 acres of ground in the Bockmuir Plantation to the town for a public park.

Hamilton, though it carries on a large amount of local trade, has no manufactures of importance. A manufacture of lace was early introduced by one of the duchesses of Hamilton, afterwards Duchess of Argyll, who brought over a native of France to teach it; but it was esteemed, in the circumstances, fully more a noble than a plebeian thing, many respectable females, who had no need of it as an avocation, becoming pupils and workers. The Hamilton lace was long in repute among the higher classes, but eventually went out of fashion. About 1835 the manufacture of a sort of tambooured bobbinet was introduced as a substitute for it; and this rose suddenly into such importance that within eight years upwards of 2500 females in the town or neighbourhood were employed upon it. The industry has now, however, entirely ceased, but one of the frames is preserved in the Palace. The making of check shirts for the colonial market, and of black silk veils of peculiar patterns, also rose rapidly into importance. The imitation of cambric weaving of the finest kinds took its chief seat at Hamilton after the introduction of the cotton trade into Scotland; and it prospered so much that whole streets of houses were built to accommodate the industrious weavers, no fewer than about 1250 looms being in the town; but about 1815 or 1820 it began to decline, and not many years afterwards it reached a point where it could yield a sustenance only a degree or two above starvation. Now, however, the industries of the town include cotton-weaving, lace manufacture, coach-building, iron and brass founding, a preserves work, sawmills, tanneries, etc.

Hamilton was made a burgh of barony in 1456, and a royal burgh in 1548. Subsequently it resigned its rights and privileges as a royal burgh, and was created a burgh of regality in 1668 by charter of Charles II. to Anne, Duchess of Hamilton. After the Reform Act of 1832 it became a parliamentary burgh, and in 1878 the municipal burgh was extended. Under the Burgh Police (Scotland) Act of 1892 it is governed by a provost, 4 bailies, a treasurer, and 9 councillors. The police and parliamentary burghs are now conterminous. The corporation income was (1832) £654, (1882) £7324, (1892) £20,000, (1895) £31,000. The burgh police force numbers 28 men, the superintendent receiving a salary of £200. The burgh unites with FALKIRK, Airdrie, Lanark, and Linlithgow in returning one member to parliament. In 1896 the parliamentary constituency was 3878, and the municipal 4326 (including 448 females). Sheriff courts are held at Hamilton every Tuesday and Friday for ordinary business; and for small-debt business every Friday. Small-debt justice of peace courts are held every Monday, and the magistrates sit in the burgh court as required. A weekly market is held on Friday, and special markets for cattle and hiring are held on the third Fridays of April and October. Valuation, including railways (1882-83) £76,900, (1895-96) £108,913. Pop. of parliamentary burgh (1881) 13,995, (1891) 24,859. Pop. of police burgh and town (1881) 18,517, (1891) 24,859, of whom 11,781 were females. Houses (1891) inhabited 4564, vacant 113, building 39.

CADZOW CASTLE was the original capital of Hamilton parish, and gave name to it till 1445, when, in virtue of a charter from James II. to the first Lord Hamilton, the present name superseded the older one of Cadyhou, Cadyow, or Cadzow. Soon afterwards the old town of Nether-ton came to be called Hamilton also. Queen Mary, on her way from Loch Leven Castle to Langside, held a court at Cadzow Castle, and rested at a spot in the town still called Queenzie Nouk. The forces appointed by Cromwell to overawe the West of Scotland in 1650 took post at Hamilton under General Lambert. There they sustained a momentary defeat from a force of 1500 Covenanters from Ayrshire, and General Lambert was captured before his men, sallying, repulsed the attack. Cromwell himself, on visiting the town, lodged at the King's Head Inn, now demolished. The victors at the battle of Drumclog, both before and after their advance towards Glasgow, marched to Hamilton; and the more moderate of them drew up a defence in explana-

tion of their conduct, which came to be known as the 'Hamilton Declaration.' The fugitives from the battle of Bothwell Bridge, fought 1½ mile NNW, fled in all directions through the parish of Hamilton, where 1200 were captured. Many escaped through hiding in the woods of Hamilton Park, where they were generously protected by Anne, Duchess of Hamilton. William Cullen, M.D. (1710-90), was a native of Hamilton; Thomas, Lord Cochrane, tenth Earl of Dundonald (1775-1860), author of *Autobiography of a Seaman*, spent many of his early years in the neighbourhood; and John Anderson (1789-1832) resided at Hamilton from 1819, and wrote *Historical and Genealogical Memoirs of the Hamiltons* (2 vols., 1825-27). The father of Dr Baillie and Joanna Baillie was minister of Hamilton.

The parish of Hamilton, situated in the middle ward of Lanarkshire, is bounded on the N by Bothwell, on the NE and E by Dalziel, on the SE by Dalserf, on the S by Stonehouse, on the SW by Glassford, on the W by Glassford and Blantyre, and on the NW by Blantyre. Its longest axis extends 6 miles from NNW to SSE; its greatest breadth, at right angles to that, is 5½ miles. It has 160 acres of water, and its total area was 14,243 prior to 1891, when the Boundary Commissioners transferred the Braidhurst detached portion of the parish (containing 85 acres) to Dalziel, but gave to Hamilton that part of Dalziel that lay on the left bank of the Clyde. The CLYDE traces the NE and N border for nearly 5 miles; the AVON has a course of 3½ miles along the ESE of the parish, to a confluence with the Clyde about a mile from the town; and nine burns rise on or near the S or W border, and run mostly NE, six to the Avon and three to the Clyde. The N district, forming a broad band along the Clyde, is a low sheltered valley; the middle district, traversed by the Avon, is diversified and beautiful; while the southern district rises gradually to elevations of from 580 to 750 feet above sea-level. The rocks are extensively of the Carboniferous formation. Sandstone is raised in several quarries, limestone is worked at Earnockmuir and Boghead, and ironstone at Boghead and Quarter. By far the most important mineral is coal, the excavation of which affords occupation to a very large number of the population. There are coal mines at Merriton, High Merriton, Dykehead, Bog, Allanton, Ferniegair, Haughhead, Quarter, and Greenfield. The soil on the low grounds is for the most part alluvial or loam; on the higher districts gravelly or moorland. The chief industry is coal mining, though of course farming occupies many hands.

Hamilton is the only burgh; the parish also contains the villages of Allanton, Darngaber, Ferniegair, Quarter, and Low Waters; and parts of the towns of Motherwell and Larkhall. The chief proprietor in the parish is the Duke of Hamilton. The chief seats are HAMILTON PALACE, Earnock House, Grove Mount, Ross, Fairhill, Naisland, Fairholm, and Edlewood. Other mansions, once of note, are Allanshaw, Darngaber, Merriton, and Udston. The chief antiquities are those in Hamilton Park, and CADZOW CASTLE, Darngaber Castle, Barncluth Gardens, Meikle Earnock tumulus, and an oblique standing stone in the S of the parish called the 'Crooked Stane.' Hamilton is in the synod of Glasgow and Ayr, and gives name to a presbytery. Besides the churches mentioned above, there is a chapel of ease at Quarter, and a mission station at Ferniegair. The following are the six public schools under the landward school board, with their respective accommodation, average attendance, and government grants:—Beechfield (68, 25, £23), Ferniegair (283, 275, £285), Greenfield (1265, 990, £1015), Low Waters (551, 600, £635), Motherwell (628, 510, £563), and Quarter (334, 195, £192). Cadzow Roman Catholic school has 271, 190, £190. There is a Roman Catholic school at Burnbank. Pop. of civil parish (1881) 26,231, (1891) 35,132, of whom 19,004 were in Hamilton ecclesiastical parish, 5628 in Burnbank, 10,033 in Cadzow, 6 in Chapelton, and 485 in Larkhall.—*Ord. Sur.*, sh. 23, 1865.

The Established presbytery of Hamilton comprises the 14 ancient parishes of Avondale, Blantyre, Both-

well, Cambuslang, Cambusnethan, Dalserf, Dalziel, Glassford, Hamilton, East Kilbride, New Monkland, Old Monkland, Shotts, and Stonehouse; the 26 *quoad sacra* parishes of Airdrie, Baillieston, Bargeddie, Bells-hill, Burnbank, Cadzow, Calderbank, Caldercruix, Calderhead, Chapelton, Clarkston, Cleland, Coats, Coltness, Dalziel South, Flowerhill, Gartsherrie, Garturk, Greengairs, Harthill, Holytown, Larkhall, Overtown, Stonefield, Uddingston, and Wishaw; and the 13 chapelleries of Cambuslang West, Craigneuk, Glenboig, Hallside, Kenmuir (Mount Vernon), Meadowfield, Newton, Palace Colliery, Quarter, Shawburn, Strathaven East, Thornwood, and Wastonville. Pop. (1891) 249,941, of whom 25,992 were communicants of the Church of Scotland in 1895. The Free Church presbytery comprises 4 churches in Airdrie, 3 in Coatbridge, 2 in Blantyre, 2 in Hamilton, 2 in Motherwell, and 19 others at Baillieston, Bells-hill, Bothwell, Cambuslang, Cambusnethan, Chapelhall, Chapelton, Cleland, Craigneuk, East Kilbride, Greengairs, Holytown, Larkhall, Shotts, Stonehouse, Strathaven, Uddingston, Whifflet, and Wishaw, which 32 churches together had 9405 members in 1894. The U.P. presbytery of Hamilton has 5 churches at Hamilton, 3 at Strathaven, 2 at Motherwell, and 9 others at Bells-hill, Blantyre, East Kilbride, Hallside, Kirkmuirhill, Larkhall, Newarthill, Stonehouse, and Wishaw, which 19 churches together had 7430 members in 1894.

Hamilton Palace, a seat of the Duke of Hamilton, is situated in the parish of Hamilton, on low ground between the town of that name and the river Clyde. The site of the old part of the town called Nether-ton is partly included within the walls of the park, and even yet the houses of Hamilton approach the palace near enough almost to intrude upon its privacy. The germ of the structure was a small square tower, but the oldest part of the present palace was erected about 1591, while a very large addition was made in 1705. This erection, described by Dorothy Wordsworth in 1803 as 'a large building without grandeur, a heavy lumpish mass,' was further added to in 1822 and subsequent years, and is now one of the most magnificent piles in the kingdom. It comprises a N front 265 feet long and 60 high, adorned with a splendid Corinthian portico of monolithic columns 25 feet high and 10 in circumference modelled after the temple of Jupiter Stator at Rome. The interior is planned on a scale of equal magnificence. The principal apartments are the tribune or saloon, the dining-room, 71 feet by 30, the library built to contain the famous Beckford collection, and a gallery 120 feet long, 20 wide, and 20 high. The treasures of art in cabinets and furniture, pictures, statuary, china, and glass, which till 1882 filled and adorned the princely rooms of the palace, formed the most splendid assemblage of the kind in Scotland. This collection was made chiefly in the early years of the 19th century by Alexander, the tenth duke, and his father-in-law, the famous William Beckford, author of *Vathek*, and it was perhaps the brightest gem in the ducal coronet of Hamilton. Between 17 June and 20 July 1882 the magnificent treasures were dispersed by the auctioneer's hammer. The sale, which created a stir in every artistic circle throughout the world, produced the sum of £397,562, a total that far exceeds any other modern sale of the same character. The 2213 lots brought an average of £180 each; enormous sums were given for the numerous unique art-treasures, which, exclusive of pictures by the old masters, were chiefly of the 17th and 18th centuries. The pictures alone, including the miniatures, brought upwards of £123,000; Rubens' famous 'Daniel in the Lions' Den,' on which Wordsworth composed his well-known sonnet, was sold for £5145; and a portrait of Philip IV., by Velasquez, for 6000 guineas. The former picture has since been repurchased by the Duke. Perhaps the speciality of the collection, if, indeed, it could be said to have a speciality, was the fine old French furniture. Two secretaires that had belonged to Marie Antoinette were sold for £9450 each, and a pair of Buhl armchairs brought £11,500. The library of Duke Alexander

was also sold, as well as Mr Beckford's library, which had been removed to Hamilton Palace, where, however, it was kept distinct.

The policies surrounding the Palace extend for 2½ miles along the Clyde, and for 2¾ miles along the Avon, and include woods, gardens, and lawns. The wild white cattle are noticed under CADZOW. Near the Palace stands a mausoleum erected, at a cost of £130,000, from designs by David Bryce, in imitation of the castle of St Angelo at Rome. It includes an octagonal chapel adorned with sculptures by A. H. Ritchie, and lighted by a dome 120 feet high. Hither, in 1852, were transferred the remains of the Hamilton family. A moat-hill towards the N of the park is 30 feet in diameter at the base and 16 high, and it has been referred to at least as far back as the time of Malcolm Ceanmor. The runic stone-cross, 4 feet high, in the vicinity, is supposed to have been the market-cross of Nether-ton. On the banks of the Clyde, and within the ducal policies, there is an extensive race-course (1888), 1½ mile in circuit and 96 feet wide.

Hamilton gives the titles of Baron and Duke in the peerage of Scotland to the noble family of Hamilton-Douglas, and that of Marquess to the Duke of Abercorn. Both of these illustrious families are said to be descended from Robert de Bellomont, third Earl of Leicester, whose grandson, Sir Gilbert Hamilton, fled to Scotland in 1323, in consequence of having slain in combat John de Spencer. The crest of the dukes of Hamilton—an oak tree with a saw through it—commemorates his escape in the disguise of a woodcutter; whilst the motto 'Through' was Sir Gilbert's exclamation on seeing his pursuers ride unsuspectingly past the place where he and his servant were in the act of sawing through an oak tree. Sir Walter de Hamilton, Sir Gilbert's son, acquired the barony of Cadzow, in the sheriffdom of Lanark, with other lands. His descendant, Sir James, sixth Lord Cadzow, was created a lord of parliament in 1445 as Lord Hamilton; and as a reward for changing to the king's side during the armed revolt of Earl Douglas, he obtained a grant, dated 1 July 1455, of the office of sheriff of Lanark, and extensive grants of lands at later dates. He married for his second wife in 1474, Mary, eldest daughter of James II., and widow of Thomas Boyd, Earl of Arran. His son, who succeeded in 1479, obtained in 1503 a charter of the lands and earldom of Arran, and was appointed lieutenant-general of the kingdom, warden of the marches, and one of the lords of regency in 1517. His son, James, the second Earl of Arran, was declared in 1543 heir-presumptive to the crown, and was appointed guardian to Queen Mary, and governor of the kingdom during her minority. In recognition of his services in opposing the English alliance, and in bringing about the marriage of Mary with the Dauphin, Henry II. of France conferred upon him the title of Duke of Chatelherault, with a pension of 30,000 livres a year. In 1557 his eldest son, James, succeeded to the earldom of Arran, the dukedom of Chatelherault having been resumed by the French crown; and on Mary's arrival in Scotland in 1561, this nobleman openly aspired to her hand. His strong opposition to her majesty's religion completely estranged her favour, and the unfortunate earl was not long afterwards declared to be insane, while his estates devolved upon his brother, Lord John Hamilton, commendator of Aberbrothock. This fourth earl assisted in procuring Queen Mary's escape from Loch Leven Castle in 1568; and it was to his estate in Hamilton that she first fled. After the battle of Langside the castle of Hamilton was taken, and its owner went into banishment. He was restored by James VI., and created in 1599 Marquess of Hamilton. His son, James, the second Marquess (1604-25), obtained an English peerage as Baron of Innerdale in Cumberland and Earl of Cambridge. James, the third Marquess, was created in 1643 Marquess of Clydesdale, and later Duke of Hamilton, with a grant of the office of hereditary keeper of Holyrood Palace.

This nobleman, the first Duke of Hamilton, warmly espoused the cause of Charles I.; and being defeated and captured at the battle of Preston, he was condemned by the same court as had condemned the king, and was beheaded in London, 9 March 1649. His brother and successor William, who had been previously raised to the peerage as Lord Machanshire and Polmont and Earl of Lanark, was mortally wounded in the cause of Charles II. at the Battle of Worcester. He was excepted from Cromwell's Act of Grace in 1654, and his estates were forfeited, with the reservation of a pittance for his duchess and her four daughters. His own honours fell under the attainder, and his English dignities expired; but the dukedom of Hamilton, in virtue of the patent, devolved upon his niece, the eldest daughter of the first duke. The male representation of the house of Hamilton passed to his next male heir, the Earl of Abercorn, whose descendant, the Duke of Abercorn, is the head of the family.

Lady Anne Hamilton, Duchess of Hamilton, introduced the Douglas name into the family by marrying Lord William Douglas, eldest son by a second marriage of William, first Marquis of Douglas; and she obtained by petition for her husband, in 1660, the title of Duke of Hamilton for life. His Grace had previously been elevated to the peerage as Earl of Selkirk. This peer sat as president of the convention parliament which settled the crown upon William and Mary. He died in 1694, and was succeeded by his eldest son, James, Earl of Arran, who, upon the Duchess, a few years afterwards, surrendering her honours, became then, by patent, Duke of Hamilton, with the precedence of the original creation of 1643 in the same manner as if he had originally inherited. He was created an English peer, in 1711, as Baron of Dutton in the county of Chester, and Duke of Brandon in the county of Suffolk; but upon proceeding to take his seat in the House of Lords, it was objected, that by the 23d article of the Union, 'no peer of Scotland could, after the Union, be created a peer of England;' and the House sustained this objection after a lengthy debate. James George, the seventh Duke, succeeded to the marquise of Douglas and earldom of Angus on the death, in 1761, of Archibald, last Duke of Douglas; and the unsuccessful attempt of his guardians to vindicate his claim to the Douglas estates also, on the ground that Mr Stewart, son and heir of the Duke of Douglas's sister, was not her son, led to the celebrated Douglas cause. His brother, eighth Duke, succeeded in 1782 in obtaining a reversal of the decision as to his right to sit in the House of Lords. William Alexander, eleventh Duke of Hamilton, succeeded in 1852, and died in 1863. William-Alexander-Louis-Stephen Douglas-Hamilton (b. 1845) succeeded as twelfth Duke of Hamilton and ninth of Brandon, and received by imperial decree of Napoleon III. of 20 April 1864 the revived title of Duke of Chatelherault. He married, in 1873, Lady Mary Louise Elizabeth Montagu, eldest daughter of the seventh Duke of Manchester, and by her left issue, Lady Mary Louise, born 1884. He died in 1895 after a lingering illness, and was buried in the family mausoleum at Hamilton Palace. He was succeeded by his kinsman, Alfred Douglas Douglas Hamilton (b. 1862; suc. 1895). The duke is premier peer of Scotland. His seats are Hamilton Palace, Lanarkshire, and Kinniel House, Linlithgowshire. London residence, 23 Prince's Gate, W.

Hamrigarth, a village in Dingwall parish, Shetland. Its post-town is Whiteness, under Lerwick.

Handa, an uninhabited island of Eddrachillis parish, W Sutherland, separated from the mainland by the Sound of Handa, $\frac{1}{4}$ to $\frac{1}{2}$ mile broad, and lying $2\frac{1}{2}$ miles NNW of Scourie. Measuring $1\frac{1}{2}$ mile from E to W, and 1 mile from N to S, it has a proximately circular outline, consists of sandstone in highly inclined strata, and rises rapidly north-westward to a height of 406 feet above sea-level at Sithean Mor, whence it breaks sheer downwards to the ocean, presenting, round more than one-third of its entire periphery, a continuous series of steep cliffs. As seen from the SE it seems to be wholly

of a dusky, greenish hue, and it exhibits in its ascents and in its cliffs striking features of ledge and fissure, that form a more imposing piece of rock scenery than almost anywhere else is to be found in the United Kingdom. One enormous perforation, inwards and upwards from the ocean-level, is swept by the influx and reflux of the tides, and roofed by natural arches resting on huge blocks of rock. Myriads of sea-fowl build in the cliffs, whose summit commands a sublime view of the lofty seaboard of the mainland from Rhu Stoir to the promontory N of Loch Inchard.—*Ord. Sur.* sh. 107, 1881.

Hangingshaw, a mansion, with finely-wooded grounds, in Yarrow parish, Selkirkshire, on the left bank of Yarrow Water, 6 miles W by N of Selkirk. It is a seat of Mr Johnstone of ALVA. Formerly the estate belonged to the Murrays of PHILIPHAUGH; and an ancient strong fortalice here was one of the strongholds of the 'outlaw' Murray. Having witnessed in his time a profusion of domestic display and a pomp and strength of retinue almost princely, it was destroyed by accidental fire about the close of the 18th century, and now is represented by only a basement wall and some outhouses.—*Ord. Sur.*, sh. 25, 1865.

Harburn, an estate, with a mansion of 1804, in West Calder parish, SW Edinburghshire, $\frac{1}{2}$ mile S of Harburn station on the Caledonian, this being 15 miles SW of Edinburgh. Harburn Castle, on the estate, is said to have been fortified by Cromwell to overawe the moss-troopers.

Harden, a fine old specimen of a Border fortress, in Robertson parish, Roxburghshire, 4 miles W of Hawick, on the left bank of Harden Burn, a rivulet running 2 miles southward to Borthwick Water. As Leyden sings,—

'Where Bortha hoarse, that loads the meads with sand,
Rolls her red tide to Teviot's western strand,
Through slaty hills, whose sides are shagg'd with thorn,
Where springs in scatter'd tufts the dark-green corn,
Towers wood-girt Harden far above the vale,
And clouds of ravens o'er the turrets sail.'

Repaired and added to in 1864, Harden retains its hall with roof of curious stucco work, its marble-paved lobby, and a mantelpiece bearing an earl's coronet and the initials W. E. T. (Walter, Earl of Tarras). In 1501 Robert, second son of Walter Scott of Sinton, acquired the estate from Alexander, Lord Home; and his great-grandson was that famous Borderer, 'Auld Wat of Harden,' whose marriage in 1576 with Mary Scott, the 'Flower of Yarrow,' has already been noticed under DRYHOPE, while under ELIBANK we have told how Wat's son and successor married the 'Muckle-mou'd Meg' of tradition; their grandson Walter (1645-93), who had had for preceptor the famous Richard Cameron, in 1659 wedded Mary, the child Countess of Buccleuch. (See DALKEITH.) She died in 1661, he having the year before received the life title of Earl of Tarras. He engaged in his brother-in-law Monmouth's rebellion (1685), but two years later recovered his estates; and, his grandson having married a daughter of the third Earl of Marchmont and Lord Polwarth, their son, in 1835, claimed and was allowed the latter title. Walter Hugh Hepburne Scott, present and sixth Baron Polwarth since 1690 (b. 1838; suc. 1867), is the thirteenth Baron of Harden, and holds extensive estates in Roxburghshire, Selkirkshire, Berwickshire, and Haddingtonshire.—*Ord. Sur.*, sh. 17, 1864. See MERTOUN, HUMBIE, and vol. i., pp. lxxvi.-lxxviii. of Sir William Fraser's *Scotts of Buccleuch* (Edinb. 1878).

Hardgate, a small village, with a public school, in Urr parish, Kirkcudbrightshire, 4 miles NNW of Dalbeattie.

Hardgate. See CLATT and DUNTOCHER.

Hardington House, a mansion in Wiston and Robertson parish, Lanarkshire, near the left bank of the Clyde, $\frac{3}{4}$ mile SSW of Lamington station. Its owner is J. R. M'Queen, Esq. See BROUGHTON.—*Ord. Sur.*, sh. 23, 1865.

Hardmuir. See DYKE.

Harefaulds. See GUTHRIE.

Harelaw, a quondam peel tower on the eastern verge of Canonbie parish, SE Dumfriesshire, near the right bank of the Liddel Water, 2½ miles NE by E of Canonbie station. It was the residence of the famous freebooter, Hector Armstrong, who in 1569 betrayed the Earl of Northumberland into the hands of the Regent Moray. Limestone of excellent quality and in great abundance exists at Harelawhill, near the site of the tower, and has long been largely quarried.—*Ord. Sur.*, sh. 11, 1863.

Harelaw, an upland farm in Currie parish, Edinburghshire, among the north-western declivities of the Pentlands, 1½ mile ESE of Balerno. A reservoir is on it at an elevation of 802 feet above sea-level; and a cairn, comprising about 2500 cart-loads of stones, and containing many human bones, was formerly near the farmhouse.

Harestane or **Hearthstane Burn**, a rivulet of Tweedsmuir parish, SW Peebleshire, rising on Cairn Law at an altitude of 2000 feet above sea-level, and running 4½ miles north-north-westward, till, after a descent of 1250 feet, it falls into the Tweed at a point 1¼ mile NNE of Tweedsmuir church.—*Ord. Sur.*, sh. 16, 1864.

Harlaw, a farm in the parish of Chapel of Garioch, Aberdeenshire, near the left bank of the Urie, 2½ miles NNW of Inverurie. It is noted for a battle fought on it, 24 July 1411 (St James's Eve), between the rebel Highland army of Donald, Lord of the Isles, and the royal forces under the Earl of Mar. Douald, at the head of 10,000 men, overran Ross-shire, marched through Inverness-shire and Moray, acquired accessions to his strength in those districts and in Banffshire, and resolved now to carry into execution a threat he had often made, to burn the town of Aberdeen. He committed great excesses in Strathbogie and in the district of Garioch, which belonged to the Earl of Mar. The inhabitants of Aberdeen were in dreadful alarm at the near approach of this marauder and his savage hordes; but their fears were allayed by the speedy appearance of a well-equipped army, commanded by the Earl of Mar, who bore a high military character, assisted by many brave knights and gentlemen of Angus and the Mearns. Advancing from Aberdeen, Mar marched by Inverurie, and descried the Highlanders stationed at Harlaw. He saw that he had to contend with tremendous odds; but though his forces were, it is said, as one to ten to those opposed to him, he resolved, from the confidence he had in his steel-clad knights, to risk a battle. Having placed a small but select body of knights and men-at-arms in front, under the command of the Constable of Dundee and the Sheriff of Angus, the Earl drew up the main strength of his army in the rear, including the Murrays, the Straitons, the Maules, the Irvings, the Leslies, the Lovells, and the Stirlings, headed by their respective chiefs. The Earl then placed himself at the head of this body. On the other side, under the Lord of the Isles, were Mackintosh and Maclean and other Highland chiefs, all bearing the deadliest hatred to their Southron foes.

On a given signal the Highlanders and Islesmen, setting up those terrific shouts and yells which they were wont to raise on entering into battle, rushed forward on the foe; but they were received with great firmness and bravery by the men-at-arms, who, with spears levelled and battle-axes raised, cut down many of their impetuous but badly armed opponents. After the Lowlanders had recovered themselves from the shock of this furious onset, Sir James Scrymgeour, at the head of the knights and bannerets under him, cut his way through the thick columns of the Islesmen, everywhere carrying death; but the slaughter of hundreds by this brave party did not intimidate the Highlanders, who kept pouring in by thousands to supply the place of those who had fallen. Surrounded on all sides, Sir James and his valiant companions had no alternative but death or victory, and death indeed was their lot. First fell the Constable of Dundee, and his fall so encouraged the Highlanders, that, seizing and stabbing the horses, they dismounted the riders, whom they

despatched with their daggers. In the meantime the Earl of Mar, who had penetrated with his main army into the very heart of the enemy, kept up the unequal contest with great bravery, and, though the action cost him almost the whole of his army, he continued the fatal struggle with a handful of men till nightfall. The disastrous result of this battle was one of the greatest misfortunes that ever befell the families of Angus and the Mearns. Many of them lost not only their head, but every male in the house. Leslic of Balquhain is said to have fallen with six of his sons; and there were also slain Sir James Scrymgeour, Sir Alexander Ogilvy, the sheriff of Angus, with his eldest son George Ogilvy, Sir Thomas Murray, Sir Robert Maulc of Panmure, Sir Alexander Irving of Drum, Sir William Abernethy of Salton, Sir Alexander Straiton of Lauriston, James Lovel, Alexander Stirling, and Sir Robert Davidson, provost of Aberdeen, with 500 men-at-arms, including the principal gentry of Buchan and the greater part of the burgesses of Aberdeen who followed their provost. The Highlanders left 900 men dead on the field of battle, among them the chiefs Maclean and Mackintosh. Their defeat was far from signal, but their career was stayed, and that was everything.

'So,' says Dr Hill Burton, 'ended one of Scotland's most memorable battles. On the face of ordinary history it looks like an affair of civil war. But this expression is properly used towards those who have common interests and sympathies, who should naturally be friends and may be friends again, but for a time are, from incidental causes of dispute and quarrel, made enemies. The contest between the Lowlanders and Donald's host was none of this; it was a contest between foes, of whom their contemporaries would have said that their ever being in harmony with each other, or having a feeling of common interest and nationality, was not within the range of rational expectation' (*Hist. Scotl.*, ii. 392-394, ed. 1876). The battle is celebrated in a long ballad, supposed by some to date from the 15th century, but closely following Boece's narrative.—*Ord. Sur.*, sh. 76, 1874.

Harlosh, a hamlet in the Isle of Skye, Inverness-shire, with a post office under Portree.

Harold's Tower, a monumental structure near the coast of Thurso parish, Caithness, 1½ mile ENE of Thurso town. It was erected in the latter part of the 18th century, by Sir John Sinclair, over the grave of an Earl of Caithness who was slain in battle about the close of the 12th century, and it presents a striking appearance.

Haroldswick, a hamlet and a bay in the N of Unst island, Shetland. The hamlet stands on the bay, and has a public school and a post office under Lerwick.

Harperfield, an estate, with a mansion, in Lesmahagow parish, Lanarkshire, on the left bank of the Clyde, 4½ miles S by E of Lanark.

Harport, a ramification of Loch Bracadale on the SW side of the Isle of Skye, in Inverness-shire. It deflects to the SE; extends to a length of about 6 miles; separates the lower part of Minginish district from the main body of Skye; affords safe harbourage to vessels; and receives at its head a torrent of about 4 miles in length, descending from the Cuchullin Mountains.

Harray. See BIRSAV.

Harris, a parish in the Outer Hebrides, Inverness-shire, comprehending the southern part of Lewis, a large number of adjacent or neighbouring islets and islands, and the distant island of St Kilda. It has a post office of its own name, with money order, savings' bank, and telegraph departments, under Portree; and it is regularly visited at Tarbert by steamers on the passage from Glasgow to Stornoway. Its main part is bounded N by Lewis parish in Ross-shire, E by the Minch and the Little Minch, S by the Sound of Harris, which divides it from North Uist, and W by the Atlantic Ocean. Connected with Lewis parish by an isthmus of 7 miles between the middle of Loch Seaforth and the head of Loch Reasort, it measures 21 miles in extreme length from NNE to SSW, 18 miles in extreme breadth, and

(inclusive of islands) 123,757 acres in area. It is almost cut in two, through the middle, by East Loch Tarbert and West Loch Tarbert, approaching so near each other as to leave an isthmus less than a mile across; and everywhere else its E and W coasts are so indented by the sea as to render its breadth at all parts very variable, not more than 7 miles upon an average. As seen from the Minch it presents such a bare, whitish, rocky, mountainous appearance as to have won for it its name of Harris (Gael. *Na Harribh*, 'the heights'). The islands, with the exception of St Kilda, all lie very near the main body, most of them so near as to be separated from it by the narrowest straits; but, though very numerous, only ten of them are inhabited—Bernera (501), Ensay (11), Killigray (8), Pabbay (3), Scalpa (517), Scarp (143), St Kilda (71), Scotasay (18), Soay (15), and Tarrensay (56). The sea-lochs, bays, and creeks of the main body, particularly on its E side, afford commodious harbours to ships and boats. The shores and some inland vales are sufficiently low and fertile to afford fair resources of sustenance to the inhabitants. The interior, from end to end, is mainly occupied by mountain ridges, 1000 to 2662 feet high. The lochs and streams are so numerous that they cannot easily be particularised; most of them teem with trout and salmon. Gneiss is the predominant rock; granite and sandstone also abound; and serpentine, asbestos, iron ore, and copper ore are found. The aggregate of arable land is very small. Sheep husbandry is largely practised; and the Cheviot breed of sheep was introduced prior to 1840, and found to be remarkably suitable. Deer abound amongst the hills; grouse are plentiful on the moors; geese, plovers, and pigeons frequent the low grounds and the swamps; eagles visit the mountainous rocks; fish of many kinds swarm in the waters; and lobsters and oysters are on some sea-grounds near the shores. Ancient standing-stones, in circles or in other arrangements, are numerous; Scandinavian forts were also formerly conspicuous, but have been removed for the erection of other buildings; and an Augustinian monastery, on the site of a Culdee cell, was founded at Rowadill at an early period, and had a number of chapels connected with it throughout the northern parts of the Outer Hebrides. Now it is represented by its ruined cruciform church, with a rude E tower and a richly sculptured recumbent effigy of Alexander Macleod of Dunvegan. The Earl of Dunmore is one of the chief proprietors. In the presbytery of Uist and synod of Glenelg, this parish is divided ecclesiastically into Bernera and Harris proper, the latter a living worth £180. Its church, erected in 1840, contains 400 sittings; and there are Free churches of Bernera, Harris, St Kilda, and Tarbert. Eleven schools—Bernera, Denishader, Finsbay, Kyles Scalpa, Kyles Stocknish, Manish, Obe, Scalpa, Scarp, Searista, and Tarbert—all of them public, with total accommodation for 913 children, have an average attendance of about 580, and grants amounting to nearly £800. Pop. of civil parish (1801) 2996, (1831) 3900, (1861) 4183, (1871) 4120, (1881) 4814, (1891) 5024, of whom 4195 were Gaelic-speaking and 3681 belonged to the main body; pop. of ecclesiastical parish (1871) 3739, (1881) 4360, (1891) 4520.

Harris, Sound of, measuring 9 miles in length from SE to NW, and between 8 and 12 in breadth, forms the only passage for vessels of burden through the long line of the Outer Hebrides. It contains a number of islands $\frac{1}{2}$ mile to nearly 4 miles in length, and is much encumbered besides with islets, rocks, and shoals; but though considerably difficult and dangerous of navigation, can be safely passed with aid of a skilful pilot. The tidal current in it, from the autumnal to the vernal equinox, runs in neap tides all day from E to W, and all night from W to E; but, from the vernal to the autumnal equinox, runs all day from W to E, and all night from E to W; and in spring tides, during both periods, corresponds nearly to the common course.

Harroldswick. See HARROLDSWICK.

Harrow, a loch ($3 \times 1\frac{1}{2}$ furl.; 850 feet) in Kells parish, Kirkcudbrightshire, $8\frac{1}{2}$ miles NW of New Galloway.

It contains some small, shy trout, and sends off Pulharow Burn $5\frac{1}{2}$ miles east-south-eastward to the Ken.—*Ord. Sur.*, sh. 8, 1863.

Hartfell, a broad-based, flat-topped mountain on the mutual border of Moffat parish, Dumfriesshire, and Tweedsmuir parish, Peeblesshire, $6\frac{1}{2}$ miles NNE of Moffat town. It has an altitude of 2651 feet above sea-level, but formerly was assigned a much higher elevation, being falsely regarded as the loftiest summit of the Southern Highlands, whereas in fact it is surpassed by Merick (2764 feet), Broad Law (2754), White Coomb (2695), etc. So gentle is its acclivity from the upper basin of Annan Water, that the greater part of it may be ascended on horseback; its level plateau, clad with short, wiry grass, commands a vast, magnificent, and varied prospect. North-westward, across a wide and billowy sea of mountains, one sees, in certain states of the atmosphere, the snowy cap or cloud-wreathed brow of Ben Lomond; north-eastward and eastward one looks athwart the green hills of Tweeddale and Ettrick Forest to the Firth of Forth, the German Ocean, and the Cheviots; westward, the Lowthers' wild and rugged scenery extends to the towering summit of Blacklag; and southward the eye strays over the Dumfriesshire uplands till it rests upon Skiddaw and the other Cumberland mountains. Hartfell Spa, on the southern side of the mountain, 5 miles NNE of Moffat, occurs in the deep ravine of Auchencat or Hartfell Burn, flowing $3\frac{1}{2}$ miles west-south-westward to Annan Water. A well that issues from strata of black shaly rock, it is protected by a small vaulted building, the keystone of whose roof is carved with the bloody heart of the Douglas family. The spa was discovered in 1748 by a farmer, John Williamson; who was superintending a mining operation lower down the burn; the following is the analysis of a litre of its water, made by Mr William Johnstone of Edinburgh in 1874. Specific gravity, 1000.386; temperature, 49° F.; temperature of air, 56° F.; ferrous sulphate, 0.2109; aluminic sulphate, 0.1970; sodium chloride, 0.0050; sodium sulphate, 0.0048; calcium sulphate, 0.0352; calcium carbonate, 0.0280; magnesian sulphate, 0.0233; magnesian carbonate, 0.0121; ferrous carbonate, 0.0240; silica, 0.0050; carbonic dioxide, 6.734; oxygen, 6.062; nitrogen, 18.057. The water is a powerful tonic, cool and acidulous, specially good in dyspepsia. About a pint is the usual quantity prescribed per diem.—*Ord. Sur.*, sh. 16, 1864.

Harthill, a collier village in Shotts parish, NE Lanarkshire, adjacent to the Linlithgowshire border, $1\frac{1}{2}$ mile E by S of Westcraigs station. It has a post office under Whitburn, with money order and savings bank departments, an established *quoad sacra* church, a Free church, and a public school. The *quoad sacra* parish of Harthill and Benhar, constituted in 1878, is in the presbytery of Hamilton and synod of Glasgow and Ayr. Pop. of village (1871) 686, (1881) 1441, (1891) 1008; of *g.s.* parish (1881) 3444, (1891) 2801.—*Ord. Sur.*, sh. 31, 1867.

Harthill, a ruined castle in Oyne parish, Aberdeenshire, on the northern slope of Bennochie, 1 mile S of Oyno station. Built by Patrick Leith in 1638, it is a massive edifice, with walls 5 feet in thickness, round towers, bartizans, loopholes, and an arched gateway; and, according to tradition, it was burned by the last of its lairds.

Hartree, an estate with a mansion in Kilbucho parish, Peeblesshire, $2\frac{1}{2}$ miles S by E of Biggar. It has been held by the Dicksons since the third decade of the 17th century.

Hartrigge, a mansion in Jedburgh parish, Roxburghshire, 7 furlongs NE of the town. Approached by a fine avenue, it is a Scottish Baronial edifice, formed in 1854 by David Bryce out of an older and plainer house for John, Lord Campbell (1781-1861), Chancellor of England, who made it his home for several years. Its present possessor is his second son, Hallyburton George Campbell, third Baron Stratheden and Campbell since 1836 and 1841 (b. 1829; suc. 1893). Hartrigge, besides,

was the deathplace of two Scotch judges—William Penney, Lord Kinloch (1801-72), and Robert Macfarlane, Lord Ormidale (1802-80).—*Ord. Sur.*, sh. 17, 1864.

Hart's Leap, a defile on the mutual border of Yarrow and Ettrick parishes, Selkirkshire, 2½ miles NW of Tushielaw. It got its name from a prodigious leap made at it by a hart, during a hunt by one of the ancient Scottish kings; and it retains two large stones, 28 feet apart, said to have been set up by order of the king, to mark the extent of the leap.

Hartwood, an estate, with a mansion of 1807, in West Calder parish, SW Edinburghshire, 1½ mile S of the town.

Harvieston, an estate, with an old, thick-walled mansion, greatly enlarged in 1869, in Borthwick parish, Edinburghshire, 1 mile S by E of Gorebridge. Its owner is M. J. Y. Trotter-Cranstoun, whose ancestor bought it about the year 1750. Some fragments of the ancient castle of Catcune are within the grounds.

Harviestoun, an estate in Tillicoultry parish, Clackmannanshire, at the southern base of the Ochils, 1¼ mile ENE of the town. Its present mansion, Harviestoun Castle, was built in 1804 by Crawford Tait, Esq. (1765-1832), whose youngest son, Archibald (1811-82), Archbishop of Canterbury, spent much of his boyhood here. It is an elegant edifice, with finely-wooded grounds, and was greatly improved by Sir Andrew Orr (1802-74), who, having bought the estate in 1859, added a new tower and porch, and formed two beautiful approaches leading from Tillicoultry and Dollar. The present holder of the estate is James Orr, Esq. It was during a ten days' visit to Harviestoun in the summer of 1787, that Robert Burns saw Charlotte Hamilton, the 'fairest maid on Devon banks,' and a cousin-german of Mr C. Tait.—*Ord. Sur.*, sh. 39, 1869.

Hassendeau, a station on the Waverley route of the North British, in Minto parish, Roxburghshire, 4¼ miles NNE of Hawick. Past it flows Hassendeau Burn, winding 4½ miles east-south-eastward to the Teviot, and overhung, on the left, by Minto Hill (905 feet). An ancient barony, it belonged for ages to a branch of the family of Scott, of whom Sir Alexander fell at the battle of Flodden; and makes considerable figure, in record and in song, under the names of Halstaneden and Hazeldean. Its baronial fortalice or strong peel-tower, near the mouth of the burn, is now represented by a small fragment forming the gable of a cottage; and there was also a monastic cell, called Monk's Tower, on a tract still designated Monk's Croft. An ancient parish of Hassendeau, conterminous with the barony, belonged, as to its teinds and patronage, to the monks of Melrose, and about the era of the Reformation was annexed chiefly to Minto, but partly to Wilton and Robertson. Its church, whose site, by the side of the Teviot, was swept away along with the graveyard by a strong flood in 1796, was a Norman edifice, and had such strong hold on the affections of the dalesmen that they repeatedly made indignant resistance to measures for closing it. Eventually, however, it was taken down in 1690 in the face of a riotous demonstration, on the part of women as well as men.—*Ord. Sur.*, sh. 17, 1864.

Hatton, a village in Cruden parish, E. Aberdeenshire, 8 miles NE of Ellou, under which it has a post office. At it are a public school, and Cruden Free church (1844), which last was the nucleus of the village, and after which it at first was called the Free Kirkton of Cruden.—*Ord. Sur.*, sh. 87, 1876.

Hatton, an estate, with a mansion, in Marykirk parish, S Kincardineshire, 3¼ miles SW of Laurencekirk.—*Ord. Sur.*, sh. 57, 1868.

Hatton, an estate, with a mansion, in Ratho parish, Edinburghshire. The mansion, a striking example of the Scoto-French chateau of the 17th century, stands near the southern verge of the parish, 1½ mile SSW of Ratho village, and consists of a thick-walled, three-story tower of the 15th century, with wings, turrets, and other additions of 1670 and later years. It was the summer residence of Francis Jeffrey (1812-14). Purchased in 1877 from John de Hatton by Allan de

Lawdre or Lauder, the estate remained with his descendants till 1653, when it passed by marriage to the noble family of Lauderdale, by whom it was sold in 1792. It then comprehended nearly one-half of the parish, but shortly afterwards was parcelled out into six properties, of which that of Hatton House, comprising 500 acres, was purchased in 1870 for £42,000 by the Earl of Morton, whose son, Lord Aberdour, soon after restored the mansion.—*Ord. Sur.*, sh. 32, 1857. See John Small's *Castles and Mansions of the Lothians* (Edinb. 1883).

Hattonburn, an estate, with a mansion, in Orwell parish, Kinross-shire, ¾ mile NNE of Milnathort.—*Ord. Sur.*, sh. 40, 1867.

Hatton Castle, a square castellated mansion of 1814, with finely-wooded grounds, in Turriff parish, N Aberdeenshire, 3¼ miles SE of Turriff tow. It comprises a fragment of the ancient baronial castle of Balquholly (Gael. *baile-chaille*, 'town in the wood'), the seat of the Mowats from the 13th century till 1727, when the estate was sold to Alexander Duff, Esq. His descendant is Garden A. Duff, Esq.—*Ord. Sur.*, sh. 86, 1876.

Hatton Castle, a ruined fortalice in Newtyle parish, SW Forfarshire, at the western base of Hatton Hill (870 feet), ¼ mile SE of the village of Newtyle. Built in 1575 by Lawrence, fourth Lord Oliphant, it commanded the Sidlaw pass of the Glack, down which it looks to an extensive prospect of Strathmore.—*Ord. Sur.*, sh. 48, 1868.

Hatton Law, a hamlet in Largo parish, Fife, 1½ mile NW of Largo station.

Hatton, Lower, a village in Caputh parish, Perthshire, 1½ mile N of Dunkeld.

Hatton, Wester. See BELHELVIE.

Haugh, a village in Mauchline parish, Ayrshire, on the right bank of the Ayr, 1¼ mile S of Mauchline town.

Haughhead, a village in Campsie parish, Stirlingshire, at the junction of Fiu and Campsie Glens, ½ mile NW of Campsie Glen station.

Haughhead. See ECKFORD.

Haugh of Urr, a village in Urr parish, Kirkcudbrightshire, near the left bank of Urr Water, 4 miles NNW of Dalbeattie, under which it has a post office.

Haughton, a mansion, with finely-wooded grounds, in Alford parish, Aberdeenshire, near the right bank of the Don, 1 mile NNE of the village. Purchased by an ancestor in the latter half of the 17th century, the estate is now held by Miss M. Ogilvie Farquharson.—*Ord. Sur.*, sh. 76, 1874.

Hauster, a burn of Wick parish, E Caithness, rising on the Latheron border at an altitude of 556 feet, and winding 8½ miles north-north-eastward till it falls into Wick Water at a point 1¼ mile W of Wick town. In the first 5 miles of its course it traverses Yarehouse and Hempriggs Lochs, and sometimes it bears the name of Thrumster Burn.—*Ord. Sur.*, shs. 110, 116, 1877-78.

Haven, East. See EAST HAVEN.

Haveton, a village in South Ronaldshay island, Orkney, 13 miles S of Kirkwall.

Hawick, a parliamentary and municipal burgh and parish in Roxburghshire. The town is the largest seat of population in the eastern Border counties, 53 miles SSE of Edinburgh, 45 NNE of Carlisle, and 346 NNW of London. It is situated on both sides of the Teviot, which enters the town from the SW after passing through the haughs and woods of Branxholme and Wilton Lodge, an approach of great picturesqueness and beauty. The Teviot is joined in the centre of the town by the Slitrig, a mountainous stream flowing through a district of romantic interest. The town is in a basin, the principal streets being built on the level land on both sides of the rivers, from which other streets ascend the slopes, and above these are the mansions and villas of the principal inhabitants, thus overlooking the town and commanding extensive views of the surrounding region. The district is rich in historic houses and in more modern seats. Branxholme, one of the original residences of the Buccleuch family; Harden, of the ancient Scotts; Cavers,

of the Douglasses of Liddesdale; Stobs Castle, of the Elliots; Wilton Lodge, of the Langlands; and Stirches, of the Chisholmes, are in the vicinity. Sillerbithall, Heronhill, Thornwood, Bucklands, Brieryards, Teviotbank, Hassendeanburn, and Linden-park are all large and elegant mansions. Nearly all these seats are surrounded with extensive woods, abounding in trees of great size. The town is regular in form, and the streets are well built and spacious. A great part of the old town has been rebuilt during the last forty years, and several streets have been added, the houses being all of freestone. Several bridges span the Slitrig and Teviot. The Municipal Buildings, the foundation stone of which was laid in 1835, were completed in 1837 at a cost of £13,000. They occupy the site of the old Town Hall in the High Street, are in the Scottish style of architecture, and contain the Free Library and a public hall capable of seating 1000 people. The buildings have a frontage of only 53 feet, but extend backwards for about 200 feet. They are three storeys in front, with a clock tower 126 feet high. On the ground floor are the police office, officials' rooms, and cells; the second floor contains the council-room, the burgh court-room, etc.; while the third floor is principally occupied by apartments in connection with the Free Library. The lofty roof of the public hall is supported on iron pillars, and a gallery runs round three sides. The Science and Art Institute was erected as a memorial to his Grace the late Duke of Buccleuch, who had long been the munificent benefactor of the burgh. The Cottage Hospital and Dispensary, opened in 1835, stands on an elevated site in Buccleuch Street granted by the late Duke. It is English Domestic in style, and was erected by public and private generosity. The post office, with money order, savings bank, and telegraph departments, was removed to handsome new premises at the corner of Bridge Street and Croft Road in 1892. Among the other chief buildings are the Exchange, the banks, and some of the churches. Few evidences in buildings remain of the antiquity of Hawick. The notable exception is the building which for more than a century has been known as the Tower Hotel. The older or western side is several hundred years old, and formed part of the castle of the Drumlanrig Douglasses, which escaped being burned in the devastating inroad of the Earl of Sussex in 1570. It was used as a residence a century afterwards by Anne Scott, who was married to the Duke of Monmouth, and was made Duchess of Buccleuch. While this house is one evidence of the antiquity of the town, the Moat at a little distance bears witness to the far-off antiquity of the town and people. This is a circular earthen-mound, 30 feet high, 312 in circumference at the base, and at the top 117. When and by whom this was erected is unknown. It is purely artificial, and bears no trace of being a sepulchral mound. It is upon an eminence which commands a view of all the surrounding hills and valleys, and must have been a capital station for watchers of apprehended attacks, an excellent rendezvous for the defenders of their homes, and an elevated station whence chiefs and justices might dispense law. There can be no doubt that the erection of this was far off in the centuries of old, as also was that of the first parish church, which dates from an unknown antiquity.

The municipal history of Hawick speaks also to its antiquity. In the Scottish Rolls, under date 1347, it is said to have been held from the Crown by Richard Lovel and his ancestors 'for time immemorial.' Soon afterwards the lands passed into the family of Sir William Douglas of Drumlanrig, to whom James I., while resident in England, gave a charter conveying to him the barony of Hawick and a territory embracing a large part of the sheriffdom of Roxburgh. Nearly a century afterwards, Sir James Douglas granted, in 1537, a charter to the inhabitants of Hawick, which was confirmed by the deed of Queen Mary of date 12 May 1545. At the period of granting the charter, the town appears to have consisted of 110 houses, inclusive of the manor house, church, and mill. The municipal jurisdiction was entrusted to 2 bailies and 31 councillors.

The territorial sovereignty passed from the Douglasses of Drumlanrig to the Scotts of Buccleuch. See DALKEITH and DRUMLANRIG.

Hawick is abundantly supplied with pure water. The former supply being inadequate, in 1865 a reservoir was made on the Allan, 5 miles SW of Hawick, and an amount of 400,000 gallons per day was brought in, at a cost of £8000. As the town extended along the slopes, it was found necessary to introduce a new supply drawn from a much greater height, from the Dodburn, and by these combined means 1,000,000 gallons are delivered in the town daily. The various works, with the reservoir, a fine sheet of water of 20 acres—a hollow among the hills—were constructed at a cost of £16,000. The reservoir contains about 54,000,000 gallons. The Allan and Dodburn, and the surface for the most part through which the pipes are carried, being on the Buccleuch property, the Duke, with his usual generosity, granted the free right of usage to the town. These works were opened by his Grace on 1 Sept. 1882. The town also is thoroughly drained on the most approved system, massive pipes having been laid in all the streets and in connection with all the public works, by which several hundred thousand gallons of sewage and polluted water from the mills are conveyed to a haugh on the W bank of the Teviot, 1 mile distant, where the water, after being purified by lime, is collected in tanks, and, separated from the solid matter, is discharged over aerated beds into the river. These extensive works were completed in 1883 at a cost of £28,000. Hawick has also an abundant supply of gas. The old works being insufficient, new works were erected in 1882 near the sewage works at a cost of £10,000.

The first bank established in the town was a branch of the British Linen Co. in 1797. The business previously was mainly carried on by a private banker, Mr Turnbull, a very shrewd, able, and upright man, who bought the estate of Fenwick, etc., and built the mansion of Brieryards. The other branch banks are the Commercial Bank (1820), the National Bank (1852), the Royal Bank (1856), the National Security Savings Bank (1815), and the Hawick Heritable Investment Bank. There are also the Temperance Hall, 2 Masonic halls, several hotels, the Museum, and a large Combination Poorhouse. Hawick has three weekly newspapers—the *Hawick Advertiser*, the *Hawick Express*, and the *Hawick News*. Among its numerous associations there are the Teviotdale Farmers' Club, the West Teviotdale Agricultural Society, Archæological, Horticultural, and Ornithological societies, the Working Men's Building Society, and several political and educational associations. There is a public library, the Public Libraries Act having been adopted by the burgh in 1877, and several clubs for recreation and amusement. The cricket club has a spacious park near the town, and the bowling clubs have two attractive greens. Wilton Lodge estate was purchased as a public park in 1890 for £14,000; and in the same year the Miller's Knowes were leased for ten years for a similar purpose. The annual interest of the Scott Bequest (£1300) and Mrs Nixon's Bounty (£2000) is applied to educational and charitable purposes.

The original parish church is St. Mary's, which dates from 1214, was rebuilt in 1763, and having been much damaged by fire in 1880, was restored at a cost of £2000, the Duke of Buccleuch contributing above £1000 for the purpose. It was from St. Mary's that Sir Alex. Ramsay of Dalhousie, a noble and patriotic knight, while holding a court of justice, was dragged by Douglas to Hermitage Castle, and in the dungeon there was starved to death. Here also was interred the body of Walter, first Earl of Buccleuch, which was brought by ship from London to Leith, and after many delays was conveyed to Branxholme, and, carried thence attended by a great body of retainers, was with much heraldic pomp interred among his ancestors. St. Mary's was the parish church till 1844, when the large and handsome edifice in the Norman style of architecture, seated for about 1300, and built at the W end of the town at the expense of the Duke of Buccleuch, became the parish

church. St Mary's became the property of the Duke, and was made a *quoad sacra* church in 1860, his Grace furnishing the greater part of the endowment. St John's church, built in 1879-80 by subscription at a cost of £6000, is a fine Early English structure with 800 sittings. St John's is a *quoad sacra* parish. Wilton parish church, built in 1860, is a beautiful edifice, and contains 950 sittings. Wellington church, a chapel of ease to Wilton church, was opened in 1886. St Cuthbert's Episcopal church, a fine building in the Early Decorated style, was erected and endowed by the Duke of Buccleuch. There are also three Free churches, four U.P. churches, and an Evangelical Union, Baptist, and Roman Catholic church, etc. In connection with the parishes of Hawick and Wilton there are two public cemeteries of large extent, finely situated and ornamented.

Consequent on the passing of the Education Act in 1872, there was a great increase in the number of the scholars. The town previously was well supplied with school accommodation. The parish school buildings and teacher's residence, built at the expense of the Duke of Buccleuch, were freely transferred to the school board, as were the industrial school (afterwards called Drumlanrig school) and St Mary's school. The parish school of Wilton was also transferred to the board, and a large school, with teacher's residence, was erected on the Jedburgh road for the accommodation of children in the NE end of the town. The following are the statistics of school accommodation, average attendance, and government grants earned for the school year ending 30 Sept. 1894:—Buccleuch School (1038, 859, £751, 12s. 6d.), Trinity (770, 581, £503, 7s. 6d.), Drumlanrig (773, 476, £446, 11s. 11d.), Wilton (769, 552, £483), St Mary's (228, 188, £153, 11s.) Besides the board schools there are academies and private schools, and schools receiving government grants in connection with the Episcopal and Roman Catholic churches. There are also Art and Science classes.

It is interesting to trace the progress of the town in manufactures to the rank which it now holds as the first manufacturing town in the South of Scotland. About 160 years ago, previous to the erection of any of the factories, the first and largest nursery and seed business perhaps in the kingdom was established by Mr Dickson, and carried on by his successors, the Messrs Dickson and Messrs Turnbull, till of late years. From these nurseries there sprang the first nurseries in Edinburgh and Perth.

Hawick, being the centre of a great pastoral region, and having a number of waterfalls on the Teviot and Slitrig, soon entered on the manufacturing career which has since made it famous. A century ago lands, with the water all on the NW side of the Teviot, were acquired from the estate of Langlands for factory purposes, and some time afterwards the Duke of Buccleuch gave 99 years' leases of the lands on the E of the Slitrig at a nominal rent. Before that time a company instituted the manufacture of carpets, table-covers, and rugs. This trade continued till 1806, when it was given up. The manufacture of broad linen tapes was commenced in 1783 and carried on till 1800. The year 1771 is memorable in the annals of Hawick for the commencement of the stocking manufacture and the introduction of the stocking-frame, an industry which rapidly flourished, and is now carried on to such an extent as places Hawick without a rival in Scotland for the making of all kinds of hosiery. The honour of founding this trade is due to Mr John Hardie, merchant, a baillie of the town, a man of notable vigour and of great humour. The yarn was carded in the town, and was spun by the wives and daughters of farmers in the surrounding country. The supply of yarn from the country being inadequate for the demand, the manufacturers soon afterwards introduced the new spinning machinery. The first to bring it in were Messrs Nixon and Messrs Wilson. Mr Hardie's enterprise was followed and extended by many of the predecessors of the firms of the present time—the Wilsons, the Laings, the Watsons, the Elliots, the Pringles, and the Laidlaws, who, besides the

manufacture of hosiery, engaged in the manufacture of flannels, shawls, plaids, and blankets. About 1830 various firms commenced the manufacture of shepherd's checks, the first kinds of twilled cloth, usually called tweels, and corrupted into the popular name of tweeds, and these were followed by the many kinds of checks and stripes, the endless variety of colours and mixtures in the plain and fancy styles of all kinds of this famous manufacture. Messrs Dickson and Messrs Laing first introduced power looms, and the trade rapidly grew into its present magnitude. Several firms relinquished the making of hosiery, and confined their energy to the extended making of tweeds, and now there are in Hawick several of the largest and most prosperous tweed factories in Scotland. Many of the improvements in the carding, spinning, and weaving machinery were suggested and carried out here in order to make the machinery for the production of woollen goods equal to that employed in cotton manufactories. There are now about a dozen and a half woollen factories, supplied with the most improved machinery. Great extensions in the hosiery manufacture have been made by the introduction of power knitting machines, of very complex and costly mechanism, into the larger factories. Each of these, wrought by a woman, does the work of several men on the frame wrought by hand. There are at present about 20 hosiery manufactories at work. Besides these, the great staple industries, there are dye-works, tanneries, an oil manufactory, quarries, saw-mills, etc.

Coming to the oldest industry, grazing and agriculture, Hawick has long been its centre in the Border counties. This again has been very much owing to the house of Buccleuch. The lands far around were let on the easiest terms, and for two centuries, considering the quality of the soil, at a lower rent than anywhere known. This, with the security of the tenure, engendered a state of things which produced wealth, and as wealth grew the desire arose on the part of the tenants to increase their acres. Formerly a large number of small farms existed, but gradually the stronger dispossessed their weaker neighbours. Nowhere will one see better houses or more commodious steadings than those which are seen in this Border land. The situation and prosperity of the town have made it a great market of grain, and especially of live stock. The old fairs for the sale of stock have long disappeared, and have been succeeded by the well-known sales in the auction mart. One of the first originators of these sales in Scotland was the father of the present Mr Oliver of Thornwood, who has long been known as one of the most extensive salesmen by auction of live stock in the kingdom, and at whose principal sales, attended by breeders from all parts, as many as 25,000 sheep and lambs have been disposed of in a single day. Besides his principal sales at the mart, extending to many acres, near the railway station on the river Haugh, covered with wooden pens, and a large stone erection for the accommodation of cattle, there is a weekly auction every Monday. The weekly corn market is held on Thursday, and hiring, cattle, wool, and sheep and lamb fairs are held at periods between springtime and the beginning of winter.

The great public festival of the year is the Common Riding, celebrated at the beginning of June. The practice of riding the town's marches dates from time immemorial. On the morning of the first day the Cornet, with his mounted troop, all gaily dressed, and bearing a flag the facsimile of one which their ancestors captured from a company of English soldiers in the neighbourhood after the battle of Flodden, rides round the municipal lands, and this part of the ceremony is concluded by their singing in the town, accompanied by the attending multitude, the rousing martial Common Riding song *The Colour*. The music dates from the most ancient times, and expresses more than any other air the wild and defiant strain of the war tramp and the battle shout. The song seems to have been founded on the invocation of the early Saxon warriors to their chief deities, Thor and Odin. In the Anglo-Saxon language it is 'Tyr hœbbe us, ye Tyr ye Odin,' which is 'May Tyr have us,

both Tyr and Odin.' The song has been changed by local poets in its descent to recent times. The more popular variation, and the one now sung after the riding of the marches, was composed by James Hogg, a Hawick stocking-maker, about 80 years ago. The following are some of the stanzas:—

'Scotia felt thine ire, O Odin!
On the bloody field of Flodden;
There our fathers fell with honour,
Round their king and country's banner.

'Teribus, ye Teri Odin,
Sons of heroes slain at Flodden,
Imitating Border Bowmen,
Aye defend your rights and Common.

'Twas then Drumlanrig, generous donor,
Gave (immortal be his honour)!
What might soothe Hawick's dire disaster,
Laud for tillage, peats, and pasture.'

The song goes on to describe the victory of the Hawick men over a plundering party of English soldiers below the town; and then concludes—

“Hawick shall triumph 'mid destruction,”
Was a Druid's dark prediction;
Strange the issues that unrolled it
Cent'ries after he'd foretold it.

'Peace be thy portion, Hawick, for ever!
Thine arts, thy commerce flourish ever!
Down to latest ages send it—
“Hawick was ever independent.”'

The municipal constitution of the burgh was established by a special act of parliament in 1861. It is

governed by a provost, 4 bailies, and 10 councillors, who also act as Police Commissioners. The Burgh Police (Scotland) Act of 1892 made no difference in the governing body of Hawick. In 1867 it acquired the rank of a parliamentary burgh, and, united with Galashiels and Selkirk, returns one member to parliament. The annual value of real property rose from £33,652 in 1872 to £57,556 in 1883, and to £73,326 (exclu-

sive of railways) in 1895-96. The revenue derived from the burgh property in 1896 was £2387. The parliamentary electors numbered 2800, the municipal 3583 (including 783 females) in 1896. Pop. of burgh (1861) 10,410, (1871) 11,356, (1881) 16,184, (1891) 19,204.

If few of the people of Hawick have attained to lasting national distinction, it has always been rich in humourists, poets, and local historians, who have sweetened its native air and ennobled its romantic scenery in the charms of literature. In his valuable history James Wilson says—that Gawin Douglas, afterwards Bishop of Dunkeld, was appointed rector of Hawick in 1496. According to Dr Laing, the antiquary, the reading of the original MS. is *Hawicke*, which was the old name of Linton or Prestonkirk, near Dunbar. It is therefore doubtful at least whether the poet-bishop tuned his Virgilian verse by the banks of the Slitrig. The Rev. William Fowler, parson of Hawick, was celebrated as a poet and a scholar. Several of his pieces in MS. are preserved in the library of the University of Edinburgh. The Rev. Alexander Orrok, who died in 1711, a profound divine and one of the leaders of the Church of Scotland, was a man of warm and extensive charity, and a promoter of higher education, leaving a large part of his property for an endowment to the Grammar School. The Rev. William Crawford, minister of Wilton, who died in 1742, was the author of several eminently practical religious works. Dr Thomas Somerville, for nearly 60 years minister of Jedburgh, and celebrated for his history of the reign of Queen Anne, was born in the parish manse, and was the son of the minister. The Rev. Dr

John Young, minister of the first antiburgher congregation, was the author of various works, and, among them, one in explanation and defence of the British Constitution—a book written to expose and counteract the revolutionary sentiments which spread in many parts of the country after the French Revolution. The book came to the notice of Mr Pitt, who was so struck with its force and impressed with its utility for the times, that he sent a complimentary letter to Dr Young, and secured a pension for two of his daughters. The parish of Wilton enjoyed for 53 years the ministry of Dr Samuel Charters, a man whose excellencies shine in his published sermons, and in his less known *Essay on Bashfulness*, which reveals such a delicate knowledge of the human heart, and such a power of portraying its most tender movements, as to give him a place among the more famous sentimentalists of the land. Mr Robert Wilson, a native of the town, published his history of Hawick in 1825. The annals of the town and neighbourhood, after much and learned research, were compiled by Mr James Wilson, the town clerk, and were published in 1850. This work has stimulated the production of similar annals of other towns. Foremost, however, of all the citizens of Hawick in national reputation, stands James Wilson, long the editor of the *Economist*, and the chief expounder of the principles of political economy which have been widely dominant throughout the empire. Having entered Parliament he rose in influence and authority, and at a very peculiar and critical juncture in our Eastern affairs, after the Mutiny, was appointed and sent out to act as the Finance Minister of India. He brought his great knowledge and energy to bear on the accumulated difficulties which met him, and in a short time succeeded in promoting the most beneficial improvements in the regulation of taxation and finance. But very soon his career was terminated by a fatal disease induced by his extraordinary exertions.

Previous to 1850 the parish of Hawick reached from Teviot stone, the source of the river, to 1 mile below the town, 16 miles long by 2 to 3 miles broad. It thus included a large part of the vale of the 'sweet and silver Teviot.' In the above year the larger part was disjoined, and, with a considerable part of the parish of Cavers, was formed into the *quoad omnia* parish of Teviothead. The Duke of Buccleuch was here also the benefactor, building both church and manse at his own expense, giving ground for the glebe, and furnishing the greatest part of the stipend. The parish is 6 miles from SW to NE, 3 miles broad, and previous to 1891 contained 6203½ acres, of which 90½ were water. In that year the Boundary Commissioners transferred to it a small detached portion (consisting of 1 acre) of the parish of Wilton situated within the burgh of Hawick and on the Hawick side of the Teviot, and gave to Wilton the Albert Mills portion of the parish of Hawick. At the hamlet of Newmill, at the upper end, there is a landward school, with schoolhouse, with accommodation for 116 children, an average attendance of 70, and a grant of £75. The scenery of the parish is soft and beautiful throughout—Teviot, with its tributaries, the Allan, the Borthwick, and the Slitrig, flowing through smiling valleys richly cultivated, rising into slopes and knolls crowned with woods, and backed by ranges of undulating hills. Branxholme stands on an elevated terrace above the Teviot, rich in its ancient woods, the scene of Sir Walter Scott's *Lay of the Last Minstrel*, and of one of Allan Ramsay's finest songs, dedicated to *The Bonnie Lass of Branksome*—

'As I cam' in by Teviotside,
And by the hraes of Branksome,
There first I saw my blooming bride,
Young, smiling, sweet, and handsome.'

Nearer the town, and on an eminence which commands one of the finest views on the Border, stands the ancient tower or peel of Goldielands, one of the most complete now in the South of Scotland. In 1891 the population of the entire parish was 14,348, of whom, ecclesiastically, 5619 were in Hawick parish, 3939 in St Mary's *quoad*

Seal of Hawick.

sacra, and 4564 in St John's *quoad sacra*.—*Ord. Sur.*, sh. 17, 1864. See Mrs Oliver's *Upper Teviotdale* (1887).

Hawkhead, an estate, with a mansion, in Abbey parish, Renfrewshire, on the left bank of the White Cart, 2½ miles SE of Paisley. It belonged in the middle of the 15th century to the doughty Sir John Ross, whose son and namesake appears in the parliament roll of 1489-90 as the first Baron Ross of Hawkhead—a title that expired with the fourteenth Lord in 1754. The estate passed first to his eldest sister, Mrs Ross Mackye, and next to a younger sister, Elizabeth, widow of the third Earl of Glasgow. Her son, the fourth Earl, succeeded her in 1791, and in 1815 was created Baron Ross of Hawkhead in the peerage of the United Kingdom. Hawkhead was sold by the sixth earl, and is now owned partly by William Stevenson, Esq., and partly by the Govan Lunacy Board. The Board built in 1892-95 a handsome asylum in the Italian style, with a central tower, and capable of accommodating between 500 and 600 patients. Hawkhead House, originally a large ancient tower, underwent such enlargement in the time of Charles I. as to take the form of a quadrangle. It was visited in 1681 by the Duke of York, afterwards James VII. Repaired and improved in 1782, it is now an irregular pile of antique appearance, with gardens originally formed in the Dutch style, and a finely-wooded park.—*Ord. Sur.*, sh. 30, 1866.

Hawthornden, the romantic home of the poet Drummond, in Lasswade parish, Edinburghshire, 1½ mile NE of Roslin, and 5 furlongs NW of Hawthornden Junction on the Peebles branch of the North British, this being 11½ miles S by E of Edinburgh. Standing upon the steep right bank of the North Esk's rocky pine-clad glen, classic Hawthornden is 'a venerable and picturesque looking edifice. The left side, as you face it, consists of a hoary mass of ivy-clad masonry, perhaps 600 years old, while the inhabited part to the right is a pleasant irregular house, with gables and a turret in the style of the 17th century.' Over the doorway are carved in marble the armorial bearings of Dr William Abernethy Drummond (1720-1809), Bishop of Edinburgh; and near them is a Latin inscription by the poet, telling how in 1638 he restored the house for himself and his successors; whilst a tablet, placed by the Bishop on the gable, runs—'To the memory of Sir Lawrence Abernethy of Hawthornden, a brave and gallant soldier, who in 1338 conquered Lord Douglas five times in one day, yet was taken prisoner before sunset.' Within, the most interesting objects are a great two-handed sword, Robert Bruce's, it is said; a good portrait of the poet's father, Sir John Drummond, who was gentleman-usher to James VI.; and a poor one of the poet himself. He, William Drummond, the 'Scottish Petrarch,' was born here on 13 Dec. 1585; here in the winter of 1618-19 he entertained Ben Jonson, who had walked from London to Edinburgh; and here, broken-hearted by Charles I.'s execution, he died on 4 Dec. 1649. The present owner is Sir James Hamlyn Williams-Drummond, fourth Bart. since 1828 (b. 1857; suc. 1868). The grounds are of great beauty, and contain a large sycamore, called the 'Four Sisters' or 'Ben Jonson's Tree,' whilst a rocky seat is named the 'Cypress Grove' after Drummond's first published production. Some curious artificial caves are in cliffs below the mansion and farther up the North Esk's ravine. Formed, it would seem, with prodigious labour out of solid rock, they communicate one with another by long passages, and have access to a draw-well of great depth, bored from the court-yard of the mansion. Like the 'earth-houses' of the North, they probably belong to prehistoric times. Three of them bear the names of the King's gallery, the King's bedchamber, and the King's dining-room; and they were occupied in 1338 as military retreats by the adventurous band of Sir Alexander Ramsay of Dalhousie. These caves were visited, on 14 Sept. 1842, by Queen Victoria. A fine view is got of Hawthornden from a point of rock overhanging the river, and popularly called John Knox's pulpit. See Prof. David Masson's *Drummond of Hawthornden* (Lond. 1873), and John Small's *Castles and*

Mansions of the Lothians (Edinb. 1883).—*Ord. Sur.*, sh. 32, 1857.

Hayland or Hailan, Loch. See DUNNET.

Hayocks, an estate, with a mansion, in Stevenston parish, Ayrshire, 1 mile NE of the town.

Haystoun, a farmhouse in Peebles parish, Peeblesshire, amid fine old trees on a knoll overhanging the right bank of Glensax Burn, 2 miles S by E of Peebles town. Built in 1660, and forming three sides of a quadrangle, it is a good example of an old-fashioned country-seat; and over its chief entrance has a tablet, sculptured with the armorial bearings of the Hays, who acquired the estate in the course of the 16th and 17th centuries. Its present proprietor is Sir Duncan Edwyn Hay of Smithfield and Haystoun, tenth Bart. since 1635 (b. 1882; suc. 1895). The reach of GLENSAX Burn through the grounds is often called Haystoun Burn.—*Ord. Sur.*, sh. 24, 1864.

Haywood. See HEYWOOD.

Hazelbank, a village in Lesmahagow parish, Lanarkshire, on the left bank of the Clyde, near Stonebyres Fall, 3½ miles WNW of Lanark. Pop. (1891) 301.

Hazelfield House, a mansion in Renwick parish, Kirkcudbrightshire, 10½ miles SSW of Dalbeattie.

Hazelhead, an estate and mansion in Newhills parish, Aberdeenshire, 3 miles W by S of Aberdeen.

Heacamhall, Heacle, or Hecla. See USTR, SOUTH.

Heads of Ayr, a rocky, precipitous headland in Maybole parish, Ayrshire, flanking the S side of the Bay of Ayr, 4 miles SW of Ayr town. Abutting from the northern skirt of BROWN CARRICK HILL, it has an altitude of 258 feet above sea-level, and consists of black, earthy, tuffaceous trap, traversed at one part by a thick basaltic vein.—*Ord. Sur.*, sh. 14, 1863.

Hearthstane Burn. See HARESTANE.

Heatherlie, a *quoad sacra* parish of Selkirk and Roxburgh shires, disjoined in 1885 from the parish of Selkirk, and containing a church with a memorial stained-glass window, and a public school. Pop. (1891) 2252.

Hebrides or Western Islands, a large group or series of groups of islands and islets extending along the greater portion of the western coast of Scotland. Anciently, the Hebrides comprehended also the islands in the Firth of Clyde, the peninsula of Kintyre S of the narrow neck of land between East and West Loch Tarbert, the island of Rathlin off the NE coast of Ireland, and even the Isle of Man; but the modern Hebrides embrace only the islands flanking the W coast, from Cape Wrath on the N to Kintyre on the S, and extending from 58° 32' of N latitude to 55° 33', or a distance, measuring in a straight line from the Butt of Lewis on the N to the Mull of Islay on the S, of 205 miles. The islands are divided into two main groups, the Inner Hebrides and the Outer Hebrides. The former extend along the coast for 150 miles, measuring in a straight line from the Point of Aird at the N end of Skye to the Mull of Islay at the S end of the island of that name; and the distance of the various islands from the mainland varies from less than half a mile at the narrow strait of Kyle Rhea, at the SE corner of SKYE, to 18½ miles at the N end of Skye, 51½ at Tyree, and 21 at the S end of Islay. The Inner Hebrides are divided into two portions by the Point of Ardnamurchan. The division to the N may be called the Skye group, and consists of Skye with the adjacent islands of South Rona, Fladda, Raasay, Scalpa, Longa, Pabbay, Soay, Canna, Rum, Eigg, and Muck, and a number of smaller islets. These are separated from the mainland by part of the Minch, the Inner Sound, Kyle Akin, the mouth of Loch Alsh, Kyle Rhea, Glenelg Bay, and the Sound of Sleat; and all since 1891, when the Boundary Commissioners transferred Rum, Canna, Muck, and Sandy from Argyllshire, belong to the county of Inverness, except some small islets close inshore along the coast to the N of Loch Alsh, which are in Ross-shire. Rum, Eigg, Canna, Muck, and Sandy are known as the Small Isles. The division S of Ardnamurchan falls into two sub-divisions—the Mull group extending from Ardnamurchan S to the Firth of Lorne, and the Islay

group extending from the Firth of Lorne southward along the coast of Kintyre. The first group contains Mull, with the cluster of islands round it, viz., Lismore, Kerrera, Iona, Staffa, Eorsa, Gometra, and Ulya, while westward are the small group of the Treshinish Islands, and still farther W the islands of Coll and Tyree. Besides these there are a number of smaller islets, including, to the SSW of Tyree, the rock on which the Skerryvore Lighthouse is built. The group is separated from the mainland by the Sound of Mull, the sound between Lismore and the mainland, and the Sound of Kerrera. The second group has the largest island, Islay, at the extreme S end, and gradually tapers to the NNE by Jura, Scarba, Luing, Shuna, and Seil. To the E of Islay, and within a mile and a half of the Kintyre coast, is the island of Gigha, while to the W of Jura are Colonsay and Oronsay. The group is separated from the mainland by the narrow passages to the E of Seil and Shuna, and farther S by the Sound of Jura. The whole of the islands S of Ardnamurchan are in the county of Argyll.

The Outer Hebrides or Long Island group lies to the W of the Inner Hebrides, and has the long triangular portion known as Lewis to the N, and an extended irregular chain tapering away in a S by W direction. The northern extremity is W by S of Cape Wrath, and distant from it 46 miles, while the southern extremity at Barra Head is W by N of Ardnamurchan, and distant from it 54 miles. The islands extend from N latitude 58° 31' at the Butt of Lewis, to 56° 43' at Barra Head, and over a distance, measuring in a straight line between these two points, of about 130 miles; and they are so closely connected that the whole chain is often spoken of as the Long Island. To the N is the largest island of the Hebrides, the northern part of which is known as Lewis, while the southern part is called Harris. Off the SE of Lewis are the Sbiant Isles, while on the W side, in Loch Roag, is the island of Great Bernera. Off the E coast of Harris, at the entrance to East Loch Tarbert, is the island of Scalpa, while on the W and S are Scarp, Taransay, Ensay, Killigray, Groay, and a very large number of smaller islands and islets. Separated from this island by the Sound of Harris is the island of North Uist; and across a narrow channel about $\frac{1}{2}$ mile wide, still farther S, is Benbecula. To the S of Benbecula, and separated from it by the Sound of Benbecula, is South Uist, with the Sound of Barra at its southern extremity; and to the S of this lies the last sub-group of the Outer Hebrides, known as the Barra Isles. North and South Uist and Benbecula in reality form only one island, as the straits separating them are fordable between half tide and low water. At the N end of North Uist are the smaller islands of Shillay, Pabbay, Berneray, Boveray, Valay, Tahay, Hermetray; on the SE are Flodda, Rona, and Grimisay; while to the SW is Baleshare Island, with 3 miles to the W the group of small islands known as the Monach Islands. There are a number of islets about Benbecula, but the only one of any size is Wiay at the SE corner. Connected with South Uist the only island of importance is Eriskay at the S end. Of the Barra Isles the principal is Barra, with the isles of Fioray, Fuda, Gighay, and Hellisay, at the N end; and Vatersay, Muldoanich, Fladda, Sanderay, Lingay, and Pabbay, at the S end; while farther S still are Mingalay and Bernera, the latter being the most southerly of all the Outer Hebrides. About 20 miles off the centre of the W coast of Lewis is the small group of the Flannan Isles or the Seven Hunters. Sixty miles W of Harris in N latitude 57° 49' 20", 'set far amid the melancholy main,' is the small group consisting of St Kilda and the adjacent islets of Levenish, Soa, and Boreray. Lewis is separated from the W coast of Ross and Sutherland by the arm of the Atlantic called the Minch, which is from 24 to 40 miles wide; while Harris, North Uist, and Benbecula are separated from Skye by the Little Minch, which is from 15 to 18 miles wide. A line following the course of the stream flowing into the head of Loch Resort, and then turning round the S end of the high ground

between Loch Langabhat and Loch Seaforth, and reaching the latter about the centre of the W side, opposite the centre of Eilean Seaforth, is the boundary between Lewis and Harris. The former, with the Shiant Isles, belongs to the county of Ross; Harris and all the other islands to the S are in Inverness-shire. 'The disposition,' says Hugh Miller in his *Cruise of the Betsy*, 'of land and water on this coast suggests the idea that the Western Highlands, from the line in the interior whence the rivers descend to the Atlantic, with the islands beyond to the Outer Hebrides, are all parts of one great mountainous plain, inclined slantways into the sea. First the long withdrawing valleys of the mainland, with their brown mossy streams, change their character as they dip beneath the sea-level and become salt-water lochs. The lines of hills that rise over them jut out as promontories, till cut off by some transverse valley, lowered still more deeply into the brine, and that exists as a kyle, minch, or sound, swept twice every tide by powerful currents. The sea deepens as the plain slopes downward; mountain-chains stand up out of the water as larger islands, single mountains as smaller ones, lower eminences as mere groups of pointed rocks; till at length, as we pass onwards, all trace of the submerged land disappears, and the wide ocean stretches out and away its unfathomable depths. . . . But an examination of the geology of the coast, with its promontories and islands, communicates a different idea. These islands and promontories prove to be of very various ages and origin. The Outer Hebrides may have existed as the inner skeleton of some ancient country contemporary with the mainland, and that bore on its upper soils the productions of perished creations at a time when by much the larger portion of the Inner Hebrides—Skye and Mull and the Small Isles—existed as part of the bottom of a wide sound inhabited by the Cephalopoda and Enaliosaurians of the Lias and the Oolite.' The rock of the Outer Hebrides is gneiss, as is also that of Iona, Tyree, and Coll, and it is to the hard tough nature of this that their continued existence is still due, for, acting as a screen to protect the western coast of the mainland from the wild waves of the Atlantic, they have to withstand the fury of a surge that would probably have long since destroyed anything less durable. Even as it is, the broken character of the groups, the winding character of the coast-lines, and the number and the twisting shores of the bays and lochs attest the severity of the struggle. The currents and waves in the narrow straits and passages are everywhere powerful and dangerous, and require the greatest skill and care in their navigation, while in stormy weather they are often for days, and sometimes even for weeks, quite impassable. 'The steamship ploughs her way through the passage, though sometimes with difficulty, and those who stand on her deck look down on the boiling gulf in safety, but it is different with those who sit in a tiny craft with the water lapping around and over them, and the bubbling roar painfully audible. These tideways are ugly indeed to the seaman's eye.' One of the most dreaded passages is the Gulf of Corrievreckan, between Scarba and Jura. It 'is the Hebridean Mahlström, ever regarded with fearful eyes by the most daring sailors of the inland deep. Poets may be allowed to sing like Campbell of "the distant isles that hear the loud Corbrechtan roar;" or, like Scott, of

" Scarba's isle, whose tortured shore
Still rings to Corryvreckan's roar,"

but the dread in the heart of the seaman is far from poetical, for, much as the accounts have been exaggerated, the danger is very real here as elsewhere, 'consisting, not in the whirlpools, but in the terrific sea raised by the wind when contending with the tidal wave and the long Atlantic swell in the narrow passage of the sound. . . . Caught in the numberless currents, a ship becomes at once unmanageable, and must drive whither Fate directs, either to strike on some corner of the coast, or to spring her planks and sink to the bottom, or perhaps, as happened on one traditional

occasion, to be swept in safety out of the tide along the Jura shore. In the most dangerous part of the gulf, where it is a hundred fathoms deep, there is a submerged pyramidal rock, rising precipitously to within fifteen feet of the surface, and the result is a subaqueous overfall, causing in its turn infinite gyrations, eddies, and counter-currents. There is most danger at the flood tide, which sets from the eastward through the gulf at the rate of ten or twelve miles an hour, and encounters the whole swell of the Western Atlantic rolling into the narrow sound. At the turn of the tide there is a brief lull, during which in calm weather boats have passed through; but the attempt is at all times to be avoided, as the slightest miscalculation as to the tides, or the sudden rising of the wind, would render escape impossible.' The roar of Corrievechan is heard at all times at a considerable distance. In all the narrower passages the tidal currents run so strong, that it is quite impossible for a sailing vessel to attempt to oppose them. The water whirls and seethes and boils, tossing boat or vessel about, now in one direction, now in another, and carrying either helplessly forward, for unless the wind be very fresh it is left behind, and the helm is useless. The squalls, too, are very dangerous and fickle, and the Minch is particularly noted for its stormy seas.

The scenery of the Inner Hebrides does not differ very much from that of the barer and wilder parts of the Highlands. There are the same rugged mountains, with stretches of moorland or peat moss alternating with rough pasture or stony waste, the same hill crofts, and the same cultivated districts in the low grounds and along the courses of the streams or the shores of some of the bays. In the Outer Hebrides, however, the difference is considerable. There the islands are destitute of wood; and though they are all more or less hilly, the hills are low, except in Harris, where they reach an extreme height of 2662 feet, and they are, besides, everywhere so smooth and heavy in their outlines as to possess but little grandeur. To the S of the Sound of Harris, between that island and North Uist, the hilly ground is chiefly confined to the E coast, while the western shore is flat, and still farther S there are wide tracts of peat-moss. The cliffs are generally too low to show any striking rock scenery; but the shores of Lewis in many places form an exception, as do also the cliffs of the islands of Bernera and Mingalay at the extreme S, which rise to a height of over 1000 feet, and are the dwelling-places of enormous numbers of sea-birds. Tame as the scenery in general may seem, however, to be, there are times and seasons when it presents aspects of beauty and grandeur.

The Hebrides are, however, seen to most advantage in distant sea views, and these, whether from the mainland or from amid the islands themselves, are always strikingly picturesque, and in many cases cause a pleasant surprise by their wild and lonely beauty. Hugh Miller has thus described an evening view from the W coast of Ross-shire at the Gairloch:—'How exquisitely the sun sets in a clear calm summer evening over the blue Hebrides! Within less than a mile of our barrack there rose a tall hill, whose bold summit commanded all the Western Isles from Sleat in Skye to the Butt of Lewis. To the south lay the trap islands; to the north and west the gneiss ones. They formed, however, seen from this hill, one great group which, just as the sun had sunk, and sea and sky were so equally bathed in gold as to exhibit on the horizon no dividing line, seemed in their transparent purple—darker or lighter according to the distance—a group of lovely clouds, that, though moveless in the calm, the first light breeze might sweep away. Even the flat promontories of sandstone, which, like outstretched arms, enclosed the outer reaches of the foreground—promontories edged with low red cliffs, and covered with brown heath—used to borrow at these times from the soft yellow beam a beauty not their own. Amid the inequalities of the gneiss regions within—a region more broken and precipitous, but of humbler altitude

than the great gneiss tract of the midland Highlands—the chequered light and shade lay, as the sun declined in strongly contrasted patches, that betrayed the abrupt inequalities of the ground, and bore when all around was warm-tinted and bright a hue of cold neutral grey.' Cuthbert Bede, in referring to a sunset view from the Kintyre end, speaks in similar terms of 'the long stretch of Islay and Jura with their purple peaks standing out so sharply against the broad bars of molten gold, and the nearer islets floating in a sea whose hue changed from bright emerald to deepest violet, with countless sparkles at every throb.' Viewed from the Sound of Jura the conical and far-seeing Paps of Jura close up the view immediately on the N, and rise to a height of 2569 feet; the north-eastern portion of Islay is screened by the dark and broken precipices of Macarthur's Head, where the Sound of Islay seems dotted over with islets, or walled across with the spray of the vexed waters; Colonsay lies away to the W, and on the E the rugged summits of Arran tower aloft in the distance, and over the intervening seas and the peninsula of Kintyre. From Dunolly Castle, near Oban, there is an excellent view of the S group of the inner Hebrides, while from Ardnamurchan there is one still more extensive and impressive. Lord Teignmouth, indeed, speaking of Skye, is bold enough to claim that 'the grandest scenery perhaps of Scotland occurs in the south-eastern division of the island.'

One very peculiar feature of the Hebrides is the immense number of lochs scattered everywhere about, and, indeed, taking them all in all, there is no part of the known world more watered from above and from below than the Hebrides, for during more than two-thirds of the year they are drenched with almost incessant rain, while, wherever the islands are not intersected by winding arms of the sea, they abound in rivulets or fresh-water lakes. Immense numbers of tiny waterfalls streak their cliffs where little burns rush down, and gradually gather into larger streams. Of these last, upwards of forty are large enough to contain salmon, and they also abound in trout and eels. Lakes and lochans are so numerous, particularly in the Outer Hebrides, as to almost defy numeration. They are everywhere 'as thickly sown amid the land as islands amid the Pacific waters.' The lakes in North Uist alone, which measures about 13 by 16½ miles, were counted by one careful observer up to the number of 170, and these were supplemented by such a number of lochans that it was too tedious to reckon them. The entire number of lochs in the Hebrides may indeed be safely computed at 1500, and their area as extending over 50,000 acres, of which those of Lewis and Uist alone cover more than half. These lakes, though they frequently interrupt communication and occasion other inconveniences, offer but little compensation in return except by providing breeding and dwelling places for various species of water birds and of fish. They are mostly shallow, none exceeding 3 or 4 fathoms in depth, and are indeed, both in themselves and in their surroundings, of a character such as the genius of improvement would seek to banish altogether. The islands are also extensively intersected by inlets and arms of the sea, many of which have winding shores, with narrow fiords branching off in all directions, and spreading about in a regular network of waters. Loch Maddy, for instance, in North Uist, has only a surface area of 10 miles, but yet its shore-line measures fully 300 miles. So numerous and branching are these sea-lochs that their windings give the islands a coastline of about 4000 miles, and their deep and long-reaching bays are eminently valuable in connection with the fishings for the sheltered harbours they afford for boats and ships.

The area of the Hebrides, exclusive of foreshores and the larger lochs, is in round numbers 1,800,000 acres or 2812 square miles. As regards size, the islands may be distributed into four classes. The first class, containing the largest islands, includes Islay, Jura, Mull, Skye, both Uists, and Harris and Lewis, and these taken together comprehend about eight-ninths of the entire

area. The second class includes Gigha, Colonsay, Luing, Seil, Kerrera, Lismore, Ulva, Gometra, Tyree, Coll, Eigg, Rum, Raasay, Rona, Barra, Benbecula, and Bernera. The third class includes Scarba, Lunga, Easdale, Inniskenneth, Iona, Muck, Canna, Scalpa, Fladda, Flodda, Eriskay, Pabbay, Boreray, and Taransay. The fourth class includes about 120 tiny islets with some little productive value, and a large number of rocky islets and skerries. Inclusive of these last the entire number of islands and islets has been set down in round numbers as 500, but understanding islands and islets to be objects which on a large map have a distinct figure and characteristic outline, the number is reduced to about 160, and of these about 100 are inhabited all the year round, while a number of others are inhabited temporarily during the summer months only. The inhabited islands, with their populations in 1881 and 1891 respectively, are as follows:—In Argyllshire, Balnaha (108; 68), Calve (10; 10), Cara (4; 3), Carna (7; 10), Coll (643; 522), Colonsay (387; 358), Danna (40; 42), Devaer (5; 6), Duirinish (24; 9), Easdale (460; 317), Earrait (51; 47), Eriska (7; 17), Gigha (378; 398), Gometra (30; 31), Innischonan (0; 9), Inniskenneth (8; 2), Iona (243; 247), Islay (7559; 7375), Jura (773; 619), Kerrera (103; 92), Lismore (621; 561), Little Colonsay (0; 2), Luing (527; 632), Lunga (17; 15), Mull (5229; 4691), Musdale (9; 13), Oronsay beside Colonsay (10; 23), Oversay (15; 9), Pladda at Jura (10; 11), Ree in Kilmartin (0; 5), Sanda (14; 36), Scarba (19; 9), Seil (661; 548), Sheep off Lismore (4; 8), Shuna in Kilbrandon (14; 11), Shuna off Lismore (8; 6), Skerryvore (3; 3), Skervuile (19; 2), Torsay (10; 7), Tyree (2730; 2449), Ulva off Kintyre (19; 20), Ulva in Kilninian (53; 46). In Invernessshire are Balleshare (266; 318), Barra (1869; 2131), Benbecula (1661; 1534), Bernera (452; 501), Berneray (72; 36), Boreray (137; 152), Canna (57; 40), Eigg (291; 233), Ensay (6; 11), Eriskay (466; 454), Fladda (87; 76), Flodda (54; 51), Fuda (6; 7), Grimisay in North Uist (292; 281), Grimisay in South Uist (23; 39), Harris (3463; 3681), Heisker (111; 135), Hut (10; 7), Killigray (6; 8), Kirkibost (12; 6), Levera (11; 12), Mingalay (150; 142), Monach (13; 5), Muck (51; 43), Ornsay (47; 64), Pabbay off Barra (26; 13), Pabbay off Harris (2; 3), Pabbay off Strath (10; 7), Raasay (478; 438), Rona (176; 181), Ronay (6; 6), Rum (89; 53), St Kilda (77; 71), Sanday (62; 62), Sanderaay (10; 4), Scalpa (540; 517), Scalpay (37; 49), Scarp (213; 143), Scotasay (0; 13), Shona (118; 104), Skye (16,889; 15,705), Soay in Bracadale (102; 78), Soay in Harris (0; 15), Taransay (55; 56), North Uist (3371; 3231), South Uist (3825; 3708), Vallay (29; 34), Vatersay (19; 32), Wiay off South Uist (5; 10). In Ross are Bernera (596; 535), Croulin (9; 9), Lewis (24,876; 27,045), Shiant (6; 8). The uninhabited islands of any note are Frielhouse, Garvelloch, MacCaskin, Oronsay in Morvern, Sheep in Kilbrandon, Calvay, Mhorgay, Wiay off Skye, and Pabay, in Argyllshire; and Ascrib, in Inverness-shire.

Westerly winds prevail on an average from August till the beginning of March, and are generally accompanied by very heavy rains; but during most of March, and often also during October and November, a NE or NNE wind prevails, and this, though intensely cold, is generally dry and bracing. Northerly and southerly winds are not very frequent, and seldom last more than two or three days. The mountains of Jura, Mull, and Skye, attaining to an elevation of from 2000 to 3000 feet, intercept the damp winds blowing off the Atlantic, and so draw down on the land in their vicinity large quantities of moisture; but they at the same time modify the climate around them, and screen the lower land in their neighbourhood from the violent winds that sweep everywhere off the sea. Though the comparatively low islands of Tyree, Coll, Benbecula, North Uist, and the low seaboard of Harris and Lewis have abundance of rain, they are probably little, if at all, damper than the western sea-board districts of the mainland. Frost and snow seldom cause much incon-

venience on the large or high islands, and are almost unknown on the small and low ones. Rain falls on an average on 264 days in the year, and the amount of rainfall is about 48 inches. The mean temperature for November, December, January, and February is 39°, for the rest of the year 49°. Owing to the comparative warmth of the islands and the lowness and closeness to the sea of the arable ground, and notwithstanding the damp and their unsheltered position, grasses and corn attain maturity at a very early period after their first start from the ground. In the southern isles sown hay is cut down between the latter end of June and the middle of July, and in the northern isles ten to fourteen days later; in all the islands barley is often reaped in August, and crops of all sorts secured in September; and in Uist, Lewis, and Tyree, here has ripened and been cut down within ten weeks of the time of sowing. In spite, too, of the same unfavourable conditions, longevity is of as frequent occurrence as among an equal amount of population in any other part of Europe, and many of the old prevalent diseases are here, just as on the mainland, losing their epidemic and malignant character.

Soils and Agriculture.—In a region so extensive there is, as might be expected, a great diversity of soils. It has been said of the Outer Hebrides that 'nature has wasted her capabilities in a climate to which she has refused vegetation, nay even denied a soil; that which is not rock is sand, that which is not sand is bog, that which is not bog is lake, that which is not lake is sea,' but this is very much exaggerated; and although the islands as a whole are by no means very fertile, there are yet many districts where the land is fairly productive, and they are indeed more populous and aggregately more productive than the same extent of many parts of the mainland Highlands, or even of the mountainous parts of Northumberland, Cumberland, and Westmoreland. Islay, for example, has 36 square miles of a thin stratum of decomposed limestone, occasionally intermixed with clay and gravel, several miles of rich clay land, and some thousands of acres of good loam. Gigha, with red clay and gravel, and inferior to many of the islands in natural capabilities, affords an excellent example of what might, by vigorous and judicious management, be accomplished in many seemingly inhospitable parts of the Highlands. Jura, though seeming to a cursory glance to be mostly mere barren mountain, yet contains some fertile patches of clayey gravel and patches of stony loam, as well as many hundred acres of improvable moss. Mull, though predominantly upland moor, has a considerable tract of soil formed from disintegrated basalt, and producing good grassy sheep pasture. Lismore has abundance of grass, and where well managed the calcareous soil yields good results under tillage. Skye possesses all the varieties of soil found in the Scottish Lowlands, except pure sand, and, notwithstanding the prevalence of barren mountains and marshy moor, there are patches of considerable fertility. In one parish alone there are 4000 acres of as fine loam and loamy clay on a gravelly bottom as are to be found anywhere in Scotland. The Outer Hebrides, over most of the seaboard and in portions of the interior, have a soil of disintegrated gneiss or granite, which, when mixed with clay or shell sand, or when manured with the sea-weed that lies plentifully at hand, yields abundant crops of oats and bere. All along the western side of this chain there is a good deal of sand-drift, but the action of this may here be regarded as beneficial. The tenant of the land is for the time being injured, and the land rendered barren in places where the sand rests too deep, yet the sand is shell-sand, and where it does not lie too deep is of immense benefit to the soil. In North and South Uist, in Barra, in Coll, in Harris, in Colonsay, and in many of the other islands as well, the sand is drifted into the interior, where, at the marshy ground along the base of the hills, it meets with the moisture it needs and peat, on which it acts as a manure. It brings on a coat of verdure where nothing grew before but heath; whence that which on the flat and arid shores is the cause of

small spots of barrenness, is in its progress the source of extensive fertility. The springing of white clover is one among the results which prove this good effect, as that is an invariable result of the application of calcareous matter to Highland pastures. About two-thirds of the entire Hebrides may be reckoned as moor or moss, and there is a considerable portion bare rock or pure sand; but the moss is of great value and importance, both as capable of improvement into pasture or arable land and as providing the only fuel used throughout the islands. It has been estimated that of the whole area about 200,000 acres are arable and meadow land; about 23,000 are occupied by villages, farmhouses, gardens, and gentlemen's parks; about 11,000 are occupied as glebes, churchyards, and schoolmasters' crofts; about 800,000 as hill pasture, paying rent, and partially enclosed; about 26,000 dug for peat or occupied by roads, etc.; about 30,000 are barren sand and bare rock; and about 700,000 are occupied by moor, marsh, and undrained lochs.

The Hebrides were in the beginning of the nineteenth century distributed into 49 estates, 10 of which yielded from £50 to £500 of yearly rental, 22 from £500 to £3000, and 8 from £3000 to £18,000. Six of the largest were in possession of noblemen. About one-fifth of all the land is under strict entail, and about three-fifths belong to absentees. The great estates are managed by factors, who usually reside on them. In the actual working of the soil four different classes are concerned: first, proprietors, who keep their lands under their own management; second, tacksmen, who hold land under 'tacks' or leases, and with rents of over £50, and sometimes amounting to several hundred pounds a year; third, tenants who hold lands of the proprietor without leases, and whose rents are from £20 to £50 a year; fourth, crofters holding land without lease either of the proprietor or of the tacksmen, and whose rents never exceed £20 a year, and are generally very considerably below that sum. This class may be taken to include the cottars of some districts, who are sub-tenants holding from year to year. Some of the proprietors who work their own lands have extensive estates, and are keen and successful agriculturists. The tacksmen used formerly to be connected with the proprietors by clanship or blood, and formed a body of resident gentry; but after the rebellion of 1745 most of the chiefs and other proprietors suddenly raised the rents, and deprived the tacksmen of the power of sub-letting their lands. The sudden rise of rents took the tenants by surprise, and large numbers of them emigrated in disgust and despair. The present tacksmen are simply the larger tenants, with security of holding, and it is much to be regretted that similar security is not given to the smaller tenants, as to the lack of it is due the utter absence of any attempt at improvement. The crofters and cottars, who form the great bulk of the population, are very similar to the cottars of the mainland, and a considerable portion of their small rents is often paid in labour. Generally with large families—whom they in many cases prefer to have with them in a state of abject misery rather than send them out to service, which they esteem a great hardship—they would in most cases be very much happier in the actual position of ordinary day-labourers.

When the old tacksmen system was broken up, about the middle of the 18th century, many of the farms held by tacksmen seem to have been taken directly from the proprietor by joint-tenants, who grazed their stock upon the pasture in common, and tilled the arable land in 'run-rig,' that is, in alternate 'rigs' or ridges, distributed annually. Since the commencement of the 19th century, the arable land has in most cases been divided among the joint-tenants or crofters in separate portions, the pasture remaining as formerly in common. The first effect of this division into separate crofts was a great increase of produce, so that districts which had formerly imported food now became self-supporting. But evils followed which had not been foreseen. So long as the farms were held in joint-tenancy there was

a barrier to their further subdivision which could rarely be overcome. But when each joint-tenant received his own separate croft, this restraint for the most part ceased. The crofters who had lived in hamlets or clusters of cottages now generally established themselves separately on their crofts. 'Their houses, erected by themselves,' says Sir John M'Neill, who was appointed by Government to report on the district in 1850, in consequence of the great distress in 1846, 'are of stone and earth, or clay. The only materials they purchase are the doors, and, in most cases, the rafters of the roof, on which are laid thin turf, covered with thatch. The crofter's furniture consists of some rude bedsteads, a table, some stools, chests, and a few cooking utensils. At one end of the house, often entering by the same door, is the byre for his cattle; at the other, the barn for his crop. His fuel is the peat he cuts in the neighbouring moss, of which an allotted portion is often attached to each croft. His capital consists of his cattle, his sheep, and perhaps one or more horses or ponies; of his crop that is to feed him till next harvest, and provide seed and winter provender for his animals; of his furniture, his implements, the rafters of his house, and, generally a boat, or share of a boat, nets or other fishing gear, with some barrels of salt-herrings, or bundles of dried cod or ling for winter use.' As originally portioned out the crofts appear to have been quite sufficient to maintain the crofter's family, and yield the landlord his yearly rent. But when kelp was largely and profitably manufactured, when potatoes were extensively and successfully cultivated, when the fishings were good, and the price of cattle was high, the crofter found that his croft was more than sufficient for his wants; and when a son or a daughter married, he divided it with the young couple, who built themselves another house upon the ground, sharing the produce, and contributing to the rent. Thus many crofts which are entered on the landlord's rent-roll as in the hands of one man, are, in fact, occupied by two, three, or even in some cases, four families. On some estates efforts were made to prevent this subdivision, but without much success. If the erection of a second house on the croft was forbidden, the married son or daughter was taken into the existing house; and though the land might not be formally divided, it was still required to support one or more additional families. It appears that attempts were made in some cases to put an end to this practice, 'but it was found to involve so much apparent cruelty and injustice, and it was so revolting to the feelings of all concerned, that children should be expelled from the houses of their parents, that the evil was submitted to and still continues to exist.' The population thus progressively increasing received a still further stimulus from the kelp manufacture. This pursuit required the labour of a great number of people for about six weeks or two months in each year; and as it was necessary to provide them with the means of living during the whole year, small crofts were assigned to many persons in situations favourable for the manufacture, which, though not alone able to maintain a family, might, with the wages of the manufacture, suffice for that end. When a change in the fiscal regulations destroyed this manufacture, the people engaged in it were thrown out of employment, and had they not been separated by habits and language from the majority of the population of the kingdom, they would no doubt have gradually dispersed and sought other occupations. But having little intercourse with other districts, which were to them a foreign country, they clung to their native soil after the manufacture in which they had been engaged was abandoned. Their crofts were then insufficient to afford them subsistence. Emigration somewhat retarded the increase of numbers, but the emigrants were the more prosperous of the tenants and crofters, not the persons who had difficulty in supporting themselves at home. The proprietors, anxious to check the redundant population, and to increase their rents so materially reduced by the decay of the kelp manufacture, let the lands vacated by the emigrants to tacksmen, who were

able, by their large capital and the new system of sheep-farming, to pay higher rents than the crofters could offer. These increased rents were at the same time collected at less cost, with less trouble, and with more certainty. The proprietors were thus led to take every opportunity of converting lands held by crofters into large farms for tacksmen, planting the displaced crofters on fishing crofts and crofts on waste land. In consequence discontent spread rapidly, and an agitation sprang up which in some places led to breaches of the peace, and at Tyree and Lewis to the landing of marines. The crofters complained that their rents were exorbitant, that in very many instances common grazings had been taken from them and converted into deer parks, and that their crofts had been reduced in extent or taken entirely from them without any compensation. The result was that a Crofters' Act was passed in 1885, somewhat on the lines of the Irish Land Act of 1881, and a commission appointed whose duty was, on the petition of the crofters, to fix a fair rent, to settle the arrears, and to inquire into the grazings and the size of the crofts. This commission has been very successful, and has adjudicated upon thousands of cases, in the majority reducing the rent, wiping out arrears, etc. Another commission was appointed to superintend a colonization scheme, by which suitable emigrants were sent to Canada and provided with money and other supplies. To still further aid them a Congested Districts (Scotland) Act was passed in 1897.

In the beginning of the nineteenth century many of the landlords in the Hebrides devoted themselves vigorously to the improvement of both land and people, and, in general, with great success. The chief improver at an early date, both as to extent and energy, was Campbell of Islay, who so revolutionised the agricultural character of that island between 1820 and 1840, that, from a condition of being obliged to import grain to the value of £1200 annually, it passed into a condition of being able to supply a sufficiency of grain for all the Hebrides and the Western Highlands. Mr Clark, of Ulva, went to Belgium in 1846, in order to study the system of *petite culture*, so that he might introduce it on his estate in the Hebrides, but he says—'The result of my investigation was to convince me that the Belgian system was altogether unsuited for Ulva or any other part of the Hebrides;' and, indeed, though the croft system is in most cases precisely a system of spade husbandry, the results will always differ widely from those obtained on the Continent with better soil and a finer climate. The peasant proprietary which generally accompanies spade husbandry seems, for the same reason, equally unsuitable, for Mr Walker, who, as one of the assistant-commissioners on the Royal Commission on Agriculture, instituted extensive inquiries into the state of the Hebrides, and had ample opportunity of studying the subject, gives, in a minute and painstaking report, published in a blue-book in 1881, the following very decided opinion:—'Peasant proprietors on such islands would be a failure; a large and rich proprietary willing to spend for the benefit of property and people is what is most required, and will do most good.' Pre-eminently such a proprietor as Mr Walker seems to desiderate was the late Sir James Matheson, the greatest benefactor of the Hebrides in the present age, who, in 1844, purchased the vast estate of Lewis from the representatives of the last Earl of Seaforth. For 417,416 acres the sum of £190,000 was paid, and since then a sum of over £400,000 has been expended in rebuilding a number of houses, of which there are altogether about 3500 on the estate, in making 170 miles of good road, in constructing roads and draining, etc. The heaviness of some items of outlay may be imagined when it is mentioned that all the wood, lime, and slate had to be imported specially, while £4000 was spent in relieving cases of distress during the famine in 1846 and 1847; and £10,069 in aiding families to emigrate in 1851, '52, '55, '62, and '63, during which years 2231 persons left, mostly for Canada. The present proprietor of the estate is D. Matheson, Esq. When Sir James purchased Lewis in 1844, it was in a

very primitive condition, and, notwithstanding all his efforts for its improvement, it is still far from occupying the position it might. Were the crofters only energetic much might be done by the proper trenching of the gravelly or clay-gravel soils exposed by the cutting and removal of peat for fuel. The clay-gravel is difficult to drain, and heavy, but the lighter parts would yield good crops, while the mixture of decomposed rock soils with moss makes land that yields excellent natural grass. The ordinary crops of the Hebrides are oats (mostly the black variety), bere, rye (in a few of the sandy districts), turnips, and potatoes. The latter hold indeed a similar place in the Hebrides to what they do in Ireland, and constitute four-fifths of the food of the inhabitants, and so any failure in the potato crop is always followed by severe distress, sometimes almost universal, and, if accompanied by any other failures, leads to necessity for direct aid from without. This was strikingly shown in 1846 and 1847, after the first outbreak of the potato disease; and again in the winter of 1882-83 distress was exceptionally severe, as not only was the potato crop a failure in 1882, but also the East Coast fishing, on which so many of the crofters largely depend, while at the same time a violent gale in the autumn utterly destroyed the crop just as it was ready for being cut.

The agricultural condition of the two groups of the Inner Hebrides may be gathered from the condition of ISLAY, RUM, and SKYE, for which reference may be made to these articles. In the Outer Hebrides there is hardly any such thing as regular scientific cultivation, as no rotation is observed except upon a few of the larger farms, and, indeed, on some crofts where the whole produce is necessary for the subsistence of man and beast, no part of the arable land has been under grass or allowed to rest for more than 100 years, while in many cases the seaweed, which is almost the only manure employed, is very exhausting to the soil. Where rotation is observed, the shift is either five, six, or seven, as best suits the particular case. In Lewis the crofter, having the right of pasture in the moorland in the centre of the island, is enabled on an average to keep 4 cattle and 10 sheep, while there is on an average 1 horse or pony for every 4 crofts. The yearly produce of 2000 of the best crofts is 8 bolls of meal and 4 tons of potatoes. In the case of the others, the produce is less; and a good deal of meal has to be imported. These remarks apply also to Harris except that it is rougher, and the patches of arable land are smaller and more difficult to cultivate. In North Uist the state of things is the same, but the soil is drier and yields best returns in moderately wet seasons. On the sandy soil rye is cultivated. The yield of grain is 2½ to 2¾ quarters per acre, potatoes 5 tons, and turnips 10 to 12 tons. In Benbecula and South Uist the state of matters is almost exactly the same, as it is also in the islands still farther to the S. The bere is not reaped in the ordinary way, but is plucked up by the root and used for thatching the houses. The thatch consists of two layers, and every spring the upper layer is taken off and laid carefully aside, while the under layer, which has become considerably decayed, and has got very much impregnated with soot from the peat smoke of the winter, is taken off, and spread over the fields as potato manure. The upper layer is then replaced on the roof, and in autumn receives a covering of fresh straw, and the process is repeated every year. The newer houses are fairly good, but the older are very primitive structures, mostly without chimneys or windows, though some of them have a solitary pane of glass inserted in the thatch. They are low, rounded at the corners, and with round roofs, which, in general appearance, bear a strong resemblance to a potato pit. The walls, which are seldom more than 5 feet high, are constructed of two fences of rough boulders packed in the centre with earth, and in some cases 5 to 6 feet thick. People and cattle are all stowed away together under one roof, and only in some cases is there a partition between the part set aside for the human beings and that which shelters

animals. There is only one entrance, and the floor of the end belonging to the cattle is made lower, so that the compost may collect during the whole of the winter, and be all taken out at once in spring to be used as manure. The thatch roof is held down by ropes of heather, crossing one another, and secured against wind by large stones tied to their ends. The floor is of hard clay, and the fire is in the centre.

As might be expected from the estimated amount of arable and grazing land already given, the pasture lands of the Hebrides are much more important than the arable grounds, and comprehend by far the greater portion of the islands. The high pastures yield herbage all the year round, while the low, though luxuriant and rich during summer and autumn, are totally useless in winter and spring. A large amount of very rich pasture occurs in Skye, Islay, Lismore, Tyree, the Uists, and Lewis, and much of it with better management ought to yield far better results than it does. That in North Uist is better adapted for cattle than sheep, while the grazing of Barra is the best in the Hebrides. The breed of cattle—the same as in the Highlands—was originally the same in all the islands, but now various kinds have been introduced. The Islay and Colonsay cattle are much superior to those in the other islands, and command a price from 50 to 100 per cent. higher. Attention is given to breeding, and not to fattening. Very good cheese and butter are produced, the excellent quality being due to the goodness of the milk. On farms in the Stornoway district the cattle are mostly Ayrshire crosses, but elsewhere they are of the Highland breed, and inferior in quality. About 1500 head of cattle annually leave the Lewis district alone, and in addition 200 are slaughtered in Stornoway, or, in other words, about one in every eight of the Lewis cattle is converted into money every year. The animals in the possession of the farmers are much superior to those of the crofters, and bring a higher price in the market. In North Uist, Benbecula, South Uist, and the islands to the S, the state of matters is the same, but the Highland cattle of North Uist are the best in the Hebrides. The cattle fairs at Stornoway and Loch Maddy are events of the Hebridean year. The sheep are of a number of different breeds. Down almost to the beginning of the nineteenth century the only breed known was the native or Norwegian sheep, the smallest in Europe, thin and lank, with straight horns, white face and legs, and a very short tail. It was probably introduced at the time of the Scandinavian invasion. Early in that century the black-faced breed was introduced, and soon made its way, as it was three times heavier and more valuable than the former, and was at the same time equally hardy. About the middle of the century the Cheviot breed was introduced, and now the principal breeds are these and the black-faced, though crosses, half-bred and grey-faced, are also being introduced. In summer both cattle and sheep are herded in common, the crofters paying the expense of watching in proportion to the number of their sheep. Ponies are very common, and those of Barra were at one time very celebrated, but they have of late years fallen off. Such horses as there are are very undersized even in Lewis, where Sir James Matheson made great efforts for their improvement by the introduction at his own expense of excellent stallions. Improvement, indeed, is needed, not only in breeding, but in feeding and tending. Pigs were formerly held in great aversion, but are now reared in some districts in considerable numbers.

Fisheries, etc.—The shores of the Hebrides and the W coast of the adjacent mainland form an excellent fishing ground, but the industry is not by any means so largely developed as it might be, and this is due to many causes, but in particular to the want of good harbour accommodation. The crofters would, indeed, be badly off were it not for the harvest of the sea, and yet their lack of energy and their poverty prevent them from taking full advantage of it, and allow the energy and enterprise of the East Coast fishermen to carry off the greater part of the spoil. In consequence of the

nature of the shores and the violence of the sea, fishing is scarcely possible along the western coast of the Outer Hebrides. The favourite stations are along the coasts of Knock and Lochs in Lewis, and at Loch Boisdale and Barra farther S. In the beginning of the nineteenth century the herring fishing, though subject, as it always is, to considerable fluctuations, was good; but between 1830 and 1840 it fell off to a large and alarming extent, and caused during that time, and particularly in 1836 and 1837, a very great amount of misery and destitution. In 1840 the herring returned in large shoals, but so sudden and unexpected was their reappearance that the people, utterly unprepared, had not salt enough to cure the herrings they caught, and could in that year realise little other advantage than a temporary increase in their own immediate supplies of food. From that time the fishing has been regular and good. There are two seasons—in spring and in autumn. The spring fishing is carried on by boats from all quarters, but the autumn one is left to the home boats. A busy sight indeed is Loch Boisdale or Stornoway in the herring season. Smacks, open boats, skiffs, wherries make the narrow waters shady; not a creek, however small, but holds some boat in shelter. A fleet indeed!—the Lochleven boat from the East Coast with its three masts and three huge lugsails; the Newhaven boat with its two lugsails; the Isle of Man 'jigger;' the beautiful Guernsey runner, handsome as a racing yacht, and powerful as a revenue-cutter, besides all the numberless fry of less noticeable vessels, from the fat west country smack, with its comfortable fittings, down to the miserable Arran wherry. Swarms of sea-gulls float everywhere, and the loch is so oily with the fish deposit that it requires a strong wind to ruffle its surface. Everywhere on the shore and hill-sides, and on the numberless islands, rises the smoke of camps. Busy swarms surround the curing-houses and the inn, while the beach is strewn with fishermen lying at length, and dreaming till work-time. In the afternoon the fleet slowly begins to disappear, melting away out into the ocean, not to re-emerge till long after the grey of the next dawn. . . . Besides the regular fishermen and people employed at the curing-stations, there are the herring-gutters—women of all ages, many of whom follow singly the fortunes of the fishers from place to place.' The East Coast boats bring over their own women, and the crews invariably encamp on shore, where the women keep house for the crew. The Hebrides are included in seven of the twenty-seven fishing districts into which Scotland is divided. Some of these include also portions of the western coasts of the mainland. The headquarters of the districts are Stornoway, Barra, Loch Broom, Loch Carron and Skye, Fort-William, Campbeltown, and Inveraray. The number of boats employed at these at different dates, with the number of men, the value of the whole property in boats, nets, and lines, the number of barrels of herring salted, and the number of cod, ling, or hake taken, is shown in the following table:—

Year.	Boats.	Men and Boys.	Value of Property.	Barrels of Herring.	No. of Cod, etc., taken.
1881	3819	11,760	£181,066	170,284	441,805
1891	4414	13,999	194,863	265,974	910,549
1895	4157	13,163	152,965	106,104	603,451

So plentiful among the Hebrides are the materials for the manufacture of kelp, that for a long series of years this was much more valuable than either agriculture or fisheries. From the beginning of the manufacture down to 1790, the price of kelp per ton was from £2 to £6; but the subsequent great war with France having checked the importation of barilla, the price rose to £15, and ultimately to £20, per ton, and from 5000 to 6000 tons were produced annually. Till 1822 considerable duties were levied on the articles—barilla, pot and pearl ash, and black ash—that could compete with it in the market; but in that year the duty on salt (which was, along with sulphur, used in the manufacture of black

ash) was reduced from 15s. to 2s. a bushel. Shortly after the duty on barilla was also reduced, and the remaining duty on salt, as well as on alkali made from salt, was entirely removed. This was in turn followed by a large reduction of the duty on foreign sulphur and on pot and pearl ash, and an entire removal of that on ashes from Canada; and the consequence was, that the kelp manufacture was almost destroyed, and a period of great misery and destitution followed. Many of the landowners were almost ruined, as they lost at once about five-sixths of their rental; and the large population engaged in the manufacture suffered very severely. The industry is almost abandoned, except in North Uist. Down to 1865, in Benbecula, on an average, about 500 tons annually were made, and in South Uist about 650, yielding a profit to the proprietor of about £1200; but the manufacture there has now almost entirely ceased. The time for making kelp is during the months of June, July, August, and September; but that of the Hebrides is inferior to the kelp of the Orkneys, and is only used in the manufacture of soap. Since the failure of the kelp manufacture, the Hebrides may be said to have no industries, except at one or two places. Mr Campbell of Islay tried to introduce the weaving of book muslin on his property, by bringing some families of weavers from Glasgow, and providing them with cottages and weaving appliances, in a locality where living was cheap; but though the attempt was well made and duly prolonged, it did not succeed. The spinning of yarn formed at one time a staple in Islay, and while it flourished employed all the women on the island, £10,000 worth of yarn being exported in a year; but it was unable to withstand the competition of the Glasgow manufactories. In Islay, now, a good deal of whisky is made, in Skye there is a distillery at Talisker, and one in Mull at Tobermory, and a small woollen manufactory near Portree, while at Easdale and Balnaha there are slate quarries of large extent, turning out about ten millions of slates annually. There is a small chemical work near Stornoway; at Tarbert, in Harris, are manufactured the famous 'Harris' tweeds; in all the islands a good deal of wool is carded, spun, and woven into plaiding, blankets, and coarse fabrics; and fish-curing gives employment to great numbers.

The people are a hardy, patient, and, in the main, a contented race, except when external influence works on their ignorance or their feeling of hardships. Reforms in many ways are much needed, but have to be carried out with great caution, as the island nature is very tenacious of old habits, however wrong. The main sources of livelihood of the crofters are their small patches of land, and the fishing in winter, spring, and autumn at home, and in summer on the East Coast, where they supply the boats engaged in the herring fishing with 'hired hands.' The struggle for existence is hard even when all these succeed; when one or more fails, much misery is the result. The people have all a sad, serious look about them, as if life were too serious for laughter. 'There is no smile,' says Robert Buchanan, 'on their faces. Young and old drag their limbs, not as a Lowlander drags his limbs, but listlessly, with a swift serpentine motion. The men are strong and powerful, with deep-set eyes and languid lips, and they never excite themselves over their labour. The women are meek and plain, full of a calm domestic trouble, and they work harder than their lords.' The last clause might indeed in many, many cases be read, that they work hard while their lords do nothing at all, and come much nearer the truth; and even Mr Buchanan himself, with all his deep appreciation of what is best and noblest in their character, and much as he dwells on their love of home and family, their purity and their kindness, is forced to admit the charge of indolence. 'The people,' he says, 'are half-hearted—say an indolent people. They do no justice to their scraps of land, which, poor as they be, are still capable of great improvement; but their excuse is, that they derive little substantial benefit from improvements made where there is only yearly tenure. They hunger often even when the fjörds opposite their

own doors are swarming with cod and ling; but it is to be taken into consideration that only a few of them live on the sea-shore or possess boats. They let the ardent east country fisherman carry off the finest hauls of herring. Their work stops when their mouths are filled, and yet they are ill content to be poor. All this, and more than this, is truth, and sad truth.' The inhabitants of the outer islands are very much isolated; for though steamers sail regularly from the Clyde and from Oban to all the larger islands, the internal communication, except in Lewis and Harris, is poor, and the arms of the lochs difficult to cross. People, when they meet, talk, not of the weather, but of the state of the fords. In outlying corners the people would fare but badly sometimes, were it not for the visits of small trading vessels, bartering goods of all kinds for fish, or any other marketable commodities the people have to dispose of. The inner islands are well provided with roads, and have much more frequent communication. Skye has communication also by steamer with Strome, the western terminus of the Dingwall and Skye section of the Highland railway.

The only towns of any great importance in the Hebrides are Stornoway in Lewis, Tobermory in Mull, Bowmore in Islay, and Portree in Skye, while there are about twenty villages with populations of over 300. Most of these are in Lewis. Almost all the crofter townships are along the coast. Some of them are at important points of communication, such as Buessan in Mull, Kyle-Akin and Broadford in Skye, Tarbert in Harris, and Loch Maddy in North Uist. Fairs for live stock are held regularly in Islay, Jura, Mull, Tyree, Skye, South Uist, Benbecula, North Uist, and Lewis, while dealers travel through all the districts. The *quoad civilia* parishes of the Hebrides are: in Ross-shire—Barvas, Lochs, Stornoway, and Uig; in Inverness-shire—Barra, Bracadale, Duirinish, Harris, Kilmuir, North Uist, Portree, Sleat, Small Isles, Snizort, South Uist, and Strath; in Argyll—the whole parishes of Coll, Colonsay, Gigha, Jura, Kilchoman, Kildalton, Kilfinichen, Killarrow, Kilninian, Torosay, and Tyree, and portions of the parishes of Ardcattan, Campbelltown, Kilbrandon, Kilmartin, Kilmore, Lismore, Morvern, North Knapdale, and Southend. There are also included the *quoad sacra* parishes of Cross (in Barvas), Knock (in Stornoway), Bernera (in Harris), Haliu-in-Waternish (in Duirinish), Stenschoil (in Kilmuir and Snizort), Trumsgarry (in North Uist), Aharaele (in Ardnamurchan and Morvern), Duror (in Lismore), Hyllipol (in Tyree), Iona (in Kilfinichen), Kilmény (in Killarrow), Kinlochspelvie (in Torosay), Oa (in Kildalton), Portnahaven (in Kilchoman), Salen (in Kilninian and Torosay), Tobermory (in Kilninian), Ulyva (in Kilninian). There are also 47 Free churches, 3 U.P. churches, a Congregational church, 7 Baptist churches, 12 Episcopal churches, and 8 Roman Catholic churches. The Argyllshire section has a sheriff-substitute with his headquarters at Oban; the Inverness-shire section has a sheriff-substitute at Portree for Skye, and another at Loch Maddy for Harris and the islands to the S; in the Ross-shire section there is a sheriff-substitute for Lewis, with his headquarters at Stornoway. Of the larger islands, Lewis belongs to D. Matheson, Esq.; Harris to the Earl of Dunmore principally; North Uist to Sir John W. P. C. Ord of Kilmory; Benbecula, South Uist, and Barra to Sir Reginald Cathcart, Bart. The area of Lewis is 417,416 acres; of Harris, 122,500 acres; North Uist, 68,000 acres; Benbecula, 22,874 acres; South Uist, 82,154 acres; Barra, 24,916 acres.

History.—The Hebrides make their first appearance in historical times as the Ebude of Ptolemy. He only knew five islands under that name, and all these lay to the S of Ardnamurchan, and were probably Islay, Jura, Mull, Scarba, and Lismore, while Skye is mentioned separately as Scetis. The inhabitants at first were probably Picts, but by the beginning of the 7th century, while the districts N of a line drawn through the centre of Mull belonged to the Northern Picts, those to the S had fallen into the hands of the Dalriadic Scots.

It is from one of the chief Dalriadic tribes, the Cinel Loarn, that the Lorn district takes its name. The islands became known to the Scandinavian sea-rovers about the end of the 8th century (A.D. 794), and suffered severely from their attacks during the whole of the 9th century. In 880 some petty Norwegian kings, who resisted the celebrated Harald Harfager's power in the north, made permanent settlements in the islands of the west, and thence piratically infested the coasts of Norway. In 888 Harald retaliated, and according to the *Islands Landnamabok*, subdued all the Sudreys—a name given to the Western Islands in distinction to the Orkneys, which were the Nordreys or Northern islands—so far west that no Norwegian king afterwards conquered more, except King Magnus Barefoot. He had hardly returned home, however, when the petty kings or vikings, both Scottish and Irish, 'cast themselves into the islands, and made war and plundered far and wide, but in the following year they fell under a fresh ruler. This was one of their own number, Ketill Flatnose, who had settled in the Sudreys, and who now, probably, however, with Harald's aid, made himself their king. By the 10th century the islands had been extensively colonised by the Norwegians, and very completely subdued to Norwegian rule; and to the Scandinavians they were a valuable possession, and 'eminently fitted to serve as a stronghold for the Northern Vikings, whose strength consisted almost entirely in their large and well-constructed ships.' In 990 the Hebrides passed by conquest from the Danes of Dublin into the possession of Sigurd, Earl of Orkney, and were governed by a deputy appointed by him. Ragnal Macgophra, who had seized the supreme power, was driven out by Sigurd in 1004, and we find a native chief, Gilli (evidently, however, tributary to Sigurd), ruling shortly after. Sigurd was killed in 1014 at the battle of Clontarf, and for a while the Isles were free; but they again, about 1034, passed under the rule of his (Sigurd's) son, Thorfinn, in whose hands they remained till his death. From 1064 to 1072 they were annexed to the Irish dominions of Diarmid Macmaelnambo, and they next passed into the possession of Setric and his son Fingal, kings of the Isle of Man. Godred Crovan, a Norwegian, having landed on the Isles as a fugitive in 1066, gradually drew around him influence and power, so that between 1075 and 1080 he was able to dethrone Fingal and take possession of the throne of Man. His son Lagman was placed over the Hebrides. In 1093, while Malcolm Ceanmor was busy making preparations for his fatal expedition into England, Magnus Barefoot, who had recently become King of Norway, revived the Norwegian claims, and enforced them by a descent on the islands with a large and powerful fleet. He does not seem to have disturbed the rulers he found in power, but merely to have caused them to become his vassals, and so Godred Crovan remained ruler till his death in Islay in 1095. Lagman his son went on pilgrimage to Jerusalem, where he died, and Magnus appointed a new Norwegian ruler named Inge-mund, whose government proved, however, so oppressive that he was murdered in Lewis. To avenge his death Magnus again passed to the islands with large forces, and after he had deprived the Earls of Orkney of power, and sent them prisoners to Norway, 'He went with his whole army to the Sudreys, but when he came there he commenced plundering immediately, burned the inhabited places, killed the people, and pillaged wherever he went. But the people of the country fled to various places, some up to Scotland, or into the fjords or sea-lochs, some southward to Satiri or Kintyre, some submitted to King Magnus and received pardon.' The animus against the original inhabitants of the islands thus shown by Magnus would seem to point to the murder of Inge-mund as being merely part of a general scheme to throw off the Norwegian yoke. When Magnus returned to the Isles after a visit to the Isle of Man, he entered into an agreement with the King of Scots, 'by which all the islands to the west of Scotland, between which and the mainland a helm-carrying ship

could pass, were ceded to him;' and as he wished to include Kintyre in the number, he is reported to have had his galley drawn across the narrow neck of land between East and West Loch Tarbert. The islands were thus severed from all connection with Scotland—a condition that lasted for more than 150 years. On the death of King Magnus in Ulster in 1104, the native islanders, with the assistance of some Irish under Donald MacTadg, appear again to have attempted to throw off the Norwegian yoke, but in 1113 Olave, the son of Godred Crovan, who had taken refuge in England, recovered possession of the now independent kingdom of the Isles, and reigned till 1153 or 1154, when he was murdered by his nephews. Godred the Black, Olave's son, succeeded him, but so alienated his subjects by his arrogance, that Somerled, the powerful and ambitious thane of Argyll, who had married Ragahildis, the daughter of Olave, was encouraged to try to gain the throne for his infant son Dougall. He carried the child all through the islands, and compelled the inhabitants to give hostages to him as their true king. When Godred heard of this proceeding he sailed against the rebels with a fleet of eighty galleys, but was so gallantly opposed that by way of compromise he ceded to the sons of Somerled the Hebrides S of Ardnamurchan, and thus in 1156 the kingdom of the Isles was divided into two portions, and rapidly approached its ruin. In 1158 Somerled, acting nominally for his sons, invaded and devastated the Isle of Man, drove Godred to seek a refuge in Norway, and apparently took possession of all the Isles; while in 1164, becoming still more ambitious, he menaced all Scotland, landed a powerful force on the Clyde near Renfrew, and there perished either in battle with Malcolm IV., or by assassination in his tent. The northern isles now returned, with the Isle of Man, to Godred; Islay was allotted to Ronald, a son of Somerled; and all the other isles were inherited by Dougall, in whose name they and the whole Hebrides had been seized by Somerled. All these chieftains, and some of their successors, were contemporaneously known as Kings of the Isles, and were subordinate to the King of Norway. Ronald was the ancestor of the Lords of the Isles or Macronalds, and Dougall of the Lords of Lorn or Macdougalls, with their seat at Dunstaffnage. The Scots were jealous of a foreign power so near their coasts, and Alexander II. sent ambassadors to King Haco, 'begging him to give up those lands in the Hebrides which King Magnus Barefoot had unjustly taken from King Malcolm.' To this Haco answered that the matter had been settled, and that, besides, the King of Scotland had not formerly had power in the Hebrides. Alexander next offered to buy the islands, and when this too was refused he collected an army and invaded them. While Alexander was in Kerrera he had a dream in which St Olaf, St Magnus, and St Columba appeared, and bade him return, 'but the King would not, and a little after he fell sick and died.' His successor, Alexander III., 'a meike prince,' did not give the matter up, for in 1262 messengers came to Haco to tell him that the King of Scots would surely win the Hebrides; and complaining also of very barbarous cruelties practised by the Earl of Ross and other Scots. Haco 'made ready swiftly for war,' and got a large army together, and himself set sail at the head of his fleet in a 'great vessel that was built all of oak, and had twenty barks of oars, and was decked with heads and necks of dragons beautifully overlaid with gold.' After visiting Orkney he sailed to Lewis, and then to Skye, where Magnus, King of Man, met him, and then on to Kerrera, where he was met by King Dougall and the other Hebrideans. The other King of the Isles, John, would not follow Haco, as he held more land of the King of Scotland than of the King of Norway. The expedition ended in the battle of Largs and the defeat of the Norwegians, and Alexander followed this up with such vigour that in 1265 he obtained from the successor of Haco a cession of all the Isles. Islay, and the islands adjacent to it, continued in the possession of the descendants of Ronald, and Skye and Lewis were con-

ferred on the Earl of Ross, all in vassalage to the Scottish monarch. In the wars of the succession, the houses of Islay and the North Isles gave hearty support to Robert Bruce till 1325, when Roderick Macalan of the North Isles intrigued against the king, and was stripped of his possessions; while about the same date Angus Oig of Islay received accessions to his territories, and became the most powerful vassal of the Crown in the Hebrides. John, the successor of Angus, taking a different course, joined the standard of Edward Baliol, and when that prince was in possession of power received from him the islands of Skye and Lewis. After Baliol's fall, David II. allowed John to retain possession of Islay, Gigha, Jura, Scarba, Colonsay, Mull, Coll, Tyree, and Lewis; and granted to Ronald, son of Roderick Macalan, Uist, Barra, Eigg, and Rum. Ronald died in 1346 without heirs, and Amie his sister, wife of John, became his heir, and John, consolidating his possessions with his own, assumed the title of Lord of the Isles. In revenge for some fancied slight of the government he rebelled, but was subdued, and in 1369 reconciled to King David. Having divorced his first wife, he married Margaret, daughter of Robert, high steward of Scotland; and in 1370, when Robert succeeded to the throne, altered the destination of the lordship of the Isles so as to make it descend to his offspring by his second wife, the grandchildren of the king. John died in 1380, and was succeeded as Lord of the Isles by Donald, his eldest son by the second marriage. He married Mary Leslie, who afterwards became Countess of Ross, and was thus involved in the well-known contest with the Regent Albany, which resulted in the battle of Harlaw. He had a great reputation in the Hebrides for many good qualities. He died in 1420 in Islay, and was pompously buried beside his father at Iona.

Alexander, the third Lord of the Isles, was formally declared by James I. to be undoubted Earl of Ross, and in 1425 he was one of the jury which sat in judgment on Albany and his sons, as well as the old Earl of Lennox. Having become embroiled with his kinsmen, the descendants of the first Lord of the Isles by his first marriage, and having shared in those conflicts which disturbed the Hebrides so much during the early part of the 15th century, he was, in 1427, summoned to Inverness with other Highland and Island chieftains, and was arrested and imprisoned. So much did this irritate him, that after regaining his freedom he, in 1429, made a levy throughout the Isles and Ross, and at the head of 10,000 men devastated the Crown lands in the vicinity of Inverness, and burned the town itself. In his retreat he was overtaken by the King and the royal forces in Lochaber, and was so hard pressed that he resolved to cast himself on the royal clemency; and on the eve of a solemn festival, clothed in the garb of poverty and wretchedness, he rushed into the King's presence amid his assembled Court at Holyrood, and, surrendering his sword, abjectly sued for pardon. He was imprisoned for two years at Tantallon, and after his release he conducted himself peaceably, and even rose into favour. During the minority of James II, he held the responsible and honourable office of Justiciary of Scotland N of the Forth. In 1445 he returned to his evil ways, and joined in a treasonable league with the Earls of Douglas and Crawford against the infant King, but before the plot had fairly developed he died at Dingwall in 1449.

John, the fourth Lord of the Isles and the third Earl of Ross, having joined the Douglas cause, made a foray on the mainland, and did a considerable amount of mischief, but he very shortly after made his submission, and was received into favour, for in 1457 he filled the very important and responsible office of one of the Wardens of the Marches, and in 1460, previous to the siege of Roxburgh Castle, he offered, at the head of 3000 armed vassals, to march in the van of the royal army, so as to bear the first brunt of an expected English invasion; and his loyalty was so trusted that he was ordered to remain as a sort of bodyguard near the

King's person. On the accession of James III., however, he became again troublesome, and after sending deputies to England to offer his assistance in case of an invasion, he poured an army into the northern counties of Scotland, and assumed a regal style. It was not till 1475 that he was denounced as a rebel, and summoned to appear before parliament at Edinburgh. He did not appear, and incurred sentence of forfeiture; but when a large force was gathered to enforce the sentence, he came to Edinburgh and threw himself on the King's mercy. With great moderation on the part of the King, he was restored to his forfeited possessions, and, making a voluntary surrender to the Crown of the Earldom of Ross and some other possessions, he was created a baron and a peer of parliament, with the title of Lord of the Isles. He could not, however, keep his rebellious family in order, and in 1493 he was deprived of his title and estate, and, after being for some time a pensioner on the King's household, he sought a retreat in Paisley Abbey, which he and his ancestors had liberally endowed, and there died the last of the Lords of the Isles.

The Lordship of the Isles being thus legally extinct, James IV. seems to have resolved on attempting to prevent the ascendancy of any one family by distributing the power and the territories among a number of the minor chiefs, and in 1496 an effort was made to extend the dominion of the law by making every chieftain in the Isles responsible for the due execution of legal writs upon any of his clan, on pain of becoming personally subject to the penalty exigible from the offender. The King, in 1499, finding all his efforts to produce order unavailing, suddenly changed his policy, revoked all the charters given to the chiefs, and commissioned Archibald, Earl of Argyll, and others, to let on short leases all the lands of the lordship as they stood at the date of forfeiture. Donald Dubh, who was generally regarded as the representative of the last Lord of the Isles, and who had been kept in prison to prevent him from agitating his claims, escaped in 1503, and, finding the district in a disturbed condition, in consequence of the royal measures, had but little difficulty in raising an armed force, which he led to the mainland. There he laid the whole of Badenoch waste, and the insurrection assumed such a formidable character that two years were required for the vindication of the King's authority. In 1504 the islanders were expelled from the mainland, and in the following year the King personally led his forces against the islands in the S, while Huntly attacked them on the N, and the rebellion was quelled. Torquil Macleod of Lewis and some other chiefs still holding out in despair, a third expedition was undertaken in 1506, and led to the capture of the castle of Stornoway, and Donald Dubh was again made prisoner, and shut up in Edinburgh Castle. Justiciaries were appointed for the North Isles and South Isles respectively—the courts of the former being held at Inverness or Dingwall, and those of the latter at Tarbert or Lochkilkerran; attempts were made to disseminate a knowledge of the laws, and the royal authority became so established that the King, up to his death in 1513, was popular throughout the islands. In the confusion that followed the battle of Flodden, Sir Donald of Lochalsh seized the royal strengths in the islands, made a devastating irruption upon Inverness-shire, and proclaimed himself Lord of the Isles. In 1515 he made his submission to the Regent, and though he attempted in 1517 to bring about another rising, this proved a failure. There was another outbreak in 1528, caused by the withdrawal of many of the grants of Crown lands, and in 1539 Donald Gorme of Sleat made a determined effort to place the Lordship of the Isles and the Earldom of Ross on their old independent footing. His death was at once followed by the failure of the insurrection, and the matter led to the voyage of James V. round the Isles in 1540. The King's measures were vigorous and effective; but after his death in 1542 Donald Dubh escaped, and, receiving support from all the Islesmen except the Macdonalds of Islay, again

dangerously disturbed the peace of the realm. He was encouraged by the fickle dealing of Albany, and in 1545 swore allegiance to England. Donald, however, died that year, and the chiefs of the southern islands then elected James Macdonald of Islay to succeed him. The Macleods of Lewis and Harris, the Macneils of Barra, the Mackinnons, and the Macquarries, however, held aloof, and obtained a reconciliation with the Regent; while in the following year the island chiefs generally were amnestied, and returned to their allegiance. James Macdonald then dropped the assumed title of Lord of the Isles, and he seems to have been the last person who even usurpingly bore it, or on whose behalf a revival of it was attempted. The subsequent history of the Hebrides is that of the mainland.

The Hebrides belonged to various clans. In the Outer Hebrides, Lewis was in the possession of the Macleods of Lewis; while Harris belonged to the Macleods of Harris; North Uist, Benbecula, and South Uist to the Macdonalds of Clan Donald; and Barra to the Macneils. In the Inner Hebrides, Skye and the adjacent islands were divided among the Macleods, Macdonalds, and Mackinnons; the Small Isles were held by the Macdonalds; Tyree, Coll, and Mull by the Macleans; Ulva by the Macquarries; Colonsay by Clan Duffie or the Macfies; Islay and the S end of Jura as far as Loch Tarbert by the southern branch of the Macdonalds; the N end of Jura and the adjacent islands as far as Luing by the Macleans; Lismore by the Stewarts of Appin; and Kerrera by the Macdougals.

Mackenzie's *History of the Macdonalds and Lords of the Isles* (Inverness, 1881).

Heck, a village in Lochmaben parish, Dumfriesshire, 2½ miles SSE of Lochmaben town, and 3½ WSW of Lockerbie. One of the villages called the Four Towns (see LOCHMABEN), it stands on a rising-ground, the Hill of Heck; and sometimes, during a freshet of the river Annan, is completely begirt with water, so as to look like an island in a lake, and to be approachable only by means of a boat. It got its name, signifying 'a rack for feeding cattle,' from its being made, in times of freshets, a retreat of cattle driven from their ordinary pasture on the haugh to be fed from racks on its rising-ground.—*Ord. Sur.*, sh. 10, 1864.

Hecla. See UIST, SOUTH.

Heiton, a village in Roxburgh parish, Roxburghshire, 2½ miles SSW of Kelso, under which it has a post office.

Helensburgh, a fashionable modern town and burgh of barony in the parish of Row, Dumbartonshire, picturesquely situated on the shore of the Firth of Clyde, near the entrance to the Gare Loch, and directly opposite Greenock, which is 5 miles distant. It lies 8 miles by rail NW of Dumbarton, and 23 WNW of Glasgow, is the terminus of the Glasgow and Helensburgh branch of the North British Railway, and has direct communication with Edinburgh and other districts *via* Cowlands Junction. The West Highland Railway begins at Helensburgh, running northward by Garelochhead and Loch Long. By water it has steam communication with Glasgow, Greenock, and all parts of the Clyde; and in summer it is the starting-point for some of the best-known tourist and excursion steamer-routes. Helensburgh is built partly on a low belt of flat ground contiguous to the beach, and partly on the gentle slope of a low range of hills that rise immediately behind. The town, whose outskirts extend into Cardross parish towards the E, stretches along the coast for about 1½ mile. For the most part it is carefully laid out on the rectangular plan, the longer streets running parallel to each other, with the shorter streets cutting

them at right angles. Each of the rectangles thus formed comprises about 2 acres, seldom occupied by more than four houses, except in the streets in the neighbourhood of the sea. A terraced street, extending along the coast, and buttressed for a part of its length by a sea-wall, forming at certain places a broad level esplanade, and with the thoroughfares immediately adjoining, is chiefly occupied by shops and dwelling-houses; but where it begins to leave the town proper it is flanked by a number of handsome and pretentious villas, standing each within its own grounds. The more inland thoroughfares, and especially those on the slope, are spacious and well-kept; many have broad and carefully-trimmed ribands of turf betwixt the side-walks and the carriage-way; and several are planted, boulevard-fashion, with small trees. The houses that line these streets are chiefly villas and neat cottages; and as each is separated from the quiet thoroughfare by a garden or shrubbery, the whole atmosphere of this retired town is delightfully sequestered and rural. The houses in most cases are the property of retired merchants and others who are well-to-do; many are the country quarters of families whose winter residence is in Glasgow. As is to be expected, the private buildings are neat and pretty rather than handsome; and the public buildings are not numerous. In Aug. 1878 was laid the foundation-stone of new municipal buildings. They are built in the Scottish Baronial style, cost £6000, have a frontage of 50½ feet to Princes Street and of 80 feet to Sinclair Street, and contain a council chamber, general public offices, court hall, police station, and cells. The Victoria or Burgh Hall in Sinclair Street, erected by subscription in 1888, is a handsome structure, and cost £6000. The Public Hall in King Street, with a neat Gothic front, was erected in 1845 as a U.P. church; but since the erection of the new U.P. church it has been let for meetings, concerts, etc. It holds about 450. At the E end of King Street stands the Hospital, erected at a cost of £3000 from a bequest left by Miss Anne Alexander, and consisting of two portions, one for infectious and one for non-infectious diseases; there is also an infirmary, erected in 1894. In connection with the Glasgow Sick Children's Hospital there is a Convalescent Cottage Home with ten cots. The Liberal Club Rooms, erected in 1893 of Ballochmyle red stone, has, besides committee rooms, billiard rooms, etc., a hall that can accommodate 200 persons, and which is capable of subdivision. On the esplanade a monument was raised to Henry Bell in 1872, at a cost of nearly £900. It consists of an obelisk, rising 25 feet from a base 3 feet square, and claiming to be the largest single block of red Aberdeen granite erected in Scotland. The total height of base and column is 34 feet; and it bears the following inscription:—'Erected in 1872 to the memory of Henry Bell, the first in Great Britain who was successful in practically applying steam-power for the purposes of navigation. Born in the county of Linlithgow in 1766. Died at Helensburgh in 1830.'

Helensburgh *quoad sacra* parish church, erected in 1847 near the beach at the E end of the esplanade, is a large oblong building with a plain square tower and little pretensions to beauty. The West *quoad sacra* church superseded an iron one built in 1868. The foundation-stone of this handsome Gothic edifice was laid on 1 Feb. 1877, and the total cost was about £6500. A memorial stained-glass window was inserted in 1889, and in 1892 a church hall was erected at a cost of £700. The West Free church, a large ornamental Gothic building with tower and spire, was erected in 1852 on the site of a former Original Secession church. The E or Park Free church, also a large Gothic edifice with tower and spire, was built in 1862-63 near the public playground. The U.P. church occupies a prominent site on the rising-ground, and was built in the same style, with tower and spire, in 1861, at a cost of upwards of £5000. The Congregational chapel was rebuilt in 1881 in James's Street at a cost of over £3000. The Baptist church was erected in 1887. The Episcopalians of

Helensburgh built the Church of the Holy Trinity in 1842, a schoolhouse in 1851, and a parsonage in 1857; but in 1866 the first was pulled down, and on its site rose the Church of St Michael and all Angels, a handsome Early French Gothic edifice, consecrated in May 1868. A Roman Catholic mission was founded in Helensburgh in 1865, with a place of worship to hold 300. In 1880 a new church, dedicated to St Joseph, was built of white and red Dumbarton stone in Gothic style, with 250 sittings. In 1878 a plain mission-hall was erected in West King Street for religious and educational purposes, especially in connection with the Helensburgh Working Boys' and Girls' Religious Society.

The following are the public schools, with their respective accommodation, average attendances, and government grants:—Helensburgh public school (561, 400, £444), Grant Street public school (454, 400, £434), St Joseph's Roman Catholic school (237, 130, £125), and Trinity Episcopalian school (143, 120, £130). Besides these there are various private schools, boarding and otherwise, for boys and girls.

Gas was introduced into the burgh about 1846, and is managed by a gas company. A plentiful supply of water is obtained from a reservoir, opened in 1868, on Mains Hill above the town, and by means of a pipe from Glenfruin, laid in 1872. Among the associations of the town may be mentioned a cemetery company, with a beautifully situated extramural cemetery, agricultural and horticultural societies, bowling, cricket, curling, and skating clubs, a provident investment and building society, reading-rooms and circulating libraries, and a public library. Several acres in the E end of the burgh are enclosed as a public playground, for cricket, quoits, etc.; and there is a safety skating pond, of about 4 acres, on the Luss Road, to the N, and fine bowling-greens. In 1878 a quantity of ground, enclosed and laid out as a park, situated at Cairndhu Point in Row parish, was presented to the burgh through the generosity of a few of the leading residents. This is known as Cairndhu Park. Helensburgh has a post office, with money order, telegraph, and savings bank, and branches of the Bank of Scotland, the Union, and Clydesdale Banks. The offices of all these banks are fine buildings; that of the first is in the Scottish Baronial style, and cost £3000. There are three principal hotels; one of them, the Queen's, formerly known as the Baths, was the residence of Henry Bell. The *Helensburgh News* (1876) is published on Thursday, and the *Helensburgh and Gareloch Times* (1879) on Wednesday. The new post office, opened in 1893, is a handsome building in the Classic style.

Although it was one of the original inducements to settle at Helensburgh, that 'bonnet-makers, stocking, linen, and woollen weavers' would 'meet with proper encouragement,' the burgh never attained any commercial importance; and it has no productive industry beyond what is required to meet its own wants and those of the summer visitors who annually swell the population. Since the opening of the railway to Glasgow in 1857, the mild climate of the district has combined with the convenience of access to make it a favourite summer resort, and it has gained much in quietude and retiredness since the formation in 1880-82 of the pier at CRAIGENDORAN. This, about a mile to the E, was built by the North British Railway Company; but it is situated wholly in Cardross parish, and is exclusively in the hands of the company. Notwithstanding various proposals, Helensburgh never had a harbour, and the completion of the railway superseded the necessity for one. The quay, a rough pile built in 1817, used frequently to be submerged; but in 1861 and again in 1872 it was enlarged and improved.

In January 1776 the lands of Malig or Milrighs were first advertised for feuing by Sir James Colquhoun, the superior, who had purchased them from Sir John Shaw of Greenock. Feuars came in gradually, and for some years the slowly growing community was known simply as New Town or Muleig; but eventually it received the name of Helensburgh, after the superior's wife, daughter of Lord Strathnaver. In 1802 it was erected into a free

burgh of barony, under a provost, 2 bailies, and 4 councillors, with a weekly market and 4 annual fairs. The insignificance of the last is indicated by the fact that in 1821 the fair customs were let for five shillings. No fairs of any sort are held now. The introduction of steam navigation lent an impetus to the growth of the burgh. Henry Bell (1767-1830) removed in 1807 to Helensburgh, where, while his wife kept the principal inn, 'The Baths,' he occupied himself with a series of mechanical experiments, whose final result was the launch of the *Comet* (Jan. 12, 1812), the first steamer floated in the eastern hemisphere. Henry Bell was provost of the burgh from 1807 to 1809. From 1846 till 1875 the town was governed under a police act obtained in the former year; while at the latter date the General Police and Improvement Act was adopted. Under the Burgh Police (Scotland) Act of 1892 the municipal authority consists of a provost, 2 bailies, and 9 commissioners.

Helensburgh was formed into a *quoad sacra* parish in 1862, the West *quoad sacra* parish being constituted in 1872. They are included in the presbytery of Dumbarton and the synod of Glasgow and Ayr. In the vicinity of the town are several imposing mansions, among which may be noticed Ardencaple Castle, the birthplace of the Duke of Argyll, Dalmore, Ferniegair, and Cairndhu, the latter occupied by John Ure, Esq., ex-lord-provost of Glasgow. There is a small and picturesque ecclesiastical ruin of unknown antiquity about 6 miles from the town, near the Gareloch. Pop. (1851) 2841, (1861) 4163, (1871) 5975, (1881) 7693, (1891) 8409, of whom 4726 were females, and 370 were Gaelic-speaking. Houses (1891) inhabited 1742, vacant 121, building 7.—*Ord. Sur.*, sh. 30, 1866.

Hellmuir Loch. See KIRKHOPE.

Hell's Glen, a rugged, solitary glen in Lochgoilhead parish, Argyllshire. Deep and narrow, it commences at a 'col' (719 feet), $3\frac{1}{2}$ miles E by N of Inveraray ferry on Loch Fyne, and thence descends $2\frac{1}{2}$ miles south-eastward to a point (194 feet) $2\frac{3}{4}$ miles NNW of Lochgoilhead village.—*Ord. Sur.*, sh. 37, 1876.

Helmsdale, a coast village in Kildonan parish, East Sutherland, with a station on the Sutherland and Caithness section of the Highland railway (1871-74), 46 miles SSW of Georgemas Junction, $82\frac{3}{4}$ NNE of Dingwall, and $101\frac{1}{4}$ NNE of Inverness. It stands at the mouth of the river Helmsdale, which here is crossed by a handsome two-arch bridge of 1811, and by which it is divided into Helmsdale and East Helmsdale on the left, and West Helmsdale, Marrel, and Gartymore on the right bank. A ruined castle, on the right bank, $1\frac{1}{2}$ furlong below the bridge, was built as a hunting-seat by the seventh Countess of Sutherland in 1488, and is noted as the scene, in July 1567, of the murder of the eleventh Earl of Sutherland and his countess. The earl's aunt, Isobel, poisoned them both at supper, and would also have poisoned their son; but the cup that she mixed for him was drunk by her own son, who was next heir to the earldom. He died within two days, as within five did the earl and countess at Dunrobin Castle; and the wretched mother committed suicide at Edinburgh on the day appointed for her execution. The instigator of this foul tragedy was George, fourth Earl of Caithness. The village, dating from 1818, has a post office, a branch bank of the British Linen Co., an inn, Kildonan parish church (1841), a Free church, and a public school. A new harbour of 3 acres, with an outer and inner basin, a breakwater 700 feet long, etc., has been formed since 1892 at a cost of £16,000. Helmsdale is head of the fishery district extended from Embo to Dunbeath, in which in 1894 the number of boats was 198, of fishermen 674, of fish-curers 13, and of coopers 59, whilst the value of boats was £6591, of nets £6920, and of lines £1329. The following is the number of barrels of herrings cured or salted in this district (1867) 45,302, (1881) 20,485, (1894) 13,593; of cod, ling, and hake taken (1867) 21,363, (1881) 6281, (1891) 2228. Pop. (1841) 526, (1861) 1234, (1871) 1511, (1881) 1334, (1891) 1323, of whom 743 were in

Helmsdale and East Helmsdale.—*Ord. Sur.*, sh. 103, 1878.

Helmsdale River. See KILDONAN.

Helvels or Halivalls. See DUBRINISH.

Hempriggs, an old mansion in Wick parish, Caithness, near the coast, 2 miles S by W of Wick town. It belongs to the same proprietor as Ackergill Tower. Hempriggs village is $\frac{1}{2}$ mile nearer the town; and $\frac{1}{2}$ mile to the W lies Hempriggs Loch ($6\frac{1}{2} \times 6$ furl.; 156 feet); whilst Hempriggs Stacks, in the sea near the beach, are lofty insulated rocks—the chief one perforated with a natural arch, and all of them thronged by myriads of sea-fowl—*Ord. Sur.*, sh. 116, 1878.

Henderland, a farm in Yarrow parish, Selkirkshire, on the left bank of Megget Water, 5 furlongs W of St Mary's Loch, and 18 miles WSW of Selkirk. A spot here, called the Chapel Knowe, which some years ago was enclosed and plauted, contains a grave-slab, sculptured with a sword and other emblems, and bearing inscripitiou 'Here lylis Perys of Cokburne and hys wyfe Mariory.' This was the famous Border freebooter, Piers Cockburn of Henderland, whose ruined stronghold stands hard by, and whose execution at Edinburgh by James V. in 1529 forms the theme of that exquisite ballad *The Border Widow's Lament*—

'I sew'd his sheet, making my mane;
I watch'd the corps, myself alone;
I watch'd his body night and day;
No living creature came that way.

'I took his body on my back,
And whiles I gaed, and whiles I sat;
I digg'd a grave, and laid him in,
And happ'd him w' the sod sae green.

'Nae living man I'll love again,
Since now my lovely knight is slain;
W' ae lock o' his yellow hair
I'll chain my heart for evermair.'

Hendersyde Park, a mansion in Ednam parish, Roxburghshire, 1 mile NE of Kelso. It is the seat of Sir Richard John Waldie-Griffith, third Bart since 1858 (b. 1850; suc. 1889).

Henlawshiel. See KIRKTON, Roxburghshire.

Henwood, an ancient forest in Oxnam parish, Roxburghshire, around Oxnam Water, 5 miles SE of Jedburgh. It abounds in natural fastnesses; presented for ages such depths and intricacies of wooded ravine as rendered it almost impervious; was often used, in the times of the Border raids and feuds, as a place of rendezvous or of refuge; and gave occasion for the war-cry 'A Henwoody!' to raise and lead a Border onset.

Herbertshire. See DUNPACE.

Herdmandston, an estate, with a mansion, in Salton parish, Haddingtonshire, on the right bank of the Tyne, 4 miles SW of Haddington. Modernised and enlarged, the house is partly of high antiquity, and down to the close of the 18th century showed vestiges of battlements, turrets, and a fosse. It was long the residence of the Hon. Adam Gillies (1787-1842), a senator of the College of Justice. In the park, close by, are remains of a chapel, erected by John de St Clair in the 13th century, and still used as the family burying vault. Henry St Clair, the founder of the line, obtained a charter of the estate from Richard de Morville in 1162. His descendant, Charles St Clair, in 1732 established his claim to the barony of Sinclair, created in 1489 and dormant since 1762; and his grandson is Charles William St Clair, fourteenth Baron Sinclair (b. 1831; suc. 1880).—*Ord. Sur.*, sh. 33, 1863. See NISBET HOUSE, and John Small's *Castles and Mansions of the Lothians* (Edinb. 1883).

Herdsmen. See BTACHAILLE.

Heriot, a parish of SE Edinburghshire, containing, towards its NE corner, Heriot station on the Waverley section of the North British railway, $19\frac{1}{2}$ miles (16 by road) SE of Edinburgh, with a post and telegraph office. It is bounded NW by Borthwick, N by Crichton, NE by Fala, SE by Stow, SW by Innerleithen in

Peeblesshire, and W by Templ. Its greatest length, from NE to SW, is $8\frac{1}{2}$ miles; and its greatest breadth $4\frac{1}{2}$ miles. Its area is now 16,167 $\frac{1}{4}$ acres, the Boundary Commissioners having in 1891 transferred to this parish the Cowbraehill detached portion of the parish of Borthwick, containing 666 acres, and the Nettleflat detached portion of the parish of Stow, containing 463 acres. Formed by the confluence of Blackhope, Hope, and Dewar Burns, which all three have their source near the Peeblesshire border, Heriot Water winds $4\frac{1}{2}$ miles east-north-eastward through the interior, till it unites with GALA WATER, itself rising on the northern verge of the parish. At the point of their confluence the surface declines to 770 feet above sea-level, and thence it rises westward and south-westward to the Moorfoot Hills, attaining 1394 feet near Roughsware, 1508 at *Torfichen Hill, 1550 at Dod Law, 1435 at Dun Law, 1634 at *Mauldsie Hill, and 2136 at *BLACKHOPE Scar, where asterisks mark those summits that culminate just on the confines of the parish. All the interior, excepting strips of vale along the course of the streams, is hilly upland; but the hills, except on the boundaries, are not ranges but congeries, which, having to a large extent been laid down in permanent pasture, no longer offer a bleak and heathy appearance. The climate is bracing, and very healthy. The rocks are mainly Lower Silurian. The soil in the vales adjacent to the streams is of the finest description, and, except in late seasons, produces abundant crops. As it is, little more than one-third of the entire area is either regularly or occasionally in tillage, or might be profitably brought under the plough. Two ancient Caledonian stone circles were on Heriot Town Hill-head and Borthwick Hall Hill-head; traces of ancient circular camps are on some of the other hills; the head and foot stones of what is known as the 'Piper's Grave' are on DEWAR farm; and a stone on which a woman was burned for imputed witchcraft is supposed to have been near Heriot station. The only mansion, Borthwick Hall, on the right bank of Heriot Water, $3\frac{1}{2}$ miles SW of Heriot station, is now the seat of David Johnstone Macfie, Esq. (b. 1828). Heriot is in the presbytery of Dalkeith and synod of Lothian and Tweeddale; the living is worth £185. The parish church, near Borthwick Hall, was rebuilt in 1835; and a public school, with accommodation for 108 children, has an average attendance of about 80, and a grant of over £87. Pop. (1801) 320, (1831) 327, (1861) 407, (1871) 414, (1881) 429, (1891) 443.—*Ord. Sur.*, shs. 24, 25, 1864-65.

Hermant, a mansion in West Calder parish, Edinburghshire, on the right bank of Hardwood Water, $1\frac{1}{2}$ mile ENE of West Calder village. It was built towards the close of last century by the judge Lord Hermant.

Hermiston, a village in Currie parish, Edinburghshire, adjacent to the Union Canal, 1 mile SSE of Gogar station, and $1\frac{1}{2}$ N by W of Currie village, under which it has a post office.

Hermiston. See HERDMANDSTON.

Hermitage Castle, a ruined stronghold in Castleton parish, Liddesdale, S Roxburghshire, on the left bank of Hermitage Water, $3\frac{1}{2}$ miles NW of Steel Road station, and $5\frac{1}{2}$ N by E of Newcastleton. 'About the oldest baronial building in Scotland,' says Dr Hill Burton, 'it has scarcely any flanking works—nothing but abutments at the corners, like the Norman towers; but in this instance they meet in a wide Gothic arch overhead.' Its position is one of great natural strength, and was further secured by extensive earthworks and by a deep fosse, which enclosed it on the E, W, and N. Morasses and mountains surround it; and the grim towers, with their few, narrow windows and massive, loop-holed walls, add gloom to the desolate and cheerless region. The interior is now a complete ruin. Hermitage Castle was founded in 1244 or a little earlier by Walter Comyn, fourth Earl of Menteith, Liddesdale having been held by the Soulis family from the first half of the preceding century. On the Soulis' forfeiture in 1320, Liddesdale was granted by Robert the Bruce to Sir John Graham of Abercorn, whose heiress,

Mary Graham, conveyed it to her husband, Sir William Douglas, 'the Knight of Liddesdale' or 'Flower of Chivalry.' He it was who, on 20 June 1342, at Hawick seized the brave Sir Alexander Ramsay of Dalhousie, and carried him captive to Hermitage Castle, where he shut him up in a dungeon, and left him to die of starvation. It is told that above the place of his confinement was a granary, and that with grains of corn which dropped down through the crevices of the roof Ramsay protracted a miserable existence for seventeen days. In 1492 Archibald Douglas, fifth Earl of Angus, exchanged Liddesdale and the Hermitage with Patrick Hepburn, first Earl of Bothwell, for Bothwell Castle on the Clyde. Thus, in October 1566, the fourth and infamous Earl of Bothwell was lying sore wounded by 'little Jock Elliot' at the Hermitage, whither Queen Mary rode madly over from Jedburgh (a stiff 20 miles), remained two hours 'to his great pleasure and content,' and then galloped back—a feat that she paid for by a ten days' fever. In 1594, shortly after the forfeiture of Francis Stuart, last Earl of Bothwell, the lordship of Liddesdale was acquired by Sir Walter Scott of Buccleuch, whose ancestor David had in 1470 received a gift of the governorship of the Hermitage; and the castle has since remained in the possession of the Buccleuch family.—*Ord. Sur.*, sh. 11, 1863. See CASTLETON, DALKEITH, and Sir William Fraser's *Scotts of Buccleuch* (2 vols., Edinb., 1878).

Hermitage, The, a mansion in St Cuthbert's parish, Midlothian, near the left bank of the Braid Burn, 3½ miles S by W of Edinburgh post-office. It is the home of the essayist, John Skelton, LL.D. (b. 1831).

Hermit's Cave. See ELLAN-VOW.

Herriot's Dyke, an ancient earthen rampart, subtended by a ditch, through the centre of Berwickshire, westward from Berwick, past Greenlaw town and Westruther village, to the valley of the Leader Water. It is still traceable about 1 mile N of Greenlaw, is recorded to have long been traceable for about 14 miles thence to the E, and is still traceable also in the northern vicinity of Westruther; but when it was constructed, or by whom, or for what purpose, is not known.

Heughhead, a hamlet in Strathdon parish, W Aberdeenshire, near the right bank of the Don, 16 miles SSW of Rhynie.

Hevera, an island of Bressay parish, Shetland, in Scalloway Bay, 2 miles S of Burra. It measures 1 mile in diameter, has the appearance of a high rock, and is accessible only at one wild creek, overhung by cliffs. Near its S side is an islet, called Little Hevera. Pop. (1871) 32, (1881) 35, (1891) 24.

Heywood, a collier village in Carnwath parish, E Lanarkshire, with a station on the Auchengray and Wilsontown branch of the Caledonian railway, 1½ mile E by S of Wilsontown. It has a post office under Lanark, a public school, and an Established chapel of ease (1878). Pop. (1871) 793, (1881) 1121, (1891) 1206.—*Ord. Sur.*, sh. 23, 1865.

Hieton. See HEITON.

Highfield House, a mansion in Urray parish, SE Ross-shire, 1½ mile NNW of Muir of Ord station, and 4 miles N by W of Beaulay. Highfield Episcopal church, St Mary's, was built in 1836, and restored in 1872.—*Ord. Sur.*, sh. 83, 1881.

Highlandman, a station in Crieff parish, Perthshire, on the Crieff Junction railway, 1½ mile SE of Crieff town.

Highland Railway, a railway serving the north and north-western districts of Scotland, and traversing the counties of Perth, Moray, Nairn, Inverness, Ross and Cromarty, Sutherland, and Caithness. The system comprises 452 miles of railway, including 7¼ of the Caledonian railway from Perth to Stanley, over which the Company has running powers under an annual toll of £5000. The inception of the Highland railway as a through line dates from 1856, when powers were obtained to construct a line called the Inverness and Aberdeen Junction from Keith, the terminus of the GREAT NORTH OF SCOTLAND RAILWAY, to Nairn. In 1854 the Inverness and Nairn railway had been authorised, and

was opened as a single line, 15½ miles in length, in Nov. 1855, this being the first portion of the system actually in operation. The railway from Nairn to Keith, 40 miles, was opened in August 1858. In 1861 an act was obtained for the construction of the Inverness and Ross-shire railway, which was opened to Dingwall, 18 miles, in June 1862, and to Invergordon, 31½ miles, in May 1863. In 1861 the branch from Alves to Burghhead, 5½ miles, was authorised, and it was opened in 1862. In the meantime, by an act passed in June 1862, the Inverness and Aberdeen Junction and the Inverness and Ross-shire railways were amalgamated; and by an act passed in 1863 the amalgamated company obtained powers to make an extension to Tain and Bonar-Bridge, 26½ miles. While these railways were being constructed on the basis of affording a continuation from the Great North of Scotland line northwards, steps were taken to open up an independent access to the North. In July 1854, the Perth and Dunkeld railway was incorporated, and the line, 8¾ miles, was opened in April 1856. By an act passed in 1861, the Inverness and Perth Junction railway was sanctioned, 112 miles in all, consisting of a single line from Forres, on the railway first named, to the terminus of the Perth and Dunkeld railway, with a branch to Aberfeldy. This line (which was to be worked by the Inverness and Aberdeen company) was opened from the south to Pitlochry in June, from Forres southwards to Aviemore in August, and throughout in September 1863. In that year this company was amalgamated with the Perth and Dunkeld. In June 1865, the various railways now described were amalgamated under the title of the Highland Railway. In July 1865 an act was obtained for the construction of the DINGWALL AND SKYE RAILWAY, which was in 1880 amalgamated with, and now forms an integral part of, the Highland railway. Its capital expenditure was £330,000. In the same year powers were got for the Sutherland railway, which was projected to run from Bonar-Bridge, the then northern terminus of the Highland railway, to Brora, a distance of 32½ miles. The line was made to Golspie only, being 26½ miles; and under an act obtained in 1870, the late Duke of Sutherland was empowered to make a railway from Golspie to Helmsdale, a distance of 17 miles, occupying 6 miles of the line formerly authorised, which were then abandoned. In July 1871 the Sutherland and Caithness railway was authorised, from Helmsdale to Wick, with a branch to Thurso, the line being 66 miles in length. It was opened in July 1874. All these lines last described were made on the footing of being worked by the Highland company, and they were all amalgamated with that company on 31 August 1884. In 1893 the total capital of the Highland railway was £5,629,526, of which there had been raised in shares £3,704,113 (ordinary stock £2,095,383, the remainder in preference stocks at various rates), in debenture stocks £1,656,413. The capital of the Sutherland Railway Company amounted to £204,850 (£144,930 ordinary stock, the remainder debenture loans); the Duke of Sutherland had expended £70,585 on his railway; and the Sutherland and Caithness Railway Company's capital amounted to £414,559 (ordinary stock £294,849, the remainder debenture loans). On its ordinary stock the Highland Railway Company has for many years paid a steady dividend. Throughout, the system consists of single line of railways, with suitable passing places at stations, etc., but the section between Inverness and Dalross has been made a double line. In the year last reported upon the Highland railway carried 1,654,289 passengers, exclusive of season-ticket holders. The total revenue for the year was £460,969 from all sources. The rolling stock to earn this revenue consisted of 100 locomotives, 338 passenger vehicles (including luggage vans, etc.), and 2605 waggons of various kinds, embracing the significant item of 15 snow ploughs. The train mileage for the same year was 2,089,063 miles. The passenger and goods traffic over the system is largely carried on by mixed trains, so that the mileage under each head cannot be given separately. The receipts per train mile were 55'22d. and 49'95d. respectively in the two halves

of the year. The Highland Railway Company is conducted by a board consisting of a chairman, deputy-chairman, and 16 directors.

While the Highland railway and its allied lines have been largely instrumental in opening up a picturesque and interesting portion of Scotland, and in attracting many thousands of tourists annually to famous places and districts, the primary object in their construction has been the improvement of the country and the development of its resources. The lines have been constructed to a very large extent by capital provided in the district, and the financial success of the railway has made it a favourite with investors. In the construction of the railways, the land has, as a rule, been obtained on favourable terms, the railways having been made after the earlier ideas that such works would impair or destroy the value of property had died down. The railways reckon as amongst the cheapest lines in the kingdom, the average cost of construction having been, on the original Highland line, £14,400 per mile; on the Dingwall and Skye, £5380; on the Sutherland, £7548; on the Duke of Sutherland's railway (outlay only), £4400; and on the Sutherland and Caithness, £6280.

The trains northward on the Highland railway are made up in the general station at Perth, at platforms set apart for the purpose; and from that terminus to Stanley the route is over the Caledonian railway. From Stanley (7¼ miles from Perth) the line proceeds through a rich part of Perthshire, a portion of Strathmore, and reaches Murthly station (11½ miles), beyond which the finely-wooded grounds of Murthly Castle are skirted. It then passes through a tunnel of 300 yards just before reaching Birnam station (15½ miles), which occupies a fine position on the side of Birnam Hill, with the Tay flowing between the railway and the finely-situated town of Dunkeld. We are here recalled to the fact that the valley of the Tay, where we now are, is the proper gate of the Highlands; and in selecting this as the point at which to break through the mountain barriers, the railway simply followed the example set by all, whether Roman invaders, military road makers like General Wade, or the more peaceable Highland Roads and Bridges Commissioners, who have essayed the task. The tourist finds himself here in the midst of the softer attractions of the Highlands. The town of Dunkeld is beautifully situated amongst wooded hills, and its old cathedral occupies a picturesque site, while at its side are shown the first larches seen in Scotland, the tree having been introduced by the Duke of Atholl in 1738. Leaving Dunkeld, the railway crosses the Bran, and between this point and Dalguise (20½ miles) there is a tunnel of 360 yards. At Dalguise the line crosses the Tay on a handsome lattice-girder bridge of 360 feet span. From here to Guay (21½ miles) the line passes through a fine valley, with hill and wood and river, making up a beautiful scene. Beyond Guay there is a fine view of the district of the junction of the Tay and the Tummel; and Ballinluig Junction (24 miles) is reached, where the Aberfeldy line branches off. This branch, 9 miles long, crosses both rivers on lattice-girder bridges, the Tay in two spans of 136 feet and two of 40 feet, and the Tummel in two spans of 122 feet and two of 35 feet each. There are on the branch upwards of forty bridges, and also a number of heavy cuttings and embankments. There is a station at Grantully (4¼ miles) and one at Aberfeldy, the latter being 33 miles from Perth. The next station on the principal line is Pitlochry (28¾ miles), beyond which the railway traverses the famous and picturesque Pass of Killiecrankie, with Killiecrankie station, 32½ miles from Perth. Just before entering a short tunnel at the head of the pass, the railway passes over a remarkable bit of engineering, being carried on a lofty viaduct of stone about five hundred yards long, and open below in ten arches, generally dry, but provided to prevent damage from flood. This viaduct rises 40 feet above the bed below, and as it curves round towards the tunnel it affords the traveller a very interesting view of the wild pass and its surrounding hills. At Blair Athole (35½ miles) is seen the old house or castle of Blair, formerly

a singularly plain building, but now very much altered and improved by the present Duke of Atholl. The trees along the railway grounds, planted originally to shut out the railway, now effectually shut out the view of the castle except at one or two points, where a momentary glimpse of it can be obtained. At a few miles' distance the river Bruar is crossed. The famous 'petition' made by Burns to the Duke of Atholl has been granted so fully that the beautiful falls on the stream are now quite concealed from public view. Numerous walks and bridges have been made to display their beauties. We now enter upon the more remote and bleak portion of the line. The river Garry is seen on the right, fretting and tossing over a very rocky bed; while on the left ranges of magnificent hills fill up the scene. At Struan or Calvine station (40 miles) the railway is carried across the river Garry on a fine stone bridge of three arches 40 feet in height. Below the centre span, which is 80 feet wide, the old road is carried across the river Garry on an old bridge. Approaching Dalnaspidal station, the railway is carried through a very heavy rock cutting. Looking westwards a fine glimpse is obtained of Loch Garry. There is a good road from Dalnaspidal by the foot of Schiehallion, one of the most striking of Highland mountains. The road skirts Loch Rannoch and Loch Tay on its route to Aberfeldy. Before reaching the next station, the line ascends by steep gradients to its summit-level on the boundary of the counties of Perth and Inverness, the height being 1462 feet above sea-level. The scenery here is wild and desolate, presenting scarcely a sign of human occupancy, or even of animal life save that of grouse, for which the district is famous. We are here traversing the forest of DRUMMOCHTER (or 'upper ridge'). Crossing the watershed, the line descends rapidly for a short distance, and then with a gentler gradient reaches Dalwhinnie (53 miles), where, in the midst of a scene of great desolation, the traveller is astonished to find a busy railway station, with many passengers joining and leaving the train, this being the centre of a wide district at which many roads converge. Two prominent hills on the left are called respectively the Sow of Atholl and the Boar of Badenoch. The next station is Newtonmore (68½ miles), the distance of 10½ miles between those stations marking the desolate character of the district through which the railway is here carried. The township of Kingussie (71¾ miles) occupies an important position as a half-way station on the journey to Inverness, and also as the point from which the coach runs daily by Loch Laggan and Spean Bridge to Fort William. The next station is Kincraig (77½ miles). On leaving Kingussie, the ruined barracks of Ruthven are seen upon a mound to the right; and further on the left, on the side of a wooded hill, are seen Belville House and the monument erected to Macpherson of Belville, the translator and editor of Ossian. The line is now completely in rear of the Grampians, and at this part of the journey splendid views of the northern ranges in Inverness-shire are obtained. Two miles from Kincraig the railway passes Tor Alvie, on the top of which is placed a cairn in memory of Highlanders who fell at Waterloo, and on the Hill of Kinrara a tall pillar to the memory of the last Duke of Gordon. Farther on the opposite side the mass of the Hill of Craigellachie is seen to the left. Aviemore station (83½ miles) is next reached. Along this portion of the line have been executed some difficult engineering works, including a considerable amount of embanking, to guard the railway against the floods on the impetuous river Spey. Passing on to Boat of Garten station (88½ miles), the railway forms there a junction with the Strathspey railway (see GREAT NORTH OF SCOTLAND RAILWAY). The railway next reaches Broomhill station (92¾ miles), and here, bending more to the northward, takes leave of the Spey, whose course it has followed for many miles, and reaches Grantown (96 miles), beyond which it enters upon heavy rock cuttings, and ascends by steep gradients to an inferior summit-level on the Knock of Brae Moray. Dava station (104½ miles) lies on the northern slope of the range, the line here descending by

rapid gradients. Five miles from Dava the railway crosses the river Divie on a large stone bridge of seven spans, and of great height. Like the other large viaducts on this line, this bridge is flanked by battlemented towers at each end. Beyond Dunphail station is the descent towards Forres, in the course of which a fine view is in clear weather obtained from the train, extending over the Moray Firth, and showing beyond the broken coast-line and fine mountain ranges in Ross, Sutherland, and Cromarty. The train passes through a deep cutting, and immediately thereafter crosses a gigantic embankment of 77 feet high, and it then descends to Forres Junction (119½ miles), where the lines to Keith and Inverness diverge.

At Keith station (149½ miles from Perth) there is a through connection over the Great North of Scotland railway to the south. The stations between Keith and Forres are: Mulben (5 miles from Keith), Orton (8½), Fochabers (11½), Lhanbryde (14½), Elgin (17½), Alves Junction (23), and Kinloss (27). At Orton there is a nominal junction with the Morayshire branch of the Great North of Scotland railway, which has been long disused. From Alves a branch to Burghhead and Hopeman, 8 miles long, strikes off, with a stopping place at Colfield platform, and from Kinloss a short branch leads to Findhorn. A branch, 13½ miles long, to connect the important harbour of Buckie with the system at Keith, was opened in 1884. Resuming the main journey towards Inverness, we cross the Findhorn river on a handsome girder bridge of three large spans. To the right are seen glimpses of the Culbin sands, which many years ago covered over a fertile tract of country. The first station is Brodie (122½ miles from Perth), at which Nairnshire is reached, and the river Nairn is crossed on a stone bridge of four 70-foot spans, reaching Nairn station (128½ miles). The line then proceeds to Fort George station (134½ miles), near the military depot of that name, to Dalcross (137½), and Culloden (140½), reaching the central station at Inverness (144), where are placed the administrative offices and the extensive workshops of the Company. Leaving Inverness the line crosses the Ness by a fine stone bridge, and afterwards crosses the Caledonian Canal by a swing bridge, so as not to interfere with the traffic of the canal. The line in this part of its course follows in some measure the indentations of the coast, skirting in succession the Beaulie Firth, Cromarty Firth, and Dornoch Firth, till Bonar-Bridge, at the head of the last named, is reached. The stations are: Bunchrev (3½ miles from Inverness), Lentrán (5½), Clunes (7½), Beaulie (10), Muir of Ord, near the great market-stance of that name (13), Conon (16½), Dingwall (18½), Novar (25), Invergordon (31½), Delny (34½), Kildary (36½), Nigg (39½), Fearn (40½), Tain (44½), Edderton (49½), and Bonar Bridge (57½). The line from Inverness to Bonar Bridge passes through the rich agricultural district of Easter Ross, with woods and mansions indicating a cultivated and prosperous community. At Muir of Ord the country is bleaker, and the portion from Tain to Bonar Bridge is also of a less rich character. On the right going N the eye of the traveller meets a pleasing succession of changeful scenes as the several arms of the sea are approached and left, and the mountains of Ross-shire at varying distances give a striking character to the prospects in that direction. For its extent, the line from Inverness to Tain presents the best proportion and the finest examples of cultivated landscape on the system.

The Dingwall and Skye branch (so called because from its western terminus it communicates by steamer with the Isle of Skye) leaves the main line at Dingwall, and proceeding by a steep ascent, reaches Achterneed station (4½ miles), which occupies an elevated position above the village and spa of Strathpeffer. A branch direct from Dingwall to Strathpeffer (5½ miles) was opened in 1884. Leaving Achterneed, the railway continues the ascent, and passes through a remarkable rock-cutting, over which towers the gigantic mass of the

Raven Rock (*Creag-an-fhithaich*), 250 feet high. Skirting Loch Garve, the line next reaches Garve station (12 miles), at which point the coach for Ullapool, crossing the 'Diridh More,' connects with the railway. An Act of Parliament was passed in 1893 for the construction of a line of railway between these two places, Garve and Ullapool. A bleak district of nine miles is next encountered, and then the railway runs along the margin of the upper end of Loch Luichart, where the landscape is finely wooded. Between Loch Luichart station (17 miles) and Achanault (21½ miles) the line follows the watercourse of the district, passing the falls of Grudie and crossing the Achanault Burn at the point where two small lochs are divided by a neck. At Auchnasheen (27½ miles) the coaches for Loch Maree and Gairloch connect with the railway, and a short distance beyond the line crosses the watershed, reaching a summit-level of 634 feet above the sea-level. From Garve onwards the line passes through a district of splendid mountain scenery, and from Auchnasheen, descending rapidly towards the western shore, enters upon scenes of much grandeur and desolation, enlivened by an attractive oasis in Auchnashellach (40 miles), a picturesque house surrounded by fine gardens placed in the midst of a bare and forbidding mountain region. At Strathcarron (45½ miles) the railway strikes the coast of Loch Carron, an extensive sea loch, and, pursuing the shore-line, reaches Attadale (48 miles) and Strome Ferry (53 miles from Dingwall and 215½ from Perth), the present terminus of the line. The originally proposed terminus was at a point on the narrow Strait of Kyle-Akin opposite Kyle-Akin village in Skye, the titular terminus of the railway. This extension, however, was begun in 1893, Government having agreed to pay £45,000 of the estimated £150,000 which the line, only 10½ miles long, will cost. These figures will convey some idea of the difficult character of the work to be undertaken. The terminus quay is to have a depth of 24 feet at low water, so that steamers may be able to call at all tides.

From Bonar-Bridge the railway, following the line of the Kyle of Sutherland, strikes inland until the foot of Loch Shin is reached, when it curves seaward again, traversing Strath Flect and reaching the sea at Golspie. Beyond Invershin station (3½ miles from Bonar) the railway follows the course of the river Shin, a romantic scene, in the course of which some heavy rock cuttings and embankments had to be executed. Lairg station (9 miles) is a noted terminus for anglers, who here leave the railway for Loch Shiu and a multitude of inland and sea lochs which have no nearer access, and to which conveyance is had in mail gigs, etc. Passing from the hilly districts into more cultivated regions, the railway passes Rogart (19 miles) and The Mound (23), the latter situated at the great embankment, with sluices, built by the Highland Roads and Bridges Commissioners at a cost of £12,000. Golspie station (26½ miles) stands at the W end of the fishing village of that name, at the E end of which stands the palatial residence of the Duke of Sutherland, Dunrobin Castle. The railway route is now for 17 miles carried on by the line built by the late Duke of Sutherland entirely at his own expense. Beyond Golspie there is a private station called Dunrobin, only used when notice to stop is given, and occupying a position near one of the approaches to the castle. The other stations are Brora (6 miles from Golspie), Loth (11½), and Helmsdale (17), the last-named, at the important fishing village of that name, being the terminus of the Duke of Sutherland's railway. From Helmsdale the route is continued by the line of the former Sutherland and Caithness Company. Beyond Helmsdale the public road northwards crosses the Ord of Caithness, but the railway line turns aside to follow inland the course of the Helmsdale river, in Strath Ilie, the first Station being Kildonan (9½ miles from Helmsdale), beyond which it crosses a long stretch of wild and exposed country, where snow blocks on the railway are of frequent occurrence in winter. The stations here are Kinbrace (16½ miles from Helmsdale), Forsinard (24½), and Altnabreac (32½), beyond which, in

a more lowland territory, there are stations at Scotscaulder (41½) and Halkirk (44), and at Georgemas Junction (46) the lines for Wick and Thurso diverge. The distance to Thurso is 6¾ miles, with an intermediate station at Hoy, the terminus being 298 miles from Perth. The line to Wick proceeds to Bower (2¾ miles from the junction), Watten (6½), and Bilbster (9), the extreme terminus of the system being at Wick, 14 miles from Georgemas Junction, 161½ from Inverness, and 305 from Perth.

The Highland railway and its continuations fulfil an important function in providing communication over a very large portion of Scotland, performing the threefold task of opening up a market for the produce of the hills in sheep, cattle, grain, etc., of carrying merchandise into the district from other quarters, and of opening up to tourists and sportsmen some of the grandest portions of Scottish scenery. Excepting Inverness, the towns served by the line are small, but, as will be seen, the railway touches at many fishing villages on the Moray Firth and farther N, embracing the important, but not now undisputed, capital of the herring fishery, Wick. By means of the branch to Strome Ferry it has opened up an alternative route to Skye and the Outer Hebrides, previously only accessible by long sea voyages. In the extreme N the development of the railway has not rewarded those by whose capital the lines were made, the sinuous line followed in order to render the system valuable locally having in a great measure lessened its likelihood of proving a good through line for traffic to Orkney. In the branches to Aberfeldy and Strome Ferry, as well as in the main through route, the railway holds an important place in the tourist routes throughout Scotland, many tours in conjunction with coaches, steamers on the Caledonian Canal, etc., being organised. The most striking feature of the system, in the eye of a stranger, is the long stretches of apparently desolate country through which the railway for many miles pursues its way, while at many points the view obtained from the train embraces scenes of grandeur and impressiveness not excelled on any other railway in the kingdom. The Highland Company is engaged in constructing a new line from Aviemore to Inverness, by which the distance to and from the south will be shortened by 26 miles. A portion of it, from Aviemore to Carrbridge (6¾ miles), has already been opened. A branch from Muir of Ord to Fortrose (13 miles), and another from Fochabers junction to the village of Fochabers (3 miles), were opened in 1893.

Highland Railway, West. See WEST HIGHLAND RAILWAY.

Hightae, a village and a lake in Lochmaben parish, Dumfriesshire. The village stands on a fertile alluvial tract near the river Annan, 2¾ miles SSE of Lochmaben town, and 4 SW of Lockerbie. The largest of the so-called Four Towns (see LOCHMABEN), it has a post office under Lockerbie, a Free church, and a public school. Hightae Loch (2¾ × 1¼ furl.) lies 1¼ mile NNW of the village, and 3 furlongs S by W of the Castle Loch, and is well stocked with fish.—*Ord. Sur.*, sh. 10, 1864.

Hightown. See HEITON.

Hilland, a village in Inverkeithing and Dalgety parishes, Fife, 1½ mile NE of Inverkeithing town. It has a post office under Inverkeithing and a public school.

Hillend, a village in Shotts parish, NE Lanarkshire, 5 miles ENE of Airdrie. Hillend Reservoir, on the mutual border of Shotts and New Monkland parishes, is traversed by the North CALDER, and has an utmost length and breadth of 10½ and 4¾ furlongs.—*Ord. Sur.*, sh. 31, 1867.

Hillhead. See GLASGOW.

Hillhead, a village and a mansion in Cockpen parish, Edinburghshire, near Lasswade.

Hillhead, an estate, with a mansion, in Caputh parish, Perthshire. The mansion, surmounting the brae on the E of Dunkeld, and overlooking the town and bridge, is an elegant edifice, and commands a panoramic view of the surrounding scenery.

Hillhouse, an estate, with a mansion, in Kirknewton parish, Edinburghshire.

Hillhouse, an estate, with a mansion, in Dundonald parish, Ayrshire, 3 miles NNE of Troon. Prince Louis Napoleon, afterwards emperor of the French, stayed here in 1839 at the time of the Eglinton Tournament. It was purchased by the Duke of Portland in 1894 for £24,000.

Hill of Beath, a mining village in Beath parish, Fife, ½ mile NW of Crossgates station. Pop. (1891) 986.

Hill of Blair. See BLAIRGOWRIE.

Hill of Cromarty. See CROMARTY.

Hill of Dores, one of the Sidlaw Hills in Kettins parish, SE Forfarshire, adjacent to the boundary with Perthshire, 3 miles SE of Coupar-Angus. It was crowned with an old castle, traditionally said to have been for some time the residence of Macbeth.

Hill of Fare. See FARE.

Hill of Keilor, a village in Newtyle parish, Forfarshire, 4 miles E of Coupar-Angus.

Hill of Nigg, a hill in Nigg parish, NE Ross-shire. Extending along the coast, from the North Sutor of Cromarty to the farm of Shandwick, it measures 4½ miles in length and 2 in breadth; rises to altitudes of from 300 to 600 feet above sea-level; presents to the sea a precipitous face, pierced with caves and fissures, and mostly about 300 feet high; and commands, from its summits, an extensive and brilliant view, from Caithness and Sutherland to Banffshire and Perthshire.—*Ord. Sur.*, sh. 94, 1878.

Hillside, a village and a *quoad sacra* parish in Montrose parish, Forfarshire. The village stands on sloping ground, ½ mile NNE of Dubton Junction, and 2¾ miles NNW of Moutrose town, under which it has a post office with money order, savings bank, and telegraph departments. Straggling over a considerable area, it contains a number of fine villas, and is a summer retreat of families from Montrose. The parish, constituted in 1872, is in the presbytery of Brechin and synod of Angus and Mearns; its minister's stipend is £182. The church was built in 1869 at a cost of £1000. Pop. of village (1881) 314, (1891) 308; of *g. s.* parish (1881) 1480, (1891) 1576.—*Ord. Sur.*, sh. 57, 1868.

Hillside, a village in Banchory-Devenick parish, Kincardineshire, 1 mile N of Portlethen station. It has a post office under Aberdeen.

Hillside, an estate, with a mansion, in Aberdour parish, Fife, a little N of the village.

Hillside, an estate, with a mansion, in Saline parish, SW Fife, 3 miles NNW of Dunfermline. It belongs to Alexander Colville, Esq.

Hillslap. See ALLEN.

Hills Tower, an ancient tower in Lochrutton parish, E Kirkcubrightshire, 5¾ miles WSW of Dumfries. Dating from times unknown to record, it includes a later entrance lodge inscribed with the date 1598, and continues in tolerable preservation.

Hillswick, a seaport village and a *voe* or bay in North-maven parish, Shetland. The village stands on the *voe*, 12 miles S by W of the northern extremity of the mainland, and 36 NNW of Lerwick, under which it has a post office, with money order, savings bank, and telegraph departments. The *voe* penetrates the land 3 miles north-north-eastward; is flanked on the W side by a narrow peninsula, terminating in a point called Hillswick Ness; affords well-sheltered anchorage; and is a good deal frequented by vessels.

Hilltown. See HILTON.

Hilton, an ancient parish in Merse district, SE Berwickshire, united in 1735 to Whitsome. The church, on a small hill, 1¾ mile E by N of Whitsome church, was once adjoined by a hamlet, taking from the site the name of Hilton or Hilltown; and is still represented by a disused burying-ground.

Hilton. See FODDERTY.

Hilton of Cadboll, a fishing village, with a public school, in Fearn parish, NE Ross-shire, on the Moray Firth, 4½ miles ESE of Fearn station. Pop. (1861) 335, (1871) 429, (1881) 390, (1891) 343.

Hinnisdale or **Hinistil**, a rivulet in Trotternish district, Isle of Skye, Inverness-shire, running $5\frac{1}{2}$ miles west-south-westward to Loch Snizort at a point $\frac{3}{4}$ miles SSE of the mouth of Uig Bay.

Hirbesta, a village in the W of Trotternish district, Isle of Skye, Inverness-shire. Its post-town is Kilmuir, under Portree.

Hirsel, The, a seat of the Earl of Home in Coldstream parish, Berwickshire, on the right bank of Leet Water, $1\frac{1}{2}$ mile NNW of Coldstream town. A spacious sandstone edifice, it stands amid beautiful grounds, adorned with very fine woods and with an artificial lake ($2 \times 1\frac{1}{4}$ furl). Stone coffins and great quantities of human bones have been exhumed on the grounds. The present earl is Charles Alexander Douglas Home, seventeenth Baron Home since 1473, and twelfth Earl of Home since 1605 (b. 1834; suc. 1881).—*Ord. Surv.*, sh. 26, 1864. See also HUME, BOTHWELL, and DOUGLAS CASTLE.

Hirst, a hill (959 feet) in Shotts parish, NE Lanarkshire, on the watershed between the Clyde and the Forth, $1\frac{1}{4}$ mile E by N of the parish church. It emits, from its E side, the head-stream of the Almond; and its summit commands a very extensive view.

Hirta. See ST KILDA.

Hoan, a green fertile island of Durness parish, NW Sutherland, within 5 furlongs of the mainland, off the W side of the mouth of Loch Eriboll. It measures 7 by $1\frac{1}{2}$ furlongs, and rises to a height of 83 feet.—*Ord. Surv.*, sh. 114, 1880.

Hobgoblin Hall. See YESTER.

Hobkirk (anciently *Hopekirk*), a Teviotdale parish of Roxburghshire, containing the post office of Bonchester Bridge, 7 miles E by S of the post-town, Hawick. It is bounded E by Bedrule, Jedburgh, and Southdean, S by Castleton, and W and NW by Cavers. Its utmost length, from NNE to SSW, is $10\frac{3}{4}$ miles; its utmost breadth is $4\frac{1}{4}$ miles; and its area is 16,242 acres, of which 49 are water. RULE WATER is formed by several head-streams in the S, and runs, from their confluence, first $4\frac{3}{4}$ miles north-north-eastward through the interior, next $2\frac{1}{2}$ miles northward on or close to the Bedrule border. Some head-streams, too, of Slitrig Water rise and run in the SW corner. In the extreme N, the surface declines along the Rule to close on 300 feet above sea-level, thence rising south-south-westward to 1392 feet at 'dark RUBERSLAW,' 1059 at round, green Bonchester Hill, 1210 at Stonedge Hill, 1312 at Pike Fell, 1662 at Windburgh Hill, and 1687 at Fanna Hill, which belongs to the mountain chain that separates Teviotdale from Liddesdale. The interior mainly consists of the narrow vale of Rule Water, with its flanking heights, and comprises a belt of haughs scarcely $\frac{1}{2}$ mile broad. Silurian rocks predominate in the S; sandstone, in the N, yields suitable building material; and limestone, occurring in considerable masses, has been quarried and calcined in several places. Trap rocks are found on Windburgh, Bonchester, and Ruberslaw Hills, and in a dyke traversing the lower part of the parish from E to W. Indications of coal have been observed. Pieces of detrital fossil wood are found in the bed of the Rule; and a stratum of agate or coarse jasper, frequently used for seals and other ornaments, occurs at Robertslin. The soil of the haughs is a deep, strong, fertile clay, mixed in some places with small boulders, in other places with sand; that of the acclivities, at a distance from the streams, is light, sandy, and naturally very barren. Less than one-fifth of the entire area, so late as 1836, was in tillage or in grass parks; but a great additional extent of pasture land has since been brought under cultivation, and bears fair grain crops. Plantations cover some 800 acres, and much of the uplands is still pastoral or waste. The chief antiquities are ancient fortifications on Bonchester Hill, and vestiges of ancient camps or fortifications on Ruberslaw at Wauchope, and in several other places. The Rev. Robert Riecalton, author of two volumes of essays and sermons, was minister of Hobkirk from 1725 till 1769; and the poet Thomson, spending with him some part of his early life, is said to have planned his *Seasons* here, and to have borrowed

from surrounding places much of the scenery in its descriptions. Mansions, noticed separately, are Hallrule, Wauchope, and Wells. Hobkirk is in the presbytery of Jedburgh and synod of Merse and Teviotdale; the living is worth £405. The parish church, $\frac{3}{4}$ mile S of Bonchester Bridge, was built in 1853; and there is a Free church at Wolflee. Hobkirk public school, with accommodation for 145 children, has an average attendance of about 90, and a grant of £85. Pop. (1801) 760, (1821) 652, (1841) 776, (1871) 718, (1881) 662, (1891) 631.—*Ord. Surv.*, sh. 17, 1864.

Hoddam, an Annandale parish of S Dumfriesshire, comprising, since 1609, the ancient parishes of Hoddam, Luce, and Ecclefechan, and containing near its E border the post-town and station of ECCLEFECHAN. It is bounded N by Tundergarth, E by Middlebie, SE by Annan, SW by Annan and Cummertrees, and W by St Mungo. Its utmost length, from N to S, is $5\frac{1}{2}$ miles; its utmost breadth, from E to W, is $3\frac{1}{2}$ miles; and its area is 7564 $\frac{1}{2}$ acres, of which 50 $\frac{3}{4}$ are water. The river ANNAN flows $4\frac{3}{4}$ miles south-eastward along the south-western border; its affluent, Milk Water, over the last 5 furlongs of its course, roughly traces part of the western boundary; and Mein Water, after flowing for 7 furlongs just beyond the south-eastern boundary, runs $9\frac{1}{2}$ furlongs across a southern wing, and falls into the Annan at a point $1\frac{1}{2}$ mile SSW of Ecclefechan. The south-western and southern district is low and level, sinking little below 100, and little exceeding 200, feet above sea-level; from it the surface rises northward to 474 feet at Three Well Brae, 503 at Relief, 550 at Douglashall, and 920 at conspicuous Brunswark Hill. The parish generally is richly embellished with hedges, clumps of wood, and high cultivation, and combines, with surrounding heights, to form a finely picturesque landscape. The rocks comprise sandstone, limestone, clay-slate, clay ironstone, and thin seams of coal. The soil along the Annan is a rich, deep, alluvial loam; in the lands farther E and N is light and gravelly, yet fertile; and in the higher grounds towards Brunswark Hill inclines to clay, incumbent on a cold till. Some 70 acres are under wood; about one-tenth of the entire area is sheep-pasture, chiefly on Brunswark Hill; and all the rest of the land is in tillage. The Hoddam estate, held from the 14th or 15th century by the powerful Herries family, was acquired from the sixth Lord Herries about 1627 by Sir Richard Murray of Cockfoot, whose nephew, the second Earl of Annandale, conveyed it about 1653 to David, first Earl of Southesk. Charles, fourth Earl of Southesk, in 1690 sold castle and barony to John Sharpe, whose ancient line ended in the four brothers—General Matthew Sharpe, Liberal M.P. for the Dumfries burghs from 1832 to 1841; Charles Kirkpatrick Sharpe (1781-1851), the 'Scots Horace Walpole;' Admiral Alexander Renton Sharpe (d. 1858); and William John Sharpe (1797-1875), of sporting celebrity. In 1878 the property was purchased by Edward Brook, Esq. (b. 1825). The original castle, said to have been a seat of the royal Bruces about the beginning of the 14th century, stood at Hallgards, on the left bank of the Annan, 2 miles WSW of Ecclefechan, and was demolished in terms of a Border treaty. The present castle stands in Cummertrees parish, $3\frac{1}{4}$ miles WSW of Ecclefechan, near the right bank of the Annan, and at the foot of Repentance Hill (350 feet), with its conspicuous square, thick-walled beacon-tower, 25 feet high, and dating from the 15th century. Hoddam Castle itself is of the same period, massive and picturesque, enlarged by a wing in Gen. Sharpe's time from designs by Mr Burn, and commanding a view of one of the loveliest Dumfriesshire straths. Knockhill, $1\frac{1}{2}$ mile WSW of Ecclefechan, is the only mansion in Hoddam parish, whose chief antiquities are noted under BRUNSWARK. The birthplace and grave of Thomas Carlyle are described under ECCLEFECHAN, but it may be added that a tombstone was erected to his memory in the summer of 1882. When in 573 A.D. St Kentigern returned from Wales to the Cumbrian region, 'King Rydderch Hael and his people went forth to

meet him, and they encountered each other at a place called Holdelm, now Hoddam. . . . Here he fixed his see for a time; but afterwards, warned by divine revelation, he transferred it to his own city Glasgow' (Skene's *Celtic Scotland*, ii. 191, 1877). Near Hoddam Bridge stands the old burying-ground of Hoddam, on the site of the ancient church founded by St Mungo. Giving off a portion to Bridekirk *quoad sacra* parish, Hoddam is in the presbytery of Annan and synod of Dumfries; the living is worth £312. The present parish church, 9 furlongs SW of Ecclefechan, was built in 1817. In its porch stands a tablet from Birrens, dedicated by the Nervian cohort of Germans to Jupiter. At Ecclefechan are a Gothic Free church (1878), a Gothic U. P. church (1865), and Hoddam public school, which, with accommodation for 294 children, has an average attendance of about 250, and a grant of nearly £220. Pop. (1801) 1250, (1831) 1582, (1861) 1653, (1871) 1598, (1881) 1548, (1891) 1533, of whom 1453 were in the ecclesiastical parish.—*Ord. Sur.*, sh. 10, 1864.

Hodges, a farm in Gladsmuir parish, Haddingtonshire, 4½ miles SW of Haddington. Once part of an extensive common belonging to Haddington, it was given by that burgh's magistrates to an eminent lawyer of the name of Hodge.

Holburn Head, a magnificent headland (306 feet) in Thurso parish, Caithness, flanking the W side of Thurso Bay, projecting from a peninsula between that bay and the North Sea, and terminating 2 miles N by W of Thurso town. There is a lighthouse here showing one light, flashing once every ten seconds, white towards the Pentland Firth and Thurso Bay, and red towards Scrabster roadstead, visible for 13 nautical miles. The neighbouring rocks exhibit astonishing scenes of natural grandeur; and one of them, called the CLETT, has been noticed separately.—*Ord. Sur.*, sh. 116, 1878.

Holehouse, Canonbie, Dumfriesshire. See **HOLLOWS**.

Holekettle or **Kettle Bridge**, a village in Kettle parish, central Fife, ½ mile S of Kettle village. Pop. (1871) 493, (1881) 451, (1891) 478.

Holl, a village in the NW of the Isle of Skye, Inverness-shire. Its post-town is Kilmuir, under Portree.

Holland, an estate, with a mansion, in Papa Westray, Orkney, 20 miles N of Kirkwall.

Hollandbush, a village on the mutual border of Denny and Kilsyth parishes, Stirlingshire, 3 miles SSW of Denny town. It stands contiguous to Hagg's village, and has a post office under Bonnybridge, with money order, savings bank, and telegraph departments. Pop. of the two villages (1871) 534, (1881) 524, (1891) 623, of whom 21 were in Kilsyth.

Hollows, a ruined Border town in Canonbie parish, SE Dumfriesshire, on the right side of the Esk, 2 miles NNW of Canonbie village. Occupying a site of great natural beauty, it is 60 feet long, 46 wide, and 70 high; has round turrets at two of its angles; and was the stronghold of the notorious freebooter, Johnnie Armstrong of GILNOCKIE.—*Ord. Sur.*, sh. 11, 1863.

Hollow-Wood or **Howwood**, a village in Lochwinnoch parish, Renfrewshire, with a station on the Glasgow and South-Western railway, 3 miles SW of Johnstone town. It has a post office, a public school, and a chapel of ease, which last in 1874 was repaired and adorned with a handsome memorial window. There are two bleach-works in the neighbourhood. Pop. (1871) 312, (1881) 333, (1891) 420.

Hollybush, a mansion in Dalrymple parish, Ayrshire, near the right bank of the Doon, and ½ mile SW of Hollybush station on the Ayr and Dalhousie branch of the Glasgow and South-Western railway, this being 6½ miles SE of Ayr.

Hollylee. See **HOLLYLEE**.

Holm, a parish in the SE of Orkney. Comprising the ancient ecclesiastical districts of Holm and Paplay, the former on the W, the latter on the E, it includes a south-eastern section of Pomona and the island of Lambholm; and contains, on the S coast of its Pomona section, 7 miles SE by S of Kirkwall, the village of St Mary's Holm, with a post office under Kirkwall. Its

Pomona section is bounded NE by St Andrews and Deerness, E by the German Ocean, S by Holm Sound, SW and W by Scapa Flow, and NW by Kirkwall. Its utmost length, from NW to SE, is 6 miles; its utmost breadth is 3¾ miles; and its area is 8452 acres. The Pomona section has mostly rocky shores; projects the headlands of Roseness to the SE, and of Howquoy or Skeldequoy to the SW; contains several small lakes; has mostly thin, loamy, tolerably fertile soil; and resembles, in its agriculture, the rest of Pomona. Holm Sound, separating Pomona from Burray, and varying in breadth from 1½ mile to 2½ miles, contains Lambholm Island towards its centre and Glimsholm Island nearer Burray; affords secure anchorage over most of its extent, and much shelter contiguous to Lambholm; and has, on its NW coast, a pier where vessels of 50 tons may unload. The herring and cod fisheries are extensively carried on. Holm is in the presbytery of Kirkwall and synod of Orkney; the living is worth £168. The parish church stands on the S coast, and was built in 1818. There are also a Free church (1870) and a U. P. church; and two public schools, East and West, with respective accommodation for 60 and 120 children, have an average attendance of about 35 and 80, and grants of nearly £34 and £100. Valuation (1881) £2766, 15s., (1891) £2618, 10s. 9d. Pop. (1801) 871, (1831) 747, (1861) 834, (1871) 935, (1881) 1090, (1891) 950.

Holmains, an old baronial tower and a range of hills in Dalton parish, Dumfriesshire. The tower, 4 miles S of Lochmaben, was the seat of a branch of the Caruthers family. It does not appear to have been a place of great strength, and now is an utter ruin. The hills, extending N and S, rise to an altitude of 800 feet above sea-level.

Holme or **Holme Rose**, an estate, with a handsome modern mansion, in Croy and Dalross parish, Nairnshire, near the left bank of the river Nairn, 4 miles S by E of Fort George station. Held by his ancestors since 1541, it is now the property of Hugh Francis Rose, Esq.—*Ord. Sur.*, sh. 84, 1876.

Holms Water, a rivulet of Broughton and Glenholm parish, W Peeblesshire, rising close to the boundary with Lanarkshire at an altitude of 1750 feet. Thence it runs 7¾ miles north-north-eastward, till, after a descent of 1100 feet, it falls near Rachan House into Biggar Water, ¾ mile above that stream's confluence with the Tweed. It affords good trout-fishing.—*Ord. Sur.*, shs. 16, 24, 1864.

Holybush. See **HOLLYBUSH**.

Holydean Castle. See **BOWDEN**.

Holy Isle, an island of Kilbride parish, Arran, Bute-shire, in the mouth of Lamash Bay. Measuring 1½ mile in length and from 3¾ to 5 furlongs in breadth, it rises to a height of 1030 feet. Its surface is picturesquely variegated with heath-clad acclivities, grassy ridges, and columnar masses—the last consisting of clinkstone on bases of sandstone, and rising tier above tier to the summit. Its height, as seen from the water, looks almost grander than that of Goatfell; and its summit is more difficult to scale, and commands nearly as brilliant a view. It is said to have got its name from being the retreat of a Culdee anchorite, St Maol Jos, whose hermitage, in the form of a natural cave, with a short Runic inscription on the roof, is still shown on its western side; and near this is a spring, a 'holy well,' which for centuries bore a surpassing repute among the superstitious for curing all sorts of diseases. Here also is a raised shelly beach some 30 feet above the sea-level, where in the 12th century stood a fortress built by Somerled of the Isles, of which, however, no trace now remains. Holy Isle had also a burying-ground, which was long used as the chief place of sepulture for Arran. The position of the isle in the mouth of Lamash Bay gives the latter, sheltered as it is from all winds, its character of a first-rate natural harbour of refuge. There is a lighthouse on the SW extremity of the island, with two fixed lights, green over red, 46 feet above high water, and visible for 12 miles. Pop. (1881) 15, (1891) 16.—*Ord. Sur.*, shs. 13, 21, 1870.

Holylee, an estate with a mansion, in Innerleithen parish, Peeblesshire, near the left bank of the Tweed, 2 miles E by N of Walkerburn station. Its owner is Major James Llewellyn Evans.—*Ord. Sur.*, sh. 25, 1875.

Holy Linn, a wooded, picturesque cascade of Garpel Burn, Kirkcudbrightshire, on the boundary between Balmaclellan and Dalry parishes. It got its name from being the place at which the ejected minister of Balmaclellan, in the days of the persecution, baptized at one time thirty-six children of his flock.

Holy Loch, an elongated bay of Dunoon and Kilmun parish, Argyllshire. Opening from the Firth of Clyde, between Strone Point on the N and Hunter's Quay on the S, and striking west-north-westward to the mouth of Stratheachaig, it measures 2½ miles in length and 7 furlongs in extreme breadth. It looks right across to Ashton and the pleasant seaboard of Renfrewshire; its N side is steeply flanked by heathy Kilmun Hill (1535 feet), its S side by swells and braes, sloping upward more gently to the Bishop's Seat (1651); whilst its shores, in an almost continuous belt of narrow low ground, are fringed with the villages of Strone, Kilmun, Sandbank, Ardnadam, and Hunter's Quay. Its lower part affords good anchorage in 16 or 17 fathoms of water; its sides, over much of their extent, have good bathing beaches; and its upper part, during the recess of the tide, is silty foreshore, frequented by flocks of sea-fowl. Holy Loch is said by tradition to have received its name from the stranding within it of a vessel freighted with earth from the Holy Land, to lay beneath the foundations of Glasgow Cathedral; but more probably it acquired the name in connection with the ancient Columban church of KILMUN. In the days of quarantine it was the quarantine station for the Clyde, with lazaretto and stores on its S shore.—*Ord. Sur.*, sh. 29, 1873.

Holyrood Abbey and Palace. The Abbey of Holyrood was founded by King David I. in 1128 for the canons regular of the order of St Augustine, and dedicated in honour of the Holy Cross or Rood brought to Scotland by his mother the pious Margaret. This cross, called the Black Rood of Scotland, fell into the hands of the English at the battle of Neville's Cross in 1346, as narrated in the article EDINBURGH. The Abbey was several times burned by the English, the nave on the last of these occasions (in 1547) being repaired with the ruins of the choir and transepts. This was used as the parish church till 1672, when it was converted into the chapel-royal. In 1687 it was set apart by King James VII. for the Roman Catholic service, but was plundered and again burned at the revolution in the following year, and remained neglected until 1758. In that year it was repaired and roofed; but the new roof proving too heavy for the walls, it fell with a crash in 1768, destroying all the new work. Thereafter being utterly neglected it became a crumbling ruin till 1816, when it was put into orderly condition, and in 1857 its appearance was still further improved.

While the Abbey of Holyrood early became the occasional abode of the kings of Scotland—James II. having been born, crowned, married, and buried in it—the foundations of a palace apart from the Abbey were only laid in the time of James IV., Edinburgh having then become the acknowledged capital of the country. Holyrood Palace henceforth was the chief seat of the Scottish sovereigns, and in it were celebrated in 1503 the splendid nuptials of the last-mentioned king. Here also Queen Mary took up her abode in 1561 when she returned from France, and here her son, James VI., dwelt much before his accession to the throne of England in 1603. For further information see under EDINBURGH.

Holytown, a town in Bothwell parish, Lanarkshire, 1 mile E by N of Holytown Junction on the Caledonian railway, 5½ miles SSE of Coatbridge, and 11 ESE of Glasgow. Surrounded by a well-worked part of the Lanarkshire mineral-field, and partaking largely in the industry and traffic connected with the working of the same, it experienced considerable increase of prosperity from the opening of the Cleland and Midcalder railway (1866), in result partly of through traffic on that line and

partly of junction-communication with Motherwell. It includes the suburb of New Stevenston, ½ mile SSW; and has a post office, with money order, savings bank, and telegraph departments, a branch of the Clydesdale Bank, gasworks, a *quoad sacra* parish church, a Free church, and a public school. The *quoad sacra* parish is in the presbytery of Hamilton and synod of Glasgow and Ayr; its minister's stipend is £230. Pop. of town (1836) 755, (1861) 1135, (1871) 2197, (1881) 2480, (1891) 2811, of whom 1293 were in New Stevenston; of *q. s.* parish (1871) 10,099, (1881) 10,449, (1891) 11,641.—*Ord. Sur.*, sh. 31, 1867.

Holywood, a village and a parish of Nithsdale, W Dumfriesshire. The village stands 1½ mile S of Holywood station on the Glasgow and South-Western railway, this being 3½ miles NNW of Dumfries, under which there is a post office.

The parish is bounded NW and N by Dunscore, NE and E by Kirkmahoe, SE by Dumfries, and S by Terregles and Kirkpatrick-Irongray in Kirkcudbrightshire. Its utmost length, from E to W, is 8½ miles; its breadth, from N to S, varies between ½ mile and 2¼ miles; and its area is 8939½ acres, of which 135 are water. The NITH sweeps 6 miles south-south-eastward along or close to all the boundary with Kirkmahoe and Dumfries; and CLUDEN Water, its affluent, winds 6½ miles east-south-eastward along the Kirkcudbrightshire border, itself being fed by CAIRN Water and other burns. Along the Nith the surface declines to 28 feet above sea-level, and all the eastern half of the parish is low and flat, nowhere exceeding 100 feet; but the western is hilly, attaining 759 feet in Steilston Hill, 786 in Killyleoch Hill, and 875 in Speddoch Hill. Silurian rocks prevail in the hills, limestone and red sandstone in the plain, and boulders of granite, trap, greywacke, and conglomerate abound in many places; whilst, on some lands near the centre, blocks of lead-ore have been turned up by the plough. The soil adjacent to the Nith and to the Cluden is deep alluvium, entirely free from stones; farther back is dry, somewhat light, and mostly incumbent on coarse sand; still farther back is a deep strong loam; and, on the hills, is loamy, but shallow and unsuited to the plough. About 300 acres are hill pasture, 360 moss, 120 meadow, and 500 under wood, all the rest of the land being in tillage. In the SE corner of the churchyard stood a Premonstratensian abbey, founded between 1121 and 1154 by John, Lord of Kirkconnel, a member of the Maxwell family. It held the churches and church-lands of Holywood, Dunscore, Penpont, Tynron, and Kirkconnel, whilst exercising jurisdiction over many lands in Nithsdale and East Galloway; and, in 1618, with the property belonging to it, it was constituted a temporal barony in favour of John Murray of Lochmaben and his heirs. The choir of its cruciform church served as the parish church from the Reformation till 1779, when it was taken down to furnish materials for the present building. It is now represented by only two good bells in the present church's belfry. Joannes de Sacro Bosco, a monk here in 1221, became a member of the University of Paris, and was one of the greatest mathematicians of the Middle Ages. Abbot Dungal and his monks, in 1296, swore fealty to Edward I. of England; and the last abbot, Thomas Campbell, gave aid to Queen Mary after her escape from Lochleven Castle, and incurred forfeiture in 1568. An hospital, with a chapel, near the abbey, was founded by Edward Bruce, the brother of King Robert Bruce; and, having been demolished during the wars of the succession, in 1372 was rebuilt by Archibald Douglas, Lord of Galloway, and endowed with the Gallowegian lands of Crossmichael and Troqueer. An ancient Caledonian stone circle, ¼ mile to the W of the abbey's site, comprises eleven of its original twelve large stones (the 'Twelve Apostles'), arranged in oval outline on a diameter of 240 feet. It is situated near the lower termination of an ancient oak grove, which seems to have extended 6 or 8 miles north-westward into Glencairn parish, and which, being looked on as sacred by the ancients, has bequeathed the name of Holywood to the parish.

Another stouc circle, comprising nine large stones, formerly lay on a small eminence within 200 yards of the Nith, less than a mile to the E of the extant circle, but towards the end of the 18th century was broken up and removed for building material. At Fourmerkland is a small tower, erected in 1590. Charles Irvine, who in the 18th century received from Government £5000 for discovering the method of rendering salt water fresh, was a native, as also was Aglionby Ross Carson, LL.D. (1780-1850), for 25 years rector of Edinburgh High School; and Bryce Johnstone, D.D. (1747-1805), who wrote a commentary on the Apocalypse, was minister of the parish from 1771 till his death. Mansions, noticed separately, are Broomrigg, Cowhill Tower, Gribton, Newtonaids, and Portraet. Holywood is in the presbytery and synod of Dumfries; the living is worth £230. The church was built in 1779, and has a plain square tower. Three public schools—Holywood, Speddoch, and Steilston—with respective accommodation for 152, 32, and 51 children, have an average attendance of about 100, 25, and 30, and grants of nearly £110, £36, and £37. Pop. (1801) 809, (1831) 1066, (1861) 1115, (1871) 1069, (1881) 1073, (1891) 1011.—*Ord. Surv.*, sh. 9, 1863.

Home. See HUME.

Honeygreen, a village in the S of Forfarshire, 2 miles NE of Dundee.

Honton, a village in the S of Pomona, Orkney, 8 miles SW of Kirkwall.

Hoove, a village in Tingwall parish, Shetland, 8 miles NNW of Lerwick.

Hope or Hopes Water. See GIFFORD WATER.

Hope, a river in Durness parish, NW Sutherland, formed by three principal head-streams at an altitude of 94 feet, and flowing 6½ miles northward along Strathmore to fresh-water Loch Hope (5½ miles × 1 to 7 furl.; 12 feet), whence issuing it continues 1½ mile northward till it falls into salt-water Loch Eriboll at a point 3 miles NE of Heilem inn. 'The drive along the side of Loch Hope is very pretty, especially at the entrance to Strathmore. On one side are bare hills, and on the other every ledge and knoll is covered with beautiful natural birchwood, above which rise the steep rugged sides of BEN HOPE' (3040 feet). Hope Lodge, built of timber and slate, forms a picturesque feature in the landscape. Both lake and river are well stocked with sea-trout, grise, salmon, and trout.—*Ord. Surv.*, shs. 108, 114, 1880. See pp. 58-63 of Arch. Young's *Sutherland* (Edinb. 1880).

Hopekirk. See HOBKIRK.

Hopeman, a fishing village in Duffus parish, Elginshire, and the terminus of the Burghead branch of the Elgin and Forres section of the Highland railway, 2½ miles E by N of Burghead, 6½ W by S of Lossiemouth, and 6½ NW of Elgin. Founded in 1805, it rose into prosperity under the late proprietor, Admiral Duff of Drummur, who purchased the property twenty-one years before his death in 1858; and it now has a post office under Elgin, with money order, savings bank, and telegraph departments, a police station, a Free church (1854), and a public school. The harbour, completely sheltered, and constructed about 1838, was considerably enlarged in 1865, and has been greatly improved since 1888, having now an area of 2½ acres, and new piers constructed of Portland cement concrete. It has 17½ feet of water at the top of spring tides, in good berths along the pier; and adjoins a sandy beach where vessels, if unable to clear the entrance in a northerly gale, may lie with little or no risk to either themselves or their cargo. The shipping of the port is not extensive. Fish of all kinds common in the Moray Firth are found close to the entrance of the harbour; and the fishing-grounds frequented by the boats of the town are only about one mile, or less than one mile, distant. Pop. (1831) 445, (1861) 1070, (1871) 1226, (1881) 1323, (1891) 1464.—*Ord. Surv.*, sh. 95, 1876.

Hope Park. See EDINBURGH.

Hopes, an elegant modern mansion in Garvald parish, S Haddingtonshire, on the right bank of Hopes or

Gifford Water, 9 miles SSE of Haddington. Held for more than two centuries by the Hays of Hopes, the estate subsequently passed to their kinsman, the Marquis of Tweeddale. See YESTER.—*Ord. Surv.*, sh. 33, 1863.

Hopetoun House, the seat of the Earl of Hopetoun, in Abercorn parish, Linlithgowshire, near the southern shore of the Firth of Forth, 3 miles W by N of South Queensferry, and 12 WNW of Edinburgh. A stately classical structure, it consists of a centre, erected in 1702 from designs by Sir William Bruce of Kinross, to which many years after Robert Adam added N and S wings, that, surmounted by octagonal dome-roofed towers, are connected with the body of the house by sweeping colonnades. The interior contains a library, rich in illuminated MSS. and early specimens of printing, and a fine collection of paintings, of which an 'Ecce Homo' by Van Dyck, his portrait of the Marchese Spinola, a curious Teniers, and a hunting scene by Cuypp were exhibited at London in the Old Masters Collection (1882-83). The N wing is occupied by extensive stables; and the spacious apartment (100 × 39 feet) which forms the S wing, and was formerly used as a family riding-school, in Sept. 1881 was converted into a ball-room on occasion of the coming-of-age of the present Earl. Standing on a raised natural terrace, the house commands a magnificent prospect up the Forth's basin to Ben Lomond, and down the blue, widening Firth to the Isle of May. Its own grounds, too, are of singular loveliness—12 acres of garden, laid out like those of Versailles, and a deer park and other policies, whose trees are unrivalled for size and beauty. Chief among them are a cedar of Lebanon (1748), an *Abies miranda* (1836), a tulip tree of Canada, the 'Dark Avenue' of beeches, a cluster of noble oaks, an avenue of fourteen ash trees, three Spanish chestnuts, yews, larches, etc.* The ancestor of the Hopetoun family was a cadet of the Craighall or PINKIE Hopes, Sir James Hope of Hopetoun, Lanarkshire (1614-61), eminent as a lawyer and a mineralogist. His son, John (1650-82), in 1678 purchased the Linlithgowshire baronies of ABERCORN and NIDDRY; and his grandson, Charles (1681-1742), in 1703 was created Earl of Hopetoun, Viscount Aithrie, and Baron Hope, in the peerage of Scotland. In the peerage of the United Kingdom the title of Baron Hopetoun was conferred in 1809 on James, third Earl (1741-1816), of Baron Nidry in 1814 on his half-brother, Sir John Hope (1766-1823), the famous Peninsular general. The latter, as fourth Earl, feasted George IV. at Hopetoun House on 29 Aug. 1822, prior to the king's embarkation for England at Port Edgar. John Adrian Louis Hope, present and seventh Earl (b. 1860; suc. 1873), is seventh in descent from Sir James, and entertained the Prince and Princess of Wales here in 1884.—*Ord. Surv.*, sh. 32, 1867. See John Small's *Castles and Mansions of the Lothians* (Edinb. 1883).

Hop-Pringle, an old baronial fortalice in Stow parish, Edinburghshire, on the right bank of Gala Water, opposite Crookston, 1½ mile NNW of Fountainhall station. It is now reduced to slender remains, yet shows evidence of having been a strong and important place; and it commands an extensive view. It was the original seat of the Hop-Pringle or Pringle family.—*Ord. Surv.*, sh. 25, 1865.

Horndean, a village and an ancient parish of SE Berwickshire. The village, standing within 5 furlongs of the left bank of the river Tweed, 7½ miles NNE of Coldstream, and 2½ N of Norham, is an ancient place, which shared in important events connected with the wars of the succession, and now has a U.P. church containing 450 sittings. The parish, at the time of the Reformation, was united with Upsetlington to form the parish of Ladykirk.

Horsbrugh, a shattered peel-tower in Innerleithen parish, Peeblesshire, near the left bank of the Tweed, 2½ miles E by S of Peebles. From at least the beginning of the 13th century till 1617 it was the castle of the Horsbrughs of Horsbrugh.

* The height and girth of these and other trees are given in the *Trans. Highl. and Ag. Soc.* (1879-81).

Horse Island, a grassy islet in Ardrossan parish, Ayrshire, 5 furlongs NW of Ardrossan harbour. Measuring $2\frac{3}{4}$ furlongs by 1, and nowhere rising higher than 13 feet above sea-level, it affords some shelter to Ardrossan harbour, and is the site of a beacon tower.—*Ord. Sur.*, sh. 21, 1870.

Hoscote, a modern mansion in Robertson parish, Roxburghshire, near the left bank of Borthwick Water, $8\frac{1}{4}$ miles WSW of Hawick. Its owner is Archibald Stavert, Esq. (b. 1828; suc. 1857).—*Ord. Sur.*, sh. 17, 1864.

Hospitalfield, an estate with a modern mansion, in Arbroath parish, Forfarshire, $1\frac{1}{2}$ mile SW of Arbroath. Its owner, Patrick Allan Fraser, Esq., at his death in 1890, bequeathed it to be made into a kind of monastic brotherhood of painters, sculptors, and literary men.—*Ord. Sur.*, sh. 49, 1865.

Hospitalmill, a village in Cults parish, Fife, on the river Eden, $1\frac{1}{4}$ mile NE of Pittlesie.

Hoswick, a village in Dunrossness parish, Shetland, 2 miles distant from Sandwick.

Houl and Houland, two villages in Tingwall parish, Shetland. Their post-town is Scalloway, under Lerwick.

Houna or Huna, a hamlet in Canisbay parish, Caithness, adjacent to Houna Ness on the Pentland Firth, 3 miles W of Duncansbay Head, and $16\frac{1}{2}$ N of Wick. It has a post office under Wick and an inn, and is the ferry station to Orkney.

Hounam, a Border village and parish of E Roxburghshire. The village stands on the right bank of Kale Water, at the base of gentle rising-grounds, $4\frac{1}{4}$ miles S by E of Morebattle, 9 E of Jedburgh station, and 11 SSE of the post-town, Kelso.

The parish is bounded N and NE by Morebattle, SE by the county of Northumberland, S, SW, and W by Oxnam, and N W by Jedburgh and Eckford. Its utmost length, from N to S, is 7 miles; its utmost breadth is $5\frac{1}{4}$ miles; and its area is $15,107\frac{1}{4}$ acres, of which $33\frac{1}{4}$ are water. KALE WATER here winds $8\frac{1}{2}$ miles north-by-eastward—first 1 mile along the boundary with Oxnam, next $5\frac{3}{4}$ miles through the interior, then $1\frac{1}{2}$ mile on or close to the Morebattle border; and here it is joined by half a dozen burns. Along it, in the extreme N, the surface sinks to 390 feet above sea-level, thence rising to 1472 feet at conical Hounam Law, 1046 at Chesterhouse Hill, 1117 at Windy Law, 1152 at Chatto Hill, 1289 at Whitestone Hill, 1844 at *Beefstand Hill, 1676 at *Lamb Hill, 1573 at *Blackhall Hill, and 1388 at Woden Hill, where asterisks mark those summits of the Cheviot watershed that culminate right on the English border. Round verdant hills these, that give the parish a diversified aspect of waving elevations, intersected with numerous deep narrow dells and charming romantic vales. The north-western border is comparatively low and level; yet even it is interspersed with several rising-grounds. The rocks are chiefly porphyritic, and contain jaspers, agates, grey amethysts, and rock crystals. The soil in the bottom of the vales is mostly either alluvium or light sandy loam; on the lower hills is chiefly a sandy gravel; and on parts of the higher hills is moorish or mossy. Most of the land serves only for pasture, maintaining large flocks of Cheviot sheep. Less than one-eighteenth of the entire area is in tillage or in meadow; whilst rather more than 100 acres is under wood. Ancient Caledonian standing stones are numerous; cairns or barrows are in several places; the Roman road called Watling Street forms for 4 miles the western boundary, and adjoins there vestiges of several camps and semicircular entrenchments; a large well-preserved Roman camp is on Hounam Law; traces of a very extensive fortification, called the Rings, are on the farm of Hounam Mains; eminences of the kind called moats are in two places; and ruins of Border peels are at Chester House and Heatherlands. GREENHILL is the only mansion. Hounam is in the presbytery of Jedburgh and synod of Merse and Teviotdale; the living is worth £306. The church is at the village, and was repaired in 1844; and a public school, with accommodation for 61 children, has an average attendance of about 30, and a grant of

over £45. Pop. (1801) 372, (1861) 289, (1871) 238, (1881) 263, (1891) 223.—*Ord. Sur.*, shs. 18, 17, 1863-64.

Houndslow, a village in Westruther parish, Berwickshire, 7 miles E of Lauder.

Houndwood, a hamlet and a *quoad sacra* parish in the W of Coldingham parish, Berwickshire. The hamlet lies on the left bank of Eye Water, adjacent to the North British railway, 3 miles WNW of Reston station, and 3 ESE of Grant's House station, its post-town. It consists of the *quoad sacra* parish church (1836), a Free church, and a few detached houses, scattered over a length of about $\frac{1}{2}$ mile. The *quoad sacra* parish, comprising about one-half of Coldingham, was constituted by ecclesiastical authority in 1836, by civil authority in 1851; contains the mansions of Houndwood House, Newmains, Berrybank, Sunnyside, Coveyheugh, Stoneshiel, Fairlaw House, and Renton House; has vestiges of two or more old towers, one of them a hunting-seat of the priors of Coldingham; and is in the presbytery of Chirnside and synod of Merse and Teviotdale. The stipend is £120. Three public schools—Auchincraw, Renton, and Reston—with respective accommodation for 104, 125, and 135 children, have an average attendance of about 35, 70, and 80, and grants of over £38, £64, and £70. Pop. of *q. s.* parish (1891) 1360.—*Ord. Sur.*, sh. 34, 1864.

Houna, a sea-loch in Glenelg parish, Inverness-shire, dividing Glenelg proper from Knoydart. Opening from Sleat Sound, at a point 6 miles SW of Glenelg village, and penetrating 14 miles east-south-eastward, it makes three successive sweeps in three different directions, and contracts somewhat regularly from a width of $3\frac{3}{4}$ miles at the entrance to a width of only $1\frac{1}{2}$ furlong at the head. 'The situation of this estuary is one of great natural grandeur, and the high walls of mountain that overhang it may well have given the idea of gloom and horror conveyed in its singular name—the "Lake of Hell." The glen itself is a deep and cavernous cleft, the loch beginning as a narrow channel, with walls of precipice on either side, often just redeemed from utter harshness by the pines which keep a precarious footing wherever they can. . . . Point after point, precipice after precipice, stands out each a mailed head with its dark plume waving over it.'—*Ord. Sur.*, shs. 72, 71, 1880-83. See GLENELG, KNOYDART, BEN SERIAL, CORRYVARLIGAN, and p. 520 of an article by Captain Thomas P. White in *Good Words* for 1874.

Housay. See Housie.

House or East Burra, an island in Bressay parish, Shetland, lying between West Burra and the W coast of the Mainland, and separated from the latter by Cliff's Sound. It commences $8\frac{1}{2}$ miles SW of Lerwick, extends 5 miles south-south-westward, and has a breadth of from $\frac{1}{2}$ to 1 mile. Its coast is rocky; its interior is mostly a hilly ridge, and its W side, at one part, approaches so near West Burra as to be connected with it by a rude timber bridge. Pop. (1871) 239, (1891) 207.

Househill, an estate, with a mansion, in Nairn parish, Nairnshire, $1\frac{1}{4}$ mile S by E of the town.

Househill, an estate, with a modern mansion and a village, in the E of Abbey parish, Renfrewshire, on the right bank of Levern Water, $2\frac{1}{2}$ miles NE of Barrhead. It was sold in 1871 for £40,000. The village, called Househill Muir, has Hurler for its post-town, under Glasgow.—*Ord. Sur.*, sh. 30, 1866.

Housie Skerries, a group of islets in Nesting parish, Shetland, $9\frac{1}{2}$ miles E of Mainland and 24 NE of Lerwick. They comprise *Housie proper in the centre, Grunay and Bruray in the E, Mickle Skerry in the WNW, and a number of islets and skerries immediately W of Housie proper; and they are often called the Out Skerries. The three chief form a triangular group at the distance of only a few hundred yards from one another; each is somewhat more than a mile long; all are widely secluded; and they are the scene of extensive fisheries for ling. Pop. (1841) 122, (1861) 60, (1871) 71, (1881) 71, (1891) 86.

House of Muir, a common in Glencorse parish, Edinburghshire, on the eastern slope of the Pentlands, 3

miles N by W of Penicuik and 8½ S of Edinburgh. A weekly market for live stock, frequented by the Edinburgh butchers, was for some time held here; and a great annual market for sheep, held from time immemorial on the first and second Mondays of April, has fallen off considerably.

Houston, a village and a parish of central Renfrewshire. The village stands 130 feet above sea-level on Houston Burn, 1½ mile NNE of Houston or Crosslee station on the Bridge of Weir section of the Glasgow and South-Western, 3½ miles W by S of Houston station on the Glasgow and Greenock section of the Caledonian, 3 NNW of Johnstone, and 6 WNW of Paisley. An older village, now extinct, stood a little lower down the burn; and the present place, founded on a regular plan in 1781, consists chiefly of two streets on the two sides of the burn, and presents a neat appearance, with slated two-story houses. The principal occupations of the inhabitants are weaving and embroidering. It has a money order, savings bank, and telegraph post office under Johnstone, and a fair on the second Tuesday of May. An omnibus runs in connection with the trains. In 1893 Mr A. A. Speirs, of Elderslie and Houston, presented a public hall to the village. The building is two stories in height, with reading and recreation rooms on the ground floor, and a hall on the upper floor, measuring 47 feet long by 27 wide, and seated to accommodate about 400. Pop. (1841) 623, (1861) 858, (1871) 518, (1881) 553, (1891) 498.

The parish, containing also the village of CROSSLEE and part of Bridge of WEIR, comprises the ancient parishes of Houston and Killallan, which inconveniently intersected each other, and were united in 1760. It is bounded N and NE by Erskine, SE and S by Kilbarchan, and W by Kilmalcolm. Its utmost length, from E to W, is 5½ miles; its utmost breadth is 3¼ miles; and its area is 7644 acres, of which 59½ are water. GRYFE Water winds 7½ miles eastward along all the southern and south-western boundary; its affluent, Dargavel Burn, flows 6½ miles east-south-eastward along all the northern and north-eastern boundary; and the interior is drained to the Gryfe by Houston and Barochan Burns. In the extreme E, at the Dargavel's influx to the Gryfe, the surface declines to 20 feet above sea-level; and the eastern and south-eastern districts are low and almost flat, but the north-western rises gradually, till near West Glen it attains a summit altitude of 623 feet. Carboniferous rocks prevail in the lower districts, eruptive rocks in the higher; and the former include sandstone, limestone, and coal. The soil of the low flat grounds is partly clay and partly loam; of the higher is thin, dry, and in places heathy. Moss to the extent of 300 acres formerly lay dispersed through portions of the eastern district, but has in great degree been reclaimed and brought under the plough, notably in the case of FULWOOD MOSS (1879-80). Barochan Moss, however, of great depth and considerable extent, is still a marked feature. The barony of Houston, anciently called *Kilpeter*, from a church on it dedicated to St Peter, in the middle of the 12th century passed from Baldwin of Biggar, sheriff of Lanark, to Hugh of Padvinan, and took from him the name of 'Hugh's-town,' corrupted into 'Houston,' and gave that name to his descendants. They retained the barony till 1740, between which date and 1782 it went by sale or inheritance to five different proprietors, eventually being purchased by Alexander Speirs of Elderslie. Houston House was a large, quadrangular, castellated pile, with a high tower at the NW corner, and with an arched entrance and two turrets on the S front; stood on an eminence surrounded by gardens and woods; and, excepting the E side, was taken down in 1780 to furnish building material for the new village. In 1893 extensive additions were made to the house by Lady Anne Speirs. These include a tower 113 feet in height. An ancient cross, supposed to have been erected by the knights of Houston, has a graduated pedestal, an octa-

gonal pillar 9 feet high, and a surmounting dial and globe. Mansions, noticed elsewhere, are Barochan House and Gryfe Castle. Houston is in the presbytery of Paisley and synod of Glasgow and Ayr; the living is worth £303. The parish church was built in 1874-75, at a cost of over £3000, by Mrs Ellice of Invergarry as a memorial to her son, Captain Archibald Alexander Speirs (1840-69), M.P. for Renfrewshire. It is an early Gothic edifice, with 600 sittings and a square tower 70 feet high; and in 1876 it was adorned with seven stained-glass windows. At its E end a new mortuary has been erected, containing an interesting 15th century monument of the Houston family; and 2 miles to the NW the ruin is still standing of Killallan or St Fillan's church. Other places of worship are Houston Free church and Houston Roman Catholic church, St Fillan's (1841). Freeland public, Houston public, and a Roman Catholic school, with respective accommodation for 245, 289, and 85 children, have an average attendance of about 220, 140, and 60, and grants of nearly £200, £150, and £140. Pop. (1801) 1891, (1841) 2818, (1861) 2490, (1871) 2167, (1881) 2191, (1891) 1946.—*Ord. Sur.*, sh. 30, 1866.

Houstoun House, a mansion in Uphall parish, Linlithgowshire, 1 mile NW of Uphall station on the Bathgate section of the North British railway, and 5 furlongs WSW of Uphall village. An old Scottish mansion house, of considerable height, with crow-stepped gables, and with well laid-out grounds, it was founded in the latter half of the 16th century by Sir John Shairp, Knight, an eminent lawyer and Queen Mary's advocate. Among his descendants have been Norman Shairp (1779-1864), Major H. E. I. C. S., and his younger son, John Campbell Shairp, LL.D. (1819-85), principal of St Salvator's College, St Andrews. The present proprietor is Sheriff John Campbell Shairp.—*Ord. Sur.*, sh. 32, 1857. See John Small's *Castles and Mansions of the Lothians* (Edinb. 1883).

Houton, a headland, a bay, and a small island, in Orphir parish, Orkney, at the south-western extremity of Pomona, 5 miles SE of Stromness. The headland rises to a height of 195 feet above sea-level, and is pierced, at the height of 90 feet, by a cave 14 feet long. The bay, adjoining the E side of the headland, forms a good natural harbour, and can be entered by ships at low water. The island lies across the mouth of the bay, and shelters it; but is not quite ¼ mile long, and is entirely pastoral.

Howdens-Hall, a hamlet in Liberton parish, Edinburghshire, 3 miles S by E of Edinburgh.

Howe, a hamlet in Wick parish, Caithness, 9 miles NNW of Wick town, and 5 WNW of Keiss.

Howe, a hamlet in Colvend parish, SE Kirkeudbrightshire, 6½ miles SE of Dalbeattie.

Howford, a village in Nairn parish, Nairnshire, 1½ mile S by W of Nairn station.

Howgate, a village in Penicuik parish, Edinburghshire, 1¾ mile SSE of Penicuik town and 11 miles S of Edinburgh. It has a U.P. church, rebuilt in 1855, a public school, and a copious water supply, introduced in 1872. From Howgate came 'Rab' and his two best friends.—*Ord. Sur.*, sh. 32, 1857.

Howgill, a village in Annan parish, Dumfriesshire, 7 furlongs E by S of the town of Annan.

Howmore, a village and a registration district in the N of South Uist parish, Outer Hebrides, Invernessshire. The village stands on the W coast of South Uist island, 7 miles S of the north-western extremity of that island, and 36 SSW of Lochmaddy. It has a post and money order office under Lochboisdale Pier (S.O.) The registration district is the central one of three districts into which South Uist parish is divided. Population of the registration district (1881) 1968; (1891) 1879.

Howwood. See HOLLOW-WOOD.

Hoxa, a peninsular headland on the W side of South Ronaldshay island, Orkney, projecting 1¾ mile west-south-westward, and terminating ½ mile E of Flotta island.

Hoy, the largest, except Pomona, of the Orkney islands, lying at the SW of the group. It is separated from the Stromness district of Pomona by Hoy Sound, which, with a varying width of $1\frac{3}{4}$ and 5 miles, contains midway the island of GRAEMSAY; from Burray and South Ronaldshay islands by Scapa Flow, $5\frac{1}{2}$ to 11 miles broad; and from Caithness by the Pentland Firth, which here has a minimum width of $6\frac{3}{4}$ miles. Its utmost length, from NNW to SSE, is $13\frac{1}{2}$ miles; its breadth varies between 3 furlongs and $6\frac{1}{4}$ miles; and its area, inclusive of Graemsay, Flotta, and Pharay islands, is $61\frac{1}{2}$ square miles or 39,510 acres, of which 15,183 acres belong to Hoy and Graemsay parish and 24,327 to Walls and Flotta parish. Near its S end it is all but disverged by two arms of the sea, Aith Hope and the Long Hope; the latter, striking 4 miles west-south-westward, and varying in width between 3 furlongs and $1\frac{1}{4}$ mile, forms one of the finest natural harbours in the world. During the French war it was no uncommon thing for a fleet of upwards of 100 large vessels to be lying wind-bound in this harbour; and a fine sight it was to see them spread their canvas to the breeze, and move majestically along the shores of the island. The district around the Long Hope, called South Walls and North Walls, is principally a fine plain, in a state of good cultivation; but the parts to the N, constituting the main body of the island, are almost wholly occupied by three large hills, ranged in the form of a triangle, of which that to the NE, called the Wardhill of Hoy, is the largest, rising from a plain, with a broad base, to the height of 1564 feet above the level of the sea. Except along the N shores, which are bordered with a loamy soil and a rich verdure, the soil is composed of peat overlying clay. The ground capable of producing grain, and that appropriate for feeding cattle, bear but a very small proportion to what is covered with heath and suitable only for sheep-walks. The township of Rackwick, $3\frac{1}{4}$ miles from the N end of the island, is beautifully situated in the extremity of a valley to which it gives name, being closed in on two sides by very lofty precipices of sandstone, but opening with a fine bay towards the western entrance of the Pentland Firth, so that every vessel which passes must necessarily come into view. All the extent of coast which faces the Atlantic, from the south-western extremity of the island, but especially from Melsetter in the vicinity of the head of the Long Hope, all the way N, past Rackwick, on to the very entrance of Hoy Sound, is a series of stupendous rock-scenery, occasionally exceeding 1100 feet in height,—sometimes perpendicular and smooth,—in other places rent, shivered, and broken down in huge fragments,—occasionally overhanging the deep, and frowning on the stormy surges of the Atlantic. And, at one place, a vast insulated rock, called the Old Man of Hoy, and shaped like an immense pillar, with arches beneath, stands so well apart from the adjacent cliffs as to be a conspicuous object even from points of view in Caithness, and has obtained its name from being fancied to present a rough outline of similitude to the human form. This 'gigantic column, rising 450 feet above the sea, gives evidence of the sculpturing force of the northern waves; and its materials record three episodes in a far-off past, for the column itself is a mass of yellow and red sandstone belonging to the upper part of the Old Red series, whilst the plinth is a fragment of a lava stream, and rests on a foundation of Caithness flag. Once a portion of the solid cliff, the Old Man has been hewn out from it during the interval that has elapsed since the last lingering glacier melted away from the upland valleys of Hoy.' The island generally is the most interesting district of Orkney to the geologist, the botanist, or the ornithologist; and well deserves the attention of any naturalist who may have an opportunity of leisurely examining it at different seasons of the year. It is the Highlands of Orkney, scarcely second to many parts of the Highlands of the mainland in various attractions, and combining these with interesting features of vale and sea-beach. Some of its cliffs are of sandstone, intersected by amygdaloid and other kinds of trap; while

the parts inland consist of sandstone, clay slate, and calcareous strata. Grouse are abundant, and hawks common; a beautiful, bold, large kind of falcon may now and then be seen; and several kinds of eagles build their eyries on the cliffs. The soil of the arable lands is mostly light, wet, and spongy, better for grass than grain. 'Walls is the best part of the island, and extensive improvements were carried out some years ago at Melsetter by a former proprietor, and a large flock of Cheviot sheep was introduced, which succeeded well. If surface-drained, the mountain range in the island would suit black-faced sheep' (*Trans. Highl. and Ag. Soc.*, 1874, p. 59). In Hoy parish during the last 50 years much has been done in draining, sub-soiling, and other land improvements. A chief antiquity, the DWARFIE STONE, and the lighthouses of CANDICK and GRAEMSAY, are noticed separately. There is a post office at Longhope, under Stromness, with money order, savings bank, and telegraph departments. Near it is Melsetter, one of two mansions in this island—the other being Hoy Lodge—belonging to John George Moodie Heddle, Esq. (b. 1844; suc. 1869). In the presbytery of Cairston and synod of Orkney, the island is divided politically and ecclesiastically between the parishes of Hoy and Graemsay and Walls and Flotta, the former a living worth £158, the latter £177 with augmentation. A new church for Hoy parish was built in 1891-92. Walls church was built in 1832. Other places of worship are St John's Established church, North Walls, and Walls Free church (1877). The three public schools of Hoy, Rackwick, and Graemsay, with respective accommodation for 51, 40, and 45, have an average attendance of about 50, 45, and 10, and grants amounting to over £65, £61, and £21. Valuation (1891) of Hoy and Graemsay, £810; of Walls and Flotta, £2536. Pop. of Hoy and Graemsay (1801) 244, (1831) 546, (1861) 556, (1871) 581, (1881) 603, (1891) 537; of Walls and Flotta (1801) 993, (1831) 1436, (1861) 1674, (1871) 1530, (1881) 1506, (1891) 1505; of Hoy island (1841) 1486, (1851) 1565, (1861) 1535, (1871) 1385, (1881) 1380, (1891) 1320. See Hugh Miller's *Cruise of the Betsy* (1858), and Sir Arch. Geikie's *Geological Sketches at Home and Abroad* (1882).

Hoy Sound. See GRAEMSAY and HOY.

Hullerhurst, an estate, with a mansion, in Stevenston parish, Ayrshire, $1\frac{1}{2}$ mile N of the town.

Humbie, a parish in the south-western extremity of Haddingtonshire. It comprehends the ancient parishes of Keith and Humbie, called at the end of the 17th century Keith-Symmars and Keith-Hundebey. The Boundary Commissioners in 1891 transferred a detached portion of the parish to the parish of Fala and Soutra, and so to Edinburghshire. This detached portion was situated at Blackshiels, about a mile SW of the western boundary of the parish, and comprised 450 acres. The parish is bounded NW by Ormiston, NE by Salton and Bolton, E by Yester, SE by Channelkirk in Berwickshire, SW and W by Fala and Soutra in Edinburghshire; and it contains the post office of Upper Keith. It has an utmost length from NNW to SSE of $5\frac{1}{2}$ miles, an utmost breadth from E to W of 4 miles, and an area of 8866 acres. The drainage is carried northward to the Tyne by Keith, Humbie, and Birns Waters; and the surface, declining to 370 feet above sea-level in the extreme N, thence rises southward to the Lammermuirs, attaining 600 feet near Humbie House, 616 near Upper Keith, 1158 near Blegbie, and 1431 at the south-eastern border. The southern district, as part of the Lammermuirs, approaching within $\frac{1}{2}$ mile of Lammer Law (1733 feet) in Yester parish, is mostly heath or upland pasture; but the central and northern districts, comparatively low and level, share the general character of the great plain of Haddington, and contain a great aggregate of park and wood. One stretch of forest, bearing the name of Humbie and Salton Wood, begins near the parish church, and extends $1\frac{1}{2}$ mile northward to the northern boundary, and $\frac{1}{2}$ mile farther into Salton parish. Silurian rocks predominate in the uplands, and rocks of the Carboniferous formation extend be-

neath the plain. Traces are found of iron ore and coal. The soil on the uplands is much of it mossy; in the eastern parts of the low grounds, is a fine light gravel, well adapted to the turnip husbandry; and in the northern parts, is variously rich clay, loam, and light gravel. Faint vestiges of a Roman castellum are on Whitburgh estate, and in front of Keith House are remains of a pre-Reformation chapel. Humbie House, about a mile S of the left bank of Birns Water, is a seat of Lord Polwarth, his grandfather early in the present century having succeeded the Hepburnes in this estate, as great-grandson of Helen Hepburne, Countess of Tarras. (See HARDEN.) Keith House and Whitburgh are noticed separately; and the chief proprietors are the Earl of Hopetoun and Lord Polwarth. Humbie is in the presbytery of Haddington and synod of Lothian and Tweeddale; the living is worth £335. The parish church, 6½ miles NE of Tynehead station on the Waverley section of the North British railway, was built in 1800. There is also a Free church; and a public school, with accommodation for 101 children, has an average attendance of about 50, and a government grant amounting to over £40. Valuation (1860) £9247, (1879) £11,283, 11s., (1883) £10,141, 10s., (1891) £8438, 10s., (1892) £7734, 15s. (1893) £7666, 15s. Pop. (1801) 785, (1831) 875, (1861) 997, (1871) 967, (1881) 907, (1891) 791.—*Ord. Sur.*, sh. 33, 1863.

Hume or Home, a post-office village and a parish of S Berwickshire. The village, standing 680 feet above sea-level, 3 miles S by W of Greenlaw, its nearest railway station, and 5½ N by W of Kelso, was once a considerable town, teeming with the retinue and the dependants of one of the most powerful baronial families of a former age, but it has passed into decadence, so as to be now a mere hamlet. Home Castle crowns a rocky eminence hard by, and figures like a beacon-tower over all the Merse, forming a picturesque feature in a wide and luxuriant landscape. As founded in the 13th century, it must have been a lofty and imposing structure; and, ever growing larger and stronger as the lords of Home grew richer and mightier, it served at once to overawe and to defend the surrounding country. Prior, indeed, to the general use of artillery* it was deemed to be almost impregnable; but in 1547 the Protector Somerset captured it, after a stout resistance by Lady Home, whose husband, the fourth Lord Home, had fallen in a skirmish the day before the battle of Pinkie. Somerset placed in it an English garrison, who in 1549 were surprised and slain by young Lord Home. Again, in 1569, the Earl of Sussex, 'being at Wark, accompanied with the whole bands of footmen and a thousand horse, with three battery-pieces and two sacris, went to the siege of Home, where he planted his battery; where, within twelve hours after the battery was planted, the castle was surrendered to him, simply having within it 240 soldiers. So the soldiers departed out of it in their hose and doublets.' And lastly, in 1650, immediately after the capture of Edinburgh Castle, Cromwell despatched Colonel Fenwick at the head of two regiments to seize the Earl's castle of Home. In answer to a peremptory summons to surrender, sent him by the colonel at the head of his troops, Cockburn, the governor of the castle, returned two missives, which have been preserved as specimens of the frolicking humour that now and then bubbles up in the tragedy of war. The first ran: 'Right Honourable, I have received a trumpeter of yours, as he tells me, without a pass, to surrender Home Castle to the Lord General Cromwell. Please you, I never saw your general. As for Home Castle, it stands upon a rock. Given at Home Castle, this day, before 7 o'clock. So resteth, without prejudice to my native country, your most humble servant, T. COCKBURN.' The second was expressed in doggerel lines, which still are quoted by the

peasantry, often in profound ignorance of the occasion when they were composed:—

'I, Willie Wastle,
Stand firm in my castle;
And a' the dogs o' your town
Will no pull Willie Wastle down.'

Home Castle, however, when it felt the pressure of Colonel Fenwick's cannon, and saw his men about to rush to the attack, very readily surrendered to his power, and received within its walls the soldiery of Cromwell. Early in the 13th century William, a grandson of the third Earl of Dunbar, acquired the lands of Home by marriage with his cousin Ada; and his eighth descendant, Sir Alexander Home, in 1473 was raised to the peerage as Baron Home, whilst his twelfth in 1605 was created Earl of Home and Baron Dunglass. (See BOTHWELL, DOUGLAS CASTLE, and HIRSEL.) In the early part of the 18th century Home Castle and the domains around it passed into the possession of the Earls of Marchmont, a branch of the Homes who for a time were wealthier and more influential than the main stock, but whose title expired with the third Earl in 1794. The castle in his time was almost level with the ground, but was by him rudely restored from its own materials, high battlemented walls being re-erected on the old foundations. It is only a 'sham antique;' but, seen from a distance, it still appears, on its rocky elevation, to frown over all the Merse and much of Roxburghshire. The proprietor is Sir J. H. P. Hume-Campbell, Bart., cousin of the late Sir H. Hume-Campbell, great-grandson of the second Earl of Marchmont.

The parish is bounded NW by Gordon, NE by Greenlaw, E by Eccles, S by Sticheil in Roxburghshire, SW by Nenthorn, and W by Earlstoun. An exchange of territory was effected by the Boundary Commissioners in 1891, between the parishes of Hume and Nenthorn, whereby the Mellerstain Farm detached portion of the former, comprising 39½ acres, was transferred to Nenthorn parish, and so much of the farm of Hardiesmill-place as was situated in the latter, and extending to 44 acres, was transferred to Hume parish. Its utmost length, from E by N to W by S, is 4½ miles; its breadth varies between 1½ and 2½ miles; and its area is 4107½ acres, of which 3½ are water. EDEN WATER flows ½ mile southward along the western boundary; and Lambden Burn rises in and traverses the southern interior, on its easterly course to the Lcet. Where it passes off into Eccles, the surface declines to 380 feet above sea-level, thence rising to 700 at Hume Craigs, 538 at Fallsidehill, 709 at Stenmuir, and 654 at North Blinkbonny. A rising-ground called Lurgie Craigs, on the south-western border, is faced with a fine basaltic colonnade, whose erect, regular, polygonal columns are 5 or 6 feet high and 16 inches thick. The soil, in most places clayey and strong, in some was naturally wet and cold, but nearly everywhere has been greatly improved, and brought into a state of high cultivation. The original parish, whose church was dedicated to St Nicholas, was four times the size of the present one, and comprehended much of the lands now included in Gordon and Westruther. In the first half of the 12th century the second Earl of Dunbar conferred it on Kelso Abbey, whose monks placed large portions of it under other parochial arrangement. The curtailed parish was annexed ecclesiastically in 1640 to the contiguous Roxburghshire parish of STICHEIL. A public school, with accommodation for 97 children, has an average attendance of about 60, and a grant of £60. Pop. (1841) 385, (1861) 420, (1871) 460, (1881) 407, (1891) 375.—*Ord. Sur.*, sh. 25, 1865.

Huna. See HOUNA.

Hundalee Cottage, a modern mansion in Jedburgh parish, Roxburghshire, on the steep left bank of the river Jed, 1½ mile S by W of Jedburgh town. A strong ancient peel tower of the Rutherfords, destroyed in the 18th century, stood on the estate of Hundalee; and Hundalee Cave, on the bank of the Jed, disappeared through a landslip in March 1881.

Hungladder, a village in the NW of the Isle of Skye. Its post-town is Kilmuir, under Portree.

* It may here be noted that, according to tradition, James II.'s queen, Mary of Gueldres, was lodging at Home Castle when the king met his death by the bursting of a cannon at the siege of the castle of Roxburgh, 3 Aug. 1460.

Hunterfield, a village in Cockpen and Newhattle parishes, Edinburghshire, now including Arniston Colliery village, 5 furlongs NNW of Gorebridge. Pop. (1871) 487, (1881) 766, (1891) 843, of whom 559 were in Cockpen and 284 in Newhattle.—*Ord. Sur.*, sh. 32, 1357.

Hunter's Quay. See DUNOON.

Hunterston, a handsome mansion, built early in the 19th century, in West Kilhride parish, N Ayrshire, within three furlongs of the Firth of Clyde and 2½ miles NNW of West Kilhride village. It is the seat of Col. Gould Hunter-Weston, son-in-law of Robert Hunter, Esq. of Hunterston (1800-80), whose ancestors held this estate as far back as the first half of the 13th century. Their castle, a small square tower, stands not far distant from the present manor house, in which is preserved a large and splendid ancient silver hrooch, richly adorned with gold filigree work, and bearing a Runic inscription. Supposed to have been lost by a Norseman at the time of the Battle of Largs (1263), it was found on the estate in 1826, and is finely reproduced in the *Archæological Collections relating to the Counties of Ayr and Wigton* (Edinb. 1878).

Huntfield, an estate, with a mansion, in Libberton parish, Lanarkshire, 4 miles NW of Biggar.

Hunthill, an estate, with a modern mansion, in Jedburgh parish, Roxburghshire, 2 miles SE of the town. An old peel tower was on it, but has disappeared.

Huntington House, a mansion in Haddington parish, Haddingtonshire, 2½ miles WNW of the town.

Huntingtower, a village and an ancient castle in Tihhermore parish, Perthshire. The village stands near Almondbank station on the Perth, Methven, and Crieff section of the Caledonian, 3 miles WNW of Perth, under which it has a post office. It adjoins the village of Ruthvenfield, and since 1774 has been the seat of an extensive bleachfield. The works are supplied with water through an artificial canal of such antiquity as to rank amongst the earliest extant appliances of industry in the kingdom. The canal is mentioned in a charter of Alexander II. as his mill-lead; and in 1244 a pipe's supply from it was granted to the Blackfriars' monastery in Perth. Opening from the river Almond, and approaching Huntingtower through a meadow, it measures 3 feet in depth, nearly 18 feet in breadth, and 4½ miles in length. Pop. of the conjoint villages of Huntingtower and Ruthvenfield (1871) 446, (1881) 458, (1891) 423.

In the reign of William the Lyon (1165-1214) the manors of Ruthven and Tibbermore were possessed by one Swan, whose descendant, Sir William de Ruthven, was raised to the peerage as Lord Ruthven in 1488. Patrick, the grim third Lord (1520-66), was the principal actor in Rizzio's murder; his second son and successor, William, in 1581 was created Earl of Gowrie. At Ruthven Castle, exactly a twelvemonth later he kidnapped the hoy-king, James VI.—an affair that, famous as the 'Raid of Ruthven,' in conjunction with a later plot, brought his head to the block in 1584. The Gowrie Conspiracy (1600), whose story belongs to Perth, cost the life of his son, the third Earl; and from his forfeiture down to early in the 19th century the castle and barony belonged to successively the Tullihardine and the Atholl Murrays. Their present proprietor is Captain William Lindsay Mercer, Esq. (h. 1858; suc. 1871). Ruthven or Huntingtower Castle consists still of two strong, heavy, square towers, battlemented and turreted, which, built at different times, and originally 9½ feet distant from one another, were afterwards united by a somewhat lower range of intermediate building. The space between the towers, from battlement to battlement, at a height of 60 feet from the ground, is known as the Maiden's Leap, it having, according to Pennant, been leapt one night by the first Earl's youngest daughter, whose mother had all but surprised her with her lover, with whom she next morning eloped.—*Ord. Sur.*, sh. 48, 1868. See *Perthshire Illustrated* (1844), and *Hunter's Illustrated Guide to Perthshire*.

Huntly, a quondam hamlet in Gordon parish, SW

Berwickshire, 4½ miles NE of Earlston. It stood on the estate of the ancestors of the ducal family of Gordon, and on their removal to the north gave name to the town of Huntly in Aberdeenshire.

Huntly, a town and a parish in Strathbogie district, NW Aberdeenshire. The town, standing 408 feet above sea-level on the peninsula at the confluence of the rivers Bogie and Deveron, has a station on the Great North of Scotland railway, 12½ miles SE of Keith, 8 SSE of Grange Junction, and 40¾ NW of Aberdeen. By a charter of 1545 to the fourth Earl of Huntly, it ranks as a burgh of barony under the Duke of Richmond and Gordon; and it owes much as a seat of trade and population to the transit through it of the great road from Aberdeen to Inverness; and still more, since 1854, to the construction past it of the Great North of Scotland railway. Its site is dry, healthy, and beautiful, amid charming hilly environs, heathy and swampish once, but now reclaimed, highly cultivated, and richly embellished; and it comprises a number of well-built streets, the two principal ones crossing each other at right angles, and forming a spacious market-place, The Square, in which stand a colossal sandstone statue, on a granite pedestal, of the last Duke of Gordon, by the late William Brodie, R.S.A., and a handsome fountain, erected in 1882 in memory of a deceased hanker. The place thus presents a modern, pleasant, and even elegant appearance, the view of it from the S being singularly fine, since, besides the several features of the town, it takes in the ruin of Huntly Castle and the neighbouring mansion and pleasure-grounds of Huntly Lodge, and rests on the brilliant background of Ord Fell (817 feet) and the Bin (1027), which are all one mass of forest. Huntly or Strathbogie Castle, a stronghold in the 13th century of the Strathbogie Earls of Atholl, was granted by King Robert Bruce to Sir Adam Gordon, lord of Gordon in Berwickshire, who fell at the battle of Halidon Hill (1333). Burned and dismantled in 1594 after the battle of Glenlivet, and rebuilt in 1602 by the first Marquis of Huntly, it ceased to be inhabited about 1760, and now is a stately ruin, which retains a few vaults of the original castle, but chiefly consists of a large round tower, with a great hall 43 feet long and 30 broad. Huntly Lodge, on a rising-ground, 1¼ mile N by E of the town and 3 furlongs N of the castle, was originally a shooting-box of the Duke of Gordon, but was enlarged in 1832 into a handsome and commodious edifice. It served as the residence of the Duke of Gordon's eldest son, from the time of the removal of the family seat to Gordon Castle; and after the death of the last duke in 1836, became the residence of the duchess-dowager till her death. See GORDON CASTLE.

The town was almost surrounded with water during the great floods in August 1829, but sustained comparatively little damage. The ancient one-arch bridge across the Deveron, which commands a very fine view, withstood the pressure of the current; across the Bogie is a good three-arch bridge. The town is well lighted with gas by a joint-stock company started in 1837; and in 1867 water was brought in from the Clashmach at a cost of £3140. Stewart's Hall, erected in 1874-75, but burnt down in 1886 and rebuilt in 1887, is a handsome edifice, the bequest of the late Alexander Stewart, a solicitor in the place. It is surmounted by a lofty clock-tower, and the large hall, used for public meetings, etc., can seat 650 people. The parish church is a plain structure of 1805. The Free church was built in 1840 at a cost of over £1300, in result of the famous Strathbogie movements that preceded the Disruption. Other places of worship are the U.P. church (1809), the Gothic Congregational church (1851), Episcopal Christ Church (1836), a small elegant Gothic pile with a spire, and a handsome Roman Catholic chapel. The Gordon Schools, on the N side of the town, looking down the principal street, were erected in 1839-41 by the late Duchess-Dowager of Gordon, as a memorial to her husband. The building, a very handsome structure, was enlarged in 1888 to receive 1000 children, and under the scheme of the Scottish Educational Endowments Commissioners

accommodates a public school and a senior department composed partly of Brander foundationers and others educated at the expense of the reformed Gordon Trust. Scott's Hospital, a fine edifice on the SE side of the town, was erected in 1854 from a bequest of the late Alexander Scott, Esq., of Craibstone House, for the maintenance of aged men and women. A Jubilee cottage hospital, in The Square, containing 16 beds, fever ward, etc., was erected by subscription in 1887-88, and is maintained by five neighbouring parishes. Brander Public Library, containing about 7000 volumes, was erected in 1885. This was part of the outcome of a gift to his native town of £6500 for educational purposes by William Brander, Esq., of London. In 1815 James Legge, M.A., Professor of Chinese in Oxford University, was born at Huntly, as in 1824 was the poet and novelist George Macdonald.

Huntly has a post office, with money order, savings bank, insurance, and telegraph departments, branches of the Union, Town and County, and North of Scotland banks, a local savings bank, several hotels, a farmers' club, a horticultural society (1846), and a Saturday newspaper, the *Huntly Express* (1863). Thursday is market-day; and cattle-markets are held on the first and third Wednesdays of every month. Several bleachfields of great repute were long in operation on the Bogie; and the manufacture of fine linen, introduced from Ireland in 1768, towards the close of the 18th century had an annual value of from £30,000 to £40,000. These industries have ceased, as also have tanning and distilling; but agricultural implement making, the manufacture of bricks and tiles, brewing, woollen manufactures, etc., afford employment to a considerable number of the inhabitants. Other sources of prosperity are the marketing and export of eggs and cheese, and an extensive retail trade in the supply of miscellaneous goods to the surrounding country. Under the Burgh Police (Scotland) Act of 1892 it is governed by a provost, 2 bailies, and 6 commissioners. Sheriff small-debt courts are held on the second Mondays of March, June, September, and December. Pop. (1831) 2585, (1861) 3448, (1871) 3570, (1881) 3519, (1891) 3760, of whom 2047 were females. Houses (1891) inhabited 825, vacant 28, building 7.

The parish of Huntly, formed by the union in 1727 of the ancient parishes of Dumbennan and Kinnoir, the latter to the right or E of the Deveron, is bounded NW by Cairnie, N by Rothiemay in Banffshire, E by Forgue and Drumblade, SE by Drumblade, S by Gartly, and W by Glass. With a very irregular outline, it has an utmost length from NE to SW of 10 miles, an utmost breadth of $3\frac{1}{4}$ miles, and an area of 12,563 $\frac{3}{4}$ acres, of which 88 $\frac{1}{2}$ are water. The DEVERON here has a winding course of 10 $\frac{3}{4}$ miles—first 3 miles north-eastward along the Cairnie border, then 4 $\frac{3}{4}$ miles south-eastward through the interior, and lastly 4 miles north-by-westward along the boundary with Cairnie; the BOGIE flows 2 $\frac{1}{2}$ miles north-north-eastward along the Drumblade border, and, after a further course of 1 $\frac{1}{2}$ furlong, falls into the Deveron at a point 1 mile NNE of the town. The surface sinks opposite Milltown of Rothiemay to 290 feet above sea-level, thence rising to 650 feet at St Mungo's Hill, 720 at the Wood of Kinnoir, 692 at Dumbennan Hill, 1229 at Clashmach Hill, 1000 at Brown Hill, and 1285 at Muckle Long Hill. The parish is thus for the most part hilly, and was formerly bleak, but has undergone extensive reclamation and much embellishment. A considerable aggregate of low land, naturally fertile, and now finely arable, lies along the banks of the rivers; and a large extent of the hills, once heathy or swampish, is now either in a state of good pasturage or adorned with thriving plantations. St Mungo's Hill, in the E, terminates in a large crater-like cavity, generally filled with water. Peat impregnated with sulphur is obtained here in dry weather, and pieces of lava are said to have been found strewn around. Granite is the prevailing rock; limestone, of a quality not much inferior to marble, occurs in small quantity; and traces of very fine plumbago have been

found near the confluence of the rivers. The arable soil of Dumbennan is generally a good deep loam, but that of Kinnoir is of a cold clayey character. The ruins of an old castle are on the Avochy estate. The Duke of Richmond and Gordon is the largest proprietor in the parish. Huntly is in the presbytery of Strathbogie and synod of Moray; the living is worth £303. The Gordon, Kinnoir, and Longhill public schools, and a Roman Catholic school, with respective accommodation for 998, 63, 75, and 78 children, have an average attendance of about 700, 50, 40, and 75, and grants of over £700, £47, £50, and £64. Pop. (1801) 2863, (1831) 3545, (1861) 4329, (1871) 4374, (1881) 4388, (1891) 4583.—*Ord. Sur.*, sh. 86, 1876.

Huntly, a burn in Melrose parish, Roxburghshire, issuing from CAULDSHIELDS Loch, and traversing the grounds of Abbotsford to the river Tweed. It runs through the Rhymer's Glen, named from True Thomas of Ercildoune or EARLSTON, and famous as a loved retreat of Sir Walter Scott. Huntlyburn House stands 1 mile WSW of Melrose town.—*Ord. Sur.*, sh. 25, 1865.

Huntly, Perthshire. See CASTLE-HUNTLY.

Hurlet, a village on the SE border of Abbey parish, Renfrewshire, on the left bank of Levern Water, 5 furlongs NW of Nitshill station, $1\frac{1}{2}$ mile NNE of Barrhead, and 3 miles SE of Paisley. Standing amid a rich mineral field, where coal has been worked for upwards of three centuries, and ironstone for about sixty years, it was the seat from 1753 till 1820 of a copperas work, the only one in Scotland up to 1807. Becoming also the seat, tentatively in 1766-69 and effectively in 1797, of the earliest alum work, it has ever since the latter date continued to send out large quantities of its chemical products. It has a post office under Glasgow. Pop. (1871) 379, (1881) 341, (1891) 344.—*Ord. Sur.*, sh. 30, 1866.

Hurlford, a town in Riccarton parish, Ayrshire, on the left bank of the river Irvine, with a station on the Glasgow and South-Western railway, at the junction of the Newmilns branch, 2 miles ESE of Kilmarnock. It has a post office, with money order, savings bank, and telegraph departments. Connected by a bridge with the suburb of CROOKEDHOLM in Kilmarnock parish, it is the seat of extensive ironworks of the Eglinton Iron Co. (1846), and of large fire-clay works, whilst in the neighbourhood are many collieries and the water-works of the local authority. A *quoad sacra* parish church, erected in 1875 at a cost of £8000, is an Early English edifice, with a fine organ and a tower. There are also a Free church, a Roman Catholic church, an Institute, with public hall and reading-room, erected by private liberality, two public schools—Hurlford and Crookedholm—and a Roman Catholic school. The *quoad sacra* parish, constituted in 1874 with an endowment of £3000, is in the presbytery of Irvine and synod of Glasgow and Ayr. Minister's stipend, £300. Pop. of town (1861) 2598, (1871) 3488, (1881) 4385, (1891) 4205, of whom 568 were in Crookedholm; of *q. s.* parish (1831), 4699, (1891) 4678, of whom 143 were in Galston parish.—*Ord. Sur.*, sh. 22, 1865.

Hutchison, a village of NW Lanarkshire, $1\frac{1}{2}$ mile from Cambuslang.

Hutton, a Border village and parish of SE Berwickshire. The village stands $\frac{2}{3}$ mile S of Whitadder Water, $4\frac{1}{2}$ miles NNW of Velvethall station in Northumberland, and 7 W of Berwick-upon-Tweed, under which it has a post office. It is supposed to have been the camping-place of the army of Edward I. in 1296, on the day before the capture of Berwick.

The parish contains also the village of Paxton, and comprehends the ancient parishes of Hutton and FISHWICK, united in 1614. It is bounded N by Chirnside and Foulden, E by Mordington and the Liberties of Berwick, SE and S by Northumberland, SW by Ladykirk, and W by Whitesome and Edrom. Its utmost length, from E to W, is 4 miles; its utmost breadth, from N to S, is $3\frac{1}{4}$ miles; and its area is 5645 $\frac{1}{2}$ acres, of which 129 $\frac{3}{4}$ are water. WHITADDER Water winds 7 miles along all the northern and most of the eastern boundary;

and the TWEED sweeps 4 miles north-eastward along all the Northumberland border, midway being spanned by the Union Bridge, which, constructed in 1820 at a cost of £7500 after designs by Captain Sir Samuel Brown, R.N., is a suspension bridge for carriages, the first of its kind in Britain. With a carriage-way 27 feet above the surface of the stream, it measures 368 feet in length and 18 in width. The surface of the parish, for the most part looking almost a dead level, declines along the Tweed to 96 feet, and attains a summit altitude of 244 feet at a point 5 furlongs SW of Hutton village. The ground adjacent to the Whitadder and the Tweed contrasts, in scenic character, with the prevailing tameness of the interior, and, being well wooded, is charmingly picturesque. Sandstone is a prevailing rock, and can be found, at comparatively little depth from the surface, in almost every part, whilst a stratum of gypsum occurs on Hutton Hall estate. The soil on the lands along the rivers is mostly a rich deep loam, incumbent upon sandstone; but on part of the central lands is thin, wet, and cold, overlying a strong tenacious clay. By far the greater portion of the land is regularly in tillage. Andrew Foreman, Archbishop of St Andrews from 1514 to 1522, was a native of Hutton; the Rev. Philip Redpath, editor of the *Border History* (1776), was minister of it; and George Home of Wedderburn, one of the Edinburgh *literati* towards the close of the 18th century, was long a resident. Hutton Hall, on the right bank of Whitadder Water, 1½ mile NW of Hutton village, crowns the brink of an eminence, and comprises a very ancient peel-tower, with a long mansion attached, of patch-work structure and various dates. Its oldest part, a remarkable specimen of a Border stronghold, was the seat of one of the 'Seven Spears of Wedderburn' mentioned by Sir Walter Scott in his *Lay of the Last Minstrel*. The estate of Hutton Hall was purchased in 1876 for £50,000 by Sir Dudley Coutts Marjoribanks of GUISSACHAN, who in 1881 was raised to the peerage as Baron Tweedmouth. The principal mansions are Meadow House, PAXTON HOUSE, SPITAL HOUSE, and Tweedhill House. Hutton is in the presbytery of Chirrside and synod of Merse and Teviotdale; the living is worth £377. The parish church is a modern Norman structure of 1765, with a massive square tower. Instrumental music was introduced into the church in 1889. Hutton and Paxton public schools, with respective accommodation for 122 and 95 children, have an average attendance of about 80 and 50, and grants of over £81 and £51. Pop. (1801) 955, (1821) 1118, (1861) 1067, (1871) 1077, (1881) 962, (1891) 815.—*Ord. Sur.*, shs. 26, 34, 1864.

Hutton and Corrie, an Annandale parish of Dumfriesshire, containing, towards the centre, the post village of Boreland, near the left bank of Dryfe Water, 5½ miles NE of Nethercleuch station, and 7 NNE of the post-

town Lockerbie. Bounded NE by Eskdalemuir, E by Westerkirk, SE and S by Tundergarth, W by Dryfesdale, Applegarth, and Wamphray, and NW by Moffat, it has an utmost length from N by W to S by E of 14 miles, an utmost width from E to W of 6 miles, and an area of 23,991½ acres, of which 68½ are water. DRYFE Water, rising in the northern extremity of the parish at an altitude of 1900 feet, winds 11¾ miles southward, till it passes off into Applegarth; the Water of MILK, from a point ¼ mile below its source (770 feet), runs 8¾ miles south-westward on or close to all the Tundergarth border; and CORRIE Water, its affluent, rising near the Eskdalemuir border at 800 feet, flows 7 miles south-south-westward through the interior and along the boundary with Applegarth and Dryfesdale. The surface sinks to 370 feet above sea-level along the Milk, and to 400 along the Dryfe, thence rising north-north-eastward and northward to 827 feet at Pyatshaws Rig, 1085 at *Hart Fell, 1021 at Peat Hill, 1259 at Macmaw Hill, 1587 at *Laverhay Height, 1754, at *Jock's Shoulder, and 2256 at *Loch Fell, where asterisks mark those summits that culminate right on the confines of the parish. The rocks are mainly Silurian. The NE portion of the parish, lying generally high, affords good runs for Cheviot sheep; while on the lower portion, which is mostly sound pasturage and meadow land, dairy farming is carried on somewhat extensively, with some cattle-raising and breeding of half-bred lambs. The Corrie portion of the parish affords excellent grazing. Barely one-eighth of the entire area is arable. Hutton Moat and a camp upon Corrie Water make up the antiquities, with ten or eleven hill-forts. Mansions are Gillesbie House (Colonel William Rogerson) and Shaw (Geo. Graham, Esq.), both near Boreland village. Formed by the union of the ancient parishes of Hutton and Corrie in 1609, this parish is in the presbytery of Lochmaben and synod of Dumfries; the living is worth £373. Two public schools, Corrie and Hutton, with respective accommodation for 120 and 97 children, have an average attendance of about 60 and 70, and grants of over £76 and £78. Pop. (1801) 646, (1831) 860, (1851) 886, (1871) 842, (1881) 814, (1891) 726.—*Ord. Sur.*, shs. 10, 16, 1864.

Hutton Hall, Dumfriesshire. See CAERLAVEROCK.

Hutton Hall, Berwickshire. See HUTTON.

Hyndford, a hamlet and an estate in Lanark parish, Lanarkshire. The hamlet, on the right bank of the Clyde, 2½ miles SE of Lanark town, bears the name of Hyndford-Bridge, from a narrow five-arch bridge across the river, erected in the latter half of the 18th century. The estate, extending along the Clyde both above and below the hamlet, from early in the 16th century has belonged to the family of Carmichael, and gave them the title of Earl in the peerage of Scotland from 1701 till 1817.—*Ord. Sur.*, sh. 23, 1865. See CARMICHAEL.

I or Ii. See IONA.

Ibris. See EYEBROUGHY.

Ibrox, a south-western suburb of Glasgow, in Govan parish, Lanarkshire, with a station on the Glasgow and South-Western railway, a short distance west of Pollokshields, and $2\frac{3}{4}$ miles WSW of the centre of Glasgow. It has a money order, savings bank, and telegraph post office and a U.P. church.

Ioolmkill. See IONA.

Ioch Water, a burn of Monquhitter and Turriff parishes, N Aberdeenshire, rising near Newbyth in the SE of King-Edward parish, and running $10\frac{1}{2}$ miles west-south-westward past Cuminestown, till, after a descent of 300 feet, it falls into the Deveron in the vicinity of Turriff. In its upper reaches it bears the name of the Burn of Monquhitter.—*Ord. Sur.*, sh. 86, 1876.

Idrigil, the name of a headland and a cave on the Duirinish coast of the island of Skye. The cliffs of the headland are about 400 feet high, and the cave was one of the gloomy prisons of the unfortunate Lady Grange.

Idivies, a modern mansion in Kirkden parish, Forfarshire, 3 miles SW of Guthrie Junction. Its owner is Mrs. J. S. Callender Brodie.—*Ord. Sur.*, sh. 57, 1868.

Ilay. See ISLAY.

Ilie. See KILDONAN.

Illeray, an island of North Uist parish, Outer Hebrides, Inverness-shire, adjacent to Balleshare island, and insulated from the SW side of North Uist island only at high water. It measures 4 by $1\frac{1}{2}$ miles, and has a soil partly sandy, partly black loam, yielding tolerable crops of barley and pasture for cattle. Pop., with that of Balleshare, (1861) 199, (1871) 246, (1881) 266, (1891) 318.

Imachar, a place on the west coast of the island of Arran, Buteshire.

Imersay, an islet off the east coast of the island of Islay, Argyllshire.

Inalterie, a place in Deskford parish, Banffshire, containing the ruins of a very ancient structure, which appears to have been both strong and massive.

Inch. See FORFAR.

Inch, a coast parish of NW Wigtonshire. Including till 1617-28 the present parishes of Stranraer and Portpatrick, it now comprises all the rest of the ancient parishes of Inch and Souleseat, the former named from the islet in Castle-Kennedy Loch, opposite the old parish church, 3 miles E of Stranraer; and it contains Castle Kennedy and Stranraer stations, the Tradeston suburb of Stranraer town, the post-office villages of Cairnryan and Lochans, Stranraer, and the hamlet of Aird. It is bounded N by Ballantrae in Ayrshire, E by New Luce, SE by Old Luce, S by Stoneykirk, and W by Portpatrick, Leswalt, Stranraer, and Loch Ryan. Its utmost length, from N to S, is $10\frac{1}{2}$ miles; its breadth, from E to W, varies between $3\frac{3}{4}$ and 6 miles; and its area is 31,919 acres, of which 590 are foreshore and 485 water. The coast-line along Loch Ryan, measuring $7\frac{3}{4}$ miles, includes most of the southern part or head of the loch and all the E side, till within $2\frac{1}{2}$ miles of the sea. In the S and the southern part of the E side it has a flat beach, covered with sand or gravel; but northward it grows bold and rocky, and is pierced with several caves 80 to 100 yards long. The northern and eastern districts, comprising three-fifths of the entire area, are everywhere hilly, their highest points being Cairnarzean Fell (735 feet), Cairnsarrow (761), Braid Fell (769), Brockloch Fell (769), and Mid-Moile (844). Here and there are arable patches; but mostly they are heathy, rugged, and unsusceptible of culture. The southern and south-western districts form the larger part of the isthmus between Loch Ryan and Luce Bay, which, though from the hills it looks to be perfectly level, has really a gently undulating surface. It seems at no dis-

tant geological period to have been covered by the sea; and its curious 'pots' or hollows—the largest 1000 feet in circumference and 100 feet deep—are supposed to have been scooped out by the whirling caused by the meeting of opposite tidal currents from Loch Ryan and Luce Bay. The Water of LUCE runs $7\frac{3}{4}$ miles south-south-eastward along all the eastern border; Piltanton Burn flows $7\frac{1}{4}$ miles south-eastward and eastward along the boundary with Portpatrick, Stoneykirk, and Old Luce; and a number of short burns drain the interior to Loch Ryan or these two streams. Of twelve lakes dotted over the interior, most of them in the low-level southern district, the two largest and finest are Castle-Kennedy and Souleseat. The former has been noticed separately; the latter, belonging to the Earl of Stair, and lying 3 miles SE of Stranraer, has a horse-shoe shape, measures about a mile in length, and has finely wooded shores, but is strictly preserved. Chalybeate and slightly sulphuretted springs are in several places. The rocks are mainly Silurian. Granite occurs in detached blocks; excellent slate has been quarried on the lands of Lochryan; lead ore is traditionally said to have been mined; coal has been sedulously but vainly sought; and extensive mosses yield abundance of peat fuel. The soil is variously gravelly, sandy, clayey, loamy, and mossy, and throughout the low-level district is generally light and sandy. Fully two-fifths of the entire area are regularly or occasionally in tillage; woods cover some 650 acres, and the rest is either pastoral or waste. Special objects of antiquarian interest are treated under Castle-Kennedy, Craigcaffie Castle, the Deil's Dyke, Glenterra, the moat of Innermessan, and Souleseat Abbey. Sir John Ross (1777-1856), the celebrated Arctic voyager, son of the parish minister, was a native; and Marshal Stair (1673-1747) and General Sir John Alexander Agnew Wallace, K.C.B. (1775-1857) were residents. Mansions, noticed separately, are Lochinch Castle, Culhorn, and Lochryan. In the presbytery of Stranraer and synod of Galloway, this parish is ecclesiastically divided into Lochryan *quoad sacra* parish and Inch proper, the latter a living worth £294. The parish church, built in 1862, was struck by lightning and set on fire Dec. 1894, and was re-erected in 1895-96. The manse is situated on a peninsula in Souleseat Loch. Inch Free church stands near Castle-Kennedy station; and Cairnryan, Castle-Kennedy, Inchparks, and Lochans public schools, with respective accommodation for 81, 115, 141, and 168 children, have an average attendance of about 50, 70, 120, and 110, and grants of nearly £60, £72, £128, and £110. Pop. (1801) 1577, (1831) 2521, (1861) 3469, (1871) 3268, (1881) 3766, (1891) 3981, of whom 2152 were in the parliamentary burgh of Stranraer and 3654 in Inch ecclesiastical parish.—*Ord. Sur.*, sh. 3, 1856.

Inch or Insh, a lake, an ancient parish, and a *quoad sacra* parish, in Badenoch district, E Inverness-shire. The lake lies on the mutual border of Alvie and Kingussie parishes, $\frac{1}{2}$ mile S of Kincaig or Boat of Inch station on the Highland railway, this being $18\frac{1}{2}$ miles SSW of Grantown and $5\frac{3}{4}$ NE of Kingussie, under which there is a post office. Formed by expansion of the river Spey, it lies 721 feet above sea-level, and has an utmost length and breadth of $7\frac{1}{2}$ and $4\frac{3}{4}$ furlongs. The rod-fishing is poor, but salmon and char are netted in great numbers. The Queen, under date 4 Sept. 1860, describes Loch Inch as 'lovely, not a wild lake, quite the contrary; no high rocks, but woods and blue hills as a background.' On 3 April 1881 the lake was completely frozen over with ice $\frac{1}{2}$ inch thick. The ancient parish is united to Kingussie parish, and forms its north-eastern district. The *quoad sacra* parish, mainly identical with the ancient parish, and lying around the upper part of Loch Inch, was originally constituted in 1828, and is in the presbytery of Abernethy and synod of Moray. The church, an old building, stands near the NE shore of Loch Inch,

Pop. (1871) 359, (1881) 455, (1891) 390, of whom 48 were in Alvie and 342 in Kingussie.—*Ord. Sur.*, sh. 74, 1877.

Inch, Aberdeenshire. See **INSCH**.

Inchaber, a small island of Loch Lomond, near the mouth of the Endrick river.

Inchaffray (Gael. *innis-abh-reidh*, 'island of the smooth water';* Lat. *Insula Missarum*, 'island of masses'), a ruined abbey in Madderty parish, Perthshire, crowning a small rising-ground—an island once—on the left bank of ditch-like Pow Water, adjacent to Madderty station, 6½ miles E by N of Crieff. It was founded in 1200 by Gilbert, second Earl of Strathearn, and his Countess Matilda, to the memory of their first-born son, and to the honour of God, St Mary, and St John the Evangelist. Colonised from Scoon by canons regular of the Augustinian order, and endowed with many privileges and possessions by several of the Scottish kings, it held the churches of Madderty, Auchterarder, Aberuthven, Strageath, Kinkell, etc., and down to the Reformation possessed great note and influence. In 1556 James Drummond, younger and infant son of the second Lord Drummond, was secular commendator of Inchaffray, which was erected into a temporal lordship in his favour; and in 1609 he was created Lord Madderty. The abbey, however, and a few acres adjoining, with the patronage of twelve livings, afterwards passed to the Earls of Kinnoull. Much of the walls remained standing till 1816; but a turnpike road was then carried through the ruins, which yielded, at the time of the demolition, a small ivory cross, several stone coffins, and a number of other interesting objects, and which now are represented chiefly by a western gable and a single arched apartment. One of the abbots, Maurice, blessed Bruce's army on the field of Bannockburn (1314); another was slain at Flodden (1513).—*Ord. Sur.*, sh. 47, 1869. See Cosmo Innes' *Liber Insule Missarum* (Bannatyne Club, 1847).

Inchard, a sea loch of Eddrachillis parish, NW Sutherland, opening from the North Minch, and striking 5½ miles eastward and south-eastward to Rhiconich inu. Its width contracts from 4 miles at the entrance to ¼ mile, but expands again to ¾ mile. It contains nine islets in its outermost reach; is pretty well inhabited round the shores; has somewhat bleak flanks, relieved with features of good scenery; and forms a fine natural harbour.—*Ord. Sur.*, sh. 113, 1882.

Inchbae Forest, an extensive forest in Ross-shire, about 6 miles from Garve station on the Dingwall and Skye branch of the Highland railway, and comprising an area of about 21,000 acres of well-wooded land that affords excellent shelter for deer. At the forest sanctuary, some 4 miles in extent, as many as 500 deer may be sometimes seen. The Blackwater river flows through the property.

Inchbare, a scattered village in Stracathro parish, Forfarshire, 4 miles N by W of Brechin, under which it has a post office.

Inchbelly, a hamlet on the mutual border of Stirlingshire and Dumbartonshire, on the river Kelvin, adjacent to the Forth and Clyde Canal, 1½ mile ENE of Kirkintilloch. It has a bridge over the Kelvin, on the road from Glasgow to Falkirk, and, together with Inchbreck, Inchterf, Inchwood, and Netherinch in its neighbourhood, it owes the 'inch' of its name to quondam insulation by the waters which once occupied the strath now traversed by the Forth and Clyde Canal.—*Ord. Sur.*, sh. 31, 1867.

Inchberry, a hamlet in the extreme end of Rothes parish, Elginshire, 5½ miles SW of Fochabers.

Inchbervis or **Inverbervie**, an old round castle in Auchtergaven parish, Perthshire, on the right bank of the Tay, ½ mile E of Stanley, and within the policies of Stanley House. It is traditionally said to have been a

religious house in connection with Dunfermline Abbey, but looks rather to have been a baronial fortalice. Though now only a curious ruin, it must have been a place of great strength in the olden times, and a dungeon, now almost filled up, is supposed to have had a connection with the opposite side of the Tay. It is believed to have been regularly resorted to by the national hero, being also known by the name of Wallace's Castle.

Inchbrakie, an estate in Crieff parish, Perthshire, 3 miles E by N of Crieff town. The mansion, destroyed some years ago, contained a curious relic of olden superstition known as Inchbrakie's Ring, and similar in character to the 'talisman' of Sir Walter Scott's novel. It was a bluish uncut sapphire, set in gold, which, in the second decade of the 18th century, the Witch of Monzie, Kate M'Niven, as she was burning on the Knock of Crieff, is said to have spat from her mouth, with the prediction that the Græmes should prosper so long as they kept it safe, the Laird of Inchbrakie having vainly attempted to save her life. In 1513 the first of these Græmes received Inchbrakie, with Fowls and Aberuthven, from his father the first Earl of Montrose, who was killed at the battle of Flodden; but the estate became by purchase in 1882 the property of the Drummond-Moray family. Inchbrakie Castle, a little ESE of the mansion, was surrounded by a moat, and suffered demolition by Cromwell in 1651 for the fifth laird's zealous adherence to the Royalist cause. A beautiful, well-wooded park surrounds the mansion and the remains of the castle; and a large old yew tree within the moat is said to have given refuge in the time of danger to the Marquis of Montrose.—*Ord. Sur.*, sh. 47, 1869.

Inchbrayock, a triangular island (3¼ × 2¼ furl.) and an ancient parish of NE Forfarshire. The island, lying in the South Esk river, between Montrose basin and the German Ocean, is separated from the mainland, on both sides, only by currents of the divided river. It has a low flat surface, nowhere exceeding 32 feet above sea-level, and was included by the Municipal Reform Bill in the parliamentary borough of Montrose. Communicating with that town by a suspension bridge (1829), and with the mainland on the other side by a stone bridge, it is traversed, in the line of these bridges nearly through the middle, by the great coast road from Dundee to Aberdeen. At its E end is a dry dock; and it contains a small suburb of Montrose; whilst, through connection with Rossie barony, it is often called Rossie Island. The ancient parish comprehended the island and some adjacent territory, and in 1618 was united with the ancient parish of St Skeoch or Dunninald to form the present parish of Craig. The church stood on the island, and the graveyard still is used for the united parish.—*Ord. Sur.*, sh. 57, 1868.

Inchbreck. See **INCBELLY**.

Inchcailloch (Gael. *innis-cailleach*, 'island of the nun'), a hilly, wooded island of Buchanan parish, Stirlingshire, in Loch Lomond, between Torrinch and Balmaha, 7 furlongs NW of the mouth of the river Endrick. With an utmost length and breadth of 6½ by 3 furlongs, it belongs to the Duke of Montrose, and till 1621 was the seat of Inchcailloch parish church, dedicated to St Kentigerna, a holy woman who had dwelt here as an anchorite. The foundations of this church (57 × 24 feet) may still be traced; whilst its ancient graveyard is still in use, and contains some curious 17th century tombstones.—*Ord. Sur.*, sh. 38, 1871. See Sir William Fraser's *The Lennox* (1874).

Inchcape. See **BELL ROCK**.

Inchcolm, an island of Aberdour parish, Fife, in the Firth of Forth, 5 furlongs SE of the nearest point of the mainland and 1½ mile S by W of Aberdour village. It measures 950 yards in extreme length, or a little over half a mile, and from 22 to 220 yards in breadth, to the E of the abbey becoming so flat and narrow, that at high tides the waters of the Firth meet over it. Both the extremities are high and rocky, the western attaining 102 and the eastern 97 feet above sea-level. It chiefly consists of trap, with greenstone to the S, largely

* Some, however, connect *-affray* with the Gael. *aifrionn*, 'raas', in which case the Gaelic and Latin names are identical.

dusted with scales of a brownish mica; and, though partly arable, it offers a bleak appearance. Anciently called *Æmonia*, it figures in Shakespeare's *Macbeth*, under the name of Saint Colme's Inch, as the burial-place of the defeated followers of Sweno, the Norways' king. 'In memory whereof,' adds Raphael Holinshed, 'many old sepulchres are yet in the said Inch, there to be seen graven with the arms of the Danes.' In 1123 Alexander I., crossing the Queensferry on affairs of state, encountered a great storm, and was driven upon the island of *Æmonia*, where he was received by a hermit who served St Columba in a small chapel, and lived upon small fishes, shellfish, and the milk of one cow. Here the King was obliged to remain three days, and here, in fulfilment of a vow made in the extremity of his peril, he founded an Augustinian abbey in honour of St Columba. Such is the story told by Walter Bower, Abbot of Inchcolm, who carried Fordun's *Scotichronicon* as far down as 1437. From 1335 to 1547 the abbey was several times pillaged by the English; and on the last occasion, after the Battle of Pinkie, the Duke of Somerset seized upon Inchcolm as a post commanding 'utterly the whole use of the Firth itself, with all the heavens upon it.' He sent, 'as elect Abbot by God's sufferance, Sir John Luttrell, knight, with C. hakbutiers and L. pioneers, to keep his house and land there, and LXX. mariners to keep his waters, whereby,' observes Patten naively, 'it is thought he shall soon become a prelate of great power.' During the war with France, in the beginning of the 19th century, the island served as an artillery station, with a ten-gun battery on the E. hill. In 1543 Inchcolm was granted to Sir James Stewart of Beith, afterwards Lord Doune and father of the first Earl of Moray. His second son in 1611 was created Baron St Colme—a title that passed, with the island, at the death of the second Lord, to his cousin, the Earl of Moray. A little stone-roofed chapel, 15½ feet long, which served till lately as a pigstye or a byre, has been identified by Sir James Simpson with the hermitage of King Alexander's day, thus dating among the earliest Christian edifices in Scotland. The neighbouring 'monastic buildings are of very various dates and still very extensive; and their oblong, light-grey mass, surmounted by a tall, square, central tower, forms a striking object in the distance, as seen in the summer morning light from the higher streets and houses of Edinburgh, and from the neighbouring shores of the Firth of Forth.' The tower (20½ feet square) is so similar in its architectural forms and details to that of Icolmkill, that it is evidently a structure nearly, if not entirely, of the same age; and the new choir (78 × 15 feet) of 1265 is apparently, as seen by its remaining masonic connections, posterior in age to the tower on which it abuts. These monastic buildings have been fortunately protected and preserved by their insular situation—not from the silent and wasting touch of time, but from the more ruthless and destructive hand of man. The stone-roofed octagonal chapter-house (22½ feet in diameter) is one of the most beautiful and perfect in Scotland; and the abbot's house, the cloisters (34 feet square), refectory, etc., are still comparatively entire. Half-way over to Aberdour is 'Mortimer's Deep,' the spot where the monks who were boating the dead body of a certain Lord Mortimer for burial to Inchcolm at night, for some inexplicable reason, threw it overboard. Pop. (1881) 7, (1891) 4.—*Ord. Sur.*, sh. 32, 1857. See vol. iii. of Billings' *Baronial and Ecclesiastical Antiquities* (1852); an article by Mr Thomas Arnold in vol. v. of *Trans. Architectural Institute of Scotland* (1859); Sir James Simpson's *Archæological Essays* (1872); and W. Ross's *Aberdour and Inchcolm* (1885).

Inchconnachan or Colquhoun's Island, an islet of Luss parish, Dumbartonshire, in Loch Lomond, 1½ mile SE of Luss village. It is separated by only narrow belts of water from Inchtavannach on the W and Inchmoan on the S; measures 5¼ furlongs in extreme length by 3¼ in breadth; and is well clothed with natural wood.—*Ord. Sur.*, sh. 38, 1871.

Inchcoormac, an islet of North Knapdale parish,

Argyllshire, in the mouth of Loch Swin. It contains remains of an ancient chapel, with a sculptured sarcophagus.

Incheruin (Gael. 'round island'), an islet of Buchanan parish, Stirlingshire, in Loch Lomond, ¼ mile W by N of Inchfad, and 9½ furlongs WSW of Arrochymore Point. With an utmost length and breadth of 4½ and 3 furlongs, it has little wood, and was formerly the site of an establishment for the insane.—*Ord. Sur.*, sh. 38, 1871.

Inchdairnie, an estate, with a mansion, in Kinglassie parish, Fife, 2½ miles S by W of Leslie. Its owner is Roger Sinclair Aytoun, Esq. (b. 1823). The mansion is beautifully situated, standing in ornamental, well-timbered grounds.—*Ord. Sur.*, sh. 40, 1867.

Inchdrewer Castle. See BANFF.

Inchdrynich, an estate, with a modern mansion, in Glenorchy and Innishail parish, Argyllshire, on the E shore of Loch Awe, 5 miles SW of Dalmally. The house was leased in 1858 and following years by the celebrated etcher, Mr. P. G. Hamerton. Its owner is William C. Muir, Esq.—*Ord. Sur.*, sh. 45, 1876.

Incheffray. See INCHAFFRAY.

Inches, an estate, with a mansion, in Inverness parish, Inverness-shire, 2½ miles ESE of the town. A baronial castle stood a little to the N of the mansion; and the estate, which has been greatly improved of recent years, contains quarries of excellent sandstone, affording the chief supply of building material to Inverness, and is traversed by a burn, with some beautiful small cascades.—*Ord. Sur.*, sh. 84, 1876.

Inches, Easter and Wester, low flat alluvial tracts in the Carse of Falkirk, Stirlingshire, traversed or enclosed by the windings of the river Carron.

Inches, North and South. See PERTH.

Inches Station. See DOUGLAS.

Inchewan, an estate, with a mansion, in Tannadice parish, Forfarshire, on the left bank of the South Esk, 5 miles ENE of Kirriemuir. Its owner is John Ogilvy, Esq.—*Ord. Sur.*, sh. 57, 1868.

Inchfad (Gael. *innis-fada*, 'long island'), a fertile islet of Buchanan parish, Stirlingshire, in Loch Lomond, 2½ furlongs SW of Arrochymore Point. Extending south-westward between Inchealloch and Incheruin, it has an utmost length and breadth of 7 and 2¾ furlongs, is but partially wooded, and shows the features of an ornate farm.—*Ord. Sur.*, sh. 38, 1871.

Inchgalbraith, a tiny islet of Luss parish, Dumbartonshire, in Loch Lomond, 2¼ furlongs respectively SE and SW of Inchtavannach and Inchmoan, and 4¼ furlongs NE of the point of land adjacent to Rosdhu House. It retains some ruins of an ancient castle of the Galbraith family, amid a few overshadowing trees.

Inchgarvie (from a Celtic word denoting 'diminutiveness'), a rocky islet of Inverkeithing parish, Fife, in the Firth of Forth, 3 furlongs SSE of the North Queensferry coastguard station and 4½ NE of Long Craig near South Queensferry. Measuring 5 furlongs in circumference, it was crowned with a fort in the reign of James IV., which served as a state prison from 1519 till the purchase of the Bass in 1671, and which was visited in 1651 by Charles II. In that year it was held by Captain Roy of Aldivalloch for some time against Cromwell in the interest of the above-mentioned king. On the approach, however, of some 300 of Monk's troops in boats, Roy, having but 20 men, spiked the guns, blew up the magazine, and escaped to the Fife shore. Inchgarvie was refortified and provided with four iron 24-pounders in 1779, after the alarm occasioned by the appearance of Paul Jones' squadron in the Firth. Since the erection of the great cantilever bridge across the firth here, the small island has come into world-wide prominence, its presence having rendered the huge undertaking practicable. The rock forms the central support of the two great spans of the gigantic work. See FORTH BRIDGE.—*Ord. Sur.*, sh. 32, 1857.

Inchinnan (old forms, *Inchiumum*, *Inchenane*, *Inchivan*; Gael. *inch*, an island, and *Inan*, the patron saint; in Bajimont's Roll the name is *Kilinan*), a small parish

on the north-eastern border of Renfrewshire, adjoining the river Clyde. It is bounded NE by the Clyde (which divides it from New Kilpatrick in Dumbartonshire), E and SE by Renfrew, SW by Kibbarchan and Houston, and W and NW by Erskine. The boundary on the NE is formed by the Clyde for a distance of 2½ miles, on the E and SE by the Cart and the Black Cart for a distance of 3¼ miles, and at the WS corner by the Gryfe for 3½ furlongs. Along the W it is purely artificial. Near the centre of the Cart, before its confluence with the Clyde, is a small island called Colin's Isle. At this point, according to local tradition, a vessel once stranded, and long before the litigation due to this had ended, the mud and silt had so gathered around the wreck as to form a small island covered with thriving young firs. The extreme length of the parish from North Barr on the N to the junction of the Cart and Gryfe on the S is 2½ miles, and the extreme breadth from the mouth of the Black Cart straight westward is 3¼ miles. The total area is 3527 acres, of which 60 are foreshore and 136 are water. The height rises gradually from the Clyde southwards and westwards. On the SE the height is from 12 to 20 feet, and it rises to 52 feet at the Free church, near the centre of the parish, and to 182 near Craighend. About eight-ninths of the parish is under cultivation, and the rest is woodland, roads, houses, etc., there being no waste. The soil is excellent, consisting chiefly of strong productive clay, and in the lower parts of rich loam. The underlying rocks are carboniferous, and consist of sandstone, limestone, coal, and volcanic rocks. Basalt has been extensively worked since 1760 for the construction of jetties, etc., and there are also quarries of sandstone and limestone, both of good quality. The centre of the parish is about 9 miles distant from Glasgow, and 13 from Greenock. The parish is traversed by the roads from Paisley to Greenock, and from Renfrew to Greenock. The Renfrew section of the Glasgow and South-Western railway passes close to the E side of the parish, and the Paisley and Greenock section of the Caledonian traverses the SW corner, while most parts are accessible from the Renfrew, Houston, or Bishopton stations. The Paisley and Greenock road crosses the Black Cart by Barnsford Bridge, and the Renfrew and Greenock road crosses both the Black and White Cart about 30 yards above their junction by Inchinnan Bridge. The prospect from this point is very beautiful, including 'the meeting of the waters,' which, after a brief union, are absorbed in the bosom of the Clyde at the 'Water-neh,' about half-a-mile to the south. For several hundred yards before the Cart and Gryfe intermingle, they are only separated from each other by a narrow strip of land, thickly covered with willows. The fine plantations of Blythswood also lend an air of sylvan grandeur to the spot, and materially heighten the loveliness of the picture. Pennant said in reference to the scenery in this vicinity, that it was 'the most elegant and softest of any in North Britain.' Here there was formerly a public ferry; and an adjoining property is still known as Ferrycroft. In 1759 a bridge of nine arches was built across the river below the junction of the two streams. It was also connected by a side arch with the point between the streams, and cost only £1450. The foundations, however, were bad, and the whole structure gave way in 1809. The new bridge above the junction was completed in 1812 at an expense of £17,000. It is composed of two divisions, not in the same straight line, but forming nearly a right angle, each section crossing one of the streams almost at a right angle also. It was at the ford here that Argyll was captured in 1685. After the dispersion of his troops in Dumbartonshire the Earl crossed the Clyde, and, disguised as a countryman, was endeavouring to make his escape towards Renfrew. He had just forded the Cart, which is in the immediate vicinity, when he was recognized and attacked by two militiamen. These he managed to keep at bay with the aid of his pistols, but, assistance coming up, he was ultimately wounded and disarmed. A large stone is shown on which tradition asserts the ill-fated

nobleman leaned himself after his capture, and which is said to have been stained by the blood which flowed from his wounds. This interesting relic is within the policies of Blythswood, and is situated a few yards off the road. It is a large sandstone, about 2 tons in weight, and had probably at a still earlier period formed the pedestal of a crucifix, or monumental pillar, as it is hewn into a form which would adapt it for such a purpose. It is elevated considerably, however, at one end, and is now thickly crusted over with mosses and lichens. There are certain veins of a ruddy nature in the stone, which in wet weather give a tinge of red to portions of its surface. These ruddy spots were supposed by the superstitious to be the effect of the sanguinary stains which it had received on the occasion alluded to. Although the parish takes its name from Inan, who was a confessor at Irvine in the 9th century, and was also patron saint of Beith, the church seems to have been dedicated to Saiut Conval or Connal or Convallus, who taught Christianity here early in the 7th century. According to Fordun, who says he was the chief disciple of St Mungo, and was famous for his virtues and miracles, his bones were buried at Inchenane; and Bede says his remains in a stately monument at Inchinnan were held in great veneration in his day. According to the Aberdeen Breviary, Conval sailed miraculously from Ireland to the Clyde on a stone which remained on the bank of the Cart, and was known as *Curru Sancti Conwalli*, and wrought miraculous cures on man and beast. A stone called St Connalie's Stone stood near the ancient ford on the Renfrew side of the river, and is mentioned in the records of the burgh of Paisley in 1620. Mr Motherwell (in notes to *Renfrewshire Characters and Scenes*) identifies it with the Argyll stone (see RENFREW), and thinks it was the pediment of a cross dedicated to St Conal near his cell, and also marking the ford. The church was excepted from Walter Fitz-Allan's grant to the monastery of Paisley of all the churches of Strathgryfe, as he had already granted the church of Inchinnan with all its pertinents to the Knights Templars. On their suppression in 1312 it was transferred to the Knights of St John of Jerusalem. After the Reformation the tithes, temple-lands, etc., passed to Lord Torphichen, and the temple-lands subsequently to Semple of Beltres. The old church was on the site of the present building at the W end of Inchinnan bridge, and was a plain structure measuring 50 feet by 18, with very thick walls. It was built about 1100, and was pulled down in 1828, when the floor was found to be literally paved with skulls. Four tombstones, apparently remains of old stone coffins, with ridged tops, are called 'the Templars' graves.' The ground known as Ladyacre was the endowment of the Virgin's altar in the old church. The lands of Inchinnan were granted by King Malcolm IV. to Walter, the High Steward, in 1158, but on the death of Matthew, fourth Earl of Lennox, in 1571, they reverted to the Crown, James VI. being the heir. He conferred them first on his uncle Charles, then on his grand-uncle Robert, afterwards Earl of March, and thereafter again on Esmé Stewart, Lord d'Aubigny, a cousin of his father. In 1672 Charles, sixth Duke of Lennox, dying without issue, the lands again reverted to the Crown, and were granted by Charles II. in 1680 to his natural son Charles Lennox, Duke of Lennox and Richmond, who sold them to the Duke of Montrose in the beginning of the 18th century, and he in 1737 sold them to Archibald Campbell of Blythswood, descended from the families of Ardkinlas and Douglas of Mains in Dumbartonshire, and in his line the property still remains. The manor-house stood about 2 furlongs N of North Barr House towards the Clyde, and seems to have been extensively altered and rebuilt about 1506 by Matthew, Lord Darnley, second Earl of Lennox, and to have received the name of 'the palace,' which the site still bears. According to Crawford's *History of Renfrewshire*, there were considerable remains of the building in 1710, but these had disappeared before the end of the century. The estate of North Barr was purchased

originally in 1670 by Donald M'Gilchrist, who claimed descent from the Lord of Tarbart of Robert the Bruce's time. Part of it passed to the family of Balfour, but the greater part of it was in 1741 acquired by Lord Sempill, and again in 1798 by Mr James Buchanan, who sold it to Lord Blantyre in 1812. An old baronial fortalice on it has since been demolished. South Barr was the property of the Boyds, and afterwards of the Alexanders, sprung from Claud Alexander of Ballochmyle. There is a good mansion-house, built in 1827, on the site of the old house, which was burned in 1826. Park House is a modern mansion. Robert Law, a Covenanted minister, whose curious Journal from 1638 to 1684 was edited in 1818 by C. K. Sharpe, was born in the parish. The post-town is Paisley. Sir Archibald Campbell of Blythswood (raised to the peerage as Baron Blythswood in 1892) is the principal proprietor. Inchinnan is in the presbytery of Paisley and the synod of Glasgow and Ayr; the living is worth £328. The parish church, near the left bank of the Black Cart, $1\frac{1}{2}$ mile N by W of Renfrew, is a Gothic building with a square tower, and was opened in 1828. In 1886 it received an organ—the gift of Lord Blythswood. The Free church, built at the private cost of Mr Henderson of Park, is $1\frac{3}{8}$ mile NW of the parish church. The public school, with accommodation for 135 children, has an average attendance of over 80, and a grant of about £80. Pop. (1755) 397, (1801) 462, (1831) 642, (1861) 619, (1871) 584, (1881) 508, (1891) 567. See Hugh Macdonald's *Rambles round Glasgow*.—*Ord. Sur.*, sh. 30, 1866.

Inchkeith, an island of Kinghorn parish, Fife, in the Firth of Forth, $2\frac{3}{4}$ miles SE by S of Kinghorn Ness, $5\frac{1}{2}$ SSE of Kirkcaldy, $3\frac{1}{2}$ ESE of Burntisland, $4\frac{1}{2}$ NNE of Leith, and $5\frac{1}{2}$ N by W of Portobello. In shape resembling an irregular triangle with south-south-eastward apex, it has an utmost length and breadth of $6\frac{3}{4}$ and 2 furlongs, and a summit altitude of 182 feet. Carlyle describes it in his *Reminiscences*, having rowed over from Kirkcaldy in 1817 with Edward Irving and one Donaldson:—"We prosperously reached Inchkeith, ran ourselves into a wild, stony little bay (W end of the island, towards the lighthouse), and slept ashore. Bay in miniature was prettily savage, every stone in it, big or little, lying just as the deluges had left them in ages long gone. Whole island was prettily savage. Grass on it mostly wild and scraggy, but equal to the keep of seven cows. Some patches (little bed-quits as it were) of weak dishevelled barley trying to grow under difficulties; these, except perhaps a square yard or two of potatoes equally ill off, were the only attempt at crop. Inhabitants none except these seven cows, and the lighthouse-keeper and his family. Conies probably abounded, but these were *feræ naturæ*, and didn't show face. In a slight hollow about the centre of the island (which island I think is traversed by a kind of hollow of which our little bay was the western end) were still traceable some ghastly remains of "Russian graves," graves from a Russian squadron which had wintered thereabouts in 1799, and had there buried its dead. . . . The lighthouse was curious to us, the only one I ever saw before or since. . . . Lighthouse-keeper, too, in another sphere of inquiry was to me quite new; by far the most life-weary looking mortal I ever saw. Surely no lover of the picturesque, for in nature there was nowhere a more glorious view. A shrewd healthy Aberdeen native, a kindly man withal, yet in every feature of face and voice telling you, "Behold the victim of unspeakable ennui." We got from him down below refection of the best biscuits and new milk, I think almost better in both kinds than I have tasted since. A man not greedy of money either. We left him almost sorrowfully, and never heard of him more. The scene in our little bay, as we were about proceeding to launch our boat, seemed to me the beautifullest I had ever beheld. Sun about setting just in face of us, behind Ben Lomond far away. Edinburgh with its towers; the great silver mirror of the Firth girt by such a framework of mountains; cities, rocks, and fields, and wavy landscapes on all hands of us; and reaching right

under foot, as I remember, came a broad pillar as of gold from the just sinking sun; burning axle as it were going down to the centre of the world!" The geology of Inchkeith is highly interesting; and, when the tide is low, the beds around its northern extremity and part of its easterly side are as well displayed as if pictured and sectioned on a geological map. The new roads, too, in connection with the fortifications cut the strata diagonally, exposing fine sections by which the observations around the coast can be checked. Five-sixths or more of the island are great sheets of igneous rocks, between which are thinner bands of sedimentary deposits, including shales, two thin seams of coal, some highly calcareous shales, and at least one band of limestone. Many of the shales are literally crammed with fossil Ostracæ and minute phyllo-pods, amongst which *Estheria* are abundant. The flora is rich, hcnbane and *Sinapis nigra* being specially plentiful. A prehistoric kitchen-midden was discovered in 1872; and on Inchkeith Skene places Alauna, a town of the Otadeni, mentioned by Ptolemy in the 2d century A.D. This he further identifies with Bode's insular city of Giudi, which in 650 Osuiu, King of Northumbria, was forced by Penda, the pagan Mercian king, to ransom with all the riches in it and the neighbouring region. About the year 700 a church or monastery, founded by St Adamnan, successor to St Columba in the abbacy of Iona, was erected on the island. Under James IV., in 1497, many plague-smitten townsmen of Edinburgh were conveyed 'to the Inch, there to remain till God provide for their health; and James IV. it was who had a dumb woman transported to the island, where, being properly lodged and provisioned, two infants were intrusted to her care, in order to discover, by the language they should adopt, what was man's primitive speech. The result proved highly satisfactory, as, after allowing them a sufficient time, it was found that 'they spak very good Elrew'! In 1547, after the battle of Pinkie, the English erected fortifications on Inchkeith, and left there a strong garrison, composed in part of a troop of Italian mercenaries; but on Corpus Christi Day, 1549, a combined force of French and Scotch, under the Sieur D'Essé, embarked from Leith at break of day in presence of the Queen Dowager, and, after a fierce contest, expelled the enemy from their stronghold, and compelled them to surrender at discretion, with the loss of their leader and above 300 slain. From then till 1560 the island was garrisoned by the French; but James VI.'s first parliament (1567-68) ordained 'that the fort of Inchkeith be demolished and cast down utterly to the ground, and destroyed in such wise that no fundament thereof be occasion to build thereupon in time coming.' None the less, on 18 Aug. 1773 Dr Johnson here found a fort,* whose remains were only removed when the lighthouse was built in 1803. Rising to an elevation of 220 feet above sea-level, and visible at a distance of 21 nautical miles, the light of this lighthouse at first was stationary, but in 1815 was changed to a revolving light, to distinguish it from the fixed light on the Isle of May. In 1835, again, it changed its reflecting for a dioptric character; and now it consists of seven annular lenses, which circulate round the light, and produce bright flashes once in every half minute, and of five rows of curved fixed mirrors which serve to prolong the duration of the flashes from the lenses. After twenty years of sug-

* 'In crossing the Firth,' says Boswell, 'Dr Johnson determined that we should land upon Inchkeith. On approaching it, we first observed a high rocky shore. We coasted about, and put into a little bay on the NW. We clambered up a very steep ascent, on which was very good grass, but rather a profusion of thistles. There were sixteen head of black cattle grazing upon the island. Lord Hailes observed to me that Brantôme calls it *L'isle des Chevaux*, and that it was probably "a safer stable" than many others in his time. The fort, with an inscription on it, *Maria Ræ: 1564*, is strongly built. Dr Johnson examined it with much attention. There are three wells in the island, but we could not find one in the fort. . . . Dr Johnson said, "I'd have this island; I'd build a house, make a good landing-place, have a garden, and vines and all sorts of trees. A rich man of a hospitable turn here would have many visitors from Edinburgh."

gestions and representations, the Government resolved to fortify Inchkeith and KINGHORN Ness; so, the island having been taken over from the Duke of Buccleuch, three polygonal batteries were built in 1878-81 on the three headlands. Connected one with the other by a military road $1\frac{1}{2}$ mile long, they are yet entirely isolated by ditches 20 feet deep and almost as many broad, whilst their massive parapet walls rise $4\frac{1}{2}$ feet above the floor of the interior. They are mounted with four 18-ton guns, two for the S battery, and one each for the N and NW batteries. The guns are fired over the parapet, and not through embrasures or loop-holes, being placed on a raised turret-shaped concrete platform on the Moncrieff principle, and run round on swivels. By way of support to these batteries, a fort, with two 18-ton guns, has been erected at Kinghorn Ness, while a telegraph cable connects the two places. Inchkeith harbour, now one of the safest in Scotland, extends outwards from the north-west cliff for 350 yards with a protecting arm running inshore a distance of 95 yards.—*Ord. Sur.*, sh. 32, 1857.

Inchkenneth, a grassy island of Kilfinichen and Kilmaclean parish, Argyllshire, at the entrance of Loch-na-Keal, on the W side of Mull, $1\frac{1}{2}$ mile S by E of the E end of Ulva. Measuring $1\frac{1}{2}$ mile in length, and 3 furlongs in extreme breadth, it is low and fertile, and took its name from Kenneth, a missionary of Iona, who became the head of Achabo Abbey in Ireland, and died there in 600. Down to the Reformation it was held by the monks of Iona; and it possesses tolerably entire ruins of a First Pointed church, built on the site of the Columban cell, and measuring 60 feet by 30, whither Boswell retired at midnight to say his prayers, but speedily returned, being frightened by a ghost. Around the ruins is a graveyard, containing the tombstones of the Macleans of Brolas. In Oct. 1773, at the time of Dr Johnson's pilgrimage to the Hebrides, Inchkenneth belonged to Sir Allan Maclean, Bart., who resided on it in what is described by Scott as a wretched and exposed hut. Yet the Doctor, with Boswell, spent two days under Sir Allan's roof, and by him and his two daughters was entertained with such 'kindness of hospitality and refinement of courtesy,' that he looked on his sojourn with them as 'a proper prelude to Iona,' and commemorated it in a Latin poem, which Professor Sir Daniel Sandford of Glasgow translated as follows:—

'Scarce spied amid the west sea foam,
Yet once Religion's chosen home,
Appears the isle whose savage race
By Kenneth's voice was won to grace.
O'er glassy tides I thither flew,
The wonders of the spot to view.
In lowly cottage great Maclean
Held there his high ancestral reign,
With daughters fair whom love might deem
The Naiads of the ocean stream:
Yet not in chilly cavern rude
Were they, like Danube's lawless brood;
But all that charms a polish'd age,
The tuneful lyre, the learned page,
Combined to beautify and bless
That life of ease and loneliness.
Now dawn'd the day whose holy light
Puts human hopes and cares to flight;
Nor 'mid the hoarse waves' circling swell
Did worship here forget to dwell.
What though beneath a woman's hand
The sacred volume's leaves expand;
No need of priestly sanction there—
The sinless heart makes holy prayer!
Then wherefore further seek to rove,
While here is all our hearts approve—
Repose, security, and love?'

Inchlaw or Lucklaw, a hill in the E end of Logie parish, NE Fife, 4 miles S of Newport. It chiefly consists of yellow felspar porphyry, very hard, and susceptible of a fine polish; but its summit is composed of flesh-red felspar. Said to have been a hunting-ground of the Scottish kings, when residing at Falkland or St Andrews, and therefore sometimes called the King's Park, it rises to an altitude of 626 feet above sea-level, and commands an extensive view, particularly towards the N.—*Ord. Sur.*, sh. 49, 1865.

Inchlonaig, an island of Luss parish, Dumbartonshire, in Loch Lomond, 3 furlongs WNW of Strathcassell Point and $6\frac{1}{2}$ E of Luss village. Extending from NE to SW, and measuring 1 by $\frac{1}{2}$ mile, it is covered over half its surface by a forest of yew trees, said to have been planted by Robert Bruce to supply his army with bows; and it has long been used by the Colquhouns of Luss as a deer park.—*Ord. Sur.*, sh. 38, 1871.

Inchmahome (Gael. 'island of my little Colman'), the larger of the two islets in the Lake of Monteith, Port of Monteith parish, SW Perthshire, $3\frac{3}{4}$ miles E by S of Aberfoyle and 5 furlongs SW of Port of Monteith village. With an utmost length and breadth of only $1\frac{1}{2}$ and 1 furlong, it lies on the unruffled water near Inch Talla, level but 'plump with rich foliage, brooding like great birds of calm. You somehow think of them as on, not in the lake, or like clouds lying in a nether sky—"like ships waiting for the wind." You get a coble, and a *yauid* old Celt, its master, and are rowed across to Inchmahome, the Isle of Rest. Here you find on landing huge Spanish chestnuts, one lying dead, others standing stark and peeled, like gigantic antlers, and others flourishing in their *viridis senectus*; and in a thicket of wood you see the remains of a monastery of great beauty, the design and workmanship exquisite. You wander through the ruins, overgrown with ferns and Spanish filberts and old fruit trees, and at the corner of the old monkish garden you come upon one of the strangest and most touching sights you ever saw—an oval space of 18 feet by 12, with the remains of a double row of boxwood all round. What is this? It is called in the guide books "Queen Mary's Bower;" but besides its being plainly not in the least a bower, what could the little Queen, then five years old, and "fancy free," do with a bower? It is plainly the Child-Queen's Garden, with her little walk, and its rows of boxwood, left to themselves for three hundred years. Yet, without doubt, "here is that first garden of her simplicity." Fancy the little, lovely royal child, with her four Marys, her playfellows, her child maids-of-honour, with their little hands and feet, and their innocent and happy eyes, pattering about that garden all that time ago, laughing, and running, and gardening as only children do and can. As is well known, Mary was placed by her mother in this Isle of Rest' from soon after the battle of Pinkie, Sept. 1547, till towards the end of the following February she left for Dumbarton, thence to take ship to France. Thus the author of *Rab and his Friends*; and Mr Hutchison, in *Trans. Highl. and Ag. Soc.** (1879-80), more minutely describes 'the quaint and simple arrangements of this mediæval garden—the three straggling boxwood trees, eventually grown from the boxwood edgings of a former oval flower-bed still discernible. They are 20½ feet high, and upwards of 3 in girth at 1 foot from the ground, where they branch into several stems, the result probably of early clipping. In the centre of the plot is a quaint old thorn tree, 22 feet high, and 16 inches in girth, but much destroyed by the prevalent west winds which sweep across the island, and to whose influence it is much exposed.' The most notable trees on the island are the old Spanish chestnuts, planted by the Augustine friars when they first settled here more than 600 years ago. In 1238 Walter Comyn, Earl of Monteith, obtained authority from Pope Gregory IX. to build an Augustinian priory on the island of 'Inchmaquhomok.' The church was dedicated to Colman, an Irish Pict, who founded the monastery of Dromore in Ireland prior to 514. Robert Bruce was at least three times at Inchmahome, in 1306, 1308, and 1310; and here in 1363 his son, David II., widower, wedded Margaret Logie, widow. First Pointed in style, and measuring 115 feet by 36, the church consisted of a three-bayed nave, a N aisle, an aisleless choir, and a square

* Where he also gives the height of the largest sycamore, Spanish chestnut, and walnut, all three near the western doorway of the priory, as 80, 85, and 80 feet, their girth at 1 foot from the ground being 13½, 19½, and 10 feet.

four-storied bell-tower. The western doorway is deeply recessed and richly sculptured; and the choir retains a piscina, sedilia, and an interesting though mutilated monument (*circa* 1294) with recumbent effigies of Walter Stewart, Earl of Menteith, and his Countess, his legs being crossed crusader-wise, and her arm twined around his neck. Notwithstanding its age of six centuries, and the neglect it has experienced during a great part of that time, it is still in tolerable preservation. The decay of ages has in some parts affected the grooving, but large portions still retain their pristine beauty. The choir of the church has long been used as a place of interment by the Earls of Menteith. S of the church are some remains of the dormitory, refectory, and vaulted kitchen; but the cloisters in 1644 made way for an awkward mausoleum, run hurriedly up to receive the corpse of John Graham, Lord Kilpont, who was murdered in Montrose's camp at Collice by one of his own vassals, James Stewart of Ardvoirlich. Lord Kilpont's son, the second and last Earl of AIRTH and Menteith, disposed of Inchmahome to the Marquis of Montrose, with whose descendant, the Duke, it still remains.—*Ord. Sur.*, sh. 38, 1871. See MONTEITH; the Rev. W. M. Stirling's *Notes, historical and descriptive, on the Priory of Inchmahome* (Edinb. 1815); Dr John Brown's 'Queen Mary's Child-Garden,' in *Horæ Subsecivæ* (Edinb. 1858); and Sir William Fraser's *Red Book of Menteith* (2 vols., Edinb., 1880).

Inchmarlow, a mansion in Banchory-Ternan parish, Kincardineshire, near the N bank of the Dee, $1\frac{3}{4}$ mile WNW of Banchory village. Its owner is Duncan Davidson, Esq. of Tillychety (b. 1843; suc. 1881).—*Ord. Sur.*, sh. 66, 1871.

Inchmarnock, an island of North Bute parish, Buteshire, off the W side of the Isle of Bute, about 3 miles SE of Ardlamont Point, where meet the waters of the Kyles of Bute, the Sound of Bute, and Loch Fyne, and $6\frac{1}{2}$ furlongs W of St Ninian's Point. Extending N and S, it has an utmost length and breadth of 2 miles and $5\frac{1}{3}$ furlongs, in the S attains a summit altitude of 165 feet above sea-level, and grows splendid crops of barley. It belonged anciently to the monastery of Saddell in Kintyre, and contains the site of a small chapel, which was dedicated to St Marnock, and the ruins of which were demolished about 40 years ago by a vandal tenant. Pop. (1871) 30, (1881) 18, (1891) 18.—*Ord. Sur.*, shs. 21, 29, 1870-73.

Inchmarrin. See INCHMURRIN.

Inchmartine House, a mansion in the NE corner of Errol parish, Perthshire, $2\frac{1}{2}$ miles NNW of Inchture station. At Westown, 1 mile SW, stood the Church of the Blessed Virgin of Inchmartine, a small, plain Gothic building, which was anciently held by Coupar-Angus Abbey, and which served as a sub-parochial place of worship till the latter part of the 18th century. Its burying-ground continued to be in use till a much later period.—*Ord. Sur.*, sh. 48, 1868.

Inchmickery, a rocky islet in the Firth of Forth, about 2 miles N of Cramond shore, Edinburghshire.

Inchmoan, a low, flat, mossy islet to the S of Inchconachan, in Loch Lomond.

Inchmurrin, an island of Kilmarnock parish, Dumbartonshire, in Loch Lomond, $5\frac{1}{2}$ furlongs WNW of the Kilmarnock shore of the lake, and terminating $2\frac{1}{2}$ miles N by W of Balloch pier. The largest and most southerly of the isles in Loch Lomond, it forms, with Inchtarr and Inchcailloch, a belt of islets from SW to NE, on a straight line across the broadest part of the lake, and measures $1\frac{1}{2}$ mile in length by $3\frac{1}{2}$ furlongs in extreme breadth. Beautifully wooded, it has long been used by the Dukes of Montrose as a deer park; and has, at its SW end, in a grove of venerable oaks, the ruins of an ancient castle of the Earls of Lennox, where, after the execution of her father, husband, and two sons, Isabella, Duchess of Albany and Countess of Lennox, lived till her death about 1460. Inchmurrin was visited by James IV. in 1506, and by James VI. in 1585 and 1617. On 24 Sept. 1439 it was the scene of the treacherous murder of Sir John Colquhoun and his attendants by a

party of Western Islanders. Near the Castle, so late as 1724, might be seen the ruins of the chapel of St Mirin, Paisley's patron saint, which gave the island its name.—*Ord. Sur.*, shs. 30, 38, 1866-71. See Sir William Fraser's *The Lennox* (2 vols., Edinb., 1874).

Inchnadamph. See ASSYNT.

Inchoch Castle, an old baronial fortalice, once the seat of the Hays of Lochloy, in Auldearn parish, Nairnshire, near the Highland railway, $1\frac{1}{2}$ mile NE of Auldearn village.

Inchparks. See INCH, Wigtownshire.

Inchriach, a mountain in Rothiemurchus parish, Invernessshire.

Inchrye Abbey, a modern mansion in Abdie parish, NW Fife, near the NE shore of Lindores Loch, 3 miles SE of Newburgh. Built at a cost of £12,000, in the Gothic style, with a verandah, battlements, and turrets, it has charming grounds, with lawns, meadows, and woods, fringing the lake.—*Ord. Sur.*, sh. 48, 1868.

Inchtavannach or Monk's Island, an islet of Luss parish, Dumbartonshire, in Loch Lomond, 1 furlong from the western shore, and 7 furlongs SSE of Luss village. Extending from N to S, it has an utmost length and breadth of $7\frac{1}{2}$ and 3 furlongs, and in the N rises steeply to 200 feet above sea-level. It is covered with natural oak wood, and anciently contained a monastery. Coleridge, Wordsworth, and his sister Dorothy visited it on 25 Aug. 1803.—*Ord. Sur.*, sh. 38, 1871.

Inchterf, a hamlet, on a quondam island, in the SW corner of Kilsyth parish, Stirlingshire, $2\frac{1}{4}$ miles ESE of Milton of Campsie.

Inchtarr or Torrinch, a wooded islet ($3 \times \frac{3}{4}$ furl.) of Kilmarnock parish, Dumbartonshire, in Loch Lomond, 70 yards SW of Inchcailloch, and 1 mile NE of the north-eastern extremity of Inchmurrin.—*Ord. Sur.*, sh. 38, 1871.

Inchture, a village and a parish in the Carse of Gowrie, Perthshire. The village stands $1\frac{3}{4}$ mile N by W of Inchture station on the Perth and Dundee section of the Caledonian, this being $7\frac{3}{4}$ miles WSW of Dundee, and 14 E by N of Perth. Occupying the crown of a rising-ground, anciently an island, it was originally called *Innis-tuir* (Gael. 'island of the tower'); and it overlooks a luxuriant expanse of circumjacent carse lands, and presents a pleasant appearance. At it are a post office, with money order, savings bank, and telegraph departments, an inn, and a brewery.

The parish, since 1670 comprising the ancient parishes of Inchture and Rossie, is bounded NW by Abernyte, NE and E by Longforgan, SE by the Firth of Tay, SW by Errol, and W by Kinnaird. Its utmost length, from NNW to SSE, is $4\frac{1}{4}$ miles; its breadth varies between $7\frac{1}{2}$ furlongs and $2\frac{1}{2}$ miles; and its area is $5328\frac{1}{2}$ acres, of which 1199 $\frac{1}{2}$ are foreshore and 6 water. One brook, rising and running $1\frac{1}{4}$ mile in the interior, traces for $2\frac{1}{2}$ miles the boundary with Errol, till, being joined from that parish by a larger brook than itself, it forms at Powgavie a small but not unimportant harbour on the firth; whilst Huntly Burn, coming down from the NW, traces for $3\frac{1}{4}$ miles the north-eastern and eastern border, and then diverges into Longforgan. The shoreline, 9 furlongs long, is low; and for 3 miles inland the surface is all but a dead-level, nowhere exceeding 34 feet, and forming part of the rich alluvial flat of the Carse of Gowrie. Then it begins to rise, till it attains 559 feet at Hilltown of Ballindean and 567 at wooded Rossie Hill—heights that command delightful views of water and hill scenery. Trap-rock prevails in the hills; red sandstone and good limestone are found in the lower grounds; and all have been quarried. Veins of copper occur, but have never been worked. The soil on the carse lands is rich argillaceous alluvium; on the undulatory tracts is a fertile loam, and on much of Rossie is gravelly or sandy. Nearly 500 acres are under wood; and several hundred acres are land reclaimed from the firth. The chief antiquities are the ruins of Moncur Castle and of Rossie church, and a cross on the site of the quondam village of Rossie. Mansions are Rossie Priory and Ballindean House, both separately noticed.

Inchture is in the presbytery of Dundee and synod of Angus and Mearns; the stipend is £300 and manse. The church, at Inchture village, a neat Gothic edifice of 1834, was burned down Dec. 1890. In its reconstruction the galleries were done away with, and it was reopened in 1891. A public school, with accommodation for 185 children, has an average attendance of over 110, and a grant of about £100. Valuation (1866) £7569, (1883) £8065, 5s. 7d., (1892) £7217, 14s. Pop. (1801) 949, (1831) 878, (1871) 659, (1881) 650, (1891) 624.—*Ord. Sur.*, sh. 48, 1868.

Inchtuthil, a tract of 200 acres in Capnuth parish, Perthshire, on the left bank of the river Tay, 2½ miles E by S of Capnuth church, and 7½ ESE of Dunkeld. Forming a flat oblong plateau, which rises steeply on all sides to an elevation of 60 feet above the level of the surrounding plain of Stormont, it is identified by Dr Skene as the site of Tamea, a frontier town of the Vacomagi. It had on its NE border a Roman camp, 500 yards square, whose stone walls, 9½ feet thick, have for a century or more been almost levelled by the plough, and to the SE of which were two tumuli and a redoubt—now distinguished by a group of trees. Inchtuthil, moreover, is said to have been part of the land granted by Kenneth III. to Hay, for his bravery at the battle of LUNCARY.—*Ord. Sur.*, sh. 48, 1868.

Inchyra, a village and a mansion in St Madocs parish, SE Perthshire. The village stands on the left bank of the river Tay, 1 mile SW of Glencarse station on the Perth and Dundee section of the Caledonian, and 5 miles ESE of Perth. It has a good harbour, which admits vessels of considerable burden, and a ferry communicating with Fingask in Rhynd parish. Inchyra House, ¾ mile N by E of the village, is a handsome edifice in the Grecian style, with finely wooded grounds.—*Ord. Sur.*, sh. 48, 1868.

Inellan or Innellan, a village and a *quoad sacra* parish in Dunoon parish, Argyllshire. The village stands on the coast of the Firth of Clyde, 3¼ miles S by W of Dunoon town. Founded in 1843, it has risen, from a cluster of villas around a castellated hotel, to rank as a fashionable watering-place, which, extending more than a mile along the shore, is backed by Garrowcherran Hill (1113 feet), Corlarach Hill (1371), Beinn Ruadh (1057), and Inellan Hill (935). It enjoys abundant facilities of communication through the Glasgow and Rothesay and the railway steamers; and has a post office, with money order, savings bank, and telegraph departments, a branch of the Clydesdale bank, a steam-boat pier, gas and water works, a spacious hotel on an elevated site, bowling and lawn-tennis club, golf club, a public school, an Established church, a Free church, a U.P. church, and St Margaret's Episcopal church, a Gothic edifice of 1875. An extension of the water-works was inaugurated in the spring of 1893. The Established church was built nearly 50 years ago as a chapel of ease, and was enlarged in 1890 at a cost of £1100. The *quoad sacra* parish, constituted in 1873, is in the presbytery of Dunoon and synod of Argyll. A few miles farther south is the modern CASTLE TOWARD, and the ruins of an ancient castle, once the seat of the family of Lamont of Ardlamont. Pop. of village (1871) 605, (1881) 859, (1891) 836; of *q. s.* parish (1881) 1061, (1891) 1029.—*Ord. Sur.*, sh. 29, 1873.

Inganess, a bay on the E side of Pomona, Orkney, projecting south-westward between the parishes of Kirkwall and St Andrews. It opens 3 miles ESE of the entrance of Kirkwall Bay; is flanked, on the NW side, by Inganess Head; measures 4½ miles in length, and from ½ to 1¼ mile in breadth; expands to its greatest breadth in its middle parts; has a depth of from 2½ to 12 fathoms; and forms a fine natural harbour for vessels of any size.

Ingans, three lofty hills in Cleish parish, Kinrossshire.

Inglismaldie, a seat of the Earl of Kintore in Marykirk parish, SW Kincardineshire, within a ¼ mile of the North Esk's left bank, and 6 miles SW of Laurencekirk. It is surrounded by extensive woods, and was built in

1884 on the site of an old castellated edifice that had been inhabited by the Earl's ancestors, the Barons Falconer of Halkerton.

Ingliston, a seat and quondam hamlet in Kinnettles parish, Forfarshire.

Ingliston House, a Scottish Baronial mansion of 1846 in the Edinburghshire section of Kirkliston parish, 2 miles N of Ratho. Its finely-wooded grounds contain an old lime tree ('Wallace's Switch'), which girths 23 feet at 3 feet from the ground.—*Ord. Sur.*, sh. 32, 1857.

Inhallow. See ENHALLOW.

Inhouse, a village close to Mossbank, in Delting parish, Shetland.

Inish. See INCH.

Inishail, a heathy islet and an ancient parish in Lorn district, Argyllshire. The island, with an utmost length and breadth of 3 and 1½ furlongs, lies in the lower part of Loch Awe, 2¼ miles SSW of Loch Awe station and pier and 4½ furlongs WNW of Cladich pier. The Boundary Commissioners in 1891 transferred the island (comprising 27 acres) from the parish of Kilchrenan and Dalavich to that of Glenorchy and Inishail. In 1857 the celebrated etcher, Mr Philip Gilbert Hamerton, encamped upon Inishail; and five years later he published two volumes entitled *A Painter's Camp in the Highlands, and Thoughts about Art*. Inishail had much celebrity in the Middle Ages as the site of a small Cistercian nunnery, which is said to have been distinguished by freedom from the evils that characterised many of the institutions of its class, and whose property was conveyed at the Reformation to Hay, the Protestant ex-abbot of Inchaffray. It is still represented by some remains of its chapel. The parish church was in use from the Reformation till it was superseded in 1773 by a new church, on the shore, 5 miles SW of Dalmally. Its burying-ground was specially used by the clan Macarthur, who formerly inhabited the shores of the lower part of Loch Awe, and contains numerous ancient carved tombstones, with insignia and devices of Crusaders, knights, warriors, ecclesiastics, and a peer. The parish, united to Glenorchy in 1618, occasions the present parish of Glenorchy to be formally designated Glenorchy and Inishail; embraces the islands, waters, and flanks of much of the lower part of Loch Awe; contains the mansions of Ardvrecknish, New Inverawe, and Inchdrynich; and shares with Glenorchy proper the alternate Sabbath services of the parish minister.—*Ord. Sur.*, sh. 45, 1876.

Inishchonell, a beautiful islet of Kilchrenan and Dalavich parish, Argyllshire, in Loch Awe, 8 miles NE of the head of the lake, and 5 furlongs ESE of Dalavich church. Here, from the 11th century, the ancestors of the Duke of Argyll had their stronghold, Ardhonnell Castle, now a picturesque ivy-mantled ruin; hence they maintained a long and arduous struggle with surrounding clans; and hence they often sent forth their famous slogan or defiant war-shout, 'It's a far cry to Lochow.'—*Ord. Sur.*, sh. 37, 1876.

Inishdrynich. See INCHDRYNICH.

Inisherrich or Innis-Seanamhach, an islet of Kilchrenan and Dalavich parish, Argyllshire, in Loch Awe, 5½ furlongs SSW of Inishchonell. It contains a ruined chapel, with an ancient burying-ground.

Inishkenneth. See INCHKENNETH.

Inishnadampf. See ASSYNT.

Inistrynich. See INCHDRYNICH.

Inkerman, a village in Abbey parish, Renfrewshire, 2 miles WNW of Paisley, under which it has a post office. It was founded about 1858 in connection with the working of ironstone mines, and like Balaklava in the same county, received its name from a battle of the Crimean war. Pop. (1881) 948, (1891) 699.

Innellan. See INELLAN.

Inneravon, a tract of land contiguous to the mouth of the river Avon in Borrowstounness parish, Linlithgowshire. A remarkable bed of oysters and other shells exist beneath a bank, from the seaward side of this tract to the vicinity of Kinneil House, and a Roman station is thought by some antiquaries to have stood

here. A castle of Inneravon or Inveravynne, mentioned in the Auchinleck chronicle of James II., is supposed to have occupied the site of the Roman station; and an old ruin which still stands here may have been one of the corner towers of that castle.

Inneravon, Banffshire, INVERAVON.

Innerhadden. See INNERHADDEEN.

Innerdale. See ENDRICK.

Innergellie House, a modern mansion in Kilrenny parish, Fife, $1\frac{1}{2}$ mile NE of Anstruther. Its owner is Edwin Robert John Sandys-Lumsdaine, Esq., of Blannerne.—*Ord. Sur.*, sh. 41, 1857.

Innerhadden House, a mansion in Fortingal parish, NW Perthshire, at the foot of a high, mural, romantic rock overlooking the E end of Loch Rannoch, 7 furlongs SE of Kinloch Rannoch. A spot near it was the starting-point of a successful skirmish of Robert Bruce against the English.

Innerkip or Inverkip, a village and a coast parish of W Renfrewshire. The village lies, completely buried among trees, on the left bank of the Kip, 3 furlongs above its influx to the Firth of Clyde and $\frac{1}{4}$ mile NNE of Innerkip station on the Wemyss Bay section of the Caledonian railway, this being $2\frac{1}{2}$ miles N by E of Wemyss Bay, $5\frac{1}{2}$ SW of Upper Gourock, and $28\frac{1}{2}$ W by N of Glasgow. A little place, consisting chiefly of two long rows of houses on either side of the turnpike road, it has a post office, a hotel, a gas company, a constabulary station, a handsome parish church (1803) with clock-tower and spire, a Free church, and 7 furlongs to the N the Episcopal church of St Michael and All Angels, the private chapel of the Shaw-Stewarts, whose mausoleum is in the old burying-ground. Innerkip was made a burgh of barony before the Union, with the right of holding three annual fairs; was often known as Auld-kirk after the erection of the first church at GREENOCK (1592); and is memorable in connection with the witchcraft trials of 1662, already noticed under GOUROCK, and fully described in Sir George Mackenzie's *Witches of Renfrewshire* (1678; new ed., Paisley, 1878). The original parish church was granted to Paisley Abbey soon after its foundation in 1169, and was held by the monks down to the Reformation. Pop. of village (1861) 449, (1871) 637, (1881) 580, (1891) 526.

The parish, containing also the town of GOUROCK and the stations of RAVENSCRAIG and WEMYSS BAY, is bounded W and N by the Firth of CLYDE, E by Greenock, SE by Kilmacolm, and S by Largs in Ayrshire. Its utmost length, from N to S, is $5\frac{1}{2}$ miles; its utmost width, from E to W, is $4\frac{3}{8}$ miles; and its area is 13,237 $\frac{1}{2}$ acres, of which 279 are foreshore and 409 water. The coast-line, $9\frac{1}{2}$ miles long, is fringed by the narrow low platform of the firth's old sea-margin, and slightly indented by Gourock, West, Leanderston, Innerkip, and Wemyss Bays; its special features are treated under GOUROCK, CLOCH Point, and WEMYSS. Inland the surface rises somewhat steeply to 478 feet at Barr Hill, 610 at Borneven Hill, 701 at White Hill, 907 at Leap Moor, 936 at DUNROD Hill, 910 at Scroggy Bank, and 1446 at Creuch Hill, whose summit, however, falls within Kilmacolm. Loch Thom ($1\frac{1}{4} \times \frac{1}{2}$ mile) and four or five smaller reservoirs of the GREENOCK Waterworks lie close to the eastern border; KELLY BURN flows $3\frac{3}{4}$ miles west-south-westward to the firth along most of the Ayrshire boundary; and the Kip winds 4 miles westward through the interior, by the way receiving Spango and Daff Burns, the latter of which, from its source upon Leap Moor, hurries $1\frac{1}{2}$ mile north-north-westward along a rocky, richly-wooded glen. The landscape generally is very charming; and the views from the higher grounds are grand beyond description. The predominant rocks are Igneous and Upper Old Red sandstone. Craigmuschat quarry, near Gourock, for upwards of seventy years has yielded abundance of porphyritic greenstone, well adapted for paving; good building material is furnished by the sandstone, and excellent road-metal by dykes of trap. The soil is light and sandy along the shore, moister and verging to red gravel on the higher arable grounds, and moorish or

moss on the uplands. Rather more than a third of the entire area is in tillage; 550 acres are under wood; and nearly all the remainder is either pasture or waste. Innerkip Castle is situated in the well-wooded grounds of Sir Michael Shaw Stewart, and stands upon the edge of a cliff near the mansion-house of Ardgowan. It is said to be of a later date than the one standing here in the days of Bruce. A fragment only of it is left, the remains of the square tower. Other antiquities are noticed under DUNROD, GOUROCK, and LEVEN. Mansions, also noticed separately, are ARDGOWAN, GOUROCK House, KELLY House, and LEVEN Castle. Innerkip Glen is a charming spot, well-wooded, and with a stream running through the centre. The Wemyss Bay railway crosses the ravine on a lofty bridge of many piers. Including nearly the whole of Gourock *quoad sacra* parish and a portion of that of Skelmorlie, Innerkip is in the presbytery of Greenock and synod of Glasgow and Ayr; the living is worth £386. A public school, with accommodation for 229 children, has an average attendance of over 110, and a grant of about £120. Pop. (1801) 1367, (1831) 2088, (1861) 3495, (1871) 4502, (1881) 5359, (1891) 6541, of whom 885 were in the ecclesiastical parish.—*Ord. Sur.*, shs. 29, 30, 1873-66. See Gardner's *Wemyss Bay, Innerkip, and Largs* (Paisley, 1879).

Innerleithen, a town and a parish in E Peeblesshire. The town stands 479 feet above sea-level, on Leithen Water, $\frac{1}{2}$ mile NNE of its influx to the Tweed, and has a station on the Peebles and Galashiels section of the North British, $6\frac{1}{2}$ miles ESE of Peebles, $12\frac{1}{2}$ W of Galashiels, and $33\frac{1}{2}$ S by E of Edinburgh. A 'quiet, pretty watering-place, it is situated in the wide, meadowy valley of the Tweed, environed by high, round, green hills; and has a main street of rather new, good-looking houses, with an older street extending up a hill-crest to the well.' It was a mere kirk-hamlet from the middle of the 12th century down to 1790, when a woollen factory was started at it by Alexander Brodie, a Traquair blacksmith who had made a large fortune in London. About the same period, too, its medicinal saline spring, and the healthiness of its climate, began to attract invalids, and tourists; and it acquired much celebrity by the general identification of that spring with the 'St Ronan's Well' of Sir Walter Scott's romance (1824). Further causes of its well-being are the annual games instituted by the now extinct St Ronan's Border Club (1827); the attractions it offers to anglers as a convenient centre for fishing the waters of the Leithen, the Tweed, and the Quair, even of the Yarrow and St Mary's Loch; and the continued extension of its woollen industry. Besides some good shops and lodging-houses, Innerleithen has a post office, with money order, savings bank, and telegraph departments, a branch of the Bank of Scotland, a National Security savings bank, several hotels, a gaswork, drainage and water works, and bowling, curling, and golf clubs. Under the Burgh Police Act of 1892 it is governed by a provost, 2 bailies, and 6 commissioners. The medicinal spring, rising on the skirt of Lee Pen at an elevation of 200 feet above the town, and at a short distance to the W, in 1826 was furnished with a verandahed pump-house, containing subscription reading-rooms. In every gallon of its water are 216·72 grains of chloride of sodium, 148·16 of chloride of calcium, 16·17 of chloride of magnesium, 1·15 of sulphate of magnesia, 5·03 of carbonate of lime, etc., this being the stronger of the two streams into which the spring branches. It is in high repute for ophthalmic, scorbutic, bilious, and dyspeptic complaints. As stated already the earliest woollen mill was built in 1790 at a cost of £3000, but it did not come into fairly successful operation till 1839, when steam was added to the original water-power from the Leithen. There are now six woollen mills at Innerleithen itself, and two at the neighbouring village of Walkerburn. They turn out tweeds, tartans, blankets, etc., and employ a considerable number of workpeople. The parish church was built in 1870, and in 1889 it was enlarged and received an organ. It now contains 1150 sittings. The Free church was enlarged in 1878, when also a Gothic U.P. church was

built at a cost of over £2000. There is also a Congregational church. St James's Roman Catholic church (1831), in the Early Gothic style of the 14th century, has a tower and spire 97 feet high. A handsome school in connection with it was built in 1876. Pop. (1841) 463, (1851) 1236, (1861) 1130, (1871) 1605, (1881) 2313, (1891) 2512. Houses (1891) inhabited 517, vacant 17, building 3.

The parish, containing also the stations of WALKERBURN and Thornielee, $1\frac{1}{2}$ and 5 miles E of Innerleithen, comprises all the ancient parish of Innerleithen and about one-third of that of Kailzie. It is bounded N by Temple and Heriot in Edinburghshire, E by Stow, S by Traquair and Yarrow, and W by Peebles and Eddleston. Its utmost length, from W by N to S by E, is $8\frac{1}{2}$ miles; its utmost breadth, from N by W to S by E, is $7\frac{1}{2}$ miles; and its area is $24,122\frac{3}{4}$ acres, of which 141 are water. Of this area 3579 acres formerly belonged to Selkirkshire, but in 1891 the Boundary Commissioners altered the county boundaries so as to place the parish of Innerleithen wholly within the county of Peebles. The river TWEED sweeps $11\frac{3}{4}$ miles east-by-southward along all the southern border; Leithen Water, its affluent, rising in the extreme NW at an altitude of 1750 feet, runs $9\frac{3}{4}$ miles south-south-eastward through all the interior, in a line a little W of the middle; and numerous burns flow either to the Leithen or the Tweed. Along the latter stream is a belt of very rich haugh; another extends for 3 or 4 miles up the lower course of the Leithen; a narrow border of low land fringes parts of the channels of some of the burns; and all the rest of the parish is part of the broad hill range called commonly the Southern Highlands, and presents for the most part a rounded and grassy appearance. Where, below Thornielee station, the Tweed quits Innerleithen, the surface declines to 410 feet above sea-level, and rises thence northward or north-north-westward to 1634 feet at Cairn Hill, 1802 at Priesthope Hill, 2161 at *Windlestraw Law, 2038 at Whitehope Law, 1647 at Leo Pen, 1708 at Black Knowe, and 2136 at *Blackhope Scar, asterisks marking those summits that culminate on the eastern or just beyond the northern boundary. Dorothy Wordsworth thus describes the scenery, as viewed from the Tweed's valley, down which she drove with her brother on Sunday, 18 Sept. 1803:—'The lines of the hills are flowing and beautiful, the reaches of the vale long; in some places appear the remains of a forest, in others you will see as lovely a combination of forms as any traveller who goes in search of the picturesque need desire, and yet perhaps without a single tree; or at least if trees there are, they shall be very few, and he shall not care whether they are there or not. . . . The general effect of the gently-varying scenes was that of tender pensiveness; no bursting torrents when we were there, but the murmuring of the river was heard distinctly, often blended with the bleating of sheep. In one place we saw a shepherd lying in the midst of a flock upon a sunny knoll, with his face towards the sky—happy picture of shepherd life.' The predominant rocks are Silurian, with some porphyries and clay slate; and they have yielded detritus favourable to vegetation. The soil of the haughs is alluvial; on the banks of some of the burns, is a gravelly loam; and on the hills, consists of the disintegrated native rocks. A hard, dark-coloured porphyry has been much worked for curling-stones; the fissile greywacke of Holylee has been employed for tessellated pavement; and a clay slate was at one time worked at Thornielee for roofing. Barely one-eleventh of the entire area is regularly or occasionally in tillage, plantation covers some 500 acres, and the rest is either sheep-walk or waste. The principal antiquities, besides the site or vestiges of five peel-towers, are the oval hill-forts of Caerlee and Pirn, 400 and 350 feet in length; the ruined castle of Nether Horsbrugh, and the Purvis-hill Terraces, twelve to fourteen in number. These are planted with ash-trees, and vary from 50 to over 100 feet in breadth. The depth between each terrace is some 14 feet, and the second one in the ascent is over 900 feet

in length. The castle of Nether Horsbrugh is noticed separately, as also are the mansions of Glenormiston and Holylee. Giving off a portion to Caddonfoot *quoad sacra* parish, Innerleithen is in the presbytery of Peebles and synd of Lothian and Tweeddale; the living is worth £366. Three public schools—Innerleithen, Leithenhope, and Walkerburn—with respective accommodation for 374, 32, and 310 children, have an average attendance of over 390, 15, and 220, and grants of about £356, £30, and £196. Pop. (1801) 609, (1831) 810, (1861) 1823, (1871) 2812, (1881) 3661, (1891) 4161, of whom 72 were in Selkirkshire, and 2775 in the ecclesiastical parish.—*Ord. Sur.*, shs. 24, 25, 1864-65.

Innerleven. See DUBBIESIDE.

Innermessan, a farm in Inch parish, Wigtownshire, on the E shore of Loch Ryan, $2\frac{1}{2}$ miles NE of Stranraer. It contains the site of a mediæval town and an extant ancient moat. An ancient town is supposed to have preceded the mediæval one, and now is commonly identified with Rerigonium, a seat of the Caledonian tribe Novante, mentioned by Ptolemy in the 2d century A. D. (See BEREGONIUM.) The mediæval town is said by Symson (1684) to have been 'of old the most considerable place in the Rhinns of Galloway, and the greatest town thereabout, till Stranraer was built;' but now it is represented by only a tiny hamlet. Innermessan Castle, whose site is occupied by the neat farmhouse, was built by the first Sheriff Agnew of Lochnaw on grounds granted to him by royal charter of 1429, and continued to be inhabited till towards the close of the 17th century. Innermessan Moat, a circular, artificial mound, once surrounded by a fosse, measures 336 feet in circumference round the base, 78 in sloping ascent, and 60 in vertical elevation. Its flat summit, which commands a fine view, was bored in 1834, and then was found to contain a stratum of ashes, charred wood, and fragments of bone.—*Ord. Sur.*, sh. 3, 1856.

Innerpeffray, a castle in Crieff parish, Perthshire, on the left bank of the river Earn, $1\frac{1}{2}$ mile SSE of Innerpeffray station on the Perth, Methven, and Crieff branch of the Caledonian, this being $2\frac{1}{2}$ miles ESE of Crieff. Built about 1610 by James Drummond, first Lord Madderty, it is now a ruin, though the outer walls, the staircase, and some of the rooms are fairly entire. Innerpeffray Chapel, $\frac{1}{4}$ mile nearer the station, since 1598 has been the burying-place of the noble family of Drummond; close by it is an endowed school with a library, founded in 1691 with a bequest of David, third Lord Madderty. The library contains between 2000 and 3000 volumes, among them some black-letter works, and a small French Bible of 1632, bearing the autograph of the great Marquis of Montrose.—*Ord. Sur.*, sh. 47, 1869.

Innertiel. See INVERTIEL.

Innertig, a place in Ballantrae parish, Ayrshire, with the ruins of an ancient church.

Innerwick, a village and a coast parish of E Haddingtonshire. The village stands 300 feet above sea-level, at the base of a steep cultivated hill, $1\frac{1}{2}$ mile W by S of Innerwick station on the North British railway, this being 4 miles ESE of Dunbar; it has a post office.

The parish, containing also the small harbour of Skateraw, is bounded NW by Dunbar, NE by the German Ocean, SE by Oldhamstocks, S by Longformacus in Berwickshire, and W by Spott and Dunbar. Irregular in outline, it has an utmost length from NNE to SSW of 10 miles, a varying breadth of $1\frac{1}{2}$ and $3\frac{1}{2}$ miles, and an area of $13,424\frac{1}{4}$ acres, of which 267 are foreshore. The coast, measured along its indentations, has a length of $2\frac{1}{2}$ miles, and it presents a tamely rugged and rocky appearance. An upland watershed bisects the parish nearly through the middle; and sends off Thornton Burn and other streamlets east-north-eastward to the German Ocean, and Monynut Water and other streamlets south-south-eastward to Berwickshire towards the Whitadder. About two-thirds of the entire surface, comprising a portion ENE of the watershed and all the sections from the watershed to the southern boundary, are parts of the Lammermuir Hills, and

present an upland, bleak, and desolate appearance; the loftier summits here from N to S being BLACKCASTLE Hill (917 feet), Cocklaw Hill (1046), Bransby Hill (1300), and Peat Law (1209). A series of ravines, intersecting the east-north-eastern declivities of the hills, exhibits pleasing features of verdure and wood, and overlooks charming prospects towards the ocean, whilst a luxuriant and very fertile plain lies all between the foot of these ravines and the shore, and is embellished in three places with plantation. The rocks are principally Silurian and Devonian, but partly carboniferous; and they include abundance of sandstone and limestone, with some ironstone, bituminous shale, and thin seams of coal. About four-ninths of the land are regularly or occasionally in tillage; plantations cover some 350 acres; and the rest is either pastoral or waste. Innerwick Castle, now a ruin, on a steep eminence overhanging a rocky glen, 1 mile E of Innerwick village, from the Stewarts passed to the Hamiltons, and was captured and demolished in 1548 by the Duke of Somerset during his invasion of Scotland. Thornton Castle, crowning an eminence on the other side of the glen, opposite Innerwick Castle, was a stronghold of Lord Home, and suffered the same fate from the same hands as Innerwick Castle, like which it is now a ruin. A bridge called Edinkens, that stood a little S of these two castles, has been associated variously with the names of King Edwin of Northumbria and King Edward of England, and now is represented by slight remains. Four ancient standing stones formerly stood near that bridge; two stone coffins, containing a dagger and a ring, were found in a field near Dryburn Bridge; and a place called Corsekill Park, near Innerwick village, is alleged to have been the scene of an encounter between Cospatrick and Sir William Wallace. An ancient chapel dedicated to St Dennis stood on the Skateraw shore, but has utterly disappeared. Thurston, noticed separately, is the chief residence. Off Skateraw, in a severe storm in November 1893, a large steamer, the *River Garry*, from Leith to London, was lost with all hands. Innerwick is in the presbytery of Dunbar and synod of Lothian and Tweeddale; the living is worth £372. The parish church, standing on an eminence in Innerwick village, is a very plain structure of 1784, though interiorly it was thoroughly renovated in 1870. There is also a Free church; and a public school, with accommodation for 126 children, has an average attendance of about 100, and a grant of over £96. Valuation (1883) £11,425, 12s., (1893) £10,379, 9s. Pop. (1801) 846, (1831) 987, (1861) 937, (1871) 892, (1881) 777, (1891) 761.—*Ord. Sur.*, sh. 33, 1863.

Innerwick, Perthshire. See GLENLYON.

Innes House, a seat of the Duke of Fife, in Urquhart parish, Elginshire, 6 miles NE of Elgin. Built in 1640-53 from designs by William Aitoun (the architect probably of Heriot's Hospital), and greatly improved about 1825, it consists of two four-story wings and a massive square tower, with a neat private chapel, some good paintings, beautiful gardens, and a fine broad avenue. The barony of Innes was held by the Inneses from the latter half of the 12th century till 1767, when Sir James Innes, sixth Bart. since 1625, who in 1812 succeeded to the dukedom of Roxburgh, sold it to James, second Earl of Fife.—*Ord. Sur.*, sh. 95, 1876. See DUFF HOUSE, and vol. iii. of Billings' *Baronial Antiquities* (1852).

Innimore, a bold basaltic headland near Carsaig Arches, on the S coast of the island of Mull, Argyllshire. It contains a cavern called Nun's Cave.

Inninmore, a headland on the Morvern coast of Argyllshire, 3½ miles ESE of Artornish Castle.

Innis. See INCH.

Innischnonnel. See INISHCHONNEL.

Innisdrynich. See INCHDRYNICH.

Inniserrich. See INISHERRICH.

Innisfraoch. See FRAOCH EILEAN.

Innishail. See INISHAIL.

Inniskeneth. See INCHKENETH.

Innocents Howe, a hollow in a moor in Urquhart parish, Elginshire, 1½ mile E of the parish church. Tradition says that, during a Danish invasion, the native women and children took refuge in this hollow, but were discovered and put to death by the Danes.

Inord, Loch. See AINORR.

Insch, a village and a parish in Garioch district, NW Aberdeenshire. The village stands, 406 feet above sea-level, at the southern extremity of the parish, ½ mile N by E of Insch station on the Great North of Scotland railway, this being 13¼ miles SE of Huntly, 7 WNW of Inveramsay Junction, and 27½ NW of Aberdeen. A burgh of barony, under the Leith-Hays of Leith Hall, it has a post office, with money order, savings bank, and railway telegraph departments, branches of the North of Scotland and the Town and County Banks, a National Security savings bank, several insurance agencies, 2 hotels, a gas company, a public hall, a police station, the parish church, a Free Church, a Congregational church, an Episcopalian church, a horticultural society, a curling club, cattle fairs on the fourth Monday of every month, and hiring fairs on the Fridays before 18 May and 18 Nov. The parish church was built in 1883 on the site of the former one of 1613. Pop. (1841) 215, (1861) 411, (1871) 533, (1881) 579, (1891) 567.

The parish is bounded N by Drumblade and Fergie, E by Culsalmond, SE by Oyne and Premnay, SW by Leslie and Kennethmont, and W by Kennethmont and Gartly. Its utmost length, from N to S, is 4½ miles; its utmost breadth, from E to W, is 3½ miles; and its area is 837½ acres, of which 1½ are water. The Shevock curves 5 miles east-by-southward along all the south-western and south-eastern boundary, passing off from this parish 1½ mile above its confluence with the Ury; and the Ury itself, here sometimes known as Glen Water, flows 2¼ miles eastward through Glen Foudland along all the northern border; whilst several rills of sufficient volume to drive a threshing machine drain the interior. The land is a diversity of hill and dale, sinking in the SE to 380 feet above sea-level, and rising thence to 876 feet at conical Dunnideer, 800 at Candle Hill, 622 at Knockenbaird, and 1529 at the Hill of Foudland. Clay slate, of excellent roofing quality, was at one time largely quarried on Foudland; gneiss and granite are the predominant rocks in the lower hills; and bog iron occurs in considerable quantities in the low grounds adjacent to Dunnideer. The soil of the low grounds is mostly a light loam, on the slopes of Foudland is a light clay, and on its higher parts is moss or heath. About one-third of the entire area is pastoral or waste; plantations cover some 50 acres; and all the rest of the parish is under cultivation. The chief antiquity is noticed under DUNNIDEER; others being a mound or rising-ground called the Gallow Hill near Insch village, and some Caledonian standing-stones; whilst the fragment of a 'Roman sword' and some links of a very rude gold chain have been found on Wantonwell's farm. Drumrossie, a little E of the village, is the only mansion. Insch is in the presbytery of Garioch and synod of Aberdeen; the living is worth £270. Three public schools—Glen Foudland, Insch, and Largie—with respective accommodation for 58, 246, and 128 children, have an average attendance of about 50, 180, and 70, and grants of over £45, £165, and £70. Pop. (1801) 798, (1831) 1338, (1861) 1565, (1871) 1596, (1881) 1536, (1891) 1384.—*Ord. Sur.*, shs. 76, 86, 1874-76.

Inshes House. See INCHES.

Inshewan. See INCHEWAN.

Insh, Loch, Inverness-shire. See INCH.

Inshoch Castle. See INCHUCH CASTLE.

Inver, a village in Little Dunkeld parish, Perthshire, on the right bank of the Tay and the left of the confluent Bran, 1 mile WSW of Dunkeld. See DUNKELD, LITTLE.

Inver, a fishing village in Tain parish, Ross-shire, on the S side of the Dornoch Firth, 6¼ miles E by N of Tain. It includes Inverskinnerton, in Tarbat parish; and in 1832 lost over a third of its inhabitants through a few weeks' ravages of the cholera. Pop. (1871) 450,

(1881) 396, (1891) 352, of whom 34 were in Tarbat.—*Ord. Sur.*, sh. 94, 1878.

Inver or Lochinver. See ASSYNT.

Inverallan, a *quoad sacra* parish in Cromdale parish, Elginshire, containing the town of GRANTOWN. Constituted in 1869, it is in the presbytery of Abernethy and synod of Moray. Stipend £200. Pop. (1871) 2522, (1881) 2497, (1891) 2474.

Inverallochy, a village and a *quoad sacra* parish in Rathen parish, NE Aberdeenshire. The village stands on the coast, immediately E of Cairnbulg village, 4 miles ESE of Fraserburgh. It has a post office with telegraph department, and a public school. Inverallochy Castle, $1\frac{1}{2}$ mile S of the village, belonged to the powerful family of Comyn; and till the latter half of the 18th century retained a stone above the entrance bearing the sculptured arms of the Comyns, with an inscription recording that the estate around it was obtained by Jordan Comyn for building the abbey of Deer. It presents an imposing but desolate appearance, and, as seen at a distance, looks more like an ecclesiastical structure than a feudal fortalice. The *quoad sacra* parish is in the presbytery of Deer and synod of Aberdeen; its minister's stipend is £100. The church was originally a chapel of ease. Rathen Free church stands $2\frac{1}{2}$ miles SSW of the village. Pop. of village, (1881) 741, (1891) 637; of the *q. s.* parish, (1881) 1577, (1891) 1463.—*Ord. Sur.*, sh. 97, 1876.

Inveramsay Junction, a station in Chapel of Garioch parish, Aberdeenshire, on the Great North of Scotland railway, $29\frac{1}{2}$ miles S by E of Banff, $20\frac{1}{2}$ SE of Grange Junction, and $20\frac{1}{2}$ NW of Aberdeen.

Inveran, a hamlet in Creich parish, S Sutherland, $1\frac{3}{8}$ mile N by W of Invershin station. It has a post office and a good hotel.

Inveraray (Gael. *Inbhir-Aoraidh*, of unknown etymology), a town and a parish in Argyll district, Argyllshire. A royal, parliamentary, and police burgh, the capital of the county, and a seaport, the town stands on the S side of a small bay, at the Aray's influx to Loch Fyne, $6\frac{1}{2}$ miles SW of the head of that sea-loch, $24\frac{1}{2}$ NNE of Lochgilphead, $56\frac{3}{4}$ N by W of Rothesay (*via* Kyles of Bute), $9\frac{1}{2}$ S of Cladich on Loch Awe, 32 SE of Oban, 16 SSW of Dalmally station, 24 W by N of Tarbet, $11\frac{1}{2}$ NW of Lochgoilhead, 45 NNW of Greenock (*via* Loch Eck), and $67\frac{1}{2}$ NW of Glasgow. It communicates three times weekly by steamboat with Glasgow, and daily during the summer by the *Lord of the Isles*; by coach it communicates daily with Lochgoilhead, and daily during summer with Tarbet. Within half a mile of the town the Aray is crossed by an elegant stone bridge of two arches, while projecting from the shore at a suitable part of the town is a strongly-built quay. 'The approach,' writes the Queen, 'is splendid; the loch is very wide; straight before you a fine range of mountains splendidly lit up,—green, pink, and lilac; to the left the little town of Inveraray; and above it, surrounded by pine woods, stands the castle of Inveraray, square, with turrets at the corner.' Robert Buchanan styles Inveraray 'that most depressing of fish-smelling Highland towns;' but his brother-poet, Alexander Smith, described it as 'a rather pretty place, with excellent inns, several churches, a fine bay, a ducal residence, a striking conical hill—Duniquaich the barbarous name of it—wooded to the chin, and an ancient watch-tower perched on its bald crown. The chief seat of the Argylls cannot boast of much architectural beauty, being a square building with pepperbox-looking turrets stuck on the corners. The grounds are charming, containing fine timber, winding walks, stately avenues, gardens, and through all, spanned by several bridges, the Aray bubbles sweetly to the sea. No tourist should leave Inveraray before he ascends Duniquaich—no very difficult task either, for a path winds round and round it. When you emerge from the woods beside the watch-tower on the summit, Inveraray, far beneath, has dwindled to a toy town—not a sound is in the streets; unheard the steamer roaring at the wharf, and urging dilatory passengers to haste by the clashes of an angry

bell. Along the shore nets stretched from pole to pole wave in the drying wind. The great boatless blue loch stretches away flat as a ball-room floor; and the eye wearies in its flight over endless miles of moor and mountain. Turn your back on the town, and gaze towards the north. It is still "a far cry to Loch Awe," and a wilderness of mountain peaks tower up between you and that noblest of Scottish lakes—of all colours too—green with pasture, brown with moorland, touched with the coming purple of the heather, black with a thunder-cloud of pines. What a region to watch the sun go down upon!' (*Summer in Skye*, 1865).

Founded in 1742, in lieu of an earlier town, which, dating from the Argylls' first settlement here, stood in front of their pristine castle, Inveraray chiefly consists of a row of houses fronting the bay, and a main street striking thence at right angles. It is mostly well built, the houses neat and substantial; and has a post office, with money order, savings bank, insurance, and telegraph departments, branches of the National and Union Banks, several hotels, fire-engine station, gaswork (1841), a police station (1869), an agricultural society, cattle markets on the Friday after the last Wednesday in May and the Thursday after the last Wednesday in October, and wool markets on the third Wednesday in June and the third Friday in July. Water was introduced into the town in 1836, and towards the end of 1892 an additional supply was obtained from the Douloch, where a new reservoir was constructed, which connects by a long pipe with the old reservoir just before entering the town—a branch pipe leading to the Castle reservoir. The neat county court-house, of native porphyry, was adorned in 1874 with a bust by Sir John Steell of the late Lord Colonsay, a native of Argyllshire and county member from 1843 to 1851. The prison was legalised in 1848, and, as altered and improved in 1871, has twenty-four cells. A sculptured stone cross, 8 feet high, with an almost illegible Latin inscription, is supposed to date from 1400 or thereby, and to have been brought from Iona. It was the town-cross of the older town, on the demolition of which it lay for a long time neglected, but now it stands at the foot of the principal street. Nearer the church is a small obelisk to the memory of seventeen Campbells who here were executed without trial for their share in Argyll's expedition (1685). A coffee and reading room, a handsome stone building to the memory of the late Duchess, and costing upwards of £1000, has been erected near the quay. The parish church, at the head of the principal street, is a long inelegant structure of 1794, with a spire rising from the centre of its roof. It was greatly injured by lightning in 1837, but repaired at considerable cost the following year; and it comprises two places of worship, English and Gaelic. There are also a Free church (1844), a U.P. church (1836), and an Episcopalian chapel (All Saints, 1886). The pier, a rude affair at first, was enlarged and improved in 1809, and again extended in 1836 at a cost of £1200, a slip being formed to suit every state of tide. Some trade is done in the exchange of Highland produce for general merchandise; and Inveraray is head of a fishery district between those of Campbelltown and Rothesay. In this district the number of boats in 1894 was 383, of fishermen 974, of fishcurers 9, and of coopers 3, whilst the value of the boats in the district was £13,764, of nets £10,734, and of lines £695. The number of barrels of herrings cured in 1894 was 872. In 1881 'the most special feature of the west coast fishing was the return of herrings to the lower reaches of Loch Fyne, where after an interval of many years' poor

Seal of Inveraray.

fishing, not only was the take large in itself, but the herrings proved exceptionally good both as regards size and quality.' The town was made a burgh of barony in 1472, and a royal burgh in 1648. Under the Burgh Police Act of 1892 it is governed by a provost, 2 bailies, and 6 commissioners; and it unites with Oban and Campbeltown in Argyllshire, and with Ayr and Irvine in Ayrshire, in sending a member to parliament. Courts of quarter sessions are held on the first Tuesday of March, May, and August, and on the last Tuesday of October. Ordinary, debts recovery, and small-debt courts are held every Friday during session. The parliamentary and the municipal constituency numbered 110 and 145 in 1895, when the annual value of real property amounted to £2417, whilst the corporation revenue was £452. Pop. of royal burgh (1811) 1113, (1841), 1233, (1861) 1074, (1871) 981, (1881) 940, (1891) 816, of whom 723 were in the parliamentary and police burgh. Houses (1891) inhabited 200, vacant 23.

Inveraray's history is that of the Earls and Dukes of Argyll, those zealous champions of civil and religious liberty. Their ancestor, Sir Colin Campbell of Lochow or Loch Awe, was knighted in 1280, and through his prowess bequeathed to the chiefs of his line the Gaelic title of Mac Cailean Mhor or Mac Callum More* ('great Colin's son'). Sir Duncan Campbell of Lochow was raised to the peerage as Lord Campbell in 1445; Colin, his son, was created Earl of Argyll in 1457, and added to his possessions the district of Lorne—'so important that we have on occasion found the Lord of Lorne spoken of as the Maor or chief ruler in these Celtic dominions. In the Lowlands the head of the house was successively earl, marquis, and duke. About such titles his Celtic subjects would neither know nor care to know. They might be casually spoken of among the tawdry foreign decorations conferred upon their chief. To them he was something infinitely greater and more illustrious as the son of Callum (*sic*) the Great, who had been the Charlemagne or King Arthur in their line of chiefs' (Hill Burton's *Hist. Scotl.*, iii. 61, ed. 1876). The second Earl fell at Flodden (1513); the fourth, who died in 1558, was the first of the Scots nobility to embrace the principles of the Reformation. Archibald, eighth Earl (1598-1661), the leader of the Covenanters, was created a Marquis in 1641, in 1651 crowned Charles II. at 'Scone, and by Charles was ten years later beheaded at Edinburgh. The Marquis he of Scott's *Legend of Montrose*, where 'Major Dugald Dalgetty' is sent on an embassy to the 'noble old Gothic castle of Inveraray, whose varied outline, emhatted walls, towers, and outer and inner courts presented an aspect much more striking than the present massive and uniform mansion.'† Archibald, ninth Earl, for his descent upon Scotland in consort with Monmouth's English rebellion, was, like his father, executed at Edinburgh (1685); his son and successor, Archibald, an active promoter of the Revolution, was in 1701 created Duke of Argyll, Marquis of Lorne, Baron Inveraray, etc. John, second Duke (1678-1743), famous in both 'the senate and the field,' is widely known through Scott's *Heart of Midlothian*; Archibald, third Duke (1682-1761), built the present castle; and at it John, fifth Duke (1723-1806), entertained Dr Samuel Johnson and Boswell on 25 Oct. 1773, when the 'Sage' was 'so entertaining that Lady Betty Hamilton after dinner went and placed her chair close to his, leaned upon the back of it, and listened eagerly.' George Douglas Campbell, present and eighth Duke (b. 1823; suc. 1847), has filled the office of Lord

Privy Seal 1853-55, 1859-66, and 1880-81, of Postmaster-General 1855-58, and of Secretary for India 1868-74. He is author of the *Reign of Law, Iona, Primeval Man, the Unity of Nature*, a sequel to the *Reign of Law*, an *Economic History of Scotland*, and other works; and he has twice had the honour of entertaining Her Majesty at Inveraray—for a few hours on 18 Aug. 1847, and again from 22 to 29 Sept. 1875. His son and heir, John Douglas Sutherland Campbell, Marquis of Lorne (b. 1845), in 1871 married H. R. H. the Princess Louise, was Governor-General of the Dominion of Canada from 1878 to 1883, Governor and Constable of Windsor Castle 1892, and has published *A Trip to the Tropics, Guido and Lita*, etc. The Duke was created Duke of Argyll in the peerage of the United Kingdom in 1892.

Inveraray Castle, 5 furlongs N by W of the town, and on the right bank of the winding Aray, $\frac{1}{2}$ mile above its mouth, 'stands on a lawn, retired from the sea-loch, and screened behind by woods that cover the sides of high hills to the top, and, still beyond, by bare mountains.' It was built by the third Duke in 1744-61, after designs by R. Morris,‡ at a cost, including the laying out of the grounds, of over £300,000. A massive, quadrangular, two-storied pile, with four round, pointed-roofed corner towers, a sunk floor, and a dormer-windowed attic story, it is in the Gothic of the 18th century, and consists of grey, sombre *lapis ollaris* or pot-stone, brought from the opposite shore of Loch Fyne. On 12 Oct. 1877, damage, estimated at £17,500, was caused by a fire of unknown origin, which gutted the central tower, and destroyed a fine organ, 200 flint-lock muskets used by the Argyllshire loyalists against the rebels at Culloden, rich tapestries, the well-worn colours of the Argyllshire Highlanders, portraits of the fifth Duke and Duchess, of the Great Montrose and his rival Argyll, etc. Fortunately, however, the most valuable paintings, furniture, and books were saved, the first including portraits of the Great Marquis and the ninth Earl; and by 1880 the building itself was restored to more than its former magnificence. On the lawn in front of the castle stands the 'Battle Stone,' a large pre-historic monolith; and here is also the 'Gledd Guu' or 'Gunnel Cam,' a brass cannon 10 feet long, recovered in 1740 from the wreck of one of the ships of the Spanish Armada which was blown up in Tobermory Bay. The park, nearly 30 miles in circumference, is nobly wooded, its plantations dating from 1674, 1746, 1771, 1805-8, and 1832-36, whilst during the last forty-five years no fewer than 2,000,000 oaks, larches, Scotch firs, spruces, etc., have been planted. There are three splendid avenues, one of limes and two of beeches; a lime tree near Essachosan is called the 'Marriage Tree,' from the curious union of its branches; and among the 'old and remarkable trees' whose dimensions are given in *Trans. Highl. and Ag. Soc.* (1879-81), are five at Inveraray—a Spanish chestnut (height, 85 feet; girth, 24 $\frac{1}{2}$ at 1 foot from the ground), a beech (95; 14 $\frac{1}{4}$ at 5), an oak (73; 20 $\frac{1}{2}$ at 1), a sycamore (80; 13 $\frac{1}{2}$ at 3), and a Scotch fir (110; 14 $\frac{1}{2}$ at 5). The shootings and fishings are of great value; and it may be noticed that wild turkeys were introduced into the woods in 1882. See also ROSENEATH and pp. 125-133 of Dorothy Wordsworth's *Tour in Scotland*, 1803 (ed. by Princ. Shairp, 1874).

The parish of Inveraray contains also the village of FURNAOE, so called from its being the site of the first Scotch iron-smelting furnace; and comprises the ancient ecclesiastical districts of Kilmilieu and Glenaray, and once had churches at Kilmilieu, Glenaray, Achantobairt, Kilbride, Kilblane, and Kilmun, with burial-grounds at most of these places, and also at Glenshira and Kilian. It is bounded N by Glenorchy-Innishail, E by Lochgoilhead-Kilmorich and Loch Fyne, SE by Loch Fyne, dividing it from Strachur and Stralachlan, SW by Kilmichael-Glassary, and W and NW by Kilchrenan-Dalavich. Its greatest length, from NE to SW, is 16 $\frac{1}{2}$ miles; its breadth varies between 2 $\frac{1}{2}$ and

* The latter form is an utter blunder. Sir Walter Scott fell into the error, and, when corrected, replied that 'Mac Callum More' was his nickname for Argyll.

† According to Dr Hill Burton, 'if we may believe a curious old print, the present unsightly pile, with its clumsy hulk and tawdry decorations, must have displaced a predecessor which, in the beautiful variety of turrets and decorated chimneys crowning the massive cluster of square and round towers built into each other at different ages below, probably excelled Glamis and the finest specimens of this peculiar architecture in the North' (*Hist. Scotl.*, viii. 542, ed. 1876).

‡ The elder Adam is commonly named as its architect, but we follow an article in the *Builder* of 2 Oct. 1875.

6½ miles; and its area is 46,892 acres. All of it, except 139 acres forming the territory of the parliamentary burgh, and 880 acres belonging to parts of the royal burgh beyond the parliamentary boundaries, was formerly the parish of Glenaray, but since the census of 1881 has been returned as a separate parish. The coast, extending 12½ miles along Loch Fyne—4½ above and 8 below the town of Inveraray—projects Strone, Dalchenna, Kenmore, and Pennymore Points, and is indented by Loch Shira and several little bays; in the S it is high and rocky, but N of Douglas Water it is closely skirted by the road from Lochgoilhead or Arrochar to Inveraray and Lochgilphead. The streams all flow to Loch Fyne, and the chief are the SHIRA, winding 11 miles south-south-westward, and expanding, 5 furlongs above its mouth, into the DOULOCH (6 × 1½ furl.); the ARAY, running 8½ miles south-by-eastward; and DOUGLAS Water, curving 6¾ miles eastward. Loch Leacann (7 × 3 furl.) lies on the boundary with Kilmichael-Glassary; and thirty smaller lakes are dotted over the south-western and western interior. Perennial springs occur in thousands; and several of them are slightly chalybeate. A lofty line of watershed forms the north-eastern boundary; a lower line of watershed forms all the western boundary; and mountains, hills, and glens occupy most of the interior. From SW to NE the principal heights are DUN LEACAINN (1173 feet), Beinn Dearg (1575), *An Suidhe (1687), *Beinn Bhreac (1723), Sron Reithe (1171), Cruach Mhor (1982), Dun Corr-bhile (1055), Stuc Scardan (1598), *Beinn Chas (2214), *Beinn Ghlas (1803), and *Beinn Bhuidhe or BENBUI (3106), where asterisks mark those summits that culminate on the confines of the parish. 'Its general appearance is mountainous, presenting that diversity of form which is always the result of the meeting and mingling together of two different mountain rocks. Here a mountain of mica-cæus schist may be seen rising upward to the height of between 2000 and 3000 feet, a huge and isolated mass, or stretching along in uniform height and unbroken surface, its sloping sides clothed with heath and verdure; and there, collected around the base of their prouder and older brethren, ridges of porphyry are grouped, sometimes in masses of naked rock 700 or 800 feet high, and sometimes in low and gentle hillocks, mantled with trees or covered with soft succulent herbage. The result of the whole is an outline so diversified, so waving, and so beautiful as is sufficient to delight the eye, and to give noble and characteristic features to the scenery.' The rocks, besides the prevailing mica slate and porphyry, comprise granite, roofing slate, limestone, chlorite rock, and greenstone; and an important granite quarry, famed for its 'monster blasts,' has been noticed under Furnace. The soil of the arable lands along Loch Fyne is mostly a thin light loam on a gravelly bottom; of the best parts of the valleys, particularly of Glenshira, is a deep dark loam on a sandy or clayey subsoil; and elsewhere is mainly moss, mixed with a small proportion of detritus from the hills. Agricultural improvements, commenced about the middle of the 18th century, have since been actively prosecuted; and sheep and cattle farming is largely carried on. Plantations now occupy some 3000 acres. Antiquities are noticed under ACHANTOBAIRT and DOULOCH. In 1893 a monument was erected, in the old churchyard of Kilmilieu, to the memory of Lieut.-Col. Colin Campbell, C.B., who commanded the Royal Scots at Waterloo. Rob. Roy Macgregor (1665-1734) lodged sometime in a house on Benbui farm, and here his son was born, who was hanged for the abduction of Jean Key from BALFRON parish. Claudius Buchanan, D.D. (1766-1815), the Indian missionary, passed most of his boyhood at Inveraray. The Duke of Argyll is sole proprietor. The seat of a presbytery in the synod of Argyll, Inveraray in 1651 was constituted a double ecclesiastical charge—English and Gaelic, burgh and landward, or Kilmilieu and Glenaray. Church Square public, Newtown public, Glenaray Church, and Creggan's female schools, with respective accommodation for 152, 105, 48, and 43 children, have an average attendance of about 100, 55,

15, and 30, and grants of over £120, £85, £30, and £54. Valuation (1860) £7973, (1883) £9108, (1893) £8249. Pop. (1801) 2051, (1841) 2285, (1861) 2095, (1871) 1794, (1881) 1706, (1891) 1466, of whom 783 were Gaelic-speaking, and of whom 205 were in Cumlodden *quoad sacra* parish, 425 in Glenaray, and 836 in Inveraray.—*Ord. Sur.*, shs. 37, 45, 1876.

The presbytery of Inveraray, meeting at Lochgilphead on the second last Tuesday of March and the last Tuesday of April, Sept., and Nov., comprises the old parishes of Craignish, Inveraray, Kilmartin, Kilmichael-Glassary, North Knapdale and South Knapdale, the *quoad sacra* parishes of Ardrishaig, Cumlodden, Lochgilphead, and Tarbert, and the chaperies of Lochgair, Ford of Lochawe, and Tayvallich. Pop. (1871) 12,367, (1881) 11,328, (1891) 11,386, of whom 1103 were communicants of the Church of Scotland in 1895. There is also a Free church presbytery of Inveraray, with 2 churches at Lochgilphead and 6 at Ardrishaig, Inveraray, Kilmartin, Lochfyneside, North Knapdale, and Tarbert, which 8 churches together had 2149 members and adherents in 1894.

Inverardoch, a mansion in Kilmadock parish, S Perthshire, near the influx of Ardoch Burn to the Teith, ½ mile SSE of Doune. French in style, it was built in 1859 from designs by David Bryce, R.S.A.—*Ord. Sur.*, sh. 39, 1869.

Inverarity, a parish in the Sidlaw district of Forfarshire. It comprehends the ancient parishes of Inverarity and Meathie, and contains the post office of Kincaldrum, 4½ miles SSW of the post-town, Forfar. It is bounded N by Forfar, NE by Dunnichen, E by Carmyllie, SE by Monikie, S by Murroes, SW by Tealing, W by Glamis, and NW by Kinnettles. In 1891 the Boundary Commissioners enlarged the area of Inverarity to the extent of 1435 acres, by transferring to the parish the Kirkbuddo detached portion of the parish of Guthrie. The length of Inverarity parish, from E to W, varies between 3¾ and 6 miles; its utmost breadth, from N to S, is 4½ miles; and its area is now 11,031½ acres, of which 14 are water. Arity Water comes in from the E, goes west-north-westward through the interior, and midway is joined on the left by Corbie Burn. A valley or small strath extends along the greater part of the Arity's course, and, sinking to less than 300 feet above sea-level, is encinctured by an amphitheatre of wooded hills—Kincaldrum Hill (911 feet) to the W, Carrot Hill (851) to the S, and Fotheringham Hill (800) to the N. Sandstone and greyslate abound, and have been worked. The soil is mostly a heavy loam, black and free in some parts, and rather stiff in others, resting closely on the boulder clay. A good deal of the land lies, therefore, on a damp stiff subsoil, and would be much improved by draining and liming. About two-thirds of the entire area are under cultivation, one-sixth is under wood, and the rest is either pastoral, waste, or water. Antiquities are several tumuli and a very large Roman camp at Haerfaulds on the Guthrie border, for the most part in very fine preservation, though at one end a portion of it has been ploughed over. The mansions are FOTHERINGHAM and KINCALDRUM. Inverarity is in the presbytery of Forfar and synod of Angus and Mearns; the living is worth £284. The church, near the right bank of Arity Water, 4½ miles S of Forfar and 2½ W by N of Kirkbuddo station, is a building of 1754, repaired in 1854. Two public schools, Inverarity and Kirkbuddo, with respective accommodation for 197 and 91 children, have an average attendance of about 120 and 40, and grants of over £123 and £50. Valuation (1857) £6310, (1883) £11,488, 15s. 10d., (1892) £9463, 2s. *plus* £1152 for railways and waterworks. Population (1801) 820, (1841) 997, (1861) 961, (1871) 888, (1881) 862, (1891) 769.—*Ord. Sur.*, shs. 57, 49, 1868-69.

Inverarnan Hotel. See GLENFALLOCH.

Inveravon (Gael. *inbhir-abhainn*, 'confluence of the river'), a hamlet and a parish in S Banffshire. Until 1891 the parish was also partly in Elginshire, but in that year it was placed by the Boundary Commissioners wholly in the county of Banff. The hamlet stands on

the right bank of the Spey and of the confluent Avon, 2 miles NE of Ballindalloch station, and has live-stock and grain fairs on the Tuesday in May before Whitsunday, the second Tuesday of July *o. s.*, and the Tuesday in November before Martinmas, these being also hiring markets.

The parish, containing also Ballindalloch station and post office, 12 miles NE of Grantown and 12 SW of Craigellachie, is bounded N by Knockando, E by Aberlour, Mortlach, and Cabrach, SE by Glenbucket and Strathdon in Aberdeenshire, SW by Kirkmichael, and W by Cromdale. Its utmost length, from N by W to S by E, is 16½ miles; its utmost width, from E to W, is 8 miles; and its area is 49,250 acres, of which 1561 belonged to the Elginshire section and 236 are water. In the SE or Glenlivet portion of the parish, Livet Water is formed by the confluence of Suie and Kymah Burns, both rising at an altitude of 2300 feet above sea-level, and running—the former 3½ miles southward, the latter 5½ miles north-by-westward. From the point of their union (1100 feet) the Livet flows 8½ miles west-north-westward and north-north-westward, till it falls into the Avon at Drummin (700 feet), 5 miles S of Ballindalloch station. The pellucid AVON, entering from Kirkmichael, runs 6½ miles northward to its confluence with the Spey at a point ¼ mile NE of Ballindalloch station; and the SPEY itself, here a noble salmon river, 200 feet broad, winds 7½ miles north-eastward along all the Knockando boundary, descending during this course from 480 to 358 feet. The surface is everywhere hilly or grandly mountainous, chief elevations to E of the Avon and the Livet, as one ascends these streams, being the *Hill of Phones (961 feet), *Cairn Guish (1607), the *western shoulder (2500) of BEN RINNES, CAIRNACAY (1605), *Corryhabbie Hill (2563), and Carn an t-Suidhe (2401); to the W of them, *Creag an Tarmachain (2121), Carn Liath (1795), *Carn Daimh (1866), the isolated BOCHEL (1500), and *Carn Mor (2636), where asterisks mark those summits that culminate on or close to the confines of the parish. The division from the Spey to Cairnacay is Inveravon proper; that from Cairnacay to the Bochel is known as Morange; and that above the Bochel is the Braes of Glenlivet. Inveravon proper rejoices in the beautiful grounds of Ballindalloch Castle, and almost everywhere is adorned with either natural wood or plantations. Morange includes a considerable extent of strath, but both it and the Braes are utterly bare of wood. A fair extent of arable land lies along the banks of the streams, and is adorned or overlooked by picturesque features of scenery; but nearly all the rest of the parish is either moor or mountain, bleak and barren of aspect. Gneiss is the predominant rock. Red granite, suitable for building purposes, forms a vein in the N side of Ben Rinnes; limestone, embedded in the gneiss, occurs in Morange; and small portions of asbestos have been found on Ben Rinnes, rock crystals in boulders of the Avon. The soil of the arable land is loamy, gravelly, or moorish; but, on the whole, may be pronounced good. Antiquities, other than those noticed under BALLINDALLOCH and CASTLE-DRUMMIN, are remains of a hunting-seat of the Earls of Huntly at Blairfindy, a very large cairn near Buitterlach, and vestiges or the sites of Caledonian stone circles and tumuli, and of several pre-Reformation chapels. The Battle of GLENLIVET is the chief event in the history of the parish, natives of which have been Gen. James Grant of Ballindalloch (1719-1806), the captor of St Lucia, and Sir James M'Grigor, Bart., M.D., F.R.S. (1771-1858), long chief of the army medical department. The Duke of Richmond and Gordon and Sir George Macpherson Grant of Ballindalloch are the largest proprietors. Giving off the *quoad sacra* parish of Glenlivet, Inveravon is in the presbytery of Aberlour and synod of Moray; the living is worth £323. The parish church, at the hamlet, was built in 1806; a Free church stands on the right bank of the Avon, 3 miles SSE of Ballindalloch station. Other places of worship are noticed under Glenlivet, and, besides the four schools there, Inveravon public, Morinish public, and Ballindalloch schools, with respective

accommodation for 148, 60, and 73 children, have an average attendance of about 85, 50, and 65, and grants of nearly £95, £60, and £70. Valuation (1860) £8539, (1881) £9677, (1894) £9750, 14s. Pop. (1801) 2107, (1831) 2648, (1861) 2639, (1871) 2608, (1881) 2568, (1891) 2319, of whom 842 were in the ecclesiastical parish.—*Ord. Sur.*, shs. 85, 75, 1876.

Inveravon, Linlithgowshire. See INNERAVON.

Inverawe, an estate, with a mansion in Ardchattan parish, Argyllshire. The mansion, on the right bank of the Awe, at the western base of Ben Cruachan, 2½ miles ENE of Taynuilt station, is surrounded with fine old trees.—*Ord. Sur.*, sh. 45, 1876.

Inverawe, New, or Tivvane, an estate of 862 acres, with a mansion in Glenorchy and Inishail parish, Argyllshire, on the NW shore of Loch Awe, 10 miles SE of Taynuilt. It was sold in 1881 for £12,500.

Inverbervie, Kincardineshire. See BERVIE.

Inverbervie, Perthshire. See INCHBERVIE.

Inverbroom. See LOCH-BROOM.

Inverbrothock, a *quoad sacra* parish in St Vigeans parish, Forfarshire, on the coast, at the mouth of the Brothock Burn. It comprises the greater part of the suburbs of Arbroath, or northern division of the parliamentary burgh; and, constituted by the ecclesiastical authorities in 1834, reconstituted by the Court of Teinds in 1854, it is in the presbytery of Arbroath and synod of Angus and Mearns. Stipend, £287. The parish church was built as a chapel of ease in 1828 at a cost of £2200. Pop. (1871) 7060, (1881) 8094, (1891) 5383.

Invercannich, a hamlet in Kilmorack parish, NW Inverness-shire, near the left banks of the Glass and the confluent Cannich, 20 miles SW of Beauly, under which it has a post office. A new iron bridge was erected here in 1892. Here, too, is Glen Affric Hotel.—*Ord. Sur.*, sh. 73, 1878.

Invercarron. See KINCARDINE, Ross-shire.

Invercauld, a mansion in Crathie and Braemar parish, SW Aberdeenshire, within 3 furlongs of the Dee's left bank, and 4 miles ENE of Castleton (as the crow flies only 1½). It is sheltered all round by wooded hills, and has a great extent of picturesque Highland grounds. In 1875 were completed a series of additions and alterations which had been in progress for some years. The style is Scottish Baronial, and the principal feature of the structure is the tower, which rises to a height of about 70 feet to the battlements, together with the staircase and other turrets, and a flag tower. The old historic dining-room remains unaltered. From the windows of the drawing-room is obtained an almost unrivalled panoramic view of the Deeside Highlands. It was from Invercauld that the Earl of Mar's address calling out the Highlanders in 1715 was dated and issued, and thence for nearly the last time the 'fiery cross' was sent through the Scottish mountains. The property of Invercauld extends to over 80,000 acres in Aberdeenshire and 30,000 in Perthshire—the land rentals being about £7000 in the former county and £3000 in the latter. In 1892 the game rentals were £9000. The house and deer forests, etc., were leased by Sir Algernon Borthwick from 1888 to 1893. The present proprietor is Alexander Haldane Farquharson, Esq. (b. 1867; suc. 1888), and Invercauld has been held by his ancestors since the close of the 14th century. See *Castles of Aberdeenshire* (1887); *Celtic Scotland*, iii. 358.

Inverchaolain, a parish in the S of Cowal district, Argyllshire. It comprises Loch Striven, and contains the village of COLINTRAIVE, with a post office and a steamboat pier. It is bounded E by the united parishes of Kilmun and Dunoon, SW by the Kyles of Bute and Rothesay Bay, W by Loch Riddon, and NW and N by Kilmopan. Its utmost length, from NNW to SSE, is

Seal of Inverbervie, Kincardineshire.

13½ miles; its utmost breadth, from E to W, is 7¾ miles; and its land area is 29,312 acres. The hilly and rugged surface includes some small flat fields adjacent to the shore, but generally rises with steep ascent all round the coast; and formerly was, in main degree, covered with heath, but has been extensively reclaimed into a condition of good sheep pasture. Chief elevations from S to N are Kilmarnock Hill (1283 feet), Bodach Bochd (1713), *Bishop's Seat (1651), *Cruach nan Capull (2005), and *Carn Ban (1869), to the E of Loch Striven; to the W, Meall an Glaic (1325), Meall an Riabhach (1587), Beinn Bhreac (1658), and Cruach nan Cuilean (1416), where asterisks mark those summits that culminate just on the eastern border of the parish. The scenery along the Kyles and up Loch Riddon is brilliantly picturesque, and exhibits attractions which may be compared with those of the Trossachs. Mica slate and other metamorphic rocks are predominant; trap rock forms several prominent dykes; and limestone of hard quality occurs to some extent, and has been worked. Less than one-thirtieth of the entire area is arable; about one-thirteenth is low-lying pasture or under plantations; and all the rest of the land is either hill pasture or waste. Antiquities are a ruined fort on the islet of Ellan-DHEIRRIK, a standing stone 10 or 12 feet high at the head of Loch Striven, and sepulchral tumuli in several places. South Hall and Knockdhu are the chief mansions. Inverchaolain is in the presbytery of Dunoon and synod of Argyll; the living is worth £162. The parish church, on the E shore of Loch Striven, 6 miles N by W of Toward, was built in 1812, and underwent extensive alterations in 1891. The ancient church stood on the side of a hill, about 200 yards above the site of the present one. At South Hall, on the Kyles of Bute, there is a Free church, which, together with the Free church at Kilmodan, forms one ministerial charge; and two public schools, Inverchaolain and South Hall, with respective accommodation for 49 and 41 children, have an average attendance of about 20 and 10, and grants of over £40 and £26. Pop. (1801) 626, (1831) 596, (1861) 424, (1871) 443, (1881) 407, (1891) 359, of whom 172 were Gaelic-speaking.—*Ord. Sur.*, sh. 29, 1873.

Invercharron. See KINCARDINE, Ross-shire.

Invercoe. See GLENCOE.

Inverdrue, a mansion in the Rothiemurchus portion of Duthil parish, NE Inverness-shire, near the right bank of the Spey and the left of the confluent Drue, 1 mile SSE of Aviemore station on the Highland railway.

Invereighty, an estate with a mansion in Kinnettles parish, Forfarshire, 4 miles SSW of Forfar.

Inverernan, a mansion in Strathdon parish, SW Aberdeenshire, near the left bank of the Don and the right of confluent Ernan Water, 18 miles SSW of Rhynie. As altered and enlarged about 1825, it presents the appearance of a modern villa, in the Italian style. Its owner is General Sir John Forbes, K.C.B. (b. 1817; suc. 1848).—*Ord. Sur.*, sh. 75, 1876.

Invererne House. See FORRES.

Invereshie, a mansion in Kingussie parish, E Inverness-shire, near the NE shore of Loch Inch, the right bank of the Spey, and the left bank of the confluent Feshie, 1½ mile SE of Kincaig station. It is a seat of Sir George Macpherson-Grant of BALLINDALLOCH, Bart., who holds extensive acres in Inverness-shire, Elginshire, and Banffshire.—*Ord. Sur.*, sh. 74, 1877.

Inveresk (Gael. *inbhir-uisge*, 'confluence of the water'), a village and a coast parish of NE Edinburghshire. The village stands above the right bank of the winding Esk, 5 furlongs S of Musselburgh, and ½ mile N by W of Inveresk station on the main line of the North British, this being 6½ miles E by S of Edinburgh. Enjoying so healthy a climate as long to have been called the Montpellier of Scotland, it extends along a broad-based gentle ascent, whose higher parts command wide and delightful views—northward across the Firth of Forth, south-westward away to the Pentlands; and itself is a pleasant, old-fashioned place, whose trees and gardens, 18th-century mansions, and more recent villas give it somewhat the aspect of a Thames-side village. The parish church, on

the western summit of the hill, is a plain edifice of 1805, with 2400 sittings, a high conspicuous spire, and a churchyard which for beauty is scarcely to be matched in all the kingdom. A new organ was presented in 1892, and its introduction took place in 1894, when the church was altered and reseated. Its ancient predecessor, dedicated to St Michael, and supposed to have been founded, soon after the introduction of Christianity, out of the ruins of a Roman station, was gifted by Malcolm Ceanmor to the church of Dunfermline. At the time of its demolition it had four aisles, two upon either side, and measured 102 feet in length. In Dec. 1545, barely two months before his martyrdom, George Wishart preached to large congregations within its walls; and its minister for 57 years was Alexander Carlyle, D.D. (1722-1805). He, 'Jupiter Carlyle'—the 'grandest demigod,' said Scott, 'I ever saw'—left behind him an Autobiography of singular interest, which was edited by Dr Hill Burton in 1860. His remains lie near the present church, the erection of which he laboured hard to bring about. In the churchyard are the remains of many naval and military heroes, and here also is the grave of David Moir, M.D. ('Delta'). In 1890 a Gothic parish hall, erected at a cost of £2000, and seating 750, was opened by the Lord High Commissioner, and at the same time the inauguration of memorial windows in the church took place. The prætorium of the Roman station of Inveresk, on ground now partly occupied by the parish church, from 1547 onwards has yielded a number of Roman remains—an altar, a hypocaust (1783), urns, bricks, medals, etc.—described in David Moir's *Roman Antiquities of Inveresk* (Edinb. 1860). Pop. of village (1871) 341, (1881) 308, (1891) 440.

The parish contains also the town of MUSSELBURGH, with the suburbs of Fisherrow and Newbigging, the villages of COWPITS and Old CRAIGHALL, and part of the village of New Craighall. It is bounded N by the Firth of Forth, E by Prestonpans and Tranent in Haddingtonshire, SE by Ormiston, S by Dalkeith, SW by Newton, and W by Liberton and Duddingston. Its length, from N to S, varies between 2½ and 3½ miles; its utmost breadth, from E to W, is 3½ miles; and its area is 5925½ acres, of which 718½ are foreshore and 51¾ water. The beautiful wooded Esk enters the parish 1 furlong below the North and South Esk's confluence in Dalkeith Park, and thence winds 3¾ miles north-by-eastward through the interior till it falls into the Firth between Musselburgh and Fisherrow; whilst BURDIEHOUSE Burn runs 1½ mile north-north-eastward along all the north-western border. The Carberry Hills, at the Haddingtonshire boundary, attain an altitude of 540 feet above sea-level; but elsewhere the surface is low and flat and gently undulating, and nowhere rises much above 100 feet. The rocks belong to the coal-measures of the Carboniferous Limestone series; and coal, sandstone, and limestone have all been worked, the first from a very early period. The soil of the flat grounds is naturally sandy, but has been worked into a condition of high fertility; the land to the S of Inveresk village, on either side of the Esk, is of better quality; and on the high grounds in the SE is clayey, and yields heavy crops of grain. Almost all the land not occupied by buildings or by roads is in a state of first-rate cultivation; and, though in places less planted than might be desired for shelter and beauty, possesses the fine woods of Newhailes and Drumore, and includes a considerable section of the nobly-wooded ducal park of Dalkeith. The manors of Little Inveresk, having long been held by the monks of Dunfermline, were given by James VI. to the first Lord Maitland of Thirlestane, under whose grandson, the infamous Duke of Lauderdale, they suffered much curtailment. With exception of the parts that had been alienated, they were purchased in 1709 by Anne, Duchess of Buccleuch and Monmouth. Among natives and residents, not noticed under Musselburgh and Newhailes, have been Admiral Sir David Milne, G.C.B.; his son, Admiral Sir Alexander Milne, Bart., G.C.B., F.R.S.E.; and Sir David Wed-

derburn, Bart. The chief events and antiquities are treated under Carberry, Pinkie, and Musselburgh. In the presbytery of Dalkeith and synod of Lothian and Tweeddale, this parish is divided ecclesiastically between Inveresk and North Esk *quoad sacra* parish, the former a living worth £489. Two landward schools, Cowpits public and Old Craighall, with respective accommodation for 59 and 75 children, have an average attendance of about 60 and 30, and grants of nearly £50 and £25. Pop. of entire parish (1801) 6600, (1831) 8961, (1861) 9525, (1871) 10,071, (1881) 10,537, (1891) 11,509, of whom 8888 were in Musselburgh.—*Ord. Sur.*, sh. 32, 1857.

Inveresragan. See ESRAGAN.

Inverey, two clachans in Crathie and Braemar parish, SW Aberdeenshire, on Ey Burn at its influx to the Dee, 5 miles WSW of Castleton. A fragmentary ruin is all that represents the ancient fortalice of the Farquharsons, caterans of Deeside, one of whom in 1666 shot the 'Baron of BRACKLEY'.—*Ord. Sur.*, sh. 65, 1870.

Invergarry, an estate, with a hamlet, a ruined castle, and a modern mansion, in Kilmonivaig parish, Inverness-shire. The hamlet lies near the NW shore of Loch Oich and the N bank of the confluent Garry, 7½ miles SW of Fort Augustus; at it are a post office, with money order, savings bank, and telegraph departments, a branch of the Caledonian Bank, a hotel, and a public school. It has a station on the Invergarry and Fort Augustus railway, the construction of which was begun in 1897, and which connects with the West Highland railway at Spean Bridge, and proceeds in a westerly direction across the river Spean to Mucomir at the S end of Loch Lochy, northwards along the E side of this loch and Loch Oich, and after skirting Loch Uanagan and crossing the Caledonian Canal and the river Oich, terminates at Fort Augustus. The entire distance is about 25 miles. The line will be continued to Inverness by the Highland railway Co. Close to Loch Oich, and 1½ mile SSW of the hamlet, is a monument, erected in 1812 by Colonel Macdonell, the last chief of the clan Macdonell, to commemorate the 'ample and summary vengeance' inflicted about 1661 on the seven murderers of the two young Macdonalds of Keppoch. It consists of a small pyramid, with seven sculptured heads; and the spring beneath it is called Tober-nan-Cean ('well of the heads'). The ruined castle, ½ mile S of the hamlet, stands on Creag-an-fitheach, or 'Rock of the Raven,' whence the Macdonells took their slogan or war-cry. See GLENGARRY.—*Ord. Sur.*, sh. 63, 1873.

Invergordon, a thriving seaport town in Rosskeen parish, E Ross-shire, on the NW shore of Cromarty Firth, with a station on the Dingwall and Tain section of the Highland railway (1863-64), 12¼ miles NE of Dingwall and 12¾ SSW of Tain. There is a regular ferry, ¾ mile wide, to the opposite shore of the Firth; and a small pier was built in 1821 for the accommodation of the passengers. The harbour itself, with 16 feet water at spring tides and 13 at neap, was formed in 1828 at the expense of the late proprietor, R. B. Æ. Macleod; and two large wooden piers were erected in 1857 at a cost of £5000; but, since the railway was opened in 1863, Invergordon has lost its steamboat communication with Inverness, Aberdeen, Leith, London, etc. The hemp manufacture is now extinct; but there are one or two sawmills and a large bone-crushing and manure factory. A place of considerable mark, substantially built, well situated for traffic, and of growing importance for the export of farming produce, Invergordon contains a number of good shops, offers fine sea-bathing, and has a post office, with money order, savings bank, and telegraph departments, branches of the Commercial and North of Scotland Banks, several insurance agencies and hotels, gaswork (1872), a Wednesday newspaper, the *Invergordon Times* (1855), and fairs on the third Tuesday of February, the second Tuesday of April, old style, the first Tuesday of August, the second Tuesday of October, and the second Tuesday of December, old style. The Town-Hall (1870-71) is a handsome Italian edifice, its pediment showing a sculptured figure of

Neptune; the public school (1875-76) is a Romanesque structure, surmounted by a belfry. Rosskeen parish church, 1½ mile W by N, was built in 1832, and contains about 1600 sittings; and Invergordon Free church (1861), Gothic in style, cruciform in plan, with a spire 140 feet high, stands immediately N of the town, and contains nearly 1000. Invergordon Castle, 7 furlongs NNW, was accidentally destroyed by fire in 1801, but, as rebuilt in 1873-74 is a fine Elizabethan mansion, with beautiful plantations; its owner is Captain Roderick W. Macleod of CADBOLL. By the Burgh Police Act of 1892 the town is governed by a provost, 2 bailies, and 6 commissioners; and sheriff small debt courts sit at it in January, April, July, and October. Pop. (1841) 998, (1861) 1122, (1871) 1157, (1881) 1119, (1891) 1117, of whom 1054 were in the police burgh. Houses (1891) inhabited 215, vacant 6, building 2.—*Ord. Sur.*, sh. 94, 1878.

Invergowrie, a village at the mutual border of Longforgan parish, Perthshire, and Liff Benvie and Invergowrie parish, Forfarshire, on the Firth of Tay, with a station upon the Perth and Dundee section of the Caledonian, 3¼ miles W of Dundee. Figuring in ancient record as a place of royal embarkation, and surrounded by Crown lands, which Alexander I. designed to be graced with a royal palace, but which he found occasion to convey to the monks of Scone, it has a ruined, ivy-clad church, said to have succeeded a church of the beginning of the 8th century, founded by St Bonifacius, and the earliest N of the Tay. (See FORTROSE.) It adjoins the extensive paper-works of Bullionfield and the village of Mylnefield, which in 1891 contained 552 inhabitants. The ancient churchyard crowns an eminence, a mound of singular shape, washed on one side by the Tay; and on the shore, near the ruined church, are two large blocks of stone, the 'Yowes (or Ewes) of Gowrie,' of which Thomas the Rhymer predicted that—

'When the Yowes o' Gowrie come to land,
The day o' judgement's near at hand.'

A huge boulder, fabled to have been flung from the Fife coast by the Devil with the intention to destroy the church, lies a little way N of the village; and a Caledonian stone circle, comprising nine large stones and four smaller ones, stands a short distance N of the boulder. An Episcopal church, All Souls', in the Early English style, was erected in 1893. Invergowrie House, in Liff Benvie and Invergowrie parish, 2¼ miles W by N of Dundee and 1½ ENE of Invergowrie station, is situated on a bank sloping down to the Firth; was greatly enlarged in 1837 after designs by W. Burn; and commands a beautiful view of a long reach of the Firth and the Carse of Gowrie. Its owner is Captain David Clayhills-Henderson. The ancient parish of Invergowrie was of small extent, and since the middle of the 17th century or earlier has been incorporated with Liff and Benvie. The united parish, previously partly in Perthshire, was in 1891 placed by the Boundary Commissioners wholly in Forfarshire.—*Ord. Sur.*, sh. 48, 1868.

Inverie, an estate, with a mansion and a hamlet, in Knoydart district, Glenelg parish, W Inverness-shire. The mansion, on the northern shore of Loch Nevis, 10 miles SSE of Isle Ornsay, and 54 WSW of Fort Augustus, was built and inhabited by the late Colonel Macdonell of GLENGARRY, the last of the Highland chiefs, and within and without is a curious structure, in the old Celtic style. It is now the property of Edward S. Bowlby, Esq. of Knoydart. The hamlet, near the mansion, has a post office under Broadford, an inn, a public school, and a Roman Catholic church, St Agatha (1886).

Inverinate, a hamlet, with a public school and a post office under Strome Ferry, in Kintail parish, Ross-shire, on the NE shore of Loch Duich, 1 mile WNW of Kintail church. Inverinate House, standing at the base of Sgurr an Airgid (2757 feet), had been greatly enlarged in the Italian style, when it was burned to the ground in 1864.—*Ord. Sur.*, sh. 72, 1880.

Inverkeilor, a village and a coast parish of Forfarshire. The village stands near the right bank of Lunan

Water, 6 miles N by E of Arbroath, with a station on the Arbroath and Montrose section of the North British railway. It has a hotel and a brick and tile work.

The parish, containing also Leysmill and Chapelton villages, and with a post, money order, and telegraph office, is bounded N by Kinnell and Lunan, E by the German Ocean, S by St Vigeans, and W by Carmyllie and Kirkden. Its utmost length, from E by N to W by S, is $7\frac{7}{8}$ miles; its breadth, from N to S, varies between $9\frac{1}{2}$ furlongs and $4\frac{1}{2}$ miles; and its area is $10,516\frac{3}{4}$ acres, of which 240 are foreshore and 36 water. Keilor Burn, which gives the parish its name, rises on the S border, and runs 3 miles east-north-eastward to Lunan Bay. Lunan Water, coming in from Kinnell, winds $3\frac{3}{4}$ miles through the interior, then $2\frac{5}{8}$ miles along the boundary with Lunan to the sea; and two headstreams of Brothock Water rise and run in the SW. The coast, $5\frac{1}{2}$ miles long, over the northern half is indented by Lunan Bay, and here is low, flat, and sandy, overgrown with bent; to the S it is high and rocky, and at Red-head, the promontorial termination of the Sidlaw spurs, attains a height of 267 feet in picturesque porphyritic cliffs. The section N of Lunan Water rises in a beautiful, gently ascending bank of arable land to 325 feet at Hilton and 290 at Compass Hill; whilst the southern section is mostly a level expanse of fertile ground, attaining 262 feet near Boghead, 265 near Kinblethmont, and 312 in the extreme W. The rocks are Devonian, with intermingling of traps and porphyries. Pavement flag, of the kind popularly called Arbroath stone, is quarried and dressed at Leysmill; sandstone of suitable quality for masonry is quarried between Lunan Water and Keilor Burn; and a hard bluish trap, well suited for road metal, is quarried on the N side of Lunan Water. Agates and other pebbles, some of them of fine colour and high density, are found in the trap rocks. The soils are various, but generally dry and fertile. About 250 acres are under plantation; 126 are almost or altogether unfit for cultivation; and all the rest of the land is regularly or occasionally in tillage. Antiquities are vestiges of Danish camps, the remains of St Murdoch's and Quytefeld chapels, and Redcastle, which last is separately noticed, as also are the mansions of Ethie and Kinblethmont. Anniston, standing $\frac{3}{4}$ mile SE of the village, is the seat of Colonel Arthur John Rait, C.B. (b. 1839; suc. 1877). Giving off a portion to the *quoad sacra* parish of Fricckheim, Inverkeilor is in the presbytery of Arbroath and synod of Angus and Mearns; the living is worth £292. The parish church was built in 1735, and enlarged about 1830. There is also a Free church (1843); and two public schools, Chapelton and Inverkeilor, with respective accommodation for 137 and 232 children, have an average attendance of about 80 and 180, and grants of over £76 and £186. Valuation (1857) £13,594, (1883) £17,227, 2s. 5d., (1892) £13,758, 5s., plus £1934 for railway. Pop. of civil parish (1801) 1704, (1831) 1655, (1841) 1879, (1861) 1792, (1871) 1521, (1881) 1671, (1891) 1531; of ecclesiastical parish (1871) 1189, (1881) 1311, (1891) 1233.—*Ord. Sur.*, sh. 57, 1868.

Inverkeithing (Celtic, 'the mouth of the Keithing'), a coast town and parish of SW Fife. A royal, parliamentary, and police burgh, and a sea-port, the town, standing at the head of Inverkeithing Bay, has a station on the Edinburgh and Perth section of the North British, $3\frac{3}{4}$ miles SE of Dunfermline, $1\frac{3}{4}$ mile N of North Queensferry, and $13\frac{1}{2}$ miles WNW of Edinburgh by the Forth Bridge. Just beyond the town the railway branches off right and left to the east coast of Fife and to Dunfermline respectively. It occupies a pleasant south-eastward slope, which commands a delightful view; and consists of a longish main street, with divergent wynds and some shoreward outskirts. It is an old-fashioned, sleepy-looking place, with quaint gables and red-tiled houses, and was a royal burgh as early as the twelfth century. An old mansion, known as Robmell Inn, is still pointed out as the residence of Annabella Drummond (1340-1403), Robert III.'s widowed queen, who died at Inver-

keithing of a broken heart. The magistrates, it is said, have no jurisdiction over this house, from which an underground passage is believed to lead to the sea. Near the town vestiges have been discovered of an ancient monastery of the Greyfriars, and at it the last assembly of the Culdees took place, in the reign of David I. It was once a quarantine station, and until 1835 there was a large sick-house at the West Ness. The town has a post office, with money order, savings bank, and telegraph departments, a branch of the Clydesdale Bank, several hotels, a good town-hall, a curious old pillar cross, a masonic lodge, a music hall, a curling club, a cemetery, a gas company, a harbour, a shipbuilding yard, a sawmill, tan-works, rope-works, paper-works, fire-clay works, and a fair on the first Friday of August, survivor of five, which itself has been growing smaller and smaller. The original parish church, St Peter's, was bequeathed in 1139 to Dunfermline Abbey by Waldeve, son of Gospatric. A reconstruction of 1826, after the fire of the year before, the present church is a handsome Gothic building, with a nave, side aisles, about 1000 sittings, and an old W tower. Square and of three stages, with a stunted polygonal spire, this is Middle Pointed in style, as also is a hexagonal, elaborately sculptured font, one of the finest in Scotland, which, disinterred from the rubbish in 1806 in making foundations for repairs on the church, was at first placed in the porch, but has since been removed to a spot near the pulpit, and regularly used for public baptisms (T. S. Muir's *Ancient Churches of Scotland*, 1848). There is also a spacious U.P. church, in which, about 1820, the Rev. Ebenezer Brown, second 'son of the *Self-interpreting Bible*', preached before Brougham and Jeffrey, the first pronouncing him the greatest orator he had ever heard, whilst Jeffrey declared he 'never heard such words, such a sacred untaught gift of speech.' The harbour is pretty good, having a patent slip, and affording accommodation for vessels of 200 tons at spring tides, though usually it is frequented by smaller vessels. It comprises an area called the Inner Bay, which, extending over an area of 100 acres, contracts to 1 furlong at the entrance between two low small headlands, the East and the West Ness. At low water it is all an expanse of foreshore. The outer bay, broadening rapidly beyond the harbour's entrance, includes foreshore over only a small

Seal of Inverkeithing.

space immediately outside the Ness; measures $1\frac{1}{2}$ mile across a chord drawn between St Davids and North Queensferry, but only $\frac{3}{4}$ mile from that chord to the Ness; and lies quite open to easterly and southerly winds. A good many vessels used to frequent the harbour for coal; but their number has greatly decreased of recent years. The town is a royal burgh, by a charter of William the Lyon, and under the Burgh Police Act of 1892 is governed by a provost, 2 bailies, and 6 councillors. It unites with STIRLING, Dunfermline,

Catross, and South Queensferry in sending a member to parliament. The municipal and parliamentary constituency numbered 389 and 312 in 1895, when the annual value of real property amounted to £19,769, whilst the corporation revenue was £452. Pop. (1831) 2020, (1861) 1929, (1871) 1763, (1881) 1653, (1891) 1676, of whom 1663 were in the police and parliamentary and 1354 in the royal burgh. Houses (1891) inhabited 401, vacant 125, building 2.

The parish, containing also HILLEND village and a portion of LIMEKILNS, includes the islets of BIMAR and INCHGARVIE. The Boundary Commissioners in 1891 effected an interchange of territory between the parishes of Inverkeithing and Dunfermline by transferring from the latter parish to Inverkeithing a detached part near North Queensferry, and by annexing to Dunfermline the Milesmark detached part of Inverkeithing, and also an area in the extreme west of the parish, consisting of the lands west of the march between the estates of the Earl of Elgin and the Earl of Hopetoun. The parish comprises the ancient parishes of Inverkeithing and Rosyth, united in 1636. It is bounded W and N by Dunfermline, E by Dalgetty, and S by the Firth of Forth. Its length, from N to S, diminishing westward, varies between 1 furlong and 4½ miles; its breadth, diminishing northwards, varies between ½ a mile and 3 miles; and its area prior to the mutual transfer above mentioned was 5020 acres, of which 557½ are foreshore. The coast, with an extent of 4½ miles, includes the greater part of St Margaret's Hope and Inverkeithing Bay, and is partly low and sandy, partly rocky and rather high. The interior is low though undulating, nowhere much exceeding 200 feet above sea-level throughout all the southern district, but rising to 344 near Annfield. The rocks belong to the Carboniferous Limestone series; but basalt intrudes in the two islets and over all the SE portion of the parish. At St Davids there is a commodious pier, at which the loading of coal from pits some distance behind is extensively carried on, there being here a depth of water of 18 feet at high tide. Except for a small proportion of wood and pasture, the entire area is in a high state of cultivation. Inverkeithing claims as a native Sir Samuel Greig (1735-88), the distinguished Russian admiral; and the Rev. Robert Moffat, D.D. (1797-1883), the African missionary, passed much of his youth here as a gardener. The house where his family resided is still pointed out in the main street. The chief antiquity is noted under ROSYTH, the chief event in its history under PITREAVIE. Ecclesiastically including North Queensferry, this parish is in the presbytery of Dunfermline and synod of Fife; the living is worth £307. Inverkeithing and North Queensferry public schools, with respective accommodation for 473 and 140 children, have an average attendance of about 360 and 100, and grants of nearly £310 and £94. Valuation (1866) £8270, 9s. 5d., (1883) £8483, 16s. 1d., (1892) £7710, 17s. 4d. Pop. (1801) 2228, (1831) 3189, (1861) 3124, (1871) 3074, (1881) 2565, (1891) 2943.—*Ord. Sur.*, shs. 32, 40, 1857-67. See W. Simson's *Reminiscences of Inverkeithing* (Edinb. 1882), and Westwood's *The Kingdom: a Handbook to Fife* (Cupar-Fife).

Inverkeithny, a village and a parish of NE Banffshire. The village stands, 200 feet above sea-level, on the right bank of the Deveron, 3 miles S by E of Aberchirder, and 7 WSW of Turriff, under which it has a post office. The parish is bounded NW by Rothiemay, N by Marnoch, and on all other sides by Aberdeenshire—viz., NE by Turriff, SE by Auchterless, and SW by Forgue. Its utmost length, from WNW to ESE, is 6½ miles; its area is 7685 acres, of which 43½ are water. The DEVERON winds 4½ miles east-south-eastward along all the northern border, and at the village is joined by the Burn of Forgue. The parish is well watered by these and several smaller streams, which serve to drive machinery for threshing purposes. Along the Deveron, in the extreme E, the surface declines to 114 feet above sea-level, thence rising to 629 feet at the Hill of Carlinraig, and 738 near

Newton of Tollo. The parish thus is pleasantly diversified with hill and dale, and the belt of it along the Deveron is beautifully ornate. About 500 acres are under wood, 400 are either pastoral or waste, and all the rest is regularly or occasionally in tillage. Remains of many stone circles are still to be seen, as also traces of a Roman camp at Mains of Auchingoul, and of huddellings on the Hill of Carlinraig. Inverkeithny is in the presbytery of Turriff and synod of Aberdeen; the living is worth £245. The parish church, at the village, is a handsome edifice, erected in 1881 at a cost of nearly £2000, and containing 500 sittings. At the same time the graveyard was levelled and beautifully laid out at a further cost of £100. Two public schools, Easterfield and Kirktown, with respective accommodation for 100 and 129 children, have an average attendance of about 45 and 80, and grants amounting to nearly £35 and £70. Valuation (1860) £4678, (1883) £5911, (1892) 5357. Pop. (1801) 503, (1831) 587, (1861) 880, (1871) 1000, (1881) 909, (1891) 826.—*Ord. Sur.*, sh. 86, 1876.

Inverkindie, a hamlet in Towie parish, W Aberdeenshire, at the mouth of the Kindie burn, 10 miles SSW of Rhyndie. It has a post office.

Inverkip. See INNERKIP.

Inverlochry Castle, a ruined feudal stronghold in Kilmonivaig parish, SW Inverness-shire, on the left bank of the Lochy, a little above its influx to salt-water Loch Linnhe, and 2 miles NE of Fort William. Here, according to a fabulous tradition, stood an ancient city where the Pictish kings occasionally resided, where King Achais in 790 signed a treaty with Charlemagne, whither numbers of Frenchmen and Spaniards resorted, and which was at last destroyed by the Danes, and never thereafter rebuilt. The castle itself is a quadrangular edifice, with round three-story towers at the angles, and measures 30 yards each way within the walls. The towers and ramparts are solidly built of stone and lime, 9 feet thick at the bottom, and 8 above. The towers are not entire, nor are they all equally high. The western or Comyn's Tower is the highest and largest, and does not seem to have been less than 50 feet when entire, whilst the rampart or screen between is from 25 to 30 feet in height. About 12 yards from the exterior walls are the traces of a ditch, which has been from 30 to 40 feet broad. The whole building covers about 1600 square yards; and within the ditch there are 7000, or more than 1½ acre. From the name of the western tower and other circumstances, it has commonly been supposed that this castle was erected either by Edward I. of England, or by his partisans in the Great Glen, the powerful Comyns, with the assistance of English engineers. More probably, however, it was founded in the latter half of the 15th century by George, second Earl of Huntly, and it seems to have still been in an unfinished state in the time of Charles II.

Near this place, on Sunday, 2 Feb. 1645, a battle was fought between a royalist army under the celebrated Marquis of Montrose, and an army partly Highland and partly Lowland, under the Marquis of Argyll. Montrose had come up from a winter raid in Argyllshire to attempt the seizure of Inverness, and was marching thither through the eastern part of the Great Glen, when he suddenly learned that Argyll, with a force nearly double his own, was following him. He instantly turned about, made a forced march over the trackless mountains to the foot of Glennevis, and found himself there in the vicinity of Argyll's army, encamped at Inverlochry. He arrived in the evening of the 1st, and lay under arms all night. Argyll, seeing battle to be at hand, and excusing himself on account of some recent contusions he had received, committed his army to the charge of his cousin, Campbell of Auchinbreck, and went on board a galley in the loch. At the dawn of the 2d both armies made preparations for battle. Montrose drew out his force in an extended line. The right wing consisted of a regiment of Irish, under the command of Macdonald, his major-general; the centre, of the Athole men, the Stuarts of Appin, the Macdonalds of Glencoe, and other Highlanders, under the command of Clan-

ranald, M^cLean, and Glengarry; and the left wing, of some Irish, at the head of whom was brave Colonel O'Kean. A body of Irish was placed behind the main body as a reserve, under the command of Colonel James M^cDonald, *alias* O'Neill. The general of Argyll's army arrayed it in a similar manner. The Lowland forces were equally divided, and formed the wings, between which were placed the Highlanders. On a rising-ground behind this line General Campbell drew up a reserve of Highlanders, with a field piece. Witbin Inverloch Castle, which was only about a pistol-shot from the lines, he planted a body of forty or fifty men to protect the place, and to annoy Montrose's men with discharges of musketry. At sunrise Montrose gave orders to advance. The attack was commenced by his left wing, under O'Kean, charging the right wing of Argyll's army. This was immediately followed by a furious assault upon the centre and left wing of Argyll's forces by Montrose's right wing and centre. Argyll's right wing, unable to resist the attack of Montrose's left, turned and fled; which circumstance had such a discouraging effect on the remainder of Argyll's troops, that, after discharging their muskets, the whole of them, including the reserve, took to their heels. The rout became general. An attempt was made by a body of 200 of the dismayed fugitives to throw themselves into Inverloch Castle, but a party of Montrose's horse prevented them. Others of the fugitives directed their course along the shore of Loch Linnhe, but were all either drowned or killed in the pursuit. The greater part, however, fled to the hills in the direction of Argyllshire, and were chased for 8 miles by Montrose's men. As little resistance was made by the defeated party in their flight, the carnage was very great, being reckoned at nearly 1500 men, or the half of Argyll's army; and many more would have been cut off, had it not been that Montrose did all in his power to save the unresisting fugitives from the fury of his men, who were loath to give quarter to the hated Campbells. Having taken the castle, Montrose not only treated the officers, who were from the Lowlands, with kindness, but gave them their liberty on parole. The loss on the side of Montrose was extremely trifling. The number of wounded, indeed, is not stated, but he had only three privates killed. Immediately after the battle he sent a messenger to Charles I. with a letter giving an account of it, and ending thus: 'Give me leave, after I have reduced this country, and conquered from Dan to Beersheba, to say to your majesty, as David's general to his master, Come thou thyself, lest this country be called by my name.' When the king received this letter, the royal and parliamentary commissioners were sitting at Uxbridge, negotiating the terms of a peace; but Charles was induced by it to break off the negotiation—a circumstance which led to his ruin. Scott weaves this battle into his *Legend of Montrose*.

Modern Inverloch Castle, $\frac{3}{4}$ miles NE of Fort William, is the Scottish seat of James Yorke M^cGregor Scarlett, fourth Baron Abinger since 1835 (b. 1871; suc. 1892), whose estate of Inverloch, which was purchased from the Gordon family by his great-grandfather the first Lord Abinger in the early part of the 19th century, was greatly extended in 1893 by the purchase of Loch Treig and Inverlair estates, the three together comprising about 60,000 acres. Merely a shooting box till 1861, the castle since has been greatly enlarged, being partly in the Scottish Baronial style of architecture, partly a large ornate modern villa, with a round central flag-tower, and a massive square porticoed tower at the principal entrance. The material is white granite, with freestone copings. Queen Victoria paid a visit here in Sept. 1873.—*Ord. Sur.*, sh. 62, 1875.

Invermark, a roofless, ivy-clad, four-story granite tower in Lochlee parish, N Forfarshire, on the peninsula at the confluence of the Waters of Mark and Lee, opposite Lochlee church, 17 miles NW of Edzell. Said to have been built in 1526, and long a seat of the Lindsays, it was put in a habitable state soon after 1729, but in 1803 was once more reduced to a ruin, to furnish materials

for the new church and manse. Its massive walls, however, more than 3 feet thick, look as though they might stand for 300 years to come; and it retains its ponderous door of grated iron. Invermark belongs to the Earl of Dalhousie, who here has a shooting-lodge, 'built of granite, in a very fine position overlooking the glen, with wild hills at the back.'—*Ord. Sur.*, sh. 66, 1871. See A. Jervise's *Land of the Lindsays* (2d ed. 1832).

Invermay, a seat of Lord Clinton in Forteviot parish, SE Perthshire, on a rising-ground overhanging the left bank of May Water, $1\frac{1}{2}$ mile SSE of Forteviot station. A plain, neat, modern structure, commanding an extensive view of the picturesque scenery of the May's valley and Lower Strathearn, it has large and beautifully wooded grounds. An old baronial fortalice in its vicinity, now represented by an ivy-clad ruined tower, forms a striking contrast to its modern neighbour. 'The Birks of Invermay' are the theme of a well known lyric by David Mallet, and seem to have been sung by earlier poets. 'The chief attraction of the place is the "Humble-Bubble" romantic waterfall on the May, its name being derived from the peculiar gurgling sound of the rushing water. The river flows through a deep gully scooped out of the solid rock, which in some parts rises to a height of 60 or 80 feet from the surface of the water. The visitor can descend almost to the water's edge by a series of winding stairs, and from a small rustic bridge look down upon the surging torrent. The trees and banks are overgrown with moss, and ferns grow profusely at inaccessible places, and impart to the scene a most fairy-like aspect. The gully through which the river here passes is about a quarter of a mile in length, and in some parts no more than 3 or 4 feet in width; while the rocks on both sides rise to a height of 80 feet, almost making one giddy to gaze upon their precipitous and mossy sides. Trees have taken possession of the crevices wherever they could obtain a hold, lending an unspeakable grandeur to the scene.' See FETTERCAIRN.—*Ord. Sur.*, sh. 48, 1868.

Invermoriston, a hamlet in Urquhart and Glenmoriston parish, Inverness-shire, at the mouth of Glenmoriston, on the NW side of Loch Ness, 7 miles NNE of Fort Augustus. It has a post office (Glenmoriston), with money order, savings bank, and telegraph departments, an inn, and a public school. Invermoriston House is an old but modernised mansion, the seat of Ian Robert James Murray Grant, Esq. of Glenmoriston (b. 1860; suc. 1868), whose ancestor got a charter of the estate in 1509.—*Ord. Sur.*, sh. 73, 1878.

Inverneil, an estate, with a mansion, in South Knapdale parish, Argyllshire, 3 miles S of Ardrishaig.

Inverness (Gael. *Inbhir Nis*, 'the mouth of the Ness'), a parish on the NE border of Inverness-shire at the NE extremity of the Great Glen of Scotland. It embraces the old parishes of Inverness and Bona, and in 1891 its area was extended by the Boundary Commissioners to include the Leys detached portion of the parish of Croy and Dalcross, comprising an area of 4830 acres. The parish is bounded N by the Beaully and Moray Firths, NE by Petty, for $\frac{1}{2}$ mile at the extreme E by Nairnshire, SE and S by Daviot and Duilichity and by Dores, SW and W by Urquhart and Glenmoriston, and NW by Kiltarlity and by Kirkhill. Along the sea-shore on the N the boundary is natural, as it also is along the line from Racecourse Wood SW along the centre of Dochfour Loch and Loch Ness to the extreme S point of the parish, $4\frac{1}{2}$ miles from the NE end of the latter loch. Elsewhere it is artificial and very irregular. The extreme length of the parish, from Cullodeu Brickworks on the NE in a line straight SW to the borders of the parish of Urquhart and Glenmoriston, is $14\frac{1}{2}$ miles; the breadth in a line at right angles to this varies from $1\frac{1}{4}$ to $3\frac{1}{2}$ miles; while the area is now 28,430 acres, of which the most considerable portion is under cultivation or woodland, though in the southern and south-western parts of the parish there is a good deal of waste ground. The surface along the seaboard is flat, but rises to the S, until in the SW portion of the parish, on the NW side of Loch Ness, at Cnoc-na-Goithe, Carn-a-Bhodaich, and

Carn-an-Leitire, it reaches a height of 1249, 1642, and 1424 feet respectively. The NE half of the parish consists principally of the north-easternmost portion of the Great Glen of Scotland, extending from the lower part of Loch Ness to the firths, and is flanked on both sides by the terminations of the hill boundaries of the glen. These are generally well wooded. The surface of the valley is mostly flat, and but little above sea-level, but at one or two points there are considerable undulations. Of these we may notice the hill of Tomnahurich (popularly known as 'hill of the fairies,' but actually meaning 'hill of the yew trees'), on the left side of the Ness near the town. It is a beautifully wooded isolated mount resembling a ship with her keel up, and measuring 1984 feet in length, 176 in breadth, and 223 in height. It has now been finely laid out as an extramural burying-place for the adjacent burgh of Inverness. A little to the W of this is a gravel ridge called Tor-a-Bhean or Torvean, rising to a height of 300 feet. The soil along the coast part is good and well cultivated, and in the vicinity of the town it is a fine clayey loam, originally formed by deposit from the river Ness and the firths, while on the arable land in the SW it is light and sandy. The subsoil is gravel and clay, and the underlying rocks in the low grounds belong to the Old Red sandstone, while in the upper districts they are metamorphic. Sandstone of a light grey colour, with intermixture of mica in small scales, and limestone, occurs on the lands of Leys, and contains calcareous spar, steatite, and heavy spar. The sandstone beside Clachnaharry pier, at the mouth of the Caledonian Canal, contains celestine. The drainage of the parish is effected by the various streams that fall into Loch Ness or into the river Ness, among which may be mentioned the burns of Abriachan—flowing from the small Loch Laide (2½ × 2 furl.; 860 feet)—Dochfour, Holm, and Inches, which have some small cascades and good woodland scenery. The parish is traversed by roads leading from Inverness as a centre eastward by Elgin to Aberdeen, northward by Beaully to Dingwall, etc., southward by Badenoch to Perth. The CALEDONIAN CANAL passes through it from the NE end of Loch Ness to the Beaully Firth at Clachnaharry, a distance of nearly 6½ miles, and connects Inverness with the SW of Scotland. The regular service of passenger steamers from Glasgow has its terminus at Muirtown, about 1 mile from the mouth of the canal, and 1 mile NW of the suspension bridge over the Ness in the burgh. The parish is also traversed by the Highland railway system, which passes through its whole breadth along the seaboard, for a distance of 6¾ miles. The main station is at Inverness, and there is a station 1¾ mile to the NW at Clachnaharry. Besides the burgh of Inverness, the parish contains also the suburban villages of Ballifeary and Clachnaharry, and the villages of Balloch, Culcabock, Hilton, Drummond, and Smithtown of Culloden. There are a number of objects of antiquarian interest, of which some are noticed under the town, while others are noticed separately under BONA, CLACHNAHARRY, and CRAIG PHADRICK. Tomnahurich, already noticed, was at one time a ward and mote-hill, and in later days the magistrates of the burgh of Inverness used to patronise horse-races, run round its base. The ridge of Torvean, also noticed, seems to take its name from St Bean, reckoned first bishop of Mortlach, a saint of the 11th century. Part of it shows traces of an ancient hill fort; and in 1808, near the base, there was dug up a massive double-linked silver chain, now in the Antiquarian Society's Museum at Edinburgh. Some cairns near the fort are known as Kilvean or *Kil-a-Bhean*, the cell of Bean or Bane, who is by some identified as the saint just mentioned, but according to others is Baithene (536-600), second abbot of Iona in succession to St Columba. The whole estate of Bught, of which Torvean forms part, is said to be also called Kilvean. In the Abriachan district there are also traces of a *kil* and a number of cairns. At Leys, 3 miles SE of the burgh of Inverness, is a so-called Druidical circle of no great size, but very perfect. There are three circles, the external diameter being 30

paces, and the internal diameter 6. On the eastern border of the parish is part of Drum Mossie Muir, where the battle of CULLODEN was fought. Near the mouth of the Ness, now a considerable way within flood-mark, is a large cairn of stones known as *Cairn Airc* ('the cairn of the sea'). It is now marked by a beacon, as it is dangerous to vessels approaching the harbour. Due W of this, in the Beaully Firth, are other three cairns, in one of which urns have been discovered. The whole four seem interesting as pointing to a change in the relative level of sea and land. Mansions, all noticed separately, are Culloden, Dochfour, Ness Castle, and Raigmore. Inverness is the seat of a presbytery in the synod of Moray. There are three charges, the first, second, and third, named respectively the High Church, the West Church, and the Gaelic Church, all of which are in the burgh. The stipend of the first charge is £512 (not including supplement) with manse; that of the second charge, £673; and that of the third, £250 (not including supplement) with manse. Under the landward school-board are the public schools of Abriachan, Culcabock, Culduthel, Culloden, Dochgarroch, Nairnside, and Leachkin (opened in 1893), which, with respective accommodation for 100, 136, 122, 136, 122, 89, and 90 pupils, have an average attendance of about 50, 75, 85, 70, 60, and 55, and grants of nearly £60, £64, £90, £87, £80, and £71. Landward valuation (1892) £27,779, 13s. 7d. Pop., inclusive of burgh (1861) 16,162, (1871) 18,552, (1881) 21,725, (1891) 24,186, of whom 11,356 were males and 12,830 females. —*Ord. Sur.*, shs. 83, 84, 1881-76.

The presbytery of Inverness comprehends the parishes of Inverness, Daviot, Dores, Kiltarlity, Kirkhill, Moy, Petty, and Urquhart, the *quoad sacra* parishes of Erchless and Glenmoriston, and the chapels of Dochgarroch and Strathglass. Pop. (1871) 28,224, (1881) 30,092, (1891) 33,579, of whom 1586 were communicants of the Church of Scotland in 1895. The Free church has also a presbytery of Inverness, with 5 churches in the burgh, and 8 churches in respectively Daviot, Dores, Kiltarlity, Kirkhill, Moy, Petty, Stratherrick, and Strathglass.

Inverness, a market-town, a seaport, a royal burgh, the county town of Inverness-shire, and the chief town in the Northern Highlands, is in the northern portion of the parish just described. It stands on the river Ness from ½ to 2½ miles from its mouth, and a short distance SW of the Moray Firth end of the Caledonian Canal. It is the centre of the Highland railway system, and is by rail 18½ miles SE by E of Dingwall, 25 WSW of Forres, 108½ NW by W of Aberdeen, 144 NNW of Perth, 160½ SSW of Wick, 191½ NNW of Edinburgh by the Forth Bridge, and 206½ N of Glasgow, while by road it is 19½ miles SSW of Cromarty, and 61½ NE of Fort William. When the Aviemore and Inverness section of the Highland railway is completed the journey from the south will be considerably shortened. The Great Glen, after narrowing at the NE end of Loch Ness, begins to widen out as it approaches the point of junction with the great hollows occupied by the Moray and Beaully Firths, and on the level tract thus formed—a plain marked with but few inequalities, lying at but a slight elevation above sea-level, and traversed by the river Ness from SW to NE—stands the whole of the town of Inverness, except the southern outskirts. The town is intersected by the river Ness, and though the greater part of the built space lies E of the course of the river, yet the parliamentary boundary extends almost equally on both sides. The boundary line extends along the sea-shore from the old pier at Kessock to a point midway between the mouth of the river and Longman Point, and the southward limit is the mouth of the Allnaskiach Burn, a short distance below the Ness Islands. On all sides, except along the sea margin, the site is hemmed in by rising-grounds. The raised sea-beach, which extends along most of the coast from the Spey to Inverness, and up the Great Glen to Loch Ness at a height of from 80 to 90 feet, sweeps round to the E and SE of the town, and stretches away into the interior in a highly cultivated table-land from 1 to 3 miles broad.

Behind this is the ridge which, rising gradually from the plain NE of Culloden, sweeps south-westward at an average height of about 400 feet, and ultimately passes into the mountain chain that flanks the SE side of Loch Ness. The heights on the SW side of the Loch are continued by ridges to Dunean Hill (940 feet) and the round-topped CRAIG PHADRICK; while on the opposite shore of the firth (which at Kessock is only 1000 yards wide), from the Ord Hill of Kessock high ground stretches away westward along the shore of the Beaulie Firth, and north-eastward along the district between the Cromarty and Moray Firths, and known as the Black Isle. In the plain are two remarkable little hills at the distance respectively of 1 and 2 miles from the town. The first is Tomnahurich ('hill of the yew-trees'), 223 feet high; the second is Torbhean, a long gravel ridge 300 feet high, marked with traces of ancient Caledonian fortifications.

The environs of the town are very beautiful, and some of the views of the scenery beyond exceedingly fine. 'Inverness,' says Dr McCulloch in his *Letters on the Highlands*, where he rises on this point into very unusual enthusiasm, 'has been strangely underrated.

When I have stood in Queen Street of Edinburgh and looked towards Fife, I have sometimes wondered whether Scotland contained a finer view of its class. But I have forgotten this on my arrival at Inverness. Surely, if a comparison is to be made with Edinburgh, always excepting its own romantic disposition, the Firth of Forth must yield the palm to the Moray Firth, the surrounding country must yield altogether, and Inverness must take the highest rank. Everything is done, too, for Inverness that can be effected by wood and cultivation; the characters of which here have altogether a richness, a variety, and a freedom which we miss round Edinburgh. The mountain screens are finer, more various, and more near. Each outlet is different from the others, and each is beautiful, whether we proceed towards Fort George or towards Moy, or enter the valley of the Ness or skirt the shores of the Beaulie Firth, while a short and commodious ferry wafts us to the lovely country opposite, rich with wood, and country seats, and cultivation. It is the boast, also, of Inverness to unite two opposite qualities, and each in the greatest perfection—the characters of a rich, open, lowland country, with those of the wildest Alpine scenery, both also being close at hand, and in many places intermixed; while to all this is added a series of maritime landscape not often equalled.' From the Castle Hill—a projection north-westward from the terrace already mentioned—the view has been, and not unjustly, described as magnificent. On the SW the eye ranges over a well-wooded foreground, and along the ridges that bound Loch Ness as far as the dome-shaped peak of Mealfourvounie. To the W is the wooded ridge which terminates in Craig Phadrick, and beyond are the hills that cluster around the upper part of the Beaulie Firth. Beyond the gleaming line of the Firths to the N are the wooded ridges that sweep from the Ord Hill of Kessock, westward by Redcastle, and eastward towards Fortrose, from which they pass on and terminate in the rugged Sutors of Cromarty. Beyond, but still at no great distance, rises the huge lumpy Ben Wyvis (3429 feet), with its flat extended top; while to the NE spreads the opening Firth, bounded by the dim, distant mountain ranges of Elgin, Banff, Sutherland, and Caithness. In the Ness, just beyond the parliamentary boundary to the S of the town, are two islands known as Ness Islands. They are beautifully wooded, and the walks through the trees form a very pleasing summer resort. In the 18th century the magistrates used here to give open-air entertainments to the Judges of Assize. The islands are connected with one another and with the banks of the river by light suspension bridges.

History.—By Boece and Buchanan Inverness is connected with one of the apocryphal kings, and is assigned an origin at least sixty years before the Christian era; but though it was probably a seat of population in the centre of a closely-peopled district in the remote age of British hill-strengths and vitrified forts, yet the

first really authentic notice of the district that we have is in Adamnan's *Life of St Columba*. From this it may be gathered that about 565 the saint made his way to the Court of Brude, king of the northern Picts, who had his residence 'at some distance, though not far, from the banks of the river Ness.' Dr Reeves, in his edition of Adamnan, is inclined to identify its site with Craig Phadrick; but Dr Skene objects that it is 'unlikely that in the 6th century the royal palace should have been in a vitrified fort on the top of a rocky hill, nearly 500 feet high, and it is certainly inconsistent with the narrative that St. Columba should have had to ascend such an eminence to reach it.' He himself is inclined to place the Pictish capital on the ridge of Torvean, already mentioned, or more probably about 'the eminence E of Inverness called the Crown, where tradition places its oldest castle.' The king, who was, previous to the saint's arrival, lost in paganism, did not give Columba a very cordial welcome, and indeed closed the door of the fort against him; but the saint 'approached the folding doors with his companions, and, having first formed upon them the sign of the cross, he knocked at, and laid his hand upon, the gate, which instantly flew open of its own accord, the bolts having been driven back with great force.' The incident proved too much for the king, for the Chronicle of the Picts and Scots tells us he was baptized by St Columba, and Adamnan himself says that 'when the King learned what had occurred, he and his councillors were filled with alarm, and, immediately setting out from the palace, advanced to meet with due respect the holy man, whom he addressed in the most conciliatory and respectful language. And ever after from that day, as long as he lived, the King held this holy and reverend man in very great honour, as was due.' We are further told that this saint had great trouble with the Druids at the king's court, but vanquished them in many striking ways. The original castle of Inverness—which stood on the Crown—has been invested with a romantic interest, from its connection with Shakespeare's *Macbeth*. That this edifice was, as Shakespeare assumes, the property of Macbeth is very probable, as he was by birth the Mormaer of Moray. It was not, however, the scene of the murder of King Duncan, for his death is now recognised as having taken place at Bothgowan, which Dr Skene identifies with Pitgaveny, near Elgin. When Malcolm Ceanmor vanquished his father's murderer, he naturally seized his strongholds, and in all probability razed his castle at Inverness, and built instead of it, as a royal residence, a fortress on the Castle Hill. This new castle figured for several centuries as at once a seat of royalty and a place of military strength, receiving at intervals within its walls the kings and princes of Scotland, and regularly serving as a vantage-ground whence they or their servants overawed the turbulent and rebellious north. It is recorded in the Mackintosh MS. histories that Shaw Macduff, second son of the 'Thane' of Fife—who assumed the name of Mackintosh, and who, after assisting Malcolm in crushing an usurpation in Moray, acquired a large extent of property in the north—was made hereditary governor of the castle. This story is, however, not borne out by strict historical investigation, for the simple reason that the Earl of Fife was never known as 'Thaue' or 'Toiseach.' In 1245 it became the prison of Sir John Bisset of Lovat, for the imputed crimes of connection with the murder of the Earl of Athole and of doing homage to the Lord of the Isles. In 1296 it received an English garrison during the visit of Edward I. to the north; but the king himself does not seem to have gone so far. It was again occupied by English troops in 1303, but, like the other strongholds of the land, subsequently passed into the hands of Bruce's followers, and from Bruce's time down to 1508 it seems to have been in the immediate power of the Crown, with various keepers, the most prominent being the Earl of Mar, under whom the castle was rebuilt in 1412, a year after the battle of Harlaw. In 1427 James I., when on a progress through the north to punish some turbulent chiefs,

lived in the castle, and held in it a parliament, to which all the northern barons were summoned. Alexander, Lord of the Isles, was on this occasion made prisoner for a year; and when once more set free, returned with an army at his heels to wreak vengeance on his keepers. He got into the town, under the pretence of friendship for it, and then immediately pillaged the place and set it on fire; but his bold attempt to seize the castle was successfully resisted. In 1455 John, his successor (who was quite as turbulent as he), or more probably Donald Balloch of Isla, acting as John's lieutenant, rushed down upon the town, and, after taking the castle by surprise, again plundered and burned the town. In 1464 the castle was visited and temporarily occupied by James III., and in 1499 by James IV. In 1503 the keepership of the castle was conferred hereditarily on the Earl of Huntly; and in 1751 we find the Duke of Gordon claiming £300 as compensation for the abolition of his hereditary office of constable of the castle of Inverness. In 1555 the castle received the Queen Regent, Mary of Guise, and was the scene of a Convention of Estates and of extraordinary courts, summoned by her to quiet the Highlands and punish caterans and political offenders; and the Earl of Caithness was consigned to one of its dungeons because he had harboured freebooters. In 1562 Queen Mary, having entered the town attended by the Earl of Moray, was refused admission to the castle, as the governor was a retainer of the Earl of Huntly, who was in rebellion. She was in consequence obliged to take up her residence and hold her Court in a private house, till, her troops having been strengthened by the accession of the Mackintoshes, the Frasers, and the Munroes, the castle was reduced and the governor hanged. In 1644, on intelligence of the descent of a party of Irish on the west coast to join the Marquis of Montrose, the castle was put in thorough repair and fully garrisoned, and next year it successfully held out under Hurry against a regular siege by Montrose's troops. In 1649 Mackenzie of Pluscarden, Sir Thomas Urquhart of Cromarty, and other royalists took the castle, demolished the fortifications, and left the ruins to decay and desolation. The time of the Revolution, however, saw it again patched up and used as a stronghold for the Jacobites, the magistrates of the burgh being warmly attached to the cause of the dethroned dynasty. It was, however, soon wrested from them, and again used as a royal fort. In 1718 the government of George I. repaired it, converted the ancient part into barracks for Hanoverian troops, added a new part to serve as a governor's house, and gave the whole structure the name of Fort George. From engravings and from the description in Burt's *Letters from the Highlands*, written in 1725, it appears to have been an imposing battlemented structure of six stories, with sharp-pointed roofs and corner turrets. In 1745 it was occupied successively by Sir John Cope and the Earl of Loudon on behalf of the government; while in 1746 it fell into the hands of Prince Charles Edward on his return from England, and was blown up. Though the castle was thus rendered uninhabitable and useless, a large part of the walls long remained entire; but now nothing is left save two bastions with part of the curtain wall, on the E side of the ascent from the Castle Wynd. The site has since been occupied by the County Buildings and prison.

What may have been the appearance of King Brude's *munitio* and *domus* mentioned by Adamnan it is impossible to tell, but the huts of the common people, which must have stood near at hand, would be the earliest representatives of the buildings that form the burgh of Inverness; and the somewhat better dwellings that would naturally cluster round the subsequent stronghold on the Crown would represent the second stage of the town's growth. Some have even regarded the stone with a hole in its centre, which was dug up a number of years ago to the E of the road by Kingsmills to Perth, as the socket of the original cross, but this is highly doubtful. Certain it is that even after it had ceased to be the capital of Pictland, the place still remained of impor-

tance, and early came into prominence as one of the principal centres of the country. Tradition even—in face of the fact that such a thing was unknown at the time—asserts that its erection into a royal burgh was in the time of Malcolm Ceanmhor. Though that cannot therefore be the case, yet it was by David I. constituted one of the six chief places of the kingdom where the King's Justiciar held his court. It was at the same time made a royal burgh and the seat of a sheriff, whose authority extended over all the N of Scotland, and was thus one of the earliest free towns in the kingdom. William the Lyon seems to have regarded the rising burgh with particular favour, for he granted it four separate charters by which persons residing beyond the bounds of the burgh were prohibited from making cloths dyed and shorn contrary to the assize of David I., and the burgesses were granted exemption from wager of battle in civil cases, and from paying toll on their merchandise anywhere within the kingdom. Three of these charters are still in possession of the corporation, and form the commencement of a series of ancient municipal records which is fuller than that of almost any other burgh in the kingdom. William also caused a fosse to be dug round the town on condition that the burgesses should erect a good palisade and agree to keep it in repair. During the period previous to the invasion of Scotland by Edward I., the Scottish Kings occasionally visited the burgh on those frequent occasions when their power was called into play by incursions of the Norse and the northern Vikings, or the necessity of quelling the insurrections of the wild inhabitants and the turbulent chiefs of the adjacent country. In 1229 a powerful chief named Gillespie M'Scourlane burned the town, spoiled the Crown lands adjacent to it, and, in his effort to assume royal authority, slew all who would not acknowledge his authority, but was afterwards defeated, captured, and beheaded. In 1233, according to Cardonell, Alexander II. founded a convent at Inverness for the Dominican Friars. Taylor, in his *Edward I. in the North of Scotland*, says that this same monarch—who was a benefactor of the burgh in various ways—settled also a colony of Franciscans or Grey Friars, who have given name to the modern street and the burying-ground; but there is some obscurity on this point, for Provost Inglis, in a MS. dated 1795, and now in the Advocates' Library, says that the monastery at Inverness was always 'called by the inhabitants "The Grey Friars," although the only one of which we have an account in history was that founded by the Dominican Order. . . . It appears by the town's records, that the stones of the Friars' Kirk were sold in the year 1653 to Colonel Lilburne, commanding the troops of the Commonwealth, for building a fort at the river mouth, which was called Oliver's Fort. In 1372, during a quarrel between the Abbot of Arbroath and the Bishop of Moray, the followers of the former burned the town of Inverness and the Dominican monastery, but it must soon have been restored again, for the decision of the Bishops of Moray and Ross in the dispute between the Wolfe of Badenoch and his wife was read 'in the church of the Preaching Friars, Inverness, the 2d day of the month of November in the year of the Lord 1389.' Mention of the monastery occurs from time to time in various documents down to 1559, when the prior and brethren were obliged to give up their property to the safe keeping of the Provost and magistrates of Inverness. What became of the silver chalices, spoons, etc., handed over, is not known, but the tenements, rents, etc., were speedily taken possession of by their keepers; and, in 1567, a formal grant of all the property 'which formerly pertained to the Dominicans or Preaching Friars' was obtained from Queen Mary, and this was further confirmed by James VI. in 1587.

In the thirteenth century the trade of the burgh was extensive, and was, like so much of the northern trade in those days, mostly in the hands of Flemings. The principal exports were wool, cloths, furs, hides, fish, and cattle—the furs possibly including beaver skins; for,

according to Boece, beavers were at one time found on the banks of Loch Ness, and one of the Scottish Acts of Parliament in the time of David I. records 'beveris skins' among Scottish exports. Inverness was at this time, too, the principal station for the herring fishing in the Moray Firth. Shipbuilding, too, was carried on, and, in 1249, Hugh de Chatellar, Count of St Paul and Blois, had a vessel built here which Matthew Paris mentions as being called 'the wonderful ship,' on account of its great size. After the accession of Bruce, and during the successive reigns of the Stewarts till near the Union, Inverness was constantly exposed to predatory visits from the islesmen and the northern clans, and there is a long record of skirmishes between its inhabitants and their assailants, and of blackmail paid as the price of the forbearance of rapacious neighbours. At times, too, stratagems were tried, and tradition records how, in the end of the fourteenth century, when a large body of islesmen advanced to Kessock Ferry, and sent a message menacing the town with destruction if a large ransom were not paid, the provost affected to agree to the terms dictated, and sent a large quantity of spirits as a present to the chief and his followers. When the islesmen, rushing headlong into the trap, had got helplessly drunk, the provost and citizens pounced on them and slew almost the whole. Their foes had, however, a subsequent revenge, for in 1411 the town was burned by Donald, Lord of the Isles, while he was on his way to HARLAW.

The burgh had a new charter granted to it by James III. in 1464; also one by Queen Mary 'in favour of divine worship, and of the ministers of God's Word, and of the hospital;' and James VI., who seems to have had considerable favour for the burgh, though he did not follow the example of his predecessors and visit the town, granted what is known as the 'golden charter' in 1591, and this was ratified by the Estates in the time of Charles II. The importance of Inverness, as the key of the Highlands, was fully recognised by Oliver Cromwell, and it accordingly became the locality of one of the four forts which he constructed for the purpose of overawing Scotland. This building—now popularly known as the Citadel—was erected in 1652-57 on the N side of the town, on the E bank of the river Ness, near its mouth, and cost £80,000. 'It was a regular pentagon, surrounded at full tide with water sufficient to float a small bark. The breastwork was three storeys high, all of hewn stone, and lined with brick inside. The sally-port lay towards the town. The principal gateway was to the north, where was a strong drawbridge of oak, and a stately structure over it with this motto: "*Togam tuentur arma.*" From this bridge the citadel was approached by a vault 70 feet long, with seats on each side.' At opposite sides of the area, within the ramparts, stood two long buildings, each four stories high—the one called the English building because built by Englishmen, and the other called the Scottish building because built by Scotchmen. In the centre of the area stood a large square edifice three stories high, the lower part occupied as a magazine and provision-store, and the highest part fitted up as a church, covered over with a pavilion roof, and surmounted by a tower with a clock and four bells. There was accommodation for 1000 men. 'England supplied the oak planks and beams; Strathglass, the fir; recourse was had to the monasteries of Kinloss and Beaulieu, the Bishop's Castle of Chanonry, the Greyfriars' Church, and St Mary's Chapel, in Inverness, for the stone-work; and so abundant were the provisions and supplies of the garrison that a Scots pint of claret sold for a shilling, and cloth was bought as cheap as in England.' Under the keen administration of the Commonwealth the fort so annoyed the Highland chiefs, that, at their request, and in acknowledgment of their loyalty, it was destroyed soon after the Restoration. Part of the ramparts still remains, while a portion of the fosse, in a widened and improved condition, is now included in the harbour.

Subsequent to the Revolution the inhabitants of Inverness distinguished themselves by enthusiastic attachment to both Prelacy and Jacobitism. So much

so indeed was the former in favour, that in 1691, when a Presbyterian minister was for the first time after the abolition of Episcopacy appointed to the vacant church, the magistrates stationed armed men at the church doors to prevent his admission. Duncan Forbes of Culloden, father of the famous Lord President Forbes, who attempted to force him into the interior, was driven back, and the resistance continued till a regiment of soldiers appeared on the scene and placed the presentee in the pulpit at the point of the bayonet. For years afterwards the magistrates used every means to support and forward the Jacobite cause, and at the accession of George I. to the throne, they openly opposed and endeavoured to prevent his proclamation, and roused the populace to a riot. In 1715 Inverness was occupied by the Mackintoshes for the Jacobites, but the post was recovered by the exertions of the lairds of Culloden and Kilravock, aided by Lord Lovat, and the castle was then repaired as already noticed. During the rebellion of 1745-46, and especially in the stir which preceded and followed its closing scene at Culloden, the town was regarded as virtually the capital of the losing side. 'The English troops committed excesses unusual even in a foreign country, and Provost Hossack, going to remonstrate, is, by tradition, said to have been kicked downstairs by Cumberland's orders. Hundreds were confined in the parish church, and many taken out to the churchyard and shot. The stone behind which they knelt, as also that on which the soldiers rested their muskets and took aim at their victims, are still seen.' Charles Edward and Cumberland when in Inverness lived in turn in the same house. It belonged to Lady Mackintosh, the widow of the twentieth chief of the clan, and stood on the W side of Church Street. It is said to have been the only house then in Inverness having a reception-room without a bed in it. From this time onward the path of the burgh has been one of peace and prosperity, and but few modern events of note need here be noticed. The first public coach between Inverness and Perth began to run in 1806, and took over two days to accomplish the distance, and in 1811 a mail coach began to run to Aberdeen, and about 1819 continued its course to Tain and to Staxigoe near Wick. On the night of 16 Aug. 1816, the whole place was alarmed by a smart shock of earthquake, which threw down the chimney tops of many houses, twisted the old steeple, and set the bells a-ringing. In 1822 the town was much benefited by the opening of the CALEDONIAN CANAL, and subsequently in 1855 by the opening of the Inverness and Nairn railway, which was extended to Keith in 1858, and was thus the beginning of the present extensive HIGHLAND RAILWAY system, which, in 1863 and subsequent years, extended itself over the north of Scotland. The Free Libraries Act was adopted in 1877, and a building, costing £3482, for a library, museum, and school of art, was opened in Castle Wynd in 1883. The library has over 7000 volumes. In 1877 also, in consequence of the territorial rearrangement of the army, the Government resolved to make Inverness a garrison town, and in 1880-85 barracks were erected on a projection of the 90 feet terrace at the E of the town. They are Scottish Baronial in style, and cost over £60,000. The territorial regiment connected with this—the 79th—district is the old 79th Highlanders or the Queen's Own Cameron Highlanders. The Highland and Agricultural Society have held their show at Inverness in the years 1831, '39, '46, '56, '65, '74, '83, and '93. Inverness was visited by the late Prince Consort on 16 Sept. 1847, when he was present at the Northern Meeting ball. The town is the birthplace of Sir Alexander Mackenzie, the North American traveller (1783-1820), and of J. F. M'Lennan, LL.D., the author of *Primitive Marriage* (1827-81).

The town itself, viewed apart from its surroundings, might be called almost entirely lowland, and it will bear comparison with most of the best modern towns of the same size in Great Britain. Defoe, in his *Journey through Scotland* (1723), says there were then 'two very good streets in this town, and the people are more

polite than in most towns in *Scotland*. They speak as good *English* here as at *London*, and with an *English* accent; and ever since Oliver Cromwell was here they are in their manners and dress entirely *English*,' and Burt says that but few houses in the town were slated. Still later the houses were mostly mere thatched cottages, with here and there town mansions in the Flemish style belonging to the landed proprietors of the surrounding district. Many of the houses were ranged along narrow lanes or closes, with their gable ends to the street, while some had outside stone staircases ascending to the entrance on the first floor, and others opened off inner courts with arched doorways. A vigorous course of change seems to have set in about 1775, and again at the close of the century under the then Provost William Inglis. Before 1740 harness and saddlery of all sorts were so little required that in that year the magistrates found it necessary to advertise for a saddler to come and settle in the town; and prior to 1775, when the first bookseller's shop was opened in the burgh, the few people in the large tract of country around who were able, and had occasion, to write letters, were supplied with materials by the postmaster. About the middle of the same century a hat had not graced any head in the north except that of a landed proprietor or a minister, and when it was first assumed by a burgher in the person of the deacon of the weavers it excited the highest ridicule of the blue-bonneted multitude, and drew from them such constant twitting and rallery, as only the stoutest pertinacity and the sturdiest independence could have enabled the worthy deacon to resist. At the same period the universal costume was Celtic and primitive, and so late as about 1790 only three ladies with straw bonnets were to be seen in the High Church. Now old customs, usages, and costume have almost entirely disappeared, and the old games of shinty, etc., have to some extent gone along with them. The Inverness pronunciation of English, which Defoe particularly notices, still enjoys a character of great purity, and of being little if at all affected by the broad forms of the usual lowland dialect. This is generally ascribed to the influence of the soldiers of the Commonwealth during the years they occupied Cromwell's fort.

Lines of Street, etc.—The section of the town on the right bank of the river includes all the site of the original town, together with many of the modern extensions, while the section on the left bank is entirely modern, and exhibits somewhat greater regularity of plan. The principal streets on the SE side are High Street, Bridge Street, Petty Street, Inglis Street, Church Street, Union Street, Queensgate, Academy Street, Chapel Street, Shore Street, and Castle Street; the principal ones on the NW side are Huntly Street, Kenneth Street, Fairfield Road, Telford Street, Celt Street, Grant Street, Queen Street, Kessock Street, Telford Road, Tomnahurich Street, and Ardrross Street. The central district, representative of the old town, forms an acute-angled triangle of which the sides are Church Street, Inglis Street, and Academy Street, with High Street as the base. This may still be called the centre of population and business. The streets were first causewayed, sewers formed, and foot-paths laid with flags in 1831. Within recent years a new drainage system was introduced, and much has been done in the improvement of the streets, and by adding to the amenities of the town, particularly in the neighbourhood of the river. In High Street on the site now occupied by the British Linen Company's Bank was the old town-house of Lord Lovat. The house in which Queen Mary lodged when refused admission to the castle was, according to tradition, in Bridge Street, which is one of the oldest streets in the town. Castle Street takes its present name from the neighbourhood of the castle, part of whose walls, as already noticed, adjoin the W side. The old name was Domesdale, as it led to the place of execution. The large burying-ground known as the Chapel-yard in Chapel Street is the cemetery of the Dominican monastery already mentioned. Before the present entrance to it was formed, it had a neat richly-sculptured gateway with the in-

scription, 'Concordia parvæ res crescunt.' Union Street, extending from Academy Street to Church Street, was opened up shortly after the completion of the railway system in 1863. The prosperity following this led also to the formation of Innes Street, Ardrross Street, and Queensgate (which runs parallel to Union Street), the reconstruction of Tomnahurich Street, and the formation of a large number of new streets of villas in the west and south parts of the burgh, the extension of the town in this way being so rapid that in order to embrace the population an extension of the burgh boundaries was in 1893 discussed by the town council. It is estimated that during 1882-93 over £500,000 was expended in buildings and improvements of all kinds, of which the largest proportion has been laid out in residential property in the west and south districts.

Bridges.—The Ness was, up to the year 1664, crossed by a wooden bridge, which is characterised by one of Cromwell's officers as 'the weakest that ever straddled over so strong a stream.' It communicated with the town on the right bank of the river by an arched way which was surmounted by a house. In Sept. 1664 the frail structure partially fell while under repair, and was never rebuilt. A new one was erected between 1685 and 1689, partly by public subscriptions and partly by large contributions from the town funds. It was a substantial structure of seven arches, and stood till 1849, when it was swept away by a flood, and in place of it the present suspension bridge in a line with High Street was constructed by Government at an expense of £26,000. Farther up, at the upper end of Ness Bank, is a handsome suspension foot-bridge erected at a cost of £2000 raised by subscription, and opened in 1879. Below the main suspension bridge is also another suspension foot-bridge in the line of Greig Street, erected by public subscription and a grant by the town council in 1881, and lower still were a wooden bridge near the harbour and a railway viaduct. The former was replaced by a steel lattice-girder bridge in 1896; the latter is a stone structure of five arches of 73 feet span, four land arches of 20 feet span, and two girder bridges of 37½ and 25 feet span, one over Shore Street and the other over Anderson Street.

Public Buildings, etc.—The Town Hall stands in High Street, opposite the end of Church Street. It is a building in the Gothic style with French features, and cost about £11,000. The building, which was designed by Messrs Matthews & Lawrie, originated from a bequest of £5000 made by Mr Grant of Bught for the purpose of erecting a public hall. It was begun in 1878, and opened by the Duke of Edinburgh on 19 Jan. 1882. In the centre of the principal front which faces the open space known as the Exchange is a gable with round turrets at the sides and on the roof an oak spirelet, while a large panel over the centre window has the town's arms sculptured on it. The windows on the main staircase are of stained glass, showing the royal arms, the town's arms, and the Scottish arms. The main hall is 66 feet long, 35 wide, and 33 high, with a ceiling of pitch pine panelled and decorated with heraldic emblems. The windows contain stained glass, some showing the arms of the Highland clans, of the trade incorporations of the burgh, the royal arms, and the Scottish arms, others allegorical representations of Art, Science, Law, Agriculture, Education, and Literature. It contains a capriciously executed copy of Reid's portrait of the late Prince Consort, a good copy of Ramsay's portrait of Flora Macdonald, portraits of Duncan Forbes of Culloden and of some other men of more local note, as well as busts of the late Dr Carruthers, by Alexander Munro, and the late Rev Dr Macdonald, first minister of Inverness, executed by A. Davidson, a local sculptor; also a presentation portrait of Sir Henry C. Macandrew, who was for some time provost, painted by Reid. Offices are provided in the building for the town chamberlain and the town clerk. In the centre of the Exchange is a fountain presented to the town in 1880 by Dr G. F. Forbes, which serves as a protection for the palladium of the burgh, the well-known Clach-na-cudhin or 'stone of the tubs,' which used at one time, long ere the ques-

tion of water supply became troublesome, to stand in the centre of the street, and was then employed by the servant girls as a convenient resting-place for tubs in passing to and from the river. The old cross, which used also of old to stand out in the street, is now placed at the W end of the new hall. The old town-hall—a very plain building of 1708—stood on the same site, and was removed to make way for the present structure. The County Hall, locally known as the Castle, stands on the Castle Hill, a short distance SE of High Street, and occupies the site of the old castle formerly noticed. The present building, erected in 1834-35, after designs by Mr Burns of Edinburgh, at a cost of £7500, is a massive square castellated structure of somewhat squat proportions. Adjoining it is the County Prison, built in 1843 and legalised in 1849. It harmonises in style with the County Hall, and with its numerous turrets helps to give dignity to the whole structure on the hill. Within the Castle are the rooms where the Northern Circuit Justiciary Courts are held. In the Court House is a portrait by Raeburn of the late Charles Grant, long M.P. for the county. One of the early prisons was a vault in the masonry between the second and third arches of the old stone bridge already noticed. It was a dismal chamber of about 12 feet square, and light was admitted by a small grated opening on the S side of the pier. The entrance was by an opening in the roadway of the bridge from which a flight of stairs led to a massive iron door. It seems to have been used till late in the 18th century, and must have been a wretched abode. There was another tolbooth in Bridge Street, of the sanitary arrangements of which some idea may be gathered from the entry in the town records in Sept. 1709, that the town-clerk 'paid an officer 4s. 6d. Scots to buy a cart of peats to be burnt in the tolbooth to remove the bad scent;' and in Dec. 1737, the magistrates ordered the town-clerk to purchase 'an iron spade to be given to the hangman for cleaning the tolbooth.' It must have been a very wretched place, for in an official memorial from the Town Council to the Commission of Supply, it is described as consisting 'only of two small cells for criminals and one miserable room for civil debtors,' and it is further declared that there were 'at present and generally about thirty persons confined in these holes, none of which is above thirteen feet square.' This was in 1786, and the building was demolished about 1790, and was replaced by a new one erected at the corner of Church Street and High Street at a cost of £3400, of which £1600 was for the steeple which still stands, although the other buildings were removed in 1854. The steeple is 130 feet high, and was much twisted by the earthquake of 1816, but was straightened some years after. The Music Hall is a large building in Union Street, erected subsequent to 1864, and since 1871 licensed for the performance of plays; but for this purpose it is pretty much superseded by the Inverness Theatre in Bank Street, which was opened in Nov. 1882. The latter belongs to a joint stock company, and is a plain building with comfortable accommodation for an audience of 700.

The Northern Meeting Rooms are near the head of Church Street. The building, which was erected by subscription, is spacious but heavy and clumsy. There is a ball-room, 60 feet by 60, with drawing-room, crush-room, and orchestral gallery; also a dining-room, 60 feet long by 30 wide. In the ball-room is a full length portrait of the last Duke of Gordon (a copy of Lawrence's picture in the Aberdeen County Hall), one of his wife by Hayter, and a kit-cat of the celebrated Jane, Duchess of Gordon, by Sir Joshua Reynolds. The Northern Meeting, instituted in 1788, is the great gathering of the North, and is attended by nobility and gentry from all parts of the kingdom. The meeting is held annually in September, the afternoons being devoted to exhibitions of Highland games and the evenings to balls. There are permanent pavilions on the SW side of Ardress Street, in the park in which the games, etc., are held. The park is also used as a cricket ground by the Northern Counties Cricket Club. The Young Men's Christian

Association Building, at the foot of Castle Street, fronting High Street, was erected in 1868 at a cost of £3500. It has composite pillars surmounted by a frieze, cornice, and entablature. Over the hall windows are medallions of eminent men, and over the door is a colossal group representing Faith, Hope, and Charity. The Workmen's Club is in Bridge Street. It dates from about 1862, and is now chiefly devoted to the game of billiards, though there is still a much-diminished library and a reading-room. The Volunteer Drill Halls, for the artillery and rifle corps respectively, form two angles of the square of Bell's Park playground. They are extensive buildings; and that of the rifles contains many paintings and framed documents of interest in the history of the regiment. Public Markets, with entrances from Academy Street, Church Street, and Union Street, were erected in 1870 at a cost of £3000, but were destroyed by fire in 1889, and the present buildings, which include a spacious central hall and a fish market, were erected in 1891 at a cost of £7158. The main front is to Academy Street, opposite the railway station, and there are also entrances from Union Street and Church Street. The railway station is at the SW end of Academy Street, and fronts the end of Union Street. There is a large hotel adjoining. The greater part of the present structure was erected in 1875-76 at a cost of £12,000, and £6000 was spent on extensions in 1881. The style is Ornamental Italian. The railway company have large workshops farther to the E. A monument in honour of the 79th Cameron Highlanders was erected in front of the railway station. The head office of the Caledonian Bank is in High Street. Above the basement, which contains two finely-carved archways, is a large portico with four fluted Corinthian columns supporting a pediment flanked by large vases with medallion portraits of the Queen and Prince Albert. In the tympanum is a finely-executed group of allegorical figures by Ritchie, of Edinburgh. The Northern Infirmary stands on the left bank of the Ness to the SW of the Cathedral, and was erected in 1803-4. It has a long plain front with a centre and two wings, and is supported by public and private collections and subscriptions. The Northern Lunatic Asylum stands about 1½ mile SW of the town, on the face of the slope between Dunean and Craig Phadrick, at a height of 320 feet above sea-level. The position is commanding and the view magnificent. The buildings were erected in 1860 under the Lunacy Act (Scotland) of 1857 at a cost of £45,000. The frontage extends to about 600 feet, there are two central pavilion towers 90 feet high, and the building, with its sharp pointed roofs and angle turrets, is plain but bold. There is accommodation for about 500 inmates. The grounds, including airing grounds, gardens, and farm, extend to 176 acres, held at an annual feu-duty of £370. The Poorhouse stands on the old Highland Road less than 1 mile S of the town, and was erected in 1860-61 at a cost of about £6000. It is a handsome building, with accommodation for 170 inmates, and the grounds extend to about 6 acres. The Inverness Forbes Dispensary for the Sick Poor in Huntly Street was established in 1832, and is supported by voluntary contributions, though a recent bequest has given it an endowment of about £150 a year. The Highland Orphanage, on the cottage system, is in Culduthel Road, was opened in 1883, and (1893) accommodates 60 children.

Churches.—The Blackfriars must have had a church in connection with their monastery, and there seems to have been chapels dedicated to St Giles, to St Thomas, and to the Virgin Mary. The two latter were about the present Chapel-yard, and the former occupied the site of the present Established High Church in Church Street. Provost Inglis, in the MS. already referred to, says that the parish church was a very ancient structure, and that, having become ruinous, it was pulled down in 1769 and the present church built on its site (1769-72). This latter is a large plain structure. Adjoining it is an old square tower, said to have been built by Oliver Cromwell, and containing a soft clear-toned bell, thought to have been brought by the Protector from Fortrose

Cathedral. Connected with this church a chapel of ease (St Stephen's) was erected in Southside Road in 1896-97. Beside the High Church is the Gaelic church, the charge being founded by the Crown in 1706 when the original church was built; but the present very plain structure dates from 1794. An old richly-carved oak pulpit of Dutch workmanship was removed when the building was renovated a few years ago. The Established West Church is on the left bank of the river to the NW, and was erected about 1840. It contains 1670 sittings. The Free High Church is near the river on the right bank, and was considerably enlarged in 1866. It is a handsome building with a good spire. The Free North Church used to be in Chapel Street, but in 1891-93 a splendid new edifice, costing about £10,000, was erected on the south side of the river at Grey Street Bridge. A handsome new building for the Queen Street Free Church congregation was erected in 1893-95 in Huntly Street, to cost about £4000. The Free East and Free West stand in the NE and NW parts of the town respectively. Queen Street Church originally belonged to the United Presbyterians, and was erected for Gaelic services. It became a Free church in 1874. The United Presbyterian church in Union Street is a good Gothic building erected in 1867 to supersede the old church. A Wesleyan Methodist church at the junction of Inglis Street and Academy Street is a graceful Norman building. It was built in 1867, and superseded a former church. The Roman Catholic church (St Mary's), on the river bank, was built in 1837, was added to in 1893, and now has accommodation for 400 persons. It has a good front. The Episcopal Cathedral of the United diocese of Moray, Ross, and Caithness, of which Inverness is the centre, is in Ardrross Street between the Northern Meeting Park and the Ness on a site on the river bank that shows it to excellent advantage. It was constructed after designs by Mr Alexander Ross, of Inverness, and the style is English Middle Pointed Gothic. The length is 166 feet, the breadth 72 feet, and the height to the ridge of the roof 88 feet. There is a clerestoried nave with aisles terminating at the principal front in two massive towers which are intended to be finished with spires, bringing them to the height of 200 feet. There is a short apsidal choir with side aisles and quasi transepts. There is also an octagonal chapter-house, and the crossing is surmounted by a flèche. The roof is internally waggon vaulted with wood, and there are 22 stalls for clergymen, 32 seats for choristers, and 700 sittings for the congregation. There is a fine altar and reredos, and the pulpit of stone and marble is highly sculptured and enriched. The windows have stained glass, and there is an organ with three manuals by Hill. Four single sculptured figures, and a large group on the tympanum of the door, were put up on the W front in 1876. The cost was £20,000 up to the time when it was opened on 1st Sept. 1869. St John's Episcopal Church is Late Perpendicular Gothic in style, and has a tower, which is, however, incomplete. It was erected in 1840, and has 268 sittings. The congregation is representative of an old one which managed to survive the troublous times of last century. There are also two Episcopal missions—Church of the Holy Spirit in Factory Street, erected 1886, and St Columba, Southside Road, erected in 1891.

Schools.—Inverness is plentifully supplied with schools. The Royal Academy, on the NE side of Academy Street, near the railway station, was founded in 1792 for the liberal education of boys of the upper classes throughout the Northern Highlands. It was a plain building with a public hall, a number of class-rooms, separate buildings for girls (1867), a large playground, and accommodation for altogether 782 pupils. This building was in 1894 superseded by a new and more commodious academy, erected on the Crown at a cost of £8000. A large fund, known as the Mackintosh of Farr Fund, provides education, clothing, and board for boys, and furnishes a university bursary. It is the interest of £10,000 invested in land, bequeathed in 1803 by Captain W. Mackintosh of the *Hindustan* East Indiaman, and the capital is now

valued at about £30,000. The Academy is conducted by a rector, eight masters, a lady superintendent, and two governesses, and used to be managed by a body of directors acting under a royal charter. Since the new Inverness Academy and Educational Trust Scheme, under the Act of 1882, came into operation, the governing body has been composed of three representatives each from the Town Council, the Inverness-shire County Council, and the Burgh School Board. With the new endowments added, a number of free scholarships and bursaries have been created, and the academy now ranks as secondary school open to all classes. In the public hall is a bust of a former rector, Hector Fraser, by Westmacott, and a painting of the Holy Family by Sasso Ferrato. The building also possesses the remains of the small museum collected by the Northern Institution for the Promotion of Science and Literature. The Northern Counties Collegiate School is in Ardrross Street, and gives education after the model of the English public schools. It is managed by a council of thirteen influential gentlemen, and is conducted by a headmaster and two assistant masters. There is accommodation for boarders. This college was made a centre for the army preliminary examinations, June 1891. A chemical laboratory was added recently. Under the Burgh School Board are the High School, the Central School, the Merkinch School, Clachnaharry and Farraline Park School, which, with respective accommodation for 1009, 555, 551, 150, and 805 pupils, have an average attendance of about 470, 380, 530, 70, and 510, and grants of over £556, £376, £460, £73, and £444. The old High School, on School Hill, was originally a Free Church Model Institution, but passed in 1873 to the School Board, who, in 1879-80, erected a new High School in King's Mill Road, to which they have added considerably since. It is Gothic in style, is well fitted up, and has a tower and observatory, the latter the gift of Mr Forbes of Cul-loden. Raining's School is on Barn Hill. It sprang from a bequest of £1000 made in 1724 by Dr John Raining of Norwich, for the purpose of building and endowing a school in any part of the Highlands the General Assembly might appoint. It is now under the management of the Trust for Education in the Highlands, and is conducted as a primary and secondary school. Bell's Institution, or Farraline Park School, is to the NE of the Academy. It is a handsome building, erected by the Magistrates and Town Council as trustees of the late Dr Andrew Bell of Egmont, and affords instruction to a large number of children, who used to be taught on the Madras or monitorial system, of which Dr Bell was such a staunch advocate, but it has been a public school under the School Board since 1888. Other schools are: the School of Science and Art, the Kindergarten School in Old Edinburgh Road, the Cathedral Boys' School, Bishop Eden's Mission School, a Roman Catholic School, and various private schools.

Trade and Commerce, etc.—Malting was for generations the chief employment in the town, which enjoyed almost a monopoly in the trade, and supplied all the northern counties, the Hebrides, and the Orkneys with malt. In the end of the 17th century half the architecture of the town was a mass of malting-houses, kilns, and granaries; but from that time the trade gradually fell off, and by 1745 the place looked almost like a mass of ruin from the deserted and dilapidated buildings connected with the malt trade. At the end of the 18th century an extensive white and coloured linen thread manufacture, that is said to have given employment to 10,000 people, had its centre at Inverness, but it is now gone owing to the spirited competition of the towns of Forfarshire. A bleachfield and two hemp manufactories then in operation have also disappeared. A woollen factory on the Ness at Holm, about 2 miles up the river, was established about 1798, and is the oldest woollen factory in the north of Scotland. It is worked by both water and steam, employs about 100 hands, and produces tweeds, mauds, plaiding, and blanketing. Two other factories were erected within

the last few years in Telford Street, and the tweed industry, owing to the preference of fashion for Highland fabrics, may be described as flourishing. There are also the large works in connection with the Highland railway, two large wood-yards and sawmills, several polished granite and marble works, a rope work, a tan work, two breweries, two distilleries, a tobacco manufactory, several foundries, and two nurseries. Considerable trade also accrues from the town being the residence of respectable annuitants, and from its being a centre for tourists and sportsmen. The railway now makes communication easy and rapid, both S and N, and Mr Macbrayne's steamers, which ply from Glasgow to Inverness by the Caledonian Canal—twice a week all the year round, and during the summer months once a day—connect it readily with the SW of Scotland. Since 1875 a steamer has also plied once a fortnight from Liverpool to Inverness, Aberdeen, and Leith, and *vice versa*, going by the Caledonian Canal. This makes Inverness a centre from which all sorts of miscellaneous goods are supplied to the smaller towns and villages throughout a very large tract of country round about. Along the river there are considerable salmon fishings. There are ordinary markets every Tuesday and Friday, and markets for horses, cattle, and sheep are held on the Fridays succeeding the Muir of Ord market. Two auction markets at Lochgorm have made Inverness an important centre for the sale of stock, and the effect is seen in the decreasing trade done at the Muir and other fairs. The great Wool Fair is held on the second Thursday of July and the succeeding Friday and Saturday. It was established in 1817 for the sale of sheep and wool, and took place originally in June, but the date was afterwards changed to July. The sales effected every year average about £200,000. There are produce markets on the last Friday in July and in August, and on the last Thursday in November, and hiring fairs are held on the Fridays before 23 May and 23 Nov. A fat stock exhibition is held in the end of the year, in connection with Northern Counties Fat Show Club.

For several centuries prior to the Union, Inverness was much frequented by foreign traders, and carried on a considerable commerce with continental ports, but much of this was in the first half of the 18th century diverted to Glasgow. An improved state of matters followed, however, on the changes that took place in the Highlands subsequent to 1745-46, and the commerce was still further extended by the transference of trade from foreign ports to the port of London, which began about 1803, and again received fresh extension after the full completion of the Caledonian Canal in 1847. The Aberdeen and Leith trade at one time carried on by steamers has now passed over to the Railway Company. The registration district of the port extends from Inverness to the Spey on the E, to Bonar-Bridge on the N, and from Fort William to Rhuestoer,—including the islands of Skye, Raasay, Cana,—on the W. The number of vessels in this district, with their tonnage, has been, at various dates, as follows:—

Year.	No. of Vessels.	Tonnage.
1831	142	7,104
1861	241	11,301
1875	154	10,269
1893	113	10,339
1892	134	10,269
1895	119	7,949

About half the vessels and nearly two-thirds of the tonnage belong to Inverness itself.

The harbour lies within the mouth of the Ness, and consists of two parts—the one at Thornbush, about 700 yards above the mouth of the river, where there is a pier for large steamers; and the other about 400 yards farther up, on the opposite side of the river, and in direct communication with the railway station. It was greatly improved in 1847, under an Act providing for the enlargement of Thornbush pier, the deepening of

the river channel, the formation of a wet dock adjacent to the timber bridge, and the construction of quays and breastworks in the vicinity of the railway. The harbour trustees are: the provost, bailies, dean of guild, treasurer, five members elected by shipowners, and five elected by merchants in the town. The following table shows the tonnage of vessels that entered from and to foreign and colonial ports and coastwise with cargoes and ballast:—

	ENTERED.			CLEARED.		
	British.	Foreign.	Total.	British.	Foreign.	Total.
1853	102,704	89,831
1860	178,781	8,509	187,290	167,824	6,698	174,522
1874	246,627	9,916	256,543	243,763	8,206	251,969
1882	308,548	10,070	318,618	305,862	9,083	314,945
1892	457,734	11,337	469,071	455,087	11,339	466,426
1895	458,510	11,472	469,982	458,805	11,586	470,391

The amount of customs in 1891 was £4081; in 1892, £3829; in 1893, £3704; in 1894, £3434; and in 1895, £3954. The principal imports are coal, pig-iron, timber, hemp, wines, bacon, fish, boots, shoes, linen and woollen drapery, hardware, china and glass; and the principal exports are grain, potatoes, wool, sailcloth, ropes, cast-iron, dairy produce, leather, and malt liquors. Till 1820 oatmeal was imported to the extent of 10,000 bolls yearly; it is now exported to nearly the same amount.

The piers at Kessock Ferry, $\frac{3}{4}$ mile NW of Thornbush pier, occupy ground that formerly belonged to Sir William Fettes, and were constructed at his private expense at a cost of about £10,000. There are extensive wharves at the Muirtown basin of the CALEDONIAN CANAL.

Municipality, etc.—The old rulers of Inverness held their authority under a sett fixed in 1676 and altered in 1722; but the old royalty excluded many important parts of the modern town—sometimes one side of a street being within and the other without the boundary. This caused so much trouble that a special Act was obtained in 1847, by which the municipal boundary was extended to the parliamentary boundary as fixed in 1832; and the modern town council consists of a provost, 4 bailies, a dean of guild, a treasurer, and 14 councillors—the town being, for municipal purposes, divided into three wards. The corporation revenue in 1894-95 was £4940.

The powers of the police are founded on the Act of 1847; but the Lindsay Act, adopted in 1874, has now superseded it in all matters with which the latter deals. The town council acts as the police commission. The police force consists of 19 men, and the superintendent has a salary of £240. The funds for education and charity managed by the council with the stock at their credit in 1893 are:—Jonathan Anderson's (£3350), Frederick Klein's (£1050), Robert Fraser's (£125), Thomas Fraser's (£100), Baillie's (£200), Burnett's (£100), Gollan's (£92), Gibson's (£102), Duff's (£1068), Smith's (£1692), and Mrs Mason's (£450). The gas and water company was established in 1826, and obtained enlarged powers in 1847; but Inverness was formerly very ill supplied with water. In 1875, however, a bill was obtained empowering the corporation to buy up the old company and introduce water by gravitation from Loch Ashie, $7\frac{1}{2}$ miles SSW of the town. The new waterworks—including a reservoir of 7,000,000

Seal of Inverness.

gallons' capacity at Culduthel, 2 miles S of the town—were opened in the end of 1877, and a supplementary supply, procured from the Altnascaich Burn, *en route*, was subsequently added, raising the supply to between 50 and 60 gallons per head per day. In 1878 a new telescopic gasometer, to contain 144,000 feet, was erected at a cost of £3515, and in 1892-93 another was added costing, together with other improvements, £10,000. A public recreation ground and a cemetery were purchased by the town council and laid out in 1893-94. The town has a head post office, for which new buildings have been erected in Queensgate at an outlay of £14,000. Besides the head office of the Caledonian Bank, there are branches of the Bank of Scotland, and of the British Linen Company, the Commercial, the National, the North of Scotland, the Town and County, the Union, and the Royal Banks. There are also a branch of the National Security Savings Bank, and a large number of excellent hotels. The newspapers are the Liberal-Unionist *Inverness Courier* (1817), published on Tuesday and Friday; the Conservative *Northern Chronicle* (1881), published on Wednesday; the Liberal *Highland News* (1883), published on Saturday; and the Independent-Liberal *Scottish Highlander* (1885), published on Thursday. There are three mason lodges—St Andrew's Royal Arch Chapter (No. 115), St John's Kilwinning (No. 6), St Mary's Caledonian Operative (No. 339). Among the miscellaneous institutions may be noticed the Highland Club, the Amateur Dramatic Club, a branch of the Bible Society, a Young Men's Christian Association, several Young Men's Mutual Improvement Societies, the Inverness Scientific Society and Field Club, the North of Scotland Tactical Society, the Choral Union, the Northern Counties Institute for the Blind (in the old High School; opened in 1881), the Gaelic Society, the Curling Club, the Bowling Club, the Golf Club, the Northern Counties Cricket Club, the Tennis Club, the North of Scotland Heritable Investment Company, the Inverness British Workman Public House Company, a Coal and Clothing Society, four Friendly Societies, and a Farmers' Society. Inverness has six batteries of artillery volunteers and four companies of rifle volunteers. In connection with these the Highland Rifle Association, established in 1861, holds a meeting at Inverness every autumn. Sheriff small debt courts are held every Tuesday; Quarter Sessions meet on the first Tuesday of March, May, and August, and on the last Tuesday of October; Justice of Peace small debt courts are held every month, and for other business as required.

Inverness, with Forres, Fortrose, and Nairn, returns a member to parliament. Parliamentary constituency (1895) 2771; municipal constituency 3409, including 638 females. Valuation (1875) £56,709, (1883) £83,641, (1895) £103,111. Pop. (1831) 9663, (1841) 11,592, (1851) 12,793, (1861) 12,509, (1871) 14,469, (1881) 17,385, (1891) 20,855, of whom 6356 were Gaelic-speaking, and 11,113 were females. Houses (1891) inhabited 4566, vacant 115, building 13.

See Burt's *Letters from a Gentleman in the North of Scotland* (Lond. 1754); Shaw's *History of the Province of Moray* (Edinb. 1775; 3d ed., Glasg., 1882); Leslie and Grant's *Survey of the Province of Moray* (Aberdeen, 1798); Maclean's *Reminiscences of Inverness* (Inv. 1842); Taylor's *Edward I. in the North of Scotland* (Elgin, 1858); the various editions of Anderson's *Guide to the Highlands*; Fraser-Mackintosh's *Antiquarian Notes* (Inv. 1865), and his *Invernessiana* (Inv. 1875).

Inverness Railway. See HIGHLAND RAILWAY.

Inverness-shire, a great Highland county, extending across Scotland from the E coast along the upper reaches of the Moray Firth to the Atlantic on the W coast beyond the Outer Hebrides. It is bounded on the N by the county of Ross and Cromarty and the Moray Firth, on the E by Nairnshire, Elginshire, Banffshire, and Aberdeenshire, on the S by Perthshire and Argyllshire, and along the W by the Atlantic Ocean. The boundaries of Inverness-shire, as affected by the neighbouring counties of Argyll, Nairn, and Ross and Cromarty, underwent considerable readjustment by the Boundary

Commissioners in 1891. Of those parishes partly in Inverness-shire and partly in Argyllshire—namely, Ardnamurchan, Kilmallie, and Small Isles—Ardnamurchan was left untouched, the Commissioners only recommending, as they had not power under the Act of their appointment to put the recommendation into effect, that this large parish be formed into two, making the boundary between the two counties the dividing line, and consequently placing the parish of North Ardnamurchan wholly within Inverness-shire, and that of South Ardnamurchan wholly within Argyllshire. Kilmallie parish, too, was left by the commissioners in both counties, the boundary between the two shires, however, being removed southward to a line drawn from the head of Loch Sheil eastward to and through the centre of Loch Eil—all of the parish north of this line being now in Inverness-shire. Small Isles parish (consisting of nine islands—Rum, Eigg, Canna, Muck, Sanday, and four smaller ones) was placed by the Commissioners wholly in Inverness-shire. Of the parishes partly in Inverness-shire and partly in Nairnshire, Daviot and Dunlichity and Petty have been placed wholly in the former county, and Cawdor wholly in the latter. The Nairnshire portion of Moy and Dalarossie parish having been transferred to the parish of Cawdor, Moy and Dalarossie is now restricted to the Inverness-shire portion of the old parish, so that the boundary here remains as formerly. The parish of Croy and Dalcross, except a detached part in Inverness-shire which was transferred to the parish of Inverness, was redivided between the two counties in such a way as to avoid the inconveniences caused by the former boundary, with the result of leaving the parish pretty equally divided between them. One parish, Urray, partly in the county of Inverness and partly in that of Ross and Cromarty, was restricted to the latter county, the Inverness-shire portion having been transferred to the Inverness-shire parish of Kilmorack. This caused no change in the county boundaries, but by the transfer of the Tomich detached portion of the parish of Kilmorack to Ross and Cromarty (to the parish of Urray) a slight change was caused in the boundaries of the two counties. As regards the boundary with Elginshire, this has been left undisturbed, Cromdale parish, that was formerly in both counties, having been restricted to the Elginshire portion, and the Inverness-shire portion transferred to an Inverness-shire parish (Duthil and Rothiemurchus). Besides these alterations on the parishes touching the county boundaries, there has been extensive rearrangement of the boundaries of the interior parishes, for which, however, see the separate articles.

The shape of Inverness-shire is very irregular. The compact mainland portion of the county may be said to extend from Ben Attow on the W to the Cairngorm Mountains on the E, a distance as the crow flies of 69 miles; and from Beauln on the N to the river Leven on the S, a distance of 57½ miles. From this, between Loch Loyne and Glen Loy, a prolongation passes westward, widening as it goes till it embraces the whole chain of the Outer Hebrides except Lewis. From the W coast of South Uist to Loch Loyne, measuring in a straight line, is a distance of 92 miles; and along the line of the Outer Hebrides, from Harris to Barra Head, the distance is 91 miles. Inverness is the largest county in Scotland, the total area previous to the rearrangement of boundary in 1891 being 4088·3 square miles or 2,616,545 acres, excluding 91,775 acres of foreshore and water. Of this enormous total, however, only 150,725 were in 1895 under crop, bare fallow, and grass, and 168,738 under planted wood; all the rest being natural wood, rough hill grazing, heath, peat, or stony waste. And it is not therefore to be wondered at that the county should be on the average the second least densely populated in the country, there being 22 persons to the square mile, while Sutherland has only 11. There are 44 inhabited islands in the county, with a population of 34,307. Of the total area 737,740 acres belong to the island, and the rest to the mainland, portion of the county.

Starting at the extreme NW corner at the head of

Loch Resort in Lewis, the boundary line curves across Lewis and Harris to the centre of Loch Seaforth, and then, striking south-eastward across the Minch, takes in the whole of Skye, and passes up the Inner Sound between Raasay and the mainland, between Longa and Croulin Mhor, through Kyle-Akin, along Loch Alsh, and half-way up Kyle Rhea. There it quits the sea, and strikes E by S along the watershed, between Loch Duich and Glen Shiel on the N in Ross-shire, and Loch Hourn and Glen Quoich to the S in Inverness-shire, for a distance of about 22 miles at an average height of about 3000 feet above sea-level, to the eastern shoulder of Aonachair Chrith (3342 feet), where it turns abruptly S for a mile to the river Loyne, the course of which it follows through the centre of upper Loch Loyne to lower Loch Loyne (700). About $\frac{1}{2}$ mile from the upper end of Loch Loyne the line turns for 3 miles to the NW, and then N across Loch Clunie (606 feet), and in an irregular line up to the high ground, where it again takes an irregular line south-westward, following the watershed by Sgurr nan Cnabhairan (3634), Garbh Leac (3673), Ciste Dhubbh (3218), Carn Fuaralach (3241), and Sgurr a' Bhealach Dheigh (3378), all at the upper ends of Glen Moriston and Glen Affrick, and so to Ben Attow (3383). Here it turns to the north-eastward by Sgurr nan Ceathreamhnan (3771 feet) and Mam Soul (3877), beyond which it quits the watershed, and, crossing a stream flowing into Loch Moyley, passes on to Loch Monar about a mile from the W end of the loch. From this it takes an irregular line eastward along the high ground between Strathfarrer and Glen Orrin till it reaches the Highland railway midway between Beaully and Muir of Ord stations. From this it sends a pointed projection northward to Muir of Ord station, where it crosses the railway and curves back to the estuary of the river Beaully, 2 miles below the town. The boundary is then the Beaully Firth, the Firth of Inverness, and the Moray Firth, to Delniet, 4 miles E of Fort George. Here it strikes southward in an excessively irregular line to Culloden Muir, and then irregularly by artificial lines south-eastward to the river Dulnain at Muckrach; passes along the Dulnain to the Spey, down the latter river for about 8 miles, and then SE to Allt Mor Burn, up which it keeps to the source; and then strikes across to the Water of Ailnack about $3\frac{1}{2}$ miles from its mouth. It proceeds up this burn to a height of 2059 feet, and then strikes SW by Caiplich (3574), and along the whole watershed of the Cairngorms, the principal summits being Cairngorm (4084) and Braeriach (4248). About midway between Cairngorm and Braeriach the boundaries of Banff, Inverness, and Aberdeen all meet. About a mile beyond Braeriach, and just above the main source of the Dee, the line takes a southerly direction to Cairn Ealar (3276 feet), where the boundaries of Aberdeen, Inverness, and Perth meet, following all the way the watershed between the burns that flow down into the Dee, and those that pass by Glen Feshie to the Spey. From the mountain just named the line takes a very irregular westerly direction along the watershed between the burns on the S in Perthshire flowing by Glen Tilt and Glen Garry to the Tay, and those flowing to the N by Glen Tromie and Glen Truim to the Spey, until it reaches Loch Erich (1153 feet), near the centre of the SE bank. The principal summits along this line are Carn na Caim (3087 feet), the Boar of Badenoch (2432), the Atholc Sow (3175), and Beinn Udlaman (3306). After turning southward along the centre of Loch Erich for $4\frac{1}{2}$ miles, it passes up the burn of Uisge Alder to the top of Beinn Chumhann (2962 feet), and then along the watershed between the burns that flow to Loch Rannoch and those that flow to Loch Treig (784), until it reaches the E end of the basin of the Leven. The highest summits here are Sgor Gaibhre (3128 feet) and Carn Dearg (3084). From the top of the basin of the Leven the line keeps westward along the valley and down the course of the river to Loch Leven, then NE and W along Loch Eil, and running farther westward reaches Loch Shiel. The boundary from the head of Lower Loch Eil until 1891 ran along the course of the

river Lochy to a point midway between Loch Eil and Loch Lochy, where it struck westward irregularly along the watershed, which it descended to the river Callop, $\frac{2}{3}$ mile above Loch Shiel. The highest summits are Stob a' Ghrianain (2420 feet), Coille Mhor (2071), Meall a' Phubuill (2535), Gulvain (North, 3224; South, 3148), Streap (2988), and Beinn nan Tom (2603). Passing down Loch Shiel, the line includes the islands of Bigg, Muck, Rum, Canna, and Sanday, and then takes in the whole of the Outer Hebrides (including St Kilda), all the way N till it reaches Loch Resort once more. For an account of the island districts the reader is referred to the articles HEBRIDES and SKYE, that which follows here being chiefly confined to the mainland part of the county.

Districts and Surface.—There are throughout the county a large number of districts with separate names. The Great Glen of Alban, passing in a NE and SW direction from the Moray Firth at Inverness, by the river Ness, Loch Ness, the river Oich, Loch Oich (105 feet), Loch Lochy (93), and the river Lochy to Loch Eil, forms a great natural division between the eastern and western divisions of the county. Taking the region to the W of this, and starting from the N, there are the three parallel Glens of Strathfarrer, Cannich, and Strathaffric, which, uniting and widening at the lower end, give place to Strath Glass along the upper waters of the river Beaully. The district occupying the high ground between the river Beaully and the river Ness is known as The Aird, beyond which, along towards the lower part of Glen Urquhart, is Caiplich. To the E of Strathaffric is Glen Urquhart, which opens at its lower end on the Great Glen about 7 miles from the NE end, and farther S is the larger and more important Glen Moriston, opening on Loch Ness about $5\frac{1}{2}$ miles from its SW end. Farther S still, and passing due westward from Loch Oich, is the long narrow Glen Garry, to the S of which, and parallel with it, is the hollow occupied by Loch Arkaig, at the commencement of the Lochail country. This hollow is continued westward by the smaller Glen Pean and Glen Dessary. To the W, along the Sound of Sleat are:—Glenelg, between Glenelg Bay and Loch Hourn; Kuoydart, between Loch Hourn and Loch Nevis; Morar, between Loch Nevis and Loch Morar; Arasaig, between Loch Morar and Loch Ailort; and Moidart, between Loch Ailort and Loch Shiel. The whole of this region forms the wildest and roughest part of Inverness-shire.

While the valleys and ridges to the W of the Great Glen have an E and W direction, those to the E of that line mostly run from NE to SW. Extending along the eastern shore of Loch Ness is the district known as Strath Errick—a tableland about 400 feet above sea-level. At the SW end of Loch Ness is Glen Tariff; while at the NE end, along Dochfour, is Strath Dores. Across the high ground E of this is Strathnairn, along the upper waters of the river of the same name. This is followed by Strathdearn along the upper waters of the Findhorn, and this, again, by the upper portion of Strathspey, while to the E of the Spey, on the borders of the county, beyond the Braes of Abernethy, is the wild district along the western side of the Cairngorms. Along the north-eastern border of the county, between the Nairn and the Findhorn, is Moy. Above Kingussie the valley of the upper Spey runs more nearly from W to E, and from it the smaller glens of Markie (N) and Mashie (S) branch. The high ground W of Glen Mashie between that and the Pattack, which flows into Loch Laggan, is the watershed between the Atlantic and the German Ocean. To the S of the Spey, and including Glen Spean, Glen Roy, Glen Treig, Glen Nevis, and some smaller glens, is the great district of Lochaber. To the SE of the Spey, and extending from the Braes of Abernethy on the N to the head of Glen Spean, and lying along the borders of the counties of Perth and Aberdeen, is the other great district—Badenoch—which includes the Glens of Feshie, Tromie, Truim, and Calder, as well as most of the basin of Loch Laggan and the north-eastern part of the basin of Loch Erich.

Inverness is the most mountainous county in Scotland, and has the most rugged and uneven surface. In the immediate neighbourhood of the town of Inverness and along the shore of the Beaully Firth there is a flat strip of no great extent, and from this there rises a series of uplands which pass into lofty hills in all directions in the interior and on the borders of the county, till finally, near the south-western extremity of the county at Ben Nevis (4406 feet), the highest point of Great Britain is reached. The range of heights to the N of Strathfarrar attains a height of from 1500 to 1800 feet, and the same height is reached between Strathfarrar and Glen Cannich. Those between Glen Cannich and Strathaffric rise to the westward to a still greater height until they terminate at Mam Soul and the lofty summits about Ben Attow. From Ben Dubh or Ciste Dubh (already mentioned), a line of heights runs eastward to the shore of Loch Ness between Strathaffric and Glen Urquhart on the N, and Glen Moriston on the S, and reach an average height of over 2000 feet, the principal summits from W to E being Sgurr nan Ceathramhan (3614 feet), Tigh Mor (3222), Aonach Shasuinn (2901), Carn a Choire Chruaidh (2830), Carn a Choire Leith (2118), and Mealfourvie (3060) close to Loch Ness. Between Gleu Moriston and Glen Garry the heights are about 2000 feet, but along the boundary line W of the source of the river Loyne they rise to over 3000, the principal being Aonachair Chrith (3342), Sgurr an Lochain (3282), Creag nan Damh (3012), and The Saddle (3317). Between Glen Garry and Loch Arkaig the majority of the heights are over 2000 feet, and a few approach or are over 3000. The principal summits are Sgor Choinich (2450 feet), Geal Charn (2636), Meall Coire nan Saobhaidh (2695), Beinn Tee (2956), Sron a Coire Ghairbh (3066), Meall Coire Lochain (2971), and Glas Bheinn (2398). To the S of Loch Arkaig are the heights on the boundary between the Lochy and Loch Shiel already mentioned, and on the E above the Lochy the great mass of Beinn Bhan with a double summit (West, 2522; East, 2613). The district to the W of this, intersected by the sea-lochs on the Sound of Sleat between Glenelg and Moidart, is very rugged, a considerable number of the hills approaching 3000 feet, and at Gleourach (3395), Sgurr a' Mhobraire (3365), Scour Gairloch (3015), Sgor Mhor (3290), Sgor na Ciche (3410), Sgor nan Coireachan (3125),* Sgor Choileam (3164), and elsewhere surpassing that height. Near the south-western extremity of the county is BEN NEVIS (4406 feet), with the shoulders known as Carn Dearg, one (3961) to the NW of the summit, and the other (3348) to the SW, while beyond the hollow occupied by the tarn is Meall an t'Suidhe (2322). To the S beyond Glen Nevis a rough sea of hills passes away to the boundary, the principal being Mullach nan Coirean (3077 feet), Stob Ban (3274), Sgor a' Mhaim (3601), Am Bodach (3382), Binnein Mor (3700), and Binnein Beag (3083) on the S side of Glen Nevis; while E of this are Glas Bheinn (2587), Beinn Bhreac (2863), and Leim Uilleim (2971). To the N of Ben Nevis the ground falls at first rapidly, and then more slowly towards Glen Spean, while to the eastward and north-eastward the long line of the Grampians begins with Aonach Mor (3999 feet), and Aonach Beag (4060), which are mere offshoots from the great Ben, the ground between sinking only to 2915 feet. Continuing north-eastward the principal summits of those that rise to a height of over 3000 feet are Stob Coire an Easain (3545), Stob Ban (3217), and a nameless summit to the W (3750); Stob Choire an Easain Mhor (3658), immediately to the W of Loch Treig; Cnoc Dearg (3433), E of Loch Treig; Beinn na Lap (3066), NW of Loch Ossian; Beinn Eibhinn (3611), Aonach Bea (3646), Beinn a' Chlachair (3569), Creag Peathraich (3031), and Mullach Coire an Iubhair (3443), all in a line to the NE of Loch Ossian; one of the many Carn Deargs (3391) and the huge mass of Ben Alder (3757), with the lower top of Beinn Bheoil (3333), to the NW of Loch Ericht; Gealacharn (3005), E of Loch Ericht; Stac Meall na Cuaich

* This is N of Glen Dessary. There is another Sgor nan Coireachan (3133 feet) S of the head of Glen Pean.

(3000), between the upper parts of Glen Truim and Glen Tromie; and Meall Tionail (3338), Meall Dubh-achadh (3268), Carn Ban (3443), and Sgor an Dubh (3658), all to the E of the upper part of Gleu Feshie. To the E of these is Monadh Mor (3651 feet) on the border of the county as the Grampians pass away into Aberdeenshire. To the NE are the Cairngorms, the principal summits of which have been already given as occurring on the borders of the county. In the part of Lochaber to the NE of Ben Nevis beyond Gleu Spean, and between Glen Roy and Loch Laggan, and extending N to the Spey, are a large number of hills from 2000 to 3700 feet high, the chief being Beinn a' Mheirlich (2994), the double-topped Beinn a' Chaoruinn (South, 3437; North, 3422), An Cearcallach (3250), Creag Meaghaidh (3700), and Carn Liath (3298). To the W of this the ground rises rapidly from the Spean, and a ridge runs north-eastward between Glen Gloy and Glen Roy parallel to Loch Lochy, the hills gradually rising in height till at Corryarrick a height of 2922 feet is reached between Loch Spey and the head of Glen Tarff. From this the chain of heights known as the Monadhliath Mountains stretch first E along the N side of the upper course of the Spey and then NE between the Spey and the Findhorn, till within about 5 miles of the boundary between Inverness-shire and Elginshire. The principal summits are Garbh Bheinn (2920 feet), Geal Charn (3036) close to Glen Markie, Carn Mairg (3087), A' Chailleach (3045), Carn Sgulain (3015), and another of the same name farther to the NE (2606). At the higher Carn Sgulain the range is split by the river Dulnan, down the sides of which the heights pass at an average elevation of about 2500 feet. A branch of the Monadhliath Mountains also passes NE between the upper waters of the Nairn and Findhorn, the chief summits being Carn a' Choire Ghlaise (2555 feet), Doire Meurach (2582), Carn na Saobhaidhe (2657), Carn Odhar (2618), Beinn Bhuidhe (2329), and Beinn Bhreac Mhor (2641). The district between Mam Soul and Moidart along the watershed between the E and W coasts is the wildest and roughest part of the whole shire, and has in consequence got the name of the 'rough bounds.' From many parts of it good views may be obtained of the surrounding districts, and particularly at the head of Glen Pean westward from Loch Arkaig. Here Glen Dessary is seen to the N, Loch Morar lies below, and away beyond is a wide expanse of sea sprinkled with islands—Skye on the right; with Rum, Eigg, and Canna, and the Outer Hebrides like a cloud on the distant horizon.

Rivers and Lochs.—There are a considerable number of rivers throughout the county, and the small streams are simply innumerable. In the NW Glen Cannich is drained by the Cannich and Strathaffric, in the upper part by Grivie Water, and then by the river Glass. These unite near the upper end of Strathglass, and at Erchless Castle are joined by the Farrer from Strathfarrar, and thereafter the river thus formed flows eastward and enters the sea at the W end of the Beaully Firth. From the Aird the burus of Moniak and Bunchrew flow N to the Beaully Firth; while the drainage of the whole of the Great Glen NE of Loch Oich is carried off by the river Ness, which enters the sea at the town of Inverness. The only streams of any size that it receives are the burn of Leys and the Allt Mor or Big Burn, which flows from Loch Ashie. The drainage of the south-western part of the Great Glen is carried off by the river Lochy, which enters the sea at Loch Eil. Passing first along the W side, Glen Urquhart is drained by the Enrick, and the Coiltie and Glen Moriston by the river Moriston, which in its upper portion receives the Doe (N) and the Loyne (S). These flow into Loch Ness; and along the banks of the loch there are also a number of smaller burns, the principal being the burn of Abriachan, N of Glen Urquhart. On a small stream flowing into the Coiltie are the picturesque falls of Divach. Loch Oich and Loch Ness are connected by the river Oich. Glen Garry is drained by the river Garry, which flows into Loch Oich, and receives an immense number of tributaries, the principal being the Kingie (S). Loch

Lochy receives, all along, a number of small burns; while near the SW corner it is entered by the Arkaig from Loch Arkaig, carrying off the drainage of the whole district lying in the hollow eastward of Glen Dessary and Glen Pean. The river Lochy receives the fair-sized stream that issues from Glen Loy in the Locheil district. In the district between Glenelg and Moidart there are numerous streams falling into the various sea-lochs. On the E side of the Great Glen the north-eastern part of Strath Errick is drained by the river Foyers and the streams E which flow into it. The region between Corryarrick and the SW end of Loch Ness has its drainage carried off by the Doe and Tarff, of which the former enters the loch about a mile from, and the latter at the SW end, close to Fort Augustus. The country immediately E of Loch Oich is drained mainly by Calder Burn, which enters the loch at the NE end; while the district immediately E of Loch Lochy is drained mainly by the stream that issues from Glen Gloy, and enters the loch 2½ miles from its SW end. Almost immediately after leaving the loch, the Lochy receives the large tributary of the Spean, which carries off the drainage of almost the whole of Lochaber. Its principal tributaries are the Roy, from Glen Roy on the N; the Treig, from Loch Treig; the Gulbin, from Loch Ossian; and the Pattack, which flows into Loch Laggan. Round Glen Gloy, Glen Roy, and Glen Spean are the fine terraces marking old lake margins, and so well known under the name of 'parallel roads.' The drainage of the NE flanks of Ben Nevis also passes to the Spean; but that of the N and NW is carried off by the river Lundy, which enters the Lochy about 2 miles from the mouth; while that to the S and SW is carried off by the Nevis, which enters Loch Eil at Fort William. From Mamore comes the Water of Kiachnish, which enters Loch Eil farther S. Besides all these, a large number of burns flow directly into the various lochs, but they are all of small size.

Excepting the basin of Loch Erich—the rainfall of which passes off to the Tummel—and the burns that flow into Loch Laggan, the whole of Badenoch is drained by the Spey and its tributaries, as are also the S and SE sides of the Monadhliath Mountains, the Grampians from Loch Erich to the borders of Aberdeenshire, and the NW side of the Cairngorms. The principal tributaries from the N and NE are Markie Burn, the river Calder, and the river Dulnan, the latter being so large as to have a sort of subsidiary basin midway between the Spey and the Findhorn, and about 20 miles long. The tributaries on the S and SW are Mashie Water, the rivers Truim, Tromie, Feshie, Druie, and Nethy. The drainage of the remaining part of the county between the Monadhliath Mountains and Strath Errick is by means of the rivers Nairn and Findhorn and their tributaries, the chief of those joining the former river being Allt Beag and the Craggie Burn, both from the SE; while joining the latter river are the Kyllachie Burn and the Moy or Funtack Burn, both from the W.

There are within the county, speaking only of the mainland part, ninety lochs of fair size, besides a very large number of lochans. The principal lochs only can here be mentioned, and these are taken in connection with the districts in which they lie. The figures give the heights above sea-level, and for other information reference may be made to the separate articles dealing with them. In Strathfarrar, Loch a' Mhuilinn (418 feet) and Loch Bunacharan (367); in Glen Cannich, Loch Mulardoch (705); in Strathaffric, Loch Beneveian (720) and Loch Affrick (744); in Glen Urquhart, Loch Meiklie (372) on the Enrick, and Loch Aislaich (1310) on the Coiltie; in Glen Moriston, the lower half of Loch Clunie (606); along Glen Garry, Loch Lundie (445), Loch Garry (258), Loch Poulary (310), Loch Quoich (555), and Lochan nam Breac (574). Loch Quoich receives the river Quoich, and Loch Garry also receives some fair-sized streams. In the Arkaig valley is Loch Arkaig (140 feet); in the Great Glen, Loch Lochy (93), Loch Oich (105), Loch Ness (50), and Loch Dochfour (50); in Strathdores, Loch Ashie (716); in Stratherrick, Loch Duntelchak

(702), Loch Ruthven (700), Loch Farraline (650), Loch Garth (618), Loch Killin (1057), Loch Kemp (545), Loch Knockie (690), and Loch Tarff (956)—the latter not, however, in Glen Tarff, but to the N of it. Between the Nairn and Findhorn, 3½ miles SW of the boundary with Nairnshire, is Loch Moy, draining into the Findhorn. On the Spey are Loch Inch (721 feet) and Loch Spey (1142); while in the basin drained by this river and by its tributaries are Loch Garten (726), Loch Phituilais (674), Loch Morlich (1046), Loch Alvie (685), Loch au Eilein (840), Loch Eunach (1700), Loch an t'Seilich (1400), Loch Bhradain (1460), half of Lochan Duin (1680), the rest being in Perthshire, Loch na Cuaich (1298), Loch Coultrie (1150), Loch Crunachan (890), and Loch Dubh (2200). On the SE border of the county is part of Loch Erich (1153 feet); in the valley drained by the Spean, Loch Laggan (819), Lochan a b-Earba (1140), Loch a' Bhealaich Shleamhuinn (2116), Loch Pattack (1430), Loch a' Bhealaich Bheithe, between Ben Alder and Ben Bheoil (2347), Loch Gulbin (1150), Loch Ossian (1269), and Loch Treig (784); on Ben Nevis, Lochan Meall an t'Suidhc (1820); to the S of Glen Nevis, Lochan Lunn Da Bhra (511), Loch Eilde Beag (1180), and Loch Eilde Mor (1120). The whole of the principal rivers and lakes abound with fish of various kinds, and furnish capital sport.

As might be expected, the scenery in such a county is very varied. The greater part of the county shows little but a sea of hills, with bare brown undulating expanses of moor between, and intersected by hollows occupied by streams or lochs, the whole being in most places very dull and dismal except when the heather is in bloom. Many of the hollows are, however, well wooded, and have fertile haughs along the banks of the rivers. This is particularly the case along the line of the Great Glen, in Glen Moriston, in Glen Urquhart, in Strath Glass, in Moy, along part of Strathdearn, and particularly in the valley of the Spey below its junction with Glen Truim. There is also a good wooded district about Loch Arkaig, on the opposite side of the county at the Aird, and eastward of Inverness by Culloeden towards Croy in Nairnshire; while the flat country along the margin of the Beaully Firth is well wooded and fertile. Details of the glens, lochs, and rivers will be found under the separate headings, as well as accounts of the fine scenery at the falls of Divach, Foyers, Kilmorack, and elsewhere.

Geology.—The geological history of the mainland portion of Inverness-shire is widely different from that of Skye and Raasay. These islands contain a grand development of Tertiary volcanic rocks resting unconformably on various members of the Secondary formations, to the description of which a separate article will be devoted. The mainland portion of the county is composed of metamorphic rocks, on which representatives of the Old Red Sandstone rest unconformably. Indeed, if we except a strip of ground stretching along the hanks of Loch Ness from Inverness, and a limited tract in the Beaully basin, the remainder of the area is occupied by stratified crystalline rocks and the granite masses associated with them. According to the generally-accepted theory, these metamorphic rocks are regarded as altered sedimentary deposits of Silurian age. No detailed investigations have as yet been made with the view of determining the order of succession of the strata between Glenelg and the crest of the Grampians, and hence at present only a general outline can be given of the types of strata represented in the area, and some of the larger folds. In the W part of the county, along the shores of Loch Hourn, and on the serrated peaks that overlook the fiord, the beds consist of finely-stratified micaceous and quartzose flagstones, which are inclined to the SE at comparatively low angles. In these beds are found bands of gneiss and micaceous quartzose grits, but the flagstones form the dominant members of the series. This succession continues, with the same SE inclination, as far as Loch Quoich, where a great synclinal fold occurs, and the same beds reappear, with a NW inclination, for several miles. Beyond this point, as we

descend Glen Garry, the strata are repeated by a series of undulations, till on approaching the Great Glen they have a decidedly NW dip. Crossing the Great Glen and ascending the valley of the Spean, we find a succession of quartzose flagstones with bands of mica schist, which are overlaid by mica schists with limestones, the whole series dipping towards the SE. From these data, as well as from the occurrence of crystalline limestones in the island of Lismore, Sir Roderick Murchison and Sir Archibald Geikie inferred that the Great Glen coincided with an anticlinal fold, which gradually increased towards the SW, and brought to the surface the Silurian limestones and overlying quartzose flagstones of Ross and Sutherland. Above the Bridge of Spean the limestones and mica schists are associated with hornblende rocks, and these are succeeded by a great development of sericite schists, quartz schists, and ordinary mica schists. Further to the E, along the crest of the Gampians at Dalwhinnie, there is an anticlinal fold in gray micaceous gneiss, schists, and quartzites, which underlie the crystalline limestone series of Perthshire. It is probable, therefore, that subsequent investigations may prove that the latter are on the same horizon as the limestones, mica schists, and hornblende rocks of Glen Spean.

There is one section in the county of special importance, on account of the variety of minerals obtained from the beds. It occurs in Glen Urquhart, not far from Drumadrochit, where the mica schists and gneiss are associated with crystalline limestones and serpentine. The following minerals have been obtained from this locality by Professor Heddle: orthoclase, andesine, biotite, edenite, hydrous anthophyllite, tremolite, zoisite, kyanite, chondrodite, Wollastonite, sphene, and garnet. Another celebrated mineralogical locality occurs in the N of the county at Struy. There the minerals are embedded in a pegmatite vein, which seems to have participated in the foldings of the micaceous gneiss on either side. The predominating mineral in the vein is feldspar of two very different tints, one displaying a delicate pink tinge when the rock is freshly fractured, and the other a blue shade. Notwithstanding this difference in colour, the chemical analysis points to the conclusion that the feldspar is orthoclase. Associated with the feldspar are muscovite, tourmaline, garnets, and, still more rarely, zircon with beautiful hexagonal crystals of beryl. In the course of the excursions of the Inverness Field Club, a blue mineral was found in considerable abundance in the gneiss and granite between Inverness and Abriachan, which on analysis proved to be a new mineral, and which has since received the name of Abriachanite. Reference ought also to be made to the fine crystals of epidote occurring in the granite on the shores of Loch Ness near Dochfour.

Numerous granite masses are associated with the stratified crystalline rocks, chiefly to the E of the Caledonian Canal. There is one area of considerable extent, however, to the W of the Great Glen, along the shores of Loch Ness at Abriachan. A portion of the granite mass forming the Ben Macdhui range is included in this county, and also a fragment of the Rannoch area, while small bosses occur to the E of Loch Errocht. One of the most interesting of these granite masses is that which forms Ben Nevis, because it shows in a conspicuous manner those lithological variations peculiar to this type of rock. The lower portion of the mountain is composed of coarsely crystalline granite, with the normal constituents, while the crest consists of grey and pink porphyritic felsite.

The representatives of the Old Red Sandstone form a continuous belt along the E side of the Great Glen, from Culloden Moor to near the Falls of Foyers; while beyond Fort Augustus they are traceable along the E shore of Loch Oich. Again, on the W side they extend from Clachnaharry by Craig Phadrick to near the mouth of Loch Ness, reappearing on both sides of Glen Urquhart, and capping Mealfourvie. At the base of the series the beds consist of coarse breccias and conglomerate, resting unconformably on the crystalline rocks, and

passing upwards into chocolate sandstones and flags, with the well-known band of nodular limestone containing ichthyolites. The basal beds are admirably displayed on Mealfourvie, on the hills between Inverfarigaig and Loch Duntelchaig, and also in the river Nairn near Daviot. The blocks in the conglomerates and breccias are composed of the underlying gneiss, mica schists, and quartzites, along with fragments of granite and porphyritic felsite. Indeed, so numerous are the granite blocks in the breccias near Inverfarigaig, that the inference seems obvious that the contiguous granite mass is older than the Old Red Sandstone of the Great Glen. Many of the breccias and conglomerates show manifest proofs of alteration, evidently resulting from the repeated earth movements along the Great Glen. The well-known fish bed is visible in the Big Burn near Loch Ashie, and also in the Nairn section at Nairn-side, where it has yielded to Mr Wallace of Inverness remains of *Diplopus*. This horizon is succeeded by a considerable development of purple flags, with occasional bands of grit containing fish scales. At various horizons the flags are fossiliferous; but at Hillhead quarry, S of Dalcross station, fine plates of *Asterolepis Asmusii* have been obtained.

In the Beaulieu basin there is also a considerable thickness of the basal conglomerates and breccias, which give rise to the picturesque scenery at the Falls of Kilmorack. They are traceable S by Belladrum House, in the direction of Abriachan.

The Great Glen is perhaps the most conspicuous example in Scotland of the coincidence of a valley with a great fracture in the earth's crust. Whether this fracture may be of pre-Old-Red-sandstone age, it is impossible to say in the present state of our knowledge. But from the distribution of the conglomerates and breccias along the Great Glen, it is evident that a hollow at least must have existed along that line as far back as the beginning of Old Red Sandstone times. The high inclination of the conglomerates and sandstones, as well as the proofs of dislocation of the strata, clearly show that they are traversed by a fault. Still further to the NE, at Eathie, Port-an-Righ, and Cadh-an-Righ, on the W shore of the Moray Firth, patches of oolitic strata have been thrown against the cliffs of Old Red Sandstone by a fault, the downthrow being to the SE. The direction of this fault coincides with the trend of the fracture traversing the Great Glen; and if the one be a continuation of the other, it would show that there must have been displacement of the strata along that line at a period later than the upper oolite. It is probable, however, as has been suggested by Sir Archibald Geikie, that this fracture may be of ancient date, and that it has been affected by subterranean movements at different geological periods.

Everywhere throughout the county there are manifest proofs of intense glaciation. The splendid *roches moutonnées* and striated surfaces, the gentle slopes of boulder clay, the innumerable moraine heaps, all point to prolonged glacial action in these Highland valleys. The Great Glen naturally formed the chief outlet for the ice which streamed from the valleys on either side of it; but during the maximum glaciation the ice-flow did not always coincide with the lines of drainage in these tributary valleys. Indeed in some cases the ice actually ascended the valleys, as in the case of Glen Roy, described by Mr Jamieson. The occurrence of Old Red Sandstone fragments at considerable elevations in the NE of Inverness-shire, and in the adjoining county of Nairn, to which they have been carried by ancient glaciers, indicates that the ice must have been so thick as to override the hill-tops at the mouth of the Great Glen. But in addition to these interesting facts bearing on the great extension of the ice, there is conclusive proof of the existence of milder periods, when the ice-sheet disappeared from the surface of the country. In the heart of the boulder clay are found beds of sand, gravel, and clay, of considerable thickness, some of which are marine and others probably of fresh-water origin. These are best developed in the adjacent county

of Nairn, where they have yielded marine shells; and a description of them will be given in connection with the geology of that county.

Of the various superficial deposits connected with the glacial period in Scotland perhaps none has given rise to greater controversy than the Parallel Roads of Lochaber. Their remarkable features, and the interesting questions which they present for solution, have excited the attention of geologists from the beginning of the century. They are seen to best advantage in Glen Roy, a tributary of the Spean, to the S of which lies the mass of high ground round Ben Nevis. In Glen Roy there are three terraces which are traceable to the head of the valley; their heights above the sea-level being 1148, 1067, and 855 feet respectively. The lowest of these is prolonged into Glen Spean following the windings of that valley to the watershed separating it from one of the tributaries of the Spey. In Glen Gloy draining into Loch Lochy, the highest of these terraces occurs at a height of 1172 feet, while a second shelf in the same valley stands at 964 feet. The materials of which the terraces are composed consist for the most part of angular and sub-angular stones derived from the adjacent hill slopes which have not been subjected to much aqueous action. Indeed a minute examination of the blocks shows conclusively that they are of local origin, resembling the detritus which might be dislodged by ordinary atmospheric agencies of waste. The terraces vary in breadth from 40 to 70 feet, and they likewise have a gentle slope towards the middle of the valley. Throughout their course they remain perfectly horizontal, and on opposite sides of the valleys the corresponding terraces are precisely on the same level. An important feature connected with them which helps to throw light on the question of their origin, is the fact that each of the chief terraces nearly coincides in level with a *col* or water parting between two valleys. The highest of the parallel roads in Glen Roy is about the level of the *col* separating that valley from the head waters of the Spey, the second terrace is on the level of the Glen Glaster *col*, while the lowest of the three coincides in height with the pass at the head of the Spean.

Various ingenious theories have been advanced to account for their origin, but only one of these has met with general acceptance. It ascribes their origin to the action of glacier lakes during the glacial period. This theory, which was first suggested by Agassiz and supported by a strong body of evidence obtained by Mr Jamieson in 1863, and also by the later researches of Mr Jolly, seems to give the most satisfactory explanation of the phenomena. According to this theory the ice which streamed into the Spean valley from the glens round Ben Nevis partly flowed E by Glen Laggan and partly down the Spean into the Great Glen. So powerful was this vast accumulation of ice that it actually ascended the tributary valley of the Roy. As the climatic conditions became less severe and the ice retreated to the mouth of Glen Roy, a lake was formed the surface level of which was determined by the height of the *col* at the head of the valley. When the water stood at this level it was prevented from escaping by the Glen Glaster *col* owing to the accumulation of ice which radiated from the Loch Treig valley. As the ice retreated still farther the waters fell to the level of the Glen Glaster *col* when the second terrace was formed, and another stage in the retirement of the glaciers is indicated by the lowest shelf, which, as already indicated, is continued throughout Glen Spean and Glen Roy; the surplus water escaping by the Muckal Pass. In each case the huge barrier of ice held back the sheet of water for a considerable period, and it was during these intervals that the materials which were dislodged from the hill-slopes were arrested by the surface of the lake and were arranged in the form of a narrow shelving terrace.

Throughout the county there are magnificent examples of moraines deposited by the later glaciers either in the form of conical mounds or sinuous ridges running down the valleys or obliquely across them. The materials

vary in character from loose sandy matter with sub-angular stones, some of which are striated, to coarse gravel. Special reference ought to be made to the remarkable ridges of Torvean and Tomnahurich at the mouth of the Great Glen near Inverness, which may possibly be of morainic origin. The former runs obliquely across the valley to the Asylum Lodge, where it bifurcates, one branch extending to Dunain House, while the other skirts the Asylum road, and disappears at a height of about 350 feet. The branch leading to Dunain House stands on the 100-foot terrace, while the terminal portion is on the level of the 30-foot beach. The ridge of Tomnahurich, which is isolated from that of Torvean, rises from the level of the 30-foot beach to a height of about 200 feet above the sea. Occasionally the materials composing these ridges are rudely stratified, but more frequently they display no such arrangement, being merely a rude assortment of shingle or coarse gravel. The stones are such as might have been derived from the Old Red Sandstone areas, and from the metamorphic and igneous rocks of the district.

The 100-foot terrace forms a belt of richly cultivated ground, stretching from Inverness along the slopes of Culloden Moor by Fort George station to the county boundary. The deposits, which consist of sand, gravel, and stratified clays, laid down on stiff sandy boulder clay, have been much denuded, and hence the surface of the ancient sea-beach is somewhat irregular. Near Fort George, on the bluff cliff overlooking the 25-foot terrace, a section of dark blue clay is exposed, which yielded to Mr Jamieson remains of marine shells. This clay or fine silt is well-nigh free from stones, and is extremely tough, resembling in general character the late glacial clays of the same age in the basin of the Forth. The forms commonly met with are *Astarte sulcata*, *A. elliptica*, *Tellina calcarea*, *Leda pernula*, and from their appearance, as well as their position, it would seem as if they had lived and died in the deposit in which they are now found. Again, at Fort William marine shells have been obtained in ancient sea-beaches. Some of the forms are now confined to Arctic seas, while others are still common to the shores of Britain. The 25-foot terrace is very well marked in the neighbourhood of Inverness, and is traceable along the S shore of the Firth to Fort George, where it is covered by an extensive series of sand dunes.

Soils and Agriculture.—The soils vary very greatly, from much of the worst to a little of the best in Scotland. Along the river Beaulie and the upper part of the Beaulie Firth there is a considerable amount of clay, unprofitably rich in some cases, and producing the same crops as similar soils farther to the S; and the wheat and other kinds of grain reach maturity early. Strathglass and Strathfarar are stony, but have some good haugh and meadow soil. Along the Aird there is good black loam towards the border of the Firth, while towards the hills the soil is lighter but good. In both Glen Urquhart and Glen Moriston the soil is good, though in places very stony. The fringes and haughs of cultivated or cultivable land about the other glens to the W are small but of fair quality, and the same may be said of the minor districts to the E and of almost the whole of Lochaber and Badenoch. In Strathdores and the flat district along the Inner Moray Firth towards Fort George the land is mostly good and very productive loam, though parts of the latter are light and sandy, and a part about Fort George is mossy. In Strathnairn there are a few patches of haugh and some light sandy gravel, and the same holds good of Strathdearn. Along Strathspey there is a good deal of fertile loam, generally in the Inverness-shire part, tending to lightness, and this in the districts below Badenoch produces good crops with anything like a fair season, though the frosts are unseasonable. In the part of Strathspey in Badenoch and Laggan, where the height is from 900 to 1400 feet, there is no lack of good loam, but the climate is very unfavourable, the stools of cut grain being sometimes not got in till snow has begun to fall, while frosts remain

late in the season and commence early. The inhabitants of the rest of the county are not dependent on the cultivation of the soil.

Up till about 1820 farming operations in Inverness-shire were in a very backward state, and though a great stimulus was given to efforts for improvement by the new roads opened about 1820, and by the Caledonian Canal in 1822, it took a long time for it to tell. Between 1854 and the present time the area under crop of all kinds has increased more than 300 per cent. In 1845 there seem to have been in the whole county about 40,000 acres under crop of all kinds, including grass and hay in rotation. By 1855 this had grown only to 44,242 acres, while in 1866 there were 77,170; in 1876, 86,652; in 1882, 89,501; and in 1895, 150,725. The principal increase has taken place in the parishes of Ardersier, Croy, Daviot, and Dores; but the improvements in Strathspey and elsewhere are also considerable. Still, however, the percentage (5.4) of cultivated area is higher only than that of Sutherland (2.3), that for all Scotland being 25.1, and for Fife 79.1. The areas under the various crops are given in the following tables:—

GRAIN CROPS.—ACRES.

Year.	Wheat.	Barley or Bere.	Oats.	Total.
1854	1684	3764	13,674	19,032
1870	1467	6734	30,028	38,229
1882	38	8731	30,908	39,677
1895	2	6801	30,364	37,167

GRASS, ROOT CROPS, ETC.—ACRES.

Year.	Hay, Grass, and Permanent Pasture.	Turnips.	Potatoes.
1854	...	5,135	3524
1870	55,922	10,275	8340
1882	68,423	11,495	8245
1895	95,059	10,858	6297

while there are about 1344 acres annually under beans, rye, vetches, fallow, &c. Between 1867 and 1895 the permanent pasture never broken up has increased from 32,009 acres to 65,132. In the best agricultural part of the county—in the parishes of Ardersier, Dores, Kirkhill, Kilmorack, Kiltarlity, and Petty—the harvest is from a week to ten days later than in the Lothians; but in the other parts of the county the time is very variable. The farms are worked mostly on the five-shift rotation, while on the heavy clays at Beauly the four and six shift systems are mostly adopted. The average yield of wheat is 28 to 35 bushels, barley 35 bushels, oats 35 to 45 bushels, and turnips from 14 to 30 tons per acre. The very great decrease in the area under wheat is noteworthy, as, Elgin excepted, Inverness used to be the greatest wheat-growing county N of Kincardine.

The agricultural live stock in the county is shown in the following table:—

Year.	Cattle.	Horses.	Sheep.	Pigs.	Total.
1854	21,809	3038	542,028	1529	568,404
1870	45,901	7998	737,166	3404	794,469
1882	51,855	8949	703,954	3531	768,289
1895	51,799	6872	645,900	3019	709,590

The cattle belong to the Highland, cross, shorthorn, polled, and Ayrshire breeds, though the last is not very numerous, nor to be found in many localities except about the town of Inverness, where they are kept for dairy purposes. There was a very good herd of shorthorns at Dochfour from 1870 till its dispersal in May 1883 in consequence of the death of Mr Evan Baillie of Dochfour, but a number of the best animals were purchased for, and the Dochfour herd was re-established by, the present owner of the estate, Mr J. Evan Bruce Baillie. The Guisachan herd of polled cattle, founded in 1878, was dispersed in 1893. Since 1880 nearly 120 young bulls had been sold, at an average price of about £44, the top

figure being 130 guineas, while in one instance 500 guineas were given for a female bred at Guisachan. Of the Highland breed—the one natural to the county—there are more animals in Inverness-shire than in any other county of Scotland, and everywhere excellent examples of these cattle are to be found. One of the principal herds is that at Faillie, 7 miles S of Inverness. Crosses are good in a few places, but in most districts they are of a very nondescript character, and stand sadly in want of improvement. There was a fine herd at Morayston, Petty, which is now broken up; but good specimens are to be found about Beauly and in Strathspey. There are Clydesdale horses in the lowland districts, but the horses get lighter on the high grounds. For instance, in Badenoch they are smaller than in Strathspey, in Laggan smaller than in Badenoch, and in Lochaber smaller still. Small Highland ponies are very numerous. The principal breeds of sheep are the Cheviot and the blackfaced, of which there are about equal numbers. The finest Cheviots are generally to be found about Strathglass; and on the Braes of Lochaber, Laggan, and Badenoch the largest and finest flocks of blackfaced sheep in the county, and probably in the Highlands. In the lower district a few Leicesters and half-breds are kept. Hogs are mostly sold at Muir of Ord, wethers at Falkirk Tryst, and ewes and lambs at the great sheep and wool fair held annually at Inverness.

The area of the county, inclusive of the islands, may be estimated as follows:—Arable land under crops and permanent pasture, 150,725 acres; lakes and rivers, 124,500; woods, including all the natural wood, 168,738; deer forests, 350,000; which leaves the very large remainder of 1,990,000, of which about 1,000,000 provide feeding for sheep, while 823,000 are heath or waste, and of no value except for grouse moors, and some parts not even for that, so inaccessible or barren are they. The whole district under heath amounts probably to about 1,630,000 acres, or two-thirds of the entire county. The higher mountains are not covered with heath to the summit, nor are the mountains in all the districts equally bare. The hills of Lochaber have a good mixed pasture of grass and heath. Glennevis is of this description, though it skirts the highest mountain in Britain. The hills of Arasaig, Glen Pean, Glen Quoich, and Glen Roy—those on both sides of Loch Lochy, particularly at Lowbridge, where the hills in general are as green as a meadow—those on the sides of Loch Oich up to the NE end—those in Glenelg, at the head of Strathglass—and on the braes of Badenoch, are all green, and yield plentiful pasture. Along the 'rough bounds' on the other hand, as well as in Strath Errick and at the head of Strathnairn and Strathdearn, hardly a green spot is to be seen except along the streams. There is a considerable amount of peat moss lying on gravel, rock, or clay, and furnishing abundant supplies of fuel. It is curious that none of these mosses, except a patch at Corpach and one or two other places, lie in the bottom of valleys, but on land above their general level. The deer forests are numerous and extensive. The principal are Balmacaan Forest at the top of Glen Urquhart, Glenaffrick Forest at the top of Strathaffric, Guisachan Forest along the S side of Strathaffric, Invermoriston Forest N of the entrance to Glen Moriston, Portclair Forest S of the same entrance, Glenquoich Forest on the N side of Glen Garry E of Glen Quoich, Glengarry Forest between Loch Garry and Loch Lochy, Lochiel Forest on the S side of Loch Arkaig, Mamore Forest S of Glennevis, Ben Alder Forest between Loch Laggan and Loch Erich, the Forest of Drumochter E from Loch Erich, Gaick Forest across the upper part of Glen Tromie, Glen Feshie Forest in the upper part of Glen Feshie, and Glenmore Forest along the base of the Cairngorms. The game in the high woodlands and moors is red deer, roe deer, hare, black game, grouse, ptarmigan, and partridges. Foxes and otters are by no means uncommon, while the last Scottish wolf is said to have been killed in the Lochiel country in 1680 by Sir Ewan Cameron; but this is doubtful, as many districts in Scotland seem

to have possessed a veritable last wolf. At Abernethy and Rothiemurchus in Strathspey there are magnificent forests in which almost the whole wood is of natural growth. They were at one time much larger, but vast quantities of wood were cut down in the beginning of the 19th century. The principal estates, most of which are separately noticed, are Abertariff, Airds, Aldourie, Ardmore, Ardverikie, Balmacaan, Balmain, Balranald, Belladrum, Belleville, Bunchrew, Castle Stewart, Chisholm, Cluny, Congash, Culloden, Daviot, Dochfour, Farr, Fassifern, Fingask, Foyers, Glenmazeran, Glenmoriston, Glentruim, Golanfield, Gortuleg, Invereshie, Invergarry, Inverie, Inverlochry, Invertromie, Lakefield, Lentrán, Leys, Lochiel, Lovat, Moy, Ness, and Raigmore, exclusive of those in the islands noticed under HEBRIDES and SKYE. The commerce is centred at the town of Inverness, and has been noticed in our account of that place, and manufacturing industries there are practically none except a woollen manufactory and a distillery in Skye, and other two distilleries at Glennevis. The mainland fishery centre is at Fort William, and is noticed in that article. The island fisheries are noticed in the articles Hebrides and Skye. A large proportion of the inhabitants of Inverness and its neighbourhood speak English, but in other districts Gaelic is mostly spoken.

Communications, etc.—For its first respectable roads Inverness-shire is indebted to the rebellions of 1715 and 1745, which otherwise cost it so dear. Immediately after that outbreak Fort George, Fort Augustus, and Fort William were erected as a chain of forts across the country, and detachments were sent thence to Inverness, to Bernera, opposite Skye, and to Castle Duart in Mull, while detachments under the direction of General Wade were, between 1726 and 1737, set to work on the construction of those military roads which used to excite the astonishment and gratitude of travellers, and which gave rise to the couplet, somewhat Hibernian in expression whatever its sentiment—

‘Had you seen these roads before they were made,
You would hold up your hands and bless General Wade.’

Still further progress took place in the beginning of the 19th century, when the Parliamentary Commission roads were made. Between 1804 and 1820, 875 miles of roadway were made through the Highlands, and principally in Inverness-shire, at a cost to the country of £267,000, to the counties concerned of £214,000, and to the proprietors of neighbouring estates of £60,000. These were added to from time to time till 1845, when the present fully adequate system was pretty nearly completed. The main lines of communication follow the old military roads, which were, first, from Inverness through Badenoch on by Dalwhinnie to the borders of Perthshire (52 miles); second, the Boleskine road from Inverness to Fort Augustus by the SE side of the Great Glen from which a road passed by Glen Tarff, Corrieyairack, and the upper waters of the Spey, till it reached the Perth road at Dalwhinnie (30); third, the road from Fort Augustus to Fort William and on to Ballachulish (45); and fourth, the S road by Fort George, Nairn, etc. Of the new lines of communication the Great North road from Inverness passes along the shore of the Beaully Firth to Beaully, and thence into Ross. There is a good road along the NW side of the Great Glen, sending off branches to the smaller side glens. A cross road leaves the Fort William road at Kilmonivaig, and passes, by Glen Spean, Loch Laggan, and upper Strathspey, to Dalwhinnie, where it joins the Perth road, and a branch striking off at Roy Bridge proceeds by Glen Roy to join the road already mentioned as passing over Corrieyairack. Another main line of road passes from Glen Foyers by Strathnairn to Daviot. The ground on the S side of Corrieyairack is so steep that the road had to be carried up by a series of seventeen zigzag traverses; this is now used only as a drove road, and here, as well as along the higher portion of the Perth road, lines of posts stand by the wayside short distances apart, so that the road may be ascertained during heavy snowstorms. The minor district roads are all excellent. The Caledonian Canal

along the Great Glen is described in a separate article. The Forbes and Perth section of the Highland Railway system passes through the county for a distance of 41 miles from the Dulnan river near its mouth on the N to the borders of Perthshire at the pass of Drumouchter on the S. The Inverness and Keith section of the same system enters the county 2 miles E of Fort George station, and passes through it for 10 miles to Inverness, whence it is continued northward by the Dingwall section, which passes round the border of the Beaully Firth, and quits the county after 13 miles at Muir of Ord station. The Speyside section of the Great North of Scotland railway passes through the Strathspey district from Boat of Garten to the boundary near Cromdale after a run of 12 miles; while the Aviemore and Inverness section of the Highland railway now being constructed will give much more direct communication between the county town and the south. The West Highland, from Helensburgh to Fort William, with a branch thence to Banavie, on the Caledonian Canal, enters the county near its meeting point with Argyll and Perth shires, and brings Fort William within 4½ hours’ journey of Glasgow. This line is being continued westward to Mallaig. The proposed Invergarry and Fort Augustus railway will connect with the West Highland at Spean Bridge, and from Fort Augustus will be continued to Inverness by the Highland Railway Co.

The only royal burgh in the county is Inverness. Fort William is a police burgh with over 1800 inhabitants, Beaully a burgh of barony with about 900, and Kingussie—the chief place in the upper district—a police burgh with over 700. Villages with more than 300 inhabitants are Campbeltown, Carrbridge, Fort Augustus, Glen, Newtonmore, and Portree; and villages of smaller size are Balloch, Broadford, Connage, Culcabock, Glenelg, Hilton, Invermoriston, Kyle-Akin, Lewiston, Lochmaddy, Lynchat, Petty, Resaudrie, Smithtown, Stein, and Stuarton.

The civil county contains the thirty entire *quoad civilia* parishes of Abernethy, Alvie, Ardersier, Boleskine and Abertariff, Daviot, Dores, Duthil, Glenelg, Inverness, Kilmonivaig, Kilmorack, Kiltarlity, Kingussie, Kirkhill, Laggan, Moy, Petty, and Urquhart, all on the mainland; and Barra, Braacadale, Duirinish, Harris, Kilmuir, North Uist, Portree, Sleat, Small Isles, Snizort, South Uist, and Strath, in the islands; and three parts of parishes, viz., Ardnamurchan and Kilmallie, both shared with Argyll; and Croy, shared with Nairn. The *quoad sacra* parishes of Bernera, Duncansburgh, Erchless, Glengarry, Glenmoriston, Insh, Knoydart, Rothiemurchus, Stenscholl, and Trumsgarry, and parts of the similar parishes of Aharacle, Ballachulish, and Inverallan, are also included. A few of these lie ecclesiastically in the presbytery of Abertariff, and the synod of Argyll; the others are divided among the presbyteries of Inverness and Nairn in the synod of Moray, and the presbyteries of Lochcarron, Skye, and Uist in the synod of Glenelg. The church services are conducted in Gaelic, except in one or two cases. There are also 48 places of worship connected with the Free Church, 3 in connection with the U.P. Church, 2 in connection with the Baptist Church, 1 in connection with the Wesleyan Methodist Church, 7 in connection with the Episcopal Church, and 21 in connection with the Roman Catholic Church. In the year ending 30 September 1894 there were in the county 184 schools, of which 174 were public, with accommodation for 19,044 children. These had 14,909 on the rolls, and an average attendance of 11,754. Inverness-shire, with a constituency (1895-96) of 8990, returns one member to parliament. It is governed by a lord lieutenant, 40 deputy-lieutenants, and 190 justices of the peace. The County Council is composed of 55 members, for as many electoral divisions. These divisions are grouped into the following districts:—First or Inverness District (with 8 divisions), Second or Aird District (with 10), Third or Badenoch District (10), Fourth or Lochaber District (10), Fifth or Skye District (9), Sixth or North Uist District (2), Seventh or Harris District (2), and Eighth or South

Uist and Barra District (4). The Council is divided into the following committees:—County Road Board, Standing Joint Committee (appointed partly by the Commissioners of Supply and partly by the County Council), Finance Committee and Committee on Technical Education, Executive Committee of the Local Authority under the Prevention of Diseases (Animals) Act (including four non-members), Valuation Committees (one each for Inverness District, Fort-William District, and Island Districts), Prison Visiting Committee, Committee under the Weights and Measures and Explosives Acts, Public Health Committee, Appeal Committee, and the Committee on Higher Education. The county forms a division of the sheriffdom of Inverness, Elgin, and Nairn, with resident sheriff-substitutes for the Inverness, Fort-William, Skye, and Long Island districts. Ordinary courts are held every Thursday from 1 Oct. to 31 March and from 1 May to 31 July. There is a small debt court every Friday during session, and circuit small debt courts at Kingussie on the Tuesday preceding the first Wednesday after 16 Jan., and on the Tuesday preceding the first Wednesday in May and September; and at Grantown for the adjoining Inverness-shire districts on the first Wednesday after the 16 Jan. and the first Wednesdays in May and September. Quarter sessions are held on the first Tuesdays of March, May, and August, and the last Tuesday of October; and monthly justice of peace courts are held at Grantown, Kingussie, Fort-William, Portree, Dunvegan, North Uist, South Uist, Barra, and Harris. The police force, exclusive of the burgh of Inverness, consists of 65 men (1 to each 1077 of the population), under a chief constable, with a salary of £400 a year. The number of registered poor in 1894 was 3401. The proportion of illegitimate births averages about 7·1 per cent., the average death-rate about 17 per 1000. Connected with the county are the 2nd battalion Cameron Highlanders (Militia); the Highland Artillery Volunteers, with 6 batteries at Inverness, and outside the county batteries at Burghhead, Cromarty, Stornoway, Loch Carron, and Nairn (2); and the 1st Inverness Highland Rifle Volunteers, with companies at Inverness (4), Fort-William, Kingussie, Beauly, Portree, Ardersier, and Roy Bridge. Valuation (1674) £6099, (1815) £185,565, (1843) £182,064, (1865) £237,348, (1871) £271,912, (1876) £293,250, (1883) £329,807, and (1892) £303,700—all exclusive of burgh, railways, and canal—(1895-96) £301,635, exclusive of railways, which amounted to £26,344, and the Caledonian Canal *nil*, or a total of £327,979, exclusive of the burgh. Pop. of registration county, which takes in the whole of the parishes of Cromdale and Croy, but gives off its parts of Abernethy, Ardnamurchan, and Kilmallie (1871) 84,258, (1881) 86,389, (1891) 85,196; civil county (1801) 72,672, (1811) 77,871, (1821) 89,961, (1831) 94,797, (1841) 97,799, (1851) 96,500, (1861) 88,261, (1871) 87,531, (1881) 90,454, (1891) 90,121, of whom 43,585 were males and 46,536 females. In 1891 the number of families was 20,010, the number of houses 19,396, and the number of rooms 69,910.

The territory now forming the mainland parts of Inverness-shire anciently belonged to the *Vacomagi*, and was afterwards the centre of the territory inhabited by the Northern Picts. After the seat of Pictish power passed farther S, we find the northern part of the county forming part of the great division of *Morevia* (see MORAY), while the southern part belonged to *Argathelia*, which extended to the Mull of Kintyre. The northern part was for long debatable ground between the Kings of Alban and the Norwegian Earls of Orkney, and it was not till the time of Malcolm III. that it passed firmly into the possession of the Scottish kings. In the Acts of David I. about the middle of the 12th century, the sheriffdom of Inverness is mentioned as comprehending the whole of the kingdom N of the Grampians. An Act in relation to it allowing any man accused of theft a certain period within which to produce the alleged vendor of what he was accused of having stolen, says:—‘*Aif ane dwellis*

beyond Drum Albin in Moray, Ross, Caithness, Argyle, or in Kintyre, he sall have fyfteen daies and eke ane month to produce his warrand before the *Schiref*; and gif he goes for his warrand dwelland in Moray, Ross, or in any of the Steids or Places pertaining to Moray, and can nocht find nor apprehend his warrand, he sall pass to the *Schiref* of Inverness, wha sall,’ etc. The shires of Elgin, Nairn, and Cromarty were constituted in the second half of the 13th century; those of Argyll, Sutherland, and Caithness were constituted in 1633; and Ross in 1661, at which time Inverness-shire took nearly its present limits, except for the interchanges of territory in 1870 and in 1891. The principal antiquities are noticed in the separate parishes. We may here mention the vitrified forts at Craig Phadrick close to Inverness and others in Boleskine and in Kiltarlity. There are Caledonian remains in the form of tumuli, cairns, and stone pillars and circles in almost every parish in the county. The duns or Pictish towers in Glenelg, and the remains of circles, etc., at Clava, are particularly worthy of notice. Besides the antiquities noticed in the article on the burgh of Inverness, there is an old castle at Urquhart on Loch Ness, Ruthven Barracks at Kingussie, the ruins of the chapel of the chiefs of Clan Chattan in Moy, ruins of Beauly Priory, the castle at Castle Stuart, another at Dalcross in Daviot, a building at Ardersier said to have belonged to the Knights Templars, and an old church at Laggan.

The lands in possession of the clans varied from time to time, though to a very slight degree. The following was the general distribution. The district about Beauly and along by the Aird and Belladrum belonged to the Frasers, as did also Strathaffric and Glen Cannich and all Strath Errick N to Culduthel near Inverness. Strathfarrer and Strathglass were in the hands of the Chisholms. All the country along the NW side of Loch Ness from the N side of Glen Urquhart to beyond Glen Moriston, and about half way along Loch Oich belonged to the Grants, as did also the lower waters of the Spey, from Upper Craigellachie, near Aviemore, down to the boundary of the county and beyond it. The Clan Ranald Macdonalds held the district about Glen Garry, and all westward to the Sound of Sleat, except a small corner between Loch Hour and Glenelg Bay, which was in the possession of the Macleods of Harris. Along the valleys of Loch Eil and Loch Arkaig were the Camerons, whose domains also crossed the line of the Great Glen and extended along Glennevis. In Glen Spean, and particularly on the S side, were the Macdonalds of Keppoch, and N of them up to Corryarrick were Clan Ranald of Lochaber. The Forest of Gaick and Glen Feshie were included in the lands of the Earl of Huntly, while the flat country from Inverness to Fort George belonged to the Earl of Moray. Between Upper Craigellachie and Kinrara, and extending E to the Cairngorm Mountains, were the Shaws of Rothiemurchus or Clan Quhele; while the whole of the rest of the county of Strathnairn, Strathdearn, Laggan, Loch Ericht, and down the river Spey to Kinrara, was in the hands of the great and powerful Clan Chattan, the two principal septes of which were the Mackintoshes and Macphersons. The former occupied the region N of the Monadhliath Mountains and the latter the track to the S. The clans of the island districts are given under the article Hebrides.

Invernettie or **Brickwork Bay**, a bay of Peterhead parish, NE Aberdeenshire, between Peterhead town and Burnhaven village. Crescental in form, it measures 9 furlongs across the entrance, and 6 thence to its innermost recess. A brickwork adjoining the bay, $\frac{3}{4}$ mile SSW of Peterhead, has been in operation since the latter part of the 18th century; produces tiles and bricks of excellent quality, from a bed of clay worked to a great depth; and exports large quantities of the bricks from a small contiguous harbour. The grain mills of Invernettie and Invernettie Distillery stand $1\frac{1}{2}$ mile SSW of the town; and the mills have such a number of wheels of various shapes and sizes as to form a striking scene.—*Ord. Sur.*, sh. 87, 1876.

Invernochty, a place in Strathdon parish, W Aberdeenshire, with a flat-topped conical mound, supposed to have been the site of an ancient church. See **DOUNE**.

Inveroran, an inn in Glenorchy parish, Argyllshire, on the road from Loch Lomond to Glencoe, at the SW end of Loch Tolla, a little W of Bridge of Orchy station on the West Highland railway, and 10 miles NNW of Tyndrum station on the Callander and Oban railway.

Inveroy, a village in Kilmonivaig parish, SW Inverness-shire, on the right bank of the Spean, near the Roybridge station of the West Highland railway, and 12 miles ENE of Fort William.

Inverquharity, a barony, with an old castle, in the lower section of Kirriemuir parish, Forfarshire, near the South Esk's left bank, $3\frac{3}{8}$ miles NNE of the town. It belonged for fourteen generations, from 1420 till the latter half of the 18th century, to a branch of the Ogilvies, who received a baronetcy in 1626, and still are designated of Inverquharity or Baldovan. Members of this family were Alexander, who is said to have been smothered at FINHAVEN (1446); another Alexander, who was captured on the battlefield of Philiphaugh and executed at Glasgow (1646); and a Captain Ogilvy, who followed James VII. to the battle of the Boyne, and wrote the song *It was a' for our rightful King*. One of the finest and most entire baronial buildings in the shire, Inverquharity Castle stands near the confluence of Carity Burn and the South Esk, and belongs perhaps to the 15th century. It is a four-story structure of strong ashlar work, in pointed architecture; has walls about 9 feet thick, projecting considerably near the top, and terminating in a parapet; is machicolated over the gateway; and continues in a state of good preservation. Its heavy door of grated iron, similar to that of Invermark, dates from either 1444 or 1467.—*Ord. Sur.*, sh. 56, 1870. See chap. vii. of Andrew Jervise's *Land of the Lindsays* (2d ed. 1882).

Inverquhomery, an estate, with a mansion, in Longside parish, NE Aberdeenshire, $1\frac{3}{4}$ mile SW of Longside station.—*Ord. Sur.*, sh. 87, 1876.

Invershin, a hamlet in Creich parish, S Sutherland, at the confluence of the rivers Shin and Oikell, with a station on the Sutherland section of the Highland railway, $3\frac{1}{2}$ miles NNW of Bonar-Bridge. It has a public school, and a post and telegraph office.

Inverskinnerton. See **INVER**, Ross-shire.

Inversnaid, a hamlet in Buchanan parish, NW Stirlingshire, situated at the mouth of Arklet Water, on the E shore of Loch Lomond, $4\frac{3}{4}$ miles SSE of Ardlui, 3 NNE of Tarbet, 18 N by W of Balloch, and 5 by road WSW of Stronachlachar Hotel on Loch Katrine. The point of communication between the two lakes, it has a steamboat pier, a post and telegraph office, and a good hotel, besides which Arklet Water forms a pretty waterfall of 30 feet, spanned by a narrow footbridge. Inversnaid was the place where, on 28 Aug. 1803, Wordsworth saw the 'sweet Highland girl,' the ferryman's sister, whom he celebrates in song, and whose beauty and kindness are described in Dorothy Wordsworth's Journal. The ruined Garrison of Inversnaid, 7 furlongs NE of the hamlet, was erected in 1713 to check the depredations of the Macgregors, and was for some time commanded by General Wolfe when he was an officer in the Buffs. See **CRAIGROYSTON**.—*Ord. Sur.*, sh. 38, 1871.

Invertiel, a *quoad sacra* parish in Abbotshall and Kinghorn parishes, Fife, comprising part of the southern or Linktown extremity of Kirkcaldy. Constituted in 1869, it is in the presbytery of Kirkcaldy and synod of Fife. The church was built before 1843 as a chapel of ease at a cost of £1400. Pop. (1871) 1828, (1881) 2023, (1891) 2246, of whom 1051 were in Kinghorn parish.—*Ord. Sur.*, sh. 40, 1867.

Invertrossachs, a mansion in Port of Monteith parish, SW Perthshire, near the southern shore of Loch Venachar, 5 miles WSW of Callander. Built about 1841, it was the residence for some weeks during the autumn of 1869 of Queen Victoria.—*Ord. Sur.*, sh. 38, 1871.

Inverurie, a small village in St Fergus parish, Aberdeenshire, on the left bank of the Ugie, $1\frac{3}{4}$ mile above its mouth, 3 miles NW of Peterhead, and $\frac{3}{4}$ mile N by E of Inverurie station on the Peterhead branch of the Great North of Scotland railway. The parish of St Fergus formed a detached part of Banffshire until 1891, when it was transferred to Aberdeenshire. The lands of Inverurie were granted by William the Lyon (1165-1214) to Bernard le Cheyne, of whose descendants Reginald was chamberlain of Scotland from 1267 to 1269, whilst Henry, his brother, was Bishop of Aberdeen from 1281 to 1332. Reginald's granddaughter conveyed them by marriage about 1350 to a younger branch of the Keith family, which in 1538 became united to the main stem by the marriage of William, fourth Earl Marischal, and Margaret, daughter and co-heiress of Sir William Keith of Inverurie; and, forfeited by their sixth descendant, the tenth Earl Marischal, for his share in the '15, since 1764 they have belonged to the Fergusons of Pitfour. The Cheynes' original castle stood on the coast, at the influx of the Ugie to the ocean, opposite Buchanhaven; and is now represented by only faint vestiges; but seems from these to have been a structure of considerable extent. It is said to have been visited by True Thomas of Ercildoune, who prophesied concerning it—

'Inverurie by the sea,
Lordless shall thy landis be.'

The subsequent castle, close to the village, was founded about 1380 by Sir John de Keith, though 'Cheynes Tower' is probably of earlier date; but it was mainly erected, about the close of the 16th century, by the fifth Earl Marischal, who founded Marischal College in Aberdeen. Exhibiting features and styles distinctly indicative of its various dates, it was, next to Dunnottar Castle, the principal seat of the Earls Marischal, and forms the theme of many traditions respecting their bygone magnificence. In the latter half of the 18th century the main building was floored, roofed in, and surmounted by an observatory; but the next proprietor stripped it of these modernisings, and suffered ruin to resume her sway. On the N it is screened by a rising-ground, the Castle Hill where the Earls once exercised 'the power of pit and gallows;' and it now exhibits a picturesque appearance, with the river winding between its wooded banks around three sides of it. Marshal Keith (1696-1758) was born here.—*Ord. Sur.*, sh. 87, 1876. William Boyd's *Old Inverurie* (Peterhead, 1885).

Inverurie, a handsome modern mansion in Duffus parish, Elginshire, within 1 mile of the Moray Firth, and 3 miles E by S of Burchhead. Purchased by his father in 1852, the estate is the property of Edward Mortimer, Esq.—*Ord. Sur.*, sh. 95, 1876.

Inveruglas, a hamlet in Luss parish, Dumbartonshire, on the W shore of Loch Lomond, at the S side of the mouth of Douglas Water, $3\frac{1}{4}$ miles NNW of Luss village. It has an inn, and maintains a ferry ($5\frac{1}{2}$ furlongs wide) across the lake to Rowardennan.

Inverurie, a town and a parish in Garioch district, Aberdeenshire. The town, standing 195 feet above sea-level at the confluence of the rivers Ury and Don, has a station on the Great North of Scotland railway, at the junction of the Old Meldrum railway, $4\frac{1}{4}$ miles SE of Inveramsay Junction, 3 N by W of Kintore, and $16\frac{1}{2}$ NW of Aberdeen. It occupies the low peninsula between the confluence of the two rivers, and the parliamentary burgh includes the suburb of Port Elphinstone on the right or Kintore bank of the Dou, with which it is connected by a three-arch bridge erected in 1791 at a cost of £2000, whilst three bridges over the Ury were built between 1809 and 1839. So straggling is its alignment, that it looks more like a village than a town; yet it possesses far greater importance than many a place of more pretentious appearance, and it dates from remote antiquity. Robert Bruce lay sick here on the eve of his victory of Barra in **BOURIE** parish, at Yule, 1308; and here, on 23 Dec. 1745, Lord Lewis Gordon, with 1200 Jacobites, surprised and defeated 700 loyalists under the Laird of Macleod.

The importance, however, of the place originated in the opening (1807) of the quondam Aberdeen Canal (begun 1796), which cost £44,000, and whose terminus here presented scenes not dissimilar to those of the quays of Aberdeen, with sometimes hundreds of carts in a day delivering grain, and carrying away coals, lime, bones, iron, timber, and building materials. Now, since the canal was superseded by the railway (1854), Inverurie serves as a point of concentration and a seat of miscellaneous trade for a pretty wide extent of surrounding country; and it has a post office, with money order, savings bank, insurance, and telegraph departments, branches of the Union, Town and County, and North of Scotland Banks, a National Security savings bank (1837), several hotels, a gas-light company, a water supply of 1876, a masonic lodge, a Young Men's Christian Association, a volunteer corps, curling and bowling clubs, a brewery, meal and paper mills, an agricultural society, and a public library, Tuesday cattle-markets once or twice a month, and feeing-markets in May, July, and November. The town-hall was built in 1863 at a cost of £2500, and is a neat Italian edifice with a clock-tower. The parish church (1842) is a beautiful Gothic granite structure, repaired and altered in 1876, and the Free church (1876) is an Early English building, with a NE spire 107 feet high. Other places of worship are a Congregational church (1822), a Wesleyan chapel (1819), a Friends' meeting-house, St Mary's Episcopal church (1842-57), and the Roman Catholic Church of the Immaculate Conception (1852). A conical mound, the Bass of Inverurie, at the S end of the town, has been noticed separately; another smaller one to the W of the main street, bears the name of Coning Hill, and is supposed to mark the grave of Aodh, King of the Picts, who 'in 878 was slain at Nnurin by his own people.' William Thom (1799-1848), the 'weaver poet of Inverurie,' was for nearly ten years a resident; and the memoir prefixed to the Paisley edition of his *Poems* (1880) has much of interest relating to the place. Inverurie claims to have been a royal burgh in the reign of William the Lyon, a charter of *novodamus* granted by Queen Mary in 1558 explaining that the charter of its erection had been lost during the civil wars. Under the Burgh Police Act of 1892 it is governed by a provost, 2 bailies, and 6 commissioners. With ELGIN, Kintore, Peterhead, Banff, and Cullen, it unites to send a member to parliament. The municipal and the parliamentary constituency numbered 524 and 452 in 1895, when the annual value of real property amounted to 9705 (£9055 in 1883), whilst the corporation revenue was £401. Pop. of parliamentary burgh (1841) 1731, (1861) 2520, (1871) 2856, (1881) 2931, (1891) 2934; of royal burgh (1881) 2669, (1891) 2625; of police burgh (1881) 2575, (1891) 2549; and of entire town (1871) 2959, (1881) 3048, (1891) 3105, of whom 385 were in Port Elphinstone, and 1642 were females.

The parish of Inverurie is bounded E by Keithhall, S by Kintore and Kemnay, and W and N by Chapel of Garioch. Its utmost length, from E to W, is 4½ miles; its utmost breadth is 2½ miles; and its area is 4995½ acres, of which 49 are water. The Don winds 4 miles north-by-eastward along all the southern border, and the URY 5¼ south-eastward along the northern and eastern. At their confluence the surface declines to 170 feet above sea-level, thence rising westward to 524 feet at Ardtannies Hill, 400 at Dilly Hill, and 780 at Knockinglew Hill. The tract around the town, to the extent of 850 acres, is low and flat; and the Ury's valley is broader than the Don's. Granite prevails in the S, trap in the W; and the soil of the low ground is light yellow fertile loam, mostly incumbent on sand, whilst that of the high grounds is various, and shades away into moor. About three-fifths of the entire area are in tillage, one-fifth is under wood, and the rest is pastoral or waste. Antiquities are: one perfect stone circle, parts of others, some sculptured stones, the supposed site of a 'Roman road,' and remains of St Apolinarius' chapel. Manar mansion, situated among well-wooded grounds on the southern slope of a hill, is 3½ miles W by S of the town.

Aquhorthies, 1 mile farther W, was from 1799 till 1829 the seat of the Roman Catholic College, transferred in the latter year to BLAIRS. Inverurie is in the presbytery of Garioch and synod of Aberdeen; the living is worth £322. Market Place public, West High Street public, and St Mary's Episcopal school, with respective accommodation for 372, 188, and 81 children, have an average attendance of about 230, 170, and 65, and grants of nearly £225, £164, and £50. Pop. (1801) 783, (1831) 1419, (1861) 2668, (1871) 2970, (1881) 3038, (1891) 2954.—*Ord. Sur.*, sh. 76, 1874. See the Rev. Dr John Davidson's *Inverurie and the Earldom of the Garioch* (Edinb. 1878-81).

Inverwick. See GLENLYON.

Inzievar, an estate, with a modern mansion, in Torryburn parish, SW Fife, 5 miles W of Dunfermline. Its owner is A. D. Smith Sligo, Esq.—*Ord. Sur.*, sh. 40, 1867.

Iona, an island and *quoad sacra* parish at the SW corner of the island of Mull, and separated from the long promontory known as the Ross of Mull by a channel about a mile wide, deep enough for the passage of the heaviest ships, but dangerous on account of the sunk rocks. For *quoad civilia* purposes the island belongs to the parish of Kilfinichen and Kilvickeon, one of those into which the island of Mull was divided in 1730. The date of junction is not known, but at the period of the Reformation Iona was still a distinct parish. The island lies NE and SW, and is about 3½ miles long and 1½ mile wide. The area is about 2000 acres, of which 600 are under occasional cultivation, the rest being pasture or waste. In the centre, at the narrowest part, a plain extends across from side to side, with a small green hillock in the centre. Here the soil is fairly good; but to the N the surface is rougher, and shows grassy hollows and rocky rising-grounds, terminating in Dun-i (327 feet). To the N a strip of low land extends to the shore, and terminates in a stretch of white sand, chiefly composed of broken shell. Along the E the ground is flat and fertile. To the S of the central plain the surface is irregular, with rocky heights and grassy hollows, but affording fair pasture. The underlying rocks are entirely Laurentian, with a dip nearly vertical, the strike being from NE to SW. There are beds of slate, quartz, marble with serpentine, and a mixture of felspar, quartz, and hornblende passing sometimes into a sort of granite. Among other minerals epidote may be found. The coast has a number of small rocky bays and headlands. It is by no means such a bleak and dismal place as it is sometimes represented to be, and there is some truth in the Gaelic proverb that asserts that if a man goes once to Iona he will go three times. The name of the island has a very large number of varieties, and, according to Dr Reeves, in his edition of Adamnan's *Life of St Columba*, Iona is a mistake for Ioua, the root being Iou. The following are some of the names it has had at different dates:—Hyona (A. D. 657), Hii (730), Columbkil (730), Ii (900), Hi (11th century), I-cholaimchille and Ieoa (late 11th century), Yona and Iona (*circa* 1251), Icolmkill (*circa* 1400), Yensis. The old derivations *I-thona*, 'the island of waves,' and *I-shona*, 'the blessed island,' are now abandoned. Y, I, or Ii is the island, while Columkil is the cell of Columba, and Icolmkill or Icolmkill is the island of the cell of Columba.

The chief interest of the island lies in its historical associations with St Columba and the introduction of Christianity into Scotland; and so powerful are these associations that, though Dr Johnson on his visit in 1773 had to be carried ashore on the back of a Highlander, and had to sleep in a barn among straw, with a portmanteau for a pillow, he had yet no thought of grumbling, but instead burst out into high praise. 'We were now treading that illustrious island which was once the luminary of the Caledonian regions, whence savage clans and roving barbarians derived the benefits of knowledge and the blessings of religion. To abstract the mind from all local emotion would be impossible if it were endeavoured, and would be foolish if it were

possible. Whatever withdraws us from the power of our senses; whatever makes the past, the distant, or the future predominate over the present, advances us in the dignity of thinking beings. Far from me and from my friends be such frigid philosophy as may conduct us, indifferent and unmoved, over any ground which has been dignified by wisdom, bravery, or virtue. That man is little to be envied whose patriotism would not gain force upon the plain of Marathon, or whose piety would not grow warmer among the ruins of Iona.' Wordsworth has devoted four sonnets to the same subject—

'Isle of Columba's Cell,
Where Christian piety's soul-cheering spark
(Kindled from Heaven between the light and dark
Of time) shone like the morning star.'

And again—

'On to Iona!—What can she afford
To us save matter for a thoughtful sigh,
Heaved over ruin with stability
In urgent contrast? To diffuse the Word
(Thy Paramount, mighty Nature! and Time's Lord)
Her Temples rose, 'mid pagan gloom: but why,
Even for a moment, has our verse deplored
Their wrongs, since they fulfilled their destiny?
And when, subjected to a common doom
Of mutability, those far-famed Piles
Shall disappear from both the sister Isles,
Iona's Saints, forgetting not past days,
Garlands shall wear of amaranthine bloom,
While heaven's vast sea of voices chants their praise

'How sad a welcome! To each voyager
Some ragged child holds up for sale a store
Of wave-worn pebbles, pleading on the shore
Where once came monk and nun with gentle stir,
Blessings to give, news ask, or suit prefer.
Yet is yon neat trim church a grateful speck
Of novelty amid the sacred wreck
Strewn far and wide. Think, proud Philosopher!
Fallen though she be, this Glory of the west,
Still on her sons the beams of mercy shine;
And "hopes, perhaps more heavenly bright than thine,
A grace by thee unsought and unopposed,
A faith more fixed, a rapture more divine,
Shall gild their passage to eternal rest."

In Aug. 1847 the island was visited by the Queen and Prince Albert during their tour in the west and their progress northward to Ardverrick. Prince Albert, the Prince of Leiningen, the Duke of Norfolk, Earl Grey, and Sir James Clark landed, while the Queen remained in the yacht and sketched. They had a very primitive and decorous reception. A few plainly-dressed islanders stood on the shore, carrying tufted willow-wands, and prepared to act as an escort; the body of the people stood behind at a respectful distance looking eagerly on; while a few children, in the usual fashion of the island, offered pebbles and shells for sale.

St Columba.—Columba or Colm or Colum was born in Ireland A.D. 521, and was from his boyhood noted for his piety and devotion to wisdom. Even when a young deacon his power was wonderful. Adamnan tells how, when he was in Leinster acquiring divine wisdom, a young girl fled to his master Gemman for protection. Her pursuer, 'an unfeeling and pitiless oppressor of the innocent,' without any regard for the presence of the holy men, 'stabbed the girl with his lance under their very cloaks, and, leaving her lying dead at their feet, turned to go away back. Then the old man, in great affliction, turning to Columba, said, "How long, holy youth Columba, shall God, the just judge, allow this horrid crime and this insult to us to go unpunished?" Then the saint at once pronounced this sentence on the perpetrator of the deed, "At the very instant the soul of this girl whom he hath murdered ascendeth into heaven shall the soul of the murderer go down into hell;" and scarcely had he spoken the words when the murderer of the innocent, like Ananias before Peter, fell down dead on the spot before the eyes of the holy youth.' About 545 he is said to have founded a large monastery in Ireland, in a place called, from the number of its oaks, Dearnagh, identified with Durrow in King's County, and his character for sanctity must have made him a man of considerable power and influence. About

560 Curnan, the son of the King of Connaught, who had taken refuge with the saint, was forcibly carried off by Diarmaid, King of Ireland, and the latter is said to have given further offence by deciding against Columba in a dispute with Finnian of Moville about a MS. psalter. The second incident is probably false (for there is no trace of a quarrel between Columba and Bishop Finnian), but the first seems to have led to the great battle fought at Culdremhne in Connaught in A.D. 561, in which the northern Hy Neill defeated the southern Hy Neill, under King Diarmaid, with great slaughter. Columba sprang from the tribe of Cinel Conaill, a branch of the northern Hy Neill, and is traditionally credited with having incited his kinsmen to make war on King Diarmaid, in order to avenge the violated right of sanctuary, and to have contributed to their success by means of his prayers. He was in consequence held responsible for the bloodshed, and was summoned before a synod of the saints of Ireland, who decided that he must quit Ireland in perpetual exile, and neither again gaze on its shores or tread its soil, but must go to a distant land and win back from paganism as many souls as there had been persons killed in the battle of Culdremhne. Leaving Ireland he sailed for the Western Isles, and after in vain trying Islay, Jura, and Colonsay (from all of which Ireland was still visible), he finally landed at the S end of Iona, and finding that Ireland was no longer to be seen (*Cairn Cul-ri-Erin* being his point of view), he settled there, and began his work among the heathen. The part of the story regarding his perpetual exile seems to be a fable, for Adamnan speaks of him as exercising constant supervision over the Irish monasteries with which he was connected, and records a large number of visits he is said to have paid to Ireland, while he attributes the saint's desire to go forth as a missionary merely to his love for Christ. 'His real motives,' says Dr Skene, 'for undertaking this mission seem therefore to have been partly religious and partly political. He was one of the twelve apostles of Ireland who had emerged from the school of Finnian of Clonard, and he no doubt shared the missionary spirit which so deeply characterised the Monastic Church of Ireland at this period. He was also closely connected through his grandmother with the line of the Dalriadic kings, and as an Irishman must have been interested in the maintenance of the Irish colony in the West of Scotland. Separated from him by the Irish Channel was the great pagan nation of the Northern Picts, who, under a powerful king, had just inflicted a crushing defeat upon the Scots of Dalriada, and threatened their expulsion from the country; and while his missionary zeal impelled him to attempt the conversion of the Picts, he must have felt that, if he succeeded in winning a pagan people to the religion of Christ, he would at the same time rescue the Irish colony of Dalriada from a great danger, and render them an important service by establishing peaceable relations between them and their greatly more numerous and powerful neighbours, and replacing them in the more secure possession of the western districts they had colonised.'

He set out from Ireland in 563 at the age of 42, and, according to a quatrain at least as old as the beginning of the 12th century—

'His company was forty priests,
Twenty bishops of noble worth;
For the psalm-singing, without dispute,
Thirty deacons, fifty youths.'

He seems first to have visited Conall, King of Dalriada, and then to have passed on to Iona, where, according to the old Irish life, he found 'two bishops,' who 'came to receive his submission from him. But God manifested to Colum Cille that they were not in truth bishops; wherefore it was that they left the island to him when he exposed their real history and career.' This story of the monks is probably founded on fact, and Dr Skene is of opinion that not only was there 'an earlier Christian establishment on the island,' but that it belonged to that peculiar development of the Irish church which was known as the Church of the Seven Bishops. Bede

tells us that the island of Hii 'had been by the donation of the Picts who inhabit these districts of Britain given over long before to Scottish monks, from whose preaching they had received the faith of Christ,' and possibly the donation may have been to the earlier settlement to which Columba succeeded. However that may be, and whether he received the right from the Picts or from the Dalriads, his claim to the island seems to have been fully recognised and admitted. His landing took place probably on the 12 May 563, and traditionally at the bay now known as *Port-a-churaich*, and he must at once have proceeded to found the monastery and establish the 'church which not only embraced within its fold the whole of Scotland N of the Firths of Forth and Clyde, and was for a century and a half the national church of Scotland, but was destined to give to the Angles of Northumbria the same form of Christianity for a period of thirty years.' The buildings that now remain are of course of much later date than Columba's time. Dr Skene, who has carefully and patiently investigated the matter, is indeed quite positive that the first erections were on a site about $\frac{1}{2}$ mile to the N of the present cathedral, between Dun-i on the W, and the old burying-ground called *Cladh-andiseart* on the E. From the lives of St Columba written by Cummin (the white abbot, 657-669) and Adamuan (abbot 679-704), the original structures were (1) a monastery with a small court, on one side of which was the church, with a small side chamber, on a second side the guest chamber, on the third a refectory, and on the fourth dwellings of the monks; a little way off on the highest part of the ground (2) the cell of St Columba, where he sat and read or wrote during the day, and slept at night on the bare ground with a stone for his pillow; (3) various subsidiary buildings, including a kiln, a mill, a barn, and a cowhouse, which latter was, however, outside the rampart. Not far off was a sequestered hollow (identified by Dr Skene with *Cabhan cuilteach*), to which Columba retired when he wished to pray in solitude. The whole was bounded by a *vallum* or rampart, the course of which may still be traced. The site of the monastery has already been noted, and St Columba's cell seems to have been within the rampart immediately to the E of the mound known as *Cnoc-na-bristeadh clach*, close to the house at present called Clachanach. The kiln was probably about 100 yards NW of Torr-abb, and the mill was in the same neighbourhood. It has left its traces in the small stream to the N of the present cathedral ruins which bears the name of *Struth-a-mhuillinn* or the mill stream. Remains of old causeways may be traced from the landing places of *Port-na-martir*, *Port Bonan*, and *Port-na-muintir*. All the early buildings, except the kiln, were of wood, the guest chamber was wattled, the church was of oak, and the cell of Columba was made of planks. The monks were divided into three classes, the older brethren, who devoted themselves to the religious services of the church, and to reading and transcribing the Scriptures; second, the younger and stronger working brothers, who devoted themselves to agriculture and the service of the monastery; and third, the *alumnae* or youth under instruction. They took a solemn vow at the altar, were tonsured from ear to ear, and wore white robes with over bodies and hoods of the natural colour of the wool.

After he had set matters in order, the Saint seems to have made frequent journeys to the mainland, probably for missionary purposes, and in 565 he even made his way across Drumalban, and along the Great Glen to the court of the Pictish King Brude, which was somewhere in the neighbourhood of Inverness. Here, after certain miraculous occurrences, he converted Brude, and thus prepared the way for the establishment of missions all through the territories of the Picts, and for the more rapid conversion of the whole Pictish nation. In 574, on the death of King Conall, he consecrated his successor Aidan, and in the following year, at the synod of Drumceatt, he was able to obtain concessions which practically established Dalriada as a kingdom indepen-

dent of the Irish *Ard-ri*. The death of Brude in 584 deprived Columba of his powerful friend and patron, but it opened up new fields of labour. Brude's successor was Gartnaidh, a southern Pict, whose seat was at Abernethy on the Tay, and though the southern Picts had been converted by Ninian in the beginning of the 6th century, they had lapsed, until the labours of Columba restored them again to the true faith. Adamnan tells us that four years before his death he had a vision that angels had been sent to bear his soul on high, but they were stayed by the prayers of his churches. When the four years were nearly finished he set everything in order for his departure. The day before 'he ascended the hill that overlooketh the monastery, and stood for some little time on its summit, and as he stood there with both hands uplifted, he blessed his monastery, saying: "Small and mean though this place is, yet it shall be beld in great and unusual honour, not only by Scotie kings and people, but also by the rulers of foreign and barbarous nations, and by their subjects; the sauits also, even of other churches, shall regard it with no common reverence." On the following day at nocturnal vigils he went into the church and knelt down in prayer beside the altar, and 'his attendant Diormit, who more slowly followed him, saw from a distance that the whole interior of the church was filled with a heavenly light in the direction of the saint,' which, as he drew near, quickly disappeared. 'Feeling his way in the darkness, as the brethren had not yet brought in the lights, he found the saint lying before the altar,' and all the monks coming in, Columba moved his hand to give them his benediction, and so breathed his last on the 9 June 597, while 'the whole church resounded with loud lamentations of grief.' His body, 'wrapped in a clean shroud of fine linen, and, being placed in the coffin prepared for it, was buried with all due veneration,' with no one present but his faithful monks. In 1897 the Established Church of Scotland held centennial services at Iona in commemoration of the saint's death.

After Columba's death, the monastery continued its career, but under harassing conditions, for under the abbot second in succession to the founder began that controversy concerning Easter, which was destined to work such harm to the Columban Church. In this early stage, however, the interference was from without, and did not as yet disturb the harmony of the brethren, who went on teaching and preaching and spreading themselves still farther to the north. When Edwin, King of Deira, conquered Bernicia, many of the young nobles of the latter country seem to have, in 617, taken refuge at Iona, among them being Oswald, who afterwards, in 634, invaded Northumbria, and won back the kingdom from Penda of Mercia and Caedwalla of Wales. As soon as he began to set things in order, mindful of his hosts and entertainers, he sent to Iona where he had been baptized, and asked for 'a bishop, by whose instructions and ministry the Anglie nation which he governed might be taught the advantages of faith in the Lord, and receive its sacraments;' and in response to this Aidan was sent. The Columban church flourished in Northumbria for thirty years, but the Easter difficulty and question about coronal tonsure then proved fatal to its further existence, and the Northumbrian church conformed to the usages enjoined from Rome. The influence of Iona was no sooner lost, however, to the south, than it made fresh conquests in the north over all that wild district along the W coast from Ardnamurchan to Loch Broom, but the parent monastery seems to have been in a decaying condition, for when Adamnan came into office as abbot, in 679, he found it necessary to execute very extensive repairs, and sent twelve vessels to Lorn for timber. He tried to introduce the Roman calculation as to the time of Easter, but his efforts led only to schism, which he himself, however, did not live to see. About 717 the continued resistance of the community to the cycles of nineteen years, 'sent throughout all the provinces of the Picts,' caused them to be driven across Drumalban,

and entirely out of the dominions of King Naiton; and at this time, therefore, the sway of Iona over the monasteries and churches in Pictland entirely ceased while the controversy of the styles does not seem finally to have ended till about 772. In 749 there was a storm in which a great number of the community of Iona perished, and in 795 the island was plundered by Danish sea-rovers, and this happened again in 798. In 802 the island was again plundered, and the buildings of the original monastery, as repaired by Adamnan, were burned, while in a subsequent attack, in 806, sixty-eight members of the community were slain. These visits seem to have caused so much alarm as to inspire the churchmen with an intention of removing from the western islands altogether, and before 807 the remains of St Columba were carried away to Ireland and there enshrined: Kells was erected, and to it passed the primacy over the Columban monasteries in Ireland. The relics were brought back in 818, and at that time the monastery was rebuilt, and now of stone as affording greater safety. The buildings were probably at the same time changed to their present site as from its natural features offering greater security. The Danes granted the monks but a short respite, for in 825 the abbot, and probably a number of the community were slain for refusing to disclose where the rich shrine of St Columba had been concealed. In 878 it was again necessary to remove the shrine and relics of Columba 'to Ireland to escape the foreigners,' but they must have been brought back about the close of the century. According to the *Annals of Ulster*, Iona was once more plundered by the Danes in 986 on Christmas eve, and the abbot and fifteen of the monks were slain, while in the following year 360 of these plunderers were slain 'by a miracle of God and of Cholaimbille.' Traditionally, the martyrdom of these sixteen took place at a bay at the N end of the island, and known as *Traith ban na manach*, or the White bay of the monks. This was the last occasion on which Iona suffered from the Danes, but the buildings seem to have remained in a ruined state thereafter till about 1074, when Queen Margaret 'restored the monastery, . . . rebuilt it, and furnished it with monks, with an endowment for performing the Lord's work;' but the island passed very shortly after into the rule of Magnus Barefoot, King of Norway, and in 1099 the old order came to an end with the death of the last of the old abbots. Under the bishopric of Man and the Isles the monastery now became subject to the bishopric of Drontheim, to which Man and the Isles was suffragan, and probably fell into a state of decay, till in 1156 Somerled won the Sudrejar, including Iona, and once more restored the connection between Iona and Ireland by placing the monastery under the care of the Abbot of Derry. In or about 1203 Reginald, Lord of the Isles, founded in the island a monastery of Benedictine Friars formerly thought to be of the Cluniac order, but now considered by Dr Skene to have been rather a branch of those introduced by David I. in 1113 from Tyron in Chartres, and settled by him first at Selkirk, and subsequently at Kelso. At the same time there was founded a nunnery for Benedictine nuns, of which Beatrice, the sister of Reginald, was first prioress. It was dedicated to the Virgin Mary. The nuns seem at a later date to have been Augustinian. The deed of confirmation of the monastery, dated 9 Dec. 1203, still exists in the Vatican, and most of the ruins that now exist are those of this monastery and nunnery. When the Benedictine monastery was established the abbot 'appears to have attempted to thrust out the prior Celtic community and place them in a separate building near the town, for we are told in the *Ulster Annals* that in 1203 "a monastery was erected by Cellach in the middle of the Cro of Iona (*Croi Ia*) without any legal right, and in despite of the family of Iona, so that he did considerable damage to the town (*Buile*).'" The Irish clergy, however, brought aid to their brethren, and, 'in obedience to the law of the church, pulled down the monastery.' A compromise seems, however, to have been arranged, for from this time onward the

old monks of Iona disappear from its history, and the Benedictines were supreme. Dr Reeves identifies the site of this monastery with the *Gleann-an-Teampull*, but Dr Skeue thinks it was near the parish church.

In a valuable paper read to the Society of Antiquaries of Scotland in 1873, and published in their *Proceedings*, and subsequently in the 1874 edition of Adamnan's *Life of St Columba*, Dr Skene indicated the opinion that none of the buildings that remained were of older date than the 12th century, being the remains of the building founded by Reginald, Lord of the Isles, between 1166 and 1207, while the capital of one of the columns in the tower has sculptured on it, '*Donaldus O'Brolchain fecit hoc opus*,' and the Ulster Annals record the death of *Domhnall Ua Brolchain* (who was probably prior of Iona) in 1203.* Remains that came to light during operations undertaken for the partial restoration of the buildings in 1874-75 have led him since then to modify his opinion, and in a subsequent paper read in the end of 1875, and published in the Scottish Society of Antiquaries' *Proceedings* for 1875-76, he points out that the little chapel N of the Abbey Church of St Mary (it was not a cathedral till near the Reformation), and at a little distance from it, had an entirely different orientation pointing more to the N, and that alongside it some foundations were exposed with a similar orientation. To the W of the ruins a small building known as St Columba's house was similar in orientation, and, therefore, these are probably all remains of the establishment that preceded the Benedictine monastery.

At the instance of the Duke of Argyll, the ruins were in 1873 visited by Mr Robert Anderson, architect, Edinburgh, who drew up a report with suggestions for their repair and partial restoration. These were carried out in the autumn of 1874 and the spring of 1875 with most excellent taste and judgment, the stone for the repairs being all brought from Carsaig Quarry in Mull, whence the original materials had been obtained. During the operations the foundations of the chapels and cloisters, which were formerly mere green mounds, have been plainly marked out in order to give a clear and accurate idea of the original plan of the Abbey. On the N side a great deal was done, the chapel and refectory having had walls, doorways, and windows restored, and even reconstructed in exact imitation of the style of the old architecture. In excavations in the cloister court several beautifully carved pillars were exposed. They formed the sides of little doors that led from the court into the square. The foundation of a cross was exposed on the mound known as Torr-Abb (the Abbot's Mound) opposite the W front of the church, and from which there is a magnificent view. This is probably the little hill on which, according to Adamnan, Columba stood when he gave utterance to the prophecy, already quoted, as to the homage that should yet be paid to the island. The excavations carried on at the nunnery have shown the foundation lines of the buildings, and both here and at the cathedral numerous stones were brought to light. A short distance NE of the Abbey Church, at Cladh-andeart, there was found in 1872 a heart-shaped stone 1 ft. 7 in. long, 1 ft. 3 in. wide, and 4½ in. thick, with an incised cross on it. Dr Skene is inclined to think it is the stone used by Columba as a pillow, and the late James Drummond, R.S.A., has suggested that besides 'when the remains of St Columba were enshrined this stone, with the sacred emblem carved upon it, was put in the place where the saint's body had lain' (See Dr Mitchell's *Vacation Notes in Cromar, Burghead, and Strathspcy*, Ediub. 1875, reprinted from the *Proceedings of the Soc. Antiq. of Scot.*). The church, which was dedicated to St Mary, though begun in the 12th century, was probably built bit by bit for a considerable time after, as was then quite customary. It is cruciform in shape, consisting of nave, transepts, and choir, with a sacristy on the N side of the choir and side

* This was the inscription as it existed in 1848. Between that and 1850 it was damaged probably by some reckless relic hunter. See Reeves' *Adamnan's Life of St Columba*, Ed. 1874, p. 247.

chapels on the S. Near the W entrance was a small chamber called St Columba's Tomb. The length, from E to W, is 160 feet, and the width 24. The width across the transepts is about 70 feet. Over the crossing is a square tower 70 feet high, and supported by arches resting on four pillars. The tower itself is plain, but it is lighted on one side by a window formed by a slab with quatrefoil openings, and on the other by a marigold or Catherine wheel window with spiral mullions. The capitals of the columns are of sandstone, carved with very grotesque figures, still sharp and well defined. One shows the sacrifice of an ox, another the temptation of Adam and Eve, another the fall, another the crucifixion, another Peter cutting off Malchus' ear, another an angel weighing the good and evil deeds of a man, with the devil trying to depress the side of the evil deeds. There are three sedilia 'formed with trefoil ogee arches under connected dripstones, which run out afterwards into a horizontal tablet, and have at each apex the remains of what seems to have been a sculptured head.' The high altar seems to have been of marble, and measured 6 feet by 4. Dr Sacheverell mentions it in 1688, and Martin, in his *Description of the Western Islands* in 1702, speaks of the beauty of its marble. Before 1772 it had got much destroyed, and Pennant, who visited the place in that year, and who describes it minutely in his *Tour*, confesses that he and his companions carried pieces of it away. It has since vanished entirely. On the N side of the chancel is the tomb of Abbot Mackinnon who died in 1500, and opposite it is that of Abbot Kenneth Mackenzie. Both are much defaced. In the centre of the chancel is the monument of Macleod of Macleod, the largest in the island. To the N and E of the cloisters are the refectory and chapter-house. The latter is a gloomy vaulted chamber, with the roof still entire; the building over it is said to have been the library. The library was traditionally very large and valuable, but was entirely dispersed at the Reformation, a number of the MSS. passing to the Scotch College at Douay. The Relig Oran or *Keilig Odhrain*, i.e., the burial-place of Oran, to the SW of the Abbey, is the ancient burial place of the monastery. The name is very old, and the account of its origin given in the old Irish life of St Columba is somewhat peculiar, and shows trace of a custom seemingly of wide extent. After he had landed at Hy, 'Columbkille said to his people . . . it is permitted to you that some one of you go under the earth of this island to consecrate it. Odhran arose quickly, and thus spake: If you accept me, said he, I am ready for that. O Odhran, said Columbkille, you shall receive the reward of this: no request shall be granted to any one at my tomb, unless he first ask of thee. Odhrain then went to heaven.' Tradition has considerably amplified this, and makes St Oran be buried *alive*, to appease some fiend who undid at night all Columba's work by day at the first occupation of the island. Oran was dug up at the end of three days, and began immediately to assure the bystanders that there was neither deity nor devil, neither future happiness nor future punishment, statements which so utterly shocked St Columba that he ordered Oran to be at once reinterred, and hence has come the Gaelic proverb, 'Earth to earth on the mouth of Oran, that he may blab no more.' Dr Reeves supposes that the place received its present name from the first of St Columba's fraternity who was buried in it. It contains a chapel called St Oran's Chapel, a plain oblong building of 40 feet by 20, and dating from the close of the 11th century. There is no E window, but in the sides near the E end are two narrow openings for light. At the W end is a circular-headed doorway, with beak-head ornament. Dr Reeves supposes this to be the building resulting from the liberality of Queen Margaret. The oldest tombstones in the cemetery are two with Irish inscriptions, requesting prayer for the souls of Eogan and of Maelpatrick. Here, it is said, were buried the Scottish kings prior to Malcolm Ceanmor, Egfrid the Northumbrian king (684), Godfred (1188), and

Haco Ospac (1228). According to Donald Munro, Dean of the Isles, who visited the place in the 16th century, and left an account of his visit, there were three tombs formed like chapels, in which were laid 'the kings of three fair realms.' The first, which contained the kings from Fergus II. to Macbeth, was inscribed, *Tumulus Regum Scotiae*; the second, which contained the remains of four Irish kings, had the inscription, *Tumulus Regum Hiberniae*; the third, with eight Norwegian kings, was marked, *Tumulus Regum Norwegiae*. An effigy of a man in armour is the monument of Macquarrie of Ulva. According to Dr Skene, a stone of the early part of the 13th century, with a sword, a small cross in a corner, and a treasure box (marking the founder of a church), is the tomb of Reginald, the founder of the monastery. That of Angus, Lord of the Isles in Bruce's time, who was interred at Iona in 1306, has a galley on it. There is also a portion of a monument to Abbot Mackinnon, already mentioned. The reason of the place having such sanctity as a burying-ground, is said to be the Gaelic prophecy thus paraphrased by the late Dr Smith of Campbeltown:—

'Seven years before that awful day,
When time shall be no more,
A watery deluge will o'erweep
Hibernia's mossy shore.

'The green-clad Islay, too, shall sink,
While with the great and good
Columba's happy isle shall rear
Her towers above the flood.'

There is a chapel at the nunnery still farther to the S with late Norman features passing into Early English. It is now partially restored. Here is the monument of the last prioress, much injured by the fall of the roof. It bears the inscription 'Hic jacet Domina Anna Donaldi Terletti filia quondam Prioressa de Iona qua obit anno MDXLIII Itio Ejus animam Altissimo Commendamus.' It has a figure of the prioress with the symbols of the mirror and the comb. It was asserted by the older writers that the island at one time contained 360 crosses, and that the synod of Argyll ordered these to be destroyed shortly after the Reformation, but this is plainly a very strouge case of travellers' stories. There are now two entire crosses, traces of other nine or ten in the shape of fragments, and of three or four from the names of places. The entire ones are St Martin's Cross, opposite the W door of the Abbey Church, and Maclean's Cross, on the wayside between the nunnery and the cathedral. The name of the latter is evidently due to some popular mistake; it is 10 ft. 4 in. high, while the former is 14 feet high. There was a parish church at an early date, and, according to the *Old Statistical Account*, it was distinct from the nunnery church, and is there described in 1795 as 'entire, but tottering.' It is mentioned in 1561 by the name of Teampul Ronain—the church of Ronan. In the 14th and 15th centuries Iona was under the Bishop of Dunkeld, but in 1506 it passed back to the care of the Bishop of the Isles, and from this date till the Reformation it was the Cathedral Church of the diocese. In 1648 Charles I. granted the island to Archibald, Marquis of Argyll, and it still belongs to his descendant, the present Duke of Argyll. A golden chalice belonging to the Abbey was in the possession of the Glengarry family, and from them passed to the service of the Roman Catholic Cathedral in Glasgow. From the sacrilege of that church it was stolen in 1845, and by the thieves consigned to the melting-pot.

At Port-a-Churaich, where Columba first landed on Iona, is a ship-barrow. It is about 50 feet in length, and is traditionally the model of St Columba's *currach* or boat. Dr Wilson in the *Prehistoric Annals of Scotland* is of opinion that it is a sepulchral barrow of some fierce Viking, erected during the period when the island was so frequently ravaged by the Northmen. There were formerly two standing stones at the same place. There are also cairns on the W side of the bay, and at Sithean Mor (the great fairy mount) there is also a

tumulus, on which Pennant says that at the time of his visit (1772) there was a circle of stones.

The parish of Iona contains also five farms in the Ross district of Mull. It was erected in 1845, and is in the presbytery of Mull and the synod of Argyll. The village is to the E of the ruins of the nunnery, and there are a few houses in the northern district, but the southern part is uninhabited. The parish church is in the village; the stipend is £120, and there is a manse and glebe. There are also a private Episcopal chapel (1894), and a Free church, the minister of which resides in Mull, the old Free church manse being now used as a hotel. There is a post office under Oban. Pop. (1881) 713, (1891) 646, of whom 575 were Gaelic-speaking.

See Monro's account in 1549 in the Macfarlane MS. in the Advocates' Library, and particulars supplied to Sacheverell, Governor of Man, by Dean Fraser in 1688 in the same MS.; Martin's *Description of the Western Islands* (Lond. 1703); Pennant's *Tour* (Chester, 1774); Maclean's *Historical Account of Iona* (Edinb. 1833-41); *Transactions of the Iona Club, Collectanea de rebus Albanicis*—edited by the Iona Club [edited by Donald Gregory and W. F. Skene] (Edinb. 1834); Graham's *Antiquities of Iona* (Lond. 1850); C. A. Butler's *Cathedral or Abbey Church of Iona* (Lond. 1866); Duke of Argyll's *Iona* (Lond. 1870; reprinted from the vol. of *Good Words* for 1869); *Adamnan's Life of St Columba* (Scottish Historian Series, Edinb. 1874); and Skene's *Celtic Scotland*, vol. ii. (Edinb. 1877).

Iorsa Water, a stream in Kilmorie parish, Arran island, Buteshire, issuing from tiny Loch na Davie (1182 feet above sea-level), and running 8½ miles south-westward to the N side of Machrie Bay. It has been widened, 2 miles above its mouth, into artificial Loch Iorsa (3 × ¾ furl.; 146 feet), which, like the stream, yields sea and river trout, with occasional salmon. See GLENIORSA.—*Ord. Sur.*, sh. 21, 1870.

Irongath Hill. See BORROWSTOUNNESS.

Irongray. See KIRKPATRICK-IRONGRAY.

Irvine, *The* (Gael. *iar-an*, 'westward-flowing river'), a river of Ayrshire, rising on the Lanarkshire border, at an altitude of 810 feet above sea-level, near Drumclog, and 7 miles SW by W of Strathaven. Thence it winds 29½ miles westward, dividing Cunninghame from Kyle, till it falls into the Firth of Clyde at Irvine town. Its principal affluents are Glen Water, Polbaith Burn, Kilmarnock Water, Carmel Water, Annick Water, and the Garnock; and it bounds the parishes of Galston, Loudoun, Kilmarnock, Riccarton, Kilmours, Dreghorn, Dundonald, and Irvine, under which full details are given as to the town, villages, mansions, and other features of its course. If the beauty of the stream, gliding slowly over its pebbly bed, the richness and verdure of its haughs, the openness of its course, the array of mansions looking down upon its meanderings, the displays of industry and wealth which salute it on its progress, are taken into view, the Irvine will be pronounced one of the most pleasing rivers of Scotland. At one time it yielded tolerable sport, and down to Kilmarnock the trout-fishing still is fair, but lower down its waters are poisoned by the refuse of public works and by town sewage. A few salmon ascend as far as Shewalton.—*Ord. Sur.*, shs. 23, 22, 1865.

Irvine, a town and a parish in Cunninghame district, Ayrshire. A seaport and a royal and parliamentary burgh, the town lies on the right bank of the river Irvine, immediately above a northward loop in the river's course, 1¼ mile in a direct line E by N of its mouth, but 2¾ miles following the winding of its channel. The parliamentary and municipal burghs are coextensive. At Fullarton stands Irvine Junction on the Glasgow and South-Western railway, 10¾ miles N by W of Ayr, 7½ W of Kilmarnock, 3½ SSE of Kilwinning, 29¼ SW of Glasgow, and 67 WSW of Edinburgh. A new station on the Caledonian railway was opened in 1890. By an Act of extension in 1881, Fullarton, on the left bank of the river, within Dundonald parish, and sometimes called the Halfway, came under the jurisdiction of the municipality. The site of the main

body of the burgh is a rising-ground, with sandy soil, extending parallel to the river; and the site of its suburbs, and of buildings on the outskirts, is low and flat. Sir William Breton described it in 1634 as 'daintily situate both upon a navigable arm of the sea and in a dainty, pleasant, level champaign country.' The principal street, ¾ mile long, runs through it from end to end, and is mostly spacious and airy, presenting an appearance superior to that of the main street of most of our second-rate towns. Some of the other streets, in whole or in part, are well-built; and the outskirts and environs contain a number of villas. The town has been lighted with gas since 1827, and in 1878 a gravitation water-supply was introduced from a distance of 6 miles at a cost of £40,000. Kilwinning, Stevenston, and Salcoats are supplied by the Irvine waterworks, upon which £90,000 has been expended since their construction. In 1881 they were transferred to the corporation, and since then have been largely extended. The old Town Hall, in the middle of the High Street, was built in 1745; the new Town Hall, on the E side of High Street, is an Italian edifice of 1859, erected at a cost of £4000. It has a fine tower 120 feet high, and contains council chambers, a court hall, a library, and other apartments. A large addition to the police premises in rear of the Town Hall was made in 1892. A four-arch carriage bridge over the river was built in 1746, and widened and improved in 1889; while the railway viaduct, on the line from Glasgow to Ayr, is an elegant six-arch structure. A magnificent market-cross, in the centre of the town, was taken down in 1694, and used for the erection of the meal market; and two gateways stood formerly at the principal entrances from the country, the one across High Street, the other across Eglinton Street. In 1867 was erected a statue of Lord Justice-General Boyle, by Sir John Steell, R.S.A. A statue to the poet Burns was unveiled in 1896, the gift of John W. Speirs, Esq., a Glasgow merchant, and a native of Irvine. With pedestal it stands 21 feet high, and is an entirely unconventional work, the designer, Mr James P. M'Gillivray, having refrained from introducing literary or agricultural paraphernalia, and depicted the poet with his hair tied behind with a ribbon bow, as was the custom in his day. The pose is easy, but suggests the independent and fearless spirit of the man. His right foot rests on a boulder, and over the knee his plaid is thrown in massive folds. The parish church, built in 1774, on a rising-ground in the Golf-fields, to the S of the foot of High Street, is an oblong edifice, with a beautiful spire, which figures conspicuously in a great extent of landscape. A number of memorial windows illustrative of Scripture subjects were presented to the church in 1892. Fullarton Established church, built as a chapel of ease in 1836 at a cost of £2000, was in 1874 raised to *quoad sacra* status. Other places of worship are Irvine and Fullarton Free churches, both erected soon after the Disruption; two U.P. churches, Trinity (1810) and Relief (1773), a Baptist chapel (1839), St Mary's Roman Catholic chapel (1875), and a mission station in connection with the Episcopal church. A pre-Reformation chapel, dedicated to the Virgin, stood on the bank of the river near the parish church; and at the S corner of the churchyard was a monastery of Carmelite or White Friars, founded in the 14th century by Fullarton of Fullarton. Irvine Academy, in an airy situation a little W of the N end of High Street, is surrounded by an enclosed playground of 2 acres, and representing a public school of 1572, was erected in 1814 at a cost of £2250. It presents a handsome appearance, contains accommodation for over 500 scholars, has two bursaries of £42 annual value, and gives education in English, writing, arithmetic, geography, drawing, book-keeping, mathematics, science, Latin, Greek, French, and German.

Irvine has a post office, with money order, savings bank, insurance, and telegraph departments, branches of the Royal, Union, Clydesdale, and British Linen Co.'s Banks, a National Security Savings Bank (1815), several hotels, a British Workman public house (1881), a Liberal club, a Unionist club, a horticultural society,

a literary institute, an evangelistic hall, a Good Templar hall, the first erection of its kind in Scotland, a fever hospital, custom-house, Assembly Rooms, fire-engine station, golf, bowling, and lawn-tennis clubs, a lifeboat, Shipwrecked Fishermen's and Mariners' Benevolent Society, and 2 weekly newspapers—the *Herald* (1870) and the *Times* (1873), both of which are published on Friday. For the local volunteers there are two drill-halls—one the Albert Hall, the other an iron structure erected in 1894, and measuring 100 feet by 50. A weekly grain market is held on Monday; fairs are held on the first Tuesday of May and on Wednesday after the third Monday of August. Manufacturing industry, both on the town's own enterprise and in connection with Glasgow and Kilmarnock, is extensively carried on. Hand-sewing, introduced about 1790, eventually rose to such importance as to employ, in the town and neighbourhood, nearly 2000 females; whilst hand-loom weaving engaged 400 weavers and 200 winders. The former is now very much decayed; the latter, about extinct. At present employment is afforded by several large chemical works, a dynamite factory (Nobel's Explosives Co., Limited), forges, foundries, and saw-mills, as well as by shipbuilding, rope-making, and all the ordinary kinds of artificership. Here also are large grain stores and the workshops of the Glasgow and South-Western railway. The traffic in connection with the railways, and in the interchange of general merchandise for country produce, is considerable. The harbour in 1892 resumed the status it lost some 30 years ago, and is once more a port of the United Kingdom. The new boundaries of the port are, on the N Stevenston Burn, and on the S Gailes Burn, giving about 5 miles of coast line. Within the boundaries of the new port the shipments of explosives from Nobel's works are made from the beach. During the last 30 years the trade at the harbour has multiplied tenfold. A weir across the river, about half a mile below Irvine Bridge, was constructed in 1896-97 at a cost of about £1200. The exports are coal, tanned leather, chrome ore, fireclay goods, etc.; the imports, timber, oats, butter, limestone, etc.

Irvine is one of the most ancient royal burghs of Scotland, having received a charter from Alexander II. (1214-49). Another, still extant, was granted by King Robert Bruce in 1308 for services rendered during the Wars of the Succession, and has been twelve times renewed and confirmed by subsequent monarchs. For some time the burgh exercised jurisdiction over the whole of Cunninghame, but this it lost by encroachments of the barons; and by the Burgh Police Act of

1892 it is now governed by a provost, 2 bailies, and 6 commissioners. The royal burgh is limited to Irvine proper; the parliamentary, including the police burgh, with Ayr, Campbeltown, Inveraray, and Oban, returns one member to parliament. A burgh court and a justice of peace court is held every Monday; a sheriff small debt court on the first

Seal of Irvine.

Thursday of February, April, June, August, October, and December; and a dean of guild court is held as occasion requires. The six incorporated trades—squar-men, hammermen, coopers, tailors, shoemakers, and weavers—early and voluntarily renounced their exclusive privileges, in advance of most similar bodies in Scotland. The corporation property, comprising 422 acres of arable land, the town hall, the town's mills, the meal market, the shambles and washing-houses, etc., yielded a revenue of £1498 in 1832, of £1980 in 1862

of £2939 in 1875, of £2539 in 1882, and of £1957 in 1895. Coal mines have been successfully sunk in the burgh land. The municipal and the parliamentary constituency numbered 1704 and 1521 in 1895, when the annual value of real property within the parliamentary burgh amounted to £35,384, against £13,854 in 1866, £10,424 in 1875, and £25,941, 13s. in 1882. Pop. of parliamentary burgh (1841) 4594, (1851) 7534, (1861) 7060, (1871) 6866, (1881) 8498, (1891) 9039, of whom 4467 were males and 4556—4508 in 1881—were in the royal burgh. Houses (1891) inhabited 1966, vacant 82, building 11.

The original church belonged till the Reformation to the monks of Kilwinning; later it was served from 1618 to 1640 by David Dickson (1583-1663), hymn-writer and commentator. In 1546 the town suffered much from the plague; in 1640 twelve women were executed at it for the crime of witchcraft; and it bore a considerable share in the struggles of the Covenanters, two of whom were hanged here in 1666. In 1783, in connection with the Rev. Hugh White, second minister of the Relief congregation, and with several other influential town-folk, Elizabeth Buchan (1738-91) here founded the fanatical sect of the Buchanites. Expelled in the following year by the magistrates, and pelted out of the town, she was joined at Kilmaraus by 45 of her disciples, and thence proceeded in a kind of exultant march to CLOSEBURN in Dumfriesshire (Joseph Train's *Buchanites from First to Last*, Edinb. 1846). In Aug. 1839 Irvine was temporarily crowded with strangers, pouring in from sea and highway to witness the fêtes of the grand tournament held at Eglinton Castle, which stands within 3 miles of the burgh. Robert Burus was sent hither at midsummer 1781 to learn the trade of a flaxdresser under one Peacock, kinsman to his mother. He had one small room for a lodging, for which he gave a shilling a week; meat he seldom tasted, and his food consisted chiefly of oatmeal and potatoes sent from his father's house. 'As we gave,' he tells us, 'a welcome carousal to the New Year, the shop took fire, and burned to ashes, and I was left, like a true poet, not worth a sixpence.' The house is still pointed out. The Irvine Burns Club possesses the MS. from which the first edition of his poems was printed. Another poet, James Montgomery ('the Christian Poet,' 1771-1854), was born in a small back dwelling in the street that leads to the station, his father having been a Moravian missionary. With the view of preserving the house it was purchased by some enthusiastic members of the Irvine Burns Club, who have placed a tablet on the building, marking it as his birthplace. In 1841 Montgomery visited his native town, and was received with every mark of respect. The novelist, John Galt (1779-1839), was born in a house on the site of the Union Bank, a tablet in the office of the bank commemorating the circumstance; and other natives were Robert Blair (1593-1666), a noted Presbyterian divine, and Lord-Justice-General David Boyle (1772-1853). A Viscountcy of Irvine, in the peerage of Scotland, was given in 1661 to Henry the eldest surviving son of Sir Arthur Ingram of Temple-Newsom in Yorkshire; it became extinct in 1778 at the death of the ninth Viscount. The ruinous Seagate Castle, belonging to the Earls of Eglinton, is supposed to have been the jointure house of the Montgomeries, and to have been built soon after 1361. Dr. Hill Burton, however, has a note on 'the Normandish tone of its gateway. . . . A visit to the spot rather confirmed the notion that some of the features of the building were of later Normau. There is a round arch, with thinnish rounded mouldings, and small round pillars with square or bevelled bases and capitals, with the tooth or star decoration in the hollows of the mouldings. The doorway has more of an ecclesiastical than a baronial look, although the building it belongs to is baronial' (*Hist. Scotl.*, ii. 98, ed. 1876). Gailes Camp, lying along the beach between Irvine and Troou, encamps at times as many as 5000 volunteers. On the Town Moor the Argyll and Sutherland Militia encamp annually from May to July. Bogside, adjoining the moor, is the steeple-

chase course of the Eglintou Hunt Club. Here also the Lanarkshire and West of Scotland Artillery Volunteers have camps of instruction during the summer. In the vicinity is the Cunningham Combination Poorhouse.

The parish of Irvine is bounded N by Kilwinning, NE by Stewarton, E by Dreghorn, S by Dreghorn and Dundonald, and W by the Firth of Clyde and Stevenston. Its utmost length, from NE to SW, is $4\frac{1}{2}$ miles; its utmost breadth is $3\frac{1}{2}$ miles; and its area is $4191\frac{1}{2}$ acres, of which $182\frac{1}{2}$ are foreshore and $78\frac{1}{2}$ water. The river IRVINE curves $3\frac{1}{2}$ miles west-by-northward on or close to all the Dundonald border; ANNICK Water, its affluent, winds 7 miles south-westward along all the boundary with Dreghorn; and GARNOCK Water flows $3\frac{1}{2}$ miles southward along that with Kilwinning and Stevenston, till it falls into the Irvine just above the latter's influx to the Firth of Clyde. The south-western district is low and flat; the north-eastern ascends very gradually till it attains 183 feet above sea-level near Muirhead, whence a beautiful view is obtained of an extensive sea-board, of a great reach of the Firth of Clyde, and of the mountains of Arran and parts of Argyllshire. The rocks are carboniferous, and abound in seams of coal and in good building stone. The soil of the SW district is partly a light loam, but mostly of a sandy character, and yields heavy grain and green crops; that of the NE is mainly a stiffish clay. With the exception of some 300 acres of drifting sand, the entire parish is capable of cultivation; only a very small portion of it is let exclusively for pasture; but a considerable aggregate, including part of Eglintou Park and numerous clumps of plantation on the north-eastern eminences, is under wood. Stane Castle, near Bourtreehill, the remains, it is said, of an ancient nunnery, is the chief antiquity. The only mansion is Bourtreehill, 2 miles E of the town; its owner is the Hon. Geoffrey Henry Browne-Guthrie, son of Baron Oranmore and Browne, the second Baron since 1836 (b. 1819; suc. 1860). Irvine is the seat of a presbytery in the synod of Glasgow and Ayr; the living is worth £379. Five public schools—Bank Street, East Road, Fullarton, Loudon Street, and Anuick Lodge—and a Roman Catholic school, with respective accommodation for 620, 294, 206, 517, 200, and 328 children, have an average attendance of about 480, 250, 100, 440, 150, and 100, and grants of over £480, £220, £98, £400, £144, and £96. Pop. (1801) 4584, (1831) 5200, (1861) 5695, (1871) 5875, (1881) 6013, (1891) 6141.—*Ord. Sur.*, sh. 22, 1865.

The presbytery of Irvine comprehends the old parishes of Ardrossan, Beith, Dalry, Dreghorn, Dunlop, Fenwick, Irvine, Kilbirnie, West Kilbride, Kilmarnock-Laigh, Kilmarnock-High, Kilmaurs, Kilwinning, Loudoun, Stevenston, and Stewarton; the *quoad sacra* parishes of New Ardrossan, Crosshouse, Darvel, Fergushill, Hurlford, Kilmarnock-St Andrews, and Kilmarnock-St Marnoch's; the chapelries of Dalry-West, Kersland, and North Church (Saltoats); and the Blair mission, Dalry. Pop. (1871) 96,695, (1881) 100,244, (1891) 105,222, of whom 15,541 were communicants of the Church of Scotland in 1895.—The Free Church also has a presbytery of Irvine, with 6 churches at Kilmarnock, 2 in Irvine, 2 in Kilbirnie, 2 in Saltoats, and 18 in Ardrossan, Beith, Catherine, Dalry, Darvel, Dunlop, Fenwick, Galston, Hurlford, Kilmaurs, Kilwinning, Loudoun, Mauchline, Muirkirk, Perceton, Stevenston, Stewarton, and West Kilbride, which 30 churches together had 8165 members in 1894.

Irvine or Irving, an ancient parish in Annandale, SE Dumfriesshire, now forming the middle part of Kirkpatrick-Fleming parish. The Irvings, who either took name from it or gave it name, held large possessions here, and had their chief seat at Bonshaw Tower on Kirtle Water. They multiplied into an important clan; signalled themselves on many occasions by patriotism and valour; numbered among their daughters 'Fair Helen of KIRKCONNEL Lee,' and sent off a distinguished and flourishing branch to Nithsdale.—*Ord. Sur.*, sh. 10, 1864.

Isbister, a fine mansion of recent erection in the Rendall portion of Evie parish, Orkney.

Isla, a beautiful river of Forfar and Perth shires, rising among the Grampians, at an altitude of 3100 feet, $1\frac{1}{2}$ mile NE of the meeting-point of Forfar, Perth, and Aberdeen shires, and $6\frac{1}{2}$ miles SSW of Lochnagar. Thence it winds $29\frac{1}{2}$ miles south-south-eastward, then $17\frac{1}{2}$ miles south-westward, till, after a total descent of 3000 feet, it falls into the Tay at a point 3 furlongs NNW of Cargill station, this being $11\frac{1}{2}$ miles NNE of Perth, and $4\frac{1}{2}$ WSW of Cupar-Angus. Its chief tributaries are Melgam Water, the Burn of Alyth, Dean Water, the Ericht, and Lunan Water, all noticed separately; and it traverses or hounds the parishes of Glenisla, Lintrathen, Airlie, Ruthven, Meigle, Bendochoy, Blairgowrie, Coupar-Angus, Cargill, and Caputh, under which, the REEKIE LINN, and the Slugs of ACH-RANNIE, are described the mansions, towns, villages, and other features of its course. That course is Highland in Forfarshire, but in Perthshire assumes a Lowland character. It is liable to great freshets; and, on occasion of the thunderstorm of 17 July 1880, the water rushed down in the form of a moving embankment 10 feet high, and, spreading over the valley, buried crops of all kinds in sand, and swept away sheep and lambs. The damage caused by another flood, in Sept. 1881, was estimated at £10,000. Salmon ascend as high as the Slugs of Achrannie, and heavy pike lurk in the deep still pools about the river's mouth, whilst its upper waters yield capital trout fishing. On 16 Oct. 1861 the Queen and Prince Consort made their 'last expedition' to Cairulochan or Canlochan Glen immediately below the Isla's source. The Queen describes it as 'a narrow valley, the river Isla winding through it like a silver ribbon, with trees at the bottom. The hills are green and steep, but towards the head of the valley there are fine precipices. To the S is Glenisla, another glen, but wider, and not with the same high mountains. Cairulochan, indeed, is "a bonnie place."—*Ord. Sur.*, shs. 65, 56, 48, 1868-70.

Isla, a small river of Banff and Aberdeen shires, rising on Carran Hill at an altitude of 1200 feet above sea-level, and running $18\frac{1}{2}$ miles north-north-eastward through or along the borders of Mortlach, Botriphnie, Keith, Grange, Rothiemay, and Cairnie parishes, till, after a total descent of 1000 feet, it falls into the Deveron at a point $\frac{3}{4}$ mile ESE of Grange Junction. Its scenery is diversified, but generally pleasing, and occasionally very beautiful; and its waters are well stocked with trout.—*Ord. Sur.*, shs. 86, 1876.

Island Glass. See GLASS-ELLAN.

Islay, an island in Argyllshire, the chief one of the southernmost group of the Hebrides. Its NE coast is $\frac{1}{2}$ mile distant from Jura at Feolin Ferry; and its E coast is $13\frac{1}{4}$ miles distant from the nearest point of Kintyre. Its utmost length, from N by E to S by W, is $25\frac{1}{2}$ miles; its utmost breadth, in the opposite direction, is 19 miles; and its area is 235 square miles, or 150,355 acres. The Sound of Islay, commencing opposite Rudha Mhail, and curving $14\frac{1}{2}$ miles south-south-eastward, separates all the NE coast from Jura; contracts from $3\frac{1}{4}$ miles to $\frac{1}{2}$ mile, and thence again broadens to 6; has abrupt shores, rarely exceeding 100 feet in height; and is swept by such rapid tidal currents, with short cross billows, as to be very dangerous to navigators. A crescental curve, with convexity to the E, and slightly diversified by a series of small headlands and bays, defines the coast from the SE end of the Sound onward to the island's southern extremity, the Mull of Islay, or Mull na Ho, which rises in cliffs to the height of 750 feet, and contains a cavern. Loch Indal, opening with a width of 8 miles, penetrates 12 miles north-north-eastward; forms the expansion of Laggan Bay at the middle of its E side; narrows to a width of from $1\frac{1}{2}$ to 3 miles in its upper part; and is all comparatively shallow. Rhynns Point, with small islands adjacent to it, flanks the W side of the entrance of Loch Indal, and forms the extremity of the south-western peninsula. A line running 13 miles north-by-

eastward from Rhynns point, and then 15 miles north-eastward to Rudha Mhail, defines all the rest of the coast; is cut about midway by Loch Gruinnard, penetrating $4\frac{1}{2}$ miles southward to within 3 miles of Loch Indal; and has elsewhere very trivial diversity of either bay or headland. The entire coast, in a general view, is bounded either by low rocks or by flat shores and sandy beaches; but at the Mull of Islay, as already noticed, it soars in cliffs to a commanding height; and about Sanaig, on the NW side, it is pierced with several large caves, one of which ramifies into a labyrinth. A number of islets lie off the coast, particularly on the E, and on the middle of the W side. The interior differs much in character from most of the Hebrides and the Highlands, exhibiting no assemblage of mountain and glen, yet displaying considerable diversity of structure and of contour, and containing a fair amount of pleasing landscape. Chief elevations, from N to S, to the E of Lochs Gruinnard and Indal, are Scarbh Hill (1197 feet), Beinn Dubh (974), Sgorr na Faoileann (1444), and Sgorr Voucharan (1157); to the W, Rock Side Hill (575), and Beinn Tartabhaille (775).

Harbours, with quay or pier, are at Port Askaig, on the Sound of Islay; Port Ellen, on the SE coast; Bowmore, near the head of the E side of Loch Indal; Port Charlotte, on the W side of Loch Indal; and Portnahaven, to the N of Rhynns Point. The small bays on the E coast are, for the most part, dangerous of approach, on account of sunken rocks; and Loch Gruinnard is almost the only place on the W coast which affords any anchorage. Numerous streamlets rise on the heights, run in all directions to the sea, afford plenty of water-power for any kind of machinery, and abound with trout and salmon. Of several small fresh-water lakes dotted over the interior, the largest are Loch Guirm ($\frac{3}{4} \times \frac{1}{2}$ mile), 7 miles WNW of Bridgend, and Loch Finlagau ($\frac{3}{4} \times \frac{1}{2}$ mile), 8 miles WSW of Port Askaig. Quartz rocks prevail in the principal hill ridge; a fine limestone prevails in the northern central district; and a strip of clay slate borders the W side of Loch Indal. Beds of excellent slate are plentiful, and have been largely worked; good marble has been quarried; beds of fine silicious sand, suitable for the manufacture of glass, are so extensive as to have furnished many cargoes for exportation; lime and shell sand, for mixture with neighbouring sea-weed and moss into composts, are inexhaustibly abundant; iron ore has been worked of prime quality; lead ore and silver are mined; and copper, manganese, graphite, and other metallic minerals have been discovered. The average rainfall in eight years was $48\frac{1}{2}$ inches, and the average temperature $47\cdot1$.

'Of late years,' writes Mr Duncan Clerk, 'the lands have passed into new hands, the new proprietors being Morrison of Islay, Ramsay of Kildalton, Finlay of Dunlossit, and Campbell of Ballinaby. The larger portion of the old native race tenantry has also passed away, and their holdings are now mostly occupied by tenants from Ayrshire and the Lowland districts, who turn their attention principally to dairy-farming, and find that Ayrshire stocks thrive exceedingly well. They also rear a considerable number of cross lambs, which are sent fat to Glasgow early in the season. The hill districts, which were formerly only partially stocked, are now covered with thriving flocks of blackfaced and Cheviot sheep, which help to supply the Glasgow market. West Highland cattle are still reared to a large extent, and the number is likely to increase under the stimulus of the high price of beef, which Islay supplies in perfection. . . . The area of arable land, though considerably increased, has not been so rapidly extended as might have been anticipated. However, the cultivation of land has been much improved, so that the production of food for cattle and sheep is very much larger per acre than it was forty years ago. Many fields carry heavier crops of turnips, potatoes, and corn than are usual even in the Lowlands. The improved culture, and the general rise in the value of farm produce, stimulated by the landlords' large expenditure on houses, fences, etc., has caused the rental of the island to be nearly doubled

within the last forty years. So much room for improvements still remains, however, that, with a judicious outlay of capital, it might be doubled again in the same number of years. The principal exports from Islay are horses, cattle, sheep, pigs, and poultry, cheese, butter, eggs, and, some years, a large quantity of potatoes. Whisky is largely produced; and the seven distilleries afford a valuable help in the supply of manure, while they also assist in maintaining prices of stock in the local markets, many cattle being fattened off in connection with them' (*Trans. Highl. and Ag. Soc.*, 1878). The arable soils are very various, but generally fertile and well cultivated. More than one-half of all the island's surface might be advantageously subjected to regular tillage; and much that was formerly heathy, pastoral, or badly cultivated is now reclaimed, well worked, and very productive. Enclosing, draining, judicious manuring, skilful cropping, and good road-making were commenced not long after the era of general agricultural improvement in Great Britain, and went on with such steadiness as to render a great part of the island, many years ago, as well dressed as many an equal extent of country in the Scottish Lowlands. The roads are everywhere excellent, and have good bridges; and a very important one, 15 miles long, from Bridgend to Port Ellen, opening up a district of previously little value, was begun to be formed so late as 1841. Drainage operations were facilitated by a very large grant under the Government Drainage Act, and by the produce of a local brick and tile work. Farming traffic is facilitated by abundance of local meal mills, by regular markets and fairs at Bowmore, Port Ellen, Bridgend, and Ballygrant, and by steamboat communication with Glasgow daily during summer, and twice a week in the winter. Telegraphic communication with the mainland was established in the autumn of 1871. In 1893 steps were taken for the erection of drainage and water works at Bowmore.

The island comprises the parishes of Kilchoman, Kildalton, and Killarrow, with the *quoad sacra* parishes of Kilmeny, Oa, and Portnahaven; and contains the villages of Bowmore, Bridgend, Port Charlotte, Portnahaven, Port Ellen, and Port Askaig, all of which are noticed separately. A sheriff small debt court sits at Bowmore four times a year; and a justice of peace small debt court is held on the first Wednesday of every month. Islay has a combination poorhouse at Bowmore, with accommodation for 48 inmates, a branch of the National Bank at Bridgend, branches of the Royal Bank at Port Ellen and Bowmore, 6 Established churches, 5 Free churches, an Episcopal mission chapel at Bridgend, a Baptist chapel at Bowmore, and 17 schools, with total accommodation for 1896 children. Valuation (1833) £38,270, (1892) £47,727. Pop. (1851) 12,334, (1861) 10,345, (1871) 8143, (1881) 7559, (1891) 7375, of whom 3653 were males and 6681 were Gaelic-speaking.

Islay was early and long in the possession of the Scandinavians; and it retains memorials of their sway in the remains of many duns and castles, and in such topographical names as Kenuibus, Assibus, Torribolse, and Torrisdale. It passed from them to the kings of Man, or sovereigns of the Hebrides; and it is said to have been, while in their possession, the place of their receiving rents and dues from large portions of their dominions. The island next became the residence of the Macdonalds, Lords of the Isles, the seat of their court, the sphere of their pompous rule over their insular dominion; and it retains the ruin of their castle on an islet in Loch Finlagan, the ruin of one of their fortalices at the SE entrance of the Sound of Islay, the vestiges of another of their fortalices on an islet in Loch Guirm, and the ruin of a famous church of their period, surrounded with an extensive cemetery, containing curious ancient grave-stones, on Island-Nave, adjacent to the NW coast. The lands of Islay, along with those of Jura, Scarba, and Muckairn, continued to be held, for several generations, by the descendants of the Macdonalds; but they were transferred, in the reign of James VI., to Sir John Campbell of Calder for an annual feu-duty, the propor-

tion of which for Islay was £500; and they all were afterwards sold to Campbell of Shawfield for £12,000. The emigrant ship, the *Exmouth*, in May 1847 struck on an iron-bound part of the NW coast of Islay, and went almost instantly to pieces, when 220 persons were drowned.

The six parishes of Islay, the parish of Jura, and that of Colonsay and Oransay, constitute the presbytery of Islay and Jura in the synod of Argyll, which meets at Bridgend on the last Tuesday of March, April, September, and November. Pop. (1871) 9564, (1881) 8917, (1891) 8489, of whom 702 were communicants of the Church of Scotland in 1895.—A Free Church presbytery of Islay comprises the five charges of Bowmore, Kilchoman, Kildalton and Oa, Killarrow and Kilmeny, and Portnahaven, with the mission station of Jura, which together had 1175 members and adherents in 1894.

Islay, Rhinns of. See ISLAY and ORSAY.

Isle. See ISLE-TOLL.

Isle Ewe. See EWE.

Isle Maree. See ELLAN-MAREE.

Isle-Martin, a triangular island of Lochbroom parish, NW Ross and Cromarty shire. It lies in the firth or elongated bay of Loch Broom, $4\frac{1}{2}$ miles NW of Ullapool. Separated from the coast of Coigach district by a strait $\frac{1}{2}$ mile wide at the narrowest, it measures $9\frac{1}{4}$ by $7\frac{1}{2}$ furlongs, rises to 397 feet above sea-level, and is used as a fishing station. Pop. (1861) 51, (1871) 42, (1881) 42, (1891) 47.—*Ord. Sur.*, sh. 101, 1882.

Isle of May. See MAY.

Isle of Oransay. See ORANSAY.

Isle of Whithorn, a seaport village in Whithorn parish, SE Wigtownshire, at the head of a small bay, 2 miles NE of Burrow Head, and $3\frac{1}{2}$ SE of Whithorn town. The most southerly village in Scotland, it stands upon what was once a rocky islet, and conducts some commerce with Whitehaven and other English ports, having a well-sheltered harbour, with a pier erected about 1790, and with capacity and external advantages sufficient to invite extensive commerce. It contains remains of a Scandinavian fort or camp and the roofless ruin of 'St Ninian's Kirk,' which has been falsely identified with the *Candida Casa* (397 A.D.), and so believed to represent the earliest place of Christian

worship in Scotland, but which was probably merely a chapel attached to the priory of WHITHORN. The village has a post office, with money order, savings bank, and telegraph departments, an inn, some tasteful villas, a lifeboat, a public school, and a neat Free church. Pop. (1831) 697, (1861) 458, (1871) 459, (1881) 352, (1891) 316.—*Ord. Sur.*, sh. 2, 1856.

Isle Ornsay, a village and an islet in Sleat parish, Isle of Skye, Inverness-shire. The village stands on the W side of the Sound of Sleat, near the mouth of Loch na Daal, opposite the mouth of Loch Hourn, 14 miles by steamboat route S by W of Kyle-Akin, and 11 by road SSE of Broadford, under which it has a post office, with money order, savings bank, and telegraph departments. Possessing also an inn and an excellent natural harbour, thoroughly sheltered, commodious, and much frequented by shipping, it is regularly visited by the Glasgow steamers to the north on their way through the Sound of Sleat, and commands the nearest route for tourists, by walking and by boat, to Loch Scavaig and the Cuchullin Mountains. The islet is small ($\frac{2}{3} \times \frac{1}{3}$ mile), but serves to protect the entrance to the harbour. It is crowned with a lighthouse, erected in 1857 at a cost of £4527, and showing a fixed white light, visible at a distance of 13 nautical miles.

Isles, North. See NORTH ISLES.

Isles, The. See HEBRIDES.

Isle-Tanera or Taneramore. See SUMMER ISLANDS.

Isle-Toll, a place with a post office under Auldgirth, in Kirkmahoe parish, Dumfriesshire, near the right bank of the Nith, $2\frac{1}{2}$ miles SSE of Auldgirth. Isle or Isle Tower, near it, is a modern mansion, whose owner is Joseph Gillon-Fergusson, Esq. (b. 1848; suc. 1879).—*Ord. Sur.*, sh. 9, 1863.

Issay, a fertile island ($1 \times \frac{1}{2}$ mile) of Duirinish parish, Isle of Skye, Inverness-shire, in Dunvegan Bay, opposite the middle of Vaternish. It is called also Ellan-Issa or the Island of Jesus.

Ithan. See YTHAN.

Itlaw, a hamlet in Alvah parish, Banffshire, 5 miles SSW of Banff, under which it has a post office.

Ively. See EVELAW.

Ivybank, an estate, with a mansion, in Nairn parish, Nairnshire, close to the town.

J

JACKTON, a village in East Kilbride parish, Lanarkshire, $3\frac{1}{4}$ miles WSW of East Kilbride village.

Jamacia, a village in Auchtermuchty parish, Fife, $1\frac{1}{2}$ mile SSE of the town.

Jameston, a village in Contin parish, SE Ross-shire, 1 mile S by W of Strathpeffer, under which it has a post office.

Jamestown, a village in Inverkeithing parish, Fife, 5 furlongs SSW of Inverkeithing town.

Jamestown, a small town in Bonhill parish, Dumbartonshire, on the left bank of the river Leven, $6\frac{1}{2}$ furlongs N of Bonhill town. It shares in the busy industry of the Vale of Leven, and has a post office, a station on the Forth and Clyde Junction section of the North British, a *quoad sacra* parochial church, and a public school. The church, erected in 1869 at a cost of £3000 in the Early English style, after designs by Clark & Bell of Glasgow, has a nave and aisle, a spire 130 feet high, and a large W window, with mullions and elaborate tracery. The *quoad sacra* parish, constituted in 1873, is in the presbytery of Dumbarton and synod of Glasgow and Ayr; its minister's stipend is £120. Pop. of town (1861) 869, (1871) 1163, (1881) 2171, (1891) 1668; of *q. s.* parish (1881) 2925, (1891) 2238.—*Ord. Sur.*, sh. 30, 1866.

Jamima. See JEMIMAVILLE.

Janefield, an estate with a mansion, in Kirkcudbright

parish, Kirkcudbrightshire, on the left bank of the Dee, $1\frac{1}{2}$ mile N by E of the town.

Janetown. See JEANTOWN.

Janetstown, a village in Wick parish, Caithness, 5 furlongs W of the station. It has a post office under Thurso.

Jardine Hall, an elegant mansion, with pleasant grounds, in Applegarth parish, Dumfriesshire, on the left bank of the river Annan, $2\frac{1}{2}$ miles NW of Nethercleuch station and $5\frac{1}{2}$ NNW of Lockerbe. Built in 1814, it was the seat of Sir Alexander Jardine, eighth Bart. since 1672 (b. 1829; suc. 1874), who died in 1893. His father, Sir William (1800-74), was a well-known ornithologist. Spedlins Tower, the seat of Sir Alexander's ancestors, stands on the opposite bank of the river, within Lochmaben parish; and is a strong, turreted, ivy-clad structure, bearing date 1605. Within its dungeon one Porteous, a miller, was imprisoned by the first Baronet, who, being called away to Edinburgh, rode off with the key in his pocket, and never once thought of his prisoner until he had reached the city. Then he sent back, but all too late, for the miller had died of hunger, after gnawing his hands and his feet.—*Ord. Sur.*, sh. 10, 1864.

Jeantown or Lochcarron, a fishing village in Lochcarron parish, SW Ross-shire, on the northern shore of Loch Carron, $3\frac{1}{2}$ miles SW of Strathcarron station, and

16 SSE of Shieldaig. Consisting chiefly of a straggling row of poor dwellings, nearly a mile in length, but containing a few pretty good shops and cottages, it has a post office (Lochcarron), with money order, savings bank, and telegraph departments, a branch of the Caledonian Bank, and a good inn. It suffered great damage from a gale in November 1881. A rising-ground behind it is crowned with a Scandinavian dune; and a road westward from it to Applecross traverses a picturesque defile to the head of Loch Kishorn, and then, in a series of traverses, ascends a steep mountain corrie to the height of 1409 feet, amid stupendous precipices, similar to those of Glencoe.—*Ord. Sur.*, sh. 82, 1882.

Jedburgh (old name, *Jed-worth*, 'town on the Jed'), the county town of Roxburghshire, a royal and police burgh, the seat of the circuit court for the counties of Roxburgh, Selkirk, and Berwick, the seat of a presbytery, a post and market town, the centre of traffic to a large extent of country, and a parish, is situated on the left bank of Jed Water, in the SE of Teviotdale. It lies 49 miles SE from Edinburgh by road, but $56\frac{1}{2}$ by rail; from Kelso 10 miles SSW by road, but $10\frac{1}{2}$ by rail; from Hawick 10 miles NE by road, but $18\frac{1}{2}$ by rail; and 12 miles NNW from the English border. A branch line of railway, $7\frac{1}{2}$ miles long, and opened in 1856, connects at Roxburgh with the North British line from St Boswells to Kelso; the station, to which the chief hotels run omnibuses, being nearly $\frac{3}{4}$ mile NNE of the market-place, beyond the suburb of Bongate. Between Jedburgh and Kelso, Hawick, Selkirk, Ancrum, Otterburn, Oxnam, Denholm, etc., carriers' carts go regularly.

Jedburgh proper, built on a spur of the Dunian ridge, may be described as cruciform, the High Street and Castlegate cutting at right angles the Canongate and Exchange Street, with the market-place at the point of intersection. The High Street and Castlegate, the best streets in the town, lying from NE to SW, and almost $\frac{1}{2}$ mile long, are well paved, and contain many of the chief buildings. Charles Stuart (the Pretender) lodged at No. 9 Castlegate in 1745. The Canongate, which stretches eastward from the market-place to the Jed, contains the house (No. 27) in which Burns lodged in 1787. Queen Street, which runs nearly parallel to the High Street, contains the house Sir David Brewster was born in (11 Dec. 1781); and that inhabited by Mary Queen of Scots in 1566, when detained in Jedburgh by severe illness. The latter, with thick walls and small windows, is large. It is described in the records of the Privy Council as 'the house of the Lord Compositor,' and seems, from the arms upon it, to have been the property of Wigmore of that ilk. Wordsworth visited Jedburgh in the autumn of 1803, and, owing to the inns being full, took up his abode at 5 Abbey Close.

Besides the town of Jedburgh proper, there are two suburbs—Richmond Row and Bongate. The former, purchased by the town in 1669 from the Marquis of Lothian, lies on the E side of the Jed; the latter, extending N of Richmond Row, belonged at one time to the monks, and was bought from Lord Jedburgh. These, however, do not belong to the royalty, though included within the municipal burgh. Bongate is built on level ground, and from it the town gradually rises from an elevation of 253 feet above sea-level to one of 388 feet. This rise, which culminates at the Townhead, where are the abbey and the building called Jedburgh Castle, once the county jail, makes the town more beautiful and more healthy. The river Jed, upon which the town stands, is crossed by no fewer than seven bridges within a mile.

The County Buildings, situated near the market-place, in which the different courts meet, and in which the head officials of the town and county transact their business, were erected in 1812. They are built of polished free-stone, but present no special architectural features. The old county prison occupies the site of the old castle of Jedburgh at the top of the town, was built in 1823, and is conspicuous, owing to the castellated style of its architecture. Jedburgh Castle, of which no trace now

remains, is inseparably connected with the history of the town, to which, from its size, position, and strength, it lent protection. Built about the 12th century, it was a favourite residence of many of the Scottish kings, as David I., Malcolm IV., William the Lyon, Alexander II., and Alexander III. Within its walls the last-named was living when he married Jolande, daughter of the Count of Dreux, in 1285; and here took place the banquet which followed the marriage ceremony in the abbey. On the same occasion it was the scene of the well-known incident, the appearance in the hall of the figure of Death, supposed to presage the calamity which befell the country by the king's death at Kinghorn in 1286. In the troubled times of the Wars of the Succession, Jedburgh Castle changed hands more than once—now held by the Scotch, then by the English, until in 1409 the men of Teviotdale rose and ejected the English, who had held it for sixty-three years. To prevent it from again falling into hostile hands, the castle was then destroyed, the money for the work of destruction being paid out of the royal revenue, after the first proposal to raise it by a tax of twopence upon each hearth in Scotland had been rejected. A part of the foundation was removed when the prison was built. After the castle was demolished, the town was defended by six bastille towers, which have also disappeared. Other public buildings are the Corn Exchange, built in 1860 by a company who hold £2500 worth of stock, and used for sales, concerts, lectures, exhibitions, etc.; the Museum, which occupies part of the Corn Exchange, and contains two pennons said to have been captured by the weavers of Jedburgh at Bannockburn and Killiecrankie, some pieces of the old burgh cross, the iron ladle which the town hangman was allowed at one time to dip into every sack of meal or corn that came into the market, and a good collection of fossils. A Maison-Dieu which once existed in Jedburgh has disappeared altogether, though it has left traces of its existence in the name of the 'Maison-Dieu acres,' given to a stretch of land, and in that of the 'Sick man's path,' as a steep road is called which leads from Friarsgate to Jedbank. The public park of Jedburgh, formerly part of the Virgin's glebe, is called the Lothian Park, after the Marquis of Lothian, who charges a merely nominal rent for the use of it. It is situated between the Jed and the parish church. There is another public park at Allerley Well, in which a summer-house was erected in 1894.

The chief attraction of Jedburgh, however, is its ruined abbey. In 1118 David I. founded a priory on the banks of the Jed, and placed it in possession of canons regular from the Abbey of St Quentin at Beauvais in France. In 1147 this priory was raised to the dignity of an abbey, dedicated to the Virgin Mary, and the smaller building that had served for the former became the nucleus of a more stately structure. The abbey, from its size and wealth, was able to rank with the great abbeys of the period, and formed a suitable pendant to the castle which stood near it. Its first abbot, Osbert, died in 1174. The abbey was endowed by David I. with the tithes of the two Jedworths, of Langton, Nisbet, Crailing, etc.; by Malcolm IV. with the churches of Brandon and Grendon in Northamptonshire, with some land and a fishery on the Tweed; by Ranulph de Soules with the church of Doddington near Brandon, and with the church in the vale of Liddel; and by William the Lyon and various barons with lands, churches, houses, both in England and Scotland. In 1220 a dispute that had lasted for twenty years between the canons of Jedburgh and the Bishop of Glasgow was ended in favour of the latter by an arbitration given in the chapel at Nisbet. The cause of the quarrel was the prerogative which the bishop sought to exercise over the canons, who resisted, but unsuccessfully. When John Morel was abbot in 1285, Alexander III. was married to Jolande, daughter of the Count of Dreux, in the Abbey of Jedburgh, then probably almost entirely built. In the wars between England and Scotland (1297-1300) it suffered so severely that the monks were unable to inhabit it, and had to be billeted on other religious

houses. The disasters with which the 14th century opened were made up for by a season of prosperity, which extended onwards from 1360. By that time at least the canons must have regained their ground, as they are discovered a few years later exporting wool into England that had come from their own flocks. In 1377 Robert III. added to their possessions the hospital of St Mary Magdalene at Rutherford, a few miles distant, under the condition that the canons should have service regularly performed in the hospital chapel. The order of Edward II. in 1328 to restore all the lands in England belonging to Jedburgh Abbey may be noticed, as one of its results was to compass the death of certain canons who had gone south to claim lauds belonging to them. This order was, at the best, only partially obeyed. In these years of Border warfare no place was more sacred than another—all suffered equally; and Jedburgh Abbey, from its proximity to England and its own commanding situation, had to bear the brunt of many an onslaught. In 1410, 1416, 1464, it was damaged by repeated attacks of the English, though to what extent is not known; but in 1523 both town and abbey fell before the forces of the Earl of Surrey on 23 Sept. The abbey was especially difficult to capture. When surrendered, it was stripped of everything valuable, and then set on fire. In 1544-45 the process of destruction was twice repeated under Sir Ralph Eure (or Evers) and the Earl of Hertford respectively. In 1559 Jedburgh Abbey was suppressed, and its revenues went to the Crown. For some years it was left almost a roofless ruin. A building, designed for the parish church, was afterwards erected within the nave, roofed over at the level of the triforium, and used as a place of worship up to 1875, when a new church, built in excambion by the Marquis of Lothian, was opened for public worship, and the edifice within the abbey walls dispensed with. Steps were forthwith taken to have it removed, so that the ruin of the abbey can now be viewed 'clear of that incubus upon its lovely proportions.'

In spite of its somewhat chequered fortune, Jedburgh Abbey is still wonderfully entire. The out-buildings, such as the treasury, library, scriptorium, refectory, common hall, etc., have disappeared, as well as part of the aisles, the eastern termination of the choir, and the S transept; but the centre of the nave, central tower, and the two western bays of the choir still remain to furnish a fair idea of the proportions of the church. It has been declared 'the most perfect and beautiful example of the Saxon and Early Gothic in Scotland,' but like most buildings that have been added to from time to time, it shows different styles of architecture. The choir, which is Early Norman, is undoubtedly the oldest part. In it the lower arches spring from corbels in the sides of the round pillars, and not from capitals, an arrangement followed also in Oxford Cathedral. Jedburgh Abbey may be said to resemble those of Dryburgh and Kelso in the shortness of its transepts. The present N transept, 68 feet in length, extended in the 14th century, furnishes a good example of Decorated work, and was for long used as the burial-place of the Kerrs of Fernieherst, a family once famous in Border history, and now represented by the House of Lothian. The great N window is divided by three mullions, and shows some fine tracery. At the point where the nave and choir intersect the transepts, rises a tower, 33 feet square and 86 high, though loftier at one time. It was divided into two stories, the upper of which once contained a clock and peal of bells. The oldest part of the tower, the N piers, is Early Norman. It was restored at the end of the 15th century. The nave, 129 feet long, and 27½ broad, is a fine specimen of 'the transition from the Transition to the developed Early English.' 'There are on each side three tiers of arches possessing a grace and lightness and beauty of general outline much and deservedly admired. The basement storey consists of clustered pillars, which support deeply-moulded pointed arches; in the triforium are semicircular arches, subdivided by pointed ones; whilst the clerestory is a detached arcade of thirty-six arches, also

pointed, the wall behind every alternate two being pierced for windows. In the lower storeys, the abacus, with only one exception, is square, as in all the older work, but in the clerestory the square edges are cut off, indicating the desire that had set in for new forms.' The total length of the building is 235 feet over the walls, and 218 within the walls. Sir G. Gilbert Scott declared the great western door and the S door, which leads from the S aisle into the cloisters, to be 'perfect gems of refined Norman of the highest class and most artistic finish.' The former, almost 14½ feet high and rather more than 6 broad, is semicircular in form, deeply recessed, and elaborately carved. Above it is a large window nearly 19 feet in height, and 6 in breadth, while an exquisite wheel-window has been placed near the top of the gable. The S door, which had become rather dilapidated, was copied at the expense of Lord Lothian, and the copy, most successfully made, has been inserted in the nave not far from the original. It is adorned with human figures, grotesque animals, and foliage. This doorway is unrivalled in Scotland, so symmetrical are its proportions, so fine its workmanship, so delicate the carvings executed upon it. Jedburgh Abbey thus shows no fewer than three or four different styles of architecture, from which it is easy to refer each part to its proper period. The combination which now exists is sufficient to make it one of the most interesting and beautiful ruins in Scotland, while the care that has been expended upon it is well repaid by the improvements which have been effected. A convent of Franciscan friars, founded in 1513, but which has totally disappeared, may be mentioned, because in it lived and died Adam Bell, author of *The Wheel of Time*. As an instance of the influence of the monks may be noted the great number of places with ecclesiastical names, as Temple Gardens, Friars' Wynd, Friarsgate, Canongate.

Considering its size, Jedburgh is well supplied with places of worship and ample school-accommodation. The parish church, as already mentioned, was erected by the Marquis of Lothian, and opened for service in April 1875. Built in the Early English style, of stone from the Eildon Hills, and having freestone facings, it is seated for over 1000 persons, and was erected at a cost of £11,000. Certain alterations and improvements upon it in 1892 cost £760. The Free church, near it, and built in the same style, was erected in 1853, and cost £3000. St John's Episcopal church, founded in 1843, and built at a cost of £4000, has about 200 sittings. It stands at the foot of Friarsgate, has a beautiful pulpit, altar, and font of Caen stone, and is one of the extremely few Episcopalian churches in Scotland with a 'lych' (corpse) gate. Besides these there are two United Presbyterian churches, Baptist and Roman Catholic chapels, and an Evangelical Union church, the two last being small and unpretentious buildings. The High Street United Presbyterian church was erected in 1818 at a cost of £3500; the Blackfriars United Presbyterian church was also built in 1818 at nearly the same cost. The Grammar school of Jedburgh was founded about the middle of the 15th century by Bishop Turnbull of Glasgow. Some doubt exists as to its precise original location, which was, however, near the SE corner of the Abbey tower, from which place it was removed in 1751. James Thomson, author of the *Seasons*, and Samuel Rutherford, the well-known Scottish divine, were educated at it. It passed, in terms of the Education Act of 1872, to the landward, and was afterwards purchased by the burgh, school board; and has accommodation for 635 scholars, and a grant of about £350. A new grammar school, costing from £4000 to £5000, with houses for the rector and janitor, board-room, large playground, etc., was built in 1883. The sessional school in Castlegate, established in 1851, has an attendance of about 140 children and £120 of grant. The town also contains several private schools, as the Nest Academy, an infant school, and an Episcopalian school. The last-named has an average attendance of about 140 children, and a grant amounting to over £130. The burgh school board consists of 7 members. Jedburgh has numerous

clubs and institutions, as the dispensary, museum, mechanics' institute, reading-room, young men's literary association, a Liberal club, a horticultural society, clubs for angling, bowling, billiards, etc., besides a cemetery, and gas and water works. There is a public library belonging to the Mechanics' Institute. Two Saturday newspapers, the *Liberal Jedburgh Gazette* (1870) and the *Liberal-Conservative Teviotdale Record* (1855), are published in the town.

In the unsettled times before the union of the two crowns, Jedburgh was unable to embark upon any industry that required security for its successful prosecution. During the period that lay between the accession of James VI. of Scotland to the English throne, and the final union of the two countries under Queen Anne, Jedburgh shared in a very lucrative contraband trade, which arose from the unequal duties levied on certain goods at the custom-houses of England and Scotland. When this was done away with, its prosperity seemed almost endangered, and would, in all likelihood, have been crippled, had not the manufacture of woollen goods been introduced. In Jedburgh, which was one of the first towns to take up this industry, a spinning-mill was started in 1728, but was not successful. Others were set up in 1738, 1745, 1786, 1806; and now there are 5 mills working, which employ several hundred persons. The chief articles made are woollen tweeds, blankets, and hosiery. Jedburgh has also an iron-foundry, several grain mills, and breweries, tanneries, and auction marts. It was for a long time famous for its pears, apples, plums,—once 'cried' in the streets of London, where the 'Jethart pears' were a favourite fruit, and a source of considerable income to their growers. No small emolument is still derived from the sale of the produce of the orchards in the vicinity of the town.

Several of the chief Scottish banks have branches at Jedburgh—the Royal, British Linen, Commercial, National, and Bank of Scotland. There is also a branch of the National Security Savings Bank, numerous agencies for fire and life insurance companies, and a head post office, with telegraph and money order office, and savings bank attached. The best hotels in the town are the Spread Eagle and the Royal.

There are weekly grain markets at Jedburgh every Tuesday and Saturday. Fairs are held on the Tuesday after 26 May and on the first Tuesday of November. The Road-day fair on 25 Sept. was formerly of great importance, but has not been held for many years. The magistrates of Jedburgh have jurisdiction over the St James' Fair, held on 5 Aug. near Kelso. Hiring fairs for servants are held on the first Tuesday of March, on the 16 May if a Tuesday—if not, on the Tuesday before—and on the first Tuesday of November.

The earliest date that can be fixed for the corporation of Jedburgh is 1296, that being the year in which the townsmen and it took the oath of allegiance to Edward I. Owing to none of the council records going further back than 1619, and the destruction of the old charters in one or other of the Border wars, it is impossible to determine the time at which the town was founded, or that at which it became a royal burgh. The evidence is in favour of an early erection, perhaps as early as the reign of David I. In 1556 Queen Mary gave a charter to the town which confirmed those that had preceded it, gave great power to the magistrates, and ample privileges to the burgesses. In 1737 and 1767 the burgh was deprived of its magistrates, at the latter date owing to misconduct at a parliamentary election. Under the Burgh Police Act of 1892 the government of Jedburgh is conducted by a provost, 2 bailies,

Seal of Jedburgh.

and 6 commissioners. At one time the corporation had property in lands, houses, mills, which yielded a yearly

rental of £500, but which was sold in 1845 to defray the debts incurred by the burgh in a lawsuit. As a result this income has dwindled away to nearly nothing, amounting in 1895 to no more than £53. Jedburgh had at one time eight incorporated trades, with the sole right of working for the inhabitants within the burgh. These were the fleshers, glovers, hammermen, masons, shoemakers, tailors, weavers, wrights, with a deacon at the head of each.

The sheriff court meets at Jedburgh every Monday and Thursday during session, and a small debt court is held every Thursday during session, and, in vacation, on such days as the sheriff appoints. Courts for summary and jury trials are held as often as required. Justice of peace courts are held on the first Tuesday of every month. The court of general quarter sessions meets on the first Tuesday of March, May, and August, and on the last Tuesday of October; and the Lords of Justiciary and Lords Commissioners hold courts at Jedburgh in the spring and autumn for the south-eastern circuit, which includes the counties of Roxburgh, Berwick, and Selkirk. The police force of the burgh is amalgamated with that of the county, an arrangement which has proved satisfactory. Jedburgh formerly united with Haddington, Dunbar, North Berwick, and Lauder in sending a member to parliament, but on the passing of the Redistribution of Seats Act of 1885 its representation was merged in that of the county. The municipal constituency numbered 740 in 1895, when the annual value of real property amounted to £14,812, against £12,893 in 1883. Pop. of the police burgh (1841) 3277, (1861) 3428, (1881) 3402, (1891) 3397, of whom 1817 were females, and 2455 were in the royal burgh.

Jedburgh is mentioned first in the 9th century, when it formed part of a gift from Bishop Egfrid to the See of Lindisfarne. Some have asserted that the original town stood $1\frac{1}{2}$ mile farther up the stream than the present town does, but this is doubtful. The name Jedburgh is spelt in as many as eighty-four different ways, the oldest of which is probably Geddewrd, while Jedworth (Jed-town) is found in 1147. In common speech, the town is still called Jethart, which is less corrupt than Jedburgh. About 1097 Jedburgh became a burgh and royal domain, owing its rise to the importance which it assumed under David I., partly to its naturally strong position, and partly to the shelter afforded by its castle on the Jed. David I., Malcolm IV., William the Lyon, Alexander II., and Alexander III. resided in Jedburgh from time to time. The town suffered severely in the Wars of the Succession. In 1297, to retaliate for damages done to Hexham, Sir Richard Hastings led a force against it, and devastated the abbey. The men of Teviotdale rose in 1409, recaptured the castle, which the English had held for sixty-three years, and destroyed it. The history of Jedburgh for a period of years from this point is simply a succession of attacks upon it by the English, and defences of it by the Scots, who were generally worsted in spite of the gallant resistance they always made. In 1513 the town was taken by the Earl of Surrey, and in 1547 it was occupied by part of the army led into Scotland by the Duke of Somerset. After this last attack Lord Dacre wrote to Wolsey in the following language, which needs no comment:—'Little or nothing is left upon the frontiers of Scotland, without it be part of old houses whereof the thak and coverings are taken away, by reason whereof they cannot be brint' (burned). In 1556 Queen Mary held a justice court at Jedburgh, with the object of quieting the Borders by removing some of the turbulent chiefs. She was detained in it for a few weeks by an illness which almost ended fatally, and it is said that in the after-troubles of her reign she was often heard to exclaim: 'Would that I had died at Jedburgh.' In 1571, when the country was divided into King's men and Queen's men, the citizens sided with the King, and held the town against the Lords of Buccleuch and Fernieherst, who marched upon it, desirous to chastise the burghers who had affronted a herald sent on the Queen's behalf. Thanks to the

speedy action of the Regent Moray in sending Lord Ruthven with reinforcements, the citizens were able to stand out against the attacks made upon them by Buccleuch and Fernieherst. The Raid of the Redeswire (1575) began in a dispute between the wardens of the middle marches about the person of Henry Robson, a noted free-lance, who, the Scottish warden demanded, should be given up for execution, while the English warden alleged that he had escaped. Such disputes seldom stopped at words, and, after an interchange of insults, the men of Tynedale began the fray by shooting their arrows at the Scots. The fighting became general, and the Scots were being worsted, when the men of Jedburgh, led by their provost, marched upon the field and turned the tide of battle. This was the occasion on which

' Bauld Rutherford, he was fu' stont,
Wi' a' his nine sons bim about,
He led the town o' Jedburgh out.
All bravely fought that day.'

This was the last of the almost innumerable engagements that took place on the Borders, and in it the war-cry of the burghers rose for the last time above the din of battle:—

' Then raise the slogan with ane shout,
Eye Tynedail to it! Jedbrugh's here.'

Here too may be mentioned the burghers' favourite weapon—the 'Jeddart staff.' It was a stout pole 7 or 8 feet long, with an iron head shaped either as a hook or hatchet. The 'Jeddart axe' is also mentioned, and both must have been formidable weapons. The oldest form of the townsmen's war cry is 'A Jedworth, a Jedworth;' but the form 'Jethart's here' also existed, while that of 'A Jeddart, a Jeddart' is probably corrupt. 'Jeddart Justice' is in Scotland what 'Lidford Justice' is in England. It means 'hanging first and trying afterwards,' and arose first in 1608 from the summary way in which Lord Home disposed of a number of captured freebooters. When Charles Stuart (the Pretender) was marching to England in 1745, he, along with part of his army, passed through Jedburgh, where he lodged in a house in Castlegate, as noted above. At the time of the Reform agitation, a meeting was held at Jedburgh in 1831, at which Sir Walter Scott spoke against the projected reform, and in consequence met with a most unfavourable reception. Jeffrey, however, explains that it was the opinions and not the man that met with disapproval. On the 23 Aug. 1869 Queen Victoria visited the town.

Could those who inhabited Jedburgh in the 14th and 15th centuries observe their town and its present occupants, they would be unable to recognise the former, and the latter would seem strangely different from themselves. The Jedburgh that was pillaged and burned again and again during the Middle Ages (though said by the Earl of Surrey in 1523 to have been well built and to contain many fair houses) must have seemed insignificant and mean when compared with the present town, in spite of its noble abbey and almost impregnable castle. Its then inhabitants were almost as much men of war as of peace, ready to share in every foray, so that it was commonly said that no Border skirmish ever took place without the cry of 'A Jedworth, a Jedworth' being heard in it. The town has been greatly improved in recent times, many new buildings have been erected, and its inhabitants are prosperous and quiet.

Jedburgh has furnished its quota of famous men and women to the bead-roll of distinguished Scotchmen and Scotswomen. The chief of these are Mary Somerville, Sir David Brewster, Dr Somerville, and James Bell. Mary Somerville, 'The Rose of Jedwood,' was born at Jedburgh Manse on 26 December 1780, and died at Naples in 1872. She wrote *The Connection of the Physical Sciences, Physical Geography, Microscopic and Molecular Science*, etc. Thomas Somerville, D.D., uncle and father-in-law of the above, was born at Hawick in 1741, and died at Jedburgh 1830. He was the author of a *History of Great Britain in the reign of*

Queen Anne, and a work entitled *My own Life and Times*. Sir David Brewster, born in 1781, died in 1868, published many scientific treatises, and invented the kaleidoscope and lenticular stereoscope. James Bell (1769-1833) wrote books on history and geography.

The parish of Jedburgh, said to be the oldest parish in Scotland of which any historical record has been transmitted to posterity, contains also the villages or hamlets of Bonjedward, 2 miles N of the town; Ulston, 1½ NE; Lanton, 3 WNW; and Edgerston, 7½ SSE. It comprises the ancient parishes of Jedworth, Old Jedworth, and Upper Crailing; and till 1891 had two detached portions separated from the main portion of the parish by the parishes of Southdean and Oxnam. The Boundary Commissioners, with the view of uniting the detached portions to the main body, transferred to Southdean so much of the Old Jedward detached part of Jedburgh as lay within the farm of Mervinslaw, and to Oxnam that part of Jedburgh which lay east of the Oxnam Burn from the Roman road northward to the boundary with the parish of Crailing, but transferred to Jedburgh the portion of Oxnam parish that still intervened between Jedburgh and its other detached part. Consisting of Jedworth in the W, Upper Crailing in the E, and Edgerston in the S, the parish is bounded N by Crailing and Eckford, E by Hounam and Oxnam, S for 1½ mile by Northumberland, SW by Southdean, W by Bedrule, and NW by Ancrum. Its utmost length, from NNE to SSW, is 10½ miles; and its width varies between ½ mile and 5 miles. The area of the entire parish up to 1891 was 22,670½ acres, of which 135½ were water. JED WATER, which takes its rise in the Carter, one of the hills of the Cheviot range, after traversing the boundary with Southdean, winds 5½ miles northward through the interior till it falls into the TEVIOT, which itself meanders 4¾ miles east-north-eastward on or close to the Ancrum and Crailing border. Along the Teviot, in the extreme N, the surface declines to 170 feet above sea-level, thence rising to 523 feet near Monk-law, 705 near Tudhope, 923 at Lanton Hill, 1095 at *DUNIAN Hill, 1110 at *Black Law, 957 at *Watch Knowe, 700 near West Cottage, and 741 near Kersheugh, where asterisks mark those summits that culminate just within Bedrule parish. The southern portion of the parish, which sinks along Jed Water to from 530 to 480 feet, attains 829 near Edgerston church, 985 at Hare-shaw Knowe, 1358 at Browdean Laws, 1173 at Hop-hills Nob, 1469 at Arks Edge, and 1542 at Leap Hill—green summits these of the CHEVIOTS. The rocks include much trap, both in mountain masses and in valley-dykes; but they mainly consist of the stratified orders, from the Silurian to carboniferous, and in many parts exhibit such interpositions as have furnished subject of interesting study to both geologists and economists. White and red sandstone, of excellent quality, has been worked in several quarries; good limestone is pretty plentiful; coal was bored for at various periods from 1660 to 1793; and a bed of iron ore, 3 feet thick, occurs not far from the town, near which are also two chalybeate springs. The soil, in some places a stiffish clay, in others a mixture of clay with sand or gravel, in the valley of the Teviot and along the lower reaches of the Jed is a fertile loam, and on the higher grounds is very various. A great natural forest, called Jed Forest, formerly covered nearly all the surface of the parish, together with all Southdean, and parts of contiguous parishes; and remains of it, to the extent of many hundred acres, were cut down only in the course of the 18th century. Two survivors are one beautiful and vigorous oak, the 'King of the Woods,' near Fernieherst Castle, with a trunk 43 feet high and 17 in girth at 4 feet above ground; and another, the 'Capon Tree,' 1 mile nearer Jedburgh, 'a short-stemmed, but very wide-spreading oak, with a circumference at the base of 24½ feet' (*Trans. Highl. and Ag. Soc.*, 1881, pp. 206, 207). Fully a tenth of the entire area is still occupied by orchards, groves, and plantations; a large portion of the uplands, especially in the southern portion of the parish, is disposed in sheepwalks; and the rest of the

land is all in a state of high cultivation. An ancient military road goes over the Dunian from Ancrum Bridge towards the town, 2 miles from which a Roman causeway, paved with whinstone, and almost entire, passes along the north-eastern district. A Roman camp, seemingly about 160 yards each way, is near Monklaw; a well-defined circular camp, 180 feet in diameter, with ramparts nearly 20 feet high, is at Scarsburgh; remains of a famous camp, formed by Douglas for the defence of the Borders during Bruce's absence in Ireland, crown the top of a bank at Lintalee; and vestiges of other camps at Fernieherst, Howdean, Camptown, and Swinnie. Peel-houses, towers, and other minor military strengths, appear to have been numerous; but only one at Lanton, and the ruins of another at Timpendean, are now extant. Of several artificial caves, excavated in rock, on the banks of the Jed, the two largest, those of Lintalee and Hundalee, disappeared through landslips of 1866 and 1881. Vestiges of a chapel, founded in 845, are at Old Jedward, 5 miles SSE of the town; and verdant mounds indicate the sites or the graveyards of others in various places. Coins of Canute, Edred, Edwy, Ethelred, Edward I., Edward III., and later kings, both Scottish and English, together with ancient medals, have been found, in almost incredible numbers, at Stewartfield, at Bongate, at Swinnie, near the abbey, and in other localities. A chief antiquity, FERNIEHERST CASTLE, is noticed separately, as also are the mansions of BONJEDWARD, EDGERSTON, HARTRIDGE, HUNTHILL, LANGREE, and LINTALEE. Including most of Edgerston *quoad sacra* parish, Jedburgh is the seat of a presbytery in the synod of Merse and Teviotdale; the living is worth £483. Two landward public schools, Lanton and Pleasant, with respective accommodation for 102 and 96 children, have an average attendance of about 40 and 90, and grants of over £45 and £88. Pop. of entire parish (1801) 3834, (1811) 5647, (1861) 5263, (1871) 5214, (1881) 5147, (1891) 4814, of whom 4662 were in Jedburgh ecclesiastical parish.—*Ord. Sur.*, sh. 17, 1864.

The presbytery of Jedburgh comprises the civil parishes of Ancrum, Bedrule, Cavers, Crailing, Eckford, Hawick, Hobkirk, Hounam, Jedburgh, Kirkton, Minto, Oxnam, Southdean, Teviothead, and Wilton, the *quoad sacra* parishes of Edgerston, Hawick St Mary's, Hawick St John's, and St Margaret's, formerly Wellington chapelry, Wilton. Pop. (1871) 26,267, (1881) 30,769, (1891) 32,848, of whom 7307 were communicants of the Church of Scotland in 1895. There is also a Free Church presbytery of Jedburgh, with 3 churches at Hawick, and 6 at Ancrum, Castleton, Crailing, Denholm, Jedburgh, and Wolflee, which 9 churches together had 2432 members in 1894.

See pp. 260-268 of Dorothy Wordsworth's *Tour in Scotland* (ed. by Princ. Shairp, 1874); James Watson's *Jedburgh Abbey* (Edinb. 1877); and an article in the *Saturday Review* (1882).

Jedfoot Bridge, a railway station in the N of Jedburgh parish, Roxburghshire, 1½ mile N by E of the Jedburgh terminus.

Jed Forest. See JEDBURGH.

Jed Water, a small river of Southdean and Jedburgh parishes, Roxburghshire. It rises, as Raven Burn, at an altitude of 1500 feet, on the western slope of Carlin Tooth (1801 feet), one of the Cheviots, 1 mile from the English Border; and thence winds 21¾ miles north-by-eastward, till, after a descent of 1325 feet, it falls into the Teviot, at a point ¾ mile below Mounteviot House. Its tributaries are numerous but small. Its basin or vale is a kind of broad tumulated plain, half engirdled by the Cheviots and their offsets; looks, in the view from Carter Fell, surpassingly beautiful; and, even as seen in detail, exhibits many a close scene, so full of character, as to have fired the muse of Thomson, Burns, Leyden, and many a minor poet. An intelligent observer, indeed, sees little in it to compete with the basins of the Tweed, the Tay, and some other large picturesque Scottish rivers; yet within the brief distance of 2 or 3 miles, especially in the parts immediately

above the town of Jedburgh, he will survey, though on a small scale, more of the elements of fine landscape than during a whole day's ride in the most favourite Scottish haunts of tourists. The rockiness of the river's bed, the briskness of its current, the pureness of its waters, the endless combinations of slope and precipice, of haugh and hillock, of verdure and escarpment, of copse and crag, along and around its banks, produce many a scene of picturesqueness and romance. Its waters are well stocked with trout of good size and high character; but, in consequence of the intricacy and woodedness of the banks, they can rarely be angled without much skill and patience.—*Ord. Sur.*, sh. 17, 1864.

Jemimaville or Jamima, a village at the mutual border of Resolis and Cromarty parishes, on the southern shore of the Cromarty Firth, 3 miles SSE of Invergordon and 4½ WSW of Cromarty. Fairs are held on the first Tuesday of April, the first Wednesday of August, and the last Tuesday of October. An urn of very antique form was found, about 1830, in a neighbouring earthen tumulus.—*Ord. Sur.*, sh. 94, 1878.

Jerviston, an estate, with a mansion, in Bothwell parish, Lanarkshire, on the right bank of South Calder Water, 1¼ mile NNE of Motherwell.

Jerviswood, an estate in Lanark parish, Lanarkshire, on the left bank of Mouse Water, 1½ mile N by E of the town. By the Livingstons it was sold in the middle of the 17th century to George Baillie, whose son, Robert Baillie of Jerviswood, entitled sometimes the 'Scottish Sydney,' was hanged at Edinburgh for alleged high-treason in 1684, and whose sixth descendant, George Baillie of Jerviswood and Mellerstain, in 1858 succeeded his second cousin as tenth Earl of Haddington.—*Ord. Sur.*, sh. 23, 1865. See TYNNINGHAME.

Jesus, Island of. See ISSAY.

Jock's Lodge, a district of Edinburgh, in South Leith parish, on the road to Portobello, adjacent to the S side of the locomotive depôt of the North British railway, and with a station on that system. Standing on low ground, at the NE base of Arthur's Seat, immediately above the subsidence into meadow, and surrounded with a rich variety of pleasant scenery, it extends somewhat stragglingly ¼ mile along the road; consists chiefly of a spacious cavalry barrack and two lines of dwelling-houses; and has a post office, with money order, savings' bank, and telegraph departments, a soldiers' home, and a police station. The barrack, on its N side, was built of Craigmillar stone in 1793; comprises a quadrangular, enclosed area (500 × 300 feet); contains accommodation for a regiment of cavalry; and includes a neat, comparatively recent, Episcopalian chapel. It bears the name of Piershill, after Colonel Piers, who occupied a villa on the exact site of the officers' quarters in the time of George II., and commanded a regiment of cavalry then stationed in Edinburgh. The name of 'Jokis Lodge' occurs as early as 1650, but is of uncertain origin.—*Ord. Sur.*, sh. 32, 1857.

Jock's Thorn. See KILMAURS.

John o' Groat's House, a quadrang domeicile in Canisbay parish, NE Caithness, on the flat downy shore of the Pentland Firth, 1¾ mile W of Duncansbay Head and 18 miles N of Wick. Its legend is told as follows:—During the reign of James IV., a Lowlander of the name of Groat—or, according to some versions, a Dutchman of the name of John de Groot—arrived along with his brother in Caithness, bearing a letter from the King, which recommended them to the gentlemen of the county. They procured land at this remote spot, settled, and became the founders of families. When the race of Groat had increased to the number of eight different branches, the amity which had hitherto characterised them was unfortunately interrupted. One night, in the course of some festivity, a quarrel arose as to who had the best right to sit at the head of the table next the door; high words ensued, and the ruin of the whole family, by their dissension, seemed at hand. In this emergency, however, one of them, John, rose, and having stilled their wrath by soft language, assured

them that at their next meeting he would settle the point at issue to the satisfaction of all. Accordingly, he erected upon the extreme point of their territory an octagonal building, having a door and window at every side, and furnished with a table of exactly the same shape; and when the next family festival was held, he desired each of his kin to enter at his own door, and take the corresponding seat at the table. The perfect equality of this arrangement satisfied all, and their former good humour was thus restored. There are many different versions of the above story, but all bearing a resemblance to the well-known legend of the Knights of the Round Table. One version represents John, the ingenious deviser of the octagonal house, to have been ferryman from Canisbay to Orkney. The site of the house is only marked by an outline on the turf. There are two hotels at the place; one, erected in 1875-76, having an appropriate octagonal tower, which commands a magnificent view. The only European cowry known (*Cypræa Europea*) is cast up here by the tide, along with quantities of other beautiful shells, and bears the name of 'John o' Groat's buckie.'—*Ord. Sur.*, sh. 116, 1878.

Johnshaven, a fishing village in Benholm parish, Kincardineshire, with a station on the Bervie branch of the North British, $4\frac{1}{4}$ miles SSW of Bervie and $9\frac{1}{4}$ NNE of Montrose. Standing upon a rocky reach of coast, it has a post office under Montrose, with money order, savings bank, and telegraph departments, several insurance agencies, inns, and friendly societies, coast-guard and police stations, a battery of artillery volunteers, a brewery, a sailcloth factory, a chapel of ease, a Free church, and a U.P. church. A new harbour was constructed in 1884 at a cost of over £4000. A public school, enlarged in 1877, with accommodation for 270 children, has an average attendance of about 230, and a grant of over £200. Pop. (1831) 1027, (1841) 1172, (1861) 1089, (1871) 1077, (1881) 1041, (1891) 1047. Houses (1891) inhabited 249, vacant 39.—*Ord. Sur.*, sh. 57, 1868.

Johnston. See LAURENCEKIRK.

Johnstone, a parish in Annandale, Dumfriesshire, whose church stands on the right bank of the Annan, 7 furlongs NW of Dinwoodie station on the Caledonian, this being 6 miles NNW of Lockerbie, under which there is a post office of Johnstone Bridge. Comprising the ancient parish of Johnstone and parts of those of DUMGREG and GARVALD, it is bounded N by Kirkpatrick-Juxta, E by Wamphray and Applegarth, S by Lochmaben, and SW and W by Kirkmichael. Its utmost length, from N to S, is $7\frac{1}{2}$ miles; its breadth varies between $1\frac{1}{2}$ and $5\frac{3}{8}$ miles; and its area is 13,607 $\frac{1}{2}$ acres, of which 116 $\frac{3}{4}$ are water. The ANNAN winds $6\frac{1}{2}$ miles south-by-westward along or near to the eastern boundary; and KINNEL Water 9 miles southward along the Kirkpatrick-Juxta boundary, across the western interior, and along or near to the Kirkmichael boundary, till it passes off into Lochmaben on its way to the Annan. In the extreme S the surface declines to 195 feet above sea-level, thence rising northward to 380 feet near Blackburn, 490 near Williamson, and 749 near Hazelbank, and north-north-westward, beyond Kinnel Water, to 1076 at Hangingshaw Hill, and 1308 at Minnygap Height. Red sandstone, prevailing for upwards of a mile from the southern boundary, has been quarried on a small scale; elsewhere cruptive rocks predominate, but have little or no economical value; and lead ore exists in circumstances to have induced a search for workable lodes, but has not answered expectations. Alluvial soil, chiefly dry loam or gravel, covers the level tract along the Annan; peat moss, extending over some hundreds of acres, occurs in other parts; and the soil of much of the arable lands on the slopes and hills is too poor to yield remunerative crops of wheat. About three-sevenths of the entire area are in tillage; woods cover some 1550 acres; and the rest is either pastoral or waste. Dr Matthew Halliday and Dr John Rogerson (1741-1823), successively first physicians to the Empress Catherine of Russia, were natives

of Johnstone. LOCHWOOD Castle, the chief antiquity, and RAEHILLS, the principal mansion, are noticed separately; and J. J. Hope-Johnstone, Esq., is sole proprietor. Johnstone is in the presbytery of Lochmaben and synod of Dumfries; the living is worth £190. The parish church was built in 1733 and enlarged in 1818. Johnstone and Wamphray Free church stands $2\frac{1}{2}$ miles N by E; and Johnstone, Cogrieburn, and Goodhope public schools, with respective accommodation for 110, 58, and 73 children, have an average attendance of about 65, 35, and 55, and grants of over £55, £30, and £50. There is a constabulary station. Pop. (1801) 740, (1831) 1234, (1861) 1149, (1871) 1089, (1881) 1002, (1891) 927.—*Ord. Sur.*, sh. 10, 1864.

Johnstone, a town, *quoad sacra* parish, and registration district in the extreme W of the Abbey parish of Paisley, and near the centre of the county of Renfrew. The parish was not erected till 1834, when there was a population of over 5000; but as early as 1792 a church had been built, and in 1794 (when the population was only about 1500) the building was ready for use, and bounds were perambulated and assigned, within which the minister of the Johnstone church had ecclesiastical charge. The town, which has now outgrown the limits of the original parish, stands on the E bank of the Black Cart, and a short distance W of the road from Glasgow to Ayr by Paisley. It is by rail $3\frac{1}{2}$ miles W by S of Paisley, $10\frac{1}{4}$ W by S of Glasgow, 14 SE by E of Greenock, and $25\frac{1}{2}$ N by E of Ayr. It has a station on the Glasgow and Ayr section of the Glasgow and South-Western railway system, close to the point where the branch turns off north-westward to Greenock, and here was also formerly the western terminus of the Glasgow, Paisley, and Johnstone Canal, an undertaking at first intended to be continued to Ardrossan. The canal subsequently coming into possession of the Glasgow and South-Western Railway Company, it was used for goods traffic only, and has now been converted into a railway. The town was founded in 1781, the site, at the E end of a bridge over the Cart known as 'the Brig o' Johnstone,' having been previously occupied by a small hamlet of only ten houses. The first houses afforded accommodation to the hands employed at a large cotton mill erected close by, and since then the place has, in virtue of its position in the middle of a large mining district, become a considerable industrial centre. The mill was built, and the plan of the town laid out, by the proprietor of the estate of Johnstone, who was also superior of the ground on which it stands, and it is to his influence that the place owes its first start in prosperity and its rapid rise, for in the first ten years of its existence the population increased from about 50 to about 1500. The plan was a regular one, the main street (High Street) running almost E and W, and being crossed at right angles by numerous minor streets, while there are two spacious squares—one of which forms a market-place. The houses are substantial stone buildings, and the place has a remarkably airy appearance, due in part to the spaciousness of the streets, and in part to the number of pieces of open garden-ground attached to the houses. The Burgh buildings, in Collier Street, were erected in 1888 at a cost of £2000, and contain a full length portrait of the late Sir Wm. M. Napier, Bart., the spacious court-room being ornamented with the burgh coat of arms. A Cottage Hospital, with accommodation for 16 beds, was in 1893 presented to the town and neighbourhood by Mr. Charles Bine Renshaw, M.P., the cost of which, including a gift endowment fund of £3000, was about £10,000—the donor besides giving £100 annually for five years. Captain Speirs of Elderslie gave the site free, and the same year presented to the town a large field in the vicinity to be used for recreation purposes. In that year also a new Drill Hall was erected at an estimated cost of £1200, and a Good Templars' Hall built at a cost of about £1000. Hand-loom weaving, at one time extensively carried on, is now extinct. The principal industries in the burgh are extensive foundries and machine works,

a boiler work, a paper mill, linen thread works, and cotton mills. The old premises of the Clippens Oil Co. (about 50 acres) were leased in 1894 by the Sun Foundry of Glasgow. Under the Burgh Police Act of 1892, it is governed by a provost, 2 bailies, and 6 commissioners. The police force consists of 9 men, and a police court is held on the first Monday of every month. The town is well supplied with water, and in 1881 the property and plant of the Gas Company were acquired by the town at a cost of £22,000. The works are at the N side of the burgh. The parish church, at the S end of Church Street, was built, as already noticed, between 1792 and 1794 as a chapel of ease at a cost of about £1400. The spire was added in 1823, and extensive repairs were made in 1877. Laigh Cartside chapel of ease was opened in 1885. The Free church in William Street was built soon after the Disruption. There are two United Presbyterian churches, the one built in 1791 at a cost of about £900, and the other in 1829 at a cost of about £1500. The Episcopal church, dedicated to St John the Evangelist, is a cruciform building with transepts and chancel. It was erected in 1874 and enlarged in 1878, and contains 400 sittings. The Roman Catholic church, dedicated to St Margaret, was originally erected in 1852, but in 1882 underwent great alteration and reconstruction after designs by Messrs Pugin & Pugin. Educational affairs are managed by a committee of the Abbey Parish School Board, and the schools are Johnstone, Nethercrails, M'Dowall Street, Inkerman, and Cardonald public schools, with accommodation respectively for 850, 142, 181, 280, and 144 scholars, an average attendance of about 890, 110, 80, 145, and 100, and grants of nearly £920, £115, £80, £135, and £100. A school is also carried on in connection with St Margaret's Roman Catholic church, which, with accommodation for 489 children, has an average attendance of about 390, and a grant of nearly £390. Johnstone has a post office, with money order, savings bank, insurance, and telegraph departments, branches of the National, Royal, and Union Banks, a branch of the National Security Savings Bank, and several inns. The newspapers are the *Johnstone Advertiser* and the *Observer*, both published on Saturday. There is a Public Hall and Working Men's Institute, with a news-room and a hall with accommodation for 1000, and containing a fine organ presented by Mr Bousfield. There are also Assembly Rooms, a temperance hall, a Mechanics' Institute, a friendly society, a branch of the Bible society, a missionary society, a Young Men's Christian Association, a bowling-green, a fire brigade, a volunteer corps, and an Agricultural Society which holds a cattle show annually on the Friday of Glasgow Fair week (see GLASGOW). A horse fair is held on the first Friday of January, and a general fair on the Thursday after the second Monday of July. Johnstone Castle, an elegant modern mansion, stands within a large well-wooded park, 1 mile S by E of the town. Its owner is George Ludovic Houston, Esq. (b. 1846; suc. 1862). MILLIKEN HOUSE, a building in the Grecian style, is 1¼ mile to the W. The parish is in the presbytery of Paisley and the synod of Glasgow and Ayr; its minister's stipeud is £382. Pop. of town (1811) 3647, (1831) 5617, (1861) 6404, (1871) 7538, (1881) 9267, (1891) 9668, of whom 4524 were males, and 5144 were females; of parish (1871) 8588, (1881) 9201, (1891) 9695. Houses in town (1891) inhabited 1980, vacant 150, building 9.—*Ord. Sur.*, sh. 30, 1866. See Matthew Gemmill's *Ecclesiastical Sketch of Johnstone*.

Johnstone Bridge. See JOHNSTONE, Dumfriesshire.

Johnstounburn, a mansion in Humbie parish, SW Haddingtonshire, on the left bank of Humbie Water, 2¼ miles NE of Blackshiels. Formerly the property of Archibald Broun, Esq., it now belongs to Mr Usher.—*Ord. Sur.*, sh. 33, 1863.

Joppa. See PORTOBELLO.

Joppa, a village in Cöylton parish, Ayrshire, 5½ miles E by S of Ayr.

Jordan or Pow Burn, a rivulet of St Cuthbert's and Duddingston parishes, Edinburghshire, rising upon the

northern slope of Craiglockhart Hill, and running 5¼ miles east-by-northward, along the valley immediately S of Morningside, Grange, and Newington, to a confluence with the Braid Burn at a point ½ mile S by E of Duddingston village. At Newington its channel was bricked over in 1882; but the Jordan should ever be kept in memory by the charming chapter concerning it in Sir Thomas Dick Lauder's interesting work on *Scottish Rivers* (1874).

Jordanhill, a village near the NE border of Renfrew parish, Renfrewshire, within 9 furlongs of the N bank of the Clyde, and 2½ miles WSW of Maryhill. It has a post office and a station on the Glasgow, Yoker, and Clydebank section of the North British railway. The Jordanhill estate, extending into the Lanarkshire section of Govan parish, comprises only 293 acres, but has a value of over £4000.—*Ord. Sur.*, sh. 30, 1866.

Jordanstone House. See ALYTH.

Junction Road, a station on the North British railway between Bonnington and North Leith, Edinburghshire.

Juniper Green, a village in Colinton parish, Edinburghshire, on a high bank above the left side of the Water of Leith, with a station on the Balerno loop-line (1874) of the Caledonian railway, 1 mile ENE of Currie and 4½ miles SW of Edinburgh. It has a post office, with money order, savings bank, and telegraph departments, and two public schools; consists in great measure of villas and pretty cottages; and, with charming environs, including a long reach of the picturesque dell of the Water of Leith, is a favourite summer retreat of families from Edinburgh. In 1892 an Established church was opened as a chapel of ease. A Free church was erected in 1880 at a cost of £3000, in the Gothic style of the 13th century, and contains 626 sittings. Pop. (1831) 338, (1861) 531, (1871) 716, (1881) 1018, (1891) 1181.—*Ord. Sur.*, sh. 32, 1857.

Jura (Scand. *deor-oe*, 'deer island'), an island and a parish in Argyllshire. One of the southern or Islay group of the Hebrides, the island extends north-north-eastward, from within ½ mile of Islay to within ¾ mile of Scarba, and lies opposite Knapdale and the southern extremity of Lorn, at distances decreasing from 12 to 2½ miles, being separated from Islay by the Sound of Islay, from Knapdale and Lorn by the Sound of Jura, and from Scarba by the Gulf of Corrievrechan. Its utmost length is 28 miles; and its width increases generally south-south-westward from less than 3 to 8½ miles; but towards the middle it contracts to ¾ mile, being all but bisected by Loch Tarbert, a long narrow arm of the sea which opens from the W. It communicates with other Hebrides and with the mainland by the Clyde steamers to Islay and to Oban; maintains ferries from Feolin in the S to Islay, from Lagg near the middle of the E coast to Keills in Knapdale, and from Kinachdrach in the N to Craignish in Lorn; and at Craig-house has a post office, with money order and savings bank departments, at Lagg another post office, an inn, and a cattle fair on the Friday after the last Thursday of July, and at Small Isles another fair on the Friday after the last Tuesday of June. From end to end extends a ridge of bleak and rugged mountains, summits of which to the N of Loch Tarbert are Clachbhein (912 feet), Ben Garrisdale (1210), Ben Breac (1482), Meall Alt Dubh (794), Rainberg (1495), and Na Ursainge (580); to the S, Sprinnealdale (1653), Beinn an Oir (2569), Beinn a Chaolais (2412), Dubh Beinn (1735), Brat Beinn (1123), and Cnoc Reumer (595). The two highest of these, Beinn an Oir (Gael. 'mountain of gold') and Beinn a Chaolais ('mountain of the sound'), are the conical Paps of Jura, which figure conspicuously in a multitude of views both near and far. The western declivities of the island are abrupt, rugged, wild, intersected by numerous torrents, and almost destitute of verdure; and they approach so closely to the shore, in skirts as rocky and barren as their shoulders, that very scanty space is left for culture or inhabitation. The eastern declivities, descending more smoothly and gradually, have their lower slopes clothed with vegeta-

tion, leave a belt of plain between their skirts and the beach, and present on the whole a pleasing appearance. Several anchoring places are on the W coast; and two good roadsteads, called Small Isles Harbour and Lowlandman's Bay, besides several landing-places, are on the E coast. The Sound of Jura, contracting north-north-eastward, sends off from its mainland side Lochs Caolisport, Sween, and Crinan; contains a good many islets; and merges at its northern extremity into the tumultuous waters of the Gulf of CORRIEVRECHAN. A principal rock of Jura is white or red quartz, some of it brecciated; other rocks are micaceous granite, micaceous sandstone, and a bluish red-veined slate, so fine as to be used as a whetstone. Its minerals include iron ore, a vein of black oxide of manganese, and a fine silicious sand suitable for the manufacture of glass. The micaceous granite is quarried, and the silicious sand has been used in glass-making. The soil along the shore is thin and stony; on the slopes is partly moorish, partly improvable moss; and along the foot of the mountains is so beset with springs, or otherwise so spouty, as to be wholly unworkable. A dozen small upland lakes lie in the hollows among the hills; and several considerable burns, well stocked with trout and salmon, descend to the coast. Cattle and sheep farming is carried on; but much the greater part of the island is deer-forest, the head of deer being estimated at 2000. Little comparatively of the land is arable, though much that was formerly waste has been reclaimed for either tillage or pasture. The cattle are a good strong Highland breed; and black-faced and Cheviot sheep were introduced in the first two decades of the nineteenth century. Wild boars existed in the island at some remote period, and

there are still to be seen the ruins of old enclosures, where these animals were trapped. Several barrows and duns are to be found on the hills; and near Small Isles Harbour there are the remains of an ancient camp, with a triple line of defence. Jura House, near the southern coast, is the seat of the Campbells of Jura. It occupies a position of great beauty, and has very extensive accommodation. The other proprietor is Walter Macfarlane, Esq. of ARDLUSSA, which has been noticed separately. In 1877, Henry Evans, Esq., lessee of Jura Forest, built a fine large shooting-lodge near Small Isles. Pop. (1811) 1157, (1831) 1312, (1851) 1064, (1861) 858, (1871) 761, (1881) 773, (1891) 619.

The parish of Jura, anciently comprehending the islands of Gigha, Cara, Colonsay, and Oronsay, was designated Kilearnadale and Kilchattan. Gigha and Cara were disjoined about 1729, Colonsay and Oronsay in 1861; but it still comprises the islands of Belnahua, Garvelloch, Lunga, Fladda, and Scarba, all of which are noticed separately. Its present total area is 93,799 acres, or 146½ square miles. This parish is in the presbytery of Islay and Jura and synod of Argyll; the living is worth £166. The parish church, built in 1776, was enlarged and improved in 1842. There is a Free Church preaching station; and four public schools—Ardlussa, Belnahua, Knockrome, and Small Isles—with respective accommodation for 28, 39, 56, and 56 children, have an average attendance of about 10, 15, 15, and 40, and grants of nearly £25, £25, £40, and £60. Pop. (1861) 1052, (1871) 952, (1881) 946, (1891) 724, of whom 637 were Gaelic-speaking.

Juxta-Kirkpatrick. See KIRKPATRICK-JUXTA.

K

KAIL. See KALE.

Kailzie (anciently *Hopkailzie*), a former parish of Peebleshire, bisected by the Tweed, and suppressed in 1674, when about two-thirds of it, on the right bank of the Tweed, were annexed to Traquair; whilst the rest, on the left bank, was annexed to Innerleithen. The ruins of its church stand, in the midst of an old burying-ground, on a burn running northward to the Tweed; and near them, 2½ miles ESE of Peebles, is Kailzie House, a plain, two-storied mansion of the early part of the nineteenth century.—*Ord. Sur.*, sh. 24, 1864.

Kaimes. See KAMES.

Kair House, a neat modern mansion in Arbutnott parish, Kincardineshire, near the left bank of Bervie Water, 1½ mile NE of Fordoun station on the Moutrose and Aberdeen section of the Caledonian railway.—*Ord. Sur.*, sh. 66, 1871.

Kale Water, a stream of NE Roxburghshire, rising, as Long Burn, on Leap Hill, one of the central Cheviots, near the English Border, at an altitude of 1230 feet above sea-level. Thence it runs 14¾ miles north-by-eastward, through Oxnam, Hounam, and Morebattle parishes, to a point 7 furlongs ENE of Morebattle village; proceeds thence 5¾ miles west-north-westward, chiefly on the boundary between Morebattle and Linton parishes, and through Eckford parish; and, after a total descent of 1135 feet, falls into the Teviot at Kalemouth, 4¾ miles S by W of Kelso. Its upper basin consists of beautiful, verdant, upland pastures, long noted for their excellence, and famous for an esteemed variety of the Cheviot sheep, called Kale-Water sheep; its middle and lower reaches lie through charming dells, across 'ferny knoves,' along a lovely vale, and athwart rich fields of 'silvery wheat and golden oats;' and its lowest reach runs partly down a deep ravine, in bygone days a retreat and meeting-place of Covenanters. Miss Baillie, supplementing a fragment of a fine old Scottish

song beginning 'O the ewe-bughting's bonny, baith e'ning and morn,' siugs—

O the sheep-herding's lightsome among the green braes,
Where Kale wimples clear 'neath the white-blossomed slaes—
Where the wild thyme and meadow-queen scent the soft gale,
And the cushat croods leesomey doon in the dale!
There the lintwhite and mavis sing sweet frae the thorn,
And hlithe lilt the laverock aboon the green corn;
And a' things rejoice in the simmer's glad prime—
But my heart's wi' my love in the far foreign clime.'

The Kale still yields capital sport, its trout ranging between ¼ and 3 lbs.; though no longer may two rods expect to kill over 400 fish in a single day, as sixty years since, in the youth of the late Mr Stoddart.—*Ord. Sur.*, shs. 17, 18, 26, 25, 1863-64.

Kalligray. See CALIGRAY.

Kames, a hamlet in Liberton parish, Edinburghshire, 3½ miles S by E of Edinburgh.

Kames, a straggling village in Kilfinan parish, Argyllshire, on the W side of the Kyles of Bute, 1½ to 2¾ miles SSW of Tighnabruaich. It has a post office, a steam-boat pier, an inn, saltpetre and powder works, and an artillery volunteer battery.—*Ord. Sur.*, sh. 29, 1873.

Kames, a mansion in Eccles parish, S Berwickshire, 6 miles E of Greenlaw, and 6½ NNW of Coldstream, A gabled edifice in the old Scottish style, surrounded by fine old trees, it was the birthplace, property, and residence of the distinguished judge and philosopher, Henry Home (1696-1782)—the place whence, as Lord of Session, he took the title of Lord Kames, and where he wrote many of his works, and entertained Dr Benjamin Franklin in 1759.—*Ord. Sur.*, sh. 26, 1864.

Kames, a bay, a hill, and a castellated mansion in North Bute parish, Buteshire. The bay, indenting the E side of Bute island, measures 9½ furlongs across the entrance, and 7½ thence to its inmost recess. It sweeps round in half-moon form, and has a good bathing beach. The hill overlooks the bay, rises to an altitude of 875 feet above sea-level, and commands a magnificent

view. Kames Castle stands at the SE base of the hill, within $\frac{1}{4}$ mile of the bay, and $2\frac{3}{4}$ miles NNW of Rothesay, in the low fertile dingle which extends across the island to Etterick Bay. Long the seat of the Bannatynes of Kames, it comprises a 14th century tower, with a house built on it by Sir William Macleod Bannatyne, Knt. (1743-1834), who, on his elevation to the bench in 1799, assumed the title of Lord Bannatyne, and from whom it passed to the Marquis of Bute. Kames Castle was the birthplace, and for three years the home, of the critic and essayist John Stirling (1806-44), whose biographer, Carlyle, describes it as 'a kind of dilapidated baronial residence, to which a small farm, rented by his father, was then attached.' Wester Kames Castle, once the seat of the Spences, 3 furlongs NNW of Kames Castle, was mainly a small tower of no great antiquity, and is now a ruin.—*Ord. Sur.*, sh. 29, 1873.

Kamesburgh, now usually Port Bannatyne, a village in North Bute parish, Buteshire, on Kames Bay, $2\frac{3}{4}$ miles NNW of Rothesay, with which it is connected by a tramway. Curving round the southern shore of the bay, and containing some good houses let for summer quarters, it presents a clean and tidy aspect, and looks out upon the beauty of the E end of Kyles of Bute. It maintains a herring fishery; communicates with steamers plying between Rothesay and places within or beyond the Kyles; and has a post, money order, savings bank, and telegraph office (Port Bannatyne) under Rothesay, a quay and a steamboat pier, two hotels, a hydropathic establishment, a gas company, St Ninian's Established church and North Bute Free church, and a public school. Pop. (1861) 504, (1871) 575, (1881) 651, (1891) 753.—*Ord. Sur.*, sh. 29, 1873.

Kannor. See CANNOR.

Katerine, Ayrshire. See CATRINE.

Katrine, Loch, a lake, the western shore of whose upper $2\frac{1}{2}$ miles belongs to Buchanan parish, Stirlingshire, but which elsewhere extends along the mutual border of Callander and Aberfoyle parishes, SW Perthshire. Lying 364 feet above sea-level, it curves 8 miles east-south-eastward, and, opposite Letter farm, has an utmost width of $7\frac{1}{4}$ furlongs, with a maximum depth of 78 fathoms. GLENGYLE Water flows $3\frac{1}{2}$ miles south-eastward to its head, and from its foot it sends off Achray Water $1\frac{3}{8}$ mile east-by-southward to Loch ACHRAY, belonging thus to the basin of the TEITH; whilst forty-eight rivulets leap down the hill-sides to its shores. Chief elevations to the N of the lake, from head to foot, are Meall Mor (2451 feet), An Garadh (2347), Stob a Choin (2839), Cruinn Bheinn (1787), Meall Gaothach (1981), Bealach-na-h Imriche (1592), Ben A'an (1500), Meall Gainmheich (1851), and BEN VANE (2685); to the S, Maol Mor (2249), Meall Meadhonach (893), Beinn Uaimhe (1962), BEN LOMOND (3192), Druim nan Carn (1495), and BEN VENUE (2393). On the southern bank of the loch, near the western terminus of the Aberfoyle shore, stands the Glasgow Waterworks, with their capacious tunnel for supplying the wants of the inhabitants of the western city; while at Portnellan, near the head of the loch on the opposite or Callander Shore, is the graveyard of the Clan Gregor. No interments, however, have taken place in it for many years. Another tunnel having been formed, the surface of the loch was raised, but special precautions were taken to preserve the Macgregors' grave. Here also stands a house for some time occupied by Rob Roy, where he put to flight certain enemies who had sought to take him by surprise; while in the neighbourhood is Glengyle House, the seat of the ancient chiefs of the Glengyle branch of the clan. On an island near the head of the Loch Rob Roy held the Duke of Montrose's chamberlain prisoner for three days. A small iron steamer was launched on its waters in 1843; and the *Rob Roy* now plies to and fro from Stronachlachar Hotel, $2\frac{3}{8}$ miles SE of the head of the lake and 5 ENE of Inversnaid on Loch Lomond, to a pier at the foot, $1\frac{1}{4}$ mile W of the TROSSACHS Hotel and $9\frac{1}{2}$ miles W by S of Callander. On board of her the Queen, with the Princesses Louise and Beatrice, sailed up the lake, 6 Sept. 1869.

In anticipation of the raising of the level of the loch, a new hotel has been erected at Stronachlachar, while, since the first raising of the level, the 'silver strand' is not now so conspicuous as formerly. Loch Katrine belongs to the Duke of Montrose, the Earl of Ancaster, and Mrs Macgregor of Glengyle; it contains some char, abundance of good trout, and pike running up to 20 lbs. The raising of the surface-level and its waterworks have been described under GLASGOW. See also BEALACH-NAM-BO, ELLEN'S ISLE, and other articles already indicated.

Scott visited the Trossachs and Loch Katrine on several occasions during 1790-1809, the year before the publication of the *Lady of the Lake*; and, as Principal Shairp remarks, 'the world believes, and will continue to believe, that he was the first Sassenach who discovered the Trossachs, as it was his poem which gave them world-wide celebrity.' In 1790 and 1800, however, the Rev. James Robertson, minister of Callander, had described them in the *Old Statistical* and his *Sketch of the most remarkable Scenery near Callander*; and in 1804 we find William Wordsworth endeavouring to make his visit hither 'appear not so very foolish, by informing the dwellers by the lakeside that this was a place much celebrated in England, though perhaps little thought of by them.' No better description exists of Loch Katrine than that which is given by his sister Dorothy, the more so as it depicts it in its twofold aspect—dreary and naked at the head, wooded and ever more beautiful towards the foot. 'Coleridge and I,' she writes, 'as we sat [near Stronachlachar], had what seemed but a dreary aspect—a waste of unknown ground which we guessed we must travel over before it was possible to find a shelter. We saw a long way down the lake; it was all moor on the near side; on the other the hills were steep from the water, and there were large coppice-woods, but no cheerful green fields, and no road that we could see; we knew, however, that there must be a road from house to house; but the whole lake appeared a solitude—neither boats, islands, nor houses, no grandeur in the hills, nor any loveliness in the shores. When we first came in view of it we had said it was like a barren Ulswater—Ulswater dismantled of its grandeur, and cropped of its lesser beauties. When I had swallowed my dinner I hastened after William, and Coleridge followed me. Walked through the heather with some labour for perhaps half a mile, and found William sitting on the top of a small eminence, whence we saw the real head of the lake, which was pushed up into the vale a considerable way beyond the promontory where we now sat. The view up the lake is very pleasing, resembling Thirlmere below Armath. . . . We were rowing down that side of the lake which had hitherto been little else than a moorish ridge. After turning a rocky point we came to a bay closed in by rocks and steep woods, chiefly of full-grown birch. . . . William, rubbing his eyes, for he had been asleep, called out that he hoped I had not let him pass by anything that was so beautiful as this; and I was glad to tell him that it was but the beginning of a new land. After we had left this bay we saw before us a long reach of woods and rocks and rocky points, that promised other bays more beautiful than what we had passed. . . . The second bay we came to differed from the rest; the hills retired a short space from the lake, leaving a few level fields between, on which was a cottage embosomed in trees; the bay was defended by rocks at each end, and the hills behind made a shelter for the cottage, the only dwelling, I believe, except one, on this side of Loch Katerine. We now came to steeps that rose directly from the lake, and passed by a place called in the Gaelic the Den of the Ghosts,* which reminded us of Lodore; it is a rock, or mass of rock, with a stream of large black stones like the naked or dried-up bed of a torrent down the side of it; birch-trees start out of the rock in every direction, and cover the hill above, farther than we could see. The water of the lake below was very deep, black, and calm. Our

* Gollins' Cave.

delight increased as we advanced, till we came in view of the termination of the lake, seeing where the river issues out of it through a narrow chasm between the hills. Here I ought to rest, as we rested, and attempt to give utterance to our pleasure: but indeed I can impart but little of what we felt. We were still on the same side of the water, and, being immediately under the hill, within a considerable bending of the shore, we were enclosed by hills all round, as if we had been upon a smaller lake of which the whole was visible. It was an entire solitude; and all that we beheld was the perfection of loveliness and beauty. We had been through many solitary places since we came into Scotland, but this place differed as much from any we had seen before as if there had been nothing in common between them; no thought of dreariness or desolation found entrance here; yet nothing was to be seen but water, wood, rocks, and heather, and bare mountains above. We saw the mountains by glimpses as the clouds passed by them, and were not disposed to regret that it was not a fine day, for the near objects were not concealed from us, but softened by being seen through the mists. The lake is not very wide here, but appeared to be much narrower than it really is, owing to the many promontories, which are pushed so far into it that they are much more like islands than promontories. . . . We hent our course right across, and just as we came in sight of two huts, which have been built by Lady Perth as a shelter for those who visit the Trossachs, Coleridge hailed us with a shout of triumph from the door of one of them, exulting in the glory of Scotland. The huts stand at a small distance from each other, on a high and perpendicular rock, that rises from the bed of the lake. A road, which has a very wild appearance, has been cut through the rock; yet even here, among these bold precipices, the feelings of excessive beautifulness overcome every other. While we were upon the lake, on every side of us were bays within bays, often more like tiny lakes or pools than bays, and these not in long succession only, but all round, some almost on the broad breast of the water, the promontories shot out so far. See pp. 86-107, 220-235, of Dorothy Wordsworth's *Tour in Scotland* (ed. by Princ. Sharp, Edinb. 1874); and Sir George B. Airy's *Topography of the 'Lady of the Lake'* (Lond. 1873).

Kealoch or **An Teallach**, a mountain (3483 feet) in Lochbroom parish, NW Ross-shire, rising on the S side of the upper part of Little Loch Broom, $3\frac{1}{4}$ miles SW of Dundonnell. It consists entirely of sandstone, but presents an appearance as if it consisted of granite; and rises on one side right from the loch in steep and soaring acclivities, on another side from among a series of glens, ravines, and ridges, nearly all of white rock and unutterably desolate. It overtops all the neighbouring country, and looks to the eye to be higher than any single mountain in Scotland, except Ben Nevis; and it commands an extensive view, comprising all the details of Loch Broom and Greinord.—*Ord. Sur.*, sh. 92, 1881.

Keanloch. See KINLOCH.

Keannoath. See OA.

Kearn. See AUCHINDOIR AND KEARN.

Kearvaig (Gael. *Amhuinn Chearbaig*), a rivulet in Durness parish, NW Sutherland, issuing from triangular Loch na Gainmhich ($3\frac{1}{2} \times 3\frac{1}{2}$ furl.; 790 feet), and running 6 miles north-north-westward to the sea, at a point $2\frac{1}{2}$ miles ESE of Cape Wrath. It is ascended by sea-trout and a few grilse, but is seldom visited by anglers.—*Ord. Sur.*, sh. 113, 1882.

Keavil, a mansion in Dunfermline parish, Fifeshire, on the Pitfirrane property, $2\frac{1}{2}$ miles WSW of the town.

Kedslie, a farm in Melrose parish, Roxburghshire, 3 miles NW of Earlston. Here stood a pre-Reformation chapel subordinate to Lauder church.

Keen, Mount, a conical mountain (3077 feet), one of the Central Grampians, on the mutual border of Lochlee parish, Forfarshire, and Glenmuick parish, Aberdeenshire, 7 miles SSE of Ballater by a steep rough track to Lochlee, which crosses its western shoulder at an altitude

of 2500 feet, and up which the Queen rode on 20 Sept. 1861.—*Ord. Sur.*, sh. 65, 1870.

Keig, a parish of central Aberdeenshire, whose church stands near the left bank of the river Don, 3 miles NNW of Whitehouse station, this being $2\frac{1}{2}$ E by S of Alford and $26\frac{1}{4}$ WNW of Aberdeen, under which there is a post office of Keig. The parish, containing Whitehouse station in the extreme S, is bounded N by Leslie and Premnay, E by Oyne and Monymusk, S by Monymusk and Tough, SW by Alford, and W by Tullynessle. Its utmost length, from N to S, is $4\frac{1}{2}$ miles; its breadth, from E to W, varies between $1\frac{1}{2}$ and $3\frac{1}{2}$ miles; and its area is $8119\frac{1}{2}$ acres, of which $60\frac{1}{2}$ are water. The Don winds $5\frac{1}{2}$ miles east-north-eastward here—5 furlongs along the boundary with Alford, $3\frac{1}{2}$ miles through the interior, and 9 furlongs along the Monymusk border; and here it is fed by several little burns. Along it the surface declines to 335 feet above sea-level, thence rising northward and north-westward to 1619 feet on BENOCHIE and 929 at the Barmkin, southward to 1250 on the western slope of Cairn William. Granite is the prevailing rock; gneiss, greenstone, and clay-slate appear in a few places; mica slate lies profusely scattered on much of the surface; and masses of porphyry and some tolerable specimens of rock crystal are found. The soil of the haugh along the Don is mostly sandy or gravelly alluvium, combined with clay; of the plain, is partly a good mould; and of the arable acclivities, is mostly reclaimed moor. Rather less than half of the entire area is arable, nearly one-third is under wood, and the remainder is either pasture or moor. Two Caledonian stone circles, and a ruinous circular enclosure of loose stones, called the Barmkin, are the chief antiquities. **CASTLE-FORBES** is the only mansion. Professor Wm. Robertson Smith (1846-94) was a native of the parish. Keig is in the presbytery of Alford and synod of Aberdeen; the living is worth £200. The parish church is a neat Gothic structure of 1835. There is also a Free church; and a public school, with accommodation for 197 children, has an average attendance of about 110, and a grant of nearly £108. Pop. (1801) 379, (1831) 592, (1861) 811, (1871) 886, (1881) 776, (1891) 748.—*Ord. Sur.*, sh. 76, 1874.

Keil, an estate, with a modern mansion, in Southend parish, Argyllshire. The mansion stands near the extremity of Kintyre, opposite Sanda island, $10\frac{1}{2}$ miles SSW of Campbeltown; and the estate extends a considerable distance along the coast. A ruined church, near the mansion, is traditionally alleged to occupy a spot visited by St Columba on his way from Ireland to Iona; and an ancient stone cross, supposed to have been erected to the memory of the saint, also stood here, but is now represented by only the pedestal. Several large caves are on the coast, and one of them is alleged by the native peasantry to extend 6 miles inland to Killellan Hill.—*Ord. Sur.*, sh. 12, 1872.

Keillour, an estate, with a mansion, in Fowlis-Wester parish, Perthshire, $2\frac{1}{2}$ miles NNW of Balgowan station on the Caledonian railway.

Keills, a hamlet and a promontory in North Knapdale parish, Argyllshire. The hamlet lies on the W coast, near the southern extremity of the promontory, opposite Lagg, in Jura, and $13\frac{1}{2}$ miles SSW of Crinan Pier. The ferry station for communication from Knapdale and the central parts of Argyllshire, with the central parts of Jura, with the N of Islay, and with Oronsay and Colonsay is here; it has a post office under Lochgilphead, an ancient cross, and the ruins of an ancient chapel. The promontory lies between Loch Swin and the Sound of Jura; extends $8\frac{1}{2}$ miles south-south-westward; is comparatively narrow; and has mostly bold rocky coasts, rising murally in many places to a height of 300 feet.

Keilor Burn. See INVERKEILOR.

Keir, a Nithsdale parish of Dumfriesshire, whose church stands near the right bank of Scar Water, $1\frac{1}{2}$ mile SE of Penpont village and $2\frac{1}{2}$ miles SW of the post-town Thornhill. It is bounded N by Penpont, E

by Closeburn, S by Dunscore, W by Glencairn, and NW by Tynron. Its utmost length, from NW to SE, is 7 miles; its utmost breadth is 2½ miles; and its area is 7890 acres, of which 84½ are water. Shinnel Water runs 2 miles north-north-eastward along the western border to the Scar; Scar Water winds 3½ miles east-south-eastward along the northern and north-eastern border to the Nith; and the NITH itself runs 5½ miles south-south-eastward along the Closeburn boundary to the south-eastern extremity in the vicinity of Auldgrith Bridge. The southern border is traced by Glennids Burn; and six other rivulets, each about 1½ mile long, rise in the interior, and run in almost parallel lines, at nearly regular intervals, north-north-eastward to the Scar and to the Nith, one of them traversing a romantic wooded ravine, and forming in one part a very beautiful waterfall. Springs are everywhere abundant; and two small lakes, one of them containing leeches, were formerly in the W, but have been drained. Low flat alluvial land, with an elevation of from 80 to 280 feet above sea-level, lies along the Nith, the Scar, and the Shinnel; and a steep wooded bank flanks most of that land all down to the extreme southern extremity. Thence the surface rises to 604 feet near Blackwood, 1171 on the Glencairn border, and 887 at Capenoch Moor; and, as seen from the highway between Thornhill and Closeburn, presents a picture of no common beauty. Silurian rocks predominate, but newer rocks occur; and limestone and sandstone have been worked at Barjarg and Porterstown. The soil of the haugh lands is rich alluvium; of the tablelands, mostly gravelly or sandy; and of the arable portions of the hills, generally a rich loam, full of stones. About one-half of all the land is arable; a fair proportion is under wood; and the rest is variously meadow, hill pasture, and waste. Gone are a standing stone near the parish church and a 'Court Knowe' on the glebe; but a stone on Keir Hill marks the spot where James Renwick often preached in the days of the persecution, and the site of an ancient chapel is on Kilbride Hill. Mansions, noticed separately, are Barjarg, Blackwood, Capenoch, and Waterside. Keir is in the presbytery of Penpont and synod of Dumfries; the living is worth £320. The parish church (1814; renovated 1880) contains 330 sittings; and the Lower and the Upper public schools, with respective accommodation for 86 and 100 children, have an average attendance of about 40 each, and grants of nearly £45 and £35. Pop. (1801) 771, (1831) 987, (1861) 849, (1871) 828, (1881) 745, (1891) 639.—*Ord. Sur.*, sh. 9, 1863.

Keir (Celt. *caer*, 'fort'), a mansion on the mutual border of Lecropt and Dunblane parishes, S Perthshire, 1½ mile SSW of Dunblane town and 1¼ NW of Bridge of Allan. The lands of Keir were acquired from George Leslie of that ilk in 1448 by Lucas of Strevelyn, whose descendant, Sir William Stirling-Maxwell, Bart. (1818-78), one of the most accomplished scholars of his day, devoted a great deal of time and money in improving the property. 'In laying out the grounds it was part of his design that the attractions of the policies should be very gradually revealed, and that at every turn there should be something specially fitted to attract the eye—a noble or graceful tree, a peculiarly constructed vase, or a far-reaching vista.' The steading, erected at a cost of £8000, and an expensive model of which is exhibited in Kensington Museum; the galleries, halls, corridors, and staircase crowded with works of art; the rare pictures and the bookcases filled with the choicest literature; the beautiful and chaste furniture, made of Spanish cedar and satinwood; the pleasure grounds and the cypress trees, one of which was planted by the late Lord Beaconsfield—all indicate that cultured taste and wealth have gone hand in hand. Sir William was author of *The Cloister Life of Charles V.* and other works, and sat for Perthshire in the Conservative interest from 1852 to 1863. In 1865 he succeeded his maternal uncle in the POLLOK estates and baronetcy, and assumed the additional surname of Maxwell. His eldest son and successor in the baronetcy, Sir John Maxwell Stirling-Maxwell, tenth Bart. since 1862, was born in 1866, and succeeded

to the Pollok estates on the death of his father in 1878, while the Keir estate fell to the younger son Archibald.—*Ord. Sur.*, sh. 39, 1869. See Sir William Fraser's *Stirlings of Keir* (Edinb. 1858).

Keiss, a village and a *quoad sacra* parish in the NE extremity of the parish of Wick, Caithness-shire, on the NW side of Sinclairs Bay, 7½ miles N by W of the town of Wick, under which it has a post and telegraph office. It also possesses a boat harbour, an Established church, a Free church, and a small Baptist chapel, the last dating from 1750. Keiss House is ¼ mile NNE of the village; Keiss Castle, the ruin of a small feudal tower, stands between it and the sea. Explorations, carried out in 1864 at Keiss Links, laid bare several cists containing human remains, and a large number of implements of the stone period, which have been described by Samuel Laing, Esq. and Professor Huxley in their *Pre-historic Remains of Caithness* (Lond. 1866). The *quoad sacra* parish, constituted by the General Assembly in 1833, and erected by the civil authorities after the Disruption, is in the presbytery of Caithness and the synod of Sutherland and Caithness. Its church was erected by Government in 1827 and repaired in 1896. The minister's stipend is £120 and manse. Two public schools, Aukengill and Kneiss, with respective accommodation for 30 and 213 children, have an average attendance of about 60 and 160, and grants of about £70 and £210. Pop. of village (1871) 327, (1881) 313, (1891) 341; of *q. s.* parish (1871) 1124, (1881) 1348, (1891) 1266, of whom 224 were in Canisbay parish.—*Ord. Sur.*, sh. 116, 1878.

Keith, a parish in the centre of the county of Banff, and occupying for some distance its whole width. It is about 5 miles from the coast. A portion near the centre of the W side formerly crossed the county boundary, and extended into the county of Elgin. The Boundary Commissioners, however, in 1891, extended the county boundaries here so as to place the parish wholly in Banffshire. They at the same time transferred to Keith the Banffshire portion of Cairnie, that parish being now restricted to the Aberdeenshire portion. It is touched at the extreme NE corner by the parish of Deskford, and is bounded E by the parish of Grange, SE by the county of Aberdeen, S by the parish of Botriphnie, W by Boharm and Bellie, and NW by Bellie and Rathven. The boundary is artificial, except for about 5 miles on the E side, between Keith and Grange parishes, where it is formed by the Altmore Burn, and for 2 miles on the W between Keith and Boharm parishes, where it is formed by Forge Burn. Though the outline is irregular, the parish is compact. The greatest length, from N by E (at the point where it touches Deskford parish) to S by W (at a point about ½ mile SW of Edintore House), is 3½ miles; and the greatest width, from E (at the point where the Great North of Scotland railway passes into Grange parish) to W (near the Hill of Mulderie), is 6½ miles). The present extended area of the parish is 19,453 acres. The surface is very irregular and undulating, and varies in height from 338 feet, at the bridge over the Isla to the NE of the town, to 766 feet (Garral Hill towards the NE end of the parish), 1199 (on the Meikle Balloch Hill to the SE), 967 (at Cairds Wood on the S), and 1020 (at the Hill of Mulderie on the W). The soil is in many places good clay loam, but is often hard, damp, and mossy, and somewhat unkindly. By far the larger portion is under crop or wooded, there being very little waste ground. Two of the woodland sections, to the S and SW of the united town of KEIRH, have, at the expense of the superiors of the respective villages, been laid out with walks for the use of the public. The drainage of a considerable part of the parish is effected by means of the river Isla, which enters on the SW from Botriphnie parish, and flows with a winding course N and NE, passing between Keith (Old and New) and Fife-Keith, and then turns eastward near Newmill, and winds E till past Grange parish in its onward course to junction with the Deveron. There are a number of small burns, the principal being the Burn of Newmill, which rises in the NW, flows past the W end of the village of Newmill, and falls into the Isla;

and the Burn of Tarnash, which rises in the SE, and flows E of Keith also into the Isla. On three of the streams near Keith there are waterfalls, picturesque, though of no great size; and the rocky glens through which the burns flow are rich localities for botanists, yielding, among other plants, plentiful specimens of the oak, beech, and bladder ferns. Near the centre of the parish, $\frac{2}{3}$ mile N of the town of Keith, is Keith Junction station on the Highland and Great North of Scotland railway systems. This is the terminus of the Forres and Keith section of the former, which passes W through the parish for a distance of $3\frac{1}{4}$ miles. Of the latter, it is the junction of the Aberdeen and Keith, and Keith and Elgin sections. A line of railway, $13\frac{1}{2}$ miles in length, which was opened in 1884, passes northward from Keith to Buckie, forming part of the Highland railway. The parish forms the connecting link between the upper and lower districts of Banffshire, and near the centre it is traversed from SE to NW by the great road from Aberdeen to Inverness. The underlying rocks are primary, and contain in many places beds of limestone of excellent quality, which are extensively worked at Blackhillock and Braehead. In places grey fluor spar is to be found associated with green antimony, and on the bank of Tarnash Burn, SE of Keith, is a small mass of alum shale. The churches and industries are connected with the villages, and most of them are noticed in the following article KEITH. Besides the burgh of Keith the parish contains the village of Newmill, about $1\frac{1}{2}$ mile N of Keith, on a slope facing S. This is now the centre of the *quoad sacra* parish of Newmill, disjoined in 1877. The church stands at the E end. It was erected in 1870, is a plain building, and was renovated in 1892, and supplied with an organ. There is also a Free church mission house. The population of Newmill village was, in 1881, 651; in 1891, 613—of the parish in 1881, 1431; in 1891, 1421. Besides the public school at Keith there are also board schools at Auchanacie, Fife-Keith (infants), Glen of Newmill, Newmill, and Tarrycroys, which, with respective accommodation for 45, 181, 93, 226, and 105 pupils, have an average attendance of about 30, 95, 55, 150, and 80, and grants of nearly £45, £70, £50, £150, and £70. The chief object of antiquarian interest is the old tower of Milton near the railway station, once belonging to the family of Oliphant. Mention is made in the old *Statistical Account* of stone circles on the Cairds' Hill, but these have disappeared, as have also the sanative properties of the neighbouring Taber-chalach or Old Wife's Well. The old bridge across the Isla is noticed in the following article. The parish anciently extended from Fordyce to Mortlach, and belonged to the Abbey of Kinloss, to which it was granted by William the Lyon. James Ferguson the astronomer (1710-76), a native of the adjoining parish of Rothiemay, was educated here, and was for a time in service at the farm of Ardnedlie, about 1 mile S of the town of Keith. The Duke of Fife and the Countess-Dowager of Seafield are the largest landowners. The mansions are Greenwood and Edintore. The parish is in the presbytery of Strathogie and the synod of Moray. The stipend is £322 with manse and glebe. Valuation (1883) £24,362; (1893) £26,987, of which £4124 was for railways. Pop. (1801) 3284, (1831) 4464, (1861) 5943, (1871) 5891, (1881) 5396, (1891) 6704.—*Ord. Sur.*, shs. 85, 86, 1876.

Keith, a post-town in Banffshire, near the centre of the parish described in the last article. It consists of the three divisions of OLD and NEW KEITH on the right bank of the Isla, and FIFE-KEITH on the left bank. Under the name of Keith, these were constituted a burgh on 27 Sept. 1889; and by the Burgh Police Act of 1892 it is governed by a provost, 2 bailies, and 6 commissioners. It is $\frac{2}{3}$ mile distant from the Keith station on the Highland and Great North of Scotland railways, and is by rail $12\frac{1}{2}$ miles NW of Huntly, 18 ESE of Elgin, $20\frac{1}{2}$ SW of Banff, $53\frac{1}{2}$ NW of Aberdeen, and $183\frac{1}{2}$ N of Edinburgh, *vid* Aberdeen and the Tay and Forth Bridges. By road it is 9 miles SE of Fochabers, 10 NW of Huntly, and 12 SSW of Cullen. Notwithstanding the disad-

vantage of its distance from the station, it is a thriving place, the centre of traffic for middle Banffshire, and the centre of communication by road between the upper and lower districts of the county.

Old Keith has a considerable antiquity, for it appears in the form of 'Geth' in a deed granted by William the Lyon, and in virtue of which the whole of Strathisla passed into the possession of the Abbey of Kinloss. The deed was granted at Elgin, but bears no date, though probably it was about 1177, a year established from other evidence as a time when William visited the North. It had a jurisdiction of regality, and in virtue of this and of its trade it was at an early period superior in consequence to Banff, Cullen, or Fordyce, then the other towns in the county. The court of regality sat in the church and, treason excepted, judged all civil and criminal causes, even including the four Crown pleas. The panels were put for trial into a window called 'the Boss Window,' and were committed on conviction to the steeple, which served as a jail. Those convicted on capital charges were executed on the hill where New Keith has since been built, the place of execution being in Mid Street, on ground now occupied by the stable-yard of the Seafield Arms Hotel. At the abolition of the regality jurisdictions in 1748 the value of this one was set down at £200. The old town seems to have extended some distance along the Isla, but being inconveniently situated it dwindled away. It used to be celebrated for the Summer Eve Fair, which was up to the beginning of the nineteenth century one of the most important fairs in Scotland. It lasted about a week, and was attended by people from all parts of Scotland. It is still held, but is shorn of its former greatness. Old Keith has been the scene of several noteworthy events. On 30 June 1645, General Baillie here offered battle to Montrose, who, however, considered the position of the Covenanters too strong. Baillie seems to have been drawn up on the ground now occupied by the new town and along by Begg's Brae, while Montrose approached from Auchanacie. On this occasion Montrose was in the full flush of victory after the battle of Auldearn, but in 1650 he was destined to revisit Keith under different circumstances. He was then a captive unemphed and ragged. Keith was reached on a Sunday, when for some unknown reason divine service was to be celebrated in the churchyard. The marquis was carried to the spot, and the minister of Keith—William Kininmonth, once chaplain to General David Leslie—preached at him from 1 Sam. xv. 33. Montrose, 'perceiving the drift of the orator, said "Rail on," and submitted in patience.' In 1667 a well-known freebooter of the day, Peter Roy Macgregor, made a descent on Old Keith, and a bloody encounter between his band and the inhabitants of the district took place in the old churchyard, with a result so little favourable to the 'caterans,' that Roy was taken prisoner and afterwards executed at Edinburgh. In 1745 Major Glasgow, an Irishman in the French service and acting with the forces of Prince Charles Edward, surprised a detachment of government troops here and carried off about eighty prisoners.

New Keith was first laid out about 1750 by the then Earl of Findlater. It adjoins Old Keith on the south-east, and occupies the eastern slope of what was formerly but a barren moor. It is built on a regular plan, there being a central square of large size, and three principal streets running parallel to one another in a northerly and southerly direction with cross lanes. The feus measure 15 yards by 60, so that a large garden is provided for each. The principal inn was built in 1823 by the Earl of Seafield (the superior), and contains a large hall in which the district courts were formerly held. The Longmore hall, presented to the town by the late Mr William Longmore, banker and distiller, is at the N end of the town. It is a plain neat building, erected in 1872-73 at a cost of £2000. It contains a portrait of Mr Longmore, presented to him in acknowledgment of his gift. The ground belonging to the hall at the W end was also laid out by Mr Longmore at his own expense, and presented by him to the town to

be used as a public bowling green. To the W of New Keith and S of Old Keith, and close to the feus of the latter, is an hospital named the Turner Memorial Cottage Hospital, in remembrance of the late Dr Turner, Keith, who was (in conjunction with Mr Longmore) its chief promoter, though he did not live to see it finished. It is a plain building erected in 1880 at a cost of £1200, and contains 25 beds, including 1 for incurables. The endowment fund amounts to about £4000, of which £3000 were derived from the residue of the estate of the late Dr Taylor, Deputy Inspector-General of Hospitals and Fleets—a native of Keith—who founded the Greenskars Bursaries at the University of Aberdeen. Other support is derived from church collections and voluntary subscriptions. In 1889 the Institute Buildings were re-erected by a limited liability company for the accommodation of various societies. The museum of the Field Club is in these buildings, as is also the public reading-room and library. There is in the town an abundant water supply, introduced in 1879 at a cost of £5000. The source of supply is $3\frac{1}{2}$ miles distant. The lighting is carried out by a private gas company, whose works are to the W of Longmore Hall. The parish church, still farther to the W, is a handsome and commodious building with a square pinnacled tower 120 feet high, with clock and bell. It was erected in 1816-19 at a cost of £6220; gas was introduced in 1880, and in 1892 an organ was erected at a cost of £700. The Free church is a plain building of Disruption date. The United Presbyterian church, near the square, is a plain Gothic building dating from 1853. The walls were heightened, and the interior was greatly improved in 1876. The Episcopal church (Holy Trinity) was formerly a very small and plain building, built in 1808, but was replaced in 1882-83 by a fine new Norman Gothic building, erected at a cost of £2200, to the NE of the Established church. There is accommodation for 300 persons. The Roman Catholic church (St Thomas) at top of Cuthel Street, with 450 sittings, was erected in 1831. It is said to be modelled after the church of St Maria-de-Vittoria at Rome, and has two gigantic statues of St Peter and St Paul at the SE and NE corners respectively. There is a fine altar-piece, illustrating the incredulity of St Thomas, presented to the church by Charles X. of France. There are two buildings used as schools, with total accommodation for 1193 pupils. They constitute the Keith combined public school, working on the graded system. There are also a ladies' school, besides a school in connection with the Roman Catholic Church, with accommodation for 197 pupils. In the town or its immediate neighbourhood there are 2 distilleries, a carding mill for the manufacture of blankets, etc., a tweed manufactory, a brewery, a manure work, an agricultural implement manufactory, a boot and shoe manufactory, coach works, lime works, and grain and flour mills. There is a post office, with money order, savings bank, and telegraph departments. There are branches of the Union, Town and County, and North of Scotland Banks. There is a very large market stance at the S end of the town, and cattle markets are held on the first Friday of every month, except in June and September, when the market is held on the third Wednesday of the month. There is a feeing market for married servants on the last Saturday of March, and for others on the Friday before Whitsunday term, on the second Friday of July (for harvest), and on the Friday before Martinmas. There is also one newspaper. Sheriff and ordinary small debt circuit courts are held on the third Saturday of Feb. April, June, Aug. Oct. and Dec., and justice of peace courts on the first Monday of every month. There are several hotels, an agricultural society, holding a spring and a summer show, a field club and mutual improvement society, a hortus club, bowling and lawn tennis clubs, a property investment company, Freemasons', Free Gardeners', and Oddfellows' lodges, and a company of rifle volunteers.

Fife-Keith is to the W of Old and New Keith, and is separated from them by the Isla. The river is

crossed by two bridges, one now disused except by pedestrians, built in 1609, and the other built in 1770. A stone in the old bridge bears the inscription 'Thomas Murray. Janet Lindsay, 1609,' the names being traditionally those of a worthy couple who lived close to the ford that formerly existed, and who were so distressed by the cries of persons in danger, that they devoted their savings to the erection of a stone bridge. Close by is the churchyard with a fragment of the old church, the rest having been removed in 1819. The 'new bridge' has a stone with the inscription 'G. III. R. R. S. 1770.' Immediately below is the pool called 'Gaun's Pot,' where witches were drowned, and into which they were thrown from a rocky bank on the S side. The village itself has a central square with a main street passing E and W, and others diverging in different directions. The Duke of Fife is superior. It was founded in 1817, and has of late years been making more rapid progress than of yore. Pop. of the united burgh (1881) 4339, (1891) 4622, of whom 1347 were in Fife-Keith. See also Souter's *Agriculture of the County of Banff* (1812); Sim's *Legends of Strathisla* (1st ed., Keith, 1849; 2d, Keith, 1851; 3d, Elgin, 1862); *A Walk from Keith to Rothiemay* (Elgin, 1862); Sim's *Old Keith and a Stroll to Cairnie* (Keith, 1865); and Gordon's *The Book of the Chronicles of Keith, Grange, etc.* (Glasgow, 1880).

Keith, an ancient parish on the SW border of Haddingtonshire, now forming the western district of Humberie parish. Keith and ancient Humberie, at the end of the 17th century, were called respectively Keith-Symmars and Keith-Hundeby. Keith Water, formed, at the boundary with Edinburghshire, by the confluence of Earl Water and Salters Burn, runs $1\frac{1}{2}$ mile north-eastward, across ancient Keith parish, to a confluence with Humberie Water, $4\frac{1}{2}$ furlongs N of the present parish church. Keith House, once a seat of the Earls Marischal, and now the property of the Earl of Hopetoun, stands a little to the left of Keith Water, $\frac{2}{3}$ mile WSW of that stream's confluence with Humberie Water and $3\frac{3}{4}$ miles NNE of Blackshiels. Once a fine old building, it acquired the timber used in its construction in a gift from the King of Denmark towards the close of the 16th century, and has within its grounds remains of an ancient chapel and graveyard. Places called Keith, Keith Mains, and Upper Keith are within from 3 to 10 furlongs of Keith House; and a fourth called Keith Hill lies $2\frac{3}{4}$ miles to the SSE.—*Ord. Sur.*, sh. 33, 1863.

Keithhall (*Monkegy* prior to 1700), a Donside parish of central Aberdeenshire, whose church stands 2 miles E by S of the post-town, Inverurie. Since 1754 comprising two-thirds of the ancient parish of Kinkell, and called by the united name of Keithhall and Kinkell, it is bounded N by Bourtie, NE by Udney, E by New Machar and Fintray, SE by Fintray, SW by Kintore, and W by Kintore, Inverurie, and Chapel of Garioch. Its utmost length, from N to S, is $4\frac{1}{2}$ miles; its breadth, from E to W, tapering southward, varies between 1 furlong and $4\frac{1}{2}$ miles; and its area is 7639 acres, of which $38\frac{1}{2}$ are water. The URY winds $2\frac{1}{2}$ miles south-south-eastward along all the Inverurie boundary till it falls into the DON, which itself flows 3 miles south-south-eastward along all the Kintore boundary. Where it passes off from this parish, the surface declines to 153 feet above sea-level, thence rising to 395 feet at Cairn More near Balbithan, 458 near Cairnhill, and 616 at Selbie Hill on the northern border. The rocks include granite, trap, and gneiss; and the soil along the streams is a fertile alluvial mixture of clay, loam, and sand, but elsewhere is mostly light and gravelly. Nearly two-thirds of the entire area are in tillage; woods and plantations cover 410 acres; and the rest is either pastoral or waste. Antiquities, other than those noticed under BALBITHAN and KINKELL, are vestiges of three large cairns and of two or more stone circles; and Kinmuck Moor, according to tradition, was the scene of a great encounter between the Scots and the Danes. Natives were Arthur Johnston (1587-1641), the eminent Latin

poet, whose ancestors had held the estate of Caskieben for many generations, and Alexander Keith, D.D. (1791-1880), the well-known writer on prophecy; but the historian, Bishop Gilbert Burnet (1643-1715), was born at Edinburgh, though his father possessed the lands of Crimond. The estate of Caskieben (thereafter called Keithhall) was purchased from the Johnstons about 1662 by Sir John Keith, third son of the sixth Earl Marischal, who in 1677 was created Earl of Kintore and Baron Keith of Inverurie and Keithhall. By the addition about 1700 of a front and E wing to the older house, he rendered it a large and stately mansion, which stands near the Ury's left bank, amidst a nobly-wooded park, 1 mile E of Inverurie. His ninth descendant, Algernon Hawkins Thomond Keith-Falconer, tenth Earl of Kintore and thirteenth Lord Falconer of HALKERTON (b. 1852; suc. 1880), owns extensive acres in Aberdeenshire, Forfarshire, and Kincardineshire. (See INGLISMALDIE.) Keithhall is in the presbytery of Garioch and synod of Aberdeen; the living is worth £274. The parish church, built in 1772, and repaired in 1875, contains 500 sittings; and the public school, with accommodation for 140 children, has an average attendance of over 70, and a grant of about £65. Pop. (1801) 853, (1831) 877, (1861) 933, (1871) 874, (1881) 880, (1891) 822.—*Ord. Sur.*, shs. 76, 77, 1874-78.

Keith-Hundeby. See KEITH, Haddingtonshire.

Keithick, an estate, with a mansion, in Coupar-Angus parish, Perthshire, 2 miles SW of the town. Its owner is Edward Collins Wood, Esq. (b. 1841; suc. 1877).—*Ord. Sur.*, sh. 48, 1868.

Keithinch. See PETERHEAD.

Keithock House. See BRECHIN.

Keithtown, a hamlet in Fodderty parish, SE Ross-shire, 1½ mile W of Maryburgh.

Kelburne Castle, a seat of the Earl of Glasgow in Largs parish, Ayrshire, within ½ mile of the Firth of Clyde, 1½ mile N by E of Fairlie, and 2 miles SSE of Largs town. Originally a square tower, it was described by Pont in the beginning of the 17th century as 'a goodly building, well planted, having very beautiful orchards and gardens;' and a hundred years later it was enlarged by David, first Earl of Glasgow. Special features of interest are a metal finial, with the crest of the Boyles surmounted by a thistle, and 'an ingeniously ornamented sun-dial, where every inch of surface is made to tell the story of time, and where its pinnacle, by a series of grooves, imitates the crocketing of Gothic architecture.' The estate came into possession of the Earl's ancestors so early as the time of Alexander III. (1249-86), and gives the title of Viscount to David Boyle, seventh Earl of Glasgow since 1703 (b. 1833; suc. 1890). The park contains many fine old trees; comprises much diversity of ground, with wooded braes and heights; and includes a dark, wooded glen, where Clea Burn, rising at an altitude of 1280 feet, and running 2½ miles north-north-westward and westward to the Firth, forms two romantic waterfalls, the lower one 50 feet high. In 1894 a private burying ground was laid out within the policies.—*Ord. Sur.*, sh. 24, 1870. See Millar's *Castles and Mansions of Ayrshire* (1885).

Kelhead, a place with limeworks in Cummertrees parish, Dumfriesshire, 3½ miles WNW of Annan.

Kellas, a hamlet in Murroes parish, Forfarshire, 5 miles NNE of Dundee.

Kellas, a villago in Dallas parish, Elginshire, on the left bank of the Lossie, 6½ miles SSW of Elgin.

Kellerstain, a mansion in Ratho parish, Edinburghshire, ½ mile WNW of Gogar station.—*Ord. Sur.*, sh. 32, 1857.

Kellie, an estate, containing Kellie Castle, in Carnbee parish, Fife. The castle, 3½ miles NW of Pittenweem, occupies a prominent and beautiful situation on the south side of Kellie Law, and was restored by the late Professor Lorimer, who wrote—'As it now appears it is a Jacobin residence of great elegance of form, and possesses special interest from the fact that no external alterations appear to have been made on it of a later date than 1606. The western portion is flanked by

two towers with turrets supported by corbels or brackets and projecting boldly from the angles. These turrets are of considerable size, and are each lighted by two windows. The eastern portion is plainer, and bears the date 1573.' The castle is the scene of one of Mrs Oliphant's tales, *Kellie Stewart*. The estate, which formerly belonged to the Earls of Mar and Kellie, is now the property of Mr. T. A. Hog, and contains Kellie Law (500 feet).—*Ord. Sur.*, sh. 41, 1857.

Kelloe, a mansion in Edrom parish, Berwickshire, on the left bank of Blackadder Water, 1½ mile SSE of Edrom station. Its owner is George Charles Fordyce-Buchan, Esq. (b. 1867; suc. 1871). Between the mansion and the station is the hamlet of Kelloe-Bastie.—*Ord. Sur.*, sh. 26, 1864.

Kello Water, a mountain rivulet of Sanquhar parish, NW Dumfriesshire. Rising upon the northern slope of Blacklorg Hill at an altitude of 1980 feet, it runs 2½ miles north-north-eastward along the boundary with New Cunnock in Ayrshire, and then 5¾ miles east-north-eastward along the Kirkconnell border, till, after a total descent of 1480 feet, it falls into the Nith at a point 2½ miles WNW of Sanquhar town. It is well stocked with trout.—*Ord. Sur.*, sh. 15, 1864.

Kells, a parish in Glenkens district, Kirkcudbrightshire, containing the royal burgh of New GALLOWAY. It is bounded NW and N by Carsphairn, E by Dalry, Balmacellann, and Parton, S by Balmaghie, and SW and W by Girthon and Minnigaff. Its utmost length, from NW to SE, is 15½ miles; its breadth varies between 1½ and 9½ miles; and its area is 49,376½ acres, of which 794¾ are water. The Water of Kell winds 14½ miles south-south-eastward along all the eastern boundary, broadening to 3¾ furlongs in Loch Ken, below which it joins the Dee; and the DEE itself, from ½ mile below its efflux from Loch Dee, flows 18¼ miles east-south-eastward along the south-western and southern border, and traverses triangular Stroan Loch (4 × 2¾ furl.; 225 feet). Pulnaddy Burn runs 6½ miles east-by-southward along the northern boundary to the Ken, whose principal affluent from the interior is Pulharrow Burn, running 5½ miles east-south-eastward out of Loch HARROW (3 × 1½ furl.; 850 feet). Two other lakes, communicating with Pulharrow Burn, are Lochs DUNGEON (6 × 2 furl.; 1025 feet) and Minnoch (2 × 1½ furl.; 870 feet). The surface is everywhere hilly or mountainous, sinking to close on 100 feet above sea-level at the SE corner of the parish, where the Ken falls into the Dee, and thence rising north-westward to 1066 at Cairn Edward, 1616 at Cairnsmore or Blackcraig of Dee, 1248 at Bennan, 2446 at Meikle Millyea, 2350 at Millfire, and 2668 at Corserine—heathy summits these of the Rhytns of Kells that command a magnificent view. The entire tract along the Ken is eminently beautiful, exhibiting in its upper parts a reach of narrow vale, flanked and overlooked by grassy or wooded slopes, and by romantic ravines and hills, and expanding in its lower part, especially along Loch Ken, into a fertile alluvial flat, screened and overhung by parks and verdant uplands. Much of the interior, to the S of the Rhytns, is supposed to have been a hunting-ground, first of the Lords of Galloway, afterwards of the Kings of Scotland. It retains some stunted remains of an ancient and very large forest, and includes the two farms of Upper and Nether Forest, patches of wood called the King's Forest, and a large meadow, the King's Holm. Granite is a predominant rock; excellent slates were formerly quarried in the NE; iron ore abounds in one locality; and lead ore occurs on Glenlee and Kenmure estates, and was formerly mined. The soil of the alluvial tract along the Ken is so rich, that, in the days prior to modern agricultural improvement, it bore crops for twenty-five successive years without other manure than the Ken's natural deposits, but elsewhere the soil is exceedingly various, and graduates towards the hills and mountains into worthless moor or bare rock. The chief antiquities are a large rocking stone on one of the heights of the Rhytns, vestiges of a defensive wall extending southward through great part

of the parish, and a stone in the churchyard to the memory of Adam M'Whan, who was shot for his adherence to the Covenant in 1685. Natives were Thomas Gordon (1690-1750), political writer; Robert Heron (1764-1807), a calamitous author; and the Rev. William Gillespie (1776-1825), a minor poet and minister of Kells from 1801 till his death. Mansions, noticed separately, are Kenmure Castle, Glenlee, Garroch, and Knocknalling. Kells is in the presbytery of Kirkcudbright and synod of Galloway; the living is worth £314. The parish church, $\frac{1}{2}$ mile N by W of New Galloway, is a neat stone building of 1822, with a square tower and 560 sittings; and Kells, Mossdale, and Pulharrow public schools, with accommodation respectively for 190, 73, and 40 children, had (1892) an average attendance of about 100, 45, and 15, and grants of nearly £100, £60, and £30. Pop. (1801) 771, (1831) 1123, (1861) 1170, (1871) 1007, (1881) 970, (1891) 931.—*Ord. Sur.*, shs. 9, 8, 5, 1857-63.

Kelly, a rivulet of E Aberdeenshire, running $5\frac{1}{2}$ miles east-north-eastward, chiefly along the boundary between Methlick and Tarves parishes, and falling into the Ythan $1\frac{1}{4}$ mile ENE of Haddo House. One of the Crown jewels, a highly valuable pearl, is said to have been found at the mouth of this stream, and presented in 1620 to James VI.—*Ord. Sur.*, sh. 87, 1876.

Kelly Castle, a grey old tower in Arbirlot parish, Forfarshire, on a high rock above the right bank of Elliot Water, 3 miles WSW of Arbroath. Held by the Auchterlonies from 1444 till 1630, it came in 1679 to the Earl of Panmure, an ancestor of the DALHOUSIE family. Now uninhabited, yet scarcely ruinous, it presents a picturesque aspect. Near it stands moderu Kelly Castle.—*Ord. Sur.*, sh. 49, 1865.

Kelly House, a large modern mansion, with beautiful pleasure-grounds, in Innerkip parish, W Renfrewshire, within 3 furlongs of the Firth of Clyde and $\frac{3}{4}$ mile NNE of Wemyss Bay station. The estate was held by the Bannatynes from the latter half of the 15th century till 1792, when it was purchased by John Wallace, Esq., whose son, Robert (1773-1855), represented Greenock from 1833 to 1845, and almost disputes with Rowland Hill the parentage of the penny post. Towards the close of his parliamentary career, he found himself forced to sell Kelly, one-half of which was purchased in 1860 by Mr (afterwards Sir) George Burns, and forms the estate of Castle Wemyss; the other half was purchased in 1867 by the eminent chemist, Dr James Young, F.R.S. (1811-83). One of Dr Livingstone's early friends, Dr Young in 1875 entertained for a fortnight the two African servants of the great explorer; and in the grounds here they reared a fac-simile of the hut they had built for their master to die in. The estate of Kelly has been since purchased by Alexander Stephen, Esq., ship-builder, Linthouse, Govan, who took down the old house—a plain, white mansion erected by Mr John Wallace in 1793, and much enlarged by his son, who also had added a large picture gallery—and erected the present mansion in its stead. Kelly Burn, rising at an altitude of 880 feet above sea-level, hurries $3\frac{3}{4}$ miles west-south-westward to the Firth, chiefly along the Ayrshire boundary. It flows through a narrow beautifully wooded glen, overhung by hills 700 to 900 feet high; and gives to these hills the name of Kellyburn Braes, sung in a quaint old satirical song, which was altered by Burns.—*Ord. Sur.*, sh. 29, 1873.

Kelso, a Border town and parish of NE Roxburghshire. The town, which lies at an altitude of from 100 to 142 feet above sea-level, on the left or N bank of the curving Tweed, opposite the Teviot's influx, by road is $8\frac{3}{4}$ miles WSW of Coldstream, 42 SE of Edinburgh, and $\frac{3}{4}$ mile N by W of Kelso station on a branch of the North British, this being 52 miles SE of Edinburgh, $11\frac{1}{2}$ E by N of St Boswells, and 23 WSW of Berwick-on-Tweed. From the station one enters across the fine five-arch bridge, erected by Rennie in 1800-3 at a cost of £17,802. This, the first bridge with the elliptic arch, may be said to have marked a new era in bridge-building, and was taken by its architect as his model

for Waterloo Bridge in London. With a length of 494 feet including the approaches, it has a level roadway $23\frac{1}{2}$ feet wide and 30 feet above the ordinary level of the river. Its arches, each 72 feet in span, are separated by piers of 14 feet in thickness; and on either side it exhibits six sets of double three-quarter Roman-Doric columns, surmounted by a block cornice and balustrade. The former bridge, built in 1754 at a cost of £3000, and swept away by the great flood of 26 Oct. 1797, is alluded to in Burns's *Border Tour*, under date 9 May 1787:—'Breakfast at Kelso; charming situation; fine bridge over the Tweed; enchanting views and prospects on both sides of the river, particularly the Scotch side.' And one learns that the poet was so impressed with the scene, that he reverently uncovered, and breathed a prayer to the Almighty. Scott, too, has left on record how he could trace hither the awakening within himself 'of that love of natural scenery, more especially when combined with ancient ruins or remains of our fathers' piety or splendour, which' was in him 'an insatiable passion;' and he thus writes: 'The neighbourhood of Kelso, the most beautiful, if not the most romantic village in Scotland, is eminently calculated to awaken these ideas. It presents objects not only grand in themselves, but venerable from their associations. The meeting of two superb rivers, the Tweed and the Teviot, both renowned in song—the ruins of an ancient abbey—the more distant vestiges of Roxburgh Castle—the modern mansion of Floors, which is so situated as to combine the ideas of ancient baronial grandeur with those of modern taste—are in themselves objects of the first class, yet are so mixed, united, and melted among a thousand other beauties of a less prominent description, that they harmonise into one general picture, and please rather by unison than by concord.' Leyden's *Scenes of Infancy* depicts this landscape with a truth that attests the power of its charm:—

'Teviot, farewell! for now thy silver tide
Commix'd with Tweed's pellucid stream shall glide;
But all thy green and pastoral beauties fail
To match the softness of thy parting vale.
Bosom'd in woods, where mighty rivers run,
Kelso's fair vale expands before the sun:
Its rising downs in vernal beauty swell,
And, fringed with hazel, winds each flowery dell;
Green spangled plains to dimpling lawns succeed,
And Tempé rises on the banks of Tweed;
Blue o'er the river Kelso's shadow lies,
And copse-clad isles amid the waters rise;
Where Tweed her silent way majestic holds,
Float the thin gales in more transparent folds.'

Fine as the view is from Kelso Bridge, that from Chalkheugh Terrace is almost finer—the meeting of the Teviot and the Tweed; St James's Fair Green; Marchmound, with the fragment of Roxburgh Castle; Springwood Park; the Abbey; Floors Castle, its lawns and woods; the Waterloo Monument on distant Penielheugh; and, further still, the triple height of Eildon. Nor is Kelso itself unworthy of its environs, comprising a spacious central square, four streets diverging thence in different ways, two smaller squares, and a number of minor cross streets, whose airiness, neatness, and well-to-do houses, roofed with blue slate, and built of a light-coloured stone, entitle it still, as in 1547, to Patten's description—'a pretty market town.' The Kelso, however, of Patten's day extended beyond the western limits of the present town into ground included now in the park of Floors Castle, where the site of its cross may still be traced. Long a mere village, a sort of suburb to Roxburgh on the opposite side of the Tweed, it rose eventually to the condition of a small town, and came to be known as Wester Kelso. Another small town, distinguished as Easter Kelso, with Kelso Abbey for its nucleus, was gradually extended westward into junction with Wester Kelso, and, on the destruction of Roxburgh in 1460, succeeded that ancient and important burgh as a centre of trade and of political and social influence on the Eastern Border. The great conflagration of March 1684 reduced Wester Kelso to ashes; but it was at its cross, on 24 Oct. 1715, that the Old Chevalier was pro-

claimed, amid shouts of 'No union! no malt tax! no salt tax!'

The gas company was started in 1831; but on 5 Feb. 1818 a shop in Bridge Street, formerly office of the *Kelso Chronicle*, and tenanted then by an ingenious copper-smith, was lighted with gas, this being its earliest introduction to Scotland. In 1866, under the direction of Mr Brunlees, C.E., a native of Kelso, the town was drained, and a gravitation water supply pumped by steam from the Tweed, at a cost of £7000. The Town Hall, on the E side of the Market Place, is a tetrastyle Ionic edifice of 1816, with a piazza basement and a cupola. The Corn Exchange, in the Wood Market, was built by subscription at a cost of £3000 in 1856 from designs by Mr Cousins. Tudor in style, it measures 124 by 57 feet, contains 71 stalls, and is sometimes used for lectures, concerts, and balls. The parish church, near the abbey, built in 1773, and much altered in 1823 and 1833, is an octagonal structure, containing over 1000 sittings, and has 'the peculiarity of being without exception the ugliest of all the parish churches in Scotland, but an excellent model for a circus.' The North *quoad sacra* parish church, a Gothic building, with a conspicuous tower and an organ (1892), was erected in 1837 at a cost of £3460 for the Establishment, to which it reverted in 1866, after having for twenty-three years belonged to the Free Church. The present Free church, on the E side of Roxburgh Street, facing the Tweed, was built in 1865-67 at a cost of £6000 for Horatius Bonar, D.D., the well-known hymn-writer, who, ordained at Kelso in 1837, was a minister there for upwards of thirty years. Decorated in style, with 750 sittings and a lofty spire, it is not unlike the Barclay Church at Edinburgh, and forms a striking feature in the landscape. Other places of worship are East Free church (1844, remodelled in 1883), the First U.P. church (1788), the East U.P. church (1793, remodelled in 1877), the Baptist chapel (1878), St Andrew's Episcopal church (1868; 314 sittings), and the Roman Catholic church of the Immaculate Conception (1858; 230 sittings). The last succeeded a cottage chapel, burned by a mob on 6 Aug. 1856; while St Andrew's, a Geometric Gothic structure, near the Tweed's bank above the bridge, superseded a chapel of 1757, whose congregation dated from the Revolution. Kelso High School, at the E end of the town, is a handsome red sandstone edifice of 1877-78, and comprises a large hall 70 feet long, with class-rooms attached, and dormitories above for boarders. It has higher-class, middle, and elementary departments, and is conducted by a rector and assistants. At the old grammar school, adjoining the abbey, Sir Walter Scott in 1783 was the six months' school-fellow of James and John Ballantyne; its site is now occupied by a fine new public school (1879). There is also a high school for girls, a young ladies' seminary, and two public schools under the parish school board.

Shedden Park, at the E end of the town, was presented to the inhabitants in 1851 by the late Mrs Robertson of Ednam House, and took its name in memory of her nephew, Robert Shedden (1820-49), who perished in the search for Sir John Franklin. Comprising an area of fully 8 acres, it adds greatly to the attractions and amenity of Kelso; is maintained from the rental of a number of dwelling-houses and gardens, given by Mrs Robertson for that and for other benevolent purposes; and has a handsome entrance gateway, erected by public subscription, in gratitude for the gift. Immediately beyond is the beautiful cemetery, the ground for which was gifted to the town by the sixth Duke of Roxburgh. Kelso Library, a handsome edifice in Chalkheugh Terrace, overlooking the Tweed, and commanding a very beautiful view, contains a valuable collection of books, first formed in 1750, and now comprising over 7000 volumes, the most interesting of which is the identical copy of *Percy's Reliques* that entranced the boyhood of Sir Walter Scott. The adjoining Tweedside Physical and Antiquarian Society's Museum (1834), with frontage towards Roxburgh Street, is a massive two-story building; contains a fine collection of stuffed birds of the dis-

trict, some portraits, relics of Sir Walter Scott, etc. The Dispensary, occupying a healthy and airy site in Roxburgh Street, was founded in 1777, and enlarged and provided with baths in 1818. This institution maintains a staff of nurses for the treatment of poor persons either within doors or at their own homes. The Union Poorhouse (1853), which has had on an average of 10 years 20 inmates, is a neat and spacious building, with accommodation for 70 inmates, and is situated in the 'Tannage' field, to the N of the North Parish church. The Parochial Board offices are in Bowmont Street, to the W of the Poorhouse. Amongst other institutions are the Billiard and Reading-room (1855), the New Billiard and Reading-room (1852), the Mechanics' Institute (1866), Subscription Library; the Border Union Agricultural Society, established as the Border Society in 1812, united with the Tweedside Society in 1820, and yearly holding a stock and sheep show on 5 Aug., a hull show in spring, and a great sale of Border Leicester and Cheviot rams in September; an Association for the Analysing of Manures and the Testing of Seeds (among the first of the kind instituted in Scotland); the Horticultural Society, under the patronage of the Duke of Roxburgh, and holding a great show in September; the Poultry Exhibition (1881), a Dog Society (1883), a Cycling Club (1883), the Total Abstinence Society (1862), Good Templar lodges, and a Rechabite tent; lodges of Freemasons (1815), Foresters (1845), and Oddfellows (1841); the Choral Union (1864), the Cricket Club (1850), the Border Cricket Club (1854), the Bowling Club (1818), the Quoiting Club (1851), the Curling Club (1790), the Angling Association (1859), the Border Racing Club (1854), and public washhouses. The Kelso races are held annually for two days in the beginning of October on a racecourse 9 furlongs N of the town, which, formed in 1822 out of what was once a morass, is perhaps the finest in Scotland; and the Border steeplechases are run in April partly on the racecourse, which has an excellent stand on the model of that at Doncaster.

Kelso has a post office, with money order, savings bank, insurance, and telegraph departments, branches of the Bank of Scotland, and of the British Linen Co., Commercial, and National banks, a National Security savings bank (1849), the Cross Keys (1760) and several other hotels, and 2 weekly newspapers, the Wednesday Conservative *Kelso Mail* (1797) and the Liberal Friday *Kelso Chronicle* (1832). A weekly general and corn market is held on Friday; and the following is a list of the fairs—horses, every Friday of March; wool, second Friday of July; St James's Fair, of very ancient origin, and long of very great importance, but now little else than a pleasure fair, held on the Friar's Haugh, on the right bank of the Tweed, opposite Floors Castle, 5 Aug., or if a Sunday, the Monday following; tups, second Friday of September; cattle and ewes, 24 Sept., or if a Sunday, the previous Saturday; auction sales of fat cattle and sheep on the first and third Monday of each month; hinds and herds hiring, first Friday of March; young men's and women's hiring, first Friday of May and November. The sale of corn in the weekly market is very great, as is also that of Border Leicester rams at the September fair. Formerly Kelso was famous for its shoes, its leather, its blue bonnets, and the produce of its handloom weavers; later it ranked second only to Dumfries in pork-curing; but now the town mainly depends on its coach-building establishments, fishing-tackle manufactories, cabinet and upholstery works, extensive nursery gardens, corn, manure, and saw mills, agricultural machinery, iron foundry, and Wooden woollen-mills, for the manufacture of tweeds, blankets, and plaidings. The original *Chronicle*, published by 'Blackneb' Palmer from 1783* to 1803, with its antidote, the existing *Mail*, started by James Ballantyne in 1797, was among the earliest Scottish newspapers, its only provincial senior being the *Aberdeen Journal* (1748). Palmer was

* Kelso can boast of having had a newspaper published in it at least weekly for upwards of a hundred years, the centenary of the founding of the newspaper press in the town having occurred in February, 1883.

printing books as early as 1782, one large volume, noteworthy for its typography, being still not seldom met with in the private libraries in the town; and from the Ballantyne press here the two first volumes of Scott's *Border Minstrelsy* came out in 1802, towards the close of which year James Ballantyne removed to Edinburgh. 'When the book appeared, the imprint "Kelso" was read with wonder by connoisseurs of typography, who had probably never heard of such a place, and were astonished at the specimen of handsome printing which so obscure a town had produced: it was received with the exclamation, "What a beautiful book!"' (*History of the Ballantyne Press*, Edinb. 1871). Kelso's printing traditions have since been worthily maintained by Messrs Rutherford, among whose publications may be noticed Hunter's *History of Coldingham* (1858), the *Southern Counties Register* (1866), the *Border Almanac* (1867, etc.), Stoddart's *Songs of the Seasons* (1874), the *Autobiography of John Younger* (1882), four or five works by the Rev. John Thomson, Hawick, and the centenary edition of the poetical works of Dr John Leyden. They also issued some of Dr Bonar's works, including the once celebrated *Kelso Tracts*, which were the first of his productions to bring him into notice as an author.

A free burgh of barony since 1634, and a police burgh under the General Police and Improvement Act (Scotland) of 1862, the town is now, under the Burgh Police Act of 1892, which came into force on 15 May, 1893, governed by a provost, 2 bailies, and 6 commissioners. Police courts are held as occasion requires; sheriff small debt courts on the Fridays after the second Mondays of February, April, June, and December, and after the last Monday of July, and also on the last Tuesday of September; and justice of peace courts are held on the second Wednesday of every month. The police force since 1881 has been included in that of the county; and the prison was closed in 1878. Pop. (1851) 4783, (1861) 4309, (1871) 4564, (1881) 4701, (1891) 4184, of whom 1919 were males and 2265 were females. Houses inhabited (1891) 1008, vacant 58.

Of Kelso Abbey Dr Hill Burton writes, in *Billings' Baronial and Ecclesiastical Antiquities* (1852), that 'in the rich wooded vale where the Teviot meets the Tweed, a huge ruin, partly Norman and partly of the earlier pointed Gothic, frowns over the pleasant market town, more like a fortified castle than the residence of peaceful monks, devoted to unambitious repose. The massive tower of the building, with corner projections, which are rather towers than buttresses, has a great deal of the baronial in its character, and probably has a closer resemblance to a Norman castle than any other building in Scotland; for, in the purely baronial remains in the North, there is no well-authenticated specimen of the Norman form. It will be seen that the history of this house has been too much in conformity with its warlike architecture, and that, situated so close to the dividing line between two fierce inimical nations, it had an unquiet career. One wonders, indeed, that after the perils and outrages it has incurred, so large a mass of it should still remain; and we can see that there must have been sound judgment in the Norman builder who environed the spiritual brethren with such ample means of carnal defence.' The minster, forming a Latin cross, with the head to the W, consisted of a large Galilee or ante-church, 23 feet square, in lieu of a nave; an aisleless transept, 71 by 23 feet; an aisle choir, 61 feet wide, and extending into a presbytery and Lady chapel of indeterminate length; and a central tower, 91 feet high and 23 square, surmounting the crossing. Thereof is left part of the W front, the transept, two bays of the choir, and the S and W sides of the tower. The two round-headed arches on the S side of the choir spring from massive piers with circular side pilasters and boldly projecting capitals; but the two extant tower arches, 45 feet high, are exquisite specimens of Early Pointed. The side walls have intersecting arcades, with rich ornamentation; the shallow N porch (*circa* 1150), obliquely recessed, with an interlac-

ing arcade and pediment above the arch, filled with a network pattern, has the character of a deep doorway. The western archway, half of which now is gone, is lavishly sculptured, and offers a striking example of the mixed richness and symmetry of Norman decoration. Nothing is left of the abbot's hall, the gatehouse, the dormitory, and other offices; but the extant remains are sufficient to warrant Cosmo Innes' assertion that 'the beautiful and somewhat singular architecture of the ruined church of Kelso Abbey still gives proof of taste and skill and some science in the builders, at a period which the confidence of modern times has proclaimed dark and degraded; and if we could call up to the fancy the magnificent abbey and its interior decorations, to correspond with what remains of that ruined pile, we should find works of art that might well exercise the talents of high masters. Kelso bears marks of having been a full century in building; and during all that time at least, perhaps for long afterwards, the carver of wood, the sculptor in stone and marble, the tile-worker, and the lead and iron worker, the painter (whether of Scripture stories or of heraldic blazonings), the designer, and the worker in stained glass for those gorgeous windows which we now vainly try to imitate—must each have been put in requisition, and each, in the exercise of his art, contributed to raise the taste and cultivate the minds of the inmates of the cloister. Of many of these works the monks themselves were the artists and artisans.'

In 1113 David, Earl of Huntingdon, brought thirteen reformed Benedictine monks from the newly founded abbey of Tiron in Picardy, and planted them on the banks of the Ettrick beside his Forest castle of Selkirk. In 1126, the year after David's accession to the throne, this Tironensian abbey of SS. Mary and John was translated from Selkirk to 'the place called Calkou,' and here its conventual church was founded on 3 May 1128, Roxburgh then being in the zenith of prosperity. David, and all his successors down to James V., lavished on Kelso Abbey royal favours. Whether in wealth, in political influence, or in ecclesiastical status, it maintained an eminence of grandeur which dazzles the student of history. The priory of Lesmahagow and its valuable dependencies, 33 parish churches, with their tithes and other pertinents, in nearly every district (save Galloway and East Lothian) S of the Clyde and the Forth, the parish church of Culter in Aberdeenshire, all the forfeitures within the town and county of Berwick, several manors and vast numbers of farms, granges, mills, fishings, and miscellaneous property athwart the Lowlands, so swelled its revenues as to raise them to £3716 per annum. The abbots were superiors of the regality of Kelso, Bolden, and Reverden, frequent ambassadors and special commissioners of the royal court, and the first ecclesiastics on the roll of parliament, taking precedence of all other abbots in the kingdom. Herbert, third abbot of Selkirk and first of Kelso, was celebrated for his learning and talent, and having filled the office of chamberlain of Scotland, in 1147 was translated to the see of Glasgow. Arnold, his successor, in 1160, was made bishop of St Andrews, and in 1161 the legate of the Pope in Scotland. In 1152 Henry, the only son of David, and heir-apparent of the throne, died at Roxburgh Castle, and, with pompous obsequies, was buried in the abbey. In 1160 John, precentor of the monastery, was elected abbot, and in 1165 he obtained from Rome the privilege of a mitred abbey for himself and his successors. Osbert, who succeeded him in 1180, was despatched in 1182 at the head of several influential ecclesiastics and others, to negotiate between the Pope and William the Lion, and succeeded in obtaining the removal of an excommunication which had been laid on the kingdom, and in procuring for the King expressions of papal favour. In 1215 Abbot Henry was summoned to Rome, along with three Scottish bishops, to attend the Fourth Lateran Council. In 1236 Herbert, who fifteen years before had succeeded to the abbacy, performed an act of abdication more rare by far among the wealthier wearers of mitres than among the harassed owners of

diadems; and, solemnly placing the insignia of his office on the high altar, passed into retirement. Edward I. of England, having seized all ecclesiastical property in Scotland, received in 1296 the submission of the Abbot of Kelso, and gave him letters ordering full restitution. In consequence of a treaty between Robert Bruce and Edward III., Kelso Abbey shared in 1328 mutual restitutions with the English monasteries of property which had changed owners during the international wars. In 1420 the abbot, having his right of superiority over all other abbots of Scotland, contested by the Abbot of St Andrews, by formal adjudication of the King was compelled to resign it, on the ground of the abbey of St Andrews being the first established in the kingdom. In 1493 Abbot Robert was appointed by parliament one of the auditors of causes and complaints. On the night after the battle of Flodden (1513) an emissary of Lord Hume expelled the abbot, and took possession of the abbey. In 1517 and 1521 Abbot Thomas was a plenipotentiary to the Court of England; and in 1526 he was commissioned to exchange with Henry or his commissioners ratifications of the peace of the previous year. On 20 June 1523 the English demolished the vaults of the abbey and its chapel or church of St Mary, fired all the cells and dormitories, and unroofed every part of the edifice. Other inroads of the national foe preventing immediate repair or restoration, the abbey, for a time, crumbled towards total decay; and the monks, reduced to comparative poverty, skulked among the neighbouring villages. From 1536 till his death in 1558, James Stuart, the natural son of James V., nominally filled the office of abbot, and was the last who bore the title. The abbey of Melrose, Holyrood, St Andrews, and Coldingham were, at the same date as the abbey of Kelso, bestowed on James's illegitimate offspring; and, jointly with it, they brought the royal family an amount of revenue little inferior to that yielded by all the possessions and resources of the Crown. In 1542, under the Duke of Norfolk, and again in 1545, under the Earl of Hertford, the English renewed their spoliations on the abbey, and almost entirely destroyed it by fire. On the latter occasion, it was resolutely defended by 12 monks and 90 other Scotsmen, but, cannon being brought up, a breach was opened, apparently in the conventual buildings. "The assault was given to the Spaniards, but, when they rushed in, they found the place cleared. The nimble garrison had run to the strong square tower of the church, and there again they held out. Night came before they could be dislodged from this their last citadel, so the besiegers had "to leave the assault till the morning, setting a good watch all night about the house, which was not so well kept but that a dozen of the Scots, in the darkness of the night, escaped by ropes out at back windows and corners, with no little danger of their lives. When the day came, and the steeple eftsoms assaulted, it was immediately won, and as many Scots slain as were within'" (Hill Burton's *Hist. Scotl.*, iii. 242, ed. 1876). In 1560 the remnant of the brotherhood was expelled, and the abbey wrecked, by Reformers. Its vast possessions, becoming now Crown property, were in 1594 distributed among the favourites of James VI., who, by a charter of 1607, erected the abbacy into the lordship and barony of Halidene, comprising the town and lands of Kelso. Rudely ceiled over, with a thatched prison above, the transept served as the parish church from 1649 to 1771, when, part of the roof giving way during service one Sunday, the people ran out, expecting the fulfilment of Thomas the Rhymers' prediction that the kirk should fall at the fullest. In 1805 the ruins were cleared of unsightly additions; and in 1866 they were placed in a state of thorough repair by the Duke of Roxburgh.

In the 12th century Kelso was known as *Calkou* or *Calchou*, a name which Chalmers identified with Chalkheugh ('chalk height'), a precipitous bank with strata of gypsum cropping to the surface; but, according to Professor Veitch, its name was *Calchwynyd* in the old Cymric times. Of events not noticed under our history

of the abbey and of ROXBURGH, the earliest on record occurred in 1209, when, a Papal interdict being imposed upon England, the Bishop of Rochester left his see, and took refuge in Kelso. Ten years later William de Valoines, Lord Chamberlain of Scotland, died in the town. In 1255 Henry III. of England and his queen, during a visit to their son-in-law and daughter, Alexander III. and his royal consort, at Roxburgh Castle, were introduced with great pomp to Kelso and its abbey, and entertained, with the chief nobility of both kingdoms, at a sumptuous banquet. In 1297 Edward I., at the head of his vast army of invasion, having entered Scotland and relieved the siege of Roxburgh, passed the Tweed at Kelso on his way to seize Berwick. Truces, in the years 1380 and 1391, were made at Kelso between the Scottish and the English kings. On the death of James II. by the bursting of a cannon at the siege of Roxburgh Castle (1460), his infant son, James III., being then with his mother in the camp, was carried by the nobles, in presence of the assembled army, to the abbey, and there crowned and treated with royal honours. In 1487 commissioners met at Kelso to prolong a truce for the conservation of peace along the unsettled Border territory, and to concoct measures preliminary to a treaty of marriage between the eldest son of James III. and the eldest daughter of Edward IV. The disastrous results of the battle of Flodden, in 1513, seem—in consequence of James IV.'s death, and of the loss of the protection which his authority and presence had given—to have, in some way, temporarily enthralled the town to Lord Hume, and occasioned, as we have already seen, the expulsion of the abbot from his monastery—the first of a series of events which terminated in the ruin of the pile. In 1515 the Duke of Albany, acting as regent, visited Kelso in the course of a progress of civil pacification, and received grave depositions respecting the oppressive conduct of Lord Hume, the Earl of Angus, and other barons. In 1520 Sir James Hamilton, marching with 400 men from the Merse to the assistance of Andrew Kerr, Barou of Fernieherst, in a dispute with the Earl of Angus, was overtaken at Kelso by the Baron of Cessford, then Warden of the Marches, and defeated in a brief battle.

In 1522 Kelso, and the country between it and the German Ocean, received the first lashings of the scourge of war in the angry invasion of Scotland by the army of Henry VIII. One portion of the English forces having marched into the interior from their fleet in the Forth, and having formed a junction with another portion which hung on the Border under Lord Dacre, the united forces, among other devastations, destroyed one-half of Kelso by fire, plundered the other half, and inflicted merciless havoc upon not a few parts of the abbey. So irritating were their deeds, that the men of Merse and Teviotdale came headlong on them in a mass, and showed such inclination, accompanied with not a little power, to make reprisals, that the devastators prudently retreated within their own frontier. After the rupture between James V. and Henry VIII., the Earl of Huntly, who had been appointed guardian of the Marches, garrisoned Kelso and Jedburgh, and in August 1542 set out from these towns in search of an invading force of 3000 men under Sir Robert Bowes, fell in with them at Hadden Rig, and, after a hard contest, broke down their power and captured their chief officers. A more numerous army being sent northward by Henry, under the Duke of Norfolk, and James stationing himself with a main army of defence on Fala Moor, the Earl of Huntly received detachments which augmented his force to 10,000 men, and so checked the invaders along the Marches as to preserve the open country from devastation. In spite of his strenuous efforts, Kelso and some villages in its vicinity were entered, plundered, and given up to the flames; and they were eventually delivered from ruinous spoliation only by the foe being forced by want of provisions and the inclemency of the season to retreat into their own territory. When Henry VIII.'s fury against Scotland was kindled anew about the proposed marriage of the infant Queen Mary

and Prince Edward of England, an English army, in 1544, entered Scotland by the Easteru Marches, plundered and destroyed Kelso and Jedburgh, and ravaged and burned the villages and houses in their neighbourhood. This army having been dispersed, another 12,000 strong, specially selected for their enterprise, and led on by the Earl of Hertford, next year trod the same path as the former invaders, and inflicted fearful devastation on Merse and Teviotdale. They plundered anew the towns of Kelso and Jedburgh, wasted their abbeys, and also those of Melrose and Dryburgh, and burned 100 towns and villages. While Kelso was suffering the infliction of their rage, 100 men, as mentioned in our notice of the abbey, made bold but vain resistance within the precincts of that pile. The Scottish army shortly after came up, and took post at Maxwellheugh, intending to retaliate; but they were spared the horrors of inflicting or enduring further bloodshed by the retreat of the invaders.

In 1553 a resolution was suggested by the Queen Regent, adopted by parliament, and backed by the appointment of a tax of £20,000, leviable in equal parts from the spiritual and the temporal estates, to build a fort at Kelso for the defence of the Borders; but it appears to have soon been dropped. In 1557 the Queen Regent, having wantonly, at the instigation of the King of France, provoked a war with England, collected a numerous army for aggression and defence on the Border. Under the Earl of Arran, the army, joined by an auxiliary force from France, marched to Kelso, and encamped at Maxwellheugh; but, having made some vain efforts to act efficiently on the offensive, was all withdrawn, except a detachment left in garrison at Kelso and Roxburgh to defend the Borders. Hostilities continuing between the kingdoms, Lord James Stuart, the illegitimate son of James V., built a house of defence at Kelso, and threw up fortifications around the town. In 1558 the detachment of the army stationed at Kelso marched out to chastise an incursion, in the course of which the town of Duns was burned, came up with the English at Swinton, and were defeated. In 1561 Lord James Stuart was appointed by Queen Mary her lieutenant and judge for the suppression of banditti on the Borders, and brought upwards of twenty of the most daring freebooters to trial and execution; and, about the same time, he held a meeting at Kelso with Lord Grey of England for the pacification of the Borders. In 1566, in the course of executing the magnanimous purpose of putting down by her personal presence the Border maraudings, from which she was wiled by her romantic and nearly fatal expedition to the Earl of Bothwell at Hermitage Castle, Queen Mary visited Kelso on her way from Jedburgh to Berwick, spent two nights in the town, and held a council for the settlement of some dispute. In 1569 the Earl of Moray spent five or six weeks in Kelso, and had a meeting with Lord Hunsdon and Sir John Foster, on the part of England. In 1570 an English army entered Scotland in revenge for an incursion of the Lords of Fernieherst and Buccleuch into England, divided itself into two co-operating sections, scoured the whole of Teviotdale, levelled 50 castles and strengths and upwards of 300 villages, and rendezvoused at Kelso preparatory to its retreat. The Earl of Bothwell, grandson to James V. and commendator of Kelso, made the town his home during the concocting of his foul and numerous treasons; and during ten years succeeding 1584 deeply embroiled it in the marchings and military manœuvres of the forces with which, first his partisans, and next himself personally, attempted to damage the kingdom.

Kelso, in 1639, made a prominent figure in one of the most interesting events in Scottish history—the repulse of the armed attempt of Charles I. to force Episcopacy upon Scotland. The Covenanting army of General Leslie, numbered variously at from 12,000 to 30,000 men, rendezvoused at Duns, and, marching thence, established their quarters at Kelso. The King, at the head of his army, got intelligence at Birks, near Berwick, of the position of the Covenanters, and despatched

the Earl of Holland, with 1000 cavalry and 3000 infantry, to try their mettle. General Leslie, however, easily repelled the Earl from Kelso, made a rapid concentration of all his own forces, and next day, to the surprise of the royal camp, took up his station on Duns Law. The Covenanters of Scotland and the Parliamentarians of England having made common cause against Charles I., Kelso was made, in 1644, the dépôt of troops for reinforcing General Leslie's army in England. Next year the detachment under the Marquis of Douglas and the Earl of Airlie, sent by Montrose to oppose the operations of Leslie in the Merse, marched to Kelso on their way to the battle-field of Philiphaugh, where they were cut down and broken by the Covenanters. Two years later the town was the place of rendezvous to the whole Scottish army after their successes in England, and witnessed the disbandment of six regiments of cavalry after an oath had been exacted of continued fidelity to the Covenant.

In 1645 Kelso was visited and ravaged by the plague. In 1648 a hundred English officers arrived at Kelso and Peebles, in the vain expectation of finding employment by the breaking out of another civil war. On 22 Oct. 1715 the rebel forces of the Pretender—the Highlanders under MacIntosh of Borlum, the Northumbrians under Mr Foster and Lord Derwentwater, and the men of Nithsdale and Galloway under Lord Kenmore—rendezvoused in Kelso; and next day, being Sunday, the infamous Robert Patten preached to them at the great kirk on the text, 'The right of the first-born is his.' They formally proclaimed James VIII., and remained three days making idle demonstrations, till the approach of the royal troops under General Carpenter incited them to march on to Preston. In 1718 a general commission of Oyer and Terminer sat at Kelso, as in Perth, Cupar, and Dundee, for the trial of persons concerned in the rebellion; but here they had only one bill, and even it they ignored. In Nov. 1745 the left of the three columns of Prince Charles Edward's army, on the march from Edinburgh into England, which was headed by the Chevalier in person, spent two nights in Kelso, and while here suffered numerous desertions. From November 1810 till June 1814 Kelso was the abode of a body, never more than 230 in number, of French prisoners on parole. The only other events that need be noticed are the tremendous floods of 1782, 1797, and 1831; the bridge riots of 1854; and Her Majesty the Queen's visit to Floors Castle in 1867.

Illustrious natives of Kelso have been the Rev. Wm. Crawford (1676-1742), author of *Dying Thoughts*; James Brown (1709-88), linguist and traveller; the printers, James Ballantyne (1772-1833) and his brother John (1774-1821); Robert Edmonstone (1794-1834), artist; Sir William Fairbairn, LL.D., F.R.S. (1789-1874), engineer, who spent the first ten years of his boyhood here, and, beginning life as a labourer in the building of Kelso Bridge, was for weeks disabled by a stone falling on him; Lieut. James Henry Scott Douglas (1857-79), of Springwood Park, who fell in the Zulu war; and Dr Charles Wilson (1804-84), an eminent physician. The Rev. James Melville M'Culloch, D.D. (1801-83), educational writer, was minister from 1832 to 1843; and Thomas Tod Stoddart (1810-80), angler and poet, resided here from 1836 till his death. 'Beardie,' the Jacobite great-grandfather of Sir Walter Scott, long resided and died in a house still existing in the corn market of Kelso. The tomb containing his remains and those of others of his family is conspicuous in a detached portion of the churchyard near the abbey.

The parish of Kelso, containing also the village of Maxwellheugh near the station, comprises, on the Tweed's left bank, the ancient parish of Kelso or St Mary, formerly in the diocese of St Andrews; and, on the Tweed's right bank, the ancient parishes of Maxwell and St James, formerly in the diocese of Glasgow. It is bounded N by Stichel and Ednam, E by Ednam and Sprouston, SE by Eckford, SW by Roxburgh, and W by Makerston and Smailholm. Its utmost length,

from N by W to S by E, is $4\frac{1}{2}$ miles; its breadth varies between $1\frac{1}{2}$ and $3\frac{1}{2}$ miles; and its area is 5537 acres, of which $153\frac{1}{2}$ are water. The TWEED, here a glorious salmon river, curves $1\frac{1}{2}$ mile east-north-eastward along the Roxburgh border, then 2 miles through the middle of the parish; and the TEVIOT flows $1\frac{1}{2}$ mile north-north-eastward along the Roxburgh border, and next $\frac{1}{2}$ mile through the interior, till it falls into the Tweed $\frac{1}{2}$ mile above Kelso Bridge. The Teviot's average width is 200 feet, the Tweed's 440; but, above and below the bridge, the channel of the latter river is interrupted by two low islets—Kelso and Wooden Anas; and, above Kelso Ana, it is 'bridled with a curb of stone'—the long mill-cauld ascribed by tradition to Michael Scott's familiar. EDEN WATER runs 7 furlongs eastward along the northern boundary; and Wooden Burn, falling into the Tweed $3\frac{1}{2}$ furlongs below the bridge, though only a rivulet, is noteworthy for its romantic ravine and its tiny but beautiful waterfall. Along the Tweed the surface declines to 98 feet above sea-level, thence rising northward to 289 feet near Sydenham, 324 near Stodrig, and 400 at Easter Muirdean, southward to 281 at Southfield, 306 near Huntershall, 433 at Middle Softlaw, and 526 at the Eckford boundary. As seen from Sweethope Hill (731 feet), near Stichill House, the entire parish looks to be part of a broad, rich strath, a plain intersected by two rivers, and richly adorned with woods, but from the low ground along the Tweed near the town it shows itself to be a diversified basin, a gently receding amphitheatre, low where it is traversed by the rivers, but cinctured in the distance with sylvan heights. Trap rocks prevail in the higher grounds, and sandstone, shale, and marl-limestone in the vales. The soil on the banks of the rivers is a rich deep loam, incumbent on gravel; in the north-western district is a wet clay; and in the S is thin and wet, on a red aluminous subsoil. Enclosed plantations cover some 260 acres; a large extent of ground is disposed in the planted dells of Pinnacle Hill and Wooden, and in the splendid parks of Floors and Springwood; 365 acres are in permanent pasture; and all the rest of the land is either regularly or occasionally in tillage. Several antiquities of some note that once existed in the landward districts are now reduced to little more than the sites of a Roman tumulus and BONY BRÆ near Wooden, of the ancient churches of Maxwell and St James, and of a Maison-Dieu near the right bank of the Teviot. There is still a well-defined 'kaim' at Kaimknow, $1\frac{1}{2}$ mile N of Kelso. Mansions are Floors Castle, Springwood Park, Wooden House, Sydenham House, Broomlands, Edenside, Ednam House, Edenbank, Pinnacle Hill, Rosebank, Tweedbank, Walton Hall, and Woodside, of which the first four are noticed separately. The Duke of Roxburgh owns more than one-half of the entire rental. The seat of a presbytery in the synod of Merse and Teviotdale, this parish is ecclesiastically divided into Kelso proper and North Kelso, the former a living worth £386, the latter a *quoad sacra* parish; stipend, £120 augmented, with manse. Kelso and Kelso infant public schools, with respective accommodation for 597 and 219 children, have an average attendance of about 365 and 165, and grants amounting to over £400 and £130. Pop. (1801) 4196, (1821) 4860, (1841) 5328, (1861) 5192, (1871) 5124, (1881) 5235, (1891) 4730, of whom 2542 were females; of ecclesiastical parishes—Kelso proper, 2582; Kelso North, 2143.—*Ord. Sur.*, sh. 25, 1865.

The presbytery of Kelso comprises the old parishes of Ednam, Kelso, Linton, Makerstoun, Morebattle, Nenthorn, Roxburgh, Sprouton, Stichel, and Yetholm, and the *quoad sacra* parish of North Kelso. Pop. (1871) 12,383, (1881) 12,061, (1891) 10,905, of whom more than 3000 are communicants of the Church of Scotland.—The Free church has a presbytery of Kelso, with 2 churches in Kelso, and 8 in Coldstream, Eccles, Gordon, Makerstoun, Morebattle, Nenthorn, Westruther, and Yetholm, which 10 churches together have about 1850 members.—The U.P. church has a presbytery of Kelso, with 2 churches in Kelso, 2 in Jedburgh, 2 in

Coldstream, and 5 in respectively Leitholm, Makerstoun, Morebattle, Stichel, and Yetholm, which 11 churches together have about 2900 members.

See James Haig's *Topographical and Historical Account of the town of Kelso* (Edinb. 1825); Cosmo Innes' *Liber S. Marie de Calchou*; and *Registrum Cartarum Abbatie Tronensis de Kelso*, 1113-1567 (Bannatyne Club, 2 vols., Edinb., 1846).

Keltie Burn, a rivulet of central Perthshire, rising at an altitude of 2200 feet above sea-level, and running $4\frac{1}{2}$ miles south-south-eastward along the mutual border of Crieff and Monzie parishes, till, after a total descent of 1970 feet, it falls into Shaggie Burn in Monzie Park, $1\frac{1}{2}$ mile N of Crieff town. At a point 9 furlongs above its mouth it tumbles over a smooth rocky precipice, 90 feet high, into a pool, Spout Bay, and, going thence through a thickly-wooded dell, makes several leaps of about 10 feet, then works its way along a narrow rock-screened channel. An artificial footpath leads up its dell to Spout Bay, where a hermitage stands in such position as to command a full view of the cascade.—*Ord. Sur.*, sh. 47, 1869.

Keltie Water, a rivulet of Callander parish, Perthshire, rising at an altitude of 2200 feet on the southern side of Stuc-a-Chroin (3189 feet), adjacent to the meeting-point of Callander, Balquhadder, and Comrie parishes. Thence it runs $8\frac{1}{2}$ miles south-south-eastward, and $2\frac{1}{2}$ south-by-westward along the Kilmadock border, till, after a total descent of 2000 feet, it falls into the river Teith in front of Cambusmore House, $2\frac{1}{2}$ miles SE of Callander town. See BRACKLAND FALLS.—*Ord. Sur.*, shs. 46, 38, 39, 1869-72.

Keltney Burn, a rivulet of Fortingall parish, Breadalbane, NW Perthshire, rising at an altitude of 2700 feet above sea-level on the northern side of Carn Maing. Thence it runs $5\frac{1}{2}$ miles east-by-northward to the boundary with Dull parish, next $3\frac{1}{2}$ miles south-south-eastward along that boundary, and falls into the river Lyon $1\frac{1}{2}$ mile above that river's confluence with the Tay. It mostly traverses wild, rugged, romantic scenery; and in the vicinity of Coshieville inn it makes a series of picturesque falls, the highest of them issuing from a dark narrow opening, and leaping 60 feet over perpendicular rocks into a deep gloomy dell.—*Ord. Sur.*, sh. 55, 1869.

Keltneyburn, a village in the parish of Fortingall, NW Perthshire, about 6 miles from Aberfeldy, with a manufactory of tweeds, clan tartans, &c.

Kelton, a village on the mutual border of Dumfries and Caerlaverock parishes, Dumfriesshire, on the left bank of the Nith, $3\frac{1}{2}$ miles SSE of Dumfries. It is an out-port of Dumfries for vessels unable to go farther up the river; and it has carried on a small amount of ship-building.

Kelton, a parish in Kirkcudbrightshire, comprising the ancient parishes of Kelton, Gelston, and Kirkcornack, and containing the post-town and station of CASTLE-DOUGLAS, with the villages of Kelton Hill and Gelston. It is bounded N by Crossmichael, E by Buittle, SE by Berwick, SW by Kirkcudbright, and W by Tongueland and Balmaghie. Its utmost length, from NNE to SSW, is $7\frac{1}{2}$ miles; its breadth varies between $7\frac{1}{2}$ furlongs and $5\frac{1}{2}$ miles; and its area is $11,424\frac{1}{2}$ acres, of which $202\frac{1}{2}$ are water. CARLINWARK Loch (6×3 furl.; 145 feet) lies immediately S of Castle-Douglas, and sends off Carlinwark Lane $1\frac{1}{2}$ mile north-westward along the Crossmichael border to the DEE, which itself flows $6\frac{1}{2}$ miles south-south-westward along all the western boundary, and is fed from the interior by Mill, Black, Auchlane, and other burns. Along it, in the extremo S, the surface declines to less than 200 feet above sea-level, thence rising to 500 feet at the Fell, 400 at Over Arkland, 1125 at Screeil Hill, 675 at Dungyle Camp, and 300 at Kelton Hill, of which Screeil Hill commands extensive and brilliant views. Silurian rocks are predominant; soft argillaceous strata lie interposed with strata of hard compact greywacke; porphyry occasionally occurs in veins or dykes; granite is found in the N; and ironstone of superior quality is plentiful,

but has never been worked on account of the dearth of coal. The soil, generally thin, in some places is a fine loam, and in others, especially on the small conical hills, is a deep watery till. Mosses of considerable extent are in various places, and exhibit remains of an ancient forest. About one-fourth of the entire area is under cultivation; plantations cover some 600 acres, and the rest of the land is either pastoral or waste. The chief antiquities are remains of a Caledonian stone circle on Torrs Farm; the Caledonian hill fort of DUNGYLE; another ancient stone fort, 68 paces in diameter, at a short distance from that on Dungyle; a Roman tripod found on Mid Kelton farm; a sarcophagus, 7 feet long, found in a tumulus near Gelston; a number of curious small antiquities found in a morass on Torrs farm and in Carlinwark Loch; the Gallows Slote, on which the victims of feudal tyranny were tortured or executed, adjacent to the W side of Carlinwark Loch; a moat in the western vicinity of Gelston Castle; and vestiges or ruins of the ancient churches of Kelton, Gelston, and Kirkcormack. The famous piece of ordnance called Mons Meg, now in EDINBURGH Castle, is believed to have been made in 1455 at Buchan's Croft, near the Three Thorns of Carlinwark. Mansions, noticed separately, are Carlinwark House, Dildawn, Gelston Castle, and Threave House. In the presbytery of Kirkcudbright and synod of Galloway, the parish since 1873 has been divided between Castle-Douglas *quoad sacra* parish and Kelton proper, the latter a living worth £316. Its church, 1½ mile S of Castle-Douglas, was built in 1806, and, as restored in 1879-80 at a cost of nearly £1800, contains 450 sittings. Other places of worship are described under CASTLE-DOUGLAS; and, besides the three schools there, Gelston and Rhonehouse public schools, with accommodation for 103 and 125 children respectively, have an average attendance of about 60 and 95, and grants of nearly £64 and £97. Pop. (1801) 1905, (1831) 2877, (1861) 3436, (1871) 3222, (1881) 3458, (1891) 3692, of whom 960 were in Kelton ecclesiastical parish.—*Ord. Sur.*, sh. 5, 1857.

Keltonhill or **Rhonehouse**, a village in Kelton parish, Kirkcudbrightshire, 2½ miles SSW of Castle-Douglas, under which it has a post office. It has a public school, and formerly had seven annual fairs, of which the June one was at one time the most important in the S of Scotland, and was attended by all classes. One of the Castle-Douglas annual fairs is still called by the name of Keltonhill.

Kelty, a collier village in Beath parish, Fife, and Cleish parish, Kinross-shire, 7 furlongs W of Kelty station on the Kinross-shire section of the North British railway, this being 5 miles SSE of Kinross. It has a Free church, a public school, and a post office under Blairadam. Pop. (1871) 793, (1881) 860, (1891) 1353, of whom 1220 were in Beath.—*Ord. Sur.*, sh. 40, 1867.

Kelvin, a river of Stirling, Dumbarton, and Lanark shires, rising in the Kilsyth Hills at a point 3 miles E by N of Kilsyth, and 160 feet above sea-level. Thence it flows 21 miles west-south-westward and south-south-westward, till it falls into the Clyde at Partick, on the western outskirts of Glasgow. It bounds the parishes of Kilsyth, Cumbernauld, Kirkintilloch, Campsie, Cadder, Baldernock, New Kilpatrick, Maryhill, Barony, and Govan, under which and GLASGOW full details are given as to the towns, villages, and other features of its course. Followed pretty closely along its left side by the Forth and Clyde Canal, it is very slow and sluggish over the first 12½ miles, where it formerly was choked with aquatic vegetation, and often dispread itself far and wide in a manner betwixt lake and morass. It was straightened, deepened, and embanked; but for several miles it is one of the tamest lines of water in the kingdom; though afterwards it has green and wooded banks; farther on it is fringed with luxuriant haughs, and overlooked by pleasant braes or hanging plains; and all along, till near its entering its famous dell, it borrows much interest from the Kilsyth Hills and Campsie Fells, which flank the N side of its basin.

The affluents which come down to it from these heights contribute the larger portion of its volume; and at least GARVALD Burn is entitled to rank as the parent stream. At Kirkintilloch, the Kelvin receives on the right hand the Glazert coming down from the Campsie Fells, and on the left Luggie Water (the beauties of which the poet David Gray has sweetly sung), creeping in from a region of moors and knolly flats. But it still continues languid, and can boast no higher ornament for several miles than the luxuriant Balmore haughs. Below these it is joined on its right side by Allander Water, and passes into a total change of scenery. Its basin is henceforth a rolling surface of knolls, with no overhanging fells and few extensive prospects, but with intricate and endless series of winding hollows, abrupt diversities, and charming close views. And here at Garscube, 5 miles NW of Glasgow, the Kelvin awakens into activity, and enters on Kelvingrove, whose original beauty called forth the well-known lyric beginning 'Let us haste to Kelvingrove, bonnie lassie, O.' Its course thence to Partick lies generally along a dell, some parts of which contract into gorges, others expand into vale; some wall in the water-course between steeps or precipices, others flank it with strips of meadow or shelving descents. But the dell, as a whole, is all feature, all character—most of it clothed with trees as thickly as a bird's wing with feathers—some parts streaked with cascades, and many picturesquely-studded with mansions, bridges, and mills. Within recent years Kelvingrove has lost most of its romantic and sylvan beauty. This has been caused by the steady westward progress of the city of Glasgow. From Maryhill downwards the banks on both sides of the Kelvin, with the exception of the Botanic Gardens and their immediate neighbourhood, have been almost entirely denuded of their foliage and levelled up, most of the old mills have been removed, and it is now hemmed in by fine villas and rows of houses of the better class. Between Maryhill and the Kelvingrove Park it is crossed by two railway bridges and four handsome iron bridges. The Glasgow Subway also passes underneath it at the Great Western Road. The Kelvin, skirting the Botanic Gardens and turning southwards, passes through Kelvingrove Park at the base of Gilmorehill, on which eminence stands the University, one of whose professors, at one time President of the Royal Society, takes from the stream his title of Lord Kelvin. For some distance before entering the Clyde the waters of the Kelvin become dark and grimy, from the mills, shipyards, etc., which line its banks.—*Ord. Sur.*, shs. 31, 30, 1867-66.

Kelvingrove. See KELVIN.

Kemback, a parish in the Stratheden district of Fife, containing the conjoint villages of Duraden, Bleho Craigs, and Kemback Mills, 1½ mile S of Dairsie station, and 3½ miles E of Cupar. Bounded NW by Dairsie, N by Leuchars, NE by St Andrews, E and S by Ceres, and W by Cupar, it has an utmost length from E to W of 2½ miles, a varying width of 7 furlongs and 2½ miles, and an area of 2602 acres, of which 7¾ are water. The EDEN winds 3¼ miles north-eastward along all the Dairsie and Leuchars boundary; and its affluent, CERES Burn, flows 1½ mile northward through Dura Den, partly along the Ceres boundary, but mainly across the middle of the parish. The surface declines along the Eden to less than 100 feet above sea-level, and rises thence to 547 feet at CLATTO Hill on the St Andrews border. The rocks, comprising trap, sandstone, ironstone, and shale, include a vein of lead-ore; and the fossil fishes of their yellow sandstone have been fully noticed under DURA DEN and the geology of FIFE. The soil is variously strong heavy clay, deep rich black loam, peat, gravel, and poor black sand; and agriculture has been carried to high perfection. About one-seventh of the entire area is under wood, nearly all the remainder being either in tillage or pasture. Mansions are BLEBO House, Dura House, Kemback House, and Rungally. Kemback is in the presbytery of St Andrews and synod of Fife; the living is worth £179. The parish church was built in 1814 at a cost of £700. A public school, with

accommodation for 188 children, has an average attendance of about 140, and a grant of nearly £120. Valuation (1866) £4885, 18s., (1883) £6554, 9s., (1893) £4744. Pop. (1801) 626, (1831) 651, (1861) 896, (1871) 1056, (1881) 853, (1891) 794, of whom 381 were in the three conjoint villages.—*Ord. Surv.*, shs. 48, 49, 41, 1857-68.

Kemnay, a village and a parish of central Aberdeenshire. The village stands near the right side of the river Don, close by Kemnay station on the Alford Valley branch of the Great North of Scotland railway, this being 4 miles W of Kintore and 17½ WNW of Aberdeen, under which there is a post office, with money order, savings bank, and telegraph departments. The village is provided with a public hall. Occupying a pleasant slope and commanding a delightful view of the basin of the Don, with Bennochie beyond, it was a paltry hamlet down to 1858, but then rising suddenly into note in connection with the opening and working of neighbouring quarries, it has been so rebuilt and extended as to become one of the finest villages in the county, and now presents an entirely new and tasteful appearance, with cottages and semi-detached two-story houses, constructed of granite, roofed with blue slate, and adjoined by garden plots. The granite quarries, ¾ mile to the N, were opened in 1858 by the lessee, Mr John Fyfe, an Aberdonian, to whose genius and enterprise is owing their great success. Employing on an average 250 men all the year round, they are worked with aid of steam cranes capable of lifting ten tons each, two of a novel type, devised by Mr Fyfe, and named Blondins, lifting smaller stones and rubbish with great despatch. The quarries furnished the principal materials for the Thames Embankment and the Forth Bridge, and produce blocks occasionally 30 feet long, and weighing 100 tons. Pop. (1881) 432, (1891) 660.

The parish is bounded NW by Chapel of Garioch, N by Inverurie, E by Kintore, SE by Skene, S by Cluny, and W by Monymusk. Its utmost length, from N by E to S by W, is 5½ miles; its utmost breadth, from E to W, is 2½ miles; and its area is 5110 acres. The Don winds 5½ miles along the north-western and northern border; and where it quits the parish, the surface declines to 195 feet above sea-level, thence rising southward to 400 feet near the quarries and 500 at Lochshangic Hill. There are numerous springs of the finest water, by one of which, yielding nearly 30,000 gallons a day, the village is supplied; as by another of like flow, aided by a ram, are a number of dwelling-houses on the Quarry Hill. A low hillocky ridge, made up internally of rounded stones and gravel, and bearing the name of the Kaims, extends for about 2 miles on the line of the river, and is evidently a *moraine*. Traces of glacier action are found on the surface of the Quarry Hill, when newly bared; and within the radius of a mile around the village there are about a dozen erratic boulders of gneiss of huge dimensions, supposed to have been brought down from Bena'an near the source of the Don. Granite is the predominant rock. The soil along the Don is a rich, deep, stoneless loam, and elsewhere is mostly a light mould, incumbent on sand or clay. A kistvaen was some years since accidentally uncovered by the plough; and an ancient standing-stone exists, measuring 11½ feet from the ground, and 9 feet in mean girth. Kemnay House, to the S of the village, is a large old mansion with finely-wooded grounds. An ancestor of its present owner (Alex. George Burnett, Esq., b. 1816; suc. 1847) was at the court of Berlin, with Sir Andrew Mitchell of Thainstone, as secretary of legation, and with Sir Andrew attended Frederick II. in his campaign during the Seven Years' War. On leaving Berlin Mr Burnett brought with him a curiosity of Kemnay House. It is a painting done by Frederick I. of Prussia during an attack of gout, with the inscription at the bottom, 'Fredricus pinxit in tormentis.' Kemnay is in the presbytery of Garioch and synod of Aberdeen; the living, including the value of the glebe, is £166 with manse.

The church, at the village, is of recent erection, and contains 400 sittings. There is also a Free church; and a public school, with accommodation for 508 children, has an average attendance of about 300, and a grant of over £264. Valuation (1893) £6340, plus £1045 for railway. Pop. (1801) 583, (1831) 616, (1851) 680, (1861) 832, (1871) 1300, (1881) 1636, (1891) 1799.—*Ord. Surv.*, sh. 76, 1874.

Kemp. See CAMP.

Kempoch. See GOUROCK.

Ken, a river in Glenkens district, Kirkcudbrightshire, rising between Long and Blacklorg Hills, at a point ¼ mile ESE of the meeting-point of Ayr, Dumfries, and Kirkcudbright shires, and 1870 feet above sea-level. Thence it winds 2½ miles south-by-eastward, till, after a total descent of 1720 feet, it forms a confluence with the DEE, opposite Parton station. Over the last 4½ miles of its course it expands into beautiful Loch Ken, which, with a varying width of 200 and 800 yards, is studded with four wooded islets, and partly fringed with plantations. Its principal affluents are the Black Water, the Water of DEUGH, and Pulmaddy, Pulharrow, Earlston, Garpel, and Dullarg Burns; and it separates the parishes of Carsphairn and Kells on its right bank from Dalry, Balmaclellan, and Parton parishes on its left. Its scenery, mountainous in the upper reaches, in the middle and the lower parts is a series of picturesque groupings of hill and vale; and its waters contain salmon, sea-trout, river-trout, pike, and perch. About the middle of the 18th century an enormous pike, 7 feet long and 72 lbs. in weight, was taken in Loch Ken; the skeleton of its head is still preserved in Kenmore Castle.—*Ord. Surv.*, shs. 15, 9, 5, 1857-64.

Kender, Loch. See KINDER.

Kenedar. See KING EDWARD.

Kenleith, a farm in Currie parish, Edinburghshire, on the western slope of the Pentlands, ¾ mile SE of Currie village. Here are vestiges of an old camp or entrenchment, said to have been formed to prevent a stealthy march upon Edinburgh through a narrow pass of the Pentlands.

Kenloch. See KINLOCH.

Kenlochaline Castle. See ALINE, LOCH.

Kenlochewe. See KINLOCHEWE.

Kenlum, a hill (900 feet) in Anwoth parish, Kirkcudbrightshire, 2½ miles NW of Gatehouse-of-Fleet.

Kenly Burn, a troutful rivulet of the E of Fife, formed by the confluence of Cameron, Wakefield, and Chesters Burns, and running 3½ miles east-north-eastward through or along the borders of Dunino, St Leonards, St Andrews, and Kingsbarns parishes, till it falls into the sea midway between St Andrews city and Fife Ness. It is sometimes called Pitmillie Burn.—*Ord. Surv.*, shs. 41, 49, 1857-65.

Kenmore (Gael. *cean-Mhoire*, 'Mary's headland'), a village and a parish in Breadalbanedistrict, central Perthshire. The village, 6 miles WSW of Aberfeldy, 17 NE by E of Killin, and 22 NNW of Crieff, crowns a gentle headland, projecting into the lower or NE end of Loch Tay, and washed on the N side by the river Tay, which here, at its efflux from the lake, is spanned by a handsome five-arch bridge. A pleasant little place, with its two churches, its neat white cottages, and its close proximity to Taymouth Castle, it has a post office under Aberfeldy, a good hotel, a public hall, a reading-room, coach and steamer communication with Aberfeldy and Killin, and fairs on the first Tuesday of March o. s., 28 June, 26 July, the Wednesday in October before Falkirk Tryst, the Friday in November before the last Doune Tryst, and 24 Dec. The view from the bridge is one of almost unrivalled loveliness; and Burns, who came hither on 28 Aug. 1787, wrote over the chimney-piece of the inn parlour what Lockhart pronounces among the best of his English heroics—

'Admiring Nature in her wildest grace,
These northern scenes with weary feet I trace;
O'er many a winding dale and painful steep,
Th' abodes of covey'd grouse and timid sheep,

My savage journey, curious, I pursue,
Till famed Breadalbane opens to my view.
The meeting cliffs each deep-sunk glen divides;
The woods, wild scatter'd, clothe their ample sides;
Th' outstretching lake, embosom'd mid the hills,
The eye with wonder and amazement fills;
The Tay, meand'ring sweet in infant pride;
The palace, rising on its verdant side;
The lawns, wood-irrig'd in Nature's native taste;
The hillocks, dropt in Nature's careless haste;
The arches, striding o'er the new-horn stream;
The village, glittering in the noontide beam.'

Wordsworth came hither, too, on 5 Sept. 1805, along with his sister Dorothy; and she writes in her Journal—'When we came in view of the foot of the lake, we perceived that it ended, as it had begun, in pride and loveliness. The view, though not near so beautiful as that of Killin, is exceedingly pleasing,' etc.

The parish, containing also the villages of Acharn and Stronfeanran, till 1891 comprised a main body and five detached sections, the area of the whole being 113½ square miles or 72,542 acres, of which 5346½ were water, and 32,841¼ belonged to the main body. Of the five detached sections, two—the Daldravaig and Corrycharmaig portions, comprising respectively 707 and 6066 acres—were transferred to the parish of Killin; one—the Shian or Glenquach portion, comprising 2575 acres—was transferred to the parish of Dull; another—the Kenknock portion, comprising 12,539 acres—was transferred partly to the parish of Fortingall and partly to that of Killin, the part in the basin of the river Lyon going to Fortingall and the remainder to Killin; while the remaining detached part—that situated at Morenish and Carie—was united with the main portion of Kenmore by transferring to that parish the intervening Ardeonaig detached portion of the parish of Killin, comprising 7247 acres. Besides these detached parts of Kenmore, that part of the main body of the parish that lay to the north of Drummond Hill, in the basin of the river Lyon, was transferred to the parish of Fortingall. On the other hand, besides the detached portion of Killin already mentioned, there were transferred to Kenmore the Achmore detached portion of the parish of Weem, comprising 2993 acres; and so much of the Balnahanaid detached part of the same parish as lay to the south of the watershed between Loch Tay and Glen Lyon. The parish, as now constituted, is bounded N by Fortingall, NE and E by Dull, SE by Monzievaun, S by Comrie, and W by Killin, has an utmost length from NNE to SSW of 16 miles, whilst its width varies between 3 and 9½ miles. It includes all the waters of Loch Tay, which, lying at an altitude of 355 feet above sea-level, extends 14½ miles north-eastward, and varies in width between ½ mile and 9½ furlongs, and which from its foot sends off the river Tay, winding 2¾ miles north-eastward till it passes off into the parish of Dull. From the shores of Loch Tay the surface rises southward to Creag Charbh (2084 feet), Meall Gleann a' Chloidh (2238), *Creag Uigeach (2840), Beinn Bhreac (2341), Creagan na Beinne (2909), Creag an Fhndair (1683), *Creag nan Enn (2790), *Rnadh Bhenl (2237), and *Meall a' Choire Chreagaich (2177); northward to Meall nan Tarmachan (3421), and broad-based, cairn-crowned *BEN LAWERS (3984), where asterisks mark those summits that culminate on the confines of the parish. Three smaller lakes are Lochan a' Chait (3 × 1½ furl.; 2480 feet) and Lochan na Lairige (5¾ × 1 furl.; 1596 feet) on the north-eastern and western skirts of Ben Lawers, and Lochan Breaclaich (4 × 1½ furl.; 1400 feet) to the S of Loch Tay.

Such is a bare outline of the general features of this Highland parish, whose beauties, antiquities, and history are noticed more fully in our articles ACHARN, BEN LAWERS, BREADALBANE, TAY, TAYMOUTH CASTLE, etc. Mica slate is the predominant rock; but gneiss, clay and chloride slate, quartz, and some varieties of hornblende slate are also plentiful, and beds of limestone occur in two or three places. The chloride slate, the quartz, and the limestone have been worked for building or other purposes. Lead, iron, and other ores exist in small quantities among the mountains. The soil of the arable lands is chiefly a light brownish loam with a slight

admixture of clay; that of much of the hill pastures has a light and mossy character. Much the larger portion of the parish is pasture, moorland, mountain, and moss, whose fishings and shootings however are very valuable. The Earl of Breadalbane is almost sole proprietor. Kenmore is in the presbytery of Weem and synod of Perth and Stirling; the living is worth £287. The parish church, at the village, is a cruciform structure of 1760, with about 300 sittings and a tower at the E end. Other places of worship are the Free churches of Kenmore, Ardeonaig, and Lawers, and Taymouth Episcopal chapel, St James'. Six public schools—Acharn, Ardeonaig, Ardaltanaig, Fearnan, Kiltyrie, and Lawers—with respective accommodation for 117, 51, 84, 65, 50, and 82 children, have an average attendance of about 85, 30, 25, 25, 15, and 30, and grants of about £100, £40, £35, £37, £30, and £45. Valuation (1866) £11,064, 11s. 8d., (1883) £11,216, 10s. 8d., (1892) £11,197. Pop. (1801) 3346, (1831) 3126, (1861) 1984, (1871) 1615, (1881) 1508, (1891) 1401, of whom 1007 were Gaelic-speaking, and 1271 were in Kenmore ecclesiastical parish.—*Ord. Sur.*, shs. 55, 47, 46, 1869-72.

Kenmore Castle, a seat in Kells parish, Kirkcudbrightshire, 5 furlongs above the head of Loch Ken, and ¾ mile S by E of New Galloway. It stands on a high, round, isolated mount, which, till one observes the rock that crops out on its S side, might be taken for artificial; and it seems of old to have been surrounded by a fosse, supplied with water from the river Ken. Approached by a noble lime-tree avenue, and engirt by well-wooded policies and gardens with stately beech hedges, it forms a conspicuous feature in one of the finest landscapes in the South of Scotland. The oldest portion, roofless and clad with ivy, exhibits the architecture of the 13th or 14th, but the main building appears to belong to the 17th century. The interior is interesting, with its winding staircases, mysterious passages, and heirloom collection of Jacobite relics and portraits—the sixth Viscount Kenmore (painted by Kneller in the Tower of London), Queen Mary, James VI. (by Zuccaro), 'Young Lochinvar,' etc. When or by whom the original portion of the pile was built, is a matter not known. In early times, and even at a comparatively recent date, it suffered much from the ravages of war, having been burned both in the reign of Mary and during the administration of Cromwell. Originally, it is said to have been a seat or stronghold of the Lords of Galloway; and John Baliol is reported to have made it his frequent residence, nay even to have been born within its walls. On the other hand, the lands of Kenmore and Lochinvar are said to have been acquired in 1297 from John de Maxwell by Sir Adam Gordon, whose sixth descendant was the first Earl of Huntly (see GORDON CASTLE), whilst his tenth, in the younger line, was created Viscount Kenmore. Thus the Gordons of Lochinvar or Kenmore claimed strictly the same stock as the Gordons of the north; and, after settling down at Kenmore, they gradually acquired, by grant, purchase, or marriage, the greater part of Kirkcudbrightshire. They were distinguished by the confidence of, and their attachment to, the Stuart sovereigns. Sir John Gordon of Lochinvar was a steadfast adherent of Mary, and ran serious hazards in her cause. In 1633 his grandson, Sir John Gordon (1599-1634), was raised by Charles I. to the peerage under the title of Viscount Kenmore. This nobleman combined attachment to the house of Stuart with unflinching fidelity in the profession of the Presbyterian religion; and, much as he is known for the honours conferred upon him by Charles, he is greatly better known for his intimacy with John Welsh and Samuel Rutherford. In 1715, William, the third Viscount, took an active part in the Rebellion, and next year was beheaded on Tower Hill in London, entailing upon his family the forfeiture of the title. His descendants, however, having bought back the estates from the Crown, endeavoured, by serving in the army, to atone for their ancestor's error, and distinguished themselves by patriotic concern for the interests of their tenants, and for the general welfare;

and, in 1824, they were restored by act of parliament to their ancient honours in the person of John Gordon (1750-1840), the forfeited Viscount's grandson. He was succeeded by his nephew, Adam, a naval officer, who displayed great gallantry on the American lakes during the war of 1813, and at whose death in 1847 the peerage became extinct. Kenmure Castle passed to his sister, the Hon. Mrs Bellamy-Gordon, on whose death in 1836 it passed to her daughter Mrs Maitland-Gordon. John Lowe (1750-98), the author of *Mary's Dream*, was a son of the gardener at Kenmure Castle, at which Queen Mary is said to have rested in the course of her flight from Langside, and which was visited once by Robert Burns. —*Ord. Sur.*, sh. 9, 1863. See pp. 163, 174-177 of M. Harper's *Rambles in Galloway* (1876); and p. 302 of Robert Chambers's *Popular Rhymes of Scotland* (edit. 1870).

Kenmure House, a plain two-storied mansion in Barony parish, NW Lanarkshire, 1 mile NNW of Bishopbriggs station. In 1806 Charles Stirling purchased the lands of Keunure, adjoining his elder brother's estate of Cawder or Cadder, and built the greater part of the existing mansion, which he sold, with the estate, in 1816 for £40,000 to that same brother, Archibald. Kenmure was thus the birthplace of the latter's son, Sir William Stirling-Maxwell (1818-78). See KEIR.

Kennedy. See CASTLE-KENNEDY.

Kennet, a collier village, with a public school, in Clackmannan parish, Clackmannanshire, 1 mile ESE of Clackmannan town, and 1¼ SSW of Kincardine station on the Alloa and Dunfermline section of the North British railway. Kennet House, 1 mile SE of Clackmannan, is a handsome mansion of the beginning of the 19th century. Commanding a charming view of the waters and screens of the Forth, it is surrounded by gardens and plantations of great beauty, and contains a number of family portraits—General James Bruce, Brigadier-General Alexander Bruce, Lord Kennet, &c. The estate was obtained from his father in 1389 by Thomas, a natural son of Sir Robert Bruce of Clackmannan; and his descendant, Alexander Hugh Bruce (b. 1849), in 1868 established his claim to the title of sixth Baron Balfour of Burleigh (cr. 1607), as fifth in female descent from the fourth Lord. Thomas Boston (1676-1732), author of the *Fourfold State*, was tutor at Kennet in 1696-97. —*Ord. Sur.*, sh. 39, 1869. See pp. 63-65 of James Lothian's *Alloa* (3d ed. 1871).

Kennethmont, a hamlet and a parish of NW central Aberdeenshire. The hamlet, Kirkhill of Kennethmont, stands 588 feet above sea-level and ¾ mile WSW of Kennethmont station on the Great North of Scotland railway, this being 8 miles SSE of Huntly, 12¼ WNW of Inveramsay Junction, and 32¾ NW of Aberdeen. It has a post office, with money order, savings bank, and railway telegraph departments.

The parish, comprising the ancient parishes of Kennethmont and CHRIST'S KIRK, is bounded N by Gartly, NE by Inch, SE by Premnay, S by Leslie, SW by Clatt, and W by Rhynie. Its utmost length, from E to W, is 6 miles; its utmost breadth, from N to S, is 3½ miles; and its area is 8472 acres, of which 3¾ are water. The Water of Bogie flows 2½ miles north-by-eastward along all the Rhynie border; and the Shevock, rising on the Moss of Wardhouse, has here a south-easterly course of 5½ miles on or near to the northern and eastern boundaries; so that the drainage belongs partly to the Deveron and partly to the Don. Along the Bogie the surface declines to 498, along the Shevock to 490, feet above sea-level; and thence it rises to 1426 feet at Knockandy Hill and 1021 at the Hill of Christ's Kirk. The rocks include mica and clay slate in the N, trap and greenstone in the E, and syenite in the W; and a chalybeate spring near the northern border enjoyed once high medicinal repute. The soil is extremely various, ranging from clay and loam to moss, but has been greatly improved within the last fifty years by draining and manuring. Plantations cover a considerable area. At Ardlair and Cults there are traces of two stone circles.

Wardhouse and Leith Hall, 1¼ mile NE and 1 mile WNW of Kennethmont station, are both old but commodious mansions, belonging respectively to the Gordon family and the Leith-Hay family. Distinguished members of these two families have been Admiral Sir James Alex. Gordon, G.C.B. (1788-1869), General Sir James Leith, G.C.B. (1763-1816), and Lieut.-Col. Sir Andrew Leith-Hay, K.H., M.P. (d. 1862); another native of Kennethmont was William Milne, D.D. (1785-1822), the Chinese missionary. A third mansion is Craighall. Kennethmont is in the presbytery of Alford and synod of Aberdeen; the living is worth £218. The parish church was built in 1812. A Free church stands 1 mile ESE; and two public schools—Kennethmont and Old Town—with respective accommodation for 137 and 63 children, have an average attendance of over 80 and 45, and grants of about £85 and £45. Pop. (1801) 784, (1831) 1131, (1861) 1187, (1871) 1062, (1881) 999, (1891) 932. —*Ord. Sur.*, shs. 76, 86, 1874-76.

Kenneth's Isle. See INCH-KENNETH.

Kennetpans, a small village in Clackmannan parish, Clackmannanshire, on the NE shore of the Forth, 1¼ mile NW of Kincardine. It has a harbour, ranking as a subport of Alloa. Kennetpans House stands near the village, and commands a fine view of the Forth.

Kennishead, a place, with a station, in Eastwood parish, Renfrewshire, on the Glasgow and Barrhead railway, 9 furlongs SW of Pollokshaws. It is the station for the village of Thornliebank, where are large calico-printing works.

Kennoway, a village and a parish of S central Fife. The village stands 3½ miles E by N of Markinch, and 1½ mile N of Camerou Bridge station, this being 3¾ miles ENE of Thornton Junction and 3¼ NNE of Edinburgh by the Forth Bridge. Kennoway is to have a station on the East Fife Central railway, authorised in 1893, which is to start from Leven, branch off at Bonnyton northward and eastward respectively to Dairsie on the main line and to Stravithie on the Anstruther and St Andrews line. Occupying the southern slope of an eminence, and overhanging a ravine or den, it thence has been said to have got the name of Kennoway (Gael. *ceann-nan-naigh*, 'head of the den'),* and it commands a magnificent view of the waters and screens of the Firth of Forth. It dates from times long prior to the existence of any of its present buildings; but in the arrangement of its streets and the style of some of its houses, it retains indications of antiquity; and it is prettier, cleaner, and more substantial than most of the seaside or the collier villages of Fife, whilst possessing a high reputation for salubrity. One of its old houses is said to have been occupied by Archbishop Sharp on the night preceding his assassination. The population has dwindled with the decline in handloom weaving, and two annual fairs have become extinct. The village is lighted with gas; and has a post office, with money order and savings bank departments, under Windygates, 2 inns, a savings bank, a horticultural society, a curling club, and several benefit and religious societies. The parish church here, built in 1850 after designs by T. Hamilton of Edinburgh, is a Norman edifice. The Free church was built soon after the Disruption; and the U.P. church is noted for having long enjoyed the ministry of the Rev. Dr Donald Fraser, biographer of the Erskines. Pop. (1831) 862, (1841) 1101, (1861) 939, (1871) 835, (1881) 770, (1891) 805.

The parish, containing also Baintown village and Star village, is bounded N by Kettle, E by Scoonie, and S and W by Markinch. Its utmost length, from E to W, is 3¾ miles; its breadth, from N to S, varies between 1¼ and 2½ miles; and its area is 3964¼ acres. Sinking to 170 feet above sea-level at the southern

* A much more probable derivation, resting on the authority of Dr Reeves, is from Kennichi or Kenneth, a disciple of St Columba. The ancient name of the parish is *Kennochi* or *Kennichin*, sometimes *Kennochy*. The bell of the old parish church, now hung above the entrance to Borthwick Hall, Midlothian, has cast upon it in raised letters—'I'm for the Kirk o' Kennochi.' *Kennoway* is a comparatively modern corruption, found in no ancient documents.

border, the surface thence rises gradually northward to 455 feet near Dalginch, 519 near Baintown, and 669 at Lalachan, and is beautifully diversified with gentle and irregular rising-grounds that command extensive and brilliant views of the basins of the Forth and of parts of the basin of the Tay away to the Grampians. The streams are all mere burns, either tributary to the Leven or running through Scoonie to the Forth; and one of them, passing close to Kennoway village, traverses there a picturesque ravine. The rocks are variously eruptive and carboniferous; and trap, sandstone, and coal are worked. The soil, in the S and E, is mostly light and fertile; in the centre, is loam or clay, on a retentive bottom; and over part of the N, is dry loam, incumbent on trap rock. Mansions are Kingsdale and Newton Hall. Kennoway is in the presbytery of Kirkcaldy and synod of Fife; the living is worth £296. Two public schools, Kennoway and Star, with respective accommodation for 248 and 110 children, have an average attendance of about 165 and 65, and grants of over £164 and £74. Valuation (1883) £8988, 14s. 1d., (1893) £7983, 10s. 6d. Pop. (1801) 1466, (1831) 1721, (1861) 2012, (1881) 1560, (1891) 1458.—*Ord. Sur.*, sh. 40, 1867.

Kennox, an estate, with a mansion, in Stewarton parish, Ayrshire, 2½ miles WSW of the town. Its owner is Lieut.-Col. Charles S. M'Alister.—*Ord. Sur.*, sh. 22, 1865.

Kentallen, a village in Lismore and Appin parish, Argyleshire, on the E shore of Loch Linnhe, 3 miles WSW of Ballachulish.

Kenziels, a hamlet in Annan parish, S Dumfriesshire, 1 mile S of the town of Annan.

Keppoch, an estate, with a modern mansion, in Cardross parish, Dumbartonshire, 2 miles NW of Cardross station on the Glasgow and Helensburgh section of the North British railway.

Keppoch, an estate, with a mansion, in Kilmonivaig parish, SW Inverness-shire, near the right banks of the Spean and the confluent Roy, 16 miles ENE of Fort William. It belonged to the M'Intoshes, but was partly held by the M'Donalds; and in a contention between them it became the scene of the last clan battle in Scotland.—*Ord. Sur.*, sh. 63, 1873.

Kerbit Water, a small tributary of the Dean, in Glamis parish, Forfarshire.

Kerelaw, an estate, with a mansion of the close of the 18th century and a ruined castle, in Stevenston parish, Ayrshire, 5 furlongs N by E of the town. The castle, which belonged to the Earls of Glencairn, was sacked towards the end of the 15th century by the Montgomeries of Eglinton; and, now a massive ivy-mantled ruin, recently underwent some renovation, to retard its decay and increase its picturesque quality. The sacking of it was avenged by the burning of Eglinton Castle to the ground in 1528.—*Ord. Sur.*, sh. 22, 1865.

Kerera. See KERRERA.

Kerfield, an estate, with a modern two-story mansion, in Peebles parish, Peeblesshire, on the left bank of the Tweed, 5 furlongs E by S of Peebles town.

Kerrera, an island of Kilmore and Kilbride parish, Argyleshire, in the Firth of Lorn, opposite the south-eastern part of Mull, with a post office under Oban. Separated from the mainland by the Sound of Kerrera, ¼ to 1 mile in breadth, and screening, in its northern part, the Bay of Oban, it extends 4½ miles south-south-westward, with a varying breadth of 1½ furlong and 1¼ mile; and it forms part of the line of communication between Oban and Mull. Its shores contribute largely to the excellence of the romantic harbour of Oban, and contain within themselves two good harbours, called Ardinttraive and Horseshoe Bays; its southern extremity is a promontory, exhibiting noble cliff scenery, and crowned with the strong, tall, roofless tower of Gylen Castle, probably erected in the 12th century, long a stronghold of the Macdonalds of Lorn, and besieged and captured in 1647 by a detachment of General Leslie's army. Chief elevations from N to S are Barr Dubh (374 feet), Ardehoric (617), and Cnoc na Faire (344); and the general surface is a broken and confused mix-

ture of steep hills and deep vales, commanding gorgeous views from the heights, containing good arable and pasture land in the hollows, and so rapidly alternating as to be traversable only with much fatigue and difficulty. The rocks are a remarkable assemblage of trap, schist, slate, and conglomerate, and form a singular study to geologists. The island is mostly included in the DUNOLLY property. Alexander II., when preparing his expedition against the Hebrides, assembled his fleet in Horse-shoe Bay, and, being seized with fever there, was taken ashore to a pavilion, on a spot still called Dalrigh or 'the King's field,' and there died, 8 July 1249; and Hakon of Norway, in 1263, held a meeting of Hebridean chiefs on Kerrera, to engage their aid in his descent on the mainland. Pop. (1841) 187, (1861) 105, (1871) 101, (1881) 103, (1891) 92, of whom 79 were Gaelic-speaking.

Kerriff. See KILFINAN.

Kerry. See KILFINAN.

Kerrycrocy, a small neat village in Kingarth parish, Bute island, Buteshire, on Kerrycrocy Bay, 2½ miles SSE of Rothesay, and about half a mile from the policies of the Marquis of Bute.

Kerse House, the seat of the Marquis of Zetland, in Falkirk parish, Stirlingshire, in the middle of a finely-wooded park, 5 furlongs SW of Grangemonth. Partly a building of high antiquity, but added to at various periods, it presents the appearance of a plain Elizabethan mansion, and forms the chief ornament of the eastern Carse. The estate had been held by the Menteiths, Livingstones, and Hopes, before it was purchased by Lawrence Dundas, who in 1762 was created a baronet. His son Thomas (1741-1820) was raised to the peerage as Baron Dundas of Aske, co. York, in 1794; and his grandson, Laurence (1766-1839), was made Earl of Zetland in 1838. Laurence Dundas, present and third Earl (b. 1844; suc. 1873), was created in 1892 Marquis of Zetland and Earl of Ronaldshay in the peerage of the United Kingdom. He was Lord-Lieutenant of Ireland from 1889 till 1892.—*Ord. Sur.*, sh. 31, 1867.

Kerwell, an estate, with a mansion, in Carnwath parish, E Lanarkshire, 2½ miles ENE of the village. Purchased by an ancestor at the beginning of the 18th century, it is now the property of the Bertram family.—*Ord. Sur.*, sh. 24, 1864.

Kershope Burn, a rivulet of Castleton parish, S Roxburghshire, rising at an altitude of 1255 feet above sea-level, and running ¼ mile south-eastward to the boundary with Cumberland, and then 8¾ miles south-westward along the English border, till, after a total descent of 975 feet, it falls into the Liddel at a point 3¼ miles S by W of Newcastleton. Its waters are well stocked with trout.—*Ord. Sur.*, sh. 11, 1863.

Kersland. See DEN and DALRY, Ayrshire.

Kessock, a ferry, 3 furlongs wide, between Inverness and Ross shires, across the strait between the Moray and Beaulie Firths, opposite Inverness, under which there is a post office of Kessock. It is on the route from Inverness to Dingwall and Cromarty, and is one of the safest ferries in the north of Scotland. The view from the middle of the strait, particularly at high water, is exceedingly fine.—*Ord. Sur.*, sh. 33, 1881.

Ket, a streamlet of Glasserton and Whithorn parishes, SW Wigtonshire. Rising ¾ mile WNW of Glasserton church, and within 1 mile of Luce Bay, it describes a semicircle round by Whithorn town, and, after an easterly run of 5½ miles, falls into the sea at Portyrock.—*Ord. Sur.*, sh. 2, 1856.

Ketland. See GLENKETLAND.

Kettins, a village and a parish on the SW border of Forfarshire. The village stands 1½ mile ESE of Coupar-Angus, under which it has a post office. It consists of neatly kept cottages and gardens, with a central green.

The parish, containing also the hamlets of Ley of Hallyburtou and Campnaur, is bounded NE by Newtyle, E by Lundie, and on all other sides by Perthshire, viz., SE by Longforgan, SW by Cargill, and NW by Coupar-

Angus. Its utmost length, from NNE to SSW, is $5\frac{1}{2}$ miles; its breadth varies between $1\frac{1}{2}$ and $3\frac{1}{2}$ miles; and its area is 7472 acres, of which 26 are water. The Bandirran detached portion of Kettins, extending to 335 acres, was transferred by the Boundary Commissioners in 1891 to the Perthshire parish of Collace. The part of Perthshire at West Kinnochtry, shown on the Ordnance Survey maps as a detached part of the parish of Scone, but claimed as part of the parish of Kettins, was at the same time transferred to the parish of Cargill. The western division of the parish, forming part of Strathmore, declines to 170 feet above sea-level; and thence the surface rises south-eastward to the watershed of the Sidlaw Hills, attaining 1088 feet at Keillor Hill and 1141 at Gaskhill Wood. The upland district slopes gently to the plain, and is partly heathy, partly wooded, and partly pastoral; the lowland district, larger than the upland one, is nearly level, highly cultivated, and finely embellished. Trap rocks prevail in the hills, Old Red sandstone in the plain; and the latter has been quarried in several places, and makes a good building-stone. The soil on the higher grounds is light and thin; on the low grounds, is chiefly a silicious loam or a fertile black mould, and highly fertile. 'Priets' Houses' or subterranean caves have been discovered on the estates of Lintrose and Pitcur—at the latter in 1878; Pitcur Castle, a ruin, $1\frac{1}{2}$ mile SE of the village, was the ancient seat of the Haliburtons; a fortalice, called Dores Castle, and said by tradition to have been a residence of Macbeth, crowned a hill to the S of Pitcur; six pre-Reformation chapels stood at Peattie, South Corston, Pitcur, Muiryfaulds, Denhead, and the S side of Kettins village; and other antiquities are noticed under Campmuir and Baldowie. Mansions, noticed separately, are Hallyburton, Lintrose, and Baldowie. Giving off a part to the *quoad sacra* parish of Ardler since 1885, Kettins is in the presbytery of Meigle and synod of Angus and Mearns; the living is worth £263. The parish church, at the village, was built in 1768, restored and enlarged in 1871, and had added to it in 1893 a memorial tower with spire and bell. It has several stained-glass windows. The public school, with accommodation for 137 children, has an average attendance of about 100, and a grant of over £98. Valuation (1883) £12,206, 15s. 11d., (1893) £9812, plus £703 for railway. Pop. of the civil parish (1801) 1207, (1831) 1193, (1861) 901, (1881) 848, (1891) 722; of the ecclesiastical parish (1881) 903, (1891) 779.—*Ord. Sur.*, sh. 48, 1868.

Kettle, a village and a parish of central Fife. The village, standing 130 feet above sea-level, near the right bank of the Eden, has a station (Kingskettle) on the Thornton and Ladybank section of the North British railway, $\frac{3}{4}$ mile S of Ladybank Junction, $6\frac{1}{2}$ miles SW of Cupar, and $38\frac{1}{2}$ N by E of Edinburgh by the Forth Bridge. So low is its site, and so closely skirted by the Eden, as almost to be reached by freshets of that river. Originally called Catul or Katel ('battle')—a name supposed to refer to some ancient unrecorded battle fought in its neighbourhood—it stands on ground which of old belonged to the Crown, and hence assumed its alternative name of King's Kettle or Kingskettle. It has a post office, with money order, savings bank, and telegraph departments, a hotel, gaswork, and horticultural and other societies. The manufacture of linen is the principal trade carried on. The parish church is a handsome Gothic edifice of 1831, with a pinnacled tower, and over 1000 sittings. A new session-hall and class-room were opened in 1882. A Free church was built at Balmalcolm, $\frac{1}{4}$ mile E, shortly after the Disruption. There is also a neat U.P. church of 1853. Pop. (1831) 527, (1861) 567, (1891) 558.

The parish, containing also the villages of Holekettle, Balmalcolm, Coalton of Burnturk, and Muirhead, was anciently called Lathrisk, and down to about 1636 had its church (St Ethernascus) on the lands of Lathrisk. It is bounded N by Collessie, NE by Cults, E by Ceres, SE by Scoonie, S by Kennoway, SW by Markinch, and W by Falkland. Its length, from E to

W, varies between $4\frac{1}{2}$ and $6\frac{1}{2}$ miles; its utmost breadth, from N to S, is $2\frac{1}{2}$ miles; and its area is 7612 $\frac{1}{2}$ acres. The EDEN flows $2\frac{1}{2}$ miles east-south-eastward along the Collessie border, then $1\frac{3}{8}$ mile east-north-eastward through the north-eastern interior. The northern district thus is part of the low flat valley of Stratheden, nowhere sinking below 110, or attaining 150, feet above sea-level; but south-eastward the surface rises to 449 feet near Parkwell and 814 on Clatto Hill. The rocks include some trap, but are chiefly carboniferous; sandstone, limestone, coal, and a fine kind of trap have been worked; and ironstone also is found. The soil of the valley is argillaceous alluvium, light friable mould, or moss-covered sand; on the higher grounds and the hills, is partly strong and clayey, partly light and friable, and partly of other and inferior qualities. The antiquities include remains of circumvallations on Bauden and Downfield Hills; the barrows of Pundler's Knowe, Lowrie's Knowe, Lackerstone, and five other places; a cavern at Clatto, formerly communicating with the old tower of Clatto Castle, and notable in old times for the Setons' deeds of rapine and bloodshed; and the sites of two pre-Reformation chapels at Clatto and Chapel-Kater. Mansions, noticed separately, are Lathrisk and Ramornie. Giving off since 1882 a portion to the *quoad sacra* parish of Ladybank, Kettle is in the presbytery of Cupar and synod of Fife; the living is worth £396. A public school, built in 1876 at a cost of £3500, with accommodation for 400 children, has an average attendance of about 240, and a grant of over £243. Valuation (1883) £13,636, 6s. 9d., (1893) £11,779, 19s. 1d. Pop. (1801) 1889, (1831) 2071, (1861) 2474, (1891) 1913.—*Ord. Sur.*, sh. 40, 1867.

Kettle Bridge. See HOLEKETTLE.

Kettleholm Bridge, a hamlet in St Mungo parish, Dumfriesshire, on the Water of Milk, 3 miles S by E of Lockerbie.

Kiel, a burn in Largo parish, Fife, formed by Boghall and Gilston Burns, in the NE of the parish, and running $3\frac{1}{4}$ miles southward to Largo Bay at Lower Largo.

Kiel or **Kilcolmkill**, an old church and churchyard in the lower part of Ardochattan parish, Argyllshire, 3 miles N by W of Connel Ferry. Of the church only a few traces remain.

Kiels or **Kilcolmkill** ('church of Columba'), a pre-Reformation parish, now forming part of the parish of Southend, in the extreme S of Kintyre, Argyllshire. Its old church stands in a burying-ground quite close to the shore, and is traditionally said to have been built by St Columba. It is 75 feet 3 inches long and 13 feet 10 inches wide; part of it is rough primitive masonry; the rest, an addition, seems Norman work. See also KEIL, Cuthbert Bede's *Glencreggan* (London, 1861), and Muir's *Old Church Architecture of Scotland* (Edinb. 1861).

Kier. See KEIR.

Killarow. See KILLARROW.

Kilbagie, a place with large pulp and fibre works, for the manufacture of paper, in Clackmannan parish, Clackmannanshire, $1\frac{1}{2}$ mile N of Kincardino. Near it is Kilbagie House.

Kilbarchan (formerly *Kylberchan* and *Kclberchan*, Gael. 'the cell of St Barchan'), a parish containing a town of the same name in the centre of Renfrewshire. It is bounded N by Houston parish, at the NE corner by Inchinnan and Renfrew, SE by Abbey-Paisley parish and Lochwinnoch, SW by Lochwinnoch, and NW by Kilmalcolm. The boundary largely follows the courses of streams, keeping on the N to the line of the Gryfe from the point of junction with Houston parish downwards to the confluence of the Gryfe and Black Cart; and on the SE side, except for about 1 mile, to that of the Black Cart, from the junction just mentioned upwards to Castle Semple Loch (a distance in a straight line of $6\frac{1}{2}$, or, including windings, of 9 miles); while on the SW it follows the lines of Locher Water and Bride's Burn. The greatest length, from NE at the junction of the Gryfe and Black Cart to SW near Greenside, is $6\frac{1}{2}$ miles; the

greatest breadth, from NW near Torr Hall to SE on the Black Cart, is 4 miles; and the area is 9098·411 acres, of which 92·609 are water. The height above sea-level varies from 18 feet at the NE corner to 620 at the SW and 550 on the NW, there being a very rapid rise near the centre of the parish. Almost the whole of the surface is under cultivation or woodland. On the E side of the town is an isolated eminence known as Barr Hill; and the rising-grounds to the W, though of inconsiderable height, command a fine view. The soil is mostly good, being on the lower ground alluvial, and elsewhere clay (S and SW) and gravel (N and NW). The underlying rocks are sandstone, basalt, volcanic ash, and limestone, with beds of coal and iron. The beds of economic value are all extensively worked, as is also a bed of a peculiar description of basalt, which has been found suitable for the construction of ovens. The volcanic rocks are pretty rich in various minerals. The drainage of the parish is effected by the Gryfe and Black Cart and their tributaries, of which the Locher, besides tracing part of the SW boundary, passes NE through the parish, and flows into the Gryfe. There are several small falls along its course. The old church of St Barchan, bishop and confessor, was in the town, and was one of those in Strathgryfe bestowed on Paisley by Walter Fitz-Allan, High Steward of Scotland; and Bishop Jocelin of Glasgow confirmed the church to the monks for their own use. St Barchan had at one time a feast, probably on the day of the annual fair. In 1401 King Robert III. confirmed an endowment granted by Thomas Crawford of Auchinames for the support of a chaplain to officiate at the Virgin Mary's altar in the parish church of Kilbarchan, and also in a chapel dedicated to St Catherine, which had been erected by Crawford in the churchyard, and of which some remains still exist. There was also a chapel dedicated to the Virgin a little to the E of the castle of Ranfurly, on the farm still called Prieston. The property called Kirklands was annexed to it, and the building itself remained in a ruined condition down to 1791. In the SW corner of the parish there was formerly a village called Kenmuir, with a chapel dedicated to St Bride. Both are alike gone; but the burn known as St Bride's Burn, and St Bride's Mill mark the old associations. Blackston on the Black Cart was the summer residence of the abbots of Paisley. Other antiquities and objects worthy of notice are the stone of Clochoderick, the Barr Hill, and the castle of Ranfurly. Clochoderick ('the stone of Roderick'—possibly some member of the Houston family, or, according to others, *clach-na-druidh*, 'the stone of the Druids') is on the bank of St Bride's Burn, on the SW border of the parish, 2 miles from the town, and is separately described. The name is at least 700 years old. The Barr Hill, or Bar of Kilbarchan, has on its top the remains of an old encampment, defended by a semi-circular rampart of loose stones, and said to be Danish. Ranfurly Castle in the N of the parish, about 1½ mile N of the town, was at one time the seat of the Knoxes. From this family were descended John Knox the Reformer and Andrew Knox, who, on the restoration of Episcopacy in 1606, was appointed Bishop of the Isles, and in 1622 transferred to the see of Raphoe in Ireland. From them the Irish Knoxes, Viscounts Northland and Barons Ranfurly, are sprung. The estate was alienated in 1665, when it passed into the possession of the Dundonald family, by whom it was sold to the family of Hamilton of Holmhead. Near the castle is an artificial mound, 330 feet in circumference near the base and 20 feet high. Auchinames belonged to a branch of the Crawfurds (already mentioned) from the 14th century to the 18th, when it was broken up and sold in portions. The estate of Milliken for over 160 years belonged to the Napier family, descended from the Napiers of Merchiston, the first of whom flourished in the reign of Alexander III. The chief part of the estate belonged at one time to the Wallaces of Elderslie, and constituted a barony called Johnstone; from the Wallaces it passed to the Houstons, who in turn sold it in 1733 to the ancestor of the Napiers, who gave it his own name of Milliken,

while the Houston family retained the old name and applied it to their estate of East Cochrane, the present Johnstone. Milliken House is a handsome Grecian building, erected in 1829 near the left bank of the Black Cart. Other mansions are Blackstone House, Glentyan House, Craighends, and Clippens. The parish is traversed by one of the main roads from Paisley to Greenock, and also by the Glasgow, Paisley, and Greenock section of the Glasgow and South-Western railway, which passes through it for a distance of 3½ miles. Houston (Crosslee) and Bridge of Weir stations on this branch, and Milliken Park and Johnstone stations on the Glasgow, Paisley, and Ayr section of the same railway, afford means of access; and the latter, though outside the parish, are the stations nearest the town.

Besides the post-town of the same name the parish contains the village of Linwood and part of the village of Bridge of Weir. The town of Kilbarchan is near the centre of the parish, 1 mile NW of Milliken Park railway station, 1½ W of Johnstone, 5 miles W by S of Paisley, and 12 W by S of Glasgow. It occupies a rising-ground sloping gently S towards Kilbarchan Burn, and is sheltered on three sides by well-wooded eminences rising to a height of nearly 200 feet. It became a burgh of barony previous to 1710, but had no trade till 1739, when a linen factory was established, and three years afterwards another was established for the manufacture of lawns, cambries, etc. for the Dublin market. Although there are numerous public and private wells in the town, a supply of water by gravitation was introduced in 1893. In this year also an improvement was effected in High Barholm, a large clump of trees having been cleared away to make room for a block of buildings. There are now about 1000 looms at work, employed in the manufacture of silk and cotton fabrics, shawls, etc. In the centre of the town is a steeple erected in 1755, with a schoolhouse of later date. In a niche in the steeple there was placed in 1822 a statue of Habbie Simpson, piper of Kilbarchan, who died about the beginning of the 17th century, and on whom Robert Sempill of Beltrees wrote a well-known poem. He is also mentioned in the song of *Maggie Lauder*. The public hall was originally a chartist meeting-house of small size, but it was in 1872 acquired by the Good Templar Lodge of the place, and was then considerably enlarged and improved. It is now used for miscellaneous public meetings. The parish church, built in 1724, is in the form of a St George's cross. The U.P. church was originally built in 1786, but underwent extensive repair and alteration in 1872 at a cost of over £1000. There is also a Unitarian church. Kilbarchan has a post office under Johnstone, with money order, savings bank, and telegraph departments, a gas company (1846), two public libraries, a branch of the Clydesdale Bank, an agricultural society, a curlers' society, a masonic lodge (St Barchan's), dating from 1784, and several friendly societies. There used to be a fair on Lillias day, the third Tuesday of July; and there is a horse fair still on St Barchan's day, the first Tuesday of December, both *o. s.* A fountain, presented to the town by a native resident in New Zealand, was erected in the public park in 1895. Robert Allan (1774-1841), author of songs and poetical pieces of some merit, was a native of and a weaver in Kilbarchan. Population of the town (1881) 2548, (1891) 2747.

Since 1880 giving off the *quoad sacra* parish of Linwood, Kilbarchan is in the presbytery of Paisley and synod of Glasgow and Ayr; the stipend is £344. Churches, other than those already mentioned, are noticed under LINWOOD and BRIDGE OF WEIR. The school board has under its management Kilbarchan and Linwood public schools, and there is also Linwood Roman Catholic school. These, with accommodation for respectively 531, 315, and 263 pupils, have an average attendance of about 340, 180, and 115, and grants amounting to about £380, £180, and £95. Besides the industries formerly mentioned there is a print work on the Locher, and a number of quarries and coal and iron pits. Pop. of civil parish, including villages, (1755) 1485,

(1774) 2305, (1801) 3151, (1831) 4806, (1861) 6348, (1891) 7111; of ecclesiastical parish (1891) 3713.—*Ord. Sur.*, sh. 30, 1866. See also Crawford's *History of Renfrewshire* (1710), Hamilton's *Description of the Sheriffdom of Lanark and Renfrew* (Maitland Club, 1831), *Orig. Paroch. Scotiæ*, vol. i. (Ban. Club, 1851).

Kilberry, Knapdale. See KNAPDALE, SOUTH.

Kilberry Castle, a mansion in South Knapdale parish, Argyllshire, near the E shore of the Sound of Jura, 16 miles WSW of Tarbert. Founded 1497, burned by an English pirate 1513, rebuilt 1844, and enlarged 1871, it is the seat of Jn. Campbell, Esq. (b. 1844; suc. 1861).

Kilbirnie, a town and a parish in Cunninghame district, N Ayrshire. The town stands on both banks of the river Garnock, 200 feet above sea-level, within a mile of the Loch of Kilbirnie, and 9 furlongs NNW of Kilbirnie station on the Glasgow and South-Western railway, this being 2½ miles NE of Dalry Junction, 9½ N of Irvine, 12¾ SW of Paisley, and 19¾ SW of Glasgow. In 1742 it contained only three houses, in 1792 not more than eighty; but, having risen to be one of the most prosperous small seats of population in Scotland, it offers now a thriving, cleanly, and cheerful appearance, and largely consists of new or recent houses, built of a light-coloured sandstone. Ranking as a free burgh of barony in virtue of rights conferred on Kilbirnie manor before the town itself had any existence, it conducts much business in connection with neighbouring mines and iron and steel works; is the seat of flax-spinning, linen thread, wincey, flannel goods, and fancy dress goods factories, fishing-net factories, rope-works, and engineering works; and has a post office, with money order, savings bank, and telegraph departments, a branch of the Clydesdale Bank, 2 inns, a public library, a Good Templars' hall, a gas-light company, a bowling club, and a cemetery of 2 acres, laid out at a cost of £900. The Kilbirnie water supply has been extended to Glengarnock and Longbar villages, at an expense of about £1200. This has caused the erection of a storage reservoir at a cost of about £3000. On the 19th of November 1892 was opened the William Knox Institute in Main Street, presented to the town and parish of Kilbirnie by Robert William Knox, Esq., as a memorial of his father. On the first floor is the reading-room and library, with adjoining committee-room and lavatory. The second flat is set apart as a recreation room, having a ceiling 14 feet high, about 1000 square feet of floorage, and commanding a magnificent view. A statue of Hygeia, the Goddess of Health, about 9 feet high, on a pedestal of same height, was erected in 1894 as a memorial to the late Wm. Walker, M.D. The parish church, 3 furlongs S of the town, was anciently held by Kilwinning Abbey, and dedicated to St Brendan of Clonfert, an Irish missionary to the Western Isles about the year 545. Repaired in 1855, and renovated in 1892, it comprises a plain pre-Reformation oblong nave, a square W tower, a SE aisle (1897), and the NE Crawford gallery (1654). A stained-glass window was put in in 1894 to the memory of Mr and Mrs Jameson, Ladeside. The pulpit and the Crawford gallery exhibit 'some rich carved woodwork of the Renaissance period, a thing,' observes Dr Hill Burton, 'very rarely to be found in the churches of Scotland. Captain Thomas Crawford of Jordanhill, who captured DUMBARTON Castle in 1571, and died in 1603, is buried in the churchyard. His monument is peculiar and attractive. There is a recumbent statue of the warrior himself, and of his wife, side by side, after the old Gothic fashion, which was becoming obsolete. The figures lie within a quadrangular piece of stonework like a sarcophagus, and they are seen through slits which admit a dim light, giving the statues a mysterious funereal tone.' The first Free church, built soon after the Disruption, was repaired and decorated in 1875; the second or West Free church, belonging till 1876 to the Reformed Presbyterians, was built in 1824. There are also Glengarnock U.P. church (1870) and St Bridget's Roman Catholic church (1862). Pop. (1851) 3399, (1861) 3245, (1871) 3313, (1881) 3405, (1891) 3528, of whom 1932 were females.

The parish, containing also the greater part of GLENGARNOCK village, is bounded N and NE by Lochwinnoch in Renfrewshire, E by Beith, SE, S, and W by Dalry, and NW by Largs. Its utmost length, from NNW to SSE, is 7½ miles; its utmost breadth is 3½ miles; and its area is 10,641½ acres, of which 306½ are water. The Maich, entering from Renfrewshire, and rising on the southern slopes of the Mistylaw Hills, flows 4 miles south-south-eastward along the Lochwinnoch border till it falls into Kilbirnie Loch (11¼ by 3½ furl.; 105 feet), a beautiful lake on the Beith boundary, well stored with pike, perch, and trout, and sending off Dubbs Burn north-north-eastward to Castle-Semple Loch. The GARNOCK, also rising among the Mistylaw Hills, at an altitude of 1600 feet above sea-level, winds 7½ miles south-south-eastward through the interior, then 1½ mile south-south-westward along or near to the south-eastern boundary, till it passes off into Dalry. Pundeavon, Paduff, and Pitcon Burns run south-south-eastward to the Garnock, the last-named tracing most of the western boundary. The surface sinks in the extreme S to 93 feet above sea-level, and rises thence northward to 454 feet near Balgry, 1000 at High Blaeberry Craigs, 710 near Glengarnock Castle, 1033 at Burnt Hill, 1267 at Ladyland Moor, 1526 at Black Law, 1663 at Mistylaw, 1615 at High Corbie Knowe, and 1711 at the Hill of Stake, the three last culminating on the northern confines of the parish, and commanding one of the widest and most brilliant panoramic views in Scotland. Thus the south-eastern district is all low, and either flat or diversified with gentle rising-grounds; the central district rises somewhat rapidly north-westward, and offers a considerable variety of hill and dale; and the northern, occupying fully one-third of the entire area, is all upland, with irregular ranges of dusky hills, mossy, heathy, and sterile. The rocks in the lowlands belong to the Carboniferous formation; those of the uplands are eruptive, and chiefly consist of greenstone and porphyry. Sandstone, limestone, coal, and ironstone abound among the carboniferous rocks, and have all been largely-worked. A vein of graphite or plumbago also exists there; and a vein of barytes, and some agates and other rare minerals, are found among the hills. The soil in the south-eastern district is a deep alluvial loam, a rich clayey loam, or a light red clay; in the central district is mostly light, dry, and fertile; and in the uplands is much of it moss of various depths, resting on light-coloured clay. Rather less than one-sixth of the entire area is in tillage; plantations cover nearly 100 acres; and the rest is either meadow, hill-pasture, or waste. On the hills are remains of several tumuli; and a pyramidal mound at Nether Mill measures 54 feet in length, 27 in breadth, and 17 in height. Formerly this parish was divided among the three baronies of Kilbirnie, Glengarnock, and Ladyland, of which the two last are noticed separately, whilst the first passed by marriage from the Barclays to the Crawfords in 1470, and from them to the Lindsays in 1661, thus coming to the fourth Earl of Glasgow in 1833. (See CRAWFORD PRIORY and GARNOCK.) Kilbirnie Castle, the ancient residence of the Earls of Crawford, and accidentally burned in 1757, consists of a rectangular 13th or 14th century tower, measuring 41 by 32 feet, with walls 7 feet in thickness, and of a still more ruinous three-storied addition of 1627; scarce a vestige remains of its gardens, orchard, and avenues. Kilbirnie is in the presbytery of Irvine and synod of Glasgow and Ayr; the living is worth £217. Bridgend, Glengarnock, and Ladyland public schools, and Kilbirnie female industrial school, with respective accommodation for 200, 400, 312, and 108 children, have an average attendance of about 200, 330, 260, and 100, and grants of about £175, £330, £250, and £90. A Roman Catholic school, with accommodation for about 170 children, was opened in May 1893. Pop. (1801) 959, (1841) 2631, (1861) 5265, (1881) 5243, (1891) 5468.—*Ord. Sur.*, shs. 22, 30, 1865-66. See *The Parish Church and Churchyard of Kilbirnie* (Beith, 1850), and John S. Dobie's *Church of Kilbirnie* (Edinb. 1880).

Kilbowie, in Clydebank, Dumbartonshire, is the seat of the Singer Sewing-Machine Works (1833-84), which cover 46 acres, and have a tower 200 feet high, with a clock whose face is 25 feet in diameter. There is a public hall, with library and reading-room. A U.P. church was erected near the works in 1894-95. See CLYDEBANK.

Kilbrandon and Kilchattan, a united parish in Nether Lorn district, Argyllshire. It comprehends a section of the mainland, with the inhabited islands of Seil, Luig, Easdale, Shuna, and Torsay, and the uninhabited island of Inis Capel or Sheep Island; contains the villages of Toberonichy, Ellanabrieche, and Easdale, the last with a post, money order, savings bank, and telegraph office under Oban; and enjoys communication by means of the Clyde and Oban steamers. It is bounded N by the Sound of Lorn, NE by the Sound of Clachan, E by Kilninver parish, S by the northern outlet of the Sound of Jura, and W by the Atlantic Ocean. Its length, from N to S, inclusive of intersecting sea-belts, is 10 miles; its breadth is 6 miles; and its area is 14,457 acres, of which 996½ are foreshore and 74½ water. The inhabited islands are all separately noticed. The mainland section, comprising 5052½ acres, is connected with Seil island by a bridge, and chiefly consists of hill pasture. No ground either in it or in the isles rises higher than from 600 to 800 feet above sea-level. The rocks of the mainland section are interesting chiefly for a marble which was at one time worked near Ardmaddy; those of the islands are remarkable for extensive slate quarries, and for ores of silver, copper, lead, zinc, and iron. Much waste land has been reclaimed, and agriculture has been greatly improved. The ruins of several old fortalices are the only antiquities. ARDMADDY CASTLE and ARDINCAPLE House have separate articles, and the Earl of Breadalbane is much the largest proprietor. Kilbrandon is in the presbytery of Lorn and synod of Argyll; the living is worth £192. The old parish church, built about 1743 on the S end of Seil island, near CUAN ferry, is now abandoned, a new and handsome edifice, with stained-glass windows, having been erected in a more central part of the island. There is also a Free church; and three public schools—Ardincaple, Easdale, and Luig—with respective accommodation for 49, 240, and 100 children, have an average attendance of about 30, 80, and 50, and grants of nearly £55, £114, and £54. Valuation (1833) £6521, (1892) £5433. Pop. (1801) 2273, (1831) 2833, (1861) 1859, (1871) 1930, (1881) 1767, (1891) 1574, of whom 1300 were Gaelic-speaking, and 59 belonged to the mainland.

Kilbrandon or Kilbrennan Sound, a sea-belt of Bute and Argyll shires, commencing at the convergence of Loch Fyne and the Kyles of Bute, and extending south-westward between Arran island and Kintyre peninsula. It measures 27 miles in length, and from 3 to 15 miles in breadth, and is usually a good herring fishing station. Its name signifies the 'church of Brendan,' *i.e.*, of St Brendan of Clonfert, who visited the Western Isles in 545.—*Ord. Sur.*, shs. 20, 21, 12, 13, 1870-76.

Kilbride, a hamlet in South Uist island, Outer Hebrides, Inverness-shire, 9 miles from Lochboisdale Pier. It has a post office.

Kilbride. See KILBRANDON AND KILCHATTAN.

Kilbride, an ancient chapelry in Kirkmabreck parish, SW Kirkcudbrightshire. Its chapel stood near the shore of Wigtown Bay, 2¾ miles SSE of Creetown.

Kilbride. See KILMORE AND KILBRIDE.

Kilbride, a parish in Arran island, Buteshire. Comprising most of the E side of Arran, and including Holy Island, it extends from Loch Ranza on the NNW to Dippin Head on the SSE, and contains the post-office villages of Corrie, Brodick, and Lamlash. It is bounded along most of its western side by the Arran watershed, which separates it from Kilmory, on the N by the Sound of Bute, and on all other sides by the Firth of Clyde. Its utmost length, from NNW to SSE, is 19¾ miles; its utmost breadth, from E to W, is 6 miles; and its area is 38,985 acres. The surface, the principal

natural features, and the chief artificial objects have all been noticed in our article on ARRAN, and in other articles. Lady Marie Louise, daughter of the late Duke of Hamilton, is the largest proprietor. Including the *quoad sacra* parish of Brodick, with a chapel of ease at Corrie, Kilbride is in the presbytery of Kintyre and synod of Argyll; the living is worth £312. The parish church, at Lamlash, was built in 1885, at the cost of the Duke of Hamilton, and superseded one built in 1773. There is also a chapel of ease at Whiting Bay; and there are two Free churches of Kilbride and Whiting Bay, with a mission station at Lamlash. There is, besides, a Congregational church at Glensannox. Lamlash public, Whiting Bay public, Brodick, and Corrie schools, with respective accommodation for 173, 105, 99, and 66 children, have an average attendance of about 110, 55, 65, and 35, and grants of about £125, £55, £65, and £45. Pop. (1881) 2176, (1891) 2231, of whom 871 were Gaelic-speaking, and 1276 were in the ecclesiastical parish of Kilbride.—*Ord. Sur.*, shs. 21, 13, 1870.

Kilbride, East, a small town and a parish on the western border of the Middle Ward of Lanarkshire. The town, towards the NE corner of the parish, stands 590 feet above sea-level, with a station on the Busby and East Kilbride section of the Caledonian railway, by road being 8 miles SSE of Glasgow, 6¼ W by S of Hamilton, and 8¼ NNW of Strathaven, by rail 4¼ ESE of Busby, 8¾ SE of Pollokshaws Junction, and 12¼ SSE of Glasgow. An ancient place, towards the close of the reign of Queen Anne it was made a burgh of barony, with a weekly market and three annual fairs; and it now has a post office, with money order, savings bank, and telegraph departments, under Glasgow, a branch of the Clydesdale Bank, a gaswork, grain mills, bowling green, police station, public hall, lime works in the neighbourhood, and a fair on the Friday after 10 June. Places of worship are the parish church (1774), a Free church, and a U.P. church (1791). Pop. (1841) 926, (1861) 1171, (1871) 1100, (1881) 1118, (1891) 1133.

The parish, containing also the villages of Auldhouse, Jackton, Kittocksidge, Nerston, and Maxwellton, a third of the town of BUSBY, and the stations of Hairmyres and Thornton Hall, comprises the ancient parishes of East Kilbride and Torrance. It is bounded N by Carmunnock and Cambuslang, E by Blantyre and Glassford, SE and S by Avoudale, and W by Loudoun in Ayrshire, and Eaglesham in Renfrewshire. The Lanarkshire detached portion of the Renfrewshire parish of Cathcart, situated at Drippis, and containing 938 acres, was transferred by the Boundary Commissioners in 1891 to the parish of East Kilbride; while the Renfrewshire detached portion of East Kilbride, situated at Kirklands, but consisting of only 1 acre, was transferred to the parish of Eaglesham. The utmost length of the parish, from N to S, is 9¾ miles; its breadth varies between 2¼ and 6 miles; and its area is now 23,734½ acres, of which 37¾ are water. Four rivulets or their head-streams, rising in the interior, run divergently—Calder Water, 2½ miles east-by-northward along the southern boundary on its way to the Avon; White CART Water, 7¼ miles north-north-westward along the western boundary; the Kittock, past East Kilbride town and Kittocksidge village, westward to the White Cart; and the CALDER or Rotten Calder, 7¼ miles north-north-eastward, chiefly along the eastern boundary, on its way to the Clyde. The surface declines along the White Cart in the NW to 200, along the Rotten Calder in the NE to 450, and along Calder Water in the SE to 690 feet above sea-level; between these points it attains 692 feet near Rogerton, 719 at Lickprivick, 726 at Crosshill, 791 at Raahed, 1130 at Ardochrig Hill, and 1215 at ELLRIG. Thus a gradual southward ascent, consisting of a regular succession of small hills, with very little intervening level ground, occupies all the distance from Crossbasket to Ellrig; sloping grounds occupy much of the western and the eastern borders; and high moors, extending outward from Ellrig, occupy nearly all the extreme S. The rocks are partly eruptive, partly carboniferous. Limestone and sandstone, both of excellent quality, have been

very largely worked, as also have Roman cement and potter's clay. Ironstone is mined at Crossbasket; but the coal is of limited quantity, and of very indifferent quality. Quartz nodules, too, pyrites, shorl, galena, and some other minerals are found. The soil is very various, and much of it still remains in a mossy condition, though agricultural improvement has been actively carried on. East Kilbride barony, which comprised nearly two-thirds of the parish, belonged to successively the Comyns, the Lord High Stewards of Scotland, and the Lindsays of DUNROD, whose stately stronghold, Mains Castle, is now a ruin, 7 furlongs NNW of the town. The site only is left of Lickpriveck Castle, 2 miles SSW, which for several centuries was the seat of Lickprivecks of that ilk. Harelaw Cairn, on Raahed farm, was finally demolished in 1808; and another cairn near Mains Castle has likewise disappeared. The famous anatomists, William Hunter, M.D., F.R.S. (1718-83), and his brother John (1728-93), were born at Long Calderwood; and the cottage of Forefaulds, on the Long Calderwood property, was the birthplace of John Struthers (1776-1853), author of *The Poor Man's Sabbath*. Mount Cameron, 7 furlongs ESE of the town, from soon after the '45 till her death in 1773, was the residence of the well-known Jacobite lady, Mrs Jean Cameron. Mansions are Calderwood Castle, Cleughearn Lodge, Crossbasket, Torrance, Lawmuir, and Limekilns, of which the four first are noticed separately. Giving off ecclesiastically two portions to Carmunnock and Chapelton, East Kilbride is in the presbytery of Hamilton and synod of Glasgow and Ayr; the living is worth £377. Auldhouse, East Kilbride, Jackton, and Maxwellton public schools, with respective accommodation for 96, 326, 83, and 106 children, have an average attendance of about 60, 255, 85, and 110, and grants of nearly £65, £290, £35, and £50. Pop. (1881) 3975, (1891) 3861, of whom 3050 were in the ecclesiastical parish.—*Ord. Sur.*, shs. 23, 22, 1865. See David Ure's *History and Antiquities of Rutherglen and East Kilbride* (Glasgow, 1793).

Kilbride, West, a small town and a coast parish of Cunninghame, NW Ayrshire. The town, standing 1 mile inland and 150 feet above sea-level, has a station on the Largs branch of the Glasgow and South-Western railway, $4\frac{1}{2}$ miles NNW of Ardrossan and $35\frac{3}{4}$ WSW of Glasgow. Its site is a finely sheltered depression, on tiny Kilbride Burn. An ancient place, it at one time possessed a number of mills and other works, which all have disappeared; weaving for the manufacturers of Glasgow and Paisley is now the staple employment. It has a post office, with money order, savings bank, and telegraph departments, branches of the Commercial and Clydesdale Banks, 3 inns, a gaswork, a Good Templars' hall, a convalescent home, a library and reading-room, and a cemetery, in the centre of which is a monument to Prof. Simson. A Children's Home, under the Glasgow Fresh-air Fortnight Scheme, was acquired here in 1893, and there is a hydropathic at Seamill. At Seamill also was erected in 1893-94 another convalescent home, in connection with the Glasgow and West of Scotland co-operative societies. In 1893, too, was opened a new hall for the Young Men's Christian Association, capable of accommodating 250 persons. The parish church is a handsome Early English edifice of 1873, with 610 sittings and a spire 100 feet high. The Free church, French Gothic in style, with 450 sittings and a spire 120 feet high, was built in 1881 at a cost of £3500; and the U.P. church in 1882-83 (400 sittings) at a cost of £2500. There is an Episcopal mission church with a monthly service, and a Roman Catholic chapel with services every third Sunday. Pop. (1861) 1083, (1871) 1218, (1881) 1363, (1891) 1617.

The parish is bounded N by Largs, NE by Dalry, SE by Ardrossan, and SW, W, and NW by the Firth of Clyde. Its utmost length, from N to S, is $6\frac{3}{4}$ miles; its utmost breadth, from E to W, is 5 miles; and its area is 11,535 acres, of which 1415 are foreshore and $\frac{1}{2}$ is water. The coast, 9 miles in extent, at ARDNEIL BANK, near Farland Head, rises steeply to 456 feet

above sea-level; but elsewhere the shore is low and shelving, and consists of alternate sandy bays and sandstone reefs. Inland the surface rises eastward to 715 feet at Black Hill, 1270 at Kaim Hill, 870 at Glentane Hill, 1081 at Caldron Hill, 551 at Law Hill, and 446 at Tarbert Hill—summits these of rolling, continuous ridges that command magnificent views of the waters and screens of the Firth of Clyde. Kilbride, Southannan, and three other burns, which rise near the eastern border and run to the Firth, in rainy weather sometimes acquire much volume and force—the Southannan, traversing a romantic glen, forming a series of beautiful falls. Basalt, porphyry, and Old Red sandstone are the predominant rocks; a stratum of breccia on Kaim Hill has been quarried for mill-stones; and slight veins of limestone appear at Farland Head. The soil on low portions of the seaboard and the centre, amounting to one-fifth or more of the entire area, is partly sand, partly poor gravel, partly a rich deep dark mould; on some rising-grounds and on the skirts of some of the hills, is loamy or calcareous; and on most of the uplands, is either spongy or heathy moor. About 170 acres are under wood, nearly one-third of all the land is either pastoral or waste, and the rest is either regularly or occasionally in tillage. Dairy farming and the growing of early potatoes form the main elements in the agricultural industry. Since the opening of the railway in 1880, the seaboard of the parish is gradually becoming a favourite resort for summer visitors, principally from Glasgow; and for their accommodation several villas have lately been built along the coast. Antiquities are several tumuli, remains of a circular watch-tower on Auld Hill, sites of signal-posts on Auld, Tarbert, Law, and Kaim Hills, and the ruins of Portincross, Law, and Southannan Castles. One of the large ships of the Spanish Armada of 1588 sank in 10 fathoms of water very near Portincross Castle, and one of its cannon is mounted on the Castle Green. In 1826, on a hillside near Hunterston, a shepherd found an ancient Celtic gold and silver brooch; and 300 old silver coins, mostly of the reign of Queen Elizabeth, were turned up by the plough in 1871 on Cbapelton farm. Robert Simson, M.D. (1687-1768), professor of mathematics in Glasgow University, and translator and editor of Euclid, and General Robert Boyd, lieutenant-governor of Gibraltar during the famous siege of that great fortress in 1782, were natives of West Kilbride. Mansions are Ardneil, Carlung, Hunterston, and Seaview. Giving off *quoad sacra* a fragment to New Ardrossan, West Kilbride is in the presbytery of Irvine and synod of Glasgow and Ayr; the living is worth £347. A public school, with accommodation for 415 children, has an average attendance of about 290, and a grant of nearly £310. Pop. (1881) 2088, (1891) 2302, of whom 2235 were in the ecclesiastical parish.—*Ord. Sur.*, shs. 21, 22, 1870-65.

Kilbryde Castle, a fine old castle in Dunblane parish, Perthshire, picturesquely seated on the right bank of Ardoch Burn, 3 miles NW of Dunblane town. Dating from 1460, it was long the residence of the Earls of Menteith, and, with its barony, was acquired in 1669 by Sir Colin Campbell of Aberuchill, with whose descendants it still remains.—*Ord. Sur.*, sh. 39, 1869.

Kilbucho. See BROUGHTON.

Kilcadzow, a village, with a public school, in Carluke parish, Lanarkshire, 2 $\frac{1}{2}$ miles ESE of Carluke town. In the vicinity are limeworks and Kilcadzow Hill.

Kilcalmkill, an estate, with a mansion, in Clyne parish, E Sutherland, on the NE side of Loch Brora, 5 miles NW of Brora station on the Highland railway. It belonged for 3 centuries to the Gordons of Carrol, and was purchased about the year 1810 by the Duke of Sutherland. Its plantations group with Carrol Rock to form a picturesque scene, and it contains a very striking and romantic cascade.—*Ord. Sur.*, sh. 103, 1878.

Kilcalmonell, a coast parish in Kintyre, Argyllshire, containing the village of CLACHAN and the greater part of the small seaport town of TARBERT, each with a post, money order, and telegraph office. Until 1891 Kilcalmonell was united with the old parish of Kilberry in

Knapdale, comprising 21,915 acres, and separated from it by West Loch Tarbert and the parish of South Knapdale. Kilberry was then transferred by the Boundary Commissioners to South Knapdale parish, and the remaining Kintyre portion restricted to the name Kilcalmonell. It is bounded N by West Loch Tarbert and by South Knapdale, E by Loch Fyne and by Saddell and Skipness, S by Killean and Kilchenzie, and W by the Atlantic Ocean. Its greatest length, from NE to SW, is 14 miles; its breadth varies between $2\frac{3}{4}$ and 5 miles; and its area, excluding foreshore and water, is now 27,751½ acres. The coast comprises a largish aggregate of sandy shore, and includes several small fishing hamlets and harbours, from which boats go out to the herring fishery. Of twelve or thirteen fresh-water lakes dotted over the parish, the largest are Lochs Ciaran ($8\frac{1}{2} \times 3\frac{1}{2}$ furl.; 353 feet) and Garasdale ($4\frac{1}{2} \times 3\frac{1}{2}$ furl.; 404 feet), and both are well stocked with trout. The surface is hilly but nowhere mountainous, chief elevations from N to S being Cruach an t-Sorchain (1125 feet), Cnoc a' Bhaileshios (1383), Cruach nam Fiadh (832), Creag Loisgte (650), and Cruach McGougain (813). Limestone occurs, and sea-weed is plentiful. A few of the larger farms are very well cultivated, and potatoes form the staple article of farm produce; but cattle and sheep grazing is much more important than husbandry. Cairns are numerous; remains exist of the chain of forts that formerly defended the communication between Kintyre and Knapdale; and other antiquities, treated in special articles, are the forts of DUNSKERG and the ruins of TARBERT Castle. Giving off a portion to the *quoad sacra* parish of Tarbert, this parish is in the presbytery of Kintyre and synod of Argyll; the living is worth £188. The two churches—Kilcalmonell (1760) and Kilberry (1821)—are served by the minister and an assistant. There is a Free church at Tarbert; and two public schools—Clachan and Whitehouse—with respective accommodation for 95 and 57 children, have an average attendance of about 50 and 30, and grants of about £65 and £50. Pop. (1881) 2304, (1891) 1901, of whom 1005 were Gaelic-speaking, and 890 were in the ecclesiastical parish.—*Ord. Sur.*, shs. 20, 29, 23, 1873-83.

Kilchattan. See KILBRANDON and JURA.

Kilchattan, a village and a bay in Kingarth parish, Bute island, Buteshire. The village, 7 miles S by E of Rothesay, forms a curve round the south-western margin of the bay, and chiefly consists of plain small cottages. It has a post office with money order, savings bank, and telegraph departments under Rothesay, a Free church, and a school; and a new pier was built in 1880 at a cost of £2000. Later undertakings have been the introduction of water at a cost of £1000, and the erection of a large hotel and several villas. It has now become a favourite resort for summer visitors. There is steam-boat connection with the other places on the Firth of Clyde, and an omnibus runs between the village and Rothesay. Within a short distance of the village is the parish church of Kingarth, a modern edifice, and in the neighbourhood there are interesting Druidical and other remains. The bay, measuring $1\frac{1}{2}$ mile across the mouth, and 7 furlongs thence to its inmost recess, has a semi-circular outline, and looks eastward to the S end of Great Cumbrae. Pop. of village (1881) 343, (1891) 340.—*Ord. Sur.*, sh. 21, 1870.

Kilchenzie. See KILLEAN and KILCHENZIE.

Kilchoan, a small harbour and a hamlet, with an inn and a public school, on the S coast of Ardnamurchan parish, Argyllshire. The harbour confronts the convergence of Loch Sunart and the Sound of Mull, $6\frac{1}{4}$ miles N by W of Tobermory, and 21 W by S of Salen; forms the principal point of communication between much of the mainland and Tobermory; and is occasionally the resort of craft bringing cattle from some of the western islands to the mainland.

Kilchoan, an ancient parish in Nether Lorn district, Argyllshire, now united with Kilbrandon and Kilchattan. Its name is popularly abbreviated into Coan or Cuan, and in that form is applied by the natives to the united parish.

Kilchoman, a parish in the SW of Islay district, Argyllshire. Comprising the south-western peninsula of Islay island, between Lochs Indal and Gruinnard, two farms beyond the eastern side of that peninsula, the islets adjacent to the Rhynns of Islay, and the islets near the mouth of Loch Gruinnard, it contains the villages of Portnahaven, Port Charlotte, and Port Wemyss, each of the two former with a post office. Its utmost length, from NNE to SSW, is $16\frac{1}{2}$ miles; its average breadth is 5 miles; and its area is 40,158 acres, of which 2006 are foreshore and 386 water. The coast and the interior are fully described in our article on ISLAY; and the lochs, the islets, and the villages are noticed in separate articles. Barely an eleventh of the entire area is in tillage, nearly all the remainder being pastoral or waste. Mansions are Cladville House and Sunderland House; a lighthouse is on Oversay islet, adjacent to the Rhynns; and the chief antiquities are several standing stones and sepulchral tumuli, remains of five pre-Reformation churches, and a finely sculptured cross in the parish churchyard. Divided ecclesiastically into Kilchoman proper and Portnahaven, this parish is in the presbytery of Islay and Jura and synod of Argyll; the living is worth £186. The parish church, built in 1826, is a neat edifice, and contains about 600 sittings. There are also Free churches of Kilchoman and Portnahaven; and six public schools—Gortan, Kilchoman, Kilnave, Port Charlotte, Portnahaven, and Rookside—with total accommodation for 666 children, have an average attendance of about 410, and grants amounting to over £510. Pop. (1801) 2030, (1831) 4822, (1861) 3436, (1871) 2861, (1881) 2547, (1891) 2697, of whom 2384 were Gaelic-speaking, and 1828 belonged to Kilchoman ecclesiastical parish.

Kilchousland. See CAMPBELTOWN, Argyllshire.

Kilchrenan, a post-office hamlet and a parish in Lorn district, Argyllshire. The hamlet, lying 218 feet above sea-level at the NE boundary, is $1\frac{1}{2}$ mile NNW of North Port-Sonachan pier and ferry on Loch Awe, $14\frac{1}{2}$ WSW of Dalnally, $14\frac{1}{2}$ NNW of Inveraray, and 8 SSE of Taynuilt station on the Oban railway; and has fairs on the Friday in May and the Thursday in October before Oban, but no business is done at these, all animals being now sent to Taynuilt.

The present parish, comprising the ancient parishes of Kilchrenan to the N and DALAVICH to the S, and extending along both sides of the middle reaches of Loch Awe, is bounded NE by Glenorchy-Inishail, SE by Inveraray, SW by Kilmichael-Glassary and Kilmartin, and NW by Kilninver-Kilmelfort and Ardehantan-Muckairn. Its utmost length, from NE to SW, is $13\frac{1}{2}$ miles; its width, from NW to SE, varies between $2\frac{1}{2}$ and $8\frac{1}{2}$ miles; and its area is 48,161 acres, of which 2208 are water. The island of Innishail (in Loch Awe), containing 27 acres, formed a detached portion of this parish till 1891, when the Boundary Commissioners transferred it to the parish of Glenorchy-Inishail. From a point $4\frac{1}{4}$ miles below its head, Loch Awe ($22\frac{3}{4} \times 3$ furl. to $3\frac{1}{4}$ miles; 118 feet) stretches $12\frac{1}{2}$ miles north-north-eastward, its width here ranging between 3 and $9\frac{1}{2}$ furlongs. Loch AVICH ($3\frac{1}{4}$ miles \times $5\frac{1}{2}$ furl.; 311 feet) sends off a stream $1\frac{1}{2}$ mile east-by-southward to Loch Awe; Loch Nant ($7\frac{1}{2} \times 2\frac{3}{4}$ furl.; 605 feet) lies on the Muckairn boundary; and forty-five smaller lochs and tarns are dotted over the interior and along the confines of the parish. The surface, hilly everywhere but hardly mountainous, culminates at 1777 feet on the south-eastern, and 1407 on the south-western boundary. Lesser heights are Cruach Achadh na Craoibhe (907 feet), Bealach Mor (846), Maol Mor (1202), and Meall Odhar (1255) to the NW, Tom Barra (1052) and Creag Ghranda (1406) to the SE, of Loch Awe. Slate is the principal rock. Some excellent arable land and natural pasturage, with not a little valuable wood, are on the shores of the lake; and the heather, that once clothed all the hills, has, since the introduction of sheep-farming, often given place to grass. Mansions, noticed separately, are EREDINE and SONACHAN. Kilchrenan and Dalavich is in the presbytery of Lorn and synod of Argyll; the

living is worth £195. The parish church, at Kilchrenan hamlet, and Dalavich chapel of ease, near the W shore of Loch Awe, 9 miles SSW, were both built about 1771. There are two public schools—Ardchonnell and Dalavich. The former (there being no returns for the latter) has accommodation for 37 children, and has an average attendance of about 15, and a grant of nearly £64. Valuation (1883) £6045, 11s. 4d., (1893) £4842, 19s. 6d. Pop. (1881) 504, (1891) 415, of whom 353 were Gaelic-speaking.—*Ord. Sur.*, sh. 45, 47, 1876.

Kilchrist, an ancient parish of SE Ross-shire, now annexed to Urray. Its ruined church, a little N of the Muir of Ord, adjacent to the boundary with Inverness-shire, was the scene in 1603 of the merciless burning of a whole congregation of the Mackenzies by the Macdonells of Glengarry, whose piper marched round the building, mocking the shrieks of its hapless inmates with the pibroch since known, under the name of 'Kilchrist,' as the family tune of the Clanranald of Glengarry.—*Ord. Sur.*, sh. 83, 1881.

Kilchrist, Kirkeudbrightshire. See KIRKCHRIST.

Kilchurn Castle, a ruined stronghold in Glenorchy parish, Argyllshire, on a rocky elevation, alternately peninsula and island, at the influx of the confluent Orchy and Strae to Loch Awe, 2½ miles W by N of Dalnally. Its site, once occupied by a stronghold of the Macgregors, passed first to Sir Duncan Campbell of Lochow, ancestor of the Dukes of Argyll, and next to his younger son, Sir Colin Campbell, a knight of Rhodes, who founded the noble family of Breadalbane. The five-storied keep was built by Sir Colin in 1440, or, according to an Odysseyan legend, by his lady, whilst he himself was absent on a crusade to Palestine. Crusade there was none for more than a hundred years earlier, so that one may take for what it is worth the further assertion that she levied a tax of seven years' rent upon her tenants to defray the cost of erection. Anyhow, the S side of the castle is assigned to the beginning of the 16th century; and the N side, the largest and the most elegant portion, was erected in 1615 by the first Earl of Breadalbane. The entire pile forms an oblong quadrangle, with one corner truncated, and each of the other towers flanked by round hanging turrets; was inhabited by the Breadalbane family till the year 1740; and five years later was garrisoned by Hanoverian troops. Now a roofless ruin, but carefully preserved from the erosions of time and weather, it ranks as the grandest of the baronial ruins of the Western Highlands, and figures most picturesquely amid the magnificent scenery of the foot of Loch Awe, immediately overhung by the stupendous masses of Ben Cruachan. Wordsworth, who passed by here on 31 Aug. 1803, addressed some noble lines to Kilchurn Castle,—

'Child of loud-throated War! the mountain stream
Rears in thy hearing; but thy hour of rest
Is come, and thou art silent in thy age. . . .
. . . . Shade of departed power,
Skeleton of unfleshed humanity,
The chronicle were welcome that should call
Into the compass of distinct regard
The toils and struggles of thy infant years!
Yon foaming flood seems motionless as ice;
Its dizzy turbulence eludes the eye,
Frozen by distance; so, majestic pile,
To the perception of this Age appear
Thy fierce beginnings, softened and subdued,
And quieted in character—the strife,
The pride, the fury uncontrollable
Lost on the aerial heights of the Crusades!'

See pp. 138-142 of Dorothy Wordsworth's *Tour in Scotland* (1874); chap. ii. of Alex. Smith's *Summer in Skye* (1865); pp. 215-219 of P. G. Hamerton's *Painter's Camp in the Highlands* (1862); and pp. 33-41 of R. Buchanan's *Hebrid Isles* (1883).—*Ord. Sur.*, sh. 45, 1876.

Kilcolmkill, an ancient parish in the southern extremity of Kintyre, Argyllshire, united with Kilblane to form the present parish of SOUTHEND. The chief localities in it are noticed under KEIL and KIELS, a contraction for Kilcolmkill.

Kilcolmkill, Sutherland. See KILCALMKILL.

Kilcolumkill. See MORVERN.

Kilconquhar, a post-office village and a parish in the East Neuk of Fife. The village stands on the northern shore of Kilconquhar Loch, and ½ mile NE of Kilconquhar station on the East Fife section of the North British railway, this being 1½ mile NW of Elie and 12½ E by N of Thornton Junction. Pop., with the NW suburb of Barnyards, (1881) 350, (1891) 345.

The parish, containing also the villages or hamlets of COLINSBURGH, LARGOWARD, Williamsburgh, and Liberty, once comprehended the barony of St Monance and the parish of Elie. In 1891 the Boundary Commissioners transferred to it the Muircambus detached portion of the parish of Elie, containing 650 acres, but gave to Elie all the coast district of Kilconquhar south of the railway line and of the Cocklemill Burn. It is bounded NE by Cameron, E by Carubee and Abercrombie, S by Elie, W by Newburn and Largo, and NW by Ceres. Its utmost length, from NNW to SSE, is 7 miles; and its breadth varies between 3 furlongs and 2½ miles. The surface descends from Kincaig Hill gradually to the plain between the railway and Colinsburgh. Thence it rises again with gentle northward ascent to 300 feet near Balcarres, 500 at Kilbrackmont Craigs, 600 near Largoward, and 750 at DUNNICKIER LAW. Den or Cocklemill Burn, which runs across the southern portion of the parish in a south-westerly direction, and for some distance forms the southern boundary with Elie, is the principal streamlet; and Kilconquhar Loch, measuring 4 by 3 furlongs, is a beautiful fresh-water lake, wooded on three sides, and very deep in places. Swans haunt it still, as in the days of the Witch of Pittonweem, when—

'They tied her arms ahint her back,
And twisted them wi' a pin;
They took her to Kinneuchar Loch,
And threw the limmer in;
And a' the swans took to the hills,
Scared wi' the unhaely din.'

All the area S of the Reres and Kilbrackmont ravine is drained southward by a brook bearing various names, and terminating in Cocklemill Burn; and the area N of the ravine is drained into the basin of the Eden. The parish is rich in charming scenery of its own; and many vantage grounds command magnificent views over the basius of the Forth and Tay. Partly eruptive and partly carboniferous, the rocks exhibit juxtapositions and displacements highly interesting to geologists; and they include columnar basalt, sandstone, ironstone, shale, coal, and limestone, the two last of which have been long and largely worked. The soil is variously argillaceous loam, black loam, rich alluvium, and light, sharp, fertile, sandy earth. With the exception of some 700 acres of wood and plantation, the entire area is either under tillage or in a state of drained, enclosed, and improved pasture. Kilconquhar House, ¾ mile NE of the village and 1½ ESE of Colinsburgh, is the seat of David Bethune, 11th Earl of Lindsay (b. 1832; suc. 1894), who succeeded his kinsman, John Trotter Bethune, who, born in 1827, succeeded as second Baronet in 1851, and in 1878 established his claim to the titles of Lord Lindsay of Byres (cre. 1445), Earl of Lindsay (1633), Viscount of Garnock (1703), etc. The latter's father was created a Baronet in 1836. Balcarres, a mansion of singular interest, is noticed separately; and others are Cairnie, Charleton, Falfield, and Lathallan. Giving off a portion to the *quoad sacra* parish of Largoward, Kilconquhar is in the presbytery of St Andrews and synod of Fife; the living is worth £372, exclusive of manse. The parish church, on a knoll at the W end of the village, is a handsome Gothic edifice of 1820-21, with about 1000 sittings and a square tower 80 feet high. There is also a U.P. church at Colinsburgh; and two public schools—Colinsburgh and Kilconquhar—with respective accommodation for 176 and 144 children, have an average attendance of about 60 and 105, and grants of nearly £58 and £110. Valuation (1883) £17,267, 17s. 11d., (1893) £14,750, 4s. 6d. Pop. (1881) 2053, (1891) 1642, of whom 1500 were in the ecclesiastical parish.—*Ord. Sur.*, sh. 41, 1857.

Kilcoy, a hamlet in Killearn parish, SE Ross-shire, 8 miles WNW of Inverness. It has a cattle fair on the Monday in May after Amulree. The lands of Kilcoy, lying around the hamlet and along the Beauly Firth, were acquired in 1618 by Alexander Mackenzie, fourth son of the eleventh Baron of Kintail, and now belong to Colonel Burton Mackenzie. Kilcoy Castle was the birthplace of the distinguished Lieutenant-General Alex. Mackenzie Fraser of Inverallochy, who died in 1809. It was long in a ruinous condition, but was restored in 1891, and is now occupied by the proprietor. A cairn to the N of the castle is encompassed with circles of standing stones, and is one of the largest cairns in the N of Scotland. The new Black Isle section of the Highland railway, leaving the main line at Muir of Ord, passes through the lands of Kilcoy and close to the castle, near which occurs the first station on the section, that of Redcastle.—*Ord. Sur.*, sh. 83, 1881.

Kilcreggan, a coast village in Roseneath parish, Dumbartonshire, at the SE side of the entrance to Loch Long, directly opposite Gourock, $2\frac{3}{4}$ miles E of Strone, and $3\frac{1}{2}$ NW of Greenock. Named after an ancient chapel now extinct, and dating from 1840, it extends nearly 1 mile along the beach, and mainly consists of mansions, villas, and pretty cottages, commanding charming views along the Firth of Clyde. In general amenity, in the charm of retirement, and in advantages of communication and supplies, it competes with the other watering-places on the Clyde; and has a post office, with money order, savings bank, insurance, and telegraph departments, a steamboat pier, a plentiful water supply, a chapel of ease (1872), a U.P. church, a public school, and a temperance hotel. A public hall, erected by subscription for Cove and Kilcreggan, with recreation and reading rooms, was opened in 1893. It stands in close proximity to the U.P. church, on a site purchased from the Duke of Argyll, and consists of three principal parts—the hall, to the left; the tower, in the centre; and the entrance, to the right. The hall and recreation room are continuous, being divided by partitions which slide into recesses. The former is 50 feet by 34 feet; the latter, in front of the hall and facing the shore, is 24 by 24. The reading-room, with an open casement and stone balcony, is placed above the recreation-room, and is 24 feet by 15 feet. The general design is Old Scotch. The police burgh of Cove and Kilcreggan curves, from the W end of Kilcreggan proper, north-westward and northward, up to a point on Loch Long, $2\frac{1}{4}$ miles NE of Strone Point; and was constituted by adoption of part of the General Police and Improvement Act of 1862. Under the Burgh Police Act (1892) it is governed by a provost, 2 bailies, and 6 commissioners. Pop. (1871) 873, (1881) 816, (1891) 946.—*Ord. Sur.*, shs. 30, 29, 1866-73.

Kildalloig, a mansion in Campbeltown parish, Argyllshire, on the S horn of Campbeltown Bay, opposite Davarr island, and $3\frac{1}{4}$ miles ESE of the town. Its owner is Sir Norman Montgomery Abercromby Campbell, ninth Bart. since 1628 (b. 1846; suc. 1875).—*Ord. Sur.*, sh. 12, 1872.

Kildalton, a parish in Islay district, Argyllshire. It comprises the south-eastern part of Islay island; is bounded on the NW by Killarrow and Kilmeny; includes Texa, Cavrach, and Inersay islets, the Ardelister islands, and the islets off Ardmore Point; and contains the village of Port Ellen, with a post, money order, and telegraph office. Its utmost length, from NNE to SSW, is 18 miles; its utmost breadth is 8 miles; and its area is 48,374 acres, of which $662\frac{1}{2}$ are foreshore and 5594 water. The coasts and the interior have alike been described in our article on ISLAY. The extent of land under cultivation bears but a small proportion to what is waste and reclaimable. A great many acres in the NE are under brushwood, and a good many acres are under flourishing plantations. A principal modern building is a handsome light monumental tower, 80 feet high, erected to the memory of Mrs Campbell of Islay; and the chief antiquities are remains of two Scandinavian forts, of the last Islay stronghold of the Macdonalds, and of four pre-Reformation chapels. Kildalton,

the principal residence, is 5 miles NE of Port Ellen. Divided ecclesiastically into Kildalton proper and Oa, this parish is in the presbytery of Islay and Jura and synod of Argyll; the living is worth £256. The parish church, near Ardmore Point, was built in 1777. There is a Free church of Kildalton; and five public schools—Ardbeg, Glenegidale, Kintour, Oa, and Port Ellen—with respective accommodation for 92, 63, 40, 72, and 294 children, have an average attendance of about 70, 20, 25, 29, and 160, and grants of over £80, £35, £40, £36, and £230. Pop. (1881) 2271, (1891) 2027, of whom 1778 were Gaelic-speaking, and 1817 were in Kildalton ecclesiastical parish.

Kildary, a hamlet in Kilmuir-Easter parish, in the county of Ross and Cromarty, on the right bank of the Balnagown, with a station on the Dingwall and Tain section of the Highland railway, $5\frac{1}{4}$ miles NE of Invergordon. It has fairs for live stock on the Tuesday before the third Thursday of July, and on the Tuesday of each of the other eleven months before Beauly. Near it is Kildary House, which is very beautifully situated. The Balnagown here is crossed by an elegant railway viaduct of 50 feet in span, with a 14-feet archway at the N end.—*Ord. Sur.*, sh. 94, 1878.

Kildonan (Gael. 'church of St Donnan'), a parish of E Sutherland, containing the coast village of HELMSDALE, with a station on the Sutherland and Caithness section of the Highland railway, 46 miles SSW of Georgemas Junction, $82\frac{1}{2}$ NNE of Dingwall, and $101\frac{1}{4}$ NNE of Inverness. Containing also the stations and post offices of Kildonan and Kinbrace, $9\frac{1}{2}$ miles WNW and $16\frac{1}{2}$ NW of Helmsdale, it is bounded W and N by Farr, E by Halkirk and Latheron in Caithness, SE by the German Ocean, S by Loth, and SW by Clyne. Its utmost length, from NW to SE, is $25\frac{1}{2}$ miles; its width varies between $4\frac{1}{2}$ and $14\frac{1}{2}$ miles; and its area is 210 square miles or $138,642\frac{3}{4}$ acres, of which 169 are foreshore and $3922\frac{3}{4}$ water. The coast, $4\frac{1}{2}$ miles in extent, is an almost unbroken line of rock or rough gravel, precipitous only towards the NE, where it rises rapidly to 652 feet at the ORD of CAITHNESS. On or near to the western border, at an altitude of 392 feet, is a chain of three lakes—Loch nan Cuinne (3 miles \times $\frac{3}{4}$ mile), Loch a' Chlair ($1\frac{1}{2}$ \times 1 mile), and Loch Baddanloch ($1\frac{1}{2}$ mile \times 7 furl.), out of which the Allt Achnaha flows $4\frac{1}{2}$ miles east-south-eastward, through Loch-na-Moine (7 \times 3 furl.; 377 feet), till it falls into the river Helmsdale at a point $1\frac{1}{4}$ mile SSW of Kinbrace station, and 330 feet above sea-level. The Helmsdale itself is formed by the confluence of two head-streams, of which the Allt Airidh-dbamh runs $6\frac{1}{2}$ miles south-south-eastward out of Loch Leum a' Chlamhain ($1\frac{1}{2}$ \times $\frac{1}{2}$ mile; 770 feet), and through Loch Araich-lin ($6\frac{1}{2}$ \times $2\frac{1}{2}$ furl.; 451 feet), whilst the other flows $2\frac{1}{2}$ miles south-westward out of Loch an Ruathair ($1\frac{1}{2}$ \times $\frac{3}{4}$ mile; 415 feet). From the confluence of these two streams, at a point 3 furlongs N by W of Kinbrace station and 362 feet above sea-level, the Helmsdale or Ilie (Ptolemy's *Ila*) flows $20\frac{3}{4}$ miles south-eastward along the Strath of Kildonan, till it falls into the sea at Helmsdale village. 'The Helmsdale,' writes Mr Archibald Young, 'and the numerous lochs connected with its basin, afford perhaps the best trout angling in Scotland. The spring salmon fishing is excellent. Among the lochs, Loch Leum a' Chlamhain, Baddanloch, and Loch an Ruathair afford the best angling. In these three lochs the writer and two friends in five days killed with the fly 600 trout, weighing over 400 lbs. The best day's sport was got in Loch Leum a' Chlamhain, at the foot of Ben Griam Mhor, whose summit commands one of the finest views in Sutherland; the eye, on a clear day, sweeping over the counties of Caithness and Sutherland, the Pentland Firth, and the Orkney Islands' (pp. 32-34, *Angler's and Sketcher's Guide to Sutherland*, 1880). The surface mainly consists of pastoral or moorish uplands, chief elevations to the NE of the Helmsdale and the Baddanloch chain of lakes, as one goes up the strath, being Creag an Oir-airidh (1324 feet), *Creag Scalabsdale (1819), Beinn Dubhain (1365), Auchintoul Hill (1135),

the *Knockfin Heights (1442), *BEN GRAM Bheag (1903), and Ben Gram Mhor (1936); to the SW, Eldrable Hill (1338), *Beinn na Meilich (1940), *Beinn na h-Urrachd (2046), Creag nam Fiadh (1273), and the *northern shoulder (2250) of BEN AN ARMUINN, where asterisks mark those summits that culminate on the confines of the parish. The predominant rocks are granite, syenite, gneiss, mica-slate, and porphyry. In 1868-69 the discovery of gold in the drift of the river Helmsdale 'created great commotion in the north of Scotland. The intelligence of the discovery spread at telegraphic speed all over the country; and thousands of people, from every part of the kingdom, flocked to the newly-found gold-field. A "city of tents" was erected in the centre of the auriferous district; "claims" were allotted, and "cradles" mounted; and digging was commenced with much enthusiasm. At the outset a fair return was obtained, but it soon began to fail; and, having become unremunerative, the Duke of Sutherland closed the "claims," and dispersed the diggers. The total value of the gold found was about £6000.' Round Helmsdale the soil is light but fertile, whilst up the Strath of Kildonan there are several small haughs of similar soil, with rather less sand, which yield good crops of oats and turnips. The soil on the higher banks along this strath consists of reddish gritty sand and peat-earth, in which are embedded numerous detached pieces of granite or pudding-stone. The bulk of the agricultural population was displaced by the introduction of sheep-farming between 1811 and 1831, but it was mainly removed to the coast district, which then belonged to Loth parish; and, by the annexation of that district to Kildonan prior to 1851, the balance of population for Kildonan parish was more than restored. The late Duke of Sutherland reclaimed 1300 acres of moor near Kiubrace station, with the steam-plough and other machinery expressly adapted to the work, at a cost of from £15 to £20 per acre, the object being to provide winter feed for sheep. The scheme proved highly successful, inasmuch as 'the sheep from this newly-reclaimed land are the best Scotch mutton in the market, and fetch a price not touched by any others, viz. 8½d. per lb.' (pp. 40-47, *Trans. Highl. and Ag. Soc.*, 1880). Ancient tumuli are numerous; and remains of circular or Pictish towers are in several places. The Duke of Sutherland owns more than six-sevenths of the entire property. Kildonan is in the presbytery of Dornoch and synod of Sutherland and Caithness; the living is worth £206. The old parish church, near Kildonan station, was dedicated to that St Donnan who has been noticed under Erce, and belonged in pre-Reformation days to the abbots of Scone. The present church, at Helmsdale village, is a large and substantial edifice of 1841. There are also Free churches of Helmsdale and Kildonan; and three public schools—Helmsdale, Kildonan, and Kinbrace—with respective accommodation for 374, 29, and 34 children, have an average attendance of about 210, 20, and 25, and grants of about £265, £30, and £40. Pop. (1801) 1440, (1831) 237, (1861) 2132, (1891) 1828, of whom 896 were Gaelic-speaking.—*Ord. Sur.*, shs. 103, 109, 1878.

Kildonan, a village in the NW of the Isle of Skye, Inverness-shire. Its post-town is Arnistror, under Portree.

Kildonan, an estate, with a mansion, in Colmonell parish, Ayrshire, ¾ mile NW of Barrhill station, on the Girvan and Portpatrick branch of the Glasgow and South-Western railway.

Kildonan Castle, an old square tower at the south-eastern extremity of Arran island, Buteshire, on a precipitous sea-cliff nearly opposite Pladda island, and 10½ miles S of Lamlash. Occupying the site of a Dalriadan fortalice, it was originally the residence of a branch of the Clan Macdonald, but it seems to have served mainly as one of a line of watch-towers, extending along the coast of the Firth of Clyde. A largish plain lies around the cliff on which it stands, and is called Kildonan Plain; and here are a post office, a lifeboat, coastguard and Lloyd's signal stations, a mansion, and a stone circle.—*Ord. Sur.*, sh. 13, 1870.

Kildrummy, a hamlet and a parish of W central Aberdeenshire. The hamlet, near the Don's left bank, is 10 miles W by N of Alford station, on the Kintore and Alford section of the Great North of Scotland railway, and 6½ SSW of Rhynie; it has a branch of the Town and County Bank, and an inn, whilst near it is Mossat post office under Aberdeen.

The parish is bounded N by Rhynie, NE by Auchindoir, E by Tullynessle, SE by Leochel-Cushnie, S and SW by Towie, and W by Cabrach in Banffshire. With an irregular outline, deeply indented by Auchindoir and Kearn, it has an utmost length from WNW to ESE of 7½ miles, an utmost breadth of 5½ miles, and an area of 10,396 acres, of which 44½ are water. The DON winds 1½ mile north-north-westward along the boundary with Towie, 2¼ miles through the interior, and 1½ mile along the Auchindoir border, which higher up is traced by the Don's tributary, Mossat Burn; and head-streams of the Water of BOGIE rise and run in the NW. Where the Don quits the parish, the surface declines to 560 feet above sea-level, thence rising southward to 747 feet at wooded Coillebharr Hill, westward and north-westward to 1500 at Broom Hill, 2368 at the BUCK OF CABRACH, and 1611 at Clova Hill. Granite rocks, and rocks akin thereto, predominate in the uplands; whilst sandstone of very fine quality is in the low district. The soil on the hills affords excellent pasture; and that in the valleys is mostly a rich deep gravelly loam, reputed to be among the most fertile in the county. A variety of oat called the Kildrummy oat, with a thin light character and abundance of straw, ripens about a week earlier than other approved varieties of oat, and is very suitable to high situations, having long been diffused and appreciated throughout many parts of Scotland. A considerable extent of natural birch wood overhangs a burn that flows to the Don, and a fair amount of plantations occupies other ground. Kildrummy Castle, 1½ mile SW of the village, crowns a rocky eminence flanked by two ravines, and covers an area of 1 acre, with outworks occupying fully 2 more. Surrounded by an assemblage of knolls whose intersecting glens and hollows are overhung on every side by lofty uplands, it once was a seat of the kings of Scotland, and in 1306 was besieged and captured by Edward I. of England. Early in the 14th century it passed to the Lords Erskine, Earls of Mar; served then as the administrative capital of both Mar and Garioch districts; and underwent dismantlement and much damage in the times of Cromwell's wars. A hatching-place of the rebellion of 1715, it was forfeited by John, Earl of Mar, in the following year, and since 1731 has belonged to the Gordons of WARDHOUSE. The original structure consisted of one great circular tower, said to have been built in the time of Alexander II., and to have risen to the height of 150 feet; later it comprised a system of seven towers, of different form and magnitude, with intermediate buildings, all arranged on an irregular pentagonal outline round an enclosed court. It retains, in the middle of one of its sides, large portions of a chapel, with a three-light E window, similar to that in Elgin cathedral; and is now an imposing ruin, one of the most interesting in the North of Scotland. Other antiquities are several 'eirde-houses.' The House of Clova, 1¼ mile W of Lumsden, and 6 miles SSW of Rhynie, is a large mansion, with finely wooded grounds; its owner is Hugh Gordon Lumsden, Esq. (b. 1850; suc. 1859). Another mansion is Kildrummy Cottage, Elizabethan in style. Kildrummy is in the presbytery of Alford and synod of Aberdeen; the living is worth £173. The church, at the village, is an ancient edifice, containing some 300 sittings; beneath its S aisle is a burial vault of the Mar family. Clova Roman Catholic church of Our Lady and St Muluog, ¾ mile from the mansion, is a building of 1880, designed by Mr Lumsden himself after the model of the ancient English churches. A public school, with accommodation for 130 children, has an average attendance of about 100, and a grant of nearly £96. Pop. (1881) 656, (1891) 569.—*Ord. Sur.*, sh. 76, 1874.

Kilearnadale and Kilchattan. See JURA.

Kilfinan, a village and a parish in Cowal district, Argyllshire. The village, standing $\frac{3}{4}$ mile inland from Kilfinan Bay, on the E side of Loch Fyne, which is here $4\frac{1}{2}$ miles wide, and $5\frac{3}{4}$ miles NNW of Tighnabruaich, has a post office under Greenock.

The parish, containing also the village of TIGHNABRUAICH, is bounded N by Stralachlan, NE by Kilmodan, E by Loch Riddon and the Kyles of Bute, S by the convergence of the Kyles of Bute and Kilbrannan Sound, and W and NW by Loch Fyne. Its utmost length, from N by W to S by E, is $14\frac{3}{4}$ miles; its utmost breadth, from E to W, is $5\frac{3}{4}$ miles; and its area is 33,763 acres, of which 1288 are foreshore and 174 water. The coast, with a total extent of $28\frac{1}{4}$ miles, terminates at the southern extremity in ARDLAMONT Point, and elsewhere is diversified by a number of smaller headlands and bays, including, particularly on its W side, Kilfinan, Auchalick, and Kilbride Bays. In some parts it is steep and rocky, in others sloping or gradually declivitous, and in others low and arable. The interior, for the most part, is very rugged, with numerous hills running N and S; but it is interspersed with arable vales and hollows, and the hills are not remarkable for either height or contour. The principal summits, from S to N, are Cnocan a' Chorra (414 feet), Cnoc na Carraig (680), Creag Mhor (869), Beinn Capull (1419), Beinn Bhreac (1488), Cruach Kilfinan (1068), Barr Ganuisg (507), Meall Reamhar (947), and Cruach nan Gearran (1230); and most of these command splendid views of the Kyles of Bute, the lower reaches of Loch Fyne, and the lower parts of Knapdale across to the Hebrides. The northern division of the parish is called Otter, from a singular sand-bank about 1800 yards long, that seems to be due to conflicting currents, and is nearly all bare during six hours of ebb spring tide. The southern is known as Kerriff or Kerry, signifying 'a quarter' or 'fourth-part;' and as it is by far the larger division, and contains the parish church, it often gives name to the entire parish. Loch na Melldalloch ($4 \times 1\frac{1}{2}$ furl.) and Loch Asgog (4×2 furl.) lie respectively 3 and 6 miles S by E of Kilfinan village, and both are well stored with trout. Mica slate is the prevailing rock, but trap occurs in two or three places, and limestone abounds in the N. The soil on low level tracts near the sea is mostly of fine light sharp character, on pretty extensive tracts farther inland is mossy, and elsewhere is very various. Barely one-twelfth of the entire area is in tillage, a very great extent is disposed in pasture, and a considerable aggregate is clothed with natural wood. Antiquities are remains of cairns, Caledonian stone circles, several dunes, and Lamont Castle. At Kames are large powder mills, but everything of an explosive nature is manufactured more than 2 miles from the shore, on the road which strikes across to Loch Fyne. The mansions are Ardlamont, Ardmarnock, Ballimore, and Otter, the first-named of which was brought into very prominent notice in 1893-94 in connection with a trial for murder—the victim being one of the occupants, a minor, and the accused his army tutor, both belonging to England—which resulted, however, in a verdict of 'not proven.' Kilfinan is in the presbytery of Dunoon and synod of Argyll; the living is worth £216. The parish church, at the village, was almost wholly rebuilt in 1759, and, with the exception of the outside walls, was entirely renovated and rearranged in 1882. It contains 200 sittings, and is a very neat and comfortable church. A *quoad sacra* church is at Tighnabruaich, a mission church is at Kilbride, and there are also Free churches of Kilfinan and Tighnabruaich. Five public schools—Ardlamont, Kilfinan, Millhouse, Otter, and Tighnabruaich—with respective accommodation for 36, 80, 136, 37, and 156 children, have an average attendance of about 30, 50, 95, 30, and 120, and grants of over £50, £73, £116, £48, and £148. Pop. (1881) 2153, (1891) 2074, of whom 1102 were Gaelic-speaking.—*Ord. Sur.*, sh. 29, 1873.

Kilfinichen and Kilvickeon, a parish in the Mull district of Argyllshire. Comprising the south-western

parts of Mull island, the inhabited islands of IONA, EARRAID, and INCHKENNETH, and several neighbouring uninhabited islets, it contains the villages of BONESSAN and Iona, each with a post office under Oban, and enjoys communication by means of the steamers sailing from Oban round Mull. It comprehends several of the numerous parishes into which Mull was anciently divided, and formed only a part of the one parish into which all that district was thrown at the Reformation, but was curtailed by the separate erection of Kilminian and Kilmore parish in 1688, and of Torosay parish about 1728, when it took the name of Kilfinichen and Kilvickeon, from two churches which stood on the central and southern parts of the coast of its Mull mainland section. It is naturally divided, in that section, into the north-eastern district of Brolass, the central district of Ardmeanach, and the south-western district of Ross; and, in consequence of the last of these districts being the most prominent of the three, the entire parish is often called Ross. It is bounded N and E by Torosay, and on all other sides by the Atlantic Ocean. The Burgh detached portion of the parish of Torosay, comprising 1307 acres, and situated on the north side of the entrance to Loch Scridain, was transferred by the Boundary Commissioners in 1891 to the parish of Kilfinichen and Kilvickeon, but a portion of that parish situated on the west shore of Loch Buy was in turn transferred to the parish of Torosay. The utmost length of the parish, from NE to SW, is 23 miles; its utmost breadth, exclusive of the islands, is 18 miles; and its area prior to 1891 was 62,730 acres, of which 2485 $\frac{3}{4}$ were foreshore and 302 $\frac{1}{2}$ water. The islands and all the prominent places and objects are noticed in separate articles; and the coasts, the surface, and the general features of the Mull mainland section are noticed in the article MULL. Loch-na-Keal, containing Inchkenneth island, forms nearly all the boundary with Kilminian and Kilmore parish; a line of mountain watershed forms the boundary with Torosay; a reach of hills, of no great height, forms the inner boundary of Brolass district; and Loch Scridain forms most of the boundary between Ardmeanach and Ross districts. BENMORE (3185 feet), the monarch mountain of Mull, lifts its summit on the boundary with Torosay; Gribon promontory, with lofty cliffs and receding trap terraces that rise to an altitude of 1621 feet, forms much of the coast and seaboard of Ardmeanach; the Ross of Mull projects 7 miles farther W than the most westerly point of Gribon, and terminates within 1 mile of Iona; ARDTUN headland, of grand basaltic character, projects from the Ross at the mouth of Loch Scridain; Inuimore headland, also grandly basaltic, and forming part of a magnificent reach of cliffs, is on the S coast of Ross district, 16 miles E of Iona; two most imposing and picturesque natural archways, called the CARSAIG Arches, are on the same coast further E; and Loch Buy, overhung at the head by the grand isolated mountain of Ben Buy (2352 feet), is on the sea-boundary with Torosay. Three lakes are in Ross—the largest of them not more than $1\frac{1}{2}$ mile in length and $\frac{1}{2}$ mile in breadth. Six rivulets are in Brolass and Ardmeanach, and, although brief in course, acquire such volume and velocity in times of rain as sometimes to be impassable. Numerous other torrents run either to these rivulets or to the ocean; and hundreds of streamlets rush or leap down the rocks of Burgh, Gribon, Inuimore, and Carsaig. Much of the land is barren mountain; the greater part is hilly, and fit at best for grazing; a comparatively small proportion is flat, and part of even that is moss or heath. The soil, throughout the arable tracts, is chiefly light and dry; and generally produces sufficient meal and potatoes for local consumption, sometimes even for exportation. Cattle grazing, sheep farming, and fishing are the chief employments. Antiquities are stauding stones, Scandinavian round towers, a small ruined church on Inchkenneth, the sketches on the walls of Unns Cave at the Ross of Mull, and the famous ruins and monuments of Iona. Mansions are Inchkenneth House, Inuimore Lodge, Pennycross, Pennyghael, Tavool, and Tiroran;

and the Duke of Argyll is chief proprietor. Divided ecclesiastically between Kilfinichen and Iona, this parish is in the presbytery of Mull and synod of Argyll; the living is worth £210. Kilvickeon parish church stands at Bonessan in Ross—Kilfinichen parish church on the Loch Scridain coast of Ardmearach, 10 miles ENE of Bonessan; both were built in 1804. Two other Established places of worship are within the parish; and they and the two churches are served, in certain rotation, partly by the parish minister and partly by a missionary. There is a Free church in Iona. Four public schools—Bonessan, Creich, Iona, and Pennyghael—with respective accommodation for 105, 124, 115, and 60 children, have an average attendance of about 60, 55, 75, and 25, and grants of over £70, £57, £105, and £60. Pop. of civil parish (1881) 1982, (1891) 1735, of whom 1558 were Gaelic-speaking; of ecclesiastical parish (1891) 1099.

Kilfinnan. See KILFINAN.

Kilgour, an ancient parish of Fife, now incorporated with Falkland. Its church, $2\frac{1}{2}$ miles W by N of Falkland town, was a building of 40 by 16 feet, with chancel; and its burying-ground continued to be used till the beginning of the 19th century. About 1825, however, the foundations of the church were dug up and removed to fill up drains, an ancient stone coffin was turned into a water-trough, and the graveyard was ploughed over.

Kilgrammie. See DAILLY.

Kilgraston, an estate, with a mausion, in Dunbarry parish, Perthshire, 1 mile SW of Bridge of Earn. Surrounded by a spacious wooded park, Kilgraston House, a Grecian edifice, with a fine collection of paintings, was destroyed by fire in April 1872; and, though insured for £14,000, involved a loss which that sum could not cover. The estate was purchased, shortly before his death in 1793, by John Grant, ex-chief-justice of Jamaica. The present proprietor is John Patrick Grant, Esq. Two members of this family were Sir Fraucis Grant (1803-78), president of the Royal Academy, and General Sir James Hope Grant, G.C.B. (1808-75), of Indian and Chinese celebrity.—*Ord. Sur.*, sh. 48, 1868.

Kilkerran, a mansion, with fine grounds, in Dailly parish, Ayrshire, 1 mile SE of Kilkerran station on the Maybole and Girvan section of the Glasgow and South-Western railway, this being $4\frac{1}{2}$ miles S of Maybole. Granted to his ancestor in the early part of the 14th century, Kilkerran now belongs to the Right Hon. Sir James Fergusson, K.C.M.G., C.I.E., G.C.S.I., sixth Bart. since 1703 (b. 1832; suc. 1849), who was Conservator M.P. for Ayrshire 1854-57 and 1859-68, under-secretary for India 1866-67 and for the Home Department 1867-68, governor of South Australia 1868-72, of New Zealand 1872-74, and of Bombay 1880-85; under-secretary for foreign department 1886, Postmaster-General 1891-92, and is now M.P. for North-East Manchester. The estate contains the remains of a strong castle.—*Ord. Sur.*, sh. 14, 1863.

Kilkerran. See CAMPBELTOWN.

Kilkivan, a pre-Reformation parish in Kintyre district, Argyllshire, now forming part of the parish of Campbeltown, and lying on the W side of Kintyre peninsula, $4\frac{1}{2}$ miles W of the town.

Kill, Ayrshire. See COYLE.

Killachonan, a village and a burh in Fortingall parish, NW Perthshire. The village stands at the mouth of the burn, 8 miles W of Kinloch-Rannoch; and the burn, rising on Beinn Bhoideach at an altitude of 2300 feet above sea-level, runs $5\frac{1}{2}$ miles south-by-westward to Loch Rannoch (668 feet), at a point $2\frac{1}{2}$ miles E of the loch's head.—*Ord. Sur.*, sh. 54, 1873.

Killallan, an ancient parish in the N centre of Renfrewshire, now incorporated with Houston. The two parishes inconveniently intersected each other, and were united in 1760. The name Killallan is a modification of Killfillan; and the church, St Fillan's, in a state of ruin, stands 2 miles NW of Houston village. Near it are a large hollowed stone and a spring of water, called Fillan's Seat and Fillan's Well.

Killarow, a parish in Islay district, Argyllshire,

comprising the central and northern parts of Islay island, and comprehending the ancient parishes of Killarrow and Kilmeny. Often called Bowmore, it contains the town of BOWMORE and the villages of BRIDGEND and PORTASKAIG, all three with a post, money order, and telegraph office. It is bounded N by the Atlantic Ocean, E by the Sound of Islay, S by Kildalton, and W by Loch Indal and Kilchoman. Its utmost length, from N to S, is 13 miles; its utmost breadth is $8\frac{1}{2}$ miles; and its area is 65,929 acres. The coasts, the interior, and the prominent features of the parish have all been noticed in our article on ISLAY. About three-sevenths of the entire area are regularly or occasionally in tillage; between 1000 and 2000 acres are under wood; and the rest is pastoral or waste. The chief antiquities are ruins of FINLAGAN Castle, Loch GUERM Castle, CLAIG Castle, and several Scandinavian strongholds. Islay House, near Bridgend, is now the property of the Morrison family. In the presbytery of Islay and Jura and synod of Argyll, this parish is ecclesiastically divided into Killarrow and Kilmeny, the former a living worth £174 with manse. The ancient parish church stood in the SW corner, a little S of Bowmore; the present one, in Bowmore, was built in 1767, enlarged in 1823, and had an organ introduced in 1890. There is a chapel of ease at Mulindry. There are also Free churches of Bowmore and Killarrow. Bowmore, Bunahabhain, Kiels, Kilmeny, Mulindry, and Newton of Kilmeny public schools, with respective accommodation for 210, 58, 98, 98, 61, and 144 children, have an average attendance of about 170, 25, 45, 60, 25, and 65, and grants amounting to about £225, £42, £58, £76, £47, and £88. Pop. (1881) 2756, (1891) 2660, of whom 2219 were Gaelic-speaking, and 1855 were in Killarrow, and 805 in Kilmeny.

Killcraggan. See KILCREGGAN.

Killean and Kilchenzie, a united parish on the W coast of Kintyre peninsula, Argyllshire, containing the hamlets or villages of Kilchenzie, 4 miles NW of Campbeltown, with a post office; Glenbarr, $3\frac{1}{2}$ miles N by W of Kilchenzie, with a post, money order, savings bank, and telegraph office; Killean, $5\frac{1}{2}$ miles N by E of Glenbarr; and Tayinloan, 7 furlongs N by E of Killean, with a post, money order, savings bank, and telegraph office, and an inn; fairs were formerly held on the Friday before the last Wednesday of May and the Wednesday after the last Thursday of July, but have long since been discontinued. Bounded N by Kilcalmonell, E by Saddell and Campbeltown, S by Campbeltown, and W by the Atlantic Ocean, it has an utmost length from N to S of $16\frac{1}{2}$ miles, a varying breadth of $2\frac{3}{4}$ and $6\frac{1}{2}$ miles, and an area of 42,742 acres, of which 441 are foreshore and 192 water. The coast-line, extending $18\frac{1}{2}$ miles south-by-westward from opposite Druimyeon Bay in Gigha island to a point $1\frac{1}{2}$ mile W by S of Kilchenzie hamlet, projects low Rhunahaorine Point and bolder Glenacardoch Point (102 feet), and is slightly indented by Beallochantay Bay and several lesser encurvatures. BARR Water, running $8\frac{1}{2}$ miles south-westward, is the chief of thirteen streams that flow to the Atlantic; and the largest of ten small lakes are Loch nan Canach ($3\frac{1}{2} \times 2$ furl.; 475 feet) in the S, and Loch an Fhraoich (4×1 furl.; 709 feet) in the N. A narrow strip of low alluvial land lies all along the coast, and from it the surface rises rapidly eastward, chief elevations from N to S being Narachau Hill (935 feet), Cnoc na Craoibhe (1103), Cnoc Odhar Auchaluskin (796), Cruach Mhic-an-t-Saoir (1195), Cruach Muasdale (655), *Beinn Bhreac (1398), *Meall Buidhe (1228), Cnoc Buidhe (1023), and *Ranachan Hill (706), where asterisks mark those summits that culminate on the eastern confines of the parish. The rocks are eruptive, metamorphic, or Devonian; and have been supposed to include carboniferous strata, containing coal. The soil of the lower tracts consists mainly of disintegrations and comminutions of the local rocks, and on the higher grounds is mostly moorish. Little more than a tenth of the entire area has ever been brought under tillage, nearly all the remainder being either pastoral or

waste. Antiquities, other than those noticed under DUNDONALD and GIANT'S FORT, are a number of barrows, hill forts, and standing stones. Killearn House, 1 mile S of Tayinloan, was, with exception of a handsome new wing, entirely destroyed by fire in 1875, but has been since restored; its owner is James Macalister Hall, Esq. of Tangy. Other mansions are GLENBARR Abbey, Glencreggan House, and LARGIE Castle. This parish is in the presbytery of Kintyre and synod of Argyll; the living is worth £208. The parish church, on the coast, 3 miles S by W of Tayinloan, was built in 1787. Near it is a handsome Free church (1846), with a tower; and at Beallochantuy, 2½ miles S by W of Glenbarr, is an Established mission church which was repaired in 1891. Five public schools—Beallochantuy, Glenbarr, Kilchenzie, Killearn, and Rhunahaorine,—with respective accommodation for 60, 76, 66, 72, and 78 children, have an average attendance of about 15, 45, 45, 40, and 45, and grants of about £30, £70, £75, £68, and £72. Pop. (1881) 1368, (1891) 1293, of whom 825 were Gaelic-speaking.—*Ord. Sur.*, shs. 20, 12, 1876-72.

Killearn, a village and a parish of SW Stirlingshire. The village, standing 270 feet above sea-level, by road is 3 miles SW of Balfron and 16½ NNW of Glasgow, whilst its station on the Blane Valley section of the North British is 7¾ miles SSW of Bucklyvie, 9½ NW of Lennoxton, and 21 NNW of Glasgow, under which there are post offices of Killearn and Killearn Station. The old station, formerly the terminus of the Blane Valley railway, is about 2 miles SSE of the village. The parish church, erected in 1880-81 at a cost of £8000, from designs by Mr John Bryce of Edinburgh, as a memorial to a daughter of the late Sir Archibald Orr Ewing, Bart. of Ballikrain, is a cruciform Early English edifice, with 600 sittings and a SE spire 100 feet high. The Free church was built soon after the Disruption; and the former parish church, of 1826, has been converted into a public-hall, with reading-room and library. An excellent water supply was introduced in 1881 from Duntreath property at the expense of Alexander Buchanan, Esq. The celebrated George Buchanan (1506-82) was born at the farmhouse of Moss, 1¾ mile SSW, which was taken down in 1808 to make room for a new and more elegant mansion; and in 1788 a well-proportioned obelisk, 19 feet square at the base and 103 feet high, was erected at the village in his honour. It has since been renovated and inclosed by iron railings. Pop. (1881) 356, (1891) 354.

The parish is bounded N by Balfron, E by Fintry, S by Strathblane and by New and Old Kilpatrick in Dumbartonshire, SW by Dumbarton, and W and N by Drymen. Its utmost length, from E to W, is 6½ miles; its breadth varies between 2½ and 7½ miles; and its area is 15,478 acres, of which 108 are water. ENDRICK Water meanders 10½ miles westward and southward along the Balfron and Drymen boundaries, and towards the close of this course forms a picturesque fall at the Pot of GARTNESS; and the BLANE winds 3 miles north-north-westward along the Strathblane border and through the interior, till it falls into the Endrick at a point 1½ mile WSW of Killearn village, a little above its mouth being joined by DUALT and CARNOCK Burns, the former of which makes one beautiful cascade of 60 feet. For 4 miles the parish is traversed from N to S by the Loch Katrine Aqueduct of the Glasgow Waterworks, which passes 3 furlongs E of the village. Perennial springs are copious and very numerous; at Ballewan is a mineral spring; and a triangular reservoir (6 × 3¾ furl.) lies on the Old Kilpatrick boundary. At the Endrick's and Blane's confluence, in the extreme W, the surface declines to 73 feet above sea-level, thence rising southward to 547 on Quinloch Muir and 1158 at Auchineden Hill, and east-south-eastward to 1781 on Clacherty-farlie Knowes and 1894 on Earl's Seat, the highest of the Lennox Hills, at the meeting-point with Campsie and Strathblane. The general landscape exhibits exquisite blendings of lowland and upland, of park and pasture, of wood and water; and both the valleys in

the lowlands, and the glens and ravines in the uplands, disclose some fine close scenery. The rocks of the hills are eruptive, those of the valleys Devonian. Sandstone has been quarried for building in several places; and one spot has yielded millstones of inferior quality. The soil of the arable lands is mainly loamy or argillaceous. A castle and a battlefield are noticed under BALGLASS and BLAIRISSAN. Killearn House, near the Carnock's confluence with the Blane, 1¾ mile WSW of the village, is an elegant edifice of 1816. Purchased in 1814, it is the property of the Blackburn family. Other mansions are BALLIKIRRAIN Castle, Ballikirrain House, MOSS HOUSE, CARRETH, and Boquhan. Killearn is in the presbytery of Dumbarton and synod of Glasgow and Ayr; the living is worth £150 and manse. A public school, with accommodation for 210 children, has an average attendance of about 110, and a grant of over £112. Valuation (1883) £16,013, 3s., (1893) £17,970. Pop. (1881) 1131, (1891) 1182.—*Ord. Sur.*, shs. 30, 38, 1866-71.

Killearnadale and Kilchattan. See JURA.

Killearnan, a parish, in the SE of the county of Ross and Cromarty, whose church stands on the northern shore of the Beaully Firth, 3¾ miles E by S of Muir of Ord station, and 6¾ WNW (*vide* Kessock Ferry) of Inverness, under which there is a post office of Killearnan. It is bounded S by the Beaully Firth, W by Urray, NW by Urquhart, and NE and E by Knockbain, a strip of which, 280 yards wide at the narrowest, till 1891 divided it into two unequal portions, the smaller of them to the NE. These two portions were united by the Boundary Commissioners in that year, by annexing to Killearnan the intervening portion of Knockbain. Gallowhill Wood (with Croft), which formerly lay partly also in Knockbain, was at the same time placed entirely in Killearnan. On the other hand, that part of Killearnan which lay east of the centre of the road leading from Allanglach past Artafallie to North Kessock was transferred to Knockbain; and the farm of Bellfield, which lay partly in both parishes, was placed wholly in Knockbain. The utmost length of the parish, from E to W, is 5 miles; and its breadth varies between 2½ and 4¼ miles. The shore-line, 5 miles long, is low, broken by no marked bay or headland; and the interior rises gradually to the summit of the Millbuie, attaining 351 feet near Ploverfield, 217 at the Free church, and 500 at the north-western boundary. Old Red sandstone is the prevailing rock, and has long been quarried; whilst clay abounds on the shore, and is used for mortar and for compost. The soil along the coast is sandy or clayish, and in the interior is so diversified as on one and the same farm to comprise gravel, light loam, red clay, and deep blue clay. General Mackenzie Fraser and General Sir George Elder were natives. Kilcoy and Redcastle, both noticed separately, are the chief estates. Killearnan is in the presbytery of Chanoury and synod of Ross; the living is worth £245. The parish church, which is a pre-Reformation structure, was restored in 1891. In 1892 a mural tablet was erected to the memory of the late Rev. John Kennedy. There is also a Free church at Killearnan and another (the Free West) at Knockbain. Two public schools, Killearnan and Tore, with respective accommodation for 180 and 59 children, have an average attendance of about 65 and 30, and grants of over £84 and £46. Pop. (1881) 1059, (1891) 951, of whom 666 were Gaelic-speaking.—*Ord. Sur.*, sh. 83, 1881.

Killellan. See KILLALLAN.

Killermont, an estate with a mansion in New Kilpatrick parish, Dumbartonshire. The mansion, on the right bank of the Kelvin, 1½ mile N of Maryhill and 4 miles NNW of Glasgow, is a large and elegant edifice, built partly about 1805, partly at earlier periods.—*Ord. Sur.*, sh. 30, 1866.

Killeter. See CADROSS.

Killiechassie, an estate with a mansion, in Weem parish, Perthshire, on the left bank of the river Tay, 1½ mile NNE of Aberfeldy. It was purchased from H. G. Gordon, Esq., in 1863, by Edward Octavius Douglas,

Esq. and is now held by his widow.—*Ord. Sur.*, sh. 55, 1869.

Killiechonan. See KILLACHONAN.

Killiecrankie, Pass of, a contraction of the valley of the GARRY on the western verge of Moulin parish, Perthshire, commencing near Killiecrankie or Aldgirnig station (3 miles ESE of Blair Athole), and descending $1\frac{1}{2}$ mile south-by-eastward to Garry Bridge (3 miles NNW of Pitlochry). With an elevation of between 400 and 300 feet, it is overhung on the E by BEN VRACKIE (2757 feet); and huge BEN-Y-GLOE (3671) rises conspicuously 8 miles NNE. Along its eastern slope, some way above the bed of the turbulent Garry, the smooth Great Highland Road, constructed by General Wade in 1732, ascends gently from the low country to the head of the defile; and between road and river the HIGHLAND RAILWAY (1863) goes, clinging to the rock, in easy gradients, with only a few yards of tunnel. 'White villas,' says Lord Macaulay, 'peep from the birch forest; and on a fine summer's day there is scarcely a turn of the Pass at which may not be seen some angler casting his fly on the foam of the river, some artist sketching a pinnacle of rock, or some party of pleasure banqueting on the turf in the fretwork of shade and sunshine. But in the days of William III., Killiecrankie was mentioned with horror by the peaceful and industrious inhabitants of the Perthshire lowlands. It was deemed the most perilous of all those dark ravines through which the marauders of the hills were wont to sally forth. The sound, so musical to modern ears, of the river brawling round the mossy rocks and among the smooth pebbles, the dark masses of crag and verdure worthy of the pencil of Wilson, the fantastic peaks bathed, at sunrise and sunset, with light rich as that which glows on the canvas of Claude, suggested to our ancestors thoughts of murderous ambushes and of bodies stripped, gashed, and abandoned to the birds of prey. The only path was narrow and rugged; a horse could with difficulty be led up; two men could hardly walk abreast; and, in some places, a traveller had great need of a steady eye and foot.' At the head of the Pass, near Killiecrankie station, on a diluvial plain of small extent, but level as a Dutch polder, was fought the celebrated battle of Killiecrankie, 27 July 1689. General Mackay, the leader of King William's forces, marched through the Pass on the morning of that day, at the head of 3000 infantry and nearly 1000 horse, and drew them up upon this level haugh. Early the same morning, Graham of Claverhouse, Viscount Dundee, had arrived at Blair Castle (the object of contention), with one little troop of cavalry and 2500 foot, including '300 new-raised, naked, undisciplined Irishmen.' Instead of descending right down to meet the foe, he went up Glentilt, fetched a compass round the Hill of Lude, and made his appearance in battle order on the hill-side about the position of Urrard House. Mackay immediately pushed forward his main body to a terrace midway between his antagonist and the haugh, forming them there in battle-line three deep, with his cavalry in the rear, and leaving his baggage in the Pass. The two armies observed each other in silence till past 7, when, the midsummer sun having touched the western heights, Dundee's army broke simultaneously into motion, and came on at a slow trot down the hill. The Highlanders, who had dropped their plaids and spurned away their socks of untaunted hide, and who resembled a body of wild savages more than a race of civilised men, advanced, according to their usual practice, with their bodies bent forward, so as to present the smallest possible surface to the fire of the enemy, the upper part of their bodies being covered by their targets. To discourage the Highlanders in their advance by keeping up a continual fire, Mackay had given instructions to his officers to commence firing by platoons, at the distance of a hundred paces; but this order was not attended to. The Highlanders having come close up, halted for a moment; then, having levelled and discharged their pistols, which did little execution, they set up a fearful yell, and rushed on the enemy sword in hand, before

they had time to screw their bayonets on to the end of their muskets. In two minutes the battle was lost and won. The shock was too impetuous to be long resisted by men who, according to their own general, 'behaved, with the exception of Hastings' and Leven's regiments, like the vilest cowards in nature.' But even had these men been brave, their courage would scarce have availed them, as their arms were insufficient to parry off the tremendous strokes of the axes and the broad and double-edged swords of the Highlanders, who, with a single blow, either felled their opponents to the earth or struck off a limb from their bodies. At the same time with this overthrow of Mackay's infantry, and immediately under his own eye, there occurred a crash on his artillery and cavalry. At this critical moment Mackay, who was instantly surrounded by a crowd of Highlanders, anxious to disentangle his cavalry, so as to enable him to get them forward, called aloud to them to follow him, and, putting spurs to his horse, galloped through the enemy; but, with the exception of one servant, whose horse was shot under him, not a single horseman attempted to follow. When he had gone far enough to be out of the reach of immediate danger, he turned round to observe the state of matters; and to his infinite surprise he found that both armies had disappeared. To use his own expression, 'in the twinkling of an eye, in a manner, our men, as well as the enemy, were out of sight, being got down pell-mell to the river, where our baggage stood.' 'All was over; and the mingled torrent of red-coats and tartans went raving down the valley to the gorge of Killiecrankie.' As Aytoun makes the victors say—

'Like a tempest down the ridges
Swept the hurricane of steel,
Rose the slogan of Macdonald,
Flash'd the broadsword of Lochiel!
Vainly sped the withering volley
'Mongst the foremost of our hand;
On we poured until we met them,
Foot to foot, and hand to hand.
Horse and man went down like driftwood,
When the floods are black at Yule;
And their carcases are whirling
In the Garry's deepest pool.
Horse and man went down before us;
Living foe there tarried none
On the field of Killiecrankie
When that stuhhorn fight was done.'

Mackay, with the remnants of Leven's and Hastings' regiments, hastened across the Garry, and, collecting as many fugitives as he could, led them precipitately over the hills, and succeeded, after a perilous retreat, in conducting about 400 to Stirling. But had not his baggage at the foot of the battle-field arrested the attention of most of the victors, had not the ground over which he retreated been impracticable for pursuing horsemen, he might have been able to bring away scarce one mau. If the importance of a victory is to be reckoned by the comparative numbers of the slain, and the brilliant achievements of the victors, the battle of Killiecrankie may well stand high in the list of military exploits. Considering the shortness of the combat, the loss on the side of Mackay was prodigious. No fewer than 2000 of his men were slain or captured, whilst Dundee's own loss was only 900. But as the importance of a victory, however splendid in itself, however distinguished by acts of individual prowess, can be appreciated only by its results, the battle of Killiecrankie, instead of forwarding King James's cause, was, by the death of Dundee, the precursor of that cause's ruin. 'At the beginning of the action he had taken his place in front of his little band of cavalry. He bade them follow him, and rode forward. But it seemed to be decreed that, on that day, the Lowland Scotch should in both armies appear to disadvantage. The horse hesitated. Dundee turned round, stood up in his stirrups, and, waving his hat, invited them to come on. As he lifted his arm, his cuirass rose, and exposed the lower part of his left side. A musket ball struck him; his horse sprang forward, and plunged into a cloud of smoke and dust, which hid from both armies the fall of the vic-

torious general. A person named Johnson was near him, and caught him as he sank down from the saddle. "How goes the day?" said Dundee. "Well for King James," answered Johnson; "but I am sorry for your Lordship." "If it is well for him," answered the dying man, "it matters the less for me." He never spoke again; but when, half an hour later, Lord Dunfermline and some other friends came to the spot, they thought they could still discern some faint remains of life. Wrapped in two plaids, his naked corpse was carried to Blair Castle; and in the Old Church of Blair, overshadowed by trees, they buried him.*—*Ord. Surv.*, sh. 55, 1869. See DUNKELD; pp. 197, 207, of Dorothy Wordsworth's *Tour in Scotland* (1874); pp. 32, 35, 40, 167, of the *Queen's Journal* (ed. 1877); chap. xiii. of Macaulay's *History of England* (1855); Mark Napier's *Life and Times of Claverhouse* (3 vols. 1859-62); vol. i., pp. 365-378, of John S. Keltie's *Scottish Highlands*; and vol. vii., pp. 371-385, of Dr Hill Burton's *History of Scotland* (ed. 1876).

Killin, a village and a parish in Breadalbane district, W Perthshire. The village stands on the peninsula between the confluent Dochart and Lochy, $\frac{3}{4}$ mile WSW of the head of Loch Tay, with a station on the Killin branch of the Callander and Oban railway, and 4 NNE of Killin junction, this being $53\frac{3}{8}$ miles W of Oban, 17 NNW of Callander, 33 NW by N of Stirling, and $70\frac{1}{4}$ NW of Edinburgh. Both far and near it is girt by magnificent scenery, and, though a small and straggling place, it possesses no little importance at once as a centre for tourists and as a seat of local and provincial trade. The rivers, flowing among rich green fields; the headlong advance of the Dochart over big black rocks; the silent gliding of the gentler Lochy; the slopes of surrounding hills, fringed here and there with wood; Glendochart and Glenloch, striking south-westward and west-north-westward in diversified grandeur; the monarch mountain of BEN LAWERS (4004 feet), 7 miles to the NE, appearing there to fill half the horizon; and the long expanse of Loch Tay ($14\frac{1}{2}$ miles \times $9\frac{1}{2}$ furl.; 355 feet), extending past that mountain, with its gorgeous flanks of woods and hills—all these combine to beautify the landscape. 'Killin,' wrote Dr McCulloch, 'is the most extraordinary collection of extraordinary scenery in Scotland—unlike everything else in the country, and perhaps on earth, and a perfect picture gallery in itself, since you cannot move three yards without meeting a new landscape. . . . Fir trees, rocks, torrents, mills, bridges, houses—these produce the great bulk of the middle landscape; under endless combinations; while the distances more constantly are found in the surrounding hills, in their varied woods, in the bright expanse of the lake, and the minute ornaments of the distant valley, in the rocks and bold summit of CRAIG-CHAILLIACH, and in the lofty vision of Ben Lawers, which towers like a huge giant in the clouds, the monarch of the scene.' A bridge of five unequal arches, across the Dochart, commands one of the best combinations of the views; and a grassy islet, studded with tall pines, immediately below that bridge, contains the burial-place of the Macnabs, once the potent chieftains of the surrounding country; whilst a neighbouring stone, about 2 feet high, is fabled to mark the grave of Fingal, which by some is supposed to have given the parish its name (Gael. *cill-Fhinn*, 'Fingal's burial-place'). Killin has a post office, with money order, savings bank, and telegraph departments, branches of the Bank of Scotland and the Union Bank, 2 hotels, a public library, a water supply (1874), angling and curling clubs, steamboat and coach communication with Kenmore and Aberfeldy, a tweed manufactory, wool and sheep-dip stores, and fairs on the third Tuesday of January, 5 and 12 May (or the Tuesday after, if on Saturday,

Sunday, or Monday), the Friday before first Wednesday of November, and on Tuesday after 11 November (also for hiring). In 1890 a monument was erected in the village square to the memory of the Rev James Stewart, the first translator of the New Testament into Gaelic. The parish church, built in 1744, was repaired and had a vestry added in 1890. Other places of worship are a Free church and an iron Episcopal church, St Fillan's (1876). Wordsworth and his sister Dorothy breakfasted at Killin on 5 Sept. 1804; and on 10 Sept. 1842 the Queen and Prince Albert were rowed from Taymouth Castle to Achmore (where is to be seen the largest vine in the world, a Black Hamburg, over 50 years old, covering 475 square yards of glass, and growing from a single stem), thence driving through Killin, Glenogle, and Upper Strathearn to Drummond Castle. At Killin, too, died the antiquary, Cosmo Innes (1798-1874). Pop. (1871) 513, (1881) 473, (1891) 589.

The parish, containing also the stations of LUIE, CRIANLARICH, and TYNDRUM, $5\frac{1}{2}$, 12, and $17\frac{1}{2}$ miles W of Killin junction, comprised till 1891 a main body and two detached sections. Of these sections, that at Ardeonaig (comprising 7247 acres) was transferred by the Boundary Commissioners to the parish of Kenmore, while that at Botourne was united with the main body by the annexation of the intervening Corrycharmaig detached part of Kenmore (comprising 6066 acres). There were further transferred to Killin from Kenmore the Daldravaig detached portion (containing 707 acres), and so much of the Kenknock detached portion as lay in the basin of the river Lochy. There was also transferred to Killin the detached portion of Weem parish lying in the basin of the river Lochy. From Weem likewise were transferred to Killin the detached parts at Bridge of Lochy and at Duncroisk (comprising respectively 191 and 3125 acres). The area of the entire parish is now about 100,000 acres. It is bounded W and NW by Kilmorich and Glenorchy in Argyllshire, N by Fortingall, E by Kenmore, SE by Comrie, S by Balquhidder, and SW by Arrochar in Dumbartonshire. Its utmost length, from E by N to W by S, is 28 miles; its width varies between 5 and 11 miles. The Callander and Oban section of the Caledonian railway enters the parish on the SE at Gleu Ogle, and giving off a branch (opened in 1886) north-eastward to Killin Pier, at the head of Loch Tay, runs westward throughout the whole extent of the parish. The West Highland railway enters the parish on the SW, runs north-eastward through Glenfalloch, and crossing the former railway at Crianlarich turns in a north-westerly direction, leaving the parish by the north-west border on its way to Fort-William. The FILLAN, rising at an altitude of 2980 feet, on the northern side of BENLOY, close to the Argyllshire border, winds $11\frac{1}{4}$ miles east-north-eastward and east-south-eastward along a glen called after it Strathfillan, till it falls into the head of Loch Dochart ($6 \times 1\frac{1}{4}$ furl.; 512 feet); and the DOCHART, issuing thence, flows $13\frac{1}{4}$ miles east-north-eastward to the head of Loch Tay (290 feet), in the first $\frac{1}{2}$ mile of its course expanding into Loch Tubhair ($1\frac{1}{4}$ mile \times $2\frac{1}{2}$ furl.), and $\frac{1}{2}$ mile above its mouth being joined by the LOCHY, which has its whole course now within the parish. Partly, however, the drainage belongs to the basin of the Clyde, since the FALLOCH, rising on BEN-A-CHROIN, close to the Balquhidder boundary, runs $8\frac{1}{2}$ miles north-by-westward, south-westward, and southward, till at Inverarnan it passes off into Dumbartonshire on its way to Loch Lomond. Of numerous smaller lakes scattered over the interior the largest are Lochan Lairig Eala ($3\frac{1}{2} \times 1\frac{1}{4}$ furl.; 950 feet) near Killin junction, and Loch Èssan ($3\frac{3}{8} \times 1\frac{1}{8}$ furl.; 1730 feet), $2\frac{1}{2}$ miles NNE of Crianlarich station. The surface everywhere is grandly mountainous, chief elevations, from E to W, to the left or N of the Dochart and the Fillan being CRAIGCHAILLIACH (2990 feet), Mid Hill (1977), Ben Dheiceach (3074), Creag Liuragan (1817), Ben Chaluum (3354), *Meall Glas (2547), *Ben nan Oighreag (2978), *Meall Ghaordie (3407), *Meall Taurnie (2580), *Creag Mhor (3305), *Ben Chaorach (2655), *BEN ODHAR (2948), *Ben Bheag (2149), *Ben Chuirn (2878),

* In 1794 the back part of a steel cap or morion, such as was worn by officers in 1689, was recovered by General Robertson of Lude, which, with other portions of rusty armour found in the possession of some cairds or tinkers, was suspected to have been abstracted from the grave of Dundee; and on investigation such was found to be the case. But the query suggests itself as to how Dundee's corpse came to be 'naked.'

*BENLOY (3708), and Ben a Chleibh (3008); to the right or S, Ben Leathan (2312), Creag Ghlas (1946), conical BENMORE (3843), *Am Binnein (3827), Grey Height (2139), *BEN-A-CHROIN (3101), Troisgeach (2395), Ben Oss (3374), Ben Dubh-chraige (3204), *Meall Sglinta (2250), *Meall an Freaan (2467), *Stob Creagach (2966), *Stob Garbh (3148), *Ben Chabhair (3053), and Meall nan Caorca (2368), where asterisks mark those summits that culminate on the confines of the parish.

Such is a bare outline of the general features of this great Highland parish, whose beauties, antiquities, and history are noticed more fully under DALRIGH, DOCHART, FILLAN, FINLARIG, GLENFALLOCH, GLENLOCHY, and other articles above referred to. Mica slate is the predominant rock, though this parish also abounds in talcose, chloritic, and hornblende rocks, and in greyish highly crystalline limestone. Lead ore has been worked at CLIFTON, near Tyndrum; cobalt is found in an ore, which yields also 60 oz. of silver per ton; a rich vein of sulphurate of iron occurs in Craighaillach; and specimens of rock crystal, amethystine quartz, smoke quartz, and some other rare minerals are found. The soil of the tracts incumbent upon limestone is generally light and dry, but in the bottoms of Glenloch, Glendochart, and Strathfillan is wet and marshy. About one thirty-fifth of the entire area is in tillage; some 1100 acres are under wood, and all the rest of the land is either pastoral or waste. Mansions are Auchlyne House, Lochdochart Lodge, and Glenfalloch House; and the Earl of Breadalbane is much the largest proprietor. Killin is in the presbytery of Weem and synod of Perth and Stirling; the living is worth £318. There is a Free church of Strathfillan; and four public schools—Criarlarich, Glendochart, Killin, and Strathfillan—with respective accommodation for 51, 43, 177, and 50 children, have an average attendance of about 20, 25, 120, and 50, and grants of over £30, £36, £122, and £62. Valuation (1883) £12,215, 15s. 5d., (1893) £11,813. Pop. (1881) 1277, (1891) 2402, of whom 1150 were Gaelic-speaking.—*Ord. Sur.*, shs. 46, 47, 1872-69.

Killin, Culen, or Loch a Chuilinn, an expansion of the river Bran, central Ross-shire, $1\frac{1}{2}$ mile E of Auchanult station, on the Dingwall and Skye section of the Highland railway. Lying 360 feet above sea-level, it has an utmost length and breadth of $1\frac{1}{2}$ mile and $1\frac{1}{2}$ furlong, contains trout and pike, and is largely invaded by moss.—*Ord. Sur.*, shs. 82, 83, 1882-81.

Killisport, Loch. See CAOLISPORT.

Killochan Castle, a 16th century mansion, near the SW border of Dailly parish, Ayrshire, and the right bank of the Water of Girvan, 3 furlongs ESE of Killochan station on the Maybole and Girvan section of the Glasgow and South-Western railway, this being $2\frac{1}{2}$ miles NE of Girvan. It is the Scottish seat of Sir Reginald Archibald Edward Cathcart, sixth Bart. since 1703 (b. 1838; suc. 1878).—*Ord. Sur.*, sh. 8, 1863.

Killoch Burn. See GLENKILLOCK.

Killoe Water. See KELLO.

Killoran or Colonsay House. See COLONSAY.

Killundine, an old castle in Morvern parish, Argyllshire, on the NE shore of the Sound of Mull, $3\frac{1}{2}$ miles NNE of Aros Castle. Used as a hunting-lodge by the feudal occupants of Aros Castle, it still is sometimes called Caisteal-nan-Coin, signifying 'the Castle of Dogs.'

Killyhounan. See KILLACHONAN.

Killywhan, a station at the NE border of Kirkcubrightshire, on the Dumfries and Castle-Douglas section of the Glasgow and South-Western railway, $8\frac{1}{2}$ miles SW of Dumfries.

Kilmacolm. See KILMACOLM.

Kilmadan. See KILMODAN.

Kilmadock, a parish of S Perthshire, containing the post-town and station of DOUNE, with the villages of Euchany, Deanston, and Drumvaich. The south-western portion of the parish till 1891 separated the Thornhill section of Kincardine parish from the main section. With a view to remedy this the Boundary Commissioners in that year effected an exchange of territory between the two parishes. Part of the detached section and part

of the main portion of Kincardine were given to Kilmadock, and the remainder of the detached part was united to the main portion of Kincardine by the annexation to Kincardine of the small part of Kilmadock left intervening. It is bounded N by Muthill, E by Dunblane, SE by Lecroft, S by Kincardine, SW by Port of Monteith, and NW by Callander. Its utmost length, from N by E to S by W, is 8 miles; its breadth varies between 3 and $9\frac{1}{2}$ miles. GOODIE Water, its affluent, bounds and traverses for some miles the SW portion of the parish. The arrowy Teith flows $8\frac{3}{4}$ miles east-south-eastward, partly along the Callander and Kincardine boundaries, but chiefly across the middle of the parish; KELTIE Water runs $2\frac{1}{2}$ miles southward to it along the western border; and Ardoch Burn, issuing from Loch Mahaick or Maghaig ($\frac{2}{3} \times \frac{1}{2}$ mile; 750 feet), runs $1\frac{1}{2}$ mile eastward, and, after a detour into Dunblane, $2\frac{1}{2}$ miles west-by-southward, till it falls near Doune town into the Teith, another of whose tributaries, ANNET Burn, has a southerly course of $6\frac{1}{2}$ miles, and forms a number of pretty waterfalls. The Teith itself, with the frequent rapids of its rocky channel, the configuration and embellishment of its banks, and its artificial cascades in connection with Deanston Works, exhibits a wealth of loveliness. Springs are numerous and good; and one in the side of Uamh Mhor, on the northern border, leaps out from the solid rock like a jet or spout. Along the Teith the surface declines to 46 feet above sea-level; and the highest point in Kilmadock S of the Teith is the Brae of Boquhapple (422 feet), near Thornhill. The northern district is far more hilly, its heathery Braes of Doune rising up and up till they attain 500 feet at $1\frac{1}{2}$ mile from the Teith, 1000 at $3\frac{1}{2}$ miles, and 2179 at Uamh Bheag on the northern boundary, whose neighbour Uamh Mhor or 'Uamvar' (Gael. 'great cave') commands a magnificent view, and is pierced on the Kilmadock side with a large rocky cavern, the haunt of robbers down to the middle of the 18th century. Eruptive rocks predominate in the hills, Devonian rocks in the valleys; and the soil is extremely various, ranging from rich alluvium to barren moor. The low tracts are nearly all in high cultivation, and the uplands are mostly pastoral or waste. The parish has been rendered famous in the annals of agriculture through James Smith of Deanston (1789-1850), who here in 1823 introduced his system of thorough draining and deep ploughing. Under Doune are noticed the chief antiquities, its castle and the Bridge of Teith. Mansions are Lanrick Castle, Doune Lodge, Cambusmore, Inverardoch, Deanston House, Argaty, Coldoch, and Gartincaber, of which the first four have separate articles. The last, Gartincaber, $2\frac{1}{2}$ miles E of Thornhill, is partly modern, the seat of John Burn-Murdoch, Esq. (b. 1821; suc. 1871). Giving off since 1877 a portion to Norriston *quoad sacra* parish, Kilmadock is in the presbytery of Dunblane and synod of Perth and Stirling; the living is worth £326. The ancient parish church, St Madoe's, stood till 1744 at the old hamlet of Kilmadock; and, whilst itself belonging to Inchmahome Priory, had six dependent chapels. The present parish church and four other places of worship are noticed under DOUNE. Three public schools—Kilmadock, Deanston Works, and Drumvaich—with respective accommodation for 247, 204, and 40 children, have an average attendance of about 150, 145, and 30, and grants amounting to nearly £130, £128, and £36. Valuation (1883) £23,194, (1893) £21,314. Pop. (1881) 3012, (1891) 2760, of whom 2593 were in the ecclesiastical parish.—*Ord. Sur.*, sh. 39, 1869.

Kilmahew, a fine modern Scottish Baronial mansion in Cardross parish, Dumbartonshire, 1 mile N by E of Cardross station, on the Glasgow and Helmsburgh section of the North British railway. It belongs to the same proprietor as CUMBERNAULD HOUSE, James Burns, Esq., in 1859 having bought the estate, which had been held by the Napiers from the close of the 13th till the early part of the 19th century. Near the modern mansion, overlooking the Glen of Kilmahew, stands their ruined castle, with this legend over its doorway—'The blessing of God be herein.'—*Ord. Sur.*, sh. 30, 1866.

Kilmahog, a village in Callander parish, Perthshire, on the northern head-stream of the river Teith, $\frac{3}{4}$ mile SE of the Pass of Leny and 1 W by N of Callander town. It once had a chapel, dedicated to St Chug. The Leny is here crossed by Kilmahog bridge, to the left of which is the old burying-ground of Kilmahog, whose entrance is a Gothic archway containing a pierced belfry, in which is hung an interesting bell, close on 300 years old, and originally the bell of Inchmahome abbey.

Kilmacolm, a village and a parish in the Lower Ward of Renfrewshire. The village stands, 350 feet above sea-level, near the E border of the parish; and has a station on the Greenock and Ayrshire branch of the Glasgow and South-Western railway, 4 miles SE of Port Glasgow, $7\frac{1}{2}$ ESE of Greenock, and 15 WNW of Glasgow. It took its name, notwithstanding the modern spelling, from the dedication of its ancient church to St Columba—Kil (cell) ma (my—fondly) colm (from the saint's baptismal name Colum, Latinized into Columba) meaning 'church or cell of my Colm.' A similar building up of a name is seen in Kilmarnock, 'church of my Ronock' (diminutive for St Ronan). Its sheltered situation and the salubrity of its climate have led to a great extension during the last twenty years; and now it has a large number of tasteful villas, a post office under Paisley, with money order, savings bank, and telegraph departments, a branch of the Royal Bank, a good hotel, a large hydropathic establishment (1880), a gaswork, and water-works, formed in 1878 at a cost of nearly £5000, with a reservoir holding 1,500,000 gallons, and fed from Blacketty Burn. There is a public reading-room and a public park, both of which were presented to the village by Mr Birkmyre, and an excellent golf-course. The parish church is a handsome edifice of 1833 (repaired in 1886), with a tower, and adjoins the aisle of a previous church, containing the tomb of the Earls of Glencairn, to the memory of whom a brass tablet memorial was erected in 1892 by their descendant, R. B. Cunningham-Graham of Gartmore. In 1890 the ruined chancel of the original parish church, which probably dated from the 12th century, was restored to serve as a vestry. There are a Free and a U.P. church. Pop. (1871) 395, (1881) 1170, (1891) 1634.

The parish is bounded N by Port Glasgow and the Firth of Clyde, E by Erskine and Houston, SE by Kilbarchan, S by Lochwinnoch, SW by Largs in Ayrshire, and W by Innerkip and Greenock. Its utmost length, from NE to SW, is $6\frac{1}{2}$ miles; its breadth, from E to W, varies between 2 and $7\frac{1}{2}$ miles; and its area is 20,405 $\frac{1}{2}$ acres, of which 263 $\frac{1}{2}$ are foreshore and 477 $\frac{1}{2}$ water. The coast-line, 2 $\frac{1}{2}$ miles in extent, is fringed by the low platform of the Firth's ancient sea-margin, and backed by pleasant braes 300 to 648 feet high. GRYFE Water, issuing from Gryfe Reservoir on the Greenock border, flows south-eastward right across the parish; and by it, Green Water, and its other affluents, the interior has been so channelled as to offer a charming variety of gentle hill and vale, with loftier moss and moorland to the W and S. Sinking along the Gryfe in the extreme E to 180 feet above sea-level, the surface thence rises to 570 feet at Craiglunschoch, 853 at Hardridge Hill, and 1446 at Creuch Hill. The predominant rocks are eruptive; and the soil on the low grounds is mostly light and gravelly, on the higher is moorish or mossy. About a half of the entire area is in tillage, plantations cover some 125 acres, and the rest of the land is either pastoral or waste. Mansions, noticed separately, are Duchall, Finlaystone, Carruth, and Broadfield. Kilmacolm is in the presbytery of Greenock and synod of Glasgow and Ayr; the living is worth £535. Kilmacolm and West Syde public schools, with respective accommodation for 632 and 67 children, have an average attendance of over 270 and 25, and grants of about £310 and £30. Pop. (1881) 2708, (1891) 3649.—*Ord. Surv.*, sh. 30, 1866. See Matthew Gemmill's *Kilmacolm, Past and Present*.

Kilmallie, a Lochaber parish of Inverness and Argyll shires, the largest parish in Scotland. By the extension of the Inverness-shire boundary southward to Loch Eil, and the corresponding contraction of that of Argyllshire,

by the Order of the Boundary Commissioners in 1891, so much of the Argyllshire part of the parish as lay north of Loch Eil was transferred to Inverness-shire. The parish thus remains still in both counties, but the Commissioners expressed the opinion that the portion of Kilmallie remaining in Argyllshire might suitably be formed at some future time into an independent civil parish. A part of the Inverness-shire portion of Kilmallie, situated on Loch Linnhe between the river Lochy and the river Ness, was separated from the remainder by a portion of the Inverness parish of Kilmonivaig. This intervening portion was at the same time transferred to Kilmallie. The Argyllshire parish of Lismore and Appin had a detached part (comprising 22,730 acres) on the north shore of Loch Linnhe, at Kingairloch. This also was transferred to Kilmallie, to the Argyllshire portion. Kilmallie contains the burgh of Fort WILLIAM, and the hamlets of North BALLACHULISH, BANAVIE, CORPAON, and ONICH in its Inverness-shire section, and of ARDGOUR, BLAICH, CLOVULIN, DUISKY, and GARVAN in that of Argyllshire. Bounded W by Ardnamurchan and Glenelg, N and E by Kilmonivaig, S by Lismore and Appin, and SW by Morvern, it has an extreme length from N by E to S by W of 29 $\frac{1}{2}$ miles, a varying width of 2 $\frac{1}{2}$ and 30 $\frac{1}{2}$ miles, and an area (not including the addition from Kilmonivaig, for which no figures are given) of 306,731 acres, of which 8403 $\frac{1}{2}$ are water. The northern boundary is partly defined by the last 1 $\frac{1}{2}$ mile of Gairowan river, flowing to Loch Quoich; by Loch Quoich itself (5 $\frac{1}{2}$ miles \times $\frac{3}{4}$ mile; 555 feet); and by the first 3 $\frac{1}{2}$ miles of its effluent, the GARRY, on to the influx of the Kingie. The eastern, again, is partly defined by the lower 6 miles of Loch LOCHY (9 $\frac{1}{2}$ miles \times 1 to 9 $\frac{1}{2}$ furl.; 93 feet), and by its effluent, the river Lochy, winding 9 $\frac{1}{2}$ miles south-south-westward to the head of Loch Linnhe at Fort William; whilst all the southern boundary is traced by the Black Water or river Leven, flowing 13 $\frac{1}{2}$ miles westward, through a chain of four small lakes, to the head of salt-water Loch LEVEN and next by Loch Leven itself (11 $\frac{1}{2}$ miles \times $\frac{2}{3}$ furl. to 2 $\frac{1}{2}$ miles). To the Inverness-shire interior belongs fresh-water Loch ARCHAIG (12 miles \times $\frac{1}{2}$ mile; 140 feet), sending off the Archaig river 1 $\frac{1}{2}$ mile ESE to Loch Lochy; while to Inverness-shire and Argyllshire belong equal halves, N and S, of salt water Loch EIL (6 $\frac{1}{2}$ miles \times 7 $\frac{1}{2}$ furl.), communicating by the Narrows, 2 miles long and 1 furlong broad at the narrowest, with the head of Loch Linnhe. Loch LINNHE itself, with a varying width of 5 furlongs and 1 $\frac{1}{2}$ mile, strikes 9 $\frac{1}{2}$ miles south-westward to CORRAN Narrows (1 $\frac{1}{2}$ furl. wide); and thus far, often called Lower Loch Eil, it divides the Inverness-shire from the Argyllshire section of Kilmallie, the latter still fringing its western shore for 20 miles below Corran Ferry. The surface everywhere is grandly mountainous, chief elevations to the N of Loch Archaig being Meall Odhar (2971 feet), Scour Gairoch (3015), and Sgor Mor (3290); between Lochs Archaig and Eil, Beinn Bhan (2613), Meall Bhanabie (1071), Drumm Fada (2420), Gulvein (3224), and *Sgor Choileam (3164); to the S of Loch Eil, Stob Choire a' Chearcall (2527), Sgur na h-Eanchainne (2397), and *Sgur Dhomnuil, where asterisks mark those summits that culminate on the confines of the parish. To the E of Loch Linnhe rise huge *BEN NEVIS (4406), *Aonach Beag (4060), Binnein Mor (3700), Am Bodach (3382), Sgor a' Mhaim (3601), Stob Ban (3274), Mullach nan Coirean (3077), and Beinn na Cucaig (2017). Such is a bare outline of the general features of this vast Highland parish, which is larger than Edinburghshire and fifteen others of the thirty-three Scottish counties. Fuller details are furnished under ACHNACARRY, ARDGOUR, CALEDONIAN CANAL, CONA, FASSIFERN, GLENNEVIS, and other articles already alluded to. Gneiss and mica slate are the predominant rocks; but granite, syenite, porphyry, quartz, hornblende, and limestone are also common. Silurian rocks, too, occur. Fine-hued marble and roofing-slates have been quarried, the latter round North Ballachulish, where there are mountains of it; and several veins of lead ore, with a comparatively large proportion of zinc

and silver, are known to exist. The soil, along parts of the margins of the lochs and of the bottoms of the glens, is mostly light, shallow, and sandy or mossy; and on the braes and mountains is mostly moorish. Not 1 acre in 300 is cultivated or capable of cultivation; but woods and plantations must cover a very large aggregate area, the old Loch Archaig native pine forest being from 8 to 9 miles in length. Giving off the *quoad sacra* parishes of DUNCANBURGH and BALLACHULISH, Kilmallie is in the presbytery of Abertarf and synod of Argyll; the living is worth £265. The districts of Ardgour and Kilmonivaig were erected into a separate ecclesiastical parish in 1894. The parish church of Kilmallie was built in 1783 and renovated in 1890, when a stained-glass window to the memory of the late Rev. Dr Clerk was inserted. Its ancient predecessor was dedicated to some Celtic saint, whose name is not preserved in any calendar; for the rendering of *Kilmallie* by 'church of Mary' is wholly inadmissible. In the churchyard there stand the ruins of one of the seven churches built by Lochiel about 1460. There is a Free church at Corpach; and other places of worship are noticed under FORT WILLIAM and BALLACHULISH. Nine public schools—Achnacarry, Ardour, Banavie, Duisky, Fort William, Kingairloch, Kinlochiel, Onich, and Trieslaig—North Ballachulish Episcopal, and Fort William Roman Catholic schools, with total accommodation for 844 children, have an average attendance of about 440, and grants amounting to over £690. Pop. (1881) 4157, (1891) 4312, of whom 3193 were Gaelic-speaking, 3623 were in Invernesshire, and 1306 belonged to Kilmallie ecclesiastical parish.—*Ord. Sur.*, shs. 53, 62, 54, 1873-77.

Kilmaluag, an ancient parish in Argyllshire, nearly identical with the present parish of Lismore and Appin. It was named from a St Malocus, said by some to have lived in the 7th century, by others more probably about the year 1160; and it contains, near Portmaluag, some traces of what are alleged to have been its original church.

Kilmarnock, a village and a parish of N Fife. The village stands 2½ miles S of the Firth of Tay and 5½ N by E of Cupar, under which it has a post office.

The parish, containing also Rathillet village, is bounded N by Balmerino and Forgan, SE by Logie, S by Dairsie and Cupar, SW by Monezie, and W by Creich. Its utmost length, from ENE to WSW, is 5½ miles; its breadth varies between 3½ furlongs and 3⅔ miles; and its area is 5343 acres. In outline it is narrow in the NE and broad in the SW. The drainage is carried eastward by Motray Water to the Eden; and the surface, sinking in the extreme NE to less than 100 feet above sea-level, thence rises westward and south-westward to 439 feet at Long Hill, 348 at Round Hill, 404 at North Hill, 493 at Daclaw Hill, 563 at Myrecairn Hill, 514 at Murdochairnie Hill, 538 at Starlaw, and 622 near Lewis Wood. The upper part of Motray vale appears to have been successively a lake and a marsh, and was not entirely drained and converted into prime arable land till the latter part of the 18th century. Goales Den, traversed by a rannel southward to Motray Water, is a deep cut near Kilmarnock village, apparently formed first by trap rock disruption, and next by the action of running water. It was tastefully planted and intersected with walks about the year 1825; and presents, on a small scale, a charming series of romantic and picturesque views. Trap rock of various kinds predominates throughout the parish, and has been largely worked for building material. The soil is various, but generally good. About 235 acres are under wood, and nearly all the rest of the land is in tillage. Stone coffins, funeral urns, and a few coins have been from time to time discovered. David Balfour, son of the proprietor of Mountquhanie, was one of the plotters and perpetrators of the death of Cardinal Beaton; David Hackston of Rathillet was one of the murderers of Archbishop Sharp; and the Rev. Dr Chalmers was minister from 1803 till 1815. MOUNTQUHANIE is the chief residence. Kilmarnock is in the presbytery of Cupar and synod of Fife; the living is worth £303. The parish church, at Kilmarnock village, is a plain structure of 1763.

A U.P. church is at Rathillet; and two public schools, Kilmarnock and Kilmarnock female, with respective accommodation for 64 and 63 children, have an average attendance of about 45 and 35, and grants of nearly £40 and £30. Valuation (1893) £7295, 15s. Pop. (1881) 634, (1891) 588.—*Ord. Sur.*, sh. 43, 1868.

Kilmardinnie, a mansion in New Kilpatrick parish, SE Dumbartonshire, 1½ mile S by W of Milngavie. It is a handsome edifice, with charming grounds and a beautiful lakelet.—*Ord. Sur.*, sh. 30, 1866.

Kilmarnock. See ARDNAMURCHAN.

Kilmarnock, a stream of fair size in the Cunninghame district of Ayrshire. It is formed by two streams that rise on the S border of Eaglesham parish in the county of Renfrew. The one to the W is known in Renfrewshire as Greenfield Burn, and in its Ayrshire part as Fenwick Water. That to the W issues from Loch Goin or Blackwoodhill Dam, and is known at first as Loch Burn; after receiving Birk Burn it is known as Duuton Water, and then as Craufurdland Water. Both flow in a general south-westerly direction, the former for 10 miles and the latter for 8½ miles, chiefly through Fenwick and Kilmarnock parishes till they unite at Dean Castle, 1 mile NE of the town of Kilmarnock. The united stream known as Kilmarnock Water has then a course of 2 miles till it falls into Irvine Water 3 furlongs W of Riccarton. In the 17th century Pont speaks of it as the Mernock, and Franck in his *Northern Memoirs* as the Marr, while an old rhyme calls it the Carth.—*Ord. Sur.*, sh. 22, 1865.

Kilmarnock (Gael. *Kil Marnoch*, the 'Church of St Marnoch'), a parish containing a large town of the same name in the Cunninghame district of Ayrshire. Prior to 1642 it included also the present parish of Fenwick. The modern parish is bounded N and E by Fenwick, SE by Loudoun, S by Galston and by Riccarton, and W by Kilmaurs. The shape is roughly a rather irregular parallelogram. The boundary on the SE is formed by Polbaith Burn for 5½ miles, and on the S for 7¾ miles by Irvine Water, which divides it from Kyle; elsewhere the line is artificial. The greatest length is from ENE at Sneddon Law, to WSW at the point where the parishes of Kilmarnock, Riccarton, and Kilmaurs meet, a distance of 9½ miles; and the greatest breadth, from NW at the point where Kilmarnock, Kilmaurs, and Fenwick meet, to SE at the point where Kilmarnock, Loudoun, and Galston meet, a distance of 5½ miles. The area is 9552½ acres, of which 108½ are water. The surface rises from S to N. The height above sea-level on the S side is 127 feet near the town, and 173 at the SE corner, and from this there is a gradual increase till near the NE corner of Northcraig Reservoir it reaches 327 feet, N of Laigh Blackwood 410, near High Rusha 650, and at Sneddon Law 782. The drainage is effected by the Polbaith Burn on the SE, by Kilmarnock Water on the W, and by several smaller burns between, all flowing to the SW and entering Irvine Water. The soil is a deep strong fertile loam, though in the NE it is somewhat inclined to moss.

Up till near the close of the 18th century agriculture was in a very backward condition, but now the whole parish, except about 400 acres in the NE at Sneddon Law, and a few patches of wood at Craufurdland Castle and elsewhere, is under cultivation. Great attention is paid, as elsewhere throughout Ayrshire, to dairy farming, the produce in cheese being about equal in value to that in oats, and double the value of the produce in wheat. The underlying rocks are carboniferous, partly volcanic, and partly sandstone. Coal is extensively worked in the SW, and an excellent white sandstone has long been worked near Dean Castle at the junction of Craufurdland and Fenwick Waters, and near this are also workings of fire-brick clay. Other industries are noticed under the burgh. The chief seats are Annanhill, Assloss, and Craufurdland Castle; and the latter, Dean Castle, and Rowallan are the principal objects of antiquarian interest. The oldest part of Craufurdland Castle, 2½ miles NE of the town of Kilmarnock, on a steep bank overlooking Craufurdland Water, dates tra-

ditionally from the early part of the 11th century; the centre is modern. The glen of the stream below is very pretty, and in the woods to the N is a large loch—a great curling resort. The proprietor, Lieut.-Col. W. R. Houston-Craufurd, is a lineal descendant of the Housions or Howisons of BRAEHAD. Dean Castle, 1 mile NE of the town, at the junction of Fenwick and Craufurdland Waters, is described by Pont in his *Cunninghame Topographized* (circa 1609) as 'Killmarnock Castle. It is a staitly faire ancient bulding, arysing in tuo grate heigh towers, and built arround courtwayes vith fyue low buldings; it is veill planted, and almost enviroined vith gardens, orchards, and a parke; it belonged first to ye Locartts, lordes thereof, then to the Lord Soulis, and now the cheiffe duelling almost for 300 zeirs of ye Lords Boyde.' The remains of the building consist of two large towers of unequal height. In the second story of the higher is the great hall 38 by 22 feet, and 26 high. There is a finely-arched stone ceiling. The space between the two towers was at one time covered with buildings, but these are now gone. Here Margaret or Mary, the sister of James III., and wife of Thomas Boyd, Earl of Arran, was kept 'as in a free prison,' and in Covenanting times Dean Castle was occupied by Captain Inglis or English (some of whose infamous exploits are referred to in a note to Scott's *Old Mortality*) and a body of soldiers trying to enforce the hated prelacy. In 1735 the castle was almost entirely destroyed by fire, and was never restored. The Boyds make their first appearance about 1205 with Sir Robert de Boyd, who signs as a witness in a contract about Irvine, and his son, also Robert, having distinguished himself at the battle of LARGS, was rewarded by Alexander III. with 'grants of several lands in Cunningham.' His chief exploit was the defeat of a strong body of Norsemen at a place called Goldberry Hill, and this is said to be the origin of the motto Gold Berry on the Kilmarnock arms. They next figure on the National side in the wars of Independence, and they were rewarded by Bruce with grants of additional land. From this time down to the reign of James III., they were prominent in the west country, and, in 1468, Robert, Lord Boyd, became regent, and married his son Thomas to Margaret, King James' sister. The creation of Thomas as Earl of Arran, his mission to Denmark, and the fall of the family are well known. The Earl of Arran died in Antwerp, but the estates were subsequently restored, and the title revived by James V. in favour of Robert Boyd, a descendant of the old family, who distinguished himself at the Battle of the Butts (see GLASGOW). His son sided with Queen Mary, and was, of course, looked on with disfavour by Regent Murray, but he was held in high esteem subsequently by King James VI. During the troubles in the time of Charles I. the Boyds were staunch Royalists, and were rewarded in 1661 with increased rank as Earls of Kilmarnock. The representative of the family in 1715 adhered to the Hanoverian cause; but the fourth Earl, in 1745, took a different course, partly through resentment against the government for depriving him of a pension, and partly perhaps through the entreaties of his wife, who was a daughter of the Earl of Linlithgow, who had been attainted for taking part in the rebellion of 1715. Taken prisoner after Culloden, he was tried before the House of Lords, condemned to death as guilty of high treason, and executed at London on 18 August 1746. His son recovered the estate, but afterwards sold it to the Glencairn family. By the death of his grand-aunt, who was Countess of Errol in her own right, he, in 1758, became Earl of Errol, and that family now represents the Boyds in the direct line, while, since 1831, the Earl has also held the title in the British peerage of Baron Kilmarnock of Kilmarnock. See 'The Boyd Papers, with Plates of Dean Castle,' in *Archaeological and Historical Collections Relating to the Counties of Ayr and Wigton* (vol. iii.); see also 'Life of Livingstone,' *Select Biographies* (vol. i. pp. 139, 147, 148), *Wodrow Society*. Rowallan Castle is in the outlying corner of the parish on the NW, on the banks of Carmel Water. A portion of the house

dates from 1562, but the original fortlet is several centuries older. To this a porch has been added, probably by Sir William Muir, the poet and Covenanter. Over the doorway of the porch there is, what is so rare as to be almost unique, a Hebrew inscription in Hebrew characters. The words are—'The Lord is the portion of mine inheritance and of my cup.' At the main entrance to the castle there is a most perfect example of the ancient 'loupin-on-stane' (*Waverley*). It was long the residence of the Barons of Rowallan, but now belongs to the Earl of Loudoun. It was the birthplace of Elizabeth Moreor Mure, first wife of Robert II., from whom our royal family are descended, and the residence of Sir William Mure (1594-1657), a member of the parliament that met at Edinburgh in 1643 to ratify the Solemn League and Covenant, and a poet of some note in his day. From the religious meetings that took place in his time part of the house still bears the name of the 'Auld Kirk.' His chief works are *The Cry of Blood and of a Broken Covenant* (Edinb. 1650), *The Historie and Descent of the House of Rowallane* (written about 1657), and a metrical version of the Psalms, which, under the name of Rowallan's Psalter, was held in high esteem among the Reformers. 'He turned the fifty-first Psalm into the verse now sung in our churches.'—*Pont's Cunningham—Appendix* (Dobie's edition).

Kilmarnock parish is traversed by a number of main roads, which, starting from the town as a centre, pass to Glasgow, Hamilton, Lanark, Mauchline, Ayr, and Irvine; and also by portions of the Glasgow and South-Western Railway system, radiating from the town and passing to Glasgow (by Barrhead or by Paisley), to Dumfries and the S, to Troon and Ayr, to Irvine, and to Ardrossan and Largs. The town of Kilmarnock is situated near the SW corner of the parish, while about the middle of the southern boundary is the village of Crookedholm, now practically swallowed up in the thriving iron town of Hurlford. The parish is in the presbytery of Irvine and the synod of Glasgow and Ayr, and is ecclesiastically divided into parts attached to the collegiate charge of the Laigh Kirk—the original parish church—the High Kirk, St Andrew's, and St Marnoch's, the latter two being *quoad sacra* parishes. It also contains a portion of the *quoad sacra* parish of Hurlford. The populations attached to these in 1891 were respectively 12,423, 3114, 8161, 3587, and 683. The stipend of the first minister of the Low Kirk is about £450; that of the second minister is under £200, with manses. The churches are noticed with the town. The landward school board has under its charge the public schools of Crookedholm, Grougar, and Rowallan, which, with accommodation for respectively 250, 97, and 127 pupils, have an average attendance of about 235, 45, and 125, and grants of over £205, £50, and £120. Pop. (1801) 8079, (1821) 12,769, (1841) 19,956, (1861) 23,551, (1871) 24,071, (1881) 25,864, (1891) 27,968, of whom 13,671 were males and 14,297 were females.—*Ord. Sur.*, sh. 22, 1865.

The United Presbyterian Church has a presbytery of Kilmarnock and Ayr—meeting at Kilmarnock and at Ayr alternately on the first Tuesday of every month except May and August—with 4 churches in Kilmarnock, 2 each in Ayr, Irvine, and Saltcoats, and 22 at respectively Ardrossan, Catrine, Cumnock, Dalry, Darvel, Fenwick, Galston, Girvan, Glengarnock, Kilmairs, Kilwinning, Mauchline, Maybole, Muirkirk, Newmilns, Patna, Prestwick, Stevenston and ARDEER, Stewarton, Tarbolton, Troon, and West Kilbride.

Kilmarnock, a police burgh in the SW corner of the parish just described, a seat of important manufactures, the largest town in the West of Scotland S of Paisley, and the ninth most populous town in the whole of Scotland. It stands on Irvine and Kilmarnock Waters, and the municipal boundary crosses both rivers, and takes in also the Riccarton suburb, which is in Riccarton parish. The town has a station on the Glasgow and South-Western and Caledonian joint line, and is on the route of the former company to Carlisle, while it is also the terminus of the Troon and Kilmarnock

nock railway, and has other lines joining the Glasgow and Ayr line at Dalry and Irvine. It is by rail $7\frac{1}{2}$ miles E of Irvine, $9\frac{3}{4}$ NNW of Mauchline, $15\frac{1}{2}$ NNE of Ayr, $23\frac{3}{4}$ and $33\frac{1}{2}$ by the direct route and by the Paisley and Dalry route SSW of Glasgow; by road it is 12 miles from Ayr and 21 from Glasgow. The site slopes gently to the S, and is from 80 to 200 feet above sea-level. The name, like that of the parish, is from *Kil Marnoch*, that is, the Church of Saint Marnoch or Mernoc. The word Mernoc itself is a contraction of the Celtic words *Mo-Ernnin-occ*, the prefix meaning 'my' and the suffix 'little,' while the centre is the name of an Irish saint, Ernin or Ernene, who died in 634 according to the Annals of Ulster, and in 635 according to Tighernach. The Breviary of Aberdeen appoints the festival '*Sancti Mernoci epyscopi et confessoris patroni de Kilmernoch*' for 25 Oct.

History.—The original church had been probably dedicated to St Marnoch's memory by some of his disciples; but the first church of which we find notice is one stated by Pont, on the authority of the records of the abbey of Kilwinning, to have been 'bulte by the Locartts, Lords of it [Cunninghame], and dedicat to a holy man Mernock.' This would place the foundation probably about the end of the 12th or the beginning of the 13th century; but there must have been subsequent alterations, for one of the door lintels of the old church is said to have borne the date 1410, and this date was about 1840 inscribed on the steeple belonging to it, and now attached to the Laigh Kirk. The church was a curacy under Kilwinning Abbey. In these early days the place must have been a mere hamlet, for almost the only notice of it is in Barbour's *Bruce*, where mention is made of the route of Sir Philip de Mowbray in his flight after being defeated by Sir James Douglas in 1306—

'Tharfor furth the wayis tuk he then
To Kilmarnock and Kilwynnyne
And till Ardrossane eftre syne.'

Even long after this time it still remained a mere village, depending on the neighbouring castle of Dean; but the favour James VI. entertained for Thomas, the fifth Lord Boyd, led him to grant a charter of erection for it as a burgh of barony in 1591, and this was ratified by parliament in 1592. It was probably by this time a thriving village, for in 1603 there is a reference to the manufacture of hose and bonnet making, which is supposed to have originated here. Pont describes it in the beginning of the 17th century as 'a large village and of grate repaire. It hath in it a weckly market and hath a faire stone bridge over the river Marnock.' The bridge was on the site of the present Old Bridge, which replaced it in 1762. In Franck's *Northern Memoirs* (1658) the manufactures are given as the 'kniitting of bonnets and spinning of Scottish cloth.' The houses he describes as ugly, and 'little better than huts, all built so low that their eaves hang dangling to touch the earth.' Almost the whole of this Kilmarnock of Franck's time perished, for 'In May 1668 the whole toun was burnt into ashes by a violent fire that broke out accidentally, and about 120 families were cast out of all habitatiou and brought to povertie and beggarie.'

During the Covenanting troubles of the 17th century Kilmarnock figured at various times, and this district, like the other parts of the SW, furnished a considerable number of sufferers. After the rising that terminated so disastrously at Rullion Green on the Pentlands, in 1667, the village became the headquarters of General Dalziel, who was in command of the troops in the SW, and the little prison known as 'Thieves' Hole' to the W of the Cross, was soon filled with miserable prisoners. The house in which Dalziel himself lodged, at the end of the Old Bridge, immediately behind the present Victoria Place, was long looked on with horror in consequence of the association. In 1678 the 'Highland Host' was quartered here as elsewhere in the West, and, not satisfied with private thefts and free quarters, a body of them attempted to sack the town. After the Revolution the people were quite willing to have some slight

revenge, and so in 1689 Mr Bell, the parson of Kilmarnock, was 'rabbed.' He was seized near Riccarton, carried prisoner to Kilmarnock, where his *Book of Common Prayer* was taken from him and burned, the skirt of his gown cut off with a sword, and he was finally dismissed as 'an ignorant, obdurate curate and malignant.' The Boyds had, in the early part of the century, been Covenanters, and the seventh Lord signed the National Covenant in 1638; but though the eighth Earl of Kilmarnock does not seem to have taken any active part in the persecution, he must have at least tacitly acquiesced in the state of affairs that prevailed, for he was in such favour with the authorities that in 1672 he obtained from Charles II. a second charter conferring fresh rights and privileges on the town. In 1690 an effort was made, with the Earl's consent, to have it erected into a royal burgh, and at the same time the common good and customs were sold to the community. The attempt to obtain a charter as a royal burgh failed; but in 1700 the common good and customs, with 'the common greens of the said town, shops under the tolbooth thereof, the weights, pecks, and measures, the tron and weights thereof, and the customs of the fairs and weekly markets, and all the customs belonging to the said burgh of barony,' passed over to the town on a payment of £3650 Scots and a yearly feu-duty of £7 Scots. The tron stood at the Cross, and existed down till about the beginning of the 19th century. During the rebellion of 1715 the town was firmly Hanoverian, and the neighbourhood raised a considerable body of militia to fight against the rebels. When the Fencibles of Cunninghame mustered at Irvine in the end of summer in that year, 'the Earl of Kilmarnock appeared at the head of above five hundred of his own men, well appointed and expert,' and later in the year bodies of them were stationed for a time at Glasgow, and afterwards in Perthshire. In 1745, though the young Earl declared for the Stuarts, the townsmen adhered to their old principles, and refused to follow their superior.

From this time onwards the history of the burgh has been one of progress and prosperity, except during the Chartist times between 1816 and 1820—when grave fears of serious disturbances were several times entertained—and in 1852, when on 14 July a violent thunder-storm visited the district, accompanied by heavy rain. The streams that unite to form the Kilmarnock Water came roaring down in very high flood, destroying mills and bridges on the way; and a large portion of the town itself was flooded to a depth of from 2 to 7 feet. The damage done within the parliamentary boundaries alone was estimated at £15,000, while nearly 200 families lost the greater part of their effects, and 221 sustained loss of some sort or other.

About the middle of the 18th century Kilmarnock consisted of a few narrow and crooked streets and lanes between the Cross and the site of the High Kirk, including those now known as High Street, Soulis Street, Back Street, Fore Street, Croft Street, and the Strand; with the Sandbed and the Netherton farther south; but the place was even then prospering so well that in 1765 the Earl of Glencairn opened up a new street, straight and wide, leading from Kilmarnock to Riccarton. This is now Titchfield Street, Glencairn Street, Glencairn Square, and Low Glencairn Street. In the next fifty years further extension took place to Dean Street on the N, and to Grange Street on the W; while the Cross district and Titchfield Street had been united by King Street; and East and West Shaw Streets, Netherton and Douglas Street had branched out from the road formed by the Earl of Glencairn. In 1800 a fire broke out in the lower part of the town called Netherton Holm, the present Low Glencairn Street; and, fanned by a brisk breeze and fed by thatched roofs, it was not subdued till it had destroyed over thirty-two houses, and rendered some 300 persons of the poorer class homeless. The attention thus drawn to the old narrow thoroughfares resulted in the Improvement Act of 1802; and the operations of the commissioners then appointed led at once to the removal of nuisances, the widening of old

thoroughfares, and the laying out of new streets. A new bridge was built, and King Street, Portland Street, and Wellington Street were all opened before 1810; and since that time, and more particularly since 1851, a large number of new streets have been formed, the principal being Portland Road, Duke Street, John Finnie Street, Dundonald Road, North and South Hamilton Streets, Woodstock Street, Ellis Street, Charles Street, Howard Street, Armour Street, Richardland Road. The glebe lands are at present being built upon, and those of Elmbank were purchased by the town in 1893 for this purpose, at a cost of £7030, while the stately mansion house, with its surrounding of old trees, was transformed into a Free Library; but this building, through the munificent offer of a native of Kilmarnock, is to be cleared away, and a fine new building in Italian style, containing library, museum, and reading-room, is to be erected on its site. The town now comprises two central areas or squares, a suburban square, and about 120 streets, places, roads, terraces, and crescents, exclusive of laes. It is $2\frac{1}{4}$ miles long from N to S and nearly $1\frac{1}{2}$ mile wide, the municipal boundary under the Extension Act of 1871 stretching from the Millburn on the W to beyond Grange Terrace on the E, and from beyond Beansburn on the N to beyond Riccarton on the S.

Public Buildings.—The Town-Hall or Council Chambers stand in King Street, and are built on part of a long arched way, which carries the street and the adjacent buildings across Kilmarnock Water. It was erected in 1805, and renovated in 1833 at a cost of £1070, and though now hardly worthy of such a town, is a neat structure of two storeys, surmounted by a belfry. The bell and a curious carved mantelpiece in one of the rooms both belonged to the old Town-House, which stood to the W of the Cross. The principal room or court-room contains a portrait of Sir James Shaw; one, by James Tannock, of Sir John Dunlop, first M.P. for the Kilmarnock burghs; one, by the same artist, of Burns; one, by William Tannock, of B. R. Bell, first sheriff-substitute for the district; one of the late Earl of Eglinton, by Sir John Watson Gordon; and one of Sir John Shaw, nephew and successor of the above-mentioned Sir James. The bridge on which the Town-Hall stands was erected in 1804, and long bore the name of the New Bridge. It supports also the meat market. Nine other stone bridges cross Kilmarnock Water and the Irvine within the burgh boundaries, and a viaduct of twenty-four lofty arches carries the Glasgow and South-Western railway over Portland Street, Soulis Street, and Kilmarnock Water. The Court-House, a good building in St Marnock Street, was erected in 1852, and subsequently enlarged and improved. The Tontine or Exchange Buildings at the Cross were erected in 1814, and the large hall served both as a well-furnished reading-room and as a place of mercantile resort, until it was discontinued in 1880. At the corner of Green Street and London Road, on part of what was once the Low Green, stands the Corn Exchange. It was erected in 1862 at a cost of about £6600, of which £6000 is the capital of a joint-stock company, and £600 was raised by public subscription for the erection of the tower, which is designed as a memorial of the late Prince Consort, and is known as the Albert Tower. It rises to a height of 110 feet, and has a public clock. The town's arms are cut on the front, and the head carved on the keystone of the window of the main building immediately underneath represents Prince Albert, that to the left Lord Clyde, and that to the right Sir John Shaw. The main buildings, covering a space of about 1602 square yards, are Italian in design, and rise to a height of two storeys. The lower storey is occupied in front by shops, and behind by a large hall 84 feet long, 51 wide, and 51 high, which is used for corn exchange and other public purposes. There is accommodation for 1200, and at one end is a fine and powerful organ. The upper storey contains two large halls, both rented by the Volunteer corps. The Kilmarnock Library was instituted in 1797, and by 1862 the library contained 3000 volumes. In

that year this library, and those belonging to the Philosophical Institution and the Kilmarnock Athenæum, were all amalgamated; while in 1893 the town adopted the Free Libraries Act, and the library now consists of 36,000 volumes. About £100 a year from the Crawford bequest is available for library purposes. The Philosophical Institution was founded in 1823 for 'the promotion of general, and more particularly of scientific, knowledge,' and sought to attain this end by the formation of a library and museum, by the delivery of lectures, and the holding of meetings for discussion. The Athenæum was founded in 1848, for 'the social and intellectual improvement of the inhabitants, more especially of the youth and working classes, by the providing of a first-class reading-room, the maintaining of a library,' and by such other means as might seem proper. To the S of the Corn Exchange is a large building 81 feet long and 64 wide, used as a market for the sale of butter, eggs, etc. To the east of it is the Corporation Art Gallery, built in 1886 at an expense of £2986.

To the SE, on the ground at the head of the river, is a large hall known as the Agricultural Hall. The Infirmary, on Mount Pleasant, at the N end of Portland Street, was erected in 1867 at a cost of £4146. Since the Infirmary was built great additions have been made, specially a Fever Hospital, detached from the Infirmary; large additional accommodation for nurses and servants; and particularly the Lady Howard de Walden Children's Ward, to which, including the endowment of a cot, her ladyship subscribed £3200, while the Misses Finnie, Springhill, Kilmarnock, have endowed two cots at the cost of £1000 each. The entire cost of the Infirmary and Fever Hospital has been fully £12,000, the endowments amount to £14,000. It is under the management of a body of directors, and has a staff consisting of two surgeons and two physicians, both of these having two assistants. A Cholera Hospital has also been built on a different site costing £1250 additional. The Astronomical Observatory, at Morton Place, was erected in 1818 by the late Thomas Morton, Esq., at a cost of £1000. On an elevated situation and rising to a height of 70 feet, it commands an excellent view. It contains two telescopes—one Newtonian, $9\frac{3}{8}$ inches in diameter, and the other Gregorian, 7 inches in diameter, and both made by Mr Morton himself—and a camera obscura. Kilmarnock House stands between St Marnock Street and Nelson Street, and was the place of residence of the Kilmarnock family after the burning of Dean Castle already referred to. The older part dates from the latter part of the 17th century, and the western part was being built immediately before the rebellion of 1745-46. There were grounds with trees, and along the line of Dundonald Road is still a tree-bordered avenue known as the Lady's Walk, which is said to take its name from having been a favourite place of resort of the last Countess of Kilmarnock after the execution of her husband. The walk was considerably improved in 1879. In 1893 it and the surrounding ground, amounting in all to between 19 and 20 acres, were generously presented to the town by Lady Howard de Walden, the lady of the manor. The municipality in 1894 laid it out so as to provide suitable places for various recreations, while the noble avenue of trees, the pride of the place, was considerably extended. Kilmarnock House is now used as a Ragged and Industrial School. During the Reform agitation of 1832, a meeting at which 17,000 persons were present was held on the large lawn then in front. There are also other handsome buildings in several of the streets—particularly the buildings of the Co-operative Society at the corner of John Finnie and John Dickie Streets, erected in 1879-80 at a cost of £4000, the Conservative Club in Sturrock Street, built in 1887 and costing with additions since made £2250, and several of the bank offices. In Ladeside Street is a model lodging-house erected in 1878. At the Cross is a statue of Sir James Shaw (1764-1843), a native of the adjacent parish of Riccarton, Lord Mayor of London in 1805-6. The monument, which was the work of James Fillans, was erected

in 1848. The statue, which represents Sir James in his official robes as Lord Mayor, is about 8 feet high. It is of Carrara marble, and stands on a pedestal with a base of Aberdeen granite. The scroll he is holding in his hand represents the warrant of precedence he obtained in 1806, reviving the right of the Lord Mayor of London to take precedence of every one except the sovereign in all public processions in the city. At the S corner of the Cross is a circular granite stone with the inscription, 'John Nisbet was executed here 14th April 1683.' It marks the place of execution of a Covenanter who was charged with having been engaged in the battle of Bothwell Bridge. A temperance coffee house, presented to the town by Lady Ossington, lady of the manor, was erected in 1883 at a cost of £3500. On the opposite side from 'The Ossington,' and facing the entrance to the railway, there was erected in 1894, in connection with the George Hotel, a beautiful building in the Italian style of architecture; the ground storey is rusticated; the second and the third grouped, and each bay divided by three-quarter Ionic columns, the whole surmounted by balustrades with stone terminals, and pitched roof at corner with flag-staff. On the NE of the town and E of High Street is the large and well-laid-out recreation ground known as the Kay Park. The ground was purchased in terms of a bequest by the late Mr Alexander Kay (1796-1866), who at his death bequeathed £10,000 for the purpose of acquiring ground for and laying out a public park in Kilmarnock. The ground, extending altogether to over 40 acres, of which a very small part is reserved for feuing, was acquired at a cost of £9000, and after £3000 had been spent in laying it out, was finally opened to the public in 1879. An addition of 8 acres was made to it in 1893 at the expense of the public. In it is the Reformers' Monument, a graceful fluted Corinthian pillar, surmounted by a statue of Liberty. The monument was unveiled by the Earl of Rosebery, 17th Oct. 1885. Near the centre of the Park is the Burns Monument, erected in 1878-79. It is a two-storey building, Scotch Baronial in style, with a tower rising to a height of 80 feet. The situation is elevated, and from the top of the tower fine views are obtained of the town, the surrounding districts, the sea, and the mountains of Arran. A handsome stone staircase leads up in front to a projecting portion of the upper storey, and here, as in a shrine, is a fine marble statue of Burns by W. G. Stevenson. The poet is represented standing with a pencil in his right hand and a notebook in his left, while a cluster of daisies rise at his feet. Behind are three rooms used as a museum, and containing a number of interesting relics connected with the poet, a copy of the first (the Kilmarnock) edition of his poems, the M'Kie Burnsiana Library, many of Burns' poems in holograph, etc., a copy by James Tannock of Nasmyth's portrait of Burns, a portrait of Mr Alexander Kay by A. S. Mackay, and the most interesting of the remains discovered in the crannog found at Lochlea. The building cost over £1600 and the statue £800. The fountain to the SW was the gift of the late Mrs Crooks of Wallace Bank.

Churches.—The Laigh Kirk or Low Parish Church stands near the centre of the town, and occupies the site of an older church erected about the middle of the 18th century. This does not seem to have been a very substantial structure, for it had to be taken down in 1802, when the present one was erected. It might have stood longer, but, its strength being doubted, the fall of some plaster from the ceiling during afternoon service caused a panic that resulted in the death of 29 persons, and the heritors, anxious to allay all cause of alarm, sanctioned its removal. The spire seems to have survived from a still earlier church, and is said to have had the date 1410 on a door-lintel. The date now to be seen was cut about the middle of the 19th century. The building of 1802 was enlarged in 1831 at a cost of £1200, and now contains 1457 sittings. One good lesson learned from the panic is visible in the spacious staircases leading to the galleries. An organ has since been introduced at a cost of about £500. In the interior is a stone in memory of Robert, fourth Lord

Boyd, with the following epitaph, said to be the composition of Alexander Montgomery, author of *The Cherry and the Slac*:—

'1589
Heir lysis yt godlie, nohle wyis lord Boyd
Quha kirk & king & commin weil decoir'd
Quhilk war (quhill they yis jowell all injoy'd)
Defendit, counsailld, governd, be that lord.
His ancient hous (oft parrel'd) he restoir'd.
Twyis sax and saxtie zeits he leivd and syne
By death (ye thrid of Januare) devoird
In anno thryis fyve hndreth aucthye nyne.'

In the surrounding churchyard there are, among other interesting stones, several to the memory of persons who suffered death during the Covenanting persecutions. The verses on the older ones are very peculiar. The following are the inscriptions:—

'Here lie the Heads of John Ross and John Shields, who suffered at Edinburch Dec. 27th 1666 and had their Heads set up in Kilmarnock.

Our persecuters mad with wrath and ire
In Edinburch members some do lye, some here;
Yet instantly united they shall be
And witness 'gainst this nation's perjury.'

On another of recent erection is the following:—

'Sacred to the memory of Thomas Finlay, John Cuthbertson, William Brown, Rohert and James Anderson (natives of this parish) who were taken prisoners at Bothwell, June 22nd 1679, sentenced to transportation for life, and drowned on their passage near the Orkney Isles. Also, John Finlay, who suffered Martyrdom 15th December, 1682, in the Grass-Market, Edinburch.

Peace to the Church! her peace no friends invade,
Peace to each nohle Martyr's honoured shade;
They, with undaunted courage, truth, and zeal,
Contended for the Church and Country's weal;
We share the fruits, we drop the grateful tear,
And peaceful Ashes o'er their ashes rear.'

On another:—

'Here lies John Nisbet, who was taken by Major Balfour's Party and suffered at Kilmarnock, 14th April, 1683, for adhering to the Word of God and our Covenants. Rev. xii. & 11.

Come, reader, see, here pleasant Nisbet lies,
His blood doth pierce the high and lofty skies;
Kilmarnock did his latter hour perceive
And Christ his soul to heaven did receive.
Yet bloody Torrence did his body raise
And buried it into another place;
Saying "Shall rebels lye in graves with me!
We'll hurry him where evil doers he!"

The Laigh Kirk is the church that figures in Burus' poem of *The Ordination*. The High Church, in Soulis Street, was erected as a chapel of ease in 1732, and the steeple (which is 80 feet high) in 1740. The total cost was about £1000. It is a very plain building with 952 sittings, and is surrounded by an extensive burial-ground. A separate parish was constituted and attached to it in 1811. A three-light window was, in 1869, filled with stained glass, as a memorial of the last Earl of Kilmarnock, and a few years ago an organ was introduced at a cost of nearly £300. In the wall enclosing the churchyard, but fronting the street, is a niche with a fluted pillar surmounted by an urn, and having a pediment with an inscription to commemorate a Lord Soulis who is said to have been killed here by one of the Boyds in 1444. The present monument was erected in 1825, and replaced a pillar surmounted by a small cross and known as Soulis' Cross. This pillar was mentioned by Pont, and was probably much older than 1444, at which time no Soulis seems to have been connected with the district. It had to be removed in consequence of its decayed condition. St Marnock's Church, in St Marnock Street, is a Gothic building of 1836. It was built as a chapel of ease at a cost of £5000 including the tower, and has 1730 sittings. It was constituted a *quoad sacra* church in 1862. The organ, which cost £350, was the gift of John Gilmour, Esq. of Elmbank. St Andrew's Church, in Richardland Road, was built as a chapel of ease in 1841 at a cost of £1700, and became a *quoad sacra* church 1868. It contains 1093 sittings. The burying-ground above it was opened in 1856; and that

adjoining, opened in 1837, was till 1875 the only common burying-ground, the Low Churchyard having been practically closed after 1850. In 1876 a new cemetery of $7\frac{3}{4}$ acres was opened to the E of the town. To it $6\frac{1}{2}$ acres were added in 1893 costing £180 per acre. It has an entrance gateway in the Scottish Baronial style. The Free High Church, in Portland Street, was built in 1844 at a cost of £3000, and has since been altered and improved at different times at a cost of over £1000, the last improvements being finished in 1881. It is a plain building with a tower, and has 1228 sittings. The Free St Andrew's Church, in Fowld's Street, was also built in 1844 at a cost of £1200, and contains 930 sittings. The Free Henderson Church, in Wellington Street, was originally erected in 1813 by a congregation of Original Burghers, but the congregation having joined the Established Church in 1839, and having a parish assigned to it, became a Free church in 1843. The first cost was £1000, but as much has since been expended on alterations and improvements. The number of sittings is 650. The Grange Free church, in Woodstock Street, is a handsome Early English cruciform structure of 1877-79, with a spire 140 feet high. There are 860 sittings and a hall and class-room. The total cost was £8000. Martyrs' Free church, in Mill Lane, originally a Reformed Presbyterian church, was built in 1825, but has since been altered and improved. It contains 590 sittings. Besides these there is a sixth, Braehead Free Church. King Street U.P. church, built in 1832, is a mixed style of architecture, with a spire 120 feet high. It was the second dissenting church in Scotland with a steeple, and the first with a bell. It cost £3840, and contains 1493 sittings. Princes Street U.P. church is a neat building, erected in 1842, and contains 750 sittings. Portland Road U.P. church, a handsome Byzantine building, was erected in 1859 at a cost of £1900. It contains 850 sittings. It superseded a church in Wellington Street built in 1772, and removed in 1861, which was the first dissenting church in the town. The Holm U.P. Church was built in 1880-81 at a cost of £1600, and contains nearly 500 sittings. The Original Secession church, in Fowld's Street, is a very plain building erected in 1857 at a cost of £500. It contains about 200 sittings. Clerk's Lane Free Christian church was originally erected in 1775 as an Antiburgher meeting-house, and was in 1807 rebuilt on a larger scale. The building, which is very plain, contains 875 sittings. It changed its ecclesiastical connection in 1841, when its minister—the late Rev. Dr Morison of Glasgow, and the founder of the Evangelical Union Church—was deposed on a charge of heresy. Again it changed in 1886, when its minister, the Rev. J. Forrest, along with the congregation, became connected with the Free Christian Church. Wintou Place Evangelical Union church is a good building in the Early English style, erected in 1860 at a cost of £2700, and containing nearly 900 sittings. The Baptist Church, off Fowld's Street, is a small building erected in 1869-70 with accommodation for about 50 persons. To all of these churches there are now halls attached, while forty years ago no church of any denomination had a hall. There are now also numerous public halls in the town; forty years ago the best (George Inn Hall) was one over a stable. There was, prior to 1867, an independent church in Mill Lane, but since that year the building has ceased to be a church, and is now used for the meetings of the Kilmarnock Abstainers' Union, to which body it now belongs. The Episcopal church (Trinity), at the corner of Dundonald Road and Portland Road, is a good building in the Early English style, with accommodation for 300 persons. It was erected in 1857 at a cost of £1400 exclusive of the organ, which was presented by Sir W. H. Houldsworth, Bart. M.P., at a cost of £1000. It and that in the Exchange Hall are the finest in town. There is a stone pulpit, and the chancel is finely decorated and lighted by a stained-glass window in memory of the late Patrick Boyle, Esq., of Shewalton. The Roman Catholic church (St Joseph's), to the N of Portland Street, is a Gothic building erected in 1847 at a cost of £3000, and con-

tains 600 sittings. From it an excellent view is obtained of the town and the surrounding country.

Schools, etc.—The old Kilmarnock Academy, at the site of the Agricultural Hall, was erected in 1807, and superseded an older parish school erected in 1752. It was itself superseded by the New Academy, built by the School Board in 1875-76 as a secondary and elementary school. The site and playground cover about an acre. The building, which cost £4500, is Elizabethan in style, and has a frontage of 150 feet with a two-storey centre and one storey wings. There are classical, English, mathematical, and science departments, and the staff consists of a rector, 5 masters, and several lady teachers. Another Academy was erected in 1896-97 by the School Board for secondary and technical education. It is in the Queen Anne style, and is estimated to cost £10,000. The following are the schools under the charge of the Burgh School Board, with accommodation, average attendance, and grant:—Academy (753, about 690, £760), Grammar (574, over 580, £575), Glencairn (560, about 580, £545), High Street (517, about 520, £480), West Netherton (391, about 395, £392), Kay's endowed in Bentinck Street (247, about 615, £574), Kay's endowed in Wellington Street (247, about 250, £240), Industrial (410, about 310, £272), and Roman Catholic (516, about 360, £315). The last was greatly enlarged in 1882. The two schools in Bentinck Street and Wellington Street were erected in 1869 under the will of the late Mr Kay, the donor of the Kay Park, by which his trustees were directed 'to set aside the sum of six thousand pounds sterling' for the purpose of erecting and endowing 'schools in Kilmarnock, in which may be given a plain, practical, and useful education, such as is usually given in the best parochial schools in Scotland, but not to include what is usually called a classical education.' It was also stipulated in the will that moderate fees of from one shilling to one shilling and sixpence per quarter are to be charged. They are now under the charge of the School Board. The school of Science and Art, in Woodstock Street, is a Tudor building, erected in 1877 at a cost of £1550. It contains 2 large lecture-rooms, and the classes in which instruction is given to about 170 students every year are in connection with the Science and Art Department at South Kensington. The principal benefactors of Kilmarnock, besides Mr Kay, have been Robert Crawford, who in 1844 bequeathed all his personal property for the purpose of providing funds for the yearly purchase of books for the Kilmarnock Library; and the Misses Buchanan (the last of whom died in 1875), who bequeathed the lands and estate of Bellfield to trustees who were to apply the annual proceeds to small annual payments to the Industrial School, to the Kilmarnock Infirmary, and to the deserving poor of Riccarton and Kilmarnock; £130 yearly for a salary for a missionary in Riccarton parish, and the rest for the purpose of fitting up part of the mansion as a public library, and, should the revenue be sufficient, to fit up the rest of the mansion as an asylum for aged and infirm people who have resided in Kilmarnock or Riccarton for 10 years, are over 60 years of age, and are not on the poor-roll.

Kilmarnock has also four bowling clubs, each with a separate green, five curling clubs, several football clubs, a Mission to the Deaf and Dumb, Male and Female Benevolent Societies, an Agricultural Society, a Horticultural Society, a Philharmonic Society, four Masonic Lodges (Kilmarnock Kilwinning, St John's, No. 22; St Andrew's, No. 126; St Marnock's, No. 109; and St Clement's, Riccarton, No. 202), lodges of Odd-fellows, Free Foresters, and Free Gardeners. During the period of the Peninsular War two regiments of volunteers were formed, and when the volunteer movement of 1859 began Kilmarnock was the first place in Ayrshire to form a company. There are now the 1st and 2nd V.B. Royal Scots Fusiliers and the 1st Ayrshire and Galloway Artillery Volunteers.

Trade.—The introduction of the weaving of hose and bonnets into the town in the end of the 16th century has been already noticed, and by the beginning of the

18th century the trade was much more important than that of any other place in the county. Defoe mentions it in 1723 as famous for all kinds of cutler's ware—a branch of trade that has long vanished. Carpet manufacture was introduced in 1777, and by 1791 had prospered so well that the annual value of the goods produced amounted to £21,000. At the most prosperous period of this trade, about 1837, no less than twelve firms had carpet factories; but now the number is four, of which one manufactures Brussels, and the rest only Scotch carpets, both two-ply and three-ply. The three-ply machine was the invention of a Kilmarnock mechanic—Mr Thomas Morton (1783-1862)—to whom is also due the Brussels carpet machine, that works five colours with four needles. All the firms now employ steam, and the annual value of the goods produced is about £100,000. Eight spinning mills within the burgh supply yarn for the various weaving works. Bonnet-making, in the departments of flat and 'cocked' woollen bonnets and striped nightcaps, is carried on by two firms, the annual product being worth about £10,000. Miscellaneous weaving of tweeds, winceys, and various woollen and mixed fabrics, is carried on extensively by seven firms; while the Nursery power-loom cotton factory has 1100 looms at work. The making and printing of shawls and calicoes (the former introduced in 1824, the latter in 1770), as well as the making of muslin, were all at one time extensively carried on, the shawls made and printed in 1837 being valued at £230,000; but now only two small works are thus engaged. The boot and shoe trade was also at one time considerable; but it also decayed till 1873, when a steam-power boot and shoe factory with modern machinery was established, which does a large South American trade. There is a large tan-work and two brickworks. The staple trade now is in connection with iron, there being a number of foundries and machine-making establishments, including works for making engines, gas-meters, agricultural implements, and hydraulic appliances. Works in connection with the Glasgow and South-Western railway at Bonnieton Square, to the W of the town, were transferred hither from Glasgow in 1856-58 at a cost of £45,000. They are intended for the manufacture and repair of locomotive engines, carriages, and other appliances required on the line. The store department was opened in 1874. Round the town are very extensive coal-fields and works. There are five incorporated trades—viz., the bonnet-makers, the skinners, the tailors, the shoemakers, and the weavers—the first being the oldest, with a charter dating from 1646. The shield of the town's arms is the same as that of the Earls of Kilmarnock, viz., Azure, a fess chequé argent and gules.

Municipality, etc.—Till near the end of the 17th century Kilmarnock was governed by a baron bailie, and from that time to the passing of the Reform Bill by a provost, 6 bailies, a treasurer, and 16 councillors. It is now governed by a provost, 6 bailies, a treasurer, a dean of guild, and 16 councillors, five members of council being returned for each of the five wards into which the town is divided. The police force in 1896 consisted of a chief constable, 2 lieutenants, 2 sergeants and 19 constables. The superintendent's salary is £220. The Municipal Extension and Improvement Act of 1871 transferred to the corporation the charge of the gas-work, which was originally established by a joint-stock company in 1822. The corporation (common good) revenue in 1895 was £1089. Water was introduced in 1850 by a joint-stock company. The original cost was £20,000, but great additions were afterwards made. The settling reservoir is at Gainford, in the parish of Fenwick, and covers 3 acres; one storage reservoir is at Northraig, in Kilmarnock parish, and with its embankment covers 25 acres, and holds nearly 66,000,000 gallons; another at Burnfoot covers an area of 43 acres, and holds 80,000,000 gallons. The Northraig distributing basin is 240 feet above Kilmarnock Cross, and there is thus always abundant pressure. The whole was purchased by the town in 1891 at a cost of £100,000. A new reservoir at Craighendunton, in the vicinity of

Loch Goin, is to contain 140,000,000 gallons, thereby doubling the previous supply; but a certain proportion of this accumulation must be given off annually during summer to the users of water along the bed of the Kilmarnock Water as compensation for the withdrawal of their former supply from the river. A sheriff court is held every Wednesday during the session, and a small debt court on Thursday. A justice of peace court is held on the first Tuesday of every month. Kilmarnock has a head post office. There are branches of the Bank of Scotland, the British Linen Company, the Clydesdale,

Seal of Kilmarnock.

the Commercial, the National, the Royal, the Union Banks, and a National Security Savings Bank, and 9 hotels. The Liberal *Kilmarnock Standard* (1863) is published on Saturday, and the Liberal Conservative *Kilmarnock Herald* (1880) on Friday. There are general markets held every Tuesday and Friday, a corn market also every Friday, and fairs on the second Tuesday of May, the last Thursday of July, and the last Thursday of October. That in May is known as the 'curd fair,' the Saturday after which is a holiday; that in July as the 'gooseberry fair'; and that in October is the cheese show and fair, which is attended by dealers from all parts of the kingdom. It is held under the auspices of the Ayrshire Agricultural Association, and is now the largest cheese show in the United Kingdom—the amount of cheese pitched in 1893 weighed 506 tons. The annual show of the Kilmarnock Farmers' Society is held in April. It is the oldest purely Farmers' Association in Scotland, and celebrated its centenary in 1893. The show of live stock, farmers' implements, etc., is one of the foremost; while the show of Clydesdales is recognized as the premier show of the kind in Scotland. Kilmarnock unites with Dumbarton, Port Glasgow, Renfrew, and Rutherglen in sending a member to parliament, and is the returning burgh. Parliamentary constituency of Kilmarnock alone (1895-96) 4640; municipal, 5284. Valuation, exclusive of railways, (1883) £80,843; railways £6538; (1895) £115,634, including railways. Pop. (1841) 19,398, (1851) 21,443, (1861) 22,619, (1871) 22,963, (1881) 23,038, (1891) 23,447, of whom 14,561 were females. In 1891 there were 5879 houses inhabited, 157 vacant, and 33 building.

The town is notable in literary history for its connection with the early career of Burns. Several of his poems refer to matters connected with it or its neighbourhood, and here the first edition of his poems was printed in 1786, while some of the leading men in or about the place were his earliest patrons. Kilmarnock has also been the birthplace of many individuals who have distinguished themselves in literature, art, or science, and has connected with it probably more than the average number of the minor poets of Scotland. We may here mention John Goldie (1717-1809), author of several small theological works that made a noise in their day; Gavin Turnbull, a minor poet; Jean Glover (1758-1801), authoress of *O'er the Muir among the Heather*; George Campbell (1761-1818), minor poet; James Thomson (1775-1832), minor poet; John Kennedy (1789-1833), minor poet and miscellaneous writer; Archibald M'Kay (1801-83), minor poet and local historian; John Ramsay (1802-79), minor poet; Rev. Dr Findlay (1721-1814), professor of theology in the University of Glasgow; James Tannock (1784-1863), portrait painter; William Tannock, his brother, also an artist; T. Y. M'Christie (1797-1860), revising barrister for the city of London; F. G. P. Neisson (d. 1876), a well-known statistical writer; Alexander Smith (1829-67), poet; John Merry Ross, LL.D. (1833-83); and James B. Reid (1837-

63), artist. See also *The Contemporaries of Burns and the more recent Poets of Ayrshire* (Edinb. 1840); Archibald M'Kay's *History of Kilmarnock* (Kilmarnock, 1848; 3d ed. 1864; 4th, 1880); James Paterson's *Autobiographical Reminiscences, including Recollections of the Radical Years 1819-20 in Kilmarnock* (Glasgow, 1871); M'Kay's *Burns and his Kilmarnock Friends* (Kilmarnock, 1874); *Cuninghame Topographised by Timothy Pont, A.M., 1604-8, with Continuations and Illustrative Notices by the late James Dobie of Crummock* (1876); Rev. D. Landsborough's *Contributions to Local History* (1878); and chap. xix. of M'Illwraith's *History of the Glasgow and South-Western Railway* (Glasgow, 1880).

Kilmarnock Castle, a mansion in Cupar parish, Fifeshire, $1\frac{1}{2}$ mile NW of Cupar town. A splendid edifice, built after designs by Gillespie Graham, it was the seat of Sir David Baxter, Bart. (1793-1872), a manufacturer and munificent benefactor of Dundee, at the death of whose widow in 1882 the estate went to the late Right Hon. W. E. Baxter of KINCALDREM.—*Ord. Sur.*, sh. 48, 1868.

Kilmarnock, a parish of E Dumbartonshire, whose church stands 2 miles WNW of Drymen station on the Forth and Clyde Junction section of the North British, this being 3 miles NE of Caldvaran or Kilmarnock station and $6\frac{3}{4}$ ENE of Balloch. Including the islands of Inchmurrin, Creinch, Torrinch, and Aber, it is bounded W and NW by Loch Lomond, NE and E by Buchanan and Drymen in Stirlingshire, S by Dumbarton, and SW by Bonhill. Its utmost length, from E to W, is $5\frac{1}{2}$ miles; its utmost breadth, from N to S, is $5\frac{1}{2}$ miles; and its area is $14,561\frac{1}{2}$ acres, of which $4236\frac{3}{4}$ are water. Loch LOMOND is on the boundary from a point 5 furlongs N of Balloch pier all round to the mouth of Endrick Water; ENDRICK Water winds 8 miles west-north-westward along all the north-eastern border; and GALLANGAD or Catter Burn, entering from Dumbarton, flows $3\frac{1}{4}$ miles northward through the southern interior, then $2\frac{1}{2}$ miles north-eastward along the boundary with Drymen, till it falls into Endrick Water near Drymen station. From Loch Lomond the surface rises south-eastward to 284 feet near Baturich Castle, 576 at Mount Misery, 462 at conical DUNCERYNE, and 800 at the Dumbarton boundary, the southern district, beyond the Forth and Clyde railway, being mainly a moorish upland tract, projected from Dumbarton Muir. The north-eastern district, along Endrick Water, to a breadth of from 1 furlong to $\frac{3}{4}$ mile, is a low, level, alluvial tract of high fertility, richly embellished with culture and wood; and the rest of the land, with exception of Dunceryne and the ridge of Mount Misery, is all champaign, diversified with heights of from 100 to 300 feet above sea-level, and richly adorned with cornfields, woods, and parks. The rocks are partly eruptive, partly Devonian; and the soil is various, ranging from deep alluvium to shallow moor, but most of it very fertile. About 850 acres are under wood; fully as much upland is pastoral; and the rest of the land is nearly all arable. Kilmarnock Castle, on the Mains estate, near the church, would seem to have been a massive and imposing pile. Mansions are Baturich Castle, Caldvaran House, Catter House, and Ross Priory. The original church of Kilmarnock (Gael. 'church of my little Ronan') was dedicated to St Ronau, a bishop of Kingarth in Bute, who died in 737; while a neighbouring spring bears the name of 'St Maronock's Well,' and Scott in the *Lady of the Lake* calls Ellen a 'votress of Maronnan's cell.' In 1325 it was given by Robert I. to the monks of Cambuskenneth, and theirs it continued down to the Reformation. Kilmarnock is in the presbytery of Dumbarton and synod of Glasgow and Ayr; the living is worth £272. The present church was built in 1813. A marble tablet was erected in it in 1890 to the memory of the late Rev. W. A. S. Paterson. A U.P. church was rebuilt about 1852; and two public schools, Ardoch Bridge and Kilmarnock, with respective accommodation for 89 and 82 children, have an average attendance of about 40 each, and grants of over £40 each. Pop. (1881) 927, (1891) 900.—*Ord. Sur.*, shs. 38, 30, 1871-76.

Kilmartin, a village and a coast parish of Argyllshire. The village, on the road from Lochgilphead to Oban, $3\frac{1}{2}$ miles NNE of Port Crinan and 8 NNW of Lochgilphead, is situated near the middle of a beautiful vale which is watered by the rivulet Skeodnish, and flanked by steep wooded hills. Rebuilt on a regular plan about 1835, it is now one of the neatest and pleasantest of Highland villages, and chiefly consists of substantial slated cottages, each with a garden plot. It has a post office, with money order, savings' bank, and telegraph departments, an inn, and fairs on the first Thursday of March and the fourth Thursday of November. The parish church is a handsome Gothic edifice of 1835, with a square tower. In its graveyard is a purely Celtic cross, $5\frac{1}{2}$ feet high, whose ornamentation consists of interlaced work, divergent spirals, and key patterns or fretwork. There are also a Free church and St Columba's Episcopal church (1854; 120 sittings).

The parish containing also Port CRINAN, and including the two chief islands in Loch Craignish, with several other islets, is bounded NW by Craignish, NE by Kilehrenan and Dalavich, SE by Kilmichael-Glassary, S by Loch Crinan, which separates it from Knapdale, and W by Loch Craignish, which separates it from the Craignish peninsula. Its utmost length, from NE to SW, is $12\frac{1}{2}$ miles; its utmost breadth is $5\frac{1}{2}$ miles; and its area is 25,102 acres. Loch AWE, for $4\frac{3}{4}$ miles downward from its head, lies on the boundary with Kilmichael-Glassary; and the rivulet Skeodnish, rising not far from the loch's head, and running 6 miles south-south-westward to Loch Crinan, appears to traverse the loch's original outlet. The ranges, ridges, and groups of hill, which occupy most of the interior, are much diversified with intervening dales and hollows, and exhibit no little beauty of verdure and copsewood. They rise to altitudes of from 700 to 1407 feet above sea-level; and include several summits which command extensive and very brilliant view. The vale of the Skeodnish is overhung by the hills in the N, and partly flanked by those in the S; has, for some distance from its head, a narrow and winding character, but expands afterwards into a level plain, partly extending along the south-eastern boundary; and, viewed as a whole, is one of the loveliest valleys in the Highlands. A series of broad terraces, rising 50 to 60 feet above the bottom level, and mostly composed of gravel and small boulders, is in the upper part of the vale, principally on the W side; and an extensive peat moss, reaching partly into Kilmichael-Glassary, and long under a course of drainage, lies on the SE border. The predominant rocks are metamorphic, and include chlorite, mica, clay, and hornblende slates. The soil of the strath is fairly good, a mixture of many kinds, and generally is very various, ranging from alluvium to moor. Barely one-seventh of the entire area is in tillage; 1200 acres are under wood; and nearly all the remainder is either pastoral or waste. A prize show is held annually in September for cattle, sheep, and horses. The ruins of Kilmartin Castle, the ancient residence of the rectors of Kilmartin, crown a bank immediately N of the village; other antiquities being the ruins of CARNASSARY Castle and several vitrified forts, concentric circles, and large cairns, out of which some beautiful urns have been exhumed. POTALLOCH HOUSE is the chief mansion, and about a quarter of a mile from it, on a prominent rock facing Loch Crinan, stands DUNTROON CASTLE. Kilmartin is in the presbytery of Inveraray and synod of Argyll; the living is worth £181. At Ford of Loch Awe is an Established mission church. A public school, with accommodation for 160 children, has an average attendance of about 90, and a grant of nearly £110. Pop. (1801) 1501, (1831) 1475, (1861) 949, (1871) 869, (1881) 811, (1891) 695, of whom 507 were Gaelic-speaking.

Kilmaurs, a small town and a parish in Cunninghame district, Ayrshire. The town stands, 200 feet above sea-level, on the right bank of Carmel Water, and has a station on the Glasgow, Barrhead, and Kilmarnock Joint railway, $2\frac{1}{4}$ miles NNW of Kilmarnock. It sprang

from the ancient hamlet of Cunninghame, which took the name of Kilmours in the 13th century from a church dedicated either to the Virgin Mary or to a Scottish saint called Maure, who is said to have died in 899, and it occupies a pleasant site on a gentle northward ascent, and chiefly consists of one main street, with some lanes and houses behind. It adjoins an old mansion, the Place, which, long a seat of the Earls of GLENCAIRN, was inhabited in the latter part of the 18th century by the Countess of Eglington; and a neighbouring farm, Jock's Thorn, contains vestiges of the original or more ancient residence of the Glencairn family, to whom Kilmours gave the title of Baron both while they were Earls of Glencairn and for 53 years earlier. In 1527 it was made a burgh of barony at the instance of Cuthbert, Earl of Glencairn; enjoyed, under its charter, some peculiar privileges which have gradually dwindled away into insignificance; and in connection therewith long figured as a considerable market-town and as an influential seat of population, before Kilmarnock had risen into note. It was also distinguished for the manufacture of cutlery, so famous for keenness of edge as to give rise to a provincial proverb, 'As gleg as a Kilmours whittle.' Now its inhabitants are for the most part employed in shoe and bonnet factories and in the neighbouring coal and iron mines; and it has a post office, with money order, savings bank, and telegraph departments, 2 inns, gaswork, a small town-hall with a steeple and clock, and fairs on the second Wednesday of June *o.s.* and 11 Nov. A new Public Hall, capable of accommodating 450 persons, with reading and recreation rooms, was erected in 1892 by public subscription and from the proceeds of a subscription sale, at a cost of £1160. The government of the town is vested in two bailies elected annually. The jugs, for the punishment of malefactors, and used for theft so late as 1812, still dangle outside the Town Hall. The parish church, originally collegiate for a provost and 6 prebendaries, is said to have been built in 1404, and in 1888 underwent a thorough restoration, which included, besides internal renovation, the erection of new chancel and tower. The Free church was built soon after the Disruption, and the U.P. church was rebuilt in 1864. The burial aisle of the Earls of Glencairn, the fourteenth of whom was the friend and patron of Burns, adjacent to the parish church, was erected by the seventh Earl in 1600, repaired in 1844, and contains a beautiful but defaced cenotaph of William, ninth Earl, the Lord High Chancellor of Scotland, who in 1664 was buried in St Giles's, Edinburgh. Pop. (1881) 1293, (1891) 1713.

The parish, containing also the villages of CROSSHOUSE and GATEHEAD, is bounded W and N by Dreghorn, E and SE by Kilmarnock, and S and SW by Dundonald. Its utmost length from NE to SW, is 6 miles; its utmost breadth is 2½ miles; and its area is 5940 acres, of which 40½ are water. The river IRVINE winds 4½ miles west-north-westward along all the Dundonald border; Garrier Burn, running 6¼ miles south-westward, and CARMEL Water, running 4½ furlongs westward to the Irvine, trace nearly all the boundary with Dreghorn; and higher up, Carmel Water, coming in from the NW corner of Kilmarnock parish, and here very often called Kilmours Water, flows 5 miles south-westward through the interior, cutting it into two nearly equal parts. Sinking at the south-western corner to 45 feet above sea-level, the surface then rises gently north-eastward to 208 at Fardalehill, 216 near Busbiehead, and 308 at Newland—vantage grounds that command delightful prospects over Cunnighame and Kyle, and across the Firth of Clyde to the Arran and Argyllshire mountains. The rocks are carboniferous; coal and iron are largely worked; and the soil for the most part is deep, strong, and of high fertility. Scarcely an acre of land is unproductive; and the beauty of the parish is greatly enhanced by clumps of wood. Agriculture has undergone vast improvement, and the dairy husbandry is eminently excellent. The chief antiquity is Busbie Castle, on the Carmel's right bank, ½ mile NE of Crosshouse. Mansions are Craig, Knockentiber, Thornton, Tour, and Towerhill. Since 1882 giving off

its western half to the *g. s.* parish of CROSSHOUSE, Kilmours is in the presbytery of Irvine and synod of Glasgow and Ayr; the living is worth £354. There is a Roman Catholic chapel at Crosshouse (1891). Two public schools, Crosshouse and Kilmours, and Crosshouse Roman Catholic school, with respective accommodation for 450, 290, and 116 children, have an average attendance of about 400, 310, and 45, and grants of about £380, £292, and £42. Pop. (1881) 3704, (1891) 4453, of whom 1993 were in the ecclesiastical parish.—*Ord. Sur.*, sh. 22, 1865.

Kilmelfort, a hamlet in Kilninver parish, Lorn district, Argyllshire, at the head of Loch Melfort, 15½ miles S of Oban and 14 N of Kilmartin. It has a post office, with money order, savings bank, and telegraph departments. See KILNINVER.

Kilmenny, an ancient parish in Islay island, Argyllshire, whose church stands 4 miles SSW of Port Askaig. It is now incorporated *quoad civilia* with Killarrow parish, but was constituted *quoad sacra* a separate parish, first by ecclesiastical authority in 1826, next by civil authority in 1849. It is in the presbytery of Islay and Jura and synod of Argyll; the stipend is £166. Pop. (1871) 924, (1881) 881, (1891) 805.

Kilmichael, an estate with an old mansion, in Glen-cloy, Arran island, Buteshire, nearly a mile SSW of Brodieck road. In 1307 the estate was given by King Robert I. to an ancestor of the Fullarton family, called MacLewie or MacLewis; and it gave its name in the modified form of *cloy* to the glen. The present proprietor, Miss Fullarton, holds the hereditary office of coroner of Arran.—*Ord. Sur.*, sh. 21, 1870.

Kilmichael. See CAMPBELLTOWN.

Kilmichael-Glassary or Glassary, a village and a parish in Argyll district, Argyllshire. The village stands, 50 feet above sea-level, on the right bank of the Add, 4 miles N by W of Lochgilphead, under which it has a post office. Once a place of some little note, as seat of the baron-bailie courts of the Campbells of Ach-nabreck, it has dwindled down to a mere church hamlet, but retains two great cattle fairs on the last Wednesday of May and the Tuesday before the last Wednesday of October, and one for lambs on the second Thursday of August.

The parish, containing also the town of LOCHGILP-HEAD, the hamlet of LOCHGAIR, and part of the village of FORD LOCHAW, is bounded NW by Kilmartin and the upper 5¾ miles of Loch AWE, NE by Kilchrenan-Dalavich and Inveraray, SE and S by Loch Fyne, and SW and W by South Knapdale, North Knapdale, and Kilmartin: Its utmost length, from NNE to SSW, is 15¾ miles; its utmost width is 8½ miles; and its area is 94 square miles or 60,229 acres. The river ADD, formed by two head-streams at an altitude of 600 feet above sea-level, and winding south-westward across the parish on its way to inner Loch Crinan, is the principal stream; and of numerous fresh-water lakes the larger are Loch EDERLINE (4 × 2½ furl.; 122 feet) on the Kilmartin border, Loch Leacann (7 × 3 furl.; 1020 feet) on the Inveraray border, and Fincharn Loch (5 × ½ furl.; 900 feet), Loch Gaineamhach (9 × 1½ furl.; 856 feet), Loch Leathan (4½ by 2 furl.; 240 feet), and Loch Glashan (1¼ × ½ mile; 347 feet) in the interior. From the shores of Loch Fyne to those of Loch Awe extends a wide desolate tract of hill and moss, which, including much bleak pasture, wild moorland, and irreclaimable waste, attains 1030 feet near Lochan Dubh, 704 near Craigmurral, 772 at Dnn Alva, 1377 at Beinn Ghlas, 1421 at Beinn Laoigh, and 1504 at Cruach Mhic Chaolice. The predominant rocks are mica slate, clay slate, and chlorite slate. Porphyry protrudes through the clay slates at Cumlodden in masses 700 to 800 feet high, and extends over a tract of several miles; limestone, too, is plentifully interspersed through the slates; and granite and porphyry boulders are scattered over the hills. About sixty years ago a copper mine was opened unsuccessfully on Braucaioille farm. The soil along Loch Fyne is gravelly, but to the SW and along Loch Awe is mostly a deep dark fertile loam. Peat occurs in every

part, and at every elevation. Antiquities are the ruins of FIONNCHAIRN Castle on Loch Awe, of four hill-forts, and of four pre-Reformation chapels—Kilbride in the W end of the parish, Kilmory near Lochgilthead, Killevin on Loch Fyne, and Kilneuair on Loch Awe. Kirnan, $1\frac{3}{8}$ mile NNE of the village, was the home of the forefathers of Campbell the poet, and is mournfully celebrated in his 'Lines on visiting a Scene in Argyllshire.' The mansions are KILMORY House, Castleton, Ederline House, Lochgair House, and Minard Castle. Giving off portions to LOCHGILPHEAD and CUMLODDEN *quoad sacra* parishes, Kilmichael-Glassary is in the presbytery of Inveraray and synod of Argyll; the living is worth £326. The old parish church, with 1300 sittings, was built in 1827; but in 1873 it was taken down and rebuilt by the heritors on a scale better suited to the population, being now seated for 300. There is also a chapel of ease at Lochgair; and four public schools—Ford, Glassary, Lochgair, and Minard—with respective accommodation for 60, 106, 60, and 111 children, have an average attendance of about 40, 75, 35, and 70, and grants of over £55, £90, £46, and £87. Pop. (1881) 4348, (1891) 3831, of whom 2608 were Gaelic-speaking, and 1256 belonged to Kilmichael-Glassary ecclesiastical parish.—*Ord. Surv.*, shs. 37, 29, 36, 1873-83.

Kilmilieu. See INVERARAY.

Kilminster, a hamlet in Wick parish, Caithness, 5 miles NW of Wick town. To the SW lie the Loch of Kilminster ($2\frac{1}{2} \times 2$ furl.; 45 feet above sea-level) and Kilminster Moss, which measures about 2 miles square, and is many feet deep.—*Ord. Surv.*, sh. 116, 1878.

Kilmodan, a parish in Cowal district, Argyllshire, containing the Clachan of Glendaruel, which, standing on the left bank of the Ruel, 17 miles NNE of Rothesay and 6 E of Otter Ferry, has a post office under Greenock, an inn, and the parish church. It is bounded NE by Strachur, E by Kilmun and Inverchaolain, S by Inverchaolain and Loch Riddon, SW and W by Kilfinan, and NW by Stralachlan. Its utmost length, from NNE to SSW, is $13\frac{3}{4}$ miles; its utmost width, from E to W, is $4\frac{3}{4}$ miles; and its area is 25,838 $\frac{3}{4}$ acres, of which 307 $\frac{1}{2}$ are foreshore and 123 water. The Ruel, formed by two head-streams at an altitude of 90 feet above sea-level, winds $10\frac{1}{2}$ miles south-by-westward down a beautiful narrow glen till it falls into the head of salt-water Loch RIDDON; just above its mouth it is joined by Tamhnich Burn, which, after tracing 3 miles of the eastern boundary, flows $1\frac{1}{2}$ mile west-south-westward through the interior. The surface is mostly occupied by heathy hills, chief elevations from S to N being Cnoc nan Darach (1184 feet), Cruach nam Mull (1069), Cruach nam Gearran (1230), Cruach Chuilceachan (1428), *An Socach (1345), *Creag Tharsuain (2111), and Cruach an Lochain (1658), where asterisks mark those summits that culminate on the eastern and north-western borders. Mica slate is the predominant rock, though limestone also abounds; and the soil along the bottom of Glendaruel is a deep and fertile alluvium. Rather more than one-sixteenth of the entire area is in tillage; 1130 acres are under wood; and the rest is most of it moorland pasture. Colin Maclaurin (1698-1746), the eminent mathematician, was a son of the parish minister. Several cists have been discovered in the parish, and its antiquities are Caledonian cairns and traces of Scandinavian fortalices. GLENDARUEL House, DUNANS, and ORMDALE, all noticed separately, are the chief residences. Kilmodan is in the presbytery of Dunoon and synod of Argyll; the living is worth £215. The parish church was built at the end of the 18th century. A much older church, whose outline can still be very distinctly traced, stood on the hillside about a mile above Clachan, to the NE. A Free church stands 7 furlongs NNE; and two public schools, Kilmodan and Stronaflan, with respective accommodation for 62 and 60 children, have an average attendance of about 25 and 30, and grants amounting to nearly £45 and £50. Pop. (1881) 323, (1891) 351, of whom 187 were Gaelic-speaking.—*Ord. Surv.*, shs. 29, 37, 1873-76.

Kilmonivaig, a large Highland parish of SW Inverness-shire, containing the hamlets of Spean Bridge or Unachan, $9\frac{3}{4}$ miles NE of Fort William; Bridge of Roy or Bunroy, 3 miles E of Spean Bridge; and Invergarry, $7\frac{1}{2}$ miles SW of Fort Augustus, each with a post, money order, and telegraph office. Bridge of Roy and Spean Bridge are each provided with a station on the West Highland railway, from which the Invergarry and Fort Augustus railway strikes off at Spean Bridge and runs through the parish, first in a westerly and then in a north-easterly direction, to Invergarry and on to Fort Augustus. It is bounded N by Glenshiel in Ross-shire and by Urquhart-Glenmoriston, NE by Boleskine-Abertariff, E by Laggan, SE by Fortingall in Perthshire, S by Lismore-Appin in Argyllshire, and W by Kilmallie and Glenelg. Its utmost length, from NW to SE, is 60 miles; its utmost breadth is 23 miles; and its area is about 276,600 acres, of which $44\frac{1}{2}$ are foreshore, $26\frac{1}{2}$ tidal water, and $9531\frac{3}{4}$ water. In 1891 a small portion of the parish, whose area is not stated, but which was situated on Loch Linnhe between the river Lochy and the river Ness, and that cut the parish of Kilmallie at this point in two, was transferred by the Boundary Commissioners to Kilmallie. The Quoich, rising in the extreme NW at an altitude of 2500 feet above sea-level, runs 8 miles south-eastward and southward to the middle of Loch Quoich ($5\frac{1}{4}$ miles \times $\frac{3}{4}$ mile; 555 feet), which extends along the Kilmallie boundary, and out of which the GARRY flows $18\frac{1}{2}$ miles eastward, through Loch Garry ($4\frac{1}{2}$ miles \times $\frac{1}{2}$ mile; 258 feet), to the middle of Loch Oich. From Loch OICH ($3\frac{7}{8}$ miles \times 1 to $2\frac{1}{4}$ furl.; 105 feet), whose foot falls just within Boleskine-Abertariff, the CALEDONIAN CANAL goes $1\frac{3}{4}$ mile south-south-westward to Loch LOCHY ($9\frac{3}{4}$ miles \times 1 to $9\frac{3}{4}$ furl.; 93 feet), and out of Loch Lochy the river Lochy winds $9\frac{3}{8}$ miles south-south-westward along the Kilmallie border, till it falls near Fort William into the head of salt-water Loch Linnhe. The SPEAN, from a point $1\frac{1}{4}$ mile below its efflux from Loch Laggan (819 feet), winds $19\frac{1}{4}$ miles westward to the Lochy, 3 furlongs below the latter's exit from Loch Lochy; and the Spean itself is fed by the GULBIN, running $10\frac{7}{8}$ miles northward out of Loch Ossiau ($3\frac{1}{4}$ miles \times 3 furl.; 1269 feet), and through Loch Gulbin ($7 \times 3\frac{1}{2}$ furl.; 1150 feet); by the TREIG, running $2\frac{3}{8}$ miles north-by-eastward out of Loch Treig ($5\frac{1}{2}$ miles \times 1 to $5\frac{1}{2}$ furl.; 784 feet); and by the ROY, running $14\frac{1}{4}$ miles south-westward. The surface is everywhere hilly or grandly mountainous, chief elevations to the W of the Caledonian Canal being Beinn Tee (2956 feet), Sron a' Choire Ghairbh (3066), and Gleourach (3395); to the E, *Carn Leac (2889), *Creag Meaghaidh (3700), Beinn Eithinn (3611), Cnoc Dearg (3433), Stob Choire an Easain Mhoir (3658), *Aonach Beag (4000), and huge *BEN NEVIS (4406), where asterisks mark those summits that culminate on the confines of the parish. Such is a bare outline of the general features of this vast parish, fuller details as to whose scenery, mansions, antiquities, and history are furnished under GLENFINTAIG, GLENGARRY, GLENGLOY, GLENGULBIN, GLENMORE-NAN-ALBIN, GLENOY, GLENSPEAN, INVERGARRY, INVERLOCHY CASTLE, and LOCHABER. The rocks are mainly mica slate and gneiss, but include some fine-grained red granite and brown porphyry. Sheep-farming constitutes the staple employment; but 2 miles NE of Fort William is the famous Ben Nevis Distillery. Three battles have been fought within this parish—the 'Battle of the Shirts,' on 3 July 1544, between the Clan Ranald and the Frasers, when 300 of the latter were slain, along with Lord Lovat and his eldest son; the Battle of INVERLOCHY, on 2 Feb. 1645, in which Montrose's small Royalist army surprised and routed Argyll's Covenanters; and the 'last considerable clan battle which was fought in Scotland,' during Charles II.'s reign, when at Mulroy the Mackintoshes were worsted by the Macdonalds of Keppoch. John Macdonald or Ian Lom, a Gaelic Jacobite poet of the latter half of the 17th century, was a native; and his songs had no little effect towards making Kilmonivaig the 'cradle of the rebellion of '45.'

Giving off the greater portion of GLENGARRY *quoad sacra* parish, Kilmorivaig is in the presbytery of Abertariff and synod of Argyll; the living is worth £375. The parish church, near Spean Bridge, was built about 1812, and renovated in 1891. There is an Established mission at Brae Lochaber. A Free church stands $2\frac{3}{4}$ miles WNW of Spean Bridge; and at Bunroy is a Roman Catholic church (1826; 350 sittings). Three public schools—Kilmorivaig, Roy Bridge, and Tomcharich—with respective accommodation for 90, 92, and 30 children, have an average attendance of about 55, 55, and 25, and grants amounting to about £60, £85, and £40. Pop. (1881) 1928, (1891) 2205, of whom 1627 were Gaelic-speaking, and 1704 belonged to Kilmorivaig ecclesiastical parish.—*Ord. Surv.*, shs. 62, 63, 53, 54, 72, 73, 1873-80.

Kilmorack (anciently Kilmoricht, Kilmorok, and Kilmarak; Gael. *Kil Morok* or *Moroc*, 'the church of St Moroc'), a large parish with a hamlet of the same name in the extreme N of Inverness-shire. The hamlet lies about 3 miles WSW of the village and railway station of Beauly, under which it has a post office. The parish is bounded N by Ross-shire, E by Kirkhill and by Kiltarlity and Convinth, and S by Kiltarlity and Couvinth, and W by Ross-shire. Along the NE the boundary is mostly formed by the river Beauly; elsewhere the line follows the watershed round the head of Glen Cannich and Strathfarrer. The Tomich detached portion of the parish, containing 466 acres, was in 1891 transferred by the Boundary Commissioners to the parish of Urray (and to the county of Ross and Cromarty); but a portion of Urray, comprising 332 acres, that was situated in Inverness-shire, was transferred to Kilmorack. Another portion of Kilmorack, however, that cut the parish of Kiltarlity and Convinth in two, and that lay to the south and east of the river Glass, was given to that parish. The greatest length, from NE to SW, is $36\frac{1}{2}$ miles, and its greatest breadth 13 miles. The land area is about 142,000 acres, but of this only some 4000 acres are arable, the rest being under wood, rough hill pasture, moorland, or waste. The soil in the flat about Beauly is a strong heavy clay; elsewhere in the cultivated districts it is a light stony loam passing into sand and gravel. The underlying rocks are gneiss and Old Red sandstone, the latter of which is quarried. An effort was made many years ago at the lower end of Strathfarrer to work a vein of graphite in heavy spar traversing gneiss, but it was given up. The drainage of the upper portion of the parish is carried off by the Farrer, Cannich, and Affric, which unite to form the river Beauly; and by it and the burns flowing into it the whole of the rainfall is carried off. The surface about Beauly is flat, but elsewhere it is rough and rugged, especially on the SW and W, where, along the borders of the county, it reaches a height of over 3000 feet at the line of heights mentioned in the article INVERNESS-SHIRE. The parish is traversed by the main road from Inverness to Dingwall, which passes through Beauly, and from this there is a road along the left side of the Beauly towards Strathglass. The Inverness and Dingwall section of the Highland railway system passes for $1\frac{1}{2}$ mile through the NE corner of the parish, half a mile W of Beauly. The scenery of the upper portions of the parish is noted for its wild and picturesque beauty, and attracts to Beauly and thence to Glen Cannich, Strathfarrer, and Strathglass a large number of summer visitors and tourists. Portions of it are referred to under the DHRUIM, ERCHLESS CASTLE, AIGAS, the GLASS, the FARRER, and the CANNICH. The falls of Kilmorack are on the river Beauly, $2\frac{1}{2}$ miles SW of the village. They occur between Kilmorack hamlet on the N bank and the ruined church and burying-ground of Kiltarlity on the S bank of the river, and are remarkable not so much for their height as for their breadth and volume. For fully half a mile above the lower fall the river has cut a deep and narrow channel through Old Red sandstone conglomerate, and at the bottom of this it toils in a series of rapids alternating with snllen, deep brown pools full of mysterious eddies. At one place the open-

ing is very narrow, and the water has a sheer fall of some 15 feet, which is known as the upper fall. Immediately below this narrow rocky channel the banks suddenly expand into a wide semicircular basin, through which the river slowly glides till, at the lower edge, it falls over a series of low rocky shelves in miniature cascades, boiling and fretting upon the uneven bed as it rushes onward. The tops of the rocky banks of both sides are covered with birch and pine trees. The best points of view are from a summerhouse in the minister's garden on the N bank and from the walk along the S bank within the policies of BEAUFORT Castle, to which a bridge immediately below the falls crosses. The chief seats are Erchless Castle, Fasnakyle, and Eilan Aigas, which are separately noticed, and the principal antiquities are some ancient stone circles and pillars, hill forts, Erchless Castle, and the ruins of Beauly Priory. Besides the hamlet of Kilmorack, the parish contains also the village of BEAULY, of which mention is made as early as 1562, but the modern village seems to be on a different site. The parish, which is in the presbytery of Dingwall and the synod of Ross, is of some antiquity, as there was a 'vicar of Kilmorok' in 1437. The lands of the Kirktown of 'Kilmoricht' were in 1521 granted by Robert, Bishop of Ross, to Thomas Fraser of Lovat. The patron saint was St Moroc, Culdee abbot of Dnnkeld, whose day was 8 Nov. The parish church, on the bank of the river Beauly close to the falls, was built in 1786, and repaired in 1835, and again in 1890-91. It seems to occupy the site of an older church. The stipend is £256 with manse. The Free church of Kilmorack is in Beauly, and there is also a Roman Catholic church, with 350 sittings, in Beauly. Beauly public, Cannich Bridge public, Struy public, Teanassie public, Beauly Roman Catholic, and Marydale Roman Catholic schools, with accommodation for respectively 250, 69, 66, 100, 90, and 68 children, have an average attendance of about 180, 20, 20, 88, 55, and 15, and grants amounting to about £215, £35, £40, £100, £60, and £16. The principal landowners are Lord Lovat and Chisholm of Chisholm. Pop. (1801) 2366, (1831) 2709, (1861) 2852, (1871) 2728, (1881), 2618, (1891) 2093, of whom 1426 were Gaelic-speaking.—*Ord. Surv.*, shs. 83, 82, 72, 73, 1873-82.

Kilmore. See KILNINIAN AND KILMORE.

Kilmore and Kilbride, a united maritime parish of Lorn, Argyllshire, containing the town of OBAN, and comprehending the island of KERRERA. It is bounded N by the entrance to Loch ETIVE, E by the Muckairn portion of Archatan, SE by Kilchreuan, S by Kilmoriv and Loch FEACHAN, and W by the Firth of LORN. Its utmost length, from NNE to SSW, is $8\frac{1}{2}$ miles; its width varies between 9 furlongs and $9\frac{3}{4}$ miles; and its area is 46 square miles or 29,500 acres. The coast, indented by Dunstaffnage, Ganavan, and Oban Bays, is generally bold and rocky; and the interior is hilly, chief elevations from N to S being Ganavan Hill (235 feet), Tom Ard (412), Cnoc Mor (500), Cruach Lerags (827), Tom na Buachaille (688), Sron Mhor (651), Torr Dhamh (961), and Beinn Dearg (1583). Troutful Loch Nell ($1\frac{1}{2}$ mile \times 3 furl.; 48 feet) is the largest of thirteen fresh-water lakes, and sends off a stream 2 miles south-south-westward to the head of Loch Feachan. The rocks include slate and sandstone, both of which have been quarried; and the soil of the arable lands is generally light and sandy. Sheep and dairy farming is the leading industry. A 'serpent mound,' near Loch Nell, was explored by Mr J. S. Phené, F.S.A., in 1872, when a megalithic chamber in the cairn at its W extremity was found to contain charred bones, stone implements, etc. Other features of interest are noticed separately under CONNELL FERRY, DOG'S STONE, DUNOLLY, DUNSTAFFNAGE, and other articles already indicated. In the presbytery of Lorn and synod of Argyll, this parish is divided ecclesiastically into Kilmore, Oban, and St Columba's, the first a living worth £306. The old church of Kilmore, $4\frac{1}{2}$ miles SSE of Oban, was built in the latter half of the 15th century. The old church of Kilbride, 3 miles S

of Oban, was built in 1740. Close to the S wall of the latter church lie fragments of a very beautiful West Highland cross, 11½ feet high, which was erected by Archibald Campbell of Lerags in 1516, and is unique in hearing a coat of arms. In 1876 the old churches were dismantled, but the walls are still standing and covered with ivy. At Dunach, about half-way between them, a new church has been built. Three public schools, Kerrera, Kilmore, and Strontoiller, with respective accommodation for 48, 65, and 45 children, have an average attendance of about 5, 25, and 20, and grants of nearly £18, £37, and £37. Valuation (1883) £11,152, 7s. 8d., (1892) £9692, 11s. 6d. Pop. (1881) 5142, (1891) 5729, of whom 3281 were Gaelic-speaking, whilst 558 were in Kilmore, 3337 in Oban, and 1834 in St Columba ecclesiastical parishes.—*Ord. Sur.*, shs. 45, 44, 1876-83.

Kilmorich, an ancient parish in Cowal district, Argyllshire, now incorporated with Lochgoilhead parish. Its church (258 sittings) is still in use, and stands at Cairndow, 9¾ miles NE of Inveraray.

Kilmorie. See CRAIGNISH.

Kilmorie, an ancient chapelry in South Knapdale parish, Argyllshire. Its burying-ground and the ruins of its church still exist, on the shore midway between Lochs Swin and Killisport; and the burying-ground contains a beautiful obelisk, while the ruins of the church comprise almost the entire walls, and show the building to have been comparatively large.

Kilmorie, the Jamiesons' ancient castle in Rothesay parish, Buteshire, on the W coast of Bute island, opposite Inchmarnock. Its towers and other buildings are now an utter ruin. The Jamiesons held the office of hereditary coroner of Bute for four centuries, as well as considerable landed property, which lapsed to the Bute family in 1780.

Kilmory, an ancient chapelry and an estate in Kilmichael-Glassary parish, Argyllshire. The chapel stood near the E shore of Loch Gilp; its foundations continued visible till the early part of the 19th century; and the graveyard is still used by the country people as a burying-ground. The mansion on the estate, near the site of the church, ¾ mile SSE of Lochgilphead, is said to date from the 14th century, but has been repeatedly renovated, enlarged, and beautified within the last hundred years. Its principal feature is a large octagonal tower, commanding an exquisite view of great part of Loch Fyne and of distant sky-lines from the mountains of Arran to those of Mull. Acquired by his grandfather in 1828, the estate is now held by Sir Arthur John Campbell Orde, fourth Bart. since 1790 (h. 1865; suc. 1897).—*Ord. Sur.*, sh. 29, 1873.

Kilmory, a parish comprising the W and S sides of the island of Arran, Buteshire, and including the isle of FLADDA. Bounded NW and W by Kilbraunan Sound, S by the Firth of Clyde, and E by Kilhride, it has an utmost length from N by W to S by E of 19¾ miles, an utmost breadth from E to W of 7¾ miles, and an area of 67,099 acres. The coast-line in Arran extends from the mouth of Loch Ranza, all round the W, the S, and the SE, to Dippiu Head; and the interior line of boundary is principally the watershed of the island. The coast, the surface, and the chief features, natural or artificial, have all been noticed in our article on ARRAN. Rather less than one-eleventh of the entire area is in tillage, and nearly all the remainder is either pastoral or waste. Agriculture is the staple industry, Lady Mary Louise, only daughter of the late Duke of Hamilton, being almost sole proprietor. In the vicinity of Lag there is a post office, with money order, savings bank, and telegraph departments, under Whiting Bay. Kilmory is in the presbytery of Kintyre and synod of Argyll; the living is worth £298. The parish church stands 7 furlongs N of the southern shore of the island, and 10 miles SW of Lamlash. It was built in 1785, and in 1881 was stripped and handsomely renovated at the cost of the Duke of Hamilton. There is an established church at Lochranza, and another was erected in 1889 at Shiskan at a cost of £1700. There

are also Free churches of Kilmory, Lochranza, and Shiskan; and Kilmory, Little Mill, Lochranza, Penrioch, Shiskan, Sliddery, and Dougarie schools, all of them public but the last, with total accommodation for 520 children, have an average attendance of about 275, and grants amounting to about £375. Since 1 January, 1894, the parish has been divided, for the registration of births, deaths, and marriages, into the three districts of Kilmory, Shiskan, and Lochranza. Pop. (1881) 2586, (1891) 2519, of whom 1579 were Gaelic-speaking.—*Ord. Sur.*, shs. 13, 21, 1870.

Kilmster. See KILMINSTER.

Kilmuir, a hamlet and a parish in Skye district, Inverness-shire. The hamlet lies on the NW coast of the Isle of Skye, 4 miles N of Uig, and 20 NNW of Portree, under which it has a post office. The parish church here dates from 1810. In the churchyard is the grave of Flora Macdonald (1722-90), the guide and protectress of Prince Charles Edward after the '45, with an Iona cross of Aberdeen granite, 28¾ feet high, erected in 1880 to replace one of 1871, which was blown down and broken by a gale of Dec. 1873.

The parish, containing also the hamlet of Staffin, with another post office under Portree, comprises the ancient parishes of Kilmuir, Kilmaluig, and Kilmartin, and comprehends the northern and north-eastern portions of Trotternish peninsula, with the islets of Iasgair, Altavaig, Fladda, Fladdachuain, Tulum, and Trodda. It is bounded N and E by the sea, S by Portree, and W by Snizort. Its utmost length, from NNW to SSE, exclusive of the islets, is 15 miles; its utmost breadth is 6 miles; and its area is 34,844 acres, of which 409 are foreshore and 210 water. The several islets, and the principal features and objects of the mainland districts are mostly noticed elsewhere; and a general view of the coasts and of the interior is given in our article on Skye. The parish is divided into the three districts of Kilmuir proper, Kilmaluig, and Stenscholl. The best lands form the largest continuous cultivated tract in Skye, called the Plain of Kilmuir; the next best lands are congeries of little hills, principally green, many of them isolated, with small intervening glens, traversed by brooks or occupied by lakes; and the other lands, comprising the central tracts southward to the boundaries with Portree and Snizort, include the lofty precipitous hill emhosoming Quiraing, and the northern parts of the craggy, shattered pinnacled mountain of Storr. Less than one-sixth of the entire area is in tillage, the rest being either meadow-land, hill pasture, or waste. The principal antiquities, besides Duntull Castle, are vestiges of cairns, remnants of Caledonian stone circles, 6 dunes or Scandinavian forts, and ruins or traces of several pre-Reformation chapels. Including almost all Stenscholl *quoad sacra* parish, Kilmuir is in the presbytery of Skye and synod of Glenelg; the living is worth £170. There is a chapel of ease at Kilmaluig. A Free Church charge, with two places of worship, is in Kilmuir civil parish; and two public schools, Kilmuir and Kilmaluig, with respective accommodation for 125 and 70 children, have an average attendance of about 105 and 80, and grants of nearly £105 and £80. Pop. (1881) 2562, (1891) 2394, of whom 2255 were Gaelic-speaking, and 1148 were in Kilmuir ecclesiastical parish.

Kilmuir, a hamlet in Knockchain or Kilmuir-Wester parish, SE Ross and Cromarty shire, on the Moray Firth, 2 miles NNE of Kessock Ferry and 3 N by E of Inverness. See KNOCKBAIN.

Kilmuir-Easter, a coast parish of NE Ross and Cromarty, containing Delyn and Kildary stations on the Highland railway, 3¾ and 5¾ miles NE of Invergordon. Within it are also the coast village of Bar-baraville, 2¼ furlongs SSE of Delyn station; BALINTRAID Pier, 1¼ mile SSW of Delyn station; and Parkhill post office, near Kildary station, with money order, savings bank, and telegraph departments. It is bounded N by Edderton and Logie-Easter, NE by Logie-Easter, SE by Nigg Bay and the Cromarty Firth, and SW and W by Rosskeen. Its utmost length, from NW to SE, is 7¾ miles; its width varies between 5

furlongs and $3\frac{3}{4}$ miles; and its area is 10,999 acres. The shore, $4\frac{1}{2}$ miles in extent, is low and flat, fringed at low water by the broad Sands of Nigg; and inland the surface for from $1\frac{1}{2}$ to 2 miles at no point exceeds 200 feet above sea-level, but beyond it rises to 1000 feet at *Kinrive Hill, 1301 at *Cnoc Corr Guinie, and 979 at Druim na Gaoithe, where asterisks mark two summits that culminate on the SW border. The only stream of any consequence is the Strathroy or Balnagowan river, entering from Rosskeen, and winding $10\frac{3}{4}$ miles east-south-eastward, till it falls into Nigg Bay $\frac{3}{4}$ mile ESE of Tarbat House. Sandstone, underlying the lower district, includes a fine white variety, which resembles the Craighleith stone near Edinburgh, and has been worked at Kinrive; whilst a reddish inferior soil has also been quarried in several places. The soil is generally light but fertile along the sea-board, highly improved by art since 1850; on the hills it grows poorer and poorer, till at last it passes into barren moor. All the lower grounds, as far as Kinrive Hill, are beautifully wooded. New Tarbat and Delny were once the seats of the Earls of Cromarty and of Ross; on Kinrive Hill are two cairns and the site of a stone circle. Mansions, noticed separately, are BALNAGOWAN, KINDEACE, and TARBAT. Kilmuir-Easter is in the presbytery of Tain and synod of Ross; the living is worth £260. The parish church, 9 furlongs NE of Delny and 9 SW of Kildary station, was built in 1798. The Free church, $\frac{1}{2}$ mile NW of Delny station, is an Early French Gothic edifice of 1875-76, and was erected at a cost of £1500. Kilmuir-Easter and Tullich public schools, both built in 1876, with respective accommodation for 160 and 80 children, have an average attendance of about 110 and 40, and grants of over £140 and £47. Pop. (1881) 1146, (1891) 1024, of whom 432 were Gaelic-speaking.—*Ord. Sur.*, shs. 94, 93, 1878-81.

Kilmun, a village and a *quoad sacra* parish in DUNOON and Kilmun parish, Cowal, Argyllshire, on the NE shore of salt-water HOLY LOCH, $1\frac{1}{2}$ mile WNW of Strone, 8 miles by road N of Dunoon, and $7\frac{1}{2}$ by water WNW of Greenock. Here towards the close of the 6th century a Columban church was founded by St Fintan Munnu of Teach Munnu in Ireland, which church was 'in lay hands in the 13th century, since, between 1230 and 1246, Duncan, son of Fercher, and his nephew Lauman, son of Malcolm, grant to the monks of Paisley certain lands at Kilmun held by them and their ancestors, with the whole right of patronage in the church' (Skene's *Celtic Scotland*, ii. 411, 1877). Here, too, in 1442 Sir Duncan Campbell of Lochow founded a collegiate church for a provost and six prebendaries, and within this church were buried the founder himself in 1453, and the headless body of the great Marquis of Argyll in 1661 (his head not till three years after). A plain, square mausoleum, pavilion-roofed, of 1794, now covers their remains, and contains the coffins of four dukes and two duchesses, nothing existing of the collegiate church but a square ivy-covered tower, 40 feet high, with a stair of peculiar construction. In 1829 David Napier, marine engineer, built the 'six tea caddies' (villas so called from their plain and uniform aspect), and he it was who constructed the present stone quay, which accommodates steamboats at all times of the tide. Many beautiful villas have since been erected; and this favourite watering-place, sheltered to the N by Kilmun Hill (1535 feet), has now a post office with money order, savings bank, and telegraph departments, a hotel, an Established church (1841), a Free church (1844), and a seaside convalescent home, erected in 1873-74 at a cost of £3500. Kilmun was erected into a *quoad sacra* parish in 1894. The stipend is £163 with manse. Pop. (1881) 331, (1891) 347.—*Ord. Sur.*, sh. 29, 1873.

Kilmux, an estate with a mansion of 1832, in Scoonie parish, Fife, 2 miles NNE of Kennoway.

Kilneuir, an ancient chapelry in Kilmichael-Glassary parish, Argyllshire. Its church near the SE sbove of the head of Loch Awe, $1\frac{1}{2}$ mile E by N of Ford, appears to have been a structure of considerable beauty, and now is represented by an interesting ruin.

Kilnhead, a village in Cummertrees parish, S Dumfriesshire, 4 miles WNW of Annan.

Kilninian and Kilmore, a united parish in Mull district, Argyllshire, containing the town of TOBERMORY and the village of AROS, each with a money order, savings bank, and telegraph post office; and comprising the parts of Mull island N of Loch-na-Keal, and the islands of Ulva, Gometra, Calve, Little Colonsay, Staffa, and Treshinish. It is bounded NE and E by the Sound of Mull, SE by Torosay, S by Loch-na-Keal, which separates it from Kilfinichen and Kilvickeon, and on the other side by the Atlantic Ocean. Its utmost length, from NW to SE, is 15 miles; its utmost breadth, within Mull island, is $13\frac{3}{4}$ miles; and its area is 77,737 acres, of which $2140\frac{1}{2}$ are foreshore, $13\frac{3}{4}$ tidal water, and 1316 $\frac{1}{2}$ water. The separate islands are separately noticed. The coast of the Mull island districts, even exclusive of minor ins and outs, has an extent of not less than 40 miles; and, containing good harbours at Tobermory and Aros, it exhibits much variety of shore and contour, with no small degree of picturesqueness, and is sufficiently noticed in our articles on LOCH-NA-KEAL, CALLIOCH, TOBERMORY, AROS, and the Sound of MULL. The interior is hilly, but hardly mountainous, and, rising from the coast in arable or verdant slopes, in heathy acclivities, in rocky cliffs, or in naked terraces, offers, for the most part, a mixture of pastoral surface with heath and moss, and displays in places basaltic dykes that stand like artificial walls or ruined castles. Basalt and greywacke, traversed with basaltic veins, seem to pervade the whole; and the greywacke affords many beautiful specimens of zeolite, and some of chalcedony and prehnite. The soil of the arable tracts is mostly either a light reddish earth or a shallow mixture of that with moss, and in places is very humid. Loch ERISA (5 miles \times $\frac{3}{4}$ mile), the largest of five fresh-water lakes, sends off Aros Water to Aros Bay, and all the five abound with excellent trout. The principal antiquities are Aros Castle and a Caledonian stone circle above Kilmore. CALGARY, noticed separately, and Torloisk are the chief mansions. Including the *quoad sacra* parishes of Tobermory and Ulva, with part of Salen, Kilninian and Kilmore is in the presbytery of Mull and synod of Argyll; the living is worth £247. The parish church of Kilninian stands on the shore of Loch Tuadh, 8 miles SW of Tobermory; another, Kilmore, is 7 miles to the NE; and both were built in 1754. The two ancient parishes were conjoined with several others at the Reformation into one vast parish of Mull, and were separated therefrom in 1688. There is a Free church of Kilninian and Kilmore; and Dervaig public, Fannore public, Morinish public, Tobermory public, and Ulva public schools, with respective accommodation for 70, 47, 63, 244, and 37 children, have an average attendance of about 35, 25, 35, 165, and 25, and grants amounting to about £72, £40, £55, £245, and £37. Pop. (1881) 2540, (1891) 2344, of whom 1970 were Gaelic-speaking, and 753 belonged to the ecclesiastical parish.

Kilninver (Gael. 'church at the river's mouth'), a hamlet and a parish in Lorn district, Argyllshire. The hamlet lies on the right bank of Euchar Water, just above its influx to salt-water Loch Feachan, $8\frac{1}{2}$ miles S by W of Oban, under which it has a post office.

The present parish, comprising the ancient parishes of Kilninver and Kilmelfort—the former in the N, the latter in the S—is bounded N by Kilmore and Kilbride, E and SE by Kilchrenan and Dalavich, S by Craignish, and W by Kilbrandon and the Firth of Lorn. Its area was enlarged in 1891 by the Boundary Commissioners, who transferred to it the Lagalochan detached portion of the parish of Craignish, comprising 529 acres. Its utmost length, from NE to SW, is $12\frac{1}{2}$ miles; its utmost breadth is $9\frac{1}{2}$ miles; and its area is now 32,920 $\frac{1}{2}$ acres, of which $303\frac{3}{8}$ are foreshore and $833\frac{1}{2}$ water. From a point 9 furlongs WSW of its head, Loch FEACHAN winds $3\frac{1}{2}$ miles westward along the boundary with Kilmore and Kilbrido; Loch Melfort is on the S side of its outer part, near the boundary with Craignish; and a line of hill watershed forms most of the boundary with

Kilchrenan and Dalavich. The coast, if one follows its ins and outs, has an aggregate extent of 14 miles, more than 6 of which are on Loch Melfort. It includes in its northern part two high rocky promontories, in its southern a very rugged reach of frontage, dangerous to shipping, though its numerous bays and inlets afford safe anchorage; and from Seil and the other islands of Kilbrandon parish it is separated by only a series of narrow straits. The eastern and central districts, with a general upland character, comprise four ranges of hills, striking laterally from the watershed on the boundary with Kilchrenan and Dalavich, and extending somewhat parallel to one another from E to W. They include the glen of EUCHAR WATER, another glen called the Braes of Lorn, and some minor vales, and culminate in the summit of BEN CHAPULL (1684 feet), which commands a very extensive and superb view. Of a number of fresh-water lakes, dotted over the interior, the largest are Lochs Scamadale ($1\frac{1}{2}$ mile \times $2\frac{3}{4}$ furl.; 221 feet) and Trahaig ($1\frac{1}{4}$ mile \times $2\frac{1}{2}$ furl.; 470 feet); and many of these lakes, and of the burns or torrents that issue from them through narrow ravines or over precipitous rocks, exhibit no little beauty. A tract of about 3 miles of arable land extends along the seaboard, and consisting of clayey soil and black loam incumbent on sand or slate, is in a state of high cultivation. Slate, sandstone, and dykes of trap are the predominant rock. A cave, traditionally said to have been inhabited by the first settlers in Lorn, is on the N side of Loch Melfort; a sepulchral tumulus, associated with the name of a Scandinavian princess, stood till 1813 in the immediate vicinity of Kilniver hamlet; a cairn, commemorating the assassination of an ancestor of the Duke of Argyll, occupies a conspicuous site on the old line of road from that hamlet to Loch Awe; a very ancient watch-tower, of unknown origin, called Ronaldson's Tower, stands on the coast; the ruins of an old castle or old monastery are on an islet in Loch Pearsan; and cairns and ancient standing stones are in various places. The Earl of Breadalbane and the Duke of Argyll are the chief proprietors. Kilniver is in the presbytery of Lorn and synod of Argyll; the living is worth £205. One parish church, at Kilniver, was built in 1791, and repaired and re-roofed in 1891-92; another, at Kilmelfort, is a very old building. There is also a Free church; and two public schools, Kilniver and Kilmelfort, with respective accommodation for 67 and 45 children, have an average attendance of about 20 each, and grants of over £45 and £40. Valuation (1883) £5426, 5s. 3d., (1892) £4902, 8s. Pop. (1881) 405, (1891) 402, of whom 314 were Gaelic-speaking.—*Ord. Sur.*, shs. 44, 36, 45, 37, 1876-83.

Kilnuair. See KILNEUAR.

Kilpatrick, a hamlet in Closeburn parish, Dumfrireshire, within $\frac{1}{4}$ mile of the Nith's left bank, and $\frac{3}{4}$ miles SSE of Thornhill.

Kilpatrick Hills. See KILPATRICK, OLD; and LENNOX HILLS.

Kilpatrick, New or East, a village of SE Dumbartonshire, and a parish partly also in Stirlingshire until 1891, when the Boundary Commissioners, by extending the boundary of Dumbartonshire, placed it wholly within that county. The village, standing 181 feet above sea-level, $2\frac{1}{2}$ miles S by W of Milngavie, has now been absorbed by BEARSDEN, a fine residential suburb of Glasgow.

The parish, containing also the town of MILNGAVIE, and the villages of Canniesburn, Dalsholm, Garscadden, Knightswood, and Netherton, was disjoined from Old or West Kilpatrick in 1649. It is bounded NE by Strathblane, E by Baldernock, SE by Cadder and Maryhill in Lanarkshire, S by Renfrew, and W by Old Kilpatrick. Its utmost length, from N to S, is $6\frac{1}{2}$ miles; its breadth varies between $1\frac{3}{4}$ and $4\frac{1}{2}$ miles; and its area is 12,245 acres, of which 195 $\frac{1}{2}$ are water. The KELVIN meanders $4\frac{1}{2}$ miles south-south-westward along all the Lanarkshire border; and ALLANDER Water, its affluent, has here a south-eastward course of $5\frac{3}{4}$ miles, viz., $2\frac{3}{4}$ along the Strathblane boundary, $2\frac{1}{4}$ through the eastern interior, and $1\frac{1}{2}$ along the Baldernock boundary. Mung-

dock Reservoir ($5\frac{1}{2} \times 3$ furl.) of the Glasgow Waterworks falls just within the north-eastern border; DOUGALSTON Loch ($4\frac{1}{2} \times 1$ furl.) lies partly in New Kilpatrick, but chiefly in Baldernock; and there are three smaller lakes in the parish, whose southern district is traversed by the FORTH AND CLYDE CANAL for a distance of $4\frac{3}{4}$ miles westward from the aqueduct over the Kelvin. This portion of the parish is likewise traversed by the Glasgow and Helensburgh section of the North British railway, with a branch northwards to Milngavie. The surface declines in the extreme S to 29 feet above sea-level, and rises thence northward to 495 at Windyhill and 1171 at the Old Kilpatrick border near Cockno Loch, this NW corner, to the extent of 4 square miles, being occupied by a portion of the Kilpatrick Hills, whilst all the rest of the parish presents a succession of undulations, thickly set with swelling knolls, and forms a very variegated and interesting landscape. Trap rocks, comprising greenstone, basalt, amygdaloid, tufa, and greywacke, predominate in the hills; and carboniferous rocks, comprising sandstone, limestone, ironstone, and coal, predominate in the low tracts. A costly but fruitless search was at one time made in the hills for lead ore; sandstone of beautiful colour and fine texture is quarried at Netherton; limestone was formerly calcined at Langfaulds, as now at Baljaffray; and coal is mined at several places. The soil on much of the banks of the Kelvin and the Allander is a deep rich loam; on some knolls is of a light, dry, sandy character; on most of the arable lands is a fertile clay on a tilly bottom; and on much of the hills is moor or bog. About 750 acres are under wood; rather more than half of the entire area is regularly or occasionally in tillage; and the rest is either pastoral or waste. The chief antiquities are traces of a long reach of ANTONINUS' WALL, ruins of DRUMRY Castle, and faint remains of an ancient chapel at Lurg. Manufactories of various kinds are prominent, chiefly at Milngavie and other places on Allander Water. At New Kilpatrick village there is a library, and in the vicinity there are the Reformatory for Girls, erected in 1882, and the Buchanan Retreat, an imposing structure of 1891, for the reception of aged men of that name—a gift of the Misses Buchanan of Bellfield House, Kilmarnock, that cost about £30,000. Mansions, noticed separately, are Clober, Craigton, Dougalston, Garscadden, Garscube, Killermont, Kilmardinnie, and Mains. In the presbytery of Dumbarton and synod of Glasgow and Ayr, this parish since 1873 has been divided ecclesiastically into New Kilpatrick proper and Milngavie *quoad sacra* parish, the former a living worth £302. Its church, at New Kilpatrick village, was built in 1807, and contains 850 sittings. During the last twenty years it has been thrice enlarged. A handsome new church was erected at Temple of Garscube in 1891-92, at a cost of about £3700, and there is a mission church at Drumchapel. There are also a Free church, a U.P. church, a meeting-house for Plymouth Brethren, and St Peter's Roman Catholic college (1892) for advanced students, a magnificent building that cost upwards of £30,000, the gift of the Archbishop of Glasgow to his arch-diocese. Six public schools—Blairdardie, Craigton, Garscadden, Milngavie, Netherton, and New Kilpatrick—and Milngavie Roman Catholic school, with respective accommodation for 79, 71, 200, 477, 262, 403, and 133 children, have an average attendance of about 55, 55, 155, 405, 190, 280, and 115, and grants amounting to about £40, £60, £155, £420, £120, £180, £310, and £110. Pop. (1881) 7414, (1891) 8309, of whom 4782 were in the ecclesiastical parish of New Kilpatrick.—*Ord. Sur.*, sh. 30, 1866.

Kilpatrick, Old or West, a village and a parish of SE Dumbartonshire. The village, near the N bank of the Clyde and of the Forth and Clyde Canal, on the road from Glasgow to Dumbarton, has a station on the North British railway, $11\frac{1}{4}$ miles WNW of Glasgow and $4\frac{3}{4}$ ESE of Dumbarton. Tradition identifies it with Bonavem Tabernæ, at which was born the great Apostle of Ireland, St Patrick (387-458), but of which we only know for certain that it was situated in a part of the Roman

province in Britain that was exposed to incursions of the Scots. In 1679 it was made a burgh of barony; but, having allowed its privileges to fall into abeyance, it now is a neat, tranquil, pleasant place, with the Kilpatrick Hills rising steeply in its rear, but with no stir of manufacture; and has a post office under Glasgow, with money order, savings bank, and telegraph departments, and a gaswork. Though situated on either side of the highroad, and the houses and shops lit with gas for many years, it was only in 1893 that steps were taken to light up the thoroughfare, almost the only street in the village. It has a large public hall at Lusset Glen, the gift of Lord Blantyre, the superior. The parish church, at its W end, is a neat edifice of 1812, with a square tower. The Free church, at the E end, was built soon after the Disruption; and the U.P. church is a plain old building, belonging formerly to the Relief Church. Pop. (1881) 911, (1891) 1313.

The parish contains also the burghs of Clydebank and Duntocher, and the villages of Bowling, Faifley, and Milton, with the greater part of Yoker, all of which are noticed separately. It is bounded NE by Killearn in Stirlingshire, E by New Kilpatrick and Renfrew, SW by the river Clyde, which divides it from Renfrewshire, and W and NW by Dumbarton. Its utmost length, from E to W, is 6 $\frac{3}{4}$ miles; its utmost breadth, from N to S, is 5 $\frac{1}{2}$ miles; and its area is 13,364 $\frac{1}{2}$ acres, of which 310 are foreshore and 500 $\frac{3}{4}$ water. The CLYDE, curving 7 $\frac{1}{2}$ miles west-north-westward along all the south-western border, here widens from 110 yards to 7 $\frac{3}{4}$ furlongs, and is crossed by ERSKINE and West Ferries—the former at the village, and the latter at the west end of the parish. At one part of the parish, near Bowling, river, road, rail, and canal run parallel almost within the limits of a stonethrow. A reservoir (6 × 3 $\frac{3}{8}$ furl.) lies on the boundary with Killearn, and sends off a stream to Allander Water; in the interior are Loch Humphrey (6 × 3 furl.), Cockno Loch (4 × 1 $\frac{1}{2}$ furl.), and three smaller sheets of water; and the drainage is carried to the Clyde by DALMUIR and other burns. From the belt of low flat ground along the Clyde the surface rises northward to 185 feet at Faifley, 446 near Edinbarnet, 207 at Carleith, 1199 at the Slacks, 500 at Hill of Dun, 547 at Dumbuck, 1140 at Cockno Hill, and 1313 at Fynloch and Duncomb Hills, the two highest summits of the Kilpatrick Hills, which, occupying fully one-half of the entire parish, are that part of the Lennox range which extends from the Vale of Leven to Strathblane, and which, though it takes its name from Old Kilpatrick parish, is prolonged into the parishes of Dumbarton, Killcarn, and New Kilpatrick. Throughout all their southern frontage, but specially for the 3 miles between Kilpatrick village and Dumbuck, the Kilpatrick Hills present picturesque features of wooded acclivity and escarpment; above Bowling they embosom the ravine of GLENARBUCK; they project, from the foot of the western flank of that ravine, the small rocky promontory of DUNGLASS; and they command, from multitudes of vantage-grounds on their summits, shoulders, and skirts, extensive, diversified, and very brilliant views. The strip between the hills and the Clyde, which narrows westward from 2 $\frac{1}{2}$ miles to less than 3 furlongs, may be roughly described as first a series of slopes, and next a belt of low flat, but is so broken with hollows and hillocks as to contain within itself some fine close scenes, and to include many vantage-grounds, particularly Dalnotter and Chapel Hills to the E and W of Kilpatrick village, which equal or excel those of the higher hills for command of magnificent views. The greater part of the entire parish, as seen from the deck of a steamer sailing down the Clyde, presents a continuous series of richly picturesque landscape. Eruptive rocks predominate in the hills, and carboniferous in the lower tracts; trap for road metal, and excellent sandstone for building, have been quarried in several places; and limestone, ironstone, and coal are worked in the neighbourhood of Duntocher. The soil is very various, ranging from fertile alluvium to barren moor. A little more than one-half of the entire area is in tillage; one-twentieth is under wood;

and the rest is pastoral or waste. The chief antiquities are noticed under ANTONINUS' WALL, CHAPEL HILL, DUNGLASS, and DUNTOCHER. Mansions are Auchentorlie, Auchentoshan, Barnhill, Cockno, Dalmuir, Dalnotter, Dumbuck, Edinbarnet, Glenarbut, and Mountblow. In the presbytery of Dumbarton and synod of Glasgow and Ayr, this parish since 1875-82 has been ecclesiastically divided into Old Kilpatrick proper and Clydebank and Duntocher *q. s.* parishes, the first worth £252. Numerous places of worship, other than those at the village, are noticed under CLYDEBANK and DUNTOCHER. The five public schools of Clydebank, Dalmuir, Duntocher, Gavinburn, and Milton, and Clydebank and Duntocher Roman Catholic schools, have a total accommodation for 4028 children. Pop. (1881) 8362, (1891) 17,775, of whom 8323 were in Clydebank, 3233 in Duntocher, and 6219 in Old Kilpatrick proper.—*Ord. Sur.*, sh. 30, 1866.

Kilpeter. See HOUSTON.

Kilpiperie. See NEWTYLE.

Kilravock Castle, a picturesque old mansion in the Nairnshire section of Croy and Dalrosc parish, near the left bank of the river Nairn, 7 miles SW of Nairn town, and 3 SSE of Fort George station. 'The keep of Kilravock,' says Mr Skelton, 'stands on the thickly-wooded bank that overhangs the valley of the Nairn. It is an imposing though somewhat heavy mass of masonry; a clumsy manor house in the architectural style of a later century having been tagged on to the square crenellated keep, built in 1460 by Hugh, the seventh baron, and destroyed by that parvenu Earl of Mar who was hanged by the old nobility in his own scarf over the Brig of Lauder. . . . The Roses selected a pleasant site for their habitation. The oak and the maple flourish luxuriantly; the peaceful stream wanders quietly through the green strath and below the battered and blackened walls whose shadow it repeats; the terraced garden along the rocky bank is sweet with the fragrance of English violets, planted by fair Mistress Muriel or Euphame of the olden time.' Within is one of the richest collections of old MSS., old armour, and old paintings in the north of Scotland; and one of the MSS., a curious family history, written in 1684, was edited by Cosmo Innes for the Spalding Club in 1848. Rich, too, is Kilravock in its memories, having received a visit from Queen Mary in 1562; from Prince Charles Edward in 1746, two days before the battle of Culloden; from the Duke of Cumberland, who came next day, and said to the old laird, 'You have had my cousin with you;' and from Robert Burns on 5 Sept. 1787. Two of its daughters, again, were one the wife of Duncan Forbes of Culloden, the other the mother of Henry Mackenzie, the 'Man of Feeling,' who, when he came down here to see his cousin, with her wrote fantastic inscriptions and dedicated walks to 'Melancholy.' Hugh Rose of Geddes, the first of the seventeen lairds who have borne that Christian name, acquired the lands of Kilravock in the 13th century; and his twenty-first descendant, Major James Rose (b. 1820; suc. 1854), is present proprietor.—*Ord. Sur.*, sh. 84, 1876. See vol. iii. of Billings' *Baronial Antiquities* (1852), and John Skelton's *Essays in History and Biography* (1883).

Kilremonth. See ST ANDREWS.

Kilrenny, a royal burgh and a coast parish in the East Neuk of Fife. The royal burgh consists of two parts—the small rural village of Upper Kilrenny, with a post office (Kilrenny) under Anstruther, and the fishing village of Nether Kilrenny or CELLARDYKE, respectively 1 $\frac{1}{2}$ mile NE and 1 E by N of Anstruther station. Originally and for a long time identified only with Upper Kilrenny, it seems to have acquired the status of a royal burgh solely by accidental misconstruction of rights that early belonged to it as a burgh of regality; and it exercised for some time the power of sending a member to the Scottish parliament, but receded in 1672 by its own consent into the condition of a mere burgh of regality. At the Union it once more rose by another mistake to the status of a royal burgh, and figuring in record as if it had obtained a royal charter

in 1707, was so extended by the Reform Act of 1832 as to include the Anstruther suburb of Cellardyke or Nether Kilrenny. Afterwards it was stripped for a time of its municipal corporation, and placed under the management of three persons resident in Cellardyke; but under the Burgh Police Act of 1892 it is governed

Seal of Kilrenny.

by a provost, 2 bailies, and 6 commissioners, and has a branch of the National Bank. With ST ANDREWS, Crail, Cupar, Pittenweem, and the two Anstruthers it unites in returning a member to parliament. The annual value of real property amounted to £5090 in 1895, when the parliamentary and the municipal constituency numbered 271 and 301, whilst the corporation revenue was £67. Pop. of parliamentary burgh (1881) 2759, (1891) 2610, of whom 2565 were in the royal burgh. Houses (1891) inhabited 620, vacant 68, building 8.

The parish, including also a small portion of Anstruther-Easter parliamentary burgh, is bounded N and NE by Crail, SE by the Firth of Forth, and W by Anstruther and Carnbee. Its utmost length, from E to W, is 2½ miles; its utmost breadth, from N to S, is 2¾ miles; and its area is 3931 acres, of which 155½ are foreshore. The coast, measuring 2½ miles in length, has a low shore covered with large masses of sandstone blocks; and contains, in its eastern part, considerably above high-water mark, some caves marked in the interior with artificial cuttings and chiselled crosses. The interior ascends, from the shore to the northern boundary, in continuous gentle acclivity, attaining an elevation of from 200 to 300 feet above sea-level, and presenting the appearance of a fertile and highly cultivated slope. A few acres along the shore are constantly in pasture, a few are in a state of commonage or under wood, and all the rest of the land is regularly in tillage. The rocks belong to the Carboniferous formation; and sandstone, limestone, and coal have been worked. The soil is mostly good, and has been vastly improved by agricultural operations. The chief antiquities are a rudely-carved standing stone, supposed to commemorate some battle with invading Scandinavians, and the site of Thirdpart House, long the family residence of the Scots of Scotstarvet. General Sir James Lumsdaine of Innergellie, who fought under Gustavus Adolphus of Sweden and at the battle of Dunbar, was a native of Kilrenny; James Melville, nephew of the famous Andrew Melville, and whose Diary, 'priceless to the historian,' was published by the Bannatyne Club in 1829, became its minister in 1536; and Drummond of Hawthornden laid in it the scene of his macaronic *Polemo-Middinia*. Mansions are Innergellie and Rennyhill. Kilrenny is in the presbytery of St Andrews and synod of Fif; the living is worth £355. The church, at Upper Kilrenny, whose tower is a relic of an older church, and at the foot of which General Lumsdaine lies buried, was built in 1808. Two public schools—Cellardyke and Upper Kilrenny—with respective accommodation for 508 and 147 children, have an average attendance of about 390 and 85, and grants amounting to about £395 and £90. Valuation (1883) £7518, 2s. 5d., (1893) £5194, 11s. 3d. Pop. (1881) 3198, (1891) 2998.—*Ord. Surv.*, sh. 41, 1857.

Kilrie, an estate, with a modern mausion, in Kinghorn parish, Fif, 3 miles NW of the town.

Kilry, a *quoad sacra* parish in Glenisla and Lintrathen parishes, W Forfarshire. Constituted in 1879, it is in the presbytery of Meigle and synod of Angus and Mearns. The church, 4 miles N by W of Alyth, was built in 1876-77. Pop. (1881) 381, (1891) 379, of whom 50 were in Lintrathen.—*Ord. Surv.*, sh. 56, 1870.

Kilrymont. See ST ANDREWS.

Kilspindie, a village and a parish in Gowrie district, SE Perthshire. The village, standing in the mouth of a small glen, 1 mile SSW of Raith, 2½ miles NNW of Errol station, and 3¾ NNE of Glencarse station, both on the Perth and Dundee section of the Caledonian railway, had anciently a castle, now extinct, and figures in Blind Harry's narrative as the place where Sir William Wallace, with his mother, found refuge in his boyhood.

The parish, containing also the post offices of Rait and Pitrody under Errol, comprehends the ancient parishes of Kilspindie and Rait. It is bounded N by Collace, NE by Kinnaid, E and SE by Errol, S by Kinfauns, SE by Kinnoull, W by Scone, and NW by St Martins. Its utmost length and breadth, south-eastward and south-westward, is 3½ miles; and its area is 6258½ acres, of which 3¾ are water. A strip along the SE border forms part of the Carse of Gowrie, and sinks to 40 feet above sea-level; thence the surface rises north-westward to the Sidlaws, attaining 944 feet on EVELICK or Pole Hill and 849 on Beal Hill; and thence again it declines towards Strathmore—to 380 feet at the NW border. The parish thus presents a diversified aspect, ranging from luxuriant corn-field to barren moor; by Rait, Kilspindie, and Pitrody Burns its drainage is mostly carried eastward to the Firth of Tay. Trap and coarse greyish sandstone are the predominant rocks. The trap has been quarried in Pitrody Den, and beautiful pieces of agate are often found among the hills. The soil on the flat south-eastern border is a fertile mixture of clay and humus; on the slopes of the southerly hills, and in the hollows and little glens, is of various quality, but generally good; and on the northern hills, is wet and heathy. About one-half of the entire area is in tillage, one-thirtieth is under wood, and the rest of the land is either pastoral or waste. FINGASK CASTLE and Annat are the only mansions. Kilspindie is in the presbytery of Perth and synod of Perth and Stirling; the living is worth £280. The church, at Kilspindie village, is a plain edifice, repaired in 1888. In connection with this church there is a Mitchell trust, being a legacy of £150 left by Mr W. Mitchell, for the encouragement of Bible study. A public school, with accommodation for 112 children, has an average attendance of nearly 90, and a grant of about £90. Valuation (1883) £6746, 13s. 4d., (1892) £5179, 18s. 9d. Pop. (1801) 762, (1831) 760, (1861) 665, (1871) 679, (1881) 693, (1891) 690.—*Ord. Surv.*, sh. 48, 1868.

Kilspindley. See ABERLADY.

Kilsyth, a town and a parish on the southern border of Stirlingshire. The town, standing within 5 furlongs of the N bank of the Kelvin and of the Forth and Clyde Canal, and provided with a station on the Kelvin Valley branch of the North British system, by road is 1¾ mile N of Croy station on the Edinburgh and Glasgow section of the same railway, 4 miles WNW of Cumbernauld, 12 W by S of Falkirk, 15 SSW of Stirling, 12½ NE of Glasgow, and 35 W by N of Edinburgh; whilst by rail it is 4½ miles ENE of Kirkintilloch, and 9 miles ENE of Maryhill, as terminus of the Kelvin Valley branch, formed in 1876-78, and subsequently continued east-north-eastward into connection with the Denny branch of the Caledonian. Overhung to the N by the Kilsyth Hills, and threaded by Garrel Burn, it occupies a small rising-ground 180 feet above sea-level; and, viewed from the neighbouring heights or from the canal, presents a straggling, irregular appearance. An older village, called Monaebrugh, was situated on a different part of the banks of Garrel Burn; but the present place was founded in 1665, and took its name of Kilsyth from the proprietor's title. For some time it derived considerable consequence from being a stage on the great thoroughfare from Glasgow to Stirling, and from Glasgow, by way of Falkirk, to Edinburgh; and, since the cessation of that traffic, it has continued to maintain itself by connection with the cotton manufacturers of Glasgow, acquiring, about 1845, a factory of its own. Kilsyth has a post office under Glasgow, with money order, savings bank,

insurance, and telegraph departments, branches of the National and Royal Banks, a National Security savings bank (1829), 3 hotels, a town hall, public hall, workmen's club, bowling-green, a cemetery, a gaswork, a good water supply, a drainage system, effected at a cost of £2250, fairs (almost extinct) on the second Friday in April and the third Friday in November, and sheriff small-court courts, held at Campsie on the fourth Thursday of March, June, September, and December. A justice of peace court is held every second Monday, and a baillie's court every Monday in the town-hall. The parish church, at W end of town, is an elegant structure of 1816. It underwent alterations in 1892, the interior being remodelled and the church rescated, Sir Archibald Edmonstone at the same time presenting a beautiful oak pulpit in memory of his father, the late Admiral Sir William Edmonstone, Bart., for some time M.P. for the county. Other places of worship are a handsome Free church, a U.P. church, Congregational and Wesleyan (1885) chapels, and St Patrick's Roman Catholic church (1866; 450 sittings). The U.P. church, a fine building of Gothic design seated for 650, was erected in 1893 to replace an older one of 1768, and has a hall, presented by Mr Robert Wilson, of the Banton Mills, as a memorial of the Wilson and Anderson families, the whole costing £8500. The Burgh Academy, at Craigend, is an Italian edifice of 1875-76, built at a cost of £4800, and enlarged in 1893. A burgh of barony since 1826, and also a police burgh, Kilsyth is governed, under the Burgh Police Act of 1892, by a provost, 2 baillies, and 6 commissioners. Burgh valuation (1883) £14,324, 9s. 3d., (1892) £11,138, 13s. 3d. Pop. (1851) 3949, (1861) 4692, (1871) 4895, (1881) 5405, (1891) 6073.

The battle of Kilsyth was fought on 15 Aug. 1645, between the army of Montrose and the Covenanters under Baillie. The scene of action was the tract around the hollow which now contains the reservoir of the Forth and Clyde Canal—a field so broken and irregular, that, did not tradition and history concur in identifying it, few persons could believe it to have been the arena of any military operation. Montrose and his men took up their ground to their own liking, to abide the onset of forces specially deputed against them by the Scottish council. When Baillie arrived to make the attack, he found his authority all but superseded by a committee, headed by Argyll, and shorn of power to exert subordinating influence on the portion of the army placed specially under his control. Montrose's army consisted of only 4400 foot with 500 horse, while that of his antagonist amounted to 6000 foot and 1000 horse; but Montrose had the high advantages of having chosen his ground, of possessing the supreme command, and of having arranged his troops in the best possible manner for confronting his opponents. The weather being very hot, Montrose bade his followers doff their outer garments—a circumstance which gave rise to a tradition that they fought naked; and, making a general assault, he almost instantly—aided or rather led by the impetuosity of his Highlanders—threw his antagonists, reserve and all, into such confusion that prodigies of valour on the part of their nominal commander utterly failed to rally even a portion of them and incite them to withstand the foe. A total rout taking place, Montrose's forces cut down or captured almost the whole of the infantry, and even coolly massacred many of the unarmed inhabitants of the country. Though Baillie's cavalry, for the most part, escaped death from the conqueror, very many of them met it in fleeing from his pursuit across the then dangerous morass of DULLATUR Bog. Incredible as it may seem, only 7 or 8 in Montrose's army were slain. 'It belongs not to me,' says the Rev. Dr R. Rennie, in the *Old Statistical Account*, 'to give any detail of that engagement; suffice it to say, that every little hill and valley bears the name, or records the deeds of that day; so that the situation of each army can be distinctly traced. Such as the Bullet and Baggage Knowe, the Drum Burn, the Slaughter Howe or hollow, Kill-e-many Butts, etc., etc. In the Bullet Knowe and neighbourhood bullets are found every year, and in

some places so thick that you may lift three or four without moving a step. In the Slaughter Howe, and a variety of other places, bones and skeletons may be dug up everywhere; and in every little bog or marsh for 3 miles, especially in the Dullatur Bog, they have been discovered in almost every ditch. The places where the bodies lie in any number may be easily known; as the grass is always of a more luxuriant growth in summer, and of a yellowish tinge in spring and harvest.' Kilsyth is remarkable as the scene of two religious revivals which occurred respectively in the years 1742 and 1839, and excited great interest throughout the country. Narratives of them were written and published by the Rev. Mr Robe and the Rev. Mr Burns, the incumbents at their respective dates. Kilsyth Castle, $\frac{1}{2}$ mile N of the town, was the seat from the first half of the 15th century of a junior branch of the Livingstons of Callendar, and, strengthened and garrisoned against Oliver Cromwell in 1650, is now a ruin. In 1661 Sir James Livingstone was created Viscount Kilsyth and Baron Campsie, but his second son, William, third Viscount Kilsyth, engaged in the rebellion of 1715, and suffered attainder in the following year. The family burying-vault in the old churchyard measures 16 feet each way; and, in 1795, was found by some Glasgow students to contain an embalmed body of the last Viscount's first wife and infant son in a state of complete preservation. It was afterwards so closed with flat stones as to be rendered inaccessible.

The parish of Kilsyth, containing also the villages of Banton and High Banton, comprises two ancient baronies, East and West, but consisted of only the East Barony, then called Monaebrugh, till 1649, when it acquired the West Barony by annexation from Campsie. It is bounded NW by Fintry, N by St Ninians, E by Denny, S by Cumbernauld and Kirkintilloch in Dumbartonshire (detached), and W by Campsie. Its utmost length, from E to W, is $6\frac{1}{2}$ miles; its utmost breadth, from N to S, is $4\frac{1}{2}$ miles; and its area is $13,248\frac{1}{2}$ acres, of which $127\frac{1}{2}$ are water. The CARRON winds $3\frac{3}{4}$ miles eastward along all the northern boundary; the KELVIN, rising in the south-eastern corner, flows $5\frac{1}{2}$ miles west-south-westward, with sluggish current in a deep artificial channel, along or close to most of the southern border, and within a brief distance of the Forth and Clyde Canal; several short but impetuous burns rise in the interior, and run northward to the Carron; and GARVALD or Garrel Burn, issuing from a reservoir near the western border, curves $5\frac{1}{2}$ miles south-south-eastward to the Kelvin, which elsewhere is joined by two or three lesser streams. Most of the burns form frequent waterfalls; and those that run to the Kelvin are remarkable for the extent to which they have been utilised for water-power. The surface declines in the NE along the Carron to 670, in the SW along the Kelvin to 150 feet above sea-level; and between these points it rises to 404 feet near Riskend, 1393 at Laird's Hill, 1484 at Tomtain, and 1129 at Cock Hill. The southern district of the parish, comprising nearly one-half of the entire area, contains the watershed or summit level (156 feet) of the strath of the Forth and Clyde Canal; and for some little distance from the southern boundary is almost a dead flat, but rises presently into an undulating, broken, rough ascent, which is everywhere so well cultivated as, though very bare of trees, to present a pleasing appearance. A narrow belt of meadow land extends along the Carron; and all the rest of the parish is that part of the long range of the Lennox Hills, which, consisting of wild pastoral heights, and connected westward with the Campsie Fells, eastward with the Denny Hills, bears the distinctive name of the Kilsyth Hills, is picturesquely intersected with short deep glens, and commands, from its loftiest summits, magnificent views from sea to sea, and over parts of fourteen counties. Eruptive rocks predominate in the hills, and carboniferous in the plain. Limestone and a beautiful light-coloured sandstone are quarried; and ironstone and coal, the latter of various qualities and much intersected by trap dykes, are both very plentiful,

and have long been mined. At Riskend and Haugh two specially rich seams of coal and ironstone were opened up in 1883. A vein of copper ore was wrought during part of the 18th century; and specimens of yellow and red jasper, suitable for gems, were brought into notice in 1791. The soil of the SE corner is thin and gravelly; on the flat lands along the Kelvin, is a deep rich loam; on the slopes and arable braes to the N of the plain, is clayey or stiffly argillaceous, incumbent on retentive strata; and in the upland tracts is mostly sandy, gravelly, or stony. Of the entire area, 10,901 acres are arable, 2050 are pasture, and 170 are under wood. Antiquities are remains of two Roman and of two Caledonian forts, the ruins of Kilsyth and Colzium Castles, a seat of ancient feudal courts still called the Court Hill, and a retreat of the Covenanters in 1669, known as the Covenanters' Cave. Among distinguished natives have been Sir William Livingston, vice-chamberlain of Scotland (d. 1627); the Rev. John Livingston (1603-72), one of the founders of the Presbyterian Church in Ireland; Sir Archibald Edmonstone (1795-1871), author of *A Journey to the Oases of Upper Egypt*; and the Rev. Dr R. Rennie, minister of the parish from 1789 till 1820, author of several essays on peat moss. COLZIUM House is the chief mansion. In the presbytery of Glasgow and synod of Glasgow and Ayr, this parish since 1880 has been divided ecclesiastically into Kilsyth proper and the *quoad sacra* parish of Banton, the former a living worth £420. Three public schools—Academy, Banton, and Chapel Green—and a Roman Catholic school, with respective accommodation for 1075, 183, 196, and 333 children, have an average attendance of about 900, 115, 130, and 280, and grants amounting to about £900, £130, £125, and £245. Landward valuation (1883) £16,049, 6s. 9d., (1892) £25,009, 13s. Pop. (1801) 1762, (1831) 4297, (1861) 6112, (1871) 6313, (1881) 6840, (1891) 7424, of whom 771 were in Banton *quoad sacra* parish.—*Ord. Sur.*, sh. 31, 1867. See the Rev. P. Anton's *History of Kilsyth* (1893).

Kiltarlity* and Convinth, a united parish of N Inverness-shire, whose church stands near the left bank of Convinth Burn, $4\frac{1}{2}$ miles S by W of Beaully, under which there is a post and telegraph office of Kiltarlity. Bounded NW and N by Kilmorack, E by Kirkhill and Inverness, S by Urquhart-Glenmoriston, and W by Kilmorack and Ross and Cromarty, it has an utmost length from NE to SW of about 50 miles, and a varying width of $3\frac{3}{8}$ furlongs and $10\frac{1}{2}$ miles. The Boundary Commissioners in 1891 enlarged the area by transferring to the parish the Crochiel strip of Kilmorack, to the south and east of the river Glass, which formerly divided the parish in two. The river GLASS, formed by the confluence of the Affric and Amhuinn Deabhaidh, $2\frac{3}{4}$ miles SW of Gleu-affric Hotel, flows 12 miles north-eastward along the boundary with Kilmorack parish, till, near Erchless Castle, it unites with the Farrar to form the river BEAULY, which itself winds 12 miles east-north-eastward, mainly along the northern boundary, till at Lovat Bridge it passes off from Kiltarlity. Of a number of streams that flow to these two rivers, the chief is Convinth Burn, running $7\frac{1}{2}$ miles northward, till it falls into the Beaully just below Beaufort Castle; and of fully a score of lakes the largest are Lochs AFFRIC and BENEVELAN, Loch a' Bhruthaich ($9 \times 3\frac{1}{2}$ furl.; 942 feet), Loch Neaty ($5 \times 1\frac{3}{8}$ furl.; 822 feet), Loch nan Eun (5×2 furl.; 1700 feet), and Loch na Beinne Baiue ($7\frac{1}{2} \times 3$ furl.; 1650 feet). Almost everywhere hilly or mountainous, the surface declines in the extreme NE to 18 feet above sea-level, and rises thence to Tor Mor (487 feet), Meall Mor (1316), Creag Ard Mhor (933), the *eastern shoulder (2032) of Carn nam Pollan, *Carn nam Bad (1499), Clach-bheinn (1887), Carn a' Choire Chruaidh (2830), and *Carn a' Choire Chairbh (2827), where asterisks

mark those summits that culminate on the confines of the parish. Such is a bare outline of the general features of Kiltarlity, whose special beauties, antiquities, and mansions are noticed under AFFRIC, AIGAS, BEAULY, BENEVELAN, DHRUIM, GLASS, GLENCONVINTH, BEAUFORT CASTLE, BELLADRUM, ERCHLESS CASTLE, ESKA-DALE, and GUISSACHAN. Devonian rocks predominate in the lower tracts; gneiss and granite in the uplands. Serpentine and granular limestone occur in small quantities on the south-eastern border; and specimens of asbestos and rock crystal are often found upon the hills. The soil of the arable lands is mostly thin, light, extremely hard, and of a reddish colour. Strathglass and the NE corner of the parish are beautifully wooded. Among the antiquities are numerous Caledonian stone circles and some vitrified forts; and there are three considerable caves at Cugie, Easter Main, and Corriedow, of which the last, in a glen on the SE border, is said to have afforded refuge for some days to Prince Charles Edward. Giving off a portion to Erchless *quoad sacra* parish, Kiltarlity is in the presbytery of Inverness and synod of Moray; the living is worth £283. The parish church, on a rising-ground amid a clump of tall trees, was rebuilt in 1829. There are also an Established mission chapel of Strathglass or Guisachan, Free churches of Kiltarlity and Strathglass, and St Mary's Roman Catholic church of Eskadale (1826; 600 sittings); whilst five schools—Culburnie, Glenconvinth, Guisachan, Tomnacross, and Eskadale (Roman Catholic)—with total accommodation for 614 children, have an average attendance of about 260, and grants amounting to nearly £336. Pop. (1801) 2588, (1841) 2881, (1861) 2839, (1871) 2537, (1881) 2134, (1891) 1922, of whom 1437 were Gaelic-speaking.—*Ord. Sur.*, shs. 83, 73, 72, 1878-81.

Kiltearn (Gael. *cill-Tighearn*, 'St Ternan's church'), a parish of Ross and Cromarty, containing EVANTON village and Foulis station on the Dingwall and Tain section of the Highland railway, the latter being 2 miles SSW of Novar and $4\frac{1}{2}$ NNE of Dingwall. Tapering north-westward, and bounded NE by Alness, SE by the Cromarty Firth, SW by Dingwall, and W by Fodderty, it has an utmost length from NW to SE of $13\frac{1}{2}$ miles, a varying width of 1 mile and 6 miles, and an area of $29,956\frac{1}{2}$ acres, of which $1097\frac{1}{2}$ are foreshore and $886\frac{1}{2}$ water. Loch GLASS (4 miles \times 5 furl.; 713 feet) lies on the Alness border, and from its foot sends off the river Glass or AULTGRANDE, which, running 8 miles east-south-eastward to the Cromarty Firth, chiefly along the NE boundary, but latterly through the north-eastern corner of the parish, is joined from Kiltarn by the Allt nan Caorach; whilst of seven lakes scattered over the interior, the largest is Loch Bealach nan Cuilean ($7\frac{3}{8} \times 1$ furl.; 1200 feet). Except for a level strip along the Firth, the entire surface is hilly or mountainous, wild, heathy, and uncultivated upland, chief elevations north-westward being Cnoc Vabin (1000 feet), Cnoc nan Each (1508), huge, lumpish *Ben Wyvis (3429), Queen's Cairn (2109), *Carn nan Ruadha (2206), and *Clach nam Buidh-fhearn (1875), where asterisks mark those summits that culminate on the western confines of the parish. Devonian rocks predominate along the coast; metamorphic rocks, chiefly gneiss, in the interior. Small portions of carboniferous rocks, containing coal, near the shore, at one time induced an expensive but fruitless attempt to sink a coal mine; and lead and iron ores occur in the interior, but not in quantity to promise productive working. At most, 3000 acres are regularly or occasionally in tillage; but a fair proportion of the lower district is under wood. A cairn and remains of five pre-Reformation chapels are among the extant antiquities, a Caledonian stone circle having been demolished not long before 1839. There is a remarkable group of cup-and-ring-marked stones on the estate of Mountgerald, and a very remarkable and interesting group of hut circles with tumuli to the SW of Cnoc Mhargaidh Dhuibh on the estate of Swordale. This group of hut circles is in part surrounded by the remains of an old enclosure. The Falls of Coneas, near the junction of the Aultgrande and Allt-nan-Caorach, are inter-

* We have a slight trace of the Columban church in the eastern districts of the northern Picts in the Irish Annals, which record in 616 the death of Tolorgain or Talarican, who gives his name to the great district of Cilltalagayn, or Kiltarlity' (Skene's *Celtic Scotland*, ii. 153, 1877).

esting and beautiful. The most interesting natural phenomenon in the parish is the Black Rock of Kiltearn, now visited by hundreds of people every year. The most distinguished and venerated of the northern Covenanters, the Rev. Thomas Hogg, was minister of Kiltearn. There is a marble tablet in the parish church with the following inscription, which gives a condensed history of his life:—"In memory of the Rev. Thomas Hogg of Kiltearn, one of the most eminent Scottish ministers of the 17th century. He was born at Tain 1628; ordained minister of Kiltearn 1654; deposed as a Protester 1661; and ejected from Kiltearn 1662. As "a noted keeper of conventicles" he was imprisoned in Forres 1668; in Edinburgh 1677, 1679, and 1683; in the Bass Rock 1677 and 1677-1679; put to the horn 1674; intercommunicated 1675; fined 5000 merks 1683; and banished furth of Scotland 1684. He was imprisoned, on false political grounds, in London 1685; went in 1686 to Holland, where the Prince of Orange made him a royal chaplain; was restored to Kiltearn 1691; and died 4th Jan'y. 1692, aged 64 years. Matt. v. 10-12. 1880.' Mansions, all noticed separately, are FOULIS Castle, MOUNTGERALD, and BALCONTE. Kiltearn is in the presbytery of Dingwall and synod of Ross; the living is worth £295. The parish church (parts of it pre-Reformation, recently repaired and re-seated) stands close to the Firth, 1½ mile SE of Evanton, where there are the Hogg Memorial Church, erected in 1893, and a Free church; and a public school, with accommodation for 171 children, has an average attendance of about 155, and a grant of nearly £135. Pop. (1801) 1525, (1831) 1605, (1861) 1634, (1871) 1496, (1881) 1182, (1891) 1301, of whom 739 were Gaelic-speaking.—*Ord. Surv.*, sh. 93, 1881.

Kiltuintaik, an ancient parish in the N of Argyllshire, incorporated with Kilmolmkill, soon after the Reformation, to form the parish of Morvern. Its church continued to be in use along with that of Kilmolmkill, and was rebuilt in 1780.

Kilvaree, a hamlet near the W border of Muckairn parish, Argyllshire, 6½ miles ENE of Oban.

Kilvaxter, a hamlet in the NW of the Isle of Skye, Inverness-shire. Its post-town is Kilmuir, under Portree.

Kilviekeon. See KILFINICHEN.

Kilwinning, a market-town and a parish in Cunninghame district, Ayrshire. The town, standing on the river Garnock, has a station on the Glasgow and South-Western railway, at the junction of the branch to Ardrossan with the line to Ayr, 3½ miles NNW of Irvine, 6 E by N of Ardrossan, and 25½ SW of Glasgow. Close to this station is another on the Barrmill and Ardrossan branch of the Lanarkshire and Ayrshire railway, opened in 1888; while a third, the Caledonian, was opened in 1890. Kilwinning took its name from St Winnin or Winning, an Irish evangelist, said to have landed at the mouth of the Garnock in 715, and here to have founded a church, on whose site four centuries later arose a stately abbey. Occupying a gentle rising-ground amid low wooded environs, the town, of considerable extent, presents a thriving aspect. Its western extremity is called the Byres, from a belief that the monks there kept their cattle, whilst the eastern is known as Crosshill, as the spot where a cross was erected to meet the eyes of approaching pilgrims to St Winning's shrine. Throughout the surrounding country it bore down to recent times the name of Saigtown or Saint's-town; and a fine spring, a little S of the manse, long held in superstitious repute, is still called St Winning's Well. After the Reformation it lost the prestige and importance conferred on it by its abbey; and, up till the establishment of the neighbouring Eglinton Ironworks (1846), it mainly depended on the weaving of muslins, gauzes, shawls, etc., for the Glasgow and Paisley markets. Kilwinning was constituted a police burgh in 1889, and under the Burgh Police Act of 1892 is governed by a provost, 2 bailies, and 6 commissioners. It has a post office, with money order, savings bank, and telegraph departments, branches of the Commercial and Clydesdale Banks, 2 hotels, a public library, the M'Gavin Public Park (for which £7000 was

bequeathed by the late John M'Gavin, Esq.), a gaswork, large engineering and fire-clay works, an iron foundry, a worsted spinning mill, grain and saw mills, 2 bowling clubs, a cemetery, fairs on the first Monday of February and November, and an annual cattle show in connection with the Farmers' Society. Besides the parish church, accommodating over 1000 sitters, there are a Free church, a U.P. church (restored 1883), an Original Secession church, an Evangelical Union church, Salvation Army barracks, and a Roman Catholic chapel. The public school, Tudor in style, was erected in 1875-76 at a cost of £8500. The ancient town cross has been restored, but retains its original shaft. Pop. (1841) 2971, (1861) 3921, (1871) 3598, (1881) 3469, (1891) 3835. Houses (1891) inhabited 844, vacant 29, building 2.

The abbey of SS. Winning and Mary was founded between 1140 and 1191, for a colony of Tyronensian Benedictines from Kelso, by Hugh de Morville, lord of Cunninghame, and Lord High Constable of Scotland. Robert I., Hugh de Morville, John de Menetheth, lord of Arran, Sir William Cunningham of Kilmaurs, Sir John Maxwell of Maxwell, and other opulent and powerful personages, endowed it with very extensive possessions, so that, besides granges and other property, it claimed the tithes and pertinents of 20 parish churches—13 of them in Cunninghame, 2 in Arran, 2 in Argyllshire, and 2 in Dumbartonshire. 'According to the traditional account of the entire revenue of the monastery,' says the writer of the *Old Statistical Account*, 'it is asserted that its present annual amount would be at least £20,000 sterling.' From Robert II. the monks obtained a charter, erecting all the lands of the barony of Kilwinning into a free regality, with ample jurisdiction; and they received ratifications of this charter from Robert III. and James IV. James IV., when passing the abbey in 1507, made an offering of 14s. to its relics; and Hoveden gravely relates, that a fountain in its vicinity ran blood for eight days and nights in 1184. The last abbot was Gavin Hamilton, a hot opponent of John Knox, and a zealous partisan of Queen Mary, who in 1571 was killed in a skirmish at Restalrig, near Edinburgh. According to tradition, the buildings of the abbey, when entire, covered several acres, and were stately and magnificent; but between 1561 and 1591 all that was strictly monastic was so demolished that hardly a trace of the foundations of the walls remains. In 1603—after the abbey had been under the commendatorship, first of the family of Glencairn, and next of the family of Raith—its lands and tithes, and various pertinents, were erected into a temporal lordship in favour of Hugh, Earl of Eglinton. The church continued to be in use as the parish church till 1775, when the greater part of it was taken down to make way for the present building. So much of the ruins as remained were afterwards repaired, at very considerable expense, by the then Earl of Eglinton; and a drawing of them made in 1789 is given in Grose's *Antiquities*. The steeple, a huge square tower, 32 feet square and 103 feet high, was struck by lightning in 1809, and in 1814, just when operations for strengthening it were about to begin, it fell. A beautiful new tower, 105 feet high and 28 square, was built at a cost of £2000 in the following year on the same site, and separate from the church. The extant remains, Early English in style, comprise the great western doorway, with mullioned window above; the base of the S wall of the nave, 95 feet long; and the stately gable of the S transept, with three tall graceful lancets (*Billings' Antiquities*, vol. iii.)

Kilwinning is the reputed cradle of Freemasonry in Scotland. Fraternities of architects were formed on the Continent of Europe, in the 11th and 12th centuries, to carry out the principles of Gothic architecture; and, being favoured with bulls from the Popes of Rome, securing to them peculiar privileges wherever they might go, they called themselves Freemasons. One of these fraternities is said to have come to Scotland to build the priory of Kilwinning; and there to have taken some of the natives into their fellowship, making them partakers of their secrets and their privileges. Such is the

current account, on which Mr R. F. Gould, in his exhaustive *History of Freemasonry* (Edinb. 1883), observes:—'The pretensions of the Kilwinning Lodge to priority over that of Edinburgh, based as they are upon the story which makes its institution and the erection of Kilwinning Abbey coeval, are weakened by the fact that the abbey in question was neither the first nor second Gothic structure erected in Scotland. That the lodge was presided over about the year 1286 by James, Lord Steward of Scotland, a few years later by the hero of Bannockburn, and afterwards by the third son of Robert II. (Earl of Buchan) are some of the improbable stories which were propagated during the last century, in order to secure for the lodge the coveted position of being the first on the Grand Lodge Roll, or to give colour to its separate existence as a rival grand lodge. Whatever was the dignity its followers desired for their *Alma Mater* during the early part of the last century, and however difficult it might then have been to reconcile conflicting claims, we are left in no doubt as to the precedence given to the lodge at Edinburgh in the Statutes of 1599, Kilwinning having positively to take the *second* place.' The oldest minute-book preserved by the Lodge is a small vellum-bound quarto, and contains accounts of its transactions from 1642 to 1758, but not regularly or continuously. Notwithstanding all which, Kilwinning is regarded as the mother lodge of Scotland, and in October 1893 a new hall was opened for it in Main Street, a little west of the old hall, all the furniture being of carved oak. At the consecration ceremony deputations from some thirty lodges attended.

Kilwinning is also remarkable for its continuation to the present time, almost uninterruptedly, of that practice of archery which was anciently enjoined by acts of the Scots parliament on the young men of every parish. Its company of archers is known, though imperfectly, and only by tradition, to have existed prior to 1488; but from that year downward, they are authenticated by documents. Originally enrolled by royal authority, they appear to have been encouraged by the inmates of the abbey; and they, in consequence, instituted customs which easily secured their surviving the discontinuance of archery as the principal art of war. Once a year, in the month of July, they make a grand exhibition. The principal shooting is at a parrot, anciently called the papingo, and well known under that name in heraldry, but now called the popinjay. This used to be constructed of wood; but in recent years has consisted of feathers worked up into the semblance of a parrot; and is suspended by a string to the top of a pole, and placed 120 feet high, on the steeple of the town. The archer who shoots down this mark is called 'the Captain of the Popinjay;' and is master of the ceremonies of the succeeding year. Every person acquainted with Sir Walter Scott's novels, will recognise the Kilwinning festival, transferred to a different arena, in the opening scene of *Old Mortality*, when young Milnwood achieves the honours of Captain of the Popinjay, and becomes bound to do the honours of the Howff. Another kind of shooting is practised for prizes at butts, point-blank distance, about 26 yards. The prize, in this case, is some useful or ornamental piece of plate, given annually to the company by the senior surviving archer.

The parish of Kilwinning, containing also the villages of Fergushill, Doura, Dalgarven, Bensley, and Eglinton Ironworks, is bounded N by Dalry, NE by Beith, E by Stewarton, SE and S by Irvine, SW by Stevenston, and W by Ardrossan. Its utmost length, from NNE to SSW, is 5½ miles; its utmost breadth is 5¼ miles; and its area is 11,069 acres, of which 79½ are water. The river GARNOCK here winds 6½ miles southward, first 1½ mile along the Dalry border, next 4½ miles through the interior, and lastly ¾ mile along the Irvine border. CAAP Water, its affluent, runs 1 mile eastward along the northern boundary; and LUGTON Water, after tracing 3¾ miles of the boundary with Stewarton, meanders 4½ miles south-westward through the interior till it falls into the Garnock at a point 1 mile SSE of the town. A triangular lake, called Ashenyard or Ashgrove Loch

(½ × ¼ mile) lies at the meeting-point with Stevenston and Ardrossan. The land surface slopes gradually upward from the SW to the NE, and including flat tracts along the Garnock and LUGTON Water, is diversified by gentle undulations, but nowhere exceeds 310 feet above sea-level. It exhibits great wealth of wood and culture; and commands, from numerous vantage-grounds, exquisite views of the eastern sea-boards, the wide waters, and the western mountain screens of the Firth of Clyde. The rocks throughout are carboniferous, with intersections of trap dyke. Good building sandstone is quarried; limestone, ironstone, and coal are largely worked, a mineral railway passing from east to west through the parish; and clay is used for making tiles and bricks. The soil of nearly one-half of the cultivated lands is a stiff clay, and that of most of the remainder is a light sandy loam. From one-fourth to one-third of the entire area is under the plough; a good many hundreds of acres are under wood; a considerable aggregate in the upper districts is moss; and all the rest of the land is disposed in field pasture, subordinate to the dairy. Distinguished persons connected with the parish have been the Earls of Eglinton, the abbot Gavin Hamilton, and the ministers John Glassford, Principal Baillie, James Fergusson, Professor Meldrum, Principal George Chalmers, and Professor William Ritchie. EGLINTON CASTLE, noticed separately, is the chief mansion, others being Ashgrove and Montgreenan. Giving off a portion to Fergushill *quoad sacra* parish, the church of which was erected in 1880, Kilwinning is in the presbytery of Irvine and synod of Glasgow and Ayr; the living is worth £459. Auchentiber, Eglinton district, Fergushill, and Kilwinning public schools, with respective accommodation for 110, 431, 237, and 839 children, have an average attendance of about 50, 265, 185, and 765, and grants amounting to over £45, £217, £170, and £518. Valuation (1883) £39,873, (1893) £43,255. Pop. (1801) 2700, (1831) 3772, (1861) 7717, (1871) 7375, (1881) 7037, (1891) 7007.—*Ord. Sur.*, sh. 22, 1865. See Robert Wylie's *History of the Mother Lodge, Kilwinning, with Notes on the Abbey* (Glasg. 1878), and the Rev. W. Lee Ker's *Kilwinning Abbey* (Ardrossan, 1883).

Kimelford. See KILMELFORT.

Kimmerghame, an estate, with a mansion, in Edrom parish, Berwickshire, near the right bank of Blackadder Water, 3 miles SE of Duns. A handsome Scottish Baronial edifice, erected in 1851 from designs by the late David Bryce, R.S.A., it is the seat of J. L. Campbell-Swinton, Esq.—*Ord. Sur.*, sh. 26, 1864.

Kinairdy, an ancient castellated mansion in Marnoch parish, Banffshire, on a promontory at the confluence of the Burn of Auchintoul with the Deveron, 2½ miles SSW of Aberchirder. Built partly at a very early period, partly at several subsequent dates, it soars aloft, in tower-like form, from its picturesque and commanding site; and, together with much surrounding property, it belonged to the Crichtons of Frendraught, from whom it passed to the Earls of Fife.—*Ord. Sur.*, sh. 86, 1876.

Kinaldie, a modern cottage ornée in the NE corner of Kinellar parish, Aberdeenshire, near the left bank of the Don and 1½ furlong ENE of Kinaldie station on the Great North of Scotland railway, this being 10½ miles NW of Aberdeenshire. There is a railway sub-post office of Kinaldie.—*Ord. Sur.*, sh. 77, 1873.

Kinaldy, an estate with a mansion, in Cameron parish, Fife, 4 miles S of St Andrews.—*Ord. Sur.*, sh. 41, 1857.

Kinbattoch, a farm in Towie parish, W Aberdeenshire, 1 mile SW of the church. Some tumuli here were opened in 1750, and found to enclose urns, trinkets, and Roman medals; and here too are an ancient artificial mound (once surrounded by a moat) and ruins of a pre-Reformation chapel.

Kinbeachie, an estate, with a handsome modern mansion, in Resolis parish, Ross-shire, near the SE shore of the Cromarty Firth, 5 miles SW of Invergordon. Kinbeachie Loch (2¼ × 1½ furl.) sends forth the Burn of Resolis.

Kinbettoch. See KINBATTOCH.

Kinblethmont, an estate in Inverkeilor parish, Forfarshire, $4\frac{3}{4}$ miles N of Arbroath. The mansion was burnt in June 1887.—*Ord. Sur.*, sh. 57, 1868.

Kinbrace. See KILDONAN.

Kinbroon, a modern mansion in Fyvie parish, Aberdeenshire, 5 furlongs SSW of Rothie-Norman station, on the Inveramsay and Macduff branch of the Great North of Scotland railway.

Kinbuck. See DUNBLANE.

Kincaid House, a mansion in Campsie parish, Stirlingshire, $\frac{3}{4}$ mile SSW of Milton, near the junction of the Blane Valley section with the Kelvin Valley section of the North British system.

Kincairney, an estate with a mansion and a village, in Caputh parish, Perthshire. The mansion, 5 miles ENE of Dunkeld, is the seat of William Ellis Glog, Esq. (b. 1828), one of the judges of the Court of Session, who takes the judicial title of Lord Kincairney from the estate.—*Ord. Sur.*, sh. 56, 1870.

Kincaldrum, a mansion in Inverarity parish, Forfarshire, on the NE slope of wooded Kincaldrum Hill, 5 miles SSW of Forfar. It is the seat of E. A. Baxter, Esq.—*Ord. Sur.*, sh. 57, 1868.

Kincale, an estate with a mansion, and a village, in St Andrews parish, Fife, 3 miles WNW of the city.

Kincardine, a large parish of N Ross and Cromarty, containing to the E the village of ARDEAY, with a post, money order, and telegraph office, and with BONAR-BRIDGE station on the Highland railway, $13\frac{3}{4}$ miles WNW of Tain, and $39\frac{1}{2}$ N by E of Dingwall. It is bounded NE by Creich in Sutherland and by the head of Dornoch Firth, E by Edderton, S by Rosskeen, Alness, Fodderty, and Contin, and SW and W by Lochbroom. Its utmost length, from E to W, is $22\frac{1}{2}$ miles; its width, contracting to a point at the extremities, elsewhere varies between $3\frac{3}{4}$ and $21\frac{1}{2}$ miles; and its area is 239 square miles, or 153,054 acres. The OIKELL, rising at the NW corner and at an altitude of 1500 feet, winds $35\frac{1}{4}$ miles south-eastward and east-south-eastward along all the Sutherland boundary, through Loch Ailsh ($7 \times 4\frac{1}{2}$ furl.; 498 feet) and the Kyle of Sutherland to the head of Dornoch Firth at Bonar-Bridge. Of its twenty tributaries from Kincardine parish, the chief is the Einig, formed by two head-streams, and running 4 miles east-north-eastward to a point $\frac{1}{2}$ mile below Oikell Bridge; whilst the CARRON, formed by three head-streams, runs 9 miles east-by-northward to the Kyle at a point $\frac{1}{4}$ mile above Bonar-Bridge. Of thirty-three lakes, besides Loch Ailsh, the largest are Crom Loch ($6 \times 3\frac{3}{4}$ furl.; 1720 feet) on the Fodderty border, and Loch Craggie ($5\frac{1}{2} \times 1\frac{1}{2}$ furl.; 507 feet) in the NW interior. The surface is everywhere hilly or mountainous, chief elevations westward and north-westward being Blar Carvary (864 feet), *Cnoc Leathado na Siorramachd (1845), Lamentation Hill (600), Carn Bhren (2080), Breac Bheinn (1516), *Carn Chuinneag (2749), Beinn Ulamhie (1616), Bodach Mor (2689), Carn Loch Sruban Mora (2406), and *Brea-bag (2338), where asterisks mark those summits that culminate on the southern and western confines of the parish. Granite and sandstone are the predominant rocks; and precious stones are found upon Carn Chuinneag, exactly similar to those of the Cairngorm Mountains. On the Invercharron estate there is a small tract of very fine arable land, with rich alluvial soil; and in 1847, after the potato disease, the greater part of Upper Gledfield farm, extending to 180 acres, was brought under cultivation, in pursuance of the reclamation scheme of Sir Alex. Matheson of Ardross (*Trans. Highl. and Ag. Soc.*, 1877, pp. 153, 154). Agriculture, however, is practicable over only a small proportion of the land area; and sheep-farming constitutes the staple occupation. There is a pier at the Bridge of Bonar, where ships are moored and discharge their cargoes. A sanguinary contest, called the battle of Tuiteam-Tarbhach, was fought in this parish, about 1397, between the Macleods and the Mackays; and near Culrain station, 4 miles NW of Ardeay, Montrose, with 1200 Cavaliers, Germans, and undrilled Orcadians, was routed by 230 horse and 170 foot under Licut.-Colonel Strachan, 27 April 1650. The

battle-field bears the name of Craigcaoineadhan or Lamentation Hill, but the conflict itself is commonly known as the battle of Invercharron. More than 600 of his men made prisoners, and 396 slain, the great Marquis disguised himself as a common Highlander, and, swimming across the Kyle, fled up Strath Oikell to ASSYNT, where three days later he was taken captive. Antiquities are remains of several dunes, cairns, and stone circles, and a sculptured stone in the churchyard. The principal residences, with their distance from Ardeay, are Invercharron Houso (2 miles N by W), Gledfield House ($1\frac{1}{2}$ W), Culrain Lodge ($3\frac{1}{4}$ NNW), Braelangwell Lodge (6 W by N), Amat Lodge (9 W), Alladale Lodge ($13\frac{1}{2}$ W by S), Achnahannet Lodge ($9\frac{1}{2}$ NW), and Inveroikell Lodge ($10\frac{3}{4}$ NW). Sir Charles Ross of Balnagowan holds nearly half of the entire rental. Giving off the *quoad sacra* parish of CROICK, Kincardine is in the presbytery of Tain and synod of Ross; the living is worth £274. The parish church, near the shore of Dornoch Firth, 7 furlongs SSE of Bonar-Bridge station, was built in 1799. There are Free churches of Kincardine and Croick; and five public schools—Achnahannet, Croick, Culrain, Gledfield, and Louberoy—with respective accommodation for 40, 35, 50, 115, and 18 children, have an average attendance of about 25, 15, 15, 95, and 20, and grants amounting to nearly £60, £35, £30, £125, and £32. Pop. (1881) 1472, (1891) 1417, of whom 1085 were Gaelic-speaking, and 1225 belonged to Kincardine ecclesiastical parish.—*Ord. Sur.*, shs. 102, 93, 92, 101, 1881-82.

Kincardine, a parish in Monteith district, S Perthshire, containing the villages of BLAIR-DRUMMOND and THORNHILL, each with a post office under Stirling, and extending southward to Gargunnoch station, northward to within 7 furlongs of Douno station. Till 1891 it comprised a main body and the Thornhill detached section, separated from each other by a strip of Kilmadock parish, 2 miles broad. With a view to unite the parish, the Boundary Commissioners in the year mentioned effected an exchange of territory between it and Kilmadock. Part of the detached section and part of the main portion of the parish of Kincardine were given to Kilmadock, and the remainder of the detached section was united to the main portion of Kincardine by the annexation of the part of Kilmadock left still intervening. It is bounded N by Kilmadock, NE by Lecropt, SE by St Ninians in Stirlingshire, S by St Ninians, Gargunnoch, and Kippen, and W by Port of Monteith; and has an utmost length from E to W of $7\frac{1}{2}$ miles, with an utmost breadth from N to S of $3\frac{1}{2}$ miles. The FORTH meanders in serpentine folds eastward along all the southern or Stirlingshire boundary of the parish, and then northward on the eastern boundary until it is joined by the arrowy Teith, which hurries $4\frac{1}{2}$ miles south-eastward along all the north-eastern boundary; whilst GOODIE Water, another tributary of the Forth, flows $1\frac{1}{2}$ mile east-south-eastward across the western or Thornhill portion of the parish. In the extreme E, at the confluence of the Forth and the Teith, the surface declines to 34 feet above sea-level, and the greater part of the parish is low and almost flat, only in the north, near Loch Watston, attaining an altitude of 205 feet. The northern half of the Thornhill portion is somewhat hillier, and rises to 400 feet near the Muir Damon, a ridge which, lying in the widest part of the strath of Monteith, is the centre of a magnificent landscape, screened in the distance by Ben Lomond, Ben Ledi, Ben Vorlich, Stuc a Chroin, the Ochils, and the Lennox Hills. The predominant rocks are Devonian, and sandstone has been quarried. The soil of the carse is a rich blue clay, incumbent on a bed of gravel; that of the dryfield is a light loam, formerly encumbered with boulders, but now entirely cleared. The carse has, at various depths, many thin beds of shells, particularly oysters; and nearly half of it till 1766 was covered with a deep bog, called Blair-Drummond or Kincardine Moss, but by the ingenious removal of the moss piecemeal into the Forth, had in 1839 been converted into highly fertile land. Woods and plantations

cover some 400 acres, 650 acres are in permanent pasture, and nearly all the rest of the parish is under the plough. Antiquities are a tumulus, called Wallace's Trench, 63 yards in circumference, near Blair-Drummond East Lodge; two other tumuli, respectively 92 and 150 yards in circumference, within Blair-Drummond garden; an eminence, the Gallow Hill, $\frac{1}{4}$ mile from Blair-Drummond House; and a standing stone, 5 feet high and 12 in circumference, on the summit of Borland Hill; whilst bronze implements, a considerable reach of Roman road, and a portion of the skeleton of a whale, were found on the carse lands in the course of the removal of the superincumbent moss. Robert Wallace, D.D. (1697-1771), statistical writer, and the Rev. Alex. Bryce (1713-86), geometrician, were natives. Blair-Drummond and Ochertyre, both noticed separately, are the chief residences. Giving off since 1877 its Thornhill section to NORRISTON *quoad sacra* parish, Kincardine is in the presbytery of Dunblane and synod of Perth and Stirling; the living is worth £283. The parish church, 2 miles S by W of Doune, was built in 1814-16, and is a handsome Perpendicular edifice, with several stained-glass windows; its ancient predecessor belonged to Cambuskenneth Abbey. Three public schools—Blair-Drummond, Kincardine, and Thornhill—with respective accommodation for 75, 141, and 157 children, have an average attendance of about 15, 75, and 95, and grants amounting to over £20, £71, and £93. Valuation (1883) £15,938, 5s. 10d., (1892) £14,153, 15s. 5d. Pop. (1881) 1351, (1891) 1277, of whom 648 were in the ecclesiastical parish.—*Ord. Sur.*, sh. 39, 1869.

Kincardine or Kincardine-on-Forth, a small seaport town in Tulliallan parish. This parish until 1891 formed part of a detached portion of Perthshire, but in that year the Boundary Commissioners transferred it wholly to the county of Fife. The town of Kincardine lies on low flat ground on the left or NE bank of the river Forth, with a terminal station on the Alloa and Kincardine branch of the North British railway (opened 18th Dec. 1893), and 3 miles S by W of Kincardine station on the Stirling and Dunfermline section. Occupying one of the best situations on the Forth, with a good quay and a roadstead 21 feet deep, where 100 vessels may ride in safety, it once, and for a long period, was the seat of commerce for nearly all places round the head of the Firth of Forth, precisely as Leith and Burntisland are the seats of commerce for nearly all places round the southern and northern sides of the lower parts of the Firth. It commands a safe ferry, half a mile wide, across the Forth; and, prior to the railway era, was the grand ferry station between Fife and Kinross-shire on the one hand, and all the SW of Scotland on the other. Early in the nineteenth century it carried on shipbuilding to so great an extent as sometimes to have from twelve to fifteen vessels on the stocks at once; and it still has a rope and twine work, a woollen factory, and a preserve work; but its former extensive distillery, brewery, salt works, and collieries are now extinct or exhausted. It is a regular place of call for the summer steamers on the passage between Stirling and Leith, ranks as a burgh of barony, connected with the estate of TULLIALLAN, and holds a fair on the second Friday of August. It contains some good, modern, slated two-storey or three-storey houses, but chiefly consists of red-tiled cottages; its environs are pleasant, with the ruins of Tulliallan Castle, its modern successor, a number of good villas, and many charming and far-reaching views; but the town itself presents a very irregular alignment, and an old-fashioned appearance. At it are a post office, with money order, savings bank, insurance, and telegraph departments, a branch of the Union Bank, a gaswork, a hotel, a public reading-room, a cemetery, bowling and curling clubs, and 3 schools. Tulliallan parish church, built in 1833 at a cost of £3400, is an elegant edifice. There are a U.P. church, built in 1819 at a cost of £1200, a Free church, and an Episcopal mission station. The distinguished chemist, James Dewar, F.R.S., professor of natural experimental philosophy at Cambridge, was born at Kincardine in 1842.

Two embankments were completed in 1823 and 1839, on the W and E sides of the town, for reclaiming valuable land from the tidal waters of the Forth. Pop. (1881) 1985, (1891) 2007, of whom 1080 were females. Houses (1891) inhabited 499, vacant 98.—*Ord. Sur.*, sh. 39, 1869. See D. Beveridge's *Culross and Tulliallan* (Edinburgh, 1885), and his *Between the Ochils and the Forth* (1888).

Kincardine, a quondam town in Fordoun parish, Kincardineshire, near the right bank of Ferdun Water, $4\frac{1}{2}$ miles NW of Laurencekirk, and 1 mile NE of Fettercairn. Near it, on a wooded eminence 30 feet high, are remains of a royal palace, whose walls, at no point exceeding 8 feet in height, consist of chisel-hewn but mostly hammer-dressed stones of a hard and durable sandstone. The ground plan may still be traced; and it seems to have measured 36 yards square, with an inner quadrangle, filled more or less with buildings. Some make this palace the scene of the murder of Kenneth III. in 994 (see FENELLA); and it is known to have been a residence of William the Lyon (1166-1214), of Alexander III. (1249-85), of Edward I. of England in 1296, and of Robert II. in 1333. In 1532 the fourth Earl Marischal obtained a charter for making the town of Kincardine 'the principal and capital burgh of the county;' but less than eighty years after the sheriff and his deputed petitioned for the removal of the courts to Stonehaven, Kincardine possessing neither tobooth nor hostelry. At the same time its fair, St Catherine's, was transferred to FETTERCAIRN, whither also its market cross (1670) was removed a century later; and now the memory of Kincardine is preserved only by the vestiges of its palace, by the graveyard of its ancient kirk of St Catherine, and by such names in its vicinity as the 'King's Park,' 'Chancellor's Park,' and 'King's Deer.'—*Ord. Sur.*, sh. 66, 1871. See chap. v. of Andrew Jervise's *Memorials of Angus and the Mearns* (Edinb. 1861), and app. xvi. of his *Land of the Lindsayys* (2d. ed., Edinb., 1882).

Kincardine, Inverness-shire. See ABERNETHY.

Kincardine, an estate, with a romantic glen, a modern mansion, and a ruined castle, on the E border of Blackford parish, Perthshire. The glen extends $2\frac{1}{2}$ miles north-eastward to the vicinity of Auchterarder; is traversed by Ruthven Water and by the Scottish Central section of the Caledonian railway; and contains stupendous railway works, including a six-arched viaduct rising nearly 100 feet above the level of the stream. Modern Kincardine Castle, $1\frac{1}{4}$ mile S of Auchterarder, is approached by an avenue that passes along the copse-dell banks of the glen; it is a neat edifice in the castellated style. The ancient castle, farther up the glen, crowned a promontory overlooking scenery similar to that around Hawthornden House. It formed a strong and spacious quadrangle; but, having been dismantled by the Earl of Argyll in 1645, it is now represented by a mere fragment of wall and some vestiges of a moat. In its neighbourhood there is a large yew tree of great antiquity. About the middle of the 13th century Malise, Earl of Strathearn, conferred the lands of Kincardine on Sir David de Graham, to whose descendant, the Duke of Montrose, they give the title of Earl of Kincardine.—*Ord. Sur.*, sh. 39, 1869.

Kincardine O'Neil, a village and a parish of S Aberdeenshire. The village stands, 234 feet above sea-level, near the left bank of the Dee, 2 miles ESE of Dess station and $2\frac{1}{2}$ SW of Torphins station, both on the Deeside section of the Great North of Scotland railway, the latter station being 24 miles W by S of Aberdeen. Protected from the north and east winds, it is much resorted to by invalids. It has a post office, with money order, savings bank, and telegraph departments, a hotel, a hall erected by public subscription in 1885, and fairs on the second Tuesday of May *o.s.* and the Wednesday and Thursday after the last Tuesday of August *o.s.*

The parish, containing also TORPHINS village and station, is bounded NW by Tough, NE by Cluny and Midmar, E and SE by Banchory-Ternan in Kincardineshire, SW by Birse, and W by Aboyne and Lumphanan.

Its utmost length, from N to S, is 8½ miles; its utmost width, from E to W, is 7 miles; and its area is 18,260½ acres, of which 16½ are water. The DEE winds 4¼ miles south-eastward along all the south-western border, being spanned, 1¼ mile SSE of the village, by the three-arched Bridge of Potarch (1812); and the interior is drained to the Dee by BELTY Burn and several lesser rivulets. The surface may be described as comprising three straths or parts of straths, together with considerable flanking hills, and attains 700 feet at Sluie Woods, 655 at the Hill of Bely, 800 at Ord Fundie, 1545 at the *Hill of FARE, 1000 at Learney Hill, and 1621 at *Benaquhallie or CORRENNIE, where asterisks mark those summits that culminate on the confines of the parish. The rocks include granite, trap, and sandstone; and the soils range from fertile alluvium to barren moor. Plantations of larch and Scotch fir still cover a large area, though a good many of the older trees have been cut down. Alexander Ross (1699-1784), a minor poet, was a native. The principal mansions are Kincardine Lodge, Learney, and Desswood. Giving off since 1875 the *quoad sacra* parish of Torphins, Kincardine O'Neil is the seat of a presbytery in the synod of Aberdeen; the living is worth £262. The parish church, rebuilt about 1863, is situated in the middle of the village, at the W end of which stands the small Episcopal Christ Church, a Pointed edifice of 1865-66. At Craigmyle, 7 furlongs ESE of Torphins station, is a Free church; and four public schools—Greenburn, Kincardine O'Neil, Torna-veen, and Torphins—with respective accommodation for 60, 146, 90, and 167 children, have an average attendance of about 30, 90, 60, and 120, and grants of nearly £80, £80, £60, and £108. Pop. (1881) 1931, (1891) 1830, of whom 1006 were in the ecclesiastical parish.—*Ord. Surv.*, shs. 66, 76, 1871-74.

The presbytery of Kincardine O'Neil comprises the old parishes of Aboyne, Banchory-Ternan, Buse, Cluny, Coull, Crathie, Echt, Glenmuick and Tullich, Kincardine O'Neil, Logie-Coldstone, Lumphanan, Midmar, Strachan, and Tarland-Migvie, the *quoad sacra* parishes of Braemar, Dinnet, Glengairn, and Torphins, and the chapelry of Finzean. Pop. (1881) 19,182, (1891) 18,781, of whom about 7500 were communicants of the Church of Scotland. The Free Church also has a presbytery of Kincardine O'Neil, with churches at Aboyne, Ballater, Banchory-Ternan, Braemar, Cluny, Crathie, Cromar, Echt, Kincardine O'Neil, Lumphanan, Midmar, Strachan, and Tarland, which 13 churches together had about 1750 communicants.

Kincardineshire (often called **THE MEARNs**), a maritime county on the eastern seaboard of Scotland. It is bounded N and NW by Aberdeenshire, E by the German Ocean, and SW by Forfarshire. Its outline is an irregular triangle, with the NE angle at the mouth of the river Dee, the S angle at the mouth of the river North Esk, and the W angle between Mount Battock and the Hill of Cammie, where the boundaries of Forfarshire, Aberdeenshire, and Kincardineshire all meet. The length of the E side is 30¾ miles, that of the SW side 18¾, and that of the NW side 29½—all the measurements being in straight lines. Previous to 1891 there were three parishes partly in the county of Kincardine and partly in that of Aberdeen—namely, Banchory-Ternan, Drumoak, and Banchory-Devenick. The Boundary Commissioners in that year effected an exchange of territory between the two shires, the Kincardineshire boundary having been so extended as to include the whole of Banchory-Ternan, and the Aberdeenshire boundary so extended as to include the whole of Drumoak. In dealing with Banchory-Devenick, however, no alteration was made in the county boundaries, the whole of the Aberdeenshire portion of the parish having been transferred to the Aberdeenshire parish of Peterculter, and the name restricted to the Kincardineshire portion. The parish of Edzell, that was situated partly in Kincardineshire and partly in Forfarshire, has been restricted to the Forfarshire portion, the Kincardineshire portion having been transferred to the Kincardineshire parish of Fettercairn, and consequently no change

having been made in the county boundaries. Following the main windings, the distance along the sea-coast is about 35 miles, and along the other two sides the distances would be fully one-third more than those just given. From the mouth of the North Esk the boundary follows the mid bed of that river for a distance of 15 miles from the mouth, and then takes a northerly course by Manach Hill to Sturdy Hill, from which it follows the watershed between Glen Esk and Glen Dye to a point about 1 mile NW of Mount Battock at Loch Tennet. From this it follows the course of the Water of Aven till it joins the Feugh Water, down which it runs for about half a mile. The line then passes irregularly to the N and NW across the Dee on to the Hill of Fare, thence about a mile in a north-easterly direction, then in an irregular SE line back to the Dee near Durris Church, and thereafter it follows the mid bed of the river for 14¾ miles to its mouth at Aberdeen. The greater part of the coast-line is bold and rocky, the cliffs often rising to over 200 feet, and presenting many picturesque features, particularly along the line of conglomerate cliffs to the S of Stonehaven. The area of the county prior to 1891 was 383 square miles or 248,195 acres, of which 1463 were inland waters and 1385 foreshore. Among the counties of Scotland Kincardineshire is twenty-first as regards area, twenty-third as regards population, and twenty-first as regards valuation. The county falls naturally into five subdivisions—the Grampian district, the northern coast district, the southern coast district, the Howe of the Mearns, and the Deeside district.

The *Grampian region* embraces the eastern termination of the Grampians, extends across the county from Mount Battock (2555 feet) on the W till the sea is reached near Muchals, and separates the Deeside district from the Howe of the Mearns. To the E of Mount Battock is Clachnaben (1944 feet), with, rising near its summit, a curious mass of rock, which looks from the sea like a watch-tower, and forms an excellent landmark. Farther E is Kerloch (1747 feet), from which there is an excellent view of the greater part of Aberdeenshire, and from which it is possible to see as far S as the Lammermuir Hills. To the NE is Cairnmorean (1245 feet), with its slopes almost covered with great masses of granite. ESE of Mount Battock is Cairn-o'-Mount (1488 feet), over the eastern shoulder of which is the public road from the Howe of the Mearns to Deeside. As the summits approach the coast they gradually get lower, till, about 3 miles from the sea, they average from 500 to 600 feet high, and from this they slope gradually down till they terminate in rocky coast heights of from 100 to 200 feet. The district is about 18 miles long and from 6 to 8 wide. It comprises about 85,400 acres, and is very rugged, dreary, and sterile, though there are here and there some picturesque glens.

From this district the *northern and southern coast regions* are offshoots to the N and S respectively. The former contains 30,750 acres, and extends from Girdleness to the neighbourhood of Stonehaven, with an average breadth of 3 miles. There is a bold rocky shore, with cliffs varying in height from 100 to 300 feet; but, except in the neighbourhood of Aberdeen and Stonehaven, the region is very bleak. The southern coast district, with an area of 58,190 acres, extends from Stonehaven to the mouth of the North Esk, and has an average breadth of from 4 to 5 miles. Although the heights between Stonehaven and Bervie are somewhat bare, the land is well cultivated, and the aspect is much less bleak than in the northern district. To the S of Stonehaven is the range of cliffs known as the Fowlsheugh, noted as the summer dwelling-place of immense numbers of sea birds. Beyond Johnshaven the heights retire farther from the coast, leaving a strip of fertile land in some places 3 miles wide, and gradually rising into the green ridge known as Garcock Hill (915 feet), forming a continuation of the Sidlaws. Between the Grampians on the SW and the heights of Garcock and Arbutnott on the NE is the northern portion of the great valley of Strathmore, which is in this county

known as the *Howe of the Mearns*. The length of this district is about 16 miles, and its breadth gradually narrows from 5 miles at the W till it runs out at Stonehaven. It contains 34,340 acres. Sheltered by high grounds from the ungenial N and E winds, it is a fertile and highly cultivated country, with thriving plantations, good farms, and a considerable number of gentlemen's seats. The soil is of a bright red colour, which gives the surface when newly ploughed a very peculiar but rich and warm appearance. The Howe constitutes the main line of access between the N and SE of Scotland.

The *Deeside district* extends from the sea westward along the southern bank of the Dee for over 14 miles, and then along both banks for about 8 miles. It comprehends also the valley of the Feugh. The area is 36,667 acres. The district is peculiarly favourable to the growth of timber, and there are large and thriving plantations, which in many cases extend to the summits of the adjacent hills. At Banchory, where the county occupies both sides of the Dee, the scenery along the river is good.

As will be seen from this outline the surface of the county is considerably diversified. The highest summit of the Grampian range in the county is Mount Battock (2555 feet), and the other principal summits are Sturdy Hill (1784), Kerloch (1747), Hound Hillock (1698), Whitelaws (1664), Mount Shade (1662), Goyle Hill (1527), Cairn-o'-Mout (1488), Fenella Hill (1358), Cairnmorearn (1245), Mongour (1232), Hill of Trusta (1051), Craig of Dalro (1042). In the coast tract between Stonehaven and the mouth of the North Esk are Clochna Hill (638 feet), Bruxie Hill (710), Law of Lum (492), Leys Hill (495), Knox Hill (523), and Hill of Morphie (486). There are a few small lochs in the county, the chief being the Loch of Drum (6 × 2 furl., formerly 3 times as large) near the centre of the N side, and Loirstone Loch (2 × 1 furl.) near the NE corner. Leys Loch is now drained. It contained a crannoge, traces of which still remain. The drainage of the part of the county to the N of the Grampians is effected by means of the Dee and its tributaries. After that river enters Kincardineshire the first stream of importance that it receives is the Water of FEUGH, which joins it a little above Banchory, after itself receiving the Water of Aven and the Water of DYE. At the church of Durris the Dee is joined by the Burn of Sheeoch, and, farther down, about a mile below Peterculter Church, by Crynoch Burn. The part of the Grampians immediately to the W of Stonehaven is drained by COWIE Water, CARRON Water, and BERVIE Water, of which the first two enter the sea at Stonehaven, and the last at Bervie. In the coast district N of Stonehaven are the small burns of Elsieck and Muchalls. The district S of Stonehaven has, besides the Bervie Water, also the smaller burns of Caterline, Benholm, Fenella, and Lauriston; near the mouth of the second last is a prettily wooded rock glen with a lofty waterfall. The SW end of the Howe of the Mearns is drained by the Black Burn, Dourie Burn, and Luther Water flowing into the North Esk. There are a number of small local burns flowing into all of these streams, particularly the Dye and the Cowie. The Dee and North Esk are valuable salmon rivers, and in many of the smaller streams there is excellent trout fishing.

Geology.—The area occupied by the ancient crystalline rocks in Kincardineshire lies to the N of the great fault which bounds the Old Red Sandstone formation. This line extends from near Edzell, NE by Fenella Hill, to Craigeven Bay, about 1 mile N of Stonehaven. The synclinal fold which traverses the crystalline rocks in Forfarshire is also traceable across this county. As we ascend the sections in the North Esk and Cowie rivers, green and grey slates and shales are seen dipping towards the NW at high angles, which are succeeded by crystalline micaceous grits and mica schists. On the N side of the synclinal axis the same beds reappear with a SE inclination, but in a still more highly altered form. By means of repeated undulations they spread over the northern part of the county towards the valley of the

Dee. A traverse along the rugged and rocky cliff between Stonehaven and Aberdeen furnishes admirable opportunities for the examination of the lithological varieties of these crystalline rocks, and the numerous flexures by which they are repeated. From the great fault in Craigeven Bay, near Stonehaven, to a point about 1½ mile to the N, there is a regular ascending series through green and grey slates, with bands of pebbly grit which are overlaid by contorted mica schists and micaceous quartzites. In the neighbourhood of Muchalls Castle the latter beds are repeated by gentle undulations, and at Skateraw they are inclined to the W or N of W, while from Portlethen to Fiondon there is a general dip to the S or SSE. In the eastern portion of the county no limestones are associated with the crystalline series, but, near Banchory and also near Lochlee in the adjacent county, some bands of limestone occur which are probably on the same horizon as the calcareous series of Loch Earn and Loch Tay. An important feature connected with these crystalline rocks is the occurrence of masses of granite in their midst. From the gradual disappearance of the foliation in the micaceous gneiss as we approach the margin of the granite, it is probable that the gneissic masses may be the result of extreme metamorphism. By far the largest area of granite extends along the watershed of the county from Mount Battock E to Cairnmorearn Hill, but, besides this mass, there are several small masses on the S side of the Dee between Maryculter and Aberdeen. The granite to the S of the Dee, which has been largely quarried for building purposes, is coarsely crystalline, of a grey colour, and is composed of the normal constituents—quartz, felspar, and black mica. Veins and dykes of this rock also occur throughout the county in the midst of the stratified crystalline series.

The geological structure of the Old Red Sandstone formation in Kincardineshire has a close resemblance to that in the adjacent county of Forfar. (See the geological description in the article FORFARSHIRE.) The great synclinal fold which traverses Strathmore runs E to the shore at Cawton, while the N limb of the anticlinal fold of the Sidlaws extends along the shore between St Cyrus and Kinneff. In Kincardineshire, however, there is a great thickness of strata belonging to this formation which occupy a lower position than any met with in Forfarshire. This subdivision, which immediately underlies the volcanic series, is admirably displayed in the shore section at Stonehaven. By means of the great fault which bounds the Old Red Sandstone formation along the flanks of the Grampians the members of this subdivision are brought into conjunction with the crystalline rocks in Craigeven Bay about 1 mile N of Stonehaven. The base of the Old Red Sandstone, therefore, is nowhere visible in this county. The strata consist of red sandstones and flags, with purple clays and shales which are either vertical or highly inclined to the E of S, and as they extend along the shore to the Bellman's Head S of Stonehaven, it is evident that their thickness must be about 5000 feet. Notwithstanding the great thickness of the members of this series, it is important to note that when they are followed inland in a WSW direction they are abruptly truncated by the great fault already referred to. Not far to the S of Stonehaven the highest beds of this subdivision pass conformably below the representatives of the volcanic series of Forfarshire. In this county, however, there is a remarkable change in the aspect of the latter subdivision. Instead of a great succession of lavas and tuffs, we find a remarkable development of coarse conglomerates, with ashy grits and a few thin sheets of diabase porphyrite. It is apparent, therefore, that the centres of volcanic activity were far removed from this part of the inland sea in which the strata accumulated. The active volcanoes must have been situated along a line extending from Perthshire into Forfarshire. The massive conglomerates, containing large and well-rounded pebbles of diabase, and various metamorphic rocks are admirably seen on the bluff cliff at Dunnottar Castle, where they are inclined to the S. In Tremuda Bay they swing round to

the SW and pass below a bed of lava. As we follow the coast-line S by Crawton the beds veer round to the W, and this dip continues to Inchbervie and Gourdon, while in the neighbourhood of St Cyrus they are inclined to the N of W. From these data it is evident that the representatives of the volcanic series are curving round the great synclinal fold of Strathmore. Of the sheets of lava intercalated in this subdivision, the most important occurs on the Bruxie and Leys Hills, which can be traced in a SW direction to the E of Inchbervie. The thin bands at Crawton, Kinneff, Inchbervie, and Gourdon are of minor importance.

The members of the volcanic zone are succeeded by red sandstones and conglomerates with bands of shale, in which occurs the well-known fish bed at Canterland (see list of fossils in article FORFARSHIRE), and these beds are overlaid in turn by the friable red marls and sandstones occupying the centre of the syncline between Stracathro and Fordoun.

An interesting feature connected with the glaciation of Kincardineshire is the abnormal trend of the ice-markings on the shore, compared with the direction met with on the slopes of the hills. In the higher reaches of the North Esk, and along the hill slopes as far as the Auchlee Hill, near Maryculter, the general trend of the striae is SE and ESE, but along the shore between Inchbervie and Aberdeen the direction is NNE. It would seem, therefore, that by some means or other the ice which radiated from the high grounds of Kincardineshire was compelled to change its course on reaching the low ground between Stracathro and Stonehaven. Along this line it moved towards the NE, and when it reached the coast-line it was deflected still further towards the NNE and N. It has been suggested that this remarkable deflection was due to the presence of the Scandinavian *mer de glace* in the North Sea, which, from its greater size, was capable of overcoming the seaward motion of the local ice. The evidence derived from the boulder clay furnishes striking confirmation of this northerly movement along the coast. This deposit, which is spread over the low grounds in the form of a more or less continuous covering, and which steals up the valleys draining the hills as a gently sloping terrace, presents the usual characteristics of the boulder clay. In the inland area occupied by the Old Red Sandstone, this deposit contains numerous fragments of the altered crystalline rocks derived from the slopes of the high grounds of the county, while to the N of the fault at Stonehaven, in the direction of Muchalls and Portlethen, striated blocks of red sandstone and porphyrite are mingled with fragments of the underlying rocks in the boulder clay. The blocks of lava and the red sandstones were derived from the area lying to the S of the great fault.

At the E end of Strathmore, and along the line of railway from that point towards Stonehaven, deposits of gravel and sand are spread over the ground, which are partly fluvial and partly due to the melting of the retreating glaciers. Here and there along the coast between Stonehaven and St Cyrus patches of stratified sands, gravels, and clays are met with which may probably belong to the 100-foot beach.

Soils and Agriculture.—In the Grampian district there is a large extent of ground simply covered with heath, waste, or under peat, but along the southern border matters improve, and there are stretches of good loam on rock or clay subsoils, while along both the Feugh and the Dye there are patches of good rich loam. Along the coast districts the soil varies considerably. About Muchalls it is thin and moorish, and the northern district is generally rough and stony. Some of the land, however, near Aberdeen is let for dairy farming, and, though stony, is fertile and commands a good rent. In the southern district by Benholm, Bervie, and St Cyrus there is good loam on a subsoil of gravel, clay, or decomposed rock; the higher parts are thin. In the Howe district there are good black and reddish loams, with a subsoil of sand, gravel, or clay, the gravel lying mostly to the NW, and

the clay to the SE. This tract is very fertile. In the Deeside district, along the N side, there is a good deal of light sandy soil produced by decomposed granite mixed with moss, while along the S side the soil varies from a good black loam to sand, gravel, and clay overlying rock.

Before the middle of the 18th century agriculture in the county was but little attended to. 'At that period' [1761], says Captain Barclay of Ury, in speaking of the county, 'agriculture was at a very low ebb. My grandfather, although a most respectable man, had no turn for improvement, nor had any of his predecessors; indeed, the pursuit of agriculture was generally despised through the country. But my father seems to have been a heaven-born improver; for such was his enthusiasm, that a year before his father's death he carried on his back, all the way from Aberdeen, a bundle of young trees, which he planted in the den of Ury with his own hand, sorely to the vexation of the old gentleman, who complained that the protecting of the plants annoyed the people's sheep. Soon after this my father went to Norfolk, then the great agricultural school of the kingdom, where he served a regular apprenticeship to the business, and brought home with him not only the most improved implements of husbandry, but also a number of Norfolk ploughmen. At that time the tenantry were little better than the boors of Germany and Russia, and the lairds were more inclined to break each other's heads than to break up the treasures of the earth. Seeing, then, that preaching doctrines was of no avail without putting them into practical operation, he took into his own hands a large surface of about 2000 acres. At that time the estate of Ury was a complete waste, consisting of bogs, baulks, and rigs, everywhere intersected with cairns of stones and moorland. For twenty years he toiled most indefatigably; and during all that time he was never known to be in bed after five o'clock in the morning, winter or summer. He was the first man who sowed a turnip in a field, or artificial grasses, north of the Firth of Forth. During this period he thoroughly improved 2000 acres, reclaimed from moor 800, and planted from 1200 to 1500 acres chiefly with forest trees. Gradually his operations began to attract attention, and he followed by the proprietors and tenantry around, until at last that spirit of improvement burst forth, which has placed the agriculture of this part of the county, and Scotland generally, in the high state of excellence in which we now find it.' This was in 1838, and the improvement that has since taken place is equally well marked. 'The area of cultivated land,' says Mr James Macdonald in his prize report on the agriculture of Forfar and Kincardine in the *Transactions of the Highland and Agricultural Society* for 1881, 'about the commencement of the century is stated at 74,377 acres, and that under actual tillage at 45,736, it being estimated that other 28,000 acres were capable of being cultivated. In the better parts of the county, in the Howe of the Mearns, and in the parishes of St Cyrus and Benholm, wheat had been grown as far back as tradition and record stretched; while by 1807, barley, oats, peas, beans, potatoes, and turnips, and sown grasses, were cultivated with success all over the country. The practice of leaving land in fallow is said to have been introduced into the county by Mr Barclay of Urie in 1761. It spread gradually over the county, and in 1807 the fallow break was estimated at 2619 acres. . . . It is stated that potatoes were first planted in Kincardineshire in 1727 by an old soldier, who had brought some tubers with him from Ireland to the village of Marykirk, where he resided for only one year. He raised a good crop, and it is recorded that while the villagers were ready enough to steal the strange plant, "none of them had the ingenuity to cultivate it after he was gone." They looked in vain to the stems for the seed. Potatoes were again introduced into the Mearns in 1760, while in 1754 turnips were introduced by Mr R. Scott of Dunninald, and grown by him on the farm of Milton of Mathers, St Cyrus. In 1764, Mr William Lyall, farmer in Watticston, Fordoun, raised about an acre

of turnips, and it is stated that the crop was considered so rare that it was sold in small quantities, at one penny per stone, for kitchen vegetables. This crop was cultivated on only a very few farms till 1775, but by the beginning of the present century it was grown all over the county. Sown grasses were not in general use till about 1770; but it is stated that, as early as 1730, Sir William Nicolson of Glenbervie, "a spirited cultivator at an early period," raised hay from sown seeds, "not, however, from the seeds of any of the species of clover now in use, but from such seeds as were found among the natural meadow hay." The number of cattle in 1807 was 24,825, and it is stated that a four-year old Mearns ox weighed about 45 stoues. The best cattle are described as black or brown, or brindled, with spreading horns. There were also some very good polled cattle similar to, and no doubt of the same breed as, the Buchan "Humlies," the progenitors, along with the Angus Doddies, of the improved polled Aberdeen and Angus breed. The sheep stock numbered 24,957, and consisted mainly of blackfaced sheep and the ancient dun faces. Along the coast there were a few Bakewell Leicesters, and also some Southdowns. At the commencement of the century the farm implements were somewhat primitive. The ancient Scotch plough was fast giving way to Small's improved ploughs, which cost about £4 each, and which by 1807 was almost the only sort of plough used in the county. Harrows, with five wooden bills and five iron teeth in each, were coming into use, as also were single carts. During the first ten years of the century about a score of threshing-mills were erected in the county at a cost of from £140 to £180 each. Among the noted early improvers, Mr Barclay is mentioned as having been the most prominent. Between 1760 and 1790 he reclaimed over 900, and planted 1000 acres, raising the rental of his estate of Ury from £200 to £1800 in less than fifty years. Early in the century great improvement was effected in houses, roads, and fences.

'Coming to speak of more recent times, the spirit of improvement aroused in the last century has never been allowed to lie dormant. True, during the last twenty-five years a smaller extent of land has been reclaimed than during either of the last twenty-five years of the 18th century or the first twenty-five of the present; but that has not been due to any flagging in the spirit of improvement, but simply to the fact that only a limited area of suitable land remained for the proprietors and tenants of the past twenty-five years to bring under cultivation. There has been less done simply because there has been less to do.'

The acreage under the various crops at different dates is given in the following tables:—

GRAIN CROPS.—ACRES.

Year.	Wheat.	Barley or Bere.	Oats.	Total.
1854	2327	8,490	29,451	40,268
1870	1130	11,032	32,187	44,349
1877	546	13,072	30,607	44,225
1882	598	12,006	31,688	44,292
1895	228	10,863	30,927	42,023

GRASS, ROOT CROPS, ETC.—ACRES.

Year.	Hay, Grass, and Permanent Pasture.	Turnips.	Potatoes.
1854	49,990	16,087	2645
1870	41,288	19,214	3135
1877	52,551	18,989	2729
1882	53,223	18,133	3410
1895	57,139	17,934	2661

There are about 1000 acres annually under beans, rye, vetches, fallow, etc. Between 1882 and 1895 the permanent pasture included above increased from 6983 to 8611. Harvest in the earlier districts commences between 10 and 31 Aug., and in the later districts be-

tween 1 and 16 Sept. The large farms are worked mostly on the seven-shift rotation, most of the others on the six-shift. The average yield of wheat per acre is from 28 to 30 bushels; barley, from 36 to 40 bushels; oats, from 36 to 46 bushels; hay, 1½ ton; turnips, from 14 to 30 tons; and potatoes, 5 tons; but the last is very variable. The decrease in the area under wheat is due partly to a decrease in the price of wheat, and partly to a slight falling off in the yield per acre, which make its growing still less remunerative. The latter is due to the chemical falling off in the soil.

The agricultural live stock in the county at different dates is shown in the following table:—

Year.	Cattle.	Horses.	Sheep.	Pigs.	Total.
1854	25,409	3984	35,195	3395	67,983
1870	27,158	4305	32,101	2617	66,181
1876	28,504	4748	32,176	2523	67,951
1882	24,162	4737	24,434	2740	56,073
1895	26,133	5433	37,535	2680	71,781

Owing to the time when cattle are sold for the meat market, the actual number of cattle reared is more than is given in the table. Breeding of cattle is now mostly confined to polled animals. Kincardineshire, in the earlier years of the 19th century, figured prominently in the breeding of shorthorns, the herd being that of Captain Barclay of Ury, founded 1829, and from which a large number of the shorthorns in the north of Scotland are descended. The horses are principally Clydesdales, but there are no celebrated breeders. Sheep-farming is carried on in the upper districts, and the heather of Glen Dye is supposed to be particularly tender and sweet. The sheep are of the blackfaced breed. The holdings in this county, as elsewhere, are principally of 50 acres or less, although there are many of more than 300 acres. Rents vary from 15s. to £3, 10s. per acre, according to the quality of the soil. The largest landowner in the county is Sir John R. Gladstone of Fasque. The chief estates, most of which are separately noticed, are Altries, Arbuthnot, Badentoy, Ballogie, Balmaiu, Balmakewan, Banchory, Benholm, Blackhall, Brotherton, The Buru, Cowie, Coul, Drumlithie, Drumtochty, Dunnottar, Ecclesgreig, Fasque, Fawside, Fettercairn, Fetteresso, Gilliebrands, Glenbervie, Hallgreen, Haulkerton, Inchmarlow, Inglismaldie, Johnston, Kingeausie, Kirktonhill, Lauriston, Leys, Luthermuir, Morphie, Muehalls, Netherley, Pitarrow, Pitcarrie, Portlethen, Raemohr, Rickarton, Strachan, Thornton, and Ury. The manufactures of Kincardineshire are practically *nil*, as a weaving trade once carried on in the smaller villages is now practically extinct. There are small manufactories of woollen and linen cloth at one or two places, several tanneries, breweries, and distilleries, and some net and rope works. The herring, haddock, halibut, turbot, cod, and ling fisheries round the coast are of great importance, and afford employment to the inhabitants of the coast towns and villages. The chief of these are Stonehaven, Gourdon, and Johnshaven. There are also good salmon fishings along the coast and in the Dee and Esk, while there are some excellent grouse moors.

Roads, etc.—The county is traversed by three railways—viz., the Caledonian, which, entering on the SW side at Marykirk, passes along the Howe of the Mearns to Stonehaven, and then along the coast to Aberdeen, a distance of 34 miles. The Montrose and Bervie section of the North British railway enters the county near Kinnaber, about 1 mile from the mouth of the North Esk, and passes along the coast to Bervie, a distance of 11 miles. The Deeside branch of the Great North of Scotland railway, starting from Aberdeen, passes along the Aberdeenshire bank of the Dee till about 1 mile to the E of Crathes station, where it enters Kincardineshire, and passes through it as far as Glassel station, where it returns to Aberdeenshire, the distance being about 7½ miles. The roads throughout the county are numerous and excellent. There are four main lines with connecting links. The first passes along the coast from

Montrose, by Bervie and Stonehaven, to Aberdeen. The second, starting from Brechin, enters the county between Inglismaldie and Balmakewan, and passing along the Howe by Laurencekirk, joins the first road at Stonehaven. The third, leaving the upper part of Forfarshire at Ganochy near Edzell, passes by Fettercairn, Fordoun, and Fetteresso, also to Stonehaven. The fourth main line follows the right-hand bank of the Dee from Aberdeen as far as Wester Sluie, about 5 miles above Banchory, where it passes into Aberdeenshire. This road is connected with the first by a road starting from Maryculter House and leading to Stonehaven, and by another road which, starting between Durris and Banchory, winds across by Cairnmorean also to Stonehaven. A third road, starting from Banchory, crosses by Cairn-o'-Mount to Fettercairn.

The only royal burgh in the county is Bervie. The old county town was Kincardine, but it is now gone, and the county town is Stonehaven, which is a burgh of barony, and the only town of over 3000 inhabitants. Laurencekirk and Fettercairn are also burghs of barony; and Banchory, Laurencekirk, and Stonehaven are police burghs. Banchory, Bervie, Gourdon, Laurencekirk, and Johnshaven have over 1000 inhabitants. The principal villages are, along the coast and in the coast district, Caterline, Cove, Crawton, Downie, Findon, Gourdon, Lochside, Portlethen, Roadside, Skateraw, St Cyrus, Tangleha, and Torry; in the Howe district—Auchinblae, Drumlithie, Fettercairn, Fetteresso, Inch, Luthermuir, and Marykirk; and on Deeside—Banchory. The principal seats, besides those on the estates already noticed, are Auchlunies, Berryhill, Bridgeton, Crathes Castle, Durris House, Elsick, Forcett Hall, Glendye Lodge, Hatton House, Kirkside, Maryculter, Monboddo, Ravelstone, Redhall, and Tillwhilly.

The civil county consists of the nineteen *quoad civilia* parishes of Arbutnott, Banchory-Devenick, Banchory-Ternan, Benholm, Bervie, Dunnottar, Durris, Fettercairn, Fetteresso, Fordoun, Garcock, Glenbervie, Kinneff, Laurencekirk, Maryculter, Marykirk, Nigg, St Cyrus, and Strachan. The *quoad sacra* parishes of Cookney, Portlethen, and Rickarton are also included. The majority of these are ecclesiastically in the presbyteries of Fordoun and Brechin in the synod of Angus and Mearns, and the others in the presbyteries of Aberdeen and Kincardine O'Neil in the synod of Aberdeen. There are Established churches within all these parishes; and the county also contains 15 places of worship in connection with the Free Church, 4 in connection with the United Presbyterian Church, 1 Congregational Church, 13 in connection with the Scottish Episcopal Church, and 1 in connection with the Roman Catholic Church. On Deeside, near the NE corner of the county, is also the Roman Catholic College of Blairs (St Mary). In the year ending Sept. 1894 there were 58 schools (51 public), which, with accommodation for 8557 children, had 6918 on the rolls, and an average attendance of 5843. Their staff consisted of 105 certificated, 16 assistant, and 28 pupil teachers. Kincardineshire, with a constituency of 6008 in 1895-96, returns one member to parliament. It is governed by a lord-lieutenant, a vice-lieutenant, 30 deputy-lieutenants, and 90 justices of the peace. The County Council consists of 21 members—20 of these being representatives for as many electoral divisions, and 1 for the royal burgh of Bervie. The divisions are grouped into 5 districts, of which the Lower Deeside and the Laurencekirk districts return 4 representatives each, the Upper Deeside and the St Cyrus districts 3 each, and the Stonehaven district 6. The Council is divided into the following committees:—Finance Committee, County Valuation Committee, Executive Committee, Declaration Committee, Weights and Measures Committee, Standing Joint Committee, County Road Board, District Lunacy Board, Prison Visiting Committee, and Public Health Committee. The county forms a division of the sheriffdom of Aberdeen, Kincardine, and Banff, but there is no resident sheriff-substitute, the business being carried on from Aberdeen. Ordinary courts are held at Stonehaven every Wednes-

day throughout the session. Sheriff small debt courts are also held at Stonehaven every Wednesday during the session, and circuit courts are held at Banchory on the first Saturdays of January and May, and at Laurencekirk on the second Saturdays of January and May, and at each of these places on a previously intimated day in September. Justice of peace courts are held at Stonehaven on the first Saturday of every month. There are police stations at Stonehaven, Auchinblae, Banchory, Bervie, Bridge of Dee, Drumlithie, Durris, Fettercairn, Gourdon, Johnshaven, Kirkhill, Laurencekirk, Marykirk, Portlethen, and St Cyrus; and there is a force of 20 men (one to each 1635 of the population) under a chief constable, with a salary of £220 a year. The number of registered poor at 26 Sept. 1894 was 433; of dependants on these, 212. The receipts were £7598, and the expenditure £7339. The parishes of Arbutnott, Banchory-Devenick, Banchory-Ternan, Benholm, Bervie, Dunnottar, Durris, Fettercairn, Fetteresso, Fordoun, Glenbervie, Kinneff, Laurencekirk, Maryculter, Marykirk, and Strachan form Kincardineshire Poor Law Combination, with a poorhouse near Stonehaven. The proportion of illegitimate births averages about 12 per cent. The death rate averages over 15 per thousand. There are coastguard stations or detachments at Johnshaven, Gourdon, Caterline, and Muchalls; batteries of artillery volunteers at Johnshaven and Bervie; and the headquarters of the 5th (Deeside Highland) V.B. Gordon Highlanders are at Banchory. Valuation (1674) £6244, (1804) £63,748, (1856) £158,761, (1866) £194,336, (1876) £223,724, (1883) £233,522, (1895) £216,205, all inclusive of the burgh of Bervie, but exclusive of railways, which in 1866 were valued at £24,305, in 1883 at £26,541, and in 1895 at £25,060; total in 1895, £241,265. Pop. of registration county (1871) 35,097, (1881) 35,465, (1891) 37,024; of civil county (1801) 26,349, (1811) 27,439, (1821) 29,118, (1831) 31,431, (1841) 33,075, (1851) 34,598, (1861) 34,466, (1871) 34,630, (1881) 34,464, (1891) 35,492, of whom 17,524 were males and 17,968 females. In 1891 the number of persons to each square mile was 93, the number of families 7790, the number of houses 7959, and the number of rooms 28,492.

The territory now forming Kincardineshire belonged to the ancient Caledonian Vernicomes, was included in the so-called Roman province of Vespasiana, and afterwards formed part of Southern Pictavia. Mention is made of various sheriffs from 1163 onwards, but none of them held office for more than a few years, except Philip de Maleville of Mondynes, who held the post from 1222 to 1240. The sheriffship became in 1348 hereditary in the Keith-Marischal family, in which it remained till the time of William, Lord Keith (1621-35). There are few distinctive features in the history of the district. Malcolm I., king of Alban, fell, according to the *Ulster Annals*, at Fetteresso in 954; and there is in that parish a tumulus known as Malcolm's Mount. It was opened in 1822 by some workmen digging materials for road repair, and found to contain a stone coffin formed of whinstone slabs 7 feet by 4. The bottom was covered with pebbles and a number of small black balls, probably acorns. The bones in it were those of a man of middle size, and when the body had been interred it had been wrapped in a robe of fine network. Some beautiful auburn hair still remained. Kenneth II. was killed near Fettercairn, and Duncan II. at Mondynes. The historical incidents are noticed under the localities KINCARDINE, FENELLA, DUNNOTTAR, KINNEFF, etc., with which they are more immediately connected. The name Mearns is supposed to be derived from Mernia, a brother of Kenneth II., who was mormaer of the district. 'Men o' the Mearns' has been for long the particular name of natives of the district, and is often associated with the ideas of skill and strength; hence the proverb—'I can dae fat I dow: the men o' the Mearns can dae nae mair.' There are two large cairns on the top of Garcock Hill; stone circles at Durris and Aquhorities; Roman remains and a disputed camp at Raedykes; and ruins of old castles at Strathfenella, Kaim of

Mathers, KINOARDINE, BALEGNO, DUNNOTAR, Green-castle, KINNEFF, MORPHIE, Whistleberry, and COWIE, and there are the ruins of a very old church at Cowie. The Sheriff's Kettle is noticed under GARVOCK.

See Anderson's *Black Book of Kincardineshire* (Stonehaven, 1843; 2d ed. 1879); Jervise's *Memorials of Angus and Mearns* (Edinb. 1861); his *Land of the Lindsays* (Edinb. 1843; new ed. 1882); and James Macdonald's 'Agriculture of the Counties of Forfar and Kincardine' in *Trans. Highl. and Ag. Soc.* for 1881.

Kinclaven (Gael. *ceann-clamhain*, 'the kite's headland'), a Tayside parish in the district of Stormont, Perthshire, containing Airtully village, 2½ miles S of Murthly station on the Highland railway, and 2¾ NNW of the junction and post-town of Stanley. It is bounded N and NE by Caputh, SE by Cargill, S by Redgorton, SW and W by Auchtergaven, and NW by Little Dunkeld. Its utmost length, from E by N to W by S, is 4¾ miles; its utmost breadth is 4 miles; and its area is 6345½ acres, of which 209½ are water. The Tay curves 8¾ miles east-north-eastward, south-south-eastward, and south-south-westward along all the Caputh and Cargill boundary, and here exhibits an impetuosity and a destructiveness that do not in general characterise its course. Though embankments were early thrown up along its banks, it has at various periods cut them down, and invaded the fertile cornfields which they were meant to protect. Three or four denudated tracts, and several islets in its present channel, are tokens of its desolating power. Just below Taymount House, it forms a picturesque fall, the Linn of CAMPSIE; and everywhere its salmon fishing is magnificent. Towards the centre of the parish lies King's Myre (2¾ × 1 furl.), the largest of seven small lakes; and out of it a streamlet, with force enough to drive machinery, runs east-by-southward to the Tay. The surface declines along the Tay to 100 feet above sea-level, and rises gently thence to 313 feet near Middleton, 370 at North Airtully, 282 at Garth, and 269 at Court Hill. The rocks are mainly Devonian; and the soil is variously alluvial, elayish, and sandy. Eight-thirteenths of the entire area are in tillage; nearly 1500 acres are under wood; and the rest is either pastoral or waste. The ruined royal castle of Kinclaven, on an eminence fronting the Islay's influx to the Tay, is said to have been founded by Malcolm Ceanmor, and figures in Blind Harry's metrical chronicle as having been won from the English by Wallace. For centuries it was a favourite residence of the kings of Scotland, and its ruins show it to have been a place of great size and strength. Thomas Duncan, A.R.A. (1807-45), was a native. Mansions are TAYMOUNT and Ballathie. Giving off a portion since 1877 to Stanley *quoad sacra* parish, Kinclaven is in the presbytery of Dunkeld and synod of Perth and Stirling; the living is worth £295. The parish church, near the Tay's right bank, 5 miles NNE of Stanley, is an old building, which was altered and improved internally in 1894. A U.P. church, 2¾ miles N of Stanley, represents one of the oldest congregations of the Secession body. The public school, with accommodation for 67 children, has an average attendance of about 45, and a grant of nearly £54. Valuation (1883) £7710, (1892) £6915. Pop. (1881) 588, (1891) 613.—*Ord. Sur.*, sh. 48, 1868.

Kincorth, an estate with an old-fashioned mauer house, in Dyke and Moy parish, Elginshire, near the Culbin Sands and the left bank of the Muckle Burn, 4½ miles NW of Forres. Purchased about 1801, it is the property of the Grant family.—*Ord. Sur.*, sh. 94, 1873.

Kincraig, a hamlet in Alvie parish, SE Invernesshire, near the left bank of the Spey, with a station on the Highland railway (5¾ miles NE of Kingussie), a post and telegraph office under Kingussie, and Alvie Free church. A new timber bridge, with stone piers and abutments, was erected here over the Spey in 1896-97. Between Kingussie and Kincraig the railway runs for 3 miles along an embankment 10 feet high that lies in an extensive meadow elevated only 2 or 3 feet above the level of the Spey, and periodically flooded. In 1893 the embankment was raised a foot or

two for the distance of a mile and a half, and two huge additional culverts were placed in it with the object of allowing a freer passage for the water, and so relieving the pressure on the embankment.—*Ord. Sur.*, sh. 74, 1877.

Kincraig, an estate with a mansion, in Rosskeen parish, Ross-shire, 1½ mile NNW of Invergordon.—*Ord. Sur.*, sh. 94, 1878.

Kineraigie, a village in Little Dunkeld parish, Perthshire, near the right bank of the river Tay, 1¼ mile N by W of Dalguise station on the Highland railway.

Kincraig Point, a headland on the SW border of Elie parish, Fife. Flanking the E side of the entrance of Largo Bay, and rising to a height of 200 feet, it presents a bold front to the Firth of Forth, and intercepts the roll of heavy seas in high easterly winds. Its rocks comprise basalt, greenstone, clinkstone, amygdaloid, trap-tuff, greywacke, claystone, and porphyry, in such juxtapositions, with such characters, and partly so reticulated by innumerable veins of calcareous spar, as to present an interesting study to geologists; and on the seaward skirt it is pierced with several caves, one of which is alleged to have been the retreat of Macduff when hiding from Macbeth.—*Ord. Sur.*, sh. 41, 1857.

Kindallachan, a village in Dunkeld and Dowally parish, Perthshire, near the left bank of the Tay, 1¼ mile SSE of Ballinluig Junction station on the Highland railway.

Kindeace House, a mansion in Kilmuir-Easter parish, Ross and Cromarty shire, 4½ miles NNE of Invergordon.

Kinder, Loch, a lake in Newabbey parish, SE Kirkcudbrightshire, at the NE base of CRIFFEL (1867 feet), 1 mile S of Newabbey village. Lying 100 feet above sea-level, it has an utmost length and breadth of 6½ and 2¼ furlongs; sends off Drum Burn 1¾ mile south-eastward to the Solway Firth; abounds in fine trout, of nearly ½ lb. weight; and contains 2 islets, the smaller an artificial cranogge or pile-built lake-dwelling, the larger the site of the ancient parish church. The estate around it was called from it Lochkinder, and gave either that name or the similar one of Lochindoloch to the parish now called Newabbey.—*Ord. Sur.*, shs. 5, 6, 1857-63.

Kindrogan, an estate, with a mansion in Moulin parish, NE Perthshire, at the head of Strath Ardlie, 10 miles ENE of Pitlochry.—*Ord. Sur.*, sh. 56, 1870.

Kinearny, an ancient parish in Kineardine O'Neil district, Aberdeenshire, in 1743 divided between the parishes of Cluny and Midmar. In 1891, again, the Midmar portion was transferred to Cluny parish.

Kineddar. See KING EDWARD.

Kinedder, an estate, with a mansion, in Saline parish, Fife, 5½ miles WNW of Dunfermline.—*Ord. Sur.*, sh. 40, 1867.

Kinellar Loch, a pretty lake (2¾ × ¾ furl.; 480 feet) in Contin parish, SE Ross and Cromarty shire, 1 mile SW of Strathpeffer. It contains an artificial cranogge or lake-dwelling said to have been a stronghold of the Seaforth family; and is flanked on one side with fine arable fields, on the other with wild uplands. Near it is a remarkable echo, repeating distinctly an entire sentence.—*Ord. Sur.*, sh. 83, 1881.

Kinellar, a parish of SE Aberdeenshire, containing, at its NE corner, Kinaldie station on the Great North of Scotland railway, 2¾ miles ESE of Kintore Junction, and 10½ NW of Aberdeen. At Kinaldie there is a post, money order, and telegraph office, under which, 1¾ mile to the S, there is the post office of BLACKBURN. It is bounded N by Fintray, E by Dyce and Newhills, SE and SW by Skene, and NW by Kintore. Its utmost length, from N to S, is 4¾ miles; its breadth, from E to W, varies between 1 and 2¾ miles; and its area is 4227½ acres, of which 10½ are water. The Don winds 2 miles east-by-northward along all the northern boundary; and, in the NE, where it quits the parish, the surface declines to 135 feet above sea-level, thence rising south-south-westward to 500 feet near Woodhill Cottage, and 610 at the Drum Stone. Granite is the predominant rock; and the soil is alluvial along the Don, loamy or gravelly on the lower knolls and hill slopes, but generally of fair fertility. A heathy common, partly broken up in 1840, is on the

NW border; a patch or two of rocky moor occurs in other parts; and, with the exception of a small proportion of planted ground, all the rest of the land is regularly or occasionally in tillage. Antiquities are numerous, tumuli on the north-western common, remnants of an ancient Caledonian stone circle in the churchyard, the 'Assembly Cairn' of Auchronie, and the 'Drum Stone' on Upper Auquhorsk farm, on which 'the much renowned laird of Drum' is said to have sat and made his testament on his way to the battle of Harlaw (1411). Mansions are Tertowie, Kinellar Lodge, Kinaldie, and Glasgowgo. Kinellar is in the presbytery and synod of Aberdeen; the living is worth £180. The parish church, $\frac{1}{2}$ mile SSW of Kinaldie station, was built in 1801. There is also a Free church. The public school, with accommodation for 99 children, has an average attendance of about 75, and a grant of over £60. Pop. (1801) 309, (1831) 449, (1861) 691, (1871) 601, (1881) 580, (1891) 580.—*Ord. Sur.*, shs. 77, 76, 1873-74.

Kinethmont. See KENNETHMONT.

Kinfauns (Gael. *ceann-fan*, 'head of the slope'), a parish of SE Perthshire, containing Kinfauns and Glencarse stations on the Perth and Dundee section of the Caledonian, $3\frac{1}{2}$ and 6 miles E by S of Perth. It is bounded N by Kinnoull and Kilspondie, E by Errol, SE by St Madoes, S by the Tay, dividing it from Rhynd and Perth parishes, and W by the Tay and Kinnoull. Its utmost length, from E to W, is $4\frac{1}{2}$ miles; and its breadth, from N to S, varies between 1 and 2 miles. The Boundary Commissioners in 1891 transferred to this parish from Kinnoull so much of its Inehyra detached part as lay to the W of the west march of Inehyra, but gave to Kinnoull so much of the parish of Kinfauns as lay to the N of the old Perth and Dundee road and to the W of the Balthayock detached part of Kinnoull. The navigable TAY, curving $3\frac{1}{2}$ miles east-by-southward along the southern border, here broadens to 3 furlongs, and has neap tides of 6, spring tides of 9 to $10\frac{1}{2}$ feet. It receives three streamlets from the interior, and is fringed by a belt of level ground, which, narrow in the W, widens eastward into the Carse of Gowrie. Beyond, the surface rises northward to the Sidlaws, attaining 729 feet at *KINNOULL Hill, 555 at tower-crowned Kinfauns Hill, 342 at *Pans Hill, 596 at Glencarse Hill, and 715 near Pitlowrie, where the asterisks indicate summits that fall just beyond the western and south-easterly confines of the parish. Old Red sandstone predominates in the low tracts, trap rock in the hills; and the latter has been largely quarried both for building and for road metal. The soil of the flat grounds along the Tay is a strong and very fertile clay; on the lower hill-slopes is an easy, deep, rich, black mould; and in the level parts of the eastern district, inland from the Carse, is black mould, mixed in some places with clay, in others with sand. Nearly one-half of the entire area is in tillage; about 215 acres are pasture; and most of the rest of the land is under wood. The lands of Kinfauns are said to have been given, early in the 14th century, by Robert the Bruce to a compatriot of Wallace, the French 'Red Rover,' Thomas de Longueville or Chartres, whose two-handed broadsword, $5\frac{1}{2}$ feet long, is still shown in the modern castle. Several of his descendants were provosts of Perth; and one of them, Sir Patrick Charteris, figures as such in Scott's *Fair Maid of Perth*. From them Kinfauns passed to the Carnegies, and from them again to the Blairs, whose heiress, Margaret, married the 12th Baron Gray in 1741. Their great-granddaughter, the eighteenth Baroness Gray, dying without issue in 1878, the entailed estates of Gray and Kinfauns went to Edmund Archibald Stuart, Esq. (b. 1840), who succeeded his kinsman as fourteenth Earl of Moray in 1895. The castle, 3 miles E by S of Perth, and $1\frac{1}{2}$ WNW of Kinfauns station, is a Gothic pile, erected in 1822 from designs by Sir Robert Smirke on the site of its ancient predecessor. Measuring 233 by 160 feet, it has a central tower 84 feet high, and is entered by a noble eastern portico. The interior contains a valuable library, and is richly adorned with stained glass, statues, paintings by the old masters, and

family portraits by Raeburn, Sir Francis Grant, etc. The grounds are finely wooded, a Spanish chestnut in particular being 75 feet in height and 17 in girth at 1 foot from the ground. (See GRAY HOUSE, and pp. 26-34 of Fullarton's *Perthshire Illustrated*, 1844.) Other mansions, noticed separately, are GLENCARSE, GLENDOCK, and SEGGIEDEN. Kinfauns is in the presbytery of Perth and synod of Perth and Stirling; the living is worth £334. The parish church is a new structure of 1870, containing 300 sittings and an organ (1882). There is also a Free church; and Kinfauns public school, with accommodation for 63 children, has an average attendance of about 40, and a grant of nearly £30. Valuation (1883) £9355, 1s. 3d., (1893) £8300, 12s. 2d. Pop. (1801) 646, (1821) 802, (1861) 657, (1871) 578, (1881) 583, (1891) 562.—*Ord. Sur.*, sh. 48, 1868.

Kingairloch, a hamlet in Kilmallie parish, Argyllshire, at the head of Loch Corry (a western offshoot of Loch Linnhe), 16 miles SW of Ardgour, and 26 SW of Fort William. It has a post office, an inn, a public school, and an Established church. From J. A. Forbes, Esq., the estates of Kingairloch and North Corry were purchased in 1881 for £30,140 by John Bell Sheriff, Esq. of CARRONVALE (b. 1821), who is also proprietor of the neighbouring estate of Glensanda. The mansion, Kingairloch House, is beautifully situated at the head of Loch Corry, one of the best yachting stations in the West Highlands.

Kingarth, a parish of Bute island, Buteshire, whose church stands $6\frac{1}{2}$ miles S of Rothesay, under which there is a post office of Kingarth. Containing also the villages of Kilchattan Bay, Ascog, and Kerryeroy, and comprising the southern part of Bute island, it is bounded NW by Rothesay parish, and on all other sides by the Firth of Clyde. Its utmost length, from N to S, is $7\frac{1}{2}$ miles; its utmost breadth is $3\frac{1}{2}$ miles; and its land area is 8995 acres. Its outline is indented by several small bays, especially on the W side; and, contracting southward to $9\frac{1}{2}$ furlongs at the low sandy isthmus of the vale of St Blane, it thence projects a peninsula $2\frac{1}{2}$ miles long, and terminating in the promontory of Garroch Head. The coast is mostly bold and rocky; the interior is variously hilly, undulating, and low—its highest elevations from S to N being Torr Mor or Blane's Hill (485 feet), Suidhe-Chatain (517), and the Mound (367). The scenery of the Vale of St Blane, and in portions of the seaboard, is very beautiful. Principal features are noticed in our articles on Bute, Ascog, Fad, Kilchattan, Garroch Head, Dunagoil, Mount Stuart, and Blane's Chapel (St). The soil of the arable lands is light and sandy, but fertile. About four-elevenths of the entire area are moor or pasture, some 950 acres are under wood, and nearly all the rest of the parish is in tillage. The Marquis of Bute is almost sole proprietor. Kingarth is in the presbytery of Duuoon and synod of Argyll; the living is worth £226. The parish church was built in 1826. There are also two Free churches, designated Kingarth and South Kingarth; and three public schools—Brigidale, Kerryeroy, and Kingarth (the latter erected in 1893)—with respective accommodation for 50, 72, and 120 children, have an average attendance of about 45, 15, and 90, and grants of nearly £55, £25, and £88. Valuation (1883) £10,517, (1893) £10,023. Pop. (1801) 875, (1831) 746, (1861) 905, (1871) 901, (1881) 1260, (1891) 1062.—*Ord. Sur.*, shs. 21, 29, 1870-73.

Kingask, an estate, with a mansion, in St Andrews parish, Fife, 3 miles SE of the city.

Kingcausie, an estate, with a mansion, in Maryculter parish, Kincardineshire, near the right bank of the Dee, $1\frac{1}{2}$ mile E by S of Culter station.—*Ord. Sur.*, sh. 77, 1873.

King Edward (pronounced *Kin-edart* or *Kin-eddar*), a parish of NW Aberdeenshire, containing King Edward station on the Macduff branch of the Great North of Scotland railway, $4\frac{1}{2}$ miles SSE of Banff Bridge station, $6\frac{1}{2}$ N by W of Turriff, $24\frac{1}{2}$ N by W of Inveramsay Junction, and $45\frac{1}{2}$ NNW of Aberdeen, with a post and telegraph office under Banff. Containing also NEWBYTH village,

8 miles to the ESE, it is bounded N by Gamrie in Banffshire, E by Aberdour and New Deer, S by Monquhitter and Turriff, W by Forglen and Alvah in Banffshire, and NW by Alvah. Its utmost length, from E to W, is 9 miles; its breadth, from N to S, varies between 2 and 4½ miles; and its area is 17,565 acres, of which 75½ are water. The Montcoffer detached portion of the parish, which was also a detached portion of the county, and comprised 1081 acres, was in 1891 transferred by the Boundary Commissioners to the parish of Alvah, and to the county of Banff. The DEVERON flows 1½ mile northward along the western boundary of the parish, and here is joined by the Burn of King Edward, which, formed by two head-streams near FISHERIE, winds 6½ miles westward through the interior. The surface declines along the Deveron to less than 40 feet above sea-level, thence rising eastward to 328 feet at Wester Keilhill, 443 near Foulzie, 422 at Waller Hill, 701 at the Hill of Overbrae, 563 at the Hill of Tillymauld, and 749 at the Hill of Fisherie. The principal rocks are greywacke, and clay slate in the W, Old Red sandstone in the E; and both the greywacke and the sandstone have been quarried. The soil along the Deveron is chiefly fertile alluvium; of many parts in the central districts, is either a loamy clay or a black loam on a gravelly or rocky bottom; and, in the eastern district, is generally of a mossy nature, very various in quality, and incumbent either on gravel or on clay. Rather more than one-half of the entire area is in tillage; some 1600 acres are under wood; and the rest is mostly pasture, moor, or moss. At 'Kenedor,' in the first half of the 10th century, St Gervadius or Gernadius, a native of Ireland, is falsely said to have built a cell or oratory (it was really at Lossiemouth). William Guild, D.D. (1586-1657), principal of King's College, Aberdeen, was minister for 23 years. The Castle of King Edward, 9 furlongs S of the station, crowned a bold precipitous rock on the N side of the deep ravine of the Burn of King Edward, and, occupied in the 13th century by the Comyns, Earls of Buchan, appears to have been a place of great strength, but now is a shapeless ruin. Mansions, noticed separately, are Byth, Craigston Castle, and Eden. Including almost the whole of Newbyth *quoad sacra* parish, King Edward is in the presbytery of Turriff and synod of Aberdeen; the living is worth £260. The parish church, ½ mile WNW of the station, is an Early English edifice of 1848, and was repaired in 1890. A Congregational chapel at Millseat, 6 miles NE of Turriff, was built in 1831; and 2 public schools, Fisherie and King Edward, with respective accommodation for 60 and 140 children, have an average attendance of about 45 and 80, and grants of nearly £45 and £70. Pop. (1801) 1723, (1831) 1963, (1861) 2843, (1871) 3111, (1881) 3068, (1891) 2714, of whom 1085 were in the ecclesiastical parish.—*Ord. Sur.*, shs. 96, 86, 87, 1876.

Kingennie, a station in Monifieth parish, Forfarshire, on the Dundee and Forfar Direct section of the Caledonian railway, 7 miles NE of Dundee, under which there is a post office. Kingennie estate, around the station, has a trap-rock quarry; and Kingennie chapelry, comprising the estate, belonged to Arbroath Abbey. Its church, having passed to a state of ruin, was erased about 1830.—*Ord. Sur.*, sh. 49, 1865.

Kingerloch. See KINGAIRLOCH.

Kinghorn (Gael. *ceann-gorm*, 'hluie headland'), a coast town and parish of S Fife. A royal, parliamentary, and police burgh, the town has a station on the Kirkcaldy section of the North British, 3 miles S by W of Kirkcaldy, 2½ ENE of Burntisland, and 2½ N by E of Edinburgh via Forth Bridge, whilst by water it is 6½ miles N of Leith. It occupies the face of a sloping ground; and its streets are levelled and well paved. The two principal streets run from east to west and from north to south. The town hall, with accommodation for 150 persons, is a Gothic edifice, built at a cost of £2500 from designs by Hamilton of Edinburgh; and places of worship are the parish church (1774), close to the sea, a Free church, and a U.P. church (1779). The public school, a handsome building of 1829, was en-

larged in 1874. Kinghorn, besides, has a post office, with money order, savings bank, and telegraph departments, a branch bank of the British Linen Co., a gas-work, a hotel, a cemetery, and a public library, instituted in 1826. Its own small harbour has fallen to decay; but that of Pettycur, ¾ mile to the SSW, has a good quay, though the ferry hence to Leith or Newhaven has since 1848 been quite superseded by the Granton and Burntisland railway ferry, itself now all but superseded by the Forth Bridge. Close to Pettycur are kilns which at one time were used in making charcoal. Two flax-spinning mills, a bleachfield, a glue factory, and engineering and shipbuilding yards, employ a large number of hands. The town and the mills are supplied with water from Kinghorn Loch. The Links Park was acquired in 1887 by the town council as a golf-course. Kinghorn or Glamis Tower, on rising ground to the N of the town, was a royal castle from the reign at least of William the Lion (1166-1214), but in the latter half of the 14th century was granted by Robert II. to his son-in-law, Sir John Lyon, whose eighth descendant was created Earl of Kinghorne in 1606—a title exchanged by his grandson in 1677 for that of Earl of Strathmore and Kinghorne. (See GLAMIS CASTLE, Forfarshire.) The plough passes over its site; and the ancient tower of St Leonard's church, converted after the Reformation into a town-house and jail, has likewise been wholly demolished, to make room for the present town hall. The rout of 9000 Norsemen at Kinghorn by Macbeth, 'Thane of Fife,' is a baseless tradition; but with one great historic event the place is forever associated—the death of Alexander III., on 12 March 1286, at the rugged basaltic promontory of Kinghorn Ness, near Pettycur. He was galloping in the dusk along the coast from Inverkeithing to Kinghorn Tower, when, his horse stumbling, he was pitched over the precipice and broke his neck. (See DUNBAR.) A former stone cross commemorating this event, having fallen into decay, was superseded in 1886 by a sculptured Celtic cross with a suitable inscription. Kinghorn was burned by the English after the battle of Pinkie. In Nov. 1831 two 18-ton guns were mounted on a battery at Kinghorn Ness, subsidiary to the fortifications of INCHKEITH. The Witch Hill, to the N of Pettycur, was the scene of the execution in olden times of reputed witches, and now is pierced by a railway tunnel 250 yards long. A royal burgh under a charter of Alexander III., confirmed by James VI. in 1611, Kinghorn is governed by a provost, 2 bailies, and 6 commissioners, and with KIRKCALDY, Burntisland, and Dysart it returns one member to parliament. The parliamentary and the municipal constituency numbered 267 and 318 in 1895, when the annual value of real property amounted to £7428 (£5230 in 1883), whilst the corporation revenue was £847 in 1894-95. Pop. of parliamentary burgh (1841) 1555, (1861) 1426, (1871) 1739, (1881) 1790, (1891) 2036; of royal burgh (1881) 1439, (1891) 1569. Houses (1891) inhabited 447, vacant 56, building 1.

The parish, containing also the hamlet of Pettycur, the Invertil suburb of Kirkcaldy, and the island of Inchkeith, is bounded NW by Auchtertool, N by Abbotshall, E and S by the Firth of Forth, and W by Burntisland and Aberdour. In 1891 the Boundary Commissioners transferred to it the Kilrie detached portion of the parish of Aberdour, comprising 132 acres. Its utmost length, from E to W, is 4½ miles; its breadth, from N to S, varies between ¾ mile and 2½ miles; and its area is now 5728½ acres, of which 351½ are foreshore and 32½ water. The coast, 4 miles in extent, exhibits a pleasing diversity of character, with many features both to attract the geologist and to gratify the lover

Seal of Kinghorn.

959

of the picturesque. A mile to the N of the town is a good-sized cave, whose dark seaward mouth is flanked by two hold projecting rocks. The interior rises abruptly in some places, in others gradually, from the shore; and, presenting beautiful alternations of height and hollow, of cultivated field and narrow vale, continues to ascend till at Glassmount Hill, $2\frac{1}{2}$ miles inland, it attains a summit altitude of 601 feet. Tiel Burn traces the northern boundary to the Firth; deep Kinghorn Loch ($1\frac{1}{2} \times 1\frac{1}{2}$ furl.) lies embosomed among rising-grounds, 5 furlongs WNW of the town; and a medicinal well, on the shore towards Pettycur, was brought into some repute by Dr Patrick Anderson's *Colde Spring of Kinghorne Craig, his admirable and new tried Properties* (1618), but has now for many years fallen into neglect. The rocks are mainly basaltic, but in the W belong to the Calciferous Sandstone series, and to the Carboniferous Limestone in the NE, where limestone and sandstone have been worked. The soil along the shore, and for some way inland, is a deep, dark, fertile loam. A little more than one-twelfth of the entire area is pretty equally divided between woodland and pasture; and all the remainder is under the plough. Seafield Tower, on the coast, $1\frac{1}{2}$ mile NNE of the town, was the seat of the Moutrie family; Pitteadie Castle, $1\frac{3}{4}$ mile NW, was long a stronghold of the Earl of Rosslyn's ancestors, and was inhabited down into the 18th century; and the estate of Grange, $1\frac{1}{2}$ mile N, gave designation to Sir William Kirkcaldy, who was executed at Edinburgh in 1573, and whose family held it from the 15th century or earlier till 1739, since which date it has come to be united to the Raith property. George Sanders (1774-1846), portrait painter, was a native. About a mile eastward of the town is the Kinghorn Combination Poorhouse. The principal mansions are Balmuto, Glassmount, and Kilrie, all noticed separately. Giving off a portion to Inveriel *quoad sacra* parish, Kinghorn is in the presbytery of Kirkcaldy and synod of Fife; the living is worth £257. Two public schools, Kinghorn and Kinghorn Infant, with respective accommodation for 409 and 245 children, have an average attendance of about 260 and 120, and grants of nearly £270 and £95. Valuation (1883) £11,392, 0s. 11d., (1893) £9392, 12s. 4d. Pop. (1801) 2308, (1831) 2579, (1861) 2981, (1871) 3323, (1881) 3650, (1891) 3837, of whom 2764 were in the ecclesiastical parish.—*Ord. Sur.*, sh. 40, 1867.

Kinglass. See GLENKINGLASS.

Kinglassie, a village and a parish in the NE of the West Division of Fife. The village, on Lochty Burn, $2\frac{1}{2}$ miles NNE of Cardenden station, $3\frac{1}{2}$ SSW of Leslie, and 6 NNW of Kirkcaldy, has a post office under Cardenden, the parish church, a Free church, a horticultural and poultry society, an agricultural society (1814), a curling club, and a fair on the Thursday of October before Falkirk Tryst. The inhabitants are principally supported by agriculture. The parish church is partly a building of the 15th century, partly a reconstruction of 1773. In 1892 a transept was added to the church by Alex. Mitchell, Esq., of Redwells. Pop. (1861) 420, (1871) 307, (1881) 351, (1891) 412.

The parish is bounded N by Leslie, E by Markinch, SE by Dysart, S and SW by Auchterderran, and W and NW by Portmoak in Kinross-shire. Its utmost length, from E to W, is $4\frac{3}{8}$ miles; and its breadth varies between 7 furlongs and $3\frac{3}{8}$ miles. There has been an exchange of territory between the parish of Kinglassie and that of Portmoak in Kinross-shire, the Boundary Commissioners in 1891 deciding that all on the south side of the New Cut from where the river enters Fife eastward to the boundary with Leslie parish shall belong to Kinglassie and to Fife, and all on the north side to Portmoak and to Kinross-shire. Part of the Wester Balbeadie detached portion of the parish of Ballingry (that to the south of the New Cut) was at the same time transferred to Kinglassie. The river LEVEN flows along all the northern boundary, a new channel (locally known as the New Cut) having been made for it here between the years 1826 and 1836; the ORE flows $2\frac{3}{8}$ miles across the southern interior; whilst Lochty Burn, after travers-

ing the central part for $2\frac{3}{8}$ miles, continues $2\frac{3}{8}$ along the Dysart border. The Leslie branch of the North British railway passes through its NE corner. The land adjacent to these streams is flat, and declines in the E along Lochty Burn to 165 feet above sea-level. Three ridges, of various heights and various gradients, extend parallel to the course of the streams, and culminate in Redwells Hill (605 feet), whose summit, 5 furlongs N by W of the village, is crowned by a conspicuous square tower, erected in 1812, and rising to the height of 52 feet. The rocks are partly eruptive, partly carboniferous. Coal and limestone were formerly worked, ironstone was discovered about 1850, and sandstone is quarried. The soil is partly a deep clay, partly a light loam, partly a mixture of clay or loam with gravel or with sand and moss. The principal antiquities are a sculptured standing stone on DOCTON farm and the site of a Danish fort on GOATMILK Hill; and about 1830 the Leven's alluvial deposits yielded a Roman sword, a hattle-axe, and several iron spear-heads. Sir William Reid, K.C.B. (1791-1859), was a native; and the Rev. John Currie (1674-1765), author of *Vox Populi Vox Dei*, was minister for sixty years. The Kinglassie estate was sold in 1883 for £22,140 to John M'Nah, Esq., of Glenmavis. INCHDAIRNIE, noticed separately, is the only mansion. Giving off since 1878 a fragment to the *quoad sacra* parish of Thornton, Kinglassie is in the presbytery of Kirkcaldy and synod of Fife; the living is worth £332. Two public schools, Cluie and Kinglassie, with respective accommodation for 70 and 248 children, have an average attendance of about 35 and 130, and grants of nearly £30 and £120. Valuation (1883) £11,828, 14s. 8d., (1893) £9825, 5s. 3d. Pop. (1801) 908, (1831) 958, (1861) 1266, (1871) 1082, (1881) 1292, (1891) 1436, of whom 1282 were in the ecclesiastical parish.—*Ord. Sur.*, sh. 40, 1867.

Kingledoors Burn. See DRUMMELZIER.

Kingoldrum, a village and a parish of W Forfarshire. The village, Kirkton of Kingoldrum, stands 600 feet above sea-level, on Crombie Burn, $4\frac{1}{2}$ miles W by N of its railway station and post-town, Kirriemuir.

The parish is bounded N and NE by Cortachy, E by Kirriemuir, S by Airlie, and W by Lintrathen. Its utmost length, from N to S, is $6\frac{1}{2}$ miles; its breadth varies between $1\frac{1}{2}$ and $3\frac{3}{8}$ miles; and its area is 9636 $\frac{1}{2}$ acres, of which $17\frac{1}{2}$ are water. Prosen Water winds $3\frac{3}{8}$ miles south-south-eastward along the north-eastern border, and its affluents Corogle and Charity Burns traverse the northern district to the Prosen; Melgam Water flows $\frac{1}{2}$ mile along the Lintrathen border on to a point within $1\frac{1}{2}$ mile of its confluence with the Isla; and Crombie Burn, its affluent, winds 6 miles east-south-eastward and west-south-westward through the interior. Along Melgam Water the surface sinks to 480, along Prosen Water to 590 feet above sea-level; and thence it rises to 798 feet at Schurroch Hill, 1164 at the Carrach, 1233 near Wester Pearsie, 2196 at CAT LAW, 1863 at Long Goat, and 1018 at Turf Hill, the three last of these summits falling on or close to the northern boundary. The southern district is undulating or hilly, comprising several parallel ridges extending south-westward, with considerable tracts of level land between; and the northern is mostly occupied with spurs of the Benchninan Grampians, and has an upland pastoral character. The rocks range from various kinds of trap, through metamorphic and Silurian rocks, to Old Red sandstone, and include greenstone, serpentine, clay, porphyry, clay slate, mica slate, greywacke, and a sandstone much used for building. The soil of the arable lands is in places a lightish sand or a cold wet clay, but is mostly a rich black mould. About three-elevenths of the entire area are in tillage, one-eighth is under wood, and all the rest of the land is either pastoral or waste. The antiquities are a large cairn on the summit of Cat Law, three ancient Caledonian stone circles on Schurroch Hill, and BALFOUR Castle. PEARSIE is the only mansion. Kingoldrum is in the presbytery of Meigle and synod of Angus and Mearns; the living is worth £175. The parish church was erected in 1840;

and the public school, with accommodation for 90 children, has an average attendance of about 50, and a grant of over £52. Valuation (1883) £6828, 14s. 5d., (1893) £5249, 16s. Pop. (1801) 577, (1831) 444, (1861) 473, (1871) 409, (1881) 389, (1891) 368.—*Ord. Sur.*, sh. 56, 1870.

Kingoodie, a village in Longforan parish, SE Perthshire, on the northern shore of the Firth of Tay, 5 miles W by S of Dundee. It originated in the working of a neighbouring sandstone quarry; and it has a small harbour, formed for the exportation of the stone and for the importation of coals, but accessible, even at spring tides, only by vessels drawing less than 10 feet water. The stone of the quarry, with a bluish colour, a fine grain, and a very compact texture, is a singularly good building material, and is susceptible of the finest polish. Used for building Castle Huntly in 1452, it has ever since been more or less in request for edifices, for docks, and for piers.—*Ord. Sur.*, sh. 48, 1868.

Kingsbarns, a village and a coast parish in the East Neuk of Fife. The village, standing 5 furlongs inland, is 3 miles NNW of Crail, and 7 ESE of St Andrews; it has a railway sub-post, money order, and telegraph office, and a station on the Anstruther and St Andrews section of the North British railway, about a mile to the westward. A royal castle by the seashore was rather an appurtenance of Falkland Palace than itself a royal residence, and appears to have been a fortified edifice of no great extent, containing the barns or granaries of the royal household. Hence it took the name of Kingsbarns, and gave that name to a tract of land around it, which tract, together with some contiguous lands, belonged to Crail parish till 1631, but then was constituted a separate parish. Pop. (1891) 348.

The parish is bounded N by St Andrews, NE by the German Ocean, S by Crail, and W by Crail and St Leonards. Its utmost length, from NE to SW, is 3 miles; its utmost breadth, 2½ miles. It had a detached part, consisting of the farms of Grassmiston and Randerston, which was separated from the main portion of the parish by a strip of the parish of Crail; also a very nearly detached part, consisting of the farm of Lochton. The Boundary Commissioners in 1891, by annexing to Kingsbarns the intervening portion of Crail parish, united the Randerston part of the detached portion with the main body, and in return transferred the farms of Grassmiston and Lochton to Crail. The coast, 3½ miles in extent, is low and rocky, with no very marked projection, and, suffering tremendous buffeting by the sea in easterly gales, has for many years been undergoing perceptible denudation. The interior rises gently south-westward from the shore, till, on the western border, it attains a maximum height of 300 feet above sea-level. The rocks belong chiefly to the Carboniferous formation, and consist mainly of sandstone and limestone. Coal appears to have been once worked; limestone has been calcined at the shore of the Cambo estate; and some ironstone is found among the rocks on the coast. The soil, in the lower district, is partly light and sandy but fertile, partly a deep black loam, tending in places to clay; in the upper district is partly strong and heavy, partly a thin clay and moorish, lying generally on a wet bottom. With the exception of some 160 acres of wood, almost all the area is in tillage. The chief residences are Cambo and Pitmilny, both noticed separately. Kingsbarns is in the presbytery of St Andrews and synod of Fife; the living is worth £334. The church, at the village, was built in 1631 and enlarged in 1811. The public school, with accommodation for 216 children, has an average attendance of about 130, and a grant of over £130. Valuation (1873) £10,590, (1883) £8919, (1893) £6938. Pop. (1801) 832, (1831) 1023, (1861) 937, (1871) 922, (1881) 795, (1891) 731.—*Ord. Sur.*, shs. 41, 49, 1857-65.

Kingsburgh, a seat in the Isle of Skye, 6 miles S of Uig village. Prince Charles Edward found a retreat here after the fatal battle of Culloden.

King's Castle. See KIRKWALL.

King's Canseway, so called because James V. travelled along it barefooted on a pilgrimage to St Dunstons sanc-

tuary, is a rough footpath across a moor in Tain parish, in the county of Ross and Cromarty.

Kingscavil, a village, with an Established church (1885—iron), and a sandstone quarry, in Linlithgow parish, Linlithgowshire, 2 miles E by S of the town of Linlithgow, under which it has a post office.

King's College. See ABERDEEN.

Kingsdale, an estate, with a modern mansion, in Kennoway parish, Fife, 1 mile N by W of Cameron Bridge station.—*Ord. Sur.*, sh. 40, 1867.

Kingseat, a collier village in Dunfermline parish, Fife, 1¼ mile N of Halbeath railway station, and 3 miles NE of the town of Dunfermline, under which it has a post office.—*Ord. Sur.*, sh. 40, 1867.

King's Forest. See KELLS.

King's Holm. See KELLS.

King's House, an inn at the N border of Glenorchy parish, Argyllshire, on the left bank of the Etive, and on the road from Loch Lomond to Fort William, 17 miles E by S of Ballaculish pier and 17¼ NNW of Tyndrum station. A large square slated structure, originally erected about the time of the '45 for the accommodation of troops marching through the Highland fastnesses, it stands (800 feet above sea-level) amid a wild, high, moorland region, spreading eastward into the Alpine wilderness of Rannoch Muir, and rising westward into the great twin-summits of BUACHAILLE-ETIVE and other mountains around the head of Gaillene. Dorothy Wordsworth, who, with her brother William, here spent a wretched night (3 Sept. 1803), has finely described the desolation of the spot on pp. 175-180 of her *Journal* (ed. by Princ. Shairp, 1874).—*Ord. Sur.*, sh. 54, 1873.

King's House, a station on the Callander and Oban railway, in Balquhiddier parish, Perthshire, being the station for Balquhiddier (the burial-place of Rob Roy) and Loch Voil. A lamb fair is held in its vicinity on the Wednesday after the second Tuesday of August.

Kingskettle. See KETTLE.

Kingsknot, a station in Colinton parish, Edinburghshire, on the Caledonian railway, adjacent to the Union Canal and to Hailes quarry, 3 miles SW of Edinburgh.

Kingsmeadows, the seat of Sir Duncan E. Hay, Bart. in Peebles parish, Peeblesshire, on the right bank of the Tweed, ¾ mile ESE of Peebles town. It is a plain edifice, built for £600 in 1795, and enlarged in 1811, but it has charming pleasure-grounds. See HAYSTOWN.

Kingsmills, a mansion in Inverness parish, on the SE outskirts of the town.

Kingsmuir, an estate, with a good mansion, near the NW border of Crail parish, E Fife, 4½ miles NNW of Anstruther.—*Ord. Sur.*, sh. 41, 1857.

Kingsmuir, a village, with a station and a public school, near the SE border of Forfar parish, Forfarshire. The station is on the Dundee and Forfar Direct section of the Caledonian railway, 2¾ miles SE of Forfar.

King's Park. See INCHLAW.

King's Seat, Fife. See KINGSEAT.

Kingston, a village, with a public school, in Dirleton parish, Haddingtonshire, 2½ miles S by W of North Berwick, under which it has a post office, with money order, savings bank, and telegraph departments.

Kingston or Kingston-Port, a seaport village in Urquhart parish, Elginshire, near the left or W side of the mouth of the river Spey, ¾ mile N of Garmouth, and 5 miles N by W of Fochabers. It owes at once its origin and name to the establishment here (1784) of timber and shipbuilding yards by Messrs Dodsworth and Osborne of Kingston-upon-Hull; and shipbuilding is still carried on, but not so largely as once. All but three or four houses have been built since 1810. The Spey here, in January 1854, was frozen completely over, so as to afford a passage without the aid of a wherry, a circumstance that had been unparalleled within the memory of the oldest inhabitant.—*Ord. Sur.*, sh. 95, 1876. See SPEY and GARMOUTH.

Kingussie (Gael. *ceann-guthsaich*, 'head of the fir-wood'), a village and a parish in Badenoch district, SE Invernessshire. The village, beautifully situated near

the Spey's left bank, 740 feet above sea-level, has a station on the Highland railway, $71\frac{3}{4}$ miles NNW of Perth, and $24\frac{1}{2}$ SW of Grantown; whilst by road it is $44\frac{1}{2}$ miles from Inverness, and 50 ENE of Fort William. The capital of Badenoch, it was founded towards the close of the 18th century by the Duke of Gordon as an intended seat of woollen manufactures. That scheme fell through; but since the opening of the railway (1863) Kingussie has become somewhat of a centre of general trade, and a summer resort of families from the seaside in quest of change of air. Handsome buildings were erected at the station in 1894. The village has a post office, with money order, savings bank, and telegraph departments, branches of the British Linen Co. and Caledonian Banks, a National Security Savings Bank, two hotels, drainage and water works, daily coach communication with Fort William in the summer, a neat court-house (1806), the parish church (1792), a Free church, a Roman Catholic church, a reading-room, Victoria hall, a farming society, a horticultural society, a musical association, a Camanachd club, bowling, curling, tennis, golf, and football clubs, Freemasons', Odd-fellows', and Good Templars' lodges, the Badenoch and Rothiemurchus Highland games (held on the last Friday of August), and fairs on the second Wednesday of August and the Tuesday of May, September, and November after Beaully. Ruthven Barracks crowned a conical mound, the site of a castle of the Comyns, Lords of Badenoch, $1\frac{1}{2}$ mile S by E of the village, on the opposite side of the Spey, which here is crossed by a substantial wooden bridge. The original Ruthven Castle in the latter half of the 14th century was the principal stronghold of the 'Wolf of Badenoch,' its successor—reared by George, sixth Earl of Huntly, not long before its fruitless siege by the Earl of Argyll in 1594—was captured by Leslie (1647), by Mackenzie of Pluscardine (1649), and by Claverhouse (1689). The barracks were built by Government in 1718, and burned in 1746 by 2500 fugitives from Culloden, who rallied here till a message from Prince Charles Edward desired them to disperse. The only other noticeable episode is that on 8 Oct. 1861 the Queen and Prince Consort drove through Kingussie, 'a very straggling place with very few cottages,' where 'there was a small, curious, chattering crowd of people, who, however, did not really make us out, but evidently suspected who we were.' Small debt courts sit on the Tuesday before the Wednesday after 16 Jan., and the Tuesdays before the first Wednesdays in May and September. Under the superiority of the Baillies of Dochfour, Kingussie became a police burgh in 1867, and under the Burgh Police Act of 1892 it is governed by a provost, 2 bailies, and 6 commissioners. On the banks of the Gynock the Speyside Distillery Co. erected, in 1895, a very large new distillery. Pop. (1841) 460, (1861) 646, (1871) 676, (1881) 645, (1891) 740.

The parish, containing also the stations of NEWTON-MORE and DALWHINNIE, 3 miles WSW and 13 SSW of Kingussie, is bounded NW by Moy-Dalarossie, N by Alvie, E by the Rothiemurchus portion of Alvie, SE and S by Blair Athole in Perthshire, and W by Laggan. Its utmost length, from N to S, is $19\frac{3}{8}$ miles; its utmost width, from E to W, is $15\frac{1}{4}$ miles; and its area is 114,049 acres. A detached portion of the parish, extending along the western shore of the upper waters of Loch ERIOHT, surrounded by the parish of Laggan, and comprising 2133 acres, was in 1891 transferred by the Boundary Commissioners to Laggan parish. From a point 5 furlongs N by W of Glentruim House, and 810 feet above sea-level, the SPEY winds 14 miles north-eastward, tracing $6\frac{3}{8}$ miles of the Alvie boundary, and, close to the NE corner of the parish, flowing through Loch INCH ($7\frac{1}{2} \times 4\frac{3}{4}$ furl.; 721 feet). It here is from 80 to 100 feet broad, and at this point is joined by the Truim, running 13 miles north-north-eastward along the Laggan boundary; the CALDER, running $4\frac{1}{2}$ miles east-by-southward; the TROMIC, running $10\frac{1}{2}$ miles north-by-eastward out of Loch an t-Seilich ($9 \times 3\frac{1}{2}$ furl.; 1400 feet); and the FESHIE, running $8\frac{3}{8}$ miles north-by-westward along the Rothiemurchus boundary. Chief elevations to the

N of the Spey are Creag Bheag (1593 feet), Creag Dubh (2581), Carn an Fhricheadain (2861), A Chailleach (3045), and *Carn Mairg (3087), belonging to the MONADHELIATH Mountains; to the S, Creag Far-Leitire (1145), Beinn Bhuidhe (1193), Creag Bheag (1610), Cruaidhleac (2099), *Carn Dearg Mor (2813), Mullach Mor (2521), Stac Meall na Cuaich (3000), *Carn na Caim (3087), and *Creagan Mor (2522), belonging to the GRAMPIANS, where asterisks mark those summits that culminate on the boundaries. Such is a bare outline of the general features of this great Highland parish, fuller details being given under BADENOCH, GAICK FOREST, GLENTROMIE, GLENTRUIM, Loch GYNAG, INVERESHIE, and other articles already indicated. A good deal of the Speyside section, and of the little lateral vales is arable; but by far the greater part of the surface is mountainous and heathy, either pastoral or waste. The soil of the lower arable lands is alluvial; that of the higher is mostly a light and sandy but fertile loam. Several plantations, of greater or less extent, impart beauty and shelter to the natural landscape, and mainly consist of larch and Scotch pine, interspersed with mountain-ash and oak. The Kingussie estate belonged anciently to the Comyns, Lords of Badenoch, and, having passed to the ducal family of Gordon, at the death of the last Duke in 1836 was purchased by the late James Evan Baillie, Esq. of Dochfour. Silver and lead ores have been discovered near Kingussie village, but never turned to any account. Antiquities are Caledonian stone circles, and vestiges of what is thought to have been a Roman camp; whilst a priory is known to have been founded by one of the Earls of Huntly in the latter half of the 15th century at or near the site of Kingussie village. James Macpherson (1738-96), the 'translator' of Ossian, was born at Ruthven, where he was afterwards for some time parish schoolmaster. Sir George Macpherson-Grant of Ballindalloch is the largest proprietor. Including the greater part of Inch *quoad sacra* parish, Kingussie is in the presbytery of Abernethy and synod of Moray; the living is worth £340. Three public schools—Dalwhinnie, Kingussie, and Newtonmore—with respective accommodation for 40, 268, and 159 children, have an average attendance of about 20, 190, and 85, and grants amounting to nearly £32, £290, and £90. Pop. (1801) 1306, (1831) 2080, (1861) 2033, (1871) 2101, (1881) 1987, (1891) 1941, of whom 1280 were Gaelic-speaking, and 1606 were in Kingussie ecclesiastical parish.—*Ord. Sur.*, shs. 64, 74, 73, 63, 1873-77.

Kinharvie, a beautiful villa in Newabbey parish, Kircudbrightshire, at the NW base of Criffel, 10 miles SSW of Dumfries, with a domestic Roman Catholic chapel.

Kininmonth. See KINNINMONT.

Kinkell, a hamlet and an ancient parish in Strathearn district, Perthshire. The hamlet lies on the right bank of the Earn, $2\frac{1}{2}$ miles NNW of Auchterarder, and has a bridge over the Earn and a U.P. church. The ancient parish is now incorporated with Trinity-Gask. Its church was dedicated to St Bean or Beanus, who, according to Dr Skene, dwelt here in the first half of the 10th century (*Celtic Scotland*, ii. 324-327, 1877).—*Ord. Sur.*, sh. 47, 1869.

Kinkell, a former parish in Garioch district, Aberdeenshire. It took its name of Kinkell (Gael. 'head church') from the circumstance that six subordinate churches anciently belonged to its parsonage. The Lords Commissioners for the plantation of kirks in 1754 annexed one-third of it to Kintore, and the remainder to Keithhall or Monkey, ordaining that the latter should thenceforth be called the united parish of Keithhall and Kinkell. A cattle and horse fair is held at Kinkell on the Wednesday after the last Tuesday of September *o. s.* The church, near the left bank of the Don, 2 miles SSE of Ivycrurie, was unroofed in 1771 to furnish materials for Keithhall church, and now is an utter ruin. Third Pointed in style, it seems to have been rebuilt in 1524 by Alexander Galloway, rector of Kinkell, who was also architect of the first Bridge of Dee at Aberdeen. It retains a sculptured tabernacle or aumbry for the Blessed Sacrament, a bas-relief of a

crucifix and the celebration of Mass, and two-thirds of an incised slab, representing a knight in armour—Sir Gilbert de Greenlaw presumably, who fell at the battle of Harlaw (1411). Its carved font, however, after lying for many years exposed to wind and weather at Kubislaw Den, in 1851 was restored and placed in St John's Episcopal church, Aberdeen.—*Ord. Sur.*, sh. 76, 1874. See vol. ii., pp. 776-779, of Alex. Smith's *History of Aberdeenshire* (Ab. 1875).

Kinkell, an estate, with a mansion, in St Andrews parish, Fife, $2\frac{1}{2}$ miles ESE of St Andrews city. It gives name to old Kinkell Castle, Kinkell Cave (35 feet deep), and small Kinkell Ness, near which a rock, called the Rock and Spindle, and consisting of various kinds of trap in curious aggregations and juxtapositions, has so remarkable an outline as to form a striking object.—*Ord. Sur.*, sh. 49, 1865.

Kinkell Castle, an ancient baronial tower in Urquhart and Logie-Wester parish, SE Ross and Cromarty, 1 mile ESE of Conan station on the Beaully and Dingwall section of the Highland railway. It belonged to the Mackenzies of Gairloch.

Kinloch, an estate, with a mansion and beautiful grounds, in Collesie parish, Fife, 3 miles NW of Ladybank. Its owner is John Boyd Kinnear, Esq. (b. 1828; suc. 1874).—*Ord. Sur.*, sh. 40, 1867.

Kinloch (Gael. *ceann-loch*, 'head of the loch'), a hamlet and a parish of NE Perthshire. The hamlet stands 2 miles W by S of Blairgowrie. The parish is bounded NW, N, and E by Blairgowrie, S by Lethendy, and W by Clunie. Its utmost length, from NNW to SSE, is $5\frac{1}{4}$ miles; and its utmost breadth is $3\frac{3}{4}$ miles. The Boundary Commissioners in 1891 transferred to the parish of Kinloch the Gormack detached portion of the parish of Caputh, comprising an area of 308 acres, but gave to Blairgowrie parish the northern part of Kinloch parish, consisting of the lands of Cochrage and Black-craig. The Lorty Burn runs $2\frac{1}{2}$ miles east-south-eastward across the middle of the upper half of the parish, and Lunan Burn traces part of the boundary with Clunie and the entire boundary with Lethendy. In the southern half of the parish are three lakes—**DRUMELLIE** (1 mile \times $3\frac{1}{4}$ furl.), **Ardblair** or **Rae Loch** ($6 \times 1\frac{1}{2}$ furl.), and **FINGASK Loch** (3×2 furl.). Sinking in the extreme S to 139 feet above sea-level, the surface thence rises north-north-westward to 500 near Ballied and 1252 on Cochrage Muir. Rather less than one-half of the entire area is in tillage, nearly one-twelfth is under wood, and all the rest of the land is either pastoral or waste. The chief antiquity is noticed under **GLASCLUNE**. Mansions are Marlee House and Ballied. For ecclesiastical purposes this parish has been united to **LETHENDY** since 1806. Valuation (1883) £4236, 16s. 8d., (1892) £3306, 5s. 6d. Pop. (1801) 367, (1831) 402, (1871) 251, (1881) 252, (1891) 192.—*Ord. Sur.*, sh. 56, 1870.

Kinloch, a modern mansion in Kilfinichen parish, Mull island, Argyllshire, at the head of Loch Scridain, 1 mile NE of Pennyghael.

Kinloch, a hamlet near the NE border of Coupar-Angus parish, Perthshire, $1\frac{1}{2}$ mile W by S of Meigle. Kinloch House here is a seat of Sir J. G. S. Kinloch, Bart. See **GLENSLA**.

Kinlochaline Castle. See **ALNE, LOCH**.

Kinlochard, a hamlet in Aberfoyle parish, Perthshire, at the head of Loch Ard, near the boundary with Stirlingshire, 12 miles NW of Bucklyvie junction of the Aberfoyle branch of the North British railway. It has a post office under Aberfoyle, and a chapel of ease.

Kinlochaylort, an inn in Arasaig district, Invernesshire, at the head of salt-water Loch Aylort, 23 miles W by N of Fort William and 10 ESE of Arasaig village. There is a post and telegraph office under Fort William.

Kinlochbervie, a hamlet and a *quoad sacra* parish in Eddrachillis parish, NW Sutherland. The hamlet lies on the lower part of the N side of Loch Inchard, $3\frac{3}{4}$ miles NW of Rhiconich and 45 NW of Lairg, under which it has a post, money order, and telegraph office. Constituted by ecclesiastical authority in 1834, and re-

constituted by civil authority in 1846, the parish is in the presbytery of Tongue and synod of Sutherland and Caithness; the living is worth £120. The church was built in 1829. There is also a Free church. Pop. (1871) 882, (1881) 920, (1891) 898, of whom 813 were Gaelic-speaking.—*Ord. Sur.*, sh. 113, 1882.

Kinlochewe, a hamlet in Gairloch parish, W Ross and Cromarty, $1\frac{1}{2}$ mile SSE of the head of Loch Maree, and 10 miles WNW of Auchnasheen station on the Dingwall and Skye section of the Highland railway. It has a post, money order, and telegraph office, a Free church, a public school, a hotel, and a cattle fair on the first Tuesday of June.

Kinlochkerran. See **CAMPBELTOWN**, Argyllshire.

Kinlochluichart, a *quoad sacra* parish of central Ross-shire, whose church (1825) stands 1 mile W of the head of Loch Luichart, adjacent to Lochluichart station on the Dingwall and Skye section of the Highland railway, this being 17 miles W by N of Dingwall. There are a post and telegraph office, a public school, and a public library. Kinlochluichart Lodge, $1\frac{1}{2}$ mile ENE, belongs to Lady Ashburton. The parish is in the presbytery of Dingwall and synod of Ross; the stipend is £120, with a manse. Pop. (1871) 704, (1881) 632, (1891) 630, of whom 601 were in Contin, 25 in Fodderty, and 4 in Urray.—*Ord. Sur.*, sh. 93, 1881.

Kinlochmoidart, a hamlet in Ardnamurchan parish, Moidart district, SW Inverness-shire, at the head of salt-water Loch Moidart, 10 miles NNE of Salen, and 20 NW of Strontian. It has a post, money order, and telegraph office (Moidart), a public school, and an Episcopal church, St Finan's (1860; 75 sittings). Kinlochmoidart House is in the vicinity of the hamlet.

Kinlochrannoch, a village and a *quoad sacra* parish in Fortingall parish, NW Perthshire, on both banks of the Dubhag or Tummel, which here, 300 yards below its efflux from Loch Rannoch, is spanned by a bridge of four arches. The village is 21 miles W by N of Pitlochry, 13 WSW of Struan station, 27 E by N of Kingshouse Inn, and 18 NW of Aberfeldy. A picturesque and thriving little place, it has a post office (Rannoch), with money order, savings bank, and telegraph departments, 2 commodious hotels, a parish church (1829, renovated and improved in 1893), a Free church (1855), an Episcopal church, All Saints (1864; 120 sittings), and a fair (almost extinct) on the last Tuesday of October. In the centre of the village a Peterhead granite obelisk, 21 feet high, was erected in 1875 to the memory of the Gaelic sacred poet and evangelist, Dugald Buchanan (1716-68), who for the last sixteen years of his life was schoolmaster at Kinlochrannoch, where his house was demolished so late as 1881. Constituted by ecclesiastical authority in 1829, by civil authority in 1845, the *quoad sacra* parish of Kinlochrannoch is in the presbytery of Weem and synod of Perth and Stirling; its minister's stipend is £120, with a manse. Auchatarsin public, Kinlochrannoch public, and Killichonan public schools, with respective accommodation for 29, 80, and 29 children, have an average attendance of about 25, 55, and 20, and grants amounting to over £36, £78, and £50. Pop. of *q. s.* parish (1871) 921, (1881) 894, (1891) 547.—*Ord. Sur.*, sh. 55, 1869.

Kinlochspelve, a *quoad sacra* parish in Torosay parish, Mull island, Argyllshire, in the SE of Mull around Loch Spelve, and containing **ACHNACRAIG** hamlet, with a post, money order, and telegraph office. Constituted by the Court of Teinds in 1845, it is in the presbytery of Mull and synod of Argyll. The stipend is £129, with a manse. The church, 9 miles SW of Achnacraig, was built in 1828. Pop. (1871) 388, (1881) 311, (1891) 270, of whom 208 were Gaelic-speaking.

Kinloss (probably a modified form of the Gaelic *ceann-loch*, 'the head of the loch'), a small parish with a hamlet of the same name on the seaboard in the NW of the county of Elgin. The hamlet is about $\frac{1}{4}$ mile from the SE corner of the estuary of the **FINDHORN** or Findhorn Bay and $\frac{3}{4}$ NW of Kinloss station on the Highland railway. The parish is bounded N by the Moray Firth, E by Alves, S by Rafford, and W by

Forres and by Dyke and Moy. Its greatest length, from WNW to ESE, is $4\frac{1}{2}$ miles; and the greatest breadth, from NE to SW, is $4\frac{1}{2}$ miles. The area, inclusive of foreshore and water, is 6286·455 acres, but the land area is only 5184 acres, of which 3000 acres are in tillage, 1800 are in divided common, 250 are under wood, and the rest are waste. The surface is everywhere very low. Along the coast is a range of sandhills, and behind this, extending on an average for half a mile inland, is a half grassy, half moory belt. The little drainage there is passes directly to Findhorn Bay or by the small Kinloss Burn, which passes from E to W almost through the centre of the parish, with a course of $4\frac{1}{2}$ miles. The land is mostly alluvial, and has been, as the name indicates, elevated at a period which, though geologically recent, must have been prehistoric. Over the whole of the arable part the soil is a rich fertile loam, with patches of clay, poor loam, sand, and moss. The underlying rock is sandstone. The principal residences are Grangehall and Seapark, both of which are noticed separately. The only object of antiquarian interest is Kinloss Abbey. It was founded by David I. in 1150, or, according to the *Chronica de Mailros*, in 1151, and the papal sanction for the new abbey was in 1174 granted by Pope Alexander III. to Reinierius, the second abbot. The monks belonged to the Cistercian order, and were brought from Melrose. According to Ferrerius, the foundation was due, like that of Holyrood, to a miraculous answer to King David's prayers. While he was hunting in his forests near Forres he lost his way, and, in answer to his prayer for aid, a white dove miraculously appeared, and, flying before him, guided him to an open space where two shepherds were watching their flocks. He was immediately afterwards warned in a dream that he ought to erect a chapel to the Blessed Virgin, and with his sword he at once marked out on the grass the outline of the building that was to be erected, and that there might be no delay he spent the summer at the castle of DUFFUS, in order himself to superintend and press on the erection of the building. The original grant conveyed to the abbey the lands of 'Kynloss and Inverlobty,' and King Malcolm afterwards added other lands in the neighbourhood. Subsequently, several of the kings, as well as private benefactors, enriched it extensively. William the Lyon conferred on the monks the barony of Strathisla in Banffshire, the lands of Burgie, the lands of Invererne, and tofts in the burghs of Inverness, Nairn, Forres, Elgin, and Aberdeen. Robert Bruce granted all the fishings on the river Findhorn, and this grant was confirmed by James I. and James IV. Several of the abbots who were mitred and had a seat in parliament were distinguished men, the most so being Robert Reid, who ruled from 1526 till his appointment as Bishop of Orkney in 1541. The abbots had a regality jurisdiction over their possessions. In 1587 the lands belonging to it were annexed to the Crown, and on 2 Feb. 1601 a charter was granted to Edward Bruce (who on the dissolution of the religious houses had been appointed commendator of Kinloss) erecting the lands into a temporal lordship and barony, and in 1604 Bruce became Lord Bruce of Kinloss, a title which still remains among those of the Earl of Elgin, though the estates have long quitted the family, the first Earl having in 1643 sold them to Alexander Brodie of Lethen. Of the buildings, which, from the importance of the place, must have been very extensive, and included all the apartments suitable to a large monastery, but few fragments now remain. These are a cloister wall on the W, two fine Saxon arches on the S, and a two-storey building with groined roof, traditionally called the 'prior's chambers,' on the E. To the S are the E gable and a portion of the wall of a dwelling-house traditionally the residence of the abbot. The chapter-house is said to have survived till the latter part of the 18th century. It seems to have been supported by six pillars, and these are mentioned by Pennant, who visited the building in 1769. His account in his *Tour in Scotland* (Chester,

1771) also mentions the orchard. 'Near the abbey is an orchard of apple and pear trees, at least coeval with the last monks; numbers lie prostrate; their venerable branches seem to have taken fresh roots, and were laden with fruit, beyond what could be expected from their antique look.' These have now disappeared. The church, whose outline alone can be traced, was dedicated to the Blessed Virgin, and had a nave, transepts, and choir, with a lofty tower at the crossing. The tower seems to have been erected between 1467 and 1482, and fell in 1574. The Laird of Lethen in 1650 sold the stones of much of the buildings to the Commonwealth for the erection of the citadel at Inverness, and one of his descendants carried off and used part of what remained for the erection of farm offices. In 1650 the parish had no separate existence, and in 1652 the minister of Alves represented to the presbytery that 'the chapter-house of the Abbey of Kinloss hath been since the Reformation a place for preaching the Word, celebrating the sacraments and marriage; and by a condescendence between Alexander Brodie of Lethen and the English garrison at Inverness, the fabric of the abbey is taken down for building their citadel, save the place of worship; and those who have the charge for to transport the stone have it in command to take that down also: therefore,' the presbytery were to lay to heart what might happen seeing that all parties concerned had agreed that there was to be a separate church and parish erected for Kinloss. Mr Brodie declared that 'it was against his will that these stones were taken away,' and finally agreed to give a glebe and a stè for a manse and a church, and, besides, to pay for the erection of these buildings out of the money he had received for the stones of the abbey. The parish of Kinloss was soon thereafter constituted in 1657 by disjunctions from the parishes of Forres, Rafford, and Alves, and this was ratified by parliament in 1661. Edward I., during his progress through the North in 1303, quartered himself and his soldiers on the monks on 13 Sept., and spent part of that month as well as of October, and possibly also of November there, as is shown by a number of deeds signed by him at Kinloss.

The parish is in the presbytery of Forres and the synod of Moray; the living is worth £250. The parish church, at the hamlet near the abbey, was erected in 1765, repaired in 1830, and fitted up with heating apparatus in 1893. The Free church of Kinloss is at FINDHORN, which village is within the parish. Two public schools, Kinloss and Findhorn female, with accommodation respectively for 137 pupils each, have an average attendance of about 100 each, and grants amounting to over £100 and £105. The parish is traversed by the Forres and Keith section of the Highland railway, which passes through it on the S for $3\frac{3}{4}$ miles, and has a station near the middle of its course. A branch line from Kinloss station to Findhorn is not at present worked. Pop. (1801) 917, (1831) 1121, (1861) 1315, (1871) 1112, (1881) 1072, (1891) 958, of whom 422 were males and 536 females.—*Ord. Sur.*, shs. 95, 94, 1876-78.

See also Sbow's *History of the Province of Moray* (Edinb. 1775; 2d ed., Elgin, 1827; 3d. ed., Glasgow, 1882); Ferrerius' *History of the Abbey of Kinloss* (Bannatyne Club, Edinb. 1839); Taylor's *Edward I. in the North of Scotland* (Elgin, 1858); and Dr John Stuart's *Records of the Monastery of Kinloss* (Edinb. 1872, published for the Society of Antiquaries of Scotland).

Kinmount, the seat of the Marquess of Queensberry, in Cummertrees parish, Dumfriesshire, $1\frac{1}{2}$ mile N by W of Cummertrees station on the Dumfries and Annan section of the Glasgow and South-Western railway, and 4 miles WNW of Annan. It is a beautiful edifice, built in the early part of the 19th century at a cost of £40,000, and surrounded by fine pleasure-grounds. In 1668 the Hon. William Douglas of Kelhead, second son of the first Earl of Queensberry, was created a baronet; and his fifth descendant, Charles, sixth Bart. (1777-1837), in 1810

succeeded his fourth cousin once removed, the fourth Duke of Queensberry, in the Scottish titles of Viscount Drumlanrig (cre. 1628), Earl of Queensberry (1633), Marquess of Queensberry (1682), etc. John Sholto Douglas is present and eighth Marquess (h. 1844; suc. 1858).—*Ord. Sur.*, sh. 6, 1863. See DRUMLANRIG.

Kinmuick, a hamlet in Keithhall and Kinkell parish, Aberdeenshire, 3½ miles ESE of Inverurie, under which it has a post office. Here the Society of Friends established themselves about the middle of the seventeenth century. Their meeting-house dates from about 1680, and contains a free library. A neighbouring moor is said to have been the scene of a great battle between the Danes and the Scotch; contains remains of an encampment, supposed to have been formed in connection with that battle; and took the name of Kinmuick (Gael. 'boar's head') from a tradition that the Scotch slew a boar in their advance.—*Ord. Sur.*, sh. 77, 1873.

Kimmundy, a plain mansion near the E border of Old Deer parish, Aberdeenshire, 3 miles SSE of Mintlaw.—*Ord. Sur.*, sh. 87, 1876.

Kinmudy, an estate with a mansion, in Skene parish, Aberdeenshire, 6½ miles W by N of Aberdeen.—*Ord. Sur.*, sh. 77, 1876.

Kinnaid (Gael. *ceann-ard*, 'high head'), a village and a parish in Gowrie district, SE Perthshire. The village, standing 2½ miles W of its post office, Inchture, and 3½ NW of Inchture station on the Perth and Dundee section of the Caledonian railway, occupies such a situation among the braes overlooking the Carse of Gowrie as may have given rise to its name.

The parish, containing also the village of Pitmiddle, is bounded N by Abernethy, E by Abernethy and Inchture, S by Errol, SW and W by Kilsplindie, and NW by Collae. Its utmost length, from E to W, is 3¼ miles; its utmost breadth, from N to S, is 2½ miles; and its area is 3501 acres, of which 2¾ are water. The south-eastern border is part of the Carse of Gowrie, sinking to less than 50 feet above sea-level; and the central and northern districts, consisting chiefly of what are called the Carse Braes, rise gradually north-westward to the watershed of the Sidlaw Hills, and attain 547 feet near Woodwell, 917 near Woodburnhead, 994 near Franklyden, and 969 near Blacklaw. Sandstone is the predominant rock. The soil, on the SE border, is of the rich character common to the Carse; in the central districts, is a mixture of black earth and so-called 'mortar,' inferior to the Carse soil, yet of no little fertility; in the northern district is light and shallow, with such mixed covering of grass, bent, and heath, as renders it fit only for sheep pasturage. Wood covers a fair proportion; and the arable area is a little larger than the pastoral. Kinnaid Castle, a little NW of the village, commands extensive views of the Carse and the Fife hills. A strong square tower of smoothed freestone, dating probably from the 15th century, it was tenanted for some days in 1617 by James VI., in 1674 was acquired by the Threiplands of FINGASK, was externally renovated in 1855, and is figured in Dr R. Chambers' *Threiplands of Fingask* (Edinb. 1880). It is in the presbytery of Dundee and synod of Angus and Mearns; the living is worth £224. The church, erected in 1815, was renovated in 1893; and a public school, with accommodation for 121 children, has an average attendance of about 60, and a grant of over £70. Valuation (1883) £3174, 13s. 11d. (1892) £2581, 13s. 10d. Pop. (1801) 455, (1831) 461, (1861) 318, (1871) 299, (1881) 260, (1891) 228.—*Ord. Sur.*, sh. 48, 1868.

Kinnaid, a mansion in Little Dunkeld parish, Perthshire, near the right bank of the river Tay, 2 miles S of Balliulug and 7 NNW of Dunkeld. Beautifully situated on a rising-ground, in the midst of woods, and almost overhung by a stupendous rock, it belongs to the Duke of Atholl. During 1823-24 it was tenanted by the Bullers, whose tutor, Thomas Carlyle (1795-1831), here wrote most of his *Life of Schiller* and the first part of his translation of *Wilhelm Meister*. See chaps. xi., xii., of his *Life* by Froude (Lond. 1882).—*Ord. Sur.*, sh. 55, 1869.

Kinnaid, a hamlet in Moulin parish, Perthshire, 1½ mile NE of Pitlochry.

Kinnaid Castle, the seat of the Earl of Southesk, in FARNELL parish, Forfarshire, within 5 furlongs of the right or S bank of the South Esk river, 3½ miles SE of Brechin, and 1½ mile NNE of Farnell Road station of the Caledonian railway. Mostly rebuilt about the beginning of the 19th century, it was enlarged and remodelled in 1854-60 after designs by the late David Bryce, R.S.A.; and 'now resembles an ancient French château, with many lofty steep-roofed towers and turrets, long stone balconies, and balustraded terrace walls.' The park, three-fourths of which are occupied by the deer-park, with several hundred deer, comprises between 1300 and 1400 acres, and, save where it is bounded by the river, is enclosed by a high wall. Most of its trees were planted towards the close of the 18th century, but there are several 170 to 400 years old, whose dimensions are given by Mr Jervise and in the series of five papers on the 'old and remarkable' trees of Scotland in *Trans. Highl. and Ag. Soc.* (1879-81). In 1401-9 Duthac de Carnegie, by purchase and marriage, acquired the lands of Kinnaid. He fell at Harlaw (1411); whilst Walter, his son, for fighting against Earl 'Beardie' in the battle of Brechin (1452), had his castle of Kinnaid burned down by the Lindsays; and John, his great-grandson, was slain at Flodden (1513). His son, Sir Robert, senator of the College of Justice (1547) and ambassador to France (1550), rebuilt the house of Kinnaid, which was visited by James VI., Charles I., Charles II., and the Chevalier. In 1616 Sir David was created Lord Carnegie of Kinnaid, and in 1633 Earl of Southesk—titles forfeited by the fifth Earl, James, for his share in the '15. The entire estate was bought for £51,549 by the York Buildings Co., on whose insolvency a large portion of the property was repurchased for £36,871 by the last Earl's third cousin, Sir James Carnegie of Pittarrow, Bart.; and his great-grandson, Sir James Carnegie, K.T., sixth Bart. since 1663 (b. 1827; suc. 1849), was restored to the earldom, by reversal of the act of attainder, in 1855, and in 1869 was created Baron Balinhard of Farnell, in the peerage of the United Kingdom.—*Ord. Sur.*, sh. 57, 1868. See pp. 238-249 of Andrew Jervise's *Land of the Lindsays* (2d ed. 1882).

Kinnaid House, an old-fashioned, three-storied mansion in Larbert parish, Stirlingshire, 4½ miles N of Falkirk. It was enlarged and improved by the great Abyssinian traveller, James Bruce (1730-94), who here was born, here spent his later years, and here died through a fall downstairs. A monument of iron, cast at Carron, has been erected over his grave. He was sixth in descent from the Rev. Robert Bruce of Kinnaid (1559-1631), the noted Presbyterian divine; and both are buried in the parish churchyard. His great granddaughter, Lady Elma Bruce, the eighth Earl of Elgin's eldest daughter, in 1864 married the present Lord Thurlow. Kinnaid village, 3¼ miles N of Falkirk, is inhabited principally by colliers and operatives connected with the industries of the populous region round Carron Iron-works. Pop. (1871) 464, (1881) 336, (1891) 344, of whom 255 were in Larbert parish and 89 in Bothkennar.—*Ord. Sur.*, sh. 31, 1867. See DUNIPHAIL.

Kinnaid's Head. See FRASERBURGH.

Kinneddar. See DRAINIE.

Kinneff, a hamlet and a parish, on the coast of Kincardineshire. The hamlet lies 2¾ miles NNE of Bervie station, and 7¾ S by W of Stonehaven, under which it has a post office.

The parish, containing also the fishing village of CATERLINE and a minute part of Bervie royal burgh, comprises the ancient parishes of Kinneff and Caterline, and once comprehended also what now is Bervie parish. It is bounded N by Dunnottar, E by the German Ocean, S by Bervie, and W by Arbuthnott. Its utmost length, from N to S, is 5¾ miles; its utmost breadth, from E to W, is 4 miles; and its area is 7233 acres, of which 103 are foreshore and 5¾ water. The river Bervie flows ½ mile along the southern border to its mouth in Bervie Bay; and three burns rise in the interior, and run to

the sea. The coast, 6 miles in length, presents along its whole extent a range of cliffs over 100 feet high, pierced with caves, and boldly picturesque; and, except where here and there it recedes into little bays, it leaves no beach between the base of the cliffs and the deep sea water. Inland the surface rises to 451 feet at Bervie Brow, 477 at Corbicknowe, 495 at Leys Hill, and 710 at Bruxie Hill on the Arbutnoth border. The predominant rock is Old Red sandstone conglomerate, traversed by long veins of calcareous spar, and occasionally intersected or overlaid by claystone porphyry, with embedded crystals of felspar. Hornblende, crystallised quartz, heavy spar, asbestos, zeolites, and agates have also been found. The conglomerate is quarried for building and for millstones; the claystone porphyry for dyke material. The soil of the seaboard tract is a deep loam, elsewhere is of inferior quality. Kinneff Castle, at Kinneff hamlet, was garrisoned by the English when they overran Scotland during David Bruce's minority; went gradually to ruin till only one high, strongly-cemented wall remained standing in the early part of the 18th century; and now is represented by nothing but a fragment of its foundations. Two other old castles stood on the coast—Cadden or Whistleberry Castle, $\frac{1}{2}$ mile NE of Kinneff hamlet, and Adam's Castle, $\frac{1}{4}$ mile farther N. They have left some remains, but are not known to history. Several tumuli were formerly on the coast; an uru, containing a number of bronze rings, was found near the site of Kinneff Castle; a monastic house, now utterly extinct, stood between that castle and the parish church; and an earthen pot, containing a number of old silver coins, and supposed to have been deposited by the English garrison of Kinneff Castle, was exhumed about 1837 in the churchyard. The story of the preservation of the Regalia in the parish church has been already told under DUNNOTAR CASTLE. The celebrated Dr John Arbuthnot, the intimate friend of Pope and Swift, and physician to Queen Anne, lived as a young man for some time at Kinghornie. Kinneff is in the presbytery of Fordoun and synod of Angus and Mearns; the living is worth £332. The parish church was rebuilt in 1738 and restored in 1876. Of several old monuments, the most interesting are those to Graham of Largie (1597), to Governor Sir George Ogilvy of Barras, to Mr and Mrs Granger, and to the Honeymans, who, for four generations, from 1663 till 1781, were ministers of Kinneff. There are also a Free church and Caterline Episcopal church, St Philip's, the latter an Early English edifice of 1848. Barras public, Kinneff public, and Caterline Episcopal schools, with respective accommodation for 60, 143, and 63 children, have an average attendance of about 50, 70, and 60, and grants of over £55, £72, and £50. Valuation (1883) £8394, (1893) £6612. Pop. (1801) 937, (1831) 1006, (1861) 1054, (1871) 1062, (1881) 997, (1891) 907.—*Ord. Sur.*, sh. 67, 1871. See pp. 396-399 of Andrew Jervise's *Land of the Lindsays* (2d ed. 1882).

Kinneil, a village, a barony, and an ancient parish on the NW border of Linlithgowshire. The village, standing on the coast of the Firth of Forth, 5 furlongs WSW of Borrowstounness, shares in the business and institutions of that town, and contains extensive ironworks. Pop. (1861) 365, (1871) 370, (1881) 373, (1891) 429. The barony, which lies around the village, was given by Robert Bruce to Sir Walter Hamilton, ancestor of the Dukes of Hamilton, and has ever since remained in possession of his descendants. In its physical aspects, it is noted for an expanse of rich carse land contiguous to the Forth, and for traces of the line of Antoninus' Wall. Kinneil House, $\frac{1}{4}$ mile WSW of Borrowstounness, had undergone large repairs by the Regent Arran not many years before it was plundered and burned by Queen Mary's opponents in 1568-70. In the reign of Charles II. it was altered and highly embellished by Duchess Anne and Duke William, then passing from the character of a feudal keep to that of three sides of a quadrangle, surmounted by cornice and balustrades. Crowning the edge of a bank that rises 60 feet above sea-level, and commanding from its flat lead-covered

roof an extensive and beautiful view, it is approached by a fine avenue of old trees, and surrounded with a considerable quantity of natural wood. It once had such rich internal decorations as to be described by Sibbald as a 'princely seat;' but, having lost favour with its noble proprietors as a desirable residence, it last was tenanted from 1809 till shortly before his death in 1828 by Dugald Stewart, who here wrote most of his celebrated works. Prior to this, about 1764, Kinneil—tenanted by Dr Roebuck, the founder of the Carron Ironworks—had been the place where James Watt matured some of his improvements on the steam-engine. (See also GIL BURN.) The ancient parish, quite or nearly identical with the barony, had Borrowstounness disjoined from it in 1649, and itself was united therewith in 1669.—*Ord. Sur.*, sh. 31, 1867.

Kinnell, a parish of E Forfarshire, whose church stands on the left bank of Lunan Water, $1\frac{3}{4}$ mile ENE of Fricockheim village and station, on the Arbroath and Montrose section of the North British railway. It is bounded N by Brechin and Farnell, E by Craig and Lunan, S by Inverkeilor, SW by Kirkden, W by Guthrie, and NW by Aberlemno. The detached part of Farnell parish, that forms a portion of Montreatment Moor, and comprised 49 acres, and the Grahamsfirth detached part of Maryton parish, that is situated near the moor, and comprised 338 acres, were transferred by the Boundary Commissioners in 1891 to the parish of Kinnell. Its utmost length, from E to W, is $5\frac{1}{2}$ miles; its utmost breadth, from N to S, is $3\frac{1}{2}$ miles; and its area is now 6980 $\frac{3}{4}$ acres, of which 16 are water. LUNAN Water flows $1\frac{3}{4}$ mile east-south-eastward through the south-western corner of the parish; and GIGHTY Burn, its affluent, traces most of the Inverkeilor border; whilst head-streams of Pow Burn, running north-eastward into Farnell towards the South Esk river, drain the north-western district. Sinking in the S to 100 feet above sea-level, the surface generally is low and flat; but it rises gradually from the S and W, and more abruptly from the N, till in Wuddy Law it culminates at 434 feet. Old Red sandstone is the predominant rock; and the soil is mostly a clayey loam, either rather stiff or moorish, with clay subsoil. Tradition assigns to Kinnell the scene of a conflict, in 1443, between the Lindsays and the Ogilvies, and adds that the spurred boot of an Ogilvy, slain in the pursuit, was taken off and hung on an ash tree near the church; and a rust-covered spur, 8 inches long and $4\frac{1}{2}$ broad, with a rowel as large as a crown piece, remained on the church wall till about the end of the 18th century. Bolshau estate has been noticed separately. Kinnell is in the presbytery of Arbroath and synod of Angus and Mearns; the living is worth £250. The church, rebuilt in 1855, is amply commodious; and a public school, with accommodation for 147 children, has an average attendance of over 90, and a grant of about £92. Valuation (1883) £7873, (1893) £6113, plus £1460 for railway. Pop. (1801) 783, (1831) 786, (1861) 816, (1871) 766, (1881) 696, (1891) 653.—*Ord. Sur.*, sh. 57, 1868.

Kinnellar. See KINELLAR.

Kinnel Water, a troutful stream of Annandale, Dumfriesshire. Rising near the Lanarkshire boundary, within 2 furlongs of a head-stream of the Clyde, and $2\frac{1}{2}$ miles N of the summit of Queensberry, it thence runs $20\frac{1}{2}$ miles south-south-eastward, till, after a total descent of 1320 feet, it falls into the Annan at a point $1\frac{1}{2}$ mile NE of Lochmaben town. It traverses successively a glen, a defile, and a fertile strath, finely embellished with culture and wood; is especially picturesque above and below St Ann's Bridge, adjacent to the demense of Raehills; and receives in its progress Lochan Burn, Ae Water, and some minor streams.—*Ord. Sur.*, shs. 16, 10, 1864.

Kinnernie. See KINEARNEY.

Kinnesswood, a village in Portmoak parish, Kinrossshire, 1 mile ENE of the middle of the E shore of Loch Leven, and 5 miles by road E by N of Kinross. It was the birthplace of the poet Michael Bruce (1746-67).

Kinnethmont. See KENNETHMONT.

Kinnettles, a parish of SW central Forfarshire, containing DOUGLASTOWN village, 3½ miles SW of Forfar, under which it has a post office. It is bounded E by Forfar, SE and S by Inverarity, and SW, W, and NW by Glamis. The Boundary Commissioners in 1891 transferred to the parish the Foffarty detached portion of the Perthshire parish of Caputh, comprising 283 acres. Its utmost length, from N to S, is 3½ miles; its breadth varies between half a mile and 2½ miles; and its area is now 3153½ acres, of which 10½ are water. DEAN WATER, from a little below its exit from Forfar Loch, creeps 2 miles west-south-westward along the northern Glamis border; and ARRY or Kerbit Water, its affluent, flows 4 miles north-westward, partly through the parish and partly along the Glamis western border, the last mile of its course having been straightened in 1876-77. In the NW, at their confluence, the surface declines to 165 feet above sea-level, and thence it rises east-south-eastward till it attains 543 feet at flat-topped BRIGTON Hill, which, occupying the middle of the parish, is a detached member of the Sidlaws, whilst the low tracts around it are part of Strathmore. Trap, greywacke, slate, and Old Red sandstone are the predominant rocks, and have all been quarried. The soil, fertile everywhere, is in some parts a brown clay, in others loam, in others loam mixed with clay or sand, and in others so light as to require rich manuring. About 115 acres are under wood, 95 acres are waste, and all the rest of the land is in tillage. The antiquities are sites of ancient chapels at Kirkton and Foffarty, and tombstones of the early part of the 17th century in the churchyard. Kinnettles House, 4 miles SW of Forfar, was built about 1867. Other mansions are Brigton and Invereighty. Kinnettles is in the presbytery of Forfar and synod of Angus and Mearns; the living is worth £178. The parish church, 5 furlongs SE of Douglstown, was built in 1812. There is also a Free church, and a public school, with accommodation for 110 children, has an average attendance of about 80, and a grant of nearly £80. Valuation (1883) £6529, 4s., (1893) £5050, 2s. Pop. (1801) 567, (1831) 547, (1861) 414, (1871) 378, (1881) 386, (1891) 340.—*Ord. Sur.*, shs. 57, 56, 1868-70.

Kinneuchar. See KILCONQUHAR.

Kinniel. See KINNEIL.

Kinning-Park, a police burgh in Govan parish, in the Lower Ward of Lanarkshire, on the south bank of the Clyde, between Glasgow and Govan. It has an area of 108 acres. The rapid growth of Glasgow is here well shown, for this district, densely populated as it now is, was yet, some thirty years ago, 'a beautiful rural spot, the principal features in the landscape being green fields, waving trees, and lovers' walks, with here and there a charming mansion-house, while a pure purling stream, called the Kinning-House Burn, meandered its way down the vale till it joined the comparatively clean waters of the Clyde not far from the Park-House Toll, where the road diverges into two branches—the one leading to Paisley, the other to Govan and Renfrew.' To go to the district was to visit the country, and in due course a pleasant suburb sprang up; but this rapidly changed, owing to the extension of the harbour and the city, and the region was speedily invaded by various public works, bringing with them an artisan population and all the attendant smoke and din. Kinning-Park was, under the Lindsay Act, constituted a police burgh in 1871; and under the Burgh Police Act of 1892 its affairs are managed by a provost, 4 magistrates, and 7 commissioners. Its incorporation in the city, with which it is virtually one, is only a question of time. Rental (1871) £28,355, (1881) £47,844, (1892-93) £57,520. The burgh income in 1892-93 was £10,388. Pop. (1871) 7214, (1881) 11,552, (1891) 13,679. Houses (1891) inhabited 2797, uninhabited 110, and building 1.

Kinninmonth, a *quoad sacra* parish of NE Aberdeenshire, whose church, built in 1838, and repaired and improved in 1893, stands 3 miles N by E of Mintlaw. Constituted in 1874, it is in the presbytery of Deer and synod of Aberdeen; the minister's stipend is £158.

Pop. (1881) 1116, (1891) 1004, of whom 576 were in Loumay, 225 in Strichen, 173 in Old Deer, 17 in Crimond, and 13 in Longside.—*Ord. Sur.*, sh. 87, 1886.

Kinnordy, an old-fashioned mansion in Kirriemuir parish, Forfarshire, 1¼ mile NW of Kirriemuir town. It was the birth-place and home of the great geologist, Sir Charles Lyell, Bart. (1797-1875).—*Ord. Sur.*, sh. 56, 1870. See the *Life of Sir C. Lyell* (2 vols., Lond., 1881).

Kinnoull, a parish of SE Perthshire, until 1891 consisting of a main body and three detached sections, and till then having an area of 3843¾ acres, of which 48 were foreshore, and 149½ were water. Of these detached portions that situated at Inchyra, and comprising 669 acres, was divided by the Boundary Commissioners between the parishes of Kinfauns and St Madoes; that at Balbeggie, comprising 453 acres, was transferred to the parish of St Martins; while part of the Balthayock detached portion was transferred to the parish of Scone, and the remaining part united to the main portion of the parish of Kinnoull by the annexation of the intervening portion of Scone parish. There was also annexed to Kinnoull so much of the parish of Kinfauns as lay to the north of the old Perth and Dundee road running past Windyedge and to the west of the Balthayock detached portion. The parish, containing the BRIDGEND suburb of PERTH, has an utmost length and breadth of 3½ and 2¼ miles, and is bounded N by Scone, NE by Kilspondie, SE and S by Kinfauns, and W by the TAY, flowing 1½ mile southward along the boundary with Perth parish, and cleft in twain by Moncrieff or Friarton island. The surface sinks by the river to 30 feet above sea-level, and rises eastward thence to 729 feet on wooded Kinnoull Hill, which, elsewhere easy of access, presents on its southern or KINFAUNS side a frontage of rugged basaltic cliff not so unlike the Salisbury Crags of Edinburgh. From Perth its summit is gained by a winding carriage-road, called Montagu's Walk after the Duke of Montagu, who was in Scotland when it was formed; and that summit commands a magnificent prospect, by Pennant entitled 'the glory of Scotland.' Near the Windy Gowl, a steep and hollow descent betwixt two tops of the hill, is a nine-times-repeating echo; and on the hill-face is the Dragon Hole, a cave where Wallace is said to have lain concealed, and where Beltane fires formerly were kindled. The base of the hill has yielded many fine agates; and a diamond is said to have gleamed from its cliffs by night, till a marksman, firing at it with a ball of chalk, was able next day to find its whereabouts—a tale that is told of a dozen other localities. The surface, thus, of nearly all the parish consists of sides, shoulders, and summits of the south-western Sidlaws. Trap is the principal rock, but Old Red Sandstone, including a compact and durable variety of a greyish-red colour, abounds in various parts, and has been largely quarried. The soil is of almost every variety, and ranges from strong argillaceous alluvium on the cars to poor moorish earth on parts of the hills. Rather less than one-sixth of the entire area is under wood, nearly all the rest being either arable or pastoral. Kinnoull barony, extending along the Tay's left bank opposite Perth, gave the title of Earl in 1633 to George Hay, Viscount DUPPLIN, who, dying next year, was buried in an aisle of the old parish church, St Constantine's, where a life-size marble statue shows him vested as Lord Chancellor of Scotland. Of Kinnoull Castle, ¼ mile to the S, some vestiges remained till the close of the 18th century. The mansion of BALTHAYOCK is 3 miles E of Perth, near the SW boundary. Kinnoull is in the presbytery of Perth and synod of Perth and Stirling; the living is worth £335. The present church, built in 1826 at a cost of £4000 from designs by Burn, is a handsome Gothic edifice, with over 1000 sittings. The public school of Kinnoull is a combination one, under the Perth School Board, and with accommodation for 454 children, has an average attendance of about 390, and a grant amounting to over £432. Valuation (1883) £7198, 5s. 6d., (1892) £3004, 7s. 10d. Pop. (1801) 1927, (1831) 2957, (1861) 3219, (1871) 3108, (1881)

3461, (1891) 3730, of whom 3462 were in the burgh of Perth.—*Ord. Sur.*, sh. 48, 1868.

Kinpirnie. See NEWTYLE.

Kinrara. See ALVIE.

Kinross, a town and a parish in Kinross-shire. The town, the chief one in the county, stands 370 feet above sea-level, near the W end of Loch Leven, at a convergence of railways, and on the direct road from Edinburgh to Perth, by road being 13 miles N of Inverkeithing, 27 NNW of Edinburgh, and 19 SW of Cupar; by railway, 15½ N by E of Dunfermline, 18¼ WNW of Thornton Junction, 17¼ from Perth, and 30½ from Edinburgh by the Forth Bridge. Dating from ancient times, it was treated by Alexander III., in the early part of his reign, as a sort of capital, and was the place where he and his young queen were seized in 1257 by the faction of the Comyns. It figures in connection with Queen Mary's escape from Lochleven Castle, as narrated by Sir Walter Scott in the *Abbot*; and on 6 Sept. 1842 Queen Victoria drove through it on her way to Perthshire. It was formerly a very mean place, but has been much improved in recent times. The streets present a fair appearance, and have been lighted with gas since 1835; and a large proportion of the private houses are moderate, substantial, and neat. The former town-hall was built in 1837 on the site of the old parish church; but, proving too small, was replaced in 1868 by a new and more commodious structure. The county hall, erected in 1826 at a cost of £2000, is a handsome edifice; its prison was closed in 1878. Conspicuous on a rising-ground, the parish church was built in 1832 at a cost of £1537, and is a neat structure in the Gothic style. The Free church was built soon after the Disruption; and two U.P. churches belonged originally to the Burgher and Anti-burgher sections of the Secession. St Paul's Episcopal church, built in 1875 and consecrated in 1881, is Gothic in style, comprising chancel, nave, N transept, and tower. The general aspect of the town, combined with the landscape around, particularly with Loch Leven and the encircling hills, is very pleasing. Three lines of railway go one towards Dollar and Alloa, one towards Thornton Junction, and Dunfermline and the Forth Bridge, and one by Glenfarig towards Perth, and by Ladybank to the Tay Bridge and Dundee.

The town has two railway stations, a post office, with money order, savings bank, insurance, and telegraph departments, branches of the British Linen Co., Clydesdale, and Royal Banks, the Kinross-shire Savings Bank, several hotels, a library, a temperance hall, an agricultural society, a horticultural society, an angling association, curling, cricket, and golf clubs, a fishing club, a masonic lodge, several benevolent and religious societies, a Young Men's Christian Association, a public school and two private ones, and a Saturday newspaper, the *Kinross-shire Advertiser* (1847). An elegant public fountain was erected by subscription in 1893 on a site adjoining the town hall. Cattle, sheep, and horse fairs are held on the second Monday of June, and the fourth Monday of March, July, and October; and a hiring fair is held on the Thursday after the second Tuesday of October. The manufacture of cutlery was introduced at a comparatively early period, and acquired much celebrity; the manufacture of linen attained some importance about the middle of the 18th century, and progressed so well as, in 1790, to employ nearly 200 looms, and to produce goods to the value of £5000 a year; the weaving of cotton was introduced about 1809, and became so flourishing as to substitute power looms for hand looms; the weaving of woollen fabrics employed many hands from 1836 till 1845; and the manufacture of shawls and plaids was commenced about 1846, and promised for two or three years to be highly vigorous and remunerative. But all these departments of industry became extinct, and the buildings they had occupied ceased to be used as factories. A wool-spinning mill was erected about 1840 at Bellfield; another in 1846 at the S end of the town; a third about 1867, opposite the second, on the South Queich rivulet; a fourth and larger one about 1867 in the neighbouring

small town of Milnathort; a large linen factory about 1874 on the South Queich; and all these have continued to prosper—in one case the manufacture of shawls having been resumed. The town was formerly governed by a committee of the inhabitants, annually chosen at a public meeting; but now it is governed, under the Burgh Police Act of 1892, by a provost, 2 bailies, and 6 commissioners. The sheriff court for the county sits on every Tuesday during session; the sheriff small debt court sits on every Tuesday during session, and once a fortnight, or oftener if required, during vacation; and courts of quarter session are held on the first Tuesday of March, May, and August, and the last Tuesday of October. Kinross House, on a peninsula between the town and Loch Leven, is a large and elegant edifice, built in 1685-92 after designs by Sir William Bruce, the architect of the later portions of Holyrood. It is commonly but falsely said to have been intended for a residence of the Duke of York, afterwards James VII., in the event of the Exclusion Bill becoming law; in the 18th century was the seat of the Grahams of Kinross; and through the marriage (1816) of Helen, daughter of the last of these, is now the property of Sir Graham Graham Montgomery, Bart. of Stobo Castle, Peebles-shire. An older mansion, on a site near that of Kinross House, was for many generations the residence of the Earls of Morton, and was taken down in 1723. The original parish church stood near the extremity of the peninsula, in the south-eastern vicinity of Kinross House; and, taking from its situation the name Kinross (Gael. *ceann-rois*, 'head of the promontory'), bequeathed that name to the town and parish. Pop. (1841) 2062, (1851) 2590, (1861) 2083, (1871) 1926, (1881) 1960, (1891) 1902. Houses (1891) inhabited 414, vacant 22, building 5.

The parish is bounded N by Orwell, E by Loch Leven, SE by Portmoak, S by Cleish, and W by Fossoway. Its utmost length, from E to W, is 4¾ miles; its utmost breadth, from N to S, is 4 miles; and its area is 10,588 acres, of which 3313½ are water. To Loch Leven flow North Queich Water, running 2 miles east-south-eastward on or close to the northern border; South Queich Water, running 4½ miles east-by-southward through the interior; and Gairney Water, running 3½ miles east-north-eastward along the Cleish and Portmoak boundary. The surface, flat over its eastern half, rises gradually westward from 360 feet above sea-level to 536 at Wester Cockairney and 629 at Hillhead in the NW corner; and, being rimmed in the four circumjacent parishes by a cordon of hills, is often called the Leigh or Level of Kinross. The rocks are trap, sandstone, and limestone. The soil is partly clay, but chiefly a thin blackish loam on a gravelly bottom. About 280 acres are under wood; nearly 160 are pastoral or waste; and almost all the rest of the land is arable. Lochleven Castle is a chief antiquity, and, with Loch Leven itself, is separately noticed. Gallows Kuowe, on the Lathro estate, appears to have been a place of public execution in the feudal times, and was found in 1822 to contain thirteen old graves. About 350 silver coins, chiefly of Edward I. and Edward II. of England, were discovered in 1820 on the lands of Coldon; and an ancient circular gold seal was exhumed in 1829 on the grounds of West Green. Among its natives were the distinguished architect, Sir William Bruce, and the Edinburgh professor of pathology, Dr John Thomson. Kinross is the seat of a presbytery in the synod of Fife; the living is worth £326. The public school, with accommodation for 479 children, has an average attendance of about 330, and a grant of nearly £320. Pop. (1801) 2124, (1831) 2917, (1861) 2649, (1871) 2477, (1881) 2492, (1891) 2385.—*Ord. Sur.*, sh. 40, 1867.

The presbytery of Kinross comprises the old parishes of Arngask, Ballyngry, Cleish, Fossoway, Kinross, Muckart, Orwell, and Portmoak, with the *quoad sacra* parish of Blairingone. Pop. (1871) 9582, (1881) 8422, (1891) 8923, of whom about 2400 were communicants of the Church of Scotland.—The Free Church also has a presbytery of Kinross, with 2 churches at Strathmiglo, and

1 each at Cowdenbeath, Fossoway, Kelty, Kinross, Orwell, and Portmoak, which 8 churches together have about 1350 communicants.

Kinrossie, a village in Collace parish, Perthshire, 8 miles NE by N of Perth, under which it has a post office.

Kinross-shire, an inland county, the second smallest in Scotland, bounded W and N by Perthshire, E and S by Fife. Its utmost length, from E to W, is 14 miles; and its breadth varies between 2½ and 8½ miles. Previous to 1891 there were five parishes partly in the county of Kinross and partly in those of Fife and Perth. Of the parishes partly in Kinross-shire and partly in Fife, the Boundary Commissioners transferred the disputed Moreland portion of the Fife parish of Dunfermline to the Kinross-shire parish of Cleish, and gave the Ryelaw detached portion of the Kinross-shire parish of Portmoak to the Fife parish of Kinglassie—thus restricting Dunfermline and Portmoak to the Fifeshire and Kinross-shire portions respectively. Arngask parish, that was partly in the three counties of Kinross, Fife, and Perth, has been given wholly to Perthshire. Of the parishes partly in Kinross-shire and partly in Perthshire, Forgandenny has been placed wholly in the latter county, and Fossoway, with the exception of the portion west of the Glendey Burn and of the road leading from Muckart to Dunning, wholly in the former. Further, by substituting the New Cut of the river Leven as the county boundary for the old river channel throughout the whole distance along which that channel was formerly the county boundary, so much of the Fifeshire parishes of Kinglassie and Ballingry as lay north of the New Cut has been transferred to the Kinross-shire parish of Portmoak, and so much of Portmoak as lay to the south of it has been transferred to the Fife parish of Kinglassie. Kinross-shire has now five entire parishes, four circling round the central parish of Kinross and Loch Leven—Orwell on the north, Portmoak on the east and south, Cleish on the south, and Fossoway on the west. Loch LEVEN (3½ × 2½ miles) lies in the SE of the county at an altitude of 353 feet, and receives the North and the South Queich, with a number of lesser burns; but the drainage is partly carried eastward to the EDEN, partly northward to the FARG and the Water of MAY. From Loch Leven the surface rises eastward to White Craigs (1492 feet), southward to BENARTY (1167) and Dumglow (1241), westward to White Hill (734), and north-westward to Cloon (1134), Melloch Hill (1573), Warroch Hill (1133), Slungie Hill (1354), Dochrie Hill (1194), and Tiliery Hill (1037). Thus a cordon of hills forms the greater part of the county's boundary, and projects more or less within its borders—the Ochils on the W and NW, the Lomond Hills on the E, and Benarty and the Cleish Hills on the S. Several depressions, variously defile, glen, and valley, cut the engirdling hills into sections—a wide one on the W, leading to Dollar and Stirling; another wide one on the NE, leading to Strathmiglo and Auchtermuchty; a narrow one on the SE, traversed by the river Leven; and a considerable one on the S, leading towards Inverkeithing and Edinburgh. The central districts are occupied by Loch Leven and the Laigh or Level of Kinross; the districts between these and the hills are a diversity of slopes and braes; and the aspect of the entire county, though destitute of any of the first-class features of landscape, presents to the eye a profusion of charms both natural and artificial.

Geology.—The oldest rocks in the county are of Lower Old Red Sandstone age, and are merely a continuation of the volcanic series so well developed in Perthshire and Fife. The members of this series are arranged in the form of a low anticlinal fold, the axis of which runs in an ENE and WSW direction. The boundary between the NW part of this county and Perthshire coincides with this axis, and hence the volcanic series in Kinross is gently inclined to the SSE. The members of this series consist of lavas and volcanic breccias which form the hilly portion of the county to the W and N. The lavas have usually a purple tint, and vary in texture from close grained to highly porphyritic rocks. One

bed, which is highly porphyritic, occupies a considerable area owing to the gentle inclination of the strata. It occurs in patches which have been isolated from the main outcrop by means of denudation, and which have been left as outliers capping several hill-tops, of which the most conspicuous example is on Dochrie Hill. The volcanic breccias or agglomerates are extremely coarse, and constitute a large portion of this formation. The lowest members of the volcanic series in Kinross, which are well displayed in the river Devon at 'the Crook,' are composed of this material, and through these beds the famous gorge at Rumbling Bridge has been excavated. Many of the bombs in this agglomerate are of enormous size, and consist of the same material as the lavas. In the NE of the county, layers of sandstone are intercalated with the lavas and ashes in some of the tributaries of the North Queich, while still further to the NE the breccias assume a conglomeratic character as if they had been assorted by water. The facts clearly point to the gradual attenuation of the volcanic series towards the NE, and to the increasing accumulation of ordinary sediment in that direction.

Reference has already been made to the great changes which intervened between the Lower and Upper Old Red Sandstone periods (see geological description in article FIFE), of which additional evidence may be obtained within the county. The strata of Upper Old Red age, consisting of friable red sandstones, marls, and conglomerates, rest unconformably on the Lower Old Red volcanic series, and dip away from the volcanic platform at gentle angles. The plain of Kinross coincides in the main with the area occupied by the younger formation, and along the S margin of this plain the strata pass conformably below the cementstone series. The hills to the S and E of the county are due to intrusive sheets of basalt which now cap those eminences, and which were injected among the softer strata in late Carboniferous times. The steep slopes of the Cleish Hills, Benarty, Bishop Hill, and West Lomond have been caused by the rapid denudation of the friable sandstones and marls at the base of the hills, while the capings of basalt have shielded the lowest members of the Carboniferous Limestone series overlying them. Specimens of *Holoptychius nobilissimus* have been obtained from the Upper Old Red beds in this county, and scales of fishes are to be found in many of the stone dykes in the neighbourhood of the town of Kinross. On the flanks of the Bishop Hill these red beds are succeeded by friable yellow sandstones which form the W prolongation of the beds at Dura Den.

The Carboniferous strata represented in the county belong to the two lowest divisions of that formation, viz.: (1) the Calciferous Sandstone; (2) the Carboniferous Limestone. There are two types of the calciferous sandstones or cementstones, one of which is composed of friable yellow sandstones bearing a close resemblance to the beds at Dura Den. The other variety comprising blue and rusty yellow clays with thin bands and nodules of cementstone is met with in the extreme SW of the county on the slopes overlooking the Pow Burn. Near the top of the group, thin beds of tuff are intercalated with the cementstones which are overlaid by the lowest or 'Hurlet' limestone of the Carboniferous Limestone series. It is evident that in this neighbourhood we have the eastward prolongation of the beds forming the Campsie Fells, which are abruptly truncated by the fault at Causewayhead near Stirling. There is only a small development of the carboniferous limestone within the county which is met with in the E and S districts. The limestone which is worked on the Lomond and Bishop Hills is on the horizon of the Hurlet limestone of Stirlingshire.

The volcanic series of the Ochils is intersected by dykes of basalt running in an E and W direction, which are well seen in the neighbourhood of Damhead in the NE part of Kinross-shire.

The direction of the ice-flow on the hills overlooking the plain of Kinross is SE, but over the low ground the trend veers round to the E. The evidence supplied by

the striated surfaces and the boulder clay points to the conclusion that the Ochils must have been overtopped by the ice which radiated from the Perthshire Highlands. The greater part of the low-lying and fertile districts is covered with an extensive development of morainic gravel, which was probably accumulated during the retirement of the ice sheet. This deposit streams from the various passes in the Ochils, and spreads out in a fan-shaped form over the plain of Kinross. Loch Leven fills a depression in these gravels and the underlying boulder clay, and the various islets are merely kames or ridges of gravel peering above the water. The Devon, North and South Queich, and Gairney Waters carry a large quantity of detritus from the hills down to the plain which forms wide alluvial flats. By this means several small lochs have been entirely silted up, and Loch Leven itself is being slowly reduced in size from the same cause.

The soil, occasionally clay, more often a fine blackish loam, and oftener still of a moorish character, on the whole, however, is light or sandy, with small intermixture of clayey loam. The climate, owing to the general elevation of the land, and to the peculiar influence of the encircling hills, is cold and wet; but it has been materially improved by draining operations, and is not considered unhealthy. The average annual rainfall is 36·3 inches.

Modern agricultural improvement was of later commencement and slower progress in Kinross-shire than in most other districts of Scotland; and it had here to operate on an unusually large proportion of waste lands, and to encounter the resistance of antique usages retained from feudal times; but it eventually made such rapid progress as soon to bring the county nearly or quite into a condition of equality with the best parts of Fife, or even of great part of the Lothians. In the whole of Scotland the percentage of cultivated area is only 25·13; in Kinross-shire it rises as high as 64·2—a figure exceeded only by Fife, Linlithgow, Berwick, and Haddington shires. Farms are generally let on leases of from 14 to 21 years. The following table gives the acreage of the crops and the number of live stock in Kinross-shire in different years:—

	1882.	1893.	1895.
Corn Crops,	7,133	6,707	6,892
Green Crops,	3,609	3,429	3,526
Sown Grasses,	10,152	10,955	11,633
Permanent Pasture,	10,657	15,087	13,761
Cattle,	5,633	7,079	6,948
Sheep,	26,694	36,110	36,239
Horses,	1,042	1,101	1,179
Swine,	722	354	515

The manufactures, except in the ordinary departments of handicrafts, are all situated in Kinross and Milnathort, and will be found noticed in our articles on these towns. The only railways are the three which converge at Kinross; but these afford a fair proportion of railway communication within the county, and give ready access to every part of the kingdom. All the roads are good; and that northward through Kinross is one of the best in Scotland. The only towns are Kinross and Milnathort, and villages are Maryburgh, Kinneswood, Scotlandwell, Middleton, Crook of Devon, Dunerevic, and part of Kelty. Mansions are Blairadam House, Tulliebole Castle, Hattonburn, Kinross House, Cleish Castle, Arnot Tower, Moreland, Thomanean, Warroch, Kinneson, Shanwell, Easter and Wester Balado, Kilduff, etc.

The county is governed by a lord lieutenant, a vice-lieutenant, 6 deputy-lieutenants, a sheriff, a sheriff-substitute, and 64 commissioners of supply and justices of peace. The sheriff-court sits at Kinross on every Tuesday during session; the sheriff small-debt court is held there on every Tuesday during session, and once a fortnight or oftener during vacation; and quarter sessions are held there on the first Tuesday of March, May, and August, and on the last Tuesday of October. The County Council is composed of 20 members for as many

electoral divisions, and one representative from each of the 5 parish councils. It is divided into the following committees:—Finance Committee, Committee under Contagious Diseases (Animals) Act, Standing Joint Committee, and Valuation Appeal Committee. The police force, in 1895, comprised 7 men; and the salary of the chief-constable was £50. Kinross-shire unites with CLACKMANNANSHIRE in sending a member to parliament; and its constituency numbered 1447 in 1895. The annual value of real property was £25,805 in 1815, £46,725 in 1855, £67,101 in 1876, £70,118 in 1880, £68,250 in 1883, and £66,514 in 1895. Pop. (1801) 6725, (1821) 7762, (1831) 9072, (1841) 8763, (1851) 8924, (1861) 7977, (1871) 7198, (1881) 6697, (1891) 6673, of whom 3513 were females and 3505 were rural. Houses (1891) inhabited 1609, vacant 193, building 13.

The registration county in 1891 had a population of 6725. The number of registered poor, in the year ending 26 Sept. 1894, was 102; of dependants on these, 52. The receipts for the poor in that year were £1889; and the expenditure was £1641. The number of pauper lunatics was 24, their cost of maintenance being £567. The percentage of illegitimate births was 13·7 in 1872, 10·5 in 1881, and 5·8 in 1894.

The county lies wholly within the presbytery of Kinross and synod of Fife. Places of worship within it are 7 of the Church of Scotland, 6 of the Free Church, 4 of the United Presbyterians, and 1 of Episcopalians. In the year ending Sept. 1894, there were 8 schools (7 of them public), which, with accommodation for 1338 children, had 967 on the rolls, and an average attendance of 805. Their staff consisted of 14 certificated, 5 assistant, and 3 pupil teachers.

The county is of very ancient date. In Nisbet's *Heraldry*, the name of John Kinross is mentioned as sheriff thereof in 1252. In the *Registrum Magni Sigilli Regum Scotorum* there are many charters of David II. and Robert II. (from 1366 to 1407) in which grants of lands are described as lying '*infra viccomitatium de Kynros*'—among others being '*Castrum nostrum lucus de Levyn cum pertinentibus*' (Rob. II. 1371). That Kinross-shire became a separate county in 1426 is a pure historic fallacy, traceable probably to the fact that in that year Kinross and Clackmannan were ordered or appointed to send each a representative to the Scottish parliament. It comprised originally the three parishes of Kinross, Orwell, and Portmoak; but in 1685, in order, as the Act says, to enlarge the boundaries of the small sheriffdom then presided over by Sir William Bruce, an act of parliament was obtained by which the parishes of Cleish and Tullibole, along with portions of Arngask and Orwell, which had formerly been within the county of Perth, were added to the original sheriffdom. Its history, excepting so much of the incidents in the life of Queen Mary as are noticed in our article LOCH LEVEN, possesses no point of special interest. Its chief antiquities are noticed under CLEISH, BURLEIGH, PORTMOAK, and LOCH LEVEN.—*Ord. Sur.*, sh. 40, 1867. See J. Tait's '*Agriculture of the Counties of Clackmannan and Kinross*' in *Trans. Highl. and Ag. Soc.*, 1838.

Kintail, a village and a parish of SW Ross and Cromarty shire. The village stands on the northern shore of the head of Loch Duich, 13 miles SE of Strome Ferry station, and 8 ESE of Lochalsh village.

The parish, containing also the fishing villages of BUNDALLOCH and DORNIE, is bounded NW by Loch Long and by Lochalsh parish, N by Lochalsh, E by Kilmorack in Inverness-shire, S by Glenshiel, and SW by Loch Duich. Its utmost length, from ENE to WSW, is 19½ miles; its utmost breadth is 9½ miles; and its area is 123¾ square miles, or 78,993¾ acres, of which 238¼ are foreshore, 58 tidal water, and 1255¼ water. Narrow, curving LOCH LONG, and broader, straighter LOCH DUICH, the forked continuations of salt-water LOCH ALSH, are noticed separately, as also are the Pass of BEALACH, ELLANDONAN Castle, and the Falls of GLOMACH. To the head of Loch Long flow the river Ling or Long, running 11 miles west-south-westward from Loch Cruashie (4 × 1½ furl.; 850 feet) along the northern and

north-western boundary, and the river ELOHAIG, formed by two head-streams at an altitude of 290 feet, and running $6\frac{1}{2}$ miles west-north-westward; whilst to the head of Loch Duich flows the CROE, over its last $1\frac{1}{4}$ mile dividing Kintail from Glenshiel. The drainage, however, is partly carried towards the Moray Firth by the CANNICH, flowing 2 miles east-by-northward from Loch Glasletter or Lungard ($1\frac{1}{2}$ mile \times $2\frac{3}{4}$ furl.; 761 feet) to Loch Mullardoch ($4\frac{1}{4}$ miles \times $1\frac{1}{4}$ to 4 furl.; 705 feet), whose upper waters belong to Kintail, and lower to Kilmorack. The surface everywhere is grandly mountainous, chief elevations from W to E being Sgurr an Airgid (2757 feet), GLASVEIN (3006), *Sgurr nan Ceathreamhnan (3771), *Mam Sodbail or Carn Eige (3877), and *Sgurr na Lapaich (3773), where asterisks mark those summits that culminate on the confines of the parish. 'From' whatever quarter Kintail is entered, whether by sea from the W or by land from the E, a scene gradually unfolds itself which it is impossible to describe. Mountains of immense magnitude, grouped together in the sublimest manner, with wood and water, scars and bens intermingled, present a prospect seldom surpassed in wild beauty, and equally interesting and astonishing in the storms of winter and in the calm serenity of summer. Gneiss is the predominant rock, but granite and syenite also occur. Sheep-farming constitutes the staple industry, there being some very fine grazing lands along Loch Duich, principally green, but steep and rocky. The lord of the Barony of Kintail is Sir A. R. Mackenzie of GLENMUCK, Bart., whose father purchased it from the Mackenzies of Seaforth in 1869. Kintail is in the presbytery of Lochcarron and synod of Glenelg; the living is worth £215 with manse. The old parish church, at the village, having been declared unsafe in 1855, a new one was built containing 450 sittings. An Established mission church was erected at Dornie in 1890-91 at a cost of £400. At Dornie also is a Roman Catholic church, St Duthac's (1861; 170 sittings), erected by the late Duchess of Leeds. Dornie public, Inverinate public, Killilan public, and Dornie Roman Catholic schools, with respective accommodation for 57, —, 60, and 88 children, have an average attendance of about 45, —, 30, and 20, and grants amounting to over £40, £—, £44, and £10. Pop. (1881) 688, (1891) 538, of whom 546 were Gaelic-speaking.—*Ord. Sur.*, shs. 72, 82, 1880-82.

Kintessack, a village with a public school, in Dyke and Moy parish, Elginshire, 4 miles WNW of Forres, and under which it has a post office.

Kintillo. See KINTULLOCH.

Kintore, a small town and a parish of central Aberdeenshire. The town, standing 165 feet above sea-level, near the right bank of the Don, has a station on the Great North of Scotland railway, at the junction of the branch to Alford, from which place it is 16 miles distant, 3 SSE of Inverurie, and $13\frac{1}{4}$ NW of Aberdeen. It ranks as a royal burgh under charter of William the Lion, but in size is no more than a mere village, consisting of one well-built street, with several smaller ones. At it are a post office, with money order, savings bank, and telegraph departments, a branch of the North of Scotland bank, a National Security savings bank (1837), 2 hotels, a plain town-hall (dating from 1740), a parish church (1819), and a Free church. The town-hall belongs to Lord Kintore, who under a decree of the Court of Session is

Seal of Kintore.

bound to give the council a room for their meetings and to pay the municipal expenses of the burgh. The town has given the title of Earl in the peerage of Scotland since 1677, and of Baron in the peerage of the United Kingdom since 1838, to the family of Keith-Falconer, whose seats are KEITHHALL in Aberdeenshire and INGLISMALDIE in Kincardineshire. The burgh is governed by a provost, 2 bailies, and 6 commissioners; and it unites with ELGIN, Inverurie, Peterhead, Banff, and Cullen in sending a member to parliament. The parliamentary constituency numbered 121 in 1895, when the annual value of real property amounted to £2777. Pop. (1881) 661, (1891) 686.

The parish, containing also the Port Elphinstone suburb of Inverurie burgh, comprises the ancient parish of Kintore and part of that of Kinkell. It is bounded N by Inverurie, E by Keithhall and Fintray, SE by Kinnellar, S by Skene, and W by Kemnay. Its utmost length, from N to S, is $5\frac{1}{2}$ miles; its breadth, from E to W, varies between $1\frac{1}{2}$ and $4\frac{1}{2}$ miles; and its area is 9185 acres, of which $93\frac{1}{2}$ are water. The DON winds $6\frac{1}{2}$ miles along all the northern and the eastern border, and is fed from the interior by three or four small burns. The land adjacent to the river is low and flat, sinking in the SE to 148 feet above sea-level, and protected from inundation by embankments. The surface rises thence westward and south-westward, with frequent inequalities; and the highest ground is CRICHE or Thainston Hill (500 feet), beautifully covered with wood. Granite is the predominant rock, and has been quarried. The soil along the Don is a deep, rich, alluvial loam; on many higher grounds, is a thin, light, shallow, sandy mould; and over some considerable tracts, is either moss in natural condition or moss subjected to cultivation. Fully three-eighths of the entire area are in tillage, woods cover rather more than one-fifth, and the rest is either pastoral or waste. HALLFOREST Castle has been noticed separately. Other antiquities are remains of two stone circles; five sculptured stones, figured in Dr John Stuart's *Sculptured Stones of Scotland* (Spalding Club, 1867); and the 'Deer Dykes,' an enclosure to the NW of the town, supposed by some to have been a Roman camp. Sir Andrew Mitchell, ambassador to the court of Prussia in the time of Frederick the Great, resided at THAINSTON House; and Arthur Johnston, the celebrated writer of Latin poetry, attended the parish school. The Earl of Kintore is much the largest proprietor—three-fourths of the parish belonging to him. Kintore is in the presbytery of Garioch and synod of Aberdeen; the living is worth £265. Kintore public, Leylodge public, and Port Elphinstone public schools, with respective accommodation for 250, 86, and 218 children, have an average attendance of about 235, 55, and 145, and grants amounting to nearly £225, £52, and £136. Pop. (1801) 846, (1831) 1184, (1861) 1895, (1871) 2158, (1881) 2327, (1891) 2409.—*Ord. Sur.*, sh. 76, 1874. See Alexander Watt's *Early History of Kintore* (1864).

Kintra, a village in Kilfinichen and Kilvickeen parish, Mull Island, Argyllshire, at the extremity of the Ross of Mull, and at the northern entrance to the Sound of Iona, $6\frac{1}{2}$ miles WNW of Bunessan.

Kintulloch, a village in Dunbarny parish, SE Perthshire, $\frac{1}{2}$ mile S by W of Bridge of Earn.

Kintyre, the southernmost district of Argyllshire, consisting chiefly of a peninsula, but including the islands of Gigha, Cara, and Sanda, with several islets. The peninsula is prevented only by the narrow isthmus of Tarbert from being an island. From Knapdale it is separated by that isthmus and by East Loch Tarbert and West Loch Tarbert; it flanks the W side of Loch Fyne downward from East Loch Tarbert, and the W side of the Firth of Clyde all downward from the mouth of Loch Fyne; and it terminates, at the southern extremity, in a bold broad promontory called the Mull of Kintyre. It probably took its name (Gael. *ceann-tir*, 'head-land;') Cym. *Pentir*) either from that promontory or from its own position as a long projection southward from the Scottish mainland; it measures $42\frac{1}{2}$ miles in

extreme length from N by E to S by W, whilst its width varies between $4\frac{1}{2}$ and $11\frac{1}{2}$ miles. A chain of hill and mountain, culminating in BEN-AN-TUIRC (1491 feet), runs along its middle, with varied declivity on either side to belts of low sea-board; and it presents, from end to end, a considerable variety and large amount of pleasing landscape, containing a greater proportion of cultivated land than almost any other district of equal extent in the Highlands. Visited by Agricola in the summer of 82 A.D., Kintyre became the cradle of the Dalriadan kingdom, and competed in a measure with Iona as a centre of missionary establishments. From the time of Magnus Barefoot till the 17th century it ranked as part of the HEBRIDES, and figures in history till then as if it had been an island, always forming part of the dominions of the Lords of the Isles. In the 15th century it was an object and a scene of great contest between the Macdonalds and the Campbells; and, in 1476, it was resigned to the Crown. The Mull of Kintyre, which was known to Ptolemy as the Epidium Promontorium, to the Romans as the Promontorium Caledoniae, is the nearest point of Great Britain to Ireland, projecting to within 13 miles of Tor Point in the county of Antrim. It presents a strong front to the waves of the Atlantic, and in time of a storm exhibits a wild and sublime appearance, being overhung by Beinn na Lice (1405 feet), which commands a magnificent view. A lighthouse, built in 1787 on a point of the promontory called Merchants' Rocks, rises to a height of 297 feet above the level of the sea at high water; and shows a fixed light, visible at the distance of 24 nautical miles. In foggy weather a double-note siren is sounded every four minutes—the first a high note, the second a low one. The valuation of the district of Kintyre in 1895 was £70,265.

The presbytery of Kintyre, in the synod of Argyll, comprehends the *quoad civilia* parishes of Campbelltown, Gigha, Kilbride, Kilcalmonell, Killean, Kilmorie, Saddell, and Southend, with the *quoad sacra* parishes of Brodieck and Skipness; and its court meets at Campbelltown on the last Wednesday of March, April, September, and November. Pop. (1871) 19,201, (1881) 19,421, (1891) 19,694, of whom about 3000 are communicants of the Church of Scotland. The Free Church also has a presbytery of Kintyre, with 2 churches in Campbelltown, 10 at Carradale, Kilberry, Kilbride, Kilcalmonell, Killean, Kilmorie, Lenimore, Lochranza, Shiskan, and Whiting Bay, and 2 preaching stations at Lamlass and Southend, which 14 have over 3500 members and adherents.

See SOUTHEND, CAMPELTOWN, KILLEAN, SADDELL, and KILCALMONELL; Cuthbert Bede's *Glencreggan* (2 vols., Lond., 1861); and Capt. T. P. White's *Archaeological Sketches in Kintyre* (Edinb., 1873).

Kip, a rivulet of Innerkip parish, Renfrewshire, winding 4 miles westward till it falls into the Firth of Clyde 3 furlongs WSW of Innerkip village. In its lower course it traverses a wooded glen at the village; and it contains good store of trout, but is strictly preserved.—*Ord. Sur.*, shs. 30, 29, 1866-73.

Kipford, a hamlet in Colvend parish, Kirkcudbrightshire, on the left bank of Urr Water, immediately above its expansion into estuary, 4 miles S of Dalbeattie, under which it has a post office.

Kippen, a village and a parish in Stirlingshire. The village stands, 210 feet above sea-level, 1 mile SSW of Kippen station on the Forth and Clyde Junction section of the North British, this being 9 miles W of Stirling, $6\frac{2}{3}$ ENE of Buckleyvie, and $21\frac{1}{4}$ ENE of Balloch. It carried on extensive whisky distillation for some time into the 19th century, and it now is a small centre of country trade, having a post office, with money order, savings bank, and railway telegraph departments, and two hotels. Near the village there is a quarry of red stone. A cattle and sheep fair is held on the last Wednesday of May, and on the second Wednesday of December. The fair known as the Gowk Fair, on the second Wednesday of April, has been discontinued for some years. The Gillespie Memorial Hall, accommo-

dating 300 persons, is an Early English edifice, with lancet windows, open timber roof, and stained woodwork, and was built in 1877-78 at a cost of £1500. The parish church, a handsome Gothic structure of 1825, with a clock-tower, was greatly improved during the fifteen years' ministry of the Rev. William Wilson, being rebenched and adorned with a beautiful pulpit and with four stained memorial windows, a fifth in memory of Mr Wilson himself, and another in memory of Sir Michael Connal. The Free church was built in 1879. The Ford of Frew, where Prince Charles lost his cannon in 1746 when retreating before his enemies, is in the vicinity of the railway station, and mineral wells are in the neighbourhood. There is also a curling club.

The parish, containing also the villages of BUCKLYVIE, CAULDHAME, and ARNPRIOR, lies all compact on the S side of the Forth, and was situated partly also in Perthshire until 1891, when the Boundary Commissioners placed the parish wholly in Stirlingshire. It is bounded N by Port of Monteith and Kincardine, E by Gargunchock, S by Balforn, and W by Drymen. Its utmost length, from E by N to W by S, is $6\frac{2}{3}$ miles; its breadth, from N to S, varies between $1\frac{1}{2}$ and $3\frac{1}{2}$ miles; and its area is $11,331\frac{1}{2}$ acres, of which 76 are water, and 4966 $\frac{1}{2}$ belonged to the two Perthshire sections—the smaller containing Cauldhame, and the larger Arnprior. The winding FORTH flows $8\frac{3}{4}$ miles eastward (only $4\frac{1}{2}$ miles as the crow flies) along all the northern border; its affluent, BOQUIAN Burn, runs $3\frac{1}{4}$ miles north-north-eastward along the Gargunchock boundary through a beautiful wooded glen; and four or five lesser streams flow to the Forth from the interior, whose chief sheets of water are the Mill Dam (2×1 furl.) and Loch Leggan ($2 \times 1\frac{1}{4}$ furl.) Along the Forth a narrow belt of very fertile haugh declines to 40 feet above sea-level; a belt of carse-ground, $\frac{1}{2}$ to 1 mile in breadth, but in places broader, extends immediately behind this belt, and forms part of the great plain that flanks the Forth from Gartmore to Borrowstounness; the surface then rises, at first abruptly, afterwards very gradually, to the breadth of 1 mile or more; and the land thence onward to the southern boundary is a moorish plateau, attaining 539 feet near Muirton of Arngibbon, 600 at Kippen Muir, and 575 at Buckleyvie Muir—vantage grounds these that command magnificent views of the far-reaching strath, away to where the rocks of Craighforth, Stirling Castle, and Abbey Craig appear like islands in the distance. Red sandstone abounds on the moors, and has been largely quarried for building, and limestone occurs on the southern border. The soil of the narrow haugh is very fertile, and eminently suited to the growth of potatoes and turnips; of the carse ground is a rich clay; of the bras further S is gravelly, sandy, or loamy; and of the moors is heathy. Rather less than half of the entire area is in tillage; about 550 acres are under wood; and the rest is either pastoral or waste. Antiquities are vestiges of five or six Roman, Pictish, or feudal forts—the 'Keir hills.' A famous Covenanters' conventicle, for celebration of the Lord's Supper, was held in 1676, 1 mile to the W of Kippen village; and a Covenanting force of between 200 and 300 men was marshalled in the parish in 1679, and figured bravely in the battle of Bothwell Bridge under James Ure of Shirgarton, whose tomb is still shown in the churchyard. The principal mansions, noticed separately, are ARNGOMERY and GARDEN. Since 1875 giving off a portion to Buckleyvie *quoad sacra* parish, Kippen is in the presbytery of Dunblane and synod of Perth and Stirling; the living is worth £305. Four public schools—Arnprior, Buckleyvie, Castlehill, and Kippen—with respective accommodation for 100, 120, 191, and 95 children, have an average attendance of about 75, 90, 85, and 60, and grants of nearly £80, £95, £75, and £65. Valuation (1883) £12,759, 16s. 4d., (1892) £7560, 11s. 8d. Pop. (1801) 1722, (1831) 2085, (1861) 1722, (1871) 1568, (1881) 1449, (1891) 1486, of whom 990 belonged to the ecclesiastical parish.—*Ord. Sur.*, shs. 39, 38, 1869-71.

Kippendavie. See KIPPENROSS.

Kippenross, a mansion, with beautiful grounds, in Dunblane parish, S Perthshire, near the left bank of Allan Water, $\frac{3}{4}$ mile SSE of Dunblane. It is the seat of the Stirlings of Kippendavie. A sycamore on the lawn, known as 'the big tree of Kippenross' so long ago as the time of Charles II., measured 42 $\frac{1}{2}$ feet in girth immediately above the ground, but some years since was snapped across by a gale.—*Ord. Sur.*, sh. 39, 1869.

Kippilaw, an estate with a mansion, in Bowden parish, Roxburghshire, 3 miles SW of Newtown St Boswells.—*Ord. Sur.*, sh. 25, 1865.

Kippoch, a village in Arasaig district, Invernesshire, 40 miles W by N of Fort William.

Kirkabister, a village in Bressay island, Shetland, 2 $\frac{1}{2}$ miles SSE of Lerwick.

Kirkaig, a stream on the mutual boundary of Assynt parish, SW Sutherland, and Lochbroom parish, Ross and Cromarty. Issuing from Loch FEVIN (357 feet), the lowest of a chain of five lakes, it runs 3 $\frac{1}{2}$ miles west-north-westward to salt-water Loch Kirkaig, between Loch Inver and Enard Bay. About 2 $\frac{1}{2}$ miles above its mouth it forms a fall of 50 feet sheer descent.—*Ord. Sur.*, sh. 101, 1882.

Kirkamuir, an ancient parish of Central Stirlingshire, now incorporated with St Ninians. Its church, in the hill district, near the N bank of the Carron, 7 $\frac{3}{4}$ miles W by N of Denny, is said to have been one of the first places in which the Lord's Supper was celebrated after the Reformation, and is represented by its burying-ground, still in use.—*Ord. Sur.*, sh. 31, 1867.

Kirkandrews, a village and an ancient parish on the coast of Kirkcudbrightshire. The village at the head of little Kirkandrews Bay, 7 $\frac{3}{4}$ miles WSW of Kirkcudbright, long the scene of an annual fair, with horse and foot races, is now reduced to the condition of a small picturesque hamlet. The parish was annexed, in 1618 or earlier, to Borge; its church, an edifice of the 15th or the 16th century, is now a ruin. Within the graveyard is buried William Nicholson (1783-1843), the Galloway pedlar-poet.—*Ord. Sur.*, sh. 5, 1857.

Kirkbank, an estate, with a station, a post office under Kelso, and a mansion, in Eckford parish, Roxburghshire, on the left bank of the Teviot. The station, on the Jedburgh branch of the North British railway, is 5 $\frac{1}{2}$ miles NNE of Jedburgh.

Kirkbean, a village and a coast parish of SE Kirkcudbrightshire. The village, one of the prettiest in the South of Scotland, stands upon Kirkbean Burn, 1 mile W of the estuary of the Nith, 10 $\frac{1}{2}$ miles E by S of Dalbeattie station on the Kirkcudbright branch of the Glasgow and South-Western railway, and 12 miles S of Dumfries, under which it has a post office.

The parish, containing also the villages of Carsethorn, Southernness, and Prestonmill, is bounded N by Newabbey, E by the estuary of the NITH, S by the SOLWAY Firth, and W by Colvend. Its utmost length from N to S, exclusive of foreshore, is 4 $\frac{5}{8}$ miles; its breadth varies between 1 $\frac{3}{4}$ and 4 $\frac{3}{8}$ miles; and its area is 19,792 acres, of which 11,227 $\frac{1}{4}$ are foreshore, 113 links, and 514 $\frac{1}{4}$ water. The great extent of foreshore is due to the peculiar character of the Solway tides, which, flowing with voluminous rush, and ebbing with a general recess of their waters, have here such rapidity and force as occasionally to upset vessels, or to drag a ship's anchor a considerable distance. The coast, with a length of 9 $\frac{1}{2}$ miles, makes a sudden bend from a southerly to a westerly direction at Southernness Point. On the E side it is slightly indented by Gillfoot and Carse Bays, the latter of which, 1 mile NNE of Kirkbean village, affords safe anchorage to vessels waiting a spring tide to take them up the Nith, or encountering contrary winds when coming down. A sea-wall, 1 $\frac{1}{4}$ mile long, and in places 12 feet high, was built in 1866-67 to protect the farm of South Carse from the tide; and mostly the shore is low and sandy, with belts of links, gained slowly from the sea; but in the neighbourhood of Arbigland, midway between Carsethorn and Southernness Point, are precipices of considerable height and some singular rocks, of which the Thirl Stane forms a natural Gothic arch. Kirkbean Burn, rising on the NW
