border, runs 4 miles east-south-eastward and northward to Carse Bay. Prestonmill Burn, rising near the W border, winds 3 $\frac{1}{2}$ miles eastward, till it falls into Kirkbean Burn, $\frac{1}{2}$ mile E of the village; several smaller streams rise in the interior and run to the sea; and Southwick Water, over the last 2 $\frac{1}{4}$ miles of its course, meanders along the Colvend boundary. The surface has all a north-north-westward ascent towards 'huge CRIFTEL'S hoary top,' attaining 1632 feet above sea-level at Boreland Hill, and 1800 at Douglas's Cairn on the Newabbey border—heights that command magnificent views across the Solway Firth, to the mountains of Cumberland and Westmoreland, to the Isle of Man, and even in clear weather, to North Wales and Ireland. The rocks of the hills are primary—granite and syenite, with veins of porphyry and strata of slate; those of the plains comprise a very coarse sandstone and an inferior kind of limestone, and at Southernness show some indications of coal. The soil over a tract of 1000 acres, called the Merse, is a light and sandy conquest from the sea, nearly all of it arable; in the SE district is a rich and deep clayey loam; and elsewhere, except on the hills, is of various but very productive qualities. Nearly half of all the parish is in tillage, a fair proportion is under wood, and the rest is commonage, pastoral, or waste. Antiquities are ruins of Wreaths Castle, which belonged to the Regent Morton; the site of the Cavens Castle; the market-cross, 7 feet high, of the quondam village of East Preston; and remains of the moat and ditch of what is called M'Culloch's Castle. Admiral John Campbell (1719-90), who sailed with the circumnavigator Anson; Dr Edward Milligan (1786-1833), the distinguished lecturer on medical science in Edinburgh; and John Paul, afterwards notorious as Paul Jones (1747-92), were natives. Mausions, noticed separately, are ARBIGLAND and CAVENS. Kirkbean is in the presbytery and synod of Dumfries; the living is worth £250. The parish church, built in 1766, has a handsome tower, added in 1840. There is also a Free church; and two public schools, Kirkbean and Preston, with respective accommodation for 186 and 62 children, have an average attendance of about 95 and 45, and grants of nearly £100 and £50. Pop. (1881) 794, (1891) 714.—*Ord. Sur.*, shs. 6, 5, 1863-57.

Kirkbuddo. See GUTHRIE.

Kirkcaldy (anc. *Kyrc-aldyn*), a seaport, a royal and parliamentary burgh, the seat of a presbytery, a market and manufacturing town, and a parish, on the SE coast of Fifeshire. The town is 10 miles N of Edinburgh in a direct line, hut 26 by way of the Forth Bridge, 18 SSW of Cupar, 6 NE of Burntisland, and 33 SSW of Dundee by the Tay Bridge. The North British railway main line from Edinburgh to Dundee, etc., by the Forth Bridge approaches Kirkcaldy on the W side of the town, whose station is about ten minutes' walk from the centre of the High Street. A branch line of railway has been made to the harbour, and is useful for the coal export trade and the shipping in general. As a royal burgh, extended under an Act of 1876, it embraces, besides Kirkcaldy, Linktown in the parish of Abbotshall, Inveriel in that of Kinghorn, Pathhead, Sinclairtown, and Gallatown in that of Dysart; while as a town it is extended by the three last-mentioned, and thus well deserves its name of 'the lang toon o' Kirkcaldy.' In 1894 the burgh boundaries were again extended so as to include within the town the Beveridge Park and lands immediately adjoining. The town formerly consisted of one main street, 'which stretches like a skeleton backbone that has been twisted with spinal curvature, while a few abrupt side streets and closes lead down to the shore or away back to the suburban villas which adorn the upper and country part of the town.' This long street includes the High Street, and at its full extent almost 4 miles in length, is the oldest part of the town, and is built mainly on the flat ground along the shore. Before 1811 the appearance of Kirkcaldy was far from prepossessing. Since then, however, considerable improvements have been effected, newer streets now leading upwards from the shore.

Kirkcaldy has a town-hall, built in 1832, in the Roman style of architecture, at a cost of £5000; a corn exchange, built in 1859-60 at a cost of £2600; and public rooms for assemblies and amusements. The town has two good libraries, the chief of which, the subscription library, has about 9000 volumes, and is furnished with a reading-room. Other institutions are a chamber of commerce, a public reading-room, an agricultural society, a horticultural society, two naturalists' societies, cricket, football, curling, billiard, skating, lawn tennis, and bowling clubs, masonic lodges, good templar lodges, an institute for the relief of destitute sailors, their widows, and children, a cottage hospital, the people's club and institute, a building and heritable security company, a property investment society, a local association of the Educational Institute of Scotland, a Sabbath-school union, a branch of the Scottish Coast Mission, etc. The Swan Memorial Hall, erected in 1894 to perpetuate the memory of the late Provost Swan, and to provide rooms for the Young Men's Christian Association, cost about £3000. In 1894 steps were taken for the erection of the Adam Smith and Burgh Memorial Halls and for the Beveridge Public Hall and Free Library. The Beveridge Park, Kirkcaldy, opened in 1892, and comprising 110 acres, was the gift to the town of the late Provost Beveridge. Lying at the west end of the burgh, and containing a large and beautiful lake and a bandstand, it commands a splendid view of the Firth of Forth and surrounding country.

There are in Kirkcaldy some two dozen places of worship, divided among half as many denominations; and all of them are comparatively modern. The parish church, built in 1807, is a large handsome building in the Gothic style. Its erection cost £3000, and it contains 1635 sittings. The tower of the church, however, is 13th century. Some have referred it to as early a date as 1130, and indeed it forms the chief, and nearly the only, relic of antiquity in Kirkcaldy. St James's parish church was erected in 1842, cost £2000, and has 750 sittings. Abbotshall, Inveriel, Linktown, Pathhead, and Sinclairtown have either parish or *quoad sacra* parish churches. The chief Free church of Kirkcaldy is called St Brycedale. Its memorial-stone was laid on 15 June 1878, and it was opened for worship in August 1881. Exclusive of the site, given by Provost Swan, it cost £17,000; has accommodation for 1036 persons; and has attached to it a Sabbath-school seated for 300 persons, and a young men's hall for 150. St Brycedale is in the Early English style, and has a lofty spire 200 feet high, a stained-glass window to the memory of Douglas the missionary, a rose window, and a peal of 11 bells, which cost £1000. Free churches, besides St Brycedale, are those of Abbotshall, Dunnikier, Gallatown, Inveriel, and Pathhead. Kirkcaldy U.P. church was built in 1822, and contains 1120 sittings. Sinclairtown U.P. church is a fine modern place of worship, built in the Gothic style at a cost of £5000, seated for 800 people, and remarkable on account of its commanding site; its spire is fully 115 feet high. Its memorial-stone was laid on 12 Sept. 1881. There are also the Union and Victoria Road U.P. churches. The Baptist chapel was erected in 1822, and has 250 sittings. St Peter's Episcopal church is seated for 292 people, and was built in 1844. St Mary's Roman Catholic chapel, with 250 sittings, dates from 1869. The Congregationalists, Original Seceders, and members of the Evangelical Union, have each their special places of worship.

Kirkcaldy Burgh School, as an institution, dates as far back as 1582, though the old school buildings were not older than 1843, when they were erected at a cost of £1600. Once under the direction of the town council, from whom it received an annual grant of £100, it passed in 1872 to the burgh school board, and has accommodation for 340 scholars, with an average attendance of about 220, and a grant of over £265. In 1893 the old premises were removed, and the now High School, for classic and technical instruction (the gift to the town of Mr M. B. Nairn, chairman of Kirkcaldy School Board), erected on the site at an expense of about

£10,000. The situation is immediately opposite St Brycedale Free church, and the school is a spacious and commanding edifice. Of the three schools erected by the school board of the parliamentary burgh of Kirkcaldy at a cost of £16,000, and with estimated accommodation for 1750 pupils, the East School has an attendance of about 890 children, and earned nearly £815 of grant; the West School, with about 850 children, earned over £736 of grant; and Abbotshall School, with accommodation for 632 children and an average attendance of about 510, had a grant of £500. A new school (Dunnikier) was erected in 1894 to provide elementary instruction for that previously given in the High School. By the will of the late Robert Philip of Edenshead, £75,000 was left, the interest of which is to be applied in terms of the scheme of the Commissioners under the Educational Endowment Act of 1882. John Thomson, another native of Kirkcaldy, left a sum of money to be spent on the education of poor children, and on annuities for the support of poor inhabitants. In addition to the above, there are in the town several good private schools. The burgh school board consists of a chairman and 8 members. There are other five public schools, but they are under the management of Dysart parish school board.

Besides the old church-tower, Kirkcaldy has few antiquities. At the east end of the town and overlooking the harbour stands the grim old Castle of Ravenscraig—the Ravensheugh of Scott's ballad of *Rosabelle*. It is a ruin, but from its position, standing on a cliff which runs out into the sea, it is a very prominent and picturesque object in the landscape. At different times, especially when the improvement scheme was being carried out, sculptured arms, inscriptions, stone coffins, and human remains were dug up.

Kirkcaldy has a head post office, with money order, savings bank, insurance, and telegraph departments, 3 hotels, branches of the Bank of Scotland, British Lioen, Commercial, National, Union, and National Security Savings Banks, waterworks, a gaswork, ceme-teries, a combination poorhouse, an annual art exhibition, and 4 Liberal newspapers—the *Saturday Five Free Press* (1871), the *Saturday Fifeshire Advertiser* (1838), the *Wednesday Kirkcaldy Times* (1876), and the *Tuesday Kirkcaldy Mail* (1885). Denmark, Russia, and the United States of America have each a consul at Kirkcaldy.

The chief industries of Kirkcaldy are the manufacture of floor-cloth and linoleum, and the manufacture of linen cloth. The town is said to have had weavers working in it as early as 1672; but it is not until 1792, when flax-spinning by machinery was introduced, that Kirkcaldy made itself felt in this branch of manufacture. In 1733, 177,740 yards of linen were stamped here, a quantity doubled in the course of three years. In 1743, 316,550 yards, valued at £11,000, were woven in Kirkcaldy and the surrounding district, while the quantity woven in 1755 was worth £22,000. Forty years later the Kirkcaldy merchants had 810 looms at work for them—a number which grew in time to 2000 looms, which wove in 1783 linen cloth worth £110,000. In 1807, when steam-power was introduced, about 1,641,430 yards were woven; and eleven years after 2,022,493 yards were stamped at Kirkcaldy. Since 1860 great advance has been made, and there are now more than 25,000 spindles engaged in the linen trade, giving employment to upwards of 2000 persons. The articles chiefly made are sheetings, towellings, ticks, dowlas, etc. Net-making is carried on in one factory, which employs a large number of hands. Yarn-bleaching is also carried on to a considerable extent.

Kirkcaldy is especially the home of the kindred industries of the manufacture of floor-cloth and that of linoleum, of which the former was first made in 1847 and the latter in 1876. In 1847 the late Mr Michael Nairn built a factory at Pathhead, known at the outset as 'Nairn's Folly' for making floor-cloth 'according to the most approved methods then practised.' The original factory has been so much extended and added to that it is now the largest work of the kind in the world, while the firm of Nairn & Co.

still keeps the lead in bringing this manufacture to perfection. Floor-cloth and linoleum are made in ten factories, which employ fully 3000 hands. There is a carpet and tapestry factory at Whytebank.

The iron-works of Kirkcaldy employ about 1000 men. Several engineering firms have in their works over 200 men each, employed in making the machinery for marine engines, boilers, sugar and rice mills for the East and West Indian trade. The pottery works of Kirkcaldy require the labour of several hundred men, who make earthenware of different qualities, from coarse brown up to fine white. A market is found for the articles made chiefly in Scotland and Ireland, but they are also exported to the Continent and the Colonies. Dyeing is carried on at Kirkcaldy on a considerable scale, being a necessary adjunct of the linen trade. At one time it was usual for even the small weavers to dye their own goods, but latterly the trade has been gathered into the hands of a few, who are dyers solely. Kirkcaldy has also breweries, brass foundries, corn and meal mills, which, along with the many fine shops in the town, are dependent for their prosperity partly on it and partly on the well-peopled surrounding country, whose population is considerable owing to the numerous collieries in the immediate vicinity. A corn market is held in the town every Saturday, and fairs on the third Friday of April and October. Kirkcaldy was made a royal burgh by Charles I. in 1644; and under the Kirkcaldy

Seal of Kirkcaldy.

Burgh and Harbour Act, 1876, is governed by a provost, 4 bailies, and 22 commissioners. Burgh courts for civil and criminal cases and justice of the peace courts are held at stated periods, and sheriff courts on the Wednesday during session and at other times as fixed. New sheriff-court buildings were erected in 1893. The corporation revenue (apart from rates and taxes, which realized £13,000) amounted to £917 in 1895. Kirkcaldy unites with Burntisland, Dysart, and Kinghorn—the Kirkcaldy burghs—in returning a member to parliament. The municipal and parliamentary constituency numbered 5696 and 2951 in 1895, when the value of real property within the municipal burgh amounted to £116,704. Pop. of the parliamentary burgh (1841) 5704, (1851) 10,475, (1861) 10,841, (1871) 12,422, (1881) 13,320, (1891) 17,324; of royal and police burgh (1881) 23,288, (1891) 27,151; of entire town (1871) 18,874, (1881) 23,315, (1891) 27,155, of whom 14,412 were females. Houses (1891) inhabited 5893, vacant 224, building 36.

If we accept the legendary origin of Kirkcaldy, we must allow that the town was founded as early as the 6th century, when it is said to have been one of the 300 churches planted by St Columba. As was his wont, the first endeavour of the northern apostle would be to have a chapel erected. Besides it, a religious house would naturally spring, and then laymen would cluster around them, both for the protection and the spiritual advantages they were able to afford. This may have been the beginning of Kirkcaldy, but it is only conjecture, and it is not until 1334 that we get on the solid ground of history. In that year it was mortified by David II. to the monastery of Dunfermline, and became a burgh of regality, holding of the abbot and monastery. In 1450 it became a royal burgh, and the monastery conveyed to the bailies and town council the burgh, burgh acres, petty customs, harbour, municipal rights, etc. Nothing is known for certain of the state of the town at this time, but, as it was probably the port of the monks, it would reap advantage from the foreign trade of the period, in which churchmen often largely shared. Before the Union all the burghs on the Fife coast maintained a brisk export trade with England and the Continent in such articles as coals,

salt, salted fish; and Kirkcaldy's considerable share in this is shown by its possessing in 1644 a fleet of 100 ships. In 1644 its original charter was ratified by Charles I. as a return for services it had rendered, and the town was erected anew into a free royal burgh and free port. In the years that followed 1644, its prosperity received severe checks. Not fewer than 94 vessels, of the aggregate value of £53,791, were lost in the course of a few years, either destroyed at sea or captured by the enemy. This loss was aggravated by another sustained at Dundee, when £5000 worth of goods, stored there for safety, fell into the hands of General Monk, and by a third which arose from some of its wealthier citizens finding it impossible to recover certain sums of money lent to the Committee of Estates. Kirkcaldy suffered in the loss of its men as well as of its money, 480 of its citizens having been slain in the battles against Montrose, of whom 200 are said to have been killed at Kilsyth alone.

These losses went far to cripple the town. The suspension of the trade with Holland after the Restoration seemed all that was wanted to finish the commercial ruin of Kirkcaldy. As a consequence, we are not surprised to find it praying the Convention of Burghs, in 1682, to consider its poverty, and ease it of its public burdens. During the civil wars, however, the burgh had acted in a way that displeased the court, and therefore, not only was its petition disregarded, but its annual assessment was increased by the addition of 200 merks. In 1687 a new application met with a better fate. In the following year a committee of investigation was appointed, and reported that, owing to the death of many substantial merchants and shippers, the decay of trade and the loss of ships, the royal customs were diminished by half, and 'that all the taxations imposed on the town could do no more than pay the eight months' cess payable to the king.' Before the result of this inquiry was declared, the Revolution intervened and changed the whole aspect of affairs. The men of Kirkcaldy had always been on the side of civil and religious liberty, and they now reaped the fruit of their steady adherence to the constitutional rights of the subject. The Earl of Perth, who was acting as governor, had espoused the Stuart cause too warmly to feel safe in Scotland after the success of the Revolution. He attempted, therefore, to escape, and got as far as almost to the mouth of the Firth of Forth, but he was pursued and captured by a Kirkcaldy vessel, brought back to the town, and kept a prisoner until handed over to the Earl of Mar. For this and other services, £1000 Scots were taken off the yearly assessment. The Revolution brought a revival of trade, which was checked at the Union by the taxes, customs, and restrictions imposed upon commerce by the English. From this and other reasons, the shipping of Kirkcaldy fell so low that in 1760 it employed only one coaster of 50 tons and two ferry-boats of 30 tons each.

On the return of peace in 1768, the shipping trade revived, so that in 1772 there belonged to the port 11 vessels, carrying 515 tons, and managed by 49 sailors. Twenty years later, its shipping consisted of 26 square-rigged vessels, 2 sloops, and 2 ferry boats, carrying 3700 tons, and manned by 225 sailors. Its chief intercourse was with Holland and the Baltic ports, but it traded also with the West Indies, America, and the Mediterranean. Since 1792 the number of its ships has varied at times in a notable, if rather inexplicable, manner, as the following table shows:—

Year.	No of Vessels.	Tonnage.
1831	95	10,610
1841	76	7,458
1868	35	3,689
1871	29	3,496
1880	21	2,290
1883	18	1,565
1892	21	1,222
1895	25	1,231

Kirkcaldy has a fishing fleet of 24 boats, with 40 fisher men and boys. As a port, it extends from Fife Ness on the E to Downey Point on the W, and comprises the creeks of Crail, Cellardyke, Anstruther, Pittenweem, Elie, Largo, Leven, Methil, Buckhaven, Wemyss, Dysart, Kinghorn, Burntisland, Aberdour. For a long time Kirkcaldy sent vessels to the whale-fishing, but the connection with that industry has now altogether ceased. A steamship, owned in Kirkcaldy, plies between it and London. Kirkcaldy harbour, situated near the E end of the royal burgh, was considerably improved in 1843. Though almost dry at low water, it is at full tide capable of admitting vessels of large burden. Not less than £40,000 were spent in constructing an outer harbour of 1½ acres, an inner harbour of 3 acres, a dock of 2½ acres, and extensive wharfrage. A new harbour at Seafield, to the west of the town, constructed by the Caledonian Railway Co., was in an advanced stage, when it had to be abandoned owing to the bill having been thrown out by Parliament. The North British Railway Co., who opposed the bill, had to pay over £90,000 as compensation. A new deep-water harbour in the vicinity of Ravenscraig, at the east end of the town, is proposed. Towards its construction the North British Railway Co. are to provide £150,000, or half the necessary capital, provided the corporation raise the other £150,000.

Earliest of the celebrated natives of Kirkcaldy was Sir Michael Scott of BALWEARIE, who lived in the 13th century, and on account of his researches in natural science—wide for his day—was held a wizard. Henry Balnaves (died 1579) held different political appointments, having been Lord of Session, Secretary of State, Depute-Keeper of the Privy Seal. George Gillespie (1613-48), his brother, Patrick (b. 1617), principal of the University of Glasgow, and John Drysdale (1718-88) were well known as learned divines, who took an active part in the affairs of the Church. Robert Adam (1728-92) was a famous architect of his day, having been the designer of the University and Register House of Edinburgh and the Glasgow Royal Infirmary. He sat as member of parliament for Kinross in 1768, and on his death was buried in Westminster Abbey. Adam Smith (1723-90) was educated at Kirkcaldy Grammar School, Glasgow University, and Balliol College, Oxford. He was appointed professor of Logic in Glasgow University in 1751, and of Moral Philosophy in 1752, from the last of which chairs he retired in 1764 in order to accompany the young Duke of Buccleuch on a continental tour. In 1766 he settled down quietly in his birthplace to write his great work, *An Inquiry into the Nature and Causes of the Wealth of Nations* (1776). Among other of his works may be mentioned as next important to *The Wealth of Nations*, his *Theory of the Moral Sentiments* (1759). For the purpose of erecting a monument to his honour £10,000 was subscribed (1894) in Kirkcaldy.

Three men deserve mention as inhabitants of Kirkcaldy at one time or another, one of them because of his peculiar pulpit gifts, and the other two on account of the high eminence they afterwards attained to. The first of these was Mr Shirra, minister of the Burgher Kirk of Kirkcaldy in 1750. His peculiar style of preaching, his intense earnestness, and the broad vein of humour that ran through his ministrations in the pulpit and out of it, are proverbial. Thomas Carlyle and Edward Irving may be mentioned together because of the close connection between them that arose from their residing in Kirkcaldy at the same time. When Carlyle went to the 'lang toon' in 1816 as a teacher of mathematics, etc. in its burgh school, he was welcomed by Irving in the most cordial fashion, and given 'will and waygate' over all the latter's possessions. Carlyle in a certain way supplanted Irving, but that was not able to abate even to the slightest degree the friendship that existed between them. 'But for Irving,' wrote Carlyle, 'I had never known what the communion of man with man means.' And this communion was drawn closer by their frequent intercourse with one another in the wood of Raith or on the beach of Kirk-

caldy—'a mile of the smoothest sand'—upon which they were wont to walk in the moonlight, or in Irving's 'litterly library' amid French and Latin classics. Doubtless it was mainly owing to Irving that Carlyle was able to say in after years, 'I always rather liked Kirkcaldy to this day.' Carlyle spent three years there, and Irving spent seven years. After the latter had become a famous preacher, he revisited it in 1828 and preached in the parish church, his audience being so large that the gallery fell and killed 28 people.

The parish of Kirkcaldy is now of comparatively small extent, but till 1650 it comprised the parish of Abbots-hall, two detached portions of which, situated at East Sineaton and comprising 27 and 4 acres respectively, were transferred by the Boundary Commissioners in 1891 to Kirkcaldy parish. Bounded N by Auchterderran and Dysart, E by Dysart and the Firth of Forth, S by Kinghorn, and W by Abbotshall, it has an utmost length from N to S of 2½ miles, a varying breadth of 6¼ and 8½ furlongs, and an area of 1279½ acres, of which 71¼ are foreshore. The coast-line, 7¼ furlongs in extent, is level and sandy; adjacent to the beach is a belt of flat land; and the surface thence inland first makes a somewhat abrupt ascent, and then continues to rise in easy gradient, till near Dunnikier House it attains an elevation of 316 feet above sea-level. The rocks belong to the Carboniferous Limestone series, but include some intersecting trap-dykes. Coal occurs in seams from 9 inches to 3½ feet thick, and at Dunnikier has been worked to a considerable depth. Iron ore, in globular masses, lies dispersed through much of the coal-field; and was formerly worked for the Carron Company. The soil, in the low tracts light, on the southern part of the higher grounds a dry rich loam, on the grounds farther N is clayey, cold, and wet. About 180 acres are under wood; and all the rest of the land, except what is occupied by houses and roads, is in tillage. Dunnikier House, noticed separately, is the only mansion, and its proprietor is much the largest in the parish. The seat of a presbytery in the synod of Fife, this parish is divided ecclesiastically into Kirkcaldy proper and St James's *quoad sacra* parish, the former a living worth £330. Landward valuation (1883) £7273, 11s. 2d., (1893) £2506, 10s. 4d. Pop. of entire parish (1801) 3248, (1821) 4452, (1841) 5275, (1861) 6100, (1871) 7003, (1881) 8528, (1891) 9994, of whom 6849 were in the ecclesiastical parish of Kirkcaldy, and 3145 in that of St James.—*Ord. Surv.*, sh. 40, 1867.

The presbytery of Kirkcaldy comprehends the *quoad civilia* parishes of Abbotshall, Auchterderran, Auchtertool, Burntisland, Dysart, Kennoway, Kinghorn, Kinglassie, Kirkcaldy, Leslie, Markinch, Scoonie, and Wemyss, the *quoad sacra* parishes of Invertiel, Kirkcaldy-St James, Lochgelly, Methil, Milton of Balgonie, Pathhead, Prinlows, Raith, Thornton, and West Wemyss, and the chaperies of Buckhaven and Sinclairtown. Pop. (1831) 64,775, (1891) 76,483, of whom about 15,000 are communicants of the Church of Scotland. The Free Church has a presbytery of Kirkcaldy, with churches of Buckhaven, Burntisland, Dysart, Kennoway, Kinghorn, Kinglassie, Invertiel, Abbotshall, Gallatown, Pathhead, Dunnikier, St Brycedale, Leslie, Leven, Lochgelly, Markinch, Methil, and East Wemyss, with a mission station at Binnend, which 18 churches together have about 5700 communicants. The United Presbyterian Church has a presbytery of Kirkcaldy, with 4 churches in Kirkcaldy, 2 in Leslie, 2 in Buckhaven, and 12 in respectively Anstruther, Burntisland, Colinsburgh, Crail, Dysart, Innerleven, Kennoway, Kinghorn, Largo, Leven, Markinch, and Pittenweem, which 20 churches together have about 5500 members.

Kirkchrist, an ancient parish in the S of Kirkcudbrightshire, now forming the southern district of Twynholm parish. It remained a separate parish till at least 1605, probably till 1654; but was certainly annexed to Twynholm long before 1684. Its church and churchyard were situated on the right bank of the river Dee, opposite the town of Kirkcudbright; and the church is still represented by some ruins, while the churchyard

continues to be in use. A nunnery anciently stood somewhere on the southern border, and is commemorated in the names of two farms and a mill—High Nunton, Low Nunton, and Nunmill.—*Ord. Sur.*, sh. 5, 1857.

Kirkchrist, Aberdeenshire. See CHRIST'S KIRK.

Kirkcrough, a modern mansion near the coast of Anwoth parish, Kirkcudbrightshire, 6 miles SW of Gatehouse-of-Fleet. It belongs to the McCulloch family.—*Ord. Sur.*, sh. 4, 1857.

Kirkcolm, a village and a parish in the N of the Rhinns district of Wigtownshire. The village stands near the W shore of Loch Ryan, 6 miles NNW of Stranraer, under which it has a post office, with money order, savings bank, and telegraph departments. It is sometimes called Stewarton, after a Galloway family who at one time were chief proprietors in the parish; and it takes the name of Kirkcolm from the dedication of its ancient church to St Columba.

The parish is bounded W and N by the Irish Sea, E by Loch Ryan, and S by Leswalt. Its utmost length, from N to S, is 6½ miles; its utmost breadth, from E to W, is 4¾ miles; and its area is 14,165¾ acres, of which 759 are foreshore and 83½ water. The coast, along the WNW and N, with an aggregate length of 8 miles, is all a breastwork of bold and ridgy rocks, partly torn with fissures, and slightly diversified with baylets and small headlands. Rising in places to over 100 feet above sea-level, it includes at its NW extremity, CORSEWALL Point, surmounted by a lighthouse; whilst, at the entrance to Loch Ryan, it terminates in the round headland of Milleur or Kirkcolm Point, being here and at Clachan-Heughs pierced deeply with caves. The coast along Loch Ryan, 5¾ miles in extent, over the first 3 resembles the western and northern; then, opposite Kirkcolm village, projects south-eastward into Loch Ryan a shelving bank of sand called the Scar, 1½ mile long, and not quite covered by the sea at the highest spring tides. Beyond this is a fine natural basin, the Wig, flanked by the Scar on the lochward side, and large enough to shelter a number of small vessels; and thence to the Leswalt boundary the shore is all low and sandy. The interior offers a gently undulating aspect, with numerous rising grounds or small hills of such easy ascent as to admit of ploughing to the summit. The highest, Tor of Craigoch (409 feet), rises right on the southern boundary; and from it the surface declines in gentle gradients to the western and eastern shores. Its streams arc all mere rivulets; and its principal sheet of water is shallow Loch Connell, lying ¾ mile WSW of Kirkcolm village, and measuring 3¼ furlongs either way. The predominant rocks are Silurian. The soil, on a narrow belt round the shore, is thin, and either sandy or gravelly; here and there is mossy and moorish; but mostly is either a fertile loam, a deep clay, or a mixture of the two. About one-eleventh of the entire area is waste; plantations cover some 100 acres; and nearly all the rest is either regularly or occasionally in tillage. The chief antiquities are noticed under CORSEWALL; and a curious cist was discovered on Ervie farm towards the close of 1875. Corsewall is the only mansion. Giving off a portion to Leswalt ecclesiastical parish, Kirkcolm is in the presbytery of Stranraer and synod of Galloway; the living is worth £322. The parish church, built in 1824, was renovated in 1893. There is also a Free church; and Douloch public, Kirkcolm public, and the village school, with respective accommodation for 105, 168, and 49 children, have an average attendance of about 65, 100, and 35, and grants of nearly £55, £105, and £35. Pop. (1801) 1191, (1841) 1973, (1861) 1860, (1871) 1948, (1881) 1847, (1891) 1705, of whom 1518 were in the ecclesiastical parish.—*Ord. Sur.*, shs. 3, 7, 1856-63.

Kirkconnel, a village and a parish in Nithsdale, NW Dumfriesshire. The village, standing on the Nith's left bank, 530 feet above sea-level, has a station on the Glasgow and South-Western railway, 3¼ miles WNW of Sanquhar and 29½ NNW of Dumfries. Successor to the village or church hamlet of old Kirkconnel, 2 miles NNW, it is a pleasant little place with an inn and a post office under Sanquhar. Pop. (1881) 464, (1891) 543.

The parish, containing also part of Crawick Mill village, is bounded N by Crawfordjohn in Lanarkshire, E and SE by Sanquhar, and W and NW by New Cumnock in Ayrshire. Its utmost length, from E to W, is 8 miles; its utmost breadth, from N to S, is 6½ miles; and its area is 26,808 acres, of which 148¼ are water. The NITH, entering from New Cumnock, flows 5¾ miles east-south-eastward through the interior, then 2 miles along the Sanquhar boundary; and here it is joined by GLENQUHARRY Burn (running 4½ miles southward), by KELLO Water (running 5¾ miles east-north-eastward along the Sanquhar boundary), by CRAWICK Water (running 8 miles south-south-westward along the Sanquhar boundary), and by sixteen lesser tributaries; whilst Spango Water, one of the Crawick's head-streams, flows 7¾ miles eastward through the northern interior. Two mineral springs on the farm of Rigg, 1½ mile W by S of the village, resemble but excel the waters of Merkland Well in Lochrutton parish and Hartfell Spa near Moffat, yet have never acquired much celebrity. In the extreme SE, at the Crawick's influx to the Nith, the surface declines to 440 feet above sea-level, and chief elevations to the right or S of the Nith are White Hill (1331 feet), *Dun Rìg (1648), and *M'Crierick's Cairn (1824); to the left or N, Black Hill (1589), Todholes Hill (1574), Cocker Hill (1653), *Mount Stuart (1567), Kirkland Hill (1670), and *Nivistop Hill (1507), where asterisks mark those summits that culminate on the confines of the parish. These hills, forming part of the broad range that runs across the South of Scotland from the Berwickshire to the Ayrshire coast, are so grouped and distributed as both to offer much diversity of contour and to enclose a number of ravines and hollows, yet they are mostly so moorish, mossy, or thinly clothed with herbage, as to exhibit a general aspect of bleakness and desolation. The banks and immediate flanks of the Nith alone contain nearly all the arable lands and the seats of population; and these, inclusive of gentle slopes on either side from the hills, have a mean breadth of 1½ mile. The rocks are partly carboniferous, but chiefly Silurian. Coal abounds, but has never been largely worked; limestone and ironstone occur; and lead is supposed to exist in several hills towards Crawick Water. The soil of the arable lands along the Nith is variously deep rich alluvium, a light gravelly mould, loam, clay, and a mixture of clay and moss. Rather less than one-fourth of the entire area is in tillage; 186 acres are under wood; and the rest of the land is either pastoral or waste. Cairns and a reach of the DEIL'S DYKE, running S of the Nith, are the only antiquities; but St Connell, to whom the original church was dedicated, is said to be buried on Halfmerk Hill, 3 miles NNW of the village, where a memorial cross of the Iona pattern has been erected by the Duke of Buccleuch. Natives have been James Hislop (1798-1827), author of *The Cameronian's Dream*, and the 'surface man' poet, Alexander Anderson (b. 1845); whilst George Jardine (1742-1827), professor of logic in Glasgow University, was parish schoolmaster in 1759. The Duke of Buccleuch is much the largest proprietor. Kirkconnel is in the presbytery of Penpont and synod of Dumfries; the living is worth £300. The parish church, at the village, was built in 1729, and enlarged about 1806. Two public schools, Cairn and Kirkconnel, with respective accommodation for 44 and 210 children, have an average attendance of about 20 and 145, and grants of over £30 and £148. Pop. (1801) 1096, (1841) 1130, (1861) 996, (1871) 952, (1881) 1019, (1891) 1087.—*Ord. Sur.*, sh. 15, 1864.

Kirkconnel, an ancient parish in Annandale, Dumfriesshire, annexed, after the Reformation, to Kirkpatrick-Fleming. Its graveyard, on a meadow within a fold of Kirtle Water, 2½ miles NNE of Kirtlebridge station, contains the ashes of 'Fair Helen of Kirkconnel Lee,' and those of her lover, Adam Fleming, in saving whose life she lost her own, from the bullet of her less favoured snitor, a Bell of Blacket House. Whether her own name was Bell or Irving is hard to determine, but tradition seems to refer the tragedy to

some time in the 16th century; and it forms the theme of that sweetest of Scottish ballads—

'I wish I were where Helen lies,
Night and day on me she cries;
Oh that I were where Helen lies
On fair Kirkconnell Lee !'

Bell's Tower, the home of Fair Helen, was demolished in 1734.—*Ord. Sur.*, sh. 10, 1864.

Kirkconnell Hall, a mansion, in Hoddam parish, Dumfriesshire, 5 furlongs N of Ecclefechan.

Kirkconnell House, an old mansion, surrounded with fine trees, in Troqueur parish, E Kirkcudbrightshire, on the right bank of the river Nith, 2 miles NE of New-abbey, and 7 S by E of Dumfries. Attached to it is a neat Roman Catholic chapel (1823).—*Ord. Sur.*, sh. 6, 1863.

Kirkconnell Moor. See TONGLAND.

Kirkcormack, an ancient parish in Kirkcudbrightshire, now incorporated with Kelton, and probably named after St Cormac, superior of the Irish monastery of Durrow about the middle of the 6th century. Its small church, on the left bank of the river Dee, $4\frac{1}{2}$ miles SW of Castle-Douglas, is represented by ruins; and the churchyard, containing a tombstone of 1534, is still partly in use. Close to it was St Ringan's Well.—*Ord. Sur.*, sh. 5, 1857.

Kirkcowan, a village and a parish of N Wigtownshire. The village stands on the left bank of Tarf Water, $7\frac{1}{2}$ miles NW of Wigtown, and 3 furlongs E by S of Kirkcowan station on the Dumfries and Portpatrick joint railway, this being $6\frac{1}{2}$ miles WSW of Newton-Stewart. Serving in a small way as a centre of country trade, it finds employment in two neighbouring woollen mills, and has a post office, with money order, savings bank, and railway telegraph departments, 3 hotels, and a bowling-green. Pop. (1881) 671, (1891) 661.

The parish is bounded N by Colmonell in Ayrshire, E by Penninghame and Wigtown, SE by Kirkcinner, SW by Mochrum, and W by Old Luce and New Luce. Its utmost length, from NNW to SSE, is $14\frac{1}{2}$ miles; its breadth varies between 9 furlongs and $6\frac{1}{2}$ miles; and its land area is 35,864 acres. The BLADENOCH, issuing from Loch MABERRY ($1\frac{1}{4}$ mile \times 3 furl.; 405 feet), at the meeting-point with Colmonell and Penninghame, winds $16\frac{3}{4}$ miles south-south-eastward along all the eastern boundary; and TARF Water, from just below its source, runs $16\frac{1}{2}$ miles south-south-eastward along most of the western boundary, and then strikes 4 miles east-south-eastward through the interior, till it falls into the Bladenoch at a point $1\frac{1}{2}$ mile ESE of Kirkcowan village. Several considerable burns rise in the interior, and run to either the Bladenoch or Tarf Water. Lakes, other than Loch Maberry, are Loch Clugston ($3 \times 1\frac{1}{4}$ furl.), in the SE; Black Loch (2×1 furl.), Loch Heron ($3 \times 1\frac{1}{2}$ furl.), and Loch Ronald ($5 \times 2\frac{3}{4}$ furl.), in the W; and seven or eight smaller ones, dotted over the centre and the N. At the confluence of Tarf Water with the Bladenoch the surface declines to 95 feet above sea-level, thence rising south-westward to 306 feet at Mindork Fell, and north-north-westward to 579 at Barskeoch Fell, 702 at Culvennan Fell, 742 at Eldrig Fell, 604 at Urrall Fell, and 1000 at Craighair Fell. Most of the land is either moor, moss, or bleak pasture; and much of it expands into broad hill plateau. Granite and greywacke are predominant rocks, and both have been largely worked. The soil is generally thin and poor. Little more than one-fifth of the entire area is either regularly or occasionally in tillage; wood covers 315 acres; and all the rest of the parish is either pastoral or waste. Antiquities are the site of Mindork Castle and traces of the old military road. CRAIGHLAW House, noticed separately, is the principal residence. Kirkcowan is in the presbytery of Wigtown and synod of Galloway; the living is worth £308. The parish church, at the village, is a handsome edifice of 1834, and was renovated in 1890. There is also a U.P. church; and two public schools, Darnow and Kirkcowan, with respective accommodation for 35 and 239 children, have an average attendance of about 20 and 185, and grants of nearly £30 and £150.

Pop. (1801) 787, (1831) 1374, (1861) 1434, (1871) 1352, (1881) 1307, (1891) 1263.—*Ord. Sur.*, shs. 4, 8, 1857-63.

Kirkcudbright (generally pronounced *Kircoo'brie*), a town and a parish of S Kirkcudbrightshire. The capital of the county, and a royal and parliamentary burgh, the town stands on the left bank of the river Dee, here broadening into Kirkcudbright Bay, but 6 miles above its influx to the open sea. By road it is 33 miles ESE of Newton-Stewart and 98 SSW of Edinburgh, whilst, as terminus of a branch (1864) of the Glasgow and South-Western railway, it is $10\frac{1}{2}$ miles SSW of Castle-Douglas and $29\frac{3}{4}$ SW of Dumfries. The view of the town and the country around it, as seen from the tower of the old Court-house, is thus described in Harper's *Galloway*:—'Immediately below is the "auld town," embosomed in its sylvan surroundings. Towards the N the scene is truly delightful, the banks of the Dee, from Tongland to the sea, being rich in natural beauty. In the foreground is the river, sparkling in the sun, and winding like a silver thread among the green meadows; while the grounds around Compstone, sloping gently to the river's margin, are clothed with plantations of great freshness and beauty. Farther on, towards the Vale of Tarf, the eye passes over a succession of knolls, well cultivated fields, and hills, their sides and summits interspersed with clumps of wood and fine belts of planting, backed by the brown heathy peaks of Kirkconnell and Barstobrick. Westward we have the sparsely-wooded grounds and rich alluvial pasturages of Borgue, with the river in the middle distance, still forming an agreeable rest to the eye; and, almost lost in the silvery haze, we discern the broad brow of Cairnsmore-of-Fleet. On facing to the right about, the eye rests on marine and inland views of great extent and loveliness. Before us is the river, broadening out so as to resemble, as it is called, a lake. To the right the quiet burying-ground of Kirkchrist, the high lands and thriving plantations of Kirkeoch and Senwick sloping gradually to the bay; and to the left the precipitous cliff of the Torrs Point presents a bold headland. The Ross Isle, with its lighthouse, lies in the mouth of the bay, while the densely-wooded peninsula of St Mary's Isle invades the estuary with its sylvan foliage. The objects of historic and traditional interest in the neighbourhood are well worthy of a visit.'

The town of old formed almost a square, each side 350 yards long, with a wall and a tidal moat around it, and a gate at each end of its one main street. The 'Meikle Yett' stood on into the 18th century, and traces remain of the moat; but the general aspect of the place is modern, its six or seven streets, built at right angles with one another, being neat and regular; and a number of pretty villas and cottages have lately sprung up in the neighbourhood of the station. A gas-work was started in 1838, gravitation water having been introduced in 1763. In 1893 a service reservoir capable of holding 100,000 gallons was constructed on the Boreland Burn, and pipes laid to convey the water to the town. The old Court-house and Jail, now partly used as a volunteer drill-hall and armoury, and partly as a fire-engine station, is a quaint 16th century edifice, whose tower and spire were built with stones from the ruins of Dundrennan Abbey. Within it the burgh wassail-bowl, of walnut wood, hooped with brass, and holding 10 gallons, is brought out on days of great rejoicing, the last occasion on which it was used being the marriage of the Earl of Selkirk in 1879; and in front of it stands the ancient market cross. The Artillery Volunteers' drill-hall is in Castle Street. A new Town-hall, erected in 1878-79 at a cost of £3500, is a Grecian building, containing, besides the ordinary offices, a public hall, the library and reading-room of the Kirkcudbright Institute, and a museum. The museum, opened in 1881, forms one of the chief attractions of the town. The County Buildings, a handsome castellated pile erected in 1868 at a cost of £8583, contain a court-hall seated for 150 persons, the Kirkcudbright law library, etc.; behind are the offices of the county constabulary. Atkinson Place is a handsome square of buildings erected by the Established

Church kirk-session at a cost of £3000, for the purpose of affording a good comfortable dwelling at a cheap rent to deserving poor of the parish, from funds given by the late Edward Atkinson Esq., a native of the burgh. The Academy, erected in 1815 at a cost of £1129, is a large plain building, with a portico in front, and with upper and lower schools. Among its masters have been the Rev. William Mackenzie (1790-1854), a native of the burgh and author of *The History of Galloway* (2 vols., Kirke., 1841), and James Cranstoun, LL.D., translator of Catullus and Propertius. Johnstone Public School, built in 1848 at a cost of £2000, and endowed with £3500 more, consists of a centre, wings, and a handsome tower. The Female School stands on the Moat Brae, near the old Castle. A monastery for Franciscans or Grey Friars, founded at Kirkcudbright in the first half of the 13th century, is very obscurely known to history in consequence of its records having been carried off at the Reformation. John Carpenter, one of its monks in the reign of David II., was distinguished for his mechanical genius; and by his dexterity in engineering he so fortified the castle of Dumbarton as to earn from the King a yearly pension of £20 in guerdon of his service. In 1564 the church of the friary was granted by Queen Mary to the magistrates of the town to be used as a parish church; and when in 1730 it became unserviceable, it yielded up its site to a successor for the use of the united parish. The ground occupied by the monastery itself, and the adjacent orchards and gardens, were given to Sir Thomas Maclellan of Bombie. The present parish church, erected in 1836-38 at a cost of £7000, is a large and handsome structure, with nave, transepts, 1500 sittings, a clock tower and spire, prettily planted grounds, and an organ introduced in 1886. The parish church hall, opened in 1892, was erected at a cost of £2500. A fine Free church (1872-74; 712 sittings), Pointed Gothic in style, cost over £5000, and has stained-glass windows, a spire 120 feet high, and a commodious hall at the back. The U.P. church was built in 1880; and there are also a Roman Catholic church (1886) and an iron Episcopal church (1879). A handsome monument, in the form of a granite wheel-cross, was erected in 1885 to the memory of the late Earl of Selkirk by his widow. The Mackenzie Hall (founded by John Mackenzie, Esq.), formerly the old U.P. church, is used for lectures, concerts, etc.

Not many paces W of the parish church stands the ruinous, ivy-mantled castle of Kirkcudbright, built in 1582 by Sir Thomas Maclellan of Bombie, the ancestor of the Lords Kirkcudbright. It is a strong, massive building, lifting its gables and chimneys so boldly into view as to give, conjointly with the tower of the jail, distinctiveness of feature to the burghal landscape; and, at the time when it was reared, it must have been a splendid, as it is still a spacious, edifice. A little W of the town, very near the river, are some mounds surrounded by a deep fosse, the remains of a very ancient fortified castle. The tide probably flowed round it in former times, and filled the fosse with water. The castle—now vulgarly called Castledykes, but known in ancient writings as Castlemains—belonged originally to the Lords of Galloway, when they ruled the province as a regality separate from Scotland; and seems to have been built to command the entrance of the harbour. Coming into the possession of John Baliol as successor to the Lords of Galloway, it was, for ten days during July 1300, the residence of Edward I. and his queen and court; and passing into the hands of the Douglasses, on the forfeiture of Edward Baliol, it remained with them till 1455, when their crimes drew down upon them summary castigation. In that year it was visited by James II., on his march to crush their malign power. Becoming now the property of the Crown, it offered, in 1461, a retreat to Henry VI. after his defeat at Towton, and was his place of residence while his Queen Margaret visited the Scottish Queen at Edinburgh. In 1509, James IV., by a charter dated at Edinburgh, gifted it, along with some lands attached, to the magistrates for the common good of the inhabitants.

Kirkcudbright has a post office, with money order, savings bank, and telegraph departments, branches of the Bank of Scotland and the National and Commercial Banks, 2 hotels, billiard, cricket, football, rowing, and bowling clubs, a lifeboat-station, an agricultural society, a reading-room, and a weekly Friday market. The main support of the town arises from the county law business, from the residence of a considerable number of annuitants or small capitalists, and from the retail supply of miscellaneous goods to the surrounding country. Manufactures and commerce have always been on a limited scale. The old smuggling trade of the Solway Firth long exerted a baneful influence on the town's prosperity; and towards the close of the 18th century Kirkcudbright, by a strange infatuation, refused to become a seat of cotton manufacture and sent away its would-be benefactors to found their cotton-mills at Gatehouse-of-Fleet. Soon after, a local attempt was made to establish both cotton and woollen manufactures, but it proved a failure; and manufactures of gloves, of boots and shoes, of leather, of soap and candles, of malt liquors, and of snuff have also at various times been introduced, but, taken as a whole, have had little or no success. Commerce chiefly consists in the export coastwise of agricultural produce, and in the import of coal, lime, and grain, with occasional cargoes of timber and guano from America. The port ranks merely as a creek of Dumfries; and the harbour, in consequence of the almost complete recession of the Solway tide, is suitable only for small vessels. Nevertheless, in regard to accessibility, spaciousness, and shelter, it is much the best harbour on the S coast of Scotland, comprising all the reach from the sea to the town, and extending over a length of 6 miles. It opens from the sea, in what is called Kirkcudbright Bay, with a width of 1½ mile; it contains, on the W side of its mouth, the islet of Little Ross, surmounted by a lighthouse, and flanking a roadstead with 16 feet at low and 40 at high water; but it suffers complete recession of the tide from a line 1½ mile above Little Ross islet, and is embarrassed by a bar 1½ mile higher up at St Mary's Isle. Still it has a depth of 20 feet over that bar at ordinary spring tides; and, at the town, it is provided with a small dock, and has a fine shelving beach, offering to vessels the alternative of lying dry on the sands, or of riding at anchor in the channel, with 8 feet of water in ebb and 28 in the flood. A handsome iron bridge, of the bowstring lattice construction, was erected over the Dee in 1865-68 at a cost of £10,000. It is 500 feet long by 23 broad, and consists of five fixed spans of 71 feet each, with a compound span of 98 feet, turning on a cast-iron cylinder filled with concrete. Reported in a dangerous condition in 1895, it was safeguarded at a cost of £1500.

Kirkcudbright was anciently a burgh of regality, and held of the Douglasses, Lords of Galloway, as superiors. Erected into a royal burgh in 1455 by charter from James II., it received another charter from Charles I. in 1633, and by the Burgh Police Act of 1892 it is governed by a provost, 2 bailies, and 6 commissioners. The incorporated trades are the hammermen, shoemakers, squarers, tailors, weavers, and clothiers. Sheriff courts sit weekly on Fridays; small debt courts on every second Friday during session; and justice of peace small debt courts on the second Tuesday of every month. The quarter sessions are held on the first Tuesday of March, May, and August, and on the last Tuesday of October. Kirkcudbright unites with DUMFRIES, ANNAN, LOCHMABEN, and SANQUHAR in sending a member to parliament. The parliamentary and the municipal constituency numbered

Seal of Kirkcudbright.

352 and 473 in 1895, when the annual value of real property within the burgh amounted to £9440 (£8722 in 1883), whilst in 1894 the corporation revenue (considerably aided by the salmon fishings in the Dee and the rents of two or three farms in the neighbourhood) was £1524, and the harbour revenue £280. Pop. (1881) 2571, (1891) 2533, of whom 1407 were females.

Some have claimed for Kirkcudbright that it was known to the Romans as *Benutium*, to the Celtic Novantæ as *Caer-cuabrit* ('fort on the bend of the river'); but the earliest authentic mention of it is the visit of Ailred, Abbot of Rievaulx, in 1164, on the feast of St Cuthbert, to whom its ancient kirk was dedicated. The site of this church is marked by St Cuthbert's Churchyard, 3 furlongs NE of the town, where, besides Ewarts and Billy Marshall the Tinkler (1672-1792), are buried William Hunter, Robert Smith, and John Halume, executed at Kirkcudbright for adherence to the Covenant—the first two by Claverhouse in 1684, and the last by Captain Douglas in 1685. Soon after 1164 the church of Kirkcuthbert was granted by Uchtred, Lord of Galloway, to Holyrood Abbey, under which it remained a vicarage down to the Reformation. Wallace sailed hence to France after the battle of Falkirk (1298); it would seem, however, that the Regent Albany in 1523 landed, not here, but in Arran from Brest. We have noticed the visits of Edward I., James II., Henry VI., and James IV. to Kirkcudbright, which in 1507 was nearly destroyed by a body of furious Manxmen, under Thomas, Earl of Derby. In 1547, in the warfare over the marriage treaty of Mary and Edward VI., an English party marched from Dumfries against 'Kirkobrie; but,' says the English commander, 'they who saw us coming barred their gates and kept their dikes, for the town is diked on both sides, with a gate to the waterward and a gate at the over end to the fellward.' A vigorous assault having failed, the English retired, with the loss of one man in the conflict. The tale of Queen Mary's flight from Langside (1568) through Kirkcudbright parish is discarded under DUNDRENNAN and TERREGLES; but Kirkcudbright Harbour is said to have been agreed on by Philip II. and the seventh Lord Maxwell as a landing-place of the Spanish Armada (1588), and James VI. seems about this time to have visited the burgh, and to have gifted the incorporated trades with the small silver gun, which last was shot for on the Queen's Coronation Day (1838). Figuring prominently in the struggles of the Covenanters, Kirkcudbright raised a serious riot to resist the induction of a curate (1663); had exposed on its principal gate the heads of three gentlemen captured at Rulliou Green, and executed at Edinburgh (1666); and witnessed, on one of its streets, a sharp altercation between the persecutor, Sir Robert Grierson of Lag, and Viscount Keumure, stepfather to one of Lag's victims, which, but for Claverhouse's intervention, might have proved fatal to the former (1685). The fleet of William III., in 1689, on its passage to Ireland, lay some time wind-bound in Kirkcudbright Bay; and at Torrs Point are traces of 'King William's Battery.' In 1698 a woman accused of witchcraft was burned at the stake near the town; in 1706 a petition against the National Union was signed by the magistrates and principal townsmen, and a riot soon after ensued. In 1715 the harbour was the intended landing-place of the Pretender; and the townspeople showed such enthusiasm in the Hanoverian cause that they sent a company of volunteers to assist in the defence of Dumfries against the Jacobite forces. In 1725 the Cameronians here held a sort of agrarian parliament, where the people were invited to state their grievances. Paul Jones, the American privateer, who was born at Arbigland, Kirkcudbrightshire, in 1778 made a descent on St Mary's Isle, and entered the mansion of the Earl of Selkirk, with the design of seizing him as a hostage. Finding that he was away from home, he carried off all his silver plate, and conveyed it to France, where, according to a recent authority, he was promptly reprimanded for piracy by Dr Benjamin Franklin, then at Paris representing the

American government, and peremptorily ordered to send the plate to him to be returned to the Earl of Selkirk, which was accordingly done. Among eminent natives or residents, other than those already noticed, have been John Welsh, son-in-law of John Knox (1570-1623), minister in 1590; John Maclellan, author of a Latin description of Galloway (1665), and also for some time minister; Thomas Blacklock, D.D. (1721-91), the blind poet, and minister in 1762-64; Basil William, Lord Daer (1763-94), distinguished as an agricultural improver; his brother, Thomas, fifth Earl of Selkirk (1771-1820), author and politician; James Wedderburn (d. 1822), solicitor-general of Scotland; and John Nicholson (1777-1866), publisher.

Kirkcudbright gave the title of Baron, in the Scottish peerage, to the family of Maclellan of Bombie. This family, once very powerful, the proprietors of several castles, and wielding not a little influence in Galloway, has already been incidentally noticed. Sir Patrick Maclellan, proprietor of the barony of Bombie, in the parish of Kirkcudbright, incurred forfeiture in consequence of marauding depredations on the lands of the Douglases, Lords of Galloway, and by the eighth Earl of Douglas was beheaded at THREAVE Castle in 1452. Sir William, his son—incited by a proclamation of James II. offering the forfeited barony to any person who should disperse a band of Saracens or Gipsies from Ireland who infested the country, and should bring in their captain, dead or alive, in evidence of success—rushed boldly in search of the proscribed marauders, and earned back his patrimony, by carrying to the King the head of their captain on the point of his sword. To commemorate the manner in which he regained the barony, he adopted as his crest a right arm raised, the hand grasping a dagger, on the point of which was a Moor's head, couped, proper; with the motto, 'Think on,'—intimating the steadiness of purpose with which he contemplated his enterprise.* Sir Robert, fourth in descent from Sir William, acted as gentleman of the bedchamber to James VI. and Charles I.; and in 1633 was created by the latter a baron, with the title of Lord Kirkcudbright. John, the third Lord, commenced public life by a course of fierce opposition to Cromwell and the Independents; and being at the time the proprietor of the greater part of the parish, he compelled his vassals to take arms in the cause of the King, brought desolation upon the villages of Duurod and Galtway by draining off nearly all their male inhabitants, and incurred such enormous expenses as nearly ruined his estates. But at the Restoration, just when any royalist but himself thought everything gained, and ran to the King in hope of compensation and honours, he shied suddenly round, opposed the royal government, sanctioned the riot for preventing the induction of an Episcopalian minister, and was captured along with other influential persons, sent a prisoner to Edinburgh, and driven to utter ruin. His successors never afterwards regained so much as an acre of their patrimony; and, for a considerable period, were conceded their baronial title only by courtesy. One of them was the 'Lord Kilcoubrie,' whom Goldsmith, in his sneers at the poverty of the Scottish nobility, mentions as keeping a glove-shop in Edinburgh. In the reign of George III. they were at last formally and legally reinstated in their honours; but, in 1832, at the death of the ninth Lord, the title sank quietly into extinction.

The parish of Kirkcudbright since 1633 has comprised the ancient parishes of Kirkcudbright, GALTWAY, and DUNROD, the first in the N, the second in the centre, and the third in the S. It is bounded N by Kelton, E

* If one may credit the above tradition, this is the earliest certain notice of the presence of Gipsies in the British Isles. Unfortunately it rests on no older authority than a MS. Baronage of Sir George Mackenzie (1639-91), cited in Crawford's *Peerage* (1716). 'Murray' (? Moor) is said to have been the Gipsy chieftain's name—a name preserved in Blackmorrow Plantation and Blackmorrow Well. This well young Maclellan is said to have 'filled with spirits, of which the outlaw drank so freely that he soon fell asleep, which Maclellan perceiving sprang from his hiding-place, and at one blow severed the head of Black Murray from his body.'

by **Rerwick**, S by the Irish Sea, and W by Kirkcudbright Bay and the river Dee, which divide it from **Borgue**, **Twynholm**, and **Tongland**. Its utmost length, from N by E to S by W, is 8 miles; its utmost breadth is $4\frac{1}{2}$ miles; and its area is 13,668 acres, of which 1146 $\frac{1}{2}$ are foreshore, 92 $\frac{1}{2}$ links, and 149 $\frac{1}{2}$ water. The beautiful **DEE** winds 3 miles south-south-westward along the **Tongland** and **Twynholm** border to the town, and forms in this course a series of picturesque falls; lower down, as already noticed, it broadens into first an estuary and then Kirkcudbright Bay. **Dunrod Burn** runs 4 miles along the eastern boundary to the sea, and several other rivulets drain the interior to either the **Dee** or the sea. The coast, exclusive of the estuary, measures only $1\frac{1}{2}$ mile in extent, and is diversified at the extremities by **Rob's Craigs** and **Gipsy Point**, in the intermediate space by the baylets of **Clinking Cove** and **Howell Bay**. The western district along the **Dee** is mainly low and level; elsewhere the surface has a general north-north-eastward ascent, attaining 233 feet near **Torr's Point**, 414 at **Drummore**, 400 at **Bombie Hill**, and 500 at **Black Eldrick**, and comprising a diversity of undulations, gentle slopes, hillocks, hill-girt hollows, and small moorish plateaux. The prevailing rock is greywacke, with occasional masses and dikes of porphyry. The soil in some places is dry and gravelly, in others is fertile clay or loam, in others is light and friable, on a sharp gravelly subsoil, and very productive, and in others again is either mossy or moorish. The grazing of sheep and of black cattle is a leading occupation, and the fisheries of the **Dee** are highly productive. The hill-fort of **Drummore** has been identified with **Caerbantorigum**, a town of the **Selgovæ**, which **Skene**, however, places at the **Moat of Urr**; other antiquities are the site of a **Caledonian** stone circle, vestiges of eight **Caledonian** and of three **Roman Camps**, traces of two landward castles of the ancient **Lochs of Galloway**, and of two of the **Maclellans of Bombie**, a natural but artificially strengthened cave about 60 feet long, spots that have yielded flint hatchets, a stone sarcophagus, a cup of **Roman metal**, a plate of pure gold, and quantities of coins of **Edward I. of England**, two moats for courts of feudal justice, and sites, vestiges, or cemeteries of five old rural places of worship. **BOMBIE** and **RAEBERRY** Castles are noticed separately. Mansions are **St Mary's Isle**, **Balmac**, **Fludha**, **Janefield**, and **Oakley**. Kirkcudbright is the seat of a presbytery in the synod of **Galloway**; the living is worth £429. Academy (lower department), **Johnston**, **Town-end**, **Townhead**, and **Whinnie Liggate** public schools, **Old Church**, and a **Roman Catholic school**, with respective accommodation for about 58, 261, 167, 102, 127, 97, and 126 children, have an average attendance of about 30, 165, 90, 75, 60, 150, and 70, and grants of over £22, £195, £78, £80, £62, £130, and £48. Pop. (1801) 2381, (1841) 3525, (1861) 3407, (1871) 3346, (1881) 3479, (1891) 3477.—*Ord. Sur.*, sh. 5, 1857.

The presbytery of Kirkcudbright comprises the *quoad civilia* parishes of **Anwoth**, **Balmaclellan**, **Balmaghie**, **Borgue**, **Buittle**, **Carsphairn**, **Crossmichael**, **Dalry**, **Girthon**, **Kells**, **Kelton**, **Kirkcudbright**, **Parton**, **Rerwick**, **Tongland**, and **Twynholm**, and the *quoad sacra* parishes of **Auchencairn**, **Castle-Douglas**, and **Corsock**. Pop. (1871) 21,783, (1881) 21,073, (1891) 20,491, of whom over 6000 are communicants of the **Church of Scotland**. The **Free church** also has a presbytery of Kirkcudbright, with churches at **Auchencairn**, **Balmaghie**, **Borgue**, **Castle-Douglas** (2), **Girthon**, **Glenkens**, **Kirkcudbright**, and **Tongland**, which 9 churches together have over 1700 members.

See chaps. vi., vii., of **Malcolm Harper's Rambles in Galloway** (Edinb., 1876), and pp. 47-60 of **Maxwell's Stewartry of Kirkcudbright** (6th ed., **Castle-Douglas**, 1896).

Kirkcudbright. See **GLENCAIRN**.

Kirkcudbright-Innertig. See **BALLANTRAE**.

Kirkcudbrightshire or the **Stewartry of Kirkcudbright**, a maritime county in the western part of the southern border of **Scotland**, constituting the eastern

portion, and rather more than three-fifths of the whole extent of the province of **Galloway**. It was one of the three counties in **Scotland** (the other two being **Wigtown** and **Orkney**) with which the **Boundary Commissioners** were not called upon to deal, either in respect of their county or parish boundaries. **Kirkcudbrightshire** is bounded NW and N by **Ayrshire**, NE and E by **Dumfriesshire**, S by the **Solway Firth** and the **Irish Sea**, and W by **Wigtownshire**. Its outline is irregular, but approaches the figure of a trapezoid. Its utmost length, from E to W, is $41\frac{1}{2}$ miles; its breadth, from N to S, is $37\frac{1}{2}$ miles; and its area is 897'8 square miles, or 609,627 $\frac{1}{2}$ acres, of which 7678 $\frac{1}{2}$ are water and 27,361 foreshore. Its southern half has, as natural boundaries, the river and estuary of the **Nith** on the E, the sea and the **Solway Firth** on the S, and the river **Cree** and **Wigtown Bay** on the W; but the northern half is traced by natural boundaries only partially and at intervals,—by the **Cairn** for $7\frac{3}{4}$ miles above its confluence with the **Nith**, by a watershed of mountain summits for $11\frac{1}{2}$ miles south-eastward of its NE angle, and, with trivial exceptions, 15 or 16 miles sinuously westward of that angle, by **Loch Doon** and its tributary **Gala Lane** for $8\frac{1}{2}$ miles on the NW, and by the river **Cree**, from the NW extremity southward to the southern division of the county.

Kirkcudbrightshire has no recognised or nominal subdivisions, except that the four most northerly parishes are called **Glenkens**; but it admits, or rather exhibits, a very marked natural subdivision into a highland district and a champaign country thickly undulated with hills. A straight line drawn from about the centre of **Irongray parish** to **Gatehouse-of-Fleet**, or to the middle of **Anwoth parish**, has, with some exceptions, the former of these districts on the NW, and the latter on the SE. The highland or north-western district comprehends about two-thirds of the whole area, and is, for the most part, mountainous. **Blacklarg**, at the point where the **Stewartry** meets with **Dumfriesshire**, has a height of 2231 feet above sea-level; and it is exceeded by **Merrick** (2764 feet) in the NW and by eleven other summits. The heights, all along the boundary, and for some way into the interior on the N, and part of what is often termed the **Southern Highlands**, or the broad alpine belt which stretches across the middle of the **Scottish lowlands**; they ascend, in the aggregate, to elevations little inferior to those of any other part of that great belt; and, extending down to the sea on the W, and parallel to **Dumfriesshire** on the E, they form, in their highest summits, a vast semicircle, whence broad and lessening spurs run off into the interior. The glens and straths among these mountains, even when reckoned down to the points where their draining streams accumulate into rivers, form an inconsiderable proportion, probably not one-tenth of the whole district. The other district, the south-easterly one, when viewed from the northern mountains, appears like a great plain, diversified only by a variety of shades, according to the colour, size, or distance of the heights upon its surface. So gentle, too, is its cumulative ascent from the sea, that the **Dee**, at the point of entering it, or even a long way up the strath on the highland side of the dividing line, is only 150 feet above the level of the sea. Yet about one-fourth of its whole area is either roughly hilly, or, in a secondary sense, mountainous; while much the greater proportion of the other three-fourths, though fully under cultivation, is a rolling, broken, hilly surface, and, for the most part, continues its bold undulations down to the very shore. On the SE the conspicuous **Criffl** rises up almost from the margin of the **Nith** to a height of 1867 feet above sea-level, and sends off a ridge 8 or 9 miles westward in the direction of **Dalbattie**, and a second low ridge away south-westward parallel with the coast to the vicinity of **Kirkcudbright**. These heights are far from being inconsiderable; and lifting their craggy cliffs and dark summits immediately above the margin of the sea, they form scenery highly picturesque and occasionally grand. Over all parts of the county the uplands are, for the most part, broken

by abrupt protuberances, steep banks, and rocky knolls, diversified into every possible variety of shape; and even in the multitudinous instances in which they admit of tillage, either on their lower slopes or over all their sides and their summits, they rarely present a smooth and uniform arable surface.

Geology.—The greater portion of the county is made up of rocks of Silurian age, through which have been intruded several large masses of granite. Both the upper and lower divisions of the Silurian system are well represented; the former extending from the town of Kirkcudbright N to the borders of Ayrshire and Dumfriesshire, and the latter along the shores of the Solway Firth from the Meikle Ross to the mouth of the Nith. Partly by means of certain fossiliferous bands of black shales, and partly by the lithological characters of the strata, the lower series has been subdivided into several zones. Of these the most important are the bands of anthracite schists or black shales, yielding graptolites in profusion, which occur on two horizons. The lower group, which is the SW prolongation of the black shale bands so typically developed in the Moffat district, may be traced more or less continuously from the Scar Water near Dunscore along the Glen Burn to the Trowdale Glen in the valley of the Urr. From thence it extends in a SW direction to the village of Crossmichael and onwards to the moors near Lochenbreck. To the S of this outcrop the anthracite schists occur in synclinal folds of the underlying group of brown crusted greywackes and shales, as, for example, in the Coal Heugh near Tarff and in the Barlay Burn N of Gatehouse-of-Fleet. This lower group is overlaid by massive grey and purple grits and shales, which cover a wide area, owing to foldings of the strata. They are admirably displayed on the moors between Kirkpatrick-Durham and Dalry. Along the crests of the anticlines the underlying bands of black shales are occasionally brought to the surface charged with graptolites, as, for instance, in the Dee near Hensol House, in the Urr Water N of Corssock, and in the Glenesland Burn W of Dunscore. The upper group of black shales is exposed in the Ken and in the Deugh near their point of junction, whence they stretch W to the Kells range, where they are truncated by the granite. They reappear, however, on the SW side of the Loch Dee granite in Glen Trool and on the crest of Curleywee.

The boundary between the upper and lower Silurian rocks is marked by a line extending from Falbogue Bay in the parish of Borgue, NE by Balmangan, the Long Robin, Castlecreavie, to the junction of the granite near Auchinleck. An excellent section of the members of the upper division is exposed along the shore between Long Robin in Kirkcudbright Bay as far as White Port in the parish of Kerwick, where they are unconformably overlaid by Lower Carboniferous rocks. In this section the upper Silurian rocks may be divided into two groups. The lower group, extending from Long Robin to near the mouth of the Balmae Burn, consists of brown crusted greywackes, flags, and shales, with a characteristic zone of dark brown sandy shales, yielding graptolites and orthoceratites. These are overlaid by olive-coloured shales with limestone nodules, fine conglomerates and grey ripple-marked flags comprising the upper subdivision. They occur on the shore between Balmae Burn and Howell Bay, on the cliffs at Raeberry Castle, and at Netherlaw Point. The following fossils have been obtained from the limestone nodules and bands of conglomerate:—*Tentaculites ornatus*, *Atrypa reticularis*, *Rhynchonella borealis*, *Strophomena grandis*, *Murchisonia obscura*, *Bellerophon trilobatus*, *Orthoceras imbricatum*.

The Silurian rocks of this county have been pierced by various masses of granite, four of which are of special importance. The first of these extends from Criffel W by Dalbeattie to Bengairn; the second covers the area between Loch Ken and Cairnmore of Fleet; the third occupies the wild and desolate region between Loch Dee and Loch Doon; and the fourth mass occurs round Cairnmore of Carsphairn. These granitic areas have

given rise to certain characteristic features in the scenery of the county. Each of them is coincident with a prominent mass of high ground, possessing very different features from those common to the Silurian areas. Along the W limit of the Bengairn mass there is an interesting passage between the granite and quartz felsite of Bentuther Hill. The granite loses its coarsely crystalline character and becomes more fine grained, while there is a gradual development of a granular ground mass, in which occur crystals of orthoclase and plagioclase felspar along with quartz. The pink porphyritic quartz-felsite spreads W across the Stockerton Moor to the Dee at Tongueland. Numerous veins and dykes of quartz-felsite radiate in all directions from the Tongueland and Bentuther porphyry as well as from the granite.

The carboniferous rocks occupy isolated areas fringing the shores of the Solway. In the parish of Kerwick they form a narrow strip along the coast between the White Port and Aird's Point E of Rascarrel Bay, a distance of 7 miles. At the former locality there is an excellent exposure of the unconformability between these rocks and the upper Silurian formation. The red breccias, with quartz pebbles, which form the local base of the carboniferous series at that point, rest on the upturned edges of the Silurian shales which have been reddened by infiltration. At Aird's Point the breccias have been thrown against the Silurian rocks by a fault which forms the boundary of the outlier W as far as Barlocco. In addition to the basal breccias, the beds exposed along the Kerwick shore consist of conglomerates, ashy grits, sandstones, and cementstones. At certain points between Barlocco Bay and Orroland they yield fossils in considerable abundance. Small outlying patches of brecciated grits belonging to the same series are met with on the shore at Glenstocking and Portowarren. The most important area, however, extends along the plain of Kirkbean from Southernness to the Drum Buru. At the base of the Cementstone series on the SE slope of Criffel there is a lenticular patch of purple diabase-porphyrity, which is well seen in the Kirkbean Glen, resting on reddish grey sandstones and marls. This fragment of interbedded volcanic rocks is on the same horizon as the volcanic series of Birrenswark and Middlebie. In both areas the ancient lavas rest on red sandstones and marls, and they pass conformably below cementstones and shales. The latter beds are well exposed in Carsethorn Bay, where they yield fossils plentifully, and to the S of Arbigland they pass below the white sandstone and grits of Thirlstane. The highest beds in the section consist of marine limestones abundantly charged with corals, which are beautifully seen in the bay at Arbigland. The natural sequence of the beds on the Kirkbean shore is much disturbed by faults, but notwithstanding these dislocations it is possible to correlate the beds with the succession in Liddesdale.

On the W side of the Nith at Dumfries a small portion of the Permian basin is included in this county. In this portion of the basin the beds consist of coarse breccias which are well exposed in the railway cutting at Goldielea. In the wood to the N of Mabic, casts of carboniferous fossils have been found in the pebbles embedded in the breccia. It is probable that the Permian rocks formerly extended along the shores of the Solway towards the mouth of the Dee. The fossiliferous sandstones and cementstones at Rascarrel and Orroland on the Kerwick coast are stained red by infiltration of iron oxide, which was, in all likelihood, obtained from the Permian beds, which have since been removed by denudation.

Various examples of basalt dykes are to be found in the county, as, for instance, in the Silurian rocks at Kirkandrews, Borgue, and in the granite to the S of Lochanhead.

Nowhere in the South of Scotland are the traces of glaciation to be witnessed on a grander scale than in the high grounds of Galloway. The ice-markings plainly show that during the period of extreme glaciation the

ice must have radiated from the elevated ground round the Kells and Merrick ranges. The striae trend S in the valley of the Cree, SE towards the mouth of the Dee, and ESE across the undulating hilly ground towards the vale of the Nith. Over the low grounds the boulder clay is usually distributed in the form of 'drums,' which form a characteristic feature in the scenery in the valleys of the Cree, the Dee, and the Urr. But, in addition to this, there is abundant evidence of the existence of local glaciers, which must have deposited moraines of considerable dimensions. Nearly all the valleys draining the E slope of the Kells range contain moraine mounds. A splendid series is traceable along the valley of the Deugh, in the parish of Carsphairn, and another equally well marked series occurs in the vale of Minnoch, between the Sute and Bargrennan.

Veins of lead ore occur in the Silurian rocks at Blackcraig, Newton-Stewart, and at Woodhead Carsphairn. A vein of hematite is met with on the NW slope of the Coran of Portmark, and another has been worked at Auchinleck to the NW of Auchencairn. Veins of barytes are visible also on the farm of Barlocco.

In the neighbourhood of Dumfries, throughout most of Terregles and part of Troqueer and Irongray, where, apart from artificial division, the territory forms a portion of the beautiful strath of Nithsdale, stretches a smooth level tract, carpeted with a mixture of sand and loam, and possessing facilities of cultivation beyond any other part of the county. Along the banks of the Nith, from Maxwelltown downward, and for some distance lying between the former tract and the river, extends a belt of merse land, at first narrow and interspersed with 'flows,' but broader in Newabbey and Kirkbean, and comprehending about 6000 acres either of carse or of a rich loam, partly on a gravelly bottom, and partly on a bottom of limestone. From Terregles, south-westward to the Dee, extends a broad tract, comprising Lochruton, Kirkgunzeon, and Urr, and part of Kirkpatrick-Durham, Crossmichael, Kelton, Bittle, and Kerwick, which, while hilly, has comparatively an unbroken surface, carpeted with a strong soil, though often upon a retentive subsoil, and peculiarly adapted for tillage. The broken portions of this tract, and the general area of the other parts of the comparatively champaign district, are much less waste than a stranger to their peculiarities, who should glance at their appearance, would imagine. The knolls conceal, by the perspective of their summits, considerable flat intervals amongst them; and while themselves seeming, from the brushwood which crowns them, to be unfit for cultivation, are usually covered with a very kindly soil, of sufficient depth for the plough. Of an extremely broken field, not more than one-half of which would seem to a stranger available for tillage, the proportion really and easily arable often amounts to four-fifths. Except in loamy sand and the merse tracts near Dumfries, the soil of nearly all the ploughed ground of the Stewartry, comprehending not only the great south-eastern division, but the fine strath of the Ken and the narrower vale of the Cree, is dry loam of a hazel colour, and therefore locally called hazelly loam, but often degenerating, more or less, into gravel. The bed of schist on which it lies is frequently so near the surface as to form a path to the plough, and probably where the rock is soft, adds by its attrition to the depth of the soil. In the highland division rich meadows, luxuriant pastures, and arable lands of considerable aggregate extent, occur along the banks of the rivers, on the sloping sides of the hills, in vales among the mountains, and along the margins of little streams. A large part of the Glenkens, too, exhibits highland scenery in such green garb as characteristically distinguishes Tweeddale. But with these exceptions, the far-stretching highland district is in general carpeted with heath and 'flows,' a weary and almost desolate waste, a thin stratum of mossy soil yielding, amidst the prevailing heath, such poor grass that the sheep which feed upon it, and are strongly attached to it, would die of hunger, were there not intervening

patches of luxuriant verdure. With large bases, lofty summits, and small intervals of valley, the mountains exhibit aspects of bleakness diversified by picturesqueness and romance; and, sometimes sending down shelving precipices from near their tops, they are inaccessible to the most venturesome quadruped, and offer their beetling cliffs for an eyrie to the eagle; while far below, among the fragments of fallen rocks, the fox finds a lair whence he cannot be unkenelled by the huntsman's dogs.

Kirkcudbrightshire sends out a few very trivial headwaters of the Ayrshire rivers, and receives some equally unimportant contributions in return; but, with these exceptions, it is a continuation of the great basin of Dumfriesshire, and, as far as the joint evidence of the disposal of its waters and the configuration of its great mountain-chain could decide, it was naturally adjudged to the place which it long legally held as a component part of that beautiful county. What Eskdale is to Dumfriesshire on the E, Kirkcudbrightshire, in the sweep of its mountain-chain to near the coast beyond the Dee, is on the W; and all the vast intervening territory is a semicircular area, with an arc of highland ridges sweeping round it from one end till nearly the other of the N side of its chord, and pouring down all its waters to the S. The Stewartry, unlike Dumfriesshire, has no expanded plain for concentrating its streams before giving them to the sea, and, in consequence, discharges much of the drainings of its surface in considerable volumes of water. Apart from the Nith, the Cairn, and the Cree, which belong only to its boundaries, its chief streams are the Urr, the Ken, the Dee, and the Fleet. Lakes are very numerous; and some of them are remarkable for either the rare species or the abundance of their fish; but, excepting Doon on the boundary, and Ken and Kinder in the interior, they are individually inconsiderable both in size and in interest. Perennial springs everywhere well up in great abundance, and afford an ample supply of excellent water. Of chalybeate springs, which also are numerous, the most celebrated is that of Lochenbrack, in the parish of Balmaghie.

The Solway Firth, becoming identified on the W with the Irish Sea, sweeps round, from the head of the estuary of the Nith to the head of Wigton Bay, in an ample semicircular coast-line of 50 miles, exclusive of sinuities. The coast, on the E, is flat; but elsewhere it is, in general, bold and rocky, here pierced with caves, and there lined with cliffs. Along the whole of it, a permanent recession of the sea has taken place, not very apparent or productive of any great advantage, indeed, in the high and rocky regions, but very evident and resulting in a bequest of the rich territory of the Merse, in the flat tract along the Nith. Besides the estuary on the E, and the gulf or large bay on the W, the Solway forms, at points where it receives streams, very considerable natural harbours, running up into the country in the form of bays or small estuaries. The principal are Rough Firth, at the mouth of the Urr; Auchencairn Bay, at the mouth of rivulets a little westward; Kirkcudbright Bay, at the mouth of the Dee; and Fleet Bay, at the mouth of the Water of Fleet. Though all the waters which wash the coast are rich in fish, they rarely tempt the inhabitants of the coast to spread the net or cast the line, and have not prompted the erection of a single fishing village, or the formation of any community of professed fishermen. Sea-shells and shelly sand, which are thrown up in great profusion, have greatly contributed to fertilise the adjacent grounds; and they are accompanied, for lands to which it is more suitable, by large supplies of sea-weed.

In early times the Stewartry appears to have been covered with woods, and at a comparatively recent period it had several extensive forests; but it retains only scanty portions of its natural woodlands, and these chiefly along the banks of the rivers. Agricultural improvement was commenced in the 12th century, principally by the settlement among the rude inhabitants of colonies of monks, and was carried to a greater extent both in tillage and pasturage than could well have been

looked for in the rough circumstances of the period. From various and trustworthy intimation, the country appears to have been much more fruitful in grain and other agricultural produce in 1300 than at the beginning of the 18th century. But disastrous wars and desolating feuds swept in rapid succession over cultivated fields, and soon reduced them almost to a wilderness. So ruthlessly was agriculture thrown prostrate that, towards the close of the 17th century, small tenants and cottagers, who had neither skill, inclination, nor means to improve the soil, were allowed to wring from it, in the paltry produce of rye and bere and oats, any latent energies of 'heart' which it still possessed; and, on the miserable condition of paying the public burdens, were permitted to sit rent-free on farms which now let for at least £200 a year. Modern improvement commenced early in the 18th century, and was not a little remarkable both in the character and in the early history of its first measure. Sir Thomas Gordon of Earlstoun having erected upon his own property a stone fence 4 miles in extent, several other proprietors sparingly, but firmly, followed his example. But fences seemed to the semi-savage squatters, to whom utter maladministration had given almost entire possession of the soil, not less an innovation upon their rights, than a signal of war; and in April and May 1724, they provoked an insurrection, and were all thrown down by the 'levellers.' The insurgents having been dispersed by six troops of dragoons, the work of enclosing was resumed with greater vigour than at first, and speedily resulted in diffusing a skilful care for the right management of the soil. The discovery, or at least the manorial application, of shell-marl, in 1740, formed an important era, and occasioned the conversion into tillage of large tracts which had been employed exclusively in pasture. The suppression, in 1765, of the contraband trade with the Isle of Man pointed the way to the exportation of agricultural produce, and occasioned it rapidly to become a considerable trade. The institution, in 1776, of the Society for the Encouragement of Agriculture in Galloway and Dumfriesshire was a still more important event. William Craik, Esq. of Arbigland, the chairman of the society, introduced new rotations of crops, new methods of cultivation, new machinery, and new modes of treating cattle, and is justly considered as the father of all the grand agricultural improvements of the Stewartry. At the commencement of the 19th century, Colonel M'Dowal of Logan made great achievements in the reclaiming of mosses. In 1809 the Stewartry of Kirkcudbright Agricultural Society arose to urge forward a rivalry with Dumfriesshire and other adjacent counties; and while it was not yet a twelvemonth old it numbered 130 members, all landholders and practical farmers, with the lord-lieutenant and the member of parliament at their head. The high price of grain during the French war at the commencement of the 19th century, the opening up of the English markets by steam navigation (1835), and the introduction of railways (1860-64), have each in their turn proved a powerful stimulus.

Both before the close of the 18th century and during the course of the succeeding one, plantations, especially on the grounds of Lord Daer and the Earl of Selkirk, arose to shelter and beautify the country; but even with the aid of about 3500 acres of copsewood, remaining from the ancient forests, they are far from being sufficient in extent or dispersion to shield the country from imputations of nakedness of aspect, or prevent it from appearing to a stranger wild and bleak. Rather more than one twenty-fifth of the whole of Scotland is under woods; in Kirkcudbrightshire the proportion is less than one thirty-second—viz., 18,732 acres. The fences, in far the greater proportion of instances, are the dry stone walls, distinctively known as Galloway dykes; but in the vicinity of Dumfries and a few other localities they consist of various sorts of hedges, all ornamental in the featuring they give the landscape. Agricultural implements are simply the approved ones known in other well-cultivated counties. Systems of cropping are

necessarily various, not only throughout the Stewartry, but very often in the same parish. In the whole of Scotland the percentage of cultivated area is 25.15; in Kirkcudbrightshire it is 32.9—a figure exceeded by Fife (79.1) and nineteen other Scotch counties. The following table gives the acreage of the chief crops and the number of live-stock in the Stewartry in different years:—

The breeding and rearing of cattle has long been a favourite object of the farmers. Few counties can boast of pastures whose grass has such a beautiful closeness of pile, and which, after a scourging course of crops, so rapidly return to their natural verdure and fertility. The breed of Galloway cattle—peculiar to the district, though now extensively known by importations from it—are almost universally polled, and rather under than over the medium size,—smaller than the horned breed of Lancashire or the midland counties, and considerably larger than any of the Highland breeds. Their prevailing colour is black or dark-brindled. The breed has, in some parts of the county, been materially injured by intermixture with the Irish, the Ayrshire, and some English breeds. But the offshoots of foreign crossings or admixtures are recognisable among the native stock, even after fifty or sixty years have elapsed to efface their peculiarities; and they are now held in little estimation, and sought to be substituted by the purest and choicest propagation of the native variety. Few of the cattle are fed for home consumption. (See an article by the Rev. J. Gillespie on 'The Galloway Breed of Cattle' in *Trans. Highl. and Ag. Soc.*, 1878.) In the moor and mountainous districts sheep-husbandry has long been sedulously plied, but in other districts it meets very trivial attention. Long-wooled Lincolnshire sheep—here called mugs—were tried and failed. The Leicestershire merinos, the Herefords, and the Shetlands were also introduced, but secured little favour. The Southdown, the Cheviot, the Morf, and the Mendip breeds have had more success, and, jointly with varieties previously in the district, tenant the sheep-walks in singular motley character. Smearing or salving is practised. Great attention here, as in Dumfriesshire, is paid to the produce of pork—chiefly for the Dumfries market, and, through it, for supplying the demands of England. Bees are much attended to in Twynholm, Borgue, Tongland, and Kirkcudbright, and there produce honey equal, if not superior, to any in the world. Few districts in Scotland, except the Highlands, are more abundant than Kirkcudbrightshire, both in number and variety of game.

The manufactures of the Stewartry are very inconsiderable, and are noticed under CASTLE-DOUGLAS, DALBEATTIE, and MAXWELLTOWN. Commerce is almost wholly confined to the exportation of grain, wool, sheep, and black cattle, and the importation of coals, lime, wood, groceries, and soft goods. The harbours of the district, as compared to what they were a century ago, exhibit marvellously little of the progress which elsewhere generally characterises Scotland. Those situated to the W of Kirkcudbright are creeks of the port of Wigtown; those situated to the E of that burn are creeks of the port of Dumfries. A great military road, part of a line from Carlisle to Portpatrick, was formed in 1764; many excellent roads, with minute ramifications, were formed subsequent to that year, especially after the years 1780 and 1797; and the roads now, considering the upland contour of the greater part

of the county, are not inferior, either in their own construction or in their aggregate accommodation, to those of almost any other part of Scotland. The railways, forming part of the Glasgow and South-Western system, are the Dumfries and Portpatrick line, by way of Kirkcunzeon, Dalbeattie, Castle-Douglas, Parton, Drummore, and Creetown, and the Kirkcudbright railway, from a junction with that line at Castle-Douglas to Kirkcudbright town.

The following are the towns and villages of Kirkcudbrightshire, with their population for 1891:—Royal and parliamentary burghs, Kirkcudbright (2533) and New Galloway (391); police burghs, Castle-Douglas (2851), Dalbeattie (3149), Gatehouse (1226), Maxwelltown (4967), and part of Newton-Stewart (406); villages, Auchencairn, Creetown (871), Dalry (560), and Kirkpatrick-Durham (398). The principal seats are Arbigland, Ardwall, Argrennan, Balmahie, Bargaly, Barholm, Barnbarroch, Barneailzie, Barwhinnock, Cairnsmore, Cally, Cardoness, Cargen, Carlinwark, Carruchan, Cassencarrie, Cavens, Compstone, Corsock, Cumloaden, Danevale, Drumpark, Earlston, Fludha, Gelston Castle, Glenhowel, Glenlair, Glenlaggan, Glenlee, Goldielea, Hensol, Kenmure Castle, Kirkclaugh, Kirkconnell, Kirkdale, Kirroghtree, Knockgray, Knocknalling, Lincluden, Mabie, Machernmore Castle, Mollance, Munches, Rusko, St Mary's Isle, Shambellie, Southwick, Spottes, Terregles, Threave, etc.

The county is governed by a lord-lieutenant, a vice-lieutenant, 37 deputy-lieutenants, a sheriff, a sheriff-substitute, an hon. sheriff-substitute, and 98 magistrates. For County Council purposes the Stewartry is divided into 27 electoral divisions, with one representative for each. The burgh of Kirkcudbright sends also two representatives to the Council, and the burgh of New Galloway one. The electoral divisions are classed into the following districts:—Northern, including 4 divisions; Eastern, 10; Southern, 9; Western, 4. The county has a Standing Joint Committee, and there is the County Road Board, the Executive Committee of the Local Authority for the Stewartry under the Contagious Diseases (Animals) Act, and the District Lunacy Board. Sheriff and commissary courts are held at Kirkcudbright on every Friday during session. Sheriff small debt courts are held at Kirkcudbright on every alternate Friday during session—at Castle-Douglas on the first and third Thursday of each month—at Maxwelltown on the last Thursday of each month—at New Galloway for the parishes of Balmaclellan, Carsphairn, Dalry, and Kells—and at Creetown for the parishes of Anwoth, Kirkmabreck, and Minnigaff. The appellation of Steward instead of that of Sheriff has, from the force of ancient usage, been popularly continued down to the present day, although by the civil arrangements of modern times there is not the least difference between the two offices. Quarter sessions are held at Kirkcudbright on the first Tuesday of March, May, and August, and on the last Tuesday of October; and justice of peace small debt courts are held at Kirkcudbright on the second Tuesday, at New Galloway on the second Monday, at Castle-Douglas on the first Monday, at Maxwelltown on the first Thursday, and at Gatehouse on the first Saturday of every month—at Creebridge on the first Saturday of every alternate month. The police force in 1894 comprised 29 men; and the salary of the chief constable was £310. The county returns a member to parliament, and its parliamentary constituency numbered 5828 in 1895. The annual value of real property was £213,308 in 1815, £193,801 in 1843, £346,503 in 1876, £362,675 in 1883, and £319,607 (*plus* £16,478 for railways) in 1895. Pop. (1801) 29,211, (1811) 33,684, (1821) 38,903, (1831) 40,590, (1841) 41,119, (1851) 43,121, (1861) 42,495, (1871) 41,859, (1881) 42,127, (1891) 39,985, of whom 21,083 were females. Houses (1891) inhabited 8432, vacant 721, building 47.

The registration county, taking in part of Peninghame parish from Wigtonshire, comprehends 28 entire parishes, and had, in 1891, a population of 40,163. The number of registered poor in the year ending 26 Sept.

1894 was 776; of dependants on these, 324. The receipts for the poor, in that year, were £12,992; and the expenditure was £11,901. The number of pauper lunatics was 105, the cost of their maintenance being £2475. The percentage of illegitimate births was 17·4 in 1873, 14·2 in 1877, 15·9 in 1880, 12·0 in 1881, and 12·7 in 1894.

The civil county comprises 28 *quoad civilia* parishes, and is divided ecclesiastically into 33 *quoad sacra* parishes and part of another. The part of it E of the river Urr was anciently comprehended in the deanery of Nith and diocese of Glasgow, and is now included in the presbytery and synod of Dumfries; and the part W of the river Urr formed anciently the deanery of Desnes in the diocese of Galloway, and now forms the presbytery of Kirkcudbright and part of the presbytery of Wigtown in the synod of Galloway. The places of worship within the county are 33 of the Church of Scotland, 13 of the Free Church, 7 of the United Presbyterian Church, 1 of the Evangelical Union, 7 of Episcopalians, and 7 of Roman Catholics. In the year ending 30 Sept. 1894 the county had 74 schools (68 of them public), which, with accommodation for 9607 children, had 7183 on the registers, and 6114 in average attendance. The certificated, assistant, and pupil teachers numbered respectively 111, 13, and 43.

During the Roman period in Britain, Kirkcudbrightshire was occupied, along with other extensive territories, by two British tribes—the Selgovæ, E of the Dee; and the Novantæ, W of that stream. British strengths line the whole frontier of the two tribes along both sides of the Dee, and occur in considerable numbers both eastward and westward in the interior, interspersed with the sites of Roman garrisons, placed to overawe a people who could not be easily subdued. Caves, subterranean excavations, and other remarkable hiding-places, resorted to by the inhabitants in barbarous times, perforate the cliffs on the rocky coast, and occur in various inland localities. The most notable is one in the parish of Borgue. Stone circles occur, in sections or entire, in the parishes of Kirkbean, Colvend, Kirkcunzeon, Lochrutton, Parton, Kelton, Rewick, Kirkmabreck, and Minnigaff. A remarkable rocking-stone exists in Kells. Cairns and tumuli abound, and, in numerous instances, have yielded up some curious antiquities. Picts' kilns and murder-holes—the former of which abound in Minnigaff and Kirkmabreck—seem to be peculiar to Galloway; and if so, are comparatively modern works rather than strictly ancient. A Roman road, branching off through Glencairn from the great road up Nithsdale, passed through the lands of Altry in Dalry, to the farm of Holm in Carsphairn, proceeded thence across the ridge of Polwhat to the NW extremity of the parish, and there entered Ayrshire to penetrate by Dalmellington to the Firth of Clyde. Vestiges of the part of this road which traversed Kirkcudbrightshire still exist. A very ancient work, probably erected by the Romanized Britons, and intended for defence of the inhabitants on its S side, has been described under the DEIL'S DYKE. The principal ecclesiastical antiquities are the abbeys of Dundrennan, Tongland, and New-abbey, the priory of St Mary's Isle, and the convent (afterwards the college) of Lincluden.

The civil history of Kirkcudbrightshire has been rapidly sketched in the article GALLOWAY. The Pictish people of the district, who for so many years retained their own laws and practised their own usages, would not permit the introduction among them of a sheriffdom. Till 1296 what is now the Stewartry was considered as a part of Dumfriesshire. Throughout the 13th century, a violent struggle was maintained between the power of ancient usages, and that of the municipal law of recent introduction. The influence of the Comyns, during the minority of Alexander III., introduced a justiciary—a beneficial change which was continued after Baliol's dethronement. The Comyn's forfeiture placed the lordship of Galloway in the possession of the illustrious Bruce, and—Western Galloway being already under the jurisdiction of the sheriff of Wigtown—seems to have occasioned the erection of Eastern and Central Gallo-

way into the present Stewartry. In 1369 Archibald Douglas (the Grim) wrenched, for himself and his heirs, from the weakness of David II., the lordship of Galloway, and with it the Stewartry to which it gave appointment and power. But in 1455, when, on the forfeiture of the Douglasses, the lordship of Galloway reverted to the Crown, the steward of Kirkcudbright became again the steward of the King. Though, for a long time, the territory continued to be nominally viewed as, in some respects, comprehended in Dumfriesshire, the steward was quite as independent as the sheriff, and, within his own territory, regularly executed, in discharge of his office, the writs of the King, and the ordinances of parliament. Before the commencement of the civil wars under Charles I., all trace of jurisdictional connection in any form whatever with Dumfriesshire had disappeared. But, from 1488 till the abolition of heritable jurisdictions in 1747, the Stewartry was enthralled by the imposition of a baronial or feudal character upon its supreme office. After the fall of James III. in the former year, Patrick, Earl of Bothwell, obtained a grant of the powers of Steward till the infant James IV. should attain the age of 21 years. In 1502, Sir John Dunbar of Mochrum got, for himself and his heirs, a grant for 9 years of the offices of steward of Kirkcudbright and keeper of Threave Castle, with their revenues, their lands, and their fisheries. Early in the reign of James V., Robert Lord Maxwell obtained a similar grant for 19 years; and in 1526 he received the offices and their pertinents as a regular hereditary possession. At the abolition of heritable jurisdictions, Henrietta, the Countess-dowager of Hopetoun, and the legal representative of the Maxwells, was allowed £5000 in compensation for the stewardship. Various other jurisdictions perplexed and chequered the district. The Stewarts of Garlies, who became Earls of Galloway, had a separate jurisdiction over all their estates in Minnigaff and Kirkmabreck, and in 1747 received for it £154, 9s. 10d.; whilst the Lords Herries ruled separately over 'the regality of Terregles,' for which they were allowed £123, 4s. 1d. The provosts of Lincluden, the abbot of Dundrennan, the abbot of Tongland, the abbot of Newabbey, and the Bishop of Galloway also had territories independent of the Steward. The regality of Almoreness, and some eight or nine baronies, were likewise separate jurisdictions. When all the feudalities were overthrown, the emancipated Stewartry was placed under a steward-depute, whose functions were the same as those of the sheriff-depute. The first steward-depute, at a salary of £150 a-year, was Thomas Miller, advocate, who, rising to the top of his profession, became president of the Court of Session, and left a baronetcy with a fair name to his family.—*Ord. Sur.*, shs. 4, 5, 8, 9, 14, 15, 1857-64.

See an article on 'The Agriculture of the Stewartry of Kirkcudbright,' by Thomas MacLelland, in *Trans. Highl. and Ag. Soc.* (1875); M. E. Maxwell's *Stewartry of Kirkcudbright* (6th ed. 1896); and works cited under GALLOWAY and DUNDRENNAN.

Kirkdale, a mansion and an ancient parish of SW Kirkcudbrightshire. Kirkdale House, near the shore of Wigtown Bay, $5\frac{1}{2}$ miles SSE of Crectown, and destroyed by fire in May, 1893, was a splendid 18th century edifice of polished granite in the Italian style, after designs by Robert Adam, surrounded with beautiful grounds, and commanding strikingly picturesque views. It was owned by Col. R. W. Rainsford-Hannay, and had 365 windows. The ancient parish was annexed in 1636 partly to Anwoth and chiefly to Kirkmabreck. Its church stood in the vale of a burn falling into Wigtown Bay, $\frac{1}{2}$ mile below Kirkdale mansion; and the graveyard is still in use.—*Ord. Sur.*, sh. 4, 1857.

Kirkden, a parish of SE central Forfarshire, containing at its NE corner the village, station, and post office of FROCKHEIM, $6\frac{1}{2}$ miles NW by W of Arbroath. Anciently it was called Idvie, its glebe forming part of Idvies barony; and it took its present name from the circumstance of its church being situated in one of those dells that locally are known as dens. It is bounded

N by Guthrie, NE by Kinnell, E and SE by Inverkeilor, S by Carmyllie, W by Dunnichen, and NW by Rescobie. The Boundary Commissioners in 1891 transferred to Kirkden the Dunbarrow detached portion of the parish of Dunnichen, containing 828 acres, and that formerly cut Kirkden almost in two, but gave to the parish of Guthrie the detached portion of Kirkden, situated at Middletonmoor, and containing 421 acres. Kirkden has an utmost length from ENE to WSW of $5\frac{3}{8}$ miles, a breadth generally of about 2 miles, and an area of 5425 acres, of which 19 are water. The Vinney rivulet winds $4\frac{1}{2}$ miles east-north-eastward along the Dunnichen and Rescobie boundary, then $2\frac{1}{2}$ miles eastward through the interior, till at Frockheim it falls into Lunan Water, which itself flows $2\frac{1}{2}$ miles east-by-southward along the Guthrie border. The gently undulating surface has a gradual west-south-westward ascent from 150 to 500 feet above sea-level, spurs of the Sidlaw Hills in the SW commanding extensive and brilliant views. Trap occurs in the hills; but hard grey sandstone, belonging to the Devonian formation, prevails throughout the rest of the parish, and has been largely quarried. The soil is chiefly friable clay, occasionally mixed with sand and gravel; and, though naturally cold and shallow, has been highly improved by marling, manuring, and judicious working. There is wood enough for shelter and embellishment; and nearly all the rest of the land is under cultivation. Gardyne Castle is a fine old haronial residence, somewhat resembling Glamis Castle; other antiquities are an obelisk opposite Pitmuies House, and two artificial mounds on the estates of Gardyne and Idvies. Mansions are Idvies, Middleton, and Pitmuies. Giving off a portion to the *quoad sacra* parish of Frockheim, Kirkden is in the presbytery of Arbroath and synod of Angus and Mearns; the living is worth £197. The parish church, on the left bank of the Vinney, opposite Letham, 6 miles ESE of Forfar, was rebuilt in 1825. The public school, with accommodation for 127 children, has an average attendance of about 70, and a grant of over £68. Valuation (1883) £8946, 17s. 6d., (1893) £8578, 14s., plus £1886 for railway. Pop. of civil parish (1801) 674, (1831) 1039, (1861) 1862, (1871) 1623, (1881) 1682, (1891) 1541; of ecclesiastical parish (1871) 523, (1881) 541, (1891) 521.—*Ord. Sur.*, sh. 57, 1868.

Kirkdominæ, an ancient chapelry in Carrick district, Ayrshire, within the part of the ancient parish of Girvan which, in 1653, became the parish of Barr. Its church, crowning an eminence on the right bank of the Stinchar, $1\frac{1}{2}$ mile SW of Barr village, belonged to Crossraguel Abbey, and was partly taken down as building material for Barr church, but is still represented by some ruins. A well, approached by an archway, adjoins the ruins; and an annual fair, till a recent period, was held on the ground around.—*Ord. Sur.*, sh. 8, 1863.

Kirkebost. See KIRKIBOST.

Kirkfield, an estate, with a mansion, in Lesmahagow parish, upper ward of Lanarkshire, $1\frac{1}{2}$ mile W by S of the town of Lanark.

Kirkfieldbank or Kirkland, a handsome village and a *quoad sacra* parish in Lesmahagow parish, Lanarkshire, on the left bank of the Clyde, 1 mile W of Lanark. Adjoining a beautiful sweep of the river, which contains a romantic wooded island, and is spanned by a three-arched bridge, it chiefly consists of two ranges of houses along the road from Lanark to Glasgow; and has a post office under Lanark, a public school, a weaving factory, angling and curling clubs, a horticultural society, and a library. Kirkfieldbank, constituted *quoad sacra* in 1883, is in the presbytery of Lanark and synod of Glasgow and Ayr. The stipend is £184 and manse. The church was built in 1871 at a cost of about £8000. Pop. (1841) 1023, (1861) 1212, (1871) 963, (1881) 963, (1891) 737; of *quoad sacra* parish (1891), 1329.—*Ord. Sur.*, sh. 23, 1865.

Kirkforthar House, an old mansion on the Balbirnie estate, in Markinch parish, Fife, 3 miles N of Markinch village. Near it are the hamlet of Kirkforthar Feus and the graveyard of the ancient chapelry of Kirk-

forthar, which chapelry, forming the north-eastern section of Markinch parish, had a separate status till the beginning of the 17th century, and has bequeathed to places in and near it the names of Kirkforthar Wood and Hilton of Kirkforthar.—*Ord. Sur.*, sh. 40, 1867.

Kirkgunzeon, a post-office village and a parish of SE Kirkcudbrightshire. The village stands, 190 feet above sea-level, on Kirkgunzeon Lane or Burn, $\frac{1}{2}$ mile WNW of Kirkgunzeon station on the Glasgow and South-Western railway, this being $10\frac{1}{2}$ miles SW of Dumfries and $4\frac{1}{2}$ NNE of Dalbeattie. It was originally called Kirkwinong or Kirkwinnyn, from the same saint who gave name to KILWINNING in Ayrshire.

The parish, containing also the stations of Killywhan and Southwick, and the village of Gateside, 2 miles NNE and $2\frac{1}{4}$ SSW of Kirkgunzeon station, is bounded N by Lochrutton, E by Newabbey, SE and S by Colvend, and SW, W, and NW by Urr. Its utmost length, from N to S, is $6\frac{1}{2}$ miles; its utmost breadth, from E to W, is $4\frac{1}{2}$ miles; and its area is 11,956 $\frac{1}{2}$ acres. Kirkgunzeon Burn, coming in from the N, winds $4\frac{1}{2}$ miles south-westward through the interior, then $2\frac{1}{4}$ miles southward along the western boundary, till, passing off into Urr, and there taking the name of Dalbeattie Burn, it falls into Urr Water, 7 furlongs below Dalbeattie town. In the valley of the stream the surface declines to close on 100 feet above sea-level, thence rising to 450 at Barclosh Hill and 750 at Clawbilly Hill in the S, 520 at Bar Hill in the W, 646 at Camphill in the N, 1250 at the Long Fell and 1050 at Lotus Hill on the eastern border. A considerable aggregate of alluvial land lies along Kirkgunzeon Burn; thence to the NW boundary, and over a medium breadth of fully 1 mile to the SE, the ground is tumulated and hilly; and all the tract on the eastern and the south-eastern border consists of the western declivities of CRIFFEL. Granite predominates in this eastern and south-eastern tract, and is quarried for ornamental steps and gate pillars; and bluish compact greywacke, used for building stone fences, is elsewhere the principal rock. The soil of the alluvial vale is naturally fertile; and that of the other arable lands, by nature either stony or swampy, has been highly improved by art; but the soil of the uplands is heathy and shallow, fit only for sheep pasturage. Antiquities are vestiges of several round camps, and the mediæval towers or castles of BARCLOSH, Corrah, and Drumcultran. Maxwell Stuart of Terregles is the chief proprietor. Kirkgunzeon is in the presbytery and synod of Dumfries; the living is worth £160. The parish church, at the village, which was originally built towards the close of the 12th century, and rebuilt in 1790, contains 160 sittings; and a public school, with accommodation for 132 children, has an average attendance of about 70, and a grant of nearly £85. Pop. (1801) 545, (1831) 652, (1861) 793, (1871) 661, (1881) 656, (1891) 539.—*Ord. Sur.*, sh. 5, 1857.

Kirkhall, an estate, with a mansion, in Ardrossan parish, Ayrshire, $1\frac{1}{2}$ mile N of the town.

Kirkhill, a parish of N Inverness-shire, comprising the ancient parishes of Wardlaw and Farnua, and containing the stations of Bunchrew, Lentrán, and Clunes (on the Highland railway), $3\frac{1}{2}$, $5\frac{1}{2}$, and $7\frac{1}{2}$ miles W by N of Inverness. It is bounded NW by Kilmorack, N by the Beaully Firth, E and SE by Inverness, and S by Kiltarlity. Its utmost length, from E to W, is $7\frac{1}{2}$ miles; its breadth, from N to S, is $5\frac{1}{2}$ miles; and its area is 13,213 $\frac{2}{3}$ acres, of which 20 $\frac{1}{2}$ are water, 104 $\frac{2}{3}$ tidal water, and 1703 $\frac{2}{3}$ foreshore. The river BEAULY winds $4\frac{1}{2}$ miles north-eastward along all the north-western border to the head of the Beaully Firth, which lower down receives from this parish Moniack, Bunchrew, and other burns, and from which the surface rises steeply southward over the eastern half to 588 feet at Inchberry Hill, 1036 at Cnoc na Moine, and 1337 at An Leacainn. The rocks are partly eruptive, partly Devonian; and the soil of the low grounds is a rich clayey loam, whilst that of the higher grounds is thin and gravelly. A large proportion of the parish is occupied by plantations or by natural woods of birch and alder. Near the left bank

of the Beaully, opposite Beaully town, stood LOVAT Castle, founded by the Bissets in 1230. Other antiquities are remains of two ancient Caledonian stone circles; a group of tumuli, said to be memorials of a desperate clan fight; and the site of Wardlaw church, now occupied by the Lovat Mausoleum. Mansions are Achnagairn, Balblair, Bunchrew, Fingask, Kingillie, Lentrán, Moniack Castle, Newton, and Reelick; and Lord Lovat is chief proprietor. Kirkhill is in the presbytery of Inverness and synod of Moray; the living is worth £265. The parish church, $\frac{3}{4}$ mile SSW of Clunes station, is a modern and commodious edifice. It was renovated in 1892 at a cost of £500, and in the following year several mural memorial tablets were inserted. There is also a Free church; and three public schools—Inchmore, Kirkton, and Knockbain—with respective accommodation for 163, 60, and 76 children, have an average attendance of about 80, 55, and 65, and grants amounting to nearly £85, £82, and £65. Pop. (1801) 1582, (1831) 1715, (1861) 1757, (1871) 1582, (1881) 1480, (1891) 1307, of whom 804 were Gaelic-speaking.—*Ord. Sur.*, sh. 83, 1881.

Kirkhill, a village in Penicuik and Lasswade parishes, Edinburghshire, on the North Esk, $\frac{1}{2}$ mile NE of Penicuik town. Standing on rising-grounds, it has extended since 1861 from the left to the right bank of the river; and it is mainly inhabited by paper-makers. Pop. (1861) 342, (1871) 671, (1881) 755, (1891) 712, of whom 498 were in Penicuik parish.—*Ord. Sur.*, sh. 32, 1857.

Kirkhill. See CAMBUSLANG.

Kirkhill, a mansion in Uphall parish, Linlithgowshire, $\frac{1}{2}$ mile W by N of Broxburn.

Kirkhill Castle, a modern mansion, successor to an ancient predecessor, in Colmonell parish, Ayrshire, on the NW outskirts of the village.—*Ord. Sur.*, sh. 7, 1863.

Kirkhill House, a mansion in Cockpen parish, Edinburghshire, on the right bank of the South Esk, $1\frac{1}{2}$ mile WNW of Gorebridge. It was the seat of the late ex-Lord Provost Sir William Johnston, the brother, and for forty years the partner, of the geographer, Alex. Keith Johnston, LL.D., F.R.S. (1804-71), whose son was the explorer, A. K. Johnston (1846-79).—*Ord. Sur.*, sh. 32, 1857.

Kirkholm, an islet in the mouth of Selkirk, in Sandsting parish, Shetland, $13\frac{1}{2}$ miles WNW of Lerwick. It appears to have been anciently fortified, as it retains traces of a breastwork round its most accessible parts, and of the foundations of nine houses within the line of the breastwork.

Kirkhope, a parish of E Selkirkshire, containing Ettrick-Bridge village, on the left bank of Ettrick Water, 7 miles WSW of Selkirk, under which it has a post office. It is bounded NE by Selkirk, E and SE by Ashkirk and Robertson, SW and W by Ettrick, and NW by Yarrow. Its utmost length, from NE to SW, is $8\frac{3}{4}$ miles; its utmost breadth, from NW to SE, is $5\frac{1}{2}$ miles; and its area is 22,972 $\frac{1}{2}$ acres, of which 248 $\frac{1}{2}$ are water. ETRICK WATER has here a north-easterly course of 11 miles, partly along the boundaries with Ettrick and Selkirk, but mainly across the interior; and during this course it is joined by seventeen little tributary burns. Six lakes, however, send off their effluence to Ale Water—Clearburn Loch ($2\frac{1}{4} \times 1$ furl.), Crooked Loch (2×1 furl.), and Hellmuir Loch ($3\frac{1}{2} \times 2\frac{1}{4}$ furl.), on the southern and south-eastern boundary; and Shaws Upper Loch ($1\frac{3}{4} \times 1\frac{1}{4}$ furl.), Shaws Under Loch ($3\frac{3}{4} \times 1\frac{1}{2}$ furl.), and Akermoor Loch ($2\frac{3}{4} \times 1$ furl.), near the south-eastern boundary. The surface declines along Ettrick Water to 480 feet above sea-level; and chief elevations to the right or SE of the river are Huterburn (1178 feet), Howford Hill (1012), Cavers Hill (1209), Shaws Hill (1292), Mossbrae Height (1528), Wedder Lairs (1539), and Stand Knowe (1528); to the left or NW, *Fauldshope Hill (1532), *Crook Hill (1580), Long Knowe (1175), *Sundhope Height (1684), Gilmanscleuch Law (1653), and *Black Knowe Head (1808), where asterisks mark those summits that culminate on the

confines of the parish. The greater part of the parish consists of hill or table-land, the eastern district being chiefly a bleak, dark, heathy plateau, which, lying 1000 feet above sea-level, is much of it occupied by swamp or morass, and presents in itself scarce one feature to relieve the eye except the above-named lakes, though the view from some of the heights, extending as far as the Cheviots, is very striking. But all along the banks of the Ettrick there is a certain amount of cultivation, which becomes more considerable in the lower part of the river's course, where also the general bareness is much relieved by wood. The most attractive natural feature in the parish, or indeed in the whole stretch of the Ettrick, consists of the Newhouse or Kirkhope Linns, in the neighbourhood of Ettrick-Bridge, where the river runs over a rocky bed or between rocky and woody banks, forming for half a mile of its course a beautiful and romantic scene. The rocks are Silurian; and the soils of the hill pastures resemble those of Ettrick and of Yarrow. Sheep-farming is the principal occupation. In the W of the parish are traces of the CATRAIL or Picts' Work Ditch, running near the right bank of Ettrick Water. Kirkhope Tower, near the site of the ancient church or chapel of Kirkhope, is an old Border keep in a good state of preservation. The Duke of Buccleuch is the largest proprietor. Conjoined with St Mary's and Deuchar in 1640 to form the parish of Yarrow, and disjoined from Yarrow in 1851 at the instance of the Duke of Buccleuch, Kirkhope is in the presbytery of Selkirk and synod of Merse and Teviotdale; the living is worth £273. The church, at Ettrick-Bridge, was built in 1841. Kirkhope and Redford Green public schools, and the Duke of Buccleuch's school, with respective accommodation for 107, 35, and 33 children, have an average attendance of about 45, 10, and 25, and grants of nearly £55, £22, and £35. Pop. (1861) 555, (1871) 565, (1881) 547, (1891) 500.—*Ord. Sur.*, shs. 17, 16, 1864.

Kirkiboll. See TONGUE.

Kirkibost, an island of North Uist parish, Outer Hebrides, Inverness-shire, adjacent to the SW side of North Uist Island, and insulated only at high water. With a length of 1 mile, and inconsiderable breadth, it chiefly consists of low land, which, once fertile and very productive, has suffered much devastation by the action of westerly gales. Pop. (1841) 25, (1861) 7, (1881) 12, (1891) 6.

Kirkinner, a post-office village and a coast parish of SE Wigtownshire. The village, remarkable for its beautiful and picturesque scenery, has a station on the Wigtownshire railway, $2\frac{1}{2}$ miles S by W of Wigtown. It took its name from St Kenneir, a virgin who suffered martyrdom at Cologne in 450. Near it is the stately mansion of BARNBAROCH.

The parish, since 1630 comprising the ancient parishes of Kirkinner and Longcastle, is bounded NW by Kirkcowan, N by Wigtown, E by Wigtown Bay, S by Sorbie and Glasserton, and W by Mochrum. Its utmost length, from N to S, is $6\frac{1}{2}$ miles; its utmost breadth, from E to W, exclusive of foreshore, is $5\frac{1}{2}$ miles; and its area is 17,949 $\frac{1}{2}$ acres, of which 2559 are foreshore and 1539 $\frac{1}{2}$ water. Wigtown Bay extends here $2\frac{1}{2}$ miles south-south-eastward, and, with a breadth at high water of from $2\frac{3}{8}$ to $3\frac{1}{2}$ miles, at low water of from 1 furlong to 5 furlongs, at the efflux of the tide leaves on the Kirkiuner side a belt of dry sands nearly $1\frac{1}{2}$ mile broad. The BLADENOCH winds $6\frac{1}{2}$ miles east-by-southward along all the northern border to its mouth near the town of Wigtown; and several streamlets traverse the interior to either the Bladenoch or Wigtown Bay. Dowalton Loch ($11 \times 5\frac{1}{2}$ furl.), at the meeting point with Sorbie and Mochrum, was drained in 1862-63. A belt of low carse ground, a mile or more in breadth, extends along Wigtown Bay; and all the rest of the land is a congeries of rising grounds, hillocks, and small hills, with intervening hollows. The hills are gently outlined and mostly covered with rich verdure; some of them are embellished and crowned with plantation; and the higher have elevations of only 200 or 300 feet

above sea-level. The predominant rocks are Silurian, greywacke chiefly and greywacke slate; and they yield but little good building material. The soil of the belt of flat land in the E is rich alluvium; of the other lands is mostly gravelly, by nature thin, light, and unfertile, but so improved by art, as everywhere now to exhibit a highly cultivated aspect. Tracts that were formerly covered with moss, and encumbered with granite boulders, have all been thoroughly reclaimed; and now not an acre can properly be called waste. Dairy-farming is a principal industry. The Rev. Andrew Symson, author of *A Large Description of Galloway*, was minister from 1663 to 1686. Antiquities, other than those of BALDOON and DOWALTON, are the site of a Caledonian stone circle, vestiges of two circular camps, the rude egg-shaped 'Hole-stone' of Crows, and the ruin of Longcastle church. Kirkinner is in the presbytery of Wigtown and synod of Galloway; the living is worth £348. The parish church, erected in 1828, is a handsome edifice, with a square tower and an ancient four-holed cross. Three public schools—Kirkinner, Longcastle, and Malzie—with respective accommodation for 178, 109, and 57 children, have an average attendance of about 120, 75, and 40, and grants amounting to about £120, £70, and £46. Pop. (1801) 1160, (1841) 1769, (1861) 1716, (1871) 1548, (1881) 1597, (1891) 1455.—*Ord. Sur.*, sh. 4, 1857.

Kirkintilloch, a town and a parish in the detached district of Dumbartonshire. The town stands, 114 to 150 feet above sea-level, on the Forth and Clyde Canal, on the Blane Valley section of the North British railway, and on Luggie Water adjacent to its influx to the Kelvin, by rail being $3\frac{1}{2}$ miles SSE of Lennoxton, $1\frac{1}{2}$ N of Lenzie Junction, 8 NNE of Glasgow, and $4\frac{1}{2}$ W of Edinburgh. It sprang from a strong fort on Antoninus' Wall, and took thence the Celtic name *Caer-pentulach* ('fort at the end of the ridge') corrupted into Kirkintilloch. Crowning a rising ground at the W end of the town, and commanding the passage of Luggie Water, this fort was situated on the N side of the wall; enclosed an area of 90 by 80 yards; and has left remains in the form of a flat oblong mound, now called the Peel. Numerous Roman relics, including a legionary stone, now preserved in the Hunterian Museum of Glasgow University, another stone with bold sculptures of bulls' heads, coins of Domitian, Antoninus Pius, Commodus, and Constantine, an amphora, etc., have been found on and near the site of the fort; and foundations of ancient buildings, with marks or accompaniments indicative of Roman origin, have been discovered in the adjacent grounds. The town was probably a place of some importance, all onward from the Roman occupation; and in 1170 it was made a burgh of barony by a charter of William the Lion in favour of William de Comyn, Baron of Lenzie and Lord of Cumbernauld. From his descendant it passed, about 1306, to the great Fleming family, Lords Fleming from 1460, and Earls of Wigtown from 1606 to 1747; and from them it received renewals or extension of its burgh rights. In 1672 William, fifth Earl of Wigtown, built a three-arch bridge over Luggie Water, described as 'maist necessary and useful for the saife passage of all persons who travel from Edinbro' and Stirling to Glasgow and Dumbarton;' in 1745 Kirkintilloch suffered severely from part of the rebel army of Prince Charles Edward; and in 1832 thirty-six of its townfolk died of the Asiatic cholera, this being the first place where the pest appeared in the West of Scotland. From time immemorial it has possessed two tracts of public property—the 'burgh acres,' on which most of its streets are built; and the 'Newland mailings,' extending into the country. A castle, built by John Comyn about the beginning of the 14th century, appears to have been a structure of considerable strength, but has utterly disappeared.

There has been a marked improvement in the appearance of Kirkintilloch of late, many of the small thatched houses having been replaced by buildings more in keeping with the times. The court-house or town-hall is an old building with a clock steeple, and included a small

prison, closed in 1878. The parish church, erected in 1644, is a cruciform old-fashioned structure, with crows-stepped gables; it was repaired in 1840. St David's Established church, renovated and reseatd 1889, was built as a chapel of ease in 1837 at a cost of £2300, and in 1873 was raised to *quoad sacra* status. Other places of worship are St David's Free church (1843), St Andrew's Free church (1871), a U.P. church (1855), a Baptist chapel (1887), a Wesleyan Methodist chapel, an Original Secession church (rebuilt in 1893, seating 500 persons, and costing about £2000), and the Roman Catholic church of the Holy Family and St Ninian (1874 and 1893). Lairdland public, Townhead public, and a Roman Catholic school, with respective accommodation for 980, 636, and 253 children, have an average attendance of about 600, 630, and 265, and grants of nearly £612, £667, and £257. See LENZIE.

Kirkintilloch has a post office under Glasgow, with money order, savings bank, insurance, and telegraph departments, branches of the National and Commercial Banks, a National Security Savings Bank, 3 inns, agricultural and horticultural societies, a public cemetery, a Young Men's Christian Association, for which new rooms were erected in 1894 at a cost of about £1000, a bowling club, a fire brigade station, a temperance hall and reading-room, and fairs on the second Tuesday of May and 20 Oct. (if a Tuesday; if not, the following Tuesday). It has been lighted with gas since 1839; and in 1878 the gasworks were purchased from the gas company by the commissioners for £14,000; whilst the Kirkintilloch and Lenzie Waterworks were constructed in 1874 at a cost of £14,000. They comprise a storage-tank of 180,000 gallons capacity; but, this supply proving insufficient, a new reservoir, holding 24,500,000 gallons, was formed in 1882 at a cost of £3636. In 1881 a cast-iron drinking-fountain, 12 feet high, was presented to the town by Bailie Wallace; and a drainage system was carried out in 1883. A handsome memorial to the late Miss Beatrice Clugston was unveiled in 1891, and there is another to the memory of a Glasgow gentleman who lost his life attempting to save that of a child who had fallen into the river. The Glasgow and West of Scotland Association for the Relief of Incurables has an hospital at BROOMHILL, and in the suburb of Lenzie, a little to the south, there are the Glasgow Convalescent Home and the Woodilee Lunatic Asylum of the Barony Parochial Board. Employment is afforded by chemical works, iron foundries, steam saw-mills, the weaving of lappet muslin, and by the coal and ironstone mines in the neighbourhood. The burgh became independent of its baronial superior prior to the abolition of hereditary jurisdictions (1747), possesses a jurisdiction similar to that of the royal burghs, adopted the General Police and Improvement Act in 1871, and under the Burgh Police Act of 1892 is governed by a provost, 4 bailies, and 7 commissioners. A police court is held weekly; a sheriff small debt court on the first Thursday of March, June, September, and December; and a justice of peace court on the first Saturday of every month. Pop. (1791) 1536, (1828) 4172, (1851) 6342, (1861) 6113, (1871) 6490, (1881) 8029, (1891) 10,312, of whom 5336 were females, and 9310 were in the police burgh. Houses (1891) inhabited 2063, vacant 114, building 17.

The parish comprises the western part of the ancient barony of Lenzie, commensurate with the entire detached district of Dumbartonshire, and was parochially separated from the eastern part of that barony in 1649. It then assumed the name of Wester Lenzie, while the eastern part took that of Easter Lenzie; but shortly afterwards the two parts from the sites of the respective churches changed their names to Kirkintilloch and Cumbernauld. The parish, containing the villages of Waterside, Tintock, Twechar, and part of Lenzie, is bounded N by Campsie and Kilsyth in Stirlingshire, E by Cumbernauld, SE by New Monkland in Lanarkshire, and S and W by Cadder, also in Lanarkshire. Its utmost length, from E by N to W by S, is 5½ miles; its breadth varies between 1½ and 3½ miles; and its area is 7226½ acres, of which 81 are water. The river KELVIN

flows 5½ miles west-south-westward along or near to all the northern boundary; Luggie Water first runs 1¼ mile westward along the eastern part of the southern boundary, then 4½ miles west-north-westward through the interior, till it falls into the Kelvin at the town; and the FORTH AND CLYDE CANAL, in a line not far from the Kelvin, traverses all the northern border. All lying within the strath or broad dingle of Antoninus' Wall and the Forth and Clyde Canal, the surface sinks at the NW corner of the parish to 105 feet above sea-level, and rises thence gently eastward and east-south-eastward to 234 feet near Oxbang, 338 near Gartshore House, and 400 at Bar Hill. To the N it is sheltered by the Kilsyth Hills, and it chiefly consists of a northward sloping plain, diversified mostly with waving swells, but in Bar Hill presenting a steep and precipitous craig. The rocks belong to the Limestone Carboniferous series, but are situated on the northern verge of the great coal-field of Lanarkshire, beyond the line of the most valuable seams; and, though including abundance of sandstone, limestone, and ironstone, they yield comparatively little coal. The soil along the Kelvin is deep and marshy, liable to inundation; on a small tract in the NE corner is a light reddish earth on a gravelly or trap rock bottom; in the W, around the town, is a light black loam, 16 or 18 inches deep, on a reddish tilly subsoil; in the southern and eastern districts is a strong clay; and in isolated small patches, together comprising some 140 acres, is black peat-moss. ANTONINUS' WALL, extending along the parish nearly in the line of the Forth and Clyde Canal, had a fort upon Bar Hill, which, enclosing an area of 150 square yards, and commanding a view of almost the entire course of the wall from the Forth to the Clyde, is still represented by some vestiges. Another fort, now hardly traceable, at Auchindavie hamlet, formed a rectangle of 150 yards by 70; and, as already stated, a third at the town is still represented by considerable remains. GARTSHORE House is the chief mansion. In the presbytery of Glasgow and synod of Glasgow and Ayr, this parish is divided ecclesiastically among Kirkintilloch proper and the *quoad sacra* parishes of St David's (Kirkintilloch), Lenzie, and Condorrat; the first is a living worth £398, the second £120 (nominal), the third £470, and the fourth £200. Under the landward school board, three public schools, Condorrat, Gartconner, and Twechar, with respective accommodation for 222, 245, and 279 children, have an average attendance of about 155, 160, and 170, and grants amounting to nearly £155, £160, and £180. Pop. (1801) 3210, (1821) 4580, (1841) 8880, (1861) 8179, (1871) 8257, (1881) 10,591, (1891) 12,427, of whom 6292 were in Kirkintilloch proper, 4427 in St David's, 1645 in Lenzie, and 63 in Condorrat.—*Ord. Sur.*, sh. 31, 1867.

Kirkland, a village in Wemyss parish, Fife, on the right bank of the Leven, 1¼ mile W of Leven town, with spinning mills, a public school, and a public hall. Pop. (1861) 448, (1871) 355, (1881) 297, (1891) 441.

Kirkland, Lanarkshire. See KIRKFIELD BANK.

Kirkland, a mansion in Dalry parish, Ayrshire, ¼ mile W of Dalry town.

Kirkland, a hamlet in Kirkeudbright parish, 1¼ mile SE of the town.

Kirklands, an estate, with a mansion, in Ancrum parish, Roxburghshire, 7 furlongs WNW of the village. The mansion, on a wooded height, overhanging Ale Water, was erected about 1830 after designs by Blore of London; and is a handsome edifice in the Tudor style.—*Ord. Sur.*, sh. 17, 1864.

Kirkliston, a village in Linlithgowshire, and a parish partly also in Edinburghshire. The village, occupying a rising-ground on the left bank of Almond Water, has a station on the Queensferry branch of the North British, 1½ mile NNW of Ratho Junction, 3½ miles S of South Queensferry, and 10 W (by road only 8) of Edinburgh. It takes name from the parish church and Liston Manor, being distinguished by the prefix *Kirk* from Old Liston, New Liston, Over New Liston, Hal Liston, and Illiston or High Liston, all in the same parish. Some of its houses are good and modern, yet it

offers on the whole a poor appearance; and has a post office, with money order, savings bank, and telegraph departments, an inn, and a long-established distillery. A foot-bridge over the Almond was constructed in 1846 to give access to Ratho station, and is over 100 feet long. The parish church, dating from the 12th century, and restored in 1884 at a cost of £2000, has a fine S Norman doorway, and includes the old hurrying vault of the noble family of Stair, with the ashes of the first countess, the 'Lady Ashton' of Scott's *Bride of Lammermoor*. The Free church had a spire added in 1880. Pop. (1861) 572, (1871) 647, (1881) 747, (1891) 958.

The parish contains also WINCHBURGH village in Linlithgowshire and Newbridge hamlet in Edinburghshire. Its church having once belonged to the Knights Templars, it was anciently called Temple Liston. The Boundary Commissioners in 1891 transferred to this parish the eastern portion of the Auldcaithie detached part of Dalmeny parish, hut gave its Edinburghshire detached portion, situated at Listonshields and comprising 1892 acres, to the parish of Currie. Otherwise the parish remains as formerly, partly in the county of Linlithgow and partly in that of Edinburgh. It is bounded on the NW by Abercorn, N by Dalmeny, E by Cramond and Corstorphine, S by Ratho and Kirknewton, SW by Uphall, and W by Ecclesmachan. Its utmost length, from E to W, is 6 miles; its utmost width is $4\frac{3}{4}$ miles. ALMOND Water winds $6\frac{3}{4}$ miles north-eastward along all the Midlothian boundary of the Linlithgowshire section, which is traversed by Brox and Niddry Burns, two affluents of the Almond, whilst a third, GOGAR Burn, flows $\frac{3}{4}$ mile along all the Cramond boundary. The Union Canal goes $2\frac{1}{4}$ miles across the southern portion of the parish, and, after making a detour through Uphall, proceeds $1\frac{5}{8}$ mile northward through the western part of the Linlithgowshire section. Springs are abundant and not a little various, affording ample supplies of pure water, and offering solutions of magnesia, lime, and iron. The surface is a plain diversified with very gentle rising-grounds, and, with altitudes ranging from 80 to 320 feet above sea-level, everywhere, but specially along the Almond, presents a pleasing appearance. The rocks belong to the Calciferous Sandstone series of the Carboniferous formation, with intersections of basalt, trap tuff, and diorite; and include sandstone, limestone, ironstone, bituminous shale, and whinstone, all of economical value. A beautiful durable sandstone is quarried on Humber farm, and furnished the material for the Glasgow Stock Exchange. The soil here and there is a very wet clay, on some haughs is light earth or deep sand, and elsewhere varies from a strong clay to a rich black mould. But a small proportion of the parish is under wood, nearly all the remainder being in a state of high cultivation. Prof. Andrew Dalzell, F.R.S. (1742-1806), the eminent scholar, was a native. A field SW of the village of Kirkliston is pointed out as the spot where Edward I. of England encamped on his way to Falkirk (1298); and near some large stones in a field by Newbridge, stone coffins, spear heads, and other relics of some ancient battle have been found. A prominent object is the stupendous viaduct of the Edinburgh and Glasgow section of the North British railway over the Almond; and the chief antiquities are the CATSTANE, ILLISTON or ELISTON Castle, and NIDDRY Castle. These are all noticed separately; as also are the chief mansions, Newliston, Clifton Hall, Fox Hall, and Ingliston. Kirkliston is in the presbytery of Linlithgow and synod of Lothian and Tweeddale; the living is worth £338. Kirkliston, Newbridge, Newhouses, and Winchburgh public schools, with respective accommodation for 372, 158, 100, and 187 children, have an average attendance of about 225, 135, 90, and 150, and grants amounting to nearly £230, £120, £80, and £150. Pop. (1881) 2580, (1891) 3777, of whom 3053 were in Linlithgowshire.—*Ord. Sur.*, sh. 32, 1857.

Kirkmabreck, a parish of SW Kirkcudbrightshire, containing the seaport town and station of CREETOWN, and comprising since 1836 the ancient parish of Kirkmabreck,

with the greater part of that of Kirkdale. It is bounded NW by Minnigaff, NE by Girthon, E by Anwoth, and SW and W by Wigtown Bay and the estuary of the Cree. Its utmost length, from N to S, is 10 miles; its utmost breadth, from E to W, is $6\frac{3}{4}$ miles; and its area is $25,011\frac{1}{2}$ acres, of which 1659 are foreshore, $128\frac{3}{4}$ links, and $192\frac{1}{4}$ water. From the Palnure's confluence to Creetown ferry, the CREE curves 3 miles south-south-eastward, at the ferry having a high-water width of $5\frac{1}{2}$ furlongs, which broadens to $3\frac{1}{2}$ miles in sandy WIGTOWN Bay. Palnure Burn winds $1\frac{1}{8}$ mile south-south-westward along the Minnigaff border to the Cree; Graddock Burn runs 5 miles south-westward along the same boundary to Palnure Burn; Carrouch Burn and Big Water of FLEET run $5\frac{5}{8}$ miles south-south-eastward along the boundary with Girthon; and Skyre Burn runs $2\frac{1}{4}$ miles south-by-eastward along that with Auwoth; whilst Moneypool Burn, flowing $6\frac{3}{4}$ miles south-westward to the Cree's estuary at Creetown, is one out of several streams that drain the interior. Chalyheate springs are at Pibhle, Muirfad, Cuil, Falbac, Ferryburn, Blackmire, and other places; and that at Pihhle has enjoyed some medicinal repute. The coast, with an extent below Creetown of $5\frac{3}{4}$ miles, is mostly flat and sandy, but towards the south-eastern extremity becomes rocky, hold, high, and precipitous, and there is torn with fissures and pierced with caverns, some of them offering romantic features, and one at Ravenshall Point bearing the name of 'Dùk Hatteraick's Cave.' The immediate seaboard is low and richly embellished; hut all the interior is a congeries of hills and mountains, intersected with vales and hollows. Chief elevations, from S to N, are Barholm Hill (1163 feet) and Cairnharrow (1497) on the Anwoth border, Larg Hill (969), Cambret Hill (1150), CAIRNSMORE of FLEET (2152), and Meikle Multaggart (2000). The uplands, rising in successive ridges, are partly green and partly clothed with a mixture of heath and verdure; present, with their intersecting hollows, a series of interesting landscapes; and, whilst forming a noble horizon to the views from the seaboard, command from their summits extensive and magnificent views over much of Galloway, over part of England, and across to Ireland and the Isle of Man. The rocks are variously granitic, metamorphic, and Silurian. A granite quarry, $1\frac{1}{2}$ mile S by E of Creetown, has been largely worked since 1830 by the Mersey Docks and Harbour Trust for the construction of the Liverpool docks; a second, at Baghie, $1\frac{3}{4}$ mile farther SSE, has been worked since 1864 by a Liverpool company; and there are other two on Fell farm, near the crown of the hill at whose base is the first. Lead ore occurs at Blairwood, Drumore, Glen, and Mark; fine specimens of galena have been found in Moneypool; and a copper mine was opened about 1835 at Craignenk, hut did not succeed. The soil is alluvial along the Cree; and elsewhere is mostly gravelly or moorish, and much encumbered with granite boulders. About 5300 acres are under the plough, and some 900 are meadow. Antiquities other than those noticed under CAIRNHOLY, GLENQUICKEN, BARHOLM, and CARSLUTH are Caledonian stone circles, the site of the large tumulus of Cairnywanie, the ivy-clad ruins of Kirkmabreck old church, vestiges of Kirkdale church, and the site of Kilbride chapel. Dr Thomas Brown (1778-1820), professor of moral philosophy in Edinburgh University, was horn at the manse; and another native was Samuel Douglas (d. 1799), the founder of Douglas Academy in Newton-Stewart. The Rev. Patrick Peacock, a distinguished sufferer in the cause of the Solemn League and Covenant, was for some time minister; and Major McCulloch, beheaded at Edinburgh in 1666, was proprietor of the estate of Barholm. Mansions, noticed separately, are Barholm, Cassencarrie, and Kirkdale. Kirkmabreck is in the presbytery of Wigtown and synod of Galloway; the living is worth £812. The parish church and a U.P. church are noticed under CREETOWN; and two public schools—Kirkdale and Kirkmabreck—with respective accommodation for 70 and 323 children, have an average attendance of about 65 and 210, and grants amounting to nearly £60 and £210. Pop. (1801)

1212, (1841) 1854, (1861) 1851, (1871) 1568, (1881) 1834, (1891) 1599.—*Ord. Sur.*, sh. 4, 1857.

Kirkmadrine, an ancient parish in Wigtownshire, since the middle of the 17th century forming the eastern district of Sorbie parish. Its church, on Penkilm farm, 7 furlongs N by W of Garlicstown, is still represented there by some ruins and the burying-ground.—*Ord. Sur.*, sh. 4, 1857.

Kirkmadrine, a small ruined chapel in Stoneykirk parish, SW Wigtownshire, 2 miles SW of Sandhead village. The gateposts of its graveyard are two sculptured stones, figured in Dr John Stuart's *Sculptured Stones of Scotland*.—*Ord. Sur.*, sh. 3, 1856.

Kirkmahoe, a hamlet and a parish in Nithsdale, Dumfriesshire. The hamlet stands, 45 feet above sea-level, near the left bank of Duncow Burn, 1 mile E of the Nith, and 4 miles N of Dumfries, under which it has a post office.

The parish, containing also the villages of DALSWINTON and DUNCOW, and including the ancient chapelry of Kilblane, is bounded NW by Closeburn, NE by Closeburn and Kirkmichael, E by Tinwald, SE by Dumfries, SW by Holywood, and W by Dunscore and Keir. Rudely resembling a kite in outline, it has an utmost length, from N by W to S by E, of 8 miles; an utmost breadth, from E to W, of 4 $\frac{3}{4}$ miles; and an area of 12,699 $\frac{3}{4}$ acres, of which 147 $\frac{1}{2}$ are water. The NITH sweeps 7 $\frac{1}{2}$ miles south-south-eastward along all the western and south-western boundary; Park Burn, a head-stream of Lochar Water, runs 4 $\frac{1}{2}$ miles south-by-eastward along most of the Tinwald border; Goukstone Burn and the Water of Ae trace most of the north-eastern boundary; and the interior is drained to one or other of these streams by a number of pretty rivulets, of which Duncow Burn, rising just within Closeburn, runs 8 miles south-by-eastward till it falls into the Nith at a point 3 miles N by W of Dumfries. The portion of the parish S of Duncow village is all of it low and nearly flat, sinking to 40, and nowhere exceeding 138, feet above sea-level; but northward the surface rises gradually to 704 feet at Dalswinton Wood, 633 at Duncow Common, 883 at Whitestanes Moor, and 984 at Anchengeith Moor—heights that command a magnificent view of the Nith's lower basin and across the Solway Firth to the Cumberland mountains. Old Red sandstone prevails in the S, greywacke in the N; and the soil along the Nith is rich alluvium, on the sloping ground and braes is sandy or gravelly, and on much of the high ground is moss 6 inches deep, incumbent on a bed of earthy gravel. Two-thirds or so of the entire area are in tillage, woods cover nearly 600 acres, and the rest is either pastoral or waste. The antiquities include tumuli, circular moats, and vestiges of hill-forts. Mansions, noticed separately, are CARNSALLOCH, DALSWINTON, and MILNHEAD. Kirkmahoe is in the presbytery and synod of Dumfries; the living is worth £318. The parish church, at Kirkmahoe hamlet, is a neat and commodious Gothic building of 1822, with a pinnacled tower, and was repaired in 1889. A memorial stained-glass window was put in in 1895. There is also a Free church; and two public schools, Dalswinton and Duncow, with respective accommodation for 79 and 189 children, have an average attendance of about 60 and 100, and grants of about £50 and £100. Pop. (1831) 1601, (1861) 1462, (1871) 1332, (1881) 1250, (1891) 1159.—*Ord. Sur.*, shs. 9, 10, 1863-64.

Kirkmaiden, a parish in the southern extremity of Rhinns district, SW Wigtownshire, containing the post-office villages of Drumore and Port Logan, the former 17 $\frac{1}{2}$ miles S by E of Stranraer. As including the southernmost point of Scotland, it is mentioned, conjointly with John o' Groat's House, in Burns's phrase, 'Frae Maiden Kirk to John o' Groat's,' to indicate the extremities of the Scottish mainland. It is bounded N by Stoneykirk, E by Luce Bay, and SW and W by the Irish Sea; and it extends southward in a peninsular strip that terminates in the Mull of Galloway. Its utmost length, from N by W to S by E, is 9 $\frac{1}{2}$ miles; its breadth varies between 1 $\frac{1}{2}$ and 4 $\frac{1}{2}$ miles; and its

area is 14,566 $\frac{1}{2}$ acres, of which 836 $\frac{3}{4}$ are foreshore. The Mull of GALLOWAY (228 feet) and its lighthouse having been separately noticed, it remains to say that the south-western and western coast is mostly bold and rocky, rising steeply to 400 feet at Laggantulloch Head, 205 at Cairnywellan Head, and 214 at the Mull of Logan, and indented by CLANYARD and PORT LOGAN or Nessoek Bays. It has numerous fissures and caves, many of the latter with small opening but roomy interior, scooped out by the endless operations of the sea, and by the furious lashings of its billows in stormy weather; and it offers very trivial aggregate of foreshore. The E coast is mostly low, and, with the exception of Killiness Point, presents from end to end a slightly waving outline. There is a small harbour at Drumore, but the harbour at Portnessock is in ruins. There are coastguard stations at Port Logan and Drumore. On both sides of the peninsula, however, there are good anchoring grounds. The interior is mainly a congeries of low hills, and attains 325 feet above sea-level at Berehill, 286 at the church, 507 at Barncorkrie Moor, 525 at West Muntloch, and 522 at Dunman. Eruptive and Silurian rocks are predominant, and slate was for some time largely worked in several quarries. Much of the soil is of a character to require artificial draining. Wood covers about 270 acres; some 1700 are rocky moor or moss; rather more than one-half of the entire area is pasture; and the rest is in cultivation. Good crops of corn and potatoes are produced, and there is a very large number of dairy farms. Antiquities other than those noticed under CASTLE CLANYARD, CRAMMAG, DRUMORE, DUNMAN, and the Mull of GALLOWAY, are vestiges of several Caledonian or medieval strongholds, sites or traces of five pre-Reformation chapels, and Auchness Castle, a quaint square gabled tower, now a farmhouse. LOGAN House, noticed separately, is the only mansion; and James M'Douall, Esq. of Logan, is the chief proprietor. On the estate of Logan there is a fish pond hewn out of the solid rock, but having communication with the sea by means of an ingeniously contrived iron grating. Some of the fish in this artificial reservoir are said to have been rendered so tame as to feed from the hand. Kirkmaiden is in the presbytery of Stranraer and synod of Galloway; the living is worth £172. The parish church, 1 mile E of Drumore, was built in 1638, and contains 275 sittings; its bell, bearing date 1534, is said to have once been the dinner-bell of Castle Clanyard. The ancient church, the cave near the Mull of Galloway, was dedicated to St Medana, identical probably with St Monenna or Moduenna, whose death is placed in 519, and who, consecrated a virgin by St Patrick, is said to have crossed from Ireland to Scotland, where she founded many churches, three of them in Galloway (Skene's *Celtic Scotland*, ii. 37, 1877). A Free church stands $\frac{1}{2}$ mile NNW of Drumore; and three public schools—Central, Northern, and Southern—with respective accommodation for 230, 190, and 85 children, have an average attendance of about 175, 115, and 55, and grants amounting to nearly £185, £112, and £50. Pop. (1831) 2051, (1861) 2333, (1871) 2507, (1881) 2446, (1891) 2192.—*Ord. Sur.*, sh. 1, 1856.

Kirkmaiden, a small pre-Reformation parish of SE Wigtownshire, long incorporated with Glasserton. Its roofless church, romantically situated by the shore, not far from Monreith, is the scene of many a weird story. Here lies buried the young French admiral, François Thurot (1726-60), killed in the sea-fight in the Bay of Luce.

Kirkmay, a large and handsome mansion of 1817 in Crail parish, Fife, $\frac{1}{2}$ mile W by S of Crail town.

Kirkmichael, a village and a parish in Carrick district, Ayrshire. The village stands, 176 feet above sea-level, on Dyrock Burn, 3 miles E by S of Maybole, under which it has a post office. The environs are pleasant; and the place itself presents a neat, agreeable appearance, with its little gardens. Pop. (1861) 463, (1871) 372, (1881) 343, (1891) 310.

The parish, containing also the village of CROSSHILL,

is bounded N by Dalrymple, E by Straiton, S by Dailly, SW by Kirkoswald, and W by Maybole. Its utmost length, from N to S, is $8\frac{1}{2}$ miles; its breadth varies between 5 furlongs and $5\frac{1}{2}$ miles; and its area is $16,114\frac{1}{2}$ acres, of which 185 are water. The river DOON winds $6\frac{1}{4}$ miles westward along all the northern boundary; GIRVAN Water, after running $6\frac{1}{2}$ furlongs northward along the eastern boundary, meanders $4\frac{1}{2}$ miles west-by-southward through the interior, and next flows $2\frac{1}{2}$ miles south-south-westward along the Maybole and Kirkoswald border; and Dyrock Burn, issuing from Shankston Loch, runs $5\frac{1}{4}$ miles west-south-westward along the eastern boundary, and through the interior, till it falls into Girvan Water, 1 mile below Kirkmichael village. On the eastern border lie triangular Loch Spallander (3×2 furl.) and Shankston Loch ($2\frac{1}{4} \times 1$ furl.); and near the latter arc Barnsham Loch (3×1 furl.) and Loch Crom ($1\frac{1}{2} \times \frac{3}{4}$ furl.). Along the Doon the surface declines to 140, along Girvan Water to 93, feet above sea-level; and, from N to S, it attains 629 feet at Lochhill near Shankston Loch, 642 near Guiltrechill, 711 at Glenside Hill near Loch Spallander, and 1406 at GLENALLA Fell. The predominant rocks are igneous and Devonian. Sandstone has been quarried, and limestone largely worked; but coal has been sought for without success, and lead ore is only supposed to exist in one of the hills. The soil, on some lands adjacent to the streams, is a rich sharp mould; on other low lands is of a clayey nature, inclining to loam on slopes; of some of the lower hills is light and gravelly; and on the higher uplands is a thin turf on a shingly bottom. A large proportion of the land is in a state of high cultivation, and nearly 1200 acres are under wood. There are traces of two ancient circular forts on Guiltrechill Farm, and of three others at Deanston, Cassanton, and Castle-Downans; and ruins of a pre-Reformation chapel existed, till a recent period, on Lindsayston Farm. Kirkmichael House, 3 furlongs S of Kirkmichael village, is a large fine mansion, with beautiful pleasure-grounds; its owner is John Shaw-Kennedy, Esq. (b. 1826; suc. 1877). Other mansions, noticed separately, are CASSILLIS House and CLONCAIRD Castle. Giving off a large piece to the *quoad sacra* parish of Crosshill, and a fragment to that of Patna, Kirkmichael is in the presbytery of Ayr and synod of Glasgow and Ayr; the living is worth £296. The parish church, at the NE of Kirkmichael village, was built in 1787, on the site of a former one dedicated to St Michael, from which the village and parish took their name. Its picturesque graveyard is surrounded by large old ash trees. The public school, with accommodation for 143 children, has an average attendance of about 75, and a grant of nearly £74. Pop. (1801) 1119, (1831) 2758, (1861) 2823, (1871) 2254, (1881) 1989, (1891) 1870, of whom 885 were in the ecclesiastical parish.—*Ord. Sur.*, sh. 14, 1863.

Kirkmichael, an Annandale parish of N Dumfriesshire, whose church stands, 390 feet above sea-level, near the left bank of the Water of Ae, $3\frac{1}{2}$ miles NW of Shieldhill station, $4\frac{1}{2}$ N of Amisfield station, both on the Dumfries and Lockerbie section of the Caledonian railway, and 9 N by E of the post-town, Dumfries. Comprising the ancient parish of Kirkmichael and the larger part of Garvald, it is bounded N by Kirkpatrick-Juxta, NE and E by Johnstone, SE by Lochmaben, S by Tinwald, SW by Kirkmahoe, and W by Closeburn. Its utmost length, from NNW to SSE, is $9\frac{1}{2}$ miles; its utmost breadth is 5 miles; and its area is $17,130\frac{3}{4}$ acres, of which 148 are water. The Water of Ae, from a point within $1\frac{1}{2}$ mile of its source upon Queensberry Hill to a point only 3 furlongs from its confluence with Kinnel Water, hurries $12\frac{3}{4}$ miles south-south-eastward on or near to all the western, south-western, southern, and south-eastern border; KINNEL Water itself, over a distance of $2\frac{1}{2}$ miles to a point $5\frac{3}{4}$ furlongs above the influx of the Ae, roughly traces part of the boundary with Johnstone; and GLENKILL and GARVALD Burns, running $6\frac{1}{2}$ and $7\frac{1}{4}$ miles through the interior southward to the Ae, divide the parish into three pretty equal portions.

In the SE is Cumrue Loch ($1 \times \frac{3}{4}$ furl.), as large again till it was reduced by drainage; and in the N, near the Martyr's Stone, a still smaller but very deep tarn lies at an altitude of 1160 feet. The SE corner of the parish is a level tract, declining to 170 feet above the sea; beyond, the surface rises north-north-westward to 324 feet at Nether Garvald, 546 at Carrick, 896 at Kirkmichael Fell, 1133 at Kirkland Hill, 1201 at Kirk Hill, and 1307 at Holehouse Hill. Red sandstone predominates in the plains, and has been worked; alum slate, interspersed with iron pyrites, occur in the SW; and Silurian rocks prevail throughout the hills. The soil along the lower reaches of the Ae and the Kinnel is very fertile alluvium; in patches amounting to over 500 acres, is mossy; and in the middle districts, is mostly dry and gravelly, but partly moorish and heathy. Rather more than one-third of the entire area is either meadow or arable land; woods cover some 350 acres; and the rest of the parish is chiefly sheep pasture. A number of ancient coins and small antiquities have been found. Greater antiquities are, vestiges of numerous Caledonian forts and camps; traces of part of the Roman road from Cumberland to Clydesdale; and remains of a Roman castellum in the manse garden, of GLENÆ Tower, of GARVALD church, and of Wallace's House or Tower, $\frac{1}{2}$ mile NW of the last. This the patriot is said to have garrisoned with sixteen men, whilst he was meditating the capture of Lochmaben Castle (1297); and a large stone, called the 'Sax Corses,' 2 miles ENE of the church, marks the grave of the Englishman, Sir Hugh de Moreland, and his followers, who fell in an encounter with Sir William Blue Cairn, too, at the northern boundary, on the SE slope of Queensberry, is the traditional site of Wallace's victory over Greystock, Sir Hugh's companion in arms, who was slain with most of his 300 followers. Kirkmichael House, $1\frac{1}{2}$ mile ESE of the church and 5 miles NNW of Lochmaben, is a handsome Tudor edifice of 1833, with finely wooded grounds and two artificial sheets of water; its owner is John Stewart Lyon, Esq. (b. 1868; suc. 1881). More than half of the parish belongs to the Duke of Buccleuch. Kirkmichael is in the presbytery of Lochmaben and synod of Dumfries; the living is worth £332. The parish church, built in 1815, contains over 500 sittings. There is also a Free church; and two public schools, Garvald and Nethermill, with respective accommodation for 90 and 100 children, have an average attendance of about 50 and 70, and grants amounting to nearly £60 and £70. Pop. (1801) 904, (1831) 1226, (1861) 1026, (1871) 903, (1881) 849, (1891) 808.—*Ord. Sur.*, sh. 10, 1864.

Kirkmichael, a village and a parish of NE Perthshire. The village stands upon Airdle Water, 705 feet above sea-level, and 14 miles NNW of Blairgowrie, under which it has a post office. A handsome bridge, built here across the Airdle in 1842, was greatly damaged by the flood of 1847, but afterwards repaired.

The parish, containing also Spittal of GLENSHEE, is bounded N by Crathie in Aberdeenshire, E by Glenisla in Forfarshire and by Alyth, SE by Blairgowrie, S by Blairgowrie and Clunie, SW by Logierait, W by Moulin, and NW by Blair Athole. Its area was considerably enlarged by the Boundary Commissioners in 1891, when the following additions were made to the parish:—The Persie detached portion of the parish of Bendochy, comprising 2999 acres; the Craigton detached portion of the parish of Caputh, comprising 688 acres; and the Bleaton-Hallet detached portion of the parish of Rattray, comprising 848 acres. Its utmost length, from NNW to SSE, is $17\frac{1}{2}$ miles; its breadth varies between $4\frac{1}{2}$ and 9 miles; and its area is 62,093 acres, of which $275\frac{3}{4}$ are water. AIRDLE Water, entering from Moulin, winds $7\frac{1}{4}$ miles south-south-eastward, till it passes off below Ballintuin House, and crossing the northern projecting portion of Blairgowrie parish traces the southern boundary of Kirkmichael until its confluence with the Shee or BLACK WATER in the extreme SE corner of the parish. Shee Water, gathering its head-streams at Spittal of Glenshee (1125 feet), has here a south-south-easterly

course of 10 miles near to or along the eastern border. One of its head-streams issues from Loch nan Eun ($3\frac{1}{2} \times 1\frac{1}{2}$ furl.; 2550 feet) in the extreme NW corner of the parish, close to the Aberdeenshire boundary; and one of its affluents is fed from Loch Shechernich ($4 \times 1\frac{1}{2}$ furl.; 1350 feet), close to the Forfarshire boundary. Along the Airdle the surface declines to 570, along the Black Water to 595, feet above sea-level; and thence it rises to Knock of Balmyle (1458 feet), *Hill of Easter Bleaton (1247), *Creag nam Mial (1842), Creag a' Mhadaidh (1474), *Creag Dhubh (2082), Lamh Dearg (1879), Meall Uaine (2600), *Meall a' Choire Bhuidhe (2846), Carn an Daimh (2449), *Monamenach (2649), BEN GHULBHUINN (2641), *Creag Leacach (3238), Carn Mor (2846), *Cairnwell (3059), *Beinn Iutharn Bheag (3011), *Glas Thulachan (3445), Monks Cally (1131), Paterlach (1097), and Craighead (1000), where asterisks mark those summits that culminate on or close to the confines of the parish. The Airdle's narrow vale, some patches along the Black Water, and a belt of territory extending from the Airdle at Kirkmichael village eastward to the Black Water, are low comparatively and mostly under cultivation; but nearly all the rest of the surface is lofty upland, chiefly mountainous, a portion of the Central Grampians. The rocks are mostly metamorphic, and one or two out of many copious springs are medicinal, believed to be anti-scorbutic. The soil of the low grounds along the streams is thin and dry, on a sandy bottom; that on the higher arable grounds is wet and spongy, requiring a dry warm season to render it productive. Little more than one-twelfth of the entire area is in tillage; about 750 acres are under wood; and the rest is either pastoral or waste. A rocking-stone, $3\frac{1}{4}$ miles SE of Kirkmichael village, is estimated to weigh 3 tons; and near it are four concentric stone circles. To the W are several standing stones, vestiges of eight or more other stone circles, and a cairn 270 feet in circumference and 25 high, surrounded at a little distance, and at different intervals, with a number of smaller cairns in groups of eight or ten. ASHINTULLY, Cally, KINDROGAN, Strone House, and WOODHILL are the chief mansions. Including all Glenshee *quoad sacra* parish and a portion of Persie, Kirkmichael is in the presbytery of Dunkeld and synod of Perth and Stirling; the living is worth £174. The parish church, at Kirkmichael village, was built in 1791, and entirely renovated in 1893. There is also a Free church; and three public schools—Ballintuim, Glenshee, and Kirkmichael—with respective accommodation for 63, 46, and 120 children, have an average attendance of about 30, 20, and 50, and grants amounting to over £40, £32, and £57. Valuation (1883) £16,754, 4s. 11d., (1892) £18,654, 9s. 3d. Pop. (1801) 1563, (1831) 1568, (1861) 1224, (1871) 965, (1881) 849, (1891) 935, of whom 310 were Gaelic-speaking, and 534 belonged to Kirkmichael ecclesiastical parish.—*Ord. Sur.*, shs. 56, 65, 55, 64, 1869-74.

Kirkmichael, a parish of S Banffshire, containing the village of TOMINTOUL, $1\frac{1}{2}$ miles S of Ballindalloch station on the Great North of Scotland railway, this being 12 miles NE of Grantown and 12 SW of Craighellachie. It is bounded NE by Inveraven, E, SE, and S by Strathdon and Crathie in Aberdeenshire, W by Abernethy in Inverness-shire, and NW by Cromdale and Knockando in Elginshire. Its utmost length, from N by W to S by E, is $17\frac{1}{2}$ miles; its width, from E to W, varies between 2 and $11\frac{1}{2}$ miles; and its area is 76,339 acres, of which $380\frac{1}{2}$ are water. The pellucid AVEN, issuing from lone Loch Aven ($13 \times 1\frac{1}{2}$ furl.; 2250 feet), winds east-north-eastward and then northward along GLENAVEN, till it enters the Spey, in the latter part of its course tracing the boundary with Inveraven parish. During this course it is joined by Builg Burn, flowing $2\frac{1}{2}$ miles north-by-westward out of Loch BUILG (6×2 furl.; 1536 feet) at the Aberdeenshire border; by the Water of Caiplauch or Ailnack, running $6\frac{1}{2}$ miles north-eastward along the Abernethy border, then $3\frac{1}{4}$ north-north-eastward across the interior; by CONGLASS Water, running 8 miles north-westward through the eastern

interior; by the Burn of Brown or Lochy, running 4 miles northward along the Abernethy boundary, then 2 north-north-eastward across the interior; and by thirty-four lesser tributaries. The surface, sinking along the Aven to 698 feet above sea-level, is everywhere hilly or grandly mountainous, the chief elevations to the E of that river, as one ascends it, being Carn na Dalach (1352 feet), *Carn Daimh (1866), Cnoc Lochy (1528), Tom na Bat (1723), *Carn Liath (2598), *Carn Elasaid (2600), Liath Bheinn (2183), *Meikle Geal Charn (2633), Meall na Gainimh (2989), *BEN AVEN (3843), *BEN-ABOURD (3924), and *BEN MACDHUI (4296); to the W, *Carn Eachie (2329), Cnoc Forgan (1573), Carn Meadlonach (1928), Big Garabhoun (2431), *Caiplich (3574), and *CAIRNGORM itself (4084), where asterisks mark those summits that culminate on the confines of the parish. The southern district, thus lying all among the Cairngorm Grampians, is wholly uninhabited. The northern, mainly consisting of ranges of mountains and congeries of hills, presents for the most part a moorish, desolate, forbidding aspect, and is inhabited only along the banks of the lower reaches of the Aven and of the Aven's principal tributaries. Granite is the prevailing rock of the mountains; sandstone occurs round Tomintoul; excellent grey slates and pavement slabs are quarried on the banks of the Aven; limestone abounds in many parts; and ironstone of rich quality has been mined near the source of the Conglass Water. The soil of a considerable portion of the arable land is fertile alluvium; that of most of the rest is a rich loam. A good deal of natural wood is dotted along the valley of the Aven; not more than between 2000 and 3000 acres are in tillage; and all the rest is pastoral waste or deer-forest, Glenaven deer-forest alone extending to about 60,000 acres. The Duke of Richmond and Gordon owns nearly nine-tenths of the parish. Giving off the *quoad sacra* parish of Tomintoul, Kirkmichael is in the presbytery of Abernethy and synod of Moray; the living is worth £200. The parish church, 4 miles NNW of Tomintoul, was built in 1807. There is also a Free church; and Kirkmichael public, Tomintoul public, and Tomintoul Roman Catholic schools, with respective accommodation for 74, 140, and 129 children, have an average attendance of about 10, 60, and 90, and grants amounting to about £25, £65, and £80. Valuation (1881) £6215, (1893) £5941. Pop. (1801) 1332, (1831) 1741, (1861) 1511, (1871) 1276, (1881) 1073, (1891) 1043, of whom 248 were Gaelic-speaking, and 348 were in the ecclesiastical parish.—*Ord. Sur.*, sh. 75, 1876.

Kirkmichael or Resolis, a parish of Ross and Cromarty shire, which, containing the villages of Gordon's Mills and Jemimaville, lies in the NW of the Black Isle, and comprises the ancient parishes of Kirkmichael and CULLICUDDEN. Its church stands 7 miles WSW of Cromarty, and 3 SW of the post-town and railway station of Invergordon, on the opposite shore of Cromarty Firth. It is bounded NW, N, and NE by the Cromarty Firth, E and SE by Cromarty, SE by Rosemarkie and Avoch, and SW by Urquhart. Its utmost length, from NE to SW, is $6\frac{1}{2}$ miles; its utmost breadth is $3\frac{1}{2}$ miles; and its area is 12,449 acres. The coast-line, $9\frac{1}{2}$ miles in extent, has a gravelly shore, interspersed with low flat rocks; and from it the surface rises to 397 feet at Kilbeachie Wood, 231 at the Bog of Cullicudden, and 838 at the highest point of broad-based ARDMEANACH or Mullbaie, on the SE boundary. The interior, however, is intersected by a valley, which, extending north-eastward nearly from end to end of the parish, contains by far the greater part of its arable land, and is traversed by the Burn of Resolis to the Cromarty Firth at Gordon's Mills. Old Red sandstone, varying in hue from red to a deep yellow, is the prevailing rock, and has been quarried, although it is mainly of inferior quality for building purposes. The soil, for the most part a light black loam on a hard tilly bottom, along the north-western shore is sharper and more productive; but almost everywhere requires laborious tillage and careful husbandry. Some tracts are embellished with plantations or natural wood, but most parts are bare or

moorish. The chief antiquities are numerous tumuli on the moors, traces of ancient camps, the fragmentary ruin of CASTLECRAG, and the remains of old Kirk-michael church, graphically described by Hugh Miller. Mansions, both noticed separately, are NEWHALL and POINTZFELD. Kirkmichael is in the presbytery of Chanonry and synod of Ross; the living is worth £292. The parish church, built in 1830, is amply commodious. There is also a Free church; and two new public schools, Cullicudden and Newhall, each with accommodation for 123 children, have an average attendance of about 70 and 100, and grants amounting to over £86 and £106. Pop. (1831) 1470, (1861) 1568, (1871) 1527, (1881) 1424, (1891) 1339, of whom 610 were Gaelic-speaking.—*Ord. Sur.*, shs. 94, 93, 83, 84, 1876-81.

Kirkmieen or Kilmein Hill. See DALRYMPLE.

Kirkmuirhill, a collier village in Lesmahagow parish, Lanarkshire, 5 furlongs from the left bank of the Nethan, $2\frac{3}{4}$ miles NNW of Abbeygreen, and $3\frac{3}{4}$ SE of Stonehouse. It has a post office, with money order, savings bank, and telegraph departments, a tilework, a sawmill, an inn, and a U.P. church. Pop. (1871) 501, (1881) 547, (1891) 569.—*Ord. Sur.*, sh. 23, 1865.

Kirkness House, a mansion in Portmoak parish, Kinross-shire, 1 mile SE of the south-eastern extremity of Loch Leven, and 4 miles N of Lochgelly.

Kirknewton, a village and a parish of W Edinburghshire. The village stands 5 furlongs E by S of Mid-caldor or Kirknewton Junction on the Caledonian railway, this being $36\frac{1}{2}$ miles E of Glasgow, and 11 WSW of Edinburgh. It has a post office, with money order, savings bank, and telegraph departments, a public hall, an inn, and a police station. Pop. (1861) 318, (1871) 383, (1881) 368, (1891) 337.

The parish, containing also the villages of East CALDER, Oakbank, and Wilkinston, comprises the ancient parishes of Kirknewton and East Calder. It is bounded NW by Uphall in Linlithgowshire, N by Kirkliston and Ratho, E by Ratho and Currie, and S and W by Mid-caldor. Its utmost length, from NNE to WSW, is $6\frac{3}{4}$ miles; its utmost breadth, from E to W, is $3\frac{3}{4}$ miles; and its area is $9491\frac{1}{2}$ acres, of which $14\frac{1}{2}$ are water. The river ALMOND winds 9 furlongs north-eastward along all the Linlithgowshire border; Linhouse Water, in a run of $5\frac{1}{2}$ miles, traces all the western boundary to the Almond; the Water of LEITH for 3 miles traces the southern part of the eastern boundary; and three head-streams of Gogar Burn rise in the interior, and drain the north-eastern district, one of them, over a distance of 2 miles, tracing the northern part of the eastern boundary. In the extreme N the surface declines to close on 200 feet above sea-level, and thence it rises gradually southward to 500 feet near Kirknewton village, 700 near Lyden, and 1000 at Corston Hill; the southern district, which comprises nearly one-half of the entire area, lying near the Pentlands, but being neither mountainous nor rocky, and consisting largely of excellent sheep pasturage. The northern district is gently diversified champaign, and exhibits a highly cultivated surface, gemmed with mansions, and embellished with parks and woods. Multitudes of stand-points, not only on the hills but likewise throughout the plain, command magnificent views over the Lothians and across the Firth of Forth, to the Lammermuirs, the Ochils, and the Grampians. The rocks belong to the Calciferous Sandstone series, with porphyrite at Corston Hill, and patches elsewhere of intrusive basalt; the soil is a mixture of clay and sand on the northern border, a fertile loam in the central and southern parts of the northern district, and on the hills a vegetable mould. About two-thirds of the land are under tillage; about 550 acres are under wood; and most of the remainder is permanent pasture. Employment is given by limestone quarries and the Oakbank shale oil-work. Alexander Bryce (1713-86), geometer, was minister from 1745 till his death, as also from 1786 was William Cameron (1751-1811), a minor poet. William Cullen, M.D. (1710-90), the celebrated physician, was proprietor of Ormiston, and is buried in the churchyard, along with his son

Robert (1764-1810), an eminent judge. Two other eminent Lords of Session were also connected with this parish—Alexander Macouochie of Meadowbank (1748-1816) and his son Alexander (1776-1861), who successively on their elevation to the bench assumed the title of Lord Meadowbank. Mansions, noticed separately, are Linburn, Hillhouse, Meadowbank, Ormiston, and Calderhall. Kirknewton is in the presbytery of Edinburgh and synod of Lothian and Tweeddale; the living is worth £416. The parish church, near the Junction, was built in 1750, and, as enlarged and restored in 1872, now presents a handsome appearance in the Gothic style, and contains 588 sittings. There are also a Free church for Kirknewton and Ratho, and a U.P. church at East Calder. Five public schools—East Calder, Kirknewton, Oakbank, Sunnyside, and Wilkinston—with respective accommodation for 272, 135, 122, 25, and 130 children, have an average attendance of about 275, 80, 115, 20, and 100, and grants amounting to nearly £285, £80, £100, £20, and £100. Pop. (1881) 2742, (1891) 3352.—*Ord. Sur.*, sh. 32, 1857.

Kirkney Burn. See GARTLY.

Kirk-o-muir. See KIRKAMUIR.

Kirkoswald, a village and a coast parish in Carrick district, Ayrshire. The village, standing 332 feet above sea-level, is $1\frac{1}{2}$ mile from the coast, and $4\frac{1}{2}$ miles WSW of Maybole, under which it has a post office. An old and picturesque place, with a good inn, it was here that Burns spent his nineteenth summer (1778) in the study of mensuration, making pretty good progress therein, though not so great as in the knowledge of mankind, in 'scenes of swaggering riot and roaring dissipation.' In the burying-ground are the graves of his 'Tam o' Shanter' and 'Souter Johnnie' (Douglas Graham and John Davidson), as also of his grand and great-grand parents, the Brouns, the restoration of whose tombstone was inaugurated on 3 Aug. 1883.

The parish, containing also Maidens village, included, till 1652, a considerable tract on the NW side of Girvan Water, now belonging to Girvan and Dailly. It is bounded NE and E by Maybole, SE by Dailly, S by Dailly and Girvan, and W and NW by the Firth of Clyde. Its utmost length, from W by N to E by S, is $7\frac{1}{2}$ miles; its utmost breadth, from NNE to SSW, is $6\frac{1}{2}$ miles; and its area is 15,444 acres, of which $503\frac{3}{4}$ are foreshore and $79\frac{1}{2}$ water. The coast-line, $8\frac{1}{2}$ miles long, exhibits prominent features at Colzean Castle and Turnberry Point, but elsewhere is chiefly a sandy beach, with verdure down to the water-mark. It offers good bathing facilities, and, though destitute of any village, attracts to the farmhouses and the cottages in its vicinity a considerable number of summer visitors. The interior shows great diversity of contour, attaining 886 feet above sea-level at Mochrum Hill and 800 at Craig-dow—vantage-grounds that command a wide and magnificent prospect; and it is everywhere richly embellished with park and wood and culture. Mochrum Loch ($2\frac{1}{2} \times 1\frac{1}{4}$ furl.) and Craigdow Loch ($1\frac{3}{4} \times 1\frac{1}{2}$ furl.) lie on the north-eastern and the eastern borders; and Milton Burn and numerous rills, running in various directions to the Firth, afford abundance of pure water. The rocks are partly eruptive, partly carboniferous; and coal has long been mined, but to no very great extent. The soil of the NW district is mostly a very rich argillaceous loam; of the SE, is generally lighter and more humid. Nearly all the land, except that in parks and under wood, is regularly or occasionally in tillage. Colzean Castle, Thomaston Castle, the vestiges of Turnberry Castle, and the ruins of Crossraguel Abbey, all noticed separately, are objects of great interest. The Marquis of Ailsa owns three-fourths of the parish. Giving off a portion to the *quoad sacra* parish of Crosshill, and a smaller one to that of Maybole West Church, Kirkoswald is in the presbytery of Ayr and synod of Glasgow and Ayr; the living is worth £340. The present parish church, at Kirkoswald village, is a modern and commodious edifice. It was repaired, re-seated, and improved in 1892 at an expense of £1000. The ancient church, standing within Turnberry manor,

was called Kirkoswald of Turnberry, and took the suffix *Oswald* from Osuald, King of Northumbria (634-42), who showed great zeal in the re-establishment of Christianity. There is also a Free church; and three public schools, Kirkoswald, Maidens, and Townhead, with respective accommodation for 162, 56, and 80 children, have an average attendance of about 100, 50, and 100, and grants of nearly £95, £36, and £90. Pop. of civil parish (1801) 1679, (1831) 1951, (1861) 2060, (1871) 1346, (1881) 1781, (1891) 1652; of ecclesiastical parish (1871) 1623, (1881) 1515, (1891) 1450.—*Ord. Sur.* shs. 14, 13, 1863-70.

Kirkowan. See KIRKOWAN.

Kirkpatrick. See KILPATRICK.

Kirkpatrick-Durham, a village and a parish of NE Kirkcudbrightshire. The village stands $4\frac{1}{2}$ miles ENE of Crossmichael station, and 5 NNE of Castle-Douglas. Founded about 1785, it was for some time the scene of vigorous but vain exertions to establish a cotton and woollen manufacture, and also was largely frequented for balls and horse-races; but underwent, in course of years, a great decline of local importance, and now is a quiet rural place, with a post office under Dalbeattie, a hall for public meetings, an Oddfellows' lodge, and a fair on 17 March *o. s.* or on the Thursday after. Pop. (1881) 484, (1891) 398.

The parish contains also the village of Bridge of Urr, and part of the village of Crocketford, and includes the ancient chapelries of Areeming, Kirkbride, and Minny-dow, the last with a once famous St Patrick's Well. It derives its name from the old church dedicated to St Patrick, and Durham, the hamlet where it stood. The parish is bounded N by Dunscore in Dumfriesshire, E by Kirkpatrick-Irongray and Lochrutton, SE by Urr, SW by Crossmichael, and W by Parton and Balmaclellan. Its utmost length, from N to S, is $9\frac{3}{4}$ miles; its utmost breadth, from E to W, is $4\frac{1}{2}$ miles; and its area is 18,389 $\frac{1}{4}$ acres, of which 111 $\frac{3}{4}$ are water. The Water of URR winds $10\frac{3}{4}$ miles along all the western and south-western border; Grange Burn, its affluent, traces the south-eastern boundary; and numerous streamlets drain the southern district to the Urr and the northern district to Cairn Water. Auchenreoch Loch ($9 \times 1\frac{1}{2}$ furl.; 340 feet) lies on the Urr border; and seven smaller lakes are dotted over the interior. Sinking in the S to between 100 and 200 feet above sea-level, the surface rises northward to 694 feet near Barderrock, 973 near Crofts, 869 at Auchenhay Hill, 863 at Bar Hill, and 1222 at Collieston Hill, close to the Dunscore border. The southern district, to the extent of about one-half of the whole area, exhibits a southward declining surface, diversified with knolls and craggy hills; the northern includes Kirkpatrick Moor, a broad, high, bleak region, almost entirely heathy or pastoral, and chiefly distinguished for its abundance of game. The rocks are variously eruptive, Silurian, and Devonian. The soil, over the eruptive rocks, is mostly wet, on a bottom of hard till; over the Silurian rocks, is gravelly and well suited for turnips and barley; and over the Devonian rocks is light, and sandy. About two-fifths of the entire parish are in tillage, woods cover some 440 acres, and all the rest of the land is either pastoral or waste. A Roman camp at Doon Park and several artificial mounds make up the antiquities. Mansions are Barncalzie, Chipperkyle, Corsock, Crofts, Croys, Kilquhanity, Marwhirn, and Walton Park. Giving off a portion to Corsock *quoad sacra* parish, Kirkpatrick-Durham is in the presbytery and synod of Dumfries; the living is worth £284. The parish church was built in 1849, and in the churchyard is a monument to a Covenanting martyr, John Neilson of Corsock. A Free church was built in 1843; and Kirkpatrick-Durham public school, with accommodation for 172 children, has an average attendance of about 120, and a grant of over £121. The farm of Brooklands was left to certain trustees for educational purposes; and, by a scheme of the Educational Endowments (Scotland) Commission, the benefits of this bequest were extended to the neighbouring parishes of Crossmichael, Parton, Corsock, Kirkpatrick-Irongray, Urr, and Lochrutton.

Pop. of civil parish (1801) 1007, (1841) 1487, (1861) 1479, (1871) 1374, (1881) 1317, (1891) 1157; of ecclesiastical parish (1871) 1218, (1881) 1113, (1891) 989.—*Ord. Sur.*, shs. 5, 9, 1857-63.

Kirkpatrick-Fleming, a village and a parish of SE Dumfriesshire. The village, standing near the left bank of Kirtle Water, has a station on the Caledonian railway, 13 miles NW of Carlisle, $3\frac{3}{4}$ ESE of Kirtlebridge, and 7 ESE of Ecclefechan, under which there is a post office. A combination porchouse, with accommodation for 120 inmates, was built here in 1852.

The parish, interesting alike in legend and song, comprises the ancient parishes of Kirkpatrick, Irvine, and Kirkconnel, and is bounded N by Middlebie, E by Half-Morton and Gretna, S by Gretna and Dornock, and W by Annan and Middlebie. Its utmost length, from N to S, is $6\frac{3}{4}$ miles; and its breadth, from E to W, varies between $2\frac{3}{4}$ and 5 miles. In 1891, in order to unite the parish of Dornock and its detached portion, the part of Kirkpatrick-Fleming that intervened was transferred to Dornock parish by the Boundary Commissioners. KIRTLE WATER winds 7 miles along the north-western and western border, and then goes $3\frac{1}{2}$ miles south-eastward through the interior, till it passes off into Gretna on its way to the Sark. Where it quits the parish, the surface declines to 70 feet above sea-level, and thence it rises slowly northward to 225 feet near Hayfield, 349 at Wyseby Hill, and 565 at High Muir—vantage-grounds that command extensive and brilliant views in every direction except to the N. Numerous perennial springs give copious supplies of pure water; and four mineral springs, one of them similar to Moffat Spa, the others to Hartfell Spa, enjoy considerable medicinal repute. The rocks are of the secondary formation, from Devonian upward; and sandstone, limestone, and marble have been worked. The soil of nearly two-thirds of all the parish is humus or decomposed moss, resting upon clay; and that of the rest is generally light and kindly, often a strong red sandy earth, with porous subsoil. About 600 acres are under wood; 850 are unreclaimed moss; 2000 are moorish pasture; and all the rest of the land is regularly or occasionally in tillage. The chief antiquities are Woodhouse Tower, Redhall Tower, Merkland Cross, and Kirkconnel churchyard. James Currie (1756-1805), an eminent physician and Burns's biographer, was a native. Mansions are Springkell, Cove, Kirkpatrick, Langshaw, Mossknow, and Wyseby. Kirkpatrick-Fleming is in the presbytery of Annan and synod of Dumfries; the living is worth £275. The parish church, partly rebuilt about 1778, was extensively altered and repaired, and had heating apparatus introduced, in 1892. There is also a Free church; and two public schools, Gair and Kirkpatrick-Fleming, with respective accommodation for 80 and 186 children, have an average attendance of about 50 and 145, and grants amounting to over £45 and £150. Pop. (1801) 1544, (1831) 1666, (1861) 1925, (1871) 1529, (1881) 1464, (1891) 1248.—*Ord. Sur.*, shs. 10, 6, 1864-63.

Kirkpatrick-Irongray, a Nithsdale parish of NE Kirkcudbrightshire, containing Shawhead post office, 7 miles W of the post-town Dumfries. It is bounded N by Holywood in Dumfriesshire, SE by Terregles, S by Lochrutton, SW by Urr, and W by Kirkpatrick-Durham. Its utmost length, from E to W, is $8\frac{1}{4}$ miles; its breadth, from N to S, varies between $\frac{1}{2}$ mile and $4\frac{1}{2}$ miles; and its area is 13,710 $\frac{1}{2}$ acres, of which 36 are water. The Old Water of Cluden, from a point 2 miles below its source, traverses the interior, first $3\frac{3}{4}$ miles east-south-eastward, next $2\frac{1}{2}$ miles northward, till $\frac{1}{4}$ mile below the beautiful Routing Bridge it falls into Cairn Water, which traces 2 miles of the Holywood border; and, as CLUDEN Water, their united stream continues $4\frac{1}{2}$ miles east-south-eastward along the Holywood border on its way to the river Nith. Along the Cluden the surface declines to just below 100 feet above sea-level, and thence rises westward to 787 feet near Upper Riddingshill, 1286 on Bishop's Forest, and 1305 on Glenbennan Hill, the north-eastern corner being nearly flat and highly embellished, the central and southern districts being much diversified

with undulations, knolls, and broad-based hills; and the western district comprising these two bare hills of Bishop's Forest and Glenbennan. The parish generally is singularly picturesque, and contains many charming close scenes, whilst commanding from several vantage-grounds very brilliant views over Lower Nithsdale, over part of Annandale, and across the Solway Firth to the Cumberland Mountains. The rocks are variously eruptive, Silurian, and Devonian; and the soil along the Cairn and the Cluden is alluvial, elsewhere is chiefly of a lightish character, either sandy or gravelly. Rather more than one-seventh of the entire area is under wood; nearly one-half is in tillage; and the rest is either pastoral or waste. Of two pre-Reformation chapels, the site of one, called Glenhead, is still marked by its long-disused burying-ground. John Welsh, a grandson of his great namesake of Ayr, was minister from 1653 till 1662; and the 'Communion Stones' on heather-clad Bishop's Forest, 4 miles W by S of the parish church, mark the spot where in 1678 he and three other ejected ministers dispensed the Lord's Supper to 3000 Covenanters. In 1870 a granite monument was erected beside the Communion Tables, the most perfect of their kind in Scotland. Scarcely $\frac{1}{4}$ mile from the churchyard lie 'Edward Gordon and Alexander M'Cbinnie, martyrs, hanged without law by Legg and Captain Bruce, March 3, 1685;' and in the churchyard itself is a stone 'erected by the Author of *Waverley* in memory of Helen Walker, who died in the year of God 1791, and who practised in real life the virtues with which fiction has invested the imaginary character of Jeanie Deans.' In recent times Kirkpatrick-Irongray has been the scene of the 'Recreations of a Country Parson'—A. K. H. Boyd, D.D. Drumpark and the Grove are mansions. Kirkpatrick-Irongray is in the presbytery and synod of Dumfries; the living is worth £315 with manse. The parish church, on the right bank of Cluden Water, $3\frac{1}{2}$ miles WSW of Holywood station on the Glasgow and South-Western railway, and $4\frac{1}{2}$ NW of Dumfries, was built in 1803, and, containing nearly 400 sittings, was repaired and beautified in 1873 at a cost of over £700, a massive Norman tower being added, and mullioned windows inserted, two of which have since been filled with memorial stained glass. A Free church stands 5 furlongs E of Shawhead; and two public schools, Roughtree and Shawhead, with respective accommodation for 62 and 105 children, have an average attendance of about 50 and 70, and grants amounting to nearly £56 and £65. Pop. (1801) 730, (1841) 927, (1861) 913, (1871) 815, (1881) 784, (1891) 747.—*Ord. Sur.*, sh. 9, 1863.

Kirkpatrick-Juxta, a parish of Upper Annandale, NE Dumfriesshire. Though shown on the Ordnance Survey maps as wholly in the county of Dumfries, this parish was really situated partly in that county and partly in the county of Lanark. The Boundary Commissioners, however, in 1891 arranged matters as represented on the maps, by placing the parish wholly in Dumfriesshire. It takes its name, denoting 'the lands nigh to the Kirk of St Patrick,' from its vicinity to a chapel the ruins of which are still to be seen, and which was dedicated to the famous saint; and it contains the station of BEATTOCK, on the Caledonian railway, and the village of CRAIGIELANDS, with Beattock post, money order, and telegraph office. It is bounded N by Moffat, E by Moffat and Wamphray, S by Johnstone and Kirk-michael, SW by Closeburn, and W and NW by Crawford in Lanarkshire. Its utmost length, from N to S, is $8\frac{1}{2}$ miles; its utmost breadth, from E to W, is $7\frac{3}{4}$ miles; and its area is 22,458 $\frac{1}{2}$ acres, of which 123 are water. The river ANNAN, from a point within $3\frac{1}{2}$ miles of its source, winds $7\frac{3}{4}$ miles south-by-eastward along all the eastern border; EVAN WATER flows $4\frac{1}{2}$ miles south-south-eastward through the north-eastern district, till it falls into the Annan opposite the influx of Moffat Water; GARPOL WATER runs $2\frac{1}{2}$ miles eastward along the northern boundary, then $3\frac{3}{8}$ miles east-south-eastward through the interior to the Evan, its last mile being through picturesque Garpol Glen, where it forms two waterfalls;

and KINNEL WATER, rising near the NW border, runs $7\frac{1}{4}$ miles east-south-eastward through the interior, then $2\frac{1}{4}$ miles southward along the Johnstone boundary. Perennial springs are numerous, and afford the inhabitants abundance of pure water; whilst several chalybeate springs might probably draw attention were they not excelled by the famous neighbouring wells of Moffat and Hartfell. The surface is hilly, declining in the SE along the Annan to 260 feet above sea-level, and rising thence to 780 feet near Marchbankwood, 1008 at Knockilsine Hill, 1897 at Harestones Height, and 2000 at Earncraig Hill on the meeting-point of Kirkpatrick-Juxta, Closeburn, and Crawford. The rocks are mainly of Lower Silurian age; and trap and greywacke are quarried. The soil of the arable lands is shallow, but dry and not unfertile. About one-third of the entire area is in tillage; woods cover some 500 acres; and all the rest of the land is pastoral or waste. The chief antiquities are numerous cairns, vestiges of a Roman camp, several circular enclosures supposed to have been used for sheltering cattle from marauders, the strong old castle of ACHINCASS, the tower of Lochhouse, and ruins of one or two other mediæval fortalices. Mansions are Auchen Castle, Beattock House, Craigielands House, and Marchbankwood. Kirkpatrick-Juxta is in the presbytery of Lochmaben and synod of Dumfries; the living is worth £245. The church, 7 furlongs S by E of Beattock station, was built in 1799, and, as repaired in 1824 and 1877, contains 430 sittings. Two public schools, Dumgree and Kirkpatrick-Juxta, with respective accommodation for 59 and 148 children, have an average attendance of about 20 and 90, and grants of nearly £35 and £80. Pop. (1801) 596, (1831) 981, (1861) 1025, (1871) 1091, (1881) 1064, (1891) 976.—*Ord. Sur.*, shs. 16, 10, 15, 1864.

Kirkpottie. See DUNBARNY.

Kirkside, an estate, with a modern mansion, in St Cyrus parish, Kincardineshire, $1\frac{3}{4}$ mile SW of Lauriston station, on the Montrose and Bervie section of the North British railway.

Kirkstead Burn, a troutful stream of Yarrow parish, Selkirkshire, rising on the eastern slope of Black Law at an altitude of 1980 feet, and running $4\frac{1}{2}$ miles south-eastward till, after a descent of 1170 feet, it falls into the foot of St Mary's Loch. The trout run two or three to the pound.—*Ord. Sur.*, shs. 24, 16, 1864.

Kirkstyle, a hamlet in Ewes parish, Dumfriesshire, 4 miles N by E of Langholm.

Kirkton, any Scottish hamlet, village, or small town, which is or was the site of a parish church. The name, in some cases, is used alone, in other cases is coupled with the name of the parish; and occasionally, when the church, hamlet, village, or town bears properly the same name as the parish, the name Kirkton is locally employed to distinguish it from other hamlets or villages within the parish. The places to which it is applied are very numerous, and most of them very small. The principal ones are in the parishes of Abbey St Bathans, Airlie, Arbriolot, Auchterless, Avoch, Balmerino, Banchory, Blantyre, Burntisland, Carluke, Cumbrae, Dunnichen, Ewes, Fetteresso, Fordoun, Fobwick, Gargunnoch, Glenelg, Glenisla, Guthrie, Hobbkirk, East Kilbride, Kilmaurs, Kinnettes, Kirkmahoe, Largo, Laurencekirk, Liff, Lintrathen, Neilston, New Deer, Newtyle, Row, St Cyrus, St Ninians, Slamannan, Stoneykirk, Tealing, Tulloch, and Weem.

Kirkton, a parish in Teviotdale, Roxburghshire, towards the middle containing Stobs station on the Waverley route of the North British, 4 miles S of Hawick, under which it has a post office. Bounded SW by Teviothead, W by Hawick, and on all other sides by Cavers, it has an utmost length from NNE to SSW of 8 $\frac{3}{8}$ miles, a varying breadth of 5 furlongs and $1\frac{1}{2}$ mile, and an area of 6222 $\frac{3}{8}$ acres, of which 21 $\frac{1}{4}$ are water. Dod Burn, which now feeds Hawick waterworks, runs $1\frac{1}{2}$ mile north-by-westward along all the Teviothead border to its confluence with Allan Water; SLIRRIE Water, followed closely by the railway, winds $2\frac{1}{2}$ miles northward along the Cavers boundaries and across the

middle of the parish; and Dean Burn flows 2½ miles north-by-eastward along the eastern border on its way to the Teviot at Denholm. Kirkton Loch (2 × ¼ furl.) lies ½ mile NNE of the church. Along the Slitrig the surface declines to 480 feet above sea-level, thence rising south-south-westward to 847 feet at Winningtonrig, and 1439 just beyond the Cavers border, north-eastward to 939 feet near Adderstonelee, and 897 at Kirkton Hill. The predominant rocks are eruptive and Silurian; and the soil of the arable grounds is naturally poor and shallow, but has been much improved by art. The poet John Leyden, M.D. (1775-1811), spent his childhood and youth at Henlawshiel cottage, long since demolished, on Nether Tofts farm, and received the rudiments of his education at the parish school—a little thatched cottage. Kirkton is in the presbytery of Jedburgh and synod of Merse and Teviotdale; the living is worth £323. The church, towards the NE corner of the parish, 3½ miles E of Hawick, was built in 1841, and contains 180 sittings. The public school is under the CAVERS and Kirkton school-board. Pop. (1801) 320, (1831) 294, (1861) 421, (1871) 320, (1881) 334, (1891) 320.—*Ord. Sur.*, sh. 17, 1864.

Kirkton Burn, a rivulet of Neilston parish, Renfrewshire, rising on the southern verge of the county, at an altitude of 750 feet, and running 4½ miles north-north-eastward till, after a descent of 600 feet, it falls into the Levern at Barrhead. It expands into two considerable reservoirs; and has on its banks, in the lower part of its course, several bleachfields and other public works.—*Ord. Sur.*, shs. 22, 30, 1865-66.

Kirkton Glen. See CAMPSIE.

Kirktonhill, a handsome modern mansion in Marykirk parish, Kincardineshire, 1½ mile N by E of Marykirk station, and 4 miles SSW of Laurencekirk, both on the Montrose and Stonehaven section of the Caledonian railway. Its owner is George Taylor, Esq.—*Ord. Sur.*, sh. 57, 1868.

Kirktonhill, a village in Westerkirk parish, Dumfriesshire, on the left bank of the Esk, 6 miles NW of Langholm.

Kirktown. See KIRKTON, Roxburghshire.

Kirkurd, a parish of W Peebleshire, whose church stands 3¼ miles SSE of the station and post-town, Dolphinton, on the Leadburn and Carstairs section of the North British railway, and 6½ N by E of Broughton station on the Biggar and Peebles section of the Caledonian railway. It is bounded N by Linton, NE by Newlands, SE by Stobo, S by Stobo and Broughton, SW by Skirling, and NW by Dolphinton in Lanarkshire. Its utmost length, from E to W, is 4½ miles; its utmost breadth, from N to S, is 3¼ miles; and its area is 5704½ acres, of which 6 are water. Tarth Water runs 3½ miles south-eastward along all the Linton and Newlands border; and Dean Burn, rising on the southern border, runs northward through the interior to the Tarth. In the extreme E, where Tarth Water quits the parish, the surface declines to 680 feet above sea-level, and thence it rises to 1632 feet at Lochurd Hill, 1872 at the Broughton Heights, 1385 near the Mount, and 1121 at Shaw Hill. The rocks are Silurian and Devonian; and the soil towards the Tarth is chiefly loam, elsewhere being either clayish or gravelly. About one-third of the entire area is in tillage; one-eleventh is under plantation; and the rest of the land is pastoral or waste. A sulphureous spring on the N border, like those of Moffat and Harrowgate, has been dry for many years. The chief antiquities are remains of a Caledonian stone circle, two circular fortifications called the Rings and the Cbesters, and two stone-engirt artificial mounds, supposed to have been used as seats of justice. Mansions, both noticed separately, are Castle Craig and Netherurd. Kirkurd is in the presbytery of Peebles and synod of Lothian and Tweeddale; the living is worth £200. The parish church was built in 1776. Kirkurd Free church is in Newlands parish; and a public school, with accommodation for 67 children, has an average attendance of about 45, and a grant of over £43. Pop. (1801)

327, (1831) 318, (1861) 362, (1871) 294, (1881) 282, (1891) 265.—*Ord. Sur.*, sh. 24, 1864.

Kirkville, a cottage ornée (1826) in Skene parish, Aberdeenshire, 8½ miles W by N of Aberdeen.—*Ord. Sur.*, sh. 76, 1874.

Kirkwall (a corruption of Scand. *Kirkjuvagr*, pronounced Kirkevaag, *i.e.*, 'church-bay'), a parish, with a royal burgh of the same name, in the E of the Mainland of Orkney. The landward portion of the parish is commonly known as St Ola, taking its title from Olaf the Holy, who was killed in 1030, and had here a church erected to his memory. The full official name is Kirkwall and St Ola. It is bounded N and NE by the sea, E by the sea and by St Andrew's parish, SE by Holm parish, S by the sea, and W by Orphir and Firth parishes. Its outline is highly irregular, the N being deeply indented by the Bay of Kirkwall and the Bay of Carness, the NE by the Bay of Work and the Bay of Meil, and the S by Scapa Bay. The distance across the centre of the parish from the sea at Scapa Bay to the sea at Kirkwall Bay, excluding the Peerie Sea, is 1½ mile; but the greatest length, from a point W of Wideford Hill on the W to Head of Holland on the E, is 5½ miles; and the extreme breadth, from Car Head on the N to the point on Scapa Flow where it joins Holm parish, is 5½ miles. The land area is 11,088 acres, of which only 3000 are arable. The surface is very irregular, and reaches its highest point at Wideford Hill (740 feet) on the western border, from which there is an excellent view. At its foot is the market stance, where the great Lammass fair is held (though now sadly diminished in importance), and where Bunce and Cleveland quarrelled with the pedlar. The drainage is carried off by a number of small burns that flow direct to the sea. There are some small lakelets, and 2 miles S of the burgh is a chalybeate spring, called Blakely's Well. The soil near the shore is generally of a sandy nature; but in some places, especially near the town, there is a rich black loam; while elsewhere, particularly in the higher grounds, it is a mixture of cold clay and moss. The underlying rocks, belonging to the Old Red sandstone, are in some places coarse, dark-coloured sandstone, in others flaggy. Many of the beds abound in fossils; and at Pickoquoy Quarry at the Peerie Sea very numerous, but not very well preserved, specimens may be obtained of the only ostracod crustacean of the system, the little *Estheria membranacea*. As elsewhere throughout Orkney, the appearance of the land is bare and bleak from the almost total absence of trees, which, numerous as the remains in the peat mosses show them to have once been, do not now thrive except under shelter. The shores are rocky, but, though higher on the S than on the N, they nowhere attain any great height. Near Gait-nip on Scapa Bay are some small caves. Off the E point of the Bay of Kirkwall is Thieves' Holm, and off the W point is Quanterness Skerry, both belonging to this parish. The Bay of Kirkwall is 2½ miles wide at the mouth, and penetrates the land for 2 miles; at the centre of the sweep, immediately to the W of the town, is the Peerie Sea, separated from the bay by a well-made road and stone dyke locally known as 'The Ayre.' This sheet of water used at one time to be a fresh-water lake; but many years ago an attempt was made to drain it by making an opening in the embankment, with the result that while the fresh water ran out the salt water runs in twice a day. The Bay of Carness is ½ mile wide at the mouth, and penetrates the land for the same distance; the opening of the Bay of Work and the Bay of Meil measures about 7 furlongs by 7 furlongs at its deepest part; Inganess Bay is 6 furlongs wide at the mouth, and extends inland for 2½ miles; Scapa Bay is 1½ mile wide at the mouth, and extends inland for the same distance. Kirkwall, Inganess, and Scapa bays all afford safe and excellent anchorage for ships of the largest size, and the latter is the ordinary resort of boats and small craft from the southern Orkneys and from Caithness. At Scapa a pier of sandstone, 530 feet long, protected by a sea-wall, was built in 1878-80 at a cost, inclusive of the improvement of the road to

Kirkwall, of £11,000, and this is now the harbour for the mail steamer from Thurso. The harbour at Kirkwall is noticed in the following article. The principal antiquities, besides those noticed under the burgh of Kirkwall, are the sites of three broughs or Picts' towers—one on the shore of Inganess near Birstane, one NW of Scapa, and one at Lower Saverock, $\frac{1}{2}$ mile along the coast NW of Kirkwall burgh—and Picts' houses at Quanterness and Wideford Hill. The latter is a fine specimen, the circumference of the mound being 140 feet and the height of it 12 feet. A passage, 18 inches high and 22 inches wide, led to a central apartment, 10 feet long, from 3 to 5 feet wide, and about 9 feet 3 inches high; connected with this were other three smaller apartments. Remains of other large subterranean buildings are at Saverock, while within half-an-hour's walk of the town more curious subterranean ruins were discovered in 1870 at Lingrow. Distinguished natives are James Atkins or Aikin (1613-87), Bishop of Galloway; Sir Robert Strange (1721-92), the celebrated engraver; Malcolm Laing (1762-1818), the historian; Professor Traill, M.D., professor of medical jurisprudence in the University of Edinburgh from 1832 to 1862; and William Balfour Baikie, M.D. (1820-64), African explorer. Besides the industries connected with the burgh and the shipping at Scapa, there is a distillery, noted for the excellence of its whisky, at Highland Park, 1 mile S of the burgh, and another at Scapa. The parish is the seat of a presbytery in the synod of Orkney, and the charge is collegiate. The stipend of the first charge is £220, with a manse; the second charge stipend is £204. The landward (St Ola) school board has under its charge Scapa public school, which, with accommodation for 53 pupils, has an average attendance of about 25, and a grant of over £35. Valuation, exclusive of burgh, (1881) £5037, (1893) £4830. Pop., inclusive of burgh, (1801) 2621, (1831) 3721, (1861) 4422, (1871) 4261, (1881) 4801, (1891) 4755, of whom 2134 were males and 2621 were females.

The presbytery of Kirkwall comprehends the *quoad civilia* parishes of St Andrew's, Deerness, Evie and Rendal, Holm, Kirkwall and St Ola, and South Ronaldshay, the *quoad sacra* parishes of Rendal and Ronaldshay-St Mary's, and the mission stations of Burray and Ilerston in South Ronaldshay. Pop. (1871) 11,497, (1881) 12,251, (1891) 11,604, of whom about 1700 were communicants of the Church of Scotland in 1895.

Kirkwall, a royal and parliamentary burgh, the county town and chief town of Orkney, and a sea-port, in the N of Kirkwall parish and at the head of the bay of the same name. The origin of the name is given in the preceding article, and the church from which it is derived seems to have been one dedicated to St Olaf that existed previous to the erection of the present cathedral of St Magnus in the 12th century. The town is $\frac{1}{2}$ mile N of Scapa, $11\frac{1}{2}$ miles in a straight line or 15 by road E by N of Stromness, $23\frac{1}{2}$ in a straight line N by E of Huna (John o' Groat's), 49 NE of Thurso, 51 N of Wick, and by steamer 135 from Aberdeen, 225 from Leith, and 575 from London. Of its foundation we know nothing, but from its fine bay and its central position among the islands, it probably became at a very early date an important place of rendezvous among the Norsemen, and so a little village would spring up, which, though of no great size, would probably even then have enjoyed burghal privileges. Down to the 12th century we find the Norse Earls of Orkney, with their residences at different places, each of which became to a certain extent a rival locality for the time being, but from 1137 when Rögnvald (Kali), the nephew of St Magnus, began the erection of the cathedral, the supremacy of Kirkwall must have been assured, if indeed the selection of it as the site of a work which the Earl had vowed was to be the wonder of succeeding ages, does not show that it had already attained the leading position. The Bishop's palace must have been erected within the succeeding century, and in 1263 Haco took up his quarters in it for the winter after the battle of LARGS. The St Clairs

became Earls of Orkney in 1379, and by one of this line the castle of Kirkwall was erected, and thus fresh dignity given to the place, which became the residence of Earls who looked upon themselves as petty kings, and kept house in a style of princely magnificence. When the ORKNEY and SHETLAND islands passed into Scottish possession on the marriage of James III. in 1469, the Scottish king showed considerable favour for his new dependency, and on 31 March 1486 granted Kirkwall a royal charter, by which all the rights and privileges conferred upon the burgh by former charters were ratified and approved of, and mention is specially made of the 'old erection of our burgh and city of Kirkwall in Orkney by our noble progenitors of worthy memory in ane hail burgh royal,' and 'of the great and old antiquity of our said city.' The right of holding courts was granted, with power of pit and gallows; there were to be two weekly markets on Tuesday and Friday, and three annual fairs of three days each, commencing on Palm Sunday, on 1 Aug. ('Lambmas Fair'), and on 11 Nov. ('St Martin's Fair'). Among the lands, etc. granted were Thieves' Holm, 'of old the place where all the malefactors and thieves were execute,' and 'all and hail the kirk called St Magnus Kirk and other kirks, . . . and all and sundry brebendaries, teinds, and other rights yrto belonging . . . to be always employed and bestowed upon repairing and upholding the said kirk called St Magnus Kirk: and farder, to call an able and qualified man to be schoolmaster of our said school in our said burgh.' A confirming charter was granted by James V. in 1536, but during the despotic government of Earls Robert and Patrick both were simply ignored, and though Charles II. granted a charter of *novo damus* in 1661, its validity was disputed by the Earl of Morton, and finally in 1670 all the charters were confirmed by Act of the Scottish Parliament. That of Charles II., in which, as well as in the confirmation, all rights of the bishopric are excluded, is deemed the governing charter. Kirkwall was too far out of the way to take any active part in the troubles of the Reformation and of the reign of Queen Mary, though, during the reign of James VI., that monarch's detestation of witches spread even thus far, and we find the records of the times full of the trials of 'habit and repute' dealers with the evil one, and frequent must have been the executions on the hill to the S of the town which is known as the Lonhead or the Gallowhill. The real reason of the accusations in many cases was Earl Patrick's strong desire for money. (See ORKNEY.) After the wars of the Commonwealth the Orcadian espousal of the cause of Charles II.* drew on the place the watchful eye of Cromwell, and so, no doubt, led to the selection of Kirkwall as the site of one of the forts that the Lord Protector erected in Scotland, ostensibly to afford protection from foreign assaults, but no doubt also to furnish posts of vantage in case Scotland might take up any more wrong-headed notions as to the government of kings. This fort was to the E of the harbour where the ramparts still remain. It is locally known as 'The Mount,' and is at present used as a battery for the 1st Orkney Artillery volunteers, who have their headquarters at Kirkwall. It was protected on the land side by a fosse, the line of which may still be traced. From this time onward the burgh may be said to be in the happy state of having no history except that of various improvements that have taken place in town and harbour, and it is to be hoped that it may long thus remain.

Public Buildings, etc.—The oldest part of the town extends along the shore of the bay, whence the principal street, a very old one, winds away to the SSW; and though the causeway is now no longer so rough as it once was, the street is still very inconvenient, being in places so narrow that carts cannot pass, and foot passengers have to take refuge from passing vehicles. All the older thoroughfares are equally

* It was at Kirkwall that some 2000 Orkney men mustered in March 1650 under the command of Montrose, and set out with him for Caithness, on that disastrous march which was to end in their defeat at Invercharron, and the capture of their leader at Assynt.

narrow, and free from any distinction between foot-way and carriage-way, but the newer ones are wide and spacious. Though the town, thanks very much to the cathedral, looks best from the sea, the remark of Sir Walter Scott, who was here in 1814, that it was 'but a poor and dirty place, especially towards the harbour,' is now no longer true, its streets being carefully kept, and there being little sign of poverty or neglect. The completion of drainage, water supply, and paving between 1876 and 1879, at a total cost of £8000 for the two former and £2500 for the latter, has been a very great improvement. The water supply comes from Papdale. Many of the houses are very old, their crow-step gables to the street, small doors and windows, thick walls, and small, gloomy, and irregular rooms, giving some parts of the town an ancient and even foreign appearance, but the newer houses are much such as may be found in any other burgh of the same size, except that most of them are provided with much larger gardens; and the strangest articles to be seen in the shops are the curious woollen work articles from Fair Isle, and thin Shetland shawls. The old Town Hall, dating from 1745, built with stones taken from the King's Castle, and covered with slates taken from the Earl's Palace, stood in the vicinity of the cathedral. The structure was a very poor one with a piazza, and previous to 1876 the lower portion served as the county jail, and also provided accommodation for town council chambers and for county offices and court room, while in the upper portion there was a large room for council meetings. In the year mentioned new County Buildings were begun, and finished at a cost of about £5000; these now form a handsome block, with an excellent court room, in which the county meetings are also held. The old Town Hall was removed in 1884, and the new Municipal Buildings erected in its stead. They are built in the Scottish Baronial style, are three storeys in height, the principal entrance having a fine semi-classic door-piece surmounted by two statues of the ancient halberdiers of the burgh in full uniform. On the ground floor the accommodation comprises telegraph office, office of the burgh surveyor and town clerk, and three other suites of offices. On the first floor, at the front, is the Council Chamber, behind which is a room for the Commissioners of Supply, and behind this again, and at the back of the building, is the Town Hall. The handsome building occupied by the Commercial Bank stands on the site of what was known as Parliament Close, the quondam meeting place of the Orkney magnates. The King's Castle was on the W side of the principal street, opposite the cathedral. It was a strong building, with very thick walls, erected by Henry St Clair in the 14th century, and was held by the burghers in resistance to the fugitive Earl of Bothwell in 1567. After the execution of Earl Patrick Stewart (see ORKNEY) in 1615, it was by order of the Privy Council demolished, and in 1742 the ruins were almost entirely cleared away, as the Earl of Morton gave permission to the Town Council to use the stones in the construction of the town house and jail. A portion of one of the walls remained till 1865, when it was removed to make way for Castle Street, as is recorded by the inscription on the front of the Castle Hotel:—

'Near this spot, facing Broad Street, stood, in the year 1865, the last remaining fragment of the ruins of the Castle of Kirkwall, a royal fortress of great antiquity, and originally of vast strength, but of which, from the ravages of war and time, nearly every vestige had long previously disappeared. Its remains, consisting of a wall 55 feet long by 11 feet thick, and of irregular height, were removed by permission of the Earl of Zetland on application of the Trustees acting in execution of "The Kirkwall Harbour Act, 1859," in order to improve the access to the Harbour; and this stone was erected to mark its site. MDCCCLXV.'

The Cathedral, near the S end of the principal street, was founded, as already noticed, in 1187, and was dedicated to St Magnus, a Scandinavian Earl of Orkney, who was, in 1114, assassinated in the island of Egilshay by his cousin Haco. It was not nearly finished by the founder, and was added to by several of the bishops,

and hence the five different styles which, according to Sir Henry Dryden, may be detected in it. As it at present stands it is one of the three old cathedrals of Scotland that now remain at all in perfect condition, and one of the two, the other being Glasgow, that have all their parts as built complete. One peculiar feature of it is the largeness with which it stands out in all the views of the place, so much so indeed from the sea that Miss Sinclair is not far wrong in saying that it 'looks almost as large as the whole city put together,' and this always gives it the appearance of being very much larger than it really is. 'After having stood,' says Dr Hill Burton, 'for nearly 700 years, it still remains pre-eminent both in dignity and beauty over all the architectural productions which the fingers of civilisation and science have reared around it; and even the traveller from the central districts of the mighty empire to which the far isle of Pomona is now attached, looking with admiring wonder on its lofty tiers of strong and symmetrical arches, and its richly mullioned windows, must admit that old St Magnus is matched by very few of the ecclesiastical edifices of our great cities, and those few are also ancient.' The appearance given by the bulky pillars is that of strength rather than heaviness. 'A few of the arches,' says Hugh Miller, 'present on their ringstones those characteristic toothed and zigzag ornaments that are of not unfamiliar occurrence on the round squat doorways of the older parish churches of England; but by much the greater number exhibit merely a few rude mouldings, that bend over ponderous columns and massive capitals, unfretted by the tool of the carver. Though of colossal magnificence, the exterior of the edifice yields in effect, as in all true Gothic buildings—for the Gothic is greatest in what the Grecian is least—to the sombre sublimity of the interior. The nave, flanked by the dim deep aisles, and by a double row of smooth-stemmed gigantic columns, supporting each a double tier of ponderous arches, and the transepts, with their three tiers of small Norman windows, and their bold semicircular arcs demurely gay with toothed or angular carvings that speak of the days of Rolf and Torfeinar are singularly fine—far superior to aught else of the kind in Scotland.'

The building is cruciform, with side aisles and a square tower over the crossing; and the material of which it is built is a dark red sandstone, interspersed with blocks of a white colour, especially on the W side. The total length, from E to W outside, is 234 feet 6 inches, and the width 56 feet; the transepts, from end to end, measure 101 feet 6 inches, and the width is 28 feet; and the present tower is 133 feet high. In the inside the nave is 131 feet 6 inches long, and the choir 86 feet; the length of the transepts is 89 feet 6 inches, the breadth of nave 16 feet, the breadth of nave and aisles 47 feet, and the height from floor to roof 71 feet. The roof is supported by 28 pillars and 4 half pillars, all 18 feet high. The four large pillars at the crossing supporting the tower are fluted, as are also the two half pillars, and the two pillars on each side next them at the E end. The half pillars at the W end are semicircular, and all those in the nave, as well as the two in the choir next the fluted pillars under the tower, are circular. The roofs are all vaulted and groined. The tower was formerly topped by a lofty spire, but this was at the beginning of 1671 struck by lightning 'which fell upon the steeple head of the Cathedral Kirk of Orkney called St Magnus Kirk of Kirkwall, and fyled the samen which burnt downward until the steeple head . . .

But, by the providence of God, the bells thereof, being three great bells and a little one called the scallat bell, were preserved by the care and vigilance of the magistrates, with the help of the townspeople.' The spire was then succeeded by the present squat and very ugly pyramidal roof. The top of the tower, from which an excellent view may be obtained, is reached by staircases, starting first from the corner of each transept. A clerestory and triforium pass round the whole building. The E window, which measures 36 feet by 12, shows four pointed lights without tracery,

and above these extending all across is a very fine rose window with 12 leaves. According to Sir Henry Dryden it is unique. The window in the end of the S transept has a rose of similar form and size. There are three doors in the W end, two into the side aisles near the W end, one in the end of the S transept, and one in the S side of the choir, near the centre. The style of the earlier parts is Norman, that of the rest different varieties of Pointed. The oldest parts are supposed to be the crossing, and the three arches in the chancel immediately to the E of it. According to the usual account, the three arches farther E still, and the large window were added by Bishop Stewart on his accession to the see in 1511. Of the nave, the first five arches next the tower are thought to be later than the earliest part, and have been even referred to a period as late as the middle of the 15th century, while the extreme W end of it is said to have been erected in 1550 by Bishop Reid, who succeeded to the see in 1540, and was the last Roman Catholic bishop. This account is, however, opposed by Sir Henry Dryden, who studied the building very minutely. He thinks that the architecture of the building indicates five portions erected respectively 1137-1160, 1160-1200, 1200-1250, 1250-1350, and 1450-1500, and that, therefore, no part of it can be due to either Stewart or Reid, except perhaps that the W arch of the nave may have been added by the latter, and the W end with its window and doorways moved. The finest parts of the buildings are the W doorways and the doorway in the end of the S transept. 'The central doorway of the W end,' says Dryden, 'has five orders in its arch; and the other two in the W end, as well as that in the S transept, have four orders. All have hoods. The carving is much decayed, but still retains evidence of its former beauty when the rolls of free foliage and the deeply-sunk mouldings were perfect. On these doorways the dog-tooth is much used, as well as a zig-zag roll undercut. . . . The caps were of richly-carved foliage, and on the caps of the central doorway are also two noudescript animals. The shafts have all been renewed. Probably at first they were alternately yellow and red,' and he thinks that in their original state they were probably the finest examples in Britain of the regular combination of different coloured stones.

Bishop Maxwell, shortly after his accession in 1525, introduced stalls, and provided the three fine-toned bells that now hang in the steeple. The notes are G, A, and C; and the first is 2 feet 9 inches in diameter and 2 feet 5 inches high, the second is 3 feet 1 inch in diameter and 2 feet 5 inches high, and the third is 3 feet 5 inches in diameter and 2 feet 9 inches high. They were originally cast in Edinburgh in 1528 by Robert Borthwick, master gunner to James V.; but the third or tenor bell was recast at Amsterdam in 1682. A fourth bell, with a very shrill tone, and known as the skellet or fire-bell, hangs also in the tower, and must be about the same age as the others; for after the destruction of the spire by the fire already noticed, it was rehung the same year, while the others were not again put in position till 1679. Though the pile escaped injury at the Reformation, it came very near destruction during the rebellion of Earl Patrick Stewart and his son; for the Earl of Caithness, who suppressed it, 'went about to demolish and throw down the church, but was with great difficulty hindered and stayed by the Bishop of Orkney, who would not suffer him to throw it down.' Still, however, it began to decay, for, the revenues of the bishopric having passed to the Crown, there were no funds to keep it in repair, and the heritors seem not to have troubled themselves to try to mend matters—somewhat the contrary indeed, as in 1649 they allowed the Earl of Morton to carry off some marble slabs from the floor of the church 'to erect a tomb upon the corp of his unquhile father in the best fashion he could have it,' though they bound him to fill up their places with 'hewen stones.' In 1701 complaint was made to the presbytery of 'the most unchristian and more than barbarous practice of the Town Guard of Kirkwall at the time of the Lambas Fair, their

keeping guard within the church, shooting of guns, burning great fires on the graves of the dead, drinking, fiddling, piping, swearing and cursing night and day within the church, by which means religion is scandalised and the presbytery most miserably abused; particularly that when they are at exercise in the said church, neither can the preacher open his mouth nor the hearers conveniently attend for smoke; yea, some of the members of the presbytery have been stopped in their outgoing and incoming to their meetings, and most rudely pursued by the soldiers with their muskets and halberts'—certainly a state of matters far from creditable to the municipal authorities of the time. Several parts of the building became very ruinous, but nothing was done till, in 1805, G. L. Mason, Esq. of Moredun, bequeathed £1000, the interest of which was to be applied every year in the repair of the building. At last, in 1845, the Government, under the impression that the cathedral was national property, spent £3000 in very extensive repairs, the S transept being put once more in thorough repair; and as another Established church had been built shortly before, they removed the unsightly screen pews and galleries that had disfigured the choir, and laid the whole building open from end to end. During these operations the tombs of William the Old (1167), the first, and Thomas Tulloch (1461), the thirteenth, bishop, were discovered—the former containing a leaden plate, inscribed on one side *Hic requiescit Wilelmus senex felicis memorie*, and on the other *Pmus Episc.*; whilst in the tomb of Bishop Tulloch were an imitation chalice and paten of beeswax and an oaken pastoral staff. These were very injudiciously removed to Edinburgh, where they may be seen in the Antiquarian Museum. In 1855 it was decided that the choir of the cathedral belongs to the heritors and the rest to the town council, and these proceeded at once to undo part of the good work that had just been done, and restored the pews and screen, and even painted some of the pillars yellow! while, during the lowering of the floor, the bones of Bishop William, again laid bare, were carted away as rubbish! This was the crowning act of vandalism; but the removal and breaking up of the bishop's throne and the Earl's pew were but little less heinous. The former was a large structure to the S of the altar, and had an arabesque gallery over. It was erected by Bishop Graham (1615-38), and repaired by Bishop Honeyman (1664-76); while the latter, which was probably the original bishop's throne, was of handsome carved oak, with a fine canopy, probably taken from the original rood loft. The pattern of the carving is figured by Billings, who uses it to demonstrate the truth of his theory that Gothic tracery was derived geometrically from systems of squares. Some of the carved panels of the bishop's throne are now in the mansion-house of Graemeshall. Since these dark deeds but little alteration has taken place, except that, in 1881, the Mason trustees (the convener of the county, and the provost and Established Church ministers of Kirkwall) restored four of the small windows on the S side of the nave which had previously been partially built up. Many of the bishops were buried in the church, as was also St Magnus, whose body was removed thither from Christ Church, Birsay, where it was first interred, and which was originally the seat of William's bishopric. It was also the temporary resting-place of King Haco before his body was removed to Trondhjem. A number of old tombs still remain, including fragments of the finely crocketed tomb of Bishop Tulloch in the S aisle, and a huge white marble slab in the choir marking the grave of Earl Robert Stewart, father of the famous Patrick. In the N transept is a handsome monument to Dr Baikie, who conducted extensive explorations along the river Niger; while suspended near this is a *mort-brod* (that is, 'dead-board'), inscribed with a name and a death's-head, hour-glass, etc.; and affixed to the wall is a marble slab to the memory of Malcolm Laing, the historian. Round the building outside is a churchyard of considerable size. There are two curious brass alms dishes of Dutch workmanship in the vestry. They

have a group of Adam, Eve, the serpent, and the tree; and one of them bears the inscription in Dutch, 'Had Adam obeyed God's words, so had we then lived in Paradise. Anno 1636.' In front of the cathedral the red sandstone cross, originally set up by Bishop Graham in 1621, has been re-erected. It stood originally in the old market-place, and the joughs were close by. The Cross is the point where the football is set agoing every New Year's Day, in the great match between those living above the Cross and those below.

The Earl's Palace, known originally as the New-wark o' the Yards, to distinguish it from the Bishop's Palace, which was the Place o' the Yards, is a short distance S of the cathedral. It was erected by Earl Patrick in 1607, and, though since 1745 it has been a roofless ruin, the extensive remains are still sufficient to show the taste with which it has been designed, as well as marked traces of French influence. The buildings form three sides of a rectangle, and over the doorway, as well as elsewhere, may still be discerned P. E. O. for Patrick, Earl of Orkney. The banqueting hall on the first floor is approached by a massive stone stair, and has two magnificent fireplaces, with flat-arch lintels, one at each end. It is 58 feet long, 20 feet 4 inches wide, and 15 feet high at the side walls. It was lighted by four fine windows, and has several rooms opening off it, one of them having probably served as a drawing-room. The corbelled turrets and oriels are very characteristic features. It was handed over to Bishop Law in 1606, and was last inhabited by Bishop Mackenzie, who died in 1688. The hall was greatly admired by Scott, who makes it the scene of Bunce's interview with Cleveland in *The Pirate*. Before the present County Buildings were erected in 1876, a proposal was made to restore this building and use it for that purpose, but the scheme fell through owing to the niggardliness of the then Chancellor of the Exchequer. The Bishop's Palace stands between the Earl's Palace and the cathedral, and must have been founded in the end of the 12th or the beginning of the 13th century, for here, after the battle of Largs and his retreat to Orkney, King Haco took up his winter quarters 'with such men as dined at his board,' and here, broken hearted, he died, and his 'corps was carried into the high chamber and set on a bier. The body was clad in rich raiment, and a garland set on his head; and all bedight as became a crowned monarch. The light-swains stood with tapers, and the whole hall was lit. Then went all folk to see the body, and it was fair and blooming, and the face was fair in hue as in living men. There was great solace of the grief of all there to see their departed king so richly dight. Then was sung the high mass for the dead. The nobles kept wake by the corps through the night. On Monday the body was borne to Magnus Kirk and royally laid out that night. On Tuesday it was laid in a kist and buried in the choir of St Magnus Kirk, near the steps of the shrine of St Magnus the Earl.' But little of the building now remains, and that of much later date than the 13th century; the principal part being a tower, round outside, but square inside, built in 1540 by Bishop Reid. On the outside of the N wall is a statue, said to represent the Bishop himself. The best trees in the island are round these buildings. An inscription on the Castle Hotel, at the corner of Castle Street, records the removal, in 1865, of the last fragments of Kirkwall Castle, erected in the 14th century.

The Established Church congregation worship in the choir of the cathedral, which is much disfigured by the wooden screen that separates this part from the nave. It was refitted, as already noticed, in 1855 at a cost of £1350, and contains about 870 sittings. An extension church, built close to the cathedral in 1841 at a cost of £1400, and containing 1000 sittings, became useless at the Disruption in 1843, and was afterwards taken down. The old church of St Olaf stood in Poorhouse Close off Bridge Street, and was, according to Dr Anderson, erected by Rögnvald to the memory of his foster father, King Olaf the Holy (not to be confounded with Olaf Tryggvison), who was killed in 1030. This was the

church from which the town took its name, and where the body of St Magnus was first placed when it was brought from Egilshay in 1135. In 1502 it was burned by a party of Englishmen, who had landed from ships, and the site is said to have been used for a time as a burial place for malefactors. Bishop Reid, however, between 1540 and 1558, erected a new church in the same place, of which, however, little but a doorway and a portion of a wall with two ambries now remain. One of the latter has been removed to the Episcopal church. It remained a church after the Reformation, for a reader was appointed in 1561, but was afterwards used as a poorhouse (hence the name of the lane), a workshop, etc. The Free church was erected in 1893 in the place of one built shortly after the Disruption. The U.P. church, built in 1848 at a cost of £3800, and containing about 1300 sittings, superseded a Secession church built in 1796. The Congregational church was erected in 1823 at a cost of £515. An Episcopal mission was established in 1871, and the present church (St Olaf's) was erected in 1875-76 at a cost of £1200. There are 160 sittings. The vestry and chancel were partly destroyed by fire in 1881. The Roman Catholic church (Our Lady and St Joseph), erected in 1877, contains 100 sittings. The burgh school board have the care of the burgh school, which was founded by Bishop Reid in 1544. The present buildings, erected originally in 1820, have since been greatly enlarged, and, with accommodation for 722 pupils, has an attendance of about 535, and a grant of nearly £560. Glaitness Public School, also under the burgh board, has accommodation for 120, an average attendance of about 70, and a grant of nearly £68. There is also St Olaf's Episcopal school. Gas was introduced into the town about the year 1850, the works belonging to a joint-stock company.

Trade, etc.—From its situation as the centre of distribution among the islands, Kirkwall has a considerable trade. It is connected by daily steamer with Stromness and Shapinsay, and with the north islands by steamers twice a week; with Aberdeen, Leith, and Lerwick by steamers twice a week in summer, and once a week in winter; and with Thurso daily by steamer from Scapa to Scrabster. The manufacture of linen was introduced in 1747, and flourished for some time, but is now gone, and the same fate has befallen the manufacture of kelp and the plaiting of straw for ladies' hats and bonnets, which, during the first half of the nineteenth century, afforded employment to about three-fourths of the women. Fishing and fish-curing employ many persons, and there is some trade in timber. But, with these exceptions, trade is now confined to the ordinary handicrafts, etc., including boatbuilding, and a shipping and distributing trade. The harbour, constructed about 1811, has since been greatly improved. In 1866 a fine iron pier, standing on screw piles, was erected at a cost of £10,490. Fresh improvements were again carried out between 1880 and 1885, when a second pier, a massive and substantial structure, was erected at a cost of about £20,000. The harbour is sheltered from the N by quays, and being safe and commodious, as well as accessible at all states of the tide, is much frequented by vessels. The customs port comprehends the whole of the Orkney islands and the Skerries, but the only considerable harbour, besides that at Kirkwall, is Stromness. The vessels belonging to the district, most of them to Kirkwall, at various dates have been as follows:—

SAILING VESSELS.			STEAMERS.	
Year.	No.	Tonnage.	No.	Tonnage.
1853	43	2455	2	—
1867	46	2314	2	95
1876	37	2024	3	132
1883	36	2796	3	196
1895	37	2172	7	252

The trade for the same year is shown in the following table, giving the tonnage of the vessels entered and

KIRKWALL

cleared, including their repeated voyages, whether with cargoes or in ballast:—

	ENTERED.			CLEARED.		
	British.	Foreign.	Total.	British.	Foreign.	Total.
1853	25,755	...	25,755	27,197	...	27,197
1867	36,765	651	37,416	37,153	651	37,804
1874	147,626	952	148,578	144,441	850	145,291
1882	224,371	1,959	226,330	218,835	1,349	220,184
1895	218,562	5,161	223,723	216,980	5,442	222,422

The number of vessels that entered in 1894 was 2540 British and 44 foreign, and that cleared 2469 British and 40 foreign.

Municipality, etc.—Kirkwall, under the Burgh Police Act of 1892, is governed by a provost, 2 bailies, and 6 commissioners, and unites with Wick, Cromarty, Dornoch, Dingwall, and Tain in returning a member to serve in parliament, Wick being the returning burgh. Corporation revenue (1895) £450, parliamentary constituency 504, municipal 583. For police purposes the burgh is united

Seal of Kirkwall.

with the county. The Duke of Edinburgh visited Kirkwall on 24 Jan. 1882, and was presented with the freedom of the burgh. The district sheriff-substitute resides here, and ordinary and small debt courts are held every Tuesday during session. Quarter sessions are held on the first Tuesday of March, May, and August, and the last Tuesday of October. There are markets on the first Monday of every month, and in August is the Lammas Fair, which used to last for a fortnight, though now it is pretty much confined to the market on the first Tuesday after 11 Aug. and the two following days. There are also a head post office, several hotels, offices of the Bank of Scotland, National, Union, and Commercial Banks, a free library, established in 1892, in place of an old public library established in 1815, an Educational Trust, the Balfour hospital for the sick, a combination poorhouse, a literary and scientific association, a young men's literary association, a branch of the Bible Society, a branch of the shipwrecked fishermen and mariners' benevolent society, masonic lodges, Good Templar lodges, a fire brigade, two batteries of artillery volunteers, a coastguard station, the Orkney Club and the Kirkwall Club, an ornithological society, golf, bowling, and cricket clubs, and three newspapers—the *Independent Orkadian* (1854) published every Saturday, the *Liberal Orkney Herald* (1860) every Wednesday, and the *Liberal Northman* (1874) every Saturday. Valuation (1883) £11,516, (1895) £13,964. Pop. of royal burgh (1841) 2205, (1861) 2444, (1871) 2265, (1881) 2613, (1891) 2557; of parliamentary burgh (1841) 3041, (1861) 3519, (1871) 3434, (1881) 3923, (1891) 3895, of 1002

KIRRIEMUIR

whom 2183 were females. Houses (1891) inhabited 686, vacant 18, building 1.

Kirk-Yetholm. See YETHOLM.

Kirn, a favourite watering-place on the Clyde, forming part of the burgh of Dunoon, and a *quoad sacra* parish in Dunoon parish, Argyllshire. Constituted in 1874, it is in the presbytery of Dunoon and synod of Argyll. Its church was built as a chapel of ease. There is a post office. Pop. (1881) 791, (1891) 910. See DUNOON.

Kirman. See KILMICHAEL-GLASSARY.

Kirroughtree. See KIRROUGHTREE.

Kirriemuir, a town and a parish of W Forfarshire. The town stands, 455 feet above sea-level, on the left bank of winding Gairie Burn, which separates it from the suburb of Southmuir; as terminus of a branch of the Caledonian, with a commodious station, rebuilt in 1872, it is 3 miles NW of Kirriemuir Junction and 5 WNW of Forfar. Situated on the NW side of Strathmore, partly on level ground, and partly on the skirt of a hill, it commands from its higher portion a brilliant view of a great extent of Strathmore, and chiefly consists of streets arranged in a manner similar to the arms and shaft of an anchor. Great improvements which have been carried out of recent years give pleasing indications of the presence both of taste and successful industry. Kirriemuir has a post office, with money order, savings bank, and telegraph departments, branches of the Bank of Scotland and the National, Union, and British Linen Co.'s Banks, several hotels, 2 Good Templar lodges, a beautiful public cemetery, a public park, several denominational libraries, a public hall, a gas-light company, a horticultural society, cricket, bowling, curling, and football clubs, and a weekly newspaper (Friday). The parish church is a handsome edifice of 1786, with a neat spire. South *quoad sacra* parish church, built as a chapel of ease in 1836 at a cost of £1340, acquired its parochial status in 1870. Other places of worship are the North and South Free churches, two U.P. churches—one built in 1853, the other fitted up from a trades' hall of 1815 in 1833; St Mary's Episcopal church (1795; 200 sittings), and a United Original Secession church (1893), whose predecessor (1807) was the 'Auld Licht Kirk' of Mr J. M. Barrie the novelist, who was born at Kirriemuir on 9 May 1860, and has made it world famous as 'Thrums.' Besides Webster's Seminary there are a public and an Episcopal school, with respective accommodation for 876 and 180 children, an average attendance of about 560 and 180, and grants of over £532 and £136. Webster's Seminary was founded in 1835, with the bequest (1829) of John Webster, Esq.

A weekly corn and provision market is held on Friday; a horse fair is held on the second Friday of March; a cattle and horse fair on the Wednesday after Glamis May fair, on 24 July or the Wednesday after, on the Wednesday after 18 Oct., and on the Wednesday after Glamis November fair; and a hiring fair is held on the Term Day if a Friday, otherwise on the Friday after. Some business is done in the supply of miscellaneous goods to the surrounding country; the weaving of linen is the staple industry; and, amid the great and many changes elsewhere in the linen manufacture, it here had long the singular character of being carried on by means solely of the hand-loom. Two large power-loom factories, however, have been erected. The weavers, in some years, particularly in 1826 and 1841, suffered severely from a great fall of wages; and often have had to struggle with poverty and

privation; but they have manfully breasted every difficulty, and are admitted throughout the county to be expert and skillful operatives. Among them have been men of marked intelligence. One, David Sands, who flourished in 1760, invented a method of weaving double cloth for the use of stay-makers, and wove and finished in the loom three seamless shirts. The manufacture began to assume importance about the middle of the 18th century, and so early as 1792 produced osnaburgs and coarse linens to the yearly value of £30,000. It turned out annually, before the close of the century, 1,800,000 yards of stamped linen; and year by year the produce has increased till now it reaches 100,000 pieces, varying from 100 to 170 yards, whilst giving employment in the town and neighbourhood to over 2000 weavers. The feud of the weavers of Kirriemuir and the sutors of Forfar has been already noticed under the latter town.

Kirriemuir is a burgh of barony, under the Earl of Home; but, as a burgh, it has neither property, revenue, nor debt. A baron bailie, appointed by the superior, up to the year 1875 was the only magistrate, and presided as judge in a police and barony court. In 1875 the General Police and Improvement (Scotland) Act was adopted, and the affairs of the town are now, under the Burgh Police Act of 1892, managed by a provost, 2 bailies, and 6 commissioners. The magistrates preside in the police court; but the baron bailie still presides in the barony court held in connection with certain of the fairs. New police buildings, estimated to cost £1000, were erected by the County Council in 1895-96. A sheriff small debt court sits on the third Monday of January, March, May, July, September, and November; and justice of peace small debt courts on the first Friday of every month. Pop. of entire town (1831) 4014. (1861) 4686, (1871) 4145, (1881) 4390, (1891) 4179, of whom 2375 were females, whilst 2782 were in Kirriemuir proper or the police burgh and 1397 in the Southmuir suburb.

The parish until 1891 was separated by the parish of Kingoldrum into two nearly equal parts—the main or Strathmore division, containing the town, and comprising 15,028 acres, of which 56 are water; and the north-western or Glenprosen division, comprising 20,630 acres. The two divisions, at the nearest meeting points, were $1\frac{1}{2}$ mile asunder. The Boundary Commissioners, however, in the year mentioned, transferred the Glenprosen portion to the parish of Cortachy and Clova, thus limiting Kirriemuir to the Strathmore portion. The parish is bounded N by Cortachy, NE by Tannadice, E by Oathlaw and Rescobie, SE by Forfar and Kinnettles, S by Glamis, SW by Airlie, and W and NW by Kingoldrum, having an almost equal extreme length and breadth from N to S and from E to W of $5\frac{3}{4}$ and $5\frac{1}{2}$ miles. PROSEN Water, rising in the north-western extremity of the former Glenprosen section on the western slope of Mayar at an altitude of 2750 feet, runs $12\frac{1}{2}$ miles through the interior of that section, then $2\frac{1}{2}$ miles south-south-eastward along the mutual border of Cortachy and Kingoldrum, afterwards winding $2\frac{1}{2}$ miles east-by-southward along all the Cortachy boundary of Kirriemuir, till it falls into the South Esk, which itself runs 2 miles east-south-eastward along all the Tannadice border, and which from the interior is joined by CARTY Burn, first tracing $1\frac{1}{4}$ mile of the north-western boundary, and next flowing $5\frac{1}{2}$ miles eastward across the northern interior. GAIRIE Burn, winding $6\frac{1}{2}$ miles south-south-eastward, passes off into Glamis on its way to Dean Water, and is itself fed by Dairsie Burn, which traces 3 miles of the south-western and southern boundary. In the S of the parish the surface sinks to 190, along the South Esk in the NE to 295, feet above sea-level; and between these points it rises to 631 feet at the Hill of Kirriemuir, 513 at Cloisterbank, and 1018 at Culhawk Hill. The principal rocks are mainly Devonian, with occasional protrusions of trap. Limestone has been quarried and calined. The soil of the arable tracts on both the northern and southern borders is sandy, and that of the central and larger portion mostly a black mould on a subsoil of so-called 'mortar.' One-

eighth of the area is under plantations in fine arrangements of clumps and groves, eleven-sixteenths are regularly or occasionally in tillage, and nearly all the rest is chiefly pasture but partly moss, the mosses of Kinnordy and Balloch being constantly used for supplies of peat. Extant antiquities are tumuli and uninscribed monumental stones; querns, arrow-heads, battle-axes, and two canoes or currachs have been discovered from time to time; and not so long ago two ponderous rock-ing-stones stood a little NW of the hill that overlooks the town. Inverquharie Castle is noticed by itself. Within this parish several skirmishes were fought arising out of the Ogilvies' feuds; and the Battle of ARBROATH (1446) must have been a grievous blow to Kirriemuir. Mansions, noticed separately, are Kinnordy, Shielhill, Logie, and Balnaboth. The parish, in the presbytery of Forfar and synod of Angus and Mearns, is divided ecclesiastically between Kirriemuir proper and Kirriemuir South Church, the former a living worth £265. Four pre-Reformation chapels, besides the parish church, were in Kirriemuir—one in the town, near a plot of ground called in old writs the Kirkyard; one at a place called Chapeltown, $3\frac{1}{4}$ miles N by W of the town; one at Kilnhill, 2 miles E by N of the town; and one near Ballinshae, 3 miles ESE, the site of which, still enclosed with a wall, was used as a family burying-place. Four public schools—Carroch, Padanaram, Roundyhill, and Westmuir—with respective accommodation for 60, 77, 91, and 60 children, have an average attendance of about 15, 60, 75, and 45, and grants amounting to nearly £27, £45, £75, and £30. Valuation (1883) £31,910, 8s. 7d., (1893) £26,162, 9s., plus £1783 for railway. Pop. (1801) 4421, (1831) 6425, (1861) 7359, (1871) 6420, (1881) 6616, (1891) 6090, of whom 3677 were in Kirriemuir proper, and 2413 in Kirriemuir South Parish.—*Ord. Sur.*, shs. 56, 57, 65, 1868-70.

Kirroughtree or Kirouchtree (Celt. *caer-Uchtréd*, 'fort of Uchtréd'), a mansion with finely wooded grounds, in Munnigaff parish, W Kirkcudbrightshire, 1 mile NE of Newton-Stewart.—*Ord. Sur.*, sh. 4, 1857.

Kirtle, a *quoad sacra* parish in Dumfriesshire, comprising parts of Annan, Kirkpatrick-Fleming, and Middlebie parishes. The church, which stands near the village of Kirtle-Bridge, was built at a cost of £500. Kirtle is in the presbytery of Annan and synod of Dumfries. Pop. (1891) 1271, of which 346 were in Annan, 165 in Kirkpatrick-Fleming, and 760 in Middlebie.

Kirtle-Bridge, a village in the SE corner of Middlebie parish, Dumfriesshire, on the right bank of Kirtle Water. It has a station on the Caledonian railway at the junction of the Solway railway, $5\frac{1}{2}$ miles NNE of Annan and $3\frac{1}{4}$ ESE of Ecclefechan, under which there is a post office, with money order, savings bank, and telegraph departments.

Kirtlefoot. See KIRTLÉ WATER.

Kirtle Water, a stream of SE Dumfriesshire, formed, in the extreme N of Middlebie parish, by the confluence of two head-streams, of which Winterhope Burn, rising at an altitude of 1250 feet above sea-level, runs $1\frac{1}{2}$ mile south-south-westward, whilst the other, rising to 890 feet, runs $1\frac{1}{2}$ mile south-by-eastward. From the point where they meet (570 feet), Kirtle Water winds $16\frac{1}{2}$ miles south-south-westward and south-eastward through or along the boundaries of Middlebie, Kirkpatrick-Fleming, Annan, Dornock, and Gretna, till it falls into the head of the Solway Firth at Kirtlefoot. It traverses a vale of much beauty, richly embellished with wood; it enfolds the meadow of Kirkeonnel burial-yard, containing the grave of 'Fair Helen of Kirkeonnel-Lee;' it is crossed, at Kirtle-Bridge, by a viaduct of the Caledonian railway, comprising nine arches, each 36 feet in span; and it contains eels, perch, and trout, and is frequented by salmon.—*Ord. Sur.*, shs. 10, 6, 1864-63.

Kirtomy. See FARR.

Kirton. See KIRKTON.

Kishorn, a sea-loch in the SW of the county of Ross and Cromarty, $5\frac{1}{2}$ miles W of JEANTOWN (Lochcarron). Projecting from the N side of Loch Carron, opposite Plockton, it penetrates $3\frac{1}{4}$ miles north-eastward; con-

tracts from $1\frac{3}{4}$ to $\frac{1}{2}$ mile; and receives, at its head, the Kishorn rivulet, rising at an altitude of 1000 feet, and running $4\frac{1}{2}$ miles southward. At its mouth lies Kishorn Island ($2\frac{1}{2} \times 1$ furl.; 50 feet high). A post office, with money order, savings bank, and telegraph departments, and a public school are designated of Kishorn. A written charm for the cure of toothache, bought from a professional witch at Kishorn, and worn by a shepherd in 1855, is now in the Edinburgh Antiquarian Museum.—*Ord. Sur.*, sh. 81, 1882.

Kismull, an ancient castle and a small bay in the S of Barra island, Outer Hebrides, Inverness-shire. The castle, crowning a small rock in the middle of the bay, was the residence of the Macneils of Barra. Completely encompassed with deep water, it comprises strong walls 60 feet high, enclosing a lofty square keep, and appears to be more than 600 years old; but, though weather-worn and dilapidated, is still tolerably entire.

Kittybrewster. See ABERDEEN.

Klett or A'Chleit, an islet ($2\frac{1}{4} \times \frac{1}{2}$ furl.; 120 feet high) in Assynt parish, Sutherland, off the mouth of Loch Inver and Enard Bay, $4\frac{1}{2}$ miles WSW of Lochinver village.

Knaik, a rivulet of Ardoch parish, Perthshire, rising at a spot $4\frac{1}{2}$ miles S by W of Comrie and 1470 feet above sea-level, and running $9\frac{3}{8}$ miles south-eastward past Braco Castle, the Roman camp of Ardoch, and Braco village, till, after a total descent of 1000 feet, it falls into Allan Water in the vicinity of Greenloaning station on the Dunblane and Perth section of the Caledonian railway.—*Ord. Sur.*, sh. 39, 1869.

Knapdale, a district of Argyllshire. It is bounded on the N by Loch Crinan, the Crinan Canal, and Loch Gilp, which separate it from Lorn and Argyll proper; on the E by Loch Fyne, which separates it from Cowal; on the S by Tarbert isthmus and the Lochs Tarbert, which separate it from Kintyre; on the W by the Islay Sea and the Sound of Jura, which separate it from Islay and Jura. Its greatest length, from N to S, is 27 miles; and its greatest breadth is 9 miles. It is prevented only by the narrow Tarbert isthmus from being a continuation northward of the peninsula of Kintyre; and it is so deeply indented on the W by Lochs Caolisport and Swin as to be itself, in a great measure, cut into three peninsulas—the largest between West Loch Tarbert and Loch Caolisport; the smallest between Loch Swin and the Sound of Jura. It now is not a political division of the county, but is placed partly in the political division of Argyll proper, and partly in that of Islay. It formerly was all one parish, but now is divided into the two parishes of North Knapdale and South Knapdale. It anciently was called *Kilvieck-Charmaig*, signifying 'the church or burying-ground of the son of Carmaig;' and the Carmaig to whom that name alludes is said to have been an Irish missionary, who first preached Christianity to the natives. Its present name is compounded of two Celtic words signifying 'a rounded hill' and 'a plain;' indicates a country mainly composed of rounded hills and intersecting dales; and is perfectly descriptive of the district's surface. The two clans Macmillan and Macneil seem to have anciently possessed all Knapdale, but they now are very sparsely found within its limits. See Capt. T. P. White's *Archæological Sketches in Knapdale* (Edinb. 1875).

Knapdale, North, a parish in Knapdale territorial district and Islay political district, Argyllshire. Formed out of the large old parish of Knapdale in 1734, it includes the port of CRINAN and the small village of Bellanoch. It is bounded N by the Crinan Canal, E by South Knapdale, S and W by the Sound of Jura. Its utmost length, from N to S, is 12 miles; its utmost breadth is 6 miles; and its land area is 26,293 acres. Bellanoch is a small village in the N of the parish, with a population in 1891 of 223. It is situated on the southern bank of the Crinan Canal, 6 miles NW of Ardrishaig, in a glen which here forms a fine triangular sheet of water, and terminates at Crinan, about a mile farther west. It has a post office and a public school. A number of small islands, including the inhabited ones of Danna and Ulva, lie off the W coast. Loch Swin, from

foot to head, penetrates the interior, and peninsulates the north-western district at three different points. The coast, along the W and within Loch Swin, is fully 50 miles in extent; its shores are much diversified by rocky bluffs and abrupt projections, which rise in many places boldly to heights of 300 feet; but it includes some reaches of gentle slope or moderate acclivity. The interior mainly consists of hill and dale, being much diversified in both its upland and its lowland portions, and possessing a large aggregate of wood and water. It abounds, especially round the shores of Loch Swin, in picturesque close scenes; and commands from many vantage-grounds extensive and magnificent views. The loftiest height is Cruach-Lussach (2004 feet); other conspicuous eminences are Dunardary, Duntaynish, Ervary, and Arichonan. The principal heights, culminating in Cruach-Lussach, form a chain or continuous watershed, extending from NE to SW; and the subordinate heights lie variously arranged on the two sides of this chain, declining shorewards into gentle declivities; whilst a tract between the western ones and Loch Swin, with a breadth of nearly $\frac{1}{2}$ mile, is a slightly inclined plain. Several considerable burns, one of them making a beautiful cascade near Inverlussa church, rise in the interior and run to the sea; some twenty-one fresh-water lakes, the largest not more than 3 miles in circumference, lie dispersed through the interior, principally in the N; and excellent springs, some of them strongly impregnated with lime, are abundant. The soil of the arable lands is sandy, gravelly, mossy, or loamy; and, at the SW extremity, is rich, friable, and very productive. About one-eighth of the entire area is in tillage; woods and plantations cover more than 2000 acres; and the rest of the land is either pastoral or waste. Antiquities, other than CASTLE SWIN, are a mound near Crinan on which the Lords of the Isles are said to have held courts of justice, remains of three old forts or watch-towers, the ruin of the chapel of St Carmaig, an ancient cross 9 feet high, and the ruins of the religious house of Drimnacraig. Major-General Sir Archibald Campbell (d. 1791), who figured in the American war, and was afterwards governor of Jamaica, was a native. In 1796 Thomas Campbell was tutor at the old house of Downie; and the hill of Arichonan, which he is said to have frequented in his leisure hours, still bears the name of 'Poet's Hill.' Lord Malcolm of Pottaloch is the chief proprietor. North Knapdale is in the presbytery of Inveraray and synod of Argyll; the living is worth £280, exclusive of manse. The parish church, at Kilmichael Inverlussa, built in 1820, and since altered, contains 200 sittings; and Tayvallich chapel of ease, on the other side of Loch Swin, 3 miles distant by sea but 10 by land, was built in 1827, and contains 700 sittings. There is also a Free church; and three public schools—Ashfield, Bellanoch, and Tayvallich—with respective accommodation for 39, 73, and 100 children, have an average attendance of about 10, 60, and 35, and grants amounting to nearly £22, £106, and £55. Pop. (1801) 2401, (1831) 2583, (1861) 1327, (1871) 1059, (1881) 927, (1891) 867, of whom 770 were Gaelic-speaking.

Knapdale, South, a parish in Knapdale territorial district and in Argyll political district, Argyllshire. It contains the post-town and harbour of ARDRISHAIG, the post-office hamlet of ACHAHOISH, and part of the post-town of TARBERT; and it enjoys from these places regular steamboat communication. Formed out of the large old parish of Knapdale in 1734, it is bounded N by North Knapdale and the Crinan Canal, NE by Loch Gilp, E by Loch Fyne, S by Kilcalmonell and West Loch Tarbert, and W by the Sound of Jura. Its area was considerably enlarged by the Boundary Commissioners in 1891, when the Kilberry district of the parish of Kilcalmonell, comprising no less than 21,915 acres, was transferred to it. Its utmost length, from N to S, is 21 miles; its utmost breadth, 7 miles; and its land area, 74,475 acres. Several islets lie off the W coast; and, though uninhabited, afford good pasturage. The west coast presents a bold front to the billows of the Atlantic, and towards the southern extremity of the Kilberry dis-

trict is indented by small Loch Stornoway, between which bay and Loch Tarbert it terminates in the headland of ARDPATRICK (265 feet). The E coast, with an extent of 12 miles, presents a slightly undulated shoreline, and a pleasantly-diversified, hilly seaboard. The W coast is distinguished chiefly by the ascent from it of Loch Caolisport up the boundary with North Knapdale; has several fine bays, which afford safe anchorage; and presents shores and seaboard, partly bold and partly gradual. The interior, for the most part, is rough upland. A range, called Sliabach-Goail, extends right across it; contains the highest ground, with mountain elevation above sea-level; and commands one of the most extensive, varied, and grandly picturesque views in Great Britain, from Islay to the Perthshire Grampians, and from Mull and Ben Cruachan to the North of Ireland, with everywhere a crowded intervening space of lofty heights and belts of sea. Other hills, less lofty and interesting, extend parallel to this principal range, and are separated from one another by deep, well-sheltered vales. Burns and torrents are numerous, and the larger ones are subject to such winter floods as render them in many parts impassable. Five or six fresh-water lakes lie in hollows; but, with one or two exceptions, they can be seen only from the summits of the highest hills; and they add very little to the beauty or interest of the landscape. The extent of arable land bears but a small proportion to that of waste and pasture lands, and is very much intersected by hills and marshes. The soil, on some of the low grounds, is loamy; on most of the other arable grounds, is of a mossy nature, incumbent upon sand. Wood, both natural and planted, covers a considerable area. A lead mine was for some time worked on Inverneill estate. Antiquities are remains of three, and the sites of four, pre-Reformation chapels. Mansions, noticed separately, are Ardpatrik, Auchindarroch, Barmore, Dunmore, Erins, Inverneill, Kilberry, Ormsary, and Stonefield. Giving off the whole of Ardrishaig *quoad sacra* parish and portions of those of Tarbert and Lochgilphead, South Knapdale is in the presbytery of Inveraray and synod of Argyll; the living is worth £214. There are three parish churches, one at Achahoish, near the manse; one at Inverneill, 6 miles distant (both built in 1775); and one at Kilberry (1821). Free churches are in Ardrishaig, Kilberry, Lochgilphead, and Tarbert; and five public schools, Achahoish, Dunmore, Inverneill, Kilberry, and Ormsary, with respective accommodation for 27, 49, 34, 63, and 60 children, have an average attendance of about 15, 20, 20, 20, and 15, and grants amounting to about £33, £30, £35, £32, and £28. Pop. (1801) 1716, (1831) 2137, (1861) 2519, (1871) 2695, (1881) 2536, (1891) 3017, of whom 1596 were Gaelic-speaking, and 293 were in South Knapdale ecclesiastical parish.

Knightswood, a village in New Kilpatrick parish, SE Dumbartonshire, 3 miles W by N of Maryhill, and 5 NW of Glasgow. Pop. (1861) 319, (1871) 636, (1881) 790, (1891) 450.—*Ord. Sur.*, sh. 30, 1866.

Knock. See GRANGE, Banffshire.

Knock, a village in Westkirk parish, Dumfriesshire, on the right bank of the Esk, 6½ miles NW of Langholm.

Knock. See RENFREW.

Knock or **Knockhall Castle**. See FOVERAN.

Knock. See EDINKILLIE.

Knock, a *quoad sacra* parish in Stornoway parish, Lewis, Outer Hebrides, Ross-shire. Comprising the ancient chapelry of Uie or Eye, which included the Aird peninsula, it contains a village of the name of Knock, the site of the present church (renovated in 1892), 5 miles E by S of the post-town Stornoway. Knock is in the presbytery of Lewis and synod of Glenelg; the living is worth £125. A Free church is 2 miles farther. Pop. (1871) 2577, (1881) 2990, (1891) 3424, of whom 3211 were Gaelic-speaking.—*Ord. Sur.*, sh. 105, 1858.

Knockando (Gael. *cnoc-an-dubh*, 'the black hill'), a parish near the middle of the south-eastern border of Elginshire, comprehending the ancient parishes of Knockando and Macallan (Gael. *Ma Calan*, 'St Colin').

The former was anciently a vicarage of Inveravon and the latter of Bottarie. They were united from 1646 to 1683, and separate from 1683 to 1689, from which time they have been again united. It is bounded NE by Rother, E and SE by Banffshire (where, at the extreme SE corner, for about 1 mile, the parish of Kirkmichael comes in above the mouth of the river Avon), S by Banffshire, SW by Cromdale, W by Edinkillie, and NW by Dallas. The boundary along the whole of the SE and S for about 14 miles is the mid-bed of the river Spey, while along the greater part of the SW side, from near Lynemore north-westwards, it follows the course of the Allt a' Gheallaidh to Carn Kitty; elsewhere it is purely artificial. The greatest length in a straight line, from below Craigellachie Bridge on the E to Carn Kitty on the W, is 12½ miles; and the greatest breadth, from the point where Knockando, Dallas, and Rother meet on the N to the Spey at Delnapot on the S, is 7¾ miles, and from this it tapers irregularly to both ends. The land area is 28,134 acres, of which probably less than 4000 acres are under tillage, and about the same amount under wood, while the rest of the parish is moorland. The surface is irregular, but the general inclination is towards the S, the ground sloping from the NE and NW borders to the river. Except for a short distance between Easter and Wester Elchies, near the E end of the parish, and at a few other places where there are alluvial patches, the river banks are steep and covered with trees, and rise rapidly to elevations of 439 feet above Craigellachie Bridge, 745 at Archiestown, 933 above Pitchroy, and 1001 at the Hill of Delnapot on the extreme S. From these last the heights rise on the SW and W by James Roy's Cairn (1691 feet), to Carn Kitty (1711), and thence pass eastward by Carn Shalag (1543), the Hill of Slackmore (1166), Clune (1035), Carn na Cailleichie (1313), across the shoulder of the Mannoeh Hill (1013), and so by the Hill of Stob (1009) and the shoulder of Hunt Hill (1210) back to the high ground above Craigellachie Bridge. The hills are smooth and rounded, and by no means picturesque, but the wooded portions along the Spey at Easter Elchies, Wester Elchies, Knockando House, and Pitchroy are very pretty. The parish is drained on the SW by the Allt a' Gheallaidh, already mentioned; in the centre by the Allt Arder, the Burn of Knockando, and the Burn of Ballintomb, which all enter the Spey to the S of the church; and in the E by some smaller streams. Between Carn Kitty and Clune on the NW border of the parish are the small loch of Little Benshalag and Loch of the Cowlatt. During the great floods of 1829 the burns of Allt a' Gheallaidh and Knockando, as well as the river Spey, did a great amount of mischief. The first carried away the corn-mill and saw-mill at Pitchroy at the S corner of the parish; and the bench of the saw-mill, 11½ feet long, 4½ broad, and 3½ high, containing two circular saws and with 112 pounds of iron attached to it, was carried down the Spey for nearly 13 miles. The Knockando Burn carried away a carding-mill, a meal-mill, and several houses, all situated below the church. 'After the flood,' says Sir Thomas Dick Lauder in his *Account of the Great Floods of August 1829*, 'the prospect here was melancholy. The burn, that formerly wound through the beautiful haugh above the promontory, had cut a channel as broad as that of the Spey from one end of it to the other. The whole wood was gone; the carding-mill had disappeared, the miller's house was in ruins, and the banks below were strewed with pales, gates, bridges, rafts, engines, wool, yarn, and half-woven webs, all utterly destroyed. A new road was recently made in this parish, and all the burns were substantially bridged; but with the exception of one arch, all yielded to the pressure of the flood.' Before 1829 the Allt Arder had a high fall about 300 yards from the junction with the Spey, but then it changed its course, and in one night cut out a ravine about 60 feet deep and 300 feet wide at the top. The respect still entertained for its powers is shown by the enormous disproportion between the small stream and the viaduct—consisting of two iron girder spans of 40 feet and one of 50 feet—that

carries the Speyside railway some 50 feet above. There is excellent trout and salmon fishing in the Spey, and the larger burns contain trout. The soil near the Spey is light, but on the higher ground there is a black gravelly loam or heavy clay passing as it approaches the moors into moss, a good deal of which is still improvable. The underlying rocks are granite and schists. The only village is Archiestown, near the E end of the parish, $3\frac{1}{2}$ miles from Craigellachie Bridge, and 2 S by E of Carron Station, on the Speyside section of the Great North of Scotland railway. Archiestown was founded in 1760 by Sir Archibald Grant of Monymusk, on an open moor, called the Moor of Ballintomb, and though it did not at first thrive, and was almost entirely destroyed by an accidental fire in 1783, it is now an average country village. There is a post office under Craigellachie. The parish church is 3 miles to the SW of Archiestown, and almost midway between the eastern and western limits. It is a long narrow building with outside stairs to the galleries, and the rising-ground on which it stands commands a wide and good view. Built in 1757, almost on the same site as the old one, it has since been twice repaired.

In the churchyard are three sculptured slabs said to have been brought thither over 60 years ago from an old burying-ground called Pulvrenan, on the bank of the Spey, below Knockando House. They have been figured in the Spalding Club's *Sculptured Stones of Scotland*, vol. ii., plate cv. One of them has an inscription in runes. There is another small burying-ground, that of the old parish of Macallan, at Easter Elchies, where there was a church which became ruinous about 1760. The Easter Elchies burial-aisle still remains. A small mission church in the Elchies district, in the E end of the parish, was built in 1873-74 at a cost of £828; and there are also a Free church and a U.P. church. There is a good road running through the whole length of the parish, in a direction more or less parallel to the Spey; from this another branches off a little to the W of the church, and passes over the moors to DALLAS; while a third strikes off at the church straight northward to Elgin. The Speyside section of the Great North of Scotland Railway system enters the parish at Carron, near the middle of the SE border, and runs parallel to, and close to, the Spey for 6 miles, till it crosses the river and returns into Banffshire at the S corner at Delnapot. The mansions are Easter Elchies, Wester Elchies, Laggan House, and Knockando House, all close to the Spey. Easter Elchies now belongs to the Countess-Dowager of Seafield, and is a plain building with a corner turret. It belonged to Patrick Grant, Lord Elchies, Judge of Session (1690-1754) who took his title from it, and from whose time the original building dates, but it was almost entirely rebuilt in 1857. His son, Baron Grant, sold it to the Earl of Findlater, from whom it passed by inheritance to the Seafields. There are good gardens adjoining the house. Wester Elchies, about 2 miles farther W, is of various dates, part of it being a fragment of an old fortalice. In the entrance hall are two chairs from the old castle of Rothes, and in the grounds are several sculptured stones from an ancient Hindu temple at Ghur. Close by the house is an observatory erected by J. W. Grant, Esq., who held the estate from 1828 to 1865. On either side of the door is a sphinx, and above is the inscription, 'He made the stars also.' It used formerly to contain a giant telescope, the trophy of the Exhibition of 1851. The site of the mansion is picturesque, and the grounds are well wooded. The present owner is J. W. H. Grant, Esq. (b. 1827; suc. 1877). Farther W, on the same estate, are Laggan House and Knockando House. The former is a building of 1861, in the old Scottish style, with walls of red brick and granite and freestone facings. The latter is a plain two-storey building, dating from 1732. In the extreme E end of the parish is the rock of Lower Craigellachie, which marks the eastern end of the former domains of Clan Grant; Upper Craigellachie, which marked the western end, being near Aviemore. On the Spey, a little above the mouth of the Knock-

ando Burn, is the famous rock of Tomdow, which is very dangerous for floats of timber passing down the river, and where in heavy floods the rush and roar of water is terrific, it being said locally that 'Spey turns up the white o' her een after she gets a drink in Badenoch.' At Dellagyle is a cave that afforded shelter to the well-known cateran James-a-Tuam (one of the Grants of Carron), who figures prominently in Spalding's *History of the Troubles in Scotland*, and it is also traditionally associated with the equally notorious Macpherson of Macpherson's Ram (See BANFF). There is a fragment of an old stone circle, and names indicating the sites of one or two religious houses. The people are engaged in agriculture, the other industries being a distillery near Easter Elchies and one near Knockando House, a woollen mill, and grain mills. The Messrs Grant of Ramsbottom in Lancashire, the prototypes of Dickens' Brothers Cheeryble in *Nicholas Nickleby*, were born in this parish. Knockando is in the presbytery of Aberlour and the synod of Moray, and the living is over £200. Four schools—Archiestown Church school, and Elchies, Kirdels female, and Knockando public schools—with accommodation respectively for 90, 150, 69, and 188 children, have an average attendance of about 90, 55, 35, and 90, and grants amounting to nearly £80, £60, £40, and £85. Pop. (1755) 1267, (1801) 1432, (1841) 1676, (1871) 1909, (1881) 1838, (1891) 1712.—*Ord. Sur.*, sh. 85, 1876. For an account of the Wester Elchies Observatory, see *Good Words* for 1862.

Knockard and Erropie, two conjoint villages in Barvas parish, Lewis, Outer Hebrides, Ross and Cromarty, 1 mile S of the Butt of Lewis and 26 miles N by E of Stornoway. Pop. (1891) 380.—*Ord. Sur.*, sh. 111, 1858.

Knockbain, a coast parish of SE Ross and Cromarty, whose church stands 1 mile S of Munloch, and $5\frac{3}{4}$ miles N by W (*via* Kessock Ferry) of Inverness. The Black Isle railway, from Muir of Ord to Fortrose, opened in 1894, passes through the northern portion of the parish and has a station at Munloch, under which there is a post office of Knockbain. Containing also the hamlets of Kessock, Munloch, and Charleston, the first of which has a post office under Inverness, it consists of the two ancient parishes of Kilmuir-Wester and Suddie, united in 1756; and it took the name of Knockbain (Gael. *cnoc-bàin*, 'white knoll') from the eminence on which its modern church was built. A strip of this parish, 280 yards wide at the narrowest, that separated the parish of Killearnan into two unequal parts, was annexed by the Boundary Commissioners in 1891 to Killearnan; and Gallowhill Wood (with croft), which formerly lay partly also in Knockbain, was placed wholly in the same parish. On the other hand, the farm of Bellfield, which also lay partly in both parishes, was placed wholly in Knockbain; and the part of Killearnan which lay east of the centre of the road leading from Allanglach past Artafallie to North Kessock was transferred also to Knockbain. The parish is bounded NE and E by Avoch, SE by the Moray Firth, S by the Beaully Firth, SW and W by Killearnan, and NW by Urquhart. Its utmost length, from N to S, is 6 miles; its breadth varies between $1\frac{1}{2}$ and $5\frac{1}{2}$ miles. The shoreline, 8 miles long, in the N is deeply indented by Munloch Bay, and everywhere is fringed by a narrow, low, flat strip of old sea-margin, from which the surface rises rather rapidly to 633 feet at Ord Hill, 400 at Craigiehow, 482 at DRUMDERFIT Hill, and 566 near Upper Knockbain in the extreme N. The rocks belong to the Old Red Sandstone formation; and the soil is extremely various, comprising sandy or clayish loam, alluvium, gravel, and peat, with here and there a pretty strong pan. Great improvements have been effected in the way of reclamation, retraining, etc.; and a largish proportion of the entire area is under plantations. On the Drumderfit ridge above Munloch are numerous cairns; and a large one on the western part of the ridge is believed to commemorate the Battle of Blair-na-coi ('field of lamentation'), in which, in 1340, the Macdonalds were routed by a night attack of the townsfolk of Inverness. Other antiquities are a vitrified fort on

Ord Hill; an earth fort on Craig-caistal, Lundie; 'James's Temple' on Drumderit; hut circles at Taerore, Arpafeelie; stone circles at Muirton, Belmaduthie, and the 'Temple,' and cremation burial mounds discovered at Drumnamarg in 1881. General John Randall Mackenzie, who fell at the battle of Talavera in 1809, was a native. Allangrange House, 2 miles SW of Munloch, is the seat of James Fowler Mackenzie, Esq. (b. 1833; suc. 1849). Other mansions, noticed separately, are Belmaduthie and Drynie. Knockbain is in the presbytery of Chanonry and synod of Ross; the living is worth £347. The parish church, enlarged about 1816, was repaired in 1894. There are two Free churches—one at Munloch and one at Munloch West—and Arpafeelie Episcopal church, St John's (1810; 200 sittings); and Drumsmital public, Munloch public, Upper Knockbain public, and Arpafeelie Episcopal schools, with respective accommodation for 120, 140, 117, and 87 children, have an average attendance of about 95, 90, 45, and 45, and grants amounting to nearly £110, £85, £58, and £60. Pop. (1801) 1859, (1841) 2565, (1861) 2485, (1871) 2155, (1881) 1866, (1891) 1667, of whom 1001 were Gaelic-speaking.—*Ord. Sur.*, shs. 83, 84, 1881-76.

Knockbrex, a mansion in Borgue parish, Kirkcudbrightshire, near the shore of Fleet Bay, 5½ miles S by W of Gatehouse. The estate and shootings, extending to 760 acres, were sold by Captain Hope of St Mary's Isle in 1894, and were purchased by James Brown, Esq., merchant, Manchester, at the upset price of £14,000.

Knock Castle, a mansion in Largs parish, Ayrshire, near the shore of the Firth of Clyde, 2½ miles N by W of Largs town. Comprising two buildings, separate one from another, it is partly a renovated ancient baronial fortalice, partly a modern, magnificent, castellated edifice in the old Scottish style. Its owner is George Elder, Esq., J.P. and deputy-lieutenant of the county. Knock Hill (777 feet), 1½ mile to the NE, was used in old times as a beacon station, and commands an extensive and very brilliant view. From about 1400 till 1650 the Knock estate belonged to a younger branch of the Frasers of Lovat.—*Ord. Sur.*, sh. 29, 1873.

Knock Castle, a ruin in Glenmuick parish, Aberdeenshire, on a beautiful eminence, in the peninsula between the rivers Muick and Dee, 2 miles WSW of Ballater. It once was a strong and stately edifice belonging to the Gordons.

Knock Castle, a ruin on a rocky headland of the SE coast of Sleat parish, Isle of Skye, Inverness-shire, 4 miles SSW of Isle Ornsay. It once was a stronghold of the Barons of Sleat.

Knockdaviae. See BURNTISLAND.

Knockdolian, an 18th century mansion in Colmonell parish, Ayrshire, on the right bank of the Stinchar, and at the NE base of conical Knockdolian Hill (869 feet), 2 miles W by S of the village of Colmonell. Its owner is William M'Connell, Esq. Ruined Knockdolian Castle stands ½ mile to the NW.—*Ord. Sur.*, sh. 7, 1863.

Knockdow or **Knockdhu**, a mansion in Inverchaolain parish, Argyllshire, near the right bank of Ardyne Burn, 2 miles NNW of Toward. It is the seat of James Lamont, Esq. (b. 1828; suc. 1861), author, Arctic explorer, and Liberal M.P. for Buteshire 1865-68.—*Ord. Sur.*, sh. 29, 1873.

Knockendoch. See CRIFFEL.

Knockentiber. See KNOCKINTIBER.

Knockespoek, a large old mansion in Clatt parish, Aberdeenshire, 4½ miles S by W of Kennethmont station on the Inveramsay and Keith section of the Great North of Scotland railway. It belongs to the Fellowes-Gordon family.—*Ord. Sur.*, sh. 76, 1874.

Knockfarrel, a conical eminence (579 feet) in Fodderty parish, Ross and Cromarty shire, on the S side of Strathpeffer vale, 1¼ mile E by N of Strathpeffer Spa. Rising from the vale in so steep an ascent as to look almost mural, it is crowned with a vitrified fort, measuring 420 feet by 120, and defended by breastworks; and it com-

mands a noble view to Craighphadrick in the vicinity of Inverness, and to the N Sutor of Cromarty.—*Ord. Sur.*, sh. 83, 1881.

Knockfin Heights. See HALKIRK and KILDONAN.

Knockgray, an estate, with a mansion (a farmhouse now), in Carspair parish, N Kirkcudbrightshire, 11 miles SE of Dalmeilton. Acquired by the Kennedys towards the close of the 17th century, it is now the property of the heirs of the late Capt. Alex. William Maxwell Clark-Kennedy, F.L.S., F.R.G.S.—*Ord. Sur.*, sh. 8, 1863.

Knockhall Castle. See FOVERAN.

Knockhill, an estate, with a modern mansion, in Hoddam parish, Dumfriesshire, 1¼ mile WSW of Ecclefechan.

Knockhillie or **Knockhooly**, a hamlet in Colvend parish, SE Kirkcudbrightshire, on the left bank of Southwick Burn, 8 miles ESE of Dalbeattie.

Knockinaam Lodge, a charming marine residence on the DUNSKY estate, Portpatrick parish, W Wigtownshire, close to the shore of Port o' Spittal Bay, 3 miles SE of Portpatrick town.

Knockinnan, a ruined fortalice on the coast of Latheron parish, Caithness, 2 miles NNE of Dunbeath, 5 furlongs nearer which is Knockinnan inn.

Knockintiber, a village in Kilmaurs parish, Ayrshire, 2 miles WNW of Kilmarnock.

Knocknalling, an estate, with a modern mansion, in Kells parish, Kirkcudbrightshire, near the right bank of the Ken and the left of confluent Pulharrow Burn, 6 miles NNW of New Galloway. Its owner is Col. John Murray Kennedy.—*Ord. Sur.*, sh. 9, 1863.

Knock of Braemoray. See EDINKILLIE.

Knowe, a hamlet, 10 miles W of Newton-Stewart, with a post office under Kirkcowan, in Penninghame parish, NE Wigtownshire.

Knowesouth, an estate, with a mansion, in Bedrule parish, Roxburghshire, near the right bank of the Teviot, 4 miles W by N of Jedburgh. Its owner is Gideon Pott, Esq.—*Ord. Sur.*, sh. 17, 1864.

Knoydart, a district and a *quoad sacra* parish in Glenelg parish, W Inverness-shire. The district is bounded on the N by Loch Hourn, on the E by Kilmonivaig, on the S by Loch Nevis, on the W by the Sound of Sleat. Its greatest length, from E to W, is 15 miles; its greatest breadth is 9 miles; and its area is about 85 square miles. The surface is mostly mountainous, yet includes a considerable aggregate of arable land; and it abounds in features of romantic and grandly picturesque scenery. Guseran Water rises on the E border, and runs through the middle to the Sound of Sleat; and INVERIE House, with a pier, stands on Loch Nevis, 10 miles SSE of Isle Ornsay and 54 WSW of Fort Augustus, and is the seat of Edward Salin Bowlby, of Gilston Park, Harlow, who purchased the estate of Knoydart in 1893 at the upset price of £100,000. The estate extends to about 67,000 acres, and comprises the forests of Inverie and Barrisdale, extending to about 20,000 and 25,000 acres respectively, a small home farm, and 21,000 acres of sheep and cattle grazings. The house, lighted by electricity, is surrounded by fine grounds and ornamental woods. The *quoad sacra* parish, which is nearly coterminous with the district, and which sprang from a mission station of the Royal Bounty, is in the presbytery of Lochcarron and synod of Glenelg. The stipend is £150. A Roman Catholic church, St Anthony's, was built in 1850, and contains 300 sittings. Pop. of parish (1871) 470, (1881) 437, (1891) 383.

Kyle, an ancient castle and a district in Ayrshire. The castle stood in Auchinleck parish, on an elevated tongue of land between confluent Gelt and Glenmore Waters, 6 miles E of Cumnock. Unknown to history, as to either its origin or its early proprietors, it passed into the possession of the Marquis of Bute; and is now represented by only slight remains. The district, the middle one of the three divisions of the county, has often, in common with COILSFIELD, COYLE river, and COYLTON parish, been thought to have got its name from

'Auld King Coil,' a Pictish king or regulus, said to have been killed in a battle fought in Coylton parish. It seems, however, to have anciently been all or nearly all covered with forest, so may very probably have got its name from the Celtic *Coille*, 'a wood;' and it ranked, in the Middle Ages, as a bailiwick. It is bounded on the N by the river Irvine, which divides it from Cunningham, on the NE by Lanarkshire, on the E by Dumfriesshire, on the S by Kirkcudbrightshire, on the SW by the river Doon, which divides it from Carrick, and on the W by the Firth of Clyde. Its greatest length, from E to W, is 28 miles; its greatest breadth is 23 miles; and its extent of coast, measured in a straight line, is nearly 12 miles. The river Ayr, rising on its eastern border, and traversing it westward to the Firth, divides it into Kyle Stewart on the N, and King's Kyle on the S. Other chief streams are the Cessnock, running to the Irvine; the Lugar and the Coyle, running to the Ayr; and the Nith, rising on the southern border, and making a circuitous run of 15½ miles to the boundary with Dumfriesshire. The parishes are Dundonald, Riccarton, Galston, Craigie, Symington, Mauchline, Sorn, Muirkirk, Monkton, Tarbolton, Stair, Auchinleck, Ayr (since 1895 including Newton and St. Quivox), Coylton, Ochiltree, Old Cumnock, New Cumnock, Dalrymple, and Dalmellington; and all are in the presbytery of Ayr. The Kyle Union Poorhouse board, with a poorhouse at Ayr, comprises delegates from the parishes of Auchinleck, Ayr (with Newton and St. Quivox), Coylton, New Cumnock, Old Cumnock, Dalmellington, Dalrymple, Mauchline, Muirkirk, Ochiltree, and Sorn.

Kyle-Akin, a village on the NE verge of Strath parish, Isle of Skye, Inverness-shire, at Kyle-Akin strait between Skye and the mainland of Ross and Cromarty shire. The village, 7 miles SW of Lochalsh church, and 8 ENE of Broadford, was founded by the third Lord Macdonald, on a ground plan, as an intended considerable seaport, to consist chiefly of two-storey houses with attics; but has never yet exceeded the limits of a mere village. A main thoroughfare between Skye and the mainland, it has a post office under Broadford, with money order, savings bank, and telegraph departments, a good inn, chapel of ease (1875), a public school, and a regular ferry. Castle-Maolil has been separately noticed. Kyle-Akin strait, which gave name to the village, got its affix from King Hakon of Norway, on occasion of his expedition against Scotland in 1263. At the W extremity of Loch Alsh, and forming the north-western termination of the long Sound of Sleat, which separates Skye from the mainland, it looks to be so narrow that a common fable represents the old method of crossing it to have been by leaping, and averages ½ mile in breadth for about 1 mile in length. In 1893, Government having voted £45,000 of the estimated £150,000 necessary for the purpose, operations were begun to carry out the original design of making this the terminus of the Dingwall and Skye railway. A terminus quay, with a depth of 24 feet at low water, was built, and the connection with the island and Kyle-Akin is maintained by steam ferry. The extension line was opened for traffic about the end of 1897. The strait is overlooked by a lighthouse, showing a fixed light visible at the distance of 12 nautical miles, red towards the S, and white towards Loch Alsh and the Sound of Applecross.

Kyle of Assynt. See KYLESKU.

Kyle of Durness, an elongated bay or narrow firth in Durness parish, Sutherland, separating the district of Durness proper from the district of Parf. Receiving at its head the river Dionard, it goes 5½ miles northward to Durness or Baile na Cille Bay (1¼ × 1½ to 2 miles), some 5 miles E of Cape Wrath; itself has a varying width of 2½ and 6½ furlongs, and is barred by a series of shallows which frequently shift their position. It becomes so nearly bare at ebb tide as then to appear little else than an expanse of sand; seems to be gradually filling up with silt and *débris* brought down by the Dionard and some lateral streamlets; and is little visited by vessels either for commerce or for shelter.—*Ord. Sur.*, sh. 114, 1880.

Kyle of Laxford. See LAXFORD.

Kyle of Sutherland, the narrow uppermost reach of the Dornoch Firth, between Ross and Cromarty shire and Sutherland, extending from the strait at Bonar-Bridge, 4¾ miles west-north-westward to the influx of the rivers Oikell and Shin. Its width varies between 150 yards and 6¾ furlongs. Fairs, bearing its name, are held adjacent to its lower end at Bonar on the Mondays in April, June, July, August, September, and October before Beauty.—*Ord. Sur.*, sh. 102, 1881.

Kyle of Tongue, a narrow sea-loch or firth in Tongue parish, Sutherland, dividing the northern district of that parish into nearly equal parts. Opening from the North Sea at Rona Islands, and containing in its mouth the small, low Rabbit Islands, it penetrates 9¼ miles south-south-westward, its breadth contracting from 2¾ miles to almost a point. It is encircled by grand scenery, with the magnificent mountains of BEN HOPE (3040 feet) and BEN LOYAL (2504) overhanging its head; has shifting sandbanks and small depth of water, yet offers safe anchorage to even the largest vessels at the Rabbit Islands; expands, on the W side at these islands, into the beautiful, well-sheltered, smooth-beached Bay of Talmin, one of the chief fishing stations on the N coast of Scotland; and forms, on the E side, the creek of Scullamie, the retreat of a few fishing boats, easily convertible into a good small harbour.—*Ord. Sur.*, sh. 114, 1880.

Kyle-Rhea, a strait at the NE end of the Sound of Sleat, between the Isle of Skye and the mainland of Inverness-shire. It took its name, signifying 'the King's strait,' from King Hakon of Norway's expedition in 1263; it connects the Sound of Sleat with Loch Alsh; and, having a width of only ½ mile, it is swept by very rapid tidal currents. A ferry across it maintains the communication between Skye and Invergarry (46 miles ESE) by way of Glenelg; and has, at either end, a pretty good inn.

Kylesku, a long, narrow sea-loch on the mutual border of Eddrachillis and Assynt parishes, W Sutherland. Opening from the Minch in semicircular Loch a' Chairn Bhain or Cairnbawn, which measures 5½ miles across the mouth, and contains a number of small islands, it strikes, from the head of that bay, 3¾ miles east-south-eastward, with an extreme width of 7 furlongs; next for ½ mile contracts to from ½ to 1¼ furlong at Kylesku Ferry; and ¾ mile beyond, divides into two horns, Lochs GLENDHU and GLENCOL, striking eastward and south-eastward. With an intricate cincture, its shores, flanks, and overhanging mountains—the monarch of them Quinag (2653 feet)—exhibiting a series of superb landscapes, Kylesku is swept by extremely rapid tides, and enjoys great celebrity for both the quantity and quality of its herrings. Unapool or Kylesku Inn, at Kylesku Ferry, is 18 miles NE of Lochinver and 11 SSE of Scourie.—*Ord. Sur.*, sh. 107, 1881.

Kyles of Bute, a semicircular belt of sea, for 16½ miles engirdling the northern half of Bute island, and separating that island from the Cowal district of Argyllshire. Connecting at both ends with the Firth of Clyde, it opens on the E, between Bogany Point in Bute and Toward Point in Cowal, with a width of 2¾ miles; and suddenly expands, on the Bute side, into Rothesay Bay, soon after into Kames Bay; whilst, at a point 4 miles N of Rothesay, it sends off, north-north-westward into Cowal, long mountain-screened Loch Striven. During the first 5 miles it exhibits the character of a capacious and most picturesque bay, with outlook to the Great Cumbrae and Ayrshire; but afterwards, for 6¾ miles, it curves gently north-westward and south-westward, with a varying width of 2 and 5½ furlongs, and displays contractions and windings like those of a river, flanked by steep hills, rugged acclivities, and rocky eminences. In the N, where it makes a sudden angular bend, it contains Eilean DHEARRIC and three other small rocky islands, and there is met by Loch Riddon; and from Tighnabruaich it curves south-south-eastward, with gradually increasing width, till, at Ardlamont Point, the south-western extremity of Cowal, it terminates

with a width of 2½ miles, and becomes lost in the conjoint expanse of the Sound of Bute, Kilbrannan Sound, and Loch Fyne. It displays, from end to end, in many styles, and with ever-changing combinations, a continuous series of picturesque and romantic views; and it is traversed throughout by the steamers plying to Arran and Loch Fyne. The Queen passed through the Kyles on 18 Aug. 1847.—*Ord. Sur.*, sh. 29, 1873.

Kymah Burn. See INVERAVEN.

Kype Water, a rivulet of Avondale parish, W Lanarkshire, rising at an altitude of 1500 feet on Goodbush

Hill, adjacent to the boundary with Ayrshire, and curving 8½ miles northward along the Lesmahagow and Stonehouse borders, till, after a total descent of 1020 feet, it falls into the Avon at a point 1 mile SE of Strathaven. In its upper reaches it traverses a bleak moorland district, and is subject to violent freshets; but, as it approaches the Avon, it assumes a more gentle character, though it makes a fine waterfall 50 feet in leap. Its left bank is flanked by Kypes Rig, culminating at a height of 1173 feet, 3¼ miles SSE of Strathaven.—*Ord. Sur.*, sh. 23, 1865.

L

LADDER BURN, a streamlet of Lochlee parish, N Forfarshire, rising on the SE slope of Mount KEEN at an altitude of 2490 feet, and hurrying 2½ miles south-by-eastward, till, after a total descent of 1420 feet, it falls into the Water of Mark at a point 2½ miles NW of Lochlee church. Its right bank is flanked by a 'steep but winding path, called the Ladder, very grand and wild,' down which the Queen rode 20 Sept. 1861.—*Ord. Sur.*, sh. 65, 1870.

Ladhope, a *quoad sacra* parish in Melrose parish, Selkirk and Roxburgh shires, containing part of the town of Galashiels. Constituted by the Court of Teinds in 1855, it is in the presbytery of Selkirk and synod of Merse and Teviotdale; the living is worth £350. Pop. (1871) 5317, (1881) 6576, (1891) 6743. See GALASHIELS.

Lady, a parish in the NE of Orkney, comprising the north-eastern part of Sanday island, with a post office under Kirkwall. Bounded SW by Cross parish, and on all other sides by the sea, it has an utmost length from NE to SW of 7 miles, a varying breadth of ½ mile and 2½ miles, and an area of 5233 acres. The coast, if one follows its ins and outs, has an extent of not less than 24 miles, being deeply indented on the NW by Otterswick Bay, on the S by Stywick Bay. It projects the headlands of Tafts Ness on the N, Start Point on the NE, Tress Ness on the SE, and Els Ness on the S; and includes two lagoons adjacent to Els Ness and Tress Ness, dry at low water, and capable of easy conversion into fine harbours. The interior is mostly low and flat, and is divided into the districts of Northwall, Sellibister, Newark, Tressness, Coligarth, Overbister, and Elsness. The soil is very various, but in most parts is a fertile mixture of mould and sand. About one-third of the land is waste and heathy, and the rest either forms good natural pasture or is under cultivation. A lighthouse is on Start Point, and gives a fixed red light visible for 14½ nautical miles; remains of Scandinavian buildings are in several places; three pretty large tumuli, partly surrounded by a square enclosure, are near Coligarth; and each of the seven districts is supposed to have anciently had its church or chapel. Lady is in the presbytery of North Isles and synod of Orkney; the living is worth £165. The parish church, rebuilt about 1832, was repaired in 1893, and is amply commodious. There is a mission church, with manse, at Rusness. In 1893 the old parish and the Sunday school libraries were opened. The schools are noticed in our article on SANDAY. Pop. (1801) 830, (1831) 858, (1861) 1122, (1871) 953, (1881) 945, (1891) 845.

Ladybank, a small police burgh in Collessie parish, Fife, with a junction on the Edinburgh and Dundee section of the North British railway, 18¾ miles SE of Perth, 5½ SW of Cupar, and 39 N by E of Edinburgh by the Forth Bridge. Of modern growth, and formerly a peat moss (Our Lady's Bog) granted to the monks of Lindores to supply the abbey with peat, and named by them after the Virgin, it has a post office, with money order, savings bank, and telegraph departments, a branch of the Union Bank, a hotel, a locomotive depôt, malting and linen industries, a tar distillery, an abundant water-supply (1876) from artesian wells, golf,

curling, and football clubs, a friendly society, etc. An Established *quoad sacra* parish church, with 400 sittings, was erected in 1881-82 at a cost of £2050, and a Free church, with spire and 400 sittings, in 1875-76, at a cost of £2140; whilst the public school was enlarged in 1875. Pop. (1861) 376, (1871) 722, (1881) 1072, (1891) 1198. Houses (1891) inhabited 271, vacant 11.—*Ord. Sur.*, sh. 40, 1867.

Ladyfield, a village at the mutual border of Longforgan parish, Perthshire, and Fowllis parish, Forfarshire, 7 miles WNW of Dundee.

Ladykirk, a Border parish of SE Berwickshire, whose church stands near the left bank of the river Tweed, 1½ mile W by N of Norham station on the North-Eastern railway, 6 miles NNE of Coldstream, and 10 WSW of Berwick-upon-Tweed. Tradition says that it took its name from the dedication of this church to the Virgin Mary by James IV., in gratitude for his deliverance from being swept away by a powerful freshet of the Tweed at a neighbouring ford; and a village around the church was formerly a place of some little note, but has dwindled to a few hinds' houses, with a post office under Norham.

The parish contains also the village of Horndean, and it consists of the ancient parishes of Horndean and Upsetlington. It is bounded NW and N by Whitsome, NE by Hutton, E and SE by Northumberland, S by Coldstream, and W by Swinton. Its utmost length, from NE to SW, is 4½ miles; its breadth varies between 6¼ furlongs and 2½ miles; and its area is 3446¾ acres, of which 66½ are water. The TWEED, curving 3¼ miles north-north-eastward, traces all the Northumbrian border, and along it the surface declines to 95 feet above sea-level, thence rising gently to 213 feet near Upsetlington, 181 near Ladykirk village, and 235 near Fellowhills. Sandstone underlies the entire area, and a very fine variety of it has been quarried within the policies of Ladykirk House. The soil is extremely fertile. Some 55 acres are under wood; about 845 are disposed in perennial pasture; and all the rest of the land is in tillage. A ford on the Tweed, between Ladykirk village and Norham, gave frequent passage in bygone days to armies of invasion; and, although always dangerous, continued to be used till, in 1839, it was superseded by a wooden bridge on stone piers. This in turn has been superseded by a handsome stone bridge, constructed at the expense of the Tweed Bridges Trust. Holywell Haugh, adjacent to the Ladykirk side of the ford, was the meeting-place of Edward I. of England and the Scottish nobles to adjust the dispute respecting the succession to the crown of Scotland; and the parish church of Ladykirk, in the time of Queen Mary, was the scene of a treaty concluded by commissioners. An ancient rectory, midway between Ladykirk and Upsetlington, has bequeathed to the ground around its site the name of Chapel Park, and is now represented by only a few large stones. Ladykirk House, near the Tweed's left bank, 1¼ mile SSW of Norham, is a finely-situated modern edifice, surrounded by a beautiful park, and commanding an exquisite view along the river. An elegant and sub-

stantial Jubilee fountain was erected by Lady Marjoribanks in commemoration of the fiftieth year of Her Majesty's reign. Ladykirk is in the presbytery of Chirnside and synod of Merse and Teviotdale; the living is worth £190. The parish church, built in 1500, was originally a handsome cruciform Gothic edifice, to which a tower was added in 1743. Internally it was greatly disfigured by alterations and additions during the first half of the 19th century; but in 1861 it underwent thorough repair, and has now five stained-glass windows and a turret clock. A U.P. church is in Horndean; and a public school, with accommodation for 110 children, has an average attendance of about 70, and a grant of nearly £72. Pop. (1801) 516, (1831) 485, (1861) 564, (1871) 518, (1881) 438, (1891) 339.—*Ord. Sur.*, sh. 26, 1864.

Ladykirk, an ancient parish in Stronsay island, Orkney. Including the south-western limb of the island, and bounded N by St Peter's, E by Mill Bay and St Nicholas, S and W by Stronsay Firth, it is compressed at the centre by Linga Sound on the N and Rousholm Bay on the S; projects south-south-westward, to the extent of about one-half of its area, in a peninsula terminating in Rousholm Head; and now forms part of the united parish of Stronsay and Eday.

Ladykirk or Northkirk, an ancient parish in Westray island, Orkney. It comprises the northern part of the island; is bounded on the SE by Westkirk, on all other sides by the sea; contains the village of Pierwall; and now forms part of the united parish of Westray and Papa-Westray.

Ladykirk House, a mansion in Monkton parish, Ayrshire, 2 miles E by N of Prestwick station on the Glasgow and South-Western railway. It is named after a pre-Reformation chapel, which is now represented only by one of its four turrets.

Ladyland, an estate, with a good mansion of 1816, in Kilbirnie parish, Ayrshire, 2 miles WSW of Lochwinnoch. Purchased by his maternal ancestor in 1718, it was the property of the late R. W. Cochran-Patrick, Esq., M.P. for North Ayrshire from 1880 to 1885. (See also WOODSIDE.) The Barclays' old house of Ladyland, described in 1609 as a 'strong tower,' was all, with the exception of a massive fragment, demolished in 1815.—*Ord. Sur.*, sh. 22, 1865.

Ladyloan, a *quoad sacra* parish in Arbroath and St Vigeans parishes, Forfarshire, comprising part of Arbroath town. Constituted in 1865, it is in the presbytery of Arbroath and synod of Angus and Mearns. Its church, erected in 1838, was adorned with two stained-glass windows in 1875, whilst Ladyloan Free church was built in 1845. Pop. (1871) 4215, (1881) 4049, (1891) 4662, of whom 1342 were in St Vigeans.—*Ord. Sur.*, sh. 49, 1865.

Lady's Bridge, a station on the Banffshire section of the Great North of Scotland railway, 2½ miles W by S of Banff.

Lady's Rock. See DUART.

Ladywell, a hamlet in Kirkbean parish, Kirkcudbrightshire, 3 furlongs SSE of Kirkbean church.

Lag, a hamlet and inn in Kilmory parish, near the SW coast of Arran island, Buteshire, towards the mouth of the glen of Torrylin Water, adjacent to Kilmory church, and 10½ miles SW of Lamblash.

Lag. See DUNSCORE.

Laga. See ARDNAMURCHAN.

Lagg. See JURA.

Laggan (Gael. *lagan*, 'a small hollow'), a hamlet and a large Highland parish of Badenoch, Inverness-shire. The hamlet, Laggan or Laggan Bridge, lies 818 feet above sea-level, on the Spey, 8 miles WSW of Newtonmore station on the Highland railway, and 11 WSW of Kingussie, under which it has a post office. It has also a farming society, two curling clubs, and a quoiting club.

The parish is bounded N by Boleskine-Abertarf and Moy-Dalarossie, NE and E by Kingussie, SE by Blair-Athole and Fortingall in Perthshire, S by Fortingall,

and SW and W by Kilmonivaig. Its area was increased in 1891 by the Boundary Commissioners, who transferred to this parish a detached part of the parish of Kingussie situated on Loch Ericht, and comprising 2133 acres. The utmost length of Laggan parish, from N by E to W by S, is 23 miles; its utmost width, from E to W, is 18 miles; and its land area is 152,239 acres. The SPEY, rising at an altitude of 1475 feet, flows 7½ furlongs south-south-eastward to Loch Spey (2½ × 1 furl.; 1142 feet), and thence winds 20½ miles east by northward (for the last ½ mile along the Kingussie border), till it passes off into Kingussie at the confluence of the Truim, which itself, rising at 2100 feet, runs 15½ miles north-north-eastward (for the last 13 along the eastern boundary). The Allt a' Chaoil Reidhe, rising at 3104 feet, runs 6½ miles north-eastward to triangular Loch Patack (7½ × 4½ furl.; 1430 feet); the Patack thence flows 7½ miles north-by-eastward and 2½ miles west-south-westward to beautiful Loch Laggan (7 miles × 2 to 5½ furl.; 819 feet); and from Loch Laggan the SPEAN flows 2½ miles west-south-westward (for the last 1½ mile along the Kilmonivaig border), till it passes off into Kilmonivaig on its way to the Lochy. Again, most of the upper 12½ miles of Loch ERICHT (14½ miles × 9 furl.; 1153 feet) belongs to Laggan, whose drainage thus goes partly north-eastward to the Moray Firth, partly westward to Loch Linnhe and the Atlantic, and partly eastward to the Tay and the German Ocean. Along both the Spey and the Spean the surface declines to 810 feet above sea-level; and near the Patack's westward bend is a 'col' between the two river systems, 848 feet high. The scenery everywhere is grandly mountainous, the principal summits being *CORRYARRICK (2922 feet) and Geal Charn (3036), to the N of the Spey; Carn Liath (3298) and *Creag Meaghaidh (3700), between the Spey and Loch Laggan; Am Faireamh (2986), Ben a' Chlachair (3569), and BEN ALDER (3757), between Lochs Laggan and Ericht; and *BEN UDLAMAN (3306), to the E of Loch Ericht—where asterisks mark those heights that culminate on the confines of the parish. The Queen, who stayed at ARDVERIKIE from 21 Aug. to 17 Sept. 1847, describes the scenery as 'splendid: high bold hills, with a good deal of wood; glens, with the Patack, and a small waterfall; the meadows here and there, with people making hay, and cottages sprinkled sparingly about, reminding us much of Thuringen. . . . We were delighted with the scenery, which is singularly beautiful, wild, and romantic—with so much fine wood about it, which greatly enhances the beauty of a landscape.' Metamorphic rocks predominate in the mountains; an inferior kind of slate occurs in places; and an excellent bed of limestone extends along the valley of the Spey. The soil on the lowest grounds is alluvial, and here and there has a depth of 10 or 12 feet. Only the bottom of the valleys and the lower hill-slopes are under cultivation, by far the greater portion of the parish being either grouse-moor or deer-forest, whilst its waters yield capital fishing, the salmon-ferox of Loch Laggan running up to 12 lbs. The Dun. 2½ miles WSW of Laggan Bridge, the most perfect specimen in the kingdom of an ancient British fort, 500 feet long and 250 broad, stands on a precipitous rock rising 500 feet above the adjoining valley; and at the head of Loch Laggan are the ruins of an old church, supposed to have been dedicated to St Kenneth. In Laggan Prince Charles Edward made some of the early movements of his enterprise of 1745, and among some of its mountain fastnesses he sought retreat after his discomfiture at Culloden. Mrs Grant of Laggan, *née* Anne M'Vicar (1755-1836), as wife of the parish minister lived here from 1779 till 1803, and here collected the materials for her *Letters from the Mountains* and other popular works on the Highlands and the Highlanders. (See also CLUNY CASTLE, GLENGULBIN, GLENSHIERA LODGE, GLENTUIM, GRAMPAINS, MONADHLIATH Mountains, and other articles already indicated.) Laggan is in the presbytery of Abernethy and synod of Moray; the living is worth £320. The parish church, at Laggan Bridge, on the Spey's N bank, was rebuilt in 1842. The

Free church stands near the opposite bank of the river. St Michael's Roman Catholic church (1846) has 272 sittings. Gergask, Glentruim, and Loch Laggan public schools, with respective accommodation for 117, 36, and 40 children, have an average attendance of about 85, 25, and 25, and grants of nearly £148, £41, and £42. Pop. (1881) 917, (1891) 857, of whom 666 were Gaelic-speaking.—*Ord. Sur.*, sbs. 63, 64, 54, 1873-75.

Laggan or Loch an Lagain. See EVELIX.

Laidlawstiel. See STOW.

Laidon, Loch. See LYDCH.

Laigh Dalmore. See COYLTON.

Laighdoors, a hamlet in Strathearn district, Perthshire, 2½ miles from Muthill.

Laigwood, a hamlet in Clunie parish, Perthshire, on the left bank of Lunan Burn, 5 miles NE of Dunkeld.

Lainshaw, an estate, with a modern mansion, purchased about the end of the 18th century by a Mr. Cunningham, one of the Glasgow "tobacco lords," in Stewarton parish, Ayrshire. Its present owner is John William Herbert Cunningham, Esq.—*Ord. Sur.*, sh. 22, 1865.

Laird's Hill. See KILSYTH.

Lairg, a village and a parish of central Sutherland. The village stands on the left bank of the river Shin, a little below its efflux from Loch Shin, and 1½ mile N of Lairg station on the Sutherland section (1863) of the Highland railway, this being 9 miles N by W of Bonar-Bridge and 6½ N by W of Inverness. A pretty little place, it serves as a centre of trade and communication, running a mail car daily to Lochinver, Durness, and Scourie and thrice a week to Tongue, and having a post office, with money order, savings bank, and telegraph departments, a branch of the Caledonian Bank, a public library, curling and cricket clubs, a company of rifle volunteers, a commodious hotel, a police station, the parish church (1846), and a Free church. In the beautiful churchyard are two noteworthy monuments—one to William Mackay, whose *Narrative of the Shipwreck of the Juno* (1795) is virtually embodied in Byron's *Don Juan*; the other to Sir James Matheson, Bart. (1796-1878). The latter, erected in 1880, is a splendid structure by a Mentone sculptor. Measuring 25 feet by 10, and 22 feet high, it is a dome supported on blue marble pillars, with a dove-surmounted, white marble cross beneath.

The parish is bounded N and NE by Durness and Farr, E by Rogart, S, SW, and W by Creich, and NW by Eddrachillis. Its utmost length, from NNW to SSE, is 24 miles; its breadth varies between 6 and 12½ miles; and its land area is 189½ square miles or 121,359 acres. Loch MERKLAND (2½ miles × 2½ furl.; 367 feet), lying on the Eddrachillis border, sends off the Amhainn na Ceardaich 1½ mile south-south-westward to Loch GRAM (11 × 3 furl.; 304 feet), which itself sends off a stream 3 furlongs southward to the head of Loch SHIN (16½ miles × ½ to 1½ mile; 270 feet); and from the foot of Loch Shin the river Shin flows 5½ miles south-by-eastward through the interior and along the Creich border, till it passes off into Creich on its way to the Oikell. Of fifty-four feeders of Loch Shin, the two largest flow to its NE side—the FRAG or Fiodbhaig, issuing from Loch Fiodbhaig (1½ mile × 5½ furl.; 650 feet), and running 5½ miles southward; and the Tirry, rising at an altitude of 1750 feet in the NE corner of the parish, and winding 17½ miles south-westward, westward, south-south-eastward, and south-south-westward. Loch CRAGGIE or Creagach (1 mile × 2½ furl.; 525 feet), on the Rogart border, and Loch Beannaichte (¾ × ¾ mile; 615 feet), lie 3¼ miles ENE and 3¾ NNE of Lairg village; and forty-four smaller lakes are scattered over the interior. Sinking in the extreme S along the Shin to 120 feet above sea-level, the surface is everywhere hilly, but mountainous only in the N. Chief elevations to the W, as one goes up the valley, are *Cnoc a' Choire (1318 feet), *Maol a' Bhealaidh (1673), and *Meallan a' Chuail (2461); to the E, a nameless height (1018) 2 miles E of the station, Meall Odhar (1403), and *BEN HEE (2864), where asterisks mark those summits that culminate on the confines of the parish. Granite and trap are the

prevailing rocks; and limestone is plentiful along Loch Shin. There is a considerable extent of light gravelly loam, mixed with moss, and lying on a clayey subsoil; but the uplands generally are covered with peat earth. In the triangular stretch of land between Loch Shin and the last 3 miles of the Tirry 2000 acres were reclaimed during 1873-77 by the Duke of Sutherland at a cost of £100,000, under the superintendence of the late Kenneth Murray, Esq. of GEANIES, to whom a monument, 33 feet high, was here erected on an elevated spot in 1877. The works excited great interest, being visited by a deputation from the Highland and Agricultural Society (1874) and by the Prince of Wales (1876). As at KILDONAN, they were designed to increase the arable area so as to raise sufficient oatmeal for the native population, and sufficient winter fodder for the large flocks of sheep that graze in summer on the neighbouring hills. The huge steam plough, made specially for the reclamations by Messrs Fowler of Leeds, and the reclamations themselves, are fully described on pp. 28-40 of *Trans. Highl. and Ag. Soc.* (1880). One sheep farm in the parish, that of Dalchork, extends to 25,000 acres. Knockachath, 'the hill of fights,' has a number of tumuli, and is believed to have been a battle scene between the Sutherlands and the Mackays. Hut circles and Pictish towers make up the remaining antiquities. ACHANY is the only mansion. Lairg is in the presbytery of Dornoch and synod of Sutherland and Caithness; the living is worth £201. Two public schools, Lairg and Shiness, with respective accommodation for 164 and 86 children, have an average attendance of about 115 and 40, and grants of nearly £145 and £58. Valuation (1882) £8999, 5s., (1893) £7432, 6s., of which £847 was for railway. Pop. (1801) 1209, (1841) 913, (1861) 961, (1871) 978, (1881) 1355, (1891) 1169, of whom 799 were Gaelic-speaking.—*Ord. Sur.*, sbs. 102, 103, 1881-80.

Lairnie. See LEARNBY.

Laithers House, a modern mansion in Turriff parish, NW Aberdeenshire, on the right bank of the Deveron, 4½ miles W by S of Turriff town. Its owner is Alexander Stuart, Esq. of Inchbreck (b. 1832; suc. 1846).—*Ord. Sur.*, sh. 86, 1876.

Lakefield House, a mansion in Urquhart and Glenmoriston parish, Inverness-shire, on the northern shore of Loch Meikle, 5½ miles W of Drumnadrochit.

Laken, a hamlet in Auldearn parish, Nairnshire, 4 miles SSE of Nairn.

Lamancha, an estate, with a mansion, in Newlands parish, N Peeblesshire, 6 miles SSW of Penicuik and ¾ mile SW of Lamancha station on the Dolphinton branch of the North British, this being 20¼ miles S by W of Edinburgh. It bore the name of Grange of Romanno till about 1736, when it was sold to the Dundonald family; and from them it was purchased in 1831 for £14,364 by James Mackintosh, Esq. A plain three-storied edifice, the mansion was built in 1663, and twice enlarged by its successive purchasers. On the estate are a public school and a post office.—*Ord. Sur.*, sh. 24, 1864.

Lamb. See DIRLETON.

Lamba, an island (¾ × ¼ mile) of Northmaven parish, Shetland, in Yell Sound, 1½ mile ENE of Ollaberry.

Lambden, a mansion in Greenlaw parish, Berwickshire, 3½ miles SE of the town. Its owner is James Nisbet, Esq. (b. 1841; suc. 1861).—*Ord. Sur.*, sh. 25, 1865.

Lamberton, a former parish of SE Berwickshire, long held by Coldingham Priory, and annexed to Ayton at the Reformation, to Mordington in 1650. Its church was built upon an eastward slope, 5 furlongs from the high sea-cliffs, 3 furlongs from the boundary of Berwick liberties, and 3¾ miles NNW of Berwick town. The site, still marked by part of the outer walls, is the burying-place of the Rentons of Lamberton. The marriage-treaty of the Princess Margaret of England with James IV. of Scotland stipulated that she should, without any expense to the bridegroom, be delivered to the Scottish king's commissioners at Lamberton church; and she is said by tradition to have been married here,

but really was married by proxy at Windsor, and remarried in Edinburgh (1503). In 1573 a convention, which led to the siege of Edinburgh Castle, was made at this church between Lord Ruthven and Sir William Durie, the marshal of Berwick. Lamberton toll-bar—which stood between the ruins of the church and the line of the North British railway—for some time vied with Greta as a place of runaway marriages.—*Ord. Sur.*, sh. 34, 1864.

Lambhill, a village in Maryhill *quoad sacra* parish, Lanarkshire, about $\frac{3}{4}$ mile beyond the northern boundary of Glasgow, under which it has a post office. There is a Roman Catholic church (St Agnes), built in 1894, and containing 950 sittings, and a day school belonging to the same body.

Lambholm, an island of Holm and Paplay parish, Orkney, nearly in the centre of Holm Sound. It has a circular outline, measuring 3 miles in circumference. Pop. (1871) 7, (1881) 8, (1891) 7.

Lamden. See LAMBEDEN.

Lamerton, a village in Monifieth parish, Forfarshire, $4\frac{1}{2}$ miles ENE of Dundee.

Lamington, a village and a parish in the Upper Ward of Lanarkshire. The village stands, 700 feet above sea-level, on the left bank of the Clyde, $6\frac{1}{4}$ miles SW by S of Biggar, 12 SE of Lanark, and 9 furlongs ENE of Lamington station (across the river) on the Caledonian, this being $10\frac{1}{4}$ miles S by E of Carstairs Junction, and $37\frac{3}{4}$ SW by S of Edinburgh. It was entitled by charter from Charles I. to hold a weekly market and two annual fairs, but now is a little country place, neat and pretty—a model village in its way—having a post office, with money order, savings bank, and railway telegraph departments, a public school, and Lady Lamington's school for females.

The parish, since 1608 comprising the ancient parishes of Wandell and Lamington, is bounded NW and N by Symington, NE and E by Culter, SE and S by Crawford, and W by Crawfordjohn and Wiston-Roberton. In outline rudely triangular, with northward apex, it has an utmost length from NNE to SSW of $6\frac{3}{4}$ miles, an utmost breadth from ENE to WSW of $5\frac{1}{2}$ miles, and an area of 12,918 $\frac{3}{4}$ acres, of which 98 $\frac{3}{4}$ are water. The CLYDE flows $8\frac{3}{4}$ miles north-north-eastward along or close to all the western and north-western boundary; and among its eight little affluents from this parish are Wandell Burn, running $4\frac{1}{2}$ miles west-north-westward, and Lamington Burn 3 miles north-north-westward. At a cost of £2000 the Clyde was embanked here along its whole Lamington extent in 1835-36, when the bridge across it near the village, of two arches, each 53 feet in span, was built at a cost of £900. In the extreme N the surface sinks along the Clyde to 680 feet above sea-level, thence rising to 1614 feet at Lamington Hill, 1399 at Startup Hill, 1536 at Cowgill Rig, 1585 at Ewe Hill, 1894 at Duncangill Head, 1867 at Tewsgill Hill, and 1406 at Arbory Hill. Porphyry and greywacke are the prevailing rocks; and the soil is a deep rich loam or clay on the level holm-lands along the Clyde, on other arable lands is mainly of free and lightish yet kindly character, and on most of the hills is moorish or mossy. About 2000 acres are arable, 137 are under plantations, and nearly all the remainder is rough pasture. George Jardine (1742-1827), Professor of Logic in Glasgow University, was a native of Wandell. The Roman Watling Street, from Nithsdale into Clydesdale, ran close by the river Clyde; and camps, both Roman and native, occur in several localities, the most curious of them being that upon ARBORY HILL. The 'Bower of Wandell,' a fortalice crowning a rocky peninsula, washed on three sides by the Clyde, is almost level with the ground, and only a vault remains of Windgate House, towards the head of Cowgill or Keygill Glen; but the Tower of Lamington, 5 furlongs N of the village, is still represented by the lofty NW angle. Tradition assigns it to the days of Wallace, but its little projecting corner turret refers it rather to the 16th century. Hamilton of Wishaw described it about 1700 as 'an old house seated upon the river Clyde, near to the kirk, in a plea-

sant place, and well planted,' and it was occupied by the Baillies for nearly fifty years later, but about 1780 it was demolished by an ignorant factor to furnish building materials. That Marion Bradfute, wife of Sir William Wallace, was heiress of Lamington, and that their daughter transmitted her mother's rights to her husband, Sir William Baillie of Hoprig, are baseless traditions, for in 1368 Sir William Baillie, second of Hoprig, as son-in-law of Sir William Seton, obtained a charter of 'Lambiston' barony. His seventeenth descendant—five times through heiresses—was Alexander Dundas Ross Cochrane-Baillie (1816-90), in 1880 created Baron Lamington in the peerage of the United Kingdom. He was succeeded by his son Charles W. A. N. Cochrane-Baillie (b. 1860). The mansion, Lamington House, finely seated on the hill slope a little E of the village, is a modern Elizabethan edifice, with pleasant grounds. The Earl of Home is the other proprietor, the barony of Hartside or Wandell having passed from the Jardines to the Earl of Angus in 1617. (See DOUGLAS CASTLE.) Lamington is in the presbytery of Biggar and synod of Lothian and Tweeddale; the living is worth £210. The parish church, St Ninian's, is an old building with a fine Norman archway, and a bell bearing date 1647. Down to the repairs of 1828 it retained its 'joug' and 'canty,' or place of repentance; and within its walls one cold rough day Robert Burns heard a sermon which called forth a stinging epigram. A private Episcopal church (built by the Right Hon. Lord Lamington in 1857, and having 70 sittings) is a pretty Early English edifice. The public and female schools, with respective accommodation for 74 and 32 children, have an average attendance of about 40 and 20, and grants of nearly £53 and £20. Valuation (1883) £7822, 8s., (1893) £7069, 3s. Pop. (1881) 316, (1891) 305.—*Ord. Sur.*, shs. 23, 24, 15, 16, 1865-64.

Lamlash, a village in Kilbride parish, on the E side of Arran Island, Buteshire. Standing on the NW shore of Lamlash Bay, $5\frac{1}{2}$ miles S by E of Brodick, and 15 miles in direct line by sea SW of Ardrossan, it chiefly consists of one long string of houses, and is a favourite summer sea-bathing resort, enjoying regular steamboat communication with Brodick, Ardrossan, Rothesay, Greenock, Gourock, Craigendoran, and Glasgow. It has a fine timber pier, erected in 1884 at the expense of the Duke of Hamilton, as well as an older stone pier; a post office, with money order, savings bank, and telegraph departments, a branch of the Bank of Scotland, two hotels, a public school, and a coastguard station. The parish church of Kilbride, erected by the Duke in 1885, superseded one built in 1774, and has a lofty spire and a peal of melodious bells. Lamlash Bay, with a horse-shoe outline 5 miles in extent, opens westward from the Firth of Clyde, between Clauchlands Point and Kingscross Point; measures $2\frac{7}{8}$ miles across the entrance, nearly three-fifths of which are occupied by HOLY ISLE; and, being sheltered from every wind, is a first-rate natural harbour of refuge. Fairs are held on Friday before Irvine May fair, and on Wednesday before Falkirk Tryst in October. See KILBRIDE. Pop. (1881) 219, (1891) 314.—*Ord. Sur.*, shs. 21, 13, 1870.

Lamma. See LAMBA.

Lammer Law, a mountain in the S of Yester parish, Haddingtonshire, $8\frac{5}{8}$ miles S by E of Haddington. Rising 1733 feet above sea-level, it is the loftiest of the entire range of the Lammermuirs, and gives them name.—*Ord. Sur.*, sh. 33, 1863.

Lammermuir Hills, a broad range of moorish heights, stretching eastward from the vale of Gala Water, in the SE extremity of Midlothian, to the German Ocean at the promontories of Fast Castle and St Abb's Head, in the parish of Coldingham, Berwickshire. From the middle of the lofty mountain-range which begins at Cheviot in Northumberland, and, passing into Scotland, extends across it to Loch Ryan—from the most elevated part of it, called the Lowthers or the Hartfell Heights, at the meeting-point of the counties of Dumfries, Lanark, and Peebles, a less lofty and less remarkable range goes off north-eastward across Peeblesshire to the vale of the Gala, and, but for being cloven down by this vale,

would join the Lammermuirs, so as to stretch unbroken to the sea. The Lammermuirs all lie within East Lothian and Berwickshire; commencing at the extreme western limit of these counties, forming, for two-thirds of their extent, a southern screen to East Lothian, and constituting—if the Lammermuir part of Lauderdale be included—nearly one-half of Berwickshire. The range forms, with the loftier and commanding chain of the Cheviots and the Lowthers, whence it diverges, the vast triangular basin of the Tweed, and overlooks, stretching away from its N base, the grand expanse of the great body of the Scottish Lowlands, till they are pent up by the stupendous barrier of the far-extending Grampians. In themselves the Lammermuirs are an extensive curvature of, for the most part, wild and cheerless heights—nowhere bold and imposing in aspect, and often subsiding into low rolling table-lands of bleak moor. Once clothed with forest, they still have natural woods hanging on some of their steepes; but over their summits, and down their higher slopes, they are almost everywhere sprinkled only with heather. Yet lovers of pastoral seclusion may find pleasure in gazing on the great flocks of sheep which tenant their higher grounds; while agriculturists will look with satisfaction on the considerable ascents which have been made by the plough on their lower declivities. The soil in nearly all the upper parts is a light peat mould; and even in some of the lower parts—as in the parish of Westruther—is a swampy moss. But elsewhere the prevailing peat is mixed with sand and clay, or gives place to comparatively kindly soil; and in the vales and lower slopes, irrigated by the numerous streams which are collected on the broad ridge, are belts of fertility and beauty. The geology is treated under HADDINGTONSHIRE. Besides LAMMER LAW (1733 feet) more than twenty summits exceed an altitude of 1200 feet above sea-level.—*Ord. Sur.*, shs. 33, 34, 1863-64.

Lammerton. See LAMBERTON and LAMERTON.

Lamont or Ardlamont House, a mansion in Kilfinan parish, Argyllshire, $1\frac{1}{2}$ mile NNW of ARDLAMONT Point, and 7 miles S of Tighnabruach. Long the seat of the chief of the clan Lamont, it was sold in 1894 to Mr D. N. Nicol. It was brought into very prominent notice in 1893-94, in connection with a trial for murder—the victim being one of the occupants, a minor, and the accused his army tutor, both belonging to England—which resulted, however, in a verdict of 'not proven.'—*Ord. Sur.*, sh. 29, 1873.

Lanark (Cymric *Llanerch*, 'a forest glade'), a market-town and a parish in the Upper Ward of Lanarkshire. The capital of the county, and a royal, parliamentary, and police burgh, the town is built on a south-westward slope, 500 to 750 feet above sea-level, within $\frac{1}{2}$ mile of the Clyde's right bank, by rail being $4\frac{1}{4}$ miles WSW of Carstairs Junction, $33\frac{1}{2}$ SW of Edinburgh, and $31\frac{1}{2}$ SE by E of Glasgow. A branch line of the Caledonian railway connects the burgh with the main line, and affords communication with Edinburgh, Glasgow, and Ayr. Its environs are singularly pleasant, comprising the three celebrated Falls of CLYDE (BONNINGTON, CORRA, and STONEYBRES Linns) and the deep, narrow chasm of MOUSE Water beneath the stupendous CARTLAND Crags, with a wealth of minor embellishment in the shape of undulating surface, woods, and mansions. Great changes have taken place since 1823; and, to quote Irving's *History of Lanarkshire* (1864), 'though many of the houses in the burgh must occupy the sites of buildings erected at a very early date, the progress of improvement and alteration has left little or nothing to interest the archaeological inquirer into the domestic architecture of our ancestors. A local antiquary, following up a house-to-house visitation, may discover some faint traces of earlier work, but he will fail to find any building which, in its main features, and as a whole, can date prior to the commencement of last century. Many of the houses were till recently covered with thatch, and some instances of this style of roofing still exist.'

Lanark may be said to consist of nine or ten streets, the principal being the High Street. Some of the streets

run parallel to the main street, but others strike off at right angles from it. It possesses a gaswork (1832), and has an abundant supply of excellent water, brought from the Tinto Hills, a distance of 7 miles, while in 1894 the first steps were taken in a new and extensive drainage scheme. The town contains some good public buildings and many handsome villas and well-appointed shops. It possesses so many amenities in itself and such full command of its beautiful environs, as to be both a very agreeable place of staid residence and a crowded resort of summer tourists.

An artificial mound, the Castle Hill, at the foot of the Castle Gate, on the side of the town towards the Clyde, is believed to have been occupied by a Roman station, and was long surmounted by a royal castle, which is thought to have been founded by David I., and was an occasional residence of William the Lion and other kings. It was mortgaged in 1295, in connection with negotiations for the marriage of the niece of King Philip of France with the son and heir of John Baliol; was held by an English garrison for a number of years till 1310; went afterwards to ruin, and has utterly disappeared, its site being now a bowling green. Some places in the neighbourhood still bear such names as King-son's Knowe, King-son's Moss, and King-son's Stane—survivals, seemingly, of royal residence in the castle. An eminence, Gallow Hill, a little N of the town, was the place of capital punishment in feudal times, and commands a magnificent view along Strathclyde, from Tinto to Ben Lomond. The ancient parish church, St Kentigern's, 3 furlongs SE of the town, was granted by David I., as early as 1150-53, to the monks of Dryburgh, who held the rectorial tithes thenceforward on to the Reformation; but from the style of its architecture—First Pointed or Early English—the present ruin appears to date from the succeeding century. It consisted of two six-bayed aisles, each with a chancel, but without a nave; and of these the portions that remain are the lofty, pointed arches dividing the two aisles, the wall of the S aisle, and a fragment of the chancels. In the S wall is a doorway, exhibiting 'the round moulding with a fillet on the face, while the capitals, which are all that remain of two nook shafts, are richly sculptured' (Bloxam's *Gothic Architecture*). It continued to be used for some time after the Reformation, but seems to have fallen into a ruinous condition by 1657, and in 1777 was finally superseded by the present church, whither its bell was transferred, which, according to an inscription on it, has 'three times, Phenix-like, past thro' fiery furnace'—in 1110, 1659, and 1740. Irvine of Bonshaw, who in 1681 seized Donald Cargill at Covington Mill, lies buried in the S aisle; and in the churchyard is the grave of 'William Henri, who suffered at the Cross of Lanark, 2 March 1682, age 38, for his adherence to the Word of God and Scotland's covenanted work of Reformation.' Within the burgh stood the chapel of St Nicholas, which existed at the beginning of the 13th century, but to assist in building which five merks were left so late as 1550. In the present yard of the Clydesdale Hotel stood an Observantine or Franciscan friary, which is said to have been founded by Robert Bruce in 1314 (the year of Bannockburn), and where a chapter of the whole Scottish Franciscan order was held in 1496. To Robert I. is also ascribed the foundation of St Leonard's Hospital, $\frac{3}{4}$ mile E of the town; but from a charter this seems to have existed at least a century earlier.

The present parish church, in the middle of the town, without is a large ungainly structure of 1777, but within was greatly improved in 1870 at a cost of nearly £1200. It contains 1033 sittings; and in a niche above its principal door is a colossal statue (1817) of Sir William Wallace by the young self-taught sculptor, Robert Forrest. St Leonard's Church was built as a chapel of ease in 1867 at a cost of £2500, and in 1873 was raised to *quoad sacra* status. Other places of worship are a Free church (rebuilt 1883), Hope Street and Bloomgate U.P. churches, an Evangelical Union chapel, Christ Church Episcopalian (1855), and St Mary's Roman Catholic

church, in connection with which there is an hospital for the sick of any creed. Of these Bloomgate U.P. church, rebuilt in 1875, is a First Pointed edifice, with a tower and spire 90 feet high; whilst St Mary's, built in 1859 at a cost of £15,000, is Second Pointed in style and cruciform in plan, consisting of nave, aisles, chancel, sacristy, and tower. The interior is adorned with many stained-glass windows, with twelve fine statues, and with a fresco by Doyle of the 'Last Judgment.' There is a new and tastefully laid out cemetery, in the centre of which an obelisk, 30 feet high, was erected in 1881 to the memory of the Lanark Martyrs of 1660-88. In front of the parish church there has been erected, by public subscription, a fountain in commemoration of Her Majesty's Jubilee, 1887. A school has existed at Lanark from 1183 and earlier. The educational endowments of the burgh and the parishes of Lanark, Carmichael, and Pettinain are managed under a scheme of 1884. The following schools include those under the Burgh School Board:—Burgh public, Grammar public, and St Mary's Roman Catholic, which have respective accommodation for 318, 549, and 370 children, an average attendance of about 220, 585, and 240, and grants of over £236, £725, and £244. The Smyllum Orphanage, for 450 destitute orphan children of Catholics in Scotland, is conducted by sisters of charity, and has attached to it a blind and deaf-mute institution and a chapel. The sisters have also charge of a Roman Catholic hospital (1872), with 34 beds. The Lockhart Hospital (gifted and endowed by the Lockharts of Lee), for the treatment and accommodation of persons suffering from disease or accident in Lanark and the neighbourhood, with 32 beds, is a Scottish Baronial structure of 1873, designed by the late David Bryce, R.S.A., and has a Dorcas society connected with it. There is also a fever hospital under the joint management of the town council and the Upper Ward district committee of the County Council. The Lady Hozier Convalescent Home, the gift of Sir William Hozier, Bart. of Mauldslee, to the directors of the Glasgow Western Infirmary, was opened in 1893. The building is two storeys in height, and consists of two wings, with accommodation for 42 inmates. It is equipped with all modern appliances, and occupies the site of the old militia barracks, the old guard-room and portion of the gateway of which has been remodelled as the principal entrance and lodge-keeper's house.

The County Buildings for the Upper Ward of Lanarkshire, which figure prominently in the town, and were erected in 1834-36 at a cost of over £5000, are a chaste and graceful structure in the Grecian style. Behind the Clydesdale Hotel are the Assembly Rooms (1827); and other buildings are a town-hall, a co-operative hall, a co-operative reading-room, a Good Templars' hall, etc. Lanark besides has a post office, with money order, savings bank, insurance, and telegraph departments, branches of the Clydesdale, Commercial, Royal, and British Linen Co.'s Banks, numerous hotels, a reading-room, agricultural and horticultural societies, a poor-house, etc. Monday is the market day, and the following is a list of the fairs:—Seeds and hiring, last Tuesday of February; grit ewes and hogs, Wednesday before first Monday in April; plants, second Wednesday of April; cattle, Wednesday before 12 June, *o.s.*; rough sheep, second Monday in June; horses, Wednesday before 12th August; lambs, Monday and Tuesday before, and blackfaced, &c., lambs, second Tuesday after lamb fair; lambs, first Mondays of September and October; horses, cattle, and hiring, Thursday after Falkirk October Tryst; cattle, first Wednesday in November, *o. s.*; general business, last Tuesday of December. There is an annual cattle show on the Saturday after the second Monday in July. A silver bell was run for annually as long ago at least as 1628; and the race-course, 1 mile in circuit and 1½ ESE of the town, is one of the finest in Scotland, being almost a dead level. A large business is done in connection with the fairs and markets, and a considerable trade in the supply of miscellaneous goods to the surrounding country; whilst much support is derived from the influx of strangers to

visit the Falls of Clyde. Comparatively little has been done to share in the multifarious and extensive manufactures of lower Clydesdale, but the weaving of winceys, skirtings, and druggets is the staple industry; and there are also artificial manure works, a brewery, a large fancy woodwork establishment, a spinning factory, a sawmill, a tannery, and a mineral oil work.

A royal burgh since the reign of David I. (1124-53), Lanark is governed under the Burgh Police Act of 1892 by a provost, 2 bailies, and 6 commissioners. Sheriff courts are held every Tuesday and Friday during session, dehts recovery courts every Tuesday, and sheriff small debt courts every Tuesday during session. With FALKIRK, Airdrie, Hamilton, and Linlithgow, Lanark returns one member to parliament. The municipal and the parliamentary constituency numbered 904 and 704 in 1895, in which year the annual value of real property within the burgh amounted to £15,817 (£13,339 in 1883), whilst the corporation revenue was £1000 in 1895, against £2119 in 1882. Pop. of royal burgh (1881) 5374, (1891) 5537; of parliamentary and police burgh. (1831) 4266, (1851) 5008, (1871) 5099, (1881) 4910, (1891) 4579, of whom 2491 were females. Houses in parliamentary burgh (1891) inhabited 1016, vacant 93, building 2.

Lanark has been identified with Ptolemy's Colania, a town of the Damnonii in the 2d century A.D., which Skene, however, places 'near the sources of the Clyde,' and describes as 'a frontier but apparently unimportant post.' Nor does Buchanan's statement, that Kenneth II. in 978 here held an assembly of the estates of the realm, appear to rest on any sufficient basis. And Chalmers is certainly wrong in asserting that 'we hear nothing of any royal castle or place of royal residence in this city,' for as early as the 12th century royal charters are known to have been dated from the Castle of Lanark. This castle it is that figures in the metrical narratives by Wytoun and Blind Harry of Sir William Wallace's first collision with the English, in May 1297. 'He had just taken to wife a virtuous damsel named Bradfute. She resides in the town of Lanark, where there is an English garrison; and as he is a marked man, from having already resented the insults of the invaders, it is not safe for him to reside there, and he must be content with stealthy visits to his bride. One day, having just heard mass, he encounters some straggling soldiers, who treat him with ribaldry and practical jokes. A very animated scene of taunt and retort, what is vulgarly called chaffing, is given by the minstrel; but it must be held as in the style of the fifteenth rather than of the thirteenth century. Wallace bears all with good temper, until a foul jest is flung at his wife. Then he draws his great sword, and cuts off the offender's hand. He is joined by a few of his countrymen, and there is a scuffle; but the English are many times their number, and they must seek safety. His own door is opened for Wallace by his wife, and he escapes through it into the open country. For this service his poor wife is slain, and then he vows eternal vengeance. Gathering a few daring hearts round him, he falls upon the garrison in the night, burns their quarters, and kills several of them, among the rest William de Hazelrig, whom Edward had made Earl of Clydesdale and Sheriff of Ayr.' Thus Dr Hill Burton, who adds that 'the story is not, on the whole, improbable: we can easily believe in such a man being driven desperate by insults and injuries to himself and to those dear to him. But the latter portion of the story is confirmed in a curious manner. About sixty years later, a Northumbrian knight, Sir Thomas de Grey, had been taken prisoner in the Scots wars, and was committed to the castle of Edinburgh. There, like Raleigh, he bethought him of writing something

Seal of Lanark.

like a history of the world; but it fortunately gave a disproportionate prominence to events in or near his own day, especially those in which he or his father participated. He tells how, in the month of May 1297, his father was in garrison at Lanark, and that Wallace fell upon the quarters at night, killed Hazelrig, and set fire to the place. The father had good reason to remember and tell about the affair, for he was wounded in it, and left on the street for dead. Had it not been that he lay between two blazing buildings, he would have died, wounded as he was, of exposure in that chill May night, but he was recognised by his comrade, William de Lundy, and tended by him till he recovered. Further, it was charged against Wallace, when indicted in London, that he had slain Hazelrig and cut his body in pieces.' Tradition says that the house in which Wallace resided stood at the head of the Castlegate, opposite the church; and that a vaulted passage led from it to the Cartland Crag; but the latter part of the statement is clearly false. The English continued to hold the castle and the town till 1310, when Edward II. occupied Lanark from the 11th till the 13th of October. The castle was then surrendered to Robert the Bruce, who seems to have either rebuilt or enlarged it. On the common muir of Lanark—used as a golfing green and a camping ground for the Lanark Militia—encamped the armies of James II. (1452), of James, ninth Earl of Douglas (1454), and of Charles II. (1651). Lanark the year before having been occupied by 4000 English horse. In Nov. 1666, 3000 West Country Covenanters, after here renewing the Covenant, set out to meet defeat at RULLION GREEN; and on 12 Jan. 1682, a well-armed body of 40 horse and 20 foot affixed to the Cross of Lanark a confirmation of the 'SANQUHAR Testimony,' and burned both the Test and the Act of Succession, for which the Privy Council fined the magistrates in 6000 merks. Among eminent natives and residents—the former distinguished by an asterisk—of town or parish have been *William Lithgow (1582-1645), who trudged more than 36,000 miles over Europe, the Levant, and Northern Africa, and was buried in the old churchyard; *Sir William Lockhart of LEE (1620-75), 'one of the Commonwealth's best generals, and by far its best diplomatist'; Robert Baillie of JERVISWOOD (executed 1634); Sir John Lockhart-Ross (1721-90), the gallant admiral; *Robert Macqueen, Lord Braxfield (1722-99), the able lawyer and judge, who received his education at the grammar school, as also did Major-Gen. William Roy (1726-90), of Ordnance fame; *Gavin Hamilton (1730-97), historical painter; David Dale (1739-1806); his son-in-law, Robert Owen (1771-1858); and his sons, Robert Dale Owen (1801-77), and *David Dale Owen (1807-60). (See LANARK, NEW.) The Duke of HAMILTON bears the title of Earl of Arran and Lanark (cre. 1643) in the peerage of Scotland.

The parish of Lanark, containing also the villages of New LANARK, NEMPHLAR, and CARTLAND, comprehends the ancient parishes of Lanark and St Leonards, and lies nearly in the centre of the county. It is bounded NW and N by Carluke, E by Carstairs and Pettinain, SE by Carmichael, and SW and W by Lesmahagow. Its utmost length, from N by W to S by E, is 6 miles; its utmost breadth, from E to W, is 5 $\frac{3}{8}$ miles; and its area is 10,560 acres, of which 175 are water. The river CLYDE winds 11 $\frac{3}{8}$ miles south-westward and north-north-westward along all the Pettinain, Carmichael, and Lesmahagow boundaries; and here it forms its three celebrated falls, and otherwise is rich in scenery of surpassing beauty and romance. MOUSE WATER, entering from Carstairs, and running 4 $\frac{1}{2}$ miles west-south-westward to the Clyde at a point 330 yards below Lanark Bridge, divides the parish into two not so unequal parts, and in the lower part of its course traverses the tremendous ravine of CARTLAND Crag, with its elegant viaduct, 130 feet in height. Along the Clyde the surface declines in the NW to less than 200 feet above sea-level, thence rising to 869 feet near Cleekhimin, 969 near Colliclaw, 656 near Nempflar, 805 near Smyllum Park, and 711 near Robiesland. The

parish generally may be regarded as a plateau, bisected by the deep irregular vale of Mouse Water, the parts to the N of which are flat and moorish, whilst those towards the Clyde are gentle slopes and deep declivities. Old Red sandstone, intersected in places by trap dykes, prevails through most of the area; and carboniferous limestone, accompanied by a small seam of coal, occurs in the NW corner, and has been largely worked. The soil, along the rivers, is light and gravelly; in the W and E, is mostly a stiff clay; on the moors, is a hard till; and in some localities, even in the same field, is a rapid alternation of different varieties. Antiquities, other than those noticed in our account of the town, are remains of a great Roman camp near Cleghorn House, the picturesque remnant of the lofty tower of Castlehill on the right bank of Mouse Water, remains of the curious old stronghold of Castledykes, or Castle Quav on the brink of Cartland Crag, the site of the church of St Leonard's, and the sites of two chapels at Cleghorn and East Nempflar. Mansions, noticed separately, are Bonnington House, Cleghorn House, and Lee Castle. The seat of a presbytery in the synod of Glasgow and Ayr, this parish is divided ecclesiastically into Lanark proper and St Leonards *quoad sacra* parish, the former a living worth £348. Three landward public schools, Cartland, Nempflar, and New Lanark, and Smyllum Roman Catholic day school, and school for blind and deaf mutes, with respective accommodation for 59, 53, 142, 542, and — children, have an average attendance of about 15, 35, 135, 360, and —, and grants amounting to over £10, £32, £136, £414, and £264. Valuation (1883) £21,087, 8s., (1893) £22,175, 17s. Pop. (1801) 4692, (1821) 7085, (1841) 7666, (1861) 7891, (1871) 7841, (1881) 7580, (1891) 7110, of whom 3964 were in Lanark proper and 3146 in St Leonards.—*Ord. Sur.*, sh. 23, 1865.

The presbytery of Lanark comprises the *quoad civilia* parishes of Carluke, Carmichael, Carnwath, Carstairs, Crawford, Crawfordjohn, Douglas, Lanark, Lesmahagow, Pettinain, and Wiston, the *quoad sacra* parishes of Douglas Water, Forth, Kirkfieldbank, Law, Leadhills, and Lanark-St-Leonards, and the chapelries of Abington, Auchengray, Carstairs Junction, Haywood, New Lanark, and Robertson. Pop. (1871) 38,103, (1881) 40,806, (1891) 38,259, of whom about 7800 are communicants of the Church of Scotland. The Free church has a presbytery of Lanark, with the churches of Abington, Carluke, Carnwath, Crossford, Douglas, Douglas Water, Forth, Lanark, Law, Leadhills, and Lesmahagow, which 11 churches together have about 2850 members. The United Presbyterian Church has a presbytery of Lanark, with 2 churches at Lanark, 2 at Biggar, and 8 at Bonkle, Braehead, Carluke, Carnwath, Crossford, Douglas, Lesmahagow, and Robertson, which 12 churches together have about 2800 members.

Lanark, New, a large manufacturing village in Lanark parish, Lanarkshire, on the right bank of the Clyde, 1 $\frac{1}{4}$ mile S by W of Lanark town. Standing on low ground by the river side, $\frac{3}{4}$ mile NNW of Corra Linn, it commands a view of that romantic fall and of its Dundaff miniature. On all sides it is surrounded by steep and beautifully wooded banks and hills; and it adjoins a series of charming walks, formed for the recreation of its inhabitants, and both containing and commanding a series of charming views. New Lanark was founded in 1783 by the philanthropic and enterprising David Dale to serve as a seat of cotton manufacture; and from 1799 till 1827 was the model scene of the social experiments of Mr Dale's son-in-law, Robert Owen. Well-built and handsome, it possesses eminent attractions as a seat of manufacture, and has a post-office under Lanark, an educational institution, an Established chapel of ease, and four spinning mills. The educational institution comprises class-rooms and a lecture hall, and affords a wider and higher range of instruction than is usually given in factory schools. The first mill was opened in 1785; the second, erected in 1788, and destroyed by fire before completion, was rebuilt in 1789; and the third and fourth were built at

subsequent periods. Each mill, as originally constructed, was 160 feet long, 40 feet wide, and 7 storeys high; and, at the time of the erection of the first, a tunnel, 300 feet long, for bringing water to it from the Clyde, was cut through solid rock, and gave a fall of 28 feet. The works were purchased in 1881 by the Lanark Spinning Co., who have doubled their former size, and introduced the latest improvements in machinery. Pop. (1831) 1901, (1861) 1396, (1871) 973, (1881) 706, (1891) 672.—*Ord. Sur.*, sh. 23, 1365. See A. J. Booth's *Life of Robert Owen* (Lond. 1869).

Lanarkshire, one of the south-western counties of Scotland, and the most important county of the country. It ranks only tenth among the Scottish counties as to area, but is by far the most populous—containing, indeed, more inhabitants than the three next in order all taken together, and fully a quarter of the whole population of Scotland—and the most valuable, as the valuation, exclusive of burghs, is greater than that of the next two in order taken both together. It is bounded N by Stirlingshire and the detached portion of Dumbartonshire, NE by Stirlingshire, Linlithgowshire, and Edinburghshire, E by Peebleshire, SE and S by Dumfriesshire, SW by Dumfriesshire and Ayrshire, W by Ayrshire and Renfrewshire, and NW by Dumbartonshire. Its greatest breadth, from E to W, is near the centre, from the point on the W on Glen Water (afterwards the Irvine), where the counties of Ayr, Renfrew, and Lanark meet, to Tarth Water E of Dolphinton, and this measures in a straight line 33 miles. Its greatest length, from NW, at the bridge over the Kelvin beyond Maryhill near Glasgow, to Earncraig Hill on the SE, is 50 miles. The total area is 881 square miles, of which at the time of the Ordnance Survey, 564,283·928 acres were land, 27·408 foreshore, and 4556·320 water, but there falls to be added to the water space and deducted from the land space other 33·75 acres for the Queen's Dock, and 34·66 for Cessnock Dock. The land area is therefore 564,215·518 acres, of which barely one-half is cultivated, there being 256,737 acres in 1895 under crop, bare fallow, and grass, while 20,592 were under wood, most of the rest being rough hill pasture, barren moorland, or covered with pit, etc., refuse. Although the most populous county in Scotland, it is, in consequence of its size and of the barren nature of the southern part, not the most densely populated, being beaten (but somewhat narrowly) in this respect by both Edinburgh and Renfrew, which have respectively 1199 and 1187 persons to the square mile, while Lanark has 1186; the next, far behind, being Clackmannan with 605.

The county boundaries were readjusted by the Boundary Commissioners in 1891 in so far as connected with the adjoining county of Dumfries, and in 1892 in connection with that of Renfrew. The parishes of Kirkpatrick-Juxta and Moffat, that were partly in Lanarkshire and partly in Dumfriesshire, were placed wholly in the latter county. Culter parish, that was partly in Lanarkshire and partly in Peebleshire, was restricted to its Lanarkshire portion, the Peebleshire portion going to the Peebleshire united parish of Broughton, Kilbucho, and Glenholm. There was thus no alteration in the boundaries with Peebleshire. Of the parishes partly in Lanarkshire and partly in Renfrewshire, Cathcart was placed wholly in the latter county—the detached part, however, of its Lanarkshire portion going to the parish of East Kilbride. This, since its Renfrewshire detached part was transferred to the Renfrewshire parish of Eaglesham, is wholly in Lanarkshire. Govan parish, after giving off small portions to the parishes of Renfrew and Eastwood (in Renfrewshire), was placed wholly in the county of Lanark. For alterations on the boundaries of the interior parishes see the separate articles throughout the work.

Commencing at the NW corner the boundary line skirts the E end of Renfrew, crosses the Clyde below Whiteinch, and passes irregularly by Scaterig to the Kelvin immediately W of Maryhill. It follows the line

of the Kelvin, except for a very short distance, to a point $\frac{1}{4}$ mile below the mouth of the Luggie, whence it strikes along the course of a small burn to Boghead near Lenzie, and from that almost due E to the Luggie between Barbeth and Deerdykes. After following the course of the Luggie to near Torbrex it strikes E to the course of a small burn and passes down it to the Avon near the bend to the E of Fannyside Loch, follows the course of the Avon for $\frac{1}{2}$ mile, and then curves south-eastward to Black Loch, across which it passes to North Calder Water between Black Loch and Hill-end Reservoir. It follows this stream to the sharp bend immediately E of Hillend Reservoir, and then strikes again SE to Forrethburn Water, which it follows to near Eastercraigs Hill (824 feet) in Linlithgowshire, whence it strikes across to a burn that joins the How Burn and flows into the river Almond. It follows this to its junction with the How Burn, and then passes northward across Polkemmet and Fauldhouse Moors to Fauldhouse Burn, which it follows to its junction with the Breich, takes the NW branch at Darnead Linn, follows it for 1 mile, then crosses to the centre branch, and follows this to the top of Black Hill (950 feet). Thence it goes N to Leven Seat (1133 feet), and from that follows the watershed between the Clyde and Almond basin by the SW end of Cobinshaw Reservoir (a small portion of which is in Lanarkshire) to Whitecraig (1425), whence it follows the course of Medwin Water to the Junction of Garvald Burn, and so to Filton E of Dolphinton station on the Caledonian and North British Joint line between Carstairs and Leadburn, and thence south-westwards to Broom Law (1399). From the SW shoulder of this hill it follows the course of the upper part of Biggar Water, and from that, first W and then SE, following in the main the course of the stream, to the top of Scawdmans Hill (1880 feet), and from this it passes irregularly westwards, following at first the watershed between the Clyde and Tweed basins till it reaches Clyde Law (1789), and then from that to the point (1566) S of the source of the Tweed where the counties of Peebles, Dumfries, and Lanark meet. The principal summits along this line are Culter Fell (2454 feet), Glenwhappan Rig (2262), Hillshaw Head (2141), Coomb Dod (2082), Culter Cleuch Shank (1801), Black Dod (1797), Bog Hill (1512), and Fletcher Hill (1522). From the point where the counties meet the line strikes south-westward across the valley of Eyan Water by Black Fell (1522 feet), Greenhill Dod (1403), Campland Hill (1571), and Mosshope Bank (East 1670; West 1583) to the shoulder of Hods Hill at the 1750 contour and along the watershed between the Clyde and Annan basins by Beld Knowe (1661) and the shoulder of Mosshope Fell, then across the valley of White Burn (Clyde) between Torrs (1598, Lanark) and Rivox Fell (1593, Dumfries), and thence in a zigzag westward to Whiteside Hill (1817). From that it passes SW across Crook Burn (Clyde) to Lamb Hill (1777 feet), and thence again along the watershed S and W by the S summit of Earncraig Hill (2000) to the NE summit of Cana Hill (2190). From this the line strikes northward and north-westward along the watershed between the basins of the Clyde and Nith to Whiteside Hill (1285 feet) E of Glenrae Burn, where it strikes across the valley of the burn, reaches the watershed again at Long Knowe (1216), and thence westward to Mount Stuart (1567), where it strikes across the hollow of a burn flowing from the NE into Spango Water (Nith), and so to the point on the shoulder of White Hill on the 1250 contour where the counties of Dumfries, Ayr, and Lanark meet, at what is known as Threeshire Stone. The principal summits along the line from Cana Hill to this point are Wedder Law (South 2185; North 2043), Scaw'd Law (2166), Little Scaw'd Law (1928), Durisdeer Hill (1861), Well Hill (1987), Comb Head (1998), Lowther Hill (2377), Wanlock Dod (1808), Sowan Dod (1784), Snarhead Hill (1663), Reecleuch Hill (1416), Slough Hill (1419), Bught Hill (1481), Leftshaw Hill (1513). From Threeshire Stone the line takes an irregular northerly direction along the watershed between the basins of

the Clyde and the Ayr by Stony Hill (South 1843; North 1771), Cairn Table (1944), Little Cairn Table (1693), and Brack Hill (1806) to the reservoir on the head waters of the Douglas (Clyde) E of Glenbuck station on the Muirkirk section of the Caledonian railway. It crosses this reservoir near the centre and crosses the top of Hareshaw Hill (1527 feet), to Galawhistle Burn, along which it turns westward for 1 mile and then strikes westward again along the watershed to the head of the Avon, the chief hills being Priesthill Height (1615 feet), Goodbush Hill (1556), Bibblon Hill (1412), and Wedder Hill (1342). From Avon Head the line follows the course of the Avon for about 5 miles, and then turns up the course of a burn which joins it from the N, and follows this to its source near Meadowfoot, whence it strikes irregularly across to the point between Quarry Hill and the Laird's Seat on Glen Water, where the counties of Ayr, Renfrew and Lanark meet, and roughly follows Glen Water to its source. From that it passes to Threepland Burn and along the course first of it and then of the White Cart as far as Netherlee, where it passes up the course of a burn from the E and along by the E side of the grounds of Cathcart Castle to the boundary with Glasgow, which it follows westward and northward, then along the boundary of GOVAN parish to Renfrew. The whole boundary is therefore almost coincident with the watershed of the middle and upper part of the basin of the Clyde, and the county is almost equivalent with the district known as Clydesdale.

Districts and Surface.—According to Hamilton of Wishaw—'The shyre of Lanark was anciently of greater extent than now it is; for there was comprehended in it the whole sheriffdom of Ranfrew lying laigher upon Clyde, called of old the Baronie of Ranfrew (and is yett so designed when the Prince's titles are enumerate) untill it was disjoyned therefra by King Robert the Third, in anno 1402, at such tyme as he erected what had been his father's patromine, before his accession to the Crown in ane Princapalitie, in favour of his sone, Prince James. And then, because of the largeness of its extent, it was divyded into two Wairds, called the Upper and the Nether Waird; and the burgh of Lanark declared to be the head burgh of the upper waird and Rutherglen of the nether waird; and since the dissolving of the shire of Ranfrew from the sheriffdom of Lanark, the burgh of Lanark is the head burgh of the sheriffdom of Lanark, and Rutherglen the head burgh of the nether waird thereof.' And he adds that, about the year 1455, the predecessor of the Duke of Hamilton became by the gift of James II. heritable sheriff, and that from that date the sheriff-deputes held courts at Lanark and Hamilton, the latter being 'more centricall for the nether waird than the burgh of Rutherglen.' From this time till the middle of the 18th century the county continued to form two wards; but then, in consequence of the increase of the population, a fresh division was made into three wards—the Upper, Middle, and Lower—Lanark still remaining the county town and the chief town of the upper, while Hamilton became the capital of the middle ward, and Glasgow of the lower; and in consequence of the rapid increase of some of the coal towns of the middle ward, this has been again subdivided into two portions, with the seats of administration at Hamilton and Airdrie. The upper ward contains 332,337·536 acres, of which 1874·864 are water; the middle ward 194,211·433, of which 1868·038 are water; and the lower ward 42,318·682, of which 847·163 are water and 27·408 are foreshore. Politically the county is divided into six divisions—Govan, Partick, North-West, North-East, Mid, and South—each division returning a member to serve in parliament.

The surface of the county is very varied, but, speaking generally, rises from NW to S and SE up the valley of the Clyde, and from this again towards either side, the highest ground lying mostly along the borders; while the whole of the S is simply a choppy sea of rounded hill tops, with great undulating stretches of moorland, stretching away brown and bare as far as the eye can

reach. 'The mountains,' says Mr Naismith in his *Agricultural Survey of Clydesdale* in 1794, 'are so huddled together that their grandeur is lost to the eye of a beholder. When he traverses a hollow only the sides of the nearest mountain are presented to his view; and when he climbs an eminence he sees nothing but a confused group of rugged tops, with the naked rock frequently appearing among the herbage.' But though they thus lack the greatness of the Highland mountains, the hills of this beginning of the Southern Uplands have peculiar characteristics of their own. They are, says Dr John Brown, 'not sharp and ridgy like the Highland mountains—

" Curling their monstrous heads and hanging them,"

like the fierce uplifted waves of a prodigious sea; they are more like round-backed lazy billows in the after-swell of a storm, as if tumbling about in their sleep. They have all a *sonsie*, good-humoured, *buirdly* look.' Sir Archibald Geikie has the same praise for it. 'It is,' he says in his *Scenery and Geology of Scotland*, speaking, however, generally of the Southern Uplands, 'in short, a smooth, green, pastoral country, cultivated along the larger valleys, with its hills left bare for sheep, yet showing enough of dark busbless moor to remind us of its altitude above the more fertile plains that bound it on the northern and southern sides. Yet with all this tameness and uniformity of outline, there is something irresistibly attractive in the green monotony of these lonely hills, with their never-ending repetitions of the same pasture-covered slopes, sweeping down into the same narrow valleys, through which, amid strips of fairy-like meadow, the same clear stream seems ever to be murmuring on its way beside us. Save among the higher districts, there is nothing savage or rugged in the landscape. Wandering through these uplands, we feel none of that oppressive awe which is called forth by the sterner features of the north. There is a tenderness in the landscape—

" A grace of forest charms decayed
And pastoral melancholy"—

that, in place of subduing and overawing us, calls forth a sympathy which, though we cannot perchance tell why it should be given, we can hardly refuse to give.'

The difference in the names of places is also to be noted, there being a total absence of the Celtic titles that prevail to the N of the central valley of Scotland. The heights are all *hills*, or *dods*, or *laws*, or *rigs*, or *fells*, or *heads*, or *banks*, with one or two *cairns*; but *bens* and *sgurrs* and *meals* are totally absent. On the NE border the hills do not rise to 1000 feet till near the point where the counties of Edinburgh, Peebles, and Lanark meet, and here the SW end of the Pentland Hills slopes out in White Craig (1425 feet), Black Birn (1213), Harrows Law (1360), Black Law (1336), Bleak Law (1460), Mid Hill (1347), and Left Law (1210). West of the Clyde at Symington are the Tinto Hills, the principal being Tinto Tap (2335 feet), Scaut Hill (1925) to the E, and Lochyock Hill (1734) to the W. Beside the heights already mentioned as occurring along the borders of the county, the others in the district, S, SE, and SW of Tinto attain a height of from 1000 to 2403 feet. Only a few of the more important summits can here be given. About Lamington, Lamington Hill (1614 feet), Broadhill (1520), and Dungavel Hill (1675); along the SE towards the border, Ward Law (1578), Woodycleuch Dod (1769), Snowgill Hill (1874), Windgill Bank (1842), The Seat (1939), Rome Hill (1852), Tewsgill Hill (1867), Dun Law (1669), Blackwater Rig (1676) Fairburn Rig (1779), Midge Hill (1613), Yearngill Head (1804), The Dod (1599), Lady Cairn (1716), Harleyburn Head (1776), Erickstane Hill (1527), Tomont Hill (1652), and Wintercleuch Fell (1804); in the extreme S, Comb Law (2107), Rodger Law (2257), Balleneleuch Law (2267), and Shiel Dod (2190); about the village of Leadhills—which is itself 1307 feet above sea-level, and the highest inhabited land in Scotland—are Rake Law (1620), Wellgrain Dod (1613), Harryburn Brac (1829), Louise Wood Law

(2028), White Law (1941), Dun Law (2216), Dungrain Law (2186), and Green Lowther (2402, the highest hill in the county); near Crawfordjohn, Black Hill (1260), Drake Law (1584), and Mountherrick Hill (1400); along the upper waters of the Duneaton and Douglas, Common Hill (1370), Craig Kinny (1616), Wedder Dod (1507), Fingland Hill (1511), Douglas Rig (1454), Dryrigs Hill (1443), Achandaff Hill (1399), Hartwood Hill (1311), Urit Hill (1476), Parish-holm Hill (1400), Windrow Hill (1297), and Hagshaw Hill (1540); W of the upper waters of the Douglas, Meikle Auchinstilloch (1609), Nutberry Hill (1712), Auchingiloch (1514), Dunside Rig (1308), Harting Rig (1475), and Side Hill (1411); near the point on Glen Water, where Ayr, Renfrew, and Lanark meet, Muir Hill (1096), Laird's Seat (1185), Ardochrig Hill (1130), and Ellrig (1215), from which the ground slopes northward to the Clyde.

Though the upper ward is, as we have seen, much more extensive than either of the other wards, it is comparatively far less valuable. Its uplands occupy a very large proportion of the area, and at least $\frac{2}{3}$ of the entire area are occupied by poor pasture or waste, and unimprovable moorland. The remainder, however, contains, especially along the Carlisle road, and among the verdant holms which in many places stretch along the Clyde and its tributaries, well wooded, fertile, and in some cases highly cultivated tracts. Many of the hills are green, even to the very top, and produce pasture the quality of which is attested by the excellence of the sheep reared on it. In the lower part of the ward the hard and barren aspect is entirely softened; and hill and dale, and wood and meadow are combined so as to produce scenery noted for its beauty, the district around the Falls of Clyde near Lanark being particularly well known. Though the middle ward is essentially lowland, the surface is very varied, and except in the alluvial meads along the streams but little of it is flat. High hills occupy the SW border, and lofty moors stretch along the NE, while the centre slopes away from the valley of the Clyde in rolling undulations. The most fertile district is the central one, along both banks of the Clyde from end to end of the ward, measuring upwards of 12 miles in length and nearly 6 in average breadth. The drive from Lanark to Bothwell is remarkably fine. The hills are covered with pasture or copse to the very top, and dotted all along are policies of mansion-houses well wooded with fine old trees. Here, too, are the orchards for which Clydesdale has been famous since the days of the Venerable Bede, and which still produce excellent crops of apples, pears, plums, gooseberries, currants, and strawberries. The last three, though of later introduction than the others, are those that are now mostly attended to. It is in this ward also as well as in the lower part of the upper ward that the coal and iron industries, to be afterwards noticed, are mostly concentrated. The lower ward is generally level or with but gentle undulations, the only considerable height being the ridge of Cathkin and Dechmont (602 feet) along the SW border. Small, however, as the district is, compared with either of the other two, it yet derives very great importance from containing the city of Glasgow and its environs; while the artificial deepening of the Clyde, and the improvements in its navigation, give this district and its vast population and manufactures all the same advantages of commerce as if it lay on the coast. In the upper ward there is very good shooting.

Rivers and Lochs.—The drainage of the county is almost entirely carried off by the Clyde, which, rising in the extreme S of the county, flows at first N to between Pettinain and Carnwath, and then in a general north-westerly direction to the Firth at Dumbarton. The course of the river and its tributaries are separately noticed in the article CLYDE, and we shall merely here mention the drainage basins. The rainfall of the extreme S is carried off by Daer Water (the principal source of the river) and the burns that flow into it, the principal being Crook Burn (E), which rises at Queensberry Hill in Dumfriesshire, and Powtrail Water (W),

which is erroneously marked on the Ordnance Survey map as Potrail. On the E and N of the main basin the district S of Culter is drained by Culter Water; about Biggar by Biggar Water, and the burns that join it flowing through Peeblesshire to the Tweed; E and NE of Carnwath, at the end of the Pentland Hills, by the South Medwin and the North Medwin, uniting to form the Medwin which joins the Clyde at the sharp bend between Pettinain and Carnwath; NE of Lanark by Abbey Burn (N) and Dippool Water (E), which unite to form Mouse Water joining the Clyde about 1 mile below Lanark; between Lanark and Wishaw by Fiddler Burn, Jock's Burn, and Garrion Gill; N of Wishaw by South Calder Water joining the Clyde opposite Hamilton; S of Coatbridge by North Calder Water joining the Clyde below Uddingston, and by Forrestburn Water flowing to the Avon between Linlithgowshire and Stirlingshire; the rest of the N by the Luggie, flowing into the Kelvin, and the Kelvin itself, both streams running part of their course the borders of the detached portion of Dumbartonshire already noticed. As the Clyde runs nearer to the E and N sides of the county than to the SW and W, the tributaries that join it from these directions are much larger and more important than those just given. Duneaton Water, Douglas Water, and the Avon, which are considerable streams, are noticed particularly in separate articles. The district about Leadhills is drained by Glengonner Water and Elvan Water; between Cairntable and the Clyde about Crawfordjohn by Duneaton Water, SW and NE of Douglas by Douglas Water, S and N of Lesmahagow by the Nethan; about Strathaven, Stonehouse, and Lanark by the Avon; between Hamilton and East Kilbride by Rotten Calder Water, which joins the Clyde below the mouth of North Calder Water; and farther W on the border of Renfrewshire by the White Cart. The scenery along the Clyde and its tributaries, which is in many places very beautiful, is noticed partly in the articles on these streams themselves, and partly in the separate articles on the parishes through which they flow. The lochs of Lanarkshire are neither numerous nor important. Between Glasgow and Coatbridge are Hogganfield, Frankfield, Bishop, Johnston, Woodend, and Lochend Lochs; the N shore of Bishop Loch is occupied by the policies of Gartloch House, and the SE end of Lochend Loch by the woods of Drumpellier. To the E of Airdrie, and between that and the border of the county, are a reservoir near Chapelhall, and NE from that Lilly Loch, Hillend Reservoir for supplying the Monkland Canal with water, and Black Loch on the border and partly in Stirlingshire. North of Dunsyre, in a bleak district of considerable elevation, is Crane Loch, and W of Carnwath is White Loch with banks partly wooded. South-east of Lanark, and surrounded by wood, is Lang Loch. None of them are of any great size, the largest being Hillend Reservoir, 1 mile long, $\frac{1}{2}$ wide, and covering 307 acres; Bishop Loch, 1 mile long and 2 furlongs wide; and the reservoir near Chapelhall, 6 furlongs long and 2 wide. For fishing the lochs are almost worthless, but in the rivers good sport is in many cases to be had, trout varying from $\frac{1}{2}$ lb. to 5 lbs.

Geology.—The geology of this county possesses features of special importance on account of the remarkable development of the Carboniferous formation, with its valuable beds of coal, ironstone, and limestone. This great formation occupies the whole of the Clyde basin, from Crossford, at the mouth of the Nethan Water, to the limits of the county round Glasgow. Briefly stated, it may be said to form a trough or syncline running in a NNE and SSW direction; the centre being occupied by the highest members of the system, while the lower divisions come to the surface in regular succession round the edge of the basin, save where the natural order is disturbed by faults. To the S of this area of Carboniferous rocks lies the Douglas coalfield in the heart of a great development of Lower Old Red Sandstone strata; while beyond the limits of the Old Red Sandstone, in the uplands in the S of the county, we have a portion of the belt of Lower Silurian rocks which stretch from sea to sea.

Beginning with the Lower Silurian rocks forming the high grounds round the sources of the Clyde, they are bounded on the N by a line drawn from the village of Crawfordjohn, NE by Robertson, Lamington, to the edge of the county near Culter. This line indicates the position of a great fault which brings the Lower Old Red Sandstone into conjunction with the Lower Silurian rocks. To the S of this dislocation the Silurian strata are thrown into a synclinal fold, in the centre of which occur grits and conglomerates yielding fossils of Caradoc age. These are overlaid by black shales charged with graptolites, grey and olive shales, flags and greywackes, with a band of fine conglomerate locally known as 'the Haggis Rock.' To the N of the fault just referred to, strata of Upper Silurian age occur in the midst of the Old Red Sandstone area, in two separate tracts which have been revealed by the denudation of the later formations. They occur along the crests of anticlinal folds running in a NE and SW direction. One of these areas of Upper Silurian rocks extends along the arch of the Hagshaw Hills N of Douglas; while the other is traceable from the Logan Water SW by Nutberry Hill and Priesthill Height, to the Greenock Water N of Muirkirk. In each case, on the N side of the anticlinal fold, there is a regular ascending series from the Upper Silurian rocks into the basement beds of the Lower Old Red Sandstone, while on the S side of the arch, the natural succession is disturbed by a powerful fault. At the top of the series the strata consist of sandy flags and shales with green shales, sandy mudstones, and sandstone bands graduating downwards into blue shales with calcareous nodules. The latter horizon yielded the famous specimens of *Eurypterids* to the late Dr Simon of Lesmahagow, the best examples having been obtained in the Logan Water above Dundside. Below this horizon the beds consist of alternations of yellow crusted greywackes, flags, and shales. The base of the series is not reached, however, but altogether there must be about 3500 feet of strata exposed in the various sections.

The Lower Old Red Sandstone, as developed in the county, is divisible into three groups, which are here stated in ascending order—(1) a lower group consisting of alternations of conglomerates and sandstones, with occasional green and red mudstones; (2) a middle group composed mainly of contemporaneous volcanic rocks, save at the top where thin intercalations of sandstones and conglomerates are met with; (3) an upper group consisting of sandstones, grits, and conglomerates, with pebbles of porphyrite. The lowest of these groups is most largely developed in Lanarkshire. It extends from Tinto Hill N by Carmichael and the well-known ravine of the Clyde near Lanark, to a point on the river not far from Crossford. It forms a tongue also to the NE of Lanark in the direction of Kilcadow, while, towards the W, the members of this group are traceable by Lesmahagow to the Upper Silurian tract of Nutberry Hill. But further, they cover the whole area between this Upper Silurian tract and the Lower Carboniferous volcanic rocks of the Avon, and they are also met with on both sides of the Upper Silurian anticline on the Hagshaw Hills.

The members of the middle group extend along the margin of the Douglas coalfield, lapping round the S and E slopes of Tinto, and stretching N as far as Thankerton and Covington. In this district the volcanic rocks are inclined to the S, but they reappear at Lamington with a N dip. On the slopes of Tinto the members of the lower group are inclined to the N, and they are covered unconformably by the green and purple porphyrites and melaphyres of the middle division. It is evident, therefore, that we have, in the Tinto area, a continuation of the marked unconformity between these groups which obtains in the Pentlands. This unconformability is, however, merely local, for when we pass W to the section in the Duneaton Water, we find a regular ascending series from the one group into the other. Sir Archibald Geikie has suggested that this local unconformity, which extends from Midlothian into Lanarkshire, may be connected with the early stages of

the volcanic activity which resulted in the ejection of the lavas and ashes constituting the middle group of the Lower Old Red Sandstone.

The strata comprising the upper subdivision lie in a synclinal fold of the volcanic series between the Clyde at Lamington and the Duneaton Water. At the base the beds consist of grey grits and yellow sandstones passing upwards into massive conglomerates, which are overlaid by chocolate sandstones. In this group we have indications of the cessation of volcanic activity. The sandstones at the base are largely composed of trapean detritus, and the pebbles in the conglomerates are composed mainly of porphyrite obtained from the degradation of the previously erupted lavas.

The Upper Silurian and Lower Old Red Sandstone strata are pierced by dykes and sheets of quartz-felsite. These intrusive masses may be traced along the S side of the Upper Silurian tract at Nutberry Hill, whence they are continued W into Ayrshire. In the Old Red Sandstone areas the quartz-felsite has been injected mainly along the lines of bedding, and hence the trend of the intrusive masses varies with the strike of the strata. The crest of Tinto is composed of a great intrusive sheet of pink felsite, which is evidently older than the volcanic series of the Lower Old Red Sandstone, inasmuch as the latter group laps round the felsite and reposes on it unconformably. Similar intrusive masses occur in the Nethan Water section at Lesmahagow, and in the Clyde at Hazlebank. On the county boundary, between Lanarkshire and Ayrshire, at Blackside End, SW of Strathaven, there is an interesting example of local metamorphism; the felspathic sandstones and grits having been converted into crystalline rocks, such as minette and granite.

The order of succession of the various divisions of the Carboniferous system in the basin of the Clyde may be readily grasped from the following table, condensed from the official reports of the Geological Survey; the different groups being given in descending order:

Carboniferous Formation.	Coal Measures.	{	(2.) Sandstones, shales, marls, and fireclays, with no workable coal seams.
			(1.) Sandstones, dark shales, and fireclays, with valuable coal seams and ironstones.
	Millstone Grit.	{	Coarse grits and sandstones, with thick beds of fireclay. Thin coals and ironstones and thin limestones are occasionally associated with this division.
(3.) Limestones, sandstones, and shales, with thin coals.			
Carboniferous Limestone Series.	{	(2.) Sandstones and shales, with valuable coal seams and ironstones, but no limestones.	
		(1.) Limestones, sandstones, and shales, with seams of coal and ironstone.	
Calcareous Sandstone Series.	{	(2.) Sandstones, shales, marls, and fireclays, with cementstone bands (cementstone group). In the W of Lanarkshire this group is represented by a great succession of interbedded volcanic rocks.	
		(1.) Red sandstones and conglomerates, with concretionstones, resting unconformably on older formations.	

Round the SE margin of the Clyde basin the two subdivisions of the Calcareous Sandstone series are typically represented. The lower red sandstone group extends from Hyndford Bridge on the Clyde E by Carnwath to the county boundary at Dunsyre Hill, being a continuation of the Cairn Hill sandstones of the Pentland chain, while the members of the cementstone group lap round the tongue of Lower Old Red Sandstone at Kilcadow. In this portion of the basin there is clear evidence of the gradual disappearance of the lower group, and of the overlap of the cementstones, for in the section of the Mouse Water and its tributaries the latter rest directly on the Lower Old Red Sandstone. This overlap gradually increases towards the W, for between the valley of the Clyde and Strathaven the Carboniferous Limestone rests immediately on the Old Red Sandstone. Though

the general type of the cementstone group in the SE part of the basin is widely different from that in the basin of the Forth, yet it is important to note that at Auchengray there is a thin development of white sandstones and dark shales at the top of the series which evidently represent the oil shales of Midlothian. These two groups are also met with in the basin of Carboniferous rocks at Douglas. They flank the basin on the E side, dipping below the Carboniferous Limestone series at Ponfeigh, and they also occur at the SW margin in the Kennox and Carmacoup Waters. In this area additional evidence is obtained of the gradual disappearance of both these divisions of the Calciferous Sandstones, and of their being overlapped by the Carboniferous Limestone. In the Nethan section, about a mile S from Lesmahagow, and again in the district of Kennox Water, the latter series rests unconformably on the Old Red Sandstone. In the W of Lanarkshire, however, along the W margin of the Clyde basin the cementstone group is replaced by a great succession of contemporaneous volcanic rocks, consisting of porphyrites, melaphyres, and tuffs indicating prolonged volcanic activity in the early part of the Carboniferous period. This great volcanic plateau dips underneath the Carboniferous Limestone of the Clyde basin, reappearing to the N in the chain of the Campsie Fells. Along the junction line between the volcanic series and the overlying Carboniferous Limestone, ashly grits and shales intervene, which have been derived from the denudation of the trappean masses.

The Carboniferous Limestone series forms a belt of variable width round the Clyde basin, extending from East Kilbride by West Quarter to Aucheneath near Lesmahagow. From thence it crosses the Clyde at Crossford, and is traceable by Carluke and Wilsontown to the county boundary. Along this area the triple classification of the series is clearly marked, but perhaps it is most typically developed in the neighbourhood of Carluke. In that district the lowest group contains from twelve to fifteen beds of limestone of variable thickness; the middle group comprises five seams of coal from 3 inches to 4 feet thick; while the upper division includes three beds of limestone. The Gair limestone, long known for its fossils, is the highest band in the Carboniferous Limestone series of Carluke, and is on the same horizon as the Levenseat limestone, N of Wilsontown, and the Castleary limestone of the Stirlingshire coalfield. Between Glasgow and the Kelvin valley this limestone has not as yet been identified, and hence the Robroyston or Calmy limestone is regarded as the top of this series in that neighbourhood. In the Aucheneath district the most valuable mineral is the Lesmahagow gas coal, which occurs in the middle group. The same subdivisions are traceable in the Douglas basin, but they approach more nearly to the types met with in the Muirkirk coalfield. The limestones of the lower division are not so largely developed as at Carluke, but the coal seams of the middle division are more abundant, and they are associated with blackband and clayband ironstones. At the base of the upper division a band of limestone, upwards of 7 feet thick, is met with, which is on the same horizon as the 'Index' limestone of the Stirlingshire and Dumbartonshire coalfields. Attention has already been directed to the proofs of overlap in the Clyde and Douglas basins; but still more conclusive evidence of this is supplied by the occurrence of a small outlier of Carboniferous Limestone on the hills of Old Red Sandstone a mile S of Tinto, while a similar patch occurs not far to the SW. These phenomena point to the uneven contour of the old land surface on which the Carboniferous strata were deposited, and to the gradual submergence of the old land during the deposition of the higher groups.

The Millstone Grit series occurs in the S and SE portions of the basin, where it is of considerable thickness; it is also found in the N part of the basin between Hogganfield and Glenboig; on the W side it is thrown out by faults bringing the Coal-measures into conjunc-

tion with the Carboniferous Limestone and the volcanic rocks of the Cathkin Hills. This group yields excellent fireclays in the N part of the county, which are worked at Glenboig, Gartcosh, and Garnkirk.

The Coal-measures, with their overlying red sandstones, occupy a wide area, extending from Glasgow E by Coathridge and Airdrie to the county boundary at Fauldhouse Moor. Towards the S they run up the valley of the Clyde as far as Dalserf, while in the Douglas basin a small outlier is also met with. A vertical section of the Clyde coalfield comprises upwards of eleven beds of coal, of which the Ell, the Pyotshaw, the Main, the Splint, the Virtuewell, and the Kiltongue seams are the most important. The bands of ironstone vary in number from four to seven, the highest being the Palaeocraig band, which, however, is only of local occurrence. The coalfield is traversed by numerous faults, many of which run in an E and W direction, repeating the various seams and causing them to spread over a wider area. The red sandstones forming the upper division of the Coal-measures probably rest unconformably on the lower group, but the evidence is not so conclusive as in Ayrshire.

Throughout the Carboniferous area various intrusive sheets of basalt rock occur, partly in the Carboniferous Limestone series, partly in the Millstone Grit, and partly in the Coal-measures. Of these the largest masses occur in the neighbourhood of Shotts; others are to be met with at Hogganfield near Glasgow; while still smaller bosses come to the surface near Carluke and Wilsontown. In the Carluke district also, at Yieldsields, and to the E of Kilcadow, several 'necks' pierce the Carboniferous strata which represent old volcanic orifices, probably of Permian age. Still more interesting are the long narrow dykes of basalt of Miocene age which are found throughout the county. Two of them run parallel with each other from the Hagshaw Hills near Douglas, SE by Abington to near the county boundary.

In the N part of the Clyde basin another of these dykes is traceable from Chrystou by Greengairs to Limerig.

The direction of the ice-flow in the upper part of the county is toward the N, but on reaching the great midland valley where the ice from the southern uplands coalesced with that streaming from the Highlands, the trend veers round to the E. Throughout the county there is a great development of boulder clay and deposits of sand and gravel, either in the form of high level terraces, or ridged up in long kames as on the mossy ground NE of Carstairs. The 100-foot, 50-foot, and 25-foot sea-beaches are also represented in the lower reaches of the Clyde. The shelly clays occurring along the estuary will be referred to in connection with the geology of Renfrewshire.

Soils and Agriculture.—It may generally be said that in the centre and W of the county the soil is cold and clayey, and everywhere intermixed with tracts of bog, while in the SE the soil is light and open. In the S a very large proportion of the parishes of Douglas, Whiston, Lamington, Culter, Crawfordjohn, and Crawford may be said to be uncultivated, while considerable tracts of East Kilbride, Avondale, Lesmahagow, and Carmichael, as well as of New Monkland, Shotts, Cambusnethan, Carluke, Carnwath, Dunsyre, Walston, and Dolphinton are in the same condition. In the upper ward altogether the soil is poor thin moor or wet moss, and there is in consequence but little tillage, the district being mostly suited for rough feeding for stock, and hence it is given up to sheep and dairy farming. Where cultivation is carried on the principal crops are barley and oats, though wheat is found to thrive in the lower valleys. The climatic conditions are much the same as in any other tract of the same altitude, with keen winter frosts and the winds chilly even at midsummer. In the middle ward on the ground farthest from the Clyde, and occupying about $\frac{1}{3}$ of the whole district, the soil is peat and improved moor; in the centre, strong clay intermixed with sand; and along the banks of the Clyde and its large tributaries, fertile alluvial deposits overlying

gravel. The climate is mild, though somewhat damp. Of the 715 acres which in 1895 were occupied by orchards within the county, the great proportion is in this ward. Even in the lower ward the soil is to a considerable extent of a mossy or moory nature, and was originally in many places bleak and unkindly, but the greater part of it has now been brought into a state of high cultivation. Between 1882 and 1895 a considerable advance in the production of the market garden has to be recorded, the number of acres that were occupied as market gardens having increased from 319 in the former year to 1684 in the latter. The climate, though mild, is damp, rain falling very frequently.

Westerly and south-westerly winds prevail during, on an average, 240 days in the year, and as they come from the Atlantic, with but little modification from the intervening land, they have all the mildness derived from contact with the heated waters of the Gulf Stream, and, being at the same time heavily charged with vapour, they generally, when they come in contact with the colder rising-grounds, cause heavy rains. In the middle ward rain often falls on the heights on both sides, while the trough of the Clyde escapes. Winds from the NE are next in frequency to those from the SW, and though cold are generally dry, and the same may be said of the winds from the N and NW, which are least frequent of all. East winds, though sharper than those from the W or SW, are so modified by the high ground to the E that they seldom bring to Lanarkshire such cold and damp as they diffuse along the eastern seaboard. In the low grounds intense frost is seldom of long continuance, and deep long-lying snow is very rare. The most dangerous period of the year for agriculture is seed-time, for owing to continuous wet weather sowing must either take place while the soil is quite unfit for it, or is kept back till an unduly late period.

Notwithstanding, however, all the drawbacks of climate, the agriculture of Lanarkshire is now in a high condition, and the progress of the improvement that first began with vigorous draining, enclosing, and planting operations in the latter half of the 18th century has been ever since steady and rapid; and, though a great deal still remains to be accomplished before matters can attain to the high standard that prevails throughout the Lothians, it must be remembered that there are here much stiffer obstacles to contend against. The areas under the various crops at different dates are given in the following tables:—

GRAIN CROPS.—ACRES.

Year.	Wheat.	Barley or Bere.	Oats.	Total.
1854	6441	2543	56,117	65,101
1870	5838	1146	47,696	54,680
1877	2729	492	46,079	50,300
1882	3592	874	46,905	51,371
1895	1450	293	39,084	40,827

GRASS, ROOT CROPS, ETC.—ACRES.

Year.	Hay and Grass in Rotation.	Permanent Pasture.	Turnips.	Potatoes.
1854	97,120	73,597	10,888	8017
1870	77,195	82,132	10,398	8816
1877	68,940	101,874	10,003	7996
1882	64,713	113,959	9,151	7639
1895	108,043	88,567	9,713	4464

while there are about 5200 acres annually under beans, rye, vetches, fallow, etc. As 1854 was the first year of the agricultural returns, it is possibly not very accurate, for the figures look unduly high. The acres under sown crop, exclusive of hay and grass, amount as given in that year to 93,040, but in 1866 the number was only 72,509; in 1868, 72,293; in 1870—the highest year—77,179; in 1874, 70,943; in 1882, 71,726; and in 1895, 57,737. The average therefore, leaving 1854 and the abnormally high year 1870 out of account, is about 69,000 acres. The total area under crop, bare fallow,

and grass of all kinds has increased from 251,121 in 1882 to 256,737 in 1895, and it is noteworthy that until 1895 the whole increase has been in permanent pasture, the grass under rotation having fallen off considerably, but in that year, as will be perceived from the table, the result has been greatly reversed. The farms are mostly worked on the five shift rotation. The average yield of wheat per acre is 32 bushels; barley and bere, 35; oats, 34; turnips, 15 tons; and potatoes, 4½ tons.

The agricultural live stock in the county at different periods is shown in the following table, and attention may be directed to the very considerably increased numbers of the sheep and cattle within recent years which it reveals:—

Year.	Cattle.	Horses.	Sheep.	Pigs.	Total.
1854	58,954	7241	127,916	8891	203,002
1870	59,877	6505	210,109	8679	285,170
1876	65,147	7522	213,535	8268	294,472
1882	64,850	7610	210,322	7637	290,419
1895	71,367	8631	232,673	8560	321,231

Throughout the county generally the cattle are Ayrshires of greater or less purity, or crosses produced by breeding with Ayrshire cows and a shorthorn bull, and in the upper parishes there are also considerable numbers of Highland cattle kept. There are many large dairy-farms, partly for the supply of milk and butter to Glasgow, and, particularly in the upper ward, for the manufacture of Dunlop cheese, the most esteemed qualities coming from Carnwath and Lesmahagow. The sheep stock is about equally divided between Cheviots and blackfaced, though crosses from Cheviot rams have now become pretty common. Down to about 1790 there were none but blackfaced, and though Cheviots were introduced about that year they made very slow progress, and it was not till after 1840 that they became at all common. The horses are of a breed which, from having originated in the district, is known as the Clydesdale, and which has now attained a world-wide celebrity. The tradition, as given in the old *Statistical Account*, was that Clydesdales resulted from a cross between a Flemish stallion and a Scotch mare, the former having been introduced by the Duke of Hamilton about the middle of the 17th century; but Aiton in his *Report on the Agriculture of Ayrshire* (1810) combated this, and maintained that the breed was originated by John Paterson of Lochlyoch, in Carmichael, who, between 1715 and 1720, brought from England a Flemish stallion, and so improved his stock that it became the most noted in Lanarkshire. Though this is undoubtedly true, it is also certain that there were, at a much earlier date, horses in or about Clydesdale noted for size, for we find in the *Rotuli Scotiae* for 1352 a safe conduct granted by King Edward to the Earl of Douglas for 'ten large horses belonging to the said William Douglas to come from certain places in Scotland' into Teviotdale, and these, some of which would undoubtedly be about Clydesdale, may have prepared the way for subsequent improvements. However this may be, Clydesdales still retain many characteristics of their Flemish origin, and it is certain that they originated and were brought to a state of considerable perfection in the 18th century in the upper ward, and particularly about Lamington, Libberton, Robertson, Symington, Culter, Carmichael, and Pettinain. In the beginning of the 19th century breeding spread from the upper ward to other parts of the county, and even to districts outside, and in 1823, at the Highland Society's show at Perth, a premium of £10 was offered for the best Clydesdale, fitted for working strong lands, the object being to encourage 'draught-horses calculated for the strong lands, of which there cannot be a better model than the Clydesdale horse.' Breeding is now general all over the world, but the cradle of the race can still hold its own. The points of a good Clydesdale are—head with a broad jaw ending in a muzzle which is not too fine or tapering, but has large open nostrils; neck, strong and massive; shoulder, more oblique than

in the English draught-horse (and hence the admirable quick step); strong forearm, broad flat knee, moderately sloped pasterns of medium length; broad low-set hind quarters, with muscular thighs, and broad well-developed hocks; the average height is from 16½ to 17 hands, and the colours that are preferred are different shades of brown; generally a portion of one of the legs at least is white, and there is a white star or stripe on the face. Some of the sheep farms are of considerable size, the largest being of course in the upper ward. The area under sheep alone is probably nearly 200,000 acres, and there are about 30,000 acres quite waste. The largest proprietors are the Earl of Home, the Duke of Hamilton, Sir S. M. Lockhart, Sir E. A. Colebrooke, the Earl of Hopetoun, Sir Wyndham Anstruther, and Lord Lamington, each of whom holds over 10,000 acres, while the Duke of Buccleuch and Colonel Buchanan of Drumpellier are also extensive holders. Of the total of about 20,000 persons who hold land within the county, about 89 per cent. hold less than one acre. Excluding the villa residences about the large towns, some of the principal mansions are Hamilton Palace, Abington House, Aikenhead House, Allanton House, Auchinairn House, Auchingray House, Auchinraith, Avonholm, Barlanark House, Bedlay, Bellahouston, Biggar Park, Birkwood, Blackwood, Bothwell Castle, Bothwell Park, Bonnington, Braefield House, Braidwood, Cadder House, Caldergrove, Calderpark, Calderwood, Cambusnethan Priory, Cambuswallace, Carfin House, Carmichael House, Carmyle House, Carnwath House, Carstairs House, Castlemilk, Cathkin House, Cleghorn House, Cleland House, Cliftonhill House, Coltness House, Corehouse, Cornhill, Craighhead House, Craighthornhill, Crossbasket, Cruthersland, Culter House, Daldowie, Dalsersf House, Dalziel House, Dolphinton House, Drumpellier, Douglas Castle, Douglas Park, Earnock House, Easterhill House, Eastfield, Edmonston Castle, Fairhill, Farme House, Frankfield House, Garnkirk House, Gartferry, Gartsherrie, Hallside, Hartree House, Jerviston House, Kennure House, Lambhill House, Lawmuir, Lee House, Letham House, Lymekilns House, Mauldslie Castle, Milton-Lockhart, Monkland House, Murdoston House, Muirburn, Netherfield House, Newton House, Robroyston, Rockssoles, Rosehall, Ross House, Smyllum, Springfield, St John's Kirk, Stonebyres, Symington, Tannoehside, Thornwood House, Torrance, Udston House, Viewpark, Westburn House, Westquarter House, Wishaw House, and Woodhall.

Industries.—The cotton goods for which Glasgow is the great depository are to a very considerable extent woven in different villages and parishes throughout the county, this branch of manufacture alone yielding support to a very large proportion of the population. Prior to 1700 the manufactures of Lanarkshire were few and unimportant, and even down to 1727, they continued to be less extensive than those of either Perthshire or Forfarshire. About 1750 they began to develop rapidly, and this became still more the case after the impulse given to the cotton trade by Sir Richard Arkwright in 1784. Lanarkshire was particularly qualified for embracing this new industry—first, from its possession of an inexhaustible supply of coal; and next from having the seaports on the Clyde, by means of which the merchants of Glasgow could hold communication with almost all the markets of the world. And so wealth flowed into the county; old coal mines were worked on improved principles with renewed spirit, and new ones opened; the iron trade came into existence; and hundreds, crowding to all the centres where minerals abounded, pushed the county into the first rank for population, wealth, and importance. The extent and richness of the mineral resources have been noticed in the section dealing with the geology, and it remains here to notice their economic importance. The coal and iron pits and works are scattered all over the northern part of the county, and are noticed in connection with the various parishes in which they occur, or in separate articles dealing with the various towns and villages; but they are principally concentrated about Glasgow, Coatbridge, Airdrie, Hamil-

ton, Wishaw, and Lesmahagow, where the furnaces for the manufacture of pig-iron are in some places so numerous as to form a characteristic feature of the district. Everywhere there are constantly clouds of smoke, the glare of furnaces, and all the clatter of rolling mills, foundries, and works for the manufacture of different kinds of machinery. At Garnkirk, and elsewhere in Cadder parish, fireclay of excellent quality abounds, and is largely worked; and weaving and dyeing, though now pretty much monopolised by Glasgow and its neighbourhood, are still carried on to a considerable extent at several places elsewhere. For the cotton, flax, and silk manufactures, as well as some details of the iron-works, reference may be made to the article GLASGOW. In 1892 there were 72 blast furnaces, with an average of fully 53 in blast throughout the year, in which about 690,000 tons of pig-iron were made. Of minerals there were raised in the same year 115,287 tons of iron ore; value at the mines, £51,879. Of lead-ore, 2019 tons, from which 1477 tons of lead were obtained by smelting, and 1736 oz. of silver. Of coal, 15,252,977 tons—value, £4,182,051—out of a total for Scotland of 27,191,923 tons. Of fireclay, 256,653 tons; value, £41,090. Of oil shale there have been produced 126,619 tons, of which, however, a small quantity was got from Renfrewshire; and of limestone, 41,153 tons. Owing to the discovery of large quantities of bituminous shale, the manufacture of paraffin has been extending very rapidly in the neighbourhoods of Airdrie, Lanark, and other places, and bids fair to become one of the most important trades in the district. In connection with the various mines some 40,000 persons were employed, including about 100 females. The first ironstone work in the county was begun at Wilsontown in Carnwath in 1781; and the lead comes from the SW border of the county about Leadhills, near the source of Glengonner Water, in Crawford parish. Here mining operations have been carried on for a long time, for mention of lead from this locality is made in the accounts of the sheriff of Lanarkshire for 1264, and Leslie also speaks of it in his *Scottish Descriptio*. In the same neighbourhood gold is to be found over a district measuring about 25 by 12 miles. The gold mines of Crawford Muir are said to have been discovered in the reign of James IV., and in the time of James V. they were of considerable value, and were carried on for the benefit of the Crown. The celebrated 'bonnet pieces' of James V. were made from this gold; and at the festival given in honour of the King's marriage with Magdalen of France, it is said that cups filled with it were set on the table. In 1542, 35 ounces of it were used in the manufacture of a crown for the Queen, and 46 ounces in the manufacture of that for the King; while, according to a MS. in the Cottonian Collection, the annual value of the workings at the same time amounted to a sum equivalent to £100,000 sterling. After that it fell off very rapidly, and now the quantity found is so small that it hardly repays the time spent by some of the miners of the neighbourhood in searching for it during leisure hours.

Communications, etc.—The Roman roads by which the district was traversed during the time that the Wall of Antoninus was held are noticed subsequently. Some parts of the modern lines of road coincide with the old ones. The main routes are now (1) roads passing from Glasgow to Edinburgh by Bathgate and by Shotts and Midcalders, and a road from Lanark to Edinburgh, joining the second of the two just mentioned at Midcalders; (2) roads passing from Glasgow up both sides of the valley of the Clyde to a point 2 miles N of Abington, where they unite. At Abington one branch passes by Glengonner Water to Leadhills and into Nithsdale; while another keeps to the Clyde to Wellshot Hill, 2½ miles S of Crawford, where it divides, and one branch passes by Powtrail Water to Nithsdale and the other by Clydes Burn to Annandale. Main roads also run up the valley of the Avon into Ayrshire by Darvel, and up the valleys of the Avon, Nethan, and Douglas into Ayrshire by Muirkirk. In the upper part of the country the main cross roads pass from Lanark eastward by Biggar, from Douglas to Wiston, and from Douglas to

Abington; while in the lower district they form such an extensive network as to be beyond particular mention. For the purposes of the Road Act of 1878, the upper and lower wards and the two divisions of the middle ward are treated as if each was a separate county. Railway communication was first opened up for a considerable part of the county by the opening of the Caledonian railway in 1847; and now the lower part of the county, with its extensive mineral traffic, is accommodated by lines far too numerous to be particularly mentioned. Main lines pass from Glasgow by Coatbridge and Bathgate to Edinburgh (North British), and by Shotts and Midcalder to Edinburgh (Caledonian); southward up the valley of the Clyde on the NE and E side to Clydes Burn, and up this into Annandale, and from NE to SW by a line from Edinburgh by Carstairs and Muirkirk to Ayr—both of the latter routes being on the Caledonian system. The Lanarkshire and Dumbartonshire railway of the same system connects these two counties by way of Glasgow. The Forth and Clyde Canal passes through the NW corner of the county; and the Monkland Canal, branching off at Maryhill N of Glasgow, winds eastward by Coatbridge to Calderbank. Several new bridges have lately been erected, the most important being those over the Clyde at Cambuslang, Dalmarnock, and Rutherglen (1894).

In 1893 the supply of water of the middle ward had become so inadequate that in the summer something approaching a water famine was experienced. Nine water-supply districts had been formed, but only six of these had been provided with water, and even these had been inadequate from the beginning or had become so from the natural increase of the districts—those outside these water-supply districts having to be content with water from wells, pits, and streams, all more or less contaminated. The District Committee of the County Council resolved to introduce a general supply commensurate with the needs of their district. The plan adopted has the Glengavel Water as a source of supply, with a reservoir near High Plewlands having a catchment of 3700 acres and a capacity of 600,000,000 gallons. From the reservoir a 21-inch pipe, capable of carrying 2,500,000 gallons per day, leads to filters on the high ground above Strathaven railway station, at an elevation sufficient to supply Strathaven and the whole middle ward by gravitation, with the exception of a few places either too distant or too elevated, and which must be dealt with separately. The scheme was estimated to cost over £200,000.

The royal burghs in Lanarkshire are Glasgow, Lanark, and Rutherglen; the parliamentary burghs are Hamilton and Airdrie; the burghs of barony are Biggar, Strathaven, and East Kilbride; and the police burghs are Biggar, Govan, Kinning-Park, Motherwell, Partick, and Wishaw. Places of over 2000 inhabitants are:—Airdrie, Bailliestou, Bellshill, Blantyre, Bothwell, Cambuslang (including Kirkhill, Coats, Silverbanks, and Wellshothill), Carluke, Coatbridge (including Gartsherrie, Langloan, High Coats, and Burnbank), Glasgow, Govan, Hamilton, Holytown (including new Stevenston), Kirkintilloch (part of), Lanark, Larkhall, Mossend, Motherwell, Newmains (including Coltness Ironworks), Partick, Rutherglen, Shettleston (including Eastmuir and Sandyhill), Stonefield, Stonehouse, Strathaven, Tolleross, (including Fullarton), Uddingston, and Wishaw (including Craignek); places with populations between 100 and 2000 are Allanton, Auchenheath, Auchinairn, Auchentiber, Avonhead, Bargeddie and Dykehead (including Cuihill), Barnhill, Biggar, Bishopbriggs, Blantyre Works, Bothwell Park, Braehead, Braidwood (including Harestanes and Thornice), Broomhouse, Busby (part of), Cadzow, Calderbank, Caldercruix, Carfin, Carmunnock, Carmyle, Carnbroe and Brewsterford, Carnwath, Carstairs, Carstairs Junction, Castlehill, Chapel and Stirling Bridge, Chapelhall, Chapelton, Chryston and Muirhead, Cleland (including Omoa), Clyde Iron-works, Clydesdale (including Fulwood and Milnwood), Crossford, Darnagaber (including Quarter), Darnagavel, Douglas, Douglas Park, Dunlop Place,

Dykehead, Eastfield, East Kilbride, East Langrigg, Eddlewood, Faskine and Palace Craig (including Hillhead), Ferniegair, Flemington, Forth, Garnkirk (including Crow Row and Heathfield), Garnqueen and Glenboig, Gartcosh, Gartgill, Glangowan, Greengairs, Halfway, Hallside, Hamilton Palace Colliery Rows, Harthill, Haywood, Hazelbank, Jerviston Square and Coalhall, Kirkfieldbank, Kirkmuirhill, Lambhill, Law, Leadhills, Lesmahagow, Longriggend, Millerston and Hogganfield, Moffat, Morningside and Torbush, Mount Vernon, Muirhead or West Benhar, Muirmadken, Nackerton (including Aitkenhead), Netherburn, Newarthill, New Lanark, New Monkland and Glenmavis, Newlands, Newton, Newton Colliery, Overtown, Plains, Riggend, Rigside, Roughrigg, Salsburgh, Shotts Ironworks (including Torbothie), Southfield and Blackwood, Spittal Colliery Rows, Stane (including Burnbrae), Stepps, Swinhill, Tannochside, Tarbrax, Thornwood, Udston, Waterloo, Wattston, Westburn, West Langrigg, West Maryston, West Quarter, Whiterigg, Wilsonston (including Rootpark), and Yieldshields Roadmeetings, besides a few smaller villages.

The county has forty-one entire *quoad civilia* parishes. These with reference to the different wards are:—Upper Ward—Biggar, Carluke, Carmichael, Carnwath, Carstairs, Covington and Thankerton, Crawford, Crawfordjohn, Culter, Dolphinton, Douglas, Dunsyre, Lamington and Wandell, Lanark, Lesmahagow, Libberton, Pettinain, Symington, Walston, and Wiston and Robertson. Middle Ward—Avondale, Blantyre, Bothwell, Cambuslang, Cambusnethan, Dalsers, Dalzell, East Kilbride, Glassford, Hamilton, Old Monkland, New Monkland, Shotts, Stonehouse. Lower Ward—Cadder, Carmunnock, Glasgow—Barony, City, Gorbals, and Govan—Maryhill, Rutherglen, Shettleston, and Springburn. The *quoad sacra* parishes of Airdrie, Baillieston, Bargeddie, Bellshill, Burnbank, Cadzow, Calderbank, Caldercruix, Calderhead, Chapelton, Chryston, Clarkston, Cleland, Coats, Coltness, Dalziel South, Douglas Water, Forth, Flowerhill, Gartsherrie, Garturk, Greengairs, those connected with GLASGOW, Harthill, Hogganfield, Holytown, Kirkfieldbank, Larkhall, Lanark St Leonards, Law, Leadhills, Lenzie (part), Overtown, Stonefield, Uddingston, Wishaw, and Rutherglen West and Rutherglen Wardlawhill, are also included. Nine of the parishes are in the presbytery of Biggar in the synod of Lothian and Tweeddale, and the others are in the presbyteries of Glasgow, Hamilton, and Lanark in the synod of Glasgow and Ayr. Exclusive of those in Glasgow and its neighbourhood, including Govan, there are 60 places of worship connected with the Free Church, 45 in connection with the United Presbyterian Church, 1 in connection with the United Original Seceders, 4 in connection with the Congregational Church, 13 in connection with the Evangelical Union, 7 in connection with the Baptist Church, 2 in connection with the Wesleyan Methodist Church, 2 in connection with the Reformed Presbyterian Church, 12 in connection with the Episcopal Church, and 32 in connection with the Roman Catholic Church. In the year ending Sept. 1894 there were in the county 387 schools, of which 279 were public, with accommodation for 181,665 children. These had 178,056 on the rolls, and an average attendance of 146,541. The staff consisted of 1898 certificated, 541 assistant, and 959 pupil teachers. The parliamentary constituencies of the six divisions in 1895-96 were—Govan, 12,070; Partick, 13,633; North-Western, 12,659; North-Eastern, 14,549; Mid, 12,008; and Southern, 9208.

Lanarkshire—exclusive of Glasgow, which was constituted a county of a city in 1893, with the lord-provost as lord-lieutenant—is governed by a lord-lieutenant, a vice-lieutenant, 56 deputy-lieutenants, and 389 justices of the peace, of whom 75 are for the upper ward, 156 for the middle ward, and 158 for the lower ward. The County Council is composed of 70 elected members—12 for the upper ward, 29 for the middle ward, and 21 for the lower ward, besides 5 for the burgh of Coatbridge, 2 for that of Rutherglen, and 1

for that of Lanark. There is a sheriff-principal with five substitutes for general county purposes, besides resident substitutes for Lanark and Hamilton, and for Airdrie. Ordinary courts are held at Glasgow, on Tuesdays, Wednesdays, Thursdays, and Fridays during session, small debt courts on Mondays, Wednesdays, and Fridays all the year round, a debts recovery court every Monday during session, and criminal courts as required. Appeals to the sheriff-principal in lower ward cases are heard every Monday, Tuesday, and Friday, and in cases from other parts of the county every Wednesday. At Lanark the sheriff-substitute sits on Mondays and Thursdays, and at Hamilton on Tuesdays and Fridays. At Airdrie the sheriff-substitute sits on Tuesdays and Fridays, and a small debt circuit court is held at Wishaw every third Thursday. The police force, exclusive of the burghs of Airdrie, Glasgow, Govan, Hamilton, Kinning-Park, and Partick, which have separate forces, consists of 246 men (1 to each 1178 of the population), under a chief constable with a salary of £600 a year. The county prison is at Barlinnie to the E of Glasgow, and the County Lunacy Board, together with those of Glasgow and Govan, have the management of Kirklands Asylum, Bothwell. In 1895 the average number of registered poor was 15,184 with 9876 dependants, while the receipts for poor law purposes amounted to £244,794, or about a quarter of the whole sum for Scotland. There are poorhouses for Barony, Cambusnethan Combination (including the parishes of Bothwell, Cambusnethan, Dalziel, and Shotts), Glasgow City Parish, Govan Combination, Hamilton Combination (including the parishes of Avon, Blantyre, Cambuslang, Dalsersf, Glassford, Hamilton, East Kilbride, and Stonehouse), Lanark, New Monkland, and Old Monkland. The proportion of illegitimate births averages fully 6 per cent., the average death-rate about 22 per 1000. Connected with the county are the third and fourth battalions of the Cameronians (formerly the Second Royal Lanark Militia), and the third and fourth battalions of the Highland Light Infantry (formerly the First Royal Lanark Militia), all with headquarters at Hamilton, two regiments of Yeomanry cavalry, with headquarters at respectively Lanark and Glasgow; a battalion of Artillery Volunteers with headquarters at Glasgow; a battalion of Engineer Volunteers with headquarters at Glasgow; and nine battalions of Rifle Volunteers, of which the second have their headquarters at Hamilton, the fifth (disbanded in 1897), the ninth at Lanark, and all the others at Glasgow; these battalions form the Glasgow Volunteer brigade, with headquarters at Glasgow. Besides the six county members and the seven returned by Glasgow, Rutherglen, Hamilton, Airdrie, and Lanark unite with other burghs outside the county in returning other two members. Valuation exclusive of burghs, but inclusive of railways and canals, (1674) £13,436, (1815) £686,531, (1875) £1,714,183, (1883) £2,144,453, (1895) £2,082,995, of which £311,926 was for the upper ward, £1,047,685 for the middle ward, and £723,384 for the lower ward. Pop. of registration county, which takes in part of Broughton from Peebles, and parts of Cathcart, Eaglesham, Eastwood, and Renfrew from Renfrewshire, (1831) 317,329, (1841) 427,738, (1851) 533,169, (1861) 640,444, (1871) 787,005, (1881) 942,206, (1891) 1,091,703; civil county (1801) 147,692, (1811) 191,291, (1821) 244,387, (1831) 316,819, (1841) 426,972, (1851) 530,169, (1861) 631,566, (1871) 765,339, (1881) 904,412, (1891) 1,105,899, of whom 550,847 were males, and 555,052 females. These were distributed into 234,681 families occupying 220,820 houses with 560,996 rooms, an average of 1.97 persons to each room, which is only surpassed among Scottish counties by Shetland, where the average is 2.03.—*Ord. Sur.*, ehs. 30, 31, 22, 23, 24, 15, 16, 1864-67.

Lanarkshire anciently belonged to the Caledonian tribe called the Damnii, and was over-run by the Romans when they extended their territories to the Wall of Antoninus, between the Firths of Clyde and Forth. This wall passed through the north-western corner of the county N of Bishopbriggs and Cadder,

and communication was kept up with the South by roads which passed from Annandale and Nithsdale through the S part of the county, and uniting to the N of Crawford village and the E of Crawford Castle, wound from that down the valley of the Clyde. Near Little Clydes Burn there is a camp on the line of it, and in places the present road coincides with it, e.g. on both sides of Elvanfoot and Watling Street in Crawford village. The Roman occupation of the district must have been principally military, for traces of roads and camps are found, but not of towns or villages. Coins, weapons, and other relics of the Romans have also been found in many places. After the departure of the Romans, the district was held by the old tribe, who now become known as the Strathclyde Britons, with their capital at Alcluith, Alclwyd, or Dunbreatan, the modern Dumbarton. This nation in 654 aided Penda, King of Mercia, against Osuiu or Oswy, King of Anglia, and on the victory of the latter fell under his sway, and were subject to Anglia for thirty years till 684. On the defeat of Eogfrid by the Picts, the Dalriadic Scots and the portion of the Britons who dwelt between the Solway and the Clyde regained their freedom. In 756 Edgbert, King of Northumbria, and Angus, King of the Picts, united against the district and took possession of it, though how long they kept it does not appear; but part of Edgbert's army was lost from some unascertained cause, but seemingly not in battle, while they were between Strathaven and Newburgh on their way home. Independence must have been, at the very latest, regained by a little after the middle of the 9th century; for in 870 the *Ulster Annals* mention that Alclwyd was besieged and captured by Northmen, and the same authority mentions the death of Arthga, King of the Strathclyde Britons, in 872. In 875 the lower part of the county was laid waste by the Danes. Within the next forty years the kingdom prospered, and by the beginning of the 10th century it extended from the Clyde southward to the Derwent in Cumberland. The then king, Donald, dying, however, without heirs, the King of Alban, who had been Donald's ally and friend, was chosen ruler, and the kingdoms united. In 945 Eadmund, King of the Saxons, conquered it and handed it over to Malcolm, a gift which was confirmed by Siward to the succeeding Malcolm in 1054. In after years it was associated with the career of Wallace, whose first exploit was that of driving the English out of the town of Lanark. After the triumph of Bruce, the county enjoyed peace till the time of James II., when the ambition of the Douglas family and the intrigues of the first Lord Hamilton plunged the district into all the horrors of civil war, as is recorded in Grey's MS. Chronicle:—'In March 1455 James the Second cast doune the castel of Inveravynce; and syne incontinent past to Glasgu, and gaderit the westland men with part of the Areschery [Irishry] and passed to Lanerik, and to Douglas, and syne brynt all Douglasdale, and all Aven-dale, and all the Lord Hamiltoune's lands, and heriit them clerlye; and syne passit to Edinburgh.' From this time there was again quiet till the escape of Queen Mary from Lochleven Castle and the battle of Langside (see GLASGOW); and from this again till the time of the Presbyterian persecution in the reign of Charles II., in the troubles of which time, the oppression of the 'Highland Host,' the Pentland Rising, the battles of Drumclog and Bothwell Bridge, Lanarkshire had its full share, while the great tracts of moor in the upper districts afforded many places of shelter, both to those who were in danger of their lives and to those who wished to hold meetings for worship. The Revolution of 1688 brought more peaceful times, and Glasgow was the first place in Scotland where the Declaration of the Prince of Orange was published. The inhabitants of the county, however, were bitterly opposed to the Union in 1707.

The sheriffdom of Lanark is said to date from the time of the lawgiving David I. After passing through various hands, the office came into the possession of the Douglasses, and after their downfall was given in feo to the Hamiltons, who held it as a hereditary appendage

to their titles, but at the request of Charles II. the holding was surrendered, and was regranted to them as deputies for the king. In 1716, the heir of the Hamilton estates being under age, the Earl of Selkirk was made sheriff, and held office till his death in 1739, when James, sixth Duke of Hamilton, took possession of it without any formal appointment, and held it till 1747, when the hereditary jurisdictions were abolished. The duke claimed £10,000 as compensation, but the claim was disallowed. The chief antiquities of the county are the traces of the Roman occupation already noticed, several British camps or strongholds, and many cairns in the upper ward; and the ruins of Douglas Castle, Craignethan Castle—the Tillietudlem of Sir Walter Scott—Bothwell, Avondale, Dalziel, Carstairs, Boghall, and Lamington; interesting churches are at Biggar, Carnwath, and Hamilton; and remains of a priory at Blantyre. New Orbiston, near Bellshill, was in 1827 granted by Hamilton of Dalzell to Robert Owen as the site of a socialistic village, which, however, very soon fell into decay.

Dudgeon's *Historical Notes on the Occurrence of Gold in the South of Scotland* (Edinb. 1876); R. W. Cochran-Patrick's *Early Records relating to Mining in Scotland* (Edinb. 1878); a paper on the 'Gold-Field and Gold-Diggings of Crawford-Lindsay,' by Dr W. Lander Lindsay, in vol. iv. of the *Scottish Naturalist* (1878); essays by the Earl of Dunmore and Thomas Dykes, Esq., in vols. i. and ii. of *The Clydesdale Stud Book* (Glasgow, 1878 and 1880.); and works referred to under BIGGAR, CLYDE, COATBRIDGE, COWTHALLY, GLASGOW, GOVAN, LEADHILLS, LESMAHAGOW, PARTICK, and RUTHERGLEN.

Langbank, a village and a *quoad sacra* parish in Erskine parish, Renfrewshire. The village, pleasantly situated on the southern shore of the Clyde, opposite Dumbarton, has a post, money order, and telegraph office, Established and U.P. churches—the former plain and with a bell-tower, the latter with a tower and spire of considerable elevation—and a station on the Greenock section of the Caledonian, $4\frac{1}{2}$ miles ESE of Port Glasgow. Constituted in 1875, the parish is in the presbytery of Greenock and synod of Glasgow and Ayr. Pop. of village (1881) 322, (1891) 315; of *q. s.* parish (1881) 575, (1891) 553.—*Ord. Sur.*, sh. 30, 1866.

Langbar, a village in Beith and Dalry parishes, Ayrshire, close to Kilbirnie station, this being $2\frac{3}{4}$ miles NNE of Dalry Junction, both on the Glasgow and South-Western railway. Pop. (1861) 632, (1871) 921, (1881) 750, (1891) 422, of whom 200 were in Beith.

Langholm, a town and parish of E Dumfriesshire. The town stands, 280 feet above sea-level, on the river Esk, at the influx of Ewes Water from the N and of Wauchope Water from the SW. By road it is 73 miles S by E of Edinburgh, 23 SSW of Hawick, 12 N by W of Longtown, $21\frac{1}{2}$ N by W of Carlisle, and 18 NE of Annan; and, as terminus of a branch of the North British, it is $7\frac{1}{2}$ miles NNW of Riddings Junction, this being 14 miles N by W of Carlisle, $31\frac{1}{2}$ S by W of Hawick, and 84 S by E of Edinburgh. Embosomed in one of the prettiest landscapes in Scotland—neither wide, romantic, nor grand, but strictly and eminently lovely—it comprises an old town on the E bank of the Esk, immediately below the influx of the Ewes, and a new town on the W bank of the Esk, immediately above the influx of Wauchope Water. The old town includes one principal street with a central market-place, and consists of houses mostly built of white freestone from Whita or Langholm Hill, and many of them in a style

superior to what are seen in most small towns. The new town was founded in 1778, and originally consisted of nearly 150 houses, built in regular street arrangement, in the form of a triangle. The town hall, in the market-place, is a neat structure with a spire. The Hope Hospital, erected in 1893-94 partly on the site of the old town bowling green, arose from a bequest by Mr Hope of America (a native of the district) of over £100,000, for the erection of a home for indigent aged people. Near the town hall stands a handsome marble statue of Admiral Sir Pulteney Malcolm (1768-1838); and an obelisk, 100 feet high, was erected at a cost of £1300 to the memory of his brother, General Sir John Malcolm (1769-1833), on Whita Hill, immediately above the town. An old two-arched stone-bridge spans the Ewes, a little above its influx to the Esk, which itself is crossed by a three-arched stone-bridge (1780) and by an iron suspension foot-bridge. The parish church, built in 1846 from plans by D. Bryce, R.S.A., is a fine Gothic edifice, containing upwards of 1000 sittings; and there is a handsome mission hall, built in 1881 at a cost of over £2000. The Free church was built soon after the Disruption; and of two U.P. churches, the one was rebuilt in 1867, the other in 1883. The Evangelical Union chapel, built in 1870 at a cost of £1000, is Gothic in style, and contains 300 sittings. Langholm Episcopal church, built in 1885, contains 105 sittings. The town has a post office, with money order, savings bank, and telegraph departments, branches of the National and British Linen Co.'s Banks, a local savings bank (founded in 1849), a number of hotels, a gasworks, an extensive library, a police station, a Freemasons' lodge, mechanics and Oddfellows' benefit societies, football, lawn tennis, bowling, curling, and cricket clubs (the last with a fine cricket ground, provided by the Duke of Buccleuch, in front of Langholm Lodge), and a Wednesday weekly newspaper, the *Eskdale and Liddesdale Advertiser* (1848). Langholm golf course is situated to the NE of the town, along the base of the Whita Hill, and is over a mile in length. A weekly market is held on Wednesday; and fairs are held on 16 April, the Wednesday before 26 May, the last Tuesday of May o.s., 26 July, 18 Sept., 5 Nov., and the Wednesday before 22 Nov. A cotton factory was built in 1788; and an extensive cotton trade, in connection with firms in Glasgow and Carlisle, was carried on till 1832, when the manufacture of shepherd plaids and shepherd check trouserings was introduced, and led to the production of very beautiful and highly finished fabrics. The manufacture of tweeds followed, and rose rapidly into such prosperity as now to employ six mills. The town has also two distilleries and a tanwork. A copious water supply is brought from Whita Well. Erected into a burgh of barony by charter from the Crown in 1643, Langholm was long governed by a baron bailie, under the Duke of Buccleuch as superior; but under the Burgh Police Act of 1892 its affairs are managed by a provost, 2 bailies, and 6 commissioners. Sheriff small debt courts are held on the third Saturday of January, May, and September. The Duke of Buccleuch presented a handsome townhall to the burgh in 1894. Langholm occupies the site of the battlefield of Arkenholm (1454), where the Douglasses sustained their final overthrow. It figures curiously in history for the taming of shrews, and for the pretended pranks of witches. Langholm is the headquarters of the Esk and Liddel Fisheries Association; and excellent fishing is to be had, the Esk abounding in salmon, sea-trout, and whiting or herling. Pop. (1831) 2264, (1891) 3643.

The parish of Langholm comprehends the ancient parishes of Staplegorton and Wauchope, and about half of the ancient parish of Morton; and was constituted in 1703. It is bounded N by Westerkirk, NE by Ewes, SE and S by Canonbie, SW by Half-Morton, and W by Middlebie and Tundergarth. Its utmost length, from E to W, is 7 miles; its breadth, from N to S, varies between $2\frac{3}{4}$ and $6\frac{3}{4}$ miles; and its area is 17,152 acres, of which 181 are water. The river Esk first runs 9 furlongs south-by-eastward along the boundary with Westerkirk, and

LANGHOPE-BIRKS

then winds 6½ miles south-south-eastward through the interior, till it passes off near Irvine House to Canonbie. To the Esk flow EWES WATER, ¼ mile along the boundary with Ewes parish, and then 1½ mile south-south-westward; Wauchope Water, formed by the confluence of Logan Water and Bigholm Burn, 3½ miles north-westward; TARRAS Water, 2½ miles south-south-westward along the south-eastern boundary; and Irvine Burn, 1½ mile southward through the interior, then 1¾ east-by-northward along the southern boundary. Three medicinal springs, one of them sulphurous, the other two chalybeate, are in the western district. In the extreme S, at the Tarras' and Irvine's influx to the Esk, the surface declines to 195 feet above sea-level, and thence it rises to Whita Hill (1162 feet), Earshaw Hill (921), Bloch Hill (878), Mid Hill (1070), Calfield Rig (1025), Tansy Hill (1065), and Haggy Hill (1412) at the meeting-point of Langholm, Middlebie, Tundergarth, and Westerkirk parishes. The tracts adjacent to the Esk and Ewes are flat, well cultivated, and highly embellished; elsewhere are smooth hills, green to the very summit, and grazed by large flocks of sheep. The scenery in many parts, especially along the Esk, is very beautiful. The rocks of the northern district are eruptive and Silurian, of the southern are carboniferous. Greywacke slate has been quarried; lead ore occurs on West Water farm and Broomholm estate; sandstone, greyish white and yellowish grey, abounds between Langholm Bridge and Byreburn; and fossiliferous bluish-grey limestone lies incumbent on the Silurian rocks. The soil of the flat grounds is mostly a lightish loam; of the hills is exceedingly various. Nearly one-seventh of the entire area is in tillage; plantations cover some 500 acres; and all the rest of the parish is pasture. Langholm Castle, a plain square tower or peel-house, now a ruin, belonged to the Armstrongs, the powerful Border freebooters, and sent forth Johnnie Armstrong of GILNOCKIE, with his gallant company of thirty-six men, to disport themselves upon Langholm Holm, prior to their execution by James V. at CAERLANRIG (1529). Wauchope Castle is represented only by grass-covered foundations; and Barnfalloch, Irvine, Nease, Calfield, and Hill Towers are quite extinct. The Roman road between Netherbie and Overbie traversed the parish north-westward, and is still partly traceable; and Roman coins have been found of Nero, Vespasian, Otho, and Domitian. Natives were William Julius Mickle (1735-88), the translator of Camoens, and David Irvine, LL.D. (1778-1864), author of the *History of Scottish Poetry*. Langholm Lodge, near the Esk's left bank, 1 mile NNW of the town, is a villa of the Duke of Buccleuch. BROOMHOLM has been noticed separately. Langholm is the seat of a presbytery in the synod of Dumfriesshire; the living is worth £377 with manse. Two public schools, Langholm and Wauchope, with respective accommodation for 989 and 40 children, have an average attendance of about 615 and 15, and grants of over £728 and £25. Pop. (1801) 2536, (1831) 2676, (1861) 2979, (1871) 3735, (1881) 4612, (1891) 3970.—*Ord. Sur.*, shs. 11, 10, 1863-64.

The presbytery of Langholm, formed in 1743 at the abolition of the presbytery of Middlebie, comprehends Eskdale and Liddesdale, and contains the parishes of Canonbie, Castleton, Eskdalemuir, Ewes, Half-Morton, Langholm, and Westerkirk. Pop. (1871) 11,032, (1881) 11,446, (1891) 10,194, of whom about 2300 are communicants of the Church of Scotland.

Langhope-Birks. See CAMPMUIR, Berwickshire.

Langhouse, an estate, with a mausion, enlarged in 1867, in Inverkip parish, Renfrewshire, 2½ miles NNE of Wemyss Bay.

Langlee, an estate, with a mausion, in Jedburgh parish, Roxburghshire, 2½ miles S by W of the town.

Langley Park, a mansion in Dun parish, Forfarshire, 1 mile WSW of Dubton Junction. Its owner is Augustus Walter Cruikshank (b. 1837; suc. 1856).—*Ord. Sur.*, sh. 57, 1868.

Langloan. See COATERIDGE.

Langshaw, an estate, with a mansion, in Kirkpatrick-

LANGWELL

Fleming parish, Dumfriesshire, 1¼ mile ESE of Kirtlebridge Junction. There is a post office under Galashiels.

Langside, an old village and a fine residential district of Glasgow, adjoining the Queen's Park, and containing a handsome Established church, erected at a cost of about £5000 and seated for 700 persons. In 1894 a new Free church, built after the amphitheatre fashion, was erected at an estimated expense of about £8000 (including halls), and contains about 900 sittings. Adjoining the sites of the two churches stands the Langside Battlefield Memorial—a carved monument, surmounted by a lion, and encircled by an ornamental railing. See GLASGOW.

Langside, a village in Bothwell parish, Lanarkshire, near Bellshill.

Langton, a central parish of Berwickshire, containing the post-office village of GAVINTON, 2 miles SW of the post-town, Duns. It is bounded W and NW by Longformacus, NE by Duns, E and SE by Edrom, and S by Polwarth. Its utmost length, from NW to SE, is 6¼ miles; its breadth varies between 5½ furlongs and 3½ miles; and its area is 7151 acres, of which 12 are water. The drainage is mostly carried eastward to the Blackadder by Langton Burn and other rivulets. In the extreme E the surface declines to 290 feet above sea-level, thence rising to 305 feet near Campmuir, 905 at Blackmill Hill, 1056 at Hardens Hill, and 1159 near Duntalee Plantation—heights of the Lammermuirs that command a view of all the Merse and over parts of Northumberland to Wooller. The prevailing rocks of the Lammermuir or north-western district are Silurian, of the Merse or south-eastern district Devonian; and the soil of the former is moorish, of the latter a reddish loam. About five-ninths of the entire area are sheep-walks; woods and plantations cover some 300 acres; and the rest of the parish is chiefly arable. Traces of two old military stations are on a hill near Raecleugh-head, and traces of another are at Campmuir. Stone coffins have been exhumed on Crease and Middlefield farms; and a gold bracelet, 9 inches in circumference, was found in 1813 in a burn at Battlemuir. Langton estate, including not only the greater part of Langton parish, but also parts of Duns and Longformacus, belonged to the Veterepontes or Viponts from the latter half of the 12th century till the beginning of the 14th century. From them it passed by marriage to the Cockburns, ancestors of the late Chief-Justice, Sir Alexander J. E. Cockburn (1802-80); and by them it was sold in 1758 to David Gavin, Esq., the maternal grandfather of John, second Marquis of Breadalbane (1796-1862). From the Marquis Langton passed to his sister, Lady Elizabeth Pringle, and at her death, in 1878, to her daughter, Mary-Gavin, who in 1861 married the Hon. Robert Baillie-Hamilton (1828-91), second son of the tenth Earl of Haddington, and Conservative member for Berwickshire from 1874 till 1880. The present mansion, commenced in 1862, is a stately Elizabethan structure, with a splendid picture gallery, beautiful grounds, and a noble entrance gateway of 1877. Langton is in the presbytery of Duns and synod of Merse and Teviotdale; the living is worth £249. The parish church, rebuilt in 1872, is a beautiful Gothic edifice, with 200 sittings, and a spire 100 feet high. There is also a Free church, with 300 sittings; and a public school, with accommodation for 129 children, has an average attendance of about 70, and a grant of over £66. Pop. (1801) 428, (1831) 443, (1861) 502, (1871) 548, (1881) 505, (1891) 417.—*Ord. Sur.*, shs. 26, 25, 33, 1863-65.

Langwell, a Scottish seat of the Duke of Portland, in Latheron parish, S Caithness, on a green eminence between confluent Langwell and Berriedale Waters, ¼ mile W of Berriedale. The estate was purchased by Sir John Sinclair in 1788 for £7000, by James Horne, Esq., in 1813 for £40,000, and by the fifth Duke in 1860 for £90,000, this enormous rise in value being due to the improvements carried out both by Sir John Sinclair and Mr Horne. By the Duke nearly all the property was

converted into deer-forest. His cousin, William John Arthur Charles James Cavendish Bentinck, sixth Duke since 1716 (b. 1857; suc. 1879), is present proprietor. See LATHERON.—*Ord. Sur.*, sh. 110, 1877.

Lanrick Castle, a mansion in Kilmadock parish, Perthshire, on the right bank of the Teith, 3 miles WNW of Doune. A handsome modern castellated edifice, with very fine grounds, it is a seat of Sir Robert Jardine, Bart., of CASTLEMILK, as successor to his kinsman, Andrew Jardine, Esq. (1810-81). A suspension bridge, which here spans the Teith, was erected in 1842, after plans by Mr Smith of Deanston.—*Ord. Sur.*, sh. 39, 1869.

Lanrig. See LONGRIDGE.

Lanton, a village in Jedburgh parish, Roxburghshire, on the NW slope of Lanton Hill (923 feet), 3 miles WNW of Jedburgh town. It has an old peel tower and a public school.

Lany, an ancient parish of SW Perthshire, suppressed, on account of the smallness of the stipend, in 1615, when part of it was annexed to Port of Monteith. Its ruined church, which belonged to the priory of Inchmahome, and stood within the section annexed to Port of Monteith, is said in the *New Statistical Account* to bear the date 1214 in Arabic numerals.

Laoghal. See LOYAL.

Larbert, a village and a parish of E Stirlingshire. The village stands $\frac{1}{2}$ mile SW of Larbert station on the Scottish Central section of the Caledonian railway, 5 furlongs N by W of Larbert Junction, and $2\frac{3}{4}$ miles NW of Falkirk; occupies a charming situation; and has a post, money order, and telegraph office, a stove and range work, a manufactory of fire-clay goods, a sawmill, and one or two hotels. Pop. (1861) 441, (1871) 559, (1881) 831, (1891) 904.

The parish, containing also the village of STENHOUSEMUIR, half of CARRONSHORE, and the greater part of CARRON and KINNAIRD, from 1624 to 1834 was united with Dunipace. It is bounded N by St Ninians, NE by Airth, E by Bothkennar, SE and S by Falkirk, and W by Dunipace. Its utmost length, from E to W, is $3\frac{1}{2}$ miles; its utmost breadth, from N to S, is 3 miles; and its area is 4054 acres, of which 2 are foreshore and 89 $\frac{1}{2}$ water. The river CARRON winds 5 miles east-north-eastward, along or close to all the Falkirk boundary; a rivulet, rising on the western border, runs eastward through the interior to the Carron at the SE corner; and Pow Burn flows $\frac{3}{4}$ mile east-north-eastward along the St Ninians boundary. The surface, with a general westward ascent to 206 feet above sea-level just beyond the Dunipace boundary, comprises portions of the Carse of Forth; and commands from multitudes of standpoints brilliant views over all the carse and along the northern screens of the Forth from the Ochil Hills to the vicinity of Dunfermline. The rocks, belonging to the Carboniferous formation, include sandstone, several seams of coal, and some strata of clay ironstone; and the coal and the ironstone are largely worked. The soil is alluvial, partly light and dry, but generally argillaceous. With the exception of 260 acres of plantations and pleasure-grounds, almost the entire area is in tillage. The leading industries are noticed under CARRON, the cattle trysts under FALKIRK. The Roman road from Falkirk to Stirling traversed the parish, and has left some vestiges. The famous Roman antiquity known as ARTHUR'S OVEN, and separately noticed, was on the southern border; and Roman millstones and fragments of Roman pottery have been found. The Scottish National Institution for the Training of Imbecile Children was built in 1865-69 at a cost of £13,000 in mixed styles of architecture, with predominance of the Scottish Baronial and the Italian. With a façade 340 feet long, it includes two wings extending 170 feet backward, and each of them terminating in a tower and spire 70 feet high. It acquired an hospital in 1872 at a cost of £1600; underwent enlargement in 1875-76, in completion of the original plan, at a further cost of £12,000; and has accommodation for 240 patients or pupils, together with servants. The

average number of imbecile children somewhat exceeds 100. Near it is the Stirling District Lunatic Asylum, for the counties of Stirling, Dumbarton, Linlithgow, and Clackmannan, also erected in 1866-69 at a cost of over £20,000 and also in the mixed Scottish Baronial and Italian styles. Measuring 438 feet along the front and 205 along the flanks, it consists of a centre block with two long verandahs on the ground floor, two wings for males and females, and two towers 90 feet high at the back of these wings. In 1893 a new hospital for the treatment of cases of insanity at the asylum was opened, consisting of a central block and two side wings—the wings being for the male and female patients respectively. All the cooking is done by gas, and hot pipes are laid for the warming of the air during cold weather. The dining-hall, in the centre of the structure, has accommodation for 100 patients. The grounds, 70 acres in extent, are enclosed by a wall 10 feet in height. The average number of pauper lunatics somewhat exceeds 300. Larbert House, 5 furlongs NW of the village, was purchased from G. Stirling, Esq., in 1876 by John Hendrie, Esq., and is now the property of J. H. N. Graham, Esq. Other mansions are CARRONHALL, Carron Park, Glenbervie, KINNAIRD, and STENHOUSE. In the presbytery of Stirling and synod of Perth and Stirling, this parish forms a joint charge with Dunipace; the living is worth £419. The parish church, at the village, is a Perpendicular edifice of 1820. The old graveyard contains monuments to the two famous Bruces of Kinnaird, to Mr W. Dawson, with a marble statue of the 'Angel of the Resurrection,' etc. A plain Free church stands at the E end of Stenhousemuir; and the four schools of Carronshore, Larbert, Larbert village, and Carron—all of them public but the last—with respective accommodation for 512, 748, 642, and 215 children, have an average attendance of about 370, 720, 310, and 215, and grants amounting to nearly £390, £740, £330, and £230. The three public schools have evening classes attached to them. Valuation (1883) £21,649, 1s. 1d., (1892) £27,012, 7s. 7d. Pop. (1801) 4217, (1831) 4248, (1861) 4999, (1871) 5280, (1881) 6340, (1891) 8340.—*Ord. Sur.*, sh. 31, 1867.

Larbert Junction, a junction of railways on the N border of Falkirk parish, Stirlingshire, 5 furlongs S by E of Larbert village, and 2 miles W by N of Falkirk town. It conjoins the S end of the Scottish Central section of the Caledonian railway with a north-eastward line from both the main trunk of the Caledonian system and the western part of the Edinburgh and Glasgow section of the North British system, also with a west-north-westward branch of the eastern part of the Edinburgh and Glasgow railway from Polmont through the Grahamston suburb of Falkirk, and with an east-south-eastward branch line from Denny.

Largie Castle, a mansion in Killean and Kilchenzie parish, Kintyre, Argyllshire, 5 furlongs NE of Tayinloan. Its owner is John Ronald Moreton-Macdonald (b. 1873; suc. 1879). There is an Episcopal chapel attached to the Castle.—*Ord. Sur.*, sh. 20, 1876.

Largo, a parish containing two villages of the same name in the SE of Fife, on the northern coast of the Firth of Forth. It is bounded NE by Kilconquhar, E by Newburn, S by the sweep of the Firth of Forth known as Largo Bay, W by Scoonie, and NW by Ceres. The outline is very irregular, and the boundary is purely artificial, except at the SE corner, where, for a little over a mile, it is formed by Johnstone's Mill Burn, and along the shore on the S. The greatest length from NE, at the point on Craighall Burn where the parishes of Ceres, Kilconquhar, and Largo meet, to SW, where the boundary line reaches the shore due S of Lundin Tower, is $5\frac{1}{2}$ miles; and the greatest width 4 miles. The area is 7585 $\frac{1}{2}$ acres, of which 199 $\frac{3}{4}$ are foreshore and water. Over 6000 acres are in tillage, about 600 are under wood, and about 300 are pasture or waste. The coast, extending about 2 $\frac{1}{2}$ miles, is fringed for most of that distance close inshore by a reef of rocks which is covered at high water, and, though low and sandy, rises almost immediately, especially behind the village

of Lower Largo, to a height of 100 feet, reaches 165 at Upper Largo village, and from that rises gradually by a series of undulations till, on the northern boundary of the parish, a height of over 600 feet is reached. On the eastern border, in the NE, the ground at Backmuir of New Gilston rises to over 700 feet, and 1 mile N of Upper Largo village Largo Law attains a height of 965 feet. Like all the hills known as Laws it is conical in its shape, rising very steeply on the S and W sides, and more gradually on the N and E. It is green to the very summit, and has two tops, separated by a slight hollow, on the side of which, as well as on the higher top and elsewhere, basalt may be seen. The hill has been a volcano at some period subsequent to the Lower Carboniferous period, the upper part consisting of volcanic ash overlying lower carboniferous rocks faulted and upturned, and with their edges worn down. The tops indicate the bottom of the crater, the basalt there marking the plug filling the pipe up which the lava ascended. A patch of basalt farther down on the S side is either the remains of an outburst from the side of the cone or of a sheet of lava that has flowed down the side. The soft ashy edges of the craters and cone have been worn away, and the hard lava at the bottom having offered more resistance to denudation, now occupies the summit. The hill is a conspicuous object all along the lower reaches of the basin of the Forth, and commands an extensive and magnificent view. The drainage of the parish is mainly carried off by the Kiel Burn, which, rising in the NE at Backmuir of New Gilston, flows S by W for $4\frac{1}{2}$ miles, inclusive of windings, till it reaches the sea at Lower Largo village. Three-quarters of a mile from its mouth it is joined by Lundin Mill Burn from the W, which carries off the drainage of the western portion of the parish, and 2 miles farther up Gilston Burn enters from the E. Above the junction with Gilston Burn the Kiel is generally known as Boghall Burn. To the E of the Kiel are the two small streams known as Temple Burn and Old Mill Burn, and on the extreme E Johnston's Mill Burn becomes the boundary at the point where it crosses the Colinsburgh road, and remains the dividing line till the shore is reached. In its lower reaches the Kiel flows for about 2 miles through a deep glen, the banks being in some places over 200 feet high. The banks are steep, and throughout the greater part of the distance very beautifully wooded, while walks open to the public lead to all the points where the views are best. The soil varies considerably, but is always good. In the SE it is a rich strong clay, but elsewhere it is generally a rich thick black loam, with lighter patches towards the S. The subsoil is clay or gravel, and in the former case is sometimes very wet. The underlying rocks are partly volcanic and partly sandstone, limestone, and shale, belonging to the Carboniferous system. There is plenty of excellent sandstone, and the limestone is in some places 15 feet thick, and of excellent quality. Coal is worked in considerable quantities in the N.

The parish contains the villages of Lundin Mill and Drumochie, Lower Largo and Temple, Upper Largo or Kirkton of Largo and Backmuir of New Gilston. Of these, Lundin Mill, Drumochie, Lower Largo, and Temple may practically be considered as constituting one long straggling village on both sides of the mouth of Kiel Burn; Upper Largo is $\frac{3}{4}$ mile NE of this; and New Gilston is in the NE part of the parish. At Lundin Mill there are a number of excellent villas, inhabited by golfers, who find an excellent course over the adjacent Lundin Links to the W; Drumochie is properly the houses immediately to the W of the mouth of the Kiel, Lower Largo immediately E of the Kiel, and Temple farther E still. Upper Largo is warm and well sheltered, and both villages are the resort of a considerable number of summer visitors, though the inshore rocks prevent the full enjoyment of good bathing-ground. Exclusive of New Gilston, the other villages may be considered as forming a small town, and have a station on the Leven and East of Fife Junction railway $8\frac{1}{2}$ miles E of Thornton Junction. Waterworks for the

supply of the three places with water from Gilston Burn, were begun in 1893. The reservoir has a length of 840 feet, a breadth of 100 feet, and a storage capacity equal to about two months' supply. The total cost of the scheme was £4500. In Upper Largo, which is the centre of trade for a considerable district of surrounding country, there are a post office, with money order, savings bank, and telegraph departments, a branch of the National Bank of Scotland, a parish church, a Free church, a public school, an endowed hospital for indigent persons, a naturalists' field club with a small museum, and a gas company; while in Lower Largo there are a U.P. church, 2 Baptist churches, an infants' school, and a small harbour. At Lundin Mill there is a public school, and a golf club instituted in 1868 meets in October to play for the 'Standard' medal, and twice a year to play for the silver medal. There are also the Jamieson Bequest, the trustees of which are the kirk-session of Largo, and Kettle and Wood charities, the trustees of which are the School Board of Largo. There is a corn market every Thursday. The inhabitants of the lower village are mostly fishermen. The harbour at the mouth of the Kiel is very small, and affords accommodation to a few boats engaged in line fishing, those engaged in the herring fishing now proceeding to some of the great stations at Aberdeen, Fraserburgh, Peterhead, Stonehaven, or elsewhere. In old times a considerable trade was carried on with Holland in coal, salt, iron, sandstone, and other heavy articles, and more recently with Norway in timber; but all that is now at an end, and the industries, besides fishing and the ordinary village handicrafts, are confined to a flour mill, an oil work, and a net manufactory, all in the lower village. About 3 furlongs E of Temple are a few houses known as The Pans, and marking the site of an old salt work. The parish church, mainly built in 1817, was enlarged in 1826 so as to include an old aisle, and a spire with the date 1623. It is surrounded by a churchyard, and there is a cemetery not far off to the N of the public school. The Free church, erected soon after the Disruption, was repaired in 1880. Wood's Hospital is a Tudor building, standing within a considerable enclosed space a little to the NE of the church. It sprang from a bequest made in 1659 by John Wood, London, who left the sum of £68,418 Scots to be applied by his trustees in the erection of an hospital for the maintenance of 13 indigent and enfeebled persons, and to pay also for the services of a gardener, a porter, and a chaplain for the institution. The whole 16 must be of the name of Wood, and those belonging to the parish or to Fife have the preference. The first building was erected in 1667, and, it having become decayed, the present building was erected in 1830 at a cost of £2000. A sitting-room and bed-room are provided for each inmate, and there is a large hall where they assemble for prayers every morning and evening, and also a room for the meetings of the trustees. These latter are the Earl of Wemyss, the lairds of Largo, Lundin, and Balfour, and the minister or a member of the kirk-session of the parish of Largo. Of the founder but little is known, but he is supposed to have been a cadet of the Largo family. He died in London, but was buried in the family aisle in Largo Church. The Simpson Institute, in the Old Scottish style of architecture, was erected by means of a sum of £4000 bequeathed by Mrs Galloway of Edinburgh, a native of Upper Largo, in memory of her father the late George Simpson. It contains a public hall, library, and billiard table, and has a bowling green and tennis court attached. Other distinguished natives of the parish have been Alexander Selkirk (1676-1723) and Sir John Leslie. The former, the original of Robinson Crusoe, was born in the lower village in a house that remained standing till 1880. In 1704, while serving on board a ship trading to the Pacific, he was punished for mutinous conduct by being set ashore on the small island of Juan Fernandez, where he lived all alone for four years and four months before he was relieved. On his return Defoe is said to have met him about Wapping.

and obtained the tale afterwards polished into Robinson Crusoe. His chest and cup, which were long preserved in the neighbourhood, are now in the Antiquarian Museum in Edinburgh, while his gun is at Lathallan House. Selkirk afterwards entered the Royal Navy, and was, when he died in 1723, at the age of 47, lieutenant on board of H.M.S. *Weymouth*. In 1885 a life-size bronze statue to his memory was placed in front of the house that now occupies the site of the cottage in which he was born. Leslie (1766-1832), famous for researches on heat and cognate branches of natural philosophy, was professor, first of mathematics, and afterwards of natural philosophy, in the University of Edinburgh.

Largo barony was in 1482 conferred by James III., by charter under the great seal, on Sir Andrew Wood, who had in 1480 in the *Yellow Caravel* attacked and beaten a hostile English squadron that had been sailing in the Firth of Forth. From Sir Andrew's descendants it passed first to a family named Black, then to Gibsons, and in 1663 to Sir Alexander Durham, to whose descendants it belonged till 1868, when Mrs Dundas-Durham sold it to G. Johnstone, Esq. of LATHRISK, to whom it now belongs. Largo House, the mansion of the barony, to the W of Upper Largo, was built in 1750, and is a very roomy building, on a charming site with a southern exposure, and commanding a fine and extensive view. The grounds are large, and, like many other parts of the parish, have a large number of fine old trees, some of them of considerable size. Within the grounds to the N is a circular tower, which formed part of the old castle inhabited by Sir Andrew Wood, and said traditionally to have been previous to that the residence of several of the widowed queens of Scotland. A runic cross found in the neighbourhood used formerly to stand on the lawn; but when the estate was sold it was unfortunately removed to Polton, near Lasswade. One of the guns of the *Royal George*, which sunk in 1782, which used to stand in the grounds, passed at the same time to James Wolfe Murray, Esq. of Cringletie, Peebleshire.* The other mansions in the parish are Balhousie and Strathairly. The mansion-house of Lundin was pulled down in 1876; but the old square tower which was built into it, and which is the remnant of an old castle of Lundin, and dates from the time of David II., has been carefully preserved. Close to it are a number of very fine old trees. The castle belonged to a family of the name of Lundin, who at an early date held a large extent of property in the district. One of William the Lyon's sons is said to have married the then heiress, and in their line it remained till 1670, when another heiress took it into the Perth family by marriage with Sir John Drummond, second son of the second Earl of Perth, with whose descendants it remained till about 1750, when it was sold in consequence of attainder against the family for connection with the rebellion of 1745. Besides the antiquities already mentioned, there is on the banks of Kiel Burn N of Largo House a fragment of the old castle of BALCRUVIE or Piteruvie, which is separately noticed. To the SE of Lundin House are three standing stones about 12 feet high, known as 'the standing stones of Lundin.' Two and a half miles N by W of Upper Largo, near Teasses, is a tumulus called Norrie's Law, concerning which a local tradition maintained that it covered the remains of a great chief who had armour of silver. A hawker stealthily opened it up about 1817, and found that something of this sort was actually the case, for he discovered a large number of ancient Celtic ornaments of silver. What they exactly were cannot be ascertained, as he carried them off and sold them to various dealers in old silver, who consigned them to the melting-pot. By the exertions of General Durham of Largo and Mr George Buist of Cupar a few were recovered, and those that still remain are so extremely valuable as to cause all the more regret for what is lost. In 1848 two beau-

* Admiral Sir Philip C. Durham of Largo was signal officer of the *Royal George* at the time of the accident, and was one of the few persons rescued.

tiful twisted gold armilla were found in a bank at Lower Largo, immediately behind the well near the ninth mile-post on the railway. A number of stone coffins, formed of slabs, have been at various times found in the sandhills skirting the shore from Drumochie eastwards, over the site of the lower village to Old Mill Burn.

The parish is traversed for 2 $\frac{3}{4}$ miles along the coast by the Thornton and Anstruther branch of the North British railway system; and there are stations at Lundin Links and Lower Largo. The S end is also traversed by the main road from Burntisland along the edge of the Firth of Forth to the East Neuk of Fife, which passes through Lundin Mill and Upper Largo. From Upper Largo district roads pass also northwards to CERES and north-eastwards to St Andrews. Largo is in the presbytery of St Andrews and synod of Fife, a part in the NE being given off to the *quoad sacra* parish of LARGOWARD. The stipend is £296 and a manse. Kirkton public, Lundin Mill public, and Durham female schools, with accommodation respectively for 150, 178, and 142 pupils, have an average attendance of about 100, 90, and 100, and grants of nearly £105, £90, and £80. Valuation (1883) £15,608, 5s. 5d., (1893) £15,028, 9s. 9d. Pop. of village of Upper Largo (1861) 365, (1871) 353, (1881) 346, (1891) 337; of Lower Largo and Temple (1861) 428, (1871) 521, (1881) 562, (1891) 590; of Lundin Mill and Drumochie (1861) 593, (1871) 537, (1881) 477, (1891) 492. Pop. of whole parish (1755) 1396, (1801) 1867, (1831) 2567, (1861) 2626, (1871) 2315, (1881) 2224, (1891) 2324, of whom 207 were in the *quoad sacra* parish of Largoward.—*Ord. Sur.*, shs. 40, 41, 1867-57.

See also *The Chronicle of Fife; being the Diary of John Lamont of Newton, from 1649 to 1672* (Edinb. 1810); *The Diary of Mr John Lamont of Newton, 1649-71* (Maitland Club, Edinb. 1830); for the geology of the Law, a paper by Sir Archibald Geikie on the 'Carboniferous Volcanic Rocks of the Basin of the Forth' in the *Transactions of the Royal Society of Edinburgh*, vol. xxix.; and for the Norrie's Law relics, Wilson's *Prehistoric Annals of Scotland*, edition 1863, vol. ii., pp. 250 et seq.

Largo Bay is the indentation of the N side of the Firth of Forth, at the top of which the parish just described lies. It is flanked on the E side by Kincaig Point, 12 $\frac{3}{4}$ miles in a straight line SW of Fife Ness, and on the W side by the point at Buckhaven harbour, measures across the mouth, in a line from point to point, 6 $\frac{5}{8}$ miles, and 2 $\frac{1}{4}$ miles from this line to the deepest part. The shores, formed from E to W by the parishes of Elie, Newburn, Largo, Scoonie, and Wemyss, are rocky on the E, W, and centre, and elsewhere low and sandy. There are several streams flowing into it, of which the chief are Cocklemill Burn, near the E side, Kiel Burn in the centre, and the river Leven on the W. Within the bay, at the extreme E side, is a smaller rocky bay $\frac{5}{8}$ mile wide across the mouth, and $\frac{1}{2}$ mile deep, with its sides formed E by Kincaig Point, and W by Ruddons Point. The bottom of the bay is mostly sandy, and forms excellent ground for line fishing. All along the coast extensive salmon fishings are carried on by fixed nets. Towards the E, beneath the sands, there are traces of a submerged forest.

Largoward, a village in Kilconquhar parish, and a *quoad sacra* parish formed from Kilconquhar, Largo, Cameron, and Carnbee parishes. The village is 4 $\frac{1}{2}$ miles NE of Largo railway station, and 6 $\frac{1}{2}$ SW by S of St Andrews. Pop. (1861) 323, (1871) 325, (1881) 338, (1891) 354, of whom 186 were males and 168 females. The *quoad sacra* parish is in the presbytery of St Andrews and the synod of Fife. The church, originally a chapel of ease, was built in 1835. Largoward and New Gilston public schools, with respective accommodation for 164 and 90 children, have an average attendance of about 100 and 70, and grants of over £104 and £60. Pop. of parish (1871) 1090, (1881) 1103, (1891) 1018, of whom 550 were in the Kilconquhar section, 207 in the Largo section, 224 in the Camerou section, and 37 in the Carnbee section.

Largs (Gael. *learg*, 'a hill-slope'), a police burgh and parish in the district of Cunninghame, Ayrshire. The town is situated on the coast, upon a large gravel deposit, which was probably at one time part of the bed of the Firth of Clyde; and the broad shingly beach in front of the town has a gradual slope that makes it at once pleasant and safe for bathers. Largs stands on the highroad between Greenock and Ardrossan, 6 miles S of Wemyss Bay, 9 NW of Kilbirnie, and 30 NNW of Ayr. A second and more inland road also leads to Greenock through Noddsdale or Noddlesdale, but it is now rarely used except by the farmers through whose lands it passes. Largs is the terminus of the Cunninghame coast branch of the Glasgow and South-Western railway *viâ* Ardrossan and Fairlie. An attempt was made unsuccessfully in 1893 to get a bill passed in parliament authorising a more direct route to Largs *viâ* Dalry. Communication with Wemyss Bay is maintained by steamers in connection with the railway to that place. The country surrounding Largs is picturesque and fertile, the climate is dry and bracing, and the town is one of the healthiest and most favourite watering-places on the Clyde. The main street, which at one part expands to a considerable breadth, runs directly inland from the pier and harbour, spanning the Gogo Burn by means of a stone bridge at its inland or E end. A broad esplanade, terraced on the sea-ward side, extends N from the quay for a considerable distance, and is continued almost to the Noddle Burn by a strip of rough common, separating the high road from the beach; while along the inland side of the road, stretching between these and the town proper, are situated a number of substantial villas, each in its own grounds. Southwards from the quay, a short street, crossing the Gogo Burn by an iron bridge, leads to the pleasant suburb of Broomfields, consisting of handsome and comfortable villas, built on the crest of a gentle grass-covered slope, inclining towards the sea. In the vicinity of the town, though beyond the boundaries of the burgh, there are numerous private houses, for the most part standing within pleasantly laid out gardens or grounds, and as these are generally occupied by the proprietors, even in winter, the society of the town is both more extensive and of a higher class than at most sea-bathing towns on the Clyde.

Largs has no public buildings of importance besides the churches. The quay, built substantially of stone in 1834, cost £4275; and, while it forms a kind of breakwater enclosing a small harbour, it is accessible by steamers on its outward side at all states of the tide. In 1816 a bath-house was erected at Largs, but that is now used as a public hall. The old parish church, built in 1812 and repaired in 1833, is a plain building with a clock steeple. Owing to the state of disrepair of the old church, a new one was erected in 1892 at a cost of over £15,000. The new building is a handsome structure of red stone, with a spire and clock, 1300 sittings, a fine organ, and a hall. The Free church, a very simple structure, was built soon after the Disruption. The U.P. church in Waterside Street, built in 1826, has been superseded by the Clark Memorial Church, opened in 1893, and erected at a cost of £20,000—the gift of the late John Clark, Esq. of Carling Hall. The new church has a spire and a chime of twelve bells, the largest 4 feet 1½ inch in diameter, and in weight 1 ton 2 cwt. The hall measures 48 feet by 24. St Columba's Episcopal church, a small building in the Early English style with 250 sittings, was built in 1876. St Mary's Roman Catholic church in School Street, with 140 sittings, was built in 1870. Largs had a parochial school, endowed with 100 merks annually, but without a school-house, so early as 1696. The respective accommodation, average attendance, and government grants of the two public schools are about—Fairlie public school, 140, 90, £92; Largs public school, 802, 435, £426. There is also a female industrial school. In 1893 a new school, the Largs public, was erected by the school board, Brisbane Academy, the former public school, having been sold to James Stevenson, Esq. of Haylie, who has fitted up

and furnished one-half of it for the workmen's club and reading-room, and the other half for the mechanics' library, containing over 3000 volumes, the two together forming an institute. On the esplanade in front of the parish church a handsome granite drinking fountain was erected about 1873 at a cost of £550 in memory of the late Dr Campbell, who for sixty-one years had been physician in the town. Largs cemetery lies a little to the SE of the town, on the steep slope of a hill, over which passes the road to Dalry. It is very carefully tended and neatly laid out, and its upper walks command an exquisite view over the Clyde. The chief object of antiquarian interest in Largs is what is known as the Skelmorlie Aisle, the only relic of the ancient church situated in the old graveyard, adjacent to the present parish church. This aisle, of chiselled freestone, was erected and converted into a mausoleum by Sir Robert Montgomery of Skelmorlie in 1636. In the interior its lofty roof is vaulted with boarding, painted in forty-one compartments with various emblematic, moral, and heraldic subjects, as the signs of the zodiac, escutcheons, texts from Scripture, several views of the mansion of Skelmorlie, and the representation of the death of one of the ladies of the Skelmorlie family from the kick of a horse. A richly carved monument stands across the aisle to the left of the entrance, 11½ feet long, 5 broad, and 18 high, to the memory of Sir Robert Montgomery and his wife, Dame Margaret Douglas, whose leaden coffins lie in the vault below. The epitaph of the latter alone is legible, and runs as follows:—

'Bis duo' bisq decem transegi virginis annos;
Ter duo ter decem consociata viro,
Et his ope[m] Lucina tulit. Mas Patris imago
Spesq domus superset; Femina iussa mori.
Clara genus generosa, anima speciosa decore
Cara Deo vivi: nunc mihi cuncta Deus.'

On the corner of Sir Robert's coffin, however, is the inscription:—

'Ipse mihi præmortuus fui, fato funera
Fraeripui, unicum idque Caesarem
Exemplar inter tot mortales secutus,'

alluding to his habit of descending to pray in his wife's tomb, and thus, as it were, burying himself alive. In another coffin within the vault is the body of Ser Hewe the Monggombyrny, said to have been slain at Chevy Chase after himself slaying Percy; but according to the more historical ballad of the Battle of Otterburn (1388)—

'Then was there a Scottish prisoner ta'eu,
Sir Hugh Montgomery was his name,
For sooth as I you say,
He borrowed the Percy home again,'

i.e., was exchanged for Percy. A large barrow or mound, about 25 yards long and 9 broad, and about 5 feet high, situated near the old burying-ground in the centre of the town, is by many held to be the ancient moat-hill or place for the punishment of criminals, especially as the Gallowgate is in the immediate vicinity; but others, including Dr Phené, who excavated the mound in 1873, incline to recognise in it the spot in which the Norwegians were buried after the battle of Largs. Other relics of the battle are referred to subsequently.

Largs is the seat of a head post office, with the usual departments; has branch offices of the British Linen Co., Royal, and Union Banks. There are several hotels, an agricultural society, 2 bowling greens, a coastguard station, a home for destitute children, besides various associations and clubs, among which may be mentioned the Royal Largs Yacht Club, with an annual regatta in August. A gaswork was erected in the town in 1838; and water is supplied by gravitation from works on the farm of Middleton. There is little or no industry beyond some fishing and the ordinary retail trade of a small town. There are, however, a corn and saw mill on the Gogo, another mill on the Noddle, and a Saturday newspaper, *The Largs and Millport Weekly News* (1876).

Largs, until recently, was governed mainly by the county authorities; but since it became a burgh it has

a provost, 2 bailies, and 6 commissioners, who in 1893 took over from the county council the roads and streets within the burgh. The harbour is managed by a committee under a chairman. The burgh is in the Kilmarnock district of the sheriff court; and a justice of the peace court for small debts is held on the first Monday of every month. A fair is annually held on Oomb's Day (originally St Colme's or St Columba's), the first Tuesday of June after the 12th, but this gathering has lost almost all its old importance. Besides the means of communication already referred to, three carriers ply daily to Glasgow. Pop. (1851) 2824, (1861) 2638, (1871) 2760, (1881) 3079, (1891) 3187, of whom 1824 were females. Houses occupied (1891) 747, vacant 257, building 2.

The chief historical event connected with the town is the battle of Largs, fought 3 Oct. 1263, between the Scots, under Alexander III., and the Norse, under Haco III. The fleet of the latter had been much damaged by a storm immediately before the battle, which had been artfully delayed by Alexander; and the Norsemen were compelled to effect a landing with but a part of their whole strength. The battle which followed resulted in a complete victory for the Scots, and effectually put an end to the Norwegian claim of sovereignty over the western coasts and islands of Scotland. The chief scene of the fight was a plain to the S of the town, immediately below the mansion of Haylie; but there are memorials of the struggle extant in many quarters. Some of these are merely local names, as Camphill farm in Dalry parish, Burleygate and Killingcraig on the Routen Burn; and still further S, Keppingburn, where Sir Robert Boyd, ancestor of the Earls of Kilmarnock, is said to have intercepted a band of fleeing Norsemen. Among the visible relics may be counted the remains of the tumulus known as 'Haco's tomb,' consisting of a large flat stone supported on two others. Till 1780 the tumulus was known as Margaret's Law; but when opened in that year, it was found to cover five stone coffins containing skulls and other bones, while many human bones and some urns were found above and about the coffins. From this discovery it was at once concluded that the remains were those of some of the slain at the battle of Largs; and popular haziness as to the details of the fight and the real fate of Haco has evolved the modern name. Another mound called Greenhill, at the entrance to the avenue of Hawkhill House, has also, perhaps too hastily, been identified as another Norwegian burial-place. Built into the garden wall of Curling Hall, a mansion near the shore in Largs, is a rude stone pillar, to which is now attached a copper plate with a lengthy Latin inscription concerning the battle of Largs. The old ballad of *Horðyknute* is founded upon this decisive and sanguinary battle. It was written by Lady Wardlaw (1677-1727).

In 1644 a terrible plague devastated the town, of which several grave notices are contained in the records of Irvine presbytery, which then included Largs. The remains of several huts, found at Outerwards on the Noddle Burn, are believed to be those of the temporary refuge of the inhabitants of Largs during the pestilence. The 'Prophet's Grave,' in a retired spot within Brisbane Woods, contains the remains of the Rev. William Smith, minister of Largs, who fell a victim to the plague in 1644. The name was given to the spot because, as Mr Smith was dying, he affirmed that if two holly trees were planted, one at each end of his grave, and prevented from ever meeting, the plague would never revisit the town. The trees have been carefully kept asunder, and Largs has never again suffered from pestilence.

The parish of Largs is bounded on the N and E by Renfrewshire, on the SE by Kilbirnie parish, on the S by Dalry and West Kilbride, and on the W by the Firth of Clyde. Its greatest length, from N by E to S by W, is $9\frac{1}{2}$ miles; its greatest breadth is $5\frac{1}{4}$ miles; and its area is 21,850 acres. On the E boundary a range of hills and high-lying moorland divide this parish so distinctly from the cultivated land to the N, E, and SE,

as to give rise to the saying, 'Out o' the world and into the Largs.' There is probably a reference to this expression in the quaint name, 'the back of the world,' given locally to the NE corner of the parish. The chief heights in the E region are, from N to S, Berry Hill (943 feet), Knockencorsan (1028), Black Fell (1323), Burnt Hill (1569), and South Burnt Hill (1481), Peat Hill (1339), Rowantree Hill (1404), Hill of Stake (1711); on the extreme E border, High Corby Knowe (1615), Girtley Hill (1254), Cockrobin (1271), Box Law (1543), and Blacklaw (1525). The uplands gradually descend as they approach the shore, sometimes, indeed, terminating in abrupt declivities, especially in the N. For the most part they are covered with verdure, and give evidence of having been under tillage. A fertile plain, about a mile broad, extends southwards from about a mile to the N of the town of Largs, well-wooded and cultivated, and separating the beach from the higher ground.

Two burns, the Routen Burn and the Calder Water, trace part of the boundary with Renfrewshire to the NE and E. But most of the streams of the parish are small, and flow westward into the firth. Of these the chief are Kelly Burn, which marks the N boundary, flowing through a beautifully wooded den; Skelmorlie Water, entering the sea just S of Skelmorlie Castle; Noddle Burn, rising between Knockencorsan and Blackfell, and flowing SW, with many feeders, through Brisbane Glen; and the Gogo, which receives the Greeto from Waterhead Moor. Clea Burn, draining the lovely Kelburn Glen, and Fairlie Burn are small streams. Blackfield Loch, in the N, a very small expanse, is the only lake. Trap and Old Red sandstone are the chief rocks; limestone and shale are found near Quarter; and building sandstone is found. Part of the lowland soil is fertile alluvium, but in general it is a poor *débris* of Old Red sandstone. The upland soil is chiefly heathy or moorland. The families most closely identified historically with Largs parish are Fairlie of that ilk, Boyle of Kelburn, Brisbane of that ilk, Fraser of Knock, Wilson of Haylie, and Montgomery of Skelmorlie. The chief mansions and seats are Skelmorlie Castle, Bridgend House, Ashcraig, St Fillans, Knock Castle, Quarter, Routenburn House, Brisbane House, Hawkhill House, Haylie, Kelburn Castle, the property of the Earl of Glasgow, and NETHERHALL, the summer residence of Professor Sir William Thomson, LL.D., President of the Royal Society, created in 1892 Baron Kelvin of Largs. The parish contains, besides the town of Largs, the villages of Fairlie and Skelmorlie, at each of which there is a *quoad sacra* parish church, and the little hamlet of Meigle, where a small concrete chapel was erected in 1876. A high-road between Greenock and Ardrossan passes through the parish; and the Glasgow and South-Western railway in 1880-82 constructed their line to Fairlie, where a steamboat pier, etc., were erected. The line was subsequently, as already mentioned, extended to Largs, and opened in 1885.

Including the whole of Fairlie and most of Skelmorlie *quoad sacra* parish, Largs is in the presbytery of Greenock and the synod of Glasgow and Ayr. Besides the churches in the town, there are Established churches at Skelmorlie and Fairlie, a Free church at Fairlie, and a U.P. church at Skelmorlie. Pop. (1801) 1361, (1831) 2848, (1861) 3620, (1871) 4087, (1881) 5149, (1891) 5320, of whom 3550 were in the ecclesiastical parish.

The name Largs appears to have been anciently given the northern and smaller of the two parts into which the district of Cunningham was divided. John Baliol, competitor for the Scottish crown, inherited this lordship from his mother; and, on his forfeiture, it was conferred by Robert Bruce on his son-in-law, Walter, the Steward of Scotland. The church was held by the monks of Paisley till 1587, when the church lands, etc., were made a temporal lordship in favour of Lord Claud Hamilton. In the reign of Charles I. this passed to Montgomery of Skelmorlie. The church was dedicated to St Columba.

The antiquities of the parish, besides those connected

with the battle of Largs, include Skelmorlie and Fairlie Castles, noticed in separate articles. Not far from the former is an artificial mound, rising to the height of 100 feet, and partly overgrown with trees, which is supposed to have been used by the ancient Britons in the rites of sun-worship and serpent-worship. This serpent-mound was discovered by Dr Phené, whose excavations on the spot resulted in the discovery of a paved platform in the form of a segment of a circle, and large masses of charcoal and portions of bones. 'Taking the latitude of the mound, and the points of the compass where the sun would rise and set on the longest day, this segment-shaped platform, devoted apparently to sacrifice by fire, is found to fill up the remaining interval, and thereby complete the fiery circle of the sun's course, which would be deficient by that space. . . . Independently of the time of year indicated by this fire agreeing with that of the midsummer fires of the Druids, we have here not only an evidence of solar and serpent worship, but also of sacrifice.' About half-way between Skelmorlie and Largs is St Fillan's Well, near which is the site of the ancient chapel of St Fillan, now utterly destroyed. Near the modern Knock Castle rises the remains of an older building of the same name, a very ancient mansion of the Frasers of Lovat, from whom it passed in 1674. Immediately behind rises Knock Hill (711 feet), on which have been discovered the traces of a triply-entrenched camp, believed to be Roman. Various Roman coins and tiles have been dug up, especially in and near the town; and according to Paterson's *History of Ayrshire*, a Roman bath was discovered in Largs in the year 1820.—*Ord. Sur.*, shs. 21, 22, 29, 30, 1865-73. See the Rev. James Johnston's *Norwegian Account of Haco's Expedition* (1782), and Gardner's *Wemyss Bay, Inverkip, and Largs* (Paisley, 1879).

Larkhall, a Lanarkshire town and *quoad sacra* parish, chiefly in Dalsert parish, but partly in Hamilton. Standing 320 feet above sea-level, $\frac{1}{4}$ mile from the right bank of the Avon, $\frac{1}{2}$ mile from the left bank of the Clyde, and $3\frac{1}{2}$ miles SSE of Hamilton, the town has a station on the Lesmahagow branch of the Caledonian railway, $6\frac{1}{2}$ miles S by E of Holytown. With slight exception it began to be built about 1776, and for 15 or 20 years continued to be only a small village. It then was rapidly extended, chiefly by means of building societies, but is less a town, in the ordinary sense of the word, than an assemblage of villages, hamlets, rows of houses, and isolated dwellings. Its inhabitants are principally miners connected with neighbouring collieries, bleachers, and handloom weavers in the employment of Glasgow manufacturers. A drainage scheme for the district was carried out by the County Council in 1893-94 at an expense of £3500. Larkhall has a post office, with money order, savings bank, and telegraph departments, a branch of the Union Bank, a gaswork, a *quoad sacra* parish church (1835), renovated and extended in 1889, a Free church, a U.P. church (1836), an Evangelical Union chapel (1876), St Mary's Roman Catholic church (1872), a public library, baths, public halls, bowling club, cemetery, etc. The *quoad sacra* parish is in the presbytery of Hamilton and synod of Glasgow and Ayr; its minister's stipend is £290. Four public schools—Academy, Duke Street, Glengowan, and Muir Street—and a Roman Catholic school, with respective accommodation for 472, 260, 350, 350, and 212 children, have an average attendance of about 450, 240, 335, 330, and 115, and grants amounting to about £495, £250, £367, £302, and £100. Pop. of town (1861) 2685, (1871) 4971, (1881) 6503, (1891) 8349, of whom 88 were in Hamilton; of *q. s.* parish (1871) 5332, (1881) 7063, (1891) 8545, of whom 485 were in Hamilton.—*Ord. Sur.*, sh. 23, 1865.

Laro, Loch. See CREICH, Sutherland.

Larriston, an estate in Castleton parish, Roxburghshire, on the left bank of Liddel Water, 7 miles NNE of Newcastleton. It is the property of David J. Jardine, Esq. of Dryfeholm. Larriston Castle stood on the right bank of Larriston Burn, and was once the stronghold of a chief of the Elliots, that 'Lion of Liddesdale' whom

Hogg has commemorated in a stirring ballad.—*Ord. Sur.*, sh. 11, 1863.

Larthat, a hamlet of S Dumfriesshire, $5\frac{1}{2}$ miles from Annan.

Lassodie, a collier village in Beath parish, Fife, $4\frac{1}{2}$ miles NNE of the post-town Dunfermline. It has a post and telegraph office, a public school (1877), and a Free church. Lassodie House is the seat of James Dewar, Esq. Pop. of village (1881) 803, (1891) 853.—*Ord. Sur.*, sh. 40, 1867.

Lasswade, a small town and parish of Edinburghshire. The town stands on the left bank of the North Esk, but includes the suburb of Westmill in Cockpen parish, with which it is connected by a substantial stone bridge. There is a station at Lasswade on the Polton branch of the North British railway, $9\frac{1}{2}$ miles SSE of Edinburgh by rail, and $6\frac{1}{2}$ by road. The site of the town, in the hollow and on the steep sides of the Esk valley, gives it an exceedingly romantic and picturesque aspect, although the marked irregularity of the ground prevents the usual convenience of street arrangement. It is said to have furnished Sir Walter Scott with some of the particulars in his description of 'Ganderleugh' in *The Tales of My Landlord*. There are no buildings of any pretensions in Lasswade, although within the last thirty years many substantial dwellings have been erected. The parish church, built in 1793 from plans by Lord Eldin, was reconstructed in 1886; it occupies a lovely site on the brow of the hill overlooking the town. In front of it is a runic cross to Dr Smith of Lasswade and his son, Col. R. B. Smith, the commanding engineer at the siege of Delhi. A small portion of the former church is still standing near, and contains in one of its aisles the burying place of the family of Melville, in which lies the body of Henry Dundas, first Viscount Melville, 'the colleague and friend of Pitt, and from 1775 to 1805 the virtual king of Scotland.' In another small arched aisle lies the poet Drummond of HAWTHORNDEN, a memorial to whom was erected in 1893. An ancient square belfry, four storeys high, was a conspicuous relic of the old church until blown down in November, 1866. Till 1855 the effigy of a fully-armed knight lay among the ruins of the church. South of the bridge stands a house with ancient stones built into it, one of which has the inscription, '1557 A.A., NOSCE TEMPUS.' On the Cockpen side of the Esk a U.P. church was built in 1830. The schools are noted below. Lasswade has a post office, with money order, savings bank, and telegraph departments, a branch of the Bank of Scotland, and various associations and clubs. The village is lighted with gas, and has a fair water supply. The industries are entirely manufacturing, except as regards the supply of the ordinary wants of its inhabitants. There are flour-mills and paper-mills. The first paper-mill at Lasswade was erected about 1750, and in 1794 its hands received a total of about £3000 a-year. Lasswade was for several years the residence of John Clerk, Lord Eldin (1757-1832). Lasswade Cottage, a plain, thatched, ivy-mantled house, was the home of Sir Walter Scott from 1798 to 1804. Here he wrote his *Grey Brother*, translation of *Goetz von Berlichingen*, etc., and here was visited by Wordsworth. Thomas de Quincey, from 1840 till his death in 1859, had his headquarters and family abode at Man's Bush Cottage (now De Quincey Villa), $1\frac{1}{2}$ mile beyond Lasswade, in the hollow of the Esk, beside Polton station. William Tennant, the author of *Anster Fair*, was parish schoolmaster from 1816 to 1819; and Thomas Murray (1792-1872), the Gallovidian author, died here. Pop. (1861) 713, (1871) 1258, (1881) 1232, (1891) 1295.

Lasswade parish is bounded N by Colinton, Liberton, and Newton, W by Glencorse, S by Penicuik and Carrington, and E by Cockpen, Newbattle, and Dalkeith. Its greatest length, from NNE to SSW, is $7\frac{1}{2}$ miles; its greatest breadth is 6 miles, but its average breadth is little over 3 miles; and its area is 10,678 acres. A projecting wing at the NW extremity is occupied by the E end of the Pentland Hills, presenting partly heath and partly good pasture; and in the S, a district of

bleak and unsheltered moorland, including some of the northern declivities of the Moorfoot Hills, stretches for about 2 miles into the interior. The surface on the whole declines rapidly from the border towards the SE, and consists of rich and well-cultivated plain, finely wooded, and of picturesquely diversified scenery. The North Esk strikes the boundary of the parish about a mile from the SW extremity, runs along the W boundary for about $\frac{1}{2}$ mile, and then turning NNE cuts the rest of the parish into nearly equal parts. The bed and gorge of this river form a beautifully romantic and picturesque glen, with lofty precipitous sides, thickly wooded banks, and are thus referred to in Scott's ballad fragment of *The Grey Brother*:—

* Sweet are the paths, O passing sweet!
By Esk's fair streams that run
O'er airy steep, through copsewood deep,
Impervious to the sun.

* Who knows not Melville's beechy grove,
And Roslin's rocky glen;
Dalkeith, which all the virtues love,
And classic Hawthornden?

The hills in the NW are eruptive, in the S Silurian, while the great bulk of the lowland rocks are carboniferous. Limestone, sandstone, and clay are worked, but the chief mineral of the parish is coal, which is mined chiefly near Loanhead and Rosewell. In the barony of Loanhead alone there are some 25 coal seams, from 2 to 10 feet thick, and in some workings the depth of 270 feet has been attained. It is calculated that Lasswade sends annually about 30,000 tons of coal to Edinburgh, besides supplying local wants. The dip of the coal on the E side of the Esk is so small that they are called 'flat broad coal,' in contrast to the edge-coals on the W side. A coal-mine was accidentally set on fire in 1770 near the Liberton boundary of the parish, and, in spite of all efforts to put out the fire, it burned for more than twenty years.

The other industries of the parish are noticed under the various towns and villages. It was long noted for its oat-meal, and a miller in Lasswade used to supply that article to the royal nursery during the childhood of George III.'s family, Lord Melville having recommended the meal to the king. The chief proprietors in the parish are Lieut.-Col. Gibsons of Pentland, Viscount Melville, Sir J. H. W. Drummond, Bart., of Hawthornden, and Sir Geo. Clerk of Penicuik. The chief seats along both banks of the Esk are Mavisbank (now a private asylum for lunatics), Dryden Bank, Dryden, and Rosbank on the left; and Eldin, Polton, Springfield, Glenesk, Hawthornden, Gorton, and Auchendinny (once the residence of Henry Mackenzie, *The Man of Feeling*), on the right. Eldin was the residence of John Clerk, F.R.S. (1736-1812), inventor of the naval tactic of breaking the enemy's line. Numerous villas have been built near Roslin and Lasswade. But the grandest county seat is MELVILLE CASTLE, about a mile below Lasswade. The parish includes the villages of Lasswade, Roslin, Loanhead, and Rosewell, a small suburb of Penicuik, and part of Bonnyrigg. It is traversed by the Peebles branch of the North British railway.

Lasswade parish is in the presbytery of Dalkeith and the synod of Lothian and Tweeddale. The parish of Melville was incorporated with it in 1633, and a considerable part of the ancient parish of Pentland is also included. The stipend is £223 with manse. The civil parish embraces the *quoad sacra* parishes of Loanhead, Roslin, and Rosewell. There are a Free church at Roslin village, a U.P. church at Lasswade, a Free and a Reformed Presbyterian church at Loanhead, and an Episcopal chapel at Lasswade and another at Roslin. The schools in the parish, with their respective accommodation, average attendance, and government grant, are Lasswade (420, 335, £380), Loanhead (494, 420, £425), Pentland (250, 165, £170), Rosewell (292, 240, £262), Roslin (394, 290, £333), and Loanhead Roman Catholic (205, 180, £180, the average attendance and government grant being approximate). Pop. (1801) 3348, (1841) 5025, (1861) 5688, (1881) 8872,

(1891) 10,455, of whom 3038 were in the ecclesiastical parish.

Lasswade parish church, with its pertinents, became, in the 12th century, a mensal church of the Bishop of St Andrews; it was later a prebend of St Salvador's College, St Andrews; and in the reign of James III. it was transferred, by the Pope's authority, to the dean of the collegiate church of Restalrig. The vicinity of Roslin was the scene of a battle, or rather three battles in one day (24 Feb. 1303), in which the Scottish army is said to have successively overcome three divisions of the English army, each more numerous than the victors' whole force. Among the antiquities the chief are the castle and chapel at Roslin, and the mansion and caves at Hawthornden. Of the Maiden Castle that stood at Lasswade, nothing is now visible but some massive foundations. Wallace's cave, on the Esk, is calculated to hold 70 men; Wallace's camp, a curious crescent-shaped formation, is at Bilston Burn; near Mavisbank House is a supposed Roman station, the chief feature of which is a circular earthen mound, girt with ramparts, now cut into terraces, where various relics have been found. From a tumulus, in a neighbouring farm, urns filled with calcined bones have been dug. One mile E of Melville Castle—itsself an interesting historic building—is Sheriffhall, where some green mounds are held to mark the site of an ancient camp, and where stood an old house in which George Buchanan is said to have written his *History of Scotland*.—*Ord. Sur.*, sh. 32, 1857.

Lathallan House, a mansion in Kilsconquhar parish, Fife, $2\frac{1}{2}$ miles NNW of Colinsburgh. The estate belongs to the Lumsdaine family.

Latheron, a coast village and parish of S Caithness. The village of Latheron, Janetstown, or Latheronwheel, stands near the mouth of Latheronwheel Burn, $18\frac{1}{2}$ miles SW of Wick and 19 NE of Helmsdale station on the Highland railway. It has a hotel, a post office, with money order, savings bank, and telegraph departments, and a combination poorhouse. Other fishing villages in the parish, with their distance from Latheron, are BERRIEDALE (9 miles SSW), DUNBEATH ($3\frac{1}{2}$ SW), FORSE ($2\frac{1}{2}$ ENE), LYBSTER (5 ENE), and CLYTH ($4\frac{1}{2}$ ENE), all of them being noticed separately.

The parish is bounded N by Watten and Wick, SE by the German Ocean, SW and W by Kildonan in Sutherland, and NW by Halkirk. Its utmost length, from NE to SW, is $21\frac{1}{2}$ miles; its breadth varies between $1\frac{1}{2}$ and $14\frac{1}{2}$ miles; and its land area is $186\frac{1}{2}$ square miles or 119,539 acres. The coast, which all along—for $25\frac{1}{2}$ miles—is followed pretty closely by the high-road to Wick, rises so steeply from the sea that the road has an altitude of 700 feet above sea-level at the ORD OF CAITHNESS, 500 beyond Berriedale, 254 beyond Dunbeath, 262 beyond Latheron, and 252 beyond Clyth. It projects no prominent headland, and is indented only by tiny inlets; but its lofty cliffs are pierced, at high-water mark, by numerous caves, the haunts of seals, and some of them 300 to 360 feet long. Of several streams that drain the interior to the sea, the largest are Langwell Water (running $12\frac{1}{2}$ miles east-by-southward to Berriedale Water, 3 furlongs above its mouth), BERRIEDALE Water ($21\frac{1}{2}$ miles east-south-eastward), DUNBEATH Water ($14\frac{1}{2}$ miles east-by-southward), and Reisgill Burn ($4\frac{1}{2}$ miles south-by-eastward); whilst of thirteen lakes the principal—all near the Halkirk border—are Lochs Stemster ($2\frac{1}{2} \times 2$ furl.; 469 feet), Rangag ($5\frac{1}{2} \times 2\frac{1}{2}$ furl.; 375 feet), Ruard ($8\frac{1}{2} \times 3$ furl.; 495 feet), and Dubh ($4\frac{1}{2} \times 1\frac{1}{2}$ furl.; 698 feet). Chief elevations are the *Ord of Caithness (1078 feet), Braigh na h-Eaglaise (1387), and *Scalabsdale (1819), to the S of Langwell Water; Scaraben (2054), MORVEN (2313), and the *Knockfin Heights (1416), between Langwell and Berriedale Waters; Beinn Choireach (891), and Orschaige Hill (969), between Berriedale and Dunbeath Waters; and Cnocan Con na Craige (867), Coire na Beinne (740), and *Cnoc an Earranaiche (693), to the N of Dunbeath Water—where asterisks mark those summits that culminate on the confines of the parish. Thus

the interior is charmingly diversified, especially in the SW, presenting a continued succession of vale and hill, of glen and mountain, sometimes in rapid alternation, and generally with bold features in striking contrast to the tame flat aspect of most other parts of the county. The south-western district, indeed, is everywhere upland, with mountains nearly as lofty, and glens quite as picturesque, as many of those most famous in the Highlands. The rocks are variously granite, clay flagstone, Old Red sandstone, and red sandstone conglomerate; and the soil of the arable lands is of various quality, but mostly shallow, sharp, and gravelly, in many parts encumbered with boulders. In spite of extensive reclamations, less than a twelfth of the entire area is in tillage; about 600 acres are under wood, chiefly along the romantic braes of Langwell and Berriedale Waters; and the rest is sheep-walk, deer-forest, and heathy waste. The maritime crofters depend in great measure on the harvest of the sea; and the following are the fishing stations, with the number of their boats and fishermen:—Berriedale (4; 16), Dunbeath (37; 86), Latheronwheel (22; 49), Forse (18; 60), Lybster (81; 265), Clyth (21; 80), total (183; 556). Antiquities are the ruins or sites of 'Picts' houses, standing stones, and the castles of Berriedale, Achastle, Knockinnan, Latheron, Forse, Swiney, and Clyth, all situated on the coast, chiefly on the brink of rocky cliffs overhanging the sea. Sir John Sinclair (1754-1835), the distinguished writer on Scottish agriculture and statistics, resided much on the Langwell estate, and commenced here some of his earliest improvements; and at Badreisky, near Forse, died Peter or 'Luckie' Sutherland (1768-1880). Latheronwheel House, near the right bank of the stream of the same name, about a mile above its mouth, and 3 miles NNE of Dunbeath, is a seat of Major Michael Stocks. Other mansions, noticed separately, are DUNBEATH Castle, FORSE HOUSE, LANGWELL, and SWINEY HOUSE. Giving off Berriedale and Lybster *quoad sacra* parishes, Latheron is in the presbytery of Caithness and synod of Sutherland and Caithness; the living is worth £326. The parish church was built in 1734, and, as repaired and enlarged in 1822, contains about 900 sittings. Lybster church was built in 1836, and constituted *quoad sacra* in 1887; and there are Free churches of Latheron, Berriedale, Lybster, and Bruan. Thirteen schools, with total accommodation for 1638 children, have an average attendance of about 860, and grants amounting to over £1080. Pop. (1801) 3612, (1831) 7020, (1861) 8571, (1871) 7400, (1881) 6675, (1891) 5875, of whom 2097 were Gaelic-speaking, whilst 2027 belonged to Latheron, 2735 to Lybster, and 1113 to Berriedale ecclesiastical parishes.—*Ord. Sur.*, shs. 110, 109, 1877-78.

Lathockar, an estate, with a mansion, in Cameron parish, Fife, 4½ miles SSW of St Andrews.

Lathones, a hamlet in Cameron parish, Fife, 6 miles SSW of St Andrews. It has a U.P. church.

Lathrisk House, a good old mansion, dating from about the end of the eighteenth century, in Kettle parish, Fife, near the right bank of the Eden, 1¼ mile NE of Falkland. Purchased by his ancestor about 1733, the estate is the property of George Johnstone, Esq.—*Ord. Sur.*, sh. 40, 1867. See KETTLE, LARGO, and MONZIE Castle.

Lattrick. See CAMBUSLANG.

Latterach. See GLENLATTERACH.

Lauchope or **Lachop House**, an old mansion in Bothwell parish, Lanarkshire, 1¼ mile ENE of Holytown. A tower-house, with walls of remarkable thickness, it was the seat of a very ancient family, the parent-stem of the Muirheads; and gave refuge, on the eve of his flight from Scotland, to Hamilton of Bothwellhaugh, Murray's assassin at Linlithgow (1570).—*Ord. Sur.*, sh. 31, 1867.

Lauder, a town and parish in the district of Lauderdale, Berwickshire. The town is a royal burgh, a post-town, and the capital of Lauderdale. It stands on the right bank of Leader Water, 6 miles ENE of Stow station on the Waverley route of the North British

railway, 7 NNW of Earlston on the Berwickshire branch of the same system, and 25 SE of Edinburgh. Communication is maintained with Stow by means of daily omnibus and carrier's cart. The town consists chiefly of one long plain irregular street, stretching NW and SE along the highway. At one end this thoroughfare is split into two by a row of houses; and diagonally across its NW end runs another street from E to W, about 350 yards long. Describing the segment of a circle on the SW side of the main street, and running nearly parallel with it on the NE side, are the two thoroughfares of Upper and Under Backside. The park wall of Thirlestane Castle screens the whole of the NE side of these thoroughfares, and forms on that side the boundary of the burgh. Though Lauder contains some neat and well-built houses, and has its suburbs adorned with a few neat villas, it presents on the whole a plain and dull aspect. The town-hall stands at the NW end of the intersecting line of houses in the main street, overlooking a radiated pavement that marks the site of an ancient cross. The parish church, a cruciform edifice of quite unimposing appearance, stands a little off the street line immediately SW of the town-hall. Erected in 1673, when the Duke of Lauderdale removed its predecessor from the vicinity of his residence, it was repaired in 1820. Lauder also contains a Free church, a U.P. church, and a Roman Catholic meeting-house. Its school, which is contained in a good building, is noted under the parish. Lauder has a head post office with the usual departments, branches of the Bank of Scotland and the Commercial Bank, and three hotels. It has also a public reading-room and library, agricultural, horticultural, ornithological, and friendly societies, a gas company (1842), etc. There are a company of rifle volunteers, who have a good drill-hall, a freemasons' lodge, bowling, curling, and draughts clubs. Annual gymnastic games are held in August. Some little trade with the surrounding country districts is carried on, but the commercial importance of Lauder is of the slightest description. It maintains its communication with the world at large chiefly in virtue of its being a convenient centre for trout-fishers. Besides daily communication with Stow, there is a carrier from Lauder to Dalkeith every Thursday, and to Galashiels every Saturday.

The town, under the Burgh Police Act of 1892, is governed by a provost, 2 bailies, and 6 commissioners. The municipal constituency numbered 205 in 1895, whilst in the same year the corporation revenue was £527. The burgh is proprietor of Lauder Common, a

Seal of Lauder.

stretch of 1700 acres. Sheriff small-debt courts are held on the last Wednesday of February, first Wednesday of July, and Saturday before last Monday of October. A justice of peace court is held when required. Lauder formed one of the Haddington group of burghs until 1885, when, under the provisions of the Redistribution of Seats Act, the group was abolished, and the re-

presentation of each burgh was merged in the county in which it was situated. Valuation (1883) £2410, (1893) £2176, (1895) £2191. Pop. (1841) 1148, (1861) 1121, (1881) 1014, (1891) 763.

Lauder is said to have been made a royal burgh in the reign of William the Lyon, but the present charter dates merely from 1502. In 1483 Lauder church—now demolished—was the scene of the meeting of Scottish nobles to take measures against the low-born favourites of James III. Under the Earl of Angus (Bell-the-Cat), the lords, in the words of Pitscottie, 'laid handis on all servandis, and tuk them and hanged them over the Bridge of Lothar before the king's eyes.' This historic bridge has quite disappeared. The strong tower, known as Lauder Fort, said to have been built by Edward I. of England, and repaired under James VI., is now incorporated with THIRLESTANE CASTLE, the seat of the Earl of Lauderdale, whose fine grounds and park are in immediate proximity to the town.

Lauder parish had a detached portion, comprising 1302 acres, situated on the W of the Leader Water, adjoining the parish of Earlston on the opposite side, $1\frac{1}{2}$ mile to the S of the nearest part of the main body of Lauder parish, and separated from it by a portion of Melrose parish. This detached portion the Boundary Commissioners transferred in 1891 to the parish of Melrose and to the county of Roxburgh. The parish is bounded N by Haddingtonshire, NE by Longformacus, E by Westruther, SE by Legerwood, S by Roxburghshire, and W by Edinburghshire and Channelkirk. Its length, from N to S is 11 miles; and its greatest breadth is 7 miles. The total area of the parish, which is the largest in Berwickshire, is 33,595 $\frac{1}{2}$ acres. The boundary line along the N and NE, to the extent of 8 miles, is the watershed of the Lammernuir Hills, and stretches to the slopes of Lammer Law (1733 feet), which gives name to the whole range. The highest of the peaks that rise within the parish are Crib Law (1670 feet), Seenes Law (1683), and Huntlaw (1625), which lie in the northern portion of the parish. For some 5 or 6 miles S of the N border, the surface is occupied by offshoots of the Lammernuir Hills, intersected with glens and corries. The aspect is generally bleak and the soil moorish, but gradually becomes more fertile as it approaches the S. The valleys through which the various streams flow are fresh and verdant. The vale of the Leader in particular has a low open bottom with a width varying from 1 to 2 miles, which it retains throughout its course. The streams of the parish are fairly numerous. Leader Water, the name of which is merely a variety of Lauder, is the chief. Rising in the extreme NW corner of the parish, it flows for $5\frac{1}{2}$ miles along the W boundary; runs for $4\frac{1}{2}$ miles SSE through the interior; and forms, for $\frac{2}{3}$ mile, the boundary with Legerwood. Numerous burns rise on the borders, and run right and left to the Leader; one of the largest of these, the BOONDREIGH, for $6\frac{1}{2}$ miles bounds Westruther and Legerwood. One of the smallest, called Lauder Burn, runs NE to the S vicinity of the town. There is good trout fishing in the Leader. Perennial springs are both numerous and copious. The predominant rocks are eruptive, Silurian, and Devonian, and yield abundant material for local building. On much of the arable land the soil is clayey, in some parts rich loam over a gravelly and sandy bottom; but, over the greatest proportion, it is of a light dry character, specially suitable for turnips. The greater part of the hills affords excellent pasturage for sheep. Agriculture and sheep-farming are the only industries of importance.

The chief landlords are the Earl of Lauderdale and the Marquis of Tweeddale. The parish contains the burgh of Lauder. The chief seats are Thirlestane Castle, Chapel-on-Leader, and Allenbank.

The parish belongs to the presbytery of Earlston and to the synod of Merse and Teviotdale. The stipend is £374, with manse. The Free church of Lauder is in the F.C. presbytery of Selkirk; and the U.P. church in the U.P. presbytery of Melrose. The public school at Lauder has accommodation for 436 pupils, an average

attendance of about 195, and a government grant of over £227. Cleikimin public school has 70, about 30, and over £380 as the figures for these particulars. Pop. of civil parish (1801) 1760, (1841) 2198, (1861) 2198, (1871) 2120, (1881) 1940, (1891) 1499. Houses inhabited (1891) 342, vacant 58.—*Ord. Sur.*, sh. 25, 1865.

The ancient parish church appears to have been endowed with a considerable living. The advowson was given in the reign of David I. to Sir Hugh Morville, constable of Scotland; and it afterwards passed into the possession of Devorgilla, wife of John Baliol, by whom it was given to the monks of Dryburgh, who retained it as a vicarage till the Reformation. Subordinate to the church were two chapels—one dedicated to St Leonard, near the extreme southern point of the parish, and one at Redslie, in that portion of the parish which has been transferred to Melrose, as already mentioned. Beside the former of the two chapels stood an hospital dedicated to the same saint. The chief antiquities, besides Thirlestane Castle, are various tumuli, several Caledonian and Pictish camps, and some remains of circular stone huts, discovered in 1872, and supposed to be the relics of a Caledonian town. Various fragments of swords, bones, flint-arrow heads, etc., have been discovered.

Lauder was the birthplace of Sir John Maitland, Lord Thirlestane, who in the reign of James VI. was lord privy seal, secretary of state, and chancellor of Scotland; and of the Rev. John Wilson, D.D., F.R.S. (1804-75), missionary, philanthropist, and scholar. The Rev. James Guthrie, first Scottish martyr after the Reformation, was minister for a short time here.

Lauderdale, an ancient district of Berwickshire, the western one of the three into which the county was divided. In geographical distribution and agricultural properties Berwickshire is all strictly divisible into simply the Lammernuir and the Merse; the upper and the lower parts of Lauderdale belonging respectively to these just as distinctly as any other part of the county. The limits of Lauderdale, as regards the usage of calling it a distinct district, cannot be defined, and must probably be understood as including simply the basin of Leader Water and its tributaries, so far as the basin is in Berwickshire. Even anciently the limits appear to have been very different in successive periods, and to have marked fluctuations both in the kind and in the extent of the civil jurisdiction within them. Maps of Lauderdale, Merse, and Lammernuir were made by Timothy Pont in the reign of Charles I., and inserted in Blaeu's *Atlas Scotiæ*. The author of the *Caledonia*—guided apparently by these maps—states the area of Lauderdale to be 105 square miles, that of Lammernuir to be 138 $\frac{1}{2}$, and that of the Merse to be 202 $\frac{1}{2}$. At the abolition of hereditary jurisdictions the Earl of Lauderdale received the same compensation for the regality of Thirlestane as for the bailiery of Lauderdale—£500. For a notice of the noble family to whom the district gives title, see THIRLESTANE CASTLE.

Laurencekirk (formerly Conveth), a parish in Kincardineshire, in Howe of the Mearns, is about 4 miles in length and 3 in breadth, having an area of 5617 acres, of which 5 are water. Pop. (1755) 757, (1801) 1215, (1841) 1904, (1871) 2174, (1881) 2045, (1891) 1934. Boundaries—N and NE, Fordoun; SE and S, Garvock; SW and W, Marykirk. The SE division forms a gentle slope, intersected by several rivulets falling into the Luther Water, which, entering from Fordoun, flows 3 miles SSW through the middle of the parish, and finds its way into the North Esk after a course of 5 miles through Marykirk. The other streams are Gauger's Burn, dividing from Marykirk; Burn of Leppie, on the E, separating from Fordoun; and Ducat Burn, in the N, falling into the Luther.

Soil, Climate, etc.—The height above sea-level varies from 150 to 400 feet, the maximum being attained at the SW boundary, and the town standing at 250 feet. Until nearly the close of the 18th century a part on both sides of the Luther formed a morass. Through the skill and enterprise of the agriculturist the marshy

grounds were by degrees converted into arable land, the process being completed towards the middle of the 19th century by the deepening and straightening of the channel of the Luther. A happy result of the improvement is the absence of any trace in the district of ague, to which the inhabitants were subject for centuries. The ancient bog is now soil of a mossy description, and the rest of the land is mostly a clayey loam on red clay subsoil resting on Old Red sandstone. The reputation of the parish for advancement in agriculture stands high. There are several large farms skilfully cultivated, of which Bent of Haulkerton, by Mr James Alexander, may be specially noted. The first covered court, with loose feeding-boxes for cattle, introduced into Scotland was on Spurriehillock, by Mr D. Dickson, who tenanted that farm from 1838, and soon after entering set the example, which has since been universally followed. The only mansion is Johnstone House, near the southern bounds of the parish.

Trade, etc.—During the greater part of the 18th century the people were dependent upon agricultural labour. Towards the close various attempts were made to procure other means of subsistence, chiefly at the instance of Lord Gardenstone. A starch work was in operation for a time; quarries were opened, but found unremunerative; and stocking-weavers were induced to settle, who had soon to have recourse to other occupations. The craft earliest developed and taking firmest hold was handloom weaving. Referring to this period, a statistical account records that 'there was carried on an extensive domestic manufacture of linen, which was commonly known in the markets by the name of Mearns linen; and the spinning of the yarn and manufacturing of the cloth afforded employment to many hands in the families both of tenants and crofters.' By and by weaving at home was practically discontinued, and public weaving shops became the rule, one or two agencies for distant weaving companies being established. About the beginning of the 19th century a flax-spinning mill was erected at Haulkerton, where there is evidence of a waulk-mill having existed for at least a century before. It employed from 16 to 20 people until the spring of 1835, when it was accidentally destroyed by fire. At Blackiemuir there was a bleach-field until 1813, when it was converted into a spinning-mill, to give employment to about a score of people upon an average until its discontinuance in 1842. Since then the only occupation in the rural part has been connected with half a dozen grain mills scattered over the parish, and with agriculture generally.

Original Constitution.—The whole lands of the parish now called Laurencekirk were separated in the 12th century longitudinally into three nearly equal parts. The district of Conveth (lands conveyed), which gave its name to the parochial combination, formed the central division. That including the lands N of Luther Water was named Luthra, while the remaining division consisted of lands included in the barony of Garuocis or Garcock, and now composing the farms which adjoin the parish of that name. A small portion, Blackiemuir and Haddo, belonged at an early date to the priory of St Andrews; various grants of the lands were made to the abbey of Arbroath; and the rest was composed chiefly of royal lands. The western boundary is within 1 mile of the ancient castle of Kincardine, once a favourite residence of the Scottish kings; and old charters show that the early destination of many of the lands was the result of this proximity to the abode of royalty.

Distinguished Families.—The proprietors have included some of the most distinguished Scottish families; and it is remarkable that, with the exception of a few acres, the whole lands are presently owned by representatives of the families which held them in the 12th and 13th centuries. The first whose name is found in connection with the parish is a branch of the family of Berkeley, whose name was changed to Barclay, and the most famous of whom in more recent times are the apologist for the Quakers and his descendants the Bar-

clays of Urie. Next in order of time were the Falconers, whose name is first associated with Luthra, and afterwards with the same lands under the name of Haulkerton, which, as well as their family name, indicates their early services to have been those of falconers or hawkers to the king. The family was ennobled by Charles I., in 1647, the first Lord Falconer being a lord of session and a devoted adherent of the unfortunate monarch. The fifth Lord Falconer married a daughter of the second Earl of Kintore. His grandson succeeded to the title and estates of Kintore on the death of the last Earl Marischal. A union was thus formed of two families who had been long connected with the parish, the Keiths-Marischal having in the main line and in one of the branches been numbered for several generations among its proprietors. The Earl of Kintore is still the largest heritor. The Middletons were landowners from a very early period—first of Middleton of Conveth, from which the family name was derived, and afterwards of Kilnhill, which was disposed of in 1606 by the uncle of the famous Earl Middleton. Among other families having landed interest in the parish may be mentioned the Wisharts of Pittarrow (from whom the martyr sprang), the Frasers (Thanes of Cowie), the Lords Gray, Strachan of Thornton, Allardice of that Ilk, Irvine of Drum, Stuart of Inchbreck, Livingstone of Dunipace, Carnegie of Pittarrow, &c. The present proprietors are the Earl of Kintore, Dr. Johnston of Redmyre, Sir Thos. Thornton of Thornton, who is owner of Mill of Conveth, Mr. David A. Pearson, and Sir Alex. Baird, Bart., of Urie.

Distinguished Natives, etc.—James Beattie, the author of *The Minstrel*, was a native, having been born at Barrowmuirhills in 1735. Many of the most beautiful periods in his great work were due to impressions on his mind when he was a boy at the parish school. Thence he passed as a student to the University and Marischal College, which he afterwards for many years adorned as a professor. Catherine Falconer, the mother of Beattie's distinguished opponent, Hume the historian, was a sister of the fifth Lord Falconer. Thomas Ruddiman, the celebrated grammarian and philologist, had been five years teacher of the parish school when he met Dr Pitcairne, by whose advice he went to Edinburgh. This was in 1700, though his most famous work bears on the title-page, 'Rudiments of the Latin Language. By Thomas Ruddiman, Keeper of the Advocates' Library, and sometime Schoolmaster at Laurencekirk in the Mearns. 1st ed. Edinburgh 1714.' Fifteen editions of the Rudiments were published in the author's lifetime; and at his death 'he left this saleable treatise as a productive income to his widow.'

Ecclesiastical.—The Church of Conveth was early dedicated to St Lawrence, who suffered martyrdom in 256, being burned to death on a gridiron. At an early date it was a rectory under the Prior of St Andrews, and down to the abolition of patronage the patrons of the parish were the College of St Mary's. The church was dedicated in 1244, and about 1275 the 'Kirk of Cuneueth' was rated at 30 marks. The first ordained minister after the Reformation was Patrick Boncle, the stipend being 100 pounds Scots. Of the thirteen parish ministers who have succeeded him there may be noticed:—Robert Douglas, of the house of Douglas, Earls of Angus, who was settled prior to 1657, translated to Hamilton 1665, and was afterwards Dean of Glasgow, Bishop of Brechin 1682-84, and Bishop of Dunblane 1684-89. He was ejected at the Revolution, and died in 1716. He was the ancestor of the Douglasses of Brigton, and of Sylvester Douglas, the distinguished lawyer, who in 1800 was created an Irish peer, with the title of Baron Glenberrie of Kincardine. Andrew Thomson, minister, 1727-59, to whom Dr Beattie was greatly indebted in his earlier years. Dr George Cook, 1795-1829, the distinguished historian of the Church, and one of its leaders for many years prior to the Disruption. He died in 1845. The present church was built in 1804 and enlarged in 1819, but is still insufficient in size. In the churchyard are some interesting old tombstones, several with inscriptions by Dr Beattie.

The living is returned at £357, with manse. Episcopacy was very strong in the parish during the whole of the 18th century. The incumbent at the Revolution, William Dunbar, a keen Episcopalian, was superseded in 1693 (a successor being appointed in 1699), but not deposed until 1716. There is notice in 1726 of an Episcopal church, which was burned by the soldiers of the Duke of Cumberland in 1745. The congregation afterwards worshipped under successive ministers, first at Laurencekirk, then at Mill of Haulkerton, and subsequently at East Redmyre. John Strachan, afterwards Bishop of Brechin, was pastor for many troublous years. Lord Gardenstone, though a Presbyterian, built and endowed a chapel in Laurencekirk, which was opened in 1791. The first incumbent was Jonathan Watson, who the following year was elected Bishop of Duukeld, and continued in both charges until his death in 1808. The present church, Early English Gothic, was built in 1871. It contains 170 sittings, and has a spire 70 feet high. There is a parsonage, with a glebe. The Congregationalists have a small chapel which was built in 1842, the first incumbent being David Moir, a native. The first Free church was a plain building in the street now named Farquhar Street. It has been converted into a dwelling-house. The present handsome edifice in High Street was built in 1857.

Schools, etc.—The old Parish School was taught by a succession of eminent teachers. The earliest recorded was William Dunbar, afterwards parish minister, already mentioned. The most distinguished was Ruddiman; a part of the building in which he officiated still remains. James Milne, schoolmaster, 1720-61, was Dr Beattie's teacher, and a good classical scholar. William Pyper, afterwards LL.D. and Professor of Humanity in St Andrews University, was parish teacher, 1815-17. The public school, erected by the School Board and enlarged in 1894, is a commodious building. There is a Ladies' School for boarders and day scholars, and there is a school in connection with the Episcopal congregation. The School Board has a joint interest in Redmyre School, close upon the E border of the parish. The details regarding the various schools may thus be tabulated:—Public school, accommodation 334, average attendance about 245, grant over £260; Episcopal School, 120, about 90, over £70; Redmyre School 153, about 80, over £72. The valuation of the parish (1893) was £5756, 12s. 6d., plus £1338 for railways, etc.—*Ord. Sur.*, shs. 66, 57, 1871-68. See W. R. Fraser's *History of the Parish and Burgh of Laurencekirk* (Edinb. 1880).

Laurencekirk, the only town in the parish noticed above, stretches for nearly a mile along the highway between Perth and Aberdeen, and has a station on the section of the Caledonian railway lying between the two cities, and a post office, with money order, savings bank, and telegraph departments. Its distance from Montrose and Brechin is respectively 10 and 12 miles, and from Stonehaven and Aberdeen 14 and 30 miles. The cattle trysts and fairs on Laurence Muir have been discontinued—the only markets and fairs now held here being the following:—Weekly market on Mouday for grain and cattle; horse market on the Monday in March before the Perth horse market; St James's fair, Thursday after the third Tuesday of July, *o.s.* Hiring fairs are held on the last Wednesday of January (St Anthony's fair), on the 26 May, on Thursday after the third Tuesday of July, *o.s.*, and on 22 December. There are an extensive cattle auction mart, a brewery, a gas company, the Agricultural Research Association, Horticultural Society, Farmers' Society, Musical Association, Public Reading Room, a savings bank, and curling, skating, and cycling clubs. Besides the churches referred to in the notice of the parish, the principal buildings are the Town Hall, the Mason Hall (built in 1779), the St. Laurence Hall (erected by subscription in 1866 at a cost of £1400), and Kinnear's Hall, the Town and County Bank (1854; established 1839), and North of Scotland Bank (1872; established 1857). The principal streets are High Street, extending the whole length of the village; Johnstou Street, formed about 1820; and Garvoek Street, soon

after. There are large and well-replenished shops, at which all the varieties of merchandisoe may be procured. The principal inns are the Gardenstone Arms, Royal, Western, and Crown Hotels; and there is the utmost facility for hiring in all its branches. New sewage works were begun in 1894. There are numerous modifications and bursaries in connection with the town. Valuation of the burgh (1893), £5113, plus £648 for railways, etc. Pop. (1841) 1365, (1851) 1611, (1871) 1521, (1881) 1454, (1891) 1426, of whom 767 were females. Of houses in 1891 there were 392 inhabited, 21 vacant, and 3 building. The village was long noted for the manufacture of snuff-boxes, the peculiarity of the 'Laurencekirk snuff-hox' being a concealed hinge and wooden pin, the invention about 1783 of Charles Stiven. The name of Laurencekirk was first applied to a village on the Haulkerton estate, which was erected a burgh of barony early in the 17th century. By and by it was amalgamated with the Kirkton of Conveth, and the two extended to the present site on the estate of Johnston. Under the fostering care of Lord Gardenstone the new portion came to be a considerable village, while the original burgh of Haulkerton dwindled away, a few relics only surviving till about 1820 or 1830. Under the old name the village was erected into a burgh of barony, under the administration of a bailie and 4 councillors, the charter being dated 27 Aug. 1779. Under the Burgh Police Act of 1892 it is governed by a provost, 2 bailies, and 6 commissioners.

Laurieston. See GOVAN.

Laurieston, a village in Falkirk parish, Stirlingshire, $\frac{1}{2}$ mile E by S of Falkirk town, under which it has a post and money order office. Adjoining the park of Callander House, and commanding from its elevated site a brilliant view of the Carse of Falkirk and the Ochil Hills, it was feued out in 1756 by Francis Lord Napier. At first it was called Langtown, next Merchiston or New Merchiston, and afterwards Lawrence-town, now abbreviated into Laurieston, in honour of the late Sir Lawrence Dundas, who did much to improve and enlarge it. It comprises a central square and regularly intersecting streets, southward and westward. Nail-making is still carried on, though not so extensively as formerly. There is a public school and a Free—until 1876 Reformed Presbyterian—church, built in 1788. Pop. (1831) 1306, (1861) 1265, (1871) 1310, (1881) 1452, (1891) 1725.—*Ord. Sur.*, sh. 31, 1867.

Laurieston, a village in Balmaghie parish, Kirkeudbrightshire, 7 miles WNW of Castle-Douglas, under which it has a post office. It was the meeting-place of the war committee of the Kirkeudbrightshire Covenanters.

Laurieston. See EDINBURGH.

Lauriston Castle, a mansion in Cramond parish, Edinburghshire, on an eminence, $\frac{1}{2}$ mile NNW of Davidson's Mains and $3\frac{1}{2}$ miles WNW of Edinburgh. Built in the latter part of the 16th century by Archibald Napier, a younger brother of the inventor of logarithms, it was enlarged in 1845, and has very beautiful pleasure-grounds. It was the residence of the famous financier John Law (1671-1729), and of the Right Hon. Andrew Lord Rutherford (1791-1854); and is now the seat of Captain Thomas Macknight Crawford, of Cartsburn (b. 1820).—*Ord. Sur.*, sh. 32, 1857. See J. P. Wood's *History of Cramond* (Edinb. 1794), and John Small's *Castles and Mansions of the Lothians* (Edinb. 1883).

Lauriston Castle, a mansion in St Cyrus parish, Kincardineshire, on the steep verge of a deep wooded ravine, $\frac{3}{4}$ mile N of Lauriston station on the Bervie branch of the North British railway, this being $6\frac{1}{2}$ miles NNE of Montrose. Comprising portions of a 10th century castle, which in 1336 was captured by Edward III., and which belonged to the Stratons from the 13th century till 1695, it is mainly a spacious and elegant mansion-house of the early part of the 19th century, with grounds of singular beauty. Its owner is David Scott Porteous, Esq. (h. 1852; suc. 1872).—*Ord. Sur.*, sh. 57, 1868.

Law, a mining village in Carluke parish, Lanarkshire, with a station on the Caledonian railway, $6\frac{1}{2}$ miles NW of Carstairs, and 6 SE of Carfin, being the junction of the Caledonian main line to the south with the line to Falkirk and the north. Of recent and rapid growth, it has an Established church (1880) a Free church (1879), a post office under Carluke, and a public school. A public hall, erected at the expense of Mr. John Wilson, coal-master, accommodates 400 persons. There is a smaller hall attached, containing a library, both being presented also by Mr. Wilson. Erected into a *quoad sacra* parish in 1855, Law is in the presbytery of Lanark and synod of Glasgow and Ayr. Pop. (1881) 1455, (1891) 1532.—*Ord. Sur.*, sh. 23, 1865.

Law Castle, a stately ruined tower in West Kilbride parish, Ayrshire, on an eminence overlooking West Kilbride village, and commanding a delightful view of the waters and screens of the Firth of Clyde.

Lawers, a hamlet in Kenmore parish, Perthshire, on the NW side of Loch Tay, at the foot of BEN LAWERS, 8 miles NE of Killin. It has an inn, a Free church, a post office, and a public school; and it maintains a ferry across Loch Tay.—*Ord. Sur.*, sh. 47, 1869.

Lawers, a mansion in Monzievaird and Strowan parish, Upper Strathearn, Perthshire, 2 miles ENE of Comrie. A large two-storey edifice, Italian in style, with beautifully wooded grounds, it is the seat of Colonel David Robertson Williamson (b. 1830; suc. 1852). The estate, originally called Fordie, was long possessed by a branch of the Campbells, who came from the foot of Ben Lawers, and were ancestors of the Earls of Loudoun. An ancient chapel, to the SW of the mansion, was their burial place down to the close of the 18th century.—*Ord. Sur.*, sh. 47, 1869.

Lawhead House, a modern mansion in Carnwath parish, E Lanarkshire, $2\frac{1}{2}$ miles W of Auchengray station on the Edinburgh and Carstairs section of the Caledonian railway.—*Ord. Sur.*, sh. 23, 1865.

Lawmuir House, a modern mansion in East Kilbride parish, Lanarkshire, $2\frac{1}{2}$ miles WSW of the town.

Laws, The, a mansion of recent erection in Whitsome parish, Berwickshire, 4 miles ESE of Duns. Its owner is Alexander Low, Esq., one of the Judges of the Court of Session, who is officially styled Lord Low.—*Ord. Sur.*, sh. 26, 1864.

Laws, The, an elegant modern mansion in Monifieth parish, SE Forfarshire, 2 miles N by W of Monifieth station. It stands on the southern slope of the Laws (400 feet), a green conical hill, terminating a long ridge, and crowned by vestiges of a vitrified fort 390 feet long and 198 wide.—*Ord. Sur.*, sh. 49, 1865.

Lawton, an estate, with a mansion and a hamlet, in Cargill parish, Perthshire, 4 miles SW of Coup-Par-Angus.

Laxdale, a village in Stornoway parish, Lewis island, Outer Hebrides, Ross and Cromarty shire, $1\frac{1}{2}$ mile N of Stornoway.

Laxfirth, a bay on the E side of Tingwall parish, Shetland. Opening at a point $5\frac{1}{4}$ miles N by W of Lerwick, it penetrates the land $2\frac{1}{2}$ south-south-westward, and contracts from $\frac{1}{2}$ mile to a point.

Laxford (Norse *lax-fjord*, 'salmon frith'), a stream and a sea-loch of Eddrachillis parish, NW Sutherland. The stream, issuing from Loch Stack (118 feet), runs $5\frac{1}{2}$ miles west-north-westward to the head of the sea-loch; is crossed, $1\frac{1}{4}$ mile above its mouth, by a large strong bridge with a public road; and enjoys high repute for its salmon and sea-trout, ranking as the second best salmon river in the county, and having been known to yield as many as 2500 salmon and grises in a single year. It belongs to the Duke of Sutherland, and is strictly preserved. The sea-loch, extending $3\frac{3}{4}$ miles north-westward from the river's influx to the Minch at a point $4\frac{1}{2}$ miles N by E of Scourie, has a varying breadth of $3\frac{1}{2}$ furlongs and $2\frac{3}{4}$ miles; sends off, from the middle of its N side, Loch Chathaidh, extending $2\frac{1}{2}$ miles east-north-eastward; contains 10 islets, of which Eilean Ard rises to a height of 238 feet; has shores and sea-boards much broken by projecting rocky

heights; is overlooked by magnificent Highland scenery; and affords excellent anchorage. In consequence of its narrowness and intricacy, the loch is sometimes called the Kyle of Laxford. At the beginning of 1893 a railway from Laig to Laxford was talked about and a committee was appointed to further the project.—*Ord. Sur.*, shs. 107, 113, 1881-82.

Leadburn, a hamlet on the southern verge of Penicuik parish, Edinburghshire, contiguous to the Peeblesshire boundary, 3 miles S of Penicuik town. It has an inn, a post office, and a station on the Peebles section of the North British railway at the junction of the branch to Dolphinton, $17\frac{1}{2}$ miles S of Edinburgh.—*Ord. Sur.*, sh. 24, 1864.

Leader Water, a stream of W Berwickshire chiefly, but partly also of NW Roxburghshire. Rising as Kelphope Burn at an altitude of 1375 feet on the southern slope of Lammer Law, just within Haddingtonshire, it thence runs $21\frac{1}{2}$ miles south-south-eastward through or along the borders of Channelkirk, Lauder, Legerwood, Melrose, Earlston, and Merton parishes, till, after a total descent of 1160 feet, it falls into the Tweed near DRYGRANGE, 2 miles E by N of Melrose town. Its upper course, among the Lammermuirs, lies through bleak hilly scenery; its middle and lower course through a pleasant vale, flanked with hills, swells, and plains. Its current is generally brisk, and its waters afford as good trout-fishing as any almost in Scotland. Some of the scenes along its banks are celebrated in the old song of *Leader Haughs and Yarrow*; and it was on the hills surrounding its upper vale that St. Cuthbert, whilst tending his flock, beheld the vision which led him to embrace the religious life.—*Ord. Sur.*, shs. 33, 25, 1863-65.

Leadhills, a mining village in Crawford parish, S Lanarkshire, on Glengonner Water, $1\frac{1}{2}$ mile NNE of Wanlockhead, 5 miles WSW of Elvanfoot station, 7 SSW of Abington, and 45 SSW of Edinburgh. The highest village in Scotland—1250 to 1412 feet above sea-level—it is backed to the S by Wanlock Dod (1808 feet) and Lowther Hill (2377), and straggles down both sides of its upland glen for nearly $\frac{1}{2}$ mile. Since 1861 nearly every cottage has been either rebuilt or repaired; and their roofs of Welsh slate, their whitewashed walls, and their pretty flower-borders have greatly improved the aspect of the village. The landscape around is bleak, but the neighbouring summits command magnificent views from Cumberland to Ben Lomond, and from the Pentlands to Ailsa Craig, Arran, and Jura. Lead-mining in the vale of Glengonner Water is heard of as long ago as 1239, and possibly was carried on in the time of the Roman domination. The Romans, at all events, had several camps in the neighbourhood, and led two of their military roads to a junction within the parish; and, as they certainly worked lead-mines somewhere in Great Britain, they are more likely to have worked them here than in any other locality. The ores, however, were little known till 1517, nor were they begun to be vigorously and systematically worked till the beginning of the 17th century; but from then until now they have continued to be worked with little interruption. In 1810 the Leadhill mines produced about 1400 tons of lead, worth at the then current price more than £45,000; but they afterwards so declined that the annual output was only from 700 to 800 tons. Since 1861, however, they have much revived under the Leadhills Mining Company, the outputs of dressed lead in 1892 being 2019 tons, containing on an average rather more than 1 oz. of silver per ton. The ores of Leadhills, which belong to the Earl of Hopetoun, since 1842 have been worked with the aid of steam power and of improved smelting apparatus; and in 1868 some $2\frac{1}{2}$ miles of underground railway were formed at a cost of £7213. The gold-mines of Crawford Muir are noticed under LANARKSHIRE (p. 462). Leadhills has a post office under Abington, with money order, savings bank, and telegraph departments, a hotel, a good water supply, a public school, an excellent public library (1741), a Good

Templar lodge, a masonic hall, a volunteer corps, a curling club, and fairs on the second Friday of June and the last Friday of October. The Ha', a shooting-lodge of the Earl of Hopetoun, is a large old mansion; one of its two wings has served since 1736 as an Established place of worship, and contains 500 sittings. The poet, Allan Ramsay (1686-1763), was a son of the superintendent of the mines, and at Leadhills passed the first fifteen years of his life; other natives were James Taylor (1753-1825) and William Symington (1764-1831), inventors of steam navigation—to the latter there is an obelisk (1890), 22 feet high; and James Martin, M.D. (1790-1875), who served as a surgeon in the Peninsular War. In the churchyard, too, is buried John Taylor (1637-1770), who passed the last 37 years of his life at Gold Scars, and worked as a miner for upwards of a century. The *quoad sacra* parish, constituted in 1867, is in the presbytery of Lanark and synod of Glasgow and Ayr; its minister's stipend is £172. There is also a Free church. The public school, with accommodation for 216 children, has an average attendance of about 170, and a grant of over £178. Pop. of village (1769) about 1500, (1831) 1188, (1861) 842, (1871) 1033, (1881) 1023, (1891) 998, in 236 houses; of *q.s.* parish (1881) 1081, (1891) 1018, of whom 14 were in Crawfordjohn.—*Ord. Sur.*, sh. 14, 1864. See Irving's *Upper Ward of Lanarkshire* (Glasg. 1864); pp. 18-22 of Dorothy Wordsworth's *Tour in Scotland* (Edinb. 1874); 'The Enterkin' in John Brown's *Leitch and other Papers* (Edinb. 1882); and the Rev. Dr J. Moir Porteous' *God's Treasure House in Scotland* (Lond. 1876).

Lealt, a village in the NW of the Isle of Skye, Inverness-shire. Its post-town is Kilmuir, under Portree.

Learney, a large and handsome mansion in Kincardine O'Neil parish, Aberdeenshire, standing 830 feet above sea-level, on the eastern slope of Learney Hill (1150), 2 miles N by E of Torphins station on the Deeside branch of the Great North of Scotland railway. Accidentally burned in 1838, and then rebuilt, it is the seat of Lieut.-Col. F. N. Innes.—*Ord. Sur.*, sh. 76, 1874.

Leckie House, a mansion in Gargunnoch parish, Stirlingshire, 1 mile W by N of Gargunnoch village. Picturesquely seated on the E side of the glen of Leckie Burn, it is a large and elegant edifice, built about 1836 in the English Baronial style, with beautiful pleasure-grounds, and an exquisite view of the Strath of Monteith. Its owner is Alastair Erskine Graham Moir, Esq. (b. 1863; suc. 1864). At Old Leckie House, which occupies a lower site on the opposite side of the glen, Prince Charles Edward dined 13 Sept. 1745.—*Ord. Sur.*, sh. 39, 1869.

Leckmelm, a small estate in Lochroom parish, NW Ross and Cromarty, on the NE shore of salt-water Loch Broom, 3 miles SE of Ullapool.—*Ord. Sur.*, sh. 92, 1881.

Lecropt, a parish in the S of Perthshire, 3 miles NNW of Stirling. It is bounded N and NE by Dunblane, E by Logie, S by Stirling, SW by Kincardine, and NW by Kilmadock. Its utmost length, from N to S, is 3½ miles; and its breadth, from E to W, varies between 3¼ furlongs and 2½ miles. The parish was partly also in Stirlingshire until 1891, when the Boundary Commissioners placed it wholly in Perthshire, and transferred from it to the parish of Logie that portion of land lying to the east of the west boundary of the Scottish Central railway, but gave to it a small portion of Logie lying to the west of the west boundary of that railway, and on the right bank of the Allan Water. The **TEITH** flows 2¾ miles south-eastward along the Kincardine border to the **FORTH**, which itself winds 1½ mile eastward along the boundary with Stirling, till it is joined by **ALLAN** Water, for the last 2½ miles roughly tracing the Logie boundary. A beautiful bank extends through the middle of the parish, almost from end to end, and commands magnificent prospects of the basins of the Teith and Forth, and of the hills and grand mountain summits which screen and encincture them. The surface all S of that bank is rich carse land, without a single

stone or pebble, tastefully enclosed and highly cultivated; and the surface N of the bank rises with gentle ascent to a height of 300 feet above sea-level, and exhibits rich results of agricultural improvement. The name Lecropt signifies 'the half of the hill,' and alludes to the configuration of the parochial surface. The predominant rock is Old Red sandstone; and the soil of the carse lands is strong argillaceous alluvium; and of the higher grounds is chiefly loam or humus. Nearly all the land is arable, or park, or under wood. In the 2d century A.D. Alaua, a town of the *Damnonii*, stood at the juncture of the Allan Water with the Forth—'a position which guarded what was for many centuries the great entrance to Caledonia from the South.' Numerous ancient Caledonian forts were formerly on the heights of the Keir estate; and one of them, called the Fairy Knowe, of circular outline and 15 feet high, still crowns an eminence near Sunnyslaw farm. Within Keir grounds is the beautiful old burying-ground of Lecropt; and near the parish church are court and gallow hills of feudal date. **KEIR**, noticed separately, is the chief mansion; and Archibald Stirling, Esq., divides most of the parish with the Earl of Moray. Lecropt is in the presbytery of Dunblane and synod of Perth and Stirling; the living is worth £201. The parish church, near Bridge of Allan station, is a handsome modern edifice, Gothic in style, and amply commodious; and the public school, with accommodation for 136 children, has an average attendance of about 95, and a grant of nearly £92. Valuation (1833) £6254, 1s. 3d., (1892) £3269, 4s. 6d. Pop. (1801) 508, (1831) 443, (1861) 538, (1871) 535, (1881) 602, (1891) 273.—*Ord. Sur.*, sh. 39, 1869.

Ledaig, a hamlet in Argyllshire, 7 miles S of Oban, with a money order, savings bank, and telegraph post office.

Ledard, Falls of. See **ARD**.

Ledi. See **BEN LEDI**.

Lednock, a troutful stream of Comrie parish, Perthshire, rising at an altitude of 1930 feet between Ruadh Bheul (2237) and Creag Uigeach (2840), and hurrying 11 miles south-eastward (for the last 3¾ along the Monzievaired and Strowan boundary) till, after a total descent of nearly 1800 feet, it falls into the Earn at Comrie village. It traverses a deep-cut, wooded glen, and forms a number of romantic waterfalls, one of which tumbles into the Devil's Cauldron.—*Ord. Sur.*, sh. 47, 1869.

Lee Castle, a mansion in Lanark parish, Lanarkshire, near the left bank of Lee Burn, 3 miles NNW of Lanark town. As renovated in the early part of the 19th century after designs by Gillespie Graham, it is a castellated two-storey edifice, with a dozen round corner turrets and a loftier square central tower, whose twelve windows, three on each side, give light to the great Gothic hall that replaces the open quadrangle of the old house. The interior is rich in paintings, tapestry, and other heirlooms, the portraits including Cromwell, Claverhouse, and Prince Charles Edward; whilst the grounds are beautiful with terraces and wooded slopes. One oak, the 'Pease Tree,' supposed to be a survivor of the great Caledonian Forest, is 68 feet high and 47 in girth at the ground, while immediately below the branches its girth is 46 feet. In the hollow of its trunk ten men might conceal themselves, and Cromwell with a party of his followers is said to have dined under its branches. The barony of Lee appears to have been acquired towards the close of the 13th century by William Loccard, whose son, Sir Simon, set out with the Good Sir James Douglas to bear the Bruce's heart in battle against the Saracens (1330), and in Spain, from a captive's wife, obtained the 'Lee Penny,' a heart-shaped, dark-red jewel, now set in a shilling of Edward I., with a silver chain and ring attached. Water wherein one had dipped this amulet—the *Talisman* of Sir Walter Scott's romance—was believed to cure every ailment of man and beast, and so 'late as 1824 a gentleman arrived from Yorkshire and carried off a quantity of the medicated water, with the view of curing his cattle, which had been bitten by a mad dog.' Among

the more eminent of Sir Simon's descendants were Sir James Lockhart, Lord Lee (1596-1674); Sir William Lockhart (1620-75), who married Cromwell's niece, and who, says Hill Burton, was 'one of the Commonwealth's best generals, and by far its best diplomatist'; Lord President Sir George Lockhart of Carnwath (1630-89); and George Lockhart (1673-1732), a zealous Jacobite. Sir Simon Macdonald Lockhart, fifth Bart. since 1806 (b. 1849; suc. 1870), is present proprietor.—*Ord. Sur.*, sh. 23, 1865.

Leeds, New, a village on the E border of Strichen parish, Aberdeenshire, $4\frac{1}{2}$ miles N of Mintlaw. A straggling place, with poor appearance, it has a U.P. church, and a post office.

Lee, Loch, a lake in Lochlee parish, N Forfarshire. Lying at an altitude of 880 feet above sea-level, it has an utmost length and breadth of 9 and $2\frac{3}{4}$ furlongs; has boats on its waters; and contains char and fine trout. The Queen describes it as 'a wild but not large lake, closed in by mountains, with a farmhouse and a few cottages at its edge.' The Water of Lee, rising at an altitude of 2650 feet, winds $6\frac{1}{2}$ miles east-by-southward to its head, and from its foot proceeds $1\frac{1}{4}$ mile east-by-northward till, at INVERMARK, it unites with the Water of Mark to form the North Esk.—*Ord. Sur.*, shs. 65, 66, 1870-71.

Lee Pen. See INNERLEITHEN.

Lees, a village in the NE of Delting parish, Shetland, 1 mile from Mossbank.

Lees, an estate, with a mansion, in Coldstream parish, Berwickshire, on the left bank of the Tweed, in the south-western vicinity of the town.—*Ord. Sur.*, sh. 26, 1864.

Leet Water, a rivulet of Merse district, Berwickshire, rising at a spot 1 mile NNE of Whitsome church, and 230 feet above sea-level, and flowing $13\frac{3}{8}$ miles south-south-westward and south-eastward through or along the boundaries of Whitsome, Swinton, Eccles, and Coldstream parishes, till, after a descent of 140 feet, it falls into the Tweed, $\frac{1}{2}$ mile S of Coldstream town. It traverses the beautiful grounds of the Hirsell and Lees; has a slow and sluggish current; and contains pike, very large eels, and well-fed trout of from $\frac{1}{2}$ lb. to 3 lbs. in weight. Its waters are mostly preserved.—*Ord. Sur.*, sh. 26, 1864. See Sir Thomas Dick Lauder's *Scottish Rivers* (Edinb. 1874).

Leetown, a village in Errol parish, Perthshire.

Legbrannock. See BOTHWELL.

Legerwood, a hamlet and a parish of SW Berwickshire. The hamlet lies in the middle of the parish, 4 miles N by E of its station and post-town, Earlstoun.

The parish is bounded NW by Lauder, NE by Westruther, E by Gordon, SE and S by Earlstoun, and W by Melrose in Roxburghshire. Its utmost length, from N to S, is 5 miles; its utmost width, from E to W, is $4\frac{1}{2}$ miles; and its area is 8817 acres, of which $27\frac{3}{4}$ are water. The drainage is partly carried westward or south-westward to LEADER WATER, which flows $3\frac{3}{8}$ miles south-by-eastward along all the western boundary; partly eastward by EDEN WATER, whose principal head-stream, rising at a point $1\frac{1}{2}$ mile NNW of the church, winds 4 miles through the interior and along the Gordon border. The surface is hilly, sinking to 450 feet along the Leader, 575 along the Eden, and rising to 923 at Legerwood Hill, 1070 at Boon Hill. Sandstone, conglomerate, and greywacke are the predominant rocks; and the soils are various—clayey, gravelly, or peaty. Of three old peel towers—Corsbie, Whitslaid, and Moriston—only the two first, noticed separately, are still remaining in a ruinous condition, the third having been demolished about the end of the 18th century. William Calderwood (1628-1709) was minister from 1655 till his death, but was ejected from 1662 till 1689 for nonconformity to the Acts of Glasgow. Legerwood is in the presbytery of Earlstoun and synod of Merse and Teviotdale; the living is worth £270. The parish church, which down to the Reformation was held by the Abbey of Paisley, is an old building, repaired in 1717 and 1804. A public school, with accommodation

for 103 children, has an average attendance of about 75, and a grant of over £80. Pop. (1801) 495, (1841) 571, (1861) 599, (1871) 525, (1881) 549, (1891) 475.—*Ord. Sur.*, sh. 25, 1865.

Leith (anc. *Let* or *Inverlet*), the fifth largest town in Scotland, a seaport, a police and parliamentary burgh, and seat of manufactures, is situated in Edinburghshire, and stands on the Water of Leith at the point where it falls into the Firth of Forth. Between Leith—which lies $1\frac{1}{2}$ mile N from the centre of Edinburgh, of which it is the port—and the capital, communication is maintained by means of a double line of tramways, which traverses the long main thoroughfare called Leith Walk—partly in Leith and partly in Edinburgh—and by two lines of railways, the North British and the Caledonian. The former of these, $3\frac{1}{4}$ miles long, approaches the town from the E; while the latter, $5\frac{1}{2}$ miles long, approaches it from the W. A railway line, $2\frac{3}{4}$ miles long, connects South Leith with Portobello. These lines furnish easy communication with all parts of the country, and secure the speedy transmission of goods landed at the port. Two new extensions of these lines have been authorised, and it is intended that they will shortly be constructed. Under these schemes the North British is to have a branch from Abbeyhill to the foot of Leith Walk, and the Caledonian a branch from Newhaven, crossing Ferry Road at Blair Park and the Water of Leith, on to the foot of Leith Walk, and eastward to their ground at the extremity of Leith Docks. At the foot of Leith Walk each company is to have an important station. From the foot of the Walk the tramway lines diverge in three directions. One line strikes off E, goes along Duke Street, and has its terminus at Seafield; another line goes by Constitution Street to Bernard Street; and the third goes to Newhaven by Great Junction Street and Ferry Road. A short line joins Commercial Street (North Leith) with Ferry Road. An omnibus runs between Leith and Granton. The Water of Leith, formerly a sluggish stream, polluted with sewage and the discharges from many factories, divides the town into two parts, called North and South Leith, although they might be more strictly named West and East Leith. By the operation of the Water of Leith Sewerage Commission under their Act of 1889, at an expense of about a quarter of a million, large sewage works have been completed, which commence at Balerno and pass through Currie, Juniper Green, Colinton, Slateford, Gorgie, Corstorphine, Edinburgh and Leith, and over the foreshore of the Firth of Forth, fully $\frac{1}{2}$ mile, to deep water at the Black Rocks, a distance in all of over 15 miles. The main outfall sewer is oval in cross section, and is 9 feet by 7 feet 3 inches in diameter. On the foreshore it is constructed of cast-iron pipes, 5 feet 6 inches in diameter, secured to piles, and by iron bands to the rock where it has been found. To compensate for the water taken by the sewage pipes from the river, the large reservoirs of Harperrig and Thriepmuir have been raised 6 feet, and a supply of pure water sent through the ordinary channel of the stream, which is now restored to purity, and the Lord Provost of Edinburgh (April, 1894) presided at the ceremony of putting 10,000 trout fry into the water at Stockbridge. The situation of Leith has been very much against it owing to its extreme flatness, which has made its drainage a difficult problem, and has retarded its growth as a port. In spite of its disadvantages the town has had, on the whole, and especially of late years, a prosperous career. Its appearance has recently undergone great change, owing to the improvement schemes that have been carried out. Although these have swept away many buildings of historical and antiquarian interest, still their removal has been more than made up for by the improved appearance of the town. New, well-built thoroughfares, straight and broad, have replaced closes and alleys and crooked, ill-paved streets; and the health of the town, as a consequence, has become markedly better, so that Leith appears to be, according to the Registrar-General's report, one of the healthiest towns in Scotland.

The usual approach to Leith from Edinburgh is by the broad street called Leith Walk, part of which belongs to the seaport and part to the capital, the division being where Pilrig Street strikes off it. Leith Walk, or Leith Loan, owed its origin to Sir Alexander Leslie, commander of the Scottish forces in 1650, when Cromwell led his army into Scotland. To protect his troops, Leslie threw up a strong breastwork of earth, and this in later days became the chief line of communication between Edinburgh and Leith, as the Long Walls between Athens and Piræus. Public conveyances ran between Edinburgh and its seaport as early as 1678. At the beginning of the 19th century it was usual to spend 1½ hours on the journey from the High Street of Edinburgh to the Shore, Leith, a distance which a tramway-car easily traverses in 20 minutes. Many interesting recollections have gathered about the 'Walk.' At Shrubhill, where the extensive stabling of the Tramway Company now is, once stood a gibbet, upon which not uncommonly there might be seen the body of some criminal hanging in chains. Leith Walk was frequented for many years by second-hand bookstalls, and 'shows,' and shooting-alleys, but these have now all but disappeared, owing to the rapid spread of new buildings. Besides these, on either side, stretched open spaces, used as nursery and market-gardens, and they also are all but covered over with blocks of houses. At the point where Leith Walk ends four streets, Great Junction Street on the W, Constitution Street and Duke Street on the E, and Kirkgate in the centre, traverse the greater part of South Leith. Great Junction Street and Constitution Street, along with Bernard Street and the Water of Leith, form the boundaries of that part of the town which chiefly deserves the name of 'Old Leith.' It consists of a network of alleys, lanes, courts, and closes, with some narrow streets, and the Kirkgate and the Shore for its principal thoroughfares. The Kirkgate—367 yards long and 17 yards broad—is one of the oldest streets of Leith, and still contains some ancient houses. Three streets strike off it—viz., St Giles Street, St Andrews Street, and the Tolbooth Wynd. This last, 183 yards long, gives access to the Shore, and is next to the Kirkgate in point of age, and at one time was only second to it in importance. All the traffic to and from the harbour passed along it, and although that must have been small in comparison with the traffic of to-day, still it must have been quite enough to tax its narrow breadth. The Shore stretches S from the foot of Tolbooth Wynd along the right bank of the Water of Leith, and presents a single line of houses, some of which bear the marks of a considerable age. It is by far the most picturesque of the streets of Leith, and indeed, but for the familiar names upon the shops and warehouses, might well be mistaken for the quay-side street of some old French town. The Shore is continued in a westerly direction by the Coalhill, Sheriff Brae, Mill Lane, all of which have the same characteristics as the other streets of the Old Town—narrowness, dirtiness, dinginess. Of the streets mentioned above as forming the boundaries of this district, Constitution Street, 838 yards long, dates from the early part of the 19th century, runs parallel with the Kirkgate, but stretches farther eastward. Great Junction Street, 667 yards in length, is broad enough to allow of the immense traffic that passes along it going on without interruption. Striking off at the foot of Leith Walk, it extends NW to the Water of Leith, which it crosses by a bridge, and enters North Leith under the name of North Junction Street. The construction of Constitution Street and Great Junction Street must have tended in no slight degree to relieve the pressure of traffic once wont to pass over the Kirkgate and Tolbooth Wynd. Bernard Street, the third of the modern streets mentioned above, is like the other two, spacious and handsome. It contains some fine buildings, and in it is the terminus of one of the tramway lines. Between South Leith and North Leith there is communication by means of seven bridges, three of which cross the Water of Leith at the foot of Junction Road, Tolbooth Wynd, and Bernard Street.

That at the foot of Tolbooth Wynd had a predecessor, which was built by Robert Ballantyne, abbot of Holyrood, in 1493. It consisted of 'three stonem arches,' and its substantial nature is proved by the time it lasted. Some portions of the piers still remain. The bridge which crosses at Bernard Street leads directly into Commercial Street, part of which was built on land reclaimed from the sea. Near it are the Wet and Victoria docks, and in it is the Leith terminus of the North British railway, and a short way beyond it that of the Caledonian railway, in Lindsay Road. Commercial Street, the main thoroughfare of North Leith, is a very busy street, owing to its proximity to the docks. Of the other streets of North Leith, some are creditably built, as North Junction Street, North Fort Street, Albany Street, Lindsay Place; but the majority do not rise above the level of the ordinary seaport street. Some of them are able to show here and there a house of earlier date than any of those around it, but none of its streets have the same ancient characteristics that distinguish many of the streets of South Leith. Perhaps this may be so far explained by the fact that the harbour made the latter, and the docks the former—and the harbour is the older of the two. The Links of North Leith no longer exist, but those of South Leith still furnish an open space, deservedly valued by the townspeople. Charles I. was playing golf on these links when he received the news of the breaking out of the Irish rebellion.

An improvement scheme, first planned in 1877, may be fitly mentioned here. Although it had several predecessors, one of which was devised as far back as 1818, yet, on account of its magnitude and thoroughness, the scheme of 1877 deserves special notice. By it the part of the town to be improved, which is, generally speaking, that described above as 'Old Leith,' was divided into five districts, to be taken up in succession. The Leith Improvement Scheme Confirmation Act, 1880, provides chiefly for the construction of a new street to begin at the Leith Walk end of Great Junction Street, cut at right angles Yardheads, Giles Street, St Andrew Street, and end at Tolbooth Wynd. The construction of this street removed many closes, lanes, and courts, and materially assisted to open up the part of the town through which it passes. Nearly 700 houses, which had, in March 1883, 2150 inhabitants, though able to contain a very much larger population, have been taken down. The parliamentary estimate for the scheme was £98,000. It was calculated that £46,000 would be made from the sale of feus, etc., which would leave a sum of £52,000 to be found by the ratepayers. In 1881 the Public Works Loan Commissioners lent £70,000 to carry out the scheme, a sum which, though large in itself, fell short by £28,000 of the amount required. It was reckoned that an assessment of three-pence per £ would be needed to cover the ratepayers' share of the expense, though it was estimated at first that an assessment of twopence per £ for 30 years would be sufficient. This scheme has removed many of the always decreasing number of the antiquities of Leith. The local authority, however, made it a condition with those engaged in the work that all sculptured stones, etc., found while the houses were being taken down, should be handed over to the town for preservation.

The public buildings of Leith are such as one would expect to find in a busy seaport town. Many of them are very fine, and all are more or less connected with the trade and commerce of the town and port. The Exchange Buildings stand at the Bernard Street end of Constitution Street, were erected at a cost of £16,000, and contain an assembly room and smaller hall. This building presents a long façade, three storeys high, with an Ionic portico of four pillars in the centre. The Corn Exchange, in Baltic Street, was built in 1860-62 at a cost of £7000. It is in the Roman style of architecture, and has a corn-hall 110 feet long by 70 feet broad and an octagonal tower, and a newsroom where telegrams are displayed. The Court House or Town Hall, situated at the point where Constitution Street cuts Charlotte

Street, cost £3300, and was erected in 1827. From its position it faces both streets. On the Constitution Street side it is adorned with an Ionic front, and on the Charlotte Street side with a Doric porch. Both as regards size and finish, the Court House is finer than its small cost would lead one to suppose. There is accommodation in it for the sheriff court, the police court, and the police establishment. The Council Chamber and relative offices have recently been remodelled, extended, and redecorated, under the direction of the late Mr James Simpson, architect, and now present a striking appearance internally. The Custom House was erected at the North Leith end of the lower drawbridge, near the harbour and docks, in 1812. It cost £12,000, and is a fine large building in the Grecian style. An approach, which was not in the original plan, was afterwards added for the sake of convenience. It consists of two short flights of steps, which lead up, one on each side, to a platform, from which another single flight of broad, shallow steps leads up to the entrance of the building. By way of ornament it has a representation of the royal arms in the tympanum, and is further adorned by fine pillars in its front. Trinity House, in Kirkgate, was erected in 1816 at a cost of £2500. The architecture is Grecian. It replaced another Trinity House built in 1555, and used as a seamen's hospital. From time immemorial the mariners and shipmasters of Leith were accustomed to receive from all vessels belonging to the port, and from all Scottish vessels visiting it, certain dues called 'prime gilt' or 'primo gilt.' The money thus acquired was employed in assisting poor sailors. About the middle of the 15th century a legal right to levy 'prime gilt' was obtained, and it was directed that the money thus raised should be used in maintaining an hospital for 'poor, old, infirm, and weak mariners.' In 1797 the association was legally constituted by a charter, and office-bearers were appointed. Its character has since been considerably modified. 'Prime gilt' was abolished in 1862, so that the association is now dependent upon the income it derives from certain properties in Leith, said to amount to about £2000 a year. This money is disbursed in small pensions to old members and their widows. The chief duty of the board now is the important one of licensing pilots. In the hall in which their annual dinner takes place there are some very fine paintings and interesting models of ships. The chief pictures are a portrait of Mary of Guise by Mytens, a portrait of Admiral Duncan by Raeburn, and David Scott's well-known picture of Vasco da Gama passing the Cape of Good Hope. Among the models are those of two or three line-of-battle ships and that of the vessel in which Mary of Guise is said to have come to Scotland. The floor of the hall is beautifully polished, and the mouldings upon the ceiling, which represent anchors, cables, etc., form an appropriate and unique design, which was specially made for the Trinity House. Leith Fort was built in 1779 to defend the harbour, when both it and the town were threatened by the ships of Paul Jones, the well-known privateer. At first merely a battery of nine guns, it afterwards became a large military barracks and the headquarters of the Royal Artillery in Scotland. It lies half a mile W of the Custom House, and overlooks the shore. Other public buildings worthy of notice are the markets, occupying the site of the old Custom House and Excise Office in Tolbooth Wynd, and erected in 1818, partly by voluntary contributions and partly by a loan of £2000 from the Merchant Company; the Slaughter House in Salamander Street, built in 1862 at a cost of £4000, and embracing a central building and two wings; and the new post office, situated at the corner of Constitution Street and Mitchell Street, and erected in 1875 in the Italian style.

In the town of Leith, which includes Newhaven, Trinity, and Wardie, there are 31 places of worship, consisting of—Established Church 7, Episcopal 2, Free 7, United Presbyterian 8, as also Roman Catholic, Congregational and Evangelical Union, Baptists, Wesleyan Methodist, and Scandinavian Lutheran. North Leith parish

church, built on rising-ground at the W end of the town, and situated in Madeira Street, had its foundation laid in March 1814, and was finished in 1826. Designed by W. Burn, it is oblong in form and of a Grecian style of architecture. The front is adorned by a portico of four Ionic pillars, and is surmounted by a tower of three stages, of which the two first are four-sided, while the third, which is eight-sided, is further heightened by a spire built upon it. The building cost £12,000, and has accommodation for 1700 persons. In 1881 it was reset and renovated at an outlay of £1100. In 1880 an organ, with 33 stops, which cost £750, was introduced. A large hall in Great Wellington Street was built recently which holds 1000 people. In the old churchyard of the parish the poet Nicoll was buried in 1837. St Mary's, the parish church of South Leith, with its surrounding graveyard, occupies a stretch of land lying between Kirkgate and Constitution Street. It was erected into a parish in 1607, after having served as a chapel to the Virgin Mary, with altars to various saints, from the beginning of the 15th century. At first it was cruciform and of great size; but, owing to the rough usage which it underwent from time to time at the hands of the English, its extent has been somewhat curtailed, so that it now consists of central and side aisles, which are ancient, and of a western front and tower, which are modern. In 1848 it was restored, after designs furnished by Thomas Hamilton, which included the construction of a square tower, adorned at the top with a balustrade elaborately carved. St Mary's is seated for 1350 persons. David Lindsay, who baptized Charles I., and John Logan, the poet, were ministers of St Mary's. The body of John Home, the author of *Douglas*, lies buried in the churchyard, interred in Sept. 1808. In 1892 a handsome stained glass window was placed by public subscription in the great window facing Kirkgate, in memory of the late James Struthers, M.D., F.R.C.P.E. The window cost about £450, and was the work of Messrs Ballantine & Gardner, Edinburgh. Since then there has been further renovation of the interior. St Thomas's *quoad sacra* parish church, on the Sheriff Brae, was erected in 1843 at the expense of Sir John Gladstone of Fasque. The church, with the manse and a school and asylum, was designed by John Henderson of Edinburgh, and erected at a cost of £10,000. The four buildings form a harmonious whole, the style of their architecture being Gothic. St Thomas's served first as a chapel of ease, but was afterwards constituted a *quoad sacra* parish church by the General Assembly in 1840 and by the Court of Teinds in 1847. St John's *quoad sacra* parish church is situated on the E side of Constitution Street, adjoining the town-hall. It was originally a large plain building, but it was afterwards adorned by the addition of a fine front in Early Gothic style and of a massive tower. The tower consists of two stages, the first of which is four-sided with pinnacles at the corners, and the second is eight-sided, surmounted by a balustrade and pinnacles. On either side of the main building are wings, built in a style which harmonises with the rest of the edifice, and used for schoolrooms. St John's was a Free church from the Disruption (1843) to 1867, when it reverted to the Church of Scotland. It was constituted a *quoad sacra* parish church in 1869, and was the church of which Dr Colquhoun was ordained pastor in 1781.

North Leith Free church stands at the north-western extremity of the town, in the Ferry Road; was built in 1858-59, after designs by Campbell Douglas, and is in the German Pointed style. A congregational hall was added to it in 1876. South Leith Free church is situated at the foot of Easter Road. Built in the Early English style, it is a handsome edifice, consisting of nave, aisles, transepts, and tower. The spire has yet to be added. It cost £4000, and was opened on 22 Dec. 1881. St Ninian's Free church, situated in Dock Street, is a conspicuous building in the Early Gothic style, with a handsome doorway and main window, flanked by two octagonal towers. It was reopened in October 1880, after alterations which cost £300. Free St John's

church, in Charlotte Street, was built in 1870-71 in the Gothic style, after designs by John Paterson of Edinburgh. It cost nearly £7500, and is surmounted by a tower 130 feet high. North Leith U.P. church, in Coburg Street, was built in 1819, and has accommodation for 1100 persons. It has a Gothic front, with central pediment and balustrades and towers. The Rev. Dr Harper was minister of North Leith U.P. church in 1819. Junction Street U.P. church was built in 1825, has a Roman front with Doric pillars, and is able to contain 1230 persons. Kirkgate U.P. church, erected in 1775, was sold some years ago and became a theatre. The congregation now worship in a handsome structure in Henderson Street, one of the new main thoroughfares made under the improvement scheme. St Andrews Place U.P. church, situated near the Links, was erected in 1826; has accommodation for 1254 persons; and has for chief architectural feature a tetra-style Ionic portico. St James's Episcopal church, in Constitution Street, is a handsome building, erected in 1862-63 in the Pointed style of the 13th century, after designs by the late Sir Gilbert Scott. It cost originally £6000; but, owing to the extensive interior decorations it underwent in 1869 at the hands of E. F. Clarke of London, its cost altogether amounted to nearly £14,000. New vestries were added in 1881. It has a nave of five bays, N and S aisles, a chancel with semicircular apse, and a tower and spire 180 feet high, which contain a chime of bells. The chancel is adorned with figures of the saints in richly foliated niches. The present church of St James, which is able to hold 536 persons, supplanted a much smaller and plainer building of the same name, erected in 1805 at a cost of £1610, and associated with the name of the well-known Dr Michael Russell. The Roman Catholic chapel—the chapel of *Maris Stella*—stands in Constitution Street, was erected in 1853, and is a cruciform, high-roofed edifice, in Early Gothic. The Congregational chapel, in Constitution Street, was built in 1826 at a cost of £2000, has 520 sittings, and has its front, which is Roman in style, adorned with Ionic pilasters. The Evangelical Union church is situated in Duke Street, was erected about 1866, and is a fine building in the Pointed style. The Baptist church stands in Madeira Street, was erected in 1875 of corrugated iron, and is now a finished stone and lime edifice. The Wesleyan Methodist church is in Great Junction Street, and the Scandinavian Lutheran church, erected in 1869, in North Junction Street.

The following are the schools under the management of the Leith Burgh School Board:—

Name of School.	Accommodation.	Average attendance.	Grant, 1895.
Leith Academy (formerly High School),	435	298	£338
St Thomas's,	394	226	237
North Fort Street,	1040	979	1090
Lorne Street,	706	690	776
Links Place,	776	550	602
Bonnington Road,	887	855	895
Victoria,	503	477	518
Lochend Road,	1619	1243	1382
Yardheads,	1259	808	863
Couper Street,	1873	1247	1813
Great Junction Street,	1070	617	673
Craighall Road,	1459	795	938

The rate of grant earned per scholar in average attendance at the schools of the board has increased from 11s. 5d. in 1874 to £1, 2s. 6½d. in 1894. The burgh school board is composed of a chairmaun and twelve members.

Leith Academy, lately known as the High School, was built in 1806 and transferred to Leith School Board in 1873. As the original edifice was not equal to present-day educational requirements, the board resolved to erect a new one. This building, erected in 1896, is three floors high from street level and basement flat, and

its main frontage is 122 feet by 80 deep. It cost about £30,000, and has accommodation for 2000 scholars. Lorne Street School, erected in 1875, T shaped in plan, with "following" staircases in centre, is two floors high and cost £7576. Links Place School, a plain brick building behind the school board offices, erected in 1875, is two floors high and cost £6147. Bonnington Road School, erected in 1877 in the Gothic style, is two floors high and cost £11,341. North Fort Street School, erected in 1875 in the Scotch style, is two floors high and cost about £8196. This school, and the previous one, are planned on the "corridor" system on each floor, from which all the class-rooms enter. The late Mr James Simpson, Leith, was architect for the last three schools. Victoria School, Newhaven, was erected in 1843 by the Free Church, one floor high, and was transferred to the School Board in 1873. A wing was added in 1875, and another floor and wings in 1884. It cost about £4592. Lochend Road School was the first large school erected in the town, in 1886, and is in the Gothic style. It is three and partly four floors high, with a frontage of 113 feet by 100 feet deep, and cost about £13,258. Yardheads School, erected in 1875, altered and enlarged in 1888, is now three floors high, in the Renaissance style, with a frontage of 179 feet by 67 deep, and cost about £14,816. Couper Street School, erected in 1890 in the Renaissance style, is three floors high, with a frontage of 132 feet by 80 feet deep, and has a flat roof surrounded with an ornamental iron balustrade. Estimated cost, £14,200. Great Junction Street School, erected in 1838 in the late Gothic style, under Dr Bell's endowment—known as Dr Bell's School under the management of the Leith Town Council—was purchased by the school board in 1890, partially taken down and a new school erected, three floors high, on the same plan as the Couper Street School, at estimated cost of additions, £8100. In 1892 additional ground was acquired for swimming baths, costing about £2000. Craighall Road School, erected in 1893, with frontage 121 feet by 79 feet, has a handsome façade broken up with two end wings ornamented with pilaster and pediments, and a central wing having a three-arched porch, ornamented with stone balustrades. It is built on the "corridor" plan, with staircases at each end, four floors high; is fitted up for secondary and higher education, having lecture hall, laboratories, drawing, sewing, and cookery rooms, and workshops; and was estimated to cost about £18,000. Mr. George Craig, Leith, was the architect for the last six schools, the additions to North Fort Street, Bonnington Road, and other schools, and the proposed reconstruction of the academy. The Roman Catholic School—*Maris Stella*—situated in Constitution Street, is conducted by the Sisters, and has an average attendance of 477 children; and St Joseph's Roman Catholic School, with accommodation for 104 children, has an average attendance of 32. The Episcopal School—St James—in Great Junction Street, has accommodation for 371 children, and is conducted by a master, a mistress, an assistant mistress, and 4 pupil teachers. The Ragged Industrial School Association maintains about 150 boys and 60 girls. There are also a number of private schools.

Leith is able to boast as large a number of institutions as any town of the same size and character. The Leith Hospital, Humane Society, and Casualty Hospital are in Mill Lane, Sheriff Brae, and together occupy a building of considerable extent, erected in 1850. When its foundation was being dug a large deposit of sea-shells was uncovered, which is held to prove that at one time the sea must have flowed over the spot. The Humane Society is provided with the most approved apparatus for resuscitating the apparently drowned. In 1840 Mr (afterwards Sir John) Gladstone of Fasque, father of the late premier, erected a church (St Thomas's), manse, schoolhouse, and asylum on the Sheriff Brae. The buildings, which are in the Gothic style of architecture, form a harmonious whole. The asylum, used as an hospital for women with incurable diseases, is fitted up for 10 patients, and has a revenue of £300 a year. The

John Watt Hospital was opened in 1862 for the reception of men and women in destitute circumstances, who were maintained there. It stands at the SW corner of the Leith Links, but recently it has been by authority put under sale, and the beneficiaries are provided for by pensions enabling them to reside where they choose. John Scougall, a Leith merchant, left £2000, the interest of which is paid to daughters of Leith merchants who have not been shopkeepers. A preference is given to Episcopallians. The two poorhouses for North and South Leith are plain buildings, both in Great Junction Street. The institute and public library of Leith, with 5000 volumes, is in Tolbooth Wynd. The Leith Chamber of Commerce, in Constitution Street, instituted in 1840 and incorporated in 1852, is presided over by a chairman, deputy-chairman, and six directors. The Shipmasters' and Officers' Protection Association, founded in 1877, and generally known as the Scottish Shipmasters' Association, is presided over by an Hon. President and council of shipowners, ship-captains, etc. Its main object is to promote good maritime legislation, to render navigation safer by lighting and marking the Scottish coast, to provide for the widows of members, etc. Among charitable institutions may be mentioned—the Association for Improving the Condition of the Poor, the Shipwrecked Fishermen and Mariners' Royal Benevolent Society, the Leith Industrial School Association, the Leith Female Society, the Society for the Relief of the Destitute Sick, etc., etc. The Leith Sailors' Home was instituted about 1840, and conducted in premises in Dock Street, which it occupied until 1881, when the building was required for offices by the Mercantile Marine Board, and for class-rooms, etc., by the Government Navigation School. It was resolved in 1882 to erect a new home; and £12,000, its estimated cost, was soon subscribed. The Dock Commissioners granted a site at a nominal rent at the corner of Tower Street and Tower Place. Its foundation-stone was laid with masonic honours in Sept. 1883. Built in the old Scottish Baronial style, it is not only a great boon to sailors visiting the port, but is among the finest of Leith's public buildings. It has accommodation for 56 seamen, 9 officers, and 50 shipwrecked seamen—for the last in dormitories in the attics. A restaurant, dining-room, recreation-room, reading-room, officers' sitting-room, bath-rooms, lavatories, and many other conveniences make it one of the most perfectly equipped buildings of the kind in the kingdom. In the nine years ended 31st Jan., 1894, the number of boarders was 20,676, and their stay varied from one day to a month. Almost £50,000 of their money was transmitted free to relatives, a result unsurpassed in any similar institution. Another institute, the Edinburgh and Leith Seamen's Friend Society, has its premises in the old Board Room of the Leith Dock Commission, in the Custom House, and is attended daily by 60 or 70 sailors. The Leith Merchants' Club has premises in Bernard Street. The Seafield Golf Club was formed in 1878 and has 120 members. Other societies are—The Young Men's Christian Association, the Sabbath School Society (1818), the Religious Tract Society. There are also numerous clubs for cricket, football, swimming, and other sports. The 5th V.B. The Royal Scots drill-hall and headquarters, Stead's Place, Leith Walk, as also the Forth Volunteer Division R.E.—four companies, headquarters H.M.S. *Dido*, Albert Dock, represent the volunteer movement in the seaport. Leith has three masonic lodges, as well as representatives of the associations of Good Templars, Foresters, Free Gardeners, and societies of a like nature. Leith races, once of considerable importance and high repute, have been suppressed.

The following banks have offices at Leith:—the Royal, British Linen Co., Commercial, National, Union, Clydesdale, and Bank of Scotland. The office of the National Bank of Scotland branch occupies the premises in which the business of the Leith Bank was once carried on. It is a building of small size, with a dome and a projection from the N front, with four Ionic columns. It is in Bernard Street, as are also the offices of the

Clydesdale, British Linen Co., and Union Banks. The Union Bank, designed by James Simpson, and built in 1871 in the Italian style, is a handsome building of three storeys, with a telling-room 34 feet long and 32 broad. There are also numerous agencies for fire, life, accident, and marine insurance. Three newspapers are published in Leith—the *Leith Burghs Pilot*, Liberal (1864), on Saturday; the *Leith Herald*, neutral (1846), on Saturday; and the *Leith Commercial List* (1813), daily, a strictly commercial paper. The chief hotels are the Baltic in Commercial Street, and the Commercial in Sandport Street, while on the Shore are some curious old inns with quite a foreign aspect. The following countries and states have consuls at Leith:—Belgium, Brazil, Chili, Denmark, France, Germany, Greece, Italy, the Netherlands, Portugal, Russia, Spain, Sweden and Norway, Turkey, and Uruguay; United States and Austria-Hungary in Edinburgh. The consuls of Denmark and of Norway and Sweden act as consuls-general for Scotland. Among recent public buildings, parks, etc., may be mentioned the Corporation Model Lodging House, Parliament Street, containing 130 beds and other rooms, with the most modern sanitary appliances, at a cost of £5000. An hospital for infectious diseases was in 1894 about to be erected at East Pilton, Ferry Road, in five blocks, with 100 beds, and offices, etc., at a cost—including site of 10 acres—of about £40,000. A new Baptist Church has been erected in Hope Street, a new cemetery at Seafield, a new U.P. Church at Wardie, Junction U.P. Hall in Bonnington Road, also St John's Parish Church Mission Hall in Pattison Street. Hawkhill Recreation Grounds of 17 acres is utilised for trotting races, bicycle and pedestrian competitions, etc. The property of Starbank, Trinity, facing the sea, was acquired by the Corporation, and is now a public park, laid out in terraces from designs of the late James Simpson, architect, and is much frequented by the residents of Newhaven and Trinity.

In making the original harbour of Leith, man had but little part, and Nature's share was far from being able to render it of great use. It consisted at first solely of the channel worn out by the Water of Leith as it flowed to meet the sea across the broad beach called Leith Sands. This channel was tidal, and in consequence, though sufficiently deep at high water, depended entirely at ebb upon the small volume of fresh water that ran down it to the Firth. According to the season of the year or the state of the weather, the river was either in flood or dried up, and this, combined with the influence of winds and tides, was able to alter the local conditions of the channel, and to raise or lower the bar that stretched across its mouth. The first serious attempt to resist the action of the elements was made in 1544 by the Earl of Hertford, who, while holding Leith, ordered a wooden pier to be constructed. On his departure for England he ordered its destruction, so that it might not benefit his enemies. Early in the 17th century another pier, resting on strong pillars, was erected, and its substantial nature is shown by its lasting for fully 240 years. Between 1720-30 there were constructed a stone pier, which was joined to the wooden pier so as to extend it by 300 feet, and a small dock on the W side of the river's mouth. In 1777 a short pier, afterwards known as the Custom House Quay, was built. These attempts helped in some degree to bring about the result after which their makers were striving. Through them Leith became a port more accessible to shipping than it had been before; but they were totally inadequate to make the approach to it at all a safe or certain matter. Sometimes the bar was impassable for days, and many found themselves in the position of Lord Erskine, who, anxious on one occasion to return to London by sea, was detained on account of the 'smack' in which he was to sail being unable to cross the bar. This detention gave rise to the well-known impromptu in which, after blessing the Bar of Edinburgh, he banned 'the shallow bar of Leith.'

In spite of these attempts to improve it, the accommodation of Leith harbour continued to be miserably

inadequate, and the increase of trade only emphasised its deficiencies. In 1799 John Rennie, the distinguished civil engineer, was employed to examine the ground and furnish designs for docks and extended piers suited to the growing requirements of trade. The gist of his report was, that the only way to remove the bar would be to build a pier right across the sands on the E side of the channel, which is more exposed than the W side. Rennie anticipated that the construction of such a pier would give an increased depth of water, amounting to 3 or 4 feet, and later operations have shown conclusively the soundness and accuracy of his judgment. Although this part of Rennie's scheme was not taken up at the time, another part was forthwith carried into effect. It had been so far anticipated by the plans of another engineer, Robert Whitworth, who in 1788 designed a wet dock of 7 acres, to be made near the Sheriff Brae, at a cost of £30,000. Rennie's design was chosen, and the construction of two wet docks, covering together an area of $10\frac{1}{2}$ acres, and able to contain 150 vessels of the class generally visiting the port, was commenced. Parliament authorised the magistrates to borrow £160,000 to carry it out; and the building of the eastern wet dock was begun in 1800 and finished in 1806. The construction of the western dock was begun in 1810 and ended in 1817. In addition to the two wet docks, which together cost £175,086, the design also allowed for the building of three graving-docks at a cost of £18,198, and of drawbridges at a cost of £11,281. Together with the sum of £80,543 paid for the ground, the total cost was £285,108, to which very large amount of money, £8000, spent in building a new bridge over the Water of Leith, must be added. The measurements of the docks are:—each of the wet docks, 250 yards long by 100 broad; each of the graving-docks, 136 feet long by 45 wide at the bottom, and 150 long by 70 wide at the top. The entrance is 36 feet wide. A strong retaining wall, in the building of which not less than 250,000 cubic feet of ashlar was employed, protects them from the sea. These docks are situated in North Leith, and lie to the N of Commercial Street. They are still known as the Wet Docks, the western basin being also sometimes called the Queen's Dock.

Immense as was the improvement effected by the carrying out of Rennie's scheme in some of its parts, still the construction of the wet docks only so far realised his wise and far-sighted plans. The erection of a new pier has been mentioned; but besides that Rennie had in view the construction of another basin, 500 yards long by 100 wide, to stretch westward from those already built to Leith Fort, with an opening to the sea on that side. The want of funds prevented more being done than had already been accomplished. To complete his design, the expenditure of £322,000 at least would have been necessary. The disbursement of so large a sum was absolutely impossible, owing to the expense already incurred in connection with the docks made, and the high rate of charges upon goods and shipping required to meet the interest upon the money that had been borrowed to build them. In 1824, however, a further attempt was made to improve Leith as a seaport, by extending the eastern pier about 1500 feet, which gave it a total length of 2550 feet, by making a western pier and breakwater, and by using part of the Queen's Dock as a naval store-yard. The first pile was driven in on 15 Aug. 1826 by the Lord Provost of Edinburgh, and the initiation of this new work of improvement was attended with considerable pomp, which shows that its importance was fully realised. These improvements, the outcome of surveys and designs by Mr W. Chapman of Newcastle, were completed at a cost of £240,000 borrowed from Government on the security of the dock dues.

In 1838-39, two eminent London engineers, Messrs Walker and Cubbitt, were sent down by the Lords of the Treasury to undertake the task of providing their lordships with such a plan as will secure to the port of Leith the additional accommodation required by its shipping and commercial interests, including the pro-

vision of a low-water pier.' The engineers were not to exceed the sum of £125,000 in their suggested improvements. Their mission was barren of results. They came and saw, but went away in disagreement as to what should be done. Mr Cubbitt sent in one report, and Mr Walker sent in two, which, like the one of Mr Cubbitt, came to nothing.

A bill was passed in parliament in 1848 to revise the schedule of rates, and to allow the execution of Mr Rendel's scheme of improvements. The main features of his scheme were the extension by 1000 feet of the E pier, the conversion of the W breakwater into a pier, and its extension by 1750 feet. It further provided for the stronger construction of the latter, so that it might be able to bear the weight of a line of railway upon it, and for the formation of a low-water landing-place at the extremity of the W pier. This last was to be 350 feet long, well sheltered, furnished with all needful accommodation, and so arranged that it should never have less than 9 feet of water around it, even at the lowest tides. This scheme also had reference to the channel, which was to be deepened so as to have a depth of 20 feet at high water of neap tides, and 25 feet at high water of spring tides. These alterations and improvements referred solely to the approach to the docks. But the bill also allowed for the construction of a new dock at a cost of £56,000, over and above the different works just specified. The act of parliament for this new dock was passed in 1847, and building operations were forthwith begun by Mr Barry, who had been successful in obtaining the contract. In 1851 the Victoria Dock, as it was called, was opened, the first vessel to enter it being the *Royal Victoria*, a steamer trading between Leith and London. This dock lies immediately to the N of the Wet Docks, has an area of nearly $4\frac{3}{4}$ acres, is 700 feet long by 300 broad, has wharfrage 1900 feet in length and 100 in breadth, has a depth of 21 feet at the lowest neap tide, and an entrance which is 60 feet broad. In 1851 the E pier was 4550 feet in length, and the W pier was $3103\frac{1}{2}$ feet in length, and in 1855 the various works of alteration and improvement became available for the trade and business of the port. Upon them a sum of £135,000 was expended, of which £56,000 were spent in constructing the dock, and £79,000 in extending the piers, deepening the channel, etc. This dock, which still continues one of, if not the busiest of the Leith docks, is chiefly occupied by the steamers of the London and Edinburgh, and of the Leith, Hull, and Hamburg steamship companies, the latter of which belong to the well-known firm of James Currie & Co.

In 1858 the Prince of Wales Graving Dock was opened. It is 370 feet long by 60 broad at its entrance. It is worthy of notice not only on account of its size, but also because it was the first dock constructed on the South Leith side of the Water of Leith. It is capable of admitting vessels of a large tonnage.

The Victoria Dock helped materially to relieve the pressure upon the old docks, but, in the course of a few years, increase of trade made further extension an absolute necessity. Nevertheless nearly ten years were allowed to pass before any fresh undertaking was begun. In 1862, Mr Rendel of London and Mr Robertson of Leith, civil engineers, after having made a very careful survey of the ground, proposed to construct new docks which, with proper wharfrage, etc., would require the reclamation of some 84 acres of sand that had once been the Leith race-course. The proposed docks were in South Leith, and the site went by the name of the East Sands. Its nearness to the half-tide level was greatly in its favour. So were its broad expanse and the comparatively small outlay required to reclaim it. The accepted contract for the work of excavation, embanking, masonry—that furnished by Mr W. Scott—amounted to the considerable sum of £189,285, which was further increased by the addition of £35,215 for cranes, sheds, etc. These two sums combined brought the expense up to £224,500. Compared with the Victoria Dock, the largest of the old basins, the size

of the new dock—the Albert, as it is named—becomes apparent. It covers an area of $10\frac{1}{4}$ acres, is 1100 feet long and 450 broad. At high-water of spring tides there is in it a depth of water equal to $20\frac{1}{2}$ feet, and its quayage measures 3049 lineal feet. The Albert Dock is approached from the W through an outer basin of more than 2 acres in extent, and by means of a lock 350 feet long and 60 broad. The wharfage round the dock is very spacious, the sheds are most commodious, and the appliances for unloading are of the most perfect description. Hydraulic cranes were fitted up on its quays for the first time in Scotland, and they have done more than anything else to hasten the discharge and loading of cargoes. Like the other docks, it is well supplied with water hydrants, and is lighted with gas. The Albert Dock was formally opened on the 21 Aug. 1869. It contains the berthage of Messrs Gibson's fine fleet of continental traders. The latest addition to the docks of Leith—the Edinburgh Dock—called after the Duke of Edinburgh, by whom it was christened and formally opened on 26 July 1881, has advanced Leith to a high position among the seaports of the kingdom. Its extent, the completeness of its equipments, the broad stretch of reclaimed ground around it, are the main features of the Edinburgh Dock. It lies immediately to the E of the Albert Dock, to which it is joined by a channel 270 feet in length and 65 in breadth. A swing-bridge, which weighs 400 tons, is worked by hydraulic power, and cost £15,000, has been made over this channel, and allows of easy communication with the N side of the dock. The work of construction was begun in 1874 by the building of a sea-wall, which stretches from the E end of the Albert Dock to a point near the place where the Seafield toll once stood. Like the dykes of Holland, this wall is extremely strong, and everything has been done to make it wave and weather proof. With a breadth of 30 feet at the bottom and $10\frac{1}{2}$ at the top, it is built of dry rubble faced with ashlar, 2 feet thick, and to a certain extent with Portland cement concrete. Its solidity is further increased by the introduction of puddled clay, 6 feet thick, on the landward side, by the introduction of many tons of what are known as 'quarry shivers,' and by the construction of a defence upon the seaward side, which breaks the waves before they reach the wall, and so diminishes their force. This embankment was completed in February 1877. It served to reclaim 108 acres of ground, out of which the dock was to be excavated. Digging was forthwith begun. An army of 'navvies' with two steam 'navvies,' able together to do as much work as 80 men, and to dig up 1100 tons of earth per day, immediately began operations, and rapid progress was made. The work went on smoothly. Neither hindrance from water nor from any other cause was experienced, and hence the magnitude of the undertaking may be so far realised from the fact that it took 4 years and 4 months successfully to accomplish it. The dock is $16\frac{3}{4}$ acres in extent; the N and S walls have each a length of 1500 feet; the greatest breadth is 650 feet. The W end, 500 feet in length and 650 in breadth, is entirely open to shipping, and affords ample room for manoeuvring even very large vessels. The E end is occupied by what may be described as an artificial peninsula, which stretches out into the dock for the length of 1000 feet, and has a uniform breadth of 250 feet. This peninsula has sheds all round it, and thus adds not a little to the accommodation. A splendid graving-dock, 300 feet long by 48 wide at the bottom, and 70 wide at the top, occupies its centre. The stone with which the walls of the Edinburgh Dock were built came from Craigmillar Quarry, not far from the capital. The masonry extends 35 feet from the top to the bottom of the side. It has been estimated that the total amount of masonry employed was not less than 900,000 cubic feet, while the length of quayage measures fully 6775 feet. At high tide the water in the dock is 27 feet deep. The S side is lined with sheds, each of which is 196 feet long and 80 broad. The coal export trade, which is engaged in on a large

scale at Leith, has been not a little aided by the erection of 3 powerful coal hoists, worked by hydraulic power, and able to raise a railway truck full of coals into the air, and then shoot its contents into the holds of the vessels being loaded. When the work of reclamation was effected, a larger space of ground was saved from the sea than was required for the dock, and this additional ground—amounting to some 54 acres—was divided between the North British and Caledonian Railway Companies, who have filled it up so as to make it of the same height as the quays. The companies use it for their goods traffic. The whole cost of the undertaking was £400,000. The dock was opened in July 1881 by H. R. H. the Duke of Edinburgh, who happened to be in Scotch waters at the time in command of the Reserve Squadron.

The trade of the port since the opening of the Edinburgh Dock continuing steadily to improve, the Commissioners obtained powers in the Leith Harbour and Docks Act, 1892, to construct further docks and other works, and to alter certain sections of other Acts. Under these powers an enclosure of about 85 acres of ground by a reclamation wall 4400 feet long, was completed in 1896. On the completion of this a dock 1100 feet long and 550 feet wide was commenced on the enclosed ground. The dock will be entered from the harbour by a lock 350 feet long and 80 feet wide, with a depth of water on the sill of about 31 feet at spring and 26 feet at neap tides, 5 feet deeper than on the sill of the Albert Dock. There will be a passage 60 feet wide, with lock gates, between the new dock and the north-west corner of the Albert Dock, by which the Albert and Edinburgh Docks will secure some of the advantages of the increased depth of the new dock.

The present quays are about 200 feet wide, but experience has shown that with the large steamers now frequenting the port, and the necessity for rapid discharge and loading, this width is insufficient, so the quays of the new dock will be 400 feet wide.

The outer harbour or entrance channel will be deepened to the extent of 5 feet, or 2 feet lower than the sill of the new dock. There will then be a depth of water of 16 feet at low-water spring tides, which will admit of nearly all coasting and passenger steamers coming into the harbour at any state of tide—an advantage which, perhaps, will be most appreciated by those who have had to lie in the Roads on a stormy night, 'waiting for the tide.' Another valuable and much-needed addition to the accommodation of the port is the construction of the Alexandra graving-dock, alongside the Prince of Wales Dock. This dock is 325 feet long and the entrance 48 feet wide, with a depth of 20 feet on the sill at spring tides, and was opened on June 29, 1896. These works have been designed by Mr Peter Whyte, M. Inst. C. E., the engineer to the commissioners, Sir A. M. Rendal being the consulting engineer. The cost of the works will be considerably over £500,000, and the whole will be completed about the end of 1898.

The docks of Leith, as has been said, are partly on one side of the Water of Leith and partly on the other. They are connected by a swing-bridge of great size. With a weight of 750 tons it cost £32,000, and has a double line of railway in the centre for goods traffic, and space on either side for passenger traffic. It is constructed of iron. The stretch of water parallel with the town, and extending 2 miles or so out from the shore, is called Leith Roads. It affords a safe and sheltered anchoring-ground, especially from eastern gales, from which it is defended by Inchkeith. Steamers and sailing vessels can generally ride securely in them, either while waiting for the tide to suit for entering the docks or for a change of wind. During the European war an admiral's guardship and several cruisers were stationed off Leith, and at the Crimean war it was the winter station of some of the vessels belonging to the Baltic fleet. A Martello tower, built on the Black Rocks, a reef running out into the Firth, stands nearly 500 yards to the E and 165 feet to the S of the E pier-head. Erected by government at a cost of £17,000 to defend Leith during the

European war, the tower is circular in form, strongly built, and bomb-proof. It was the chief defence of the town until 1878, when Inchkeith was fortified. (See INCHKEITH.) The long piers, the E of which has a length of 1177 yards and the W of 1041 yards, are carefully lighted. At the point of the W pier there is a fixed bright light, visible 10 miles off; and at the point of the E pier a fixed green light. From the inner lighthouse on the E pier a fixed red light is shown. The depth of water is shown both by day and night at the E pier-head by a system of flag and balls by day, and white and red lights by night. When the gates of the Victoria Dock are open a red light is shown on both of the Victoria Dock heads. In foggy weather the fog-bell is sounded from the lighthouse at the end of the W pier. During the day there are other signals by which captains are informed when there is sufficient water to allow their vessels to enter the docks.

For some distance above the various docks the Water of Leith has been widened and deepened, and has a line of wharfs on one side and the Shore on the other. Small steamers, barges, and even large vessels, are able to pass up and down at certain states of the tide, owing to the bridges being so constructed that they can be raised or let fall at pleasure. As a shipbuilding yard is some way above the docks, it is very necessary to keep the passage clear. In connection with the docks should be mentioned the line of blank unornamental buildings that stretch along Commercial Street, and occupies the greater part of one side of it. They are the bonded stores of Leith, and are of great size. At Commercial Street the different lines of railway, which cover the quays with an iron network, converge in a point, and are carried across the street to the North British railway station, now a shabby building, though at one time it may have had some claim to be regarded as ornamental. The Caledonian railway station, at the W end of Commercial Street, is a plain brick building, but is clean and neat, if not pretentious.

The right of property over the harbour of Leith formerly belonged to the city of Edinburgh. This right extended back as far as the reign of Robert the Bruce, who in 1329 granted 'ane right of the harbour and mills of Leith, with their appurtenances, to the city of Edinburgh.' The district referred to included the whole shore, beach, sands, and links between the point known as Seafield toll-bar on the E and that known as Wardie Burn on the W. All the shore dues levied within these limits, except a merk per ton, which helped to increase the stipends of the city clergy, passed into the coffers of the capital. In the account of the various schemes devised and carried out to improve the accommodation of Leith, mention was made of the sums expended upon new docks, improved machinery, etc. Previous to 1825 the magistrates and council of Edinburgh owed £25,000 to Government and £240,000 to other parties; but in that year Government advanced £240,000 to enable them to meet their obligations to private parties. Various conditions had to be accepted before the advance was made. Interest at the rate of 3 per cent. was to be paid, and 2 per cent. was to go to a sinking fund; part of the W dock and shore around it was to be handed over to the admiralty for its own use, and government was to have a preferential claim over the entire dock and harbour property, and a concurrent claim with other creditors over the whole property of Edinburgh. In 1833 the city did become bankrupt, but by that time £25,000 had been written off, leaving £240,000 still due. Various negotiations were entered into, and at last an arrangement was carried out which has been of no little benefit to Leith. By an act of parliament, passed in 1838, the petty customs of the town were transferred from the city of Edinburgh to the town council of Leith; the merk charged on each ton was abolished; the sum of £125,000 was allowed to be expended in improvements; and the entire management of the docks and harbour was vested in a commission of 15 members. Three of these are elected by the town council of Edinburgh, 3 by that of Leith, 1 each by the

Edinburgh Chamber of Commerce, the Leith Chamber of Commerce, and the Edinburgh Merchant Company, 2 by the shipowners, and 4 by the ratepayers (those who pay £4 and upwards of dock rates).

The following table shows the steady progress of the port from 1840 to 1893, as regards the Leith Dock Commission:—

Year.	Ordinary Revenue.	Ordinary Expenditure.
1840	£26,012	£16,444
1850	27,717	15,536
1860	33,789	22,375
1870	56,625	37,304
1880	83,330	52,677
1890	*82,763	58,248
1895	93,521	42,838

* Large reductions of rates on goods and vessels took place in 1883 and in 1885.

Since the existing Commissioners were appointed under the Act of 1875, they have expended upon dock extension and other new works upwards of £500,000, and it says much for the care and prudence with which the finances and affairs have been administered that notwithstanding this large expenditure, the total indebtedness at the present time is less than when the Commissioners took office, and amounts to about one-fifth of the amount expended for new works since the Commissioners were first appointed in 1839. The following statistics show how the shipping registered at the port has grown. In 1692 there were 29 vessels, with 1702 tonnage; in 1792 the tonnage was 18,468; in 1895 there were 180 steamers, tonnage 110,246, and 23 sailing vessels, tonnage 5890. In Leith fishery district there are 489 fishing boats handled by 1861 men and boys (see NEWHAVEN); and as indicating the growth of trade during the last forty years, the tonnage of vessels arriving at the port in the following years is here given:—

Year.	STEAMERS.	SAILING SHIPS.	TOTAL.	Increase in each 10 Years.
	Tons Register.	Tons Register.	Tons Register.	
1853	83,487	259,610	343,097	—
1863	226,940	300,479	527,419	184,322
1873	504,041	324,258	828,299	300,880

Increase in 40 years, 1,146,428 tons = 300 per cent.

As a seaport Leith depends very largely for its prosperity on the continental and foreign trade. The firm managed by James Currie & Co. has 34 steamers, with a tonnage of 33,973. These vessels trade regularly to Hamburg, Christiansand, Copenhagen, Danzig, Königsberg, Libau, Pillau, Stettin, and other Baltic ports; also to Newcastle three times a week, and Hull and Sunderland once a week. George Gibson & Co. have 12 steamers, with a tonnage of 10,880. They sail to Rotterdam, Amsterdam, Harlingen, Antwerp, Terneuzen, Ghent, and Dunkirk. M. Langlands & Sons' steamers call at Aberdeen and other ports on to Inverness, Stromness, Stornoway, Oban, etc., and fortnightly to Plymouth, Falmouth, Bristol, Cardiff, etc.; W. Thomson & Co.'s vessels sail every ten days to Cronstadt during the season; James Cormack has regular sailings to Riga and neighbouring ports and to Archangel as required; the North of Scotland & Shetland Co. have frequent sailings to Aberdeen and northern ports; London & Edinburgh Shipping Co. have 6 splendid passenger steamers (7500 tonnage), sailing twice a week to London, and they also have 6 cargo steamers (6500 tonnage), trading with the French, Portuguese, Spanish, and Mediterranean ports as required; General Steam Navigation Co.'s vessels sail twice a week to London from Granton; C. Salvesen & Co., Leith, send their steamers from Granton to Aarhus, Christiania, Gothen-

burgh, etc.; Simon & Co. send fortnightly to Iceland during the season; Hugh Blaik & Co. to New York every 10 days. There are other smaller coasting traders, and in summer passenger saloon steamers run to Stirling, etc., Forth Bridge, Aberdour, Elie, North Berwick, St Andrews, etc.

Leith was constituted a parliamentary burgh by William IV. in 1833. Before that date its government had been very inefficient, owing to its consisting of a number of separate jurisdictions, some of which were under the power of Edinburgh. The Parliamentary Reform Bill (1832), the Burgh Reform Bill (1833), and the Act of 1838, which transferred to and vested in the provost and magistrates of Leith the common good of the burgh, embracing the customs, rates, imposts, market dues, freed Leith from this bondage. The municipal government consists of a provost (who is also admiral of the Firth of Forth), 4 bailies, a treasurer, and 10 councillors. Among the town officials are a town-clerk and deputy, treasurer, collector, burgh assessor, burgh surveyor, analyst, officer of health, sanitary inspector, firemaster, registrar, etc. Admiral and baillie courts are held by the provost and bailies, and there is a society of solicitors for practising before these courts. A sheriff court for the Leith district is held in the sheriff court room, Constitution Street, every Tuesday while the court sits; and a sheriff small debt court is held on Wednesday during session. The dean of guild court is presided over by the provost and

magistrates for the time being. The Edinburgh and District Water Trust is composed of members elected from the town council of the capital, Leith, and Portobello, which burghs are all supplied from the same reservoirs. The Water of Leith Sewerage Commission is drawn partly from the town council of Edinburgh, and partly from that of Leith. The gas is supplied by the corporations of Edinburgh and Leith. Electric lighting was introduced in 1897. The police force consists of 1 chief constable, 1 lieutenant, 7 inspectors, 12 sergeants, 88 constables, and 2 detectives. Of

New Seal.

these the dock division consists of 1 inspector, 4 sergeants, and 32 constables, who are paid by the Dock Commissioners. For municipal purposes Leith is divided into 5 wards. The annual value of real property (including railways and tramways) in the burgh amounted in 1895-96 to £418,986 (£377,211 in 1882-83); the corporation revenue for 1895 was £535. The municipal constituency numbers 13,599, which includes 1978 females. Leith unites with Musselburgh and Portobello (the Leith Burghs) in returning one member to parliament. The parliamentary constituency is 11,621. Pop. of parliamentary burgh (1821) 26,000, (1831) 25,862, (1841) 26,026, (1851) 30,919, (1861) 33,628, (1871) 44,280, (1881) 58,196, (1891) 67,700, of whom 33,425 were males. The parliamentary burgh consists of parts

of the parishes of Cramond (102), North Leith (20,617), St Cuthbert's (13,493), South Leith (33,480). In 1893 the population of the town was 68,707 (inclusive of shipping). Houses inhabited 14,067, uninhabited 607, building 56.

The port of Leith in its Custom house relations includes the creeks of Dunbar, North Berwick, Aberlady, Cockenzie, Morrison's Haven, Fishierrow, Granton, Cramond, which lie between St Abb's Head and Cramond Water. The amount of customs collected was in 1891, £322,225; in 1892, £373,296; in 1893, £336,667; in 1894, £314,835; in 1895, £360,501. The chief imports at Leith are grain, hemp, hides, tallow, timber, sugar, esparto grass, wine, wool, tobacco, flour, oil-cake, guano, linseed, tinned meats, grass seeds, fruits. The total value of exports from Leith in 1895 was £3,614,446, which shows an increase of about tenfold within the last forty years, the total value in 1851 having been £389,293.

Leith is the headquarters in Scotland for the wine trade, and business connected therewith. It has one very large and some smaller distilleries. Among other industries shipbuilding and engineering take a high place. The timber trade and saw-milling are largely developed. There are very large flour and meal mills, sugar refineries, tanneries, and skin works. There are chemical works, cooperages, colour works, and preserved meat works. The corn trade is an extensive one, and the making of ropes, cordage, and sailcloth is among the largest in Scotland.

Until comparatively recently, Leith was able to make a very fair show of old houses and relics of the past, but the improvement schemes carried out from time to time, though in themselves very great boons to the town, have gone far to remove all that was of an antiquarian nature. So that, notwithstanding the great advantages that have arisen from the opening up of the town, and the removal of narrow closes and noisome courts, it is impossible not to feel a shade of regret that, along with felt nuisances, much that was interesting and picturesque has been swept away. One of the old houses of Leith, of which a small part is still extant, is that which once was known as the mansion of Lord Balmerino. It stands at the corner of Coatfield Lane in the Kirkgate, was built for the Earl of Carrick in 1631, and passed into the possession of Lord Balmerino in 1643. The house, which had originally four floors, was of considerable size, oblong in shape, and had two approaches—one from Kirkgate through a low, narrow archway, and the other on the E side through a garden. This garden must in bygone days have been one of the chief attractions which the property presented, owing to its size and the seclusion it afforded. The architecture of the house was marked by traces of debased Gothic. Charles II. is said to have passed a night in it in 1650. It is impossible now to say in what house, or even in what part of Leith, Mary of Lorraine, the Queen Regent, lived during her sojourn in the seaport. Divers houses in different localities lay claim to the honour of having sheltered her. Very likely it no longer exists; still as many houses compete for the distinction of having been the residence of Mary of Lorraine and of Oliver Cromwell as citizens of Greece competed for having been the birthplace of Homer. A building at the head of Queen Street, formerly Paunch Market, which was demolished in 1849, has been considered by some authorities the most likely of these claimants. It certainly was distinguished from its neighbours by the finish of its different parts. In the oak panellings of its doors, the carving of its window frames, the ornamentation of its front, it was not difficult to discern that it must have been at one time the residence of some person of rank. It has been asserted further that the change of the name of the street from Paunch Market to Queen Street is an indication that it once must have contained the abode of royalty. This is plausible enough, but against it must be put the direct evidence of William Maitland, the historian and antiquary, who wrote about the middle of the 18th century. He says, 'Mary of

Lorraine, having chosen Leith for her residence, erected a house at the corner of Quality Wynd, in the Rotten Row, but the same being taken down and rebuilt, the Scottish arms, which were in front thereof, are erected in the wall of a house opposite thereto, on the southern side.' The stone, upon which the arms of Guise, quartered with those of Scotland, had been carved, has fortunately been preserved, though it has had several narrow escapes from destruction. The Queen-regent is also credited with the erection on the Coalhill of a building in which her privy council might meet. Until within a few years this house was distinguished by the superior style of ornamentation upon its walls, cornices, ceilings, visible even through the obscuring dirt that had accumulated upon them. It is supposed to have been used successively by Mary of Lorraine, the Earl of Lennox, the Earl of Mar, but the latest improvement scheme, when carried out, will require its removal. Perhaps along with it will perish the name of Parliament Square, which arose from its nearness to the place of deliberation on the Coalhill. The King's Work, a building probably 100 feet square, erected on ground between Bernard Street and Broad Wynd, was originally intended for a royal arsenal, with warehouses and dwellings for the permanent officials. In 1575 it was used as a convalescent hospital for those recovering from the plague. It was gifted by King James VI. to Bernard Lindsay, his groom of the chamber, after whom Bernard Street is called. He was permitted to keep four taverns in it. Nothing now remains of this building, once considered one of Leith's chief adornments, and the ground it occupied is covered with irregularly built houses of later date. To the E of the King's Work was the district called Little London, measuring 90 feet long by 75 broad. It has been said that its name was derived from some fancied likeness to the great metropolis, but such an explanation is hardly sufficient. It is far more likely that it got its name from the fact that in it were quartered the English soldiery, sent to aid the Earl of Morton in 1571, when he was trying to reduce Edinburgh Castle. The Old Tolbooth of Leith was finished in 1565, when Mary Queen of Scots was on the throne. It was taken down in 1819, and rebuilt on the same site. The building presented no particular architectural features. King James's Hospital was founded by the kirk-session of South Leith in 1614, confirmed by a charter of King James VI., and endowed with lands and tenements in Leith and Newhaven. The building stood on the E side of the Kirkgate, and was able to accommodate 12 poor women, each of whom had a separate apartment, enjoyed a small pension, and was provided with fuel and candles. The site of the hospital is marked by a stone, with the Scottish arms carved upon it, let into the wall of South Leith churchyard. Cromwell, it is known, lived for a time in Leith, but the same difficulty exists in regard to his place of abode as did in regard to that of the Queen-regent. There almost appears to have been some affinity between them, to judge at least from the statement of a writer who, after considerable search, discovered that a majority of the houses which claimed to have received the one, claimed to have received the other also. The Old Grammar School of Leith stood in Kirkgate, and was an institution of some fame, since the post of teacher of Latin in it was much coveted. The Kantore or Kintore House, whose name is said to be derived from the Flemish word *Kantoor* (place of business), was the customary prison-house in which those were confined who had incurred the censure of the Church. Timberbush, another old locality of Leith, lying N of Queen Street, derives its name from the French word *bourse* (exchange). In Timberbush all the wood that came into Leith was stored, and doubtless it got its name from the occurrence in it of wood sales. The Precceptory of St Anthony's Wynd. It was founded in 1435 by Robert Logan of Restalrig. A Catholic writer speaks of it as 'most magnificent,' and regrets that, owing to the way in which 'the madness of the

heretics had raged,' no trace of it now remains. It was mainly supported by the contributions of seamen, who had escaped from the perils of the deep by the intervention of the saint, or sought his protection before they went to sea. To the E of the Trinity House, at the head of Combe's Close, stands one of the oldest houses in Leith still extant, though probably soon to perish. It is remarkable for the way in which the ground has risen in and about it. In one passage, through which men were originally able to walk upright, the level has so greatly changed that it is only possible to traverse it crawling or stooping very low. The house which was inhabited by the parents of John Home, author of the tragedy of *Douglas*, etc., stood in Quality Street. It was pulled down some years ago to make way for new buildings. Before leaving the antiquities of Leith, some of the curious texts upon stones may be mentioned. Many are extremely quaint, and the majority are interesting as the sole relics of the houses to which they formerly belonged. In the S wall of the Trinity House is a stone with the following inscription, 'In the name of the Lord, ye Masteris and Marineris Bylis this Hous to ye pour; Anno Domini, 1551.' In the E wing is one with this inscription, 'Pervia, Virtuti, Sidera, Terra, Mare.' It has also representations of various nautical instruments. Over a doorway in Burgess Close is 'Nisi Dns (dominus) Frustra (1573)'; over the doorway of the first Episcopal chapel, 'Thay ar welcum heir that God dois love and feir, 1590.' The tablet of the Association of Porters, over the entrance to the Old Sugar House Close, is extremely interesting, since it shows pictorially how the wine ships that came into Leith were unloaded by a treadmill apparatus, and in what way the casks were carried about from place to place. The armorial bearings of the Queen-regent are now built into the window of St Mary's, in Albany Street. Leith became a walled town in 1549, when its fortifications, begun in 1548, were completed by D'Essé, the commander of the French troops then in Scotland. His object was to strengthen the position of Mary of Lorraine, who became regent in 1554. The rampart was octagonal in form, with a bastion at each of the eight angles. The first bastion, called Ramsay's Fort, and situated on the E side of the river, between the beach and the W end of the present Bernard Street, was intended to protect the harbour. The wall ran from it in a SE direction, parallel with the line of Bernard Street, and had a second bastion on the same site as that upon which the Exchange Buildings now stand, and a third where Coatfield Lane joins Constitution Street. The line of Constitution Street fairly represents the direction between the second and third bastions. From the third to the seventh, the direction was more or less NW. The fourth was at the top of Kirkgate, the position of the fifth is uncertain, the sixth was somewhere near the river on the W side of it, and the seventh stood beside the site on which the Citadel was afterwards built. The eighth bastion was at the Sandport, overlooking the harbour, and corresponding to Ramsay's Fort on the opposite side of the stream. Between the fifth and sixth bastions flowed the river, which broke of course the continuity of the wall. The two parts were joined by a wooden bridge, by which communication was maintained between them. The wall was built wholly of stone, and was pierced by six gates, or 'ports,' as they were called. These were the Sandport, St Nicholas' Port, the gate for Bonnytown Road, St Anthony's Port, Coat-fold, Lady's Walk. St Anthony's Port was the chief, being the main entrance to the town on the line of Kirkgate. At it took place the severest fighting and the greatest bloodshed in the attack of 1560, when the Lords of the Congregation, assisted by the English, were worsted by the combined Scotch and French forces under the standard of Mary of Lorraine. The town was partly dismantled of its fortifications in 1560, after the signing of the treaty of Leith, but in 1571 the Earl of Morton so far rebuilt the wall as to make it again serviceable for defence. It has now totally disappeared, and its

line can only be imperfectly guessed at, indications of it sometimes appearing when the ground is turned up. Traces still remain on the Links of the earthworks raised by the Protestant party. The names of three have come down—Mount Falcon, Mount Somerset, Mount Pelham. Mount Somerset is now known as the Giant's Brae. The Citadel of Leith, mainly constructed in 1650 by the forces of Oliver Cromwell, stood on the North Leith side of the river, and was of considerable size. In form it was pentagonal, with a bastion at each of the angles. Its extent may be gathered from its comprising, besides magazines for gunpowder and stores for provisions, barracks for the garrison, a place of worship, and a courtyard. After the Restoration it was almost entirely destroyed, and its site granted by Charles II. to the Duke of Lauderdale. All that now remains of this once large building is only a Saxon archway and a few feet of the old wall.

Several circumstances combine to make the history of Leith both interesting and eventful. Its proximity to the capital, in whose fortunes, whether willingly or unwillingly, it had to share; its peculiar relation of dependence upon Edinburgh; its struggles after freedom, at last successful—all unite to increase the interest which it excites. The first mention of the town is found in the charter of the abbey of Holyrood (1128 or 1143-47), in which, along with other property, 'the lands of Inverlet or Leith, in the neighbourhood of the harbour, with the said harbour,' are granted to the monastery. This charter is mentioned in all the charters which refer to Leith that succeeded it, and hence there is strong presumptive evidence of its genuineness. If its validity be unquestioned, it may safely be concluded that there was at that time some kind of harbour at the mouth of the Leyt or Leith. That there was a harbour in 1313 is certain, for at that date all the ships in it were burned by the English invaders. A transaction took place in 1329 between King Robert the Bruce and the town council of Edinburgh, which decided the fate of Leith for long years to come. In it the capital had all the advantage; and, had the King foreseen its consequences, such an agreement would never have been ratified. By it the port of Leith, its mills and pertinents, were gifted to the burghesses of Edinburgh and their successors, to have and to hold in all time coming for the yearly payment of 52 merks, which, considering the value of money then and now, would certainly be less than £300, and might be about £280. This sum was to be paid twice a year, one-half at Whitsunday and the other half at Martinmas. The next step of the city of Edinburgh was to strengthen its hold by getting into its hands the ground that lay around the harbour. In 1398 a dispute arose between Sir Robert Logan of Restalrig, the superior of the lands, and the town council of Edinburgh as to the legal rights of the latter. Only in so far as it was the cause of the disagreement had Leith any interest in the quarrel, which was simply a struggle for the mastery between a grasping individual and an equally grasping corporation. Sir Robert Logan was so far successful, in that he was able to force his opponents to buy from him, by purchase and charter, waste lands on which to build shops and granaries and construct quays and wharfs. Lawsuits arose from time to time between the baron and the burghesses, until in 1413, when Logan of Restalrig, by 'an exclusive, ruinous, and enslaving bond,' restrained the inhabitants of Leith from carrying on any trade, from possessing warehouses and shops, and from keeping houses of entertainment for strangers. For executing this deed, which one would hardly have expected to find in a country whose freedom has always been its boast, this autocratic baron was paid a very large sum out of the coffers of the city of Edinburgh. In 1423 King James I. allowed a tax or toll to be levied upon all ships and boats entering the port or harbour of Leith. The money that was the fruit of this tax was to be spent in improving and repairing the harbour. The abbot of Holyrood appointed Sir Robert Logan in 1439 to the office of bailie over the abbey lands of St Leonards, which lay

in the town of Leith. Forty-six years later the Edinburgh town council, acting most despotically, ordained, 'That no merchant of Edinburgh presume to take into partnership any indweller of the town of Leith under pain of forty pounds to the Kirkwark and to be deprived of the freedom (of the city) for a ne zear.' This was surely severe enough a punishment; but the number of restrictions had not yet reached an end. Further orders prohibited the farming of the revenue of the city to an inhabitant of Leith or any one in partnership with a native of Leith, or the selling of goods in the seaport, or the depositing of them in its warehouses. Royal charters confirmed these far-reaching rights. James I., by a charter dated 4 Nov. 1454, granted to Edinburgh 'the haven-siller, customs and duties of ships, vessels, and merchandize coming to the road and harbour of Leith.' James III., on 16 Nov. 1482, granted the burghesses of the capital a detailed account of the customs, profits, exactions, commodities, and revenues of the port and roads of Leith. In 1497 the civic authorities took a step which was kind, though apparently cruel. They obtained a writ from the privy council, which bade all persons afflicted with contagious diseases appear on the Sands of Leith. They were examined, and those whose condition was dangerous to their neighbours were taken to Inchkeith, there to die or to remain till they recovered. James IV., on 9 March 1510, granted to the city of Edinburgh a right to the new port called Newhaven, with the lands belonging to it, and certain faculties and privileges. He also confirmed the charter of Feb. 1413, granted by Logan of Restalrig. This custom of granting charters was continued by Mary, Queen of Scots, who, on 8 Oct. 1550, confirmed an act of the lords of session against the inhabitants of North Leith, by which the provost and bailies of Edinburgh were held proper judges of the said inhabitants in the petty customs of Leith belonging to the town of Edinburgh. Mary of Lorraine may perhaps be credited with good intentions towards Leith. When acting as queen-regent in 1555, she contracted with the inhabitants to erect the town into a burgh of barony, which was to continue valid until she could erect it into a royal burgh. To further this object, which must have appeared to the inhabitants a way of escape from many troubles, they agreed to lend her the sum of money necessary to purchase the superiority of the town from Logan of Restalrig. This engagement was never fulfilled. The disorder of the times doubtless served the regent as a sufficient excuse for not implementing it; but the Leith people in their disappointment declared that she had been bribed by the city of Edinburgh to break her plighted word. Mary, Queen of Scots, when pressed for money, mortgaged the superiority of Leith to the city of Edinburgh, redeemable for 1000 merks. Conscious of what would be the fruit of her action, she besought the town council to delay asserting their rights, and to give her a chance of redeeming the superiority. She was, however, quite unable to prevent the burghesses from assuming by open demonstration the powers and rights over the unhappy seaport, which, owing to her needs and difficulties, they were tacitly holding. On 2 July 1567 they marched to Leith in military order, and went through some evolutions, intended to represent the capture of a hostile town. This might appear harmless and empty pantomime; but the superiority of the capital over the seaport, and the way in which the stronger exercised its power over the weaker, was a stern reality, and no mere show. King James VI. of Scotland was entreated by the unfortunate Leith people to interfere on their behalf, and to relieve them from a part of their burden. The King did interpose, but his interference was no boon, since it only added to the weight imposed upon them. By a letter of gift under the privy seal, dated 25 March 1596, he empowered the corporation of Edinburgh to levy a tax during a certain period, to support, erect, and repair the bulwark pier and the port of Leith; and, by a charter of confirmation and of *novo damus* (1607), he confirmed anew all the grants made to them. On

this occasion Leith made a great effort to free itself from the thralldom to which it had been so long subjected. Bribes were offered on both sides; but, as might have been expected, the wealthier party won. Charles I. followed in the footsteps of his predecessor. By the payment of £42,000 Scots to the Earl of Roxburgh, who was acting in 1638 as treasurer of the King, the superiority of the Canongate and of North Leith was secured to the magistrates of Edinburgh. In 1661, on payment of £6000, the city of Edinburgh obtained possession of the Citadel of Leith from the Earl of Lauderdale, to whom it had been granted by Charles II. It was not until the 19th century had passed into its third decade that Leith obtained relief from its 'auld enemies,' as the burgesses and council of Edinburgh may well be called. In 1832 the Reform Bill was passed, and set Leith free from those who had too often ruled it with unnecessary rigour. The first representative of Leith was John Archibald Murray, afterwards Lord Murray, who contested the seat against Mr Aitchison of Drummore. The first provost, appointed in 1833, was Adam Whyte. 'In 1838 the petty customs of Leith were transferred by act of parliament from the city of Edinburgh to the town council of Leith; Leith Links were acquired on payment of £25 per annum, along with the Council Chambers and Tolbooth; and the merk, (13½d.), per ton upon all goods imported was abolished.' In the course of time other changes were effected which materially improved the position of the town, and gave it an impetus the effects of which have not yet ceased to be felt.

The above gives in brief outline the municipal history of Leith, and for the sake of clearness it has been kept apart as far as possible from its political and social history. Although the fortunes of the seaport were greatly influenced by its peculiar municipal relationship to the capital, yet it had so far a distinct political existence. Leith, it has been said, was first mentioned either in 1128 or 1143. In 1313 and 1410 the ships in its harbour were burned by the English—at the first date, during the campaign in Scotland of Edward II., which ended so disastrously for him at Bannockburn. Nothing worthy of special note occurred in Leith until the century had almost closed. In 1493, however, Robert Ballantyne, Abbot of Holyrood, built the chapel of St Ninian's, which afterwards became North Leith parish church, and erected a bridge of 'three stonern arches' to connect North Leith with South Leith. This was the first bridge thrown across the Water of Leith, and its stability and endurance have been fully proved by the length of time it has been available as a means of crossing the river. From 1506 to 1510, under the enlightened administration of King James IV., whose efforts to raise Scotland in the scale of civilisation as well as among the nations were ably seconded by the famous sailor Sir Andrew Wood, progress was made in maritime affairs that deeply affected the fortunes of the sea-port. Either at Leith or near it was built the *Great Michael*, in the building of which, by a pardonable hyperbole, it was said that nearly all the woods of Fife had been wasted. In 1544 the Earl of Hertford, in command of 10,000 men, seized Leith, with the shipping in its harbour, held it for a time, plundered and ravaged it and the surrounding country, and then withdrew, leaving the port in flames. The same general, when Duke of Somerset, performed nearly the identical action in 1547, less damage, however, being done in 1547 than in 1544. On the latter occasion he carried off 35 vessels. A year later, D'Essé, the French general, began to construct the fortifications of Leith, and Mary of Lorraine commenced to regard it as a place of shelter from the coming storm. But before entering upon the history of that troubled time, we may turn aside to look upon Leith from a different stand-point, as the port at which royalty generally landed when passing to and from the Continent and elsewhere. At Leith James I. and his queen, Jane, daughter of the Earl of Somerset, landed on 20 March 1423; from it James II. was borne by sea to Stirling, after his abduction from Edinburgh

Castle in 1433; there Mary of Gueldres, queen of James II., landed on 1 April 1449; and Margaret of Denmark, queen of James III., in 1469. Sixty-eight years later Magdalene of France, consort of James V., 'the queen of twenty summer days,' landed upon the same pier that was burned by Hertford in 1544. The chronicler records that as soon as her foot touched the ground, the queen knelt, kissed the ground, and prayed God to bless her adopted people. In 1548 Mary, Queen of Scots, sailed from Leith for France; and there, too, after thirteen years spent at the French court, she landed again in 1561, when—

'After a youth by woes o'ercast,
After a thousand sorrows past,
The lovely Mary once again
Sets foot upon her native plain;
Kneel'd on the pier with modest grace,
And turned to heaven her beautiful face.

There rode the lords of France and Spain,
Of England, Flanders, and Lorraine;
While serried thousands round them stood,
From Shore of Leith to Holyrood.'

The lines quoted express what history has recorded of the warm welcome and the loyal devotion lavished upon Mary Stuart when she returned to sit upon the throne of her fathers. It was at Leith that Mary's daughter-in-law, Anne of Denmark, landed in May 1589, after her marriage to James VI. of Scotland in Norway. Other sovereigns who have landed at Leith are James VII. of Scotland in 1682 (while Duke of York), on which occasion he played golf on the links, and Mons Meg, fired in his honour, was damaged beyond repair; George IV., who arrived on 15 Aug. 1822; and Queen Victoria and the Prince Consort on 3 Sept. 1842. The Queen recorded her opinion of Leith in a single sentence, which was the reverse of favourable.

The historical account of Leith was brought down to 1548, in which year the fortifications began to rise around the town. In the contest between Mary of Lorraine and the Lords of the Congregation, Leith would have been extremely useful to either party, but its importance was far greater to the Regent than to the Lords. Holding it, she was able to draw from France provisions, munitions of war, troops; and, if the worst did come to the worst, it left a way of escape open by sea back to her native country. These reasons encouraged Mary in her attempt to make the inhabitants of the seaport friendly to her and her party. Mary's action with regard to the superiority of the town, and her promise to erect it into a royal burgh, have already been noticed. The goodwill she manifested towards them impressed the inhabitants with the belief that to the Queen Regent, rather than to another, should they look for help. Her frequent presence in the town, her gracious and winning ways, added not a little to her popularity. Mary of Lorraine had therefore acted wisely when she chose Leith as the 'nest' to which she, the 'linnet,' was compelled to fly for refuge from those birds of prey hovering over her—the Lords of Arran, Argyll, Ochiltree, and Ruthven. André de Montalembert, Sieur D'Essé, had, in 1548-49, constructed the fortifications of Leith, and made it the French 'place of arms' in Scotland. During the ten years that had elapsed between their erection and the siege of Leith, the fortifications had fallen out of repair, and the Regent at once set about putting them into a state of efficiency. Some preliminary negotiations were conducted, but without avail, and the Lords began to besiege the town in October 1559. Everything went against them. They tried to storm it, but were repulsed; the besieged made a sortie, and drove back the Protestant forces with great loss; an emissary, sent to England to beg assistance, was waylaid as he returned with a large sum of money to pay the forces, and robbed and wounded. In their need the Lords looked for help to Elizabeth, who sent (1 April 1560) an English reinforcement of 6000 men under the command of Lord Grey of Wilton. But, before their arrival, the 'linnet,' finding her nest no longer tenable, had abandoned it, and betaken herself

to the Castle of Edinburgh. For two months the siege lasted, success now declaring for the one side and now for the other. The loss of both parties in men was considerable, and the besieged found that they had not only to fight against the English, but against famine too. Still they fought on with undiminished spirit. At last both French and English saw that it was advisable to put a stop to this continued strife, and a treaty was arranged by the Bishop of Valence and Lord Burreigh. It stipulated that the two parties should return to their own lands on the same day, and this arrangement was carried into effect on 16 July 1560. Soon after, the walls were ordered to be destroyed, and Leith sank from being a fortified to being a commercial town. The Regent did not see these plans carried out. Her health had long been breaking, and the contention, rivalry, and bloodshed by which her term of office had been marked, doubtless hastened her end. She died on 10 June 1560, in the Castle of Edinburgh.

Mary, Queen of Scots, landed at Leith on 19 Aug. 1561, and rode to Holyrood on the next day amid the acclamations of the 'serried thousands' assembled to do her honour. Her mortgaging Leith, her chief act in reference to the town, has already been noticed. At that time Edinburgh was the natural centre of faction and intrigue, and Leith was peculiarly sensitive to every change of feeling in the capital. It was generally in opposition, so that if Edinburgh was held by one party, it was all but certain that Leith would contain the headquarters of the other. In the minority of James VI. the seaport was held by the Earl of Morton nominally for the King, and soon became the centre round which there gathered from Edinburgh and elsewhere the party opposed to the imprisoned Queen. Their council-chamber on the Coalhill has been alluded to under the antiquities. In 1571 the Edinburgh party made a sudden attack upon their opponents, in which, though at first victorious, they were afterwards worsted and driven back upon the capital. This was the 'Lang Fight,' in which the duration of the struggle was in inverse proportion to the number of the slain, the former having continued all day long, while the latter only numbered 36. As the war dragged on, feelings became embittered, and great cruelty and harshness were practised. Men and women were burned on the cheek, whipped through the town, drowned and hanged on the most trivial grounds. Even to belong to Edinburgh or Leith was crime enough to cost a man his life. It required very strong representations on the part of the French and English ambassadors to repress these barbarous acts, and to secure a cessation of hostilities between the Queen's men and the King's men.

In 1572 Leith was the scene of a meeting very different from any that had previously taken place in it, for in that year there was held in it an ecclesiastical convocation, in which superintendents, commissioners, and ministers took part. In the following year Maitland of Lethington died of poison in the Tolbooth of Leith (1573). An act of parliament, passed in 1578, is curiously illustrative of a time in which protection was considered a first law of nature. Its purpose was to prevent the export of butcher-meat, and one clause enjoined that the bailies of Leith should take care that no ship carried off more meat than was sufficient to serve its crew until they reached their next port.

Leith was made, in 1584, the chief market for herring and other fish caught in the Firth of Forth, and this doubtless helped to increase the trade of the port. In 1610, not fewer than 35 English sailors were hanged on the Sands of Leith for piracy, whose prevalence required stern measures of repression.

1643 is a memorable date in the history of Leith, for in October of that year the Solemn League and Covenant was signed by the inhabitants, the subscription being preceded by prayer, preaching, and fasting. Two years after Leith was visited by a terrible plague which, in nine months, carried off fully one-half of the population. Famine accompanied the plague, and had its own victims. Between them, in South Leith parish,

the death-roll numbered 2421; in Restalrig 160; in Craighend (Calton) 155. Many of the dead were buried in the Links, and even now it is not unusual, when the ground is opened, to find bones, and even, it is said, fragments of the blaukets or other material in which the bodies were hastily wrapped and buried. One result of the calamity was the passing of an act of parliament which allowed the magistrates to seize whatever grain they could find in granaries or store-houses for the use of the survivors. They were also given permission to seek help from the charitable in their distress, both to pay for the borrowed corn, and to help them to tide over their time of trouble.

Five years elapsed between the stamping-out of the plague and the occupation of Leith by Major-General Lambert, acting for Oliver Cromwell. Disease and famine had thinned the population, and even those who survived bore the marks of the trial they had passed through. They were powerless to resist the exactions of their conquerors. Besides having to pay its share of the assessment of £200 levied upon the capital and seaport, Leith had also to find a monthly sum of £22, 7s. 6d. This does not appear a very large amount of money, still, when all the circumstances of the case are taken into account, £22, 7s. 6d. does not seem so insignificant a sum after all. When Cromwell returned to England he left General Monk commander-in-chief in Scotland. Monk made Leith his headquarters, and the Citadel, erected by Cromwell in 1650, contained a garrison of regular soldiers. Fully aware of the capabilities of Leith as a seaport, Monk exerted his influence to induce a number of Englishmen, of wealth and position, to settle there as immigrants. Those who came thrived in their new home, much to the disgust of the people of Edinburgh, who did everything in their power to thwart them and keep them from prospering. Their attempts to hurt the English settlers became at last so notorious, that Cromwell himself had to interfere. At the instance of Monk, he appointed him and two of the Scotch judges referees in all matters of dispute. It might have been expected, and the action of the English makes it almost certain that they did expect, that Monk would have taken more than usual care to secure their interests. It seems more than probable that he was bribed by the city of Edinburgh. A memorial, prepared by the Southerners and the people of Leith, set forth their common grievances, but was unsuccessful in obtaining for them any redress. Still, so far as the Leith people were concerned, their position was not a little improved by the tranquillity of the times, the freer circulation of money, and the presence in their midst of an industrious, peaceful living community.

On 26 July 1698, the ill-fated Darien expedition of 5 frigates, with 1200 men and 300 gentlemen, sailed from Leith Roads. On 4 April 1705, Captain Green of the *Worcester* and two of his crew were hanged on Leith Sands for murder and piracy, committed on the high seas in 1703. In 1715, during the rebellion, Brigadier Mackintosh of Borlum, with a party of Highlanders, seized the Citadel, and held it for a day. The Duke of Argyll, who was then in Edinburgh, threatened to attack the Highlanders, but the marauders did not wait for battle. Having plundered the Custom-house, and broken open the prison, they gathered together as much booty as they could conveniently carry, and beat a hasty retreat across Leith Sands at low water. A mutiny of the Seaforth Highlanders occurred in 1778, but was suppressed without bloodshed by the officers granting their demands. Twenty-one years later a party of Highland recruits, which was to sail from Leith, also mutinied, refused to embark, and took up a position on the shore. This affair did not end so easily, as the mutiny was not quelled until 12 of the Highlanders were killed and 20 were wounded, while, of the Fencibles sent to subdue them, 2 were killed and 1 was wounded. On 17 Sept. 1779, Leith, like other towns on both sides of the Firth of Forth, was much disturbed by the appearance of Paul Jones. Three batteries were quickly raised, two at Leith and one at Newhaven, but their services were fortu-

nately not required, as the privateer's ships were blown out of the Firth by a strong westerly gale. Since the beginning of the present century Leith has had that form of good fortune which needs no annals to record it. In quieter times, and freed from the jealous rule of the city of Edinburgh, it has made advances which cannot fail to excite astonishment. In its docks, with the ships of all nations floating in them, in its warehouses and works, and in its busy streets, there is sure indication of its prosperity. And there can be no greater difference than between the attitude which Edinburgh sustains to Leith at the present day, and that which it sustained towards it during the centuries of its dominion and mis-rule. Petty jealousies do occasionally arise, but, on all important questions, there is commonly an unanimity of opinion and of sentiment which one would scarcely expect to see, after the bitter feeling of resentment with which Leith had learned to regard the capital, as the source of most of its woes, as the check upon its growth, and as the main cause of its degradation.

Of the natives of Leith, the following may be noted as the most famous. John Home (1722-1808), born in a house in Quality Street, became minister of Athelstanford, wrote *Agis* and *Douglas*, and, owing to his having written these stage-plays, was regarded with disapproval by the Church. He gave up his charge, resided in Edinburgh until his death, and wrote other works, chiefly dramatic. *Douglas*, his best, was played at Edinburgh in 1756. Hugo Arnot (1749-86) wrote a *History of Edinburgh* (1779) and *Criminal Trials* (1785). Sir John Gladstone of Fasque (1764-1851) made a large fortune at Liverpool in the shipping trade, sat as member of parliament for Lancaster, Woodstock, Berwick, purchased the estate of Fasque, and was made a baronet in 1846. His fourth son, William Ewart (b. 1809), was four times Premier. Robert Jameson (1774-1854) acted as keeper of the Edinburgh University Museum (1792), professor of Natural History (1804), established the Wernerian Society (1808), and began the *Philosophical Magazine* (1819). Jameson wrote two works on mineralogy. David Cousin (1809-78) was an eminent architect. Erskine Nicol (b. 1825) is a well-known Scotch artist and member of the Royal Scottish Academy. Sir James Marwick (b. 1826) acted as town-clerk of Edinburgh (1860-1873), and of Glasgow from 1873 onwards. He has edited numerous works on subjects upon which his position, first in Edinburgh and then in Glasgow, has made him an authority. Such are *Records of the City and Royal Burgh of Edinburgh* (4 volumes, quarto, 1869-80), *Records of the City and Royal Burgh of Glasgow* (2 volumes, quarto, 1876-80), and *Charters of the City of Glasgow* (1879). Other well-known characters connected with Leith, though not by birth, are Secretary Maitland (1525-73), who died of poison in the old Tolbooth to escape being executed; John Kay (1742-1826), the drawer of the 'Edinburgh Portraits,' who was brought up at Leith; Robert Nicoll (1814-37), 'Scotland's second Burns,' who lies buried in the old churchyard of St Ninians; John Logan (1748-88), ordained to South Leith parish in 1773, the composer of some of the Paraphrases and editor of an edition of Michael Bruce's Poems; Dr Colquhoun (1748-1827), who succeeded Logan in the charge; and Dr Harper (1794-1879), minister of the first Secession charge of North Leith (1819), professor of Systematic and Pastoral Theology in the United Presbyterian Theological Hall (1847), and moderator of the U.P. Synod (1860).

The parish of North Leith is bounded on the N by the Firth of Forth; on the E and SE by the Water of Leith, which divides it from the parish of South Leith; and on the S and W by the parish of St Cuthbert's. The outline is most irregular. It follows the windings of the Water of Leith from its mouth to a point near the Bonnington Mills, then strikes down in a NNW direction to within about $\frac{1}{4}$ mile of the shore; then stretches in zig-zag fashion along the course of the Anchorfield Burn SW to Inverleith Row, whence it strikes off due N and reaches the Firth at Wardie. Its

surface is on the whole level, with a tendency to rise, at first abruptly, then gradually as it retreats from the Firth. It is mainly covered by the town of North Leith, the village of Newhaven, the suburbs of Bonnington and Trinity, and numerous villas with their grounds. Within late years the building of houses, chiefly of the villa class, has been largely carried on. In extent it is $1\frac{1}{2}$ mile long, $\frac{1}{2}$ mile broad, and has an area of 349 acres. A powerful breakwater on the seaward side of the parish has been built to defend the land against the encroachments of the Firth. The parish is partly traversed by the lines of the North British and Caledonian Railway Companies. The land in it has greatly increased in value of late years on account of the demand for ground to build upon, and this explains the disappearance of nurseries and market gardens which once occupied the ground now covered with houses. Pop. of North Leith *quoad civilia* parish (1801) 3228, (1831) 7416, (1861) 10,903, (1871) 14,828, (1881) 18,732, (1891) 21,747, of whom 10,922 were females, whilst 15,353 were in North Leith ecclesiastical parish, 6085 in that of Newhaven, and 309 in St Thomas (Leith). Houses (1891) inhabited 4450, vacant 236, building 11.

This parish is in the presbytery of Edinburgh and synod of Lothian and Tweeddale. The living is worth about £600. There are an Established church of Newhaven and 3 Free churches—North Leith, income £1485, stipend £590; St Ninian's, income £470; Trinity, income £203, stipend £365; Newhaven, income £1173, stipend £370. North Leith United Presbyterian church has an income of £1314, and the Baptist church has 163 members.

Previous to the Reformation North Leith belonged partly to the parish of Holyroodhouse, and partly to that of St Cuthbert's, David I. having endowed the monastery of Holyrood with considerable property on the shores of the Firth, of which North Leith, etc., formed a part. The chapel of St Ninian was built and endowed by Robert Ballantyne, abbot of Holyrood. It was purchased from John Bothwell, commendator of Holyrood, by the inhabitants of Leith in 1609. The district was thereupon erected into a parish by act of parliament, and in 1630 the commissioners for teinds and planting further extended its limit by adding to it Newhaven and the rest of the area that had belonged to St Cuthbert's. In 1633 the parish was joined to the episcopate of Edinburgh.

The parish of South Leith is bounded on the NE by the Firth of Forth, on the S by Duddingston and Caonagate, on the W by some parishes of the royalty of Edinburgh, by St Cuthbert's and North Leith. Nearly triangular in form, and with an area of 1629 acres, the parish is $2\frac{1}{2}$ miles long on the NE side, $2\frac{3}{4}$ on the S side, and $1\frac{1}{2}$ on the W side. The boundary is traced for some way with Duddingston by the Fishwives' Causeway, then passes along the Portobello road as far as Jock's Lodge, where it strikes off, and, after skirting Arthur's Seat, mainly on the line of the Queen's Drive, trends almost due N to Abbeyhill, whence it runs along the North back of the Caonagate, passes through Low Calton, then down Leith Walk to its foot, strikes off westward to the Water of Leith, and follows its windings to the sea. It thus includes, besides its landward districts, Calton Hill, parts of Calton and Caonagate, Abbeyhill, Jock's Lodge, Restalrig, the E side of Leith Walk, and the town of South Leith. Part of this district is described under Edinburgh, and separate articles treat of Jock's Lodge, Lochend, and Restalrig. Where not built upon, the ground has been brought to a high state of cultivation, but a great part of it is taken up by villas and mansions, among which may be mentioned Craigentenny House, Restalrig House, Lochend House, Hawkhill, and Marionville. In a field which lies to the N of the Portobello road, a little way past Piershill, and belongs to the Craigentenny estate, stands the splendid mausoleum of William Miller, Esq., at one time M.P. for Newcastle-under-Lyne. The 'Craigentenny marbles,' as the 'reliefs' which are on two sides of the mausoleum are called, represent the

destruction of the Egyptians and the triumphant song of Miriam on their overthrow. Their execution is at once striking and artistic. The beach of South Leith, once fine, has been much spoiled of late years. Pop. of *quoad civilia* parish (1801) 12,044, (1831) 18,439, (1861) 26,170, (1871) 30,079, (1881) 44,783, (1891) 54,523, of whom 27,195 were females, whilst 40,258 were in the ecclesiastical parish of South Leith, 4539 of St John's, 3994 of St Thomas, 5567 of Abbey, and 165 of Portobello. Houses (1891) inhabited 10,975, vacant 472, building 112.

This parish is in the presbytery of Edinburgh and synod of Lothian and Tweeddale. The living is worth £654. The parish church, as well as St Thomas's and St John's Established Churches, are described under the town of Leith. There are also Established churches at Restalrig and Lorne Street. Two Free churches are—South Leith (income £588) and St John's (income £831, stipend £335). Three United Presbyterian churches are—Junction Street (income £1907, stipend £500), Kirkgate (income £1445, stipend £400), and St Andrew's Place (income £1416). Other churches in the parish are mentioned under the town of Leith, and the various schools, board and otherwise, are also referred to there.

Restalrig was the ancient name of the parish of South Leith, a church having existed there as early as 1296, when Adam of St Edmunds, 'pastor of Restalrig,' swore fealty to Edward I. From an early date in the 14th century to 1600, the patronage of this living was in the hands of the Logans of Restalrig, who lost it owing to the share which the then head of the family took in Gowrie's conspiracy. The establishment, which was collegiate, consisting of a dean and canon, was first set up by James III., was afterwards increased by James IV., who added 6 prebendaries, and by James V., who added singing boys. The three kings enriched it by grants of land, etc. A chapel, dedicated to the Virgin Mary, and situated in the town of South Leith, was erected, probably in 1483, and became the parish church after the Reformation, while the revenues derived from the altarages and other sources were so far employed in the support of the ministers of the reformed church. In 1609 it was formally constituted the parish church by act of parliament, and endowed with the revenues and pertinents of Restalrig. Of the Preceptory of St Anthony, founded by Logan of Restalrig in 1435, and suppressed in 1614, hardly any vestiges remain. The seal of the convent is, however, still preserved in the Advocates' Library, Edinburgh.—*Ord. Sur.*, sh. 32, 1857.

See *The History of Leith from the Earliest Antiquities to 1827*, by Alexander Campbell (1827); *Antiquities of Leith*, by D. H. Robertson, M.D., F.S.A. (1851); *Memorials of Edinburgh in the Olden Times*, by Daniel Wilson, LL.D. (Edinb. 1875); and James Grant's *Old and New Edinburgh* (Lond. 1883).

Leithen Lodge, a modern mansion in Innerleithen parish, Peeblesshire, on the left bank of Leithen Water, $4\frac{1}{2}$ miles N by W of the town. Its owner is John Cunningham, Esq.—*Ord. Sur.*, sh. 24, 1864.

Leithen Water. See INNERLEITHEN.

Leith Hall. See KENNETHMONT.

Leithhead, the head stream of the Water of Leith, in Midcalder parish, Edinburghshire.

Leith Lumsden. See AUCHINDOIR.

Leitholm, a village in Eccles parish, Berwickshire, $5\frac{1}{2}$ miles NW of Coldstream. It has a post office under Coldstream, the site of a pre-Reformation chapel, a public school, a reading-room, and a U.P. church.

Leith, Water of, a small river of Edinburghshire, formed by several burns of Midcalder parish that rise among the Pentlands at altitudes of from 1250 to 1400 feet above sea-level. Thence it winds $23\frac{3}{4}$ miles north-eastward, through or along the borders of Midcalder, Kirknewton, Currie, Colinton, St Cuthbert's, and North and South Leith parishes, till it falls into the Firth of Forth between the heads of the E and W piers of Leith harbour. Its chief tributary is Bavelaw Burn, flowing

into it at Balerno; and its other tributaries are small but numerous, mostly from the Pentlands. Its volume varies, according to the weather, from the insignificance of a brook to the importance of a considerable river; and its velocity, over most of its course, in times of freshet, is impetuous. Its water-power, for the driving of corn, paper, and other mills, is economised by such a multitude of dams as to exceed the water-power of any other stream of its size in Scotland. Formerly polluted with sewage and factory discharges, trout-fishing in the stream was completely destroyed, but since the completion of the sewage works its purity has been restored, and in 1894 its waters were restocked with fish. Its banks, over the greater part of its course, are beautifully picturesque, ranging from romantic glen to meadowy plain, and abounding in rocks and woods, in parks and elegant mansions. The last $5\frac{1}{2}$ miles of its course lie through the parliamentary burghs of EDINBURGH and LEITH; and the most striking feature here, the Dean Bridge, is noticed in our article on the former city.—*Ord. Sur.*, sh. 32, 1857.

Lenno, an affluent of the South Esk, into which it falls $6\frac{1}{2}$ miles WSW of Brechin, in Forfarshire.

Lempitlaw, a village and an ancient parish in Sprouston parish, Roxburghshire. The village stands 4 miles ESE of Kelso.

Lendalfoot, a coast village, with a public school, in Colmonell parish, Ayrshire, at the mouth of the Water of Lendal, $6\frac{1}{2}$ miles SSW of Girvan.

Lendal, Water of, a burn in Girvan and Colmonell parishes, Ayrshire, issuing from tiny Loch Lochton, and running $3\frac{3}{8}$ miles south-westward and west-by-southward, till it falls into the Firth of Clyde at Carleton Bay.—*Ord. Sur.*, sh. 7, 1863.

Lendrum, the scene of a battle between the Thane of Buchan and Donald of the Isles, in Monquhitter parish, Aberdeenshire.

Leney. See LENY.

Lennel House, a modern mansion in Coldstream parish, Berwickshire, on the steep left bank of the Tweed, 1 mile NE of the town. It is a seat of the Earl of Haddington; and its predecessor was the residence for many years and the death-place of Patrick Brydone (1741-1818), author of the well-known *Tour through Sicily and Malta*, who here on 7 May 1787 gave Robert Burns an 'extremely flattering reception.' The parish of Coldstream till 1716 bore the name of Lennel or Leinhall; and its church stood 3 furlongs lower down the river. Around it once was a village of Lennel, destroyed by predatory incursion during the Border wars.—*Ord. Sur.*, sh. 26, 1864. See TYNINGHAME.

Lennox, the ancient county of Dumbarton, comprehending the whole of the modern county of Dumbarton, a large part of Stirlingshire, and part of the counties of Perth and Renfrew. The original name was *Leven-ach*, 'the field of the Leven,' and very appropriately designated the basin, not only of the river Leven, but also of Loch Lomond, anciently called Loch Leven. Levenachs, in the plural number, came to be the name of all the extensive and contiguous possessions of the powerful earls of the soil; and, being spelt and written Levenax, was easily and naturally corrupted into Lennox. In the 13th century Lennox and the sheriffdom of Dumbarton appear to have been co-extensive; but afterwards, in consequence of great alterations and considerable curtailments upon the sheriffdom, they ceased to be identical.

In or soon after 1174 King William the Lion created the two new earldoms of Garioch and Levenach, and bestowed them on his brother, David, Earl of Huntingdon, who, however, in 1184 appears to have resigned the earldom of Levenach in favour of Aluin, first of a line of Celtic earls. Maldwin, the third earl, obtained from Alexander II. in 1238 a confirmatory charter of the earldom as held by his father; but was not allowed the Castle of Dumbarton, nor the lands, port, and fisheries of Murrach. In 1284 Earl Malcolm concurred with the 'Magnates Scotie' in swearing to acknowledge Margaret of Norway as heir-apparent to Alexander III.'s

throne; and in 1290 he appeared in the assembly of the states at Birgham, and consented to the marriage of Margaret with the son of Edward I. Next year, when Margaret's death opened the competition for the Crown, Malcolm was one of the nominators of Robert Bruce. Resistance to England becoming necessary, he, in 1296, assembled his followers, and, with other Scottish leaders, invaded Cumberland and assaulted Carlisle. While Sir Alexander Menteith, the captor of the patriot Wallace, was governor of Dumbarton Castle, and sheriff of Dumbartonshire, in favour of Edward I., Malcolm went holdly out, and achieved feats as a supporter of Robert Bruce; and he continued, after Bruce's death, to maintain the independence of the kingdom, till, in 1333, he fell with hoary locks, but fighting like a youthful warrior, at Halidon Hill.

In 1424, after the restoration of James I., Earl Duncan became involved in the fate of his son-in-law, Murdoch, Duke of Albany, the Regent; and for some real or merely imputed crime, which no known history specifies, he was, in May next year, along with the Duke and two of the Duke's sons, beheaded at Stirling. Though Duncan left, by his second marriage, a legitimate son, called Donald of Lennox; yet his daughter Isabella, Duchess of Albany, while obtaining no regular entry to the earldom as heiress, appears to have enjoyed it during the reign of James II.; and she resided in the castle of Inchmurrin in Loch Lomond, the chief messuage of the earldom, and there granted charters to vassals, as Countess of Lennox, and made gifts of portions of the property to religious establishments. After this lady's death in 1459, a long contest took place for the earldom between the heirs of her sisters, Elizabeth and Margaret, the second and third daughters of Duncan, whose priority of age was not ascertained by evidence, or admitted of keen and plausible dispute. The vast landed property of Lennox was dismembered between the disputants; but the honours, the superiority, and the principal messuage of the earldom—the grand object of dispute—could be awarded to only one party, and were not finally adjudged till 1493. Sir John Stewart of Darnley had married Elizabeth; and their grandson, besides being declared heir to half the Lennox estate, became Lord Darnley and Earl of Lennox. Sir Robert Menteith of Rusky had married Margaret; and their moiety of the Lennox estate came, with the estate of Rusky, to be divided, in the persons of their great-granddaughters, the co-heiresses, between Sir John Haldane of Gleneagles, who had married the elder, and Sir John Napier of Merchiston, who had married the younger. In 1471 the earldom, being in the King's hands by the non-entry of any heir, was given, during his life, to Andrew, Lord Avondale, the chancellor. After the death of James III., John Lord Darnley appears to have been awarded the Lennox honours by the new government; and in 1488 he sat as Earl of Lennox in the first parliament, and received for himself and his son Matthew Stewart the ward and revenues of Dumbarton Castle, which had been held by Lord Avondale. But only next year he took arms against the young King, drew besieging forces upon his fortresses both of Crookston and Dumbarton, suffered a defeat or rather a night surprise and rout at Tilly Moss, on the S side of the Forth above Stirling, saw the castle of Dumbarton, which was defended by four of his sons, yield to a vigorous six weeks' siege, headed by the King and the ministers of state, and, after all, succeeded in making his peace with government, and obtaining a full pardon for himself and his followers.

Matthew, the next Earl, whose accession took place in 1494, led the men of Lennox to the fatal field of Flodden, where he and the Earl of Argyll commanded the right wing of the Scottish army, and, with many of their followers, were hewn down amid vain efforts of valour. John, the son and successor of Matthew, played an active part during the turbulent minority of James V. In 1514 he, along with the Earl of Glencairn, assailed the castle of Dumbarton during a tempestuous night, and, breaking open the lower gate, succeeded in

taking it; in 1516 he was imprisoned by the Regent Albany, to compel him to surrender the fortress as the key of the west, and was obliged to comply; and in 1526 he assembled a force of 10,000 men, and marched towards Edinburgh to the rescue of the young King from the power of the Douglasses. Matthew, the next earl; a very conspicuous figure in history, obtained in 1531, for nineteen years, the tenure of the governorship and revenues of Dumbarton Castle. In 1543, some French ships arriving in the Clyde with supplies for the Queen, he, by artful persuasion, got the captains to land 30,000 crowns of silver and a quantity of arms and ammunition in the castle; and he immediately joined with other malcontents in an abortive attempt to overthrow the government. In May and June 1544 he secretly entered the service of Henry VIII., engaging every effort to seize and deliver to England the Scottish Queen, the isle of Bute, and the castle and territories of Dumbarton, and obtaining from the King the Lady Margaret Douglas in marriage, and lands in England to the annual value of 6800 merks Scots. Sent soon afterwards to the Clyde with 18 English ships and 600 soldiers, he was civilly received by George Stirling of Glorat, whom he had left in charge of Dumbarton Castle as his deputy; but he no sooner hinted to that official his design, and offered him a pension from Henry, than he and his Englishmen were turned out of the fortress and compelled to return to their ships. The Earl and his party now ravaged and wasted, with fire and sword, the islands of Arran and Bute, and other places in the west; and in October 1545 he was declared by parliament to have incurred forfeiture. He continued an active partisan in the hostilities against Scotland of Henry VIII. and his successor, received from the former a grant of the manor of Temple-Newsom in Yorkshire, and during twenty years remained in England an exile from his native land. Father of Mary's husband, the ill-fated Lord Darnley, and grandfather of James VI., he eventually rose in the revolving politics of the period to the uppermost side of the wheel, and for a period filled the office of Regent, and vicereally swayed the sceptre of his grandson. Holding at Stirling Castle, in Sept. 1571, what the opposite party in politics called 'the black parliament,' he was mortally wounded in an attack made upon the town by a small force who designed to take the fortress by surprise.

The earldom of Lennox now devolved on James VI. as the next heir; and in April 1572 it and the lordship of Darnley, with the whole of the family property and heritable jurisdictions, were given to Lord Charles Stewart, the King's uncle, and Lord Darnley's younger brother. But he dying in 1576 without male issue, they again devolved to the King, and were given in 1578 to the King's grand-uncle, Lord Robert Stewart, Bishop of Caithness, resigned by him in 1579 in exchange for the earldom of March, and given in 1579-80 to Esmé Stewart, Lord D'Aubigny. In Aug. 1581 Esmé, this last favourite among the royal kinsmen, and the holder of the office of chamberlain of Scotland, was raised to the dignity of the Duke of Lennox and Earl of Darnley; and his son Ludovic, the second Duke, received from the King additional offices and grants of property, and, among other preferments, was made custodian of Dumbarton Castle, and the owner of its pertinents and revenues. In 1672 Charles the sixth Duke, dying without issue, the peerage, with all its accumulated honours and possessions, went once more to the Crown, devolving on Charles II. as the nearest collateral heir-male; and the revenues of the estates were settled for life on the dowager Duchess. In 1680 Charles II. granted to his illegitimate son, Charles, born of Louise Renée de Ferencourt de Querouaille, Duchess of Portsmouth and D'Aubigny, the dukedom of Lennox and earldom of Darnley in Scotland, and the dukedom of Richmond and earldom of March in the peerage of England. After the death of the dowager Duchess in 1702, the Duke of Richmond and Lennox sold the whole of his property in Scotland, the Marquis of Montrose

purchasing most of it, as well as many of its jurisdictions. In 1836 Charles, fifth Duke of Richmond and Lennox, succeeded to the Gordon estates. See GORDON CASTLE.

In the reign of James IV. the sheriffdom of Dumbartonshire was made hereditary in the family of Lennox, Earl Matthew obtaining in 1503 a grant which united the office to the earldom. The office continued a pertinent of the Earls and Dukes for two centuries, and was usually executed by deputy-sheriffs of their appointment. The Marquis of Montrose, who was created Duke in 1707, purchased at once the sheriffdom of the county, the custodiership of Dumbarton Castle, and the jurisdiction of the regality of Lennox, along with the large part of the Lennox property bought from the first Duke of Richmond and Lennox. The Earls and Dukes of Lennox had a very ample jurisdiction over all their estates, both in and beyond Dumbartonshire, comprehended in the regality of Lennox; and their vassals also had powers of jurisdiction within the lands held by them, subject to the remarkable condition that all the criminals condemned in their court should be executed on the Earl's gallows. At the abolition of heritable jurisdictions in 1748, the Duke of Montrose claimed for the regality of Lennox £4000, but was allowed only £578, 18s. 4d. See Sir William Fraser's *The Lennox* (2 vols., Edinb., 1874), and other works cited under DUM-BARTON and DUM-BARTONSHIRE.

Lennoxbank, an estate, with a mansion, in Bonhill parish, Dumbartonshire, near Balloch station on the Dumbarton and Balloch section of the North British railway.—*Ord. Sur.*, sh. 30, 1866.

Lennox Castle, a very strong ancient fortalice in Currie parish, Edinburgshire, on a rising-ground on the right bank of the Water of Leith, $\frac{3}{4}$ mile SW of Currie village. It commanded a charming view down the vale of the Water of Leith towards the Firth of Forth; had a subterranean communication with another building on the opposite bank of the river; belonged to the Earls of Lennox; was an occasional residence of Queen Mary and the Regent Morton, and a favourite hunting-seat of James VI., from whom it passed into the possession of the celebrated George Heriot; and, having fallen into decay, it became an utter ruin, now popularly known as Lymphoy.—*Ord. Sur.*, sh. 32, 1857.

Lennox Castle, a splendid mansion in Campsie parish, Stirlingshire, 7 furlongs WSW of Campsie Glen station on the Blane Valley section of the North British railway, and $1\frac{1}{2}$ mile W by N of Lennoxton. Standing on the wooded northern slope of the South Brae (758 feet), it commands an extensive and brilliant view, and itself figures as a striking feature in a gorgeous landscape. It was erected in 1837-41, after designs by David Hamilton of Glasgow, in a bold variety of the grand old Norman style; occupies a site adjoining that of the old mansion of Woodhead; and was the seat of the late Hon. Charles Spencer Bateman Hanbury Kincaid-Lennox, M.P. for Herefordshire 1852-57 and for Leominster 1858-65. He married the heiress of Lennox Castle in 1861, and assumed her name. It is now the seat of Mrs Cecilia Peareth Lennox.—*Ord. Sur.*, sh. 30, 1866.

Lennox Hills, a range of hills extending east-north-eastward along the middle of the ancient county of Lennox, from the vicinity of Dumbarton to the vicinity of Stirling. It is interrupted, in Strathblane parish, by the valley of the Blane, but is elsewhere continuous. The portion of it WSW of the interruption is called the Kilpatrick Hills, and the portions ENE of the interruption are called the Strathblane, the Killearn, the Fintry, the Gargunnoch, the Campsie, the Kilsyth, and the Dundaff Hills; and all these, with their principal characters and altitudes, are separately noticed. The range has an aggregate length of 23 miles; varies in breadth from $\frac{1}{2}$ to 9 miles; culminates in Earl's Seat at an altitude of 1894 feet; consists chiefly of various kinds of trap, containing great plenty of rare minerals; and in many parts displays romantic features of glen, ravine, cliff, and basaltic colonnade.

Lennoxlove, a seat of Lord Blantyre, in Haddington parish, Haddingtonshire, $1\frac{1}{2}$ mile S of Haddington town. Anciently called Lethington, it belonged to the Maitland family from 1345, and was the birthplace of John Maitland, Duke of Lauderdale (1616-82), and long the chief residence of him and of other members of the line. About the beginning of the 18th century it passed by sale to Alexander, Lord Blantyre, and was named by him Lennoxlove in honour of the Duchess of Lennox, who gave him the means of purchasing it. It is partly a building of high antiquity, its square tower (80 feet high, with walls from 10 to 13 feet in thickness) being unsurpassed in strength and height by any similar structure in Scotland. A Latin inscription over the massive N door of grated iron records that this tower was improved in 1626 by John Maitland, Earl of Lauderdale.—*Ord. Sur.*, sh. 33, 1863. See ERSKINE and John Small's *Castles and Mansions of the Lothians* (Edinb. 1833).

Lennoxton, a town in Campsie parish, Stirlingshire, on the left bank of Glazert Water, with a station on the Blane Valley section of the North British railway, $9\frac{1}{2}$ miles SE of Killearu, $3\frac{1}{2}$ NNW of Kirkintilloch, and $11\frac{1}{2}$ N by E of Glasgow. Founded a century since, it has always been in great measure dependent on print-works, bleachfields, alum-works, collieries, and other industrial establishments in its vicinity, and mainly consists of one long street, whose plain two-storey houses present an unassuming but cleanly and comfortable appearance. It serves as the centre of traffic for all the numerous and various factories in Campsie parish, and has a post office under Glasgow, with money order, savings bank, and telegraph departments, branches of the Royal Bank and of the National Security Savings Bank, a comfortable hotel, a gas company, a water supply of 1876, a town-hall, a mechanics' institute, ornithological, horticultural, and agricultural societies, and several clubs. A sheriff small debt court is held on the second Wednesday of February, May, August, and November. Places of worship are Campsie parish church (1828; 1550 sittings), with a square tower; a Free church, built soon after the Disruption; a U.P. church (1784; 593 sittings); and St Machan's Roman Catholic church (1846; 450 sittings). The public and a Roman Catholic school, with respective accommodation for 567 and 288 children, have an average attendance of about 325 and 180, and grants of over £335 and £165. Pop. (1861) 3209, (1871) 3917, (1881) 3249, (1891) 2838.—*Ord. Sur.*, sh. 31, 1867.

Lentran, a station on the Beaulieu section of the Highland railway, in Kirkhill parish, Inverness-shire, close to the southern shore of the Beaulieu Firth, $5\frac{3}{4}$ miles W by N of Inverness. Near it is Lentran House.

Lentrathen. See LINTRATHEN.

Lenturk. See LYNTURK.

Leny, a hamlet and a low hill in Cramond parish, Edinburgshire. The hamlet has a public school.

Leny, a mansion and a mountain pass in Callander parish, Perthshire. The mansion, 1 mile NW of Callander village, in a small romantic glen with a waterfall, was enlarged and turreted towards the middle of the 19th century. Its owner is John Buchanan Hamilton, Esq., F.R.S., of Bardowie and Spittal (b. 1822). The Pass of Leny, $2\frac{1}{2}$ miles WNW of Callander, strikes north-by-westward to Loch Lubnaig; takes up the Callander and Oban railway; is traversed by the impetuous northern head-stream of the Teith; and has a narrow, alpine character, flanked by wooded precipices, and overhung on the W side by the bold acclivities of Ben Ledi (2875 feet). It formed in olden times a portal to the Highlands, so strong that a few brave men could have held it against an army, and is described by Sir Walter Scott in his *Legend of Montrose*.—*Ord. Sur.*, sh. 38, 1871.

Lenzie, a village in the suburbs of Kirkintilloch, partly in Kirkintilloch parish, Dumbartonshire, and partly in Cadder parish, Lanarkshire, with a junction on the North British railway, $1\frac{1}{2}$ mile S of Kirkintilloch, 41 miles W of Edinburgh, and $6\frac{1}{2}$ NNE of Glasgow, under which it has a post office, with money order, savings

bank, and telegraph departments. Of recent and rapid extension, Lenzie has a handsome public hall, erected in 1892 with the proceeds of a bazaar. The building contains a main hall 60 feet long and 40 broad, with small gallery; a lesser hall, billiard, reading, cloak, and waiting rooms and lavatories. Here, too, is situated the Barony Lunatic Asylum, erected in 1875 at a cost of £150,000 on the Woodielee estate of 382 acres, which was purchased by the Barony Parochial Board in 1852 for £30,000, making a total of £180,000. Elizabethan in style, the building is over 700 feet long and 450 broad, occupying 6½ acres of ground. There are two central towers 150 feet high, a clock-tower of 88 feet above the main entrance, and a flèche surmounting the chapel, which is seated for 400, and adorned with stained glass. The dining-hall can accommodate 500 persons; and the recreation-hall measures 90 feet by 60. Extensive additions were made to the asylum in 1892. At Westernmains there is a private lunatic asylum. Another institution is the Glasgow Convalescent Home (1864). The Broomhill Home for the relief of incurables belonging to Glasgow and the West of Scotland is in the neighbourhood, an institution which also spends on behalf of incurables at their own homes over £1000 a year. There are also a collegiate school and Lenzie Academy, the latter partly destroyed by fire in 1893, a horticultural society, and a bowling club. An Established church, built as a chapel of ease in 1873, was raised to *quoad sacra* status in 1876; a U.P. church, erected in 1874-75 at a cost of £3300, contains 450 sittings; and St Cyprian's Episcopal church (1873) contains 175. The *quoad sacra* parish is in the presbytery of Glasgow and synod of Glasgow and Ayr; its minister's stipend is £470. Pop. of parish (1881) 2292, (1891) 2805, of whom 1160 were in Cadder; of village (1871) 351, (1881) 1316, (1891) 1916, of whom 918 were in Kirkintilloch police burgh, and 998 in Cadder.—*Ord. Sur.*, sh. 31, 1867.

Leochel Burn, a troutful rivulet of central Aberdeenshire, rising as Corse Burn in the N of Coull parish at an altitude of 970 feet above sea-level, and winding 9¼ miles north-by-eastward through or along the borders of Leochel, Tough, and Alford parishes, till, after a descent of 510 feet, it falls into the Don, ½ mile above Alford bridge.—*Ord. Sur.*, sh. 76, 1874.

Leochel-Cushnie, a parish of central Aberdeenshire, comprising the ancient parishes of Leochel and Cushnie, united temporarily in 1618, permanently in 1795. Its church stands, 1029 feet above sea-level, 6 miles SW of the post-town and station, Alford, the terminus of the Alford branch of the Great North of Scotland railway. It is bounded NW by Kildrummy, N by Alford, NE, E, and SE by Tough, S by Coull and Tarland-Migvie, and W by Towie. Its utmost length, from E to W, is 7¼ miles; its breadth, from N to S, varies between 2½ and 4¾ miles; and its area is 12,859½ acres, of which 3½ are water. The drainage is carried northward to the Don by LEOCHEL BURN (running 3½ miles north-north-westward along the Tough and Alford boundaries and through the interior) and by its affluents—Rumble Burn (flowing 2½ miles east-by-southward along the Coull boundary), the Burn of CUSHNIE (flowing 4½ miles east-north-eastward through the interior), and Droichs Burn (tracing part of the northern boundary). The surface is hilly, sinking in the extreme N to 500 feet above sea-level, and rising thence to 1468 feet at Langgaddie Hill, 1723 at Sear Hill, and 2032 at Sockaugh or Cushnie Hill, which culminate respectively on the northern, western, and the south-western boundaries. Granite is the predominant rock; and the soil of the valleys is clayey for the most part, but in places a fine alluvium, of some of the hill-slopes is a fertile loam. Nearly half of the entire area is in tillage; about 1150 acres are under wood; and the rest is either pasture or moor. Cairns and stone circles were at one time numerous, and several 'eirde' or 'Picts' houses' have been found on Cairnconllie farm. CRAIGIEVAR Castle, CUSHNIE House, HALLHEAD House, and LYNTRUK House are all noticed separately. Lord Semple is chief

proprietor. Ecclesiastically including the Corse or northern division of COULL, Leochel-Cushnie is in the presbytery of Alford and synod of Aberdeen; the living is worth £245. The parish church was built in 1798. The Free church, a conjoint charge with Towie, stands 9 furlongs WSW of the parish church; on the NE verge of the parish is Lynturk U.P. church; and four public schools—Cairnconllie, Corse, Craigievar, and Cushnie—with respective accommodation for 60, 96, 140, and 106 children, have an average attendance of about 50, 80, 65, and 65, and grants amounting to over £50, £80, £60, and £63. Pop. (1881) 1217, (1891) 1146.—*Ord. Sur.*, sh. 76, 1874.

Leod. See CASTLE-LEOD.

Lerwick (Scand. *Leir-vik*, 'mnd bay'), a parish containing a town of the same name, towards the S of the Mainland of Shetland. Joined to the ancient parish of Gulberwick in 1722, the united parish of Lerwick and Gulberwick was further enlarged by the Boundary Commissioners in 1891, when the old parishes of Burra and Quarff, that formed a detached portion of the united parish of Bressay, Burra, and Quarff, were transferred to it. Lerwick and Gulberwick parish, and Bressay, Burra, and Quarff parish were henceforth to be restricted to the names Lerwick and Bressay. Lerwick parish is bounded NE and E by Bressay Sound between the Mainland and Bressay, SE by the sea, SW by the Bay of Scalloway, and W and NW by the parish of Tingwall. It consists of the following districts:—The ancient parish of Lerwick, comprising 3153·8 acres; the ancient parish of Gulberwick, 2793·8 acres; the ancient parish of Quarff (these three districts entirely mainland) 2098·5; and the ancient parish of Burra (insular), consisting of the islands of Papa, 148·4 acres; West Burra, 1781·5; East Burra, 1242·4; Hous Ness, 32; South Havra, 147·9; Little Havra, 29·4; and six small islands, 16·1. Except along the coast, the boundaries are artificial. The sea coast is deeply indented: on the NE a bay extends from Grimista to Lerwick, 1 mile wide across the mouth, and ¾ mile deep; S of Lerwick is Brei Wick, 6½ furlongs across the mouth, from the Nab (NE) to Ness of Sound (SW), and ¾ mile deep. To the SW is the Voe of Sound, ¾ mile wide from Dainaberg (NE) to the Nizz (SW), and 1½ mile deep; and further to the SW still is Gulber Wick, ½ mile wide and 1 mile deep; while S is the East Voe of Quarff. The Sound of Bressay and the Bay of Lerwick is one of the finest anchorages in the United Kingdom. From the sea-coast the surface rises steeply to a height of over 100 feet in the N, and over 200 in the centre and S, the highest points being 346 feet on the border of the parish to the SW of Grimista, 273 at Ward of Lerwick NW of the town, 576 at Shorloun Hill W of Sandy Loch, near the centre of the parish; 258 at the highest point between Sandy Loch and Trebister Loch, 365 at the highest point on the road to the SW of Sandy Loch, 244 to the W of Setter Ness, and 217 on the surface of Brindister Loch. Only a very small portion of the parish is arable, and this lies along the coast, where the soil is light and sandy, but fairly good; elsewhere there is rock and peat moss. Except on the extreme S, where mica schist comes in, the underlying rocks belong to the Lower Old Red period, and consist of sandstones, flagstones, and conglomerate, of which the first is quarried. As elsewhere throughout the SHETLAND Islands, there are a number of small lochs, the principal being Clickhimin or Cleek-em-in, SW of the burgh of Lerwick, separated from Brei Wick by a shingle terrace or 'ayre'; Sandy Loch and Trebister Loch, W of the Voe of Sound; Brindister Loch in the S; and Gossa Water on the boundary with Tingwall. Clickhimin derives its name from a whisky shop that once stood near it, and was supposed to entice or 'cleek' people into it. Brindister Loch has a small island, with the remains of a broch, and said to be a breeding-place of the lesser black-backed gull. There is another broch at Burland, on the coast to the E; and a third, with some very peculiar features, is on a little circular islet of about 150 feet in diameter, in Clickhimin. This last was excavated in 1861, when a

number of stone vessels were found. The drainage of the parish is effected by a number of small streams, the principal being two entering the sea near the pier at Grimista, the burns that flow into Sandy and Trebister Lochs and thence to the Voe of Sound, one that enters the head of Gulber Wick, one from Brindister Loch, and one in the SW that flows to Fitch Burn in Tingwall parish. Besides Lerwick burgh, the parish contains also the hamlet of Sound, at the head of Voe of Sound. The churches are noticed in the following article. Six schools—Burra, Gulberwick, Lerwick Central, Lerwick Anderson Educational Institute, Quarff public, and Lerwick Episcopalian schools—with respective accommodation for 130, 65, 369, 376, 66, and 83 scholars, have an average attendance of about 110, 25, 325, 195, 40, and 90, and grants amounting to nearly £132, £30, £410, £326, £50, and £104. The parish is the seat of the presbytery of Lerwick in the synod of Shetland, and the living is £170 a year with augmentation. Grimista, 2 miles NNW of the town of Lerwick, is the only mansion and the largest estate in the parish, belonging to the Nicholson family. Valuation, inclusive of the burgh, (1881) £9340, (1893) £15,667. Pop. (1801) 1706, (1831) 3194, (1861) 3631, (1871) 4180, (1881) 4772, (1891) 5757, of whom 3824 were in the burgh.

The presbytery of Lerwick, meeting at Lerwick as circumstances require, includes the *quoad civilia* parishes of Bressay, Dunrossness, Lerwick, and Tingwall, the *quoad sacra* parishes of Quarff and Sandwick, and the mission stations of Fair Isle, Cunningsburgh, and Whiteness, the latter being a royal bounty station. Pop. (1881) 13,051, (1891) 12,640, of whom over 2600 are communicants of the Church of Scotland.

Lerwick, a burgh of barony, a police burgh, and the chief town and county town of SHETLAND, stands on Bressay Sound, near the extreme E of the parish just mentioned. By road it is 4 miles SE of Tingwall, 6 ENE of Scalloway, 2½ N by E of Sumburgh Head, 4½ S by W of Balta Sound in UNST, and 115 NE of KIRKWALL, by reference to which its distance from places further S may be ascertained. The sheltered landlocked bay must certainly have been used to a large extent from very early times, and there was in all probability from a very early date a village on or near the site of the present town, but of this there seems to be now no trace left, unless it be in the narrow and inconvenient main street. The present burgh, notwithstanding its very quaint and ancient appearance, which makes it look older than many places of three its age, dates only from the early part of the 17th century. Mention is made of it in 1625, in an 'Act anent the demolishing of the houssis of Lerwick,' when the sheriff of Orkney and Shetland gave orders that, in consequence of the great wickedness of every sort that was going on among the Shetlanders and the Dutch who resorted to the Sound in the prosecution of the herring fishing, all 'the houssis of Lerwick, quhill is a desert place,' should be demolished. Desert probably refers to the condition of the country in the neighbourhood, and as indicating the worthy sheriff's opinion that there was no need for a town in such a place. But in spite of this, and though the houses then standing were probably destroyed, the natural law of supply and demand was not to be interfered with, and the suitability of the place as the natural centre for the islands was very soon again acknowledged, for in the time of Charles II., during the first Dutch war, a fort was built and a garrison of 300 men stationed here to protect the place against the Hollanders, and probably also to attack, if need be, the Dutch herring-busses. (See SHETLAND.) On the conclusion of peace, the garrison was withdrawn and the fort dismantled; and when the war was renewed a Dutch frigate very soon visited the bay and took advantage of this defenceless condition by destroying the buildings of the fort, and burning a considerable portion of the town. In 1781 it was rebuilt, and received its present name out of compliment to the consort of George III. In 1640 the part of the Sound opposite was the scene of a conflict between 10 Spanish war ships and 4 Dutch ones; and in 1653 and 1665 the fleet of the

Commonwealth, consisting of over 90 ships, lay at anchor off the town for several days; while during the continental wars at the beginning of the following century a good deal of damage was done on several occasions by French privateers. Lerwick has grown slowly, and though vast improvement has taken place since 1850, many of the arrangements are still somewhat old-fashioned. The town, like so many of those on the Scottish coast, consists mainly of one long narrow street, following all the windings of the shore for a distance of about a mile, and flanked by buildings of every size, shape, and age. This is bounded on the W by a high bank, up which are a number of lanes leading to a road along the ridge towards the docks. At the N end of the town is Fort Charlotte, and farther N still is the headland known as North Ness, to the W of which are the docks, where ship-repairing and boat-building are carried on. At the E end of the town are the Widows' Asylum and the Anderson Institute; and on the high ground to the W is the district known as Newtown, occupied by modern houses built within the last thirty years. Though it is no longer true of the main street that it knows nothing of cart or carriage, and is seldom trodden by anything heavier than a sheltly laden with turf, yet it is still very narrow and inconvenient; and though the houses are mostly good, in the older part of the town they straggle very much, and present gable or front or corner to the street, just as was most convenient to the builder at the time.

Fort Charlotte is the training establishment of the Royal Naval Reserve, and one of the most important of all the stations on the coast of the United Kingdom, both as regards the number of men and their superior physique. Shooting practice is obtained at the North Ness. The fort is the principal building of any antiquity in Lerwick, and also serves the purposes of the coast-guard. The town-hall and the county buildings stand side by side on the highest part of the ridge above the old town. The former was erected in 1882-83, the foundation-stone being laid by the Duke of Edinburgh on 24 Jan. 1882, and the opening ceremony presided over by Sheriff Thoms on 30 July 1883. In 1887 a clock and chime of eight bells were placed in the tower in honour of the Queen's Jubilee, at a cost of about £600. The front elevation shows a central gable with turrets at the angles and side wings. In the gable is the chief entrance, by an arched doorway; and above the main staircase is a clock and bell tower rising to a height of 72 feet, with battlements and corner turrets. Over the widows are the coats of arms of various peers who are, or have been, connected with the district. Over the lower windows from N to S are the arms of the Earls of Zetland and Morton with a Viking dragon ship in the centre; those of the Earl of Orkney and of Baron Sinclair, with the Norwegian lion in the centre; of the Stewarts and of the Earl of Caithness, with the Scottish lion; of Bothwell, Duke of Orkney, and of Earl Rosslyn, with the Orcadian galley; while over the oriel windows are the arms of the town of Lerwick. These are 'Or,' in a sea proper, a dragon ship vert under sail, oars in action; on a chief gules a battle-axe argent. Above the shield is placed a suitable helmet with a mantling gules doubled, and on a wreath of the proper livery is set forth the crest, a raven proper, and in an escrol, over the same, this motto from the *Agri-cola* of Tacitus, '*Dispecta est Thule.*' On the ground floor are the burgh court-room (24 × 30 feet) with magistrates' rooms and police cells, and the

Seal of Lerwick.

custom-house and inland revenue offices, etc. Occupying the whole of the front of the first floor is the town-hall, 60 feet long, 30 wide, and 25 high, with timbered ceiling. There is accommodation for 500 persons. In front it is lit by an oriel and mullioned windows, in the S end by mullioned and traceried windows, and in the N end by a large wheel window with lancets below. The windows are of stained glass representing various persons and incidents connected with the history of the Shetlands, and presented by various donors, including the councils of Amsterdam and Hamburg. In the corridor are panels with the arms of Glasgow, Edinburgh, Leith, and Aberdeen presented by the respective corporations, and of Dundee and Kirkwall presented respectively by Messrs Strong and Peace. There is also a presentation portrait of Sheriff-substitute Rampini painted in 1883. Behind are retiring rooms and a public reading and news-room, and on the next storey are two smaller halls. The cost, exclusive of gifts, was £4500, and the stained-glass windows alone have cost £1200 more. This is the finest building in Lerwick, and admission may be had to the main hall (in which a picture gallery has been begun) and tower on payment of 6d. The old town-hall dated from the end of the 17th century. The new county buildings, close to the town-hall, were erected in 1872. The building occupied by the Commercial Bank was erected in 1871, and that occupied by the Union Bank in 1872. There are Established, Free, United Presbyterian, Wesleyan Methodist, Congregational, Baptist, and Episcopal churches. The Established church has an organ, but the only one architecturally noteworthy is the U.P. church, which contains nave, transepts, tower, and short chancel. Education is provided by a public school under the parish board, by the Anderson Institute—which, as well as the Widows' Institute that stands beside it, was erected and endowed by the late Mr Arthur Anderson, long chairman of the directors of the Peninsular and Oriental Company, and its founder, also for a short time M.P. for Orkney and Shetland, of the latter of which counties he was a native—and by a school in connection with the Episcopal church. Water and drainage works were carried out in 1871 after plans by Messrs Leslie of Edinburgh at a cost of about £6000. For the former, the level of Sandy Loch was raised 2 feet by means of an embankment, and a reservoir and filter beds were constructed. The cemetery lies to the SSE at the Nab.

With the exception of woollen knitted goods, which are noted for their softness and warmth, the trade of Lerwick is principally connected with its position as a centre of distribution among the whole group of islands; with the herring and white fishing, for both of which it is a centre, and has a herring-curing station, the number of sea-fishing boats on the register in 1895 being 776; and with its being a place of rendezvous and call for the ships sailing from ABERDEEN, DUNDEE, and PETERHEAD, to the seal and whale fishing. Communication is kept up by steamers from Leith and Aberdeen, which make Lerwick their northern terminus. From 1838 to 1858 there was only a weekly steamer from April to October, but in the latter year it began to ply all the year round, and since 1866 the number of vessels has been increased to two, making in summer four trips, and in winter two. There is besides a schooner to Leith once in three weeks. A local steamer sails twice a week to UNST and once a week to YELL. The roadstead is excellent, the soundings over a considerable area being 9 fathoms. In 1883, when a fund of £15,000 had been raised partly by loan and partly by subscription, the foundation-stone of new harbour works costing £12,700 was laid with full masonic honours—the first occasion of the sort in Shetland. The new pier, formed of concrete, runs out 220 feet from the Victoria Wharf, with a width of 55 and a depth of 18 feet at high water at the sea end, and 14 feet at its junction with the wharf, the depths at low water being 4 feet less. An esplanade with a minimum width of 25 feet has been formed for 120 yards S of Victoria Wharf and 420 to the N of it. At the S end of

this a wharf 50 feet long has also been formed for boats and small vessels, and another jetty built to protect the boat harbour. Harbour affairs are managed by a board of 12 trustees.

The following table shows the ships belonging to the port at different periods:—

SAILING VESSELS.			STEAMERS.	
Year.	No.	Tonnage.	No.	Tonnage.
1861	74	2722
1871	87	3701	1	64
1881	77	3615	1	116
1892	41	1870
1895	45	2441

And the trade may be estimated from the tonnage of the vessels entering and clearing (including repeated voyages) with cargoes or in ballast in the following years:—

	Entered.			Cleared.		
	British.	Foreign.	Total.	British.	Foreign.	Total.
1867	26,418	2,192	28,610	23,145	2,161	25,306
1871	29,516	2,799	32,315	27,654	2,408	29,462
1882	69,188	3,708	72,896	67,058	3,599	70,657
1895	118,854	24,008	142,862	117,788	22,236	140,024

In 1895 the British tonnage inwards was carried in 707 vessels, and the foreign in 180; the British tonnage outwards was carried in 690 vessels, the foreign in 166. The fishery statistics are given under SHETLAND.

Lerwick has a post office, with money order, savings bank, insurance, and telegraph departments, branches of the Commercial, Union, and North of Scotland Banks, a gas company, several hotels, masonic, Odd-fellows, and Good Templar lodges, a combination poorhouse, and a combination hospital; and at an annual regatta in August, one of the most interesting features is a race between boats rowed by girls from the islands of Bressay, Burra, and Trondra. There are also the Anderson Education Trust, a public library and news-room, a free recreation room, agricultural and horticultural societies, a literary and scientific society, fishermen's widows' relief society, Young Men's Christian Society, golf, curling, and football clubs, and excellent bathing places for ladies and for gentlemen. There are two newspapers published in Lerwick—the *Shetland Times* (1872), Saturday; and the *Shetland News* (1885), Saturday. The inhabitants of the islands and of many of the parishes and districts in Orkney or Shetland have 'tee' or nick names; the epithet applied to the inhabitants of Lerwick is 'Whittings.' The town was visited by the Duke of Edinburgh (then Prince Alfred) in the *Raccoon* in 1863, and again in 1882, on his tour as inspector of naval reserves. Burghal matters are managed, under the Burgh Police Act of 1892, by a provost, 2 bailies, and 6 commissioners. The sheriff-substitute for the county resides here, and a sheriff court is held every Wednesday during session; while justice of peace, ordinary, and small debt courts are held as required. There are fairs on Mondays in August, September, and October. Valuation (1883) £9340, (1893) £12,927. Pop. (1831) 2750, (1861) 3061, (1871) 3516, (1881) 4045, (1891) 3930, of whom 2255 were females, and 3783 were in the police burgh. Houses (1891) inhabited 633, vacant 33.

Leslie, a hamlet and a parish of central Aberdeenshire. The hamlet stands, 546 feet above sea-level, on the S bank of Gadie Burn, 4 miles SSW of Inch, under which it has a post office.

The parish is bounded N by Kennethmont, NE by Inch, E by Premnay, S by Keig and Tullynessle-Forbes, and W and NW by Clatt. Its utmost length, from E to W, is 3 miles; its utmost breadth, from N to S, is 2½ miles; and its area is 4446½ acres, of which 2½ are water. GADIE Burn, famous in song, runs 2½ miles eastward across the middle of the parish, then 9 furlongs along the Premnay border; and in the extreme

E the surface declines to 524 feet above sea-level, thence rising to 800 feet at Gallow Hill, 800 at the Hill of Newleslie, 1181 at Salters Hill, 1355 at Knock Saul, and 1362 at Suie Hill, the last three of which rise close to or on the southern boundary. The rocks include serpentine, felspar, quartz, etc.; and the soil of the northern division is a light yellowish loam with a gravelly sub-soil and a rocky bottom, of the southern division is a rich loam overlying clay, but moorish and heathy on the higher hills. Less than half of the entire area is in tillage; wood covers but a small proportion; and the rest is either pastoral or waste. Leslie Castle, or the old House of Leslie, on the Gadie's N bank, opposite the hamlet, is now a ruin. It was founded in 1661 by William Forbes of Monymusk, whose father had acquired the barony through marriage with the widow of the last of the Leslies, its possessors since the 12th century. Of a stoue circle and a pre-Reformation chapel the sites only remain. Leslie is in the presbytery of Garioch and synod of Aberdeen; the living is worth £177. The parish church, at the hamlet, was built in 1815. Duncanstone Congregational church (1818) stands $2\frac{1}{2}$ miles NNW; and Leslie and Premnay Free church, $\frac{3}{4}$ mile E by N, just within Premnay parish. The public school, with accommodation for 108 children, has an average attendance of about 75, and a grant of nearly £70. Pop. (1801) 367, (1831) 473, (1861) 577, (1871) 532, (1881) 523, (1891) 461.—*Ord. Sur.*, sh. 76, 1874.

Leslie (Gael. *his-Leven*, 'garden on the Leven'), a small town and parish in the west of Fife. The town, situated near the SE border of the parish, is distant 12 miles E from Kinross, 12 SW from Cupar, 9 NW from Kirkcaldy, and 3 W from Markinch, to which it is joined by a branch line of railway, $4\frac{1}{4}$ miles long, which was opened in 1861, and became a part of the North British Railway system in 1872. Carriers' carts ply between Leslie, Kirkcaldy, and Markinch; and an omnibus runs between it and the last-mentioned place in connection with the trains. The town consists mainly of one long street of irregularly-built houses, situated on the top of a steep bank, and overlooking the valley of the Leven. Its position is picturesque, and its beauty is not interfered with by the presence of the mills in which the majority of the inhabitants work, as these stand on the river at a little distance from the town. The town green is a fine open expanse at the E end of Leslie. It was once used for games and sports, and even for bull-fights, a stone still existing to which were fastened the animals intended to fight, and hence called the 'Bull-stone.' In the High Street are the town-hall, built in 1872 at a cost of £1000, and containing one room 72 feet long by 40 broad, with two ante-rooms; the parish church, built in 1820, renewed about 1872, and thoroughly renovated in 1891; the Free church, rebuilt in 1879; 2 U.P. churches, Trinity and West; and a Baptist church, founded in 1880. A public school, with accommodation for 799 children, has an average attendance of about 660, and a grant of over £676.

Leslie has a head post office, with the usual departments, a branch of the Union Bank of Scotland, an institute and library of about 1100 volumes connected with the Young Men's Christian Association, a gaswork, a ploughing society, and clubs for skating, bowling, etc. There are several hotels. The Leslie Cemetery Company was incorporated in 1862-67, and the Leslie Joint Stock Water Company in 1833. It possesses a capital of £600, and has paid $7\frac{1}{2}$ per cent. of dividend. The water, which is excellent and plentiful, is brought from Balgothrie, the Countess of Rothes and the late Hon. Mrs Douglas of Strathendry having been mainly instrumental in introducing it. A newspaper, the *Leslie News*, is published quarterly. There is a weekly market on Thursday, and fairs are held at Leslie on the first Tuesday of April, *o.s.*, and the first Friday in October.

The chief industries carried on in Leslie (town and parish) are spinning, bleaching, paper-making, and linen weaving. There are 2 flax-spinning and bleaching

works, the most extensive of which, at Prinlaws, employs a large number of hands. There are 2 paper-mills—Fettykil and Strathendry. The former, started in 1848-49, employs about 200 hands, including many females. Under the Burgh Police Act, 1892, the town is governed by a provost, 2 bailies, and 6 commissioners. Pop. (1861) 3607, (1871) 3743, (1881) 3852, (1891) 3421, of whom 1422 were males and 1999 females, whilst 2177 were in Leslie proper, 247 in Croftouterly, and 997 in Prinlaws. Houses (1891) inhabited 814, uninhabited 60, and building 1.

The parish of Leslie is bounded N by Falkland, E by Markinch, S by Kinglassie, and W by Kinross-shire. The Leven traces the southern boundary, and two small streams, the Lothrie and the Cammie, drain the interior of the parish. Its greatest length, from W by N to E by S, is 5 miles; its breadth varies between 7 furlongs and $2\frac{3}{4}$ miles; and its area is 5028 acres. The western side of the parish includes part of the Lomond range, and rises near Drumain to 1060 feet above sea-level. The northern border is also hilly, attaining 898 feet near Little Balgothrie, 766 at Rhind Hill; and so is the ground on both sides of the Lothrie Burn. Along the Leven the ground is generally much lower than in other parts of the parish; and at Cadham declines to 258 feet. From W to E there is a gradual upward slope, and in the lowlands the ground is, as a rule, highly cultivated and covered with fields, while in the uplands it is commonly pastoral. Trap rock abounds in the W and N, and has been extensively used for building. Limestone and coal are found in the E, and are worked on a small scale. The soil is mainly alluvial, or a mixture of sand and gravel. About three-fourths of the entire area are in tillage, some 312 acres are under wood, and the rest is either pastoral or waste. Various antiquarian remains, as standing-stones, etc., have been discovered on the hills of this parish, which is said to have been the scene of some severe fighting between the Romans and ancient Britons. Its records extend back for 300 years, but do not contain anything noteworthy. The old kirk of Leslie is claimed as being the original of King James' (I. of Scotland) poem of *Christ's Kirk on the Green*. David Pitcairn, M.D. (1749-1809), chief among medical men of his day in London, has been claimed as a native. The Rev. Ebenezer Erskine (1680-1754) acted for a time as tutor in the Rothes family; and Adam Smith (1723-90), the author of the *Wealth of Nations*, when a child of three, was kidnapped from Strathendry by a band of Gipsies, but recovered by his uncle in Leslie Wood. The chief proprietors are the Earl of Rothes, George Douglas Clephane, Esq., of Strathendry, and Balfour of Balbirnie. The connection between the Rothes family and Leslie has always been a close one. Their family name is Leslie, and it has been said that the district was called after them, Leslie having been known as Fettykil till 1283, when Norman de Leslie obtained a grant of its woods and lands from Alexander III. In 1457 George Leslie of ROTHES was created first Earl of Rothes; and his descendant, Norman Evelyn Leslie-Leslie is fourteenth Earl (born 1877; suc. 1893). His seat, Leslie House, as built by the Duke of Rothes, who was Lord Chancellor of Scotland in the reign of Charles II., was originally a large mansion, quadrangular in form. Three sides were burnt down in 1763, and the fourth, when repaired in 1767, was made the dwelling-house, and still exists as such. Externally it is a plain building, with no particular architectural features; but the interior is comfortable, and the principal rooms are fine. Notably so is the picture gallery, hung with family portraits, and 3 feet longer than the gallery at Holyrood. The grounds around Leslie House are most picturesque. Strathendry House is separately noticed.

This parish is in the presbytery of Kirkcaldy and synod of Fife. The living is worth £325 and manse. Prinlaws Established church was erected into a *quoad sacra* parish church in 1891. Valuation (1883) £19,251, 11s. 2d., (1893) £20,633. Pop. (1801) 1609, (1831) 2749, (1861) 4332, (1871) 4294, (1881) 4345, (1891) 3886.—*Ord. Sur.* sh. 40 1867.

Lesmahagow (anc. *Lesmachute* or *Lesmahagu*, 'the green (*līs*) or court (*lys*) of St Machutus or Maclou'), a parish in the NW of the Upper Ward of Lanarkshire, containing the town of Lesmahagow or ABBEYGREEN, 6 miles SW of Lanark, 11 $\frac{3}{4}$ SSE of Hamilton, 22 $\frac{1}{2}$ SE of Glasgow, and 38 SW of Edinburgh.

The parish is bounded NW by Stouehouse and Dalserf, NE by Carluke and Lanark, SE by Carmichael and Douglas, SW by Muirkirk in Ayrshire, and W by Avondale. The boundaries with Avondale, Douglas, and Carmichael are traced respectively by Kype Water, Poniel Water, and Douglas Water; and the CLYDE flows 10 miles north-north-westward along all the Lanark and Carluke boundary. From NNE to SSW Lesmahagow has an utmost length of 10 $\frac{1}{2}$ miles; its utmost breadth, from E to W, is 9 $\frac{1}{2}$ miles; and its area is 41,533 $\frac{1}{2}$ acres, of which 234 $\frac{3}{4}$ are water. Besides Lesmahagow, it contains the thriving villages of Auchenheath (2 $\frac{1}{2}$ miles N of Lesmahagow), Bankend, Boghead, Crossford (5 $\frac{1}{2}$ miles NE of Lesmahagow), Hazelbank, Kirkfieldbank, Kirkmuirhill (2 $\frac{3}{4}$ miles NNW of Lesmahagow), Nethanfoot, New Trows, and Turfholm. The Nethan, rising close to the Ayrshire border at an altitude of 1550 feet, winds 13 miles north-north-eastward through the interior to the Clyde at Crossford, and itself is joined by Logan Water. The Falls of Clyde, though generally viewed from the Lanark side of the river, can be also seen from the Lesmahagow side. Corra Linn is opposite Corehouse; Bonnington Linn is $\frac{1}{2}$ mile above; and Stonebyres Linn 4 miles below. The scenery on the banks of the Clyde and its tributaries is among the finest in Scotland, its chief charm being its great variety of wood and water, hill and valley. In the extreme N the surface declines along the Clyde to 190 feet above sea-level; and thence it rises to 624 feet near Draffan, 1017 at Dillar Hill, 1075 near Boreland, 1108 at Auchrobert Snout, 1254 at Tod Law, 1712 at Nutberry Hill, and 1609 at Meikle Anchinstilloch. The parish is traversed by a branch line (1856-57) of the Caledonian railway, with stations at Lesmahagow, Auchenheath, and Tillietudlem, and a radiating branch to Blackwood; and by Telford's great highway (1824) from Glasgow to Carlisle. Cross roads intersect it in all directions, and are commonly narrow and hilly.

Lesmahagow is chiefly a mining parish. Coal is found in large quantities, but irregularly disposed. A fine kind of cannel coal is worked. Sandstone, limestone, and ironstone are also found extensively. Lead ore has been discovered, but not in sufficient quantities to repay working. There are tile works at Littlegill and Auchenheath. The predominant rocks are trap, and from their variety and the fine fossils found in them are of an interesting character. Near the streams the soil is commonly alluvial. In other places, however, it is either a yellow clay resting sometimes on white sandstone, or a light friable mould resting on trap, or a damp, mossy, or sandy gravel. About 23,887 $\frac{3}{4}$ acres are regularly or occasionally in tillage; 2714 $\frac{1}{2}$ are under wood or plantation; and 4889 $\frac{3}{4}$ are pastoral or waste. Fruit-growing is carried on to an extent which almost raises it to an industry. Large fields are covered with strawberry plants, and in the summer and autumn the pear and apple harvest demands the whole labour of the villagers to secure it. The chief landowners are the Duke of Hamilton and J. C. Hope Vere, Esq., of Blackwood. Mansions in the parish, noticed separately, are Birkwood, Blackwood, Corehouse, Harperfield, Kirkfield, and Stonebyres.

This parish is in the presbytery of Lanark and synod of Glasgow and Ayr. The charge is collegiate, the stipend of the minister of the first charge being £400 and manse, and that of the minister of the second charge £388. The parish church, built in 1804 on the site of the ancient priory, in 1872 was adorned with a fine stained-glass window, in 1889 had an organ erected, and in 1897 received extensive additions and alterations. A chapel of ease at Kirkfieldbank was raised to *quoad sacra* status; and other places of worship are Lesmahagow Free church, Crossford Free church,

Lesmahagow U.P. church, Crossford U.P. church, Kirkmuirhill U.P. church, and a Roman Catholic church at Blackwood, Our Lady and St John (1880; 200 sittings). Twelve schools—all of them public but one, with total accommodation for 2314 children, have an average attendance of over 1600, and grants amounting to about £1720. Valuation (1883) £67,011, (1893) £60,388. Pop. (1801) 3070, (1821) 5592, (1841) 6902, (1861) 9266, (1871) 8709, (1881) 9949, (1891) 9752, of whom 1537 were in Lesmahagow, 737 in Kirkfieldbank, 918 in Crossford, 735 in Auchenheath, 569 in Kirkmuirhill, 574 in Southfield and Blackwood, and 301 in Hazelbank.—*Ord. Sur.*, sh. 23, 1865.

Hiring fairs are held on the second Wednesday of March and October; and fairs on the second Wednesday of January, on the Wednesday after 11 May, on the Wednesday after Lanark in August, on the second Thursday of November, and on the first Wednesday in December. There are police stations at Lesmahagow, Blackwood, Crossford, Kirkfieldbank, and Coalburn; post offices at Lesmahagow, Kirkmuirhill, Kirkfieldbank, Crossford, and Coalburn, all with money order, savings bank, and telegraph departments, except Kirkfieldbank. Lesmahagow is the headquarters of clubs for curling, bowling, etc., and societies of different kinds. Dr Whyte's mortification for the 'decayed and modest poor' amounts to £2700, the interest of which is divided half-yearly as directed. The interest of the sum of £100, left by Dr Hamilton, is employed in the education of deserving children living within 3 miles of Abbeygreen. Brown's Bequest is a sum of £1200, the interest of which is divided as directed half-yearly by a committee appointed by the heritors. There are also two small benefactions to the poor from the Tod Bequest.

St Machute or Maclou is said to have been a fellow-voyager with the famed St Brendan in the 6th century; and in the 14th Lesmahagow seems to have possessed at least a portion of his relics. It is likely that between 1100 and 1120 a colony of Tironensian Benedictines built a church here; for in 1144 David I. granted the 'cell of Lesmahagow' to the monks of Kelso, and raised it to the dignity of a Tironensian priory. This priory served as a sanctuary to all those who, 'in peril of life or limb,' betook themselves to it or to the four crosses that stood around it. Various gifts of land, tithes, and money were presented to it by David I., Robert, son of Wanebald, Robert the Bruce, Lord Somerville, etc. Charters of protection and immunity were granted it by William the Lyon in 1222 and 1230. The priory suffered very severely in the invasion of 1335. John of Eltham, brother of Edward III., and commander of part of the English forces, burned it to the ground as he passed Lesmahagow on his way northward. He met the king at Perth, and an altercation having arisen, John of Eltham—Earl of Cornwall—was slain by his brother's hand. This, as Wyntoun points out, was—

'The vengeance tane perfar
Of the burning of that abbey.'

On the Reformation the priory lands passed into secular hands, and were successively held by James Cunningham, son of the Earl of Glencairn; Francis Stewart, son of John Stewart, afterwards Earl of Bothwell; and by Lord, afterwards Earl of, Roxburgh, who held them from 1607 to 1625, when he disposed of them to the Marquis of Hamilton. The extent of the lands and the value of the property belonging to the priory are shown by the rental at the Reformation. It consisted of £1214, 4s. 6d. Scots; 15 chalders, 8 bolls, 1 firlet, 2 pecks bere or barley; 11 chalders, 8 bolls, 3 firlets meal; 4 chalders, 3 bolls oats. The priory was burned for the second time at the Reformation (1561), but was restored and served as the parish church until 1803, when its site was cleared to make room for the present church. Traces of the older buildings have been discovered at different times. The priory was famed

for its gardens, which shows that, then as now, the district was eminently suitable for fruit-gardens. The most interesting object in the parish is the old Castle of Craignethan, which has been identified with the 'Tillietudlem' of *Old Mortality*. It 'occupies the summit of a steep bank, encircled on the E by the Water of Nethan, on the W by a precipitous rock.' Sir Walter Scott describes it as having 'no roof, no windows, and not much wall,' which is by no means a fair description. The outer wall is still nearly entire, and sufficient remains of the keep to show its immense strength. The room once occupied by Mary Queen of Scots is still pointed out. (See CRAIGNETHAN.) Corra Castle is built on the very edge of the river, opposite Corra Linn. Its chief interest arises from its romantic situation. Coins, Roman remains, and stone weapons have been discovered. The bronze Lesmahagow flagon, found about 1810, and now in the Hunterian Museum, Glasgow, is 'of the pure egg-shape, with the inward-curved neck. It has a handle covered with symbolic sculpture, representing Mercury in one compartment and Minerva in another. . . . The natives had been familiar with a convenient round stepping-stone which helped them to cross a burn. The stone became iudented, and, on examination, presented the appearance of a hollow piece of oval metal. It was taken up, and found to be what is above described' (Hill Burton's *Hist. Scotl.*, i. 51, edn. 1876). An old bell and the bronze figure of 'an elephant-necked horse' are also among the relics. Ancient mounds were once numerous, but the stones that composed them have been employed in building walls, etc.

The name of Sir William Wallace is connected with this district, and caves and trees take their name from him. A cave on the S bank of the Clyde is said to have been inhabited by him. Many of the Covenanters who fell at Bothwell Brig belonged to Lesmahagow, and their monuments are to be seen in its churchyard. In 1685 Colouel Rumbold, a chief actor in the Rye-House Plot, was captured by Hamilton of Raploch in Lesmahagow, where too, in 1745, young Macdonald of Kinloch-Moidart, aide-de-camp to the Pretender, was seized by a young clergyman called Linning, and a carpenter named Meikle.

John Wilson (1720-80) was the son of a Lesmahagow farmer. He spent the greater part of his life in teaching, and held the office of master of the Grammar School, Greenock, where he died. Wilson is remembered as a poet, his chief work being the *Clyde* (1764).

See *Annals of Lesmahagow* (Edinb. 1864), by John Greenshields of Kerse, printed for subscribers.

Lesmore, a ruined castle in Rhyne parish, Aberdeenshire, 2 miles WNW of Rhyne village. It was a stronghold once of an ancient branch of the Gordon family.

Lesmore, Argyllshire. See LISMORE.

Lesmurdie. See CABRACH.

Lessendrum, an old mansion, enlarged and repaired about 1837, in Drumblade parish, Aberdeenshire, 4½ miles NE of Huntly. Its owner is Mrs Janet Fenwick Elrington Bisset.—*Ord. Sur.*, sh. 86, 1876.

Lessudden. See ST BOSWELLS.

Leswalt, a village and a parish in the Rhinns of Galloway, Wigtonshire. The village stands 3¼ miles NW of Stranraer, under which it has a post office.

The parish, containing also the Sheuchan suburb of Stranraer burgh, is bounded N by Kirkcolm, E by Loch Ryan, SE by Stranraer and Inch, S by Portpatrick, and W by the Irish Channel. Its length, from NNW to SSE, varies between 2½ and 5½ miles; its utmost breadth, from E to W, is 5½ miles; and its area is 13,054 acres, of which 473½ are foreshore and 58 water. A number of brooks, rising in the interior, run some to Loch Ryan, some to the Irish Channel; and Piltatoun Burn, issuing from tiny Gray Loch, winds 5½ miles within the parish, and then goes east-south-eastward to the head of Luce Bay. Of four small lakes, the largest is the White Loch (3 × 2¼ furl.), on whose wooded islet stood the ancient Castle of Lochnaw. The tract adjacent to Loch Ryan

is flat; but elsewhere the surface has much diversity of feature, attaining 404 feet at the Tor of Craigoach, 484 at the Craighead of Lochnaw, and 500 at three points in the SW. The Tor of Craigoach, or Monument Hill, is surmounted by a conspicuous tower, 60 feet high and 20 square at the base, erected in 1850 to the memory of Sir Andrew Agnew (1793-1849), and commanding a wide view. Greywacke is the predominant rock, red sandstone also occurs, and both are quarried. The soil is very various—kindly and fertile in the eastern district; greatly improved and enriched by culture in the central district; and sandy, gravelly, and otherwise thin and poor in the western and the southern districts. Galdenoch's haunted Castle, built towards the middle of the 16th century, is represented only by its keep, with one little pepper-box turret. LOCHNAW Castle, noticed separately, is the principal feature of the parish; and Sir Andrew Agnew is chief proprietor. Giving off Sbeuchan *quoad sacra* parish and taking in a portion of Kirkcolm, Leswalt is in the presbytery of Stranraer and synod of Galloway; the living is worth £188. The plain parish church was built in 1828. At the village, ¼ mile to the W, is its ruined ivy-clad predecessor, whose graveyard has been the Agnews' burying-place from the 14th century onward. There is a Free church of Leswalt; and Larbrex and Leswalt public schools, with respective accommodation for 55 and 200 children, have an average attendance of about 30 and 110, and grants amounting to over £30 and £111. Pop. of civil parish (1881) 2635, (1891) 2320; of ecclesiastical parish (1881) 1292, (1891) 1170, of whom 187 belonged to Kirkcolm.—*Ord. Sur.*, sh. 3, 1856.

Letham, a village in Monimail parish, Fife, 5 miles W of Cupar and 3¼ N of Ladybank. It has a post office under Collessie, a public school, and a fair on the second Friday in May.

Letham, a village of Forfarshire, mainly in Dunnichen but partly in Kirkden parish, on the rivulet Vinney, 6 miles ESE of Forfar and 1½ mile S by W of Auldbar Road station on the Scottish North-Eastern section of the Caledonian railway. Founded about the beginning of the 19th century by 'honest' George Dempster of Dunnichen, who dreamed of making it a city, it has never been much more than a small agricultural village. Its handlooms and spinning-mill belong to the past; but it has a post office under Forfar, with money order, savings bank, and telegraph departments, a police station, a gaswork, two public schools, a Free church, an Established mission church, and fairs on 26 May and 23 Nov. Pop. (1881) 885, (1891) 798, of whom 18 were in Kirkden.—*Ord. Sur.*, sh. 57, 1868.

Letham Grange, a modern mansion in St Vigeans parish, Forfarshire, 4 miles NNW of Arbroath. With the estate around it, it was sold in 1876 for £121,800 to James Fletcher, Esq. of Rosehaugh, and is now the property of Fitzroy Charles Fletcher, Esq.—*Ord. Sur.*, sh. 57, 1868.

Letham House, a mansion in Avondale parish, Lanarkshire, 1¼ mile W of Strathaven. Its owner is John Struthers Napier, Esq. (b. 1844; suc. 1865).—*Ord. Sur.*, sh. 23, 1865.

Letham House, a mansion in Haddington parish, East Lothian, 2 miles WSW of the town. It is a seat of Sir A. B. Hepburn, Bart. of SMEATON.—*Ord. Sur.*, sh. 33, 1863.

Letham House, a mansion in Strathmiglo parish, Fife, 4½ miles WSW of the town.

Lethangie, a modern mansion in Kinross parish, Kinross-shire, 1½ mile N by E of the town.

Lethanhill. See DALMELLINGTON.

Lethendy, a parish in Stormont district, Perthshire, whose church stands 4½ miles SW of the post-town and station, Blairgowrie. Since 1806 united ecclesiastically to KINLOCH, it is bounded NE by Clunie, E by Kinloch and Blairgowrie, and on all other sides by Caputh. Its utmost length, from NNW to ESE, is 3½ miles; its utmost breadth is 1½ mile; and its area is 1746½ acres, of which 3½ are water. Lunan Burn flows 1½ mile south-south-eastward along all the Kinloch and Blair-

gowrie boundary; and the surface, with a gentle westward ascent, varies in altitude from 119 to 501 feet—the former at $1\frac{1}{2}$ furlong S by E, the latter at $3\frac{1}{2}$ furlongs N, of the parish church. The soil of the western district is black mould, inclining to reddish clay, exceedingly rich, and adapted to every crop; but eastward grows bleaker, wetter, and less productive. About 135 acres are under wood, and nearly all the rest is in tillage. The Tower of Lethendy, 5 furlongs E by S of the church, is a very old building, earlier, it is supposed, than the introduction of artillery. Lethendy and Kinloch is in the presbytery of Dunkeld and synod of Perth and Stirling; the living is worth £250. A Free church stands $1\frac{1}{2}$ mile E of the parish church. Kinloch public school, with accommodation for 95 children, has an average attendance of about 45, and a grant of over £60. Valuation (1883) £2732, 13s. 1d., (1892) £2371, 19s. 3d. Pop. (1871) 179, (1881) 149, (1891) 151.—*Ord. Sur.*, shs. 48, 56, 1868-70.

Lethen House, an 18th century mansion in Auldearn parish, Nairnshire, near the left bank of the Muckle Burn, 5 miles SE of Nairn. Comprising a large three-storey centre, with lower wings, and with beautifully wooded grounds, it is the seat of Mrs Brodie.—*Ord. Sur.*, sh. 84, 1876.

Lethenty, a station on the Old Meldrum branch of the Great North of Scotland railway, at the western verge of Bourtie parish, Aberdeenshire, $2\frac{1}{2}$ miles N of Inverurie.

Lethington. See LENNOXLOVE.

Lethnot, a parish in the Grampian district of Forfarshire, whose church stands near the left bank of West Water, 5 miles W by S of Edzell and $7\frac{1}{2}$ NNW of Brechin, under which there is a post office of Lethnot. Since 1723 comprising the ancient parishes of Lethnot and Navar, the former on the left and the latter on the right side of West Water, it is bounded N by Lochlee, NE by Edzell, SE by Stracathro and Menmuir, SW by Fearn and Tannadice, and W by Cortachy. Its utmost length from WNW to ESE, is 12 miles; its utmost breadth is $4\frac{1}{2}$ miles; and its area is 26,626 $\frac{1}{2}$ acres, of which 36 $\frac{1}{2}$ are water. The Water of Saughs or WEST WATER, rising at an altitude of 2680 feet, winds 15 miles east-south-eastward through the interior, then $3\frac{1}{2}$ east-north-eastward along or close to the Menmuir and Stracathro border, till it passes off from the parish on its way to the North Esk $4\frac{1}{2}$ miles lower down. In the SE, where West Water quits the parish, the surface declines to 295 feet above sea-level; and chief elevations to the left or N of the stream, as one goes up the valley, are the *Hill of Wirren (2220 feet), *West Knock (2273), *Cruys (2424), and *White Hill (2787); to the right or S, Berry Cairn (1433), Tamhilt (1759), the *Hill of Glansie (2383), and *Ben Tirran (2939)—where asterisks mark those summits that culminate on the confines of the parish. Clay slate and mica schist are the predominant rocks; blue roofing slate, of similar quality to that of Easdale, forms a vein from E to W, and was for a short time worked; and limestone occurs, but is of no practical utility. The soil in the lower lands of the valley is partly sandy, partly clayey, and in some places pretty deep; but on the higher grounds is gravelly and much more shallow. Remains of two small ancient Caledonian stone circles are at Newbigging and Blairno; several small tumuli are on a tract where tradition asserts a skirmish to have been fought between Robert Bruce and the English; and near Newbigging are remains of the ancient fortalice of Dennyfern. The Earl of Dalhousie is much the largest proprietor. Lethnot and Navar is in the presbytery of Brechin and synod of Angus and Mearns; the living is worth £167. The parish church was rebuilt in 1827; and a public school, with accommodation for 50 children, has an average attendance of about 35, and a grant of over £47. Valuation (1883) £4389, 4s., (1893) £4213, 5s. Pop. (1801) 489, (1841) 400, (1861) 446, (1871) 318, (1881) 288, (1891) 239.—*Ord. Sur.*, shs. 57, 56, 66, 65, 1868-71.

Letterewe, an estate, with a shooting-lodge, in Gair-

loch parish, NW Ross and Cromarty, on the north-eastern shore of Loch Maree, $10\frac{1}{4}$ miles SE of Poolewe. Its owner is Mrs M. Liot Banks.—*Ord. Sur.*, sh. 92, 1881.

Letterfearn. See GLENSHIEL.

Letterfinlay, an inn in Kilmonoivaig parish, Invernesshire, on the SE shore of Loch Lochy, $7\frac{1}{2}$ miles N by E of Spean Bridge.—*Ord. Sur.*, sh. 62, 1875.

Letterfourie, a modern mansion in Rathven parish, Banffshire, 3 miles SSE of Buckie. It is the seat of Sir Robert Glendonwyn Gordon, ninth Bart. since 1625 (b. 1824; suc. 1861). The seventh descendant of the youngest son of the second Earl of Huntly, he is premier baronet of Nova Scotia, his father having assumed the baronetcy after the death (1795) of its sixth holder, Sir William Gordon of GORDONSTOWN, who was ninth in descent from the second son of the second Earl of Huntly.—*Ord. Sur.*, sh. 96, 1876.

Leuchar Burn, a rivulet of SE Aberdeenshire, issuing from Loch SKENE (276 feet), and flowing $7\frac{1}{2}$ miles south-eastward through or along the borders of Skene, Echt, and Peterculter parishes, till, after a descent of 195 feet, it falls into the Dee at Peterculter church.—*Ord. Sur.*, shs. 76, 77, 1874-73.

Leuchars, an estate, with a mansion, in Urquhart parish, Elginshire, 4 miles NE of Elgin.

Leuchars, a village and a parish of NE Fife. The village, with a station on the Tayport section of the North British railway, stands 1 mile NNE of Leuchars Junction station, this being $5\frac{1}{2}$ miles S of Tayport, $4\frac{1}{2}$ WNW of St Andrews, $6\frac{1}{2}$ NE of Cupar, and 51 NNE of Edinburgh by the Forth Bridge. It is lighted with gas, and has a post office, with money order, savings bank, insurance, and railway telegraph departments. Pop. (1881) 588, (1891) 689.

The parish, containing also the villages of BALMULLO and GUARD BRIDGE, is bounded N by Forgan and Ferryport-on-Craig, E by the German Ocean, S by the Eden estuary and river, which separate it from St Andrews and Kemback, SW by Dairsie, and W by Logie. Its utmost length, from NE to SW, is 8 $\frac{1}{2}$ miles; its utmost breadth, from NW to SE, is 4 $\frac{3}{4}$ miles; and its area is 15,128 $\frac{1}{2}$ acres, of which 1658 $\frac{1}{2}$ are foreshore and 116 water. It is traversed from N to S by the Edinburgh and Dundee and by the Tayport sections of the North British railway. The shore, extending $7\frac{1}{2}$ miles along the German Ocean and St Andrews Bay, is flat and sandy, at no point exceeding 16 feet above sea-level. The EDEN flows 6 $\frac{1}{2}$ miles east-north-eastward along the Kemback and St Andrews boundary and through St Andrews Bay, till at Eden Mouth it falls into the German Ocean; and Motray Water traces 4 $\frac{1}{2}$ furlongs of the Logie boundary, and then flows 2 $\frac{1}{2}$ miles south-south-eastward through the interior, till it falls into the Eden at the head of St Andrews Bay. In the SW, beyond Balmullo village, the surface rises to 515 feet at Airdit Hill; but most of the parish is almost a dead level, no point to the E of the railway exceeding 53 feet. Tents Moor here is an extensive tract of land, covered up with sand, and overrun by rabbits. Inhabited by a number of small crofters, who were also much given to smuggling, until near the close of the 18th century, when they were removed, large farms now occupy their place. Trap rocks prevail on the higher grounds, and have been largely quarried; whilst sandstone, of the New Red formation, occurs near the Eden, but is little suited for building. The soil of the higher grounds is gravel, soft loam, or clay; and that of the low flat lands comprises every variety, from the poorest sand to the richest argillaceous loam. Nearly seven-elevenths of the entire area are regularly in tillage; plantations cover some 400 acres; and the rest is mostly pastoral or waste. The Rev. Alexander Henderson (1583-1646), of Covenanting fame, was minister for twenty-six years; and Henry Scogal (1650-78), from 1669 professor of philosophy at King's College, Aberdeen, has been claimed for a native. No vestige remains of the ancient Castle of Leuchars, its ruins having been carried off for building purposes by the neighbouring farmers. It crowned a circular eminence, the Castle Knowe, 3 furlongs N of the village;

the moat round the knowe enclosed 3 acres of ground, and was crossed by a drawbridge. The castle was the residence of the Celtic chief, Ness, the son of William, whose daughter was married to Robert de Quinci; and it seems to have been the principal residence of their son, Seyer de Quinci, Earl of Winchester, where he held his baronial court, as many of his charters are dated thence; and in a dispute with Duncan, the son of Hamelin, about the lands of Duglyn, in the Ochils, he brought Duncan to acknowledge a release of his claims, in his court, 'in pleuā curiā meā apud Loeres.' In 1327 it was taken and demolished by the English, under the Earl of Pembroke, but was no doubt subsequently rebuilt. In 1808 an earthen vase, containing nearly a hundred well-preserved coins of Severus, Antoninus, and other Roman emperors, was found on Craige Hill. Three pre-Reformation chapels were in the parish—one at Easter Tron, another near Airdit House, and the third on the site of the parish school. AIRDIT, EARLS-HALL (1546-1617) and PIRCULO are noticed separately. Leuchars is in the presbytery of St Andrews and synod of Fife; the living is worth £374. The parish church, containing 850 sittings, is less 'complete than that of Dalmeny, but has originally been a nobler edifice. Indeed, there are few finer specimens of pure Norman work than the semicircular apse, with its two arcades, the upper one having the richness of its effect increased by square piers between the pillars. The windows have been filled up, but their outline is distinctly traceable. A band of corbels, carved into grotesque heads, running along above the higher arcade, will reward attention. Among the subjects which the fantastic stone-cutter has specially indulged in are a ram's head with its horns and a muzzled bear—a phenomenon but rarely seen, one would think, in Scotland in the 12th century. It is easy to notice on the wall traces of the original height of the apse. The ecclesiastical antiquary is not inclined to thank those who have built a somewhat imposing belfry above it—an ornament not entitled by old rule to occupy such a position. The next compartment still preserves its original Norman character, and is conspicuous for an interlaced arcade, of that kind which, according to the theories of some antiquaries, suggested the idea of the pointed arch. The Norman features die away, as it were, into the western compartment of the church, which is entirely bald and modern; and it is sometimes difficult to say whether the stones with zigzag and toothed mouldings retain their original position, or have been built, as so many old stones lying about, into new walls. In the interior there appear through the plaster traces of a large semicircular arch, which had perhaps divided the nave from the choir. Within the apse a great part of the original arching has been removed, but enough remains to show its character.' There is also a Free church, and three public schools, Balmullo, Guard Bridge, and Leuchars, with respective accommodation for 132, 230, and 232 children, have an average attendance of about 80, 130, and 160, and grants amounting to nearly £68, £123, and £158. Valuation (1883) £22,115, 2s. 9d. (1893) £19,115, 14s. 10d. Pop. (1801) 1687, (1831) 1869, (1861) 1903, (1871) 1727, (1881) 2185, (1891) 2370.—*Ord. Sur.*, sh. 49, 1865. See T. S. Muir's *Descriptive Notices of Ancient Parochial and Collegiate Churches of Scotland* (Lond. 1848), and vol. iii. of Billings' *Baronial and Ecclesiastical Antiquities* (Edinb. 1852).

Leuchie House. See BERWICK, NORTH.

Leukopibia. See WHITHORN.

Leurbost, a village in Lochs parish, Lewis, Outer Hebrides, Ross and Cromarty, on a small sea-loch of its own name, 8 miles SSW of Stornoway. Pop. (1881) 654, (1891) 608.—*Ord. Sur.*, sh. 105, 1858.

Leven, the name of an old ruined castle and also of a modern mansion, the two standing close to one another, in Innerkip parish, Renfrewshire, on the sea-shore, 2 miles SW of Kempeck Point in Gourcock. The castle comprises two quadrangular towers about 30 feet high and with very thick walls. Till 1547 it belonged to a branch of the Mortons, but at that date it passed into the hands

of the Sempills, and is now the property of the Shaw-Stewarts.

Leven, a river issuing from the SE end of Loch Leven, and flowing eastward for 2½ miles in Kinross-shire, and 13½ miles in Fifeshire, to the Firth of Forth, at the town of LEVEN on the W side of LARGO Bay, passing through the interior or along the boundaries of Portmoak, Leslie, Kinglassie, Markinch, Wemyss, and Scoonie parishes, and with its tributaries draining a basin of 97,920 acres. From the N it receives Arnot Burn, Lotherie Burn, and Kennoway Burn; and from the S the river Orc with Lochty Burn. Where not checked by mill-dams, it has a rapid current, and is, in its upper reaches, pure and soft, and being particularly suitable for the purposes of bleaching and paper-making, many mills for these purposes have been long established on its banks. There are also a few along the Ore; and at Cameron Bridge, about a mile below the junction, there is a very large distillery. Prior to the establishment of the mills it was a good trouting stream, but that is now at an end. Along some parts of its course there is pretty scenery. The artificial nature of the first 3 miles of the channel is noticed in the article LEVEN, LOCH.—*Ord. Sur.*, sh. 40, 1877.

Leven, a town in Scoonie parish, Fife, on the NE side of the mouth of the river just described. It has a station on the Leven and East of Fife section of the North British Railway system, from Thornton Junction to Anstruther, and is the starting-point of the East of Fife Central railway, sanctioned by Act of Parliament in 1893, running *via* Kennoway to Bonnyton, and thence branching eastwards to Stravithie on the Anstruther and St Andrews railway, and northwards to Dairsie on the main line to Dundee. Leven is by rail 36¾ miles NNE of Edinburgh (*via* Forth Bridge), 17 NE of Burntisland, 10¾ NE of Kirkcaldy, 6 E by N of Thornton Junction, and 13¼ W by S of Anstruther. Originally a small weaving village of some antiquity, and a burgh of barony, it has since developed into a centre of manufactures of considerable importance. It includes the hamlet of Scoonieburn, and is separated by the Leven river from the village of Inverleven (formerly called Dubbicside) in the parish of Wemyss. It became a police burgh in 1867, and under the Burgh Police Act of 1892 its affairs are managed by a provost, 2 bailies, and 6 commissioners. There are three principal streets with cross streets, but the town is irregularly built, though there are some good houses, particularly towards the links to the E, where there are a number of villas. Eastward to the Links a number of new streets and many handsome villas have been erected. The road to Inverleven crosses the river by a handsome stone bridge (1839). The sands, reaching in one unbroken curve onwards to Largo, are strewn with thousands of shells, and having a gradual descent to the sea are very suitable for bathing. The harbour prior to 1876 was simply the natural inlet at the mouth of the river, difficult of access, but admitting vessels of 300 tons to a small quay built about 1833. Under the Leven Harbour Act, however, of 1876, a wet dock, a river wall, a protection wall, and railway connections were constructed at a cost of £40,000, and opened in 1880. The undertaking, however, proving a failure financially, was, after the successful opening of Methil Dock, bought by R. Erskine Wemyss of Wemyss, and along with Methil Dock (built by the same gentleman) and the Wemyss railway to Thornton, was afterwards sold by him to the North British railway company. Leven Dock is now almost useless, owing to accumulations of sand in the bed of the river, in the fairway of the dock, and which would require continuous dredging.

The industries of the place are flax-spinning, linen-weaving, brewing, and seed-crushing, while in the neighbourhood there are extensive foundries, bone-dust and saw-mills, bleachfields, brick-works, rope-works, paper-works, and salt-works. The extensive collieries of the Fife Coal Company engage the principal share of labour in Leven. Some of these pits are nearly 600 feet deep. The public halls are the town-hall, rebuilt in 1892, with

accommodation for 800, and the Gardeners' hall, with accommodation for 400. There are also a drill-hall and one or two minor halls. The People's or Greig Institute is an institution akin to a mechanics' institute, and is due to a popular movement begun in 1871. The first building occupied was an old U.P. church, but in 1872-73 the present two-storey structure, containing a library, a reading-room, a billiard-room, bath-rooms, and a classroom, etc., was erected by public subscription, at a cost of £2000. The name was given in honour of Mr Greig of Glencarse, who gave the site and subscribed £1000 to the building fund. At the east side of the institute stands the old Cross of Leven, in 1890 found built into a wall close by, but which was then re-erected in its present position. The Established church—the parish church of Scoonie—in Durie Street, was erected in 1775, enlarged in 1822, and had a new porch and an organ added in 1883; it contains 1000 sittings. The Free church, in Durie Street, is a handsome building, erected in 1861 at a cost of £3100; the U.P. church, in Durie Street, is a good building, erected in 1870 at a cost of £2150, and containing over 600 sittings. There is also a U.P. church in Inverleven. The Episcopal church (St Margaret of Scotland), in Blackwood Place, is an Early English building of 1881, with 200 sittings. There is an organ, and the tower contains four bells. Under the school board, the Leven public school, erected at a cost of £4000, and enlarged in 1893 at a further cost of about £3000, has accommodation for 1178 pupils, an average attendance of about 925, and a grant amounting to over £997. Leven has a post office, with money order, savings bank, and telegraph departments, offices of the Royal, National, Commercial, and British Linen Co.'s banks, a hotel, a battery of artillery volunteers (8th Battery 1st Fife), a masonic lodge, golf, bowling, lawn tennis, and curling clubs, a gaswork, and a weekly newspaper, the *Leven Advertiser* (Thursday). The golf links of Leven rank among the best in the kingdom. There is also a ladies' golf course, and the brine, sea, and fresh water baths are fitted up in first-class style. A water supply was introduced in 1867, and there is good drainage. There are fairs on the second Wednesday of April *o.s.*, on the Thursday after the third Monday of July, the latter and the two following days being the time of the annual holidays, and on the third Wednesday of October. The weekly market day is Thursday. Sheriff small debt circuit courts for the parishes of Largo, Scoonie, Kennoway, Wemyss (with the exception of the town and suburb of West Wemyss), the village of Inverleven, part of Markinch parish, and the *quoad sacra* parish of Milton in Markinch, are held on the Friday after the second Mondays of January, April, and July, and the Friday after the first Monday of October. The place gives the title of the Earl of Leven in the peerage of Scotland, the first earl being General Alexander Leslie, in 1641. The title is now united with that of Melville. Pop., inclusive of Inverleven, (1881) 3568, (1891) 4577.

Leven, a small stream and a sea-loch on the mutual border of Argyll and Inverness shires. Issuing as the Black Water from little Lochan a' Chlaidheimh (1145 feet) at the meeting-point of the counties of Argyll, Inverness, and Perth, the stream flows 16½ miles westward, through a chain of lochs—Loch a' Bhaillidh, Lochan na Salach Uidhre, and Loch Inbhir (992 feet)—and falls into the head of Loch Leven. The scenery along the basin is wild and romantic, particularly at the wild glen of the falls of Kinlochmore. There is excellent trout-fishing, which is, however, preserved. The loch extends 11½ miles westward from the mouth of the river to Loch Linnhe at its junction with Lower Loch Eil, and varies in breadth from ⅔ furlong to 2½ miles, being very narrow in its upper half, but widening out at Invercoe, where Gluecoe opens on it from E by S, and the river Coc enters it. The scenery, more particularly along the western part, is very wild. 'It is with justice,' says Dr Macculloch, 'that Glenceoe is celebrated as one of the wildest and most romantic specimens of Scottish scenery; but those who have written about Glenceoe for-

got to write about Loch Leven, and those who occupy a day in wandering from the inns at Ballachulish through its strange and rocky valley, forgot to open their eyes upon those beautiful landscapes which surround them on all sides, and which render Loch Leven a spot that Scotland does not often exceed, either in its interior lakes or its maritime inlets. From its mouth to its farther extremity, this loch is one continued succession of landscapes on both sides, the northern shore being accessible by the ancient road which crosses the Devil's Staircase, but the southern one turning away from the water near the quarries [of Ballachulish]. The chief beauties, however, lie at the lower half, the interest of the scenes diminishing after passing the contraction which takes place near the entrance of Glenceoe, and the farthest extremity being rather wild than beautiful.' The Devil's Staircase is the name given to the portion of the old road from Tyndrum to Fort William, which is at the E end of the loch.—*Ord. Sur.*, shs. 54, 53, 1873-77.

Leven, a river of DUMBARTONSHIRE, carrying the surplus water from Loch LOMOND to the Firth of Clyde. It leaves the loch at the extreme S end, immediately to the E of Balloch pier, and takes a very winding course, first easterly then southerly, to the Clyde at DUMBAR-ROX, passing through the parish of Bonhill and along the boundary between the parishes of Dumbarton and Cardross. Measured in a straight line, its length is 5½ miles, but there are so many windings that the real course is 7½. The fall from the loch to the mouth is only 23 feet, and the discharge is about 60,000 cubic feet per minute. The tide flows up for about 3 miles. The scenery along its whole course was formerly very soft and pretty, and in some reaches it is so still; while the Vale of Leven, about 2 miles broad, is rich and fertile. Pennant described it as 'unspeakably beautiful, very fertile, and finely watered;' and its beauty has also been sung by Smollett, whose paternal estate of BONHILL is on its banks, in his *Ode to Leven Water*, where he addresses it as

'Pure stream, in whose transparent wave
My youthful limbs I wont to lave;'

but the transparency is, alas, now gone. The purity and softness of the water fits it admirably for bleaching and dyeing purposes, and the banks of the river have accordingly become spotted with a continuous series of print-fields, bleachfields, and dye-works, particularly in connection with turkey-red dyeing. After washing the villages or towns of Balloch, Jamestown, Alexandria, Bonhill, and Renton, which are on its banks, and in the neighbourhood of which these industries are carried on, the stream is no longer so pure as it might be, though it is to be hoped that at no distant date there will again be considerable improvement. The fishing used formerly to be good, and notwithstanding the pollution, salmon, sea-trout, river-trout, perch, pike, eels, and flounders are still occasionally to be got, though salmon and sea-trout die in the effort to ascend, unless the river be in flood. The half mile of the course below Dumbarton may be navigated by vessels of fair size, and a considerable amount of shipbuilding is carried on along the banks. The only tributary of any size is the Murroch Burn from the E, which enters half-way between Renton and Dumbarton.—*Ord. Sur.*, sh. 30, 1866.

Leven, Loch ('lake of the *leanhan*,' or elm-tree), a lake in the SE of the county of KINROSS and lying wholly in the parish of Kinross, though the parishes of ORWELL and PORTMOAK skirt its N, NE, S, and SW parts. The general outline may be described as an irregular oval lying from NW to SE, and with a wide bay opening obliquely off on the W side towards the burgh of Kinross; or it may be described as heart-shaped, with the broad end, which has the right-hand lobe larger than the left-hand lobe, to the NW, and the small end to the SE. The length from the extreme NW to the mouth of the river Leven is 3½ miles, and the width at the broadest part, midway between Castle Island and St Serf's Island, is 2 miles. The bay already mentioned on the W side measures ¾ mile

on a line across the mouth due N of the point E of the burgh of Kinross, and extends the same distance to the W of this line. It probably occupies a rock basin with its true margin obscured by drift. The depth, except close inshore, varies from 10 to 20 feet, but reaches, in some places, 90 feet; the mean height of the water above sea-level is 353 feet; and the area is 3406 acres. It was formerly considerably larger, the length being 4 miles, the width 3, and the extent about 4506 acres, but, in 1826, an Act of Parliament was obtained in order to allow a depth of 9 feet to be dealt with, 4½ feet being drained entirely, and benefiting the surrounding proprietors, though principally on the E side, to the extent of about 1100 acres, while other 4½ feet was to be given up to the mill-owners along the river to form a reservoir entirely under their own control, and compensating them for the supply that might be lost by the drainage operations. The land reclaimed is sandy and not very valuable, but the storage operations prevent the excess of winter-rain from flowing off in heavy and destructive floods as was formerly the case. The quantity of water stored up when the surface of the loch is at its full height is about 600,000,000 cubic feet, and this, with what is constantly added by inflowing streams, is sufficient, except in very dry seasons, to provide a regular supply of 5000 cubic feet per minute. The loch receives the drainage of almost the whole of Kinross-shire, the basin of which it receives the rainfall being, above the sluices at the opening of the river LEVEN, 39,204 acres, over which the average rainfall is about 36 inches. The principal streams that enter it are the North Queich, at the NW end; the Ury Burn, N of Kinross; the South Queich and Gelly Buru, S of Kinross; and Gairney Water, W of St Serf's Island; and the surplus water is carried off by the river Leven, which issues from the SE end. The drainage operations were carried out between 1826 and 1836 under the superintendence of the late Mr Jardine of Edinburgh, and the lowering of the level of the water was effected by cutting at a very low level a new course for the river Leven; this, known as the 'New Cut,' extends from the end of the loch for 3 miles down the river in a straight line to Auchmoor bridge, and the regulation of the flow of the stored water is managed by powerful sluices erected at the point where the river leaves the loch. The total cost was about £40,000. There are seven islands, of which the largest is St Serf's Island, ⅓ mile from the SE end, which measures 5 by 4 furlongs at the widest part, and has an area of about 80 acres. The next largest is Castle Island, ¼ mile E of the projecting point on which the old church of Kinross stands, which measures 2 furlongs by 1, and has an area of about 8 acres. Close to it are three small islands—Reed Bower to the S, Roy's Folly to the SW, and Alice's Bower NW, while about 3 furlongs N is Scart Island, and ⅓ mile N by E of the latter is a small nameless island near the NW end of the loch. The island of St Serf receives its name from the ruins of a priory, the church of which had been dedicated to St Serf or Servanus, who lived about the beginning of the 8th century. The first foundation must have been made either by himself or by some of his followers soon after his death, for, according to the *Register of St Andrews*, the island was given by Brude, king of the Picts, in or about the year 842, to God, St Servan, and the Culdee hermits serving God there; and the possessions of the community were increased by various grants from different kings and from some of the bishops of St Andrews between 1039 and 1093. Other benefactors also aided them till the early part of the 12th century, but in the course of the quarrels as to rule and discipline that then raged, they, like all the other bodies of the older Scottish church, had the worst of the battle, seeing that their foes were backed by all the weight of the royal power. Prior to 961 the brethren had given up the island to the bishop of St Andrews, so long as he should provide them with food and raiment; and in 1144, or shortly after, Bishop Robert handed the island and all their other possessions over to the newly founded order of Canons

Regular of St Andrews. Some resistance was probably made to this arbitrary proceeding, since King David granted a charter conferring the island on the canons of St Andrews, that their order might be instituted in the old monastery. Any of the Culdees who chose to remain and live canonically were to be allowed to do so, but those who resisted were at once to be expelled from the place. Many of the brethren were probably driven out, and the canons of St Andrews held the place till the Reformation, and the lands passed into the possession of the Earl of Morton. A list of the books belonging to the Culdee community has been preserved in the *Register of St Andrews*. They were—a pastorage, a gradual, a missal, the works of Origen, the Sentences of St Bernard, a treatise on the sacraments, a portion of the Bible, a lectionary, the Acts of the Apostles, the Gospels, the works of Prosper, the Books of Proverbs, Ecclesiastes, and Canticles, a Gloss on the Canticles, a book called Interpretationes Dictionum, a collection of sentences, a commentary on Genesis, and selections of ecclesiastical rules. The priory is also known as the priory of Loch Leven, or the priory of Portmoak, the latter still being the name of the adjacent parish, and said to be derived from the first abbot, St Moak. The prior at the beginning of the 15th century was Andrew Wyntoun, author of *The Orgyngnale Cronykil of Scotland*, and the work was written here. The ruins were explored and the foundations laid bare in the end of 1877, when the remains of two bodies, supposed to be those of St Ronan and Graham (first bishop of St Andrews), were found within the area. The island is grassy, and affords pasture for a few sheep and cattle. The Castle Island was considerably increased in size by the drainage operations, and it was even feared that it would be joined to the mainland and lose its classic associations, more particularly as an ancient causeway extends from it under water to the shore. When or for what purpose this was formed is not known, but so continuous and high is it that in a dry season, when the lake is at its lowest, a man can wade along it from end to end. There is said to have been a stronghold here at a very early period, built by Congal, the son of Dongart, king of the Picts, and part of the present strength must be of considerable antiquity. During the minority of David II. it was held for him by Allan de Vipont and James Lamby, citizens of St Andrews, and was besieged by part of Baliol's forces under John de Strivilin. The English leader first erected a fort on the point where Kinross churchyard is, and tried thence to batter the castle; but, his efforts being in vain, he next tried by means of a bulwark of stones and trunks of trees to stop the narrow opening by which the Leven rushed out of the lake, so that the castle on the island might be laid under water. The water began slowly to rise, and success seemed certain, but, on 19 June 1335, while the English leader and the greater portion of his soldiers were at Dunfermline celebrating the festival of St Margaret, the defenders took advantage of the opportunity, attacked the barrier and broke part of it down, when the water rushed out with such force that it overwhelmed and whirled away a number of the English soldiers who were encamped on that side. The castle, however, derives its chief interest from its associations with Queen Mary, this being the place selected as her prison after the surrender to the confederate lords at Carberry. One of the Douglases had obtained a grant of the lands and loch in 1353, and at this time the castle was held by Sir Robert Douglas, a near kinsman of the famous James, Earl of Morton, and stepfather of James, Earl of Murray, afterwards the regent. It was probably on account of this relationship that he was selected for such an important duty, and the Queen was consigned to his care on 17 June 1567. On 24 July following she was visited by Lord Ruthven, Lord Lindsay of the Byres, and Sir Robert Melville, in name of the Confederates, and was by them forced to sign a deed of abdication resigning the throne to her infant son, who was five days thereafter crowned at Stirling as James VI. The scene that then occurred, as well

as the subsequent escape of the Queen, are graphically described in Scott's *Abbot*. On 15 Aug. it was again the scene of a stormy meeting, when Regent Murray, in a conference that lasted 'until one of the clock after midnight . . . did plainly, without disguising, discover unto the queen all his opinion of her misgovernment, and laid before her all such disorders as either might touch her conscience, her honour, or surety,' and still further 'behaved himself rather like a ghostly father unto her than like a councillor. Sometimes the queen wept bitterly, sometimes she acknowledged her unadvisedness and misgovernment; some things she did confess plainly, some things she did excuse, some things she did extenuate.' In conclusion, the Earl of Murray left her that night 'in hope of nothing but of God's mercy, willing her to seek *that* as her chiefest refuge.' Next morning she 'took him in her arms and kissed him, and showed herself very well satisfied, requiring him in any ways not to refuse the regency of the realm, but to accept it at her desire. "For by this means," said she, "my son shall be preserved, my realm well governed, and I in safety, and in towardness to enjoy more safety and liberty than way than I can any other;" and after he had accepted the fatal post 'she embraced him very lovingly, kissed him, and sent her blessing unto the prince her son by him,' and they parted—to meet again at Langside (see GLASGOW). On 2 May 1568 Mary effected her escape by the aid of a youth of eighteen, named Willy Douglas, and possibly a kinsman of the family. A previous attempt concerted by George Douglas, a son of Sir Robert, and made on 25 April, had been frustrated; but George, who had early 'allen under the power of the queen's fascination, and had been sent away from the castle, continued to hang about the neighbourhood, till at last, the younger Douglas having stolen the castle keys while Sir Robert was at supper, a fresh effort was made and was successful. 'He let the queen and a waiting-woman out of the apartment where they were secured, and out of the door itself, embarked with them in a small skiff, and rowed them to the shore. To prevent instant pursuit he, for precaution's sake, locked the iron-grated door of the tower, and threw the keys into the lake. They found George Douglas and the Queen's servant, Beaton, waiting for them, and Lord Seyton and James Hamilton of Orbieston in attendance, at the head of a party of faithful followers, with whom they fled to Niddrie Castle, and from thence to Hamilton' (see GLASGOW and TERREGLES). The boat, according to tradition, landed on the lands of Coldon on the S side. The keys were recovered during the nineteenth century (1805), and presented to the Earl of Morton. The Earl of Northumberland also, after his rebellion in England and his capture in Scotland, was confined in Lochleven Castle from 1569 to 1572, when he was delivered up to Elizabeth and sentenced to death. The castle and courtyard occupied a considerable portion of the old area of the island; and the garden occupied most of the remainder. In 1840 the courtyard was cleared of weeds and most of the ruins of accumulated rubbish. The great tower or keep of the castle, dating probably from some time in the 14th century, stood at the NW corner of the courtyard, next Kinross, and was four storeys high, with walls 6 feet thick. The entrance was on the second storey, and had been gained by a temporary staircase that could be removed in time of danger. The door opened at once into the great hall which occupies the whole of this storey, and within the doorway and at the entrance to the hall is a square opening leading to the dungeon below. The two upper storeys seem to have been bed-chambers. The courtyard was surrounded by high walls, protected at the corners by towers. The turret on the SE is pointed out, though merely on vague tradition, as the place of Queen Mary's confinement. The chapel was on the W side to the W of the keep. The whole island is now prettily wooded. The scenery round the loch is very fine. Across the level ground to the NE rise the green Ochils, while on the E is Bishop Hill (1492 feet), and to

the S the well-wooded Benarty Hill (1167), both rising steeply from the edge of the loch with a dignity not always seen even in much loftier mountains; while to the W of Benarty are the woods of BLAIRADAM, where the idea of the *Abbot* occurred to Scott.

The loch has long been noted for trout of a delicate colour and very fine flavour, for even in the time of Charles I. in 1633 an Act of Parliament was passed for the protection of fish spawning in any of the inflowing streams within five miles of their mouth; and Defoe, in his *Journey through Scotland* (1723), declares that the 'lake is full of fish, particularly the finest trouts in the world.' Previous to 1856 the fishing was by nets, the trouts not generally rising to fly, while now they do so readily. Rod-fishing, now the only method of capture employed for trout, does not begin till 5 Feb., and continues till 31st August. The average take of trout with nets was about 11,000 lbs. a year, and since rod-fishing began it has varied considerably. In 1883 it was 12,742 lbs.; in 1888 it rose as high as 21,074 lbs., falling to 12,837 lbs. in 1889, and as low as 9202 lbs. in 1890, but rising again to 19,529 lbs. in 1893, and showing a slight falling off in 1895 (14,320 lbs). The trout average nearly 1 lb., but fish of 2, 3, 4, or 5 lbs. are not at all rare, and some years ago one of 10 lbs. was captured. Besides trout, the loch also contains perch and pike, the latter being relentlessly destroyed by the net. The fishings are leased by the Loch Leven Angling Association (Limited), who keep about twenty boats on the loch. The boats are provided with two boatmen, and the charge is 2s. 6d. per hour, and 3 shillings extra per day for one of the men, the Association paying the other. Perch fishers, however, are charged a lower rate than trout fishers. Curiously unlike most other places, fishing is best with an E wind. From the Douglas family the property passed, in the time of Charles II., to Sir William Bruce, who erected Kinross House, and it is now in the possession of Sir G. Graham Montgomery, Bart.—*Ord. Sur.*, sh. 40, 1877. See Robert Burns-Begg's *History of Lochleven Castle* (2d. ed., Kinross, 1887).

Levenwick, a coast village in Dunrossness parish, Shetland, 4 miles SW of Sandwick.

Levera, an islet of North Uist parish, Outer Hebrides, Inverness-shire. Pop. (1871) 8, (1881) 11, (1891) 12.

Levern Water, a stream and a *quoad sacra* parish of Renfrewshire, issuing from Long Loch, on the boundary between the parishes of Neilston and Mearns, near the Ayrshire border, and running $9\frac{1}{2}$ miles north-north-eastward through the parish of Neilston and along the boundary between Abbey-Paisley and Eastwood, to a junction with the White Cart, at a point $3\frac{1}{2}$ miles ESE of Paisley. Its principal affluents are the Kirkton and the Brock Burn. It exhibits various scenes of sequestered and even romantic beauty. Before reaching the level ground, its velocity is very considerable, and there are several waterfalls. The cascades in Killock Glen form a miniature resemblance of the three celebrated Falls of Clyde. The greater part of its valley is thickly inhabited by a manufacturing population, which centres at the villages of Neilston, Barrhead, and Hurler. The *quoad sacra* parish of Levern is in the presbytery of Paisley and synod of Glasgow and Ayr. Its church was built as a chapel of ease in 1835. Levern public and Nitshill Roman Catholic schools, with respective accommodation for 359 and 123 children, have an average attendance of about 215 and 75, and grants amounting to nearly £210 and £72. Pop. of *q.s.* parish (1871) 2413, (1881) 2847, (1891) 2772, of whom 2617 were in Abbey-Paisley and 155 in Eastwood.—*Ord. Sur.*, shs. 22, 30, 1865-66.

Lewis or Lews, the northern part of the 'Long Island' or Outer Hebrides, and next to Ireland the largest of the British Isles, comprises one large island and a great number of isles or islets. The island of Lewis, 45 miles in length, with an average breadth of 15 miles and an extreme breadth of 30, consists of two parts, Lewis proper on the N and Harris on the S, which are united to each other by an isthmus $6\frac{1}{2}$ miles broad. Harris and the isles connected with it belong

to Inverness-shire, and have been fully described in our article HARRIS. Lewis proper and the islets connected with it belong to Ross-shire. The islets, excepting only the small group called the Shiaut Isles, lie quite close to the coast, and are all very small, and for the most part uninhabited, so that they do not need to be separately noticed. The main body of Lewis proper, in all its statistics, and in many of its principal features, as well as in most of its minor ones, will be found described in our articles on its four parishes of BARVAS, LOCHS, STORNOWAY, and UIG. We will therefore make only a few general statements here.

Lewis proper has somewhat the outline of an equilateral triangle, its base 28 miles broad, each of its sides nearly 50 miles long, and its apex pointing to the NE, and terminating in a promontory called the BUTT of LEWIS. The general surface of Lewis proper is not so mountainous and rugged as that of Harris, and has been aptly described as 'an immense peat, with notches of the moss cut away here and there, to afford a sure foundation for the inhabitants, and produce food for their bodily wants.' The total area is 437,221 acres, of which 417,416 are land. Much the greater portion of this is hill, moor, and moss, with here and there an undulating tract of blue clay upon a rocky bottom. On some parts of the coast the soil is of a sandy nature, tolerably fertile. The rocky cliffs which form the Butt rise to the height of 142 feet, and are broken into very rugged and picturesque forms. The loftiest summits are Mealashal and Beinn Mhor, both which rise to a height of 1750 feet above sea-level. Gneiss is the predominant rock. Numerous sea-lochs or elongated bays project far into the interior on both sides of the southern district, and in some instances are so ramified that they and the fresh-water lakes produce, in many parts, a watery labyrinth with the land. But these sea-lochs afford great quantities of shell-fish; and the whole coast is very favourable for the white fish and herring fisheries. The streams also abound with trout and salmon. Large roots of trees have been abundantly dug up in the bogs, indicating the ancient existence of an extensive forest; but in later times, excepting a small patch in the neighbourhood of Stornoway, the whole country became utterly destitute of wood. Its agriculture and its arts also, till 1844, were in a very rude state. It belonged then to the Mackenzies of Seaforth, but it was purchased for £190,000 by the late Sir James Matheson, Bart. (1796-1878); and by him no less a sum than £329,409 was expended in a series of sweeping improvements, which have greatly changed its character. No instance of improvement, in recent times, within the United Kingdom, has been more striking to the eye of an observer. Its details have comprised draining, planting, road-making, the reforming of husbandry, the improving of live stock, the introduction of manufactures, and the encouraging of fisheries, all on a great scale and with good results. The focus of the improvements has been Stornoway and its neighbourhood; so that a fuller account of them will fall to be given in our article on STORNOWAY. The harbour of Port Ness, with its boat-slip of 1835, rendering any increase in the size of the fishing boats scarcely possible, was in 1893 enlarged to such an extent that not only does it now serve the local wants, but is greatly taken advantage of by the larger boats of the east coast fishermen in their periodic visits to the west coast. The Highlands and Islands Commission having reported in favour of a breakwater at the entrance to the harbour, which is very much exposed to heavy seas, and during gales to high waves, Government in the same year granted £15,000 for the purpose. The breakwater not only shelters the harbour, but forms a quay from which steamers transfer the produce of the fishings to the southern markets. In 1893 also Government gave £1500 for the making of roads and footpaths in Lewis. Under the County Council the new Carloway Road was formed in that year at a cost of fully £14,000, and in 1894 a pier was erected at Portnambothag, Folsta. Pop. (1861) 20,570, (1871) 23,483, (1881) 24,876, (1891)

27,045, of whom 24,747 were Gaelic-speaking.—*Ord. Sur.*, shs. 98, 99, 104, 105, 106, 111, 112, 1858.

The Established presbytery of Lewis, in the synod of Glenelg, meets at Stornoway on the last Wednesday of March and November, and comprises the *quoad civilia* parishes of Barvas, Lochs, Stornoway, and Uig, with the *quoad sacra* parishes of Cross and Knock, and the chapelries of Bernera and Carloway. Pop. (1881) 25,487, (1891) 27,590, of whom about 150 are communicants of the Church of Scotland. The Free Church presbytery of Lewis has 2 churches at Stornoway, and 9 at Back, Barvas, Carloway, Cross, Kinloch, Knock, Lochs, Park, Shawbost, and Uig, which 12 together have over 12,000 members and adherents. See W. A. Smith's *Lewisiana; or, Life in the Outer Hebrides* (Edinb. 1875), and an article by James Macdonald on 'The Agriculture of Ross and Cromarty' in *Trans. Highl. and Ag. Soc.* (Edinh. 1877).

Ley of Hallyburton, a hamlet in Kettins parish, Forfarshire, 2½ miles SE of Coupar-Angus.

Leys Castle, a fine modern mansion in Inverness parish, Inverness-shire, 3½ miles SSE of Inverness. Standing 520 feet above sea-level, it commands a beautiful view of mountain and valley, water and wood.—*Ord. Sur.*, sh. 84, 1876.

Leys, Loch. See BANCHORY-TERNAN.

Leysmill, a village in Inverkeilor parish, Forfarshire, with a station on the Arbroath and Forfar section of the Caledonian, 2½ miles ESE of Guthrie Junction.

Libberton, a village and a parish in the Upper Ward of Lanarkshire. The village, towards the NW corner of the parish, is 5 miles NW of Biggar on the Symington and Peebles branch of the Caledonian railway, and 2½ SSE of the post-town Carnwath, on the Carstairs and Edinburgh section of the same system.

The parish, containing also Quothquan village, 4 miles W by N of Biggar, since 1669 has comprehended the ancient parishes of Libberton and Quothquan. It is bounded N by Carnwath, E by Walston and Biggar, S by Symington and Covington, and W by Covington and Pettinain. Its utmost length, from N to S, is 5½ miles; its breadth, from E to W, varies between ¾ mile and 4¼ miles; and its area is 8320 acres, of which 88⅞ are water. The CLYDE, here a beautiful river, 100 to 120 feet in width, and 2 to 15 in depth, flows 8 miles west-north-westward and north-by-westward along or close to all the Symington, Covington, and Pettinain boundaries; and the South MEDWIN meanders 5¼ miles westward along all the northern border till it falls into the Clyde at the NW corner of the parish. Sinking here to 620 feet above sea-level, the surface rises to 1006 feet at Bellsraigs, 1141 near Huntfield, and 1097 at pointed, green Quothquan Law, an outcropping rock on whose summit bears the name of Wallace's Chair. A large extent of haughland, with a strong clay soil, extends along the Clyde; the tract thence inward rises in some places gently, in other places suddenly, to the height of 50 or 60 feet above the level of the stream, and extends, with a fine, early, fertile soil, to the distance of ½ mile or more; and the land farther back becomes more elevated, later, and less productive in its arable parts, till it includes a considerable extent of uncultivated surface. The banks of the Medwin comprise some early fertile spots, but, in general, are poor and moorish. About 1076 acres are under wood, 6158⅓ are in tillage; and the rest is either pastoral or waste. The largest landowner is Sir Simon Lockhart of LEE, Bart. This portion of the Lockhart estates was sold by the fourth Earl of Carnwath in 1676 to Sir George Lockhart, afterwards President of the Court of Session, who was assassinated in March 1689, and they have since remained in the family. The lands of Quothquan and Shieldhill have, however, been in possession of the Chancellor family for more than 400 years, a charter of 1432 being still extant, containing a grant of them by Lord Somerville to the ancestor of the Chancellor family. The proprietor of the estate in the time of Queen Mary took part with that princess, and was engaged at the battle of Langside, in consequence of

which his mansion at Quothquan was burned down in 1568 by the adherents of the victorious Regent Murray. The family then removed to the old tower of SHIELDHILL. A short way E of it is HUNTFIELD, the mansion of another landowner, and two more are Cormiston Towers and Oggs Castle, the former at the SE, the latter at the NE corner of the parish. From the 13th till the latter part of the 17th century Easter Gledstones was the seat of the Gledstones of that ilk, the last of whom, William, removed to BIGGAR, and was the great-great-grandfather of the Right Hon. W. E. Gladstone. (See FASQUE, and Prof. Veitch's 'Mr Gladstone's Ancestors' in *Fraser's Magazine* for June, 1880.) Libberton is in the presbytery of Biggar and synod of Lothian and Tweeddale; the living is worth £267. The parish church at Libberton village was built in 1812. Quothquan church at Quothquan village having become ruinous, about 1780 was converted by John Chancellor of Shieldhill into a family burying-place. The cot on its W gable retains a fine-tonged bell of 1641. Two public schools, Libberton and Quothquan, with respective accommodation for 72 and 56 children, have an average attendance of about 15 and 35, and grants of over £30 and £40. Valuation (1884) £8105, 12s., (1893) £6908, 19s. Pop. (1881) 625, (1891) 486.—*Ord. Sur.*, shs. 23, 24, 1865-64.

Liberton ('leper town'), a village and a parish of Edinburghshire. The village stands, 356 feet above sea-level, on the summit of a low broad-based ridge, 2 $\frac{3}{4}$ miles SSE of the centre of Edinburgh, and is sometimes distinguished as Liberton Kirk, from the fact that it contains the parish church. It is somewhat straggling in its arrangement, and besides the poorer class of cottages, includes some neat houses and elegant villas. There are no buildings of any importance except the parish church and the Free church. The former is a handsome semi-Gothic edifice, whose square tower, capped by four corner pinnacles, forms a very prominent object in the landscape. Designed by Gillespie Graham, and containing 1000 sittings, it was built in 1815, and renovated at a cost of over £1200 in 1882, when gas was introduced, a panelled ceiling inserted, the gallery reconstructed, the whole reseated, &c. The precise site of the present building was formerly occupied by a very ancient church, mentioned in the foundation charter of Holyrood (1128). When the church which immediately preceded the present one was taken down, a curious Russian medal of the 13th century is said to have been found embedded in the materials. The Free church of Liberton, standing nearly $\frac{1}{2}$ mile to the NE, was built in 1870 at a cost of £2200. Liberton post office has money order, savings' bank, insurance, and telegraph departments. Pop. (1881) 157, (1891) 379.

Two hamlets, named Liberton Dams and Nether Liberton, lie respectively 4 $\frac{1}{2}$ furlongs NNW and 6 $\frac{1}{2}$ furlongs N by W of the village. They are mere groups of cottages of little pretensions, but within late years several neat though small houses have been built at Liberton Dams. In old documents there occurs a mention of a mill at Nether Liberton, where there is still a saw-mill; and in 1369 the lands of Nether Liberton were granted to William Ramsay and spouse.

Liberton parish is bounded N by St Cuthbert's and Duddingston, E by Inveresk and Newton, SE by Dalkeith, S by Lasswade, and W by Colinton. It extends from the Pow Burn at Edinburgh to within a mile of Dalkeith, and from the close vicinity of the Firth of Forth at Magdalaue Bridge to near the E end of the Pentland range. Its greatest length from ENE to WSW is 5 $\frac{3}{4}$ miles; its greatest breadth is 4 $\frac{1}{4}$ miles; and its area is 6617 acres. The scenery of this parish is very beautifully diversified, though it never loses its lowland smiling character. Just within the W boundary the Braid Hills attain their maximum altitude of 698 feet above sea-level, and extending from these are low broad ridges and gentle elevations, with alternating belts and spaces of plain. The state of cultivation is high, and there are numerous private mansions with fine policies. The Braid Burn and Burdiehouse Burn flow north-eastward through the interior, and there is a curious bituminous

spring at St Catherine's, known as the Balm Well. The rocks of the Braid Hills are basaltic, but elsewhere are carboniferous, belonging either to the Calciferous Sandstone or to the Carboniferous Limestone series. Sandstone, limestone, and coal are extensively worked. The soil in some parts is wet clay or dry gravel, but in most parts is a fertile loam. Nearly six-sevenths of the land are under cultivation, and hardly an acre of waste ground is to be seen. The industries, &c., are referred to in the articles dealing with the various villages. The original 'Ragged School,' founded by Dr. Guthrie in 1847, was removed in 1887 to extensive premises near the parish church. The chief seats are Morton Hall, Drum, Inch House, Brunstane, Niddry, Southfield, Moredun, St Catherine's, Monnt Vernon, Craigend, and Kingstou Grange. The parish includes, besides the village and hamlets of Liberton, the villages of Burdiehouse, Gilmerton, Greenend, Niddry, Oakbank, and Straiton, parts of the villages of Echobank and New Craighall, and some fifteen hamlets, with a part of the burgh and suburbs of Edinburgh. With the extension of Edinburgh southward there has been erected a large number of handsome villas.

It is traversed by several good roads leading S from the capital, by the Loanhead and Roslin branch of the North British railway, which has a station near Gilmerton, and by small parts of the St Leonard's branch and of the Edinburgh Suburban branch of the same railway, which has two stations at Liberton.

Giving off Gilmerton *quoad sacra* parish, and parts to Mayfield (Edinburgh) and New Craighall *quoad sacra* parishes, Liberton is in the presbytery of Edinburgh and the synod of Lothian and Tweeddale; the stipend is £344 and manse. Besides the two schools at Gilmerton, Liberton public, Niddry public, Burdiehouse public, and New Craighall schools, with respective accommodation for 228, 128, 291, and 448 children, have an average attendance of about 215, 125, 210, and 375, and grants amounting to nearly £220, £106, £204, and £368. Pop. (1871) 3791, (1881) 6026, (1891) 8266, of whom 3408 were in the ecclesiastical parish, and 2037 in the burgh of Edinburgh.

Lockerby Almshouses.—These almshouses are situated at Burnhead, Liberton, and were erected under the will of the late Mr Thomas Lockerby, Esq., who left over £30,000 to found them. This sum, by the accumulation of interest and supplemented by a bequest of £4000 from a Miss Macaulay, now amounts to about £35,000, including the value of the cottages. These are twelve in number, are in the double-villa style, with plots of ground in front and rear, and each consists of three rooms and kitchen, with baths, &c. The beneficiaries, male or female, are persons in reduced circumstances through no fault of their own; they sit rent and taxes free, and in addition receive each 10s. per week.

An hospital anciently stood at Upper Liberton, and is supposed to have given rise to the name of the village, the original form being Lepertown. Near it rose a tall peel-house or tower, now utterly vanished, the stronghold, it is said, of MacBeth, a baron under David I., holding a considerable part of the lauds of Liberton. By him a chapelry was erected at Liberton, and placed under the church of St Cuthbert, with which it passed, by grant of David I., to the canons of Holyrood. In 1240 the chapelry was disjoined from St Cuthbert's, and remained till the Reformation as a rectory under the Abbey of Holyrood. For a time Liberton was a prebend of the short-lived bishopric of Edinburgh, and on the abolition of Episcopacy in Scotland it reverted to the Crown. Three chapels—one founded at Bridgend by James V., St Catherine's near the mansion of that name, and St Mary's founded at Niddry in 1389 by Wauchope of Niddry—were subordinate to the parish church. Only a few faint vestiges of the walls of the latter, and its burying-ground, remain of them. A chapel was built by James V. at Bridgend; and there was a Presbyterian chapel erected under the Indulgence of James VII. The parochial registers date from 1639.

The chief antiquity in the parish is CRAIGMILLAR Castle.

Others are the sites and remains of the buildings above mentioned; Peffer Mill, erected in 1636 by one Edgar, whose arms, impaled with those of his wife, are over the principal door; and a square tower still standing near Liberton Kirk, reputed to be the hold of a fierce robber laird, and not to be confounded with MacBeth's tower mentioned above. In Scott's *Heart of Midlothian* 'Ruben Butler' is schoolmaster at Liberton; and Peffer Mill is commonly identified with 'Dumbiedikes.' Various tumuli have been discovered near Mortonhall; and a plane tree near Craigmillar Castle is said to have been planted by Mary Queen of Scots, and reputed one of the largest of its kind in the country. In 1863 the remains of a Celtic cross, covered with knot-work, were found in a wall near Liberton Tower. Part of the BOROUGHMUIR is in the parish. A rising-ground to the E of St Catherine's, formerly called the Priest's Hill, has now the name of Grace Mount. (See also under GILBERTON.) Amongst distinguished natives of the parish of Liberton have been Mr Clement Little of Upper Liberton, who founded the College Library of Edinburgh; and Sir Simon de Preston of Craigmillar, in whose Edinburgh house, as provost, Queen Mary was lodged on the night after the affair of Carberry Hill. The Wauchopes of Niddry have had a seat in the parish for 500 years, and are probably the oldest family in Midlothian.—*Ord. Sur.*, sh. 32, 1857. See an article in vol. i. of *Trans. Soc. Ants. Scotl.* (1793).

Liddel Water, a Border stream of Roxburgh and Dumfries shires, formed by the confluent Caddroun, Wormsleugh, and Peel Burns, at an altitude of 650 feet above sea-level, amid the great bog called Dead Water, $1\frac{1}{2}$ mile ENE of Saughtree station. Thence it flows $15\frac{1}{2}$ miles south-south-westward through Castleton parish, next $11\frac{1}{2}$ miles along the English Border, having Castleton and Canonbie parishes on its right bank and Cumberland on its left; till after a descent of 545 feet, it falls into the Esk at a point 12 miles N of Carlisle and $7\frac{1}{2}$ S by E of Langholm. It is fed by a score of affluents, the chief of them HERMITAGE Water and KERSHOPE Burn. For 10 miles from its source its banks are bleak and naked—in most places a mountain gorge or glen; but afterwards they spread out in a beautiful though narrow valley, carpeted with fine verdure, adorned with beautiful plantations, and screened by picturesque heights. In all the lower parts of its course, its banks are sylvan, picturesque, and at intervals romantic; and, at a cataract called Penton Linns, 3 miles from the confluence with the Esk, they are wildly yet beautifully grand. Stupendous rocky precipices, which fall sheer down to the bed of the stream, and wall up the water within a narrow broken channel, along the Scottish side have a terrace-walk carried along a ledge, and affording a view of the vexed and foaming stream, lashed into foam among the obstructing rocks; and they are fringed with a rich variety of exuberant copsewood. In the middle of the cataract rises from the river's bed a solitary large rock crowned with shrubs, whose broken and wooded summit figures majestically in a conflict with the roaring waters during a high flood. At its confluence with the Esk a sort of promontory is formed, on which stand the ruins of a fort, called in the district the Strength of Liddel. Its salmon and trout fishing is good, but like the Esk it has been affected by the salmon disease.—*Ord. Sur.*, shs. 17, 11, 1864-63.

Liddesdale. See CASTLETON, CANONBIE, HERMITAGE CASTLE; and Robert Bruce Armstrong's *History of Liddesdale, etc.* (Edinb. 1884).

Liff, a village and a parish of SW Forfarshire. Standing close to the Perthshire boundary, 250 feet above sea-level, and 5 miles WNW of the centre of Dundee, the village is a pleasant little place, with a station on the Newtyle branch of the Caledonian railway.

The parish contains also the LOCHEE and Logie suburbs of Dundee, the villages of BENVIE, INVERGOWRIE, DARGIE, MUIRHEAD OF LIFF, BIRKHILL FEUS, and BACKMUIR, and part of the village of MYLNEFIELD FEUS; and, comprehending the four ancient parishes of Liff, Logie, Invergowrie, and Benvie, is commonly

designated Liff, Benvie, and Invergowrie. The original parish of Liff comprehended most of the site of Lochee; the parish of Logie comprised a portion of Dundee burgh, and was united to Liff before the middle of the 17th century; the parish of Invergowrie was annexed as early as Logie, or earlier; and the parish of Benvie was annexed in 1758. A small part of the parish at Easter Mylnefield, about 4 acres, was in the county of Perth until 1891, when the Boundary Commissioners placed the parish wholly in Forfarshire. The united parish is bounded N by Auchterhouse, NE by Mains and Strathmartin, E by Dundee, S by the Firth of Tay, and W by Longforan (in Perthshire) and Fowls-Easter. Its utmost length, from E to W, is $4\frac{1}{2}$ miles; its utmost breadth, from N to S, is $3\frac{3}{4}$ miles; and its area is 8069 acres, of which 956 $\frac{1}{2}$ are foreshore and 8 $\frac{3}{4}$ water. Dighty Water and a small tributary of that stream trace the northern boundary; and Invergowrie Burn, coming in from the NW, and receiving affluents in its course, drains most of the interior to the Firth of Tay. The land rises gently from the firth for 3 miles, till near Birkhill Feus it attains an elevation of 500 feet above sea-level, and then declines northward to Dighty Water. Sandstone, of the Devonian formation, and of various colour and quality, is the prevailing rock, and has been largely quarried. The soil of the lower grounds is either clayey or a black mould inclining to loam; of the higher grounds, is light and sandy. Some of the land is of very fine quality. A large aggregate area, in the N chiefly, is under wood; some 60 acres are in pasture; and all the rest of the parish not occupied by houses, railways, and roads is in tillage. Factories and other industrial establishments make a great figure, but are mostly situated at or near Lochee. The new Royal Lunatic Asylum, West Green, is situated near the western boundary of the parish. In an enclosure opposite the churchyard of Liff may be traced the site of a castle, said to have been built by Alexander I. of Scotland, and called Hurly-Hawkin. In the neighbourhood of Camperdown House was discovered, towards the close of the 18th century, a subterranean building of several apartments, rude in structure, and uncentred by mortar. Close on the boundary with Dundee is a place called Pitalpie, or Pit of Alpiu, from having been the scene of that memorable engagement in the 9th century between the Scots and the Picts, when the former lost at once battle, king, and many nobles. Mansions, noticed separately, are CAMPERDOWN, GRAY HOUSE, BALRUDDERY, and INVERGOWRIE. Giving off portions to five *quoad sacra* parishes, this parish is in the presbytery of Dundee and synod of Angus and Mearns; the stipend is £336 with manse. The parish church, at Liff village, is a good Early English edifice, erected in 1831 at a cost of £2200, with a conspicuous spire 108 feet high. There is a Free church of Liff; and two public schools, Liff and Muirhead of Liff, with respective accommodation for 133 and 163 children, have an average attendance of about 85 and 105, and grants of nearly £85 and £96. Landward valuation (1884) £15,215, 11s., (1893) £13,568, 3s., plus £2692 for railways. Pop. of entire parish (1871) 35,554, (1881) 43,190, (1891) 47,616.—*Ord. Sur.*, sh. 48, 1868.

Lightburn, a village in Cambuslang parish, Lanarkshire, 1 mile ESE of Cambuslang town.

Lilliards-Edge. See ANCRUM.

Lilliesleaf is a village and parish in the NW of Roxburghshire. The village, 3 miles W of Belses station, $3\frac{1}{2}$ NNW of Hassenden station, and 6 SSW of Newtown St Boswells station—all on the Waverley route of the North British railway system—is picturesquely situated on a ridge of ground which slopes down first steeply to the village, then gradually to Alc Water. Between the village and the river lie fields and meadows. Lilliesleaf consists mainly of one long narrow street, $\frac{1}{2}$ mile in length, which contains the post office, with money order, savings bank, and telegraph departments, 2 inns, 2 schools, and several good shops. There is a subscription library, containing about 1600 volumes of all classes of literature. The houses exhibit con-

siderable diversity, some being thatched and others slated, while old cottages and new villas are not unfrequently found standing close together. Almost without exception, the houses have gardens attached to them, and as a natural consequence, flower-culture is largely engaged in. Owing to the trimness of its gardens, and the beauty of its situation, Lilliesleaf is among the prettiest of the Border villages, and its advantages have been fully appreciated by our Scotch artists, who have found in it and its environs charming subjects for their brush.

The parish church, built in 1771, and restored in 1883, stands a little way beyond the E end of the village. It is surrounded on three sides by the churchyard, which contains a few curious tombstones, and the remains of an old ivy-grown chapel. The improvements of 1883 changed it from a plain barn-like building to one of taste and elegance. They embraced the addition of a nave and bell-tower, and the remodelling of the interior, in which handsome modern benches took the place of the old 'box-pews.' The lighting of the church has been much improved by the new windows in the nave and the enlargement of the old windows in the transepts. A fine-toned bell, which cost about £100, and weighs 8½ cwts., has been presented to the church by Mr Edward W. Sprot, younger son of the late Mr Mark Sprot of Riddell. An interesting relic is the old stone font. It was removed from the church at the Reformation, and eventually found its way into the moss, where for a long time it lay buried. It has lately been dug up, and placed at one of the entrance doors of the church. The U.P. church was erected in 1805. Besides the girls' school at the village, built by subscription in 1860 on ground bequeathed by the late Mr Currie of Linthill, there is the public school, once known as the parish school, also at the village, and built in 1822, which, with accommodation for 191 children, has an average attendance of about 135, and a grant of over £134. The inhabitants are chiefly employed in agriculture and trades connected therewith. Pop. (1861) 325, (1871) 349, (1881) 315, (1891) 302.

Lilliesleaf parish is bounded NW by Selkirk, N by Bowden, NE and E by Ancrum, SE by Minto and Wilton, and W by Ashkirk. Its utmost length, from NE to SW, is 6½ miles; its breadth varies between 1 furlong and 4½ miles; and its area is 6707½ acres, of which 35 are water. ALE Water winds ½ mile westward along the Ashkirk border, then 2¾ miles north-eastward through the interior of the parish, and lastly 4½ miles east-by-northward along the boundary with Bowden and Ancrum. Almost all the land in the parish is arable, and what remains is taken up with pasture. The ground is gently undulating, sinking in the NE to 390 feet above sea-level, and rising thence to 556 feet near the village, 754 near Greatlaws, 711 near Newhouse, and 936 at Black Craig. The soil is mostly loam and clay, and there is little or no sand. The predominant rocks are Silurian and Devonian. A portion of the Waverley route of the North British railway passes through the parish. The chief landowners are Sprot of Riddell, Currie of Linthill, Lords Minto and Polwarth, Mr Scott of Sinton, Mr Stewart of Hermiston, Mr Martin of Firth, Mr. Dobie of Raperlan, Mrs. Dickson of Chatto, Mr. Pennycook of Newhall, and Mr. Riddell-Carre of Cavers-Carre. 'Ancient Riddell's fair domain' belonged till 1823 to a family of that name, whose ancestor Walter de Riddell obtained a charter of Lilliesleaf, Whittunes, etc., about the middle of the 12th century, and who received a baronetcy in 1628. The remoter antiquity of the family has been rested upon the discovery, in the old chapel of Riddell, of two stone coffins, one of which contained 'an earthen pot, filled with ashes and arms, bearing a legible date, A.D. 727,' while the other was filled with 'the bones of a man of gigantic size.' These coffins, it has been conjectured, contained the remains of ancestors of the family, although this view has been rejected by Sir Walter B. Riddell. The mansion of Riddell, 1½ mile WSW of the village, is a plain but large three-storeyed house. It is

approached from one of the lodges by a very fine avenue, 1¼ mile in length. The present owner is General John Sprot (b. 1830; suc. 1883). Another mansion, Cotfield, stands 1¾ mile S of the village. Lilliesleaf Moor was the scene of many 'Conventicles' held by the Covenanters, and upon it took place several skirmishes between them and their opponents. The chief engagement occurred at Bewlie Moss.

This parish is in the presbytery of Selkirk and synod of Merse and Teviotdale. The stipend amounts to £320 with manse. The old church of Lilliesleaf belonged before the year 1116 to the Church of Glasgow, whose right over it was confirmed by several Papal Bulls. A church which also belonged to the See of Glasgow, stood at Hermiston or Herdmanstown, and in addition to it, there were chapels at Riddell (where Riddell Mill now stands) and at Chapel (on the present site of Chapel Farm). Pop. (1881) 718, (1891) 649.—*Ord. Sur.*, shs. 17, 25, 1864-65.

Lily Loch. See DEWS.

Limecraigs, an estate with a mansion in Campbeltown parish, Argyllshire.

Limefield, an estate with a modern mansion in West Calder parish, Edinburghshire, 1 mile NE of West Calder town.

Limekilns, a coast village of SW Fife, mainly in Dunfermline, but partly in Inverkeithing parish, 1 mile E by S of Charlestown, with which it is practically one, and 3 miles SSW of Dunfermline town. In 1814 Limekilns had 4 brigs, 1 schooner, and 137 sloops; in 1843 6 brigs, 7 schooners, 16 sloops, and 1 pinnace, these thirty manned by 168 men; but the harbour is now chiefly made use of for the mooring of vessels. There are now no limekilns here, but at Charlestown limestone is still extensively worked. An old house called the 'King's Cellar,' bears date 1581, and was possibly the death-place of Robert Pitcairn (1520-84), first commendator of Dunfermline and secretary of state for Scotland. George Thomson (1759-1851), the editor of a well-known *Collection of Scottish Songs*, was a native. A 'pan house' for salt-making, long discontinued, was started in 1613; and in 1825 there was built at a cost of £2000 a U.P. church, with 1056 sittings, whose congregation celebrated its centenary on 12 Nov. 1882. Limekilns has also a post office under Dunfermline, and a public school. Thoroughly drained in 1890-91, with a copious water supply, and being completely sheltered from easterly and northerly winds, it is coming into note as a health resort in chest complaints. There is a coach to Dunfermline several times daily. Pop. (1841) 950, (1861) 828, (1871) 758, (1881) 698, (1891) 582, of whom 17 were in Inverkeithing.—*Ord. Sur.*, sh. 32, 1857.

Limekilns, a mansion in East Kilbride parish, W Lanarkshire.—*Ord. Sur.*, sh. 23, 1865.

Limerigg, a village in Slamannan parish, Stirlingshire, 1 mile S of Slamannan station, on the Manuel, Slamannan, and Coatbridge section of the North British railway, and 6½ miles SSW of Falkirk. An Established mission church was opened in 1886. Pop. with Lochside (1881) 1204, (1891) 1419.—*Ord. Sur.*, sh. 31, 1867.

Linacro, a village in the NW of the Isle of Skye, Invernessshire.

Linburn House, a mansion in Kirknewton parish, Edinburghshire, 2 miles ENE of Midcalder Junction.—*Ord. Sur.*, sh. 32, 1857.

Lincluden College, a ruined religious house in Terregles parish, Kirkeudbrightshire, on a grassy mound above the right bank of winding Cluden Water, which here falls into the Nith, 1½ mile N by W of Dumfries. It was originally a convent for Black or Benedictine nuns, founded by Uchtred, second son of Fergus, Lord of Galloway, about the middle of the 12th century. But towards the close of the 14th, Archibald, Earl of Douglas and Lord of Galloway, called the 'Grim,' expelled the nuns for 'insolence' and other irregularities, and converted the establishment into a collegiate church, with a provost and 12 canons—later, a provost, 8 canons, 24 bedesmen, and a chaplain. In the zenith of their

power the Earls of Douglas expended considerable sums in ornamenting the place, and when wardens of the West Marches, adopted it as their favourite residence, William, eighth Earl, here holding a parliament in 1448 to revise the uses of Border warfare. From what remains of the ancient building, which is part of the provost's house, the choir, and the S transept, an idea may be easily formed of its bygone splendour. The aisleless three-bayed choir, in particular, was finished in the richest style of Decorated architecture, its roof resembling that of King's College, Cambridge, and the brackets, whence sprung the ribbed arch-work, being decked with armorial bearings. Over the door of the sacristy are the arms of the Grim Earl, the founder of the provostry, and those of his lady, who was heiress of Bothwell. Both he and Uchtred, founder of the nunnery, were buried here; and in the choir is the mutilated but richly sculptured tomb (c. 1440) of Margaret, daughter of Robert III., and wife of Archibald, fourth Earl of Douglas and first Duke of Touraine. To quote from Billings' *Ecclesiastical and Baronial Antiquities* (1852), 'the character of the edifice, so far as it remains, is very peculiar. Though of small dimensions, it has, like Michael Angelo's statues, a colossal effect from the size of its details. This is conspicuous in the bold and massive cornels and capitals of the vaulting shafts from which the groined arches, now fallen, had sprung. This largeness of feature may be observed in the moulding round the priest's door—itself but a small object—and in the broken tracery of the window above it. Over the interior of the small square door by which this part of the ruin is entered, there is a moulding of oak wreath, or perhaps, more correctly speaking, a series of crockets, so grotesquely large as to appear as if they had been intended to be raised to a great height, so as to be diminished by distance. Heraldic forms predominate, probably owing to circumstances which the history of the institution will readily suggest. Many of the large brackets are shields, but they are massed in with the other decorations with more freedom and picturesqueness than this species of ornament is generally found to admit of. Of the tracery of the windows, enough only remains to show how rich, beautiful, and varied it had been. The patterns, with a tendency to the French Flamboyant character, are strictly geometrical. The main portion of the church now existing consists of the choir and a fragment of a transept. On the right-hand side, opposite to the tomb and door, there are three fine sedilia, partially destroyed. They consist of undepressed ribbed pointed arches, each with a canopy and crocket above, and cusps in the interior—an arrangement that unites the richness of the Decorated with the dignity of the Earliest Pointed style. Beyond the sedilia is a beautiful piscina of the same character. The arch is within a square framework, along the upper margin of which there runs a tiny arcade of very beautiful structure and proportion.' Along the walls of the ruin are a profusion of ivy and a few dwarfish bushes; around are a few trees which form an interrupted and romantic shade; on the N is a meadow, sleepily traversed by Cluden Water; on the E is a lovely little plain, spread out like an esplanade, half its circle edged with the Cluden and the Nith; on the SE were, not so long ago, distinct vestiges of a bowling-green, flower-garden, and parterres; and beyond is a huge artificial mound, cut round to its summit by a spiral walk, and commanding a brilliant view of the 'meeting of the waters' immediately below, and of the joyous landscape about Dumfries. The place is much cherished by the townfolk of that burgh, and was a favourite haunt of the poet Burns, who here, says Allan Cunningham, beheld the 'Vision.'

The provosts of Lincluden were in general men of considerable eminence, and several held high offices of state. Among them were John Cameron (d. 1446), who became secretary, lord-privy-seal, and chancellor of the kingdom, archbishop of GLASGOW, and one of the delegates of the Scottish Church to the council of Basel; John Winchester (d. 1458), afterwards bishop of Moray;

John Methven, secretary of state and an ambassador of the court; James Lindsay, keeper of the privy seal, and an ambassador to England; Andrew Stewart (d. 1501), dean of faculty of the University of Glasgow, and afterwards bishop of Moray; George Hepburn, lord-treasurer of Scotland; William Stewart (d. 1545), lord-treasurer of Scotland, and afterwards bishop of Aberdeen; and Robert Douglas, the eighteenth and last provost, a bastard son of Sir James Douglas of Drumlanrig, who was appointed in 1547, and was allowed to enjoy the benefice for 40 years after the Reformation. So late as Yule tide 1586, Lord Maxwell had mass sung openly in the church on three days running. Robert Douglas's grand-nephew, William Douglas, the heir of Drumlanrig, obtained a reversion of the provostry, and, after Robert's death, enjoyed its property and revenues during his own life. Succeeding to the family estates of Drumlanrig, and created afterwards Viscount DRUMLANRIG, and next Earl of Queensberry, he got vested in himself and his heirs the patronage and tithes of the churches of Terregles, Lochrutton, Colvend, Kirkbean, and Caerlaverock, belonging to the college, and also a small part of its lands. But the major part of the property of the establishment was in 1611 granted, in different shares, to Sir Robert Gordon of Lochinvar and to John Murray. The latter, prior to 1627, conveyed his share, including Lincluden College, to Robert, Earl of Nithsdale. The late Captain Maxwell of Terregles did much to preserve this architectural gem, by erecting a railing round it, and installing a suitable person as custodian. Extensive excavations, too, of the foundations, vaults, etc., have furnished a good deal of additional information as to the dates of different portions of the building. The present proprietor is Herbert Maxwell Stewart, Esq. Lincluden House (till recently known as Youngfield), a Tudor mansion, a little SW of the church, was almost totally destroyed by fire in 1875, but was restored in the following year from designs by the late David Bryce, R.S.A., this being his last work.—*Ord. Sur.*, sh. 9, 1863. See Wm. M'Dowall's *Chronicles of Lincluden*, (1886), which treats in a charming style and in an exhaustive manner of the ruin; also an article by E. F. C. Clark in *Trans. Arch. Inst. of Scotland* (1864).

Lindalee. See LINTALEE.

Lindean, a station in Galashiels parish, Selkirkshire, on the Selkirk branch of the North British railway, near the confluence of Ettrick Water with the Tweed, 2 miles N by E of Selkirk. The ancient parish of Lindean is now united to Galashiels, and formed the Roxburghshire portion of the parish until 1891, when the Boundary Commissioners placed Galashiels parish wholly in Selkirkshire. Its church, disused since 1586, stood 3 furlongs S of the station, and was the place where the body of William Douglas, the Knight of Liddesdale, lay during the night after his assassination (1353).—*Ord. Sur.*, sh. 25, 1865.

Lindertis, a mansion in Airlie parish, W Forfarshire, $\frac{3}{4}$ miles WSW of Kirriemuir. Almost entirely rebuilt in 1813, after designs by Elliot of Edinburgh, it is a castellated edifice, with well-wooded grounds, and commands an extensive view of the richest portion of Strathmore. The owner is Sir Thomas Munro, second Bart. since 1825. His father, Major-Gen. Sir Thomas Munro (1761-1827), distinguished himself in India alike as soldier and statesman.—*Ord. Sur.*, sh. 56, 1870.

Lindores, a village in Abdie parish, and an ancient abbey in Newburgh parish, Fife. The village lies 2 miles SE of Newburgh, near the railway line from Ladybank to Perth. Near its E end traces of an ancient castle, supposed by the natives to have belonged to Macduff, 'Thane of Fife,' were discovered about 1800. While the workmen were digging into the ruins, they came on a 'small apartment with a shelved recess, upon which lay a piece of folded cloth, which, on exposure to the air, soon dissolved and disappeared.' In the neighbourhood of the castle there was fought, on 12 June, 1298, the battle of Black Innesyde or Earnside, between Wallace and the Earl of Pembroke, in which the English were worsted. Lindores Loch extends 7

furlongs from SE to NW, and has an utmost width of $2\frac{3}{4}$ furlongs. The railway passes along the south-western shore, and the north-eastern is fringed by the grounds of Inchrye Abbey. It is well stocked with fish.

Lindores Abbey, situated on ground rising gently from the Tay, $\frac{1}{4}$ mile E of Newburgh, was founded by David, Earl of Huntingdon, in 1178 (according to Fordoun), but more probably about 1196. It was dedicated to the Virgin Mary and St Andrew the Apostle, and endowed for monks of the Benedictine Order. To Guido, the first abbot, Lindores mainly owed its size and importance. From the remains, it is possible to guess its extent and character. 'The church,' says Laing, 'was 195 feet in length, and the transepts were 110 feet from N to S. The most perfect portion of the abbey remaining is the groined arch of the porch which formed the entrance to the abbey through the cloister court. The ruins have recently been cleared of superincumbent rubbish, and the ground plan and style of the buildings are now clearly seen; they belong to the Early English or First Pointed style, which prevailed in Scotland at the period of their erection.' The abbey grew gradually in size and riches, being endowed with property of various kinds, and those who held the chief office in it took a leading part in the affairs of the Catholic Church in Scotland. From time to time it was visited by kings and nobles: by Edward I. (1291), John Baliol (1294), Sir William Wallace (1298), David II. The unfortunate Duke of Rothesay, who died 27 March, 1402, was buried there. According to Boece, his body 'kithit meraklis mony yeris eftir, qubil at last King James the First began to punis his slayaris; and fra that time furth, the miraculis ceissit.' In Lindores Abbey James, ninth Earl of Douglas, passed the last five years of his life in retirement; and here King James III., when his barons rose against him, visited the old Earl, and vainly besought him, with the offer of full forgiveness, to come out and place himself at the head of his vassals in the royal cause. In 1510 Lindores was erected into a regality, which conferred large powers upon the abbot. In 1543 the monks were expelled for a short time from the abbey; and in 1559, as Knox writes, they were well reformed, their mass books and missals burnt, as well as their 'idols and vestments of idolatry.' John Leslie, the last Abbot of Lindores, who held the abbacy 'in trust, or *in commendam*, took an active part in the intrigues of the time of Queen Mary. He was a warm supporter of the queen. He was appointed abbot in 1566, and died in 1596. Lindores Abbey soon passed into secular hands, the monks were ejected, and its large revenues fell to Sir Patrick Leslie, who was created first Lord Lindores. Although greatly harmed at the Reformation, Lindores was not completely destroyed. Its almost perfect demolition was caused by its being afterwards regarded as a convenient quarry from which to obtain stones for building purposes. The consequence is that very few traces of it remain, the chief being the groined arch of the principal entrance, a portion of the chancel-walls, and about 8 feet of the western tower. The ivy-clad ruins have now been cleared from *débris*, etc., as mentioned already, and what remains can be properly seen. Several stone coffins have at different times been discovered, and are still to be seen. In the orchard there is an old pear tree measuring at the ground 17 feet; at 3 feet from the ground, 13 feet 6 inches; and 3 feet higher up separates into two branches, one of which is 8 feet 9 inches in circumference, the other 10 feet 6 inches. The tree, mentioned by Sibbald, is believed to be more than 400 years old.

The title of Lord Lindores was acquired in 1600 by the Leslie family, and became dormant at the death of its seventh holder in 1775. The mansion beside the loch was built on his estate of Lindores by Admiral Sir Frederick Maitland, K.C.B. (1779-1839), who received Napoleon on board the *Bellerophon* after Waterloo.—*Ord. Sur.*, sh. 48, 1868. See *Lindores Abbey and its Burgh of Newburgh*, by Alexander Laing, F.S.A.Scot. (Edinb. 1876).

Lindsay Tower. See CRAWFORD.

Ling. See LONG, LOCH (Ross and Cromarty).

Linga, an islet of Tingwall parish, Shetland, off the SE shore of Hildasay, $2\frac{3}{4}$ miles WNW of Scalloway. Pop. (1871) 12, (1881) 10, (1891) 15.

Linga, an islet ($2 \times 1\frac{3}{4}$ furl.) of Walls parish, Shetland, in Vaile Sound, $\frac{1}{2}$ mile S by W of Walls. Pop. (1871) 10, (1881) 13, (1891) 8.

Linga, an uninhabited islet ($2\frac{3}{4} \times 1\frac{1}{2}$ furl.) of Nesting parish, Shetland, $\frac{1}{4}$ mile E of the mainland, and $2\frac{3}{4}$ miles S by W of the southern extremity of Yell.

Linga, one of the Treshnish isles in Kilminian and Kilmore parish, Argyllshire. Its coast is low, and its interior rises in a succession of terraces to an altitude of about 300 feet above sea-level.

Linga Holm, an islet ($6\frac{1}{4} \times 3\frac{1}{2}$ furl.) of Stronsay and Eday parish, Orkney, $\frac{1}{2}$ mile W of the northern arm of Stronsay island. Linga Sound is the strait between the islet and Stronsay, and opens southward into St Catherine's Bay.

Lingay, an islet of Barra parish, Outer Hebrides, Inverness-shire, $3\frac{1}{2}$ miles S of Watersay. It has excellent pasturage, but is uninhabited by man.

Lingay, an islet of North Uist parish, Outer Hebrides, Inverness-shire, off the NW coast of North Uist islet, and $2\frac{1}{4}$ miles SW of Bernera. It is of small extent and uninhabited, but it shelters an excellent anchorage.

Linhouse Water, a troutful rivulet of W Edinburghshire, formed by two head-streams which rise among the Pentland Hills, and unite at a point $2\frac{3}{4}$ miles E by S of West Calder. Thence it winds $4\frac{1}{2}$ miles north-north-eastward along the boundary between Midcalders and Kirknewton parishes, and receiving Murieston Water on its left side at Midcalders village, it falls into Almond Water $\frac{1}{4}$ mile lower down.—*Ord. Sur.*, sh. 32, 1857.

Linkhead, a hamlet in Cockburnspath parish, Berwickshire, 1 mile E of Cockburnspath village.

Linktown, a burgh of regality in Abbotshall parish, Fife. It forms part of the parliamentary burgh of Kirkcaldy, is a prolongation westward of Kirkcaldy proper, figures in all respects as a component part of the 'lang toon,' and has been substantially noticed in our articles on Abbotshall and Kirkcaldy.

Linlathen, a spacious mansion in Monifieth parish, Forfarshire, on the left bank of Dighty Water, $2\frac{1}{4}$ miles N of Broughty-Ferry. Its owner is Colonel James Erskine Erskine, Esq. (b. 1826). He succeeded his uncle, Thomas Erskine, LL.D. (1788-1870), who was author of some well-known religious works, and whose Memoir has been written by Princiupal Shairp. A large cairn, called Cairn-Greg, stands a little to the N, and is said to commemorate a famous chieftain of the name of Greg or Gregory, who fell in battle here.—*Ord. Sur.*, sh. 49, 1865.

Linlithgow, a parish containing the royal burgh of the same name in the NW of the county of Linlithgow. A south-eastern projection of the parish, a mile broad at the narrowest, that separated the parish of Ecclesmachan from its detached part, was in 1891 transferred by the Boundary Commissioners to that parish. It is bounded N by Carriden parish, NE by Abercorn, E and SE by Ecclesmachan, S by Ecclesmachan and Bathgate, SW by Torphichen, W by Stirlingshire, and NW by Borrowstonness parish. The boundary with Stirlingshire is the river Avon, over a distance of $4\frac{1}{2}$ miles, and in the NE and SE the line follows for some distance the Haugh and Mains Burns; elsewhere it is mostly artificial. The greatest length of the parish, from the river Avon west of Carriber on the W to the boundary with Ecclesmachan on the E, is 6 miles; and the greatest breadth, from the road N of Bonside on the N to Silvermine on the S, is $4\frac{1}{2}$ miles. The surface is undulating, and the height above sea-level rises from 150 feet at Linlithgow Loch, northwards to Bonnyton Hill or Glower-o'er-em (559) and southwards to the Riccarton Hills (832). From Bonnyton Hill, which is just on the northern border, there is a very extensive and charming view. The north-eastern and eastern districts are mainly level, while the central hollow rises southward with a long slope to the Riccarton Hills. The

soil in the S and SE is a strong stiff clay on a retentive subsoil, and is more suitable for pasture than for tillage; in all the other districts it is mostly light, friable, easily cultivated, and yielding good returns. A considerable area in the parish is under wood, and the rest, except a very small proportion on the upper slopes or tops of the higher grounds, is either regularly or occasionally under tillage. The underlying rocks are sandstone, limestone, basalt, and volcanic ash, of which the two first are worked in several places. There are large quarries at Kingscavil. Small patches of bitumen, capable of being manufactured into bright flaming candles, are sometimes found associated with the sandstone. There are at several places thin seams of coal and bitumen found, but not in sufficient quantity to be worked. Silver was once obtained in some quantity from lead ore mined and smelted at Silvermine in the S, but the works have long been abandoned, except during a feeble attempt made for their revival some years ago. A mineral spring at Carriber is now neglected. The parish is drained on the W by the river Avon, and by the small streams that join it, the principal being Loch Burn, issuing from the W corner of, and carrying off the surplus water from Linlithgow Loch. One or two small streams also enter the loch. In the N, NE, and centre, the rainfall is carried off by the Pardovan, Haugh, and Riccarton burns, which unite and run NE to the sea at ABERCORN; and in the S and SE by Mains Burn, on the boundary with Ecclesmachan. Besides the burgh of Linlithgow, the parish contains the village of Kingscavil, E of Linlithgow, and part of the village of Linlithgow Bridge to the W, both of which are separately noticed. The northern portion of the parish is traversed by roads from Edinburgh by South QUEENSFERRY and by KIRKLISTON, which unite at Linlithgow and pass westward to Glasgow, and by Stirling to the north; and there are also throughout the whole of it a large number of excellent district roads. The north is also traversed by the UNION CANAL, which, entering on the W at the Avon to the WSW of Woodcockdale, winds eastward for 5½ miles, and passes into Abercorn parish near Easter Pardovan; and by the North British railway system, which, entering on the E ½ mile NE of Wester Pardovan, passes westwards 4½ miles, and quits the parish at the Avon ½ mile S of Linlithgow Bridge. There is a station at the town of Linlithgow. The mansions are Avontoun, Champfleure House, Belsyde, Bonyde, Preston House, and Woodcockdale. Besides the industries in connection with the town, and the paper-mill at Linlithgow Bridge, there are sandstone and whinstone quarries, a paper-mill W of the outlet of Linlithgow Loch, and a large distillery ½ mile SW of the town. On the tract of ground E of the town still called Boroughmuir, Edward I. encamped on the night previous to the battle of Falkirk and the defeat of Wallace. On the same ground, in 1781, an earthen urn was found containing about 300 Roman coins. On Cocklerue Hill are traces of a hill fort, and on the top, which is, however, in Torphichen parish, is a hollow, associated, like so many others of the same sort, with the name of the great Scottish patriot, and known as Wallace's Cradle. There are traces of another hill fort in the SE, 3 furlongs S of Wester Ochiltree. There is a tradition that a battle was fought between the natives and the Romans at Irongath, but Dr Skene thinks that though there really was a battle, it was post-Roman, and fought between native tribes, and the same authority fixes Carriber as, in 736, the place where the Cinel Loarn branch of the Dalriadic Scots were defeated by the Picts. About a mile W of the town along the railway is the scene of the battle of Linlithgow Bridge, fought in Sept., 1526. The Earl of Lennox having assembled a considerable force at Stirling, advanced towards Linlithgow to try, at the young king's own expressed desire, to get James V. out of the keeping of the Douglasses. The Earl of Arran barred the way by occupying the bridge and the steep banks between that and Manuel Priory, and with assistance from the Earl

of Angus ultimately defeated the Lennox party. Lennox himself, who had surrendered to the Laird of Pardovan, was deliberately shot by Sir James Hamilton of Finnart, and the spot where he fell, or possibly where he was buried,* seems to have been marked by a heap of stones, and is still known as Lennox's Cairn. Many relics of the fight were recovered when the railway was being made, and a sword with the inscription *pono leges virtute*, which was then found, is now in the burgh museum at Linlithgow. Not far off there seems to have been a field used for knightly sports, and known as the joisting or jousting haugh. Nearer the town is a rising-ground, traditionally a law hill, the flat ground below having the name of Doomsdale. At Carriber are the ruins of an old mansion, known from the owner in the time of James V. as 'Rob Gib's Castle,' and there is an old tower at Ochiltree. Distinguished natives of the parish are Binny or Binnoch, Rob Gib, Stewart of Pardovan, and Sir Charles Wyville Thomson. Binny figures prominently in connection with Bruce's capture of Linlithgow Peel, an exploit noticed in the following article. The Binnings of Wallyford are said to have been descended from him, and in reference to their ancestors' deed, to have had for their arms a hay-wain with the motto '*Virtute doloque*.' Rob or Robert Gib was stirrup-man to James V. and laird of Carriber, and is well known in connection with the proverb, 'Rob Gib's contract—stark love and kindness,' which arose from his having one day described the courtiers as 'a set of unmercifully greedy scyphants, who followed their worthy king only to see what they could make of him,' while he himself served his master 'for stark love and kindness.' Stewart of Pardovan represented the burgh of Linlithgow in the last Scottish parliament, and is also author of a work of considerable authority on the proceedings of Presbyterian church courts and the intricacies of Presbyterian law. Sir Charles Wyville Thomson (1830-82) was Professor of Natural History in the University of Edinburgh, and had a world-wide reputation as the chief of the scientific staff engaged in the deep-sea investigations carried out by the expedition in H.M.S. *Challenger* in 1872-76.

The parish, which comprehends also the ancient parish of BINNING, united to it after the Reformation, and which, prior to 1588, had also the parishes of Kinneil and Carriden attached to it, is the seat of a presbytery in the synod of Lothian and Tweeddale; the living is worth £370 a year. The churches are noticed in the following article. The landward school-board has under its charge the public schools of Bridgend and Linlithgow, and these, with accommodation respectively for 452 and 455 pupils, have an average attendance of about 330 and 345, and grants of nearly £335 and £380. Pop. (1801) 3596, (1831) 4874, (1861) 5784, (1871) 5554, (1881) 5619, (1891) 7520, of whom 4155 were within the burgh.—*Ord. Surv.*, shs. 31, 32, 1867-57.

The presbytery of Linlithgow, almost corresponding with the old rural deanery, includes the *quoad civilia* parishes of Abercorn, Bathgate, Borrowstounness, Carriden, Dalmeny, Ecclesmachan, Falkirk, Kirkliston, Linlithgow, Livingston, Muiravonside, Polmont, Queensferry, Slamannan, Torphichen, Uphall, and Whitburn; the *quoad sacra* parishes of Armadale, Blackbraes, Canelon, Fauldhouse, Grahamston, and Grangemouth; and the mission stations of Grangepens, Laurieston, Winchburgh, Kingscavil, Limerig, and Broxburn (St Nicholas). Pop. (1871) 79,580, (1881) 90,507, (1891) 99,459, of whom about 13,500 are communicants of the Church of Scotland. There is also a Free Church presbytery of Linlithgow, with churches at Abercorn, Armadale, Bainsford, Bathgate, Borrowstounness, Caldercruix, Canelon, Crofthead, Falkirk,

* Pitscottie says 'the king's servants came through the field and saw the lord Hamilton standing mourning beside the Earl of Lennox, saying, "The wisest man, the stoutest man, the hardiest man that ever was born in Scotland was slain that day," and his cloak of scarlet cast upon him, and gart watchmen stand about him till the king's servants came and buried him;' which seems to point to his being buried on the spot.

Grangemonth, Grangemonth West, Harthill, Kirkliston, Laurieston, Linlithgow, Livingston, Longriggend, Muiravon, Polmont, Slamannan, Torphichen, Uphall, and Whitburn, and a mission station at Blackridge, which 23 churches together have over 5800 members.

Linlithgow (popularly Lithgow, formerly Linlithcu, Linlythku, Linliskeu, Liuliscoth, Linlychku, and Lith-cow; etymology uncertain), a royal and parliamentary burgh and the county town of Linlithgowshire, in the NW of the parish just described. It has a station on the Edinburgh and Glasgow branch of the North British railway system, and is by rail $17\frac{1}{2}$ miles, and by road 16 miles, W of Edinburgh. In a straight line it is 3 miles S of Borrowstounness, 7 N by E of Bathgate, and 8 E of Falkirk.

History and Situation.—What the exact antiquity of the town may be is doubtful, though it must be considerable. The name is probably British, and tradition has it that there was an ancient British village on the site now occupied by the town, while Sibbald has preserved the story that the burgh was founded by King Achaius of doubtful memory, and that there was once a stone cross bearing the name of King Cay's stone, which was a corruption of King Achaius' stone. From similarity of name, but seemingly without any other evidence, Camden and his followers identified the place with the Lindum of Ptolemy, but this is unquestionably wrong, though it is highly probable that there was a station here, and when the wall of Antoninus was the northern limit of the Roman power, the site afterwards occupied by the peel seems to have been the site of a Roman fort or station. Before the accession of David I. a chapel appears to have been erected on the promontory now occupied by the church and the palace, and this king granted to the priory of St Andrews the church with its chapels and lands as well within the burgh as without, and there was also a royal castle as well as a grange or manor near, for to the abbot and canons of Holyrood was granted the skins of all the sheep or cattle used at the castle or on the lands of the demesne of Linlithgow. The castle seems to have been erected to overlook and protect the royal manor, but whether it stood on the site afterwards occupied by the peel cannot now be ascertained. The mention of the burgh shows at all events that there was even then a considerable town which was a king's town in demesne, and had therefore all the privileges which were afterwards formally given by charter to royal burghs. After the death of Alexander III., and before a charter had been obtained, the town was governed by two bailies, John Raebuck and John de Mar, who, along with ten of the principal inhabitants, were compelled in 1296 to swear fealty to Edward I. The rents or 'firms' of the town had been let by the king to the community, and afterwards mortgaged by Alexander to the King of Norway as security and in payment of interest of part of the dowry of his daughter Margaret, married to Eric of Norway, only half of which had been paid. In the unsettled times that followed the death of the Maid of Norway, the interest does not seem to have been paid very regularly, for at two different dates writs of Edward I. were addressed 'prepositis de Linlithgow,' requiring the payment of £59, 2s. 1d. and of £7, 4s. 10d. respectively, as arrears due to the Norwegian King. In 1298 Edward I. marched through the town on his way to fight the battle of Falkirk, and in 1301 he took up his winter quarters here, and in that and the following year erected a new castle 'mekill and stark,' part of which still remains at the NE corner of the present palace. This remained till 1313 in the hands of the English, 'stufft wele,' as Barbour has it—

'With Inglis men, and wus reset
To thaim that, with armuris or met,
Fra Edynburgh wald to Strewelyn ga,
And fra Strewelyn agane alsua;
That till the countré did gret ill.'

In the summer of that year, however, a farmer in the neighbourhood named William Binnock or Bunnock,

'a stout carle and a sture, and off him self dour and hardy,' seeing how

'Hard the countré stad
Throw the gret force that it was then
Gouernyt, and led with Inglis men;'

determined to strike a blow for the freedom of his country. His opportunities were good, as he had been selected to supply the garrison with hay, and was frequently at the castle with his waggon. Having talked the matter over with as many of his friends as were willing to join in the enterprise, they determined that the attempt was to be made the next time hay was taken within the walls. A considerable number of men were placed in ambush near the gate the night before, and were to rush to his assistance as soon as they heard the shout of 'Call all, Call all.' On the top of the waggon itself, just covered with bay and nothing more, were concealed eight strong well armed men. He himself drove the waggon, and one of the stoutest of those who aided him accompanied him with a sharp axe. On his approach to the castle early in the morning, the warder at the gate knowing that the forage was expected, and seeing only the two men, apprehended no danger, and at once opened the gate. Just when the waggon was half through, the man with the hatchet cut the 'soyme' or yoke, and the cart and load being thus left standing, the gates could not be shut, nor could the portcullis be lowered. At the same moment Binnock struck down the porter and shouted, 'Call all, Call all,' whereupon the men who had been concealed among the hay jumped down and attacked the guard, while his friends who had been posted in ambush rushed forward to his assistance, and in a very short time made themselves masters of the castle. King Robert rewarded Binnock 'worthely' with a grant of land, and according to Barbour caused the castle itself to be destroyed, but probably the order extended only to the portions added by Edward, and consisting in all likelihood of a high outer wall with round towers at the corners. If it was entirely demolished, another must have been built very soon after, for in 1334 Edward Baliol transferred to Edward III. the constabulary, the town, and the castle of Linlithgow as part of the price paid for the assistance given him during his short lived usurpation. In 1366, possibly earlier, the burgh had a representative in the Scottish Parliament, while in 1368 it was determined that the Court of the Four Burghs—still existing as the Convention of Royal Burghs, though now sadly shorn of its former powers—which had formerly consisted of Edinburgh, Stirling, Berwick, and Roxburgh, should, so long as the two latter places remained in the hands of the English, consist of Edinburgh, Stirling, Linlithgow, and Lanark, which shows that the place had attained considerable size and importance. At this time too the town possessed the sole right of trade along the coast between the Cramond and the Avon, and the profit arising thence must have been considerable, for in 1369 the customs yielded to the royal chamberlain no less than £1403 which was more than any of the other burghs except Edinburgh, Aberdeen being next with £1100. The first of the Scottish Kings who made Linlithgow a favourite residence was Robert II., who frequently lived at the castle, and whom we find in 1386 granting to his son-in-law, Sir William Douglas, £300 sterling out of the great customs of Linlithgow, Edinburgh, Dundee, and Aberdeen, and also giving to other persons various pensions out of the burgh mails or great customs of Linlithgow. In 1388 he held a parliament here, and in 1389 he granted to the burgh the earliest charter now remaining in its archives, and by which the mails hitherto drawn by the royal chamberlain were granted to the community at an annual rent of £5. From the reign of Robert II. down to that of James VI. the castle and palace were very frequently visited by the court, and formed one of the ordinary royal residences, and so became the scene of many important national events. Under the Regent Albany and James I. the town was twice burned, first in 1411 and again in 1424,

in the latter of which years the castle also was injured, and in 1425 the earlier portions of the present palace were begun. James II., at his marriage in 1449, settled on his bride, Mary of Gneidres, as her jointure, the lordship of Lidlithgow and other lands, amounting in value to 10,000 crowns; James III. also, at his marriage in 1468 to Margaret of Denmark, settled on her the palace of Lidlithgow and the surrounding territory; and James IV., on his marriage with Margaret of England in 1503, gave her in dower the whole lordship of Lidlithgow with the palace and its jurisdiction and privileges. In 1517 Stirling and his followers who had attempted to assassinate Meldrum of Binns on the road to Leith, fled to Lidlithgow, 'where they took the peel upon their heads to be their safeguard, thinking to defend themselves therein,' but they were speedily pursued by De la Bastie, lieutenant to the Regent Albany, and captured after a short siege. The battle of Lidlithgow Bridge in 1526 has been already noticed in connection with the parish. Sir James Hamilton, who so foully murdered the Earl of Lennox, was rewarded by Augus with the captaincy of the palace, and having, unlike most of Angus' followers, afterwards become a favourite of James V., he showed still more the faithlessness and atrocity of his nature by attempts, both in the palace of Lidlithgow and in that of Holyrood, to assassinate the King.

In 1540 James V., by a special charter, empowered the town for the first time to add a provost to their magistracy; and in the same year, while Mary of Guise was delighting herself with the beauties and luxuries of Lidlithgow Palace, Sir David Lindsay's satire of the three Estates was played before the king, queen, court, and townspeople, and was received with apparent satisfaction by all alike—a pretty sure sign as to how the wind was to blow in the coming Reformation storm. On 7 Dec. 1542, the unfortunate Mary Queen of Scots was born in the palace, and as James V. died at FALKLAND on the 13th of the same month, and his infant daughter succeeded to the throne, the place became, for the period thereafter during which the queen dowager and her child remained there, the centre of all the many political intrigues of the time. In 1543 convocations met here on 1 Oct., and again on 1 and 19 Dec.; and in 1552 a provincial council of the clergy was held. In 1559 the Earl of Argyll, Lord James Stewart, and John Knox, passed through Lidlithgow on their celebrated march from Perth to Edinburgh, and demolished the monastic houses; and almost ten years later, Stewart, now the Earl of Murray, and regent, was to return and end his all too brief term of power, for on 20 Jan. 1569-70, while passing through Lidlithgow on his way from Stirling to Edinburgh, the regent was shot by Hamilton of Bothwellhaugh. The old story was, that it was an act of private revenge for injury of the most cruel kind done to Hamilton's wife by some of Murray's friends; but that this is utterly false has been shown by Dr Hill Burton, and the well-planned scheme must be regarded as simply a political murder. Lidlithgow was chosen because 'the Hamiltons had a strong feudal influence in the surrounding district, and could thus make their preparations among themselves. The structure of the old Scots towns favoured such a deed. They were generally laid out in one narrow street, with gardens radiating outwards on either side. These the enemy might destroy, but the backs of the houses formed a sort of wall, and protected the actual town from invasion. The arrangement was conducive to health as well as protection, but it afforded opportunities for mischief, and frequently those concerned in street brawls could escape through their own houses into the open country. A house, belonging, according to the concurring testimony of contemporaries, to Archbishop Hamilton, was found to suit the purpose, as facing the principal street. Horses and all other means were ready for escape westward into the chief territory of the Hamiltons, where they were absolute. There was a balcony in front, with hangings on it. Perhaps the citizens did honour to the occasion by displaying their finery, and this house appeared to be

decorated like the others,' or it may be, as is told by an account parts of which at least are contemporary, that 'upon the pavement of the said gallery [or balcony] he laid a feather-bed, and upon the window thereof he affixed black cloths, that his shadow might not be seen nor his feet heard when he went to or fro.' It is more likely, however, not, as black cloth would certainly have attracted attention, and warnings of danger had previously reached the regent, 'but he was not a man easily flustered or alarmed, and gave no further heed to what was said, save that he thought it prudent to pass rapidly forward. In this, however, he was impeded by the crowd. The murderer had to deal with the delays and difficulties of the clumsy hackbut of the day, but he did his work to perfection. The bullet passed through the body between the waist and the thigh, and retained impetus enough to kill a horse near the regent's side.' He was carried to the palace hard by, where after a few hours all was over, and the country stood once more face to face with anarchy. The *Diurnal of Occurrences* says that the house, which belonged to Bothwellhaugh's uncle, Archbishop Hamilton, 'incourtinent thairefter was all uterlie burnt with fyre.' Its site is now occupied by the county court buildings, in the wall of which a bronze tablet commemorative of the event was inserted in 1875. It was designed by Sir Noël Paton and executed by Mrs D. O. Hill, and bears a medallion portrait of Murray, taken from a painting at Holyrood, with the inscription: 'On the street opposite this tablet James Stewart, Earl of Murray, Regent of Scotland, was shot by James Hamilton of Bothwellhaugh, on 20 January 1570. Erected in 1875.' The hackbut with which the murder was committed is still preserved at Hamilton Palace; the assassin himself fled to France, and remained in voluntary exile. Some months after the deed, the English army, which entered Scotland to readjust the arrangements that the regent's death had unsettled, burnt the Duke of Chatelreault's house in Lidlithgow, and threatened to destroy the whole town. It was also proposed during that distracted year to hold a parliament at Lidlithgow, but Regent Lennox marching thither in October prevented the intended meeting. In 1584 the reuts both of money and victual of the lordship of Lidlithgow were appropriated for supporting Blackness Castle, and in 1585 a parliament was held in the town. At the king's marriage in 1592 the barony lands and palace were, according to former usage, given in dowry to his bride, the Princess Anne of Denmark. In 1596, during a popular tumult in Edinburgh, the 'faithful town of Lidlithgow' afforded refuge to Court, Privy Council, and Court of Session; and in 1603 it shared in the grief that arose from James's abandonment of his native palaces on his accession to the English crown, and when the king first revisited Scotland in 1617, and made his appearance at Lidlithgow—the palace of which was then the residence of a Scottish sovereign for the last time—the inhabitants held high festival. James was met at the entrance to the town by James Wiseman, the burgh pedagogue, enclosed in a plaster figure resembling a lion, and was addressed by him in the following doggerel speech:

'Thrice royal sir, here do I you beseech,
Who art a lion, to hear a lion's speech;
A miracle, for since the days of Aesop
No lion, till those days, a voice dared raise up
To such a majesty! Then, king of men,
The king of beasts speaks to thee from his den,
Who, though he now enclosed be in plaster,
When he was free, was Lithgow's wise schoolmaster.

Here in 1604 the trial of the leaders of the Aberdeen Assembly took place, and in 1606 and 1608 the Assemblies were held at which the modified episcopacy of this period was established. When Charles I. was at Edinburgh in 1633 he intended to visit the town, and had the palace put in order for his reception, while the magistrates and council were quite in a fluster over preparations to do him honour. They ordered a thatched house in the Kirkgate to be slated, 'as it was unseemly, and a disgrace to the town;' and also, 'con-

sidering how undecent it is to weir plaidis and blew bannetis, . . . statuit and ordanif, That no person, athir in burgh or landwart, weir ony banneteis nor plaidis during his Majesties remaining in this his ancient kingdome; And that none resort in the toune with bannettis or plaidis, under the paine of confiscation of thair plaidis aud bannettis, and punishment of thair personne; but something came in the way, and he never went, so that all their provisions, as well as their great care as to how the king's retinue was to be accommodated, 'seeing the puir peipill hes not wharupon to sustain thame,' went for nought. During the troubles preceding the Covenant, the Privy Council and Law Courts again, in 1637, moved to Linlithgow, but either because they were still too near Edinburgh, or because they could get no suitable accomodation, they moved again almost at once to Stirling. In 1646, when the plague was raging in Edinburgh, the University classes were taught in Linlithgow church, and parliament sat in the hall of the palace for the last time. There was the usual outburst of somewhat dubious rejoicing over the Restoration; and two years later, on the anniversary rejoicings, the Covenant was publicly burned, seemingly principally at the instigation of Ramsay the minister, afterwards Bishop of Dunblane, and R. Mylne, then dean of guild—an act of which it is well to know that the community were afterwards ashamed, for in 1696 the council, after due search, declared that they could find in the minutes nothing 'appointing the same to be done,' and 'that the Toun had noe hand in burning the Covenant, and any aspersion put upon the Toun thair-arent to be false and calumnious.' The matter is thus described in a contemporary account: 'At the Mercat Cross was erected a crowne standing on an arch on four pillars. On the one side of the arch was placed a statue in form of an old hag, having the Covenant in her hands, with this superscription, "A glorious reformation;" and on the other side of the arch was placed another statue, in form of a Whigamuir, having the Remonstrance in his hand with this superscription, "No assoiation with malignants;" and on the other side was drawn a Committee of Estates, with this superscription, "Ane act for delivering the king;" and on the left side was drawn a Commission of the Kirk, with this superscription, "Ane act of the west-kirk;" and on the top of the arch stood the Devil as ane angel, with this label in his mouth, "Stand to the cause;" and in the middle hung a table with this litany:

"From Covenanters with uplifted hands,
From remonstrators with associate hands,
From such committees as govern'd the nation,
From kirk-commissions, and their protestation,
Good Lord, deliver us!"

Over the pillar at the arch beneath the Covenant were drawn kirk-stools, rocks, and reels; and over the pillar, beneath the Remonstrance, were drawn beechen cogs and spoons; and on the back of the arch was drawn Rebellion in a religious habit, with turned-up eyes, in her right hand "Lex, Rex," in her left a piece called "The causes of God's wrath;" round about her was lying all Acts of Parliament, of Committees of Estates, of General Assemblies, and of the Commissioners of the Kirk, with their protestations and declarations during the 22 years' Rebellion; above her was written this superscription, "Rebellion is as the sin of witchcraft." At the drinking his Majesty's health, fire was put to the frame, it turned it into ashes, and there appeared suddenly a table supported by two angels, and on the other side the dragon, the devil that fought with Michael the archangel, with this inscription:

"Great Britain's monarch on this day was born
And to his kingdoms happily restor'd;
The queen's arriv'd, the mitre now is worn,
Let us rejoice, this day is from the Lord.
Fly hence, all traitors who did marr our peace;
Fly hence, schismatics who our church did rent;
Fly, covenanting, remonstrating race;
Let us rejoice that God this day hath sent."

The town gave such sumptuous entertainment to the Duke of York, afterwards James II., when he was in

Scotland, that it is said to have long felt the pressure of the debt incurred by its lavish expenditure on the occasion. Prince Charles Edward also was hospitably received on Sunday, 15 Sept. 1745, when the Palace Well was set a-running with wine; and on 13 Sept. 1842, the Queen and Prince Albert, returning from Perthshire to Edinburgh, passed through but did not stop.

Walter Simson, in his *History of the Gipsies* (2d ed., New York, 1878), has an interesting chapter on the Linlithgow tribe. About the middle of the 18th century their chieftain, 'Captain' M'Donald, was shot in an attempt at highway robbery. He was buried in the churchyard, and the 'funeral was very respectable, being attended by the magistrates of Linlithgow and a number of the most genteel persons in the neighbourhood.' In 1770 his son and his son's brother-in-law were hanged at Linlithgow Bridge—the latest instance in which the 'fame of being Egyptians' formed part of the indictment.

The trade of Linlithgow, arising from its charter rights along the coast, was, as we have seen, at one time very considerable, and this remained so till the 16th century, when it was seriously interfered with by the troubles of Queen Mary's reign, and those of the early part of that of James VI.; and still further encroachment was made in the 17th century by the erection in 1615 of the lands of grauge into a barony, and by the advancement of Queensferry and Borrowstounness, as mentioned farther on.

The town at one time possessed a considerable amount of property, including the common known as the Burghmuir, which seems to have been enclosed about 1675. The lands are now sold, but the Magistrates still annually 'ride the marches' on the Tuesday of June following the second Thursday. The custom dates from at least 1541, when reference is made to it in the Court Book; and in the Town Charter of 1593, the community are confirmed in their lands 'as they have enjoyed aud perambulated them in time past.' Formerly the occasion was one of great splendour, each trade turning out with its banner, and every one who could command the loan of a horse appearing on horseback. The 'riding' is now confined to a visit to Linlithgow Bridge, where the burgh mill stood at one time, and then to BLACKNESS, the former port of the burgh. The Town's Arms were formally confirmed by a grant from the Lyon King of Arms in 1673, and are 'Azure the figure of the Archangell Michael with wings expauded, treading on the bellie of a Serpent lying with its tail fesswayes in base, all argent; the head of which he is pearcng through with a Spear in his dexter hand, and grasping with his sinister ane Inescutcheon charged with the Royall Armes of Scotland, the Motto being *Collocet in coelis nos omnes vis Michaelis*. And upon the reverse of the seal of the said Burgh is insculp'd in a field or, a Greyhound bitch sable, chained to ane Oak tree within ane loch proper.' The popular motto, however, is 'My fruit is fidelity to God and the King.' The burgh has a special tune known as 'Lord Lithgow's March,' or 'The Rock and the Wee Pickle Tow.' The first title is from the Livingstones, who were Earls of Linlithgow and Callendar, and latterly keepers of the Palace. The title is now extinct, James, the fifth and last Earl, having been attainted for taking part in the rebellion of 1715. As a Member of the Court of Four Burghs, and subsequently by an Act of Parliament passed in 1621, Linlithgow was entrusted with the keeping of the standard peck and firlot, the latter for oats and barley, containing 31 Scotch pints or 3205½ eubic inches, and for wheat and pease 21¼ pints or 2197¼ eubic inches, the standard of the pint being 3 Scotch pounds of water taken from the Water of Leith. After the Union an attempt was made to take away the privilege, but it was

Seal of Linlithgow.

1077

successfully resisted by the burgh, though since the introduction of the imperial measures, the matter has ceased to be of more than mere antiquarian interest. The iron brand for the firlot is still to be seen in the council chamber, but the standard was unfortunately destroyed when the Town House was burned in 1847.

Site and Public Buildings.—None of the houses in the burgh can be older than the 15th century, but a number must date very nearly from that time. Modern improvements are making great alterations, however, here as elsewhere. Its site is a hollow, the lowest part of which is occupied by Linlithgow Loch, which bounds the town on the N. The principal street (High Street) runs E and W fully $\frac{1}{2}$ mile, and is fairly wide at the ends, but narrow immediately to the W of the open space at the Cross. From the Cross a narrow street called the Kirkgate leads N to the church and palace, while at the E end High Street is continued to the NE by the Low Port, and eastwards by High East Port. At its W end is a portion known as West Port. The other streets are chiefly short lanes and narrow alleys. Anciently the town had gates at the several ports, and was surrounded by a wall of defence, but all traces of these have disappeared. The Loch on the N is 150 feet above sea-level, and covers an extent of 102 acres, the extreme length being $6\frac{1}{2}$ furlongs, and the width 2. It contains perch and eels, and may be fished by boat, on application to the representatives of the lessee, or from the banks free, or according to a decision given in the burgh court as early as 1552, 'The inhabitants within this burgh hes fishen the louch past memory of men without stop see fare as they might wade with ane gad.' The greatest depth of the western half is 50 feet, and of the eastern half about 10 feet. On the N side, rising 50 feet above the loch, is a promontory on which are the ruins of Linlithgow Palace. The early castles on the site have been already noticed down to the time of Robert Bruce. Of that erected by Edward I., the only parts now remaining are portions of three towers at the NW corner—starting points for the flying buttresses by which the lofty E wall is here supported—and possibly part of the SW tower. The buildings as they now stand form a square of 168 feet from E to W, and 174 from N to S, while the court inside measures 91 feet from E to W, and 88 from N to S, and at each corner is a tower. The exterior looks heavy from the very large amount of dead wall and the small number of windows, but the fronts to the court are handsome and elegant, the ordinary appearance of the Scottish Baronial architecture being relieved by many features drawn from Continental sources. The whole structure, with the exception first noted, must be of later date than 1425, for the old palace or castle where the monarchs lived, from David II. downwards, suffered damage in the fire of 1424, when James I. brought home his Queen from England. Preparations seem to have been at once made to rebuild the whole, and in the course of the next six years £2440, 10s. 7 $\frac{1}{2}$ d. was expended, and work continued to be done throughout the rest of the reign of James I. and that of James II. The parts then erected seem to be about the SW corner, but they have since probably undergone a good deal of alteration. The W side seems to have had at one time the wooden galleries in front which were characteristic of 15th century work. From 1451 to 1467 operations were pretty much at a standstill, but in the latter year, James III., who 'was much given to buildings and repairing of chappels, halls, and gardens,' brought his Queen here, and began to build again, and in the following year added considerably to the surrounding grounds. To his reign probably may be assigned the northern parts of the W side, and the original N side, which was afterwards removed. One of the rooms on the NW is shown as the bedroom of James III., and on two of the bosses in the groining of a closet opening off it are carved a stag lying under a tree, with the motto *Belle a vous leulle*, which has been supposed to be old French for 'Fair be your rising.' In the time of James IV., the treasurer's accounts contain notices of many

sums spent on the palace, and to this period may be assigned alterations on the N side at the towers, and probably the erection of the turret on the top of that to the NW, which is known as 'Queen Margaret's Bower.'

The palace does not seem to have been very completely furnished, for the royal accounts contain entries of payments for the conveyance of 'Arress claythes,' or tapestry, from Edinburgh, and an organ was also carried backwards and forwards. The floors were strewn with rushes, even on high occasions, for five shillings were paid 'for resschis to the Haw of Lythgow, the tyme of the Imbassatouris.' To James V., who was born here on 10 April 1512, the present form of a large part of the buildings is, however, due. He constructed the fine fountain in the centre of the quadrangle, and the detached gateway to the S, which then led into an enclosed court; altered the whole of the S side and the chapel very extensively, and probably also made alterations on the S and W sides. All this seems to have been done in preparation for his marriage, and though his first queen was destined never to see it, his labours were rewarded by the declaration of Mary of Guise, 'that she had never seen a more princely palace;' and Sir David Lyndsay, in his *Farewell of the Papingo*, writes,

'Adew Lithgow, whose palyce of plesance
Micht be ane pattern in Portugall or France.'

It seems to have been a favourite residence with this monarch, and it was here that he was troubled by the vision which has been already noticed under BALWEARIE. In the time of James VI. several alterations were made on the W side, and the whole of the N side was rebuilt between 1617 and 1628. This was rendered necessary by the fall of the original buildings in 1607, but nothing seems to have been done till the king revisited Scotland in 1617. The style is well marked, and the design is often attributed to Inigo Jones, but as there was a royal master mason or architect for Scotland at this time—William Wallace, the designer of Heriot's Hospital in Edinburgh—the work is more probably his. The centre fountain seems to have been damaged by the fall, as one part of it must be referred to this date. The walls of this portion have again become very much twisted, so that there seems to be some fate attached to this side. From this time onward the palace became little more than the occasional residence of the Earls of Livingstone, its keepers, except between 1651 and 1659, when it was occupied by a small garrison of Cromwell's soldiers; possibly even the great leader himself may have lived in it for a few days, as some of his letters are dated from Linlithgow. The eventful year 1745 found it in charge of a housekeeper, a Mrs Glen Gordon, who seems to have been a staunch Jacobite, and to have given a cordial welcome to Prince Charles Edward. The next occupants were Hawley's dragoons, after their flight from Falkirk in 1746, and by them it was, either through carelessness or design, set on fire and completely ruined. Mrs Gordon went to the general to remonstrate as to the behaviour of the soldiers, and finding her complaints treated with indifference, is said to have taken her leave with the sarcastic remark, 'A-weel, a-weel, I can rin frae fire as fast as ony General in the King's army.' The buildings and the park, which extends to 15 $\frac{1}{2}$ acres, have been since 1848 cared for by the Commissioners of Woods and Forests. Proposals to convert the buildings into a county courthouse and into a supplementary register house for Scotland were once made but abandoned, and in 1891 the Town Council memorialized Parliament to have the place roofed in and otherwise fitted up for a museum of Scottish antiquities. Meantime, owing to the state of disrepair into which it has fallen, and as no more money appears to be procurable from the Imperial Treasury, it is hoped that some private scheme may be formed for properly repairing and roofing the ancient palace. The present entrance is on the S side; and on the ground-floor to the E of it are the guard-room, into which Regent Murray is said to have been at first carried, a bakehouse, and stables. In the E side are the old entrance, with guard-house and dungeons on one side and the kitchens on the

other. One of the vaults beneath the guard-room is known as the Lion's Den, whether from its lying below the Great Hall, known as the Lyon Chamber, or from its having been the actual den of a lion kept by some of the kings is uncertain. On the W side are vaulted chambers, probably intended for servants. On the first floor to the E of the S entrance is the chapel, and the whole of the E side is occupied by the Lyon Chamber, or parliament hall, a fine room measuring 98½ feet long, 30 wide, and 35 high at the side walls. On the W side are the so-called bedroom of James III. and the room where Queen Mary was born. The fountain in the centre of the quadrangle is now very much destroyed. The E entrance seems to have been made by James V., and the now empty niches 'were filled with statues of the Pope, to represent the Church; a knight to indicate the gentry; and a labouring man to symbolise the commons, each having a scroll above his head, on which were inscribed a few words of legend, now irretrievably lost.' The group on the S side represented the Salutation of the Virgin, and these were originally brightly painted, and so late as 1629 payment was made for 'painting and laying over with oyle coullour, and for getting with gold the hail fair face' of the N side, and for 'getting and laying over with oyle coullour the Four Orderis above the utter yett'—*i.e.*, the outer gate on the S side. These four orders were carved panels, with the badges of the four orders of knighthood that James V. held, *viz.*:—St Michael, the Golden Fleece, the Garter, and the Thistle. The sculptured panels at present occupying the upper part were placed there in 1848, and probably represent pretty nearly the original designs. The cannon in the palace grounds is a Crimean trophy brought from Bomarsund. In 1894 it was proposed to form a carriage drive round the palace.

To the S of the palace is the parish church, of which Billings says that it is 'assuredly the most important specimen of an ancient parochial church now existing in Scotland, both as to dimensions and real architectural interest.' We have already seen that there was a church here dedicated to St Michael as early as the reign of David I., and in the time of Alexander II., in 1242, there is word of a new church having been erected, and probably some parts of this are incorporated with the present building. In 1384 Robert II. contributed 26s. 8d. for the erection or repair of the church tower, and in 1424 the church was injured and considerably destroyed by the fire that reduced the town to ashes. A considerable portion of the present building, which is Scottish Decorated in style, probably dates from the time of James III., and the steeple at least seems to have been finished during his reign, for the open crown that once formed the finish at the top had a vane formed by a hen, with the points below marked by chickens, which is said to have been borrowed from a favourite device of James's—a hen with chickens under her wings, and the motto, *Non dormit qui custodit*; but many alterations and additions were made in the time of James V., between 1528 and 1536. On 29 June, 1559, the Lords of the Congregation, on their march S from Perth, destroyed all the altars within the building, and all the images, except that of St Michael, which still remains. In 1646 the building was divided by partitions, by which chambers were formed for the accommodation of the university classes, moved from Edinburgh, as already noticed. In 1812 it was very extensively repaired, pews and galleries introduced, and a new roof and ceiling put in. The crown that formerly surmounted the tower, being thought so heavy as to endanger the entire structure, was taken down about 1821. 'The incorporated trades who, after the Reformation, had their dues to the altars changed into the upholding of the church windows, claimed a sort of vested interest in the building, and the shoemakers held for a time the privilege of holding the annual meeting for the election of their deacon in the south transept, known as St Katherine's aisle.' The part used (the eastern half) as the parish church had the whitewash removed and repairs made in 1871, when a fine organ was introduced;

in 1885 a stained-glass window to the memory of Sir Wyville Thomson of the *Challenger* expedition, was inserted; and in 1894-96 the whole building underwent a thorough restoration, £3000 having been raised for the purpose. The total length of the church is 185 feet, and the width 105 across the transepts, while the height is about 90 feet. Internally the length is 146 feet, not including the apse, and the breadth 62 feet, exclusive of the transepts. The steeple contains three bells, the largest of which has the inscription, *Linlithgow villa me fecit. Vocor alma Maria. Domini Jacobi quarti tempore magnifici. Anno milimo quadringseno nonagesimo*, with the royal arms, a copy of the old town seal, and a curious monogram. The next bell, recast in 1773, has on it the names of the founders, and copies of both sides of the old town seal. The third bell, which was recast in 1718, seems to have borne the name of Meg Duncan for a long time, as it has the inscription, *Sicut quondam Meg Duncan*. The windows are noticeable for the great variety of design. The S transept contained an altar dedicated to St Katherine, and was the place where James IV. sat when he saw the apparition—real or sham—that warned him against his fatal expedition to England, an incident minutely chronicled by Pitscottie, and forming the basis of Sir David Lyndsay's tale in *Marmion*. There were in all twenty-four altars, dedicated to different saints, but these were removed in 1559, and probably still further damage was done by Cromwell's dragoons, who used the church as a stable. The vestry contains a stone altar-piece, representing the betrayal and sufferings of Christ. The church anciently belonged to St Andrew's priory, and was long served by perpetual vicars. John Laing, one of its vicars, rose in 1474 to be bishop of Glasgow, and George Crichton, another of them, became in 1500 abbot of Holyrood, and in 1522 bishop of Dunkeld. In 1891 the old Roman Catholic chapel was bought and converted into a church hall, which was opened at the end of 1892.

An ancient chapel, dedicated to St Ninian, stood in the western part of the town, and on the S side, on the eminence still called Friars' Brae, was a Carmelite Friary, erected in 1290, and the third of this order in Scotland. Though it was in existence at the Reformation, no part now remains, but a well not far off is known as the Friars' Well. To the E was a Dominican Friary, some traces of which existed down to 1843, or later. To the SE was a hospitium, which is noticed as early as 1335, and seems to have been an almshouse, possibly a leperhouse. It was dedicated to St Mary Magdalene. It possessed considerable lands, which are said to have been in 1526 alienated by the then preceptor to Sir James Hamilton of Finnart. An almshouse existed down to 1637. St Magdalene's cross, on the old fair ground, was where St Magdalene's distillery now stands.

The old Town-hall is in High Street, at the corner of the Kirkgate. The original building was erected in 1668-70, after a design by John Mylne, the royal architect, with funds obtained by the charge of double customs, and from an additional fair, both privileges being granted after the Restoration, to compensate for losses sustained during the time of the Commonwealth. Great injury was done to it by fire in 1847, but it was restored in the following year, and the spire, originally added about 1678, renewed. A clock to replace the old one, destroyed by fire, was placed in position in 1857. It was the first turret clock constructed in Scotland on the same principles as the Westminster clock, with a gravity escapement. Besides the town-hall proper, the building also contains the old sheriff court-room and the old prison. The council chamber contains a set of old Scottish weights and measures, and a portrait of Henry, the historian (1718-90), who bequeathed his library to the town. The county hall, behind the town-house, is a plain building with a large hall, containing portraits of the great Earl of Hopetoun (Raeburn), second in command under General Sir John Moore; of his brother, General Sir Alexander Hope (Watson-Gordon), long M.P. for the county; and of the late Earl of Rosebery. The new county buildings and courthouse are on the opposite

side of High Street, a little to the W, and, as already mentioned, partly occupy the site of the house whence Hamilton of Bothwellhaugh fired his fatal shot. It is a plain building, erected in 1863-65, with ample accommodation for the county offices, etc. On the SE is the county police office. The Victoria or Jubilee Town Hall, erected 1887-88, at a total cost of about £4000, can accommodate about 800 persons. It is Scottish Baronial in style, has a frontage of 56 feet, and measures 170 feet from front to back. Linlithgow has long been celebrated for its wells, according to the old rhyme, which says—

'Glasgow for bells,
Lithgow for wells.'

The most important of these is the Cross Well, close to the town-hall. When the first structure was raised here is uncertain, possibly about 1535, when the palace fountain was constructed. In 1628 it was repaired, having been at that time in decay, 'ane deid monument.' It was again repaired in 1659, as it had been destroyed by Cromwell's soldiers, but fell once more to decay, and had to be rebuilt again in 1807. The present structure is said to be a pretty exact imitation of the old one. It has a number of curious figures, and the top is surmounted by a unicorn supporting the Scottish arms, perhaps in imitation of that which the town council in 1633, in anticipation of the expected visit of Charles I., ordered to be executed and placed on the top of the market cross in 1628. The water comes from a spring $\frac{1}{4}$ mile to the S, near Friars' Brae. Of the other wells, known as the Lion Well, the Dog Well, and St Michael's Well, the latter, near the station, is the only one worthy of notice. It has a figure of St Michael, taken from one of the old Cross Wells, on the top, with the date 1720, and the inscription, 'St Michael is kinde to Strangers.' A building, with an old square tower, that stood near the railway station, and was said to have belonged to the Knight-Templars, and afterwards to the Knights of St John, was removed in 1886. It was said to have been used as a mint in the time of James I., and possibly by the Lords of the Congregation, who, while here in 1559, meant to 'set up a coin, saying they shall coyne a good part of their plate for maintenance of the word of God and the wealth of Scotland.'*

The old Free church has been converted into a school, under the landward school board, and in its place a good Gothic building, with a spire of 100 feet, was erected in 1873-74. The East United Presbyterian church was built in 1805 for an Anti-burgher congregation formed in 1773, and the West United Presbyterian church in 1834 for a Burgher congregation formed in 1772. The Evangelical Union church was built in 1840 at a cost of £700. There is also a Roman Catholic church, St Michael's (1888; 400 sittings). The Burgh School is heard of in 1187. Niniau Winzet, who wrote controversial tracts against John Knox, and who ultimately became Abbot of the Scots College at Ratisbon, was rector from 1551 to 1561. One of his successors, Kirkwood, who was rector at the Revolution, wrote a satirical pamphlet against the town council (*The History of the Twenty-seven Gods of Linlithgow*), who had unjustly deprived him of office. The Earl of Stair and Colonel Gardiner were pupils of his.

Under the burgh school board are Linlithgow public and St Joseph's Roman Catholic schools; and these, with accommodation for 602 and 207 pupils respectively, have an average attendance of about 445 and 215, and grants of nearly £470 and £212. There is also the Secondary Education Academy.

Municipality, etc.—The town has a head post office, and branches of the British Linen Company and the Commercial banks. The miscellaneous institutions include a gas company, howling, bicycle, and curling clubs, a company of volunteers, a building society, a

horticultural society, a cemetery, a masonic hall, a mechanics' institute, a working-men's club, and a workmen's hall. The gas company in 1894 erected additional works in consequence of their adoption of the oil-gas system. The poorhouse, at the E end of the town, is a Scottish Baronial building, with good grounds. It was erected in 1854 at a cost of £9000, for Linlithgow Combination, consisting of the parishes of Ahercorn, Bathgate, Borrowstounness, Carriden, Kirkliston, Linlithgow, Muiravonside, and Whitburn, and with accommodation for 230 paupers has an average of about 160 inmates. The town, which used to be governed by a council of 27—the 'gods' of Kirkwood's pamphlet—has under the Burgh Police Act of 1892 a provost, 2 bailies, and 6 commissioners. The trade of Linlithgow was, as we have seen, at one time very considerable, and this remained so till the 16th century, when it was seriously interfered with by the troubles of Queen Mary's reign, and those of the early part of that of James VI. Still further encroachment was made in the 17th century by the erection in 1615 of the lands of Grange into a barony, with the privileges of a free port; by the erection of QUEENSFERRY into a royal burgh in 1636; and by the erection of BORROWSTOUNNESS into a burgh of regality in 1668. The council offered vigorous opposition to all these as encroachments on the town's privileges, and were so far successful, in the case of the first two, that freemen of Linlithgow were to have full use of the port of Grange without payment of custom, while all cargoes of merchandise were, on arrival, to be offered to the council and burgesses of Linlithgow at a certain fixed price, and on their refusal to buy were not to be offered to any one else for less; while after 1641 Queensferry agreed to make compensation of 10 merks every year to Linlithgow, besides which all burgesses and guild brethren of Linlithgow were to have the same privileges as at home, and twenty-four hours' notice was to be given to Linlithgow before any foreign cargo was sold. Borrowstounness, backed by the influence of the Duke of Hamilton, was more fortunate, as it got a charter of regality in spite of the opposition, and very shortly afterwards parliament decreed that burghs of regality should have the same trade privileges as royal burghs. In the middle of the 18th century there was a considerable linen manufacture, and Defoe, in the first edition of his *Journey through Scotland*, says that the whole town had 'a good face of business,' while in a subsequent edition he says, 'the People look here as if they were busy and had something to do. . . . The whole green, fronting the Lough or Lake, was cover'd with Liunen-Cloth, it being the bleaching Season, and I believe a Thousand Women and Children, and not less, teuding and managing the bleaching Business.' The trade in lint and linen yarn, as well as those in damask, diaper, muslin, carpets, and stockings, are all now extinct. In the end of the 18th century the staple industries were wool-combing, tanning, and shoemaking. The latter trades were probably introduced during the occupation of the palace by Cromwell's garrison, between 1651 and 1659, and during the wars at the end of the 18th and the beginning of the 19th centuries they had a period of considerable vigour, as large quantities of shoes were supplied to the army. Tanning, currying, and shoemaking may still be looked on as the staple industries, and in or near the town are two paper-mills, a distillery, a soap work, and sawmills, while extensive shale works have been established in the district. The cost of the improvement of the streets in 1894 by the planting of trees at approved points, under the direction of the magistrates and council, has been defrayed out of the estate of the late Mr Whitten, sheriff-clerk of Midlothian, in terms of his will.

The sheriff courts for the county are held here every Friday during session, and there is also a sheriff's small debt court held every Friday. A justice of peace small debt court is held on the first Thursday of every month, and quarter sessions on the first Tuesday of March, May, and August, and the last Tuesday of October. Linlithgow unites with FALKIRK, Airdrie,

* In Cardoncel's *Numismata* it is stated that the coins of James I. struck here bear the words *Villa de Linlitho*, and that this is the only occasion on which the name of Linlithgow appears on a coin.

Hamilton, and Lanark in returning a member to serve in parliament. The weekly market is on Friday, and the following is the only newspaper published:—*Linlithgowshire Gazette* (1891) on Saturday. The parliamentary constituency numbered 623 in 1895, and the municipal 737 (including 114 females), while the corporation revenue for the same year amounted to £535. Valuation (1884) £12,186, (1893) £14,771, (1895) £15,160, of which £1103 was for the canal and railway. Pop. of parliamentary burgh (1881) 3913, (1891) 4155, of whom 2101 were males and 2054 females; of royal burgh (1891) 3918.

See also Collie's *The Palace of Linlithgow* (Edinb. 1840), G. D. Gibb's *Life and Times of Robert Gib, Lord of Carrabee, Familiar and Master of the Stables to King James V. of Scotland, etc.* (1874), and Waldie's *History of the Town and Palace of Linlithgow* (Linlithgow, 1st ed., 1850; 3d ed., 1879).

Linlithgow Bridge, a village partly in LINLITHGOW parish, Linlithgowshire, and partly in MUIRAVONSIDE parish, Stirlingshire, at the bridge across the Avon, $\frac{3}{4}$ mile W of the town of Linlithgow. The bridge was built about 1650 by Alexander, Earl of Linlithgow, and the pontage was in 1677 granted by Charles II. to his descendant George, Earl of Linlithgow. The battle of Linlithgow Bridge has been noticed in the article LINLITHGOW PARISH. A quarter of a mile farther up the Avon is the viaduct that carries the North British railway across the river, there being twenty-three arches, of which the centre ones are 90 feet high. Close to the village is a paper-mill, which affords employment to a large number of the inhabitants. Pop. of village (1861) 560, (1871) 503, (1881) 479, (1891) 594, of whom 455 were in the Linlithgowshire portion.

Linlithgowshire or West Lothian, a midland county of Scotland, on the southern edge of the upper reach of the Firth of FORTH. It is bounded N by the Firth, SE by the county of Edinburgh, SW by Lanarkshire, and NW by Stirlingshire. Though there was in 1891 some give-and-take of territory between the counties of Linlithgow and Edinburgh, there has been very little change in the boundaries between the two shires. Of the two parishes that were situated partly in Linlithgowshire and partly in Edinburghshire—namely, Kirkliston and Cramond—only Cramond was dealt with. Its Linlithgowshire portion was transferred to the parish of Dalmeny, thus preserving the river Almond as the county boundary. The only alteration in the county boundary was caused by transferring a small part of the parish of Dalmeny and county of Linlithgow on the east bank of the Almond to the Edinburghshire parish of Cramond. For further alterations on the parishes mentioned, and others, see the respective articles. Along the N side, from W to E, in a straight line from the mouth of the Avon to the mouth of the Almond, is $14\frac{1}{2}$ miles; the SE side, in a straight line from the mouth of the Almond to the point where the counties of Edinburgh, Lanark, and Linlithgow meet, at the junction of Fauldhouse Burn with the Breich, is $19\frac{1}{2}$ miles; the SW side, from the point just indicated to the point on North Calder Water, between Black Loch and Hillend Reservoir (see LANARKSHIRE), where the counties of Stirling, Lanark, and Linlithgow meet, is 7 miles, but as this side is very irregular it is, following the curves, about double this; and the NW side, from the point mentioned straight to the mouth of the Avon, is 10 miles. The boundaries are mostly natural. From the mouth of the Avon eastwards to the mouth of the Almond, the line follows the shore of the Firth; it then turns SW along the course of the Almond for $10\frac{1}{2}$ miles, till at Clapertonhall Burn it turns north-westward along its course and across to Caw Burn, up which it passes to the source. North of Mossend it turns again back by the SW side of Howden grounds to the Almond, the course of which it then follows for 3 miles to the junction of the Breich. Here it takes to the course of that stream, and follows it up for $8\frac{1}{2}$ miles to the mouth of Fauldhouse Burn, which is the extreme S point of the county. After following this burn to its source, the line passes across Fauld-

house and Polkemmet moors, E of the village of Hart-hill, to the How Burn, down which it passes to the junction with a burn from the N, whence it follows the course of the latter, till within $\frac{3}{4}$ mile of its source. It then passes straight N by W to Barbauchlaw Burn, and up its course to a point 3 furlongs N by E of Forrestburn Mill, and thence in an irregular line to the sharp bend on North Calder Water between Black Loch and Hillend Reservoir E of the reservoir. It follows up the course of this stream for $\frac{3}{4}$ mile, and then crossing to the source of Drumtassie Burn, follows the burn $4\frac{1}{4}$ miles to the Avon, and thence the course of the Avon, for $13\frac{3}{4}$ miles, to the sea. Along almost the whole course of these streams the scenery is soft and prettily wooded. The area of the county is 120 square miles or $81,120\frac{1}{2}$ acres, of which 3857 $\frac{1}{4}$ are foreshore and 456 $\frac{1}{2}$ are water. Of the land surface of 76,807 acres, 59,090 were under cultivation in 1895, and 5237 under wood, an increase of about 500 acres in the former case within the last forty years, and in the latter case of 1900 acres within the same period. About 2400 acres, mostly in the centre and SW, are heath, rocky ground, and rough pasture. The mean summer temperature is 58°, and the mean winter temperature 37°, while rain or snow falls on an average on two hundred days of the year, the mean depth being about 32 inches, though of course it varies considerably, and is higher in the upper districts than in the lower. Among the counties of Scotland, Linlithgow is thirty-first as regards area, the only smaller ones being Kinross and Clackmannan, but seventeenth as regards population and valuation.

Surface, etc.—The coast-line is pretty regular, the principal projections being at Borrowstouness; the head on which Blackness Castle stands, $3\frac{3}{4}$ miles to the E; and Hound Point, on the E, within the grounds of Dalmeny House. In the bay W of Borrowstouness, as well as at Drum Sands, E of Hound Point, a large amount of foreshore is exposed at low water, and at the mouth of the Avon at Kinneil Kerse or Carse an embankment has been made reclaiming a considerable amount of land. Along the coast there is a flat, and from this the ground rises in long rolling undulations or chains of heights trending in a general line from E to W, but very much broken up by cross hollows, and reaching towards the extreme S an average height of about 700 feet. These are all available for wood or pasture, and are in some cases even capable of being ploughed. The highest summits lie between Linlithgow and Bathgate, the line to the N consisting of the Kipps, Riccarton, and Binny hills; the chief summits, from W to E, being Bowden Hill (749 feet), Cocklerue or Cuckold le Roi (912), Riccarton Hills (832), and the sharp peak of Binny Craig (718). Nearer Bathgate are the Torphichen Hills (777 feet), Cairn-naple (1016), Knock (1000), and the sharp detached Dechmont Law (686). From these the ground slopes W to the valley of the Avon, S to the flat at Bathgate, and E towards Kirkliston and Blackburn, where there is a considerable space of level country. To the N of Linlithgow is Bonnytown Hill or Glower-o'er-em (559 feet), on which there is a monument to Brigadier-General Adrian Hope, who fell in the Indian Mutiny; the NW slope is known as Irongarth; and farther E are Mons Hill, Craigie Hill, and Dundas Hill, in Dalmeny; and Craigton Hill and Binns Hill, in Abercorn; the greatest height in the former case being 387 feet, and in the latter 372. All the heights command wide and pretty views of the Lothians and Stirling, with the Forth and its wooded banks in the middle distance against a background of hills. The whole of the northern part of the county is beautifully wooded. The drainage of the county is effected mainly by the streams already mentioned as flowing along its borders and by their tributaries. In the extreme S, about Whitburn and Blackburn, Cultrig or White Burn, Bickerton Burn, and Foulshiels Burn, with the smaller streams that join them, flow NE to the Almond; to the NE about Livingston are the Lockshot, Dean, and Folly Burns; and farther to the NE still, about Uphall, are Caw Burn, Beugh Burn, and Brox Burn, the

whole five joining the Almond, as does also Niddry Burn, which passes eastward by Ecclesmachan and Niddry. In the part of the county to the W and SW of Bathgate there is a small stream joining Drumtassie Burn; and this latter, Barbauchlaw Burn, and Logie Water, all join the Avon, to which also flow Kipps Burn N of Torphichen, and a small burn W of Linlithgow, with a branch coming from Linlithgow Loch. To the N, flowing directly into the Firth of Forth, are the small Den or Dean and Gil Burns at Kinneil House on the W, Blackness Burn at the castle of the same name, the Haugh and Nethermill Burns uniting and reaching the sea at Abercorn, and Dolphington Burn passing through Dalmeny grounds and reaching the sea about the centre of Drum Sands. The only loch in the county is that at Linlithgow Palace, which was noticed in our article on the burgh. Other small lochs which once existed on Drumtassie Burn near Drumtassie, at Lochcote near Kipps, at Balbardie near Bathgate, at West Binny, and at Dundas Castle, are now drained. NE of Bathgate is a reservoir for the Bathgate water supply. Some of the streams at one time afforded good fishing, but refuse from oil and other works have now destroyed it, though the Almond, Avon, and Couston, in consequence of legal proceedings, are much improved. There are mineral springs, but of no value, near Torphichen, Kipps, Caribber House, the church of Ecclesmachan, and Borrowstounness.

Geology.—The solid rocks which enter into the geological structure of this county belong, with few exceptions, to the four great divisions of the Carboniferous system, viz., the Coal-measures, the Millstone Grit, the Carboniferous Limestone, and the Calciferous Sandstones. Owing to the occurrence of oil-shales in the Calciferous Sandstone series and the presence of valuable coal seams in the Carboniferous Limestone group and in the Coal-measures, the geology of Linlithgowshire is of special importance. But apart from the economic value of the strata, this county is attractive to the geologist from the remarkable development of contemporaneous volcanic rocks which are interstratified with the members of the Carboniferous Limestone series.

Beginning with the oldest members of the system we find that they belong to the Cementstone group of the Calciferous Sandstone series. As developed in this county, they present those features which are commonly met with in the basin of the Forth. They may be described as consisting of white and yellow sandstones, black and blue shales, clay ironstones with bands of marine limestone, and an occasional seam of coal. Sometimes the beds are crowded with plant remains, such as *Sphenopteris*, sometimes they are charged with teeth of ganoid fishes and remains of *Leperditia* or other ostracods, while certain bands of shale and limestone yield typical marine forms. From the character of the organic remains it is evident that alternatively estuarine and marine conditions must have prevailed during the deposition of the beds. The members of this group occupy the area between the E margin of the county and the Bathgate Hills, but throughout this extensive tract they are in a great measure obscured by superficial deposits, and it is only in the stream courses or along the sea-shore that the relations of the rocks can be determined. There are two prominent zones, however, which are of great service in solving the geological structure of the district, viz., the Queensferry Limestone and the Houston Coal. The former is regarded as the equivalent of the well-known Burdiehouse Limestone of Midlothian. The strata underlying the Queensferry Limestone are exposed on the shore to the W of the mouth of the Almond, from which point there is a regular ascending series to the outcrop of the limestone near Queensferry. Between this latter horizon and the interbedded volcanic rocks forming the base of the Carboniferous Limestone series, there are two well-marked zones of sandstone which have been named by Sir Archibald Geikie 'the Binny Sandstone group.' Separating these two zones of sandstone we find a succession of clays, shales, and shaly sandstones, along with which

occurs the seam of Houston Coal. The lower of these sandstone zones has been largely quarried at Binny near Ecclesmachan, and the upper at Kingscavel E of Linlithgow. The oil-shales which have proved of such great economic value occur at various horizons in the Cementstone group of Linlithgowshire. Some of these bands are so bituminous that they yield from 30 to 40 gallons of oil to the ton of shale. The West Calder Fells and Raeburn shales are the highest in the order of succession, and underneath these come the Broxburn shales, both groups being above the Raw Camps, Burdiehouse, or Queensferry limestone. These are all rich in oils. A lower set has lately been proved to exist, which are likely to be extensively wrought, for, though they are poorer in oils than those above, they yield larger quantities of solid paraffin and ammonia.

At intervals in the series there are layers of volcanic materials, clearly indicating that volcanic activity must have been intermittent during the deposition of the Cementstone group. Below the horizon of the Queensferry Limestone and in the sandstone series overlying it, sheets of felspathic tuff are associated with the sandstone and shales. But when we ascend still farther to the beds overlying the Houston Coal we find still more striking evidence of volcanic action. Indeed, from this horizon upwards to the coal-bearing series of the Carboniferous Limestone, we have a remarkable development of ancient lavas and tuffs which are regularly interbedded with the sandstones, shales, and limestones. The lavas are wholly basaltic, varying considerably in texture, and presenting the typical slaggy characters on the upper and under surfaces of the flows. The volcanic materials reach their greatest development in the Bathgate Hills, where their thickness is probably about 2000 feet, and they gradually die out when followed S towards Blackburn and N towards Borrowstounness. One of these old lavas is of such a remarkable character that it deserves special notice. It occurs at Blackburn, where it has been quarried for the soles of ovens, and where it has been locally termed 'lakestone.' From the description of the microscopic characters of this rock by Sir Archibald Geikie, it would seem that the rock varies considerably in the upper and lower portions of the mass. The lower portion mainly consists of serpentine. Here and there traces of olivine occur among the serpentine in such a way as to lead to the conclusion that this mineral originally formed the chief constituent of the rock. Large pale brown crystals also occur in the serpentine, which are probably augite. A few prisms of triclinic felspar and particles of titaniferous iron or magnetite are also met with. The upper part of the rock differs considerably in character from that just described. Fresh plagioclase felspar is the chief constituent, but in addition to the felspar, augite, altered olivine, and titaniferous iron are also observable, though far less abundantly developed than in the lower portion. To this rock the name of Pikrite has been applied.

Some of the cones from which the volcanic materials were discharged are still preserved to us. One of these is now represented by the Binns Hill, which consists of a mass of fine green tuff, pierced by basalt, the latter filling up the old vent or volcanic orifice.

Owing to the enormous accumulation of volcanic materials in the Bathgate Hills, it is not easy to draw a definite boundary line for the base of the Carboniferous Limestone series. The lower portion of the contemporaneous volcanic rocks probably belongs to the Calciferous Sandstone series, while the upper portion must be grouped with the Carboniferous Limestone. In the official memoir descriptive of the geology of the district the massive limestone of Petershill is provisionally regarded as the base of the Carboniferous Limestone. To the S of the volcanic area of the Bathgate Hills, however, the boundary line is clearly defined, for in the river Almond near Blackburn, and in the Breich Water near Addiewell, the highest members of the Cementstone group pass below the Hurlst Limestone and Coal, which are the lowest beds of the overlying series. As in other districts of central Scotland, the Carboniferous

Limestone of Linlithgowshire is clearly divisible into three sub-groups—(1.) a lower limestone series; (2.) a middle coal-bearing series; (3.) an upper limestone series. In the Bathgate Hills, as already indicated, the order of succession is complicated by the presence of the bedded lavas and tuffs, but notwithstanding this fact, the limestones and even the coal seams are traceable along the range. The general inclination of the strata is towards the W, and hence we have a steady ascending series as we cross the hills to Bathgate. The massive Petershill limestone which crops out about $\frac{1}{2}$ mile E of Bathgate can be followed by a series of quarries N by Hillhouse towards Linlithgow. Though this limestone is about 80 feet thick at Petershill, it thins out rapidly when traced in either direction from that locality. It is immediately succeeded by sandstones, shales, and ironstones, which are capped in turn by sheets of basaltic lava. The Wardlaw Limestone which is highly charged with corals, and particularly with *Lithostrotion irregulare*, occupies a slightly higher horizon than the main limestone just described. It is evidently a lenticular band occurring in the midst of the bedded lavas, for it is traceable for no greater distance, and is rapidly succeeded by a great development of volcanic rocks forming the most elevated ground of the Bathgate Hills. One of the most interesting points connected with these ancient lavas and tuffs is the manner in which they represent various members of the Carboniferous Limestone series which are typically developed at other localities in the county. In the neighbourhood of Kipps for example, the volcanic rocks take the place of a great part of the middle or coal-bearing group of the Carboniferous Limestone, which is well developed at Borrowstounness and Bathgate. Only the upper coal seams are to be found near the Kipps, which are rapidly succeeded by the Index Limestone which marks the base of the highest sub-group of the Carboniferous Limestone. But even to the W of the Kipps this band is overlaid by basaltic lavas, thus proving beyond doubt that the volcanic forces must have been active in that neighbourhood till near the close of the Carboniferous Limestone period. These volcanic rocks are overlaid by a set of strata in which there are two prominent beds of limestone locally termed the Dykeneuk and Craigenbuck seams. Along the shore from Blackness to the mouth of the river Avon the triple arrangement of this division of the Carboniferous system is clearly distinguishable. The massive limestones at the base of the series are not conspicuously displayed on the shore section, but the middle or coal-bearing group is well represented between Carriden House and Borrowstounness. This coalfield is intersected by an important development of lavas and tuffs forming the N prolongation of the volcanic rocks of the Bathgate Hills. Underlying this volcanic zone we find the following seams in ascending order,—the Smytho Coal, the Easter Main Coal, the Foul Coal and Lower Ironstone, and the Red Coal. In the heart of the volcanic zone at Borrowstounness a lenticular coal seam was discovered, which is locally termed the West Main Coal, while between the horizon of the volcanic series and the Index Limestone there intervene the Upper Ironstone and the Splint Coal. The coal-bearing series of Bathgate occupies the same relative position as the Borrowstounness coalfield, that is to say, it belongs to the middle division of the Carboniferous Limestone series. In the Upper Limestone group to the W of Borrowstounness there are three important horizons, which are here given in ascending order, viz., the Index Limestone, the Dykeneuk Limestone, and the Craigenbuck Limestone. Upwards of 400 feet of strata intervene between the Index and Dykeneuk seams, while the latter is separated from the Craigenbuck limestone by 300 feet of strata. The highest of these, viz., the Craigenbuck seam, is on the same horizon as the Castlecary and Levensat limestone, while the Dykeneuk band occupies the same position as the Arden, Janet Peat, Calmy or Gair limestone. It is important to observe also that the Gair limestone, to which attention was directed in a previous article (see

LANARKSHIRE, p. 460), though used provisionally as the upper limit of the Carboniferous Limestone series in the Carlake district, was so regarded because the Castlecary or Levensat limestone was either absent or had not been observed there.

Overlying the Millstone Grit which is traceable as a nearly continuous belt from the mouth of the river Avon S to Whitburn we find the representatives of the true Coal-measures. Both at Armadale and Torbanehill, and again at Fauldhouse, there are valuable mineral fields with seams of coal and ironstone. The strata represented in the Armadale and Torbanehill mineral fields belong to the lower section of the Coal-measures. At these localities the following seams occur, in ascending order,—the Boghead or Torbanehill Parrot Coal, the Colinburn Coal, the Main Coal, the Ball Coal, the Mill Coal, and the Upper Cannel or Shotts Gas Coal.

Various intrusive masses of basalt and diabase rocks pierce the Carboniferous strata of this county. They occur on different horizons, and some of them doubtless belong to different periods of eruption. Some of these sheets occur in the midst of the Cementstones in the E part of the county, another important mass has been intruded in the Carboniferous Limestone and Millstone Grit N of Tophichen, while still a third sheet is to be met with W of Armadale in the Coal-measures. But in addition to these, there are excellent examples of basalt dykes running in an E and W direction, and traversing alike the various subdivisions of the Carboniferous system in the county. These dykes are of a much later date however, being connected with the volcanic ejections of Tertiary times. (See Geological Survey one-inch maps, 31 and 32, and memoirs descriptive of those sheets.)

Soils and Agriculture.—The soil varies very much, but, consisting largely of decomposed volcanic rocks, is everywhere good and fertile, except in the moorish and rocky districts in the centre, S, and SW. In the low-lying portions there are 20,000 acres of excellent carse clay land, and 20,000 on the lower slopes and higher hollows are of harder clay on a cold subsoil, 9000 are good loam, 9000 are light gravel and sand, and the rest are either moorish, moss, or rocky. At an early period the greater part of the surface was covered with natural wood, part of which is said to remain near Kinneil House. The soil has been tilled from a very early period, and David I., one of the most energetic of monarchs, was a great farmer in West as well as in Mid Lothian, and no doubt the operations carried on at the royal grange near Linlithgow were profitable as well as interesting. The stimulus given by David to the agriculture of the county lasted till the death of Alexander III., but, in the years that followed, ruin and devastation must have long settled down. Even so late as 1445, during the feud between Douglas and Crichton, the Chancellor ravaged the Earl's manor of Abercorn, and drove away his valuable Flanders mares; and the agriculture remained at a very low ebb till 1723, when improvers began once more to make their appearance. One of the first signs of returning enterprise in this direction was in 1725, when a person of the name of Higgins, and his copartners at Cuffabouts, near Borrowstounness, sold some manure for 1s. a bushel. In 1720, John, second Earl of Stair, having, notwithstanding brilliant services to his country, been sacrificed by Parliament on account of his indifference to Law's financial schemes, retired to Newliston House, near Kirkliston, and devoted himself to the improvement of his estate by planting and other improvements. He introduced new maxims of husbandry and new modes of cultivation, sowed artificial grasses, and was the first to cultivate turnips, cabbages, and carrots in the open field. Charles, first Earl of Hopetoun, imitated and even excelled the Earl of Stair; but after his death in 1742, and that of Stair in 1747, matters languished for thirty years till 1775, when both proprietors and tenant-farmers started on the course of vigorous improvement that has given such renown to the Lothians. From that time the improvement has been constant, and the farmers of West Lothian yield to none either for skill or enterprise.

LINLITHGOWSHIRE

The areas under the various crops at different dates are given in the following tables:—

GRAIN CROPS.—ACRES.

Year.	Wheat.	Barley or Bere.	Oats.	Total.
1854	2850	4659	12,884	20,893
1870	2495	5001	10,542	18,038
1877	1434	5104	10,739	17,277
1882	1478	4665	10,918	17,061
1895	844	3363	10,461	14,673

GRASS, ROOT CROPS, ETC.—ACRES.

Year.	Hay, Grass, and Permanent Pasture.	Turnips.	Potatoes.
1854	28,725	4857	1627
1870	29,788	4645	2523
1877	32,682	4442	2580
1882	34,274	3960	2280
1895	37,616	4179	1704

while there are over 900 acres on an average annually under beans, rye, vetches, fallow, etc. The farms are worked mostly on the six-shift rotation, and the average yield of wheat is 32 bushels per acre; of barley, 40 bushels; of oats, 40 bushels; turnips, from 15 to 30 tons; and potatoes, about 5 tons; but the last two are very variable. Here, as in so many of the other Scottish counties, there is a most marked decrease in the number of acres under wheat, and a marked increase in the number of acres under grass and permanent pastures, showing that farmers are finding the profit from stock raising greater than that from the cultivation of cereals.

The agricultural live stock in the county at different dates is shown in the following table:—

Year.	Cattle.	Horses.	Sheep.	Pigs.	Total.
1854	10,984	2223	14,239	2093	29,539
1870	10,770	1961	15,664	1652	29,947
1876	10,902	2140	19,906	1858	34,806
1882	10,324	2080	16,000	2428	30,832
1895	11,918	2282	25,173	2085	41,458

For dairy purposes Ayrshire cows are generally kept, while those kept for feeding are mostly crosses. The sheep are Cheviot and blackfaced, with Border Leicesters and crosses; and the horses are Clydesdales. Harvest in the lower and earlier district is from 1 to 14 August, and in the upper parts a fortnight later. The average extent of the farms is a little over 100 acres, while 40 per cent. are under 50 acres, and only 6 per cent. over 300 acres. The steadings are good and well kept. Rents are very much the same as in the county of Edinburgh. In 1891 there were employed in connection with the agriculture of the county 1937 persons, including 1252 men, 224 women, 332 boys, and 129 girls.

Industries.—The principal industries of the county are connected with its mineral wealth. The distribution of the deposits has been already indicated in the section dealing with the geology, and here the economic value simply remains to be noticed. Coal-mining, now so important, is supposed to date from the time of the Romans, and the older pits about Borrowstounness extend under the bed of the Firth. The value of the deposit was certainly well known by the 12th century, and a charter granted to William Oldbridge of Carriden near the end of that period is the first document relating to coal pits in Scotland. In the beginning of the 19th century the output was about 40,000 tons, but since 1847 the growth of the trade has been rapid, 778,576 tons having been raised in 1892, of the value of £233,573 at the mines. A peculiar coal, better known to science, as well as to law, as 'the Torbanehill mineral,' very rich in bitumen, and accompanied by shales from which a large percentage of oil is obtained, began to be worked in 1849, and led to a long and ex-

LINLITHGOWSHIRE

ensive lawsuit to settle the question whether it was really a coal or not. Oil-bearing shales have since been found to exist throughout Bathgate, Whitburn, and Uphall parishes, and the industry has largely developed, particularly since 1860, extensive paraffin works having been established at Dalmeny, Broxburn, Winchburgh, Uphall, Bathgate, and Armadale, as well as at Addiewell, in the vale of Breich in Edinburghshire, just outside the SE border of this county. In 1892, 1,032,312 tons of shale were drawn, which amounted to nearly one-half of the whole quantity produced in Scotland, and more than was produced by any other county. Iron ore occurs extensively in Borrowstounness, Abercorn, Torphichen, and Bathgate parishes, and in 1892 45,660 tons were obtained, of the value of £20,547 at the mine. At Kinneil near Borrowstounness there are four blast furnaces. Including workmen and their families, probably about $\frac{1}{3}$ of the total population of the county is dependent on the coal and shale pits and the industries connected with them. Limestone and fireclay are worked at many places; of the latter, 18,062 tons were mined in 1892, of the value of £3161 at the mine; and of the former 6397 tons. There are large quarries of excellent sandstone at Binny, near the centre of the county. Basalt is worked near Linlithgow for clinkers for street paving, and lead ore with a considerable admixture of silver was at one time worked, but the mine has long been given up, and an effort to reopen it in 1871 proved unremunerative. Besides these and agriculture, there are leather, glue, soap, shoe-making, and agricultural implement works about Linlithgow; large distilleries at Kirkliston, Bathgate, Linlithgow, and Borrowstounness; a glass-work, a foundry, and spade and shovel factories at Bathgate; paper-works at Linlithgow Loch, LINLITHGOW BRIDGE, on the Logie near Torphichen, and on the Almond near Blackburn; chemical works at several places, and potteries and iron-foundries at Borrowstounness. There were at one time considerable saltworks, which have left the name Grangepans, near Borrowstounness.

Communications, etc.—The commerce is principally centred at BORROWSTOUNNESS, but the county is well provided with roads and railways. Of the former the main lines are the three great roads between Edinburgh and Glasgow—that by Kirkliston and Linlithgow passing through the N; that by Uphall and Bathgate, to the S of the centre; and that by Livingstone, Blackburn, and Whitburn, through the S. Other important lines are the road from Edinburgh to Linlithgow by Queensferry, the road from Lanark to Linlithgow by Whitburn and Armadale, and the road from Linlithgow to Borrowstounness. There are also a large number of district roads, and in connection with the road near Blackston Junction, a splendid lattice-girder bridge, 50 feet in span, across the Avon was erected in 1893 at the joint expense of the Linlithgowshire and Stirlingshire authorities. The North British railway from Edinburgh to Polmont enters the county $1\frac{1}{2}$ mile W of Ratho station, and passes first NW and then W by Winchburgh and Linlithgow for $9\frac{1}{2}$ miles, entering Stirlingshire $1\frac{1}{2}$ mile W of Linlithgow station. At Ratho a branch quits this line and passes N by Kirkliston and Dalmeny to South Queensferry and the Forth Bridge. Half a mile W of Ratho another branch passes off W by S along the upper part of the county, 10 miles to Bathgate. From this, as a centre, one line passes NW by the valley of the Logie to the line between Slamannan and Borrowstounness, at Blackston Junction, the distance to the Almond being 4 miles; a second line passes westward direct to Airdrie, the length of two portions within the county being 6 miles; and a third line passes S and SW towards Wishaw, the distance within the county being 8 miles. From this a connecting branch crosses the Breich to Addiewell, where it joins the Caledonian section between Edinburgh and Glasgow *via* Cleland. The line between Slamannan and Borrowstounness passes through the NW corner of the county for $3\frac{1}{2}$ miles. The UNION CANAL connecting Edinburgh with the FORTH AND CLYDE

Canal enters the county on the W by a lofty aqueduct over the Avon, 1½ mile SW of LINLITHGOW BRIDGE, and, passing NW to near Linlithgow, follows the line of the first-mentioned railway to Niddry, ¾ mile SE of Winchburgh, whence it winds first to the SW, and then easterly, till it quits the county at the S of Clifton Hall grounds (Edinburghshire) by a lofty aqueduct over the Almond, after a course of 13½ miles.

The royal burghs are Linlithgow and Queensferry, while Armadale, Bathgate, Borrowstounness (including Grangepens), and Whitburn are police burghs, and Broxburn and Fauldhouse (including Crofthead) are large enough to be denominated towns. The villages are East Benhar, Blackburn, two of the name of Bridgend (in Linlithgow and Bathgate parishes), Durhamtown, Kingscavil, Kinneil, Kirkliston, part of Linlithgow Bridge, which is shared with Stirlingshire; Newtown, Niddrie, Philpstoun, Torphichen, Uphall (including Upper Uphall), Winchburgh, and Woodend. Smaller villages and hamlets are Abercorn, Blackness, Bridge-ness, Craigie, Cuffabouts, Dalmeny, Drumcross, Ecclesmachan, Gateside, Muirhouses, and Riccarton. The principal seats, most of which are separately noticed, are Almondell, Avontoun, Balbardie House, Ballencrieffe House, Bangour, Belsyde, Binns, Blackburn House, Boghead House, Bonhard House, Bonsyde, Bridge House, Bridgecastle, Carlowrie Castle, Carriden House, Champfleurie House, Clarendon House, Craigiehall, Craigton House, Dalmeny Park and Barnbougle Castle, Dechmont House, Dundas Castle, Foxhall, Grange House, Hopetoun House, Houston House, Kinneil House, Kirkhill House, Lochcote Castle, Newliston, Philpstoun House, Polkemmet, Preston House, Torbanehill House, Wallhouse, and Westwood.

The civil county consists of the 12 entire *quoad civilia* parishes of Abercorn, Bathgate, Borrowstounness, Carriden, Dalmeny, Ecclesmachan, Linlithgow, Livingston, Queensferry, Torphichen, Uphall, and Whitburn, and a portion of Kirkliston, which it shares with Edinburghshire. The *quoad sacra* parishes of Armadale and Fauldhouse are also included, and there are mission stations at Broxburn, Grangepens, Kingscavil, and Winchburgh. These are all ecclesiastically in the presbytery of Linlithgow and the synod of Lothian and Tweeddale. Besides the 19 churches in connection with the Established Church, there are 11 places of worship connected with the Free Church, 4 in connection with the United Presbyterian Church, 3 Evangelical Union churches, 2 Episcopal churches and a mission station, and 6 Roman Catholic churches. In the year ending Sept. 1895 there were 54 schools (45 public), which, with accommodation for 11,527 children, had 11,250 on the rolls, and an average attendance of 9204. Their staff consisted of 130 certificated, 30 assistant, and 56 pupil teachers.

Linlithgowshire, with a constituency of 7998 in 1895-96, returns one member to serve in Parliament, but Linlithgow, as one of the FALKIRK burghs, has a share of a second, and Queensferry, as one of the STIRLING burghs, of a third. The county is governed by a lord-lieutenant, a vice-lieutenant, and 6 deputy-lieutenants, besides justices of the peace. It is under the same sheriff-principal as Midlothian, but has a resident sheriff-substitute. Ordinary courts are held at Linlithgow every Friday during session, and there are also sheriff small debt courts every Friday. There is a small debt circuit court at Bathgate for the parishes of Bathgate, Livingston, Uphall, Torphichen, and Whitburn on the third Wednesday of January, April, July, and October. Quarter sessions are held on the first Tuesday of March, May, and August, and on the last Tuesday of October; and justice of peace courts when required. The County Council consists of 24 members—21 for as many electoral divisions (including police burghs), 2 for the royal burgh of Linlithgow, and 1 for that of Queensferry. Of these the Bathgate District is represented by 12 divisional members, and the Linlithgow District by 9. The Council is divided into the following committees:—Finance Committee, Lands Valuation Committee, Executive

Committee under Contagious Diseases (Animals) Act, Committee on Weights and Measures and Explosives Acts, Convener's Committee, and County Road Board (from which are excluded the representatives from the royal burghs and the police burgh of Bathgate). The Standing Joint Committee of the county is composed partly of County Councillors and partly of Commissioners of Supply. There is a police force of forty-six men (one to each 1198 of the population), which is under a chief constable with a salary of £150 a year. The number of registered poor during the period ending Sept. 1894 was 627, and of dependants on them 454; whilst the expenditure for poor-law purposes amounted in the same period to £10,862. All the parishes are assessed, and Abercorn, Bathgate, Borrowstounness, Carriden, Kirkliston, Linlithgow, and Whitburn, with the parish of Muiravonside in Stirlingshire, form Linlithgow Poor-Law Combination, with a poorhouse at LINLITHGOW. The proportion of illegitimate births in 1894 was 5·2 per cent., and the average annual death-rate is 17·3 per thousand. Valuation (1647) £5073, (1815) £97,597, (1849) £122,242, (1866) £163,593, (1876) £186,531, (1884) £216,940, (1895) £257,245, all exclusive of railways and canals, which in the latter year were valued at £57,607. Population of registration county, which takes in part of Kirkliston from Edinburgh, (1831) 23,760, (1841) 27,466, (1851) 30,590, (1861) 39,045, (1871) 41,379, (1881) 44,005, (1891) 53,532; of civil county (1801) 17,844, (1811) 19,451, (1821) 22,685, (1831) 23,291, (1841) 26,872, (1851) 30,135, (1861) 38,645, (1871) 40,965, (1881) 43,510, (1891) 52,808, of whom 27,946 were males, and 24,862 females. The occupations of these are shown in the following table:—

Occupations.	Males.	Females.	Total.
Professional,	560	300	860
Domestic servants,	53	1,715	1,768
Commercial,	1,615	24	1,639
Agriculture and fishing,	1,637	353	1,990
Industrial,	13,775	1,562	15,337
No stated occupation,	10,306	20,908	31,214

Of the 1637 males and 353 females in the fourth class, 1584 males and 353 females were connected with farming; of those engaged in industrial occupations, 7975 men and 269 women were engaged in industries connected with mineral substances; and in the last class there were 9907 boys and 10,840 girls under fifteen years of age. It is a curious and very inexplicable circumstance that at each census from 1841 to 1881 Linlithgow was the only county in Scotland where the males were in excess of the females. At the census of 1891, however, Stirlingshire and Lanarkshire as well as Linlithgowshire had a slight increase of males over females. In 1891 the number of persons to each square mile was 440, the county thus ranking fifth in the order of density of population. In the same year the number of families was 10,673, occupying 10,173 houses with 26,888 rooms.

A monastery is said to have existed at Abercorn as early as 675, but it was abandoned ten years after, and on the rise of the Roman Catholic Church the county became part of the diocese of Lindisfarne; and was subsequently comprehended in that of St Andrews. The old archdeaconry had probably the same limits as the modern presbytery, including not only the whole county itself, but several parishes in Stirlingshire and in Edinburghshire. The Bishop of St Andrews had a regality jurisdiction over all the lands in the see lying to the S of the Forth, and his court sat at Kirkliston. During the time of the short-lived Protestant bishopric of Edinburgh, Linlithgowshire lay within the limits of that see. Though the Knights of St John had their seat at Torphichen—which thus passed into the hands of the present proprietors, the first Lord Torphichen being the last preceptor, and Lord St John of Jerusalem in Scotland—there were anciently in the county but few religious houses, two monasteries and a hospitium at Linlithgow and a Carmelite convent near Queensferry being the chief.

The brass seal of the presbytery of Linlithgow dates from 1583, and has the inscription *Sigillum presbyterii Linlithcu* round the edge, while on the face is *Verbum Dei nostri stabit in æternum*. At the dawn of the historic period we find the county within the limits usually given to the Otaleni or Otadeni or Gadeni; but when the district was, in A.D. 81, brought by Agricola within the limits of the Roman power, the tribe that inhabited it are called the Damnonii, and from Carriden the great general himself set sail to the opposite shore to attack the Horestii. He probably began his chain of forts at the same place. When Antonine's Wall was constructed in 139, almost the whole of the shire fell within the limits of Roman government, for the wall passed through the extreme NW corner of the county, beginning at the E corner of Carriden grounds and running westward for 5 miles by Kinneil House to the bridge near Inveravon, where it crossed the Avon and passed into Stirlingshire. From the Roman station at Cramond a road passed along near the coast to the end of the Roman wall at Carriden. Traces of a reputed Roman camp exist to the E of Abercorn; Blackness is said to have been a Roman port; and at Bridgeness there was found in 1868 one of the finest legionary tablets in the country. A *facsimile* of it has been placed on the spot, but the stone itself is in the Antiquarian Society's Museum at Edinburgh. It is 9 feet long, 2 feet 11 inches wide, and 9 inches thick. On one side of a central inscription a Roman soldier is sculptured, riding triumphantly over conquered Britons; on the other is the representation of a sacrificial ceremony. The inscription itself records that the Augustan Legion, after making 4652 paces of the wall, set up and dedicated the stone to the Emperor Cæsar Titus Antoninus. It was at Kinneil that St Serf stood and threw his staff across the Firth, in order to find out where he was to settle (see CULROSS); and, according to Dr Skene, the twelfth of the great Arthurian battles was fought at Bowden Hill in 516. Edwin of Northumbria in 617 extended his dominion over all the Lothians, and afterwards Kenneth Macalpine led the Scots to the conquest of these provinces, and they finally became incorporated with the Scottish kingdom about 1020. Traces of cairns or tumuli of these and earlier periods exist on the Lochcote Hills, on the Forth near Barnbogle, near Kirkliston, and on the S bank of the Almond near Livingston; and in the old bed of Lochcote there are the remains of a crannoge. There are standing-stones near Abercorn, near Bathgate, and near Torphichen, while there are traces of hill forts at Cockerlue, Bowden Hill, Cairn-naple, and Binns. The county was probably a sheriffdom in the time of David I., and certainly was so in the reign of Malcolm IV., and thus it remained down to the time of Robert Bruce, though after William the Lyon's reign the rule of the sheriffs was nominal rather than real. By Robert I. the district was put under a constable, whose successors held office till the reign of James III., when we find it again under a sheriff. In 1600 the latter office was granted to James Hamilton, the eldest son of Claude, Lord Paisley, and to his heirs, and was again, soon after the Restoration, given hereditarily to John Hope of Hopetoun, the ancestor of the Earls of Hopetoun. At the abolition of the hereditary jurisdictions in 1747, the then earl claimed £10,500 as compensation for the sheriffdom of Linlithgow, the sheriffwick of Bathgate, the regality of St Andrews at Kirkliston, the bailiery of Crawfordmuir, and the regality of Kirkheugh, and obtained £4569. No county in the whole of Scotland had probably so many independent petty jurisdictions of baronies, regalities, and bailieries. Kirkliston and other lands were a regality, with an attached bailiery; Bathgate was long a barony, and afterwards became a separate sheriffwick; Torphichen was a regality first of the Knights of St John, and next of the Lords Torphichen. Other regalities were Kinneil, under the Duke of Hamilton; Philipstoun, under the monks of Culross, and afterwards under the Earls of Stair; and Brighouse and Ogleface, under the Earl of Linlithgow. Linlithgow was a hereditary royal bailiery, belonging,

like the last-named regality, to the Linlithgow family, while Abercorn, Barnbogle, Caribber, Dalmeny, Livingston, and Strathbrock had baronial jurisdictions. The principal antiquities dating from mediæval times are Dalmeny church, the peel of Linlithgow, the castles of Abercorn, Barnbogle, Blackness, Bridgehouse, Dundas, Mannerston, and Niddry, the towers of Binny, Ochiltree, Midhope, and Torphichen, and the vestiges of a castle that afforded a retreat to Walter, Steward of Scotland, in a morass near Bathgate. Part of Dundas Castle is supposed to have stood since the beginning of the 11th century, and the family was the oldest in the county.

Trotter's *General View of the Agriculture of West Lothian* (Edinb. 1794; 2d ed., 1810); John P. Wood's *Ancient and Modern State of the Parish of Cramond* (Edinb. 1794); John Peuney's *Historical Account of Linlithgowshire* (Edinb. 1831); Mr Farrall's paper 'On the Agriculture of Edinburghshire and Linlithgowshire,' in *Trans. Highl. and Ag. Soc.* (1877); John Small's *Castles and Mansions of the Lothians* (2 vols., Edinb. 1883); and G. Waldie's *Walks along the Northern Roman Wall* (Linlithgow, 1883).

Linmill, a village in Clackmannan parish, Clackmannanshire, 2½ miles E by N of Alloa.

Linmill, a burn on the mutual boundary of Dalmeny and Abercorn parishes, Linlithgowshire, running to the Firth of Forth. It makes, near Springfield, a leap of 75 feet over a trap rock precipice.—*Ord. Sur.* sh. 32, 1857.

Linn, an estate, with a mansion, in Cathcart parish, Renfrewshire, adjacent to Lanarkshire and White Cart Water, ¼ mile S of Cathcart village.

Linn, an estate, with a mansion, in Dalry parish, Ayrshire, 5 furlongs SSW of the town. Till about 1827 the ruins of a pre-Reformation chapel stood on the estate, which is believed to be the locality of a fine old ballad, *The Heir of Lynne*; and four urns containing burned human bones have been exhumed on it.—*Ord. Sur.*, sh. 22, 1865.

Linnhe, a beautiful sea-loch, mainly of Argyllshire, but partly also of Inverness-shire. Striking north-eastward from the junction of the Firth of Lorn with the Sound of Mull, it extends 31¼ miles, nearly in direct line with the former and at right angles to the latter; has a maximum breadth of 8½ miles, and at CORRAN NARROWS contracts to 1½ furlongs; contains Lismore, Shuna, and some other isles and islets; separates Appin on the SE from Morvern and Ardgour on the NW; sends off from its SE side Lochs Ceran and Leven; and forms part of the line of navigation from the Caledonian Canal to the western seas. The upper 9½ miles, from Corran Narrows to Fort William, are often known as Lower Loch ERL. On 20 Aug. 1847 the Queen steamed up Loch Linnhe, whose 'scenery is magnificent; such beautiful mountains!' See also pp. 158-164 of Dorothy Wordsworth's *Tour in Scotland* (ed. by Princ. Shairp, 1874).—*Ord. Sur.*, shs. 44, 45, 52, 53, 1876-84.

Linshart. See LONGSIDE.

Lintalee, an estate, with a mansion, in Jedburgh parish, Roxburghshire, on the left bank of Jed Water, 1½ mile S by W of Jedburgh town. It contains the famous camp formed by Douglas in the time of Robert Bruce for defence of the Borders, and described by Barbour. The camp was defended, partly by a deep ravine, partly by a precipitous bank of the Jed, partly by an artificial double rampart. Lintalee Cave, in the steep bank of the Jed, once used as a place of refuge, disappeared through a landslip in 1866.—*Ord. Sur.*, sh. 17, 1864.

Linthill, a modern mansion in Bowden parish, Roxburghshire, on the left bank of Ale Water, 1½ mile NNE of Lilliesleaf.—*Ord. Sur.*, sh. 25, 1865.

Linthill House. See EYEMOUTH.

Linton ('town on the lin or pool') or **West Linton**, a village and a parish of NW Peeblesshire. The village standing, 800 feet above sea-level, on the left bank of Lyne Water, by road is 16 miles SSW of Edinburgh, 11 NNE of Biggar, and 14 NW of Peebles, whilst its

station, Broomlee or West Linton (5 furl. SSE), on the Dolphinton branch of the North British railway, is 24 miles SSW of Edinburgh and $14\frac{1}{2}$ ENE of Carstairs. The village is very irregularly built. Even in the main thoroughfare the houses are built on no fixed plan, and, in consequence, show great variety of style, age, and appearance. West Linton possesses 3 places of worship—the parish church, built 1781 and repaired in 1871; the United Presbyterian church, built in 1784 (at that date occupied by a Relief congregation), and the Episcopal church of St Mungo. The parish church contains some beautiful wood-carving, the work of ladies. The carved work of the galleries and windows was done by Miss Fergusson, eldest daughter of the late Sir William Fergusson, surgeon to the Queen; that of the pulpit by Mrs Woddrup, wife of the proprietor of Garvald. The Free church (erected in 1845) is at Carlops. West Linton also possesses a public hall (built in 1881), a post office, with money order, savings bank, and telegraph departments, a branch of the Bank of Scotland, two hotels, a gaswork, agricultural and horticultural societies, a leek club, senior and junior curling clubs, and a police station. On the Rutherford estate, which belongs to Mrs Philip, there is a mineral spring called 'Heaven Aqua Well,' the taste of whose waters somewhat resembles that of the waters of Tunbridge Spa. West Linton was once known as Linton Roderick or Linton Rutherford. The double name is found as early as the 12th century, and was probably derived from that of the chief man or family in the district. There is another Linton in Haddingtonshire—East Linton—from which that in Peebleshire is distinguished by the prefix *West*. According to Chambers (in his *History of Peebleshire*, 1864), West Linton was at one time a burgh of regality and centre of traffic. Quoting from Pennicuik, he says:—'In the Regent Morton's time West Linton was a pendicle of Dalkeith, but was created a burgh of regality by John, the first Earl of Traquair, who derived from it his title of Lord Linton. . . . Linton is known to have had a resident baillie of regality, who was assisted in keeping order by a council, composed of portioners or small proprietors, known as the "Lairds of Linton." Sheep markets were once held at West Linton four times a year, but their size and importance gradually dwindled until they ceased altogether. Now the business done in the village is almost entirely local, its chief frequenters being commercial travellers, anglers, and a few summer visitors.

An interesting relic is to be found in the statue of a woman, placed on the top of the village pump. It represents the wife of James Gifford, usually known as Laird Gifford, who flourished as a mason and stone carver in 1666. Another curiosity, according to Chambers, 'consisted in a marble tombstone in the parish churchyard, over the grave of James Oswald of "Spital" or Spitals.' During his lifetime it had served in some way at the social gatherings of which Oswald was fond, and at his death (1726) it was placed over his grave by his widow. It bore the following inscription in Latin:—'To James Oswald of Spittal, her deserving husband, this monument was erected by Grizzel Russell, his sorrowing wife. This *marble table*, sitting at which I have often cultivated good living (*lit.* propitiated my tutelar genius), I have desired to be placed over me when dead. Stop, traveller, whoever thou art; here thou mayest recline, and, if the means are at hand, mayest enjoy this table as I formerly did. If thou doest so in the right and proper way, thou wilt neither desecrate the monument nor offend my *manes*. Farewell.' This relic was carried off about the year 1838, and sold for the value of the marble. The carving of grave-stones was once largely engaged in at West Linton, suitable stone being found in the Deepsykehead quarries. Handloom weaving of cotton fabrics was also carried on by the villagers. Pop. of West Linton (1831) 395, (1861) 512, (1871) 514, (1881) 434, (1891) 359, of whom 174 were males. Houses (1891) inhabited 106, uninhabited 16.

The parish, containing also CARLOPS village, is

bounded NW and NE by the Edinburghshire parishes of West Calder, Midcalder, Currie, and Penicuik, SE by Newlands, S by Kirkurd, SW and W by Dolphinton and Dunsyre in Lanarkshire. Its utmost length, from N by E to S by W, is $9\frac{3}{8}$ miles; its utmost breadth is $7\frac{3}{8}$ miles; and its area is 23,313 acres, of which 57 are water. LYNE WATER, rising at an altitude of 1260 feet above sea-level, winds $7\frac{1}{2}$ miles south-south-eastward through the middle of the parish, then $1\frac{1}{2}$ mile south-by-westward along the Newlands boundary. The North Esk, fed by Carlops Burn, flows 5 miles south-south-eastward and east-by-northward along the Midlothian border, and MEDWIN Water $4\frac{1}{2}$ miles along the W boundary. The drainage thus belongs mainly to the Tweed, but partly to the Clyde and partly to the Firth of Forth. Many small streams flow through the parish, which also contains Slipperfield Loch ($1\frac{1}{2} \times \frac{1}{2}$ furl.), 9 furlongs SSW of the village. As a rule the surface is hilly, with a northward ascent to the Pentland range, which lies on the northern border. In the SE, along Lyne Water, it declines to 700 feet above the sea; and chief elevations, from S to N, are Blyth Muir (1015), Mendick Hill (1480), King Seat (1521), Byrchope Mount (1752), Mount Maw (1753), and West CAIRN Hill (1844). The scenery is extremely pretty and attractive, especially near Carlops and HABBIE'S HOWE, which, in the summer time, are visited by picnic parties without number. The greater part of the land is occupied by sheep farms (the parish being noted for a famous breed), but near the rivers the ground is under tillage and yields good crops. The soil is chiefly either clay on limestone or sandy loam upon a gravelly bottom. White freestone has been largely quarried at Deepsykehead and Spittalhaugh, and limestone calcined at Whitfield; whilst fuller's earth is found near the Lyne, blue marl at Carlops, and Scotch pebbles in the streams. Mansions, noticed separately, are GARVALD HOUSE, MEDWYN, and SPITALHAUGH. This parish is in the presbytery of Peebles and synod of Lothian and Tweeddale; the living is worth £335. The church of Linton Roderick was a vicarage under the monks of Kelso from the reign of David I. to the Reformation. In the 13th century a chaplaincy of the Virgin Mary existed at Ingliston, and a chapel attached to an hospital at Chapel on Lyne Water. Two schools—public (1874) and Episcopal—with respective accommodation for 112 and 68 children, have an average attendance of about 90 and 50, and grants amounting to nearly £100 and £40. Pop. of parish (1801) 1064, (1831) 1577, (1861) 1534, (1871) 1387, (1881) 1117, (1891) 1005.—*Ord. Sur.*, shs. 24, 32, 1864-57.

Linton, a Border parish of NE Roxburghshire, whose church, within 3 furlongs of the southern boundary, stands $1\frac{1}{4}$ mile N of Morebattle, 4 miles WSW of Yetholm, and $6\frac{1}{2}$ miles SSE of the post-town, Kelso. It is bounded NW by Sprounston, NE by Northumberland, E by Yetholm and Morebattle, S by Morebattle, and W by Eckford. Its utmost length, from NNE to SSW, is $6\frac{1}{2}$ miles; its breadth varies between $9\frac{1}{4}$ furlongs and 4 miles; and its area is 6428 acres, of which $34\frac{3}{8}$ are water. KALE WATER flows $1\frac{1}{2}$ mile westward along the southern boundary; and one burn, running southward to it, traces all the boundary with Eckford; whilst another, issuing from pretty Hoselaw Loch ($3 \times 1\frac{1}{2}$ furl.; 640 feet) in the north-eastern extremity of the parish, is a feeder of Bowmont Water. A second lake, Linton Loch, which lay to the SE of the parish church, and covered some 50 acres, has been drained. Along the southern and the western boundary the surface declines to less than 300 feet above sea-level, and thence it rises to 926 feet at Linton Hill on the eastern border, 750 at the Kip and near Old Graden, and 715 at Hoselaw. The SW corner, a fertile level of about 300 acres, rises only a few inches above the level of Kale Water, and hence is subject to inundations. The rest of the parish is a mixture of hollows and rising-grounds, valleys and hills, and presents an appearance alike diversified and charming. The low grounds, excepting some largish patches of moss and about 75 acres under wood,

are in a state of rich cultivation, and all the eminences, excepting the top of Linton Hill, are wholly arable. The rocks are partly eruptive, partly carboniferous. Rock crystal occurs in seams among the erupted rocks, sandstone has been quarried at Frogden, and coal is known to exist in thin seams. The soil of the plain at the SW corner is partly a strong retentive clay, and partly a deep loam incumbent on sand or gravel; elsewhere it is variously or mixedly clay, loam, sand, and gravel. Linton Tower, the baronial fortalice of the noble family of Somerville, stood on an eminence near the parish church, and seems to have been a place of considerable strength. It figured prominently in the Wars of the Succession, and was first severely damaged, next utterly demolished, by the English in the time of Henry VIII. Another ancient fortalice, at Graden, had a similar history to that of Linton Tower. The parish, both from its lying immediately on the Border, and from its forming part of the so-called 'dry marches,' which offered no natural hindrance to the movements of a hostile force, was peculiarly exposed to the turmoils and conflicts of Border warfare. A spot called 'the Tryst,' on Frogden Farm, once marked by several standing stones, was a place of rendezvous for parties about to make a foray into England; and a narrow pass between two heights, in the vicinity of the parish church, has been thought to bear marks of having been fortified, and may have been regarded as a suitable fastness for checking invasion or repelling pursuit. Remains of circular camps are on several eminences, and sepulchral tumuli are in various places. The poet, Thomas Pringle (1789-1834), was born at Blakelaw Farm; and Mr Dawson, a leading agricultural improver, tenanted Frogden Farm. Clifton Park, noticed separately, is the only mansion; and its owner is R. H. Elliot, Esq. Linton is in the presbytery of Kelso and synod of Merse and Teviotdale; the living is worth £321. The pretty little antique church crowns the top of a small round hill, and contains 160 sittings. The public school, with accommodation for 84 children, has an average attendance of about 55, and a grant of nearly £52. Pop. (1801) 403, (1831) 462, (1861) 608, (1871) 570, (1881) 543, (1891) 468.—*Ord. Sur.*, sh. 26, 1864.

Linton, East, a small police burgh in Prestonkirk parish, Haddingtonshire. It stands 80 feet above sea-level, $1\frac{3}{4}$ mile NNE of conical Traprain Law (700 feet), mostly on the left bank of the river Tyne, and has a station on the North British railway, $5\frac{3}{4}$ miles WSW of Dunbar, and $23\frac{1}{2}$ E by N of Edinburgh, whilst by road it is $5\frac{3}{4}$ miles ENE of Haddington, and $6\frac{1}{2}$ SSE of North Berwick. It took the name of 'Linton' from a large, deep linn here in the river Tyne; it gave that name to the parish from the earliest record down to the Reformation; and it bears the prefix *East* to distinguish it from West Linton in Peeblesshire. A prosperous place, conducting a considerable amount of rural trade, it consists mainly of East Linton proper, immediately on the railway, and partly of the extra-burghal suburb of Preston, 3 furlongs lower down the river, and it has a post office (Prestonkirk), with money order, savings bank, and telegraph departments, a branch of the National Bank, a gas company, a grain mill, a saw mill, curling and bowling clubs, horticultural and ornithological societies, Freemasons', Good Templars', and Foresters' lodges; Young Men's Christian Association; cattle fairs on the second Mondays of March, May, and June, and on the Thursday before Falkirk October Tryst—the last of the most importance. A public hall, 60 feet long, $36\frac{1}{2}$ broad, and 31 high, was erected in 1874-75 at a cost of £1000, and serves for volunteer drill, lectures, concerts, etc. A coffee-house, with reading-room and library, was built in 1880-81, at a cost of £1000, by Lady Baird of Newbyth; and in 1882 a public school, with accommodation for 364 children, was built at a cost of £3000. The parish church in Preston suburb, was built in 1770, and enlarged in 1824. In 1892 a panelled and carved screen was erected across the gable of the church behind the pulpit, and the wall between the vestry beyond and the church

was removed. The Free church, improved and enlarged in 1879-80 at a cost of £1200, is a handsome Romanesque building, with tower and spire, adorned in 1888 with an illuminated clock; and there is a U.P. church. The railway viaduct over the Tyne here is the finest on the North British, that of Dunglass only excepted. John Pettie, R.A. (1839-93) was brought up here, and here too were born the painters Colin Hunter and Charles Martin Hardie, as well as Robert Brown (1757-1831), writer on agriculture. It is governed by a provost, 2 bailies, and 6 commissioners. Pop. (1891) 1111, of whom 865 were within the police burgh.—*Ord. Sur.*, sh. 33, 1863.

Linton, West. See LINTON, Peeblesshire.

Lintrathen (Gael. *Uinne-bre-ainn*, 'falls in the river'), a hamlet and a parish in the Grampian district of W Forfarshire. The hamlet, Bridgeud of Lintrathen, lies 715 feet above sea-level, on Melgam Water, $5\frac{7}{8}$ miles NNE of Alyth station, and $7\frac{1}{4}$ W of Kirriemuir, under which it has a post office.

The parish is bounded NE by Cortachy and Clova, E by Kingoldrum, SE by Airlie, and SW and W by Glenisla. Its utmost length, from NNW to SSE, is $10\frac{1}{2}$ miles; its utmost breadth is $5\frac{1}{2}$ miles; and its area is $22,872\frac{3}{8}$ acres, of which $248\frac{3}{8}$ are water. Lying between the Grampian range and the valley of Strathmore, the district in which the valley is situated is termed the Braes of Angus. The river ISLA, running 7 miles south-eastward along the Glenisla boundary, here makes two beautiful falls, the REEKIE LINN and the Slugs of ACHRANNIE, and for 4 miles is overhung by steep, rocky, wooded banks, which rises in places to more than 100 feet. Back or Melgam Water, rising in the northern extremity of the parish at an altitude of 1970 feet above sea-level, winds $13\frac{3}{8}$ miles south-south-eastward through the interior, then 2 miles eastward, south by eastward, and west-south-westward, along the Kingoldrum and Airlie boundaries, till after a total descent of 1600 feet, it falls into the Isla opposite Airlie Castle. The circular Loch of Lintrathen ($5\frac{1}{2} \times 5\frac{1}{4}$ furl.), $\frac{1}{4}$ mile W of the the village, is a picturesque sheet of water. Since 1893 Dundee has been wholly supplied with water from this loch, at the rate of 9,000,000 gallons per day. During the water commissioners' operations the area of the water of the loch was increased and the fishing improved. In the extreme S the surface declines to less than 400 feet above sea-level, and chief elevations to the W of Melgam Water, as one goes up the glen, are the wooded Knock of Formal (1153 feet), Craiglea Hill (1272), *Hare Cairn (1692), and *Cairn Daunie (2066); to the E, Strone Hill (1074), Craig of Auldallan (1371), Creich Hill (1630), *CAR LAW (2196), Milldewan Hill (1677), and *High Tree (2001)—where asterisks mark those summits that culminate on the confines of the parish. The rocks to the N of the Loch of Lintrathen are metamorphosed Silurian, but the southern district falls within the Old Red Sandstone area of Strathmore. Less than one-seventh of the entire area is arable, and even of this the soil is mostly moorish, whilst so late is the season that oats have actually been reaped on 30 Dec. Plantations cover some 1200 acres. Since 1879 giving off a portion to Kilry *quoad sacra* parish, Lintrathen is in the presbytery of Meigle and the synod of Angus and Mearns; the living is worth £172. The parish church was built in 1802. Three public schools—Backwater, Braes of Coull, and Lintrathen—with respective accommodation for 30, 63, and 101 children, have an average attendance of about 10, 30, and 45, and grants amounting to over £23, £42, and £53. Valuation (1884) £13,610, 9s., (1893) £11,515, 5s. Pop. (1801) 919, (1831) 998, (1861) 893, (1871) 756, (1881) 641, (1891) 558, of whom 267 were females, and 508 were in the ecclesiastical parish.—*Ord. Sur.*, sh. 56, 1870.

Lintrose, an estate with a mansion, in Cargill parish, SW Forfarshire, 2 miles S by E of Coupar-Angus. Its owner is Miss Anne Murray. A cave, about 50 feet long, and from 3 to 8 feet high, was discovered on the estate in 1840.—*Ord. Sur.*, sh. 48, 1868.

Linvale, a village in Lesmahagow parish, Lanarkshire, $1\frac{3}{4}$ mile W of Lanark.

Linwood, a village in Kilbarchan parish, and a *quoad sacra* parish in Abbey parish, Renfrewshire. The village stands on the left bank of Black Cart Water (here spanned by a one-arch bridge), $1\frac{1}{2}$ mile NE of Johnstone, and $3\frac{1}{2}$ miles W of Paisley, under which it has a post office, with money order, savings bank, and telegraph departments. It arose from a large cotton-mill, built in 1792, burned down in 1802, and rebuilt in 1805; was laid out on a regular plan; is inhabited chiefly by the operatives of its cotton-mill, and by workers in the paper-mill and in neighbouring mines; acquired, in 1872, a water supply by pipes from the Paisley water-works; and has an Established church, a public school, and a Roman Catholic chapel-school. The *quoad sacra* parish, constituted in 1850, is in the presbytery of Paisley and the synod of Glasgow and Ayr; its minister's stipend is £200. Pop. of village (1881) 1393, (1891) 1315; of *quoad sacra* parish (1881) 2505, (1891) 3295.—*Ord. Sur.*, sh. 30, 1866.

Lismore (Gael. 'great garden'), an island of Lorn district, Argyllshire, in the middle of the lower waters of Loch Linnhe, less than 1 furlong from the nearest point of the Argyllshire mainland, and 5 to 11 miles NNW and N of Oban. Its utmost length, from NE to SW, is $10\frac{1}{2}$ miles; its breadth is $1\frac{1}{2}$ mile; and its area is 6013 $\frac{1}{2}$ acres, of which 368 are foreshore and 93 water. With a basis of limestone, it consists of an uneven rocky ridge; and its rugged surface attains a maximum altitude of 417 feet above sea-level at Barr Mor. Limestone rock crops everywhere up; but the soil, though thin, is a fertile deep-coloured loam. A lighthouse on Musdile Island, at the south-western extremity of Lismore, built in 1833 at a cost of £11,229, shows a fixed light, visible at a distance of 16 nautical miles. The bishopric of Lismore or Argyll in 1236 had its seat transferred from Muckairn on the S side of Loch Etive to the island of Lismore, where long before a Columban monastery had been founded by St Lughadh or Moluoc. The only remains of the Cathedral, once 137 by 29 $\frac{1}{2}$ feet, are an aisleless Decorated choir, with traces of a chapter-house and sacristy; and as re-roofed in 1749 this choir now serves as a parish church. It is situated at the Clachan of Lismore. One of its deans, Sir James M'Gregor, between 1512 and 1540, compiled a commonplace-book, filled mainly with Gaelic heroic ballads, several of which are ascribed to the authorship of Ossian or his kindred. This, the earliest specimen of Scottish Gaelic, strictly so called, was edited, with a translation and notes, by the Rev. T. M'Lauchlan and Dr Skene, in 1862. There are a U.P. and a Baptist church, and two schools; while at the north-west end of the island stands the small village of Port Ramsay. A pier has been erected at Achnacroish. Three fresh-water lakes afford a good supply of salmon, trout, etc. Besides oats and potatoes, great quantities of lime are exported. ACHANDUIN or AUCHINDOWN CASTLE, CASTLE RACHAL, Castle Guylen (a Danish fort), and Tirefoor Castle, with cairns and fortified camps, make up the antiquities. Lismore is the Epidium of Ptolemy, one of his five Ebudæ. Pop. (1861) 865, (1871) 720, (1881) 621, (1891) 561, of whom 508 were Gaelic-speaking.—*Ord. Sur.*, shs. 45, 44, 1876-84.

Lismore and Appin, a united parish in Lorn district, N Argyllshire. It comprehends the ancient parishes of APPIN and LISMORE, with the whole of ELLAN-MUNDE; and includes Lismore proper and the great district of Appin, the former consisting of islands in Loch Linnhe, the latter lying on the SE side of Loch Linnhe, and extending from Loch Creran to Loch Leven. The Kingairloch detached portion of the parish, situated on the western shore of Loch Linnhe, and comprising 22,730 acres, was transferred by the Boundary Commissioners in 1891 to Kilmallie. The parish is bounded N by Inverness-shire, E by Glenorchy and Ardehatten, S by Ardehatten, Kilmore, and Torosay, and W by Morvern and Kilmallie. Its area is 94,725 acres, of which 829 $\frac{1}{2}$ are water. Its districts and features, other than LISMORE island, are noticed in our articles on AIRDS, APPIN, BALLACHULISH, CASTLE-MEARNAIG,

CRERAN, DUROR, GLENCOE, GLENCRERAN, LEVEN, MUSDILE, and SHUNA. At most, 4000 acres are in tillage; nearly as many are under wood; and all the rest of the land is moss, moor, hill-pasture, or barren mountain. Giving off the *quoad sacra* parishes of Appin, Duror, and St Munda (Glencoe), and including the chapelry of Glencreran, Lismore is in the presbytery of Lorn and the synod of Argyll; the living is worth £324. There are a U.P. church, a Baptist chapel, and a post office at Lismore. In the civil parish nine schools—two of them Episcopalian, the rest public—with total accommodation for 880 children, have an average attendance of about 500, and grants amounting to nearly £683. Pop. (1801) 3243, (1831) 4365, (1861) 3595, (1871) 3535, (1881) 3433, (1891) 3135, of whom 2577 were Gaelic-speaking, and 681 were in the ecclesiastical parish.—*Ord. Sur.*, shs. 45, 44, 53, 1876-84.

Liston. See KIRKLISTON.

Listonshiels. See KIRKLISTON and CURRIE.

Little Colonsay. See COLONSAY, LITTLE.

Littledean Tower, a ruined baronial fortalice in Maxton parish, Roxburghshire, on the right bank of the river Tweed, $1\frac{1}{2}$ mile NE of Maxton village. Down to the first half of the 18th century it was the seat of a branch of the Kers, and now belongs to Lord Polwarth.—*Ord. Sur.*, sh. 25, 1865.

Little Dunkeld. See DUNKELD, LITTLE.

Little France, a hamlet in Liberton parish, Edinburghshire, 3 furlongs S of Craigmillar Castle, and $1\frac{1}{2}$ mile N of Gilmerton. The French servants of Queen Mary resided here when in attendance upon her at Craigmillar Castle.

Little Loch Broom. See BROOM and LOCHBROOM.

Littlemill, a village in Old Kilpatrick parish, Dumbartonshire, on the N bank of the Clyde, near Bowling, and 2 miles ESE of Dumbarton. It carries on ship-building, and has a distillery.

Little Roe, an islet ($4\frac{1}{2} \times 3$ furl.) of Delting parish, Shetland, in Yell Sound, 7 furlongs from the northern coast of the mainland part of Delting.

Little Ross, a small island of Borgue parish, Kirkcudbrightshire, at the W side of the mouth of the Dee's estuary, $\frac{1}{4}$ mile E of the headland which separates the entrance of that estuary from the entrance of Wigtown Bay. Measuring 2 $\frac{1}{2}$ furlongs by 1, it is crowned by a lighthouse, which rises 175 feet above high water, and commands a magnificent view of the waters and screens of the estuary, all northward to Kirkcudbright, whilst seaward it looks across the entire breadth of Wigtown Bay, and along the Solway Firth on to its emergence with the Irish Sea. The lighthouse, built in 1843 at a cost of £8478, shows a flashing light every five seconds, visible at the distance of 18 nautical miles, and guiding the navigation of the Solway; and two towers, standing on a line with the lighthouse in a north-easterly direction, serve to guide a vessel over the bar at the mouth of the Dee into the fairway of the estuary.—*Ord. Sur.*, sh. 5, 1857.

Little Sorbie. See SOBIE.

Littlewood, a pretty shooting-box in Tullynessle parish, Aberdeenshire, on the left bank of the Don, 5 miles W by N of Alford.

Livet Water. See GLENLIVET.

Livingston ('Leving's town,' after a Fleming of that name who settled here about the time of Alexander I.), a parish with a village of the same name near the middle of the SE border of the county of Linlithgow. It is bounded NE by Uphall parish, E and SE by the county of Edinburgh, SW by Whitburn parish, and NW by the parishes of Bathgate and Ecclesmachan. On the SE the boundary follows the course of the river Almond from a point almost 1 mile due E of Livingston church, up to the junction with Breich Water, and then follows the course of the latter stream for $3\frac{1}{2}$ miles, till near Auchinhard the parish of Whitburn is reached. From this it passes 5 furlongs NNW to the SE branch of Foulshiels Burn, down which it passes to the Almond and up the Almond to a point $2\frac{1}{2}$ furlongs due W of Riddoch-hill. Elsewhere, except at the N corner where

it touches Brox Burn, the boundary is purely artificial and very irregular, the general shape of the parish showing two compact portions to the NE and SW, united by a narrow neck in the centre. The greatest length, from NNE at Dechmont Toll to SSW on the Breich above Auchinbard, is $5\frac{3}{4}$ miles; the breadth varies from 3 miles to 5 furlongs; and the area is 5391 acres, $28\frac{3}{4}$ being water, and $5362\frac{1}{4}$ laud, of which about 400 acres are under wood, and the rest is either arable or good pasture. The average height of the land above sea-level is from 400 to 500 feet, the highest elevations being 525 feet to the N of Blackburn village, and Dechmont Law (686) in the NE, the latter, which is volcanic, rising very abruptly and commanding an extensive view. The soil varies very considerably, passing from strong clay and rich loam to poor, thin, clayey, and moorish ground, but is on the whole good. The underlying rocks are sandstone, limestone, volcanic rocks, and coal; and all belong to the Carboniferous period. The beds of economic value—oil shale—are all worked along the SW and S; and at Blackburn there is a bed of a particular kind of volcanic rock known as pikrite, or lake-stone, or ovenstone, which has been found very suitable for the construction of ovens, and which has long been largely quarried; the quarry is now partly in WHITBURN parish. The drainage is carried off by the river Almond and by Breich Water, and the burns that flow into them, the principal being the Foulshields and Bickerton Burns on the SW, Dean Burn to the W of Cousland, Lochshot Burn to the W and Folly Burn to the E of Livingston village. The total length of the course of the Almond through or along the border of the parish is 6 miles. To the E of the village stood the peel of Linlithgow, which was a tower defended by an earthen rampart and a wide fosse, traces of which remained till the middle of the 18th century. It was deemed of sufficient importance to be garrisoned by Edward I. in 1302. A mansion, N of the village, was pulled down shortly after the late Earl of Rosebery acquired the estate in 1812. The garden of the old mansion-house contained, about the middle of the 17th century, a large typical collection of plants, forming a sort of botanic garden, and amounting to about 1000 species—for those days a very large number. It was formed by Sir Patrick Murray of Livingston, one of the most promising men of science of his time, who died, while quite a young man, during a journey on the Continent, undertaken for the purpose of increasing his botanical knowledge. The plants were then removed to Edinburgh by Sir Andrew Balfour, and formed a large proportion of those with which the first Botanic Garden of that city—the Old Physic Gardens—was stocked in 1670. A number of uncommon plants that had escaped from the garden are still to be found in the neighbourhood. One mile NNE of the village, at the farmhouse of Newyearfield, a square tower, said to have been one of the hunting seats of the Scottish kings, remained down till about the close of the 18th century. There is a well close by, the water of which, sprinkled on patients with the sovereign's own hand before sunrise on the first morning of a new year, was accounted a remedy for the king's evil. Of the Leving who bestowed his name on the parish, nothing is known, but *Thurstanus filius Levingi* witnessed a charter of Robert, Bishop of St Andrews, confirming a grant of the church to the monks of Holyrood, made by David I. The district also gave the title of Baron to the Livingstones, Earls of Linlithgow. The earldom was given in 1600 to Alexander, the seventh baron; and the fifth and last earl was attainted for his share in the rebellion of 1715. The lady celebrated in song as 'the bonnie lass o' Livingstone,' is said to have kept an inn at the old village of Livingston, about a mile to the W of the present village, which was then the Kirkton. The principal mansions are Blackburn House, DECHMONT HOUSE, and Westwood. The parish is traversed by two of the main lines of road from Edinburgh to Glasgow, one passing for $4\frac{1}{2}$ miles across the centre and S, from 1 mile E of the village of Livingston to the bridge

across the Almond at the village of Blackburn, and the other by Dechmont on the N to Bathgate; and also by the Edinburgh and Bathgate branch of the North British railway system, which passes through the northern part for $2\frac{1}{2}$ miles. Livingston station, $4\frac{1}{2}$ miles ESE of BATHGATE on this line, and Newpark and MIDCALDER stations on the Caledonian system, which skirts the parish on the S, afford means of access, though they are from $1\frac{1}{2}$ to 4 miles distant from the village. A mineral loop of the Caledonian also passes through the S end.

Besides the village of the same name the parish also contains the hamlet of Dechmont in the N, and part of the village of BLACKBURN on the SW. The village of Livingston itself, near the centre of the SE side of the parish, is merely the kirkton of the parish. It has a post office under Midcalder, and an inn. The parish church was rebuilt in 1732 and repaired in 1837: the silver communion cups have the inscription—'Gifted by Sir Patrick Murray of Livingstoun, 1696.' The Free church, built in 1844, is at the E end of the village. The school board have under their charge Livingston and Blackburn public schools; these, with accommodation for 115 and 173 children respectively, have an average attendance of about 70 and 215, and grants amounting to nearly £67 and £225. The parish, which is in the presbytery of Linlithgow and the synod of Lothian and Tweeddale, was once a vicarage of Holyrood, and prior to 1730 comprehended also the whole of Whitburn parish. The living is worth £218 a year. The industries are agriculture, mining, and two paper-mills at Blackburn, a cotton-mill at the same place having been burned down in 1876. The principal proprietor is the Earl of Rosebery. Pop. (1881) 1484, (1891) 1616, of whom 322 were males and 794 females.—*Ord. Sur.*, shs. 32, 31, 1857-67.

Livishy House, a mansion in Urquhart parish, Inverness-shire, near the left bank of the Moriston, 9 miles N by E of Fort Augustus.

Loanhead, a police burgh and a *quoad sacra* parish in Lasswade parish, Edinburghshire, $4\frac{1}{2}$ furlongs from the North Esk's left bank, and 5 miles S by E of Edinburgh by road, but $10\frac{1}{2}$ by the Roslin and Glencorse branch of the North British railway. With charming environs, including a very romantic reach of the North Esk's glen, it mainly consists of two streets, which join each other at an obtuse angle; and it contains a number of good houses, which serve as a summer retreat for some of the Edinburgh townfolk, though its own population consists in great measure of miners and those engaged in the oil-works and paper-mills. It has a post office, with money order, savings bank, insurance, and telegraph departments, a branch of the British Linen Company's Bank, a gaswork, a water supply by pipes, a police-station, public and R.C. schools, and a bowling club. It became a police burgh in 1834, and under the Burgh Police Act of 1892 is governed by a provost, 2 bailies, and 6 commissioners. Places of worship are an Established church, a Free church, a Reformed Presbyterian church (rebuilt 1875), a Primitive Methodist chapel, and St Margaret's Roman Catholic church (1878). Loanhead *quoad sacra* church is in the presbytery of Dalkeith and synod of Lothian and Tweeddale. Minister's stipend, £223. Population of burgh, (1861) 1310, (1871) 1759, (1881) 2493, (1891) 3244; of *q.s.* parish (1891) 3845.—*Ord. Sur.*, sh. 32, 1857.

Loanhead, a village in Monikie parish, Forfarshire, $8\frac{1}{2}$ miles NE of Dundee.

Loanhead-Denny. See DENNY-LOANHEAD.

Loaningfoot, a hamlet in Kirkbean parish, Kirkcudbrightshire, 10 miles ESE of Dalbeattie.

Loans, a village in Dundonald parish, Ayrshire, $2\frac{1}{2}$ miles ENE of Troon, under which it has a post office.

Lochaber, a territorial district in the S of the mainland of Inverness-shire, bounded by Perthshire, Argyleshire, the Great Glen, and Badenoch. Its greatest length, from NE to SW, is 33 miles; and its greatest breadth is 21 miles. The river Leven, Loch Leven, Loch Linnhe, the river Lochy, Loch Lochy, and the

foot of Loch Laggan, form the greater part of its boundaries; lines of mountain watershed form parts of its boundaries with Perthshire and Badenoch; the basin of the Spean, downward from the foot of Loch Laggan, forms about one-half of all the area; the Ben Nevis group of mountains, with the deep glens which skirt or cut them, occupies most of the south-western district; Glenspean, Glenroy, Glengloy, Glentraig, Loch Ossian, Loch Gulbin, Loch Treig, Glen Nevis, and Ben Nevis, are prominent features of the interior; and the entire district is pre-eminently Highland, abounds in deep glens, broad moors, and lofty mountains, and is at once wild, romantic, and grand. It seems to take its affix of 'aber,' not as other places do from a confluence of streams, but from a girdling and intersecting of lochs. It belongs parochially to Kilmornaig and Kilmallie, and has been noticed in detail in our articles on these parishes, and on its several lochs, glens, and prominent mountains. A wolf that was slain in it in 1680 by Sir Ewen Cameron of Lochiel is commonly stated to have been the last of its kind in Great Britain; but, according to Chambers's *Domestic Annals*, one was killed in the forest of Darnaway, Elginshire, so late as 1743. See the Rev. Alex. Stewart's *Nether Lochaber* (Edinb. 1883).

Loch-a-Bhealach. See GLENSHIEL.

Loch Achall. See ACHALL.

Lochalsh, a coast parish of SW Ross and Cromarty, containing the village of Balmacara, which lies on the northern shore of Loch Alsh, 8 miles SW of Stromeferry, 4 ENE of Kyle-Akin, 50 WNW of Invergarry, and 63 WSW of Beaul, and which has a branch of the Commercial Bank, an hotel, a steamboat landing-stage, and Lochalsh post office, with money order, savings bank, insurance, and telegraph departments. Containing also the village and post office of Plockton (6½ miles N by W of Balmacara), STROME FERRY station (53 miles WSW of Dingwall), and the Kyle-Akin extension of the Dingwall and Skye branch of the Highland railway, with a terminus quay at Kyle-Akin Strait, having a depth of 24 feet at low water, the parish is bounded NW by salt-water Loch Carron and Lochcarron parish, NE by Urray, E by Kilmoraek in Inverness-shire, and S by Kintail and salt-water Lochs Long and Alsh. Its utmost length, from ENE to WSW, viz., from the head of Loch Monar to Kyle-Akin Ferry, is 28¼ miles; its utmost breadth is 6 miles; and its area is 80½ square miles, or 51,513½ acres, of which 1077½ are water, 27½ tidal water, and 877½ foreshore. Loch Alsh, like a land-locked lake, with an utmost width of 2½ miles, strikes 7 miles eastward from Kyle-Akin to the vicinity of Ellandonan Castle, where it forks into Lochs Drnich and Long, the latter of which curves 5½ miles north-eastward, though its average width is less than ¼ mile. Issuing from Loch Cruashie (4 × 1½ furl.; 850 feet), the river Ling or Long flows 11 miles west-south-westward along the Kintail boundary to the head of Loch Long. Other lakes are Loch Monar (4¼ miles × 3¾ furl.; 663 feet), at the Inverness-shire border; Loch-an-Lalagh (1 × ¼ mile; 893 feet), on the Lochcarron boundary; and Loch Calavie (9 × 3 furl.; 1129 feet), Loch an Tachdaidh (5 × 3 furl.; 970 feet), and An Gead Loch (7 × 2 furl.; 960 feet), in the eastern interior. The surface is everywhere hilly or grandly mountainous, rising east-north-eastward to Carn na h-Onaich (1100 feet), *Meall Ruadh (1476), Beinn Dronaig (2612), *Lurg Mhor (3234), Beinn Bheag (2030), and *An Riabhachan (3696), where asterisks mark those summits that culminate on the confines of the parish. Some small vales and the slopes of the lower hills have a good arable soil, and the uplands are neither rocky nor heathy, but furnish excellent pasture. Not more, however, than 1450 acres are in tillage; some 2000 are under wood; and the rest is either pastoral or waste. Mansions are Balmacara House and Duncraig Castle; and Sir Kenneth James Matheson of Lochalsh, Bart., is almost sole proprietor. (See ARDROSS.) Lochalsh is in the presbytery of Lochcarron and the synod of Glenelg; the living is worth £195. The parish church at Balmacara village was built in 1806. Other places of worship are a Govern-

ment church at Plockton, and Lochalsh and Plockton Free churches; and four public schools—Auchmore, Earbusaig, Lochalsh, and Plockton—with respective accommodation for 50, 82, 90, and 201 children, have an average attendance of about 30, 50, 55, and 120, and grants amounting to over £35, £54, £61, and £136. Pop. (1801) 1606, (1841) 2597, (1861) 2413, (1871) 2319, (1881) 2050, (1891) 1868, of whom 1742 were Gaelic speaking.—*Ord. Sur.*, shs. 82, 72, 81, 71, 1880-84.

Loch Alvie. See ALVIE.

Lochan Balloch. See MONTEITH, PORT OF.

Lochan-an-Eilein, a beautiful lake in the Rothiemurchus portion of Duthill parish, Inverness-shire, at the SE base of Ordbain Hill (1250 feet), and 1¾ mile S of Inverdrue House. Lying 840 feet above sea-level, and having an utmost length and breadth of 7½ and 4½ furlongs, it is fringed with tall pines and weeping birches, remains of the ancient Forest of Rothiemurchus; and contains an islet, with the ruins of a fortalice, which is a breeding place of the osprey.—*Ord. Sur.*, sh. 74, 1877.

Lochanhead, a station at the mutual border of Torquair and Lochrutton parishes, near the meeting-point with Kirkgunzeon parish, Kirkcudbrightshire, on the Dumfries and Castle-Douglas railway, 6 miles SW of Dumfries.

Lochans, a village of Inch parish, Wigtownshire, at the meeting-point with Portpatrick and Stoneykirk parishes, 2¾ miles S by E of Stranraer. It has a post office and a public school.

Lochar, a morass and a stream of S Dumfriesshire. Lochar Moss, which is distributed among the parishes of Caerlaverock, Ruthwell, Mouswald, Torthorwald, Dumfries, and Tinwald, extends 10 miles north-north-westward from the Solway Firth to Locharbriggs village, and varies in breadth between 2 and 3 miles. It is all but a dead flat, from 26 to 70 feet above sea-level, and seems at a comparatively recent period of the human epoch to have formed a navigable inlet of the sea, which, filling gradually with silt and aquatic vegetation, became successively a marshy forest and a bog. Most of it, to the depth of many feet, is soft, spongy, and quaking; and in the days of Robert Bruce it was impassable by any large body of men; but now it is traversed by four lines of good road, and by the Glasgow and South-Western and the Dumfries and Lockerbie railways, and has been so extensively reclaimed that a large aggregate of it is arable, pastoral, or wooded, and more resembles a pleasant valley than a morass. A ridgy tract in it, more than ½ mile long, and 35 acres in area, consists entirely of sea sand. Apparently the earliest portion won from the sea, it seems for some time to have formed an island, and still is called the Isle. A thick stratum of sea sand, which underlies all its moss, and here and there is mixed with shells and other marine deposits, has been found, by excavation, to contain canoes, fragments of vessels, several iron grapples, small anchors, and other relics of ancient navigation. Many large and seemingly aged trees—pine chiefly, but also oak, birch, and hazel—have been discovered in the portions of the moss immediately above the sea sand, and all lie with their tops towards the NE, seeming to have been overthrown by the continued action of impetuous tides and south-western blasts. Much of the morass has long served as turbarry, for the supply of peat fuel; and parts of it were burned, in 1785 and 1826, by accidental fire. The villages of Locharbriggs, Roucan, Collin, Blackshaws, Bankend, and Greenmill all lie on or near the margin of the morass; and the village of Trench stands on one of the roads which traverse it.

Lochar Water, rising, as Park Burn, at an altitude of 480 feet above sea-level, flows 18½ miles south-south-eastward along the boundary between Kirkmahoe, Dumfries, and Caerlaverock on the right, and Tinwald, Torthorwald, Mouswald, and Ruthwell on the left, till it falls into the Solway Firth at a point 2¾ miles E by N of Caerlaverock Castle. It traverses Lochar Moss from end to end, nearly through the middle, so as to cut it into pretty equal halves; and here is so sluggish, or almost stagnant, as generally to look more like a

ditch than a stream. At low tide it has $5\frac{1}{2}$ miles farther to wind across the sands, through a channel less than 1 furlong broad, before it reaches the open waters of the firth. Its fishing is poor—some trout, roach, pike, and eels above, with sea-trout, herling, and occasional salmon below.—*Ord. Sur.*, shs. 10, 6, 1864-63.

Locharbriggs, a village in the N of Dumfries parish, Dumfriesshire, near the right bank of Lochar Water, with a station on the Dumfries and Lockerbie section of the Caledonian railway, $2\frac{3}{4}$ miles NNE of Dumfries, under which there is a post office. It adjoins a rising ground, which superstition long regarded as a trysting-place of witches. Pop. (1881) 306, (1891) 344.

Loch Archaig. See ARCHAIG.

Lochawe, a station of the Callander and Oban railway (1830), in Ardehattan parish, Argyllshire, at the SE base of Ben Cruachan, and on the NW shore of Loch Awe towards its foot, 22 miles E of Oban and $2\frac{1}{2}$ W of Dalmailly. There are a steamboat pier, a post office, with money order, savings bank, and telegraph departments, a fine hotel (1881) in the Scottish baronial style, and St Conan's Established chapel of ease (1883). See AWE.—*Ord. Sur.*, sh. 45, 1876.

Loch Bay, a bay in Duirinish parish, Isle of Skye, Inverness-shire, deflecting from the E side of Loch Dunvegan, and striking 3 miles south-eastward into the middle part of Vaternish peninsula. It lies exposed to NW winds, yet affords good anchorage in ordinary weather.

Lochboisdale, a hamlet on Loch Boisdale, in the island of South Uist, Outer Hebrides. It has a post office, with money order, savings bank, and telegraph departments.

Lochbroom, a coast parish of NW Ross and Cromarty, whose church stands at the head of salt-water Loch Broom, 6 miles SSE of Ullapool, 26 NW of Garve station on the Dingwall and Skye section of the Highland railway, and $35\frac{3}{4}$ NW by W of Dingwall. There is a post office, with money order, savings bank, and telegraph departments. Containing also ULLAPOOL village, it is bounded NE by Assynt in Sutherland, E by Kincardine and Contin, SE by Contin, SW by Gairloch, and W by the North Minch. Its utmost length, from N to S, is $29\frac{1}{2}$ miles; its utmost breadth, from E to W, is $20\frac{1}{4}$ miles; and its area is 273,347 acres, of which 10,425 $\frac{1}{2}$ are water, 69 $\frac{1}{2}$ tidal water, and 1832 foreshore. It thus is the third largest parish in Scotland, exceeded only by Kilmallie and Kilmonivaig, and larger than the whole county of Midlothian. The coast is much indented by Enard Bay, Loch Broom, Little Loch Broom, and GREINORD Bay; projects the bold headlands of Rudha na Breige (302 feet), Rhu Coigach (263), Cailleach Head (370), and Stattic Point (607); and is fringed by TANERA, ISLE MARTIN, GREINORD, and other islands. On the Sutherland border lies Loch VEYATIE (4 miles \times 1 to $3\frac{1}{2}$ furl.; 366 feet), sending off the Uidh Fhearna 9 furlongs west-north-westward to FEWIN or Fionn Loch ($2\frac{1}{2}$ miles \times 3 furl.; 357 feet), out of which the KIRK-AIG runs $3\frac{1}{4}$ miles west-north-westward to the sea. FIONN LOCH ($5\frac{3}{8}$ miles \times $\frac{1}{2}$ furl. to $1\frac{1}{4}$ mile; 559 feet) sends off the Little GREINORD $5\frac{1}{2}$ miles north-by-eastward along the Gairloch boundary to the head of Greinord Bay; and Loch DROMA ($1\frac{1}{4}$ \times $\frac{1}{2}$ mile; 905 feet) sends off the Abhuinn Droma or Broom 10 miles north-north-westward to the head of Loch Broom. Other freshwater lakes are triangular Loch Gainmheich ($7 \times 6\frac{1}{2}$ furl.; 251 feet), isleted Loch Skinaskink (3 miles \times 70 yards to $2\frac{1}{4}$ miles; 243 feet), Loch na Doire Seirbhe ($1\frac{1}{4} \times \frac{1}{4}$ mile; 222 feet), the chain of Lochs Lurgain ($3\frac{1}{2}$ miles \times $4\frac{1}{2}$ furl.; 173 feet), Bad a' Ghaill (2 miles \times $\frac{3}{4}$ mile), and Owskeich ($1\frac{1}{2} \times \frac{3}{4}$ mile; 72 feet), Loch ACHALL ($1\frac{1}{2}$ mile \times 3 furl.; 265 feet), and Loch an Daimh ($1\frac{1}{2}$ mile \times $1\frac{1}{3}$ furl.; 672 feet), all to the N of Loch Broom; with Loch a' Bbraoin ($2\frac{5}{8}$ miles \times $2\frac{1}{2}$ furl.; 813 feet) and Loch na Sheallag ($4\frac{3}{8}$ miles \times 5 furl.; 279 feet) to the S. From the latter the Meikle GREINORD flows $5\frac{1}{2}$ miles north-north-westward to the western side of Greinord Bay; and the Strathbeg river, rising at an altitude of 2240 feet, winds $12\frac{1}{2}$ miles north-by-westward

to the head of Little Loch Broom. Lesser streams and lakes there are without number, all, like the above, yielding capital fishing. The surface is everywhere hilly or wildly mountainous, chief elevations from N to S being Cul Mhor (2786 feet), An Stac (2009), Cul Beag (2523), BENMORE-COIGACH (2438), Beinn Eilideach (1830), Meall Dubh (2105), Eiddidh nan Clach Geala (3039), *BEN DEARG (3547), Sail Mhor (2508), An Teal-lach (3483), Sgurr Ban (3194), and *A' Chailleach (3276), where asterisks mark two summits that culminate on the Contin boundary. 'To a spectator placed on a central eminence the appearance is that of a wide and dreary waste of bleak and barren heath, as if a segment of the great ocean, agitated and tossed and tumbled, not by an ordinary storm, however violent, but by some frightful convulsion of nature, with here and there a rude and lofty peak of rugged rock towering to the skies, had been suddenly condensed and formed into a solid shapeless mass of unproductive desert, without one spot of green on which to rest the eye.' But much of the vales, the seaboard, and the shores of the salt-water inlets exhibit delightful blendings of wood and water, fertile field, and green hill pasture, luxuriant lowland, and lofty romantic mountains, and is brilliantly picturesque. Metamorphic rocks, chiefly gneiss, but partly granite, partly quartzite, predominate in the mountains. Quartz is in places plentiful; Old Red sandstone prevails in Coigach, in some other parts of the mainland, and in most of the islands; limestone appears in Strathbeg; bog iron ore occurs in great quantity on Scorrig Farm; and mineral springs, chiefly of a chalybeate character, are numerous. The soil is exceedingly various, but on much of the arable land is light, sharp, gravelly loam. The adjoining estates of Braemore and Inverbroom were purchased in 1865-67 by Sir John Fowler, Bart., K.C.M.G., C.E., LL.D., F.G.S. (b. 1817), who was chief engineer of the Forth Bridge, and was created a baronet on the completion of that undertaking in 1890. At Braemore, 4 miles S by E of the parish church, he built a handsome mansion in 1866-68, and he has planted 1200 acres along the river Broom with larch and Scotch firs, besides doing much in the way of draining, fencing, reclaiming, road and bridge making, etc. Another mansion, noticed separately, is DUNDONNELL. Sir George Simson (1792-1860), governor of the Hudson's Bay Company's Territories, was a native. The only antiquities are several round drystone buildings of the kind called 'duns.' Loch Broom gives name to one of the twenty-seven fishery districts of Scotland. Within this district the number of boats at the beginning of 1895 was 538, of fishermen 1834, whilst the value of boats was £6222, of nets £9510, and of lines £1302. The following is the number of barrels of herrings cured or salted in different years—(1874) 3070, (1878) 13,282, (1882) 1126, (1894) 4871; of cod, ling, and hake taken, (1874) 43,880, (1882) 53,273, (1892) 70,760, (1894) 50,137. Since 1859, giving off the *quoad sacra* parish of Ullapool, Lochbroom is in the presbytery of Lochcarron and the synod of Glenelg; the living is worth £440. The parish church, built in 1844, is amply commodious. The Free church is at Ullapool. Eleven schools, of which ten were public, with total accommodation for 988 children, have an average attendance of about 560, and grants amounting to over £855. Pop. (1881) 4191, (1891) 3910, of whom 3362 were Gaelic-speaking, and 1487 were in the ecclesiastical parish.—*Ord. Sur.*, shs. 101, 92, 1882-81.

Loch Brora. See BRORA.

Lochbuy, a hamlet in Torosay parish, Mull island, Argyllshire, at the head of salt-water Loch Buy, 12 miles SW of Auchnacraig. It has a post office under Craignure, with money order, savings bank, and telegraph departments, an Episcopal church, St Kilda's (1876; 66 sittings), in 13th century Gothic, and a pre-Reformation chapel, which, with a modern roof, now serves as the mausoleum of the Maclaines, possessors of the lands of Lochbuy for more than five hundred years. Their present representative, Murdoch Gillian Maclaine (b. 1845; suc. 1863), is chief of the clan. His seat,

Lochbuy House, is a spacious and handsome mansion, commanding a fine view. See BUY.

Lohcarron, a coast parish of SW Ross and Cromarty, containing the stations of Attadale, Strathcarron, and Auchnashellach, on the Dingwall and Skye branch (1870) of the Highland railway, 48, 45½, and 40 miles WSW of Dingwall. Containing also the fishing village of Lohcarron or JEANTOWN, it is bounded N by Gairloch, E by Contin, SE by Urray and Lochalsh, S by Lochalsh and salt-water Loch Carron, and W by Applecross. Its utmost length, from NE to SW, is 20½ miles; its utmost breadth is 10½ miles. The parish prior to 1891 had four detached parts, all surrounded by the parish of Applecross. Glaschnoc detached portion, containing 141 acres, and a portion of the main body of the parish lying to the east of this detached part, were transferred in that year by the Boundary Commissioners to Applecross. The other three detached portions were united to the main body of the parish by transferring to Lohcarron that part of Applecross which lay east of the river Kishorn and south of the north march of Kishorn estate. The upper 8¾ miles of beautiful Loch Carron, ¼ to 1½ mile broad, belong to this parish, which takes its name therefrom, except that Strome Ferry station and the 2½ miles of railway to the NW (closely skirting all the south-eastern shore) are in the parish of Lochalsh. The river Carron, issuing from Loch Scaven or Sgamhain (9 × 2½ furl.; 491 feet) on the Contin border, flows 14 miles south-westward to the head of Loch Carron, and about midway in its course expands into Loch Doule or Dhughail (11 × 3 furl.; 100 feet). Lochs Coulin and Clair, together 2½ miles long, and from 50 to 600 yards broad, lie on the GAIRLOCH border at an altitude of 300 feet, and send off a stream towards the head of Loch Maree; Loch an Laoigh (1 × ¼ mile; 893 feet) lies on the Lochalsh border, and sends off a stream towards the head of Loch Long; and elsewhere, either on the boundaries or dotted over the interior, are fully thirty smaller lakes and lakelets. The surface is everywhere mountainous. Chief elevations to the NW of loch and river, as one goes up Glencarron, are Bad a' Chreamha (1293 feet), Glas Bheinn (2330), Torr na h-Iolair (1383), Meall a' Chinn Deirg (3060), Fuar Tholl (2368), Sgurr Ruadh (3141), Beinn Liath Mhor (3034), and Carn Breac (2220); to the SE, Carn nan Iomairean (1523), Creag a' Chaoruinn Eagan (2260), Sgurr Choinnich (3260), and Moruisk (3026). The predominant rock is gneiss, conjoined with quartzite, clay-slate, and limestone; Old Red sandstone occurs separately; and the presence of iron is indicated by a few chalybeate springs. The soil is exceedingly various. A good deal has been done in the way of planting, fencing, reclaiming, and road-making on the Auchnashellach and Lohcarron estates; but less than a twentieth of the entire area is in tillage or under wood. There is a post office, with money order, savings bank, and telegraph departments, at Lohcarron village. One of the twenty-seven fishery districts of Scotland bears the designation of Lohcarron and Skye. Within this district the number of boats at the beginning of 1895 was 865, of fishermen 2300, whilst the value of the boats was £6708, of nets £14,354, and of lines £2377. The following is the number of barrels of herrings cured and salted in different years—(1854) 2056, (1874) 17,932, (1878) 5682, (1881) 53,649½, (1892) 28,749, (1894) 28,584; of cod, ling, and hake taken, (1871) 30,552, (1874) 15,180, (1882) 22,160, (1892) 89,202, and (1894) 52,614. The only antiquities are an old circular dun or fort behind Lohcarron village, and the remains of Strome Castle, once a stronghold of the Macdonalds of Glengarry. Two Gaelic poets of the early part of the 18th century, William and Alexander Mackenzie, were natives of Lohcarron. Courthill House, at the head of Loch Kishorn, 5½ miles W by N of Lohcarron, is on the Lohcarron estate, which in 1882 was sold by Dugald Stuart, Esq., to C. J. Murray, Esq. Auchnashellach deer forest extends over 50,000 acres. It belongs to Mr. Emerson Bainbridge. Giving off a portion of Shieldaig parliamentary parish, Lohcarron is the seat of a presbytery in the synod of

Glenelg; the living is worth £200. The parish church, 1¼ mile NNE of Lohcarron, and built in 1751, was thoroughly repaired in 1892, and a new churchyard enclosed round it. There is also a Free church; and five public schools—Attadale, Balnachra, Kishorn, Lohcarron, and Strome—with respective accommodation for 45, 50, 51, 167, and 45 children, have an average attendance of about 30, 15, 45, 95, and 40, and grants amounting to nearly £47, £34, £50, £115, and £50. Pop. (1801) 1178, (1831) 2136, (1861) 1592, (1871) 1629, (1881) 1456, (1891) 1642, of whom 1438 were Gaelic-speaking, and 1390 were in the ecclesiastical parish.—*Ord. Sur.*, shs. 82, 81, 1882.

The presbytery of Lohcarron comprises the *quoad civilia* parishes of Applecross, Gairloch, Glenelg, Glenshiel, Kintail, Lochalsh, Lochbroom, and Lohcarron; the *quoad sacra* parishes of Knoydart, Plockton, Poolewe, Shieldaig, and Ullapool; and the chaperies of Aultbea, Dornie, and Strome Ferry. Pop. (1871) 18,712, (1881) 17,243, (1891) 17,076, of whom about 290 are communicants of the Church of Scotland. The Free Church also has a presbytery of Lohcarron, with churches at Applecross, Coigach, Gairloch, Glenelg, Glenshiel, Kinlochewe, Little Lochbroom, Lochalsh, Lochbroom, Lohcarron, Plockton, Poolewe, and Shieldaig, which 13 churches together have about 6000 members and adherents.

Loch Carroy. See CARROY.

Lohcote House, a handsome mansion of 1843 in Torphichen parish, Linlithgowshire, 4½ miles N of Bathgate.

Lochdochart Lodge, a modern mansion in Killin parish, W Perthshire, on the northern shore of Loch Iubhair near its foot, 3¾ miles ENE of Crianlarich station on the Callander and Oban railway.

Lochearnhead, a village in Balquhider parish, Perthshire, at the head of Loch Earn, 1¼ mile NNE of Lochearnhead station on the Callander and Oban railway, this being 12 miles NNW of Callander, and 400 feet above the village. It is a small and scattered place; but it stands amid delightful scenery of lake, wood, glen, and mountain, and serves as a fine centre for tourists. At it are a post office, with money order, savings bank, and telegraph departments, a Free church, two schools, and a good hotel. Omnibuses run in connection with the hotel, and meet all trains. Here, on 10 Sept. 1842, the Queen changed horses on her way from Taymouth to Drummond Castle; and at the hotel, on 6 Sept. 1869, she called on Sir Malcolm and Lady Helen Macgregor, whose seat, Edenchip, is within half a mile of the village. The loch, at the foot of Glen Ogle, is said to be 100 fathoms deep, and is 7 miles long by 1½ broad. The fishing is free to parties staying at the hotel. The loch is said to be a 'dour' one to fish.—*Ord. Sur.*, sh. 46, 1872.

Lochee, a town on the E border of Liff and Benzie parish, Forfarshire, 1¼ mile by road NW of the centre of Dundee, but 6 miles by the Newtyle branch of the Caledonian railway. Forming part of the parliamentary and royal burgh of Dundee, it may be regarded as mainly a suburb thereof; yet it has the history, the proportions, and, to some extent, the interests of a separate town. With scarcely one building a century old, it long presented, and partly still presents, an uncontinuous and dispersed appearance, as it was formed without any precise alignment, and with reference only to the narrow notions and the private conveniences of the original and early tenants, so that it largely consists of mere lanes and incommensurable thoroughfares. Still it exhibits results of important improvements, tasteful renovations, and well-arranged extensions; is traversed by a very creditable main street, with substantial houses and good shops; shares the amenities of the fine public park of Balgay Hill, acquired in 1871 for the use of its inhabitants, and for those in the W end of Dundee; and has a post office under Dundee, with money order, savings bank, insurance, and telegraph departments, branches of the Royal and North of Scotland Banks, two chief inns, and a number of miscellaneous institutions. In 1892 Lochee Park (25 acres) was presented to the town

of Dundee by the Messrs Cox. The park, which is endowed, with lodge, lavatories, sheds, etc., cost upwards of £20,000. In 1893 the late Thomas Cox of Malesden left £10,000 for the erection of a free library, reading-room, and swimming baths. Of two Established churches, the first, Lochee (1100 sittings), was built in 1829-30. Having been remodelled through the liberality of Mr Cox at a cost of £5000, in 1880 it was raised to *quoad sacra* status. The second, St Luke's, was formerly a U.P. church, which, becoming insufficient for the increasing congregation, was purchased for the Establishment in 1874 for £1500, made *quoad sacra* in the succeeding year, and has since been improved, reseated, and had an organ erected. The U.P. church, successor to what is now St Luke's, was built in 1871 at a cost of £6000; and has a tower and spire rising to the height of 130 feet, and containing a fine peal of bells. It figures conspicuously in the view from Balgay Park, and from a long reach of country to the W; it has a gallery round three sides, and contains 1000 sittings. There is another U.P. church in Lochee Road. The Free church was built in 1846, and the Baptist chapel in 1866. St Margaret's Episcopal church, in Ancrum Road, was built in 1888, and contains 120 sittings. The Roman Catholic church of the Immaculate Conception was built in 1866, and contains 700 sittings; whilst St Clement's (1857) is now the chapel of the Wellburn Asylum, conducted under Roman Catholic auspices, for 200 old and destitute men and women. Handloom weaving of coarse linen fabrics was long the principal occupation of the inhabitants, and towards the close of the 18th century employed nearly 300 looms, and produced goods to the value of £12,520 a year. Bleaching was afterwards introduced, and continued to increase till it occupied, in 1819 and previous years, an area of not less than 25 acres. Factories for spinning, weaving, dyeing, bleaching, printing, and calendering were afterwards erected, and soon employed so many hands as to lead to a great and rapid extension of the town. The principal factory, the Camperdown Linen Works of Messrs Cox Brothers, on the N side of the town, occupies an area of 25 acres, and was erected in 1849-64. The largest jute factory in the world, it is a neat and regular suite of buildings, with an elegant illuminated clock-turret and peal of fine-toned bells, a gigantic chimney-stalk, 282 feet high, which alone cost £6000, a half-time free school, etc. The same firm has large works at Calcutta, on the Hoogly, where the jute is selected and packed previous to being shipped to their works here. An excellent sandstone has long been worked in several quarries contiguous to Lochee. It was used in the construction of the Houses of Parliament, and was a chief material in the construction of Dundee harbour. Pop. of Lochee *quoad sacra* parish (1881) 2762, (1891) 2796; of St Luke's (1881) 3716, (1891) 4208; of Lochee registration district (1871) 11,076, (1881) 12,370, (1891) 13,867.—*Ord. Sur.*, sh. 48, 1868.

Lochenbreck, an hotel and a spa in Balmaghie parish, Kirkcudbrightshire, on the Woodhall estate, 4 miles S by W of New Galloway station. Near it is Lochenbreck Loch (2½ × 2 furl.; 650 feet), with remains of a crane.—*Ord. Sur.*, sh. 5, 1857.

Lochend, a small lake in South Leith parish, Edinburghshire, on the burgh boundaries of both Leith and Edinburgh, 5 furlongs NW of Jocks Lodge. It lies on the margin of a plain, extending to Leith and to the base of Calton Hill; has an utmost length and breadth of 390 and 160 yards; was formerly much more extensive than now; and is believed to have been only one of a chain of lakes, occupying much of the south-western portion of the plain. It gave once water-supply to Leith for all uses, and still gives it for manufacturing uses; and is overhung, on one side, by a short range of low cliffy rocks, crowned with vestiges of the castle of Logan of Restalrig. A strip of ground along its western margin, formerly covered with its water, but now left bare, was discovered in 1871 to contain what appears to have been part of a great wooden framework sustaining an ancient lake village.—*Ord. Sur.*, sh. 32, 1857.

Lochend, a place in Kirkcunzeon parish, Kirkcudbrightshire, ½ mile SE of Killywhan station, and 7 miles SW of Dumfries. Here is the Free church of Lochend and Newabbey. Loch Arthur or Lochend Loch, immediately to the E, is noticed under NEWABBEY.

Lochend, a hamlet in Inverness parish, at the foot of Loch Ness, 5¼ miles SSW of the town.

Lochend House, a seat of Sir George Warrender, Bart., in Dunbar parish, Haddingtonshire, ¾ mile S of Dunbar town. See BRUNTSFIELD.—*Ord. Sur.*, sh. 33, 1863.

Locher Water, a pretty rivulet of Renfrewshire, rising at an altitude of 830 feet above sea-level, and winding 8 miles east-north-eastward, chiefly within Kilbarchan parish, till, after a total descent of 805 feet, it falls into Gryfe Water, at a point 1½ mile E of Houston village. A petrifying spring on its banks has yielded many beautiful specimens of dendritic carbonate of lime.—*Ord. Sur.*, sh. 30, 1866.

Loch Fell, a mountain of N Dumfriesshire, at the meeting-point of Eskdalemuir, Hutton, Wamphray, and Moffat parishes, 5½ miles E of Moffat town. One of the Hartfell group, it rises to an altitude of 2256 feet above sea-level.—*Ord. Sur.*, sh. 16, 1864.

Lochfield, a hamlet in Annan parish, Dumfriesshire, 1 mile E of the town.

Lochfoot, a village in Lochrutton parish, Kirkcudbrightshire, at the foot of Lochrutton Loch, 5½ miles WSW of Dumfries, under which it has a post office.

Lochgair, a small sea-loch, a hamlet, and a mansion in Kilmichael-Glassary parish, Argyllshire. The sea-loch, opening from the W side of Loch Fyne, penetrates the land 7 furlongs north-north-westward, and receives a streamlet 1¼ mile long from Loch Glashan. The hamlet, at the head of the sea-loch, 4½ miles SSW of Minard, has a post office, a small mission church of the Church of Scotland, and a public school. The mansion, in the vicinity of the hamlet, succeeded an ancient baronial fortalice, which was long the seat of extensive clan-power.—*Ord. Sur.*, sh. 37, 1876.

Lochgelly, a police burgh in Auchterderran parish, SW Fife. It stands 460 feet above sea-level, 5 furlongs NW of Loch Gelly, and ¾ mile S by E of Lochgelly station on the Dunfermline branch of the North British railway, this being 7¾ miles WSW of Thornton Junction and 7½ ENE of Dunfermline. The headquarters till 1798 of a gang of notorious Gipsies, it dates mostly from modern times, and owes its rapid rise in prosperity and population to the extensive collieries and ironworks of the Lochgelly Coal and Iron Company (1850). It has a post office, with money order, savings bank, and railway telegraph departments, a branch of the Union Bank, a hotel, a police station, a public water supply (1880), a gaswork, a music hall, a floral and horticultural society (1871), a co-operative store (1892), a Good Templars' lodge (1871), a masonic lodge, and curling, bowling, cricket, and bicycle clubs. A handsome drill-hall, 70 feet long by 40 wide, was erected in 1892. The Established church, built as a chapel of ease in 1855, in 1868 was raised to *quoad sacra* status, and in 1885 was repaired. The Free church was built about 1868; the U.P. church was long the only place of worship in the town; and St Patrick's Roman Catholic church (1877) contains 250 sittings. Three schools, Lochgelly public, Lumphinnans public, and Lumphinnans Roman Catholic, with respective accommodation for 1019, 246, and 98 children, have an average attendance of about 785, 145, and 120, and grants of over £730, £150, and £97. Loch Gelly, lying chiefly in Auchterderran parish, but partly in Auchtertool, measures 5¾ by 3½ furlongs, and is wooded and beautiful on its northern bank, but elsewhere bleak and tame. Lochgelly House, a seat of the Earl of MINTO, stands near the NW corner of the lake. Pop. of *g. s.* parish (1881) 3190, (1891) 5436, of whom 1293 were in Ballingry parish; of police burgh (1881) 2601, (1891) 4133.—*Ord. Sur.*, sh. 40, 1867.

Lochgilphead, a small town in Kilmichael-Glassary parish, Argyllshire, round the northern end of Loch Gilp, which opens from Loch Fyne, 126 miles W by N of Edinburgh, 80 WNW of Glasgow, 51 N by E of

Campbeltown, 24½ SSW of Inveraray, 13½ N of Tarbert, and 2 NNE of Ardrishaig. By its nearness to the Crinan Canal, which passes within ¼ mile of the town, and to Ardrishaig, where the canal joins Loch Fyne, Lochgilphead shares in the growing trade of the West Highlands, to which it owes its rise from a small fishing village to a prosperous well-built town, lighted with gas and plentifully supplied with water. In the summer it may be easily reached by the 'swift' steamers, and in winter there is regular communication daily with Glasgow and twice a week with Inverness, Skye, Oban, etc. The main road from Campbeltown to Oban passes through it, and it is also on the route of the Loch Awe and Ardrishaig coaches. Lochgilphead has a post office, with money order, savings bank, insurance, and telegraph departments, branches of the Clydesdale and Union Banks, and several inns. The weaving of woollen cloth is carried on. There is a considerable fishing population. Fairs are held on the third Thursday of March, on Wednesday fortnight after Kilmichael markets in May and October, and on the second Thursday after the fourth Thursday in November. Lochgilphead contains the Argyll and Bute District Asylum for the Insane, and the combination poorhouse for the parishes of Glassary, Kilmartin, Kilcalmonell, and North and South Knapdale. The former was erected in 1862-64. In 1883 the Lunacy Board for the counties of Argyll and Bute decided to obtain more accommodation by erecting a building apart from the asylum, to be occupied mainly by industrial patients. The building is 202 feet long and three storeys high. It has accommodation for 120, and its cost was £11,000. The fittings are of the most complete description, and the arrangement of the rooms, dormitories, bath-rooms, etc., excellent. The total accommodation of the asylum is 400. The poorhouse has accommodation for 72 paupers. Places of worship are Lochgilphead parish church (1885), 2 Free churches, a Baptist church (1815), and Episcopal Christ Church, the last a Middle Pointed edifice, containing some fine stained glass. Under the Burgh Police Act of 1892 the government of Lochgilphead is carried on by a provost, 2 bailies, and 6 commissioners. A sheriff court is held every two months in the year, and justice of the peace courts as required. There is a good-sized court-house. Connected with the town may be mentioned the public reading-room, a company of the Argyll and Bute Artillery Volunteers, an agricultural society, a gaswork, Glassary and South Knapdale Cemetery. In front of the main street a part of the loch has been embanked, and a piece of ground made for the convenience of the fairs. On the Kilmory side is a quay for accommodation of the small craft engaged in the herring fishery and coal vessels. The County Council meetings are held in May, October, and December at Dunoon, Lochgilphead, and Oban respectively. The *quoad sacra* parish of Lochgilphead included at one time Ardrishaig, which is now a separate *quoad sacra* parish. It is in the presbytery of Inveraray and synod of Argyll. The following schools are in Lochgilphead: Aird public, Ardrishaig public, and Lochgilphead public, which, with respective accommodation for 50, 238, and 238 scholars, have an average attendance of about 30, 220, and 250, and grants amounting to nearly £43, £328, and £384. Pop. of town (1861) 1674, (1871) 1642, (1881) 1489, (1891) 1320; of *quoad sacra* parish (1881) 2381, (1891) 2252, of whom 2097 were in Kilmichael-Glassary parish, and 155 in South Knapdale.—*Ord. Sur.*, sh. 29, 1873.

Lochgoilhead, a village and a parish in Cowal district, Argyllshire. The village, at the head of salt-water Loch GOIL (6 miles × 2 to 6½ furl.), is 12½ miles SW of Arrochar, by Glencroe; 11½ SE of Inveraray, by Hell's Glen and St Catherine's Ferry; and 19½ NNW of Greenock, by water. A peaceful little place, with its lovely surroundings of wood and water, mountain and glen, it communicates daily by coach with Inveraray, by steamer with Greenock and Craigendoran, and in summer with Glasgow direct. It has a post office, with money order, savings bank, and telegraph departments,

a hotel, a steamboat pier, and a good many villas and pretty cottages.

The parish, containing also CAIRNDOW and Carrick Castle hamlets, comprises the ancient parishes of Lochgoilhead and Kilmorich, the former in the S, the latter in the N, and down to 1649 comprehended Strachur besides. It is bounded N by Glenorchy, NE by Killin in Perthshire, E by Arrochar, SE by the upper 10½ miles of salt-water Loch LONG (½ mile broad), SW by Kilmun, W by Strachur, and NW by salt-water Loch Fyne and Inveraray. Its utmost length, from N to S, is 19 miles; its breadth varies between 1 mile and 11 miles; and its area is 110½ square miles or 70,460½ acres, of which 39,192½ belong to the Lochgoilhead section, 191 are water, 6 tidal water, and 567½ foreshore. The northern division, extending from the vicinity of Benloy to the mountains which screen the northern side of Glencroe, includes BEN BUT (3106 feet), BEN IME (3318), BEN ARTHUR (2891), and Glenfyne. The southern division, extending 10½ miles down Loch Long and 5 down Loch Fyne, is intersected by Loch Goil, and includes GLENCROE, GLENKINGLAS, HELL'S GLEN, BEN-AN-LOCHAIN (2955 feet), BEN BHEULA (2557), BEN DONICH (2774), BEN LOCHAIN (2306), and ARGYLL'S BOWLING GREEN. In all twenty-seven summits have a height of more than 2000 feet above sea-level, and the surface everywhere is wildly mountainous and very rugged, abounding in vast bare rocky masses, and in stupendous cliffs and precipices. Caves, grottos, and natural vaults are very numerous; streams, rapid and romantic, but all of short length of course, run to the several sea lochs; and four small lakes, well stored with trout, lie high up among the hills. Considerable pendicles of land on the coasts and in the glens are well cultivated and highly embellished; and a large aggregate of natural wood clothes much of the upland tracts, especially on and near the coasts, and charmingly hides or relieves the savageness of the mountain wastes. Eruptive and metamorphic rocks predominate; limestone has been worked in several quarries; at the head of Loch Fyne is a vein of lead ore, said to be very rich in silver; and jasper, several kinds of spar, and some other interesting minerals are found. The soil in the bottoms of some of the glens is rich and fertile; on patches of the coast lands is light, sharp, and sandy; in the high glens is generally wet and spongy, partly a deep moss; and on the pastoral uplands is mostly thin, dry, and firm to the tread of cattle. The chief antiquities, ARDKINGGLASS, CARRICK, and DUNDARAVE Castles, are noticed separately, as also are the mansions of ARDGARTAN, ARDKINGGLASS, and DRIMSYNIE. Lochgoilhead is in the presbytery of Dunoon and the synod of Argyll; the living is worth £260. The parish church, at Lochgoilhead village, is an old building, with 305 sittings; there are mission churches at Kilmorich and Carrick Castle, the latter opened in 1892. There is also a Free Church at Lochgoilhead; and two public schools, Kilmorich and Lochgoilhead, with respective accommodation for 44 and 72 children, have an average attendance of about 25 and 30, and grants of over £43 and £68. Pop. (1801) 1145, (1831) 1196, (1861) 702, (1871) 766, (1881) 870, (1891) 787, of whom 376 were Gaelic-speaking.—*Ord. Sur.*, shs. 37, 38, 45, 46, 1871-76.

Lochinch Castle, the seat of the Earl of Stair, in Inch parish, Wigtownshire, on the W side of Castle-Kennedy Loch, 1½ mile N of Castle-Kennedy station, this being 2½ miles E by S of Stranraer. Completed in 1867, it is a stately Scottish Baronial edifice, with pepper-box turrets, corbie-stepped gables, terraced gardens of singular beauty, a splendid pinetum, etc. The present and tenth Earl, since 1703, is John Hamilton Dalrymple (b. 1819; suc. 1864).—*Ord. Sur.*, sh. 3, 1856. See also CASTLE-KENNEDY, OXENFORD, and BARGANY.

Lochindaal, a bay in Sleat parish, Isle of Skye, Inverness-shire. It opens from the Sound of Sleat, opposite the mouth of Loch Hourn; washes most of the NE end of the Sleat peninsula; and is separated by an isthmus of only ½ mile in breadth from the head of Loch Eishart.

Loch Indal, a sea loch in Islay island, Argyllshire.

Opening on the S between the Mull of Islay and the Point of Rhynns, and penetrating 12 miles north-north-eastward to the centre of the island, it measures 8 miles across the entrance, and contracts gradually over the first $4\frac{3}{4}$ miles to a breadth of $6\frac{3}{8}$ miles. It then expands on the E side into Laggan Bay, then over the last $6\frac{1}{2}$ miles has an average breadth of only about 2 miles; and, though all comparatively shallow, is much frequented by shipping, and abounds in fish. A lighthouse, designated of the Rhynus of Islay, stands on Orsay islet adjacent to the W side of the loch's entrance, and shows a flashing light every 5 seconds, visible at the distance of 18 nautical miles; and another lighthouse, designated of Loch Indal, stands on Dune Point, and shows a fixed white light from NE by E to about N by E half E, a red light from about N by E half E to about W half N, and a white light from about W half N to SW by W three-quarters W, visible at the distance of 12 nautical miles.

Lochindorb (Gael. *loch-an-doirbh*, 'the lake of trouble'), a loch in the county of ELGIN, partly in the parish of EDINKILLIE, but mostly in the parish of CROMDALE, and just touched on the W side $\frac{2}{3}$ mile from the S end by the county of NAIRN. It is 2 miles in a straight line, or 3 miles by road, SW of Dava station on the Highland railway, and 6 miles in a straight line NNW of GRANTOWN. It is $2\frac{1}{2}$ miles long from NNE to SSW, a little over $\frac{1}{2}$ mile wide at the broadest part near the centre, and $\frac{1}{3}$ mile wide, farther to the SW, at the narrowest part, where the county of Nairn touches the edge, and 24 feet deep at the deepest part. At the SSW end it receives the burns of Glentarroch and Feith a Mhor Fhìr, and several other small burns flow into it at other points, while the surplus water is carried off by the DORBOCK Burn, which flows out near the NNE and takes a northerly course to its junction with the DIVIE, and so to the FINDHORN. The boundary line between Edinkillie and Cromdale passes in a straight line from the point where the Dorbock leaves the loch, to the W side at the narrowest part, just opposite the projection below Lochindorb Lodge. The hills about it, though of considerable height, lose a good deal of their effect in consequence of the height of the surface of the loch itself, which is 969 feet above sea-level, and the effect therefore is pretty rather than grand, particularly as there is very little wood. On the W the hills rise gently to a height of over 1000 feet; on the E a little more abruptly to Craig Tiribeg (1586) and Carn Ruigh na Caorach (1585); while to the NNE the Knock of Braemoray (1493) towers above the valley of the Dorbock. The loch is preserved, and the fishing is good, the trout weighing from $\frac{1}{4}$ to $\frac{1}{2}$ lb. Near the N end was the old king's highway between Findhorn and Spey, which is mentioned as early as the time of Alexander II. in 1236. The historical associations of the loch are important, and are connected with the castle, the ruins of which still remain on a small island of about an acre in extent, $\frac{2}{3}$ mile from the NNE end of the lake, and 350 yards distant from its E side. The water round it is about 20 feet deep, and the island rises steeply and has almost its entire area covered by the castle. It is said to be artificial, for, according to the *Old Statistical Account*, 'great rafts or planks of oak, by the beating of the waters against the old walls, occasionally make their appearance;' and Mr James Brown, in his *Round Table Club*, says that an old gamekeeper in Elgin had once got his boat's anchor fixed among oak planks. The ruins at present consist of a wall about 21 feet high and 7 feet 8 inches thick, which forms an irregular quadrangle, with round towers with sloping bases at the four corners. The length of the quadrangle within walls is 180 feet, and the width 126. Round this, inside the walls, there had been houses all round, but of these no traces now remain. On the S side the foundations of the chapel, 40 feet long, 25 wide, and with walls 3 thick, may still be traced; while to the E is the square keep. When the *Old Statistical Account* was written in 1793, the whole of the towers were standing, though only one is now at all entire. There were then also traces of houses round the

inside of the walls, and the principal entrance—a pointed arch with a portcullis—is described as very fine. The portcullis is said now to be at Cawdor Castle. The building is of the kind which, from the date of their erection, are known as 'Edwardian,' of which other examples still remain in Scotland, at Bothwell, Dirleton, Kildrummy, and Caerlaverock. Tytler supposes that Edward I. merely added to the fortifications, but Taylor, in his *Edward I. in the North of Scotland*, probably rightly, thinks that the greater part of the building was erected by Edward's orders between 1303 and 1306. Prior to that, the castle, which was much smaller, and probably a mere hunting-seat, belonged to the Cumyns, Lords of Badenoch, to crush whose power Edward I. made his expedition to the N of Scotland in 1303. Edward arrived here on 25 Sept., and took up his residence in such castle as there then was, while his army encamped on the shore to the E. He remained here till 5 Oct., received the homage of many of the northern nobles, and during his intervals of leisure enjoyed the pleasures of the chase in the surrounding district, which, bare as it now is, was at that time covered with the woods of the royal forests of Leanich and Drummynd. Walsingham and John of London mention that, 'when he had leisure from war, he indulged in the hunting alike of birds and beasts, and more particularly of stags;' while Hardyng in his chronicle advises Edward IV. to take with him in the invasion of Scotland 'kennets and ratches, and seek out all the forests with hounds and horns, as King Edward with the Longshanks did.' After the fall of the English power, it seems to have remained a royal castle, probably in the keeping of the Earls of Moray, but during the minority of David II. it was held by the Earl of Athole for the English party, and after his defeat and death at Kilblane his wife and some other ladies fled hither for refuge in 1335. The castle was at once besieged by Sir Andrew Murray, the regent, who had already won all the other northern strongholds for King David. The siege was carried on for some time, and traces of the works are still to be seen on the point nearest the castle, on the E side; but in 1336 Edward III. advanced with a large army, and compelled Murray to retreat. In 1342 we find the place used as a state prison, and in that year William Bulloch, a favourite of David II., and a deserter from the Baliol party, who was suspected of hankering after his old associates, was imprisoned here and died of cold and hunger. When John Dunbar was made Earl of Moray in 1372, Badenoch was excepted from the grant of lands, and the castle became the stronghold of the king's son, the well-known Wolfe of Badenoch, and was the place from which he made his descent on FORRES and ELGIN. When Archibald Douglas became Earl of Moray he strengthened the castle, and after his fall at Arkinholme in 1455, one of the reasons of his forfeiture, as set forth in the Act of Parliament, was 'pro munitione et fortificatione castrorum de Lochindorb et Tarnua contra Regem,' and when James II. passed north after this, he entrusted the Thane of Cawdor with the oversight of the destruction of the fortress, a work carried out at the expense of £24. After this time it again reverted to the Earls of Moray, who in 1606 sold it to an ancestor of the present Earl of Cawdor, and the Cawdor family about 1750 sold it to the Earl of Seafield, in whose family it still remains, though the Moray estate still reaches the banks of the loch.

See also Sir Thomas Dick Lauder's *Wolfe of Badenoch* (Edinb. 1827), and his *Account of the Great Moray Floods* (Edinb. 1830); Taylor's *Edward I. in the North of Scotland* (Elgin, 1858); and chap. xx. of James Brown's *Round Table Club* (Elgin, 1873).

Lochinvar, a lake in Dalry parish, N Kirkcudbrightshire, 6 miles NNE of New Galloway. Lying 770 feet above sea-level, it has an utmost length and breadth of $4\frac{1}{2}$ and $2\frac{1}{2}$ furlongs; sends off a burn south-south-westward to Ken Water; is stocked with very fine trout; and contains an islet, with vestiges of the ancient baronial fortalice of the Gordons, Knights of Lochinvar, ancestors of the Viscounts Kenmure, and one of them

the theme of Lady Heron's song in *Marmion*, 'Young Lochinvar.'—*Ordn. Surv.*, sh. 9, 1863.

Lochinver. See ASSYNT.

Lochlea. See TARBOLTON.

Lochlee (Gael. *loch-le*, 'the smooth lake'), a parish in the N of Forfarshire. The district is sometimes known as Glensk. It is bounded N by Aberdeenshire, NE for a mile by Kincardineshire, E by Edzell, S and SW by Lethnot and by Cortachy and Clova, and W by Aberdeenshire. The boundary is entirely natural. Beginning at the NE corner, at the top of Mount Battock, the line passes down the course of the Burn of Turret to the North Esk, up the North Esk, $1\frac{1}{2}$ mile, to the Burn of Keeny, and up the Burn of Keeny, and then up the Burn of Deuchary to the highest point of the Hill of Wirren (2220 feet), and from that westward along the line of watershed between the basin of the North Esk and that of the Water of Saughs—the main stream of the West Water—the principal summits being West Wirren (2060), West Knock (2273), two nameless tops to the W (2272) and (2246), Cruys (2424), East Cairn (2518), Muckle Cairn (2699), and White Hill (2787). From this point onwards the line continues between the upper waters of the North Esk and the upper waters of the South Esk in Glen Clova, the principal summits being Green Hill (2837 feet), Beuty Roads (2753), Boustie Ley (2865), and Lair of Aldararie (2726), on the borders of Forfarshire and Aberdeenshire. From this the line follows the watershed between the basins of the North Esk on the S and the Dee on the N, first N by Black Hill of Mark (2497 feet) and Fasheilach (2362), and then E by a nameless summit (2170), Hair Cairn (2203), Mount Keen (3077), with its W shoulder (2436 and 2500), Braid Cairn (2907), Cock Cairn (2387), and the ridge between (2478), Hill of Cat (2435), Mudlee Bracks (2259), and a summit between (2363), Hill of Cammie (2028), and Mount Battock (2555). From Lair of Aldararie to midway between Hill of Cammie and Mount Battock the line coincides with the boundary between the counties of Aberdeen and Forfar, and from this on to the Burn of Turret with the boundary between the counties of Kincardine and Forfar. The greatest length, from ENE at Mount Battock to WSW near the Lair of Aldararie, is $15\frac{3}{8}$ miles; the greatest breadth, from N near Cock Cairn to S near West Knock, is $8\frac{1}{2}$ miles; and the area is 58,382 acres. The surface, as might be expected from the vicinity of the parish to the Grampians, is very rough, and the average elevation is over 800 feet above sea-level. Besides the heights already mentioned, there are, between the Burn of Turret and the Burn of Tennet, Bennygray (1823 feet) and Craig Soales (1648); between Burn of Tennet and Water of Mark, Hill of Saughs (2141), Hill of Doune (2342), Craig Brawlin (1643), Badalair (1133), and Hill of Migvie (1238); between Glen Mark and Glou Lee are Round Hill of Mark (2257), Wolf Craig (2343), and Monawee (2276); to the S of Glen Lee are East Balloch (2731) and Craig Maskeldie (2224); between Loch Lee and Glen Effock is Cairn Caidloch (2117), and further to the E is Cowie Hill (1439). The heights are steep and rocky, or covered with heath and moss, and the heather extends even to the lower elevations. Of the whole area only about 2000 acres are arable, the rest is sheep-pasture or waste, and the W and SW is an extensive deer forest. The soil of the arable portion is thin and light with a gravelly subsoil, and the underlying rocks are primary, with beds of limestone. In the 16th century an iron mine at Dalbog was worked, and later lead ore was mined near Invermark, but the quantities were unremunerative. The mines were, however, noted in early times, and the last effort to work them was made by the South Sea Company in 1728 at Craig Soales. The drainage of the parish is effected by all the head-waters of the North Esk. The part to the W of Lochlee church, which is very near the centre of the parish, is drained by the Water of Mark (NW) and the Water of Lee (W). The former rises on the extreme W of the parish, and flows N, NE, and SE to its junction with the Lee, near Lochlee church, and receives on the N the burns of Fasheilach, Doune,

Ladder, Easter, and Branny. The glen through which the Mark flows is in some places very wild and picturesque. The Water of Lee is joined by the Water of Unich, which itself receives from the S the burns of Longshank and Slidderies. To the NE of the church is the Water of Tarf, which receives from the W the burns of Adekimore, Easter, and Kirny, and from the N and NE the burns of Cat, Kidloch, Clearach, and Tennet, with the burn of Crosplit. The Tarf is noted for its sudden and dangerous freshets. Farther E, on the boundary-line, is the Burn of Turret. To the E of the church the North Esk is joined on the S by the Water of Effock with the Burn of Cochlie, the Burn of Dalbrack, and the Burns of Berryhill and Deuchary, which unite to form the Burn of Keeny, and besides all these there are a very large number of smaller burns. The lochs in the parish are Carloch and Loch Lee. The former lies in the bottom of a great basin-shaped hollow on the SE flank of Craig Maskeldie, surrounded by precipices. It contains char, and the fishing is good. The latter, about $1\frac{1}{4}$ mile E by N, and 900 feet above sea-level, is on the course of the Water of Lee. It is $1\frac{1}{2}$ mile long, and 3 furlongs wide at the widest part. The fish, which, when full grown, weigh from 1 to 3 lbs., are char and trout, and permission to fish is easily procured. The patron saint of the parish is St Drostan, Abbot of Donegal in Ireland, and of Holywood in Wigtownshire, who flourished in the end of the 16th century. Where his cell was it is difficult to say, but probably the site is now occupied by the present mausoleum at Droustie. This seems a mere corruption of the saint's name, and a spring close at hand is known as Droustie's Well, while on Tarfside is Droustie's Meadow, and at Neudos in Edzell is St Drostan's Well. The whole district of Cairncross lying between the Tarf and the Turret belonged to St Drostan's Monastery, which was probably in this neighbourhood, though Dr Joseph Robertson maintained that it was in Edzell. The old church, which is at the E end of the loch, is sometimes called the 'Kirk of Dronstie;' and a deep pool in the Lee has the name of 'Monk's Pool,' derived, according to tradition, from the right possessed by the monks to catch salmon in it during Lent. In 1384, the parish is mentioned as being a chaplainry of LETHNOT, and in 1558 mention is made of a curate, but it was not till 1723 that it became a separate charge. Of the oldest church that is noticed, nothing is known but that it was burned in 1645 by the soldiers of the Marquis of Montrose. It probably was on the same site as the present old kirk, at the E end of the loch, in a very picturesque position. This building was originally thatched, but was slated in 1784. The present parish church, which is a mile to the eastward, was built in 1803, and contains 270 sittings. The Free church, built in 1843, is farther to the E, and $\frac{1}{2}$ mile NE of the village of Tarfside. It contains 250 sittings, and in 1881 was adorned with two stained-glass windows by Messrs Ballantine, to the memory of Lord Dalhousie and Dr Guthrie, the former of whom chiefly built the church, whilst the latter worshipped within its walls for upwards of twenty summers. The Episcopal church (St Drostane), at Tarfside, was built in 1878-79 by Lord Forbes, in memory of the late Rev. Alex. Forbes, Bishop of Brechin (1817-75). The church, which is Early English in style, was consecrated in 1880; it has 145 sittings, and there are three stained-glass windows and a fine font. Tarfside, near the junction of the Tarf and North Esk, is now the only village in the parish, the older Glenlee or Kirkton being gone. It has a post office under Brechin, the Episcopal church and parsonage, the public school, and a masonic lodge (St Andrew's). This body, on its institution in 1821, erected St Andrew's Tower on Modlach Hill, to afford a refuge to benighted travellers who might be caught in snowstorms. The cairn on the top of Migvie or Rowan Hill, to the W, was erected in 1866 by the Earl of Dalhousie (1805-80) as a family memorial, the names of himself, his wife, his brothers, and

his sisters being engraved on a slab at the bottom. The only seat in the parish is Invermark Lodge (the Earl of Dalhousie—born 1878; suc. 1887), W of the parish church; and close by are the ruins of Invermark Castle, a fine square tower on a commanding site, close to the North Esk. It remained almost entire down to the erection of the present parish church, when all the out-buildings were pulled down, and the interior of the tower itself cleared out, in order that the materials might be used for that building. It has a curious old door made of iron, said to have been mined and smelted on the Farm of Tarfside. It seems to date from the earlier portion of the 16th century, and to have had a moat filled from the Mark, the mouth of which seems at one time to have been closer to it. It commands the important pass of Mount Keen to Deeside. Built by one of the Lindsays, it is now in the possession of the Earl of Dalhousie. The parish is traversed by district roads from Edzell and Lethnot up the basin of the North Esk, and there are a number of connecting roads to the E, the W being, as might be imagined, entirely destitute of any communication. A track leads from the church up Glen Mark and Ladder Burn by a winding path known as 'The Ladder,' across Mount Keen and by Glen Tanner to Deeside. It was along this that the Queen and Prince Albert travelled 20 Sept. 1861, on their expedition to Fettercairn. The Lochlee part is thus described in *Leaves from the Journal of our Life in the Highlands* (1868): 'We came in sight of a new country, and looked down a very fine glen—*Glen Mark*. We descended by a very steep but winding path, called *The Ladder*, very grand and wild; the water running through it is called *The Ladder Burn*. It is very fine indeed, and very striking. There is a small forester's lodge at the very foot of it. The pass is quite a narrow one; you wind along a very steep and rough path, but still it was quite easy to ride on it, as it zigzags along. We crossed the burn at the bottom, where a picturesque group of "shearers" were seated, chiefly women, the older ones smoking. They were returning from the south to the north, whence they came. We rode up to the little cottage; and in a little room of a regular Highland cabin, with its usual "press bed," we had luncheon. This place is called *Invermark*, and is 4½ miles from *Corrie Vruach*. After luncheon, I sketched the fine view. The steep hill we came down immediately opposite the keeper's lodge, is called *Craig Boestoek*, and a very fine isolated craggy hill which rises to the left—over-topping a small and wild glen—is called the *Hill of Down*. We mounted our ponies a little after three and rode down *Glen Mark*, stopping to drink some water out of a very pure well, called *The White Well*; and crossing the *Mark* several times. As we approached the *Manse of Loch Lee* the glen widened, and the old *Castle of Invermark* came out extremely well; and, surrounded by woods and corn-fields, in which the people were "shearing," looked most picturesque. We turned to the right and rode up to the old ruined castle, which is half covered with ivy. We then rode up to Lord Dalhousie's shooting-lodge, where we dismounted. It is a new and very pretty house, built of granite, in a very fine position overlooking the glen, with wild hills at the back. . . . We passed through the drawing-room and went on a few yards to the end of a walk, whence you see *Loch Lee*, a wild but not large lake, closed in by mountains.' In commemoration of the visit, the Earl of Dalhousie erected a granite well at the White Well. It bears the inscription 'Her Majesty Queen Victoria and His Royal Highness The Prince Consort visited this well and drank of its refreshing waters on the 20th September 1861—the year of Her Majesty's great sorrow;' and round the basin is

*Rest, traveller, on this lonely green,
And drink and pray for Scotland's Queen.'

On 19th Sept. 1865, the Queen and Princess Helena 'drank with sorrowing hearts from this very well where just four years ago I had drunk with my beloved Albert.

. . . e afterwards had some tea close by; and this fine wide glen was seen at its best, lit up as it was by the evening sun, warm as on a summer's day, without a breath of air, the sky becoming pinker and pinker, the hills themselves, as you looked down the glen, assuming that beautifully glowing tinge which they do of an evening. The Highlanders and ponies grouped around the well had a most picturesque effect. And yet to me all seemed strange, unnatural, and sad' (*More Leaves from the Journal*, 1884). On Migvie or Rowan Hill are a number of cairns traditionally but wrongly asserted to be connected with an engagement between Bruce and Cumyn in 1307. There was certainly a meeting between their forces; but Cumyn either sued for peace or ran away without fighting. A stone with a rudely incised figure of a cross is pointed out as the position of Bruce's standard, but it is probably a boundary mark of church lands. Other objects worthy of notice are the standing stones at Colmeallie; the Court Hill, S of Modlach Hill, probably an old law hill; St Fillan's Well, beside the Burn of Gleneffock; Eagil's or Edzell's Loup, where the young laird of Edzell leaped across the Mark when pursued by the Earl of Crawford; Bonnymune's Cave, near Curmand Hill, where the laird of Balmamoon resided for a time after the battle of Culloden; Johnny Kidd's Hole (all these three are in Glenmark). At Gilmuffman there was formerly a fine rocking-stone, but it has been thrown down. Near Carlochry is a small cave called Gryp's Chamber, after a robber of that name who lived in it. In the churchyard at the old church is a memorial of Alexander Ross (1699-1784), the author of *Helenore*, or *the Fortunate Shepherdess*, and of other shorter pieces, who was long schoolmaster of Lochlee, and who died there. The monument was erected by public subscription, and was at first erected in the new churchyard, but the Earl of Dalhousie removed it in 1856, and placed it near Ross's grave.

The parish is in the presbytery of Brechin and the synod of Angus and Mearns, and the living is worth £320 a year. The only proprietor is the Earl of Dalhousie. Originally belonging to the Lindsays, the district passed to the Panmure family, and on the Earl of Panmure's forfeiture in 1716 was sold to the York Buildings Company, but was afterwards recovered for its present possessors. Lochlee public school at Tarfside, with accommodation for 91 pupils, has an average attendance of about 35, and a grant of over £48. Valuation (1884) £3941, 6s. (1893) £4830, 18s. Pop. (1831) 553, (1861) 495, (1871) 424, (1881) 359, (1891) 343.—*Ord. Sur.*, shs. 66, 65, 1871-70. See Andrew Jervise's *Land of the Lindsays* (Edinb. 1853; 2d ed. 1882).

Lochlin or **Lochslin**, an ancient castle in the NE corner of Fearn parish, Ross-shire, on a little eminence 3½ furlongs ENE of Loch Eye, and 4¾ miles E by S of Tain. Said to be more than five centuries old, it comprises two square towers, 20 and 38 feet broad, standing conjointly corner to corner, and 60 feet high. It has one large turret on the lesser square, and two others on the greater square; and it figures conspicuously in a wide extent of landscape.—*Ord. Sur.*, sh. 94, 1878.

Lochmaben, a town and parish of Annandale, Dumfriesshire. A royal, parliamentary, and police burgh, the town stands 183 feet above sea-level, amid a perfect cordon of lakes, and within 9 furlongs of the right bank of the Annan. Its station, on the Lockerbie and Dumfries branch of the Caledonian railway, is 10¼ miles NE of Dumfries, 4½ WNW of Lockerbie, 52 SSE of Carstairs, 7½ S by W of Edinburgh, and 8¾ SSE of Glasgow; whilst by road it is 15 S of Moffat, 65 S by W of Edinburgh, 8 NE of Dumfries, and 13 NNW of Annan. 'Lochmaben,' says Mr Graham, 'is situated in the beautiful vale of the Annan, and, though an inland town, has much more of the aquatic than many seaports. There are no less than seven lochs around it, and the rivers Annan, Kinnel, and Ae are in the immediate vicinity. Viewed from the Pinnacle Hill or some other neighbouring height, it seems, like the city of Venice, to rise from the water. Nor are the beauties

of hil and valley wanting. Northward the view is only stopped by the Moffat and Queensberry Hills; the Beacon and Pinnacle Hills bound the western side of the valley, and Brunswark the eastern; whilst to the S lies Annandale stretched to view, the eye at last resting on Skiddaw and Scafell. The town itself is regularly built. Its High Street, $\frac{1}{4}$ mile long, is wide and spacious. At the S end stands the parish church, at the N end are the town-hall and market-place. Until within the last few years most of the houses were thatched with straw, but now there is only one that has not been roofed with more stable materials. There are no buildings of much pretension, but two or three deserve a passing notice.'

The town-hall, with tower and clock, successor to one of 1723, is a handsome edifice in the Scottish Baronial style, erected in 1878 from designs by the late David Bryce, R.S.A., at a cost of over £2000. Several of its windows have been filled with stained glass. In front, on the site of the ancient market-cross, is a freestone statue, 8 feet high, of Robert Bruce, by Mr John Hutchison, R.S.A., unveiled on 13th Sept. 1879, and surmounting a pedestal of Dalbeattie granite 10 feet high. The parish church, built in 1818-20 at a cost of £3000, is a Gothic structure, with some 1400 sittings, a bold square tower, and two good bells, one of which is said to have been the gift of the Pope to Robert Bruce. Its predecessor, at the W side of the town, on the shore of the Kirk Loch, was a Gothic edifice, with a large choir, dedicated to St Mary Magdalene. The Maxwells, after their defeat by the Johnstones in the battle of Dryfe Sands (Dec. 1593), having taken refuge in this church, the Johnstones fired it, and forced them to surrender. Near the site of it is St Magdalene's Well, enclosed with a stone and lime wall, and roofed with freestone. The Free church, built in 1844 at a cost of £800, was greatly improved in 1867; and a U.P. church, on a rising-ground in the northern division of the town known as Barras, was built in 1818. Lochmaben has a post office, with money order, savings bank, and telegraph departments, a branch of the National Bank, a local savings bank, several hotels, a gas company, a masonic lodge, curling, lawn tennis, bowling, and boating clubs, a reading and recreation room, a subscription library, and other associations. There is a market-day every alternate Monday during winter. A considerable manufacture of coarse linen cloth, for sale unbleached in the English market, was at one time carried on, but has for many years been extinct; and there being no manufactories, Lochmaben is not a place of much trade, but a rural town and a place of resort for tourists and strangers, who in the summer months visit it as a place of retirement and recreation. To-day the town, in many respects, is nothing better than many a village, but it looms large and important when seen through the haze of antiquity. Under the fosterage of the Bruces it must have sprung into vigour before the close of the 12th century, and probably soon acquired more consequence than any other town in the SW of Scotland. Like other Border towns, it suffered severely and lost its records from the incursions of the English; but it is traditionally asserted to have been erected into a royal burgh soon after Bruce's accession to the throne. Its latest charter, granted in 1612 by James VI., confirms all the earlier charters; but although the whole of the former privileges were regained, the place itself has never recovered its former consequence. In 1463 the town was burned by the English, under the Earl of Warwick; and in 1484 the recreant Earl of Douglas and the treacherous Duke of Albany attempted to plunder it on St Magdalene's fair day, but were repelled by the inhabitants. Under the Police Act of 1892 it is governed by a provost, 2 bailies, and 6 commissioners. The corporation once possessed considerable property, but so squandered and alienated it as to become bankrupt; and the corporation revenue was only £48 in 1895. In 1894 a water-supply was introduced into the burgh. Lochmaben unites with DUMFRIES, Annan, Sanquhar, and Kirkeudbright (called the Dumfries burghs) in

returning a member to parliament. The municipal and the parliamentary constituency numbered 236 and 171 in 1895, when the annual value of real property amounted to £2808 (£2794 in 1884), plus £447 for railways. Pop. of royal burgh (1861) 1544, (1871) 1627, (1881) 1539, (1891) 1366; of parliamentary and police burgh (1841) 1328, (1851) 1092, (1871) 1244,

Seal of Lochmaben.

(1881) 1216, (1891) 1038, of whom 568 were females. Houses in parliamentary burgh (1891) inhabited 28, vacant 29, building 1.

Lochmaben Castle, the ancestral residence of the Bruce, stands 1 mile SSE of the burgh, on the extreme point of a heart-shaped peninsula which juts a considerable way into the S side of the Castle Loch. Across the isthmus at the entrance of the peninsula are vestiges of a deep fosse, which admitted at both ends the waters of the lake, and converted the site of the castle into an island, and over which a well-guarded drawbridge gave or refused ingress to the interior. Within this outer fosse, at brief intervals, are a second, a third, and a fourth, of similar character. The last, stretching from side to side of the peninsula immediately at the entrance of the castle, was protected in front by a strong arched wall or ledge, behind which a besieged force could shield themselves while they galled, at a distance, an approaching foe, and midway was spanned by a drawbridge which led into the interior building, and was probably the last post an enemy required to force in order to master the fortress. Two archways at the north-eastern and south-western angles of the building, through which the water of the fosse was received or emptied, remain entire. But no idea can now be formed of the original beauty or polish either of this outwork or of the magnificent pile which it helped to defend. Vandal hands began generations ago to treat the castle of the Bruce as a convenient quarry; and, for the sake of the stones, they have peeled away every foot of the ashlar work which lined the exterior and the interior of its walls. So far has barbarian rapacity been carried, that now only the heart or packing of some of the walls is left, exhibiting giant masses of small stones and lime, irregularly huddled together, and nodding to their fall. Many portions of the pile have tumbled from aloft, and lie strewn in heaps upon the ground, the stone and the lime so firmly cemented that scarcely any effort of human power can disunite them. The castle, with its outworks, covered about 16 acres, and was the strongest fortress of the Border country, all but impregnable till the invention of gunpowder. But what remains can hardly suggest, even to fancy itself, the greatness of that which Vandalism has stolen. Only one or two small apartments can be traced, and they stand in the remoter part of the castle, and excite but little interest. The enclosed space around is naturally barren, fitted only for the raising of wood; and its present growth of trees harmonises well with the ruin. The view of the loch and of the circumjacent scenery, from all points in the vicinity, is calmly beautiful. The date of the castle is uncertain, but probably was the latter part of the 13th century—the period of the competition for the Crown.

Tradition, though unsupported by documentary evidence, asserts this castle to have been not the original Lochmaben residence of the Bruces, but only a successor of enlarged dimensions and augmented strength. A little way S of the town, on the NW side of the loch, is a large rising-ground called Castle Hill, which is pointed out as the site of the original castle, and even as the alleged birthplace of the first royal Bruce. That a building of some description anciently crowned the eminence, is evident from the remains of an old wall an inch or two beneath the surface of the summit, and from the vestiges of a strong and deep intrenchment carried completely round the base. Tradition says that the stones of this edifice were transferred from the Castle Hill across the intervening part of the lake, to the point of the heart-shaped peninsula on the southern shore, as materials for the more recent erection; and it adds, that a causeway was constructed, and still exists, across the bed of the lake, to facilitate their conveyance. But here monuments, documents, and physical probabilities, concur in refusing corroborative evidence. The Castle Hill commands a fine view of the burgh, of the adjacent lakes, and of a considerable expanse of the Howe of Annandale. Near it is a lower hill or mount, the Gallows Hill, on which in ancient times stood a formidable gallows, seldom seen during the Border wars without the dangling appendage of one or two reivers. The baronial courts of Lochmaben, and even occasional warden courts, were probably held on the summit of the Castle Hill, whence the judges beheld their sentences promptly carried into execution.

Robert the Brus of Cleveclaud, a grandson of that noble knight of Normandy who came into England with William the Conqueror, and first possessed the manor of Skelton, was a comrade in arms of our David I. while prince, and received from him, when he came to the throne in 1124, the lordship of Annandale, with a right to enjoy his castle there, and all the customs appertaining to it. A charter, granted by William the Lion to Robert, third Lord of Annandale, confirming to him the property held by his father in that district, is dated at Lochmaben. This is supposed to have been granted between 1165 and 1174. Robert, fourth Lord of Annandale, wedded Isobel, second daughter of David, Earl of Huntingdon, the younger brother of William the Lion, thus laying the foundation of the royal house of Bruce. Their son, Robert, the competitor for the throne, and the grandfather of Robert I., died at his castle of Lochmaben in 1295. In the year preceding his death he granted a charter, dated thence, confirming a convention between the monks of Melrose and those of Holmcultram. 'The old castle of Lochmaben,' says Chalmers in his *Caledonia*, 'continued the chief residence of this family during the 12th and 13th centuries. Robert de Bruce, the first Earl of Carrick, of this dynasty, probably repaired the castle at Annan.' As a stone from the ruins of Annan Castle bears his name, with the date 1300, the conjecture seems to be formed with great probability that the family had continued previously to reside at Lochmaben.

In July 1298 Edward took possession of Lochmaben Castle; and in 1300 he strengthened it and the castle of Dumfries, placing adequate garrisons in them, with ample supplies, and appointing a governor for each. Hither fled Bruce in 1304, on his way from London, before erecting his royal standard. Having met, near the west marches, a traveller on foot, whose appearance aroused suspicion, he found, on examination, that he was the bearer of letters from Comyn to the English king, urging the death or immediate imprisonment of Bruce. He beheaded the messenger, and pressed forward to his castle of Lochmaben, where he arrived on the seventh day after his departure from London. Hence he proceeded to DUMFRIES, where the fatal interview between him and Comyn took place.

At the accession of the Bruce to the Scottish throne, he conferred his paternal inheritance, with its chief seat, the castle of Lochmaben, on Randolph, Earl of Moray. When Edward III. obtained from Edward Baliol the

county of Dumfries as part of the price for helping him to a dependent throne, he appointed a variety of officers over Lochmaben Castle, and garrisoned the fortress in defence of the cause of England. In 1342 the Scots made a strenuous attempt to capture the castle, but were repulsed; and next year the forces of David II., whom he was leading into England, were stoutly resisted and harassed by its garrison. David, exasperated by the repeated disasters inflicted on him, in 1346 vigorously assaulted the fortress, took it, and executed Selby its governor. But after the battle of Durham, which speedily followed, the castle changed both its proprietor and its tenants. John, Earl of Moray, falling in that battle, the castle passed by inheritance to his sister, Agnes, the Countess of March, and from her was transmitted, through the reigns of Robert II. and Robert III., to her son, Earl George; whilst David II. becoming the English king's prisoner, the castle once more opened its gates to an English garrison. Even after David II.'s restoration, Edward III. retained the district of Annandale, and kept the fortress well garrisoned to defend it; but though connived at by the pusillanimity of the Scottish king, his dominion was pent up by the bravery of the people within the narrow limits of the castle. Sallies of the garrison provoked frequent retaliations, occasioned incursions into England, and led, in particular, to a hostile foray (1380) into Westmoreland, and the carrying away of great booty from the fair of Penrith. In 1384 the Earl of Douglas and Archibald Douglas, Lord of Galloway, whose territories had been infested by the garrison, marched in strong force against the castle, besieged and captured it, and, by effecting its reduction, expelled the English from Annandale. In 1409 the castle was resigned by the Earl of March to the Regent Albany, and conferred, along with the lordship of Annandale, on the Earl of Douglas. In 1450, when the Earl of Orkney was sent to quell some outrages of the dependants of a Douglas, and, though acting by the king's authority, was opposed and defied, James II. marched an army into Annandale, and took and garrisoned Lochmaben Castle. In 1455, in common with the lordships of Annandale and Eskdale, the castle became the property of the Crown by the attainder of the Earl of Douglas. Till the union of the Crowns it was preserved as a Border strength, and belonged either to the kings personally or to their sons; and it was maintained and managed by a special governor.

From 1503 to 1506, James IV. made great repairs and improvements on the castle, and built within it a large hall. In 1504, during a public progress through the southern parts of his kingdom, he paid it a personal visit. In 1511 he committed the keeping of it for seven years, with many perquisites, to Robert Lauder of the Bass. During the minority of James V., Robert, Lord Maxwell, being a favoured counsellor of the queen-mother, was by her intrusted with the keeping of the castles of Lochmaben and Threave for nineteen years, with the usual privileges. In 1565, when Queen Mary chased into Dumfriesshire those who had broken into rebellion on account of her marriage with Darnley, she, accompanied by him, visited Lochmaben Castle, which was then in the keeping of Sir John Maxwell. In 1588, when James VI., in the prosecution of his quarrel with Lord Maxwell, summoned his various castles to surrender, Lochmaben Castle offered some resistance, but, after two days' siege, was given up. In 1612 the governorship of the castle, together with the barony of Lochmaben, was granted to John Murray, 'groom of his Majesty's bedchamber,' who was created Viscount of Annan and Lord Murray of Lochmaben, and afterwards Earl of Annandale. From him descended the noble family of Stormont, now merged in that of Mansfield. The title of constable and hereditary keeper of the palace of Lochmaben is borne by Mr J. J. Hope Johnstone of Annandale, as representative of the Annandale marquisate, who in 1892 effected certain necessary repairs upon the ancient ruin. The governor of the castle had a salary of £300 Scots, and the fishing of

the lochs. He had also, for the maintenance of the garrison, from every parish of Annandale, what was called *laird a mairt*, or a lairdner mart cow, which, it was required, should be one of the fattest that could be produced, besides thirty-nine meadow geese and 'Fasten's e'en' hens. So late as the first half of the 18th century this tax was exacted. Although the right of fishing in all the lochs was granted, by a charter of James VI., to the burgh of Lochmaben, yet the proprietors of the castle enjoyed the exclusive privilege of fishing in the Castle and Mill Lochs with boats, nets, etc.—a privilege, however, disputed by the townsfolk, who now exercise the right of fishing in all the lochs. About the year 1730 the inhabitants of Annandale, galled by the exactions of the Marquis of Annandale, the governor, resisted his claims, and obtained from the Court of Session a decree forbidding the future levying of his usual receipts. At the abolition of hereditary jurisdictions in 1747 the Marquis claimed £1000 as compensation for his governorship, but was not allowed a farthing.

The dilapidation of the castle was probably commenced not long after the place was abandoned as useless; but it must have been mainly incited by the triumph of the people over pretensions based on the sinecure office of its noble governor. Our good old Bellenden, in his translation of Boece (1536), has given a very curious picture of the character of the ancient inhabitants of this district, and of the original reason of the erection of the castle. 'In Annandail is ane loch namit Lochmaben, fyue mylis of lenth, and foure of breid, full of uncouth fische. Besyde this loch is ane castell, vnder the same name, maid to dant the incursion of theuis. For nocht allanerlie in Annandail, bot in all the dalis afore rehersit, ar mony strang and wekit theuis, inuading the cuntré with perpetual thift, reif, & slauchter, quhen they sé ony trublis tyme. Thir theuis (because thay haue Inglis-men thair perpetuall enymies lyand dry marche upon thair nixt bordour) inuadis Ingland with continewal weris, or ellis with quiet thift; and leiffis ay ane pure and miserabill lyfe. In the tyme of peace, thay are so accustomit with thift, that thay can nocht desist, bot inuadis the cuntré—with ithand heirschippis. This vail of Annand wes sum tyme namit Ordouitia, and the pepill namit Ordouices, quhais cruelteis wes sa gret, that thay abhorrit nocht to eit the fiesche of yolding prisoneris. The wyuis vsit to slay thair husbandis, quhen thay wer found cowntis, or discomfist he thair enymies, to give occasion to otheris to be more bald & hardy quhen danger occurrit.' Whatever might be their character in that early period, they have in later ages showed, at least, a good deal of humour in their depredations. Of this we have an amusing proof in the ballad of the *Lochmaben Harper*, who, having been seized with a strong attachment to the Lord Warden's 'Wanton Browne,' made his way to Carlisle Castle, hliud though he was, and so enchanted the whole company, and even the minions, by the charms of his music, that he found means, not only to send off the warden's charger, but to persuade him, that while he was exerting himself to the utmost to gratify the company, some one had stolen his 'gude gray mare,' and thus to secure far more than the value of all his pretended loss:

"Allace! allace!" quo the cunning auld harper,
 "And ever allace that I cam here!
 In Scotland I lost a brow cowt foal;
 In England they've stown my gude gray mare!"
 'Then aye he harped, and aye he carped;
 Sae sweet were the harpings he let them hear:
 He was paid for the foal he had never lost,
 And three times over for his "gude gray mare!"

The parish of Lochmaben, containing also the villages of Templand, Hightae, Greenhill, Heck, and Smallholm, is bounded N by Johnstone, E by Applegarth and Dryfesdale, S by Dalton and Monswald, W by Torthorwald and Tinwald, and NW by Kirkmichael. Its utmost length, from N by W to S by E, is 9 miles; its breadth varies between 1½ furlong and 4 miles; and its area is 11,367½ acres, of which 555 are water. The ANNAN, in mazy folds, flows 10½ miles south-by-east-

ward along or close to all the eastern border; KINNEL Water winds 4½ miles south-south-eastward through the northern interior, till it falls into the Annan at a point 1½ mile NE of the town; and the Kinnel itself is joined by the Water of Ane, flowing 1½ mile north-eastward along the Kirkmichael boundary and through the north-western interior. Six lakes, with their utmost length and breadth in furlongs, are Castle Loch (6 × 5½) and Hightae Loch (2½ × 1½), to the S of the town; Kirk Loch (3½ × 1½), to the SW; Mill Loch (3 × 1½) and Upper Loch (1½ × 1), to the NW; and Halleath or Broomhill Loch (4 × 2½), to the E. Under CASTLE LOCH we have noticed the vendace, which is also taken in Mill Loch. Over most of the area the surface sinks little below 140, and little exceeds 230, feet above sea-level; but in the SW it rises to 788 feet at Carthar Hill, 816 at the Monswald boundary, and 803 at the Torthorwald boundary. Permian red sandstone, suitable both for masonry and for roofing, has been largely quarried at Corncockle Moor, and there presents fossil reptilian footprints. The soil towards the W is light and gravelly, but elsewhere is uncommonly rich, consisting over a large area of the finest alluvial loam, occasionally 9 feet deep, and everywhere growing capital crops. The land is too valuable to admit more than some 90 acres of plantation; but it is finely enclosed, and sheltered by rows of trees. Excepting three small mosses, which are of value for fuel, the whole parish is capable of cultivation, though a largish proportion is disposed in meadow-land and pasture. Overlooking the Mill Loch, ½ mile NW of the town, is a rising-ground called Woody or Dinwoody Castle. The summit shows no vestiges of building, but is surrounded with a very distinct trench. In a field SW of the town is the circular trace of a tower, which is called Cockie's Field, from one John Cock, or O'Cock, who resided in it, and was one of the most renowned freebooters of Annandale. An old ballad, still extant, details his feats of arms, dilates on his personal strength, and narvates the manner of his death. A party of the king's foresters, to whom he had been an intolerable pest, and whom he had relieved of many a fat deer, chaucing one day to find him asleep in the forest, cautiously beset him, and were bent on his destruction. John suddenly awaking, and perceiving at once the snare into which he had fallen, and the hopelessness of escape, resolved to sell his life dearly, and ere they could overpower him, laid seven of their number dead at his feet. In the SW corner of the parish is a large and artificial mound of earth, perfectly circular, quite entire, and terminating in a sharp tower. It is called both Rockhall Moat and the Beacon Hill, and possibly served both as a moat or seat of feudal justice, and as a beacon-post for describing the movements of Border marauders, and giving the alarm. Its position is on the summit of a low but conspicuous ridge which divides Nithsdale, or rather the district of Lochar Moss, from Annandale, and commands a map-like and very brilliant view of a large part of the champaign country of Dumfriesshire, a portion of Galloway, and all the Solway Firth. The parish has remains of several Roman encampments; and must have been traversed by Agricola, along a route easily traced, on his march from Brunswark Hill to Glota and Bodotria. On the lands of Rokele, or Rockhall, there anciently stood an endowed chapel, the pertinents of which, though seized by lay hands at the Reformation, now yield some proceeds to the parish minister. Some other pre-Reformation chapels existed in the parish, hut cannot now be very distinctly traced. Spedlins Tower has been noticed under JARDINE HALL. An extensive estate water-supply scheme, with a reservoir on Thorniethwaite Hill, was carried out in 1894 by the proprietors of Castlemilk, Halleath, and Dryfeholm estates. The length of the main is about 7 miles, and there are branches to the various farm steadings, cottages, and fields on the three estates.

The four villages of Heck, Greenhill, Hightae, and Smallholm, with the lands around them, form the barony of Lochmaben, or the Fourtowns. The lands

arc a large and remarkably fertile tract of holm, extending along the W side of the Annan, from the vicinity of Lochmaben Castle to the southern extremity of the parish. The inhabitants of the villages are proprietors of the lands, and hold them by a species of tenure nowhere else known in Scotland except in the Orkney Islands. From time immemorial they have been called 'the King's kindly tenants,' and occasionally the 'rentallers' of the Crown. The lands originally belonged to the kings of Scotland, or formed part of their proper patrimony, and were granted, as is generally believed, by Bruce, the Lord of Annandale, on his inheriting the throne, to his domestic servants or to the garrison of the castle. The rentalers were bound to provision the royal fortress, and probably to carry arms in its defence. They have no charter or seisin, but hold their title by mere possession, yet can alienate their property by a deed of conveyance, and by procuring for the purchaser enrolment in the rental-book of the Earl of Mansfield. The new possessor pays a small fee, takes up his succession without service, and in his turn is proprietor simply by actual possession. The tenants were, in former times, so annoyed by the constables of the castle that they twice made appeals to the Crown, and on both occasions—in the reigns respectively of James VI. and Charles II.—they obtained orders, under the royal sign-manual, to be allowed undisturbed and full possession of their singular rights. In more recent times, at three several dates, these rights were formally recognised by the Scottish Court of Session and the British House of Peers. A chief part of the lands existed till the latter half of the 18th century in the form of a commonty, but it was then, by mutual agreement, divided; and being provided, in its several parcels, with neat substantial farmhouses, and brought fully into cultivation, it soon became more valuable than the original allotments immediately adjacent to the villages. More than a moiety of the lands, however, has been purchased piecemeal by the proprietor of Rammerscales, whose mansion-house is in the vicinity, within the limits of Dalton parish. But such portions as remain unalienated exhibit, in the persons of their owners, a specimen of rustic and Lilliputian aristocracy unparalleled in the kingdom. If the possession of landed property in a regular line of ancestry for several generations is what confers the dignity of gentleman, that title may be justly claimed by a community whose fathers have owned and occupied their ridges and acres from the 13th century. Their names run so in clusters that sobriquets are very generally in use. Richardson is commonest, then Rae, Kennedy, Nicholson, and Wright. These names were borne by companions of Wallace and Bruce in their struggles against the usurping Edward.

Mansions, noticed separately, are **ELSHIESHIELDS TOWER** and **HALLEATH**. Lochmaben is the seat of a presbytery in the synod of Dumfries; the living is worth £328. A Free church at Hightae, built for a Relief congregation in 1796, and afterwards Reformed Presbyterian, was restored in 1883. Three public schools—Hightae, Lochmaben, and Templand—with respective accommodation for 145, 509, and 99 children, have an average attendance of about 75, 220, and 90, and grants of nearly £62, £252, and £78. Pop. (1881) 2816, (1891) 2522.—*Ord. Sur.*, sh. 10, 1864.

The presbytery of Lochmaben comprises the parishes of Applegarth, Dalton, Dryfesdale, Hutton, Johnstone, Kirkmichael, Kirkpatrick-Juxta, Lochmaben, Moffat, Mouswald, St Mungo, Tundergarth, and Wamphray. Pop. (1871) 16,177, (1881) 16,126, (1891) 15,590, of whom about 4200 are communicants of the Church of Scotland.

See William Graham, *Lochmaben Five Hundred Years Ago* (Edinb. 1865); and M. E. Cumming Bruce, *Family Records of the Bruces and the Cummys* (Edinb. 1870).

Lochmaddy, a village and a sea-loch in North Uist island, Outer Hebrides, Inverness-shire. The village, on the W shore of the sea-loch, 19½ miles W of Vaternish Point in Skye and 65 SW by S of Stornoway, communicates regularly with Skye and the Scottish main-

land by steamers, and is a centre of trade and commerce for the middle and southern portions of the Outer Hebrides. It comprises some poor huts, an inn, a sheriff's residence, a court-house (1877) and prison, at considerable distances one from another, and Long Island combination poorhouse, with accommodation for 20 paupers; and has a post office, with money order, savings bank, and telegraph departments, a branch of the Caledonian Bank (1878), a Free church mission station, a public school, North Uist Agricultural Society, and a considerably frequented harbour. A sheriff court is held here every Wednesday during session. The sea-loch, opening on the E from the Little Minch, and expanding from an entrance only 1¼ mile wide to an interior width of 2¾ miles, penetrates the land to a length of 5½ miles, and includes, not one harbour, but many harbours, safe, capacious, and wanting nothing but sufficient trade to render them one of the finest groups of natural harbours in the world. About ¼ mile inward from the sea are two remarkable isolated rocks of columnar basalt, 100 feet high, called Maddy-More and Maddy-Grisioch, which serve as marks to mariners. At Weaver Point there is a lighthouse, erected in 1891, showing a white light flashing every six seconds. The country around is all low, flat, and peaty country; and Loch Maddy itself is so beset with innumerable islets and intersected by multitudes of little peninsulas, as to present a perfect labyrinth of land and water. It does not cover more than 9 square miles with its waters, but its aggregate coast-line can hardly be less than 200 miles.

Loch Maddy or Loch na Meide. See **MUDALE**.

Loch Maree. See **MAREE**.

Lochmalonie, an estate, with a mansion, in Kilmany parish, Fife, 4½ miles N by W of Cupar.

Lochnagar, a finely-shaped mountain of Braemar district, SW Aberdeenshire, 6½ miles SE of Castletown and 9¾ SW of Ballater as the crow flies, but 10½ and 13 to walk. One of the frontier Grampians, it flanks the W side of the upper part of Glenmuick, and blocks the heads of Glengelder and Glengarrawalt; and it rises so steeply and fitfully as to be scalable on foot only with extreme fatigue, yet can be conveniently ascended on Highland ponies, as by the Queen and Prince Albert on 16th Sept. 1848. Far up its north-eastern side lies triangular Lochnagar or the 'Lake of the Hare' (2½ × 2 furl.; 2575 feet), a gloomy tarn, overhung by precipices 1200 feet high; and it is gashed on other sides and on its shoulders by frightful corries. Some of its higher hollows retain deep snow-drifts throughout the summer months. The predominant rock is granite, and topazes, beryls, and rock crystals are found. Rising to an altitude of 3786 feet above sea-level, Lochnagar commands from its summit a very extensive and most magnificent view. Lord Byron pronounced it 'the most sublime and picturesque of the Caledonian Alps,' and celebrated it, as 'dark Lochnagar,' in one of his best known and most beautiful minor poems.—*Ord. Sur.*, sh. 65, 1870.

Loch-na-Keal, a sea-loch penetrating the W side of Mull island, Argyllshire. Opening a little E of Staffa island, and extending eastward to the length of 14½ miles, it measures 12½ miles across the entrance, and diminishes gradually to a width of only 1 mile; contains Gometra, Ulva, Little Colonsay, Eorsa, and Inch Kenneth islands; is divided by Gometra and Ulva into two sections, slenderly connected with each other; and, in the part to the N of Gometra and Ulva, bears the separate name of Loch Tuadh.

Loch nan Cuinne. See **KILDONAN**.

Loch-na-Sheallag. See **LOCHBROOM**.

Lochnaw Castle, a mansion in LESWALT parish, Wigtownshire, on the southern shore of the White Loch, 5¾ miles WNW of Stranraer. Its oldest part, a central square battlemented tower, five storeys high, bears date 1426; the modern portion, well harmonising with the old, was commenced in 1820. The garden and grounds are of great beauty, finely wooded with trees both native and exotic. The White Loch (3 × 2¼ furl.) was drained in the early part of the 18th century, but a hundred years after was restored to its original condition. It

contains abundance of capital trout; and on its wooded islet are traces of the ancient King's Castle of Lochnaw. From 1330 to 1747 the Agnews of Lochnaw were hereditary sheriffs of Galloway; the present representative is Sir Andrew Noel Agnew, ninth Bart. since 1629 (b. 1850; suc. 1892). See Sir Andrew Agnew's *Agnews of Lochnaw* (1864; 2d ed., 2 vols., 1893).—*Ord. Sur.*, sh. 3, 1856.

Lochnell, an estate, with a mansion, in Ardehatten parish, Argyllshire. The mansion, at the head of Ard-mucknish Bay, 12 miles WNW of Taynuilt, was built by Sir Duncan Campbell, and enlarged, at a cost of more than £15,000, by his successor, General Campbell. A spacious and handsome edifice, it was destroyed by fire about 1859; and an observatory, in the form of a tower, was reduced to a mere shell by fire in 1850, but continues to figure conspicuously in the view from the neighbouring waters. The present proprietor is Archibald Argyll Lochnell Campbell, Esq. (b. 1849; suc. 1882).—*Ord. Sur.*, sh. 45, 1876.

Lochore House, a mansion, with well-wooded grounds, in Ballingry parish, Fife, 3 miles NNW of Lochgelly, under which there is a post office of Lochore. The lake, Loch Ore, which gave it name, was a considerable sheet of water, formed by expansion of the river Ore, and was drained towards the close of the 18th century, with the result of its bottom becoming very fertile corn land, but subject to floods in times of heavy rain. See BALLINGRY.—*Ord. Sur.*, sh. 40, 1867.

Loch Park. See BOTHPHNIÉ.

Loch Ranza, a small village, situated round the head of a bay or loch of the same name, on the N coast of Arran, Buteshire. The loch, which opens from Kilbrannan Sound, pierces the land in a SSE direction, and has a length of 7 furlongs and a breadth of $\frac{1}{2}$ mile. At its upper end, a grass-covered peninsula, terminating in a shingly spit, stretches almost across the loch, and leaves only a narrow opening for the water to pass into the inner harbour formed by this natural breakwater. This harbour affords safer anchoring ground than the loch, which is much exposed to sudden squalls, and, in consequence, the fishermen prefer to lay their boats up in it. In the herring-season, however, the loch is often crowded with fishing-boats, as it is conveniently near Loch Fyne, Kilbrannan Sound, etc. Beyond the harbour lies a stretch of marshy ground, through which the Ranza Burn flows by many channels to the sea. On both sides of the loch the hills rise to a considerable height, while the low ground between the harbour is backed by the range of Caisteal Abhael (2735 feet), Meall Mor (1602), and Torr Nead an Eoin (1057), mountains which are separated by two glens. On the E is Glen Chalmadale, up which passes the carriage road to Corrie; and on the W is Glen Easan Biarach, which contains some very grand scenery. Such are the natural surroundings that belong—

'To the lone hamlet, which her inland bay
And circling mountains sever from the world.'

The village of Loch Ranza may be approached either by land from Brodick (15 miles SSE) or direct by sea, a pier having been erected in 1890, at which the Campbellton steamers call in passing. It contains a post office under Greenock, an inn, a public school, two or three small shops, a line of cottages on the W side of the bay, and a few houses irregularly dotted round the head and E side of the loch. There are two churches in the vicinity—an Established and a Free. The latter is a neat modern building of reddish sandstone. Loch Ranza gives name to a registration district. Pop. (1861) 824, (1871) 777, (1881) 714, (1891) 759.

Loch Ranza Castle stands upon the peninsula which stretches across the bay. All that now remains is a square tower with thick walls, which, combined with its situation, must have made the Castle almost impregnable. The building is now roofless. Although it is not known when the Castle was erected, it must be very old, since it is mentioned as 'a hunting-seat of the Scottish kings in 1380, when it was regarded as one of the royal castles.' Like many other places in Arran,

Loch Ranza and its castle are associated with the name of Robert the Bruce. No vestige now remains either of the chapel, built by Anne, Duchess of Hamilton, or of the convent of St Bride, celebrated by Sir Walter Scott in his *Lord of the Isles* as the lonely residence of the Maid of Lorne.—*Ord. Sur.*, sh. 21, 1870.

Lochridge, an estate, with a mansion, in Stewarton parish, Ayrshire, 1 mile S of Stewarton town.

Lochrutton, a parish of E Kirkcudbrightshire, containing at its south-eastern border the station of Loch-anhead on the Dumfries and Castle Douglas branch of the Glasgow and South-Western railway, 6 miles SW of Dumfries, and 13 $\frac{3}{4}$ NE of Castle-Douglas; as also Lochfoot village, 1 $\frac{3}{4}$ mile NNW of that station, and 5 $\frac{1}{2}$ miles WSW of Dumfries, under which it has a post office. It is bounded NW and N by Kirkpatrick-Irongray, NE by Terregles and Troqueer, SE by Troqueer and Newabbey, and SW by Kirkgunzeon and Urr. Its utmost length, from E to W, is 5 $\frac{1}{2}$ miles; its utmost breadth, from N to S, is 3 $\frac{3}{4}$ miles; and its area is 7561 acres, of which 150 are water. Lochrutton Loch (7 \times 3 $\frac{1}{2}$ furl.; 325 feet), from which the water supply of Dumfries is drawn, extends south-by-westward from Lochfoot village, and contains the tiny islet of Doulton's Cairn and the larger Big Island, which, partly at least, is an artificial cranog. Half-a-dozen rivulets flow eastward, north-eastward, or westward to this lake, which sends off CARGEN Water towards the Nith. Kirkgunzeon or Dalbeattie Burn, a feeder of Urr Water, traces all the Newabbey boundary; and Merkland Well, near the head of Lochrutton Loch, is a strong chalybeate spring, which was formerly very celebrated for the cure of agues and of dyspeptic and nervous disorders. The surface undulates, sinking along the northern and south-eastern boundaries to less than 300 feet above sea-level, and rising thence to 637 feet near the manse, 550 near Carswadda, and 604 near Slack. The predominant rocks are eruptive and Silurian, and the soil is mostly a light shallow loam. Nearly six-sevenths of the entire area are in tillage or in meadow; about 250 acres are under wood; and the rest is either pastoral, moss, or waste. An ancient Caledonian stone circle, called the 'Seven Grey Stones,' but really comprising nine, with a diameter of 70 feet, is on the eminence near the manse, which commands a very extensive and brilliant view. Old baronial fortalices, or peel towers, were in various places; and the most perfect, HILLS TOWER, has been noticed separately. Henry Duncan, D.D. (1774-1846), the founder of savings banks in Scotland, was the son of a former minister. Lochrutton is in the presbytery and synod of Dumfries; the living is worth £197. The church, 1 mile E by S of Lochfoot, was built in 1819, contains upwards of 300 sittings, and was repaired in 1889. The public school, with accommodation for 132 children, has an average attendance of about 65, and a grant of nearly £82. Pop. (1801) 514, (1831) 650, (1861) 677, (1871) 656, (1881) 614, (1891) 534.—*Ord. Sur.*, sh. 9, 1863.

Loch Ryan. See RYAN.

Lochryan, a *quoad sacra* parish in Inch parish, Wigtonshire, around Cairnryan village, on the E side of Loch Ryan, 5 $\frac{1}{2}$ miles N of Stranraer. Lochryan House, 3 furlongs NNW of Cairnryan, is a plain substantial mansion, with finely-wooded grounds. Its owner is John Alexander Agnew Wallace, Esq. The parish is in the presbytery of Stranraer and the synod of Galloway; its minister's stipend is £185. The church was built in 1841 as a chapel of ease. A new manse, costing £1200, was built in 1893, the site of which was granted by J. A. A. Wallace, Esq. Pop. (1871) 354, (1881) 292, (1891) 327.—*Ord. Sur.*, sh. 3, 1856.

Lochs, a parish of Lewis proper, Outer Hebrides, in the county of Ross and Cromarty. Its church stands on the northern shore of Loch Erisort, 11 $\frac{1}{2}$ miles SSW of the post town, Stornoway. Forming the south-eastern section of Lewis proper, it is bounded N by Stornoway, E and SE by the North Minch, SW by Loch Seaforth and Harris, and W by Uig. It includes also the SHIANT Isles, 5 miles to the SE, and several

islets lying off the coast and within the sea-lochs. The detached part of the parish known as the Carloway District, and comprising 18,813 acres, was divided by the Boundary Commissioners in 1891 between the parishes of Uig and Barvas. All to the west of a line starting at Goodha Shealalga on the coast, running in a generally south-easterly direction through the chain of lochs beginning with Loch Langabhat, and reaching the boundary of Uig in Gleann Éiracleit, went to Uig, and all to the east of this line to Barvas. The utmost length (exclusive of islands) from N to S, is 19½ miles, its utmost breadth is 16½ miles, and the area of the entire parish, including foreshore and water, is 125,631 acres. A profusion of sea-lochs and of fresh-water lakes cut the parish into a labyrinth of land and water, and gave it its name of Lochs. Lochs Grimshadar, Luirbost, Erisort, Odhairn, Shell, Broilum, Claidh, and Seaforth, penetrate from the sea to lengths of from 2¼ to 10 miles; Loch Seaforth, besides penetrating 8¾ miles inland, lies for 7 miles along the boundary with Harris; fresh-water Loch Langabhat, with a maximum breadth of 7 furlongs, extends 8½ miles north-north-eastward along the boundary with Uig; and innumerable other fresh-water lakes, both large and small, lie scattered over the interior. Kebock Head flanking the S side of Loch Odhairn, Uskenish Point flanking the E side of Loch Broilum, and numerous smaller headlands, jut out along the coast-line, which for the most part is very bold and rocky. Part of the interior, especially in the south-eastern district, called the Park or the Forest, is mountainous, and contains the summits of Crionaig (1500 feet) and BENMORE (1750); elsewhere the surface is mostly low, and either marshy or heathy. The Park district, forming a great peninsula between Lochs Erisort and Seaforth, and intersected by fully one-half of all the sea-lochs, connects with the south-western district by an isthmus only 1¾ mile broad, was once a deer forest, protected by a very high wall across that isthmus, and exhibits a profusion of wild, grand, Highland scenery. Barely one-fiftieth of the entire area is regularly or occasionally in tillage; and all the arable lands have more or less a mossy soil, generally of blackish colour, occasionally intermixed with gravel, and, to some extent, improved by cultivation. The inhabitants mostly reside in groups of 40 families or fewer; and each group has its habitations in the form of a sort of village. Lochs has largely participated in the improvements effected by the late Sir James Matheson, and noticed in our articles HEBRIDES, LEWIS, and STORNOWAY. Ruins or vestiges of fortifications are in several places; and a ruined pre-Reformation church, surrounded by a burying-ground, is on Ellan Collumkill in the mouth of Loch Erisort. Donald Matheson, Esq., is sole proprietor. Lochs is in the presbytery of Lewis and the synod of Glenelg; the living is worth £173. The parish church was built about 1830, and contains about 700 sittings. There are Free churches of Crossbost, Kinloch, and Graver; and 12 public schools, with total accommodation for 1134 children, have an average attendance of about 750, and grants amounting to nearly £884. Pop. (1801) 1875, (1831) 3067, (1861) 4904, (1871) 5880, (1881) 6284, (1891) 4676, of whom 4417 were Gaelic-speaking.—*Ord. Sur.*, shs. 99, 105, 1858.

Lochside, an estate, with a mansion, in Lochwinnoch parish, Renfrewshire, 2 miles ESE of the town.

Lochslin. See **LOCHLIN**.

Lochton, an estate, with a mansion, in Longforgan parish, E Perthshire, 4 miles NNW of Inchtute.—*Ord. Sur.*, sh. 48, 1868.

Lochtower, a quondam baronial fortalice of NE Roxburghshire, at the foot of Yetholm Loch, 2 miles W of Yetholm village. It belonged to a branch of the Ker family; and its site and surrounding scenery were the prototype of those of Avenel Castle in Sir Walter Scott's *Monastery*.—*Ord. Sur.*, sh. 26, 1864.

Lochty, a rivulet, partly of Kinross-shire, but chiefly of Fife. Rising on Bennarty Hill, a little NW of Lochore House, it runs 10½ miles eastward through or along the boundaries of Ballingry, Portmoak, King-

lassie, Dysart, and Markinch parishes, and falls into the Ore 2¾ miles WSW of the Ore's confluence with the Leven. A bleachfield of its own name is on it within Markinch parish, in the vicinity of Thornton Junction.—*Ord. Sur.*, sh. 40, 1867.

Lochwinnoch, a town and a parish of S Renfrewshire. The town stands on the left bank of the river Calder, at the SW end of Castle-Semple Loch, 1 mile NW of Lochwinnoch station on the Glasgow & South-Western railway, this being 6¾ miles NNE of Dalry Junction, 8¾ SW of Paisley, and 15¾ WSW of Glasgow. Its name was written in nearly forty different ways before the present spelling was finally adopted; and while the first part of it manifestly refers to Castle-Semple Loch, the latter part may be either the genitive *innich* of the Celtic *innis*, 'an island,' referring to an islet in the lake, or the name of a St Winnoc, to whom some old chapel on or near the town's site was dedicated. That site is a pleasant one, sheltered on all sides except the SE by rising-grounds or thick plantations. The older part of the town is mean and irregular; but its modern portion comprises a main street, half a mile in length, with some streets diverging at right angles, and chiefly consists of slated two-storey houses. Manufactures of linen cloth, thread, leather, candles, and cotton were formerly carried on; but it still may lay claim to being a place of some manufactures, there being a large cabinet and chair manufactory, a steam laundry, etc. Lochwinnoch has a post office, with money order, savings bank, and telegraph departments, a branch of the National Bank, two inns, a gas company, an agricultural society, a public library, bowling and curling clubs, a cemetery, and a cattle fair on the first Tuesday of November, old style. The parish church (1806; 1500 sittings) has the form of an irregular octagon, and is adorned with a columnar porch, surmounted by a neat short spire. Lady E. L. Harvey of Castle Semple, presented an organ to the church in 1885. The Free church was built soon after the Disruption; and the U.P. church (1792; 503 sittings) is in the form of an octagon with a small front tower. Pop. (1881) 1192, (1891) 1413.

The parish of Lochwinnoch, containing also the village of Howwood, is bounded N by Kilmalcolm and Kilbarchan, E by Kilbarchan, Neilston, and Abbey parish, and S and SW by the Ayrshire parishes of Beith, Kilbirnie, and Largs. Its utmost length, from WNW to ESE, is 11 miles; its utmost breadth is 6½ miles; and its area is 19,877½ acres, of which 371¼ are water. **CASTLE-SEMPLÉ LOCH** (1½ mile × 3 furl.; 90 feet) extends across the greater part of the interior, and divides the parish into two parts of about one-third on the SE and two-thirds on the NW. **KILBIRNIE LOCH** (11¼ × 3½ furl.; 105 feet) touches a projecting point on the southern border; **Queenside Loch** (2¼ × 1 furl.; 1300 feet) lies among hills in the extreme NW; and **Walls Loch** (4½ × 3 furl.; 560 feet) lies on the eastern boundary. **Rowbank Dam** is the **PAISLEY** reservoir. The **CALDER**, rising in Largs parish at an altitude of 1400 feet above sea-level, flows 9¼ miles east-south-eastward to Castle-Semple Loch, out of which the **Black Carr** runs 2¾ miles north-eastward along the Kilbarchan boundary. **Auchenbathie Burn** winds 4 miles along the Beith boundary to the head of Castle-Semple Loch; **Dubbs Burn**, running from Kilbirnie to Castle-Semple Loch, traces for 1¼ mile farther the boundary with Ayrshire; and **Maich Water**, rising and running 1½ mile near the western border, traces for 4 miles a portion of the Ayrshire boundary south-south-eastward to Kilbirnie Loch. The surface of the south-eastern division of the parish nowhere exceeds 656 feet above sea-level; but that of the north-western attains 908 feet at Thornlybank Hill on the northern boundary, and of 1711 at the Hill of Stake on the south-western, the highest summit of the Mistyval Hills. The central district is mainly a low-lying valley along the banks of Dubbs Burn, Castle-Semple Loch, and the Black Cart, flanked with slopes, undulations, and rising-grounds up to the base of the hills. It formerly contained a much larger expanse of Castle-Semple Loch than now, and an

entire other lake called Barr Loch having been contracted by an embankment whereby several hundred acres of land were reclaimed for cultivation; and, with an elevation over great part of its area of not more than from 90 to 170 feet above sea-level, it possesses a wealth of artificial embellishment in wood and culture, and presents a warm and beautiful appearance. Partly eruptive and partly carboniferous, the rocks comprise all varieties of trap, fused into one another in endless gradations. They include workable beds of limestone, sandstone, and coal; and contain carbonate of copper, oxide of manganese, jasper, agate, very fine white prehnite, and other interesting minerals. The soil of the lower grounds is clay and loam; and that of the higher grounds, exclusive of the moors, is of a light, dry quality. Nearly half of the entire area is arable; more than 700 acres are under wood, and the rest is either pastoral or waste. The chief antiquities are Barr Tower, Elliston Castle, foundations or sites of Castle-Tower and Beltrees, Cloak, and Lorabank Castles, remains of an ancient camp on Castlewalls farm, an ancient bridge at Bridgend, and various relics found in Castle-Semple Loch. Alexander Wilson (1766-1813), minor poet and American ornithologist, worked at Lochwinnoch as a journeyman weaver. Three estates, noticed separately, are Castle-Semple, Barr, and Auchenbathie. Lochwinnoch is in the presbytery of Paisley and the synod of Glasgow and Ayr; the living is worth £334. At Howwood is a chapel of ease; and four public schools—Glenhead, Howwood, Lochwinnoch, and Macdowall—with respective accommodation for 60, 269, 330, and 164 children, have an average attendance of about 35, 175, 160, and 95, and grants amounting to nearly £34, £162, £172, and £72. Pop. (1891) 3477.—*Ord. Sur.*, shs. 30, 22, 1866-65. See Matthew Gemmill's *Ecclesiastical Sketches of Lochwinnoch*; and *Archæological Collections of County of Renfrew* (Paisley, 1885-90).

Lochwood Tower, a ruined baronial fortalice in Johnstone parish, Dumfriesshire, $6\frac{1}{2}$ miles S of Moffat. Standing upon a rising-ground amid a flat expanse that formerly was forest and morass, it was the seat, from the 14th century, of the Johnstones, who received the titles of Lord Johnstone of Lochwood (1633), Earl of Hartfell (1643), Earl of ANNANDALE and Hartfell (1661), and Marquis of Annandale (1701). It was burned by the Maxwells in 1593, but restored and again inhabited, till in 1724 it was finally abandoned. Of great strength seemingly at once in structure and from situation, it now is represented by only one angle, with two vaulted rooms, and an outspread mass of rubbish. The ruins are embosomed in grand old trees, the finest of which, with their girth in feet at 5 feet from the ground, are two oaks (20 and 18 $\frac{3}{4}$), a sycamore (13 $\frac{3}{4}$), and an ash (17), and are surrounded by an impassable bog. Regarding its builder, James VI. is reported to have said that 'however honest he might have been in outward appearance, he must have been a rogue at heart.'—*Ord. Sur.*, sh. 10, 1864.

Lochy, a stream of Glenorchy and Innishail parish, Argyllshire, issuing from Lochan Bhe (822 feet), 2 miles WNW of Tyndrum, and running $8\frac{3}{4}$ miles west-south-westward, till, after a descent of 676 feet, it falls into the Orchy at a point $1\frac{1}{2}$ mile above Dalmally. It is closely followed by the high road and by the Callander and Oban railway, while the West Highland railway approaches its source at its Tyndrum station.—*Ord. Sur.*, shs. 46, 45, 1872-76.

Lochy, a small river of Breadalbane district, W Perthshire, rising at an altitude of 2050 feet, and curving $17\frac{1}{2}$ miles east-north-eastward, till, after a total descent of 1690 feet, it falls, near Killin village, into the Dochart, half a mile above the influx of the latter to Loch Tay. It forms, $2\frac{3}{4}$ miles NW of Killin, a series of six cataracts in two groups, with a deep round pool between. Higher than this salmon cannot ascend; but capital trout fishing may be had all up GLENLOCHY.—*Ord. Sur.*, sh. 46, 1872.

Lochy, a lake and a river of SW Inverness-shire. Lying 93 feet above sea-level, Loch Lochy is the south-westernmost of the chain of fresh-water lakes in the

Great Glen, and forms part of the navigation of the CALEDONIAN CANAL. It extends $9\frac{3}{4}$ miles south-westward, and varies in width between 1 and $9\frac{3}{4}$ furlongs. It receives the ARCHAIG on its north-western side, and the stream from GLENLOY on its south-eastern; has steep shores and lofty continuous mountain screens, mostly of bare appearance, and here and there torn with gullies; commands, to the SW, a magnificent vista, closed by Ben Nevis; near its banks has Glenfintaig House, Glenfintaig Lodge, and Achnacary House, the residence of Lochiel, the chief of the Clan Cameron; and adjoins, at its head, the scene of a sanguinary battle fought in 1544 between the Frasers under the fifth Lord Lovat and the Macdonalds of Clanranald. On 12 Sept. 1873 the Queen, who was staying at Inverlochry, sailed half way up Loch Lochy on the small screw steamer of Cameron of Lochiel, and by him was shown the scenes of Prince Charlie's wanderings—an excursion described on pp. 252-256 of *More Leaves from the Journal of Our Life in the Highlands* (1884). Glenloy hotel is beautifully situated on the S shore of the loch, and has a private pier, where steamers stop by signal. The river Lochy, issuing from the foot of the lake, winds $9\frac{3}{4}$ miles south-south-westward along the mutual border of Kilmallie and Kilmornivaig parishes, till, near Fort William, it falls into the head of salt-water Loch Linnhe. It goes first for $3\frac{1}{4}$ furlongs in an artificial channel, cut for it at the formation of the Caledonian Canal, and then for 5 furlongs in the channel of its former tributary, the Spean, and it rushes with such force and rapidity into Loch Linnhe as to preserve, for a considerable distance, distinctness of current and freshness of water. It is one of the best salmon streams in Scotland, and contains also plenty of sea and river trout, but is subject to great spates.—*Ord. Sur.*, shs. 63, 62, 1873-75.

Lochy, Burn of Brown or. See KIRKMICHAEL, Banffshire.

Lochyside, a hamlet in Kilmallie parish, Inverness-shire, on the right bank of the Lochy, 3 miles NNE of Fort William.

Lockerbie, a market town and police burgh in Dryfesdale parish, Annandale, Dumfriesshire. It stands 244 to 297 feet above sea-level, at the SW base of steep Whitewoolen Hill (733 feet), on a flat tract 2 miles E of the river Annan and $1\frac{3}{4}$ mile W of the Water of Milk. Its station, on the main line of the Caledonian, is the junction for Dumfries and Portpatrick, by rail being $25\frac{3}{4}$ miles NW of Carlisle, $14\frac{1}{2}$ ENE of Dumfries, $47\frac{3}{4}$ SSE of Carstairs, and $75\frac{1}{2}$ S by W of Edinburgh. The country around is one of the pleasantest parts of Annandale; and the town itself, a neat and thriving place, stretches N and S, on the E being flanked by a beautiful rising-ground, called Lockerbie Hill (515 feet). Like most of the Border towns, it originated in the protection and influence of a castle or fortalice. On a ridge, which was nearly surrounded by two lochlets, now drained, and one of them anciently traversed by the great Roman road up Annandale, stands an ancient quadrangular tower, the seat in bygone days of the Johnstones of Lockerbie. Around this tower grew up a hamlet, which gradually swelled into a village, and eventually, by the liberal policy of granting feus and long tacks, increased to the bulk of a small provincial town. But though the place is of remote origin, and the scene of some curious traditional tales (the phrase, 'a Lockerbie lick,' dating back to the battle of DRYFE Sands, 1593), it comes mainly into notice as the seat of a vast lamb fair, and of considerable pastoral traffic. After the union of the Crowns and the commencement of international friendly intercourse, English dealers here yearly met the Dumfriesshire sheep-farmers, to buy their surplus stock for the southern markets. The 'tryst,' as the meeting was called, was held on the skirt of Lockerbie Hill; but it grew with the growth of intercourse between the two nations, till it could no longer be held within the limits of its original arena. Some one, unknown to record and tradition, now granted, for the holding of the tryst, the whole hill in perpetuity as 'a common' to the town. This common—above 100

acres in extent—was once, in some way or other, dependent on the city of Glasgow; but the right of superiority having been bought up by the Douglasses of Lockerbie House, it is let out by auction to a person who exacts a small sum per score for the lambs shown on it, and who, in some good years, pays £30 to the proprietor for a single day's collection. The lamb fair of Lockerbie is the largest in Scotland, no fewer than from 30,000 to 50,000 lambs being usually on the ground; and the day for it is late in the season, being the 13th of August, old style, unless that be a Saturday, a Sunday, or a Monday, and in that case the Tuesday following. Thursday is market-day. The other markets and fairs are—horses, 20 Feb.; cattle, 15 May, 26 June, 24 July, and 13 Nov.; cattle and sheep, 25 Sept. and 16 Oct.; Hogget fair and April show, 10 April; seed, 20 March; pork, weekly in Jan. and Feb., beginning on 2 Jan., and 5, 13, and 20 March; hiring markets, 17 April, 13 Aug., and 23 Oct. Lockerbie has a post office (1883), with money order, savings bank, insurance, and telegraph departments, branches of the Bank of Scotland and the Clydesdale, Commercial, and Royal Banks, a local savings bank (1824), several hotels, a drill-hall, a library association, the Mid Annandale Agricultural and Horticultural Society, and a Thursday Liberal paper—the *Annandale Herald and Moffat News* (1862). About £1000 had been expended by the police commissioners on the erection of water-works at the head of Bridge Street, when, the supply still being defective, a new water supply was introduced in 1885. The gas-works were taken over by the burgh in 1891 at a cost of £5400. The town-hall, built in 1891 at an expense (including site) of upwards of £8000, has a massive and imposing appearance. The style is Scottish Baronial, and the buildings contain a public hall seated for 700, a market hall, a lesser hall to hold 100, town-clerk's offices, and a subscription library. A mechanics' institute, originating in a bequest of Mr George Easton of Chester, was erected in 1866 at a cost of £1050. Scottish Baronial in style, it comprises a reading-room and a lecture-hall, with accommodation for more than 800 persons. Dryfesdale public school is a handsome and commodious Gothic edifice, built in 1875 at a cost of £4500, exclusive of site, and having accommodation for 690 children. Dryfesdale parish church was built in 1757, the session-house and the front wall of the churchyard being rebuilt in 1883 at a cost of £350. There are also a conspicuous Free church (1872); an Early English U.P. church, rebuilt in 1874-75 at a cost of £2600, with a spire 135 feet high; an Episcopal mission church (All Saints, 1891), being a schoolroom converted into a church; and a Roman Catholic chapel (St Mungo—1888). Under the Burgh Police Act of 1892 Lockerbie is governed by a provost, 2 bailies, and 6 commissioners. The municipal voters numbered 536 in 1895, when the annual value of real property amounted to £11,220, whilst the revenue, including assessments, was £1204. Pop. (1881) 2029, (1891) 2391.—*Ord. Sur.*, sh. 10, 1864.

A Free church presbytery of Lockerbie, in the synod of Dumfries, comprises the churches of Annan, Canonbie, Ecclefechan, Eskdalemuir, Halfmorton, Johnston, Kirkmichael, Kirkpatrick-Fleming, Langholm, Lochmaben, Lockerbie, and Moffat, which 12 churches together have about 2490 members.

Lockerbie House, a mansion in Dryfesdale parish, Dumfriesshire, $1\frac{1}{2}$ mile N by E of Lockerbie town. Its owners are the trustees of the late Geo. Fullerton, Esq.—*Ord. Sur.*, sh. 10, 1864.

Logan, an estate, with a Scottish Baronial mansion, in Kirkmaiden parish, SW Wigtownshire, $2\frac{1}{2}$ miles SSE of Ardwell. Its owner is James M'Douall, Esq. (b. 1840; suc. 1872), whose ancestors have possessed the estate from time immemorial. See PORT LOCAN.—*Ord. Sur.*, sh. 1, 1856.

Logan or Glencorse Burn, a rivulet of Penicuik and Glencorse parishes, Edinburghshire, rising 1400 feet above sea-level, among the Pentland Hills, at a point $4\frac{1}{2}$ miles W by N of Penicuik town, and running $7\frac{1}{2}$ miles north-eastward and east-south-eastward, till, after 1106

a total descent of 800 feet, it falls into the North Esk in the vicinity of Auchendinny. See GLENCORSE.—*Ord. Sur.*, sh. 32, 1857.

Loganbank, a mansion in Glencorse parish, Edinburghshire, near the right bank of Glencorse Burn, $1\frac{1}{2}$ mile N by W of Auchendinny station. Gradually enlarged under the superintendence of David Bryce, R.S.A., it at first was a small thatched house, built in 1810 by the Rev. John Inglis, D.D. (1763-1834), minister of Old Greyfriars, Edinburgh, and father of the late Lord President Inglis. A. W. Inglis, Esq., son of the latter, is present proprietor.—*Ord. Sur.*, sh. 32, 1857.

Logan House, a mansion in Old Cumnock parish, Ayrshire, near the left bank of Lugar Water, $1\frac{1}{2}$ mile E by N of Cumnock town. The famous Ayrshire wit, Hugh Logan, better known as the Laird of Logan, passed most of his life on the estate.—*Ord. Sur.*, sh. 14, 1863.

Logan House, a mansion in Lesmahagow parish, Lanarkshire, on a head-stream of Logan Water, 7 miles SW of Abbeygreen. Logan Water, formed by four head-streams which rise close to the Ayrshire boundary, runs 6 miles north-eastward and east-by-southward to the Nethan.—*Ord. Sur.*, sh. 23, 1865.

Logan House, an old mansion in Penicuik parish, Edinburghshire, on the left bank of Logan Burn, $5\frac{1}{2}$ miles NW of the town. Its owner is Charles William Cowan, Esq.—*Ord. Sur.*, sh. 32, 1857.

Loganlee, a hamlet in Glencorse parish, Edinburghshire, a little N of Glencorse Barracks, and 2 miles NNE of Penicuik.

Logie. See CRIMOND.

Logie, a 17th century baronial mansion, with a modern W wing, in Edinkillie parish, Elginshire, on the right bank of the Findhorn, $2\frac{1}{2}$ miles NNW of Duniphaill station on the Grantown and Forres section of the Highland railway. Its owner is Mrs Smith Cumming (suc. 1880).—*Ord. Sur.*, sh. 84, 1876.

Logie, a mansion in Dunfermline parish, Fife, on the PITTECRIEFF estate, $1\frac{1}{2}$ mile SW of Dunfermline town.

Logie, a *quoad sacra* parish in Liff and Benvie parish, Forfarshire. Constituted in 1877, it is in the presbytery of Dundee and the synod of Angus and Mearns. A church hall was opened in 1889. Pop. (1881) 4270, (1891) 4881.

Logie, a village and a parish of NE Fife. The village stands 3 miles NNW of Dairsie station, on the Ladybank and Leuchars section of the North British railway, and 5 NNE of its post-town, Cupar.

The parish, containing also the village of Lucklawhill Feus, was anciently called Logie-Murdoch. It is bounded N by Forgae, E by Leuchars, S by Dairsie, and W and NW by Kilmarty. Its utmost length, from NE to SW, is $4\frac{1}{2}$ miles; its breadth varies between $\frac{3}{4}$ mile and $2\frac{1}{2}$ miles; and its area is 3599 $\frac{1}{2}$ acres. Motray Water traces the northern boundary, Moornzie Burn traces the southern; and the surface, sinking along these two streams to 85 and 180 feet above sea-level, between them rises in several parallel ridges to 335 feet at Crumble Hill, 626 at Lucklaw or INCHLAW Hill, and 571 at Forret Hill. The predominant rocks are eruptive; and the soil on the slopes of the hills is mostly a good fertile loam, on their shoulders and summits is thin and moorish. Nearly five-sixths of the entire area are in tillage, 290 acres are under wood, and the rest of the land is pastoral or waste. The estate of Logie, on the S side of the parish, belonged in the time of Robert III. to Sir John Wemyss, ancestor of the Earls of Wemyss, and passed in the reign of James VI. to a younger branch of the Wemyss family. An incident in the life of one of its proprietors forms the theme of a ballad called the *Laird of Logie*, and published by Sir Walter Scott in his *Minstrelsy of the Scottish Border*. CRUVIE Castle, the chief antiquity, has been separately noticed. John West, author of a *System of Mathematics*, was the son of a minister of the parish, who lived about the middle of the 18th century. Logie is in the presbytery of Cupar and synod of Fife; the living is worth £218. The parish church (1826) was restored in 1882, and contains 280 sittings. There is also a Free church; and a public

school, with accommodation for 72 children, has an average attendance of about 50, and a grant of over £58. Valuation (1884) £5386, 7s., (1895) £4499, 17s. 5d. Pop. (1801) 339, (1831) 430, (1861) 410, (1871) 402, (1881) 390, (1891) 360.—*Ord. Sur.*, shs. 48, 49, 1868-68.

Logie, a parish situated in the county of Stirling, and containing the police burgh of Bridge of Allan, the villages of CAUSEWAYHEAD, CRAIGMILL, and BLAIR-LOGIE, and part of the royal burgh of Stirling. Prior to 1891 Logie was situated partly in the counties of Stirling, Perth, and Clackmannan, though all its sections lay mutually contiguous, and formed a compact whole. The Boundary Commissioners in the year mentioned transferred the Clackmannanshire portions, situated at Blackgrange and Menstrie, to the Clackmannanshire parishes of Alloa and Alva; and the Perthshire portion, situated at Keirfield (west of the Scottish Central railway), to the Perthshire parish of Leacropt. On the other hand, so much of the Stirlingshire portion of Leacropt as lay to the east of the west boundary of the railway line, and the Gogar Haugh part of the parish of Alloa, were transferred to the parish of Logie. Logie parish, thus reconstructed, was then placed wholly in the county of Stirling. It is bounded NW and N by Dunblane, E by Alva and Alloa, S by St Ninians and Stirling, and W by Leacropt. ALLAN Water flows to the Forth 2½ miles southward along the Leacropt boundary; the FORTH, in the serpentine winding of the 'Links of Forth,' meanders 11½ miles east-south-eastward along all the southern boundary, though the point where it first touches and that where it quits the parish are but 4½ miles distant as the crow flies; the DEVON, before reaching the Forth, traces for about 1½ mile the SE boundary; Menstrie Burn, the greater portion of the E boundary; and Wharry Burn runs 5½ miles westward and south-westward along most of the Dunblane boundary on its way to the Allan. The surface S of Blairlogie and Bridge of Allan is low, flat carse land, only 15 to 40 feet above sea-level; but it rises to 362 feet at isolated ABBEY CRAIG, 1375 at abrupt DUNMYAT, 896 at Pendriechmuir, 1240 at Myreton Hill, and 1832 at Colsnair Hill. The southern district thus, all onward from the Forth, to the extent of nearly one-third of the entire area, is strong and beautiful carse land, unsurpassed in richness by any land in the kingdom; the western district is part of the beautiful vale of Strathallan, with flanking braes rising eastward; and all the rest is part of the grand masses, romantic intersections, and lofty shoulders and summits of the Ochil Hills. The entire landscape, both in itself and in views commanded from it, is exquisitely picturesque; and the southern front of the Ochils in particular, in one continuous chain from E to W, with soaring precipitous acclivity, partly clothed in verdure, partly rugged precipice and naked rock, both offers magnificent features in its own vast façade, and commands most gorgeous and extensive prospects from each of its many vantage grounds. Dunmyat, standing out boldly in the middle of that grand front, and Abbey Craig, rising isolatedly in advance of it, and crowned with the conspicuous Wallace Monument, are specially prominent, both for their own picturesqueness and for the views which they command. The rocks of the plain are carboniferous; those of the hills are eruptive. Coal does not seem to exist in any workable thickness; limestone of coarse quality occurs in thin beds, as also does shale or slate clay, containing balls of clay ironstone; whilst sandstone of various shades of white and red is plentiful. Greenstone and amygdaloid are the most common of the eruptive rocks; and they contain iron ores, agates, rock crystals, calc spar, heavy spar, and other minerals. A mine of copper ore was for some time worked near Westerton, and seemed to have the promise of a very rich vein; but it failed to repay the cost of working, and was abandoned in 1807. The famous mineral springs of Airthrey have been separately noticed. The soil of the carse lands is rich argillaceous alluvium; of the hill slopes, mostly good loam; and of the uplands, either sandy or moorish. About two-fifths of the entire area

are arable; one-tenth is under wood; and one-half is either pastoral or waste. The Battle of STIRLING (11 Sept. 1297), in which Wallace defeated the English under Surrey and Cressingham, was fought to the W of the Abbey Craig. Antiquities are a Roman causeway across the Forth at Manor, faint traces of a Pictish fort on Castle Law, sites of a pre-Reformation chapel and hermitage, and the grand old tower of CAMBUSKENNETH Abbey. Sir Ralph Abercromby, K.B. (1784-1801), the hero of Aboukir Bay, was born at Menstrie, on the E boundary, though now in Alva parish. AIRTHREY Castle is the principal mansion. Giving off Bridge of Allan *quoad sacra* parish, Logie is in the presbytery of Dunblane and the synod of Perth and Stirling; the living is worth £322. The parish church, 2 miles ESE of Bridge of Allan, is a plain edifice of 1805. Its predecessor, a little way NNW, is a beautiful ivy-clad ruin, with a number of very old tombstones. A parish mission hall was opened at Causewayhead in 1889. Two public schools—Bridge of Allan and Causewayhead—with respective accommodation for 296 and 120 children, have an average attendance of about 250 and 70, and grants amounting to nearly £270 and £64. Valuation (1884) £37,229, 2s. 11d., (1892) £26,650, 7s. 10d. Pop. (1801) 2166, (1831) 1945, (1861) 3483, (1871) 4553, (1881) 4696, (1891) 4252, of whom 2565 were females, whilst 2286 were in the ecclesiastical parish.—*Ord. Sur.*, sh. 39, 1869.

Logie, a mansion in Kirriemuir parish, Forfarshire, 1½ mile SSE of the town. Its owner is General Alexander Angus Airlie Kinloch (b. 1838; suc. 1894).—*Ord. Sur.*, sh. 56, 1870.

Logiealmond, a district in Monzie parish, central Perthshire, and a *quoad sacra* parish partly also in Methven. The district lies on the N bank of the river Almond, 6 miles NW of Methven station on a small branch of the Perth and Crieff section of the Caledonian railway; and in 1702 was annexed *quoad sacra* to Moneydie. It contains the meeting-point of the three ancient dioceses of Dunblane, Dunkeld, and St Andrews, and according to tradition was a place of conference for the bishops of those three sees. (See MONZIE.) The *quoad sacra* parish, constituted about 1852, is in the presbytery of Perth and the synod of Perth and Stirling; its minister's stipend is £120. An ancient church at Chapelhill, which had been in a ruinous state for upwards of a century, was refitted for public worship in 1834. There are also a Free church and a U.P. church (1811); and a public school, with accommodation for 73 children, has an average attendance of about 70, and a grant of over £81. Pop. (1871) 646, (1881) 581, (1891) 511.—*Ord. Sur.*, sh. 47, 1869.

Logiebride. See AUCHTERGAVEN.

Logie-Buchan, a parish of E Aberdeenshire, whose church stands on the right bank of the Ythan, 2 miles E by S of the post town, Ellon, near which there is a station on the Aberdeen and Fraserburgh section of the Great North of Scotland railway. The parish is bounded N by Cruden, E by Slains, S by Foveran, SW by Udny, and W by Ellon. Its utmost length, from N to S, is 5½ miles; its breadth varies between 7¼ furlongs and 4¾ miles; and its area is 6975²/₁₀ acres, of which 198½ are foreshore, 3½ water, and 90½ tidal water. The river YTHAN, here navigable at full tide for small sloops, winds 3¾ miles south-eastward across the interior and along the Ellon and Slains boundaries, dividing the parish into two pretty equal halves; and its little affluents, the burns of Auchmacoy, Forvie, and Tarty, trace part of the western and all the eastern and southern boundaries. Precipices of gneiss rock flank the river on the western border, and in a calm evening give a very distinct echo to short sentences. The surface is comparatively flat, attaining a maximum altitude of 184 feet above sea-level to the S, and of 234 to the N, of the Ythan. The predominant rock is gneiss; and the soil is generally loam of various quality, incumbent upon clay. Nearly nine-tenths of the entire area are in tillage, some 70 acres are under wood, and the rest of the land is either pastoral or waste. In 1597 the lands of Logie,

Rieve, Allatham, and Bonitown were taken from Logie-Buchan to form part of Udney. In 1644 the Royalists defeated a Covenanting force on the lands of Tarty, and gave occasion to that hasty rising of the Gordons which led to the flight of the Marquis of Huntly and the execution of Sir John Gordon. The *Boat of Logie*, a well-known tune, has reference to this parish; but the still better known song of *Logie o' Buchan* relates to a gardener about the middle of the 18th century, at Logie in the parish of Crimond. Alexander Arbuthnot (1538-83), first Protestant principal of King's College, Aberdeen, was minister from 1568 till his death. AUCHMACOY, noticed separately, is the only mansion. Logie-Buchan is in the presbytery of Ellon and synod of Aberdeen; the living is worth £171. The parish church, built in 1787, contains about 300 sittings; two public schools, Arthrochie and Tippetty, with respective accommodation for 76 and 80 children, have an average attendance of about 65 and 75, and grants amounting to over £50 and £47. Pop. (1801) 539, (1831) 684, (1861) 762, (1871) 808, (1881) 767, (1891) 763.—*Ord. Sur.*, shs. 87, 77, 1876-73.

Logie-Coldstone, a parish of SW Aberdeenshire, whose church stands 608 feet above sea-level, 4 miles W of Tarland, and 4½ NNW of the post town, Dinnert, at which there is a railway station on the Ballater branch of the Great North of Scotland railway. Comprising since 1618 the ancient parishes of Logie-Mar and Coldstone, it is bounded N by Towie, NE by Tarland, E by Coull, SE by Aboyne, S by Glenmuick, and W by Strathdon. In 1891 the Boundary Commissioners transferred to this parish the Migvie detached portion of the parish of Tarland, comprising 1969 acres; but gave to Tarland the north-east corner of Logie-Coldstone, the new boundary here being the road leading from the Mill of Culfork in a southerly direction to Tarland. DESKRY Water flows 6¼ miles north-north-eastward along the Strathdon boundary; and other streams run to triangular Loch DAVEN (6 × 4¾ furl.; 480 feet) on the boundary with Glenmuick, so that the drainage belongs partly to the Don but mainly to the Dee. The north-western district, drained by Deskry Water, is in Donside; and all the rest of the parish is in Cromar. A range of heights, extending north-eastward, divides the Donside from the Cromar district; and a loftier range, extending thence south-south-westward to the meeting-point with Glenmuick and Strathdon parishes, culminates in the lofty summit of MORVEN (2862 feet), celebrated in a poem of Lord Byron, and commanding a view down Deeside as far as the eye can reach. Of the eastern division of the parish the highest summit is the Sockangh (2032 feet), at the meeting-point with Towie and Tarland. Great part of the parish appears to have anciently been occupied by a large lake, or a chain of lakes, and now is a valley, diversified by rising-grounds. The predominant rock is granite; and the soil on the hill slopes is generally deep and fertile, on the low grounds is mostly shallow, and either sandy or peaty. Mansions are BLELACK, CORRACHREE, and Deskry Shiel. Logie-Coldstone is in the presbytery of Kincardine O'Neil and the synod of Aberdeen; the living is worth £243. The parish church, erected in 1780, and almost rebuilt in 1876 at a cost of £900, contains 400 sittings. Two public schools, Logie-Coldstone and Migvie, with respective accommodation for 155 and 53 children, have an average attendance of about 85 and 35, and grants amounting to nearly £85 and £27. Pop. (1801) 861, (1831) 910, (1861) 932, (1871) 900, (1881) 903, (1891) 938.—*Ord. Sur.*, shs. 75, 76, 1876-74.

Logie-Crimond. See CRIMOND and LOGIE-BUCHAN.

Logie-Durno. See CHAPEL OF GARIOCH.

Logie-Easter, a parish of NE Ross and Cromarty, containing Kildary station on the Highland railway, 5¼ miles NE of Invergordon and 17½ NE of Dingwall. It is bounded N by Tain, E by Fearn, SE by Nigg, S by Kilmuir-Easter, and W by Eddertoun. Its greatest length, from E to W, is 7½ miles; its breadth varies between ¾ mile and 4¾ miles; and its area is 10,532½ acres, of which 479½ are foreshore and 75 water. Balna-

gown river flows 8¾ miles eastward and south-eastward along all the Kilmuir-Easter boundary till it falls into Nigg Bay; and eight tiny lochs are in the interior. Fine springs are numerous; and the water of one of them was thought, when carried into the presence of a sick person, to change colour if he would die, and to remain clear if he would get well. The surface rises gently east-north-eastward to 208 feet near Logiehill, 351 near Lamington, and 1238 near the western boundary. The predominant rock is Old Red sandstone; and the soil, in places a strong deep clay, in others is either a rich black mould or a light earth on a sandy irretentive bottom or hard pan. Several cairns on both sides of one of the burus are said to commemorate an ancient battle in which the Danes were routed by the Scotch. A gallows hill, towards the middle of the parish, and a deep small pond hard by, called *Poll a' bhathaidh* ('pool for drowning'), were places of capital punishment in the old days of hereditary jurisdiction. Mansions are Shandwick and Calrossie. Logie-Easter is in the presbytery of Tain and the synod of Ross; the living is worth £286. The parish church, 1½ mile W by S of Nigg station and 1¼ NNE of the post-town, Parkhill, is a neat modern edifice, renovated in 1891. There is also a Free church; and two public schools, Logie-Easter and Scotsburn, with respective accommodation for 102 and 99 children, have an average attendance of about 65 and 80, and grants of nearly £70 and £105. Pop. (1801) 1031, (1831) 934, (1861) 932, (1871) 912, (1881) 827, (1891) 870.—*Ord. Sur.*, sh. 94, 1878.

Logie-Elphinstone, a plain old mansion, with prettily wooded grounds, in Chapel of Garioch parish, Aberdeenshire, on the left bank of the Ury, 5 miles NW of Inverurie, and 1 mile W by N of Pitcapele station. Within it are portraits of Bishop Elphinstone, Charles Lord Elphinstone, other members of the Elphinstone family, Viscount Dundee, Count Patrick Leslie, and Sir James Leslie. In 1754 Robert Dalrymple, Esq. of Horn and Westhall, a grandson of Sir Hew Dalrymple of North Berwick, married Mary, daughter and heiress of Sir James Elphinstone of Logie; and their great-grandson, Sir Græme Hepburn Dalrymple Horn Elphinstone, fourth Bart. since 1827 (b. 1841; suc. 1887), is present proprietor.—*Ord. Sur.*, sh. 76, 1874.

Logie-Mar. See LOGIE-COLDSTONE.

Logie-Montrose. See LOGIE-PERT.

Logie-Murdoch. See LOGIE, Fife.

Logie-Pert, a parish of NE Forfarshire, with a post-office village of its own name, 2 miles W by S of Craigo station on the Montrose and Aberdeen section of the Caledonian railway, and 4¾ NW of the post-town, Montrose. Containing also CRAIGO village and the post office of North Water Bridge (under Laurencekirk), it comprises the ancient parishes of Logie-Montrose and Pert, united between 1610 and 1615, and constituting respectively its eastern and western divisions. It is bounded N, NE, and E by Fettercairn, Marykirk, and St Cyrus in Kincardineshire, S by Montrose and Dun, and W by Straththo. Its utmost length, from WNW to ESE, is 5 miles; its utmost breadth is 2½ miles; and its area is 5808 acres, of which 68¾ are water. The river North Esk flows 6½ miles east-south-eastward along all the Kincardineshire border; and along it the surface declines to less than 100 feet above sea-level, thence rising to 306 feet at the Hill of Craigo, 366 near Balloch, and 357 at the Brae of Pert—heights that command a magnificent view of great part of Strathmore, the Howe of Mearns, and the grand range of the frontier Grampians. There is a fine medicinal spring in Martin's Den; but good springs are in several other places. Sandstone abounds, but is not much quarried; and limestone was at one time calcined. The soil ranges from light gravelly loam to strong hard clay, a pretty large extent being good sharp medium loam on a moderately open subsoil. Fully three-fourths of the entire area are in tillage; and plantations cover some 1200 acres. The historian of British India, James Mill (1773-1836), was the son of a small farmer and shoemaker of Logie-Pert, 'a

douce bien body,' who followed his calling in a humble thatched cottage at North Water Bridge; and John Stuart Mill about 1864 paid a visit to his father's birth-place. In the ruined 'Auld Kirk of Pert' close by, George Beattie makes John o' Arnha' see 'unco sights.' Nearly a mile to the W of Craigo House are three remarkable tumuli, the Laws of Craigo, two of which, being opened, were found to contain five human skeletons of extraordinary size. Mansions, noticed separately, are CRAIGO and GALLERY. Logie-Pert is in the presbytery of Brechin and the synod of Angus and Mearns; the living is worth £301. The old church of Logie, like that of Pert, still stands in ruins by the North Esk's bank. The present parish church was built in 1840, and in 1893 an organ was erected at a cost of £200. There is also a Free church; and two public schools, Craigo Works and Logie-Pert, with respective accommodation for 138 and 112 children, have an average attendance of about 80 and 50, and grants of over £70 and £44. Valuation (1884) £8353, 3s., (1893) £7188, 4s., plus £1223 for railway. Pop. (1861) 1483, (1881) 995, (1891) 979.—*Ord. Sur.*, sh. 57, 1868.

Logierait (Gael. *lag-an-rath*, 'hollow of the castle'), a village and a parish of N central Perthshire. The village is beautifully situated on the N bank of the Tay, 5 furlongs above the influx of the Tummel, and $\frac{3}{4}$ mile W of BALLINLUG Junction on the Highland railway, this being $8\frac{3}{4}$ miles E by N of Aberfeldy and 8 N by W of Dunkeld. A neighbouring eminence was crowned by a castle of Robert III. (1390-1406), and now is the site of a conspicuous and richly-sculptured Celtic cross, erected in 1866 to the memory of the sixth Duke of Atholl. Long the seat of the regality court of the lords of Atholl, which wielded wide jurisdiction with almost absolute powers, the village then had its court-house, gaol, and Tom-na-croiche or 'gallows-knoll.' The court-hall is said to have been 'the noblest apartment in Perthshire,' more than 70 feet long, with galleries at either end; whilst Rob Roy escaped from the gaol (1717), and Prince Charles Edward confined within it 600 prisoners from Prestonpans. Almost the sole survivor of the past is the hollow 'Ash Tree of the Boat of Logierait,' which, 63 feet in height and 40 in girth at 3 feet from the ground, is said to have been 'the dool tree of the district, on which caitiffs and robbers were formerly executed, and their bodies left hanging till they dropped and lay around unburied.' The lower part of the trunk is quite a shell, and has been formed into a summer-house or arbour, capable of accommodating a considerable number of people. A chain-boat over the Tay, started in 1824, was superseded in 1888 by a handsome iron bridge that cost £2800. Logierait also has a post office, a hotel, and the Atholl and Breadalbane combination pothouse, erected in 1864.

Prior to 1891 the parish of Logierait had five detached parts. Of these the portions situated at Loch Glassie, Edradynate, and Killiechassie, and comprising respectively 685, 1265, and 1583 acres, were transferred by the Boundary Commissioners to the parish of Weem, except that part of the Killiechassie portion lying south of the river Tay, which went to Dull parish; while the other two portions, situated one on the south side of Loch Rannoch, the other at Lochgarry House, and comprising respectively 9939 and 4681 acres, were transferred to Fortingall parish. Besides these detached portions, the estate of Ponab, belonging to the main portion of Logierait, was transferred to Moulin parish; while certain land common to the parishes of Logierait, Blair-Atholl, and Fortingall was restricted to the latter two parishes. There were, however, transferred to Logierait the Ballyoukan detached portion of Moulin parish, comprising 176 acres; that portion of the parish of Dull situated at Grandtully and bounded N by the Tay, E and S by Little Dunkeld parish, and W by the Duntaggart detached portion of Weem; this Duntaggart portion of Weem itself, comprising 2207 acres; and the Daleapon detached portion of Dunkeld and Dowally parish, comprising 1284 acres. Logierait parish, with Logierait village on its southern border, is bounded N

by Mouliu, NE and E by Kirkmichael and Clunie, S by Dunkeld-Dowally and Little Dunkeld, SW by Dull, W by Weem, and NW by Dull. Shaped somewhat like the letter P, it has in the north an extreme breadth of 11 miles; in the south, of 4 miles. Its extreme length in the west is $9\frac{1}{2}$ miles, and in the east $4\frac{1}{2}$. The Tummel enters the N portion of the parish a little below Portnacraig Ferry, and runs in a SSE direction till it falls into the Tay near the boundary with Dunkeld-Dowally. The Tay, after tracing the boundary on the W with Weem parish, crosses Logierait from W to E, and forms the boundary with Little Dunkeld until it is joined by the Tummel. The whole course of the Tummel through the parish is followed by the Highland railway main line, and the whole of that of the Tay by the branch line to Aberfeldy. Much the largest of ten sheets of water are Lochan Oisinnach Mhor ($4 \times 2\frac{1}{2}$ furl.), Loch Broom ($5\frac{1}{2} \times 2$ furl., but partly belonging to Moulin), and Loch Kennard. The surface sinks along the Tay to 185 feet above the sea; and chief elevations to the E of the Tummel are *Cregnam Mial (1842 feet), *Meall Reamhar (1741), and Tom Bheithé (1192); to the W, *Carra Beag (1250), and the *eastern shoulder (2000) of Beinn Eagach, where asterisks mark those heights that culminate on the parish confines.

The scenery of the parish is eminently picturesque. 'The windings of the rivers, the rich vales, the sloping corn-fields and pastures, the hanging woodlands, and the awful mountains in the distance,' as seen from a rock about 1 mile distant from Logierait village, 'form one of the noblest landscapes, for extent, variety, beauty, and grandeur, that the eye can behold;' and the combinations of vale and hill, glen and mountain, wood and water, cliff and cascade, exquisite culture and sublime desolation, as seen from many standpoints, are striking specimens of almost all the best kinds of Highland scenery. The rocks are very various. Several strata of limestone lie in different parts; in one place occurs a variety of talc; and building stones of different kinds are occasionally raised on almost every estate. The soil of the low grounds is chiefly alluvium; on the slopes of the hills is mostly deep and loamy; on the higher grounds is cold and spouty; and on the mountains is nearly everywhere moorish. The surface of the parish is principally either pastoral or waste, and the parish itself is noted for its distilleries. Antiquities are Caledonian standing-stones and cairns in several places, an ancient camp near Middlehaugh, a sculptured stoue in the parish churchyard, a ruined beacou-house on a rock 2 miles from Logierait village, and sites and burying-places of several pre-Reformation churches. Amongst natives of Logierait have been Adam Ferguson, LL.D. (1724-1816), the historian; Robert Bisset, LL.D. (1739-1805), the biographer of Burke; Daniel Stewart (1741-1814), the founder of Stewart's Hospital in Edinburgh; and General Sir Robert Dick of Tullymet, who fell at Sobraon (1846). Mansions, noticed separately, are BALLECHIN, DONAVOURD, DUNFALLANDY, EASTERTYRE, PITCASTLE, PITNACREE, and TULLYMET. Giving off part to Kinloch Rannoch *quoad sacra* parish, Logierait is in the presbytery of Weem and the synod of Perth and Stirling; the living is worth £305. The parish church, at Logierait village, built in 1806, contains about 1000 sittings; and a handsome mission-church was built at Aberfeldy in 1884. Logierait Free church dates from Disruption times; and Tullymet Roman Catholic Church, Our Lady of Good Aid, was built in 1885. In Strathtay are Episcopal (1875) and Roman Catholic (Holy Cross, 1876) chapels; and four schools—Grandtully public, Logierait public, Grandtully West Park, and Tulloch of Pitnacree—with respective accommodation for 74, 227, 48, and 63 children, have an average attendance of about 45, 110, 10, and 25, and grants amounting to nearly £61, £116, £25, and £35. Valuation (1884) £19,118, 0s. 6d., (1892) £16,598, 14s. 8d. Pop. (1881) 2323, (1891) 1773, of whom 1120 were Gaelic-speaking; of ecclesiastical parish (1891) 2033.—*Ord. Sur.*, shs. 55, 56, 54, 1869-73.

Logierieve, a station in Uduy parish, Aberdeenshire,

on the Buchan and Formartine section of the Great North of Scotland railway, 16½ miles N by W of Aberdeen.

Logie-Wester, an ancient parish in Ross-shire, annexed about 1490 to Urquhart.

Loing or Ling. See LONG, LOCH, Ross and Cromarty.

Loirston, a loch (3 × 1½ furl.) in Nigg parish, Kincairdineshire, 1½ mile SSW of the parish church.

Lomond (Gael. ? *Laomain*, the name of an old Celtic hero), the largest lake in Scotland, partly in Stirling-shire and partly in Dumbartonshire. Hotels are situated here and there along its banks, and the whole loch is open to the public for fishing, the sport being good and that amid extraordinary surroundings. To the N both banks are in Dumbartonshire as far as Inch Vow, whence to Ross Point the boundary line follows the middle of the loch; there it curves to the E of Inchlonaig back between Inchmoan and Inchruim, and between Torrinch and Inchcailloch to the mouth of Endrick Water. All to the E of this line is in Stirlingshire, all to the N, W, and S in Dumbartonshire. Along the E side are the parishes of Arrochar and Buchanan; to the S are Kilmarnock and Bonhill; and to the W are Luss and Arrochar. From the N end at Glen Falloch to the extreme S end at the LEVEN river, at Balloch pier, is 20¾ miles in a straight line, or following windings, about 22; and along the course of the steamers that ply on the lake 24. The S end forms an irregular triangle, with its E corner at the bay S of the mouth of Endrick Water, the S angle at Balloch pier, and the N angle opposite Ross Point. Measured in straight lines the distances are—NE 6½ miles, SE 5, and W 8½; but the shores are very winding, and the distances by them would be fully ¼ greater. From the E corner, in a straight line through Inchmurrin, W by S across the widest part of the loch, the distance is 5 miles. To the N of Ross Point the basin becomes much narrower, the width being on an average about ¾ mile, though at some places—as at Rowardennan Lodge, Tarbet, and Inversnaid—it widens to 1 mile. There are altogether thirty islands in the loch, but of these only six very small ones are to the N of Ross Point; all the others, including the whole of the large ones, are in the triangular space just mentioned. The larger and more important, most of which are noticed separately, are Inchlonaig (120 feet),* Bucinch, Incheonnachan (200), Inchtavannach (200), Inchmoan (33), Inchruim (59), Inchfad (78), Incheailloch (278), Clairinch, Torrinch (105), Creinch (110), and Inchmurrin (291); the smaller islets are Inch or Eilan Vow with, near the N end, the ruins of a castle, once a stronghold of the Macfarlanes; Inveruglas and Wallace's Islands, off Inversnaid; Tarbet Island, ½ mile SE of Tarbet pier; three islets off Rowardennan; Ross Island, and another off Ross Point; a group of small islets off Luss; an islet off Inchmoan; Ceardach E of Bucinch; and Aber Island at the E corner. The surface is 23 feet above sea-level, and a subsidence of less than 40 feet would again unite the waters with the sea across the narrow neck between Tarbet and Arrochar at the head of Loch Long. In the prehistoric period after the appearance of man, and when our remote ancestors were sailing their log canoes over the site of GLASGOW, the loch was in this way probably an arm of the sea. The hollow in which the lake lies is a true rock-basin due, to a considerable extent, to the scooping powers of the ice by which, during the glacial epoch, it must have been occupied. Striae may still be detected along its shores, and traced over the neck at Arrochar down to Loch Long. The depth at the extreme S end slopes very gradually to 12 fathoms between Inchmurrin and Inchmoan, and by the time the narrow portion is reached at Ross Point the depth is 34 fathoms. From that point it shoals to 2 fathoms off Rowardennan, and again deepens northwards to 96 fathoms due W of Ben Lomond, and to 105 fathoms off Culness half-way between Tarbet and Inversnaid, which is the deepest part. At Eilan Vow the depth is

8 fathoms, and after sinking to 34 opposite Doune it finally shoals to the N end of the loch. The surface temperature varies with the season and the weather, but according to Sir Robert Christison, the lowest 100 feet of water in the deeper parts has a constant temperature of 42° Fahr. The area is 17,420 acres or nearly 2709 square miles. Sea-trout, lake-trout, pike, and perch are abundant; while salmon are from time to time able to find their way up the river Leven. The sea-trout run from 1½ to 5 lbs., and the lake-trout to ½ lb. Although few salmon are met with as a rule, there are exceptions, and good baskets of sea-trout are often made. Boats may be had at any of the hotels along the banks. The loch lies completely imbedded among different ranges of hills. To the SE are the Kilpatrick Hills (1313 feet) and the western spurs of the Campsie Fells, and in the flat between that and the border of the loch is the conical little Duncryne (462), which forms a well-marked feature in all the views of this end. To the NE rising almost directly from the water's edge are Conic Hill (1175 feet), Beinn Bhreac (1922), Beinn Uird (1957), Ben Lomond (3192) with its shoulders, Ptarmigan (2398) to the W, and Crag-a-Bhocain (1613) to the SW, Cruinn a' Bheinn (2077), Cruachan (1762), Stob-an-Flainne (2144), Beinn a' Choin (2524), Stob-nan-Eighrach (2011), Cruach (1678), and to the NW Beinn Chabhair (3053); these summits form the line of the watershed of Scotland, the streams to the E running to the Forth, those to the W to the Clyde. Along the W side of the loch are Killeter (978 feet), Creachan Hill (1758), Beinn Ruisg (1939), Beinn Dubh (2108), Beinn Bhreac (2500), Ben Reoch (2163), Cruach Tairbeirt (1364), and the double-topped Ben Voirlich (N, 3055; S, 3092), while behind farther inland are Balcnock (2092), Beinn Tharsuinn (2149), Beinn Chaorach (2338), Beinn Eich (2302), Doune Hill (2409), Tullich Hill (2705), Ben Arthur or the Cobbler (2891), Ben Ime (3318), and Ben Vane (3004), the last three being beyond Loch Long. From the slopes of these many streams rush down to the lake, the chief being the Falloch at the N end, Inveruglas Water (W) S of Ben Voirlich, Arklet Water (E) directly opposite at Inversnaid, Douglas Water (W) from Glen Douglas opposite Rowardennan, Luss Water (W) from Glen Luss at Luss, Endrick Water (E) with its tributary, Mar Burn, at the E corner; and Fruin Water (W), from Glen Fruin opposite the S end of Inchmurrin. Besides these the loch receives, from the E, Culness Burn from the SW shoulder of Ben Lomond, Caol Ghlean Burn from Beinn Uird, and Cashell and Blair Burns from Beinn Bhreac; from the W Finlas Water, between the Luss and the Fruin; and many smaller burns on all the sides. The surplus water is carried off by the LEVEN, which joins the Clyde at Dumbarton.

It is said that the old name of the lake was Leven, as that of the river still is, and that the present name was taken from the name of the Ben so late as about the 13th century. From the old name came that applied to the whole district, viz., Levenax, the modern Lennox. Traditionally, the waters of Loch Lomond have risen within the last 300 years, for Camden in his *Atlas Britannica* speaks of an island existing in his time called Camstradan, situated between the lands of that name and Inchtavannach, on which he adds, were a house and an orchard. The island has now disappeared, but the people of the neighbourhood maintain that about 100 yards from the shore the ruins of houses are to be seen under the water. Such an accident may, however, have occurred without any increase in the waters of the lake, and indeed the valley of the Leven presents no appearance of such a rise being possible. Loch Lomond was at one time famed for three wonders:—'Waves without wind, fish without fin, and a floating island.' The first was the swell in the widest part of the loch after a storm, and the second vipers that swam from island to island. The writer in Blaeu's *Atlas*, in noticing it in 1653, says, 'the fish which they speak of as having no fins, and which they commonly call *Paones*, are a kind of snake, and are therefore no cause

* The figures denote the height of the highest points above sea-level.

of wonder.' Of the floating island various accounts have been given, one of them being that it was constructed of large square beams of oak firmly mortised into one another by a Keith Macindool, a contemporary of Finmacool or Fingal, and this looks somewhat like a tradition pointing to the former existence of a crannoge in the lake. 'As for the floating island,' says Camden, 'I shall not call the truth of it in question, for what could hinder a body from swimming that is dry and hollow like a pinnace, and very light? And so Pliny tells us that certain green lands covered with rushes, float up and down on the lake of Vundimon. But I leave it to the neighbours who know the nature of this place to be judges, whether this old distich of our Neckham be true—

"Ditatur fluviis Albania, saxea ligna
Dat Lomund multa frigiditate potens."

of which Defoe has given the paraphrase—

'With Rivers Scotland is enrich'd,
And Lomond there a Lake,
So cold of Nature is, that Sticks
It quickly Stones doth make.'

The whole country round is rich in historical associations of various kinds. During Haco's great expedition to the W (1263), his son-in-law, Magnus King of Man, sailed up Loch Long with a squadron of 60 ships, and on arriving at Arrochar, his men dragged some of the galleys across the narrow neck there—only $1\frac{3}{4}$ mile across—and launched them on Loch Lomond, 'where their sea-boats must have created as much astonishment among the agriculturists of the Lennox as if they had fallen from the clouds.' No doubt the pillage amply rewarded them for their exertions, as the ground was fresh, and not likely to be guarded 'against marauders coming from so unlikely a direction.' In 1306, after the Battle of Dalree, Robert Bruce is said to have taken refuge in what is now Rob Roy's Cave, and at this time also to have planted many of the yew trees on Eilan Vow, while subsequently he is accredited with having caused many trees of the same kind to be planted on Inchlonaig, to provide a supply of bows for his soldiers. A few still survive, but the others were accidentally burned down many years ago. Clairinch gave the Buchanans their slogan. Inchcailloch—the island of women or of nuns—had a nunnery, and this was followed on the same site by the parish church, which, in its turn, has been abandoned, and a new church built on the mainland at Buchanan; and to the churchyard, as the burying-ground of the Macgregors, reference is made in the *Lady of the Lake*, the Fiery Cross being made from yew grown here. To the WNW of the church is the Pass of Balmaha, another of Scott's localities in the same poem, while farther up the scenery figures in his novel of *Rob Roy*. The whole of the district about Inversnaid is all Rob Roy's country. On the opposite side, to the S, is the district that belonged to the Colquhouns; and Glen Fruin—the glen of wailing—was in 1603 the scene of the great battle between the Macgregors and the Colquhouns, in which the latter were almost entirely destroyed, a matter that led to the proscription of the Macgregors.

It was on Inchlonaig that the chief of the Colquhouns and Rob Roy made their agreement about the black-mail which Colquhoun paid.

In the rebellion of 1715 the Macgregors took up arms in the Jacobite cause, and threatened the country to the S. In October they seized the whole of the boats on the loch, and took them to Rowardennan, so that they might be able to make forays anywhere along the shore, but no enemy could reach them except by passing round the loch. The western Hanoverians were, however, not to be outdone, and accordingly some 500 men assembled from Paisley and other towns in the W, and having been joined by 100 men, 'well-hearted and well-armed,' from a man-of-war lying in the Clyde, they dragged armed boats up the Leven to the loch, and advanced to the attack both by land and by water.

The further proceedings are thus described in a contemporary account of the expedition. 'When the pinnaces and boats, being once got in within the mouth of the loch, had spread their sails, and the men on shore had ranged themselves in order, marching along the side of the loch, for scouring the coast, they made altogether so very fine an appearance as had never been seen in that place before, and might have gratified even a curious person. The men on the shore marched with the greatest order and alacrity; the pinnaces on the water discharging their pattering, and the men their small arms, made so very dreadful a noise through the multiplied rebounding echoes of the vast mountains on both sides the loch, that perhaps there was never a more lively resemblance of thunder.' Having thus given sufficient warning of their approach, it is hardly to be wondered that when they reached Rowardennan they found no one, and though the 'Paisley men and their friends mounted the rocky bank of the lake, and forming as well as they could, beat their drums for an hour in noisy challenge,' there was no answer, and they went home, asserting that they had so frightened the Macgregors as to cause them to flee in panic to the camp at Strath Fillans. They accomplished the object of the expedition, however, for having, more by good fortune than good management, discovered the boats that had been carried off, by destroying some and taking away the rest they effectually prevented any renewal of the raids. Besides the Macgregors and the Colquhouns the other clans on the shores were the Grames and the Macfarlanes, the former being still represented by the Duke of Montrose, while the possessions of the latter have passed to the Colquhouns. One of the last survivors of the Macfarlanes took up his residence in a vault of their old ruined castle on Eilan Vow, and gave Wordsworth a subject for his poem of *The Brownie's Cell* in 1814, and again for the sonnet called *The Brownie*, written on his subsequent visit in 1831. Glenfinlas was a royal hunting forest. To the S is Bonhill associated with Smollett; and to the E is Killearn where George Buchanan was born, and where there is now a monument to his memory; while Gartness House on the Endrick is associated with Napier's calculations about logarithms. Inchmurrin, the largest and most southerly of the isles in Loch Lomond, and on which are the ruins of Lennox Castle, is used as a deer park by the Duke of Montrose, and Inchlonaig is also a deer park belonging to the Luss estate. It was while Sir James Colquhoun of Luss was returning from shooting on this island that he was drowned along with two gamekeepers on 18 Dec. 1873. Inchtavannach—the island of the monks' house—is so named from being the site of a monastery. It was at Inversnaid that Wordsworth, during his tour in 1803, saw the *Highland Girl* whose beauty he made famous in his poem of that name. Of history in late years the loch has none, except that ever-increasing swarms of tourists resort to it every year. During the severe winter of 1880-81 the S end of the loch was frozen over from Balloch up to Luss, and on 22 Jan. 1881 it was calculated that some 15,000 skaters were on the ice.

The Prince Consort visited the loch in 1847 and the Queen on 4 Sept. 1869. In *More Leaves from the Journal of a Life in the Highlands* (1884), Her Majesty's impressions are thus recorded: 'We steamed southward [from INVERNSNAID, where she had gone on board the steamer], and for the first half nothing could be finer or more truly Alpine, reminding me much of the *Lake of Lucerne*, only it is longer, *Loch Lomond* being twenty-two miles long. We kept close to the E shore, passing under *Ben Lomond*, with its variously called shoulders—*Cruachan*, *Craig a Bochun*, and *Plarmigan*—to *Rowardennan* pier, where there is a pretty little house, rented from the Duke of Montrose (to whom half *Loch Lomond* belongs) by a Mr Mair—a lovely spot from whence you can ascend *Ben Lomond*, which is 3192 feet high, and well wooded part of the way, with coruifields below. After you pass this, where there are fine mountains on either side, though on the W shore not so high, the lake widens out, but the shores become much flatter and tamer (in-

deca, to the E and S completely so); but here are all the beautifully-wooded islands, to the number of twenty-four.

. . . To the left we passed some very pretty villas. . . Then *Tarbet*, a small town, where dearest Albert landed in 1847; and here began the highest and finest mountains, with splendid passes, richly wooded, and the highest mountains rising behind. A glen leads across from *Tarbet* to *Arrochar* on *Loch Long*, and here you see that most singularly-shaped hill called the *Cobbler*, and a little further on the splendid *Alps of Arrochar*. All this, and the way in which the hills run into the lake, reminded me so much of the *Nasen* on the *Lake of Lucerne*. The head of the lake, with the very fine glen (*Glen Falloch*), along which you can drive to *Obar*, is magnificent. We (Louise and I) sketched as best we could.' In 1875, on her way back from Inveraray, she drove along the bank of the loch from *Tarbet* to *Balloch*. 'The drive along *Loch Lomond*, which we came upon almost immediately after *Tarbet*, was perfectly beautiful. We wound along under trees on both sides, with the most lovely glimpses of the head of the loch, and ever and anon of *Loch Lomond* itself below the road; the hills which rose upon our right reminding me of *Aberfoyle* near *Loch Ard*, and of the lower part of the *Pilatus*. Such fine trees, numbers of hollies growing down almost into the water, and such beautiful capes and little bays and promontories! The loch was extremely rough, and so fierce was the wind that the foam was blown like smoke along the deep blue of the water. The gale had broken some trees. The sun lit up the whole scene beautifully, but we had a few slight showers. It reminded me of *Switzerland*. I thought we saw everything so much better than we had formerly done from the steamer. As we proceeded, the hills became lower, the loch widened, and the many wooded islands appeared. We next changed horses at *Luss*, quite a small village—indeed, the little inn stands almost alone. . . . From here we drove along past the openings of *Glen Luss* and *Glen Finlas*, which run up amongst the fine hills to the right, the loch being on our left, and the road much wooded.'

In consequence of its size and beautiful scenery *Loch Lomond* is often styled the 'Queen of Scottish lakes,' a title which it certainly deserves. At the S end the banks have none of that bleakness and wildness that characterise so many of the lakes of the Highlands of Scotland. 'I have seen,' says *Smollett* in *Humphrey Clinker*, 'the *Lago di Gardi*, *Albano*, *De Vico*, *Bolsena*, and *Geneva*, and on my honour I prefer *Loch Lomond* to them all; a preference which is certainly owing to the verdant islands that seem to float on its surface, affording the most enchanting objects of repose to the excursionist. Nor are the banks destitute of beauties which even partake of the sublime. On this side they display a sweet variety of woodland, cornfields, and pasture, with several agreeable villas emerging as it were out of the lake, till, at some distance, the prospect terminates in huge mountains, covered with heath, which, being in the bloom, affords a very rich covering of purple. Everything here is romantic beyond imagination. This country is justly styled the *Arcadia* of Scotland; and I don't doubt that it may vie with *Arcadia* in everything but climate: I am sure it excels in verdure, wood, and water. What say you to a natural basin of pure water nearly thirty miles long, and in some places seven miles broad, and in many above an hundred fathoms deep, having four-and-twenty habitable islands, some of them stocked with deer, and all of them covered with wood; containing immense quantities of delicious fish, salmon, pike, trout, perch, flounders, eels, and pawns, the last a delicate kind of fresh-water herring peculiar to this lake.' He also adds that the powan never descends the *Leven*. These are probably the animals that the writer in *Blaeu's Atlas* calls *paones*, though he is incorrect in confusing them with *vipers*. They belong to the *Salmonidæ*, and the species is scientifically known as *Coregonus La Cepedei* (*Parnell*) or *C. clupeoides* (*Lacepede*). The level and well wooded ground at the S end of the loch and the number and

beautifully wooded condition of the islands, give this part great softness, and it presents an appearance more akin to that of the Lakes of Killarney than any other sheet of water in Scotland. Above *Luss*, where the loch contracts and the hills rise more steeply from the water, and at the same time lose somewhat of the green colour they have farther to the S, the scenery becomes wilder, but by no means savage. Many parts of the lower skirts of the hills are still well wooded, and the slopes themselves have smooth rounded outlines, which the height, however, prevents from being tame. Everywhere, too, *Ben Lomond* towers above the lake, and fills up or borders the view.

Dr Johnson (who, however, visited it late in the year and during rain) expresses his opinion of the scenery in terms of great dissatisfaction; but *Boswell*, on the other hand, declares that the Doctor was very much pleased with the scene. *Wordsworth*, who visited *Loch Lomond* in his Scottish tours in 1803, 1814, and 1831, had all manner of faults to find with it. He thought 'the proportion of diffused water was too great,' and wished for 'a speedier termination of the long vista of blank water,' and 'the interposition of green meadows, trees, and cottages, and a sparkling stream to run by his side.' He thought that 'a notion of grandeur as connected with magnitude has seduced persons of taste into a general mistake upon this subject. It is much more desirable for the purposes of pleasure that lakes should be numerous and small or middle-sized, than large, not only for communication by walks and rides, but for variety and for recurrence of similar appearances.' This may be true, but one hardly sees that the proposition that everything great is not magnificent also implies the opposite that everything magnificent is not great. *Dorothy Wordsworth*, his sister, who, along with *Coleridge*, accompanied him in 1803, was no more satisfied. The hills were not such as 'a Cumbrian would dignify with the name of mountains,' nor was *Ben Lomond* 'seen standing in such company as *Helvellyn*.' Everything was too good for them; it would not submit to be measured by the spirit of *Ullswater*, but doubtless things have changed for the better in many ways about the shores of the loch since then, for the *Luss* of that time, with 'not a single ornamented garden,' must have been a very different place from the *Luss* of to-day, in midsummer, bright with *rhododendron* bloom. Dissatisfied, however, as she was, she had to admit beauty. They crossed to *Inchtavannach*, from which the view is thus described:—'We had not climbed far before we were stopped by a sudden burst of prospect so singular and beautiful that it was like a flash of images from another world. We stood with our backs to the hill of the island which we were ascending, and which shut out *Ben Lomond* entirely and all the upper part of the lake, and we looked towards the foot of the lake, scattered over with islands without beginning and without end. The sun shone, and the distant hills were visible, some through sunny mists, others in gloom, with patches of sunshine; the lake was lost under the low and distant hills, and the islands lost in the lake, which was all in motion with travelling fields of light or dark shadows under rainy clouds. There are many hills, but no commanding eminence at a distance to confine the prospect, so that the land seemed endless as the water. What I had heard of *Loch Lomond*, or any other place in Great Britain, had given me no idea of anything like what we beheld: it was an outlandish scene—we might have believed ourselves in North America. The islands were of every possible variety of shape and surface—hilly and level, large and small, bare, rocky, pastoral, or covered with wood. . . . There were bays innumerable, straits or passages like calm rivers, land-locked lakes, and, to the main water, stormy promontories.' The scene 'was throughout magical and enchanting—a new world in its great permanent outline and composition, and changing at every moment in every part of it by the effect of sun and wind, and mist and shower and cloud, and the blending lights and deep shades which

took place of each other, traversing the lake in every direction. The whole was indeed a strange mixture of soothing and restless images, of images inviting to rest and others hurrying the fancy away into an activity more pleasing than repose. Yet, intricate and homeless, that is without lasting abiding-place for the mind, as the prospect was there was no perplexity; we had still a guide to lead us forward. Wherever we looked, it was a delightful feeling that there was something beyond. Meanwhile, the sense of quiet was never lost sight of. . . . The whole scene was a combination of natural wildness, loveliness, beauty, and barrenness, or rather bareness, yet not comfortless or cold, but the whole was beautiful.

Professor Wilson, dealing with the remarks of Wordsworth already given, says, "The 'diffusion of water' is indeed great; but in what a world it floats! At first sight of it how our soul expands! The sudden revelation of such majestic beauty, wide as it is and extending afar, inspires us with a power of comprehending it all. Sea-like indeed it is,—a Mediterranean Sea,—enclosed with lofty hills and as lofty mountains,—and these indeed are the Fortunate Isles! We shall not dwell on the feeling which all must have experienced on the first sight of such a vision—the feeling of a lovely and a mighty calm; it is manifest that the spacious "diffusion of water" more than conspires with the other components of such a scene to produce the feeling; that to it belongs the spell that makes our spirit serene, still, and bright, as its own. Nor when such feeling ceases so entirely to possess, and so deeply to affect us, does the softened and subdued charm of the scene before us depend less on the expanse of the "diffusion of water." The islands, that before had lain we knew not how—or we had only felt that they were all most lovely—begin to show themselves in the order of their relation to one another and to the shores. The eye rests on the largest, and with them the lesser combine; or we look at one or two of the least, away by themselves, or remote from all a tufted rock; and many as they are, they break not the breadth of the liquid plain, for it is ample as the sky. They show its amplitude; as masses and sprinklings of clouds, and single clouds, show the amplitude of the cerulean vault. And then the long promontories—stretching out from opposite mainlands, and enclosing bays that in themselves are lakes—they too magnify the empire of water; for long as they are, they seem so only as our eye attends them with their cliffs and woods from the retiring shores, and far distant are their shadows from the central light. Then what shores! On one side where the lake is widest, low-lying they seem and therefore lovelier—undulating with fields and groves, where many a pleasant dwelling is embowered, into lines of hills that gradually soften away into another land. On the other side, sloping back, or overhanging, mounts beautiful in their bareness, for they are green as emerald; others, scarcely more beautiful, studded with fair trees—some altogether woods. They soon form into mountains—and the mountains become more and more majestic, yet beauty never deserts them, and her spirit continues to tame that of the frowning cliffs. Far off as they are, Benlomond and Benvoirlich are seen to be giants; magnificent is their retinue, but they two are supreme, each in his own dominion; and clear as the day is here, they are diademed with clouds. It cannot be that the "proportion of diffused water is here too great;" and is it then true that no one "ever travelled along the banks of Loch Lomond, variegated as the lower part is by islands, without feeling that a speedier termination to the long vista of blank water would be acceptable, and without wishing for an interposition of green meadows, trees, and cottages, and a sparkling stream to run by his side?" We have travelled along them in all weathers and never felt such a wish. For there they all are—all but the "sparkling stream to run by our side," and we see not how that well could be in nature. "Streams that sparkle as they run," cross our path on their own; and brighter

never issued from the woods. Along the margin of the water, as far as Luss—ay, and much farther—the variations of the foreground are incessant. "Had it no other beauties," it has been truly said, "but those of its shores, it would still be an object of prime attraction; whether from the bright green meadows sprinkled with luxuriant ash trees, that sometimes skirt its margin, or its white pebbled shores on which its gentle billows murmur, like a miniature ocean, or its bold rocky promontories rising from the dark water rich in wild flowers and ferns, and tangled with wild roses and honeysuckles, or its retired bays where the waves dash, reflecting, like a mirror, the trees which hang over them, an inverted landscape."

"The islands are for ever arranging themselves into new forms, every one more and more beautiful; at least so they seem to be, perpetually occurring, yet always unexpected, and there is a pleasure even in such a series of slight surprises that enhances the delight of admiration. And alongside, or behind us, all the while, are the sylvan mountains, "laden with beauty;" and ever and anon open glens widen down upon us from chasms; or forest glades lead our hearts away into the inner gloom—perhaps our feet; and there, in a field that looks not as if it had been cleared by his own hands, but left clear by nature, a woodman's hut. Half-way between Luss and Tarbet the water narrows, but it is still wide; the new road, we believe, winds round the point of Firkin, the old road boldly scaled the height, as all old roads loved to do; ascend it, and bid the many-isled vision, in all its greatest glory, farewell. Thence upwards prevails the spirit of the mountains. The lake is felt to belong to them—to be subjected to their will—and that is capricious; for sometimes they suddenly blacken it when at its brightest, and sometimes when its gloom is like that of the grave, as if at their bidding, all is light. We cannot help attributing the "skye influences" which occasion such wonderful effects on the water, to prodigious mountains; for we cannot look on them without feeling that they reign over the solitude they compose; the lights and shadows flung by the sun and the clouds imagination assuredly regards as put forth by the vast objects which they colour; and we are inclined to think some such belief is essential in the profound awe, often amounting to dread, with which we are inspired by the presences of mere material forms. But be this as it may, the upper portion of Loch Lomond is felt by all to be most sublime. Near the head, all the manifold impressions of the beautiful which for hours our mind had been receiving begin to fade; if some gloomy change has taken place in the air, there is a total obliteration, and the mighty scene before us is felt to possess not the hour merely, but the day. Yet should sunshine come, and abide a while, beauty will glimpse upon us even here, for green pastures will smile vividly, high up among the rocks; the sylvan spirit is serene the moment it is touched with light, and here there is not only many a fair tree by the water-side, but yon old oak wood will look joyful on the mountain, and the gloom become glimmer in the profound abyss. Wordsworth says, that "it must be more desirable, for the purposes of pleasure, that lakes should be numerous, and small or middle-sized, than large, not only for communication by walks and rides, but for variety, and for recurrence of similar appearances." The Highlands have them of all sizes—and that surely is best. But here is one which, it has been truly said, is not only "incomparable in its beauty as in its dimensions, exceeding all others in variety as it does in extent and splendour, but unites in itself every style of scenery which is found in the other lakes of the Highlands." He who has studied and understood and felt all Loch Lomond, will be prepared at once to enjoy any other fine lake he looks on; nor will he admire nor love it the less, though its chief character should consist in what forms but one part of that of the Wonder in which all kinds of beauty and sublimity are combined. Elsewhere he says again: "Loch Lomond is a sea!

Along its shores might you voyage in your swift schooner, with shifting breezes, all a summer's day, nor at sunset, when you dropped anchor, have seen half the beautiful wonders. It is many-isled, and some of them are in themselves little worlds, with woods and hills. . . . Ships might be sailing here, the largest ships of war; and there is anchorage for fleets. But the clear course of the lovely Leven is rock-crossed and intercepted with gravelly shallows, and guards Loeh Lomond from the white-winged roamers that from all seas come crowding into the Firth of Clyde. . . . We should as soon think of penning a critique on Milton's *Paradise Lost* as on Loeh Lomond. People there are in the world, doubtless, who think them both too long; but, to our minds, neither the one nor the other exceeds the due measure by a leaf or a league. You may, if it so pleaseth you, think it, in a mist, a Mediterranean Sea. For then you behold many miles of tumbling waves, with no land beyond; and were a ship to rise up in full sail, she would seem voyaging on to some distant shore.'

The loeh may be reached by rail to Balloch Pier, and thence steamers ply to the piers at Balmaha (E), Luss (W), Rowardennan (E), Tarbet (W), Inversnaid (E), and Ardlui at the N end. The West Highland railway, in the neighbourhood of Tarbet, crosses from Lochlongside to Loehlomondside, and thence skirts the shore to the head of the loeh, with stations at Tarbet and Ardlui.—*Ord. Sur.*, shs. 38, 30, 1871-66.

H. Millar's *History of Rob Roy* (1883); and the notes to Scott's *Rob Roy*.

Lomond Hills, an isolated ridge of hills on the borders of Kinross-shire and Fifeshire, NE of Loeh LEVEN. From the E shore of Loch Leven the hills pass northwards, north-eastwards, and eastwards for a distance of 6½ miles through PORTMOAK, STRATHMIGLO, and Falkland parishes, and between the basins of the EDEN and LEVEN. The W and N fronts are steep and rocky, the E and S smooth and gently sloping, while the top is a flat plateau, on an average about 1250 feet high. Of the section that trends eastward the principal tops are West Lomond (1713 feet), East Lomond (1471), and a point between, often called Mid Lomond (1186). The section trending N and S is known as Bishop Hill, and has two tops (N, 1292 feet; S, 1492). This latter, though sometimes counted not to belong to the Lomond chain proper, does so in reality, being only separated from it by the deep and narrow glen that has been cut by the Glen Burn on its way to join the Eden. The hills form conspicuous landmarks all over Fife, Forfarshire, and the Lothians, and command extensive and beautiful views. Sir David Wilkie, a Fifeshire man himself, used to admire the Lomonds very much, and talked of them as his 'own blue Lomonds.' The ridge presents in some parts a face of regular columnar basalt, and elsewhere it is formed of sandstone, limestone, coal, and interbedded volcanic rocks. The NE and E portions are well wooded. Besides Glen Burn, Maspie Burn, rising between East and Mid Lomonds, and some other small burns flow to the Eden; and Arnot, Lothrie, and Conland Burns to the Leven. The boundary line between the counties of Fife and Kinross passes along the hollow between Bishop Hill and West Lomond. South of Mid Lomond is a small lochan known as Miller's Loeh. On the top of West Lomond there is a cairn, and on the edge of the Glen Burn, below Edge Head, on the SE shoulder, are the remains of a hill-fort. There are also hill-forts E by S of Mid Lomond and on the very top of East Lomond. Bishop Hill was in 1852 the scene of extensive search for gold, particularly about the limestone quarry known as Clattering Well. Overlying the limestone, which is richly fossiliferous, is a bed of ochre, in which round masses of iron pyrites occur, and these were eagerly carried off as lumps of the precious metal. East Lo-

mond Hill was one of the great stations during the Ordnance Survey; and Carlyle in his *Reminiscences* (1881) thus describes a visit he and Edward Irving then paid to the top: 'Another time military tents were noticed on the Lomond Hills (on the eastern of the two). "Trigonometrical Survey," said we, "Ramsden's theodolite and what not; let us go." And on Saturday we went. Beautiful tho airy prospect from that eastern Lomond far and wide. Five or six tents stood on the top; one a blaek stained cooking one, with a heap of coals close by—the rest all closed and occupants gone, except one other, partly open at the eaves, through which you could look in and see a big circular mahogany box (which we took to be the theodolite), and a saucy-looking, cold, official gentleman diligently walking for exercise, no observations being possible, though the day was so bright. No admittance, however. Plenty of fine country people had come up, to whom the official had been coldly monosyllabic, as to us also he was. Polite, with a shade of contempt, and unwilling to let himself into speech. Irving had great skill in these eases. He remarked—and led us into remarking—courteously this and that about the famous Ramsden and his instrument, about the famous Trigonometrical Survey, and so forth, till the official in a few minutes had to melt; invited us exceptionally in for an actual inspection of his theodolite, which we reverently enjoyed, and saw through it the signal column—a great broad plank, he told us, on the top of Ben Lomond, sixty miles off—waving and shivering like a bit of loose tape, so that no observation could be had. We descended the hill *re facta*.'—*Ord. Sur.*, sh. 40, 1867.

Lonaig. See INCHLONAIG.

Lonan, a rivulet of Muckairn and Kilmore parishes, Lorn, Argyllshire, rising at an altitude of 1230 feet above sea-level, and running 6½ miles west-by-northward to the head of fresh-water Loeh NELL (48 feet).—*Ord. Sur.*, sh. 45, 1876.

Loncarty. See LUNCARTY.

Lonfeary, a village in Kilmuir parish, Isle of Skye, Inverness-shire.

Longa, an islet off the E side of Skye, Inverness-shire, 1 mile NE of Sealpa, 2½ miles NNW of Pabbay, and 6 WNW of Kyle-Akin. Measuring 1½ mile in circumference, and mainly consisting of red sandstone, it forms an uneven table-land, everywhere abrupt on the coast, and rising to a height of 221 feet above sea-level; and is merely a pasture for sheep and a haunt of sea-fowl.

Longa, a small island (1¼ × ½ mile; 229 feet high) of Gairloch parish, Ross and Cromarty, within the N side of the mouth of Gair Loeh, 8 miles WSW of Poolewe.—*Ord. Sur.*, sh. 91, 1882.

Longannat. See TULLIALLAN.

Longart, Loch. See GLASLETTER.

Long Calderwood. See CALDERWOOD, LONG.

Longcastle. See DOWALTON and KIRKINNER.

Long Causeway. See CAUSEWAYHEAD.

Longcroft, a village in Denny parish, Stirlingshire, 2½ miles SSW of Denny town. It lies between Parkfoot and Hags, and forms part of the long line of nearly continuous village from Denny-Loanhead to Hags. Pop., with Parkfoot, (1871) 547, (1881) 606, (1891) 588.

Long Dalmahoy. See DALMAHOY.

Longdyke, a village in Bothkennar parish, Stirlingshire. Pop. (1881) 305, (1891) 340.

Longfaugh. See CRICHTON.

Longforgan, a village and a parish on the eastern border of Perthshire. The village, standing on a ridge 135 feet high, is 1 mile NNW of Longforgan station on the Dundee and Perth section of the Caledonian, this being 5¼ miles W by S of Dundee and 16½ ENE of Perth. It commands a splendid view over the Carse of Gowrie and the Firth of Tay; consists of a straggling main street; served long as an appanage of Castle-Huntly; and in 1672 was created a burgh of barony, with many privileges; but has fallen away from its former prosperity. It has a post office under Dundee, with money order and savings bank departments. Pop. (1861) 442, (1871) 363, (1881) 366, (1891) 318.

LONGFORMACUS

The parish, containing also the villages of KINGOODIE and MYLNEFIELD FEUS, is bounded NW by Kettius in Forfarshire, NE by Fowlis-Easter and by Liff and Benvie in Forfarshire, SE by the Firth of Tay, and W by Inchture, Abernethy, and Cargill. Its utmost length, from NW to SE, is $7\frac{5}{8}$ miles; its breadth varies between $7\frac{1}{2}$ furlongs and $4\frac{1}{2}$ miles; and its area is 11,247 $\frac{3}{4}$ acres, of which 2687 are foreshore and 32 water. Part of the estate of Mylnefield, that was in the parish of Caputh, and of very small extent, was in 1891 transferred to Longforgan. The streams are all small, and the largest, rising in the north-western extremity, runs $2\frac{1}{2}$ miles to the SW boundary, flows $3\frac{3}{4}$ miles along that boundary, and thence goes 2 miles eastward to the Firth at Barnside Park. The foreshore, $3\frac{3}{8}$ miles long and $1\frac{1}{2}$ mile broad, bears the name of Dogbank. A triangular tract of seaboard, about $1\frac{1}{2}$ mile broad at the western boundary, and converging to a point in the vicinity of Kingoodie village, 1 mile from the eastern boundary, is carse land, almost as flat as a bowling-green. A bold and rocky promontory projects at Kingoodie; and a gently sloping bank or low ridge goes thence north-westward, bears on its summit Longforgan village, and ends somewhat abruptly at the Snabs of Drimmie (177 feet). A dingle lies immediately behind, and extends quite across the parish; a gentle ascent flanks the NW side of the dingle; and in the north-western corner of the parish, Ballo Hill, a summit of the Sidlaws, attains a maximum altitude of 1029 feet above sea-level. Sandstone of excellent quality is quarried at Kingoodie, and on a farm in the uplands; coal was long believed to exist, but eluded extensive and frequent search; and shell marl was dug and sold to a vast amount after the epoch of agricultural improvement. The soil on the carse land is rich argillaceous alluvium; on the bank or ridge flanking the carse land, is mostly a deep black loam; and elsewhere is mainly of a light dry character, well suited to the turnip husbandry; but on two or three farms is wet and spongy, on a cold retentive bottom. Rather more than one-sixth of the entire land area is under wood; about 180 acres are meadow or hill pasture; and all the rest of the land is regularly or occasionally in tillage. Chief antiquities are a large tumulus on what was anciently Forgan Moor, traces of a fortification on DRON HILL, a ruined chapel and a cemetery in a dell among the high grounds of Dron, vestiges of a cemetery on the grounds of Monorgan, and many ancient coins, chiefly Scottish and English, found in various parts. CASTLE-HUNTLY, the most prominent edifice, has been separately noticed, as also are the mansions of MYLNEFIELD and LOCHTON. A fourth mansion was DRIMMIE House, represented by Rossie Priory, within the eastern border of Inchture. Longforgan is in the presbytery of Dundee and the synod of Angus and Mearns; the living is worth £374. The parish church, at Longforgan village, was built in 1795, and contains nearly 1000 sittings. The clock on its steeple was reconstructed in 1878 by an ingenious self-taught carpenter, and a new bell was presented to the church by Mrs Armistead, Huntly Castle, in 1889. There is also a Free church; and two public schools, Longforgan and Mylnefield, with respective accommodation for 185 and 196 children, have an average attendance of about 115 and 175, and grants amounting to nearly £120 and £172. Valuation (1884) £15,282, 2s. 10d., (1892) £14,333, 15s. 6d. Pop. (1871) 1753, (1881) 1854, (1891) 1779.—*Ord. Sur.*, sh. 48, 1868.

Longformacus, a small village and a parish in Lamermuir district, N Berwickshire. The village stands 690 feet above sea-level, on both sides of Dye Water, 7 miles WNW of its post-town Duns, at which there is a station on the Berwickshire branch of the North British railway. It has a post and telegraph office under Duns, is a resort of anglers, for whom there is good accommodation, and has been much improved in appearance by the erection of a new schoolhouse, with residence for the master, and a number of neat cottages. There are curling and fishing clubs.

The parish comprises the vacant parishes of Longfor-

LONGHOPE

macus and Ellem, united in 1712. It is bounded N by Whittingham in Haddingtonshire, NE by Cranshaws, E by Duns and Langton, SE by Polwarth, S by Greenlaw and Westruther, SW and W by Lauder, and NW by Garvold in Haddingtonshire. Its outline is remarkably irregular, making a great projection towards Greenlaw; and its utmost length, from E to W, is $10\frac{3}{8}$ miles; whilst its breadth varies between $\frac{3}{4}$ mile and 6 miles. Its former detached or BLACKERSTONE section, lying $2\frac{1}{2}$ miles to the NE of Ellem Inn, and comprising 1149 acres, was in 1891 transferred by the Boundary Commissioners to the parish of Abbey St Bathans. The part of the parish, also, north of a line drawn down the river Whitadder from a point near the centre of the boundary with Cranshaws parish to the boundary with Duns at Ellem Inn, was transferred to Cranshaws parish. There was, however, added to Longformacus parish the Scarlaw detached portion of Cranshaws parish, S of the Dye Water, comprising 6132 acres. DYE WATER, rising on the western confines of the parish at an altitude of 1600 feet above sea-level, winds $13\frac{3}{4}$ miles eastward through the interior, till, after a total descent of 1000 feet, it falls into the Whitadder, $\frac{3}{4}$ mile WSW of Ellem Inn. Watch Water, rising on the western boundary of the parish, runs in an easterly direction till it joins the Dye Water about a mile from the village. The WHITTADDER itself curves $2\frac{1}{2}$ miles eastward along the boundary with Cranshaws. The surface declines in the extreme E to 510 feet above sea-level, thence rising to 1032 feet at Brown Law, 880 near Otterburn, 1309 at DIRRINGTON Great Law, 1191 at Dirrington Little Law, 1194 at Wrink Law, 1299 at Black Hill, 1531 at Meikle Law, 1625 at Hunt Law, and 1626 at Willies Law. The rocks are mainly Silurian, and various unsuccessful attempts have been made at copper-mining. The soil is fairly good for a hill district. The chief antiquity, a cairn called the Mutiny Stones, is noticed under BYREOLEUGH. An ancient British camp, known locally as Runklie—a corruption of Wrink Law—lies $1\frac{1}{2}$ mile above Longformacus, where the flanks of the hill drop abruptly down on Dye Water. On one side it is protected by precipitous slopes, on the other by walls and mounds. In recent times Runklie has been the site of a farm and a mill, the traces of which can be easily seen within the limits of the more ancient remains (*Proc. Berwickshire Naturalists' Club*, 1882). At the manse is a tall picturesque gable-end of a dwelling supposed to have been a mansion built for defence in the old Border times. The huge Twinlaw Cairns, on the SW boundary of the parish, are described under WESTRUTHER. In olden times the barony of Longformacus belonged successively to the Earls of Moray, the Earls of Dunbar, and the St Clairs of Roslin. Longformacus House stands a little way E of the village, on the opposite bank of the Dye, amidst large and well-wooded grounds. Its owner is Lieut.-Col. A. M. Brown. The only other resident landowner is Andrew Smith, Esq. of Whitechester, whose turreted mansion, standing on a hill between Ellemford and Longformacus, forms from all parts a most prominent feature in the landscape. Longformacus is in the presbytery of Duns and the synod of Merse and Teviotdale; the living is worth £290 and manse. The parish church, built about 1730, was renovated in 1892-93. There is also a Free church; and a public school, with accommodation for 66 children, has an average attendance of about 30, and a grant of nearly £40. Pop. (1801) 406, (1831) 425, (1861) 448, (1871) 452, (1881) 385, (1891) 278.—*Ord. Sur.*, shs. 33, 34, 25, 1863-65.

Longhaven, a modern mansion in Cruden parish, Aberdeenshire, 6 miles S by W of Peterhead. There is a post office of Longhaven under Ellon.

Longhope, a hamlet and a sea-loch or long bay in Walls and Flotta parish, Hoy Island, Orkney. The hamlet, lying on the sea-loch, 18 miles SW of Kirkwall, has a post office under Stromness, with money order, savings bank, and telegraph departments. The sea-loch, opening from the south-western extremity of Scapa Flow, opposite Flotta Island, is sheltered across the entrance, at the distance of about 1 mile, by Flotta and

Switha. Penetrating the southern district of Hoy Island, so as to cut that island into a large main body and a small peninsula, it extends $3\frac{1}{2}$ miles west-south-westward to within 3 furlongs of the Pentland Firth, and is separated at its south-eastern extremity by an isthmus only 200 feet broad from Aith Hope Bay. With a breadth of from 3 furlongs to $1\frac{1}{2}$ mile, it forms a splendid natural harbour, perfectly sheltered from every wind. There is a ferry across the harbour to South Walls, with an inn on the north side of the loch.

Long Island, the Outer Hebrides or largest group of the Western Islands, partly in Ross and Cromarty, but chiefly in Inverness-shire. See **HEBRIDES**.

Longleys, a village in Meikle parish, Perthshire, 2 miles SW of Meikle village.

Long Loch, a lake on the mutual border of Mearns and Neilston parishes, SE Renfrewshire, 3 miles S of Neilston town. Lying 790 feet above sea-level, it has an utmost length and breadth of $1\frac{1}{2}$ and $\frac{1}{2}$ mile, contains some perch and trout, and sends off the principal head-stream of the Lovern.—*Ord. Sur.*, sh. 22, 1865.

Long Loch. See **LUNDIE**.

Long Loch (the *Sinus Lemannonius* of Ptolemy), a salt-water inlet on the eastern border of the district of Cowal, Argyllshire, and on the mutual border of Dunoon and Lochgilhead parishes in Argyllshire, and Roseneath, Row, and Arrochar parishes in Dumbartonshire. An arm of the Firth of Clyde, which, but for wanting the influx of the river Clyde or of some other considerable river, would claim to be regarded as the upper firth, it opens on a line with the lower firth, immediately to the N of the mouth of Holy Loch, 5 miles WNW of Greenock, and extends $17\frac{1}{2}$ miles north-north-eastward, with a varying width of 2 miles and $2\frac{1}{2}$ furlongs. It sends off from its western side the considerable inlet of Loch Goil, and at Portincle and Arrochar approaches to within 2 miles of the head of Gare Loch and $1\frac{1}{2}$ mile of Tarbet on Loch Lomond. At Coulpout a ferry connects with Ardentiny opposite; at the upper side of the entrance to Loch Goil is the series of irregular peaked mountains playfully termed Argyll's Bowling Green; opposite Loch Goil the West Highland railway (1894) emerges from Garelochhead on its way from Heiensburg to Fort William, running along the entire length of the eastern side of the upper reach of the loch, and having a station at Arrochar at the head of it; and here, to the left, towers **BEN ARTHUR**, or 'the Cobbler,' so named from its fancied resemblance to a shoemaker at work. Loch Long, which had for years been utilized by the Clyde Trust for receiving the dredgings of the river, has, by the intervention of the Crown authorities, been freed from being put to this use, the dredgings being now taken further out to sea. Under **ARDENTINY**, **ARGYLL'S BOWLING GREEN**, **GLENCROE**, and the five parishes which skirt its shores, are noticed the leading features of Loch Long, which the Queen, who steamed up and down it on 17 Aug. 1847, describes as 'indeed splendid, surrounded by grand hills, with such beautiful outlines, and very green, the loch winding along most beautifully, so as to seem closed at times.' Dorothy Wordsworth writes, under date 29 Aug. 1803, that 'this was the first sea-loch we had seen. We came prepared for a new and great delight, and the first impression which William and I received, as we drove rapidly through the rain down the lawn of Arrochar, the objects dancing before us, was even more delightful than we had expected. But, as I have said, when we looked through the window as the mists disappeared and the objects were seen more distinctly, there was less of sheltered-valley comfort than we had fancied to ourselves, and the mountains were not so grand; and now that we were near to the shore of the lake, and could see that it was not of fresh water, the wreck, the broken sea shells, and scattered sea-weed gave somewhat of a dull and uncleanly look to the whole lake, and yet the water was clear, and might have appeared as beautiful as that of Loch Lomond, if with the same pure pebbly shore. Perhaps had we been in a more cheerful mood of mind we might have seen everything with a different eye. The stillness of

the mountains, the motion of the waves, the streaming torrents, the sea-birds, the fishing boats were all melancholy; yet still, occupied as my mind was with other things, I thought of the long windings through which the waters of the sea had come to this inland retreat, visiting the inner solitudes of the mountains, and I could have wished to have mused out a summer's day on the shores of the lake. From the foot of these mountains whither might not a little barque carry one away? Though so far inland, it is but a slip of the great ocean: seamen, fishermen, and shepherds here find a natural home. We did not travel far down the lake, but, turning to the right through an opening of the mountains, entered Glen Croe.—*Ord. Sur.*, shs. 29, 37, 38, 1871-76.

Long Loch, the north-eastern fork of salt-water Loch Alsh, on the mutual border of Loch Alsh and Kintail parishes, SW Ross and Cromarty. It curves $5\frac{1}{2}$ miles north-eastward, though its average width is less than $\frac{1}{2}$ mile; and at its head it receives the **ELCHAIG** and the **Ling** or **Long**, the latter of which issues from Loch Cruashie (850 feet), and runs 11 miles west-south-westward along the boundary of the above-named parishes. It is crossed at the mouth by the line of communication from Kyle-Akin to Inverness; and on its Kintail shore are the fishing villages of Dornie and Bundaloch.—*Ord. Sur.*, shs. 71, 72, 82, 1880-84.

Longmanhill, a village in Gamrie parish, Banffshire, 3 miles ESE of Macduff. Founded about 1822 by the Earl of Fife, it chiefly consists of a regular assemblage of houses occupied by small crofters, and has a post office under Banff.—*Ord. Sur.*, sh. 96, 1876.

Longmorn, a station in Elgin parish, Elginshire, on the Great North of Scotland railway, 3 miles S by E of Elgin.

Longnewton, a quondam village and an ancient parish of NW Roxburghshire. The village lay near the left bank of Ale Water, 3 miles S of St Boswells, and was the birthplace of the famous shoemaker-fisherman, John Younger (1785-1860) of St Boswells. The parish, lying around the village, forms the north-western section of the present parish of Ancrum. Its church is represented only by the burying-ground.—*Ord. Sur.*, sh. 25, 1865.

Longnewton, a hamlet in Yester parish, Haddingtonshire, at the foot of the Lammermuirs, $2\frac{1}{2}$ miles SW of Gifford.

Longniddry, a village in Gladsmuir parish, Haddingtonshire, with a post and railway telegraph office, and with a station on the North British railway, the junction for Haddington, $4\frac{1}{2}$ miles WSW of that town and $13\frac{1}{2}$ E by N of Edinburgh. Once a small town of some importance, with several streets, it covered a considerable extent of ground which now is under the plough. Today it exhibits a straggling, irregular, and decayed appearance; although, in connection with the railway, it still is a place of some transit traffic, which will no doubt be increased by the opening of the Aberlady and North Berwick railway (authorized in 1893), which branches off the North British main line about $1\frac{1}{2}$ mile east of Longniddry station, and runs *via* Aberlady and Gullane to the junction with the North Berwick branch about midway between Dirleton and North Berwick. Longniddry House, the seat of the Douglasses, who figured prominently in the movements of the Reformation, stood at the SW side of the village, and is now represented by only a circular mound and subterranean vaults. An ancient chapel, in which John Knox occasionally preached, and which came to be called John Knox's Kirk, stood a little to the E, and is now a ruin.—*Ord. Sur.*, sh. 33, 1863.

Longridge or **Lanrig**, a village in Whitburn parish, SW Linlithgowshire, $1\frac{1}{2}$ mile N by W of Breich station on the Edinburgh and Holytown branch of the Caledonian railway, $1\frac{1}{2}$ S by E of Whitburn town. It has a post office under Fauldhouse.—*Ord. Sur.*, sh. 31, 1867.

Longriggend, a village in New Monkland parish, Lanarkshire, 5 miles NE by E of Coatbridge and $2\frac{1}{2}$ SW of Slamannan. It has a post office with money order, savings bank, and telegraph departments; a

station on the Coatbridge, Slamannan, and Bo'ness section of the North British railway, an Established church, a Free church, an hospital, and a public school. Mining is the chief occupation of the inhabitants. Pop. (1881) 475, (1891) 1403.—*Ord. Sur.*, sh. 31, 1867.

Longside, a village and a parish in Buchan district, NE Aberdeenshire. The village lies at an altitude of from 66 to 107 feet above sea-level, near the right bank of South Ugie Water, 3 furlongs S of Longside station on the Peterhead branch of the Great North of Scotland railway, this being 6 miles W by N of Peterhead, 7½ E of Maud Junction, and 38½ N by E of Aberdeen. It stands on an eminence, sloping gently on every side, and was founded in 1801 by Mr Ferguson of Pittfour. Its growth was rapid till the stoppage of a woollen factory at Millbank in 1828, since which year very few houses have been built; but it presents a pleasant appearance, and has a post office under Aberdeen, with money order, savings bank, and telegraph departments, a branch of the North of Scotland Bank, one of the oldest savings banks (1815) in the north of Scotland, a hotel, fairs on the Thursday after the third Tuesday of every month, and hiring fairs on the Thursday after 7 May and Tuesday after 7 Nov. The old parish church, on the summit of the eminence, was built in 1620, and down to 1801 was the only edifice on the site of the village, excepting a farmhouse and an alehouse. Becoming too small for the greatly increased population, it was then abandoned, but still remains standing in the churchyard, the entrance to which is by an old lych-gate, one of the few in Scotland. The new parish church, beside the old one, was built in 1836, and is a plain but well-proportioned edifice, with a steeple and 1350 sittings. A vestry was built and heating apparatus introduced in 1889. The Free church, erected soon after the Disruption, has a tall slender spire; and St John's Episcopal church, on Cairngall estate, to the E of the village, was built in 1853, after designs by W. Hay. First Pointed in style, it consists of nave, aisles, and chancel, with a central saddle-roofed tower 90 feet high. Burns's correspondent, the Rev. John Skinner (1721-1807), author of an *Ecclesiastical History of Scotland*, and of *Tullochgorum, John o' Badenyon, Ervie wi' the Crooked Horn*, and other popular songs, for 64 years was Episcopal minister of Longside. Linshart, his low thatched cottage, is still standing, where, after his church had been burned by the Hanoverians in 1746, he preached from the window to the little flock gathered outside. A handsome monument marks his grave in the parish churchyard; and an interesting Life of him was published in 1883 by the Rev. W. Walker. A monument, too, was erected in 1861 over the grave of Jamie Fleeman (1713-78), the 'Laird of Udn's fool,' who was born at Longside, and died at Kinnmudy. Pop. (1831) 316, (1861) 447, (1871) 584, (1881) 474, (1891) 453.

The parish of Longside, containing also MINTLAW village, was disjoined from Peterhead parish in 1620. It is bounded NE by St Fergus, E by Peterhead, S by Cruden, W by Old Deer, and NW by Old Deer and Lonmay. Its utmost length, from N by E to S by W, is 8½ miles; its breadth varies between 3 and 5½ miles; and its area is 16,894½ acres, of which 58½ are water. North and South Ugie Waters wind 2½ miles east-south-eastward and 4½ east-north-eastward, and unite in the Haughs of Rora to form the river UGIE, which itself has an east-north-easterly course of 2½ miles, till it passes off from the parish. North Ugie Water used often to flood a considerable extent of adjacent land, but now is restrained within embankments. Several burns run to one or other of these streams; and springs are abundant and generally pure. Two, 400 yards S of the village, though within 18 inches of each other, differ so remarkably that the one has very soft water, while the other is a strong chalybeate. The surface for the most part is either level or gently undulating, and rises to a low watershed at the Cruden boundary, attaining there a maximum altitude of 447 feet above sea-level, and at Rora Moss of 189, whilst along the Ugie it declines to close upon 40 feet. Granite of

different colours and excellent quality is worked in the CAIRNGALL and other quarries, both for ordinary building and for ornamental purposes. The soil is in most parts light, comparatively shallow, and incumbent on a ferruginous stratum or 'pan.' About one-fifth of the entire area is moss, pasture, or waste; nearly 400 acres are under wood; and all the rest of the land is in tillage. Estates, noticed separately, are CAIRNGALL, FAICHFIELD, INVERQUHOMERY, and KINMUNDY. Giving off three portions to the *quoad sacra* parishes of Blackhill, Ardallie, and Kinninmonth, Longside is in the presbytery of Deer and synod of Aberdeen; the living is worth £260. The following four public schools—Kinnmudy, Longside, Mintlaw, and Rora—with accommodation for 173, 297, 133, and 172 children respectively, have an average attendance of about 110, 145, 120, and 120, and grants of over £106, £134, £115, and £118. Pop. (1861) 3008, (1871) 3321, (1881) 3222, (1891) 3031, of whom 2663 were in the ecclesiastical parish.—*Ord. Sur.*, sh. 87, 1876.

Long Sprouston. See SPROUSTON.

Long Yester. See YESTER.

Lonmay, a parish in Buchan district, NE Aberdeenshire, with a station on the Formartine and Buchan section of the Great North of Scotland railway, 5¼ miles S by E of Fraserburgh and 42 N by E of Aberdeen. There is a post office of Lonmay, with money order, savings bank, and telegraph departments. Fairs are held near the station on the second Monday of every month.

Containing also the fishing village of St Combs, 4½ miles NNE of Lonmay station, the parish is bounded NE by the German Ocean, E by Crimond and St Fergus, S by Longside, SW by Old Deer, and W and NW by Strichen and Rathen. With a very irregular outline, it has an utmost length from NNE to SSW of 8½ miles, a varying width of 1½ furlong and 4 miles, and an area of 12,000½ acres, of which 528 are foreshore and 397 water. The coast, 4 miles in extent, has a sandy beach, bordered by low and bent-covered sandhills. Bleak, shallow Loch Strathbeg, 2¾ miles long, and from 2 to 4½ furlongs broad, lies partly in Crimond but mainly in Lonmay, within ¼ mile of the sea-shore. Formed by sand drifts blocking the outlet of a stream, it contains three islets, and is bounded on the N by a fine grassy extent of downs or links, affording pasturage for cattle and sheep. Several burns run in different directions across the parish, and after making a confluence, pass into Loch Strathbeg; whilst North UGIE Water, at two different points, traces 1½ and ½ mile of the southern boundary. The highest point in the parish—270 feet above sea-level—is near Kinninmonth church. One or two green braes skirt the links near the beach; two or three unimportant ridges extend westward through the interior; a plain, comprising the estates of Lonmay, Cairness, Craigellie, Blairmormond, Park, and parts of Inverallochy and Crimomogate, constitutes the northern district; and the southern consists of another plain, somewhat more elevated, broken by rising-grounds, and containing two extensive peat mosses. Syenite and greenstone are the predominant rocks; and limestone occurs on the northern border. The soil, in some parts clay, is elsewhere chiefly light, dry, and sandy. About one-fifth of the entire area is still moss or moor; plantations cover some 400 acres; and all the rest of the land is either cultivated or in pasture. Lonmay Castle, that stood on the coast, 1½ mile SSE of St Combs village, is scarcely known to record, and has utterly disappeared. An ancient Caledonian stone circle, in pretty entire condition, is at Newark. The principal mansions are CAIRNESS, CRAIGELLIE, and CRIMOMOGATE. Since 1874 giving off its southern division to the *quoad sacra* parish of KINNINMONTH, Lonmay is in the presbytery of Deer and the synod of Aberdeen; the living is worth £251. The parish church, 2¼ miles NE of Lonmay station, is a neat edifice of 1787. Near it is St Columba's Episcopal church (1797), which, as reconstructed in 1862, is seated for 200, and comprises nave, chancel, and organ-chamber. Three public schools—Blackhills,

Lonmay, and St Combs—with respective accommodation for 102, 161, and 162 children, have an average attendance of about 80, 105, and 150, and grants amounting to nearly £80, £100, and £133. Pop. (1831) 1798, (1861) 2142, (1881) 2393, (1891) 2286, of whom 1710 were in the ecclesiastical parish.—*Ord. Sur.*, shs. 97, 87, 1876.

Lora, Falls of. See CONNELL FERRY.

Lordscairnie, a quondam lake in Moonzie parish, five, 3½ miles NW of Cupar. Nearly 2 miles long, and in some parts ½ mile broad, it presented features which occasioned it to be sometimes called Lordscairnie Mire, and about the year 1803 was so drained as to be converted into arable ground. Lordscairnie Castle, on a slight eminence, once an islet surrounded by the lake, was built in the time of James II, by the third Earl of Crawford, popularly called Earl Beardie. Though it has suffered much demolition in modern times by being used as a quarry, it still partly stands to the length of 54 feet, the breadth of 40 feet, and the height of four storeys; has walls nearly 6 feet thick, consisting of many kinds of stones, and very strongly cemented; and is often popularly designated Earl Beardie's Castle. Lordscairnie estate, comprising the farms of Lordscairnie, Moonzie, Torr, and Bridgend, is sometimes called Moonzie estate.—*Ord. Sur.*, sh. 48, 1868.

Loretto. See MUSSELBURGH.

Lorn, a district and a presbytery of Argyllshire. The district is bounded, on the NW, by Loch Linnhe, which divides it from Morvern; on the N by Loch Leven, the river Leven, and the chain of lakelets drained by the Leven, which divide it from Inverness-shire; on the E by an arbitrary line across Rannoch Moor, and by the great central southward reach of the Grampians, which divide it from Perthshire; on the S partly by brief arbitrary lines, and chiefly by Lochs Awe, Avich, and Melfort, which divide it from Cowal and Argyll; on the W by the Firth of Lorn, which divides it from Mull. It includes also the islands belonging to the parish of Lismore and Appin, and the islands of Kerrera, Easdale, and Shuna. Its length, from N to S, varies from 22 to 33 miles, and its breadth, from E to W, varies from 15 to 32 miles. The parishes comprised in it are Lismore and Appin, Ardochattan and Muckairn, Kilmore and Kilbride, Glenorchy and Innishail, Kilbrandon and Kilchattan, Kilchrenan and Dalavich, Kilniver and Kilmelfort. The north-eastern portion of it, comprising Glencoe, Glenorchy, and the minor part of Rannoch Moor, belongs to it only in a loose and indefinite manner, whilst the rest of it, measuring 33 miles in extreme length, and about 9 miles in mean breadth, is strictly or emphatically Lorn, and is divided into Upper Lorn, lying N of Loch Etive, and including Appin and Airds; Middle Lorn, lying immediately S of Loch Etive, and including Muckairn; and Nether Lorn, separated from Middle Lorn by no natural boundary, and extending to Lochs Avich and Melfort. The district, in a general view, is grandly Highland; displays great wealth and variety of mountain, glen, romantic sea-board, picturesque fresh-water lake and long-reaching sea-loch; abounds in many kinds of interesting antiquities, both civil and ecclesiastical, from the ancient Caledonian to the late mediæval; has ancient historical associations connected with Dalriada, or the original Scottish kingdom; and possesses three of the most renowned ancient castles in the Western Highlands—Dunstaffnage, Dunolly, and Kilchurn. The Firth of Lorn extends southward from the junction of Loch Linnhe and the Sound of Mull; washes all the W coast of Lorn and all the SE coast of Mull; has a length of 17 miles, and a breadth of from 5 to 15 miles; contains Kerrera island, most of the Slate islands, and some small islets; has screens and intersections of remarkable force of character; is traversed by all the steamers plying between the Clyde and the North of Scotland; and, whether seen from many parts of its own bosom, or from numerous vantage-grounds on its shores, displays a variety and a magnificence of scenery unsurpassed by any in the kingdom. The district got its name from Loarn, one of the three brothers, sons of Erc, who, in the end of the 5th century, immigrated from the

Irish Dalriada, and founded the Scottish monarchy; and it gives the titles of Baron and Marquis, in the peerage of Scotland, to the Duke of Argyll—the former title created in 1470, the latter in 1701. The Duke of Argyll's eldest son bears, by courtesy, the title of Marquis of Lorne; and the present Marquis, born in 1845, married in 1871 Her Royal Highness Princess Louise Caroline Alberta, fourth daughter of Her Majesty the Queen. Valuation of district (1895) £67,578. The presbytery of Lorn comprehends the *quoad civilia* parishes of Ardochattan, Glenorchy, Kilbrandon, Kilchrenan, Kilmore, Kilniver, and Lismore, the *quoad sacra* parishes of Appin, Duror, Glencoe, Muckairn, Oban, and St Columba (Oban), and the chapelries of Glencreran, Lochawe, Dalavich, and Connell Ferry, and holds its meetings at Oban on the last Wednesday of March and November, and the first Wednesday of May. Pop. (1871) 12,956, (1881) 14,361, (1891) 14,564, of whom about 1540 are communicants of the Church of Scotland. The Free Church also has a presbytery of Lorn, with churches at Appin, Ardochattan, Glenorchy, Kilbrandon, Kilniver, Muckairn, two (one for English only) at Oban, and preaching stations at Kilchrenan and Connell, which eight churches together have over 2000 members and adherents.

Lorn Furnace. See BUNAWE.

Lornaty. See BLAIRGOWRIE.

Lossie, a river of Elginshire, which rises in the parish of Dallas, near Carr Kitty (1711 feet), where the parishes of DALLAS, EDINKILLIE, and KNOCKANDO meet, 14 miles SW of the city of ELGIN. Springing from the feeders of two small lochs—Trevie and Lossie—and receiving also near its source a burn from the loch marked on the Ordnance Survey map as Loch Nair, but which ought to be Loch-an-Iore, it flows in a very winding course, with a general N by E direction, to the MORAY Firth at LOSSIEMOUTH, passing through or along the borders of the parishes of Dallas, Birnie, Elgin, Spynie, St Andrews-Lhanbryd, and Drainie. The distance from source to mouth is only 19 miles, but so numerous are the windings that the distance along the river itself is 31 miles. The upper part of its course is bleak and bare, but there are pretty parts from Dallas church downwards, particularly in the neighbourhood of the city of Elgin, where one of the banks is always well wooded, and sometimes both. At Kellas, a little below Dallas, there is a very fine series of river terraces at three different levels, and not surpassed in the N of Scotland. Immediately farther down there are narrow rocky gorges, through which the river flows in a succession of rapids. The lowest of these is the Dun Cow's Loup. Near Birnie a hollow known as Foths (? fosse, *fossa*) opens off. This is evidently an old course of the river, though the present channel, cutting backwards, is now at a much lower level. Below Birnie the flow, which is nowhere rapid, becomes more sluggish still, and the river along the greater part of the rest of its course has to be bounded by strong embankments. Good examples of terraces may again be seen W of the bend at Haughland near Elgin. In 1829 the river, like all the others on the N side of the Moray Firth, came down in heavy flood, sweeping almost all the bridges before it, and inundating the whole of the low country along its banks, and breaking into the old bed of the Loch of SPYNE, which had been drained about twenty years before. The streams that join it from the E are the Burn of Corratnich, the Lennoc Burn, the Burn of Shogle, the Muirton, Linkwood or Waukmill Burn, and the Burn of Lhanbryd. The Lennoc Burn flows through the deep Glenlatterich, and at one narrow rocky gorge called the Ess of Glenlatterach has a fall 50 feet high. The streams from the W are the Lochty or Black Burn and the Monaughty Canal. The river contains a few salmon, sea-trout, yellow-trout, and 'finnock' or whiting, and its tributaries afford good trout fishing. Though the fishings are let by the proprietor, the Earl of Moray, the tenant allows the public to fish.—*Ord. Sur.*, shs. 85, 95, 1876.

Lossiemouth, a small coast town in DRAINIE parish, Elginshire, at the mouth of the river just described,

and by rail $5\frac{1}{2}$ miles NNE of Elgin, of which, as well as of a considerable part of the district, it is the seaport. It consists of three different villages, Lossiemouth proper, Branderburgh, and Stotfield, and has a post office under Elgin, with money order, savings bank, and telegraph departments. There is a port of 'Lossy, otherwise of Spynie,' mentioned in the Chartulary of Moray in 1383, but it was very probably farther up the river than the present site. It was then as now the port of Elgin, and the reason of the mention is a dispute as to the rights of the bishop and burgesses. The bishop seems to have prevailed, and the mouth of the river became a pertinent of the estate of Kinedder, and thus remained till near the end of the 17th century. In 1698 the town of Elgin feued from the then proprietor of Kinedder, Brodie of Brodie, about 80 acres of bare gravel and sand, at a yearly feu-duty of £2, 1s. 7d., and a harbour was constructed; and streets and cross lanes, all at right angles, were regularly laid out round a large central square, in which is the sadly dilapidated town's cross. The feus measure 120 by 180 feet, and are held at a very low rate. They were, so long as the old harbour remained, readily taken off, though since the erection of the new harbour many of the fishermen prefer Branderburgh, and the earlier village is now known sometimes as the Old Town. The original harbour was within the mouth of the river, and cost £1200 previous to 1780, but the entrance was very inconvenient on account of a bad sand-bar, which could not be got rid of, notwithstanding the effort made to increase the scour of the river by the erection of another pier on the opposite side of the river in that year. As business by and by increased—particularly the herring fishing, which was first tried in 1819—the accommodation became very insufficient, and in 1834 a Stotfield and Lossiemouth Harbour Company was formed for the purpose of making a new harbour at Stotfield Point, away from the mouth of the river and the bar altogether. This was a rectangular basin, mainly cut in solid rock, and protected by a breakwater on the N. The work was carried out between 1837 and 1839, and the rubbish was flung on the shore. The stones thus thrown down have been gradually carried westward by a strong in-shore current that sets in that direction, and now extend along the shore for fully $\frac{1}{2}$ mile, forming a ridge 40 feet wide at the base and about 10 feet high. The harbour was again enlarged, deepened to 16 feet at spring tides, and otherwise improved in 1852, when railway communication with Elgin was first opened, and during the next eight years trade again increased, and such large numbers of herring boats began to fish from the place, that the directors of the company—now the Elgin and Lossiemouth Harbour Company—extended the breakwater to the SW, and at a cost of £18,000 formed a large new basin, intended entirely for boats. Further deepening operations were completed in 1894 at a cost of over £20,000, defrayed by Government grant, giving 20 feet depth at spring tides and 10 feet at neap tides. At the beginning of 1895 there were 150 boats belonging to Lossiemouth and 435 resident fishermen and boys. The rising-ground W and SW of the harbour is known as the Coulard Hill (124 feet), and along the slopes of this since 1830 the village of Branderburgh has sprung up, Colonel Brander of Pitgaveny, the late proprietor of the ground, having, in that year, built a house there for himself—the first, and for seven years the only one erected—close to the present entrance to the boat basin at the harbour. The change of harbour favoured the rise of the new village, and within the next thirty years the number of inhabitants had become nearly 1000. This village is also regularly laid out, with the streets at right angles and a large central square. To the W and N of the square the houses belong to fishermen, and are substantial and mostly very tidy buildings. To the S there are a number of villas occupied by the business men connected with the place, or belonging to the inhabitants of Elgin, who make this a summer resort. Stotfield is along the coast to the SW, and contains a number of villas used as summer residences.

Close by, the rocks [See ELGINSHIRE] contain galena, efforts to work which to profit have been made on many occasions, from 1790 downwards, but hitherto without success. To the E of this is the Branderburgh Baths, containing a swimming bath and other accommodation, the water being pumped from the sea. Originally constructed by a joint stock company in 1873-74, they have since been sold, and are now in private hands. The beach below Stotfield, in Stotfield Hythe, forms excellent bathing ground, and is much resorted to by visitors. The village was, on 25th Dec. 1806, the scene of a sudden and terrific gale, in which almost all the fishermen belonging to the place were drowned within sight of the houses. There are fine views of the Sutherlandshire and Ross-shire hills, both from Stotfield and the Coulard Hill. The Established church at the W of the Old Town, was erected in 1848, and is a chapel of ease for the parish of Drainie, which in 1792 was in what the writer of the *Old Statistical Account* evidently thought the happy position of having 'no lawyer, writer, attorney, physician, surgeon, apothecary, negro, Jew, gipsy, Englishman, Irishman, foreigner of any description, nor family of any religious sect or denomination except the Established Church.' The Free church, replacing one destroyed by fire, stands on a commanding site, and cost £2400. Its octagonal tower and spire form a notable landmark to mariners. The original U.P. church was further to the E, and was the oldest church in the village; but a new one was erected in 1881. The Baptist church dates from 1870. The Episcopal church has a mission station. Lossiemouth school, close to the Free church, was originally built as a General Assembly school, but on the passing of the Education Act was handed over to the school board of Drainie. A town-hall was erected in 1884-85 at an expense of about £1100. There are a branch of the Bank of Scotland, a coastguard station, boating, bowling, cricket, golf, and tennis clubs. The industries are mainly those connected with fishing and shipping. There are a few boatbuilding yards, and several quarries of good sandstone along the edge of Coulard Hill. From these large numbers of specimens of the reptiles found in the 'Elgin Sandstones' have been procured. They are noticed in the article on the county of Elgin. A lifeboat has been stationed here since 1866. The Police and General Improvement (Scotland) Act was adopted in 1865, and in 1890 the town was created a burgh. Under the Burgh Police Act of 1892, it is governed by a provost, 2 bailies, and 6 commissioners. A plentiful water supply was introduced in 1877 at a cost of £4340. The supply is taken from an excellent spring in a deep well to the E of Lossiemouth proper, from which it is pumped by steam to a circular iron reservoir, containing over 6000 gallons, on the top of the Coulard Hill, and thence distributed over the place. There is frequent railway communication with Elgin by the Morayshire railway, since 1881 a branch of the Great North of Scotland railway system. The principal imports are coal, salt, timber, pavement, and slates, and the principal export pit-props. Pop. (1831) 580, (1861) 2285, (1871) 2620, (1881) 3497, (1891) 3486, of whom 1855 were females, whilst 2086 were in Branderburgh, 905 in Lossiemouth, 304 in Seatown, and 191 in Stotfield. Houses (1891) inhabited 680, vacant 61.—*Ord. Sur.*, sh. 95, 1876.

Loth, a hamlet and a coast parish of E Sutherland. The hamlet, $5\frac{3}{4}$ miles SW of Helmsdale, has a station on the Sutherland section of the Highland railway, a post office, a church, and a public school. The parish, containing also the fishing village of Portgower, 2 miles SW of Helmsdale, and much curtailed by the annexation of its Helmsdale portion to Kildonan prior to 1851, is bounded N by Kildonan, SE by the Moray Firth, and SW by Clyne. Its utmost length, from NE to SW, is $7\frac{1}{2}$ miles; its utmost breadth, from NW to SE, is $5\frac{3}{4}$ miles; and its area is $25\frac{1}{4}$ square miles or 17,806 acres, of which $430\frac{1}{2}$ are foreshore and $4\frac{1}{2}$ water. The coast-line, closely followed by the railway for $7\frac{3}{4}$ miles, is chiefly a low, level beach of sand, indented by several

baylets, and projecting some low rocky headlands. The impetuous Loth, rising on Beinn na Meilich at an altitude of 1510 feet, winds $5\frac{1}{2}$ miles southward to the sea near Loth station, $2\frac{1}{2}$ miles above its mouth being joined by Sletdale Burn, which rises on Meall an Liath Mor at an altitude of 1495 feet, and, thence curving $5\frac{1}{2}$ miles east-by-southward, has a total descent of 1132 feet. Of seven other streamlets the chief is one running 4 miles south-south-eastward to the sea near Kintradwell. In 1818 a new channel was cut for the Loth through a solid rock 20 feet high, whereby a largish swamp or loch—the river's expansion—was drained, and its bed converted into rich arable carse-land. The surface rises rapidly north-westward to 1000 feet at Cregan Mor, 970 at Cnoc na h-Iolaire, 1294 at Creg a Chrionaich, 1346 at Creg a' Mheasgain, 1311 at Culgower Hill, 1767 at Beinn Chol, 1608 at Meallan Liath Mor, 1581 at Creg Mhor, 2063 at Beinn Dohrain, 2046 at Beinn na h-Urrachd, and 1940 at Beinn na Meilich, the last six of which culminate on the confines of the parish. The rocks along the coast are oolitic, comprising limestone, conglomerate, variously-coloured shales, and white and red sandstone; but the prevailing rock of the uplands is a species of large-grained porphyry, unusually frangible, and easily denuded by running water. At most one-seventh of the entire area is in tillage, but what arable land there is has a fertile soil, and the farm of Crakaig is one of the best in the county. Pennant describes an ancient flag-built 'hunting house'—one of three—in Glen Loth; and near Kintradwell there still are remains of a Pictish tower. The mansion of Kintradwell was burnt by the Jacobite Earl of Cromarty in 1746. Hereabout stood a chapel dedicated to St Trullo; and another pre-Reformation place of worship was standing at Garty towards the close of the 18th century. The Duke of Sutherland is sole proprietor. Loth is in the presbytery of Dornoch and the synod of Sutherland and Caithness; the living is worth £169. The parish church at the hamlet, $1\frac{1}{2}$ mile NE of Loth station, is a handsome edifice of 1838. Two public schools—Loth and Port Gower—with respective accommodation for 60 and 51 children, have an average attendance of about 25 and 65, and grants amounting to nearly £36 and £67. Pop. (1801) 1374, (1831) 2214, (1861) 610, (1871) 583, (1881) 584, (1891) 528.—*Ord. Sur.*, sh. 103, 1878.

Lothian, a district on the S side of the Firth of Forth, extending from the Avon to the Lammermuirs. It is now regarded as commensurate with Linlithgow, Edinburgh, and Haddington shires, which are called respectively West, Mid, and East Lothian; but anciently it was sometimes taken to embrace all the country as far S as the Tweed. By the Saxons it was called *Lothene*, by the Gael *Lethead*; and Latin equivalents were *Loidis* and *Lodonea*. It gives the titles of Earl and Marquis in the peerage of Scotland to the noble family of Kerr—the former title created in 1606, the latter in 1701. The Marquis's chief seat is Newbattle Abbey, near Dalkeith.

Lothian and Tweeddale, a synod of the Church of Scotland, comprehending the presbyteries of Edinburgh, Linlithgow, Biggar, Peebles, Dalkeith, Haddington, and Dunbar, and holding its meetings at Edinburgh on the first Tuesday of May and November. A Free Church synod also bears the name of Lothian and Tweeddale; comprehends the presbyteries of Edinburgh, Linlithgow, Biggar and Peebles, Dalkeith, and Haddington and Dunbar; and holds its meetings at Edinburgh on the Tuesday after the last Sunday of April and October—the October meeting in such other town as the synod may appoint.

Lothian-Bridge. See CRANSTON.

Lothrie Burn, a rivulet of Kinross-shire and Fife, rising on Bishop Hill, at a point 9 furlongs NE of Kinnesswood, and running $4\frac{1}{2}$ miles east-south-eastward, till it falls into the river Leven at the E end of Leslie.—*Ord. Sur.*, sh. 40, 1867.

Lotue, an estate, with a mansion, in Kirkgunzeon parish, Kirkcudbrightshire, at the head of Loch Arthur, 7 miles NNE of Dalbeattie.

Loudoun, a parish in the SE corner of Cunninghame

district, Ayrshire, containing the post-town and station of **NEWMILNS** ($7\frac{1}{2}$ miles E by S of Kilmarnock), the villages of **DARVEL** and **ALRON**, and part of the town of **GALSTON**. It is bounded N by Eaglesham in Renfrewshire, E by East Kilbride and Avondale in Lanarkshire, S by Galston, and NW by Kilmarnock and Fenwick. Its utmost length, from E to W, is 6 miles; its breadth increases eastward from $8\frac{1}{2}$ furlongs to $5\frac{1}{2}$ miles; and its area is 15,543 $\frac{1}{2}$ acres, of which 57 $\frac{1}{2}$ are water. The river **IRVINE**, rising on the Lanarkshire border at an altitude of 810 feet above sea-level, flows $10\frac{3}{4}$ miles west-by-southward along or close to all the Avondale and Galston boundary; and Glen Water, coming in from Renfrewshire, runs $5\frac{3}{4}$ miles south-by-westward across the interior till, just above Darvel, it falls into the Irvine, another of whose affluents, Polbath Burn, runs $5\frac{1}{2}$ miles south-westward along the Fenwick and Kilmarnock boundary. Along the Irvine the surface declines to 135 feet above sea-level, thence rising to 750 feet near High Bowhill, 577 near East Heads, 835 near Hapton, 1089 at Quarry Hill, and 839 at Loudoun Hill. The last, a conspicuous conical summit, formed of columnar trap, is situated in the SE corner of the parish, and figures as a remarkable feature in a very extensive landscape. It belongs to the class which the Scoto-Irish called 'dun,' the Scoto-Saxons 'law;' and by a singular triplicate of honours, it wears as its designation not only both these words, but also the modern 'hill'—Law-dun-hill, or Loudoun-hill, 'Hill-hill-hill.' The rest of the parish, notwithstanding its lying so near the watershed with Lanarkshire, has neither an elevated nor a rough appearance, but is champaign, and only gently sloping. Much of it near the centre, and especially along the E, is moor and moss. The soil of the arable grounds is here and there light and gravelly, but is mostly a rich deep loam, greatly improved by lime. John, Earl of Loudoun, who succeeded to the earldom in 1731, was the first agricultural improver. He commenced his operations in 1733, by making roads through the parish; he next had an excellent bridge built over the Irvine; and he got made thence, and from his own house to Newmilns, a road, which was the first constructed by statute-work in the county. These measures, the prelude to his becoming the father of agriculture in the district, he adopted apparently from his recollecting a time when carts or waggons belonging to his father and his father's factor were the only ones in the parish; but he also plied vigorously the work of planting and enclosing. He is said to have planted more than a million trees, chiefly elm, ash, and oak; and, in general, he bequeathed to his estate a pervading character of rich cultivation and sylvan beauty. The rocks are mainly carboniferous, with disturbing protrusions of trap. Limestone of excellent quality is very abundant, and has been largely worked. Coal in some parts is too much broken up by trap to be mined, but elsewhere forms rich, extensive, workable fields, with an aggregate thickness of 27 feet in the seams. Clay ironstone, also, is plentiful. Nearly four-sevenths of the entire area are in tillage; about 750 acres are under wood; and the rest is either pastoral or waste. At Loudoun Hill Skene places Vandogara, a town of the Damnonii, which, under the form *Vandurara*, by Chalmers was identified with Paisley. But 'the best editions give *Vandogara* as the form of the name, which obviously connects it with *Vindogara* or the Bay of Ayr; and Ptolemy's position corresponds very closely with Loudoun Hill on the river Irvine, where there is a Roman camp. What confirms this identity is, that the towns in the territory of the Damnonii appear afterwards to have all been connected with Roman roads; and there are the remains of a Roman road leading from this camp to Carstairs' (*Celtic Scotland*, i. 73, 1876). At Loudoun Hill, on 10 May 1307, Robert Bruce, with only 600 followers, defeated 3000 English under the Earl of Pembroke. He entrenched himself strongly, and, following up the tactics of Wallace, defended his position by epearmen drawn up in square against the charge of heavily armed cavalry. Loudoun Hill, too, sometimes

gives name to the Battle of DRUMCLOG. Cairns and tumuli once were numerous, and Roman vessels have been dug from a moss upon Braidlee Farm. In Alton and near Darvel are ruins still called castles, but more like Danish forts; and the lands of DARVEL were held by the Knights Templars. In the village of Newmilns is a very small and very old castle belonging to the Campbells of Loudoun. On the summit of a rising-ground, by the side of a brook, $\frac{1}{2}$ mile E of the present mansion, are the ruins of an ancient castle which belonged to the same family, and which is said to have been destroyed towards the close of the 15th century by the Clan Kennedy, under the Earl of Cassillis. The present sumptuous pile stands embowered by wood, in the SW part of the parish, 5 miles E of Kilmarnock, and $1\frac{1}{2}$ mile NNE of Galston. It singularly combines the attractions of massive antiquity with the light gracefulness of modern architecture. A square battlemented tower, of unknown antiquity, was destroyed in a siege by General Monk, when the castle was defended by Lady Loudoun, who obtained honourable terms of capitulation. The old part of the house consists now of one large square tower, battlemented and turreted, which, probably built in the 15th century, lifts its solemn and imposing form above a surrounding mass of modern building. The modern part, sufficient in itself to constitute it one of the largest and noblest edifices in the West of Scotland, was completed only in the year 1811. The library contains over 11,000 volumes. The noble proprietors of the castle, whose title of earl is taken from the parish, are a branch of the great family of Campbell, being descendants of Donald, who was second son of Sir Colin Campbell of Lochow (see INVERARAY), and who married Susanna Crauford, the heiress of Loudoun, in the reign of Robert I. In 1601 Sir Hugh Campbell of Loudoun, Sheriff of Ayr, was raised to the peerage as Baron Loudoun; and in 1633 his granddaughter's husband, Sir John Campbell of Lawers, was created Earl of Loudoun. A zealous Covenanter, he became High Chancellor of Scotland in 1641, and played a conspicuous part in the stirring events of the times. His great-great-granddaughter, Flora Mure Campbell (1780-1840), married the first Marquess of Hastings, a title which became extinct at the death of their younger grandson in 1868, when that, however, of Countess of Loudoun devolved on their granddaughter, Edith Maud (1833-74), who married the first Lord Donington. Her eldest son, Charles Edward Hastings Rawdon Abney Hastings, is the present Earl (b. 1855). (See FENWICK and KILMARNOCK.) 'Loudoun's bonny woods and braes' are the theme of one of Tannahill's best-known songs. The Earl of Loudoun is much the largest proprietor. Giving off a portion to Darvel *quoad sacra* parish, Loudoun is in the presbytery of Irvine and the synod of Glasgow and Ayr; the living is worth £250. The ancient church, at the SW corner of the parish, was dependent upon Kilwinning Abbey, and now is represented only by its choir, which serves as a mausoleum of the Loudoun family. Norman Macleod, D.D. (1812-72), was minister from 1838 till 1843, and the account of the parish in the *New Statistical* was written by him. Modern places of worship are noticed under NEWMILNS and DARVEL; and 5 schools—Darvel public, Mairs public, Moor public, Newmilns public, and Lady Flora's—with respective accommodation for 306, 151, 35, 576, and 279 children, have an average attendance of about 205, 180, 15, 435, and 170, and grants amounting to nearly £228, £155, £27, £440, and £168. Pop. (1801) 2503, (1831) 3959, (1861) 4840, (1871) 5525, (1881) 5239, (1891) 6379.—*Ord. Sur.*, sh. 22, 1865.

Louisburgh. See WICK.

Loup of Fintry. See FINTRY.

Lour; a mansion in Forfar parish, Forfarshire, 4 miles SSE of the town. It was built by one of the Earls of Northesk, whose descendant, Major Patrick Alexander Watson Carnegie of Lour and Turin (b. 1836; suc. 1833), is present proprietor. A lake was once on the estate, but has been completely drained; and a moor on it,

within Inverarity parish, has remains of a Roman camp.—*Ord. Sur.*, sh. 57, 1868.

Louthier. See LOWTHER, GREEN.

Lovat, a place in Kirkhill parish, Inverness-shire, on the right bank of the river Beauly, opposite Beauly town, and $1\frac{1}{4}$ mile W by S of Clunes station on the Inverness and Dingwall section of the Highland railway. Here stood the baronial fortalice of Lovat, founded in 1230 by the Bissets, and conferred by James I. on Hugh Fraser, first Lord Lovat—a title attained in 1747 and restored in 1857. (See BEAUFORT CASTLE.) Lovat Bridge, across the river Beauly, $1\frac{3}{4}$ mile WSW, a fine arched structure erected in 1810 at a cost of nearly £10,000, and with a waterway of 240 feet, was partially carried away by heavy floods in February 1892. It was restored in 1894 at an estimated expense of £5000.—*Ord. Sur.*, sh. 83, 1881.

Low Banton. See BANTON.

Lowes, Loch of the, a lake in the extreme NW of Etrick parish, Selkirkshire. Lying 815 feet above sea-level, it measures $6\frac{3}{4}$ furlongs in length from S by W to N by E, $1\frac{3}{4}$ furlong in extreme breadth, and 11 or 12 fathoms in depth. At the foot it is separated by only a narrow neck of land from the head of St Mary's Loch, into which it discharges, through an aggregate descent of only 15 inches, the nascent drain-like stream of Yar-row Water; and it seems to have been originally one lake with St Mary's Loch, till gradually separated from it by deposits at the mouths of Oxcleugh and Crosscleugh Burns. In consequence, probably, of its becoming a separate lake, but certainly not on account of any pre-eminence in either extent or picturesqueness, it is popularly called the Loch of the Lowes, signifying 'the lake of the lakes.'—*Ord. Sur.*, sh. 16, 1864.

Lows, Loch of the, a lake in Caputh parish, Perthshire, $1\frac{1}{2}$ mile NE of Dunkeld. The largest of a chain of five lakes, expansions of LUNAN BURN, it measures 1 by $\frac{1}{2}$ mile; presents exquisite features of contour and embellishment; and contains pike, perch, and fine but very shy trout. The Queen drove round by here both in 1865 and 1866, and describes the loch as 'surrounded by trees and woods, of which there is no end, and very pretty.'—*Ord. Sur.*, shs. 48, 56, 1868-70.

Lowther, Green, a mountain (2403 feet) in Crawford parish, Lanarkshire, $1\frac{1}{2}$ mile ESE of Wanlockhead and $8\frac{1}{2}$ miles ENE of Sanquhar. Lowther Hill (2377 feet) rises 1 mile to the SW, at the meeting point with the Dumfriesshire parishes of Sanquhar and Durisdeer; and these two summits, occupying a chief place among the central masses of the Southern Highlands, give the name of Lowthers, as a general or comprehensive name, to the great range extending eastward across the S of Lanarkshire and the N of Dumfriesshire, to the southern borders of Peebles and Selkirk shires. Dr John Brown, in his *Enterkin*, has finely pictured their 'vast expanse covered with thick, short, tawny grass and moss,' and the graves of the suicides who used to be buried here.—*Ord. Sur.*, sh. 15, 1864.

Lowthertown, a village in Dornock parish, Dumfriesshire, $3\frac{1}{2}$ miles E of Annan.

Lowtis or Lotus Hill, an eminence (1050 feet) on the mutual border of New Abbey and Kirkgunzeon parishes, Kirkcudbrightshire, $2\frac{3}{4}$ miles ENE of Kirkgunzeon village. It projects from the NW side of the Criffell mountains, and overhangs Loch Arthur.—*Ord. Sur.*, sh. 5, 1857.

Low Waters, a village in Hamilton parish, Lanarkshire, 1 mile SSW of the town of Hamilton, under which it has a post and money order office. There is a public school.

Loyal or Laoghal, Loch, a wood-fringed lake on the mutual border of Tongue and Farr parishes, Sutherland, 5 miles SSE of Tongue village. Lying 369 feet above sea-level, it extends $4\frac{3}{8}$ miles northward, has a maximum width of 7 furlongs, contains three islets, and is overhanging to the W by BEN LOYAL (2504 feet), to the E by BENSTOMINO (1728). It contains magnificent trout and salmo-ferox, is frequented by waterfowl, is fed by sixteen rivulets, and from its foot sends off the river BORGIE,

10 $\frac{3}{4}$ miles north-north-eastward to Torrisdale Bay. (See CRAGGIE.—*Ord. Sur.*, shs. 102, 108, 1880-81.)

Lubnaig, Loch, a lake of Balquhiddier and Callander parishes, SW Perthshire, 1 mile S of Strathyre station on the Callander and Oban railway, and 3 $\frac{3}{4}$ miles NW of the town of Callander. Lying 405 feet above sea-level, it extends 3 $\frac{7}{8}$ miles south-south-eastward, has a maximum width of 3 furlongs, and is traversed by the northern head-stream of the TEITH. Its western shore, closely skirted by the Callander and Oban railway, is overhung by BEN VANE (2685 feet) and BEN LEDI (2875); whilst from its eastern shore, traversed by the highroad to Killin, rises Beinn Bhreac (2250). Its waters contain salmon, trout, and char; and boats may be hired. The loch is open to the public, except for net fishing, and the trout average over a quarter of a pound. 'We next,' writes Dorothy Wordsworth, under date 10 Sept. 1803, 'came to a lake called Loch Lubnaig, a name which signifies "winding." In shape it somewhat resembles Ulswater, but is much narrower and shorter. The character of this lake is simple and grand. On the side opposite to where we were is a range of steep craggy mountains, one of which—like Place Fell—encroaching upon the bed of the lake, forces it to make a considerable bending. I have forgotten the name of this precipice: it is a very remarkable one, being almost perpendicular, and very rugged. We, on the eastern side, travelled under steep and rocky hills which were often covered with low woods to a considerable height; there were one or two farm-houses, and a few cottages. A neat white dwelling—ARDCHULLARIE—on the side of the hill over against the bold steep of which I have spoken, had been the residence of the famous traveller Bruce, who, all his travels ended, had arranged the history of them in that solitude—as deep as any Abyssinian one—among the mountains of his native country, where he passed several years. The house stands sweetly surrounded by coppice-woods and green fields. On the other side, I believe, were no houses till we came near to the outlet, where a few low huts looked very beautiful, with their dark brown roofs near a stream which hurried down the mountain, and after its turbulent course travelled a short way over a level green, and was lost in the lake.' At Loch Lubnaig the tourist again is among the scenery of the *Lady of the Lake*. It was up the Pass of LENY that the cross of fire was carried by young Angus of Dun-Craggan, who had just been obliged to leave his father's funeral in order to speed the signal on its way.

'Ben Ledi saw the cross of fire;
It glanced like lightning up Strathyre;
O'er dale and hill the summons flew,
Nor rest, nor peace, young Angus knew;
The tear that gathered in his eye,
He left the mountain breeze to dry;
Until where Teith's young waters roll,
Betwixt him and the wooded knoll,
That graced the sable strath with green,
The chapel of Saint Bride was seen.'

Here the messenger delivers up the signal to Norman of Armandave, who was about to pledge his troth at the altar to Mary of Tombea; and the bridegroom, leaving his unwedded bride, starts off with the cross along the shores of Loch Lubnaig, and away towards the distant district of Balquhiddier. The chapel of Saint Bride stood on a small and romantic knoll between the opening of the Pass of Leny and Loch Lubnaig. Armandave is on the W side of the loch; and Tombea, the residence of Norman's bride, is also in the neighbourhood.—*Ord. Sur.*, sh. 38, 1871.

Luce. See HODDAM.

Luce, a river partly of Ayrshire but chiefly of Wigtownshire. Rising at an altitude of 1300 feet above sea-level on the southern slope of Beneraid (1435 feet), it first runs 3 $\frac{1}{2}$ miles south-south-eastward through Ballantrae parish to the boundary between Ayrshire and Wigtownshire, and then winds 15 $\frac{1}{2}$ miles south-south-eastward till it falls into the head of Luce Bay. During the first 12 miles it bears the name of the Main Water of Luce,

which at New Luce village, where it receives the Cross Water, it exchanges for that of the Water of Luce. From a point a little way above New Luce village it is followed pretty closely by the Girvan and Portpatrick railway. Its waters yield capital salmon and sea-trout fishing. June and July are the best months for sea-trout, and August, September, and October for salmon.

Luce Bay (*Abraucannus Sinus* of Ptolemy), a large bay indenting the southernmost land in Scotland, and converting the southern half of Wigtownshire into two peninsulas—a long and narrow one between this bay and the North Channel, and a broad one between it and Wigtown Bay. Its entrance is between the Mull of Galloway on the W, and Borough Head on the E. Measured in a straight line, direct from point to point, this entrance is 18 $\frac{3}{4}$ miles wide; and the length of the bay, measured in a line at right angles with that chord to the commencement of the little estuary of the Water of Luce, is 16 miles. Its area is about 160 square miles. Over a distance of 3 $\frac{3}{4}$ miles from the commencement of the estuary at its head, it expands, chiefly on the W side, to a width of 6 $\frac{3}{4}$ miles; and thence to the entrance, its coast-line, on the W, runs, in general, due S, or a little E of S; whilst that on the opposite side trends almost regularly due SE. At its head the seaboard is low, and at the efflux of the tide displays a sandy beach of $\frac{1}{2}$ mile in mean breadth; but elsewhere it is all, with small exceptions, bold and rocky, occasionally torn with fissures and perforated with caverns. The bay contains various little recesses and tiny embayments, some of which are capable of being converted into convenient harbours. It also offers to a seaman acquainted with it anchoring-grounds in which he may safely let his vessel ride in almost any wind. In hazy weather vessels sometimes mistake the bay for the Irish Channel, and when steering a north-westerly course suddenly take the ground on the W coast. The mistake, when it happens, is almost certain destruction; for the tide no sooner leaves a struck ship than she settles down upon quicksands, so that subsequent tides serve only to dash her to pieces. But since the erection (1830) of the lighthouse on the Mull of Galloway, errors have become comparatively infrequent, and navigation proportionally safe. The lighthouse is situated on the extreme SE, 325 feet above high water, and shows an intermittent white light visible at a distance of 25 miles. Two rocks, called the Big and the Little Scare, lie 1 $\frac{1}{2}$ mile and 2 $\frac{1}{2}$ miles within the strait between the Mull of Galloway and Borough Head, the former 5 $\frac{1}{4}$ NE by E of the Mull, and the latter $\frac{3}{4}$ mile further.—*Ord. Sur.*, shs. 1, 2, 3, 4, 1856-57.

Luce, New, a village and a parish of N Wigtownshire. The village, standing 195 feet above sea-level, on the left bank of the Water of Luce, at the influx of Cross Water, has a station on the Girvan and Portpatrick section (1876) of the Glasgow and South-Western railway, 5 miles NNW of Glenluce, under which there is a post office.

The parish consists of the northern part of the ancient parish of Glenluce, which was divided into the parishes of New and Old Luce in 1647. It is bounded NW and N by Ballantrae and Colmonell in Ayrshire, E by Kirkcowan, S by Old Luce, and W by Inch. Its utmost length, from N to S, is 9 $\frac{3}{4}$ miles; its breadth, from E to W, varies between 3 $\frac{3}{4}$ and 6 $\frac{3}{4}$ miles; and its area is 45 $\frac{1}{2}$ square miles or 28,929 $\frac{1}{2}$ acres, of which 53 $\frac{3}{4}$ are water. The Main Water of Luce, entering from Ballantrae, runs 8 $\frac{1}{2}$ miles south-south-eastward along the Ayrshire and Inch border till at New Luce village it is joined by the Cross Water of Luce, also rising in Ballantrae, and winding 11 $\frac{1}{2}$ miles southward—for the first 1 $\frac{1}{2}$ mile along the Colmonell border, and then through the interior of New Luce parish. As the Water of Luce, their united stream flows 2 $\frac{1}{2}$ miles south-by-eastward, mainly along the boundaries with Inch and Old Luce, till, at Gabsnout, it passes off into the latter parish. A number of rivulets flow to one or other of these streams, or else to Tarf Water, which runs 9 $\frac{1}{2}$ miles south-south-eastward along all the eastern boundary, and which, at

the SE corner of the parish, is joined by Drumpail Burn, running 4 miles southward through the interior, then 2½ miles north-eastward along the eastern part of the southern boundary. At Gabsnout the surface declines to 100 feet above sea-level; and thence it rises northward to 531 feet at Gleniron Fell, 607 at Buight Fell, 807 at Balmurrie Fell, 888 near Artfield, 834 at Quarter Fell, 725 at the Stab Hill, 900 at Murdonochee, and 970 at Miltonish. The Standing Stones of Laggangarn are now taken care of by the Government department for the conservation of ancient monuments. 'The scenery around the village, indeed of the parish generally, is not remarkable for beauty. There are plantings on both the Main Water and Cross Water, which give their banks a sylvan aspect; but generally the landscapes are bare and monotonous. Still, a ramble in the Moors in summer weather is never without pleasure, and a visit to the "auld grey cairns" is always interesting.' The predominant rocks are Silurian; and lead was mined on Knockibae farm in the latter half of the 18th century. The soil, for the most part naturally poor, has been somewhat improved by draining. Chief attention is paid to the rearing of sheep and black cattle. The 'prophet,' Alexander Peden (1626-86), was minister for three years prior to his ejection in 1662, when, at the end of his farewell sermon, he closed the pulpit door, and, knocking thrice upon it with his Bible, thrice repeated: 'I arrest thee in my Master's name, that none ever enter thee but such as come in by the door as I have done'—a prediction indeed fulfilled, as no man preached there till after the Revolution. New Luce is in the presbytery of Stranraer and the synod of Galloway; the living is worth £150. The parish church was built about 1821. There is a neat Free Church station, and two public schools, Glenwhilly and New Luce, with respective accommodation for 31 and 154 children, have an average attendance of about 25 and 95, and grants of over £34 and £83. Pop. (1801) 368, (1831) 623, (1861) 731, (1871) 661, (1881) 706, (1891) 588.—*Ord. Sur.*, shs. 3, 4, 7, 8, 1856-63.

Luce, Old, a coast parish of Wigtownshire, containing the post-office village of GLENLUCE, with a station on the Castle-Douglas and Portpatrick joint railway, 8¾ miles E by S of Stranraer and 14¾ WSW of Newton Stewart. The Glasgow and South-Western railway from Girvan runs through the parish, parallel with Luce Water, and connects with the joint railway at Dunragit station. It is bounded N by New Luce, NE and E by Kirkcowan, SE by Mochrum, S by Luce Bay, SW by Stoneykirk, and W by Inch. Its greatest length, from E to W, is 10 miles; its breadth, from N to S, varies between 2½ and 7½ miles; and its area is 33,798½ acres, of which 1995½ are foreshore and 206¾ water. Drumpail Burn runs 2½ miles north-eastward along the eastern part of the northern boundary to Tarf Water, which itself winds 6¼ miles south-eastward along all the north-eastern boundary. The Water of Luce first runs 7 furlongs on the boundary with New Luce, and then goes 3¾ miles south-south-eastward across the interior to the head of Luce Bay; and Piltanton Burn runs 4¼ miles eastward along the Inch border and through the south-western interior. White Loch (4¾ × 1¾ furl.) and Dernaclar Loch (3½ × 2½ furl.) are the largest of five small featureless lakes in the eastern half of the parish, since Castle Loch (1¼ × ½ mile) falls just within the Mochrum boundary. Springs are numerous—perennial, limpid, and extremely cold. The coast, 11½ miles in extent, is mostly fringed by a sandy beach, ½ mile in mean breadth; but at Synniness (Scand. 'Sueno's headland') it rises steeply to 231 feet above the sea. Some level lands lie adjacent to that beach and to Luce Water, and the rest of the surface is all tumulated, irregular, or hilly, its chief elevations being Challock Hill (484 feet), Barlockhart Fell (411), Knock Fell (513), and Craig Fell (538). Greywacke, the predominant rock, has been quarried; and the soil of the seaboard is sand, gravel, or clay, of other low tracts is clay, loam, or moss, and on the higher grounds is mostly light, dry, and stony. Nearly

three-fourths of the entire area are in tillage; rather more than 300 acres are under wood; and the rest is either pastoral or waste. Antiquities, other than those noticed under GLENLUCE, CARSECREUGH, PARK PLACE, and SYNINNESS, are remains of cairns and of a crannoge in Barlockhart Loch, and the sites of two pre-Reformation chapels, Our Lady's and Kirk Christ. Mansions, each with a separate article, are BALKAIL, CRAIGENVEOCH, DUNRAGIT, and GENOCH. Old Luce is in the presbytery of Stranraer and the synod of Galloway; the living is worth £150. Three churches are at GLENLUCE; and three public schools—Drochduil, Glenluce Academy, and Glen of Luce—with respective accommodation for 120, 613, and 123 children, have an average attendance of about 75, 280, and 60, and grants amounting to over £68, £318, and £72. Pop. (1801) 1221, (1831) 2180, (1861) 2800, (1871) 2449, (1881) 2447, (1891) 2517.—*Ord. Sur.*, shs. 4, 3, 1857-56.

Luckieslap, a village in the S of Forfarshire, 8 miles NE of Dundee.

Lucklaw. See INCHLAW.

Lude. See BLAIR ATHOLE.

Luffness, a mansion in Aberlady parish, Haddingtonshire, on the left side of Peffer Burn, near its influx to Aberlady Bay, ¾ mile NE of Aberlady village, and 3½ miles WNW of Drem Junction on the North British railway. An old irregular building, with thick walls, tall chimneys, and crow-stepped gables, it was once surrounded by a rampart and a ditch, which have left distinct remains, and was greatly improved by the grandfather of the present proprietor, Henry Walter Hope, Esq. (b. 1839; suc. 1863), whose great-great-grandfather, the first Earl of Hopetoun, bought the estate in 1739 for £8350. Aberlady Bay long bore the name of Luffness Bay, and figures under that name in old records as the port of Haddington. The rampart and the ditch around Luffness mansion were part of a fortification constructed in 1549 to straiten the English garrison in Haddington, by preventing it from receiving supplies by sea.—*Ord. Sur.*, sh. 33, 1863. See John Small's *Castles and Mansions of the Lothians* (Edinb. 1883).

Lugar, a village in Auchinleck parish, Kyle district, Ayrshire, on the right bank of Lugar Water, with a station on the Mauchline and Muirkirk branch of the Glasgow and South-Western railway, 1½ mile ENE of Cumnock and 16½ miles SE of Kilmarnock. It was built chiefly for the accommodation of the workers in its iron-works, which date from about 1845, and which have five blast furnaces. The Lugar Institute was presented in 1892 by Mr Weir of Kildonan. The buildings are partly of two storeys and partly of one, and contain a lecture or concert room capable of accommodating 400 persons, reading room, recreation room for chess, etc., billiard room, bath rooms, bowling alley, etc., while provision is made for a library. Lugar has also a post office under Cumnock, with money order, savings bank, and telegraph departments, a chapel of ease, and a public school. Pop. (1861) 753, (1871) 1374, (1881) 1353, (1891) 1288.

Lugar Water, formed just above the village of Lugar by the confluence of Gass and Glenmore Waters, winds 12½ miles westward and north-westward, past Cumnock town, Dumfries House, Ochiltree village, and Auchinleck House, and traces the boundary between Auchinleck and Mauchline parishes on the right, and Old Cumnock, Ochiltree, and Stair parishes on the left, till it falls into the river Ayr at a point 1½ mile S by W of Mauchline town. It exhibits great diversity and force of picturesque on its banks—sometimes deep ravines, wooded to the top; sometimes high mural precipices of rock, or naked, overhanging, menacing crags; sometimes gentle slopes or undulating declivities, embellished with trees and culture; and sometimes a series of little green peninsulas. Between Lugar village and Cumnock town it washes an almost isleted round hillock, called the Moat, which commands an exquisite view of long reaches of its picturesque and romantic banks; and it is crossed, in the same vicinity, by a viaduct of the Glasgow and South-Western railway, 756 feet long and 150 high, with nine arches of 50 and five of 30 feet in span. At

its influx to the Ayr, in the eastern vicinity of the magnificent grounds of Barskimming, it seems to have a volume of water equal to that of the Ayr, so as to have been designated by Burns 'the stately Lugar;' and it once contained great abundance of yellow trout and salmon, but is now a very indifferent angling stream.—*Ord. Sur.*, sh. 14, 1863.

Luggate Water, a rivulet of Stow parish, Edinburgh. Formed by two small head-streams, which rise close to the Peebleshire border, it runs $4\frac{3}{4}$ miles south-eastward to Gala Water, at a point 1 mile SSW of Stow village. It is a cold hill stream, fed by many rills, subject to sudden freshets, and containing great store of trout. Two old castles stood on its banks, on spots $\frac{3}{4}$ and $1\frac{3}{4}$ mile from its influx to Gala Water; and both of them have left some remains.—*Ord. Sur.*, sh. 25, 1865.

Luggie Water, a rivulet of Lanarkshire and the detached district of Dumbartonshire, flowing $10\frac{1}{2}$ miles westward and west-north-westward along the boundaries or through the interior of Cumbernauld, New Monkland, Cadder, and Kirkintilloch parishes, till it falls into Kelvin Water at Kirkintilloch town. Except for a brief distance in Kirkintilloch parish, where it possesses some features of beauty, it is a dull, sluggish, ditch-like stream. David Gray (1838-61), however, deemed it at once cheerful and romantic, and sang its supposed beauties in the pretty lyric of *Luggie-Side*.—*Ord. Sur.*, sh. 31, 1867.

Lugton, a village in Dalkeith parish, Edinburghshire, on the left bank of the North Esk, $3\frac{1}{2}$ furlongs W by N of the centre of Dalkeith town. Lugton barony, which was annexed to Dalkeith parish so late as 1633, had anciently a baronial fortalice, and belonged to a branch of the family of Douglas, but was possessed in 1693 by Anne, Duchess of Buccleuch.—*Ord. Sur.*, sh. 32, 1857.

Lugton Junction. See DUNLOP.

Lugton Water, a rivulet, partly of Renfrewshire, but chiefly of Ayrshire. Issuing from Loch Libo (395 feet above sea-level), it flows $14\frac{1}{4}$ miles south-south-westward along the boundaries of or through the parishes of Neilston, Beith, Dunlop, Stewarton, and Kilwinning, till, after traversing Eglinton Park, it falls into the Garnock at a point $2\frac{1}{4}$ miles N by W of Irvine town. It once abounded with fresh-water trout and sea-trout, and was occasionally ascended by salmon, but now yields good sport only over the last 5 miles.—*Ord. Sur.*, sh. 22, 1865.

Luib, a railway station in Glendochart, Killin parish, Perthshire, on the Callander and Oban line, $5\frac{3}{4}$ miles W of Killin station. Here is a post and railway telegraph office; and 1 mile to the E is Luib Hotel.—*Ord. Sur.*, sb. 46, 1872.

Luichart, Loch, a lake in Contin parish, Ross and Cromarty, with Lochluichart station near its head, on the Dingwall and Skye railway, 17 miles W by N of Dingwall. Traversed by the river Conan, and lying 270 feet above sea-level, it curves $4\frac{3}{4}$ miles south-eastward, and decreases in breadth from $6\frac{1}{2}$ furlongs to 100 yards. Its northern shore, towards the head, is finely wooded; and here is a handsome shooting-lodge belonging to the Dowager Lady Ashburton. Its waters contain great plenty of excellent trout, with occasional grilse.—*Ord. Sur.*, shs. 93, 83, 1881.

Luine or Loyne, a stream of Ross and Inverness shires, rising at an altitude of 1100 feet above sea-level, and flowing $13\frac{1}{4}$ miles east-north-eastward—for $7\frac{3}{4}$ miles along the boundary between the two counties—till, after a total descent of 620 feet, it falls into the Moriston at a point 1 mile SW of Ceanacroc shooting-lodge and 13 W of Fort Augustus. Its marshy expansion, Loch Luine, 3 miles N of Tomdoun inn, is $4\frac{1}{2}$ miles long, but only 50 yards to 3 furlongs wide.—*Ord. Sur.*, sh. 72, 1880.

Luing, an island of Kilbrandon and Kilchattan parish, Argyllshire, separated on the N from Seil Island by a strait scarcely 300 yards wide, and on the E from Torsa and Shuna Islands, also by narrow straits. Lying 1 mile to $3\frac{1}{2}$ miles W of the coast of Nether Lorn and the entrance of Loch Melfort, it extends 6 miles in a direction nearly due N and S, nowhere exceeds $1\frac{1}{2}$ mile in breadth, and has an area of $3797\frac{1}{2}$ acres, of which 291 are for-shore and $12\frac{1}{2}$ water. As grouped with the several

islands near, it exhibits an extensive range of picturesque and pleasing scenery. The surface in the N rises into rocky cliffs and eminences, approximates the form of two distinct ranges of heights, and attains an extreme altitude of 650 feet; but in all other parts, and generally round the coast, it is mostly low, though nowhere absolutely flat. Clay slate of fissile character is the predominant rock, and has been largely quarried for roofing. The land is chiefly under sheep, but in the course of the 19th century several hundred acres were reclaimed from a comparatively waste condition, and one farm has a remarkably fine suite of dwellings and offices. The Marquis of Breadalbane is sole proprietor. Pop. (1861) 521, (1871) 582, (1881) 527, (1891) 632, of whom 577 were Gaelic-speaking.

Luirbost. See LEURBOST.

Lui Water, a mountain rivulet of Braemar district, SW Aberdeenshire, rising, at an altitude of 3400 feet, on the eastern shoulder of Ben Macdhui, and running $9\frac{1}{2}$ miles south-eastward, till, after a total descent of 3232 feet, it falls into the river Dee at a point $\frac{3}{4}$ mile below the Linn of Dee. Its upper $5\frac{3}{4}$ miles, above the Derry's confluence, bear the name of Luibeg Burn.—*Ord. Sur.*, shs. 64, 65, 1874-70.

Lumphanan, a hamlet and a parish in Kincardine O'Neil district, S Aberdeenshire. The hamlet has a station on the Deeside section of the Great North of Scotland railway, 27 miles W by S of Aberdeen, under which it has a post-office, with money order, savings bank, and telegraph departments; a branch of the North of Scotland Bank; a hotel; and fairs on the second Thursday of January, February, March, April, May, October, November, and December.

The parish is bounded N by Leochel and Tough, E by Kincardine O'Neil, S by Kincardine O'Neil and Aboyne, and W and NW by Coull. Its utmost length, from N by E to S by W, is $5\frac{1}{4}$ miles; its utmost breadth is $5\frac{1}{4}$ miles; and its area is $8757\frac{3}{8}$ acres, of which $3\frac{3}{8}$ are water. The drainage is carried partly northward to the Don by Leochel Burn, but mainly southward to the Dee by the Burns of Beltie and Dess, along the latter of which the surface declines to 420 feet above sea-level, thence rising to 923 feet at Stot Hill, 1250 at Mill Maud, and 1563 at Craiglich on the Coull boundary. The drainage of a good-sized loch in 1860 has been noticed under AUCHLOSSAN. The predominant rock is granite; and the soil varies from a deep loam on the low grounds to a thin sand on the higher. About 3500 acres are in tillage; 625 acres are under wood, and the rest of the land is either pastoral or waste. On the Perk Hill, 1 mile N by W of the parish church, is Macbeth's Cairn, which in 1793 was described as '40 yards in circumference, and pretty high up in the middle.' Here, on 15 Aug. 1057, Macbeth, pursued across the great range of the Mounth, was slain by Malcolm Ceanmor, the son of Duncan. In Lumphanan another king, Edward I. of England, on 21 July 1296, received the submission of Sir John de Malevill—probably at the Peel Bog, a moated, round earthen mound, 46 yards in diameter, and 12 feet high, in a marshy hollow, a little SW of the church. Till 1782 it was crowned by remains of a stone building, called Haa-ton House. Another strength was the Houff, on the lands of Auchinove; and two earthen ramparts, 230 yards long, extended along the base of the Hills of Corse and Mill Maud. Estates are AUCHINHOVE, Burnside, Camp-hill, FINDRACK, GLENMILLAN, and Pitmurehie; and Dr R. Farquharson of FINZEAN, M.P., owns three-fourths of the parish. Lumphanan is in the presbytery of Kincardine O'Neil and the synod of Aberdeen; the living is worth £192. The parish church, built in 1762, and enlarged in 1851, contains 600 sittings. Its ancient predecessor was dedicated to St Finan (*Lumphanan* being a corruption of *Llanffinan*); and this dedication, according to Dr Skene, 'must have proceeded from a Welsh source.' According, however, to one of its ministers, the church in pre-Reformation times was dedicated to St Vincent, and Lumphanan means 'bare little valley.' There is a Free church; and a public

school, with accommodation for 208 children, has an average attendance of about 115, and a grant of over £116. Pop. (1801) 614, (1831) 957, (1861) 1251, (1871) 1239, (1881) 1130, (1891) 992.—*Ord. Surv.*, sh. 76, 1874.

Lumphinnans, a mining village in the S of Ballingry parish, Fife, $1\frac{1}{2}$ mile WSW of Lochgelly. Pop. (1871) 404, (1881) 440, (1891) 1007.—*Ord. Surv.*, sh. 40, 1867.

Lumsden, a village in Auchindoir and Kearn parish, Aberdeenshire, 4 miles SSW of Rhyndy, $9\frac{3}{4}$ NW by N of Alford, and 8 SSW of Gartly station on the Inverness and Keith section of the Great North of Scotland railway. It communicates with Gartly daily by public coach. Founded about the year 1825 on what was then a barren moor, it crowns a rising-ground, 745 feet above sea-level, amid a fertile district, and commands a picturesque view to the W, with the Buck of Cabrach in the background. Besides a number of excellent houses, it has a post office, with money order, savings bank, and telegraph departments, a branch of the North of Scotland bank, a hotel, a Free church (1843), a public school, and fairs on the first Monday of January, February, and March, on the first Monday and last Tuesday *o.s.* of April, on the last Friday of May *o.s.*, on the third Tuesday of August *o.s.*, and on the first Monday of December. It carries on a considerable amount of provincial business, and the superior is H. Gordon Lumsden of Auchindoir. Pop. (1840) 243, (1861) 478, (1871) 487, (1881) 519, (1891) 501.—*Ord. Surv.*, sh. 76, 1874.

Lunan, a coast parish of E Forfarshire, with a station, Lunan Bay, on the Arbroath and Montrose section (1879-83) of the North British, 5 miles SSW of Montrose, and $8\frac{1}{2}$ NNE of Arbroath. It is bounded N by Craig, E by the German Ocean, SE and SW by Inverkeilor, and W by Kinnell. Its utmost length, from ENE to WSW, is $2\frac{3}{4}$ miles; its breadth varies between $3\frac{1}{2}$ furlongs and $2\frac{3}{4}$ miles; and its area is 2874 acres. The area was largely increased in 1891 by the Boundary Commissioners, who transferred to Lunan the Dysart detached portion of Maryton parish, comprising 964 acres. The coast, extending $\frac{3}{4}$ mile along LUNAN BAY, is a low sandy beach, strewn here and there with small boulders, and flanked by bent-covered knolls, beyond which the surface rises somewhat rapidly till at Cothill it attains an altitude of 319 feet above sea-level, and thence commands an extensive prospect of country, seaboard, and sea. LUNAN WATER winds $2\frac{5}{8}$ miles north-eastward along the Inverkeilor boundary; and BUCKIE DEN Burn, traversing a romantic dell, and forming a number of pretty waterfalls, crosses the interior. Trap and sandstone are the prevailing rocks; and the former has been quarried for building. The soil is sandy for a short way inland, deep and rich on the lower declivities, and frequently shallow on the higher grounds. Three-fourths of the entire area are in tillage; less than 20 acres are under wood; and the rest is either pastoral or waste. The chief antiquities are vestiges or sites of structures connected with Red Castle. Walter Mill (1476-1558), burned at St Andrews, the last of Scotland's Reformation martyrs, was priest of Lunan for forty years; and Alexander Peddie, its Episcopalian minister, was suffered, after the re-establishment of Presbyterianism, to retain his charge till his death in 1713. Lunan House is the seat of William Thomas Taylor Blair-Imrie, Esq. (b. 1833; suc. 1849). The Earl of Northesk is chief proprietor. Lunan is in the presbytery of Arbroath and the synod of Angus and Mearns; the living is worth £178. The church was rebuilt in 1844, and a public school, with accommodation for 82 children, has an average attendance of about 50, and a grant of nearly £84. Valuation (1884) £3034, 3s., (1893) £3853, 5s., plus £1235 for railway. Pop. (1801) 318, (1831) 298, (1861) 259, (1871) 245, (1881) 243, (1891) 349.—*Ord. Surv.*, sh. 57, 1868.

Lunan Bay, lying open to the E, extends from Boddin Point in Craig parish to the Lang Craig in Inverkeilor; measures 3 miles across the entrance, and $1\frac{1}{2}$ mile from the entrance line to the head; has an approximately semicircular outline; is flanked for about 1 mile at each end by bold rocky heights rising to altitudes of more

than 100 feet above sea-level, and partly consisting of columnar or pyramidal cliffs; has, around its head, a low sandy beach, slightly strewn with small boulders, and regularly flanked with bent-covered knolls; and, during westerly or south-westerly winds, affords safe anchorage. Its bottom is fine sand, and its strand furnishes beautiful varieties of sea-shell, and occasionally jasper and onyx gems.

Lunan Burn, a rivulet of Stormont district, Perthshire, rising at an altitude of 1400 feet, and winding $14\frac{1}{2}$ miles east-south-eastward, through or along the borders of Dowally, Caputh, Clunie, Kinloch, Lethendy, and Blairgowrie parishes, till, after a total descent of 1270 feet, it falls into the Isla at a point 2 miles W by S of Coupar-Angus. During the middle 7 miles of its course it traverses a chain of five lakes—Craiglush Loch (4×2 furl.; 380 feet), the Loch of the Lows (8×4 furl.), Butterstone Loch ($4\frac{1}{2} \times 3\frac{3}{4}$ furl.), the Loch of Clunie (5×5 furl.), and Drumellie Loch ($8 \times 3\frac{1}{2}$ furl.; 190 feet)—all five of which are noticed separately. A deep, sluggish, ditch-like stream, it contains some capital trout weighing 2 or 3 lbs.—*Ord. Surv.*, shs. 56, 48, 1870-68.

Lunan Water, issuing from RESCOBIE LOCH (196 feet above sea-level), and $\frac{1}{4}$ mile lower down, traversing Balgavies Loch ($4 \times 1\frac{1}{2}$ furl.), flows $12\frac{3}{4}$ miles eastward through or along the boundaries of Rescobie, Kirkden, Guthrie, Kinnell, Inverkeilor, and Lunan parishes, Forfarshire, till it falls into Lunan Bay. Its chief tributary is the Vinny; and its waters are limpid, and contain excellent trout, with a few sea trout. There are complaints, however, that the refuse from bleachfields does great damage to the river.

Lunasting, an ancient parish of Shetland, now united to Nesting, and lying 25 miles N of Lerwick. Its church still stands, and ranks as a chapel of ease. Pop. of Lunasting registration district (1861) 880, (1871) 822, (1881) 783, (1891) 719.

Luncarty, a suppressed parish and a village in the Strathmore district of Perthshire. The parish was anciently a rectory, and is now incorporated with Redgorton, forming its NE division. The village, near the right bank of the Tay, has a station on the Caledonian railway, 4 miles NNW of Perth. Luncarty bleachfield has long been reputed one of the largest in Britain. Its grounds cover upwards of 130 acres. The water-power by which the works are driven includes the whole volume of Ordie and Shochie Burns, carried along an artificial canal, and also a considerable volume led out from the Tay by means of a dam run nearly across the river. Pop. of village (1881) 270, (1891) 345.

According to Hector Boece, but to no earlier historian, Luncarty in 990 was the scene of a decisive overthrow of the Danes by Kenneth III., aided by the peasant-ancestor of the noble family of Hay. The Danes, strong in numbers and fiery in resolve, had landed on the coast of Angus, razed the town and castle of Montrose, and moved across Angus and along Strathmore, strewing their path with desolation, and menacing Scotland with bondage. Kenneth the King heard at Stirling of their descent, and hastened to take post on Moncrieff Hill, in the peninsula of the Earn and the Tay; but while there organising the raw troops, which he had swept together, and waiting the arrival of forces suited to his exigency, he learned that Perth was already besieged. Arraying what soldiery he had, and making a detour so as to get to northward of the enemy, he marched to Luncarty, saw the Danes posted on an eminence to the S, and next day taunted and provoked them to a trial of strength on the intervening level ground. The rush of the Danes was dreadful; but three puissant ploughmen, father and sons, of the name of Hay, or Haya, who were at work in a field on the opposite side of the river, were bold enough to attempt to infuse their own courage into the faltering troops. Seizing the yoke of the plough and whatever similar tools were at hand, they forded the Tay, and arriving just at a crisis when the wings had given way and the centre was wavering, they shouted shame and death against the recreant who should flee, and threw themselves with such fury on the

foremost of the Danes as to gain the Scots a moment for rallying at a spot still known as Turn-again Hillock. Hay, the father, as if he had been superhuman, had no difficulty in drawing some elans to follow in his wake; and plunging with these down a deep ravine, while the battle was renewed on ground at a little distance from the original scene of action, he rushed upon the Danes in flank and rear, and threw them into confusion. A band of peasants, who were lurking near or drawn together from curiosity, now raised a loud shout of triumph, and were taken by the Danes for a new army. The invaders instantly ceased to fight; they became a mingled mass of routed men; and, not excepting their leaders and king himself, they either were hewn down by the sword or perished in the river. An assembly of the states, held next day at Scoue, decreed to give the peasant-conqueror the choice of the hound's course or the falcon's flight of land, in reward of his bravery. Hay having chosen the latter, the falcon was let off from a hill overlooking Perth, and flew eastward to a point a mile south of the house of ERROL, alighting there on a stone which is still called the 'Hawk's Stane.' All the intervening lauds were given in perpetuity to Hay's family; but they have since been either alienated, or parcelled out among various lines of descendants.—*Ord. Sur.*, sh. 48, 1868.

Lunderston Bay. See INNERKIP.

Lundie, a village and a parish of SW Forfarshire. The village stands 3 miles WSW of Auchterhouse station on the Dundee and Newtyle branch of the Caledonian railway, 6 ESE of Coupar-Angus, and 9 NW by W of Dundee, under which it has a post office.

The parish is bounded N by Newtyle, E by Auchterhouse, S by Fowlis-Easter, and W by Kettins. Its utmost length, from W by N to E by S, is 4 miles; its utmost breadth is 3 miles; and its area is 4296½ acres, of which 107½ are water. Of seven lakes, which send off head-streams of DICHRU WATER, much the largest is Long Loch (5½ × 2 furl.; 722 feet) in the N, Lundie Loch having been reduced by drainage about the year 1810 to less than a twelfth of its former size. A range of the Sidlaw Hills extends along part of the N and all the W of the parish, whose surface, nowhere sinking much below 500 feet above sea-level, attains 1063 feet near Smithston and 1088 at Keillor Hill on the Kettins boundary. The range divides the head of Strathdighty from the neighbouring part of Strathmore, and gives to all the interior of the parish a sheltered and sequestered aspect. The predominant rocks are trap and common grey sandstone; and the soil is for the most part light, sharp loam. Since 1850 great improvements have been effected in the way of reclaiming, draining, fencing, and building. The Duncans of Lundie, now Earls of CAMPERDOWN, have held nearly all the property from 1678 and earlier; and Lundie churchyard is still their burying-place. This parish since 1618 has formed one charge with the contiguous parish of FOWLIS-EASTER. It is in the presbytery of Dundee and the synod of Angus and Mearns; the living is worth £213. A building of considerable antiquity, Lundie church was repaired about the year 1847, and renovated in 1892 at a cost of £900. The restoration of the two churches of the united charge was due to the exertions of the minister, the Rev. P. L. Burr, and cost £2500. A public school, with accommodation for 108 children, has an average attendance of about 50, and a grant of nearly £50. Valuation (1884) £4311, 19s., (1893) £3299, 11s. Pop. (1831) 456, (1861) 442, (1871) 400, (1881) 317, (1891) 301; of united parish (1831) 778, (1871) 691, (1881) 628, (1891) 584.—*Ord. Sur.*, sh. 48, 1868.

Lundie, Loch, a lake in Golspie parish, Sutherland, 2½ miles W of Golspie village. Lying 556 feet above sea-level, it has an utmost length and breadth of 7 and 1½ furlongs, sends off Culmailie Burn to the sea, and on the N is overhung by Ben Lundie (1464 feet).—*Ord. Sur.*, sh. 103, 1876.

Lundin and Lundin Mill. See LARGO.

Lundin Links, a railway station on the S coast of Fife, 1 mile WSW of Lower Largo.

Lunga, an island of Jura parish, Argyllshire, on the W side of Scarba Sound. It extends 1½ mile from N to S; has a maximum breadth of 1 mile; is separated by a very narrow strait at its S end from Scarba island; and consists of an irregular hilly ridge, rising mostly to a height of less than 500 feet above sea-level, but lifting summits to a height of nearly 1000 feet. Everywhere uneven, and mostly rocky and bare, with patches of bog and heath, it is scarcely anywhere capable of even spade culture; trends down, on most of its W side, in steep naked declivities; consists of quartzite, clay slate, and other schistose rocks, traversed by numerous trap veins; and headlands, from many points on its shoulders and summits, extensive, impressive, and diversified views. The narrow strait separating it from Scarba is obstructed on the E by a rocky islet, and has a tumbling, impetuous, tidal current, quite as violent and grandly scenic as that of the far more celebrated Corrievrechan between Scarba and Jura. Pop. (1871) 5, (1881) 17, (1891) 15.

Lunna, a coast village in the Lunasting portion of Nesting parish, Shetland, 9 miles NE of Voc and 25 N of Lerwick. The headland of Lunna Ness terminates 5 miles to the NE; and ¼ mile further is the little islet of Lunna Holm. Lunna Firth, washing the W side of the headland, penetrates 7½ miles southward and south-westward in three ramifications, separates the headland and the adjacent parts of the mainland from the S coast of Yell island, strikes north-westward into junction with Yell Sound, contains numerous islands and islets, and is excellent fishing ground.

Lunnasting. See LUNASTING.

Lurgain, Loch. See LOCHBEROW.

Lurgie Craigs. See HUME.

Luscar House, a handsome Tudor mansion (*circa* 1839) in Carnock parish, Fife, 3¼ miles WNW of Dunfermline. Its owner is Alexander Mitchell, Esq.—*Ord. Sur.*, sh. 40, 1867.

Luss, a village and a parish of Dumbarshire. The village stands just S of the mouth of Glenluss, on the western shore of Loch Lomond, at the SE base of Bendhu (2108 feet), 8 miles SSE of Tarbet, 9 NNE of Helensburgh, and 12¼ NNW of Dumbaron. Occupying a charming site in front of three of the finest islands in Loch Lomond, it mainly consisted, about 1850, of miserable huts, but then was mostly rebuilt with neat cottages on a regular plan. It communicates with the Loch Lomond steamers in their passages up and down the lake; is much frequented by anglers and by tourists; and has a post, money order, and telegraph office, a hotel, a parish library, a literary association, and a fair on the third Tuesday of August. Coleridge, Wordsworth, and his sister Dorothy passed the night of 24 Aug. 1803 at the inn here; and here on 29 Sept. 1875 the Queen changed horses, as she drove from Inveraray to Balloch.

The parish had anciently other and much more extensive limits than now. The 'forty-pound lands' of Buchanan, on the E side of Loch Lomond, were detached from it in 1621, and annexed to Incheiloch (now Buchanan); the lands of four proprietors at the S end of the lake were detached from it in 1659, and annexed to Bonhill; all the extensive territory along the W side of the lake, to the N of Glendouglas and around the head of the lake, now constituting the parish of Arrochar, was detached from it in 1658; and, on the other hand, the lands of Caldannach, Prestelloch, and Conglens, which belonged to Incheiloch parish, were united to it in modern times. It now is bounded N by Arrochar, E by a sinuous line among the islands of Loch Lomond, separating it from Stirlingshire and Kilmaronock, SE by Bonhill, S by Cardross and Row, and W by Row and (for 3 furlongs) Loch Long. Its utmost length, from NNW to SSE, is 12¼ miles; its breadth varies between 2½ and 5½ miles; and its area is 28,844½ acres, of which 1½ are foreshore and 4637 water. INCHLONACH, INCHOONACHAN, INCHTAVANNACH, INCHGALBRAITH, and two other islands of Loch Lomond, belong to Luss, and are separately noticed. To Loch Lomond flow DOUGLAS WATER, formed by two head-streams

within $\frac{1}{2}$ mile of Loch Long, and running $4\frac{3}{4}$ miles east-by-southward to Inverbeg Inn, mainly along the Arrochar border; Luss Water, rising at an altitude of 1100 feet, and curving $7\frac{1}{2}$ miles east-by-southward to Luss village; FINLAS Water, rising at an altitude of 1800 feet, and running $4\frac{3}{4}$ miles south-eastward, eastward, and north-by-eastward, to Rossdhu House; and FRUIN WATER, winding $5\frac{1}{2}$ miles eastward to the N of Arden House, along the Row boundary and through the southern interior. Nine-tenths of the parish are mountainous, and offer such saliences of feature, such diversities of contour, such labyrinths of glen, and such outlooks on Loch Lomond, as to abound in grand and romantic scenery. Chief elevations from S to N are *Benuchara Muir (1028 feet), *Balnock (2092), *BEN THARSUINN (2149), *BEN RUISG (1939), Cruach Dubh (1154), *BEN CHAORACH (2338), *BEN MHANARCH (2328), BEN EICH (2302), BENDHU (2108), and DOUNE Hill (2409), where asterisks mark those summits that culminate on the confines of the parish. The uplands, all the way between the mouth of Glendouglas and the mouth of Glenluss—a distance of 3 miles—press close on Loch Lomond; and thence to the southern boundary—a distance of $5\frac{1}{2}$ miles—they recede somewhat gradually from the shore till they leave a lowland tract of about $2\frac{1}{2}$ miles from E to W along the course of Fruin Water. The low grounds, all southward from Luss village, lie contiguous to Loch Lomond; consist partly of dead levels, partly of gentle undulations, partly of braes or hill slopes; are interlocked on one side with bays of the lake, on the other side with spurs and recesses of the mountains; display vast profusion of wood and culture; include Sir James Colquhoun's mansion and park of Rossdhu; and combine, with their magnificent surroundings, to form a series of exquisite landscapes. The predominant rock of the mountains is clay slate, of the low grounds is Old Red sandstone; and both are quarried. The soil on the mountains is mostly heathy or moorish; in some hollows or low tracts is moss; on parts of the low grounds adjacent to Loch Lomond is either sand or gravel; and on other parts is fertile loam. The chief antiquities are a large cairn $1\frac{1}{2}$ mile S of the village, traces of an ancient fortification on Dumfin Hill, and sites of ancient chapels at Rossdhu and in Glenluss. Haco of Norway, during his invasion in 1263, worked great havoc in the parish. Sir John Colquhoun, who became Lord High Chamberlain of Scotland in 1474, was a native, as also was his descendant, the Rev. John Colquhoun, D.D. (1748-1827); and the Rev. John Stuart, D.D. (1743-1821), translator of the Scriptures into Gaelic, was minister. ROSSDHU, noticed separately, is the only mansion; and Sir James Colquhoun of that ilk and Luss, Bart., is the sole proprietor. Luss is in the presbytery of Dumbarton and the synod of Glasgow and Ayr; the living is worth £302. The parish church was built in 1771. There is also a Free church; and Luss public and Muirland Christian Knowledge Society's schools, with respective accommodation for 63 and 75 children, have an average attendance of about 70 and 40, and grants of over £80 and £58. Pop. (1801) 953, (1831) 1181, (1861) 831, (1871) 730, (1881) 719, (1891) 633, of whom 101 were Gaelic-speaking.—*Ord. Sur.*, shs. 38, 30, 1871-76. See Dr William Fraser's *Chiefs of Colquhoun and their Country* (2 vols., Edinb. 1869); and pp. 64-77 of Dorothy Wordsworth's *Tour in Scotland* (Edinb. 1874).

Luthermuir, a village, with an Established church and a public school, in Marykirk parish, Kincardineshire, near the right bank of Luther Water, $3\frac{3}{4}$ miles S by E of Fettercairn and 5 SW of Laurencekirk, under which it has a post office. Founded towards the close of the 18th century on a moor so barren as to be reckoned worthless, it figured for a time as little else than a resort of destitute and abandoned persons from many surrounding parishes.—*Ord.*, *Sur.*, sh. 57, 1868.

Luther Water, a troutful rivulet of Kincardineshire, rising at an altitude of 1300 feet among the frontier Grampians, and curving $13\frac{1}{2}$ miles south-south-eastward and south-south-westward through Fordoun, Laurencekirk, and Marykirk parishes, till, after a total descent

of 1205 feet, it falls into the North Esk at the boundary with Forfarshire, $1\frac{3}{4}$ mile WNW of Marykirk village.—*Ord. Sur.*, shs. 66, 57, 1871-68.

Luthrie, a village on the E side of Creich parish, Fifeshire, $2\frac{1}{4}$ miles S of the Firth of Tay, and $5\frac{1}{2}$ NW of Cupar, under which it has a post office.

Lybster, a coast village and a *quoad sacra* parish of Latheron parish, Caithness, $13\frac{3}{8}$ miles SW by S of Wick. It has a post office under Wick, with money order, savings bank, and telegraph departments, branches of the Commercial and the Town and County Banks, two hotels, a police station, a good boat harbour, the parish church (1836), a Free church, a public school, and fairs on the Thursday in July after Hill of Wick and the second Tuesday of November. Erected into a *quoad sacra* parish in 1887, Lybster is in the presbytery of Caithness and the synod of Sutherland and Caithness. The stipend is £140. It is the headquarters of one of the twenty-seven fishery districts of Scotland, comprising the fishing villages of Latheronwheel, Forse, Lybster, and Clyth. Within this district the number of boats at the beginning of 1895 was 142, of fishermen and boys 606, whilst the value of boats was £4854, of nets £6340, and of lines £1052. The following was the number, in different years, of barrels of herrings salted or cured—(1866) 15,806, (1873) 28,350, (1882) 3458, (1892) 6734, (1894) 6747; of cod, ling, and hake taken—(1873) 16,979, (1882) 6200, (1894) 1406. Pop. (1861) 745, (1871) 833, (1881) 831, (1891) 740; of *quoad sacra* parish, (1891) 2735.—*Ord. Sur.*, sh. 110, 1877.

Lydoch or Laidon, Loch, a lake on the mutual border of Fortingall parish, Perthshire, and Glenorechy parish, Argyllshire, 6 miles E of Kingshouse Inn. It lies 924 feet above sea-level, amid the dismal expanse of Rannoch Muir; extends $5\frac{1}{2}$ miles north-eastward; has a maximum breadth of $\frac{1}{2}$ mile; is all engirt with bog and heath and rock, presenting a surpassing scene of wildness and desolation, yet possesses within itself many attractions; contains abundance of trout, some of them running up to 8 lbs. in weight; is gemmed with nearly a dozen islets, the haunts of the red deer and the eagle; and sends off, from a point near its head, the rivulet Gauir, 7 miles eastward to the head of Loch Rannoch.—*Ord. Sur.*, sh. 54, 1873.

Lymekilns. See LIMEKILNS.

Lymphoy. See LENNOX CASTLE, Edinburghshire.

Lyne, a parish of Peeblesshire, until 1891 named Lyne and Megget parish, and till then consisting of two widely separate portions—Lyne, near the centre of the county; and the old parish of Megget, 13 miles to the S, on the county border. The Boundary Commissioners in the year mentioned transferred the Megget portion of the parish to the parish of Yarrow and to the county of Selkirk, and directed that the remainder of the parish should be known as the parish of Lyne. The old parish of Megget was separated by a watershed from the rest of the county of Peebles, and the district drained into St Mary's Loch and Yarrow valley. Its utmost length, from NNE to SSW is $7\frac{1}{2}$ miles; its utmost breadth, $6\frac{1}{2}$; while its area is 14,500 acres. Lyne, whose church is $4\frac{1}{2}$ miles W of Peebles and $1\frac{1}{4}$ mile WNW of Lyne station in Stobo parish, on the Symington and Peebles section of the Caledonian railway, is bounded NE by Eddleston, E by Peebles, S and SW by Stobo, and NW by Newlands. Its utmost length, from N to S, is $2\frac{1}{2}$ miles; its utmost breadth, from E to W, is $2\frac{3}{8}$ miles; and its area is 2793 acres. LYNE WATER flows $3\frac{3}{8}$ miles south-eastward and eastward along all the Stobo boundary to a point 3 furlongs above its influx to the Tweed, and here receives four rivulets, one of them tracing all the eastern border. The surface sinks at the SE corner to 565 feet above sea-level, thence rising to 701 feet at the Roman camp, 1261 at Hamildean Hill, 1334 at Black Meldon, and 1516 near the NW boundary.

The predominant rocks are Silurian. The parish is principally pastoral or waste; but such arable land as there is has a gravelly soil of fair fertility, with a southern exposure. A large British fort is on Hamildean Hill; and just to the W of Lyne church are remains of a

Roman camp. 'Randal's Walls' it was called at the beginning of the 18th century; and as depicted in Roy's *Military Antiquities* (1795), it has an extreme length and breadth of 850 and 750 feet, its four environing ramparts, 4 to 5 feet high, being pierced by four entrances. Since then, however, the plough has greatly destroyed it. Lyne is in the presbytery of Peebles and the synod of Lothian and Tweeddale; the living is worth £190. Crowning a grassy mound, above the left bank of Lyne Water, the parish church is a pretty, antique structure, rebuilt or renovated in 1644 by John, Lord Hay of Yester, and restored in 1889 by the Earl of Wemyss. Lyne public school, with accommodation for 71 children, has an average attendance of about 30, and a grant of over £41. Pop. (1801) 167, (1831) 156, (1861) 134, (1871) 174, (1881) 204, (1891) 104.—*Ord. Sur.*, shs. 24, 16, 1864.

Lyne Burn, a rivulet of Dunfermline parish, SW Fife, rising near Crossgates in the E corner of the parish, and running 7 miles south-westward and southward through the interior and along the Torryburn border, till it falls into the Firth of Forth immediately to the W of Charlestown. It is often called Spital Burn, (properly Hospital Burn), from its washing the site of the ancient Hospital of St Leonard's at the S side of Dunfermline town; and it receives, a little SW of that site, a tributary coming 2½ miles southward from Loch-head.—*Ord. Sur.*, shs. 40, 32, 1867-57.

Lynedoch Cottage or House, a mansion in Methven parish, Perthshire, standing amid beautiful grounds on the left bank of the river Almond, 2 miles NNE of Methven village and 7 WNW of Perth. The estate was purchased in 1787 by General Thomas Graham (1748-1843), one of the heroes of the Peninsular War, and the victor of Barossa, and it gave him the title of Baron on his elevation to the peerage in 1814. See DRONACH, and Murray Graham's *Memoir of Lord Lynedoch* (2d ed. 1877).

Lyne Water, a stream of NW Peeblesshire, rising among the Pentlands at an altitude of 1250 feet above sea-level, within ½ mile of the Midlothian border, and winding 18¾ miles south-south-eastward through or along the boundaries of Linton, Newlands, Stobo, Lyne, and Peebles parishes, till, after a total descent of nearly 700 feet, it falls into the Tweed near Lyne station, 3 miles W by S of Peebles town. It is joined by Bad-dingsgill Burn, West Water, Cairn Burn, Dead Burn,

Flemington Burn, and Tarth Water; its pleasant meadowy vale is here and there prettily wooded, especially opposite Drochil Castle; and its amber-coloured waters, which are open to the public, contain good store of trout.—*Ord. Sur.*, shs. 32, 24, 1857-64.

Lynn House. See LINN.

Lynturk, a small mansion, with pretty grounds, in Leochel parish, central Aberdeenshire, 2¼ miles SW of Whitehouse station on the Alford branch of the Great North of Scotland railway. The estate belonged anciently to the Strachans, passed to successively the Irvines and the Gordons, in 1816 was sold to Peter M'Combie, and is now the property of Peter Duguid M'Combie, Esq.—*Ord. Sur.*, sh. 76, 1874.

Lynwilg, a hotel in Alvie parish, Inverness-shire, near the E shore of Loch Alvie, 2½ miles SSW of Aviemore, under which there is a post office of Lynwilg.—*Ord. Sur.*, sh. 74, 1877.

Lyon, a river of Breadalbane district, Perthshire. Rising among alpine mountains, close to the Argyllshire border, at an altitude of 2400 feet above sea-level, and 5 miles NNE of Tyndrum, it first runs 4 miles northward, under the name of Abhainn Ghlas or Avonglass, to the head of Loch Lyon (1¾ × ¼ mile; 1100 feet), after issuing from which it proceeds 30¼ miles east-north-eastward, along GLENLYON, and through the entire southern portion of FORTINGALL parish, till, after a total descent of 2090 feet, it falls into the Tay at a point 9 furlongs NNE of Taymouth Castle, and 2¾ miles below the Tay's own efflux from Loch Tay. Its tributaries are very numerous, but most of them are mere impetuous torrents of only a few furlongs to 3 miles in length of course. The chief are the Allt Conait, running 8½ miles east-by-southward, through Lochs Dhamh and Girre, and entering its N side 1¾ mile SW of Meggernie Castle; and KELTNEY BURN, running 8¾ miles east-by-northward and south-south-eastward to a point 1½ mile above the Lyon's confluence with the Tay. Its waters make two considerable cascades; and they contain valuable pearl mussels and plenty of capital trout, besides salmon, grilse, and sea-trout.—*Ord. Sur.*, shs. 46, 54, 55, 1869-73.

Lyon, Castle. See BORROWSTOUNNESS and CASTLE-HUNTLY.

Lyth, a village in the E of Bower parish, Caithness, 8½ miles NNW of Wick. It has a fair on the third Tuesday of October.

ORDNANCE GAZETTEER

OF

SCOTLAND.

MAAM-RATAGAIN, a mountain pass (1072 feet) on the mutual border of Inverness and Ross and Cromarty shires, leading from Glenshiel to Glenelg, $3\frac{1}{4}$ miles WNW of Shiel Inn. A zig-zag road, formed in 1815 over the pass, commands from the highest point a very grand view.—*Ord. Sur.*, sh. 72, 1880.

Maam-Stuil or **Mam-Sodhail**, a mountain on the mutual border of Kintail parish, Ross and Cromarty, and Kilmorack parish, Inverness-shire, $2\frac{3}{4}$ miles NNW of the head of Loch Affric. It rises to an altitude of 3862 feet above sea-level; has remarkably numerous species of plants; is believed to retain more perennial snow than any other mountain in Great Britain; and commands an extensive and very impressive view.—*Ord. Sur.*, sh. 72, 1880.

Maar or **Park Burn**, a rivulet of Durisdeer parish, Dumfriesshire, running $5\frac{1}{4}$ miles southward and east-south-eastward—for the last 2 miles along the Penpont boundary—till it falls into the river Nith at a point 2 miles NNW of Thornhill. It traverses the beautiful grounds of Drumlanrig Castle; and the diversion of its course, at the time that the castle was built, forms the theme of an old-world rhyme.—*Ord. Sur.*, shs. 15, 9, 1864-63.

Maberry, Loch, a lake on the mutual border of Colmonell parish, Ayrshire, and Penninghame and Kirkcowan parishes, Wigtownshire, $5\frac{3}{4}$ miles SSE of Barrhill station on the Girvan and Portpatrick section of the Glasgow and South-Western railway. Lying 405 feet above sea-level, it extends $1\frac{1}{4}$ mile south-south-eastward; has a maximum width of 3 furlongs; is gemmed by eight little islets, one of them with vestiges of a castle; contains large pike and trout; and sends off the **BLADENOCH** to Wigton Bay.—*Ord. Sur.*, sh. 8, 1863.

Mabie, an estate, with a mansion, in Troqueer parish, Kirkcudbrightshire, $4\frac{1}{2}$ miles SSW of Dumfries. Its owner is Reginald Howat, Esq.—*Ord. Sur.*, sh. 9, 1863.

Macallan. See **KNOCKANDO**.

Macarthur's Head, a headland on the E coast of Islay island, Argyllshire, flanking the W side of the S end or entrance of the Sound of Islay. A lighthouse on it shows a fixed white light up the Sound of Islay to about N half E, a fixed red light from N half E to about E, and a fixed white light to the S of E as far as the land allows, visible at a distance of 18 nautical miles.

Macbeth's Castle. See **CAIRNBEDDIE**, **DUNSINANE**, and **MANOR**.

Macbie Hill, an old but modernised mansion, with a well-wooded park and a small lake, in Newlands parish, Peebleshire, 3 miles E by S of West Linton, and 9 furlongs S of Macbie Hill station on the Dolphinton branch of the North British, this being $21\frac{3}{4}$ miles S by W of Edinburgh. Its owner is John George Massy-Beresford, Esq. (b. 1856; suc. 1893).—*Ord. Sur.*, sh. 24, 1864.

Macduff, a seaport town and a *quoad sacra* parish in the *quoad civilia* parish of **GAMRIE**, Banffshire, $1\frac{1}{4}$ mile E of Banff. It is the terminus of the Turriff and Macduff

branch of the **GREAT NORTH OF SCOTLAND RAILWAY** system, the station being $49\frac{1}{2}$ miles NNW of Aberdeen and $29\frac{3}{4}$ N by W of Inveramsay Junction, where the branch leaves the main line. The town, which consists of a number of well-planned streets with good houses, and has one of the best harbours along the Moray Firth, is situated on an irregular rising-ground sloping northward and north-westward towards the sea-shore. Previous to 1732 it was but a small fishing hamlet, and owes its great progress since to the fostering care of successive Earls of Fife, and to its situation. The hamlet was known as **Down** or **Doune**, but in 1783 James, second Earl of Fife, changed it to **Macduff** (the family name being **Duff**), and obtained for the place a charter of *de novo damus* from George III., by which it was erected into a 'free and independent burgh-of-barony.' The lower harbour rates and the better position of the harbour diverted a considerable amount of traffic from Banff, and the growth of trade has been still more rapid and important since the opening of railway communication in 1860. The station was then at the SW side of the town, and was also intended for the partial accommodation of Banff, but in 1872 a prolongation of $\frac{3}{4}$ mile took place, bringing the station into a central position, while accommodation is still provided for Banff, from this side, by the Banff Bridge station. The climate is good, and as the beach affords excellent bathing ground the place is frequented during the summer months by visitors. The mineral wells of Tarlair are about a quarter of a mile distant. There were great rejoicings on the occasion of the arrival of the Prince of Wales on a visit to the Earl of Fife on 13 Nov. 1883, when the town was gaily decorated, various public bodies walked in procession to Duff House, and an address was presented to His Royal Highness. The harbour, enlarged and improved in 1877, was constructed by and belonged to the Duke of Fife, who sold it in 1897 to the town council for £13,000—£8000 in cash, £2000 as an investment at $3\frac{1}{2}$ per cent., and £3000 as a donation to the improvement scheme. The trade consists chiefly of exports of grain and cured herrings and other fish, and the imports are coal, salt, and bone and other manures. At the beginning of 1895, 105 fishing boats, of which 47 were first-class boats (*i.e.*, with keels of 30 feet or upwards), belonged to the port, and there were 105 boats (48 large and 57 small) employed in the salmon fishing, which is let out on lease. The Established church, a large building on an eminence at one end of the town, was erected at the expense of the third Earl of Fife. A cross, erected by the Duke of Fife, ornaments its precincts. The Free church was built soon after the Disruption. A Congregational church was erected in 1881 at a cost of £1250, and a Salvation Army hall in 1883. Murray's Institution was founded in 1848 by Mr Murray of London, a canvas manufacturer and a native of the burgh, for the free education of poor children. It has been transferred to the School Board in virtue of a scheme drawn up under the Educational Endowments (Scotland) Act, which also pro-

vides for the administration of the funds of the institution, amounting to £6000. The public school has accommodation for 700 children, and Murray's for 95. There is also a technical school. By the Reform Bill Macduff was, for parliamentary purposes, included within the boundaries of the burgh of Banff, but its municipality remained distinct, and under the Burgh Police Act of 1892 its municipal matters are managed by a provost, 2 bailies, and 6 commissioners. Water was introduced in 1883, and a new sewage scheme begun in 1894. There is a post office, with money order, savings bank, and telegraph departments, and branches of the Union and North of Scotland Banks. The town-hall, erected by voluntary subscription, cost £2100. There are also meal, oil-cake, and saw mills, manure works, rope and sail works, boat-building yards, baths, a gas-work, a masonic lodge (St James, No. 633), a company of artillery volunteers, curling, cricket, dramatic, and football clubs, a branch of the Moray Frith Fisheries Association, a hotel, a club and reading-room, and a number of the usual charitable, etc., institutions. The bridge across the Deveron to the W, on the road to Banff, was designed by Smeaton. The *quoad sacra* parish, which extends beyond the town, is in the presbytery of Turriff and synod of Aberdeen. Macduff with adjoining district was formed into a registration district in 1882. Valuation of burgh, (1893) £8677, 3s. 4d. Pop. of parish (1871) 3912, (1881) 4104, (1891) 4164; of burgh (1831) 1819, (1861) 3067, (1871) 3410, (1881) 3650, (1891) 3722.—*Ord. Sur.*, sh. 96, 1876.

Machany Water, a troutful stream of Muthill and Blackford parishes, Perthshire, flowing $13\frac{1}{4}$ miles eastward till it falls into the Earn at a point $2\frac{1}{2}$ miles NNW of Auchterarder.—*Ord. Sur.*, sh. 47, 1869.

Machar, New, a parish in the S of the Formartine district of East Aberdeenshire, to the N containing Summerhill village, which stands, 310 feet above sea-level, 4 furlongs SSW of New Machar station on the Formartine and Buchan section of the Great North of Scotland railway, this being $5\frac{1}{4}$ miles N of Dyce Junction and $11\frac{1}{2}$ NNW of Aberdeen. Summerhill has a post office under Aberdeen, with money order and savings bank departments; and close to the station is New Machar Inn.

Containing also Parkhill station, 4 miles S of that of New Machar, the parish is bounded N and NE by Udney, E by Belhelvie, SE and S by Old Machar, SW by Dyce, W by Fintray, and NW by Keithhall. Till 1621 it formed part of Old Machar parish, and, after being disjoined, was known successively as the Upper Parochie of St Machar, Upper Machar, and, finally, New Machar. Prior to 1891 it had a detached part situated at Straloch, and that formed also a detached part of the county of Banff. This detached portion was by the Boundary Commissioners connected with the main portion of the parish by annexing the intervening strip of the parish of Udney, measuring 300 yards wide at the narrowest, and consisting of that part of the estate of Torryleith which was in Udney. New Machar was then placed wholly in the county of Aberdeen. Its utmost length, from N by W to S by E, is $6\frac{1}{2}$ miles; and its utmost breadth, from E to W, $3\frac{1}{2}$ miles. The Don flows $1\frac{1}{2}$ mile south-south-eastward along all the Dyce border; and Elrick Burn, rising in the Straloch district, runs $7\frac{1}{2}$ miles south-south-eastward, partly along the Keithhall and Fintray borders, but mainly through the interior, till it falls into the Don at a point $2\frac{3}{4}$ furlongs SW of Parkhill station. Corby Loch ($2\frac{3}{4} \times 2$ furl.; 251 feet) lies mostly beyond the south-eastern boundary, near which are Lily Loch ($1 \times \frac{3}{4}$ furl.) and BISHOP'S LOCH ($2 \times \frac{3}{4}$ furl.) At the Bridge of Dyce the surface declines to 128 feet above sea-level; and thence it rises gently to 299 feet at Highlands, 400 at Rosemount, 500 at Upper Rannieshill, 620 at Changehill, and 543 at the Hill of Clyne. Granite abounds in the southern district, and limestone is found on the estate of North Kimmundy. The soil of the southern district, near the Don, is a gravelly loam; of the middle district, is a good loam; and of the northern district, is very various,

and much of it poor. About two-thirds of the entire area are in tillage; nearly one-tenth is under wood; and the rest is either pastoral or waste. Antiquities, other than those noticed under BISHOP'S LOCH, are remains of three pre-Reformation chapels—St Colm's at Monykebbock, St Mary's at Clubsgoval, and St Mary's at Straloch—the first of which is mentioned as early as 1256, and still is represented by a fine old burying-ground. At Parkhill, in 1864, was found a silver chain of double rings, $17\frac{1}{2}$ inches in length and 44 oz. in weight, with a penannular terminal ring, engraved with one of the symbols of the sculptured stones. It is now in the Edinburgh Antiquarian Museum. A moor within the parish was the scene, in 1647, of a defeat of the Royalists by the Covenanters. Robert Gordon of Straloch (1580-1661), the distinguished geographer and antiquary, was born at Kimmundy; and Dr Thomas Reid (1710-96), the eminent moral philosopher, was minister from 1737 till 1752. Mansions, the first two of which are noticed separately, are ELRICK, PARKHILL, and Straloch. New Machar is in the presbytery and synod of Aberdeen; the living is worth £270. The parish church at Summerhill was built in 1791. There is also a Free church; and three public schools—New Machar public, Parkhill girls', and Whiteashes—with respective accommodation for 214, 108, and 119 children, have an average attendance of about 160, 90, and 80, and grants of nearly £143, £80, and £70. Pop. (1801) 925, (1831) 1246, (1861) 1511, (1871) 1483, (1881) 1505, (1891) 1432.—*Ord. Sur.*, sh. 77, 1873.

Machar, Old, a parish of SE Aberdeenshire, containing great part of ABERDEEN city, with all Old Aberdeen, Woodside, and other suburbs. Down to the 17th century it comprehended the present parishes of New Machar and Newhills; and now it is bounded NW by New Machar, N by Belhelvie, E by the German Ocean, S by St Nicholas and Nigg, SW by Newhills, and W by Dyce. Its utmost length, from N by W to S by E, is $7\frac{1}{2}$ miles; its utmost breadth is $4\frac{1}{2}$ miles; and its area is $12,595\frac{1}{2}$ acres, of which 285 are foreshore and $167\frac{1}{2}$ water. The Don, after flowing $3\frac{1}{2}$ miles south-south-eastward along the Dyce and Newhills boundary, winds $3\frac{1}{2}$ miles eastward across the interior to the sea; and the DEE, in a run of $1\frac{1}{4}$ mile, traces the southern boundary. The district between the two rivers, comprising two-fifths of the entire area, is described in our article on ABERDEEN; and, as to the district N of the Don, it need only be said that the surface rises gradually from the shore to a summit altitude of 313 feet at Perwinnes Hill, $\frac{1}{2}$ mile N of which, at the New Machar boundary, is Corby Loch ($2\frac{3}{4} \times 2$ furl.; 251 feet). The predominant rock is granite; and the soil ranges from fertile loam to barren peat-earth. In the presbytery and synod of Aberdeen, this parish is divided ecclesiastically into Old Machar, Gilcomston, Holburn, Rubislaw, Ferryhill, Rosemount, and Woodside, with part of Mannofield and Craigiebuckler. Old Machar itself is a collegiate charge, the stipend of the first minister being £281 and glebe, of the second £283, both with manses. At Whitsunday 1894 the Old Machar public schools within the extended municipal boundaries were passed to the Aberdeen School Board, only two north of the Don (Denmore and Whitestripes), and a new one near Bridge of Don, remaining under Old Machar School Board. Pop. of entire parish (1881) 56,002, (1891) 71,579, of whom 9681 were in the ecclesiastical parish of Old Machar.—*Ord. Sur.*, sh. 77, 1873.

Machars (Celt. *machair*, 'a plain'), one of the three districts of Wigtownshire, being the broad-based, triangular peninsula between Wigtown and Luce Bays. It has ill-defined boundaries, but it may be viewed either as comprehending the parishes of Whithorn, Glasserton, Sorbie, Kirkinuer, and most of Mochrum, amounting to 100 square miles, or as comprehending also the rest of Mochrum and parts of Old Luce, Kirkcowan, and Penninghame, amounting, with these additions, to nearly 150 square miles. Its surface is prevalently low and flat, yet has considerable diversities, and will be noticed in our article on WIGTOWNSHIRE.

Machermore Castle, an old square tower in Minnigaff parish, W Kirkcudbrightshire, near the left bank of the Cree, $\frac{1}{2}$ mile SE of Newton-Stewart. Its owner is Robert Lennox Nugent Dunbar, Esq. (b. 1864; suc. 1866.)

Machine. See MAUGHLINE.

Machrihanish Bay, a bay on the W coast of Kintyre, Argyllshire. It is flanked on the N by Glenacardoch Point, 5 miles SSE of Cara island, on the S by Earadale Point, $6\frac{1}{4}$ miles N of the Mull of Kintyre; and the distance between these points is 13 $\frac{1}{2}$ miles. It nowhere, however, penetrates the land to an extent of more than 2 $\frac{1}{2}$ miles from the entrance line, and that at the mouth of Machrihanish Water, $4\frac{1}{2}$ miles W of Campbeltown; so that it lies all open to the W, and has an unindented and unsheltered coast. There is a post office here, with money order, savings bank, and telegraph departments; also an Episcopal mission station. Machrihanish golf-links are now almost world-famous. 'The long crescent of Machrihanish,' to quote from the *Life of Norman Macleod* (1876), 'girdled by sands wind-tossed into fantastic hillocks, receives the full weight of the Atlantic. Woe to the luckless vessel caught within those relentless jaws,' etc.—*Ord. Sur.*, shs. 20, 12, 1876-72.

Mackinnon's Cave, a cavern on the W coast of Mull island, Argyllshire, in Gribon promontory, 8 miles NE of Iona. Opening from the shore, and obstructed by fragments of rock, it penetrates to an unknown extent—the common people say quite across the island. It got its name, or is said to have got it, from the disappearance within its depths of a gentleman called Mackinnon, who went in to explore it, and never was heard of more. Its accessible parts, which were long a retreat of the clansmen, at once for safety and for strategy, are for some way inward invaded by the tide and encumbered with stones; but it opens afterwards into an arched chamber 45 feet wide and 30 high, where is a square stone called Fingal's Table, on which the clansmen frequenting it are said to have taken their meals. On 19 Oct. 1773 it was explored, to the extent of about 480 feet, by Dr Johnson and Boswell, the former of whom pronounced it 'the greatest natural curiosity he had ever seen.' Once it competed with Staffa for attracting tourists; but, except for its vastness and its associations, it possesses little real interest.

Mackinnon's Cave. See STAFFA.

Mackiston. See MAXTON.

Maclellan's Castle. See KIRKCUDBRIGHT.

Macleod's Castle, an ancient fortress in Stornoway parish, Lewis, Outer Hebrides, Ross and Cromarty, at the entrance of Stornoway Bay. Built by the ancient proprietors of Lewis to protect the bay, and dismantled by the troops of Oliver Cromwell, it is now represented by only a fragment of wall 12 feet high and 4 thick.

Macleod's Maidens, three insulated basaltic pillars of Duirinish parish, Isle of Skye, Inverness-shire, a few hundred yards W of Idrigill Point. Rising vertically from the sea, one of them to a height of 200, and the other two to a height of 100 feet, they are called by the country people, 'the mother and her two daughters,' and by Sir Walter Scott were compared to the Norwegian riders of the storm. Indeed, from a distance they are not unlike gigantic women clad in cloaks and hoods; and they have been described as 'three spires of rock rising sheer out of the sea, shaped like women, around whose feet the foaming wreaths are continually forming, floating, and disappearing.' A fourth pillar once stood adjacent to them, but was overwhelmed by the storms and waves. See DUNVEGAN.

Macleod's Tables. See DUIRINISH.

Macmerry, a village, with a post office and iron-works (now stopped), in Gladsmuir parish, Haddingtonshire, at the terminus of a branch line of the North British, 2 miles E by S of Tranent. Pop. (1871) 330, (1881) 352, (1891) 325.—*Ord. Sur.*, sh. 33, 1863.

Madderty, a parish in Strathearn district, Perthshire, with a station on the Perth, Methven, and Crieff section of the Caledonian railway, 11 $\frac{1}{2}$ miles W by S of Perth and $6\frac{1}{4}$ E by N of Crieff, under which it has a post and telegraph office. Containing also ABERCAIR-

NEY station, St DAVIDS village, and the hamlet of Bellycloan, it is bounded N by Fowlis-Wester, NE by Methven, E by Findo Gask, SE and S by Trinity Gask, and SW, W, and NW by Crieff. Its utmost length, from ENE to WSW, is 5 $\frac{1}{2}$ miles; its utmost breadth is 2 $\frac{3}{4}$ miles; and its area is 4863 $\frac{1}{4}$ acres, of which 2 $\frac{1}{2}$ are water. The surface is all a portion of the low flat lands of the valley of the Earn, sinking little below 200 and little exceeding 300 feet above sea-level. All the northern and north-western boundary is traced by sluggish Pow Water, which traverses an artificial cut 6 feet deep and 4 feet wide, and which formerly flooded the adjacent lands, but is now restrained by embankments; and all the south-eastern boundary is traced by Cowgask Burn, another tributary of the river Earn. The prevailing rock is Old Red sandstone; and the soil is partly alluvial, partly loamy. About one-eighth of the entire area is under plantation, and nearly all the remainder is in tillage. James Burgh (1714-75), a voluminous but forgotten writer, was a native. INCH-AFFRAY Abbey is noticed separately, as likewise are the mansions of WOODEND and DOLLERIE. Madderty is in the presbytery of Auchterarder and the synod of Perth and Stirling; the living is worth £315. The parish church, 5 furlongs SW of Madderty station, is modern and amply commodious. There is also a Free church; and a public school, with accommodation for 99 children, has an average attendance of about 55, and a grant of over £66. Valuation (1884) £6421, 17s. 11d, (1892) £5674, 5s. 7d. Pop. (1801) 560, (1831) 713, (1861) 536, (1871) 523, (1881) 527, (1891) 483.—*Ord. Sur.*, sh. 47, 1869.

Maddiston, a village in Muiravonside parish, Stirlingshire, $\frac{1}{2}$ mile SE of Polmont Junction. It has a post office under Linlithgow. Population of Maddiston and Sootyhill (1891) 311.

Maddy. See MUDALE and DOLLAR.

Maeshowe or Maiden's Mound, a tumulus in Stenness parish, Orkney, near the foot of the Loch of Harray, 9 miles WNW of Kirkwall and 5 $\frac{3}{4}$ NE of Stromness. Conical in shape, it rises to the height of 36 feet above the level of the circumjacent plain, and is engirt at a distance of 80 feet from its base by a moat 40 feet wide. On the W side it is entered by a narrow passage, 54 feet long and from 2 $\frac{1}{2}$ to 4 $\frac{3}{4}$ feet high, the whole being mostly constructed of huge blocks of stone. It was first opened in 1861, and was then found to contain a central chamber, 15 feet square, converging to a vaulted roof originally 20 feet high. Three little chambers branch off from the one in the middle; and on the stones are a series of Runic inscriptions, supposed to date from the middle of the 12th century, and thus affording no clue to the origin of the tumulus itself. See Fergusson's *Rude Stone Monuments* (1872); vol. i., pp. 101-104, of Hill Burton's *History of Scotland* (ed. 1876); and J. Anderson's *Scotland in Pagan Times* (1886).

Magbiehill. See MACBIE HILL.

Magus Muir, a tract, reclaimed and cultivated or wooded now, but formerly bleak and wild, in St Andrews parish, Fife, $3\frac{1}{2}$ miles WSW of the city. A spot on it, marked now by the Bishop's Wood, was the scene, on the night of 3 May, of the murder of Archbishop Sharp (1618-79) by twelve Fife Cameronians. He was travelling from Edinburgh with his daughter, and, after a halt at Ceres to smoke a pipe with the parson, was driving on again, when a horseman, spurring towards them, fired right into the carriage. Others rode up, and shot after shot was fired, but never one took effect, and 'Judas, come forth!' was their cry. So they dragged the old man out of the lumbering coach, and hacked him to death on the heath. 'Upon the opening of his tobacco-box, a living humming-bee flew out. This either Hackston of Rathillet or Balfour of Burley called his "familiar;" and some in the company not understanding the term, they explained it to be "a devil."' Guillan, a weaver lad, one of the party though not one of the murderers, and who actually interceded for Sharp, was, four years later, hung in chains on the spot, as also were five of the

prisoners from the battle of BOTHWELL Brig, who, however, had nothing to do with the murder—indeed had never been so much as in the county of Fife before in their lives. An old broken headstone to Guillan's memory bore inscription:

'A faithfull martyr here doth lye,
A witness against perjurie,
Who cruelly was put to death
To gratify proud prelate's wrath;
They cut his hands ere he was dead,
And atter that struck off his head;
To Magnus Muir then did him bring,
His body on a pole did hing;
His blood under the altar cries
For vengeance on Christ's enemies.'

On the site occupied by this old stone stands a pyramid of rough masonry about 10 feet high, with an inscription in Latin telling that near the spot the Archbishop was murdered. Both it and a stone ('restored') to the memory of the Bothwell Brig Covenanters were erected in 1877 by the proprietor of Magus Muir. See vol. vii., pp. 207-221, of Dr Hill Burton's *History of Scotland* (ed. 1876).—*Ord. Sur.*, sh. 49, 1865.

Mahaick or Maghaig, Loch. See KILMADOCK.

Maich Water, a rivulet of Lochwinnoch parish, Renfrewshire, rising on Misty Law Muir at an altitude of 1250 feet, and running $5\frac{1}{2}$ miles south-south-eastward—for the last 4 miles along the boundary with Kilbirnie parish, Ayrshire—till, after a total descent of 1145 feet, it falls into the N end of Kilbirnie Loch. It is mostly a moorland stream, traversing a deep channel.—*Ord. Sur.*, shs. 30, 22, 1866-65.

Maidenkirk. See KIRKMAIDEN.

Maiden-Paps. See CAVERS.

Maidens, a village in Kirkoswald parish, Ayrshire, $6\frac{1}{2}$ miles WSW of Maybole, under which it has a post office.

Maiden's Leap. See HUNTINGTOWER.

Maines, a mansion of 1835 in Chirnside parish, Berwickshire, 1 mile E by N of the village.

Mainhill, a solitary, low, white-washed cottage in Hoddam parish, Dumfriesshire, 3 miles NW of Ecclefechan. From 1814 to 1826 it was the home of Thomas Carlyle (1795-1881). Here he 'first learned German, studied *Faust* in a dry ditch, and completed his translation of *Wilhelm Meister*. . . . The situation is high, utterly bleak, and swept by all the winds. Not a tree shelters the premises. . . . The view alone redeems the dreariness.'—*Ord. Sur.*, sh. 10, 1864. See chap. iii. of *Froude's Life of Carlyle* (1882).

Mainhouse, an estate, with a mansion, in Eckford parish, Roxburghshire, 4 miles SSE of Kelso.

Mainland. See POMONA and SHELAND.

Mains and Strathmartine, a parish of S Forfarshire. The two ancient parishes of which it consists were united in 1799, but still are separate registration districts. Mains, the eastern portion, is said to be so called from the Mains of Fintry. The largest village is DOWNFIELD, 2 miles N by W of the post-town, Dundee; and large populations are also concentrated at Dundee Bleachworks (Parkhead), Claverhouse, Trottich, Baldovan, Strathmartine, Rosemill, and Fallows. There are two stations within the parish, on the Dundee and Newtyle branch of the Caledonian railway—Baldovan (at Downfield) and Baldragon. The parish is bounded N by Tealing, NE by Murroes, E, SE, and S by Dundee, SW by Liff and Benvie, and W by Auchterhouse. Its greatest length, from WNW to ESE, is $5\frac{1}{2}$ miles; its breadth varies between $\frac{1}{2}$ mile and $3\frac{1}{4}$ miles; and its area is 6321 acres, of which 20 ac water. FITHE Water, for a distance of 3 miles, traces the northern boundary; and DICTHY WATER, running east-south-eastward, goes from end to end of the interior. In the SE the surface sinks to 120 feet above sea-level; and thence it rises to 536 near Hilltown of Balmuir, 526 near Strathmartine Castle, and 533 at Clatto Moor. A beautiful strath extends along the course of the Dichty, on the sides of which extensive woods pleasantly alternate with cultivated fields. The bogs and marshes, which formerly occupied some hollows, have all been drained. A very copious spring of excellent water,

called Sinavey, rises perennially from a crevice in a perpendicular rock at Fintry Castle. Trap and Old Red sandstone are the prevailing rocks; and the latter had been largely quarried. The soil in some parts adjacent to the Dichty is alluvial, and on numerous ridges near the stream is gravel or sand; almost everywhere else it is a black loam, incumbent on clay, gravel, or rock. Nearly 400 acres are under wood; about 130 are moorland or rocky hilllock; and all the rest of the land is in tillage. Baldovan Imbecile Asylum and Orphanage was founded by Sir John Ogilvy, Bart., in 1854; and the Baldovan Institution, or Boys' Industrial School of Dundee, was opened in 1878. Two obelisks and some vestiges of a Roman camp are the only extant antiquities. FINTRY CASTLE and CLAVERHOUSE are noticed separately, as also is the mansion of BALDOVAN. Four fairs are now held here—Stobs fair, on Tuesday after 11 July; First fair, on 26 Aug. or Tuesday after; Latter fair, on 19 Sept. (these three fairs being for cattle, sheep, and horses); and Bell's fair, on the first Friday of Oct., for feeing servants—all held on Muir Fair in the parish. Mains and Strathmartine is in the presbytery of Dundee and the synod of Angus and Mearns; the living is worth £247. The parish church was built in 1800 and renovated in 1894. There is also a Free church; and three public schools—Downfield, Mains, and Strathmartine—with respective accommodation for 227, 222, and 150 children, have an average attendance of about 180, 115, and 120, and grants of nearly £177, £112, and £104. Valuation (1884) £25,730, 9s. (1893) £18,144, plus £6551 for railway. Pop. (1881) 3490, (1891) 3998.—*Ord. Sur.*, shs. 48, 49, 1868-65.

Mains Castle. See KILBRIDE, EAST.

Mains House, a mansion in New Kilpatrick parish, Dumbartonshire, $1\frac{1}{4}$ mile WNW of Milngavie. Its owner is Archibald Campbell Douglas, Esq. (b. 1841; suc. 1857), his ancestors having possessed the estate since 1873.—*Ord. Sur.*, sh. 30, 1867.

Mainsriddle, a village on the mutual border of Kirkbean and Colvend parishes, Kirkcudbrightshire, 10 miles ESE of Dalbeattie. It has a Free and a U.P. church.

Main Water of Luce. See LUCE.

Makerstoun, a rural parish on the N border of Roxburghshire, whose church stands 5 miles S by W of Kelso, under which there is a post office. It is bounded N by Smailholm, E by Kelso, S by Roxburgh and Maxton, and W by Mertoun. Its utmost length, from ENE to WSW, is 3 miles; its utmost breadth is 2 miles; and its area is 2913 acres, of which 48 are water, and 80 are under wood. The TWEED flows $3\frac{1}{2}$ miles east-north-eastward along all the southern boundary; and, where it quits the parish, the surface declines to 135 feet above sea-level, thence rising gently to 459 feet at a point $3\frac{1}{2}$ furlongs W by N of the church. The soil is, generally speaking, rich and well-cultivated, and the prevailing rock is Old Red sandstone. The chief natural feature in the parish are the Trow Craggs. These are a series of projecting rocks, rising from the bed of the Tweed 'like the sides of a man's hands.' At one time they were so close together that, when the river was low, it was possible to pass by means of them from one bank to the other. An accident, however, occurred, and in consequence the middle rock was blown up to prevent the recurrence of a like mishap. When the river comes down in flood, its waters break over the rocks with very fine effect. It is said that the best salmon-fishing in all the Tweed is to be had in this reach of the river. The two proprietors are the Duke of Roxburgh, who possesses one large farm, and Hugh Jas. Elibank Scott, Esq., to whom the rest of the parish belongs. His residence, Makerstoun House, is a square three-storeyed building, situated on the N bank of the Tweed, and standing in grounds that are extensive and well-wooded. The park contains about 100 acres. An observatory, erected by General Sir Thomas Brisbane (1773-1860) in the park at Makerstoun, was demolished after his death. He was the husband of the eldest daughter of Sir Henry Hay Makdougall, so that the estate came to him through his wife. The interesting

ruin of what was first a Roman Catholic chapel and then a Protestant church was used by the Makdougall family as a place of interment, and stands a little way from the house, entirely shut in by trees. The estate of Makerstouu passed on the death of Miss Scott-Makdougall in 1890 to the Scotts of Gala. This parish is in the presbytery of Kelso and the synod of Merse and Teviotdale; the living is worth £350. The parish church is a plain building, erected in 1807, and having accommodation for 150 people. A Free church, with 250 sittings, was built by the late Miss Elizabeth Makdougall, who also left £1500 towards its endowment, and built, at her own expense, an excellent manse. The public school, with accommodation for 127 children, has an average attendance of about 70, and a grant of over £75. Pop. (1831) 326, (1861) 380, (1881) 381, (1891) 401.—*Ord. Sur.*, sh. 25, 1865.

Mallaig, a place in the northern section of the territorial district of MORAR, in Glencg parish, county of Inverness, at the entrance to Loch Nevis, Sound of Sleat. It is the terminus of the Arasaig and Mallaig extension of the West Highland railway. This line reaches Banavie, at the southern entrance to the Caledonian Canal, by a short branch from Fort William. The extension line, leaving Banavie, runs westward by the northern shore of Loch Eil, and skirting the northern end of Loch Shiel passes on its westward way by the southern shore of Loch Eilt, till it reaches Arasaig. Turning then northward it proceeds coastwise, part of the way following the western shore of Loch Morar to Mallaig. Here a pier is to be constructed on the fore-shore and bed of the harbour, with a breakwater jutting out into the Sound of Sleat. In its course of 39 miles, the extension line has curves innumerable, being perhaps the most serpentine railway in this country, while the radii are in several instances as acute as 10 chains. The gradients, too, at more than one point are as steep as 1 in 48. Apart from its traversing one of the most historical districts of Scotland, this line is likely to be of immense importance in bringing the West coast into touch with the markets of the South.

Malleney, an estate, with a mansion, in Currie parish, Edinburghshire, close to Balerno village, where there is a station on a short branch from the Currie loop line of the Caledonian railway. The house is old and ivy-mantled, with Dutch gardens and fine old yews and plane-trees. The estate from the middle of the 17th century was held by a branch of the Scotts of Murdieston, one of whose members was General Thomas Scott (1745-1841). By his grand-nephew, Col. Francis Cunningham Scott, C.B., it was sold in 1882 for £125,000 to the Earl of Rosebery.—*Ord. Sur.*, sh. 32, 1857. See DALMENY, and John Small's *Castles and Mansions of the Lothians* (Edinb. 1883).

Maltan Walls. See ANCURM.

Mam-Ratagain. See MAAM-RATAGAIN.

Mam-Suil. See MAAM-SUIL.

Manar, a commodious mansion, with finely-wooded grounds, in Inverurie parish, Aberdeenshire, near the left bank of the Don, 3½ miles WSW of Inverurie town. Its owner is Henry Gordon, Esq. (b. 1848; suc. 1874).—*Ord. Sur.*, sh. 76, 1874.

Manderston, a fine modern mansion in Duns parish, Berwickshire, 1½ mile E by N of Duns town. Its owner is Sir James Percy Miller, second baronet since 1874 (b. 1864; suc. 1887). In 1892 Sir James bought the adjoining estate of Broomhill, extending to upwards of 100 acres.—*Ord. Sur.*, sh. 34, 1864.

Mannofield, a village at the boundary between Old Machar and Peterculter parishes, Aberdeenshire, 2 miles SW of Aberdeen, under which it has a post office. Its church was raised to *quoad sacra* status in 1882.

Manor, Aberdeenshire. See MANAR.

Manor (in 1186 *Mainneure*; *Cymric maenowr*, 'a manor or district enclosed in a stone boundary'—*maen*, 'stone'), a parish of Peebleshire, whose church stands on the left bank of Manor Water, 3 miles SW of the post town, Peebles. It is bounded NW by Stobo, N and E by Peebles, SE and S by Yarrow in Selkirkshire, and W

by Drummelzier and Stobo. Its utmost length, from N to S, is 11 miles; its utmost breadth is 4½ miles; and its area is 16,671½ acres, of which nearly 50 are water. Manor Water, rising in the extremo S at an altitude of 2000 feet above sea-level, runs 10½ miles north-by-eastward—for the last 5½ furlongs along the Peebles boundary—till, after a total descent of 1400 feet, it falls into the Tweed at a point 1¼ mile WSW of Peebles, and 1 furlong below one-arch Manorfoot Bridge (1702). It is joined by GLENRATH BURN and nearly a dozen more little affluents, most of which, like itself, afford capital trout-fishing. The TWEED curves 2½ miles east-by-northward along all the north-western and northern boundary, and just above Manorfoot is spanned by a handsome five-arch stone bridge, 260 feet long, erected in 1881-83 at a cost of £3000. At the influx of Manor Water to the Tweed the surface declines to 600 feet above sea-level; and chief elevations to the W of the Manor, as one goes up the vale, are Whitelaw Hill (1521 feet), the *Scrape (2347), Posso Craigs (1817), *Pyke-stone Hill (2414), *DOLLAR LAW (2680), and *Norman Law (2408); to the E, Canada Hill (1716), *Hundeshope Heights (2249), Glenrath Hill (2049), *BLACKHOPE Heights (2213), *Black Law (2285), and *Shielhope Head (2110), where asterisks mark those summits that culminate on the confines of the parish. The rocks are Lower Silurian, and the soil is generally light. At an early period cultivation was carried far up the vale, perhaps to its very head; but later tillage was abandoned, especially in the upper reaches, which may account for the old rhyme—

'There stand three mills on Manor Water,
A fourth at Posso Cleugh;
Gin heather-bells were corn and bere,
They had get grist enough.'

In the lower half of the parish the cultivation of cereals and green crops, always more or less followed, is now the principal industry. The parish is rich in antiquities and objects of interest, comprising hill-forts, of which there are several well defined; peel-towers, that of Castlehill being the most prominent, and that of BARNS (1498) the best preserved; the site of 'Macbeth's Castle,' the site of St Gordian's Kirk, far up the vale, in Kirkhope, marked by a granite runic cross, with the old font stone at its base; the Ship Stone, under Posso Craigs; a tumulus known as the 'Giant's Grave,' in Glenrath Hope; a cup-marked fallen monolith, near Bellanridge (an old woman, it is said, whom the devil turned into stone); and traces of the old 'Thief's Road,' or freebooters' mountain bridle-way. One and all are surpassed in interest by the lowly cottage (1802) of the 'Black Dwarf,' 'Bowed Davie' Ritchie (1740-1811), near Woodhouse farm, 1 mile SW of the Kirkton. Here in 1797 he received a visit from Sir Walter Scott, who was staying at Hallyyards with Professor Ferguson. His chair, scarce as high as a hassock, is still kept at Woodhouse; and a tombstone in the churchyard, erected by Messrs Chambers in 1845, marks the spot where they laid him to rest—a rest soon broken, for his legs, no longer than a two-year child's, and his ape-like arms, so marvellously strong, proved too strong a temptation to resurrectionists, as one learns from Dr John Brown's *Horæ Subsecivæ*. Mansions are BARNS, Glenternie, and HALLYARDS. Manor is in the presbytery of Peebles and the synod of Lothian and Tweeddale; the living is worth £261. The parish church is a handsome Gothic edifice of 1873-74, with 188 sittings and several memorial windows, one of which was presented in 1893. Within the vestry is a table made of oak that had been used for church building purposes not later than the 13th century; and a bell in the belfry bears the Latin inscription, 'In honore Sancti Gordiani, MCCCCLXXVIII.' The public school, with accommodation for 56 children, has an average attendance of about 50, and a grant of over £62. Pop. (1801) 308, (1831) 254, (1861) 247, (1881) 277, (1891) 249.—*Ord. Sur.*, shs. 24, 16, 1864.

Mansfield House, a mansion in New Cumnock parish, Ayrshire, 1½ mile E by N of New Cumnock village. It is the seat of Sir James Stuart-Menteth, third Bart.

since 1838 (b. 1841; suc. 1870), whose grandfather, Sir Charles G. Stuart-Menteth, Bart. of Closeburn (1760-1847), a distinguished agricultural improver, acquired the estate by purchase. It is rich in coal and limestone; and, after coming into Sir Charles's possession, it underwent vast improvement at once in agriculture, in mining operations, and in the opening up of railway transit.—*Ord. Sur.*, sh. 15, 1864.

Manuel House, a mansion in Muiravonside parish, Stirlingshire, near the left bank of the Avon, 2½ miles WSW of Linlithgow. Manuel Junction, on the North British railway, at the intersection of the Edinburgh and Glasgow with the Slamannan and Bo'ness lines, is 2 miles W of Linlithgow. Manuel or Emmanuel Priory, near the mansion, was founded for Cistercian nuns in 1156 by Malcolm IV., and received considerable endowments and donations, at different periods, from various distinguished persons. It was dedicated to the Virgin Mary, and seems to have been in the First Pointed style. The chapel was fairly entire in 1739; but in 1788 a spate of the Avon swept away part of the walls; and now it is represented by only the western gable, thickly clothed with ivy. Edward I. was here in 1301.—*Ord. Sur.*, sh. 31, 1867.

Mar, an ancient district of SW Aberdeenshire, subdivided into Braemar, Midmar, and Cromar. A Mormaer of Mar was present at the battle of Clontarff (1014); and Ruadri or Rothri, Mormaer of Mar, figures in the foundation charter of Scone priory (1115) as 'comes' or earl. The male line of the Celtic Earls of Mar expired in 1377 with Thomas, thirteenth Earl, whose sister, Margaret, married William, first Earl of Douglas; and their daughter, Isabel, in 1404 married Alexander Stewart, the 'Wolfe of Badenoch,' who, after her death in 1419, was designated Earl of Mar. The earldom by rights should have gone to Janet Keith, great-grand-daughter of the eleventh Celtic Earl, and wife to Sir Thomas Erskine; but it was not till 1565 that it was restored, *per modum justitie*, to their sixth descendant, John, fifth Lord Erskine. Into the question of this peerage it is not possible here to enter; enough, that there are now two bearers of the title—Walter John Francis Erskine, Earl of Mar and Kellie, whose seat is Alloa Park; and John Francis Erskine Goodeve-Erskine, whose residence is Sunnington Rise, Bournemouth. The former is Earl *de facto*, according to judgment of the House of Lords (1875); but the latter is Earl *de jure*, according to the late Earl of Crawford's *Earldom of Mar in Sunshine and Shade during Five Hundred Years* (2 vols., Edinb. 1882).

March, Berwickshire. See MERSE.

Marchfield. See CRAMOND.

Marchglen, a village near Tillicoultry, in the parish of Alloa, Clackmannanshire.

Marchmont House, a mansion in Polwarth parish, Berwickshire, ¾ mile SW of Marchmont station on the Berwickshire branch of the North British railway, this being 3½ miles SW of the post-town Duns. It is the seat of Sir John Purves Hume-Campbell, eighth Bart. since 1665 (b. 1879; suc. 1894). The father of the seventh Bart., Sir William Purves, inherited the property from his great-uncle, the third and last Earl of Marchmont (1708-94), whose ancestors, the Humes, possessed the lands of Polwarth for three centuries. The most famous of them, Sir Patrick Hume (1641-1724), distinguished as a patriot and statesman, was created Lord Polwarth in 1690 and Earl of Marchmont in 1697. (See HARDEN.) The mansion was built about 1754 by the last Earl to supersede Redbraes Castle, 200 yards to the E. A semi-Palladian edifice, it stands in a large and finely-wooded park.—*Ord. Sur.*, sh. 25, 1865. See Miss Warrender's *The Humes of Polwarth* (1894).

Maree, Loch, a magnificent fresh-water lake of Gairloch parish, W Ross and Cromarty. Commencing at a point 11½ miles WNW of Auchnasheen station on the Dingwall and Skye section of the Highland railway, and lying 32 feet above sea-level, it extends 12½ miles north-westward, with a varying breadth of from 3 furlongs to 2½ miles, a general depth of 360 feet, and an

area of 11 square miles or 7090½ acres. On all sides it is overlooked by mountains of great height and beautiful contour, so that its shores present an inexhaustible variety of the most romantic and interesting scenery. The loftiest are BEN SLEOCH (3217 feet) to the NE, and BEN EAY or EIGHE (3309) to the SW. From the former of these the Lewis, with the town and bay of Stornoway, can be distinctly seen. The effect of this superb mountain, seen at once from its base to its summit, is, perhaps, more striking than that of any other mountain in the Highlands. At the western extremity, BEN LAIR (2817 feet) is a principal feature in the landscape—graceful, solid, broad; and where its skirts descend steep into the water, the scenes are peculiarly original and grand. The northern margin of Loch Maree presents a great variety of scenery, consisting of rocky and wooded bays, and creeks rising into noble overhanging cliffs and mountains; here also are displayed some of the finest general views of the lake. But there is one portion of the margin of the lake so peculiar as to deserve the most minute description, and that of Dr M'Culloch is so vivid and so true that we cannot refrain from extracting it: 'In one place in particular, the remains of a fir forest, in a situation almost incredible, produce a style of landscape that might be expected in the Alps, but not among the more confined scope and tamer arrangements of Scottish mountains. Immediately from the water's edge, a lofty range of gray cliffs rise to a great height, so steep as almost to seem perpendicular, but varied by fissures and by projections covered with grass and wild plants. Wherever it is possible for a tree to take root, there firs of ancient and noble growth, and of the most wild and beautiful forms, are seen rising above each other, so that the top of one often covers the root of the succeeding, or else is thrown out horizontally in various fantastic and picturesque modes. Now and then some one more wild and strange than the others, or some shivered trunk or fallen tree, serves to vary the aspect of this strange forest, marking also the lapse of ages, and the force of the winter storms which they have so long braved.'

The bosom of Loch Maree is gemmed with islands of varied size and appearance. They are 27 in number, and lie chiefly in a cluster on the middle of the lake, where it is broadest. The chief of these, all noticed separately, are ELLAN-SUBHAINN, ELLAN-MAREE, and ELLAN-RORYMORE or Ruairidh-Mor. The lake is supposed at one time to have had a much lower level than it now has, and to have been raised to its present level by the accumulation of sand and gravel at the lower end, by which the water was dammed in. Indeed there is reason to think that Lochs Maree and Ewe originally formed one lake, under the name of Loch Ewe, as the village near the head of Loch Maree is named Kinlochewe or 'head of Loch Ewe.' Loch Maree contains salmon, sea-trout, yellow trout, and char, though the first are very seldom caught; and the river Ewe, flowing from it, is almost the best angling water on the W coast of Scotland, abounding with salmon of princely size and quality. A steamer was launched on the lake in 1883, which sails daily from Poolewe to the head of the loch and back, calling at Lochmaree Hotel, Ru Noa (for Kinlochewe) each way. The Talladale or Lochmaree Hotel, on the SW shore of the lake, opposite the group of islands, and 9 miles NW of Kinlochewe, is an excellent establishment, erected in 1872, and honoured from the 12th to the 18th of September 1877 by a visit from Queen Victoria and the Princess Beatrice. A rock of pale red granite bears a Gaelic inscription recording this visit, which is fully described in *More Leaves from the Journal of a Life in the Highlands* (1884). There is a post and telegraph office of Lochmaree under Auchnasheen.—*Ord. Sur.*, shs. 92, 91, 1881-82.

Margaretsfield, a village in Ruthwell parish, Dumfriesshire, 8 miles W by N of Annan.

Markinch (*mark-inch*, 'the forest island'), a small town and a parish in the Kirkealdy district of Fife. The town has a station (the junction for Leslie) on the Edinburgh and Dundee section of the North British,

34 miles N by E of Edinburgh by the Forth Bridge, $11\frac{1}{2}$ SSW of Cupar, $7\frac{1}{2}$ N by E of Kirkcaldy, and $4\frac{1}{2}$ E of Leslie. It is built on the top and sides of a low ridge, which, according to tradition, was once an island in a lake. This is supposed to explain the derivation of the name Markinch. The height of this ridge is greater at its northern and southern extremities than at the centre. The northern was at one time occupied by a Culdee cell; and the southern, known as Markinch Hill, has six terraces, each 20 feet broad, and rising one above the other, cut out from it. By some, these terraces have been ascribed to the Romans, while others have thought it probable that they were intended for an amphitheatre, from which games, etc., engaged in below, might easily be viewed. It is now hardly possible to make out the terraces, owing to the ridge being overgrown with trees, planted by the late General Balfour. When the parish church was built is unknown; it was, however, enlarged and repaired in 1806, and again repaired in 1884-85, and has now about 1000 sittings. The Free church was renovated, and two stained-glass windows were inserted, in 1883; and there is also a U.P. church. Markinch has a post office, a branch of the Commercial Bank of Scotland, new municipal buildings, erected in 1897-98, a town-hall, altered and added to at the same time by Mr. Smith of Duloch, several hotels, a gas company, a water company, bowling and curling clubs, Freemasons' and Foresters' lodges, a literary society with a public library, a property investment building society, and a cottage garden society. The only fair is on the 25 July, and it is observed as a holiday. Pop. (1891) 1397.

Markinch parish is bounded NW by Falkland, N by Kettle, E by Kennoway and Scoonie, SE by Wemyss, SW by Dysart, and W by Kinglassie and Leslie. With a very irregular outline, it has an utmost length from N to S of $5\frac{1}{2}$ miles, a varying width from E to W of $\frac{1}{2}$ mile and $5\frac{1}{2}$ miles, and an area of 9763 acres, of which $48\frac{3}{4}$ are foreshore and $7\frac{1}{2}$ water. Until 1891 the parish had a detached part situated at Innerleven, and comprising 113 acres. This was transferred by the Boundary Commissioners to the parish of Wemyss. South of Cameron Bridge the parish approaches to within 7 furlongs of the Firth of Forth. 'The general aspect of the parish,' says one writer, 'is varied and picturesque. From the Lomond Hills as a background on the N, it slopes gently towards the S and E. The parish is intersected by four fertile valleys, watered by as many streams, which unite towards the eastern extremity. The valleys are separated by corresponding low ridges, each rising gradually above the other in the direction of the summit level'—516 feet at Kirkforthar, close to the northern boundary. The chief streams in the parish are the river Leven, Lochty Burn, and the Ore. The first divides the inland section into two pretty equal parts. LOCHTY Burn runs $7\frac{1}{2}$ furlongs eastward to the ORE, which itself flows $4\frac{1}{2}$ miles north-eastward to the Leven, partly along the Dysart boundary, but mainly through the south-eastern interior; and the LEVEN goes $6\frac{1}{2}$ miles eastward, partly along the Leslie and Wemyss boundaries, but chiefly across the middle of the parish. The rocks are mainly of the Carboniferous formation, and mining has been long carried on on a large scale. Ironstone is also found in abundance. At first it was smelted on the spot, but was afterwards exported to the Tyne to be smelted there. In the northern part of the parish the soil is either clay, loam, or gravel; in the district between the Lochty and the Ore, it is clay, loam, or sand of a wet character; and in the southern part it is a wet clay, loam, or sand. A considerable portion is under wood, and there are about 100 acres of bog-land. The parish is traversed by a section of the Edinburgh and Dundee railway, which has a junction station at Thornton, where the Leven and East of Fife and the Methil lines break off, and at Markinch where the Leslie branch separates from the main line.

Besides the small town of Markinch, the parish contains the following villages and hamlets: Milton of Balgonie, Coaltown, Windygates, Woodside, Balcurrie,

Haughmill, Burns, Rothcs, Auchmuty, Balbirnie, Gate-side, Kirkforthar, Seythrum, Cameron Bridge. In these, and in the country round about them, are conducted the various paper mills, flax-spinning mills, bleachfields, collieries, etc., which form the industries of the parish. At Cameron Bridge there is a very large distillery. Markinch contains several objects of antiquarian interest. The House of Orr (Balfour House) may be noticed, because in it was born Cardinal Beaton (or Bethune), who played so large a part in Scottish history of the 16th century. The old House of Orr was situated at the junction of the Orr with the Leven, but the present house is near the Milton of Balgonie. An interesting portrait of the cardinal may be seen in the gallery of Balfour House, which also contains a portrait of James Bethune, Archbishop of Glasgow (b. 1517), a nephew of the cardinal, and another of Mary Beaton (b. 1566), well known as one of the 'Queen's Maries,' and mentioned in the old song, supposed to be sung by the hapless Mary on the eve of her execution:—

'Yestreen the Queen had four Maries,
The night she'll hae but three;
There was Mary Beaton and Mary Seaton,
And Mary Carmichael and me.'

Balgonie Castle, $1\frac{1}{2}$ mile ESE of Markinch, stands on the summit of a bank, which rises from the Leven. 'The Old Red sandstone keep of Balgonie was both a palace and a prison.' It is about 80 feet high, with a battlement at the top, and is 45 feet in length and 36 in breadth over the walls. The walls of the two lower storeys, which are arched with stone, are 8 feet thick. Balgonie belonged originally to the Sibbalds, a well-known Fifeshire family, from whom it passed to the Lundins. The famous Scottish general, Sir Alexander Leslie—'Crocketback' Leslie, as he was called—acquired it from them about 1640. There he spent the closing years of his life, and there he died in 1661, as Lamont relates:—'Old Generall Leslie in Fyffe, the Earle of Leven, departed out of this life at his own house in Balgonie, and was interred at Markinshe church in his own ilye, the 19 of Apr(il), in the evening.' Another account says that his remains were borne to the vault at midnight, by torch-light. Water-supply works for farms on the Balgonie estate were erected in 1893.

The ruined tower of Bandon, in the western part of the parish, was one of Beaton's many possessions. Other antiquities are the ruined church of Kirkforthar, the tower of Markinch parish church, and an old cross, 7 feet high, erected to the N of Markinch, near the garden entrance to Balbirnie. What remains of it is now merely a broad slab, either quite plain at first, or so weather-beaten in the course of years, as to have lost all traces of carving upon it. Stone coffins and other remains of an antiquarian nature have also been found in the parish.

Men of note, who have been connected with Markinch, are:—Dr Drew, who became Principal of St Leonard's College, St Andrews, in 1708, after having been minister of Markinch parish church; Mr Tullidolph, minister of Markinch, who was appointed Professor of Divinity in St Mary's College, St Andrews, in 1734; Dr Sievewright, who was first minister of the parish church, and afterwards of the Free church of Markinch. When he left the Established Church, most of his 'people' 'came out' with him. He was Moderator of the Free Church General Assembly in 1846, and died in 1852.

Giving off the *quoad sacra* parish of Milton of Balgonie and parts to the *quoad sacra* parishes of Methil and Thornton, this parish is in the presbytery of Kirkcaldy and the synod of Fife; the stipend is £308 and manse. Besides the parish church there are also *quoad sacra* parish churches at Milton of Balgonie and Thornton. The former has accommodation for 650 and the latter for 400 persons. There are Free and U.P. churches at Markinch. The church of Markinch, in the 10th century, was conveyed by Maldrumus, Bishop of St Andrews, to the Culdees of Lochleven. The men of Markinch, it has been shown from the Kirk Session

Records, were warmly attached to the Covenantee cause, in defence of which they spent 'lives, land, and gear.' Seven public schools, with total accommodation for 1505 children, have an average attendance of about 960, and grants amounting to over £1005. Valuation (1884) £30,206, 5s. 5d., (1893) £32,037, 14s. 11d. Pop. (1881) 5863, (1891) 5798.—*Ord. Sur.*, sh. 40, 1867.

Marlee Loch. See DRUMMELIE.

Marlefield. See ECKFORD.

Mar Lodge, a deer-stalking lodge of the Duke of Fife, in Crathie and Braemar parish, SW Aberdeenshire, near the S bank of the Dee, 3 miles WSW of Castleton. It is picturesquely seated on the steep wooded side of the Eagle's Craig, 1250 feet above sea-level, and is the highest inhabited gentleman's seat in Great Britain. The old lodge, a rambling structure, between a Swiss chalet and an Indian bungalow, was destroyed by fire in June, 1895, and in October of the same year the Queen laid the foundation stone of the present building—an Elizabethan granite structure, the front forming something like three sides of a square. In 1881 the Duke entertained the Prince of Wales here; and on 10 Sept. 1852 the Queen and Prince Albert were present at an open-air torch-light ball.—*Ord. Sur.*, sh. 65, 1870.

Marnoch, a parish of NE Banffshire, with a post office (Bridge of Marnoch), 8½ miles NNE of its post-town, Huntly, and 2 SSW of ABERCHIRDER. Containing also that thriving village, it is bounded N by Boyndie and Banff, NE by Alvah, E by Forglen, SE by Turrif in Aberdeenshire, S by Inverkeithny and Rothiemay, W by Rothiemay and Grange, and NW by Ordiquhill. Its utmost length, from E to W, is 6¼ miles; its utmost breadth, from N to S, is 5½ miles; and its area is 14,954 acres. The DEVERON, here spanned by the two-arch Bridge of Marnoch (1806), winds 9½ miles eastward along all the southern and south-eastern boundary, though the point where it first touches and that where it quits the parish are only 5½ miles distant; and Crombie, Auchintoul, and other burns rise in the N, and flow to its southward across the interior. Along the Deveron the surface declines to 190 feet above sea-level; and thence it rises to 600 feet at Clunie Hill, 851 at Catstone Hill, 767 at *Meikle Brown Hill, 890 at *Wether Hill, and 740 at Gallow Hill, where asterisks mark those summits that culminate on the western and north-western confines of the parish. Granite is the predominant rock, and has been largely quarried. Limestone also occurs, and was at one time worked. The soil is variously alluvium, rich loam, clay, moss, and humid moor. KINAIRDY and CROMBIE Castles have been noticed separately. Mansions are ARDMELLIE, AUCHINTOUL, Cluny, Culvie, and Netherdale. A fund called the Glasgow Bequest, founded in terms of the will of the late George Christie, Esq., merchant, Glasgow, amounts to £2656, the interest of which is divided among respectable poor people resident in Marnoch and Ord. Giving off a portion to Ord *quoad sacra* parish, Marnoch is in the presbytery of Strathbogie and synod of Moray; the living is worth £313. The parish church, on a rising-ground near the left bank of the Deveron, a little NW of the Bridge of Marnoch, was built in 1792, is a plain barn-like edifice, and was restored in 1884-85. It stood in the midst of a Caledonian stone circle, two large stones only of which remain; and in the churchyard are a portion of its ancient predecessor and the finely-sculptured monument of Geo. Meldrum of Crombie (1616-92), Episcopal minister of Glass. The successive presentation of Mr J. Edwards in 1837 and of Mr D. Henry in 1838 gave rise to one of the stiffest Disruption contests under the Veto Act; and led to the erection at Aberchirder of New Marnoch Free church, which, costing over £2000, contains 1000 sittings. Other places of worship are noticed under ABERCHIRDER; and Aberchirder Episcopal and five public schools—Aberchirder, Blacklaw, Culvie, Marnoch, and Netherdale—with respective accommodation for 99, 419, 78, 72, 125, and 77 children, have an average attendance of about 55, 260, 65, 65, 95, and 50, and grants amounting to nearly £48, £270, £54, £54, £104, and £46.

Valuation (1882) £18,350, (1893) £12,467. Pop. (1801) 1687, (1831) 2426, (1861) 3289, (1881) 3230, (1891) 3006, of whom 2906 were in the ecclesiastical parish.—*Ord. Sur.*, sh. 86, 1876.

Marnock. See INCHMARNOCK.

Marr or Mar Burn, Dumfriesshire. See MAAR.

Marrel. See HELMSDALE.

Marshadder, a village in the NW of the Isle of Skye, Inverness-shire. Its post-town is Kilmuir, under Portree.

Mar's Hill. See ALLOA.

Martin. See ISLE-MARTIN.

Martnaham, Loch, a lake on the mutual border of Coylton and Dalrymple parishes, Ayrshire, 4¼ miles SE of Ayr. Lying 290 feet above sea-level, it has an utmost length and breadth of 1¼ and ¼ mile; contains a wooded islet, with ivy-clad ruins of an ancient manor-house; abounds in pike and perch, with a few trout; is frequented by wild geese, wild ducks, teals and widgeons; receives two streamlets, one of them from Lochs Fergus and Snipe to the NW; and sends off a third 3 miles south-westward to the river Doon near Dalrymple church.—*Ord. Sur.*, sh. 14, 1863.

Marwick Head. See BIRSAV AND HARRAY.

Maryburgh, a small village in Cleish parish, Kinross-shire, 4 miles S by E of Kinross.

Maryburgh, a village on the mutual border of Foderty and Dingwall parishes, Ross and Cromarty, on the left bank of the river Conon, where it opens into the Cromarty Firth, 1¾ mile S by W of Dingwall town, and ¼ N of Conon station on the Beaulay and Dingwall section of the Highland railway. It is a modern place, inhabited chiefly by crofters and mechanics; and has a post office under Dingwall, a Free church, a reading-room and library, and a public school. Pop. (1841) 403, (1861) 503, (1881) 420, (1891) 390, of whom 9 were in Dingwall parish.—*Ord. Sur.*, sh. 83, 1881.

Maryburgh. See WILLIAM, FORT.

Maryculter, a parish, with a hamlet of the same name, in the NW of Kincardineshire, bordering on the Dee. It is bounded E by Banchory-Devenick parish, S by Fetteresso parish, SW by Durris parish, and NW by Aberdeenshire. The boundary along the whole of the NW side is formed by the Dee, which has here a course of 6 miles. Elsewhere the line is artificial. Prior to 1892, however, Peterculter parish, in the county of Aberdeen, had a small detached portion (only 44 acres) on the S bank of the Dee, near Insch of Culter, extending half a mile upward from the mouth of the Crynoch Burn—the line following an old channel of the river. This Aberdeenshire portion was transferred by the Boundary Commissioners to the parish of Maryculter and to Kincardineshire. The greatest length of the parish, from the Dee at Ardo House (Banchory-Devenick) on the extreme NE, to the SW corner, 5 furlongs beyond Muirskie, is 5½ miles; the average width about 2¼ miles, and the area 7879 acres, of which 142 are water. The surface slopes upwards from the Dee, reaching a height of 545 feet near the SE corner, and 558 at Berry Top, near the centre of the S side. Some small haughs lie along the banks of the river, but the rest of the surface is uneven and rocky. The soil on the side of the river is naturally thin and sandy, but in the central districts it becomes deeper, and is in many cases a good black loam on a clay bottom. On the S and SE there is much damp pasture and moss lying on a subsoil of clay. The underlying rocks are granite and gneiss. Of the land area about half is under tillage, and some 900 acres are under wood, while the rest is pasture land or waste. The drainage of the parish is effected by three burns, in the E, centre, and W of the parish, all flowing to the Dee; the chief is Crynoch or Maryculter Burn, in the centre. The Dee did great damage during a flood in 1768, and again in the more famous one of 1829, when the river rose from 13 to 16 feet above its ordinary level. The parish takes its name from its having been a chapelry in the lands of Culter (Gael. *Cul-tìr*, 'the back-lying land') dedicated to St Mary, and dependent on the church of St Peter Culter, now Peterculter. The

old churchyard is near the mansion-house of Culter, near the river Dee. Of the old church almost nothing now remains but the foundations, which show that it was about 82 feet long, 28 wide, and had walls about 3 feet thick. It seems to date from about the sixteenth century, and contained a number of curious wood carvings, which were all dispersed, and most of them lost or destroyed, when the new church was built, a mile to the S, in 1782. Carved effigies of a knight and his lady are supposed to be those of Thomas Menzies of Maryculter and his wife Marion Reid, heiress of Pitfodels, who lived in the first half of the 16th century. The Menzies family acquired the estate of Maryculter early in the 14th century; and the last of the family was Mr John Menzies, the founder of BLAIRS College. The family burial ground was at St Nicholas in Aberdeen, and these figures are supposed to have been brought here for safety when the West Kirk of Aberdeen was rebuilt in 1751-55. The late Mr Irvine-Boswell of Kingcaussie (1785-1860), who did so much for the improvement of the agriculture of the parish, is also buried here. The Irvines of Kingcaussie are a branch of the Irvines of Drum; and the line ended in an heiress who married the well-known Lord Balmuto. Their son was the Mr Irvine-Boswell just mentioned. The mansions, besides Maryculter House and Kingcaussie House, are Altries House, Auchlunies House, and Heathcot, the last of which, a picturesque building, pleasantly situated, and distant 5 miles from Aberdeen, has been converted into a hydropathic establishment. The clock tower of Maryculter House is old, and is said to have been used by the Menzies family as an oratory, but the rest of the house is modern. Near the mansion-house is an oval hollow, measuring some 80 yards across, and about 30 feet deep, which bears the name of 'The Thunder Hole.' Since 1800 the depth has been considerably reduced. Traditionally it was formed by the fall of a thunderbolt, and the spot was reckoned not exactly 'canny.' The church and most of the lands of the parish were in the possession of the Knights Templars, and on their downfall passed under the control of the Knights of St John of Jerusalem, who held them in regality. In 1540 we find Sir Walter Lyndesay, the Preceptor of Torphichen, granting the lands of Essintully (now Ashentilly), 'jacentes in baronia nostra de Mariculter,' to his beloved 'germano fratri Alexandro Lyndesay;' and in 1545 he leased to him also the Mains of Maryculter, part of the rent to be paid being 'thre barrill of salmon yeirlie for the Weill Watter anentis Furd,' where salmon-fishing is still carried on. In 1547 Sir James Sandilands, Lord St John and Preceptor of Torphichen, leased the 'teynd schawis' of Easter Essintully and the Mains of Maryculter, 'lyand within the barony of the samyn,' to the same Alexander Lyndesay; and in 1548 the Lords of Council and Session found, in an action raised by the preceptor, that 'the haill landis and barony at Mariculter' belonged 'to his sayd preceptorie in fre regalite,' having been 'in tymes bypast replegit fra the Schiref of Kincardin and his deputis to the fredome and privilege of the sayd regalite and baillies courttis thairof.'

The portion of the parish bordering the Dee is traversed by a fine road formed about 1836-37, and leading from ABERDEEN to BANCHORY by the S side of the river. From this, near Maryculter House, a road passes southward to a bridle-path across the Grampians to near DRUMLITHIE, and so to the coast road. Railway communication is afforded by Milltimber and Culter stations, on the Deeside section of the Great North of Scotland railway system. These are, however, on the N bank of the Dee, outside the parish, and each about 1½ mile from its centre. The hamlet is beside the church, and is merely the Kirktown. It is by road 7 miles WSW of Aberdeen, under which it has a post office. The parish of Maryculter is in the presbytery and synod of Aberdeen; the stipend is £185. The parish church, built in 1782, and repaired in 1881, when an organ was introduced, contains 460 sittings. There is a Free church; and the Roman Catholic College and chapel at BLAIRS are separately noticed. Three public schools—the boys'

and the East and West girls' and infants'—with respective accommodation for 74, 69, and 69 children, have an average attendance of about 40, 50, and 45, and grants amounting to over £40, £45, and £38. The principal landowner is Mr Kinloch of Park. Valuation (1884) £7691, 6s. 7d., (1893) £7323, 6s. 9d. Pop. (1801) 710, (1831) 960, (1861) 1055, (1871) 1110, (1881) 1072, (1891) 1030.—*Ord. Sur.*, shs. 77, 67, 1873-71.

Marydale, a place in Kilmorack parish, Inverness-shire, on the left bank of the Glass, near Invercannich and the Glenaffric Hotel, 20 miles SW of Beauly. Its Roman Catholic church of Our Lady and St Bean was built in 1868, and contains 400 sittings; and its Roman Catholic school has accommodation for 68 scholars, with an average attendance of 13.

Maryhill, a district in the NW of Glasgow, and a *quoad sacra* parish partly in Barony and partly in the City parishes, Lanarkshire, 3½ miles from the centre of the town, with which it has good railway and tramway communication. It is situated on a brae descending to the picturesque and romantic dell of the Kelvin, which dell is spanned by the four-arch aqueduct—83 feet high and 400 long—of the FORTH AND CLYDE CANAL. Formerly a police burgh it was annexed to Glasgow in 1891, and now forms one of the wards of that city. Maryhill has a post office under Glasgow, with money order, savings bank, and telegraph departments, branches of the Royal and Union banks, a public hall, a volunteer drill hall, and a public park. There are a brewery and numerous manufactories, but its trade is bound up with GLASGOW, to which article the reader is referred for further information. The barracks and the Corporation (Dawsholm) gasworks are also in Maryhill. In connection with the former a soldier's home—a picturesque building of red stone in the Elizabethan style of architecture—was opened in 1893. Besides the parish church, which was entirely renewed internally in 1893, there are other two established churches, two Free churches, a U.P. church, an Episcopal church (St George, 1892-93), and a Roman Catholic church (The Immaculate Conception, 1851). Four public schools—Eastfield, Eastpark, Maryhill, and Possilpark—and St Agnes (Lambhill) and Maryhill Roman Catholic schools, with respective accommodation for 292, 1072, 793, 1106, 333, and 762 children, have an average attendance of about 275, 1210, 750, 1045, 290, and 525, and grants amounting to nearly £178, £1284, £784, £1092, £290, and £558. Pop. of *quoad sacra* parish (1881) 12,844, (1891) 39,611.—*Ord. Sur.*, sh. 30, 1866.

Marykirk, a village and a parish of S Kincardineshire. The village, in the SE corner of the parish, is beautifully situated near the left bank of the river North Esk (here spanned by a four-arch bridge of 1813), 7 furlongs N by W of Craigo station, 1¼ mile S of Marykirk station, and 6 miles NNW of Montrose. It has a post office. There is here the remnant of an old market cross.

The parish, containing also LUTHERMUIR village, till at least 1721 was known as Aberluthuott (Gael. 'meeting of the waters where the stream is swift'). It is bounded N by Fordoun, NE by Laurencekirk, E by Garvock, SE by St Cyrus, S by Logie-Pert in Forfarshire, and W by Fettercairn. Its utmost length, from NNE to SSW, is 5½ miles; its breadth varies between 2½ and 4½ miles; and its area is 9912 acres, of which 72 are water. The North Esk flows 4 miles east-by-southward along all the Forfarshire boundary, and opposite the village is spanned by a thirteen-arch railway bridge; LUTHER WATER runs 4½ miles south-south-westward through the middle of the interior to the North Esk; and Black and Dourie Burns, Luthnot and Balmaleedy Burns, drain the side districts into the larger streams. The surface, comprising much of the SW extremity of the Howe of Mearns, declines along the North Esk to 80 feet above sea-level, and W of the railway to no point exceeds 264 feet; but to the E it attains 555 feet at Kirktonhill Tower and 700 at the meeting-point with Garvock and St Cyrus. Eruptive rocks occur in the hills; but Old Red Sandstone prevails throughout the low grounds, and is quarried; whilst limestone also is plentiful, and was

formerly worked. The soil is much of it good sound fertile loam, incumbent on decomposed red sandstone. About 615 acres are in pasture; plantations, chiefly of Scotch fir, cover rather more than 1600 acres; and the rest of the land is in tillage. Mansions, noticed separately, are BALMAKEWAN, HATTON, INGLISMALDIE (Earl of Kintore), KIRKTONHILL, and THORNTON CASTLE. Marykirk, dedicated to the Virgin, is in the presbytery of Fordoun and the synod of Angus and Mearns; the living is worth £255. The parish church, at the village, was built in 1806, and restored internally in 1893. There are also a Free church of Marykirk and a U.P. church at Muirton (1824). Two public schools, Luther-muir and Marykirk, with respective accommodation for 155 and 180 children, have an average attendance of about 100 and 95, and grants of over £32 and £90. Valuation (1884) £11,450, (1893) £10,044, plus £1761 for railway. Pop. (1801) 1530, (1841) 2387, (1861) 2068, (1871) 1771, (1881) 1461, (1891) 1307.—*Ord. Sur.*, shs. 57, 66, 1868-71.

Mary's Loch or Loch Morie, a pretty, troutful lake in the upper part of Alness parish, Ross and Cromarty, $9\frac{1}{2}$ miles WNW of Alness village. Lying 622 feet above sea-level, it has an utmost length and breadth of 2 miles and $4\frac{3}{4}$ furlongs; is flanked to the SW by Meall Mor (2419 feet); took its name from an ancient chapel at its head, dedicated to the Virgin Mary; is very deep, and has never been known to freeze further than a few yards from its banks; receives at its head the Abhuinn nan Glas; and from its foot sends off the river Alness, 11 $\frac{1}{2}$ miles east-south-eastward to the Cromarty Firth. It contains good trout running from half a pound to a pound. May, June, and July are the best months for fishing.—*Ord. Sur.*, sh. 93, 1881.

Mary's Loch, St. See ST MARY'S LOCH.

Mary's Loch, St., a charming small loch in the vicinity of Tobermory, Mull island, Argyllshire.

Maryton, a parish in Forfarshire, bounded on the N and NE by the river South Esk and the Montrose Basin, SE and S by Craig, and W by Farnell. It formerly had two detached portions, one of which, including the lands of Dysart, and adjoining the parishes of Craig and Lunan, comprised 946 acres; the other, at Grahamsfirth, to the west of Kinnell parish, comprised 338 acres. The Boundary Commissioners in 1891 transferred the former to the parish of Lunan, and the latter to that of Kinnell. The length and breadth of the parish are now about equal, $2\frac{1}{2}$ miles. The soil partakes of all the varieties of strong clay, rich loam, and land of a lighter character. The rocks along the sea-coast are precipitous and picturesque; and intersecting the parish is a ridge of hills extending from E to W, the highest of which is Maryton Law (335 feet), believed to have been formerly a site for the administration of justice, and from which there is a magnificent view of the district. The land is well adapted for all the usual crops, and, as a rule, a system of high farming prevails. This is especially the case on Old Montrose in the hands of Mr Charles Lyall, whose ancestors for many generations have been among the most distinguished agriculturists of Forfarshire, and who is himself one of the best-known and most enterprising farmers in Scotland. The Earl of Southesk is sole proprietor.

The ancient divisions of the parish (about the 13th century) were—the lands of *Old Montrose*, which were erected into a barony in 1451, and into an earldom in 1505; the lands of *Bonniton* or *Bonnington*, erected into a barony in 1666; the lands of *Ananie*; the lands of *Fullerton*; the *Abthen* of St Mary's, consisting of the lands of Over and Nether Maryton; the lands of *Drum*, and of *Balnانون*. These lands formed the parish of Maryton proper. *Dyserth*, including *Over and Nether Dysart*, now transferred to Lunan parish, constituted a separate parish which was first annexed to Brechin and afterwards disjoined in 1649 and added to Maryton. *Grahamsfirth*, the other transferred portion, probably came into the possession of the Grahams as their share in the division of Monrommon Muir, of which it forms a part. The name of Ananie, unfortunately, is lost to the

parish, though it lingered until the 19th century in the Den of Ananie, by which name the pretty Den of Fullerton was known. The lands to which the name applied had centuries before been added at different times to Bonniton, Fullerton, and Old Montrose.

The most distinguished of the families connected with the parish have been the Grahams of Old Montrose (1325-1668). The several titles of the family were derived from Old Montrose, and not from the town of Montrose, with which the estate had not the slightest connection, the identity of name (Alt Munross) being purely accidental. Sir David Graham, a devoted follower of Robert the Bruce, received from the king the lands of Old Montrose in exchange for those of Cardross. James, fifth Earl of Montrose, who is best known as the Great Marquis, was born at Old Montrose, and there remains a fragment of the house in which his birth took place. The Woods of Bonniton were a notable family, connected with the parish from 1493 to the beginning of the 18th century. There were several knights in the family, and its representative was created a baronet in 1666, for service rendered to Charles II. The famous Earl of Middleton succeeded the last Marquis of Montrose in possession of the estate, and it was forfeited along with the titles when the second Earl was outlawed in 1695. The first Fullerton of that ilk was Geoffrey, falconer to Robert Bruce, whose name appears in connection with the estate (Fowler-town) in 1327. It was held in the family for at least 120 years, after which they transferred themselves and their name to the lands in Meikle parish still called Fullerton. Other noted families having an interest in the parish were the Cranes and Schaklocks of Ananie, Arrats of Balnانون, Inverpeffers and Tullocks of Bonniton, Crawmonnts and Durhams of Fullerton (the latter being of the Durhams of Grange), Wisharts of Drum, Lyells, Guthries, Mills of Bonniton, Hays (Dupplin), and Stratons, Mills, and Stirling of Old Montrose. The Abthen seems to have continued mainly in the hands of the ecclesiastics. There is evidence, indeed, that the Fullertons more than once obtained interest in it, but the right was held of 'tholance' of the bishop. After the Reformation, Bishop Alexander Campbell made over the whole lands of Maryton to his kinsman and chief, the Earl of Argyll. They were transferred eventually to the owner of Old Montrose, and have since continued to be a portion of that estate. By-and-by portions of Ananie and Fullerton were added, the remainder being annexed to what became the barony of Bonniton. Towards the end of the 18th century the two estates were purchased by Sir David Carnegie, and have been included since in the fertile domain of the lords of Kinnaird.

The kirk of Marinton was a vicarage of the cathedral of Brechin, and it was gifted (1178-98) to the abbey of Arbroath. It was dedicated to the Virgin, and named St Mary's of Old Montrose. There is a St Mary's Well in the parish, but on the westerly border. The first Protestant minister was Richard Melville, who was also laird of Baldovie. His father, younger son of Melville of Dysart and laird of Baldovie, had fallen at Pinkie, leaving a large family, of which Richard was the eldest, and Andrew Melville, the distinguished Reformer, was the youngest. James Melville was the younger son of Richard. In the 17th century two of his descendants by the elder son were successive lairds of Baldovie and ministers of Maryton, viz., Richard (1613-1639) and Andrew (1639-41). The brother of the latter, Patrick, was probably the last laird; he was served heir in 1642; and he was one of the followers who accompanied the Marquis of Montrose in his exile. The next parish minister was John Lammie (1642-1673), who was tutor and servitor of the Marquis of Montrose. When the house of Old Montrose was searched for 'wreitis' to serve as evidence, 'they took to Edinburgh with thame also the erllis secretar, callit Lamby (the minister), to try what he kend.' The bell of the church is dated 1642, and that is understood to be the date of the erection of the previous church. An aisle of the old church was the burying-place of the Wood family, and

the church contained a monument, which has been transferred to the present one, to David Lindsay (1673-1706), minister of the parish. The present church, built in 1792, is a plain but neat structure, the walls covered with ivy, and a well-kept graveyard surrounding it. It has been renewed in the internal arrangements more than once, the last occasion being 1883, when the area was fitted with handsome and substantial pews. Maryton is in the presbytery of Brechin and the synod of Angus and Mearns; the stipend is £192 and manse. There is a Free church at Barnhead, a handsome building with a fine exposure, which serves for the parishes of Maryton, Dun, and Farnell. The public school has accommodation for 116 scholars, with an average attendance of about 40, and a grant of nearly £44. The valuation in 1884 was £5800, and in 1893 £2907, plus £350 for railway. Pop. (1755) 633, (1801) 596, (1831) 419, (1861) 417, (1871) 396, (1881) 389, (1891) 270. See *Maryton Records of the Past*, by Rev. William R. Fraser, M.A. (Montrose, 1877).

Marywell, a village in St Vigeans parish, Forfarshire, 2 miles N of Arbroath.

Mashie Water, a rivulet of Laggan parish, Invernesshire, rising at an altitude of 2650 feet, within 1 mile of the NW shore of Loch Erich, and running 9½ miles north-by-eastward, till, after a total descent of 1825 feet, it falls into the Spey at a point 7½ furlongs above Laggan Bridge. On 28 August 1847 the Queen and Prince Albert drove from Ardverrick to the small farm of Strathmashie, where Col. Macpherson was then living.—*Ord. Surv.*, sh. 63, 1873.

Masonhall, a village of NW Fife, 4 miles WSW of Strathmiglo.

Massan, a streamlet, an affluent of the EACHAIG, in Dunoon parish, Argyllshire.

Masterton, a village in Dunfermline parish, Fife, 2½ miles NNW of Inverkeithing. Standing high, it commands a fine view over the waters and screens of the Firth of Forth, has an hospital for poor widows, founded and endowed in 1676 by Sir Henry Wardlaw of Pitreavie, and an Episcopal mission church (St Margaret of Scotland), an Early Norman building of 1888, with about 100 sittings.

Mathers, a tract on the coast of St Cyrus parish, Kincardineshire, with a ruin on its rocky peninsula, and the site of a sea-destroyed village.

Mattocks, a village in Monifieth parish, Forfarshire, 6½ miles NE of Dundee.

Mauchline (anciently *Machlein*, *Machlene*, or *Magh-line*, Gael. *magh-linne*, 'plain with the pool'), a town and a parish nearly in the centre of Kyle district, Ayrshire. The town stands, 460 feet above sea-level, on the Glasgow and Dumfries high-road, 1¼ mile N of the river Ayr and ½ mile N of Mauchline Junction on the Glasgow and South-Western railway, this being 6¼ miles NW of Cumnock, 11¼ ENE of Ayr, 9¾ SSE of Kilmarnock, and 33½ S by W of Glasgow. Mauchline is built on a southward slope, in the midst of a highly cultivated country, which, abounding in springs, must at one time have presented the appearance indicated in its name. It has a neat and pleasant appearance, and looks busy and prosperous in proportion to the number of its inhabitants. There are no principal buildings in the usual sense of the term. The barn-like edifice which served as the church in Burns's time was replaced in 1829 by the present building. This, occupying a site in the centre of the town, rises from the churchyard, round which crowd many old houses. Mainly Gothic in style, it is built of red sandstone, and has at its eastern end an old tower, 90 feet high, surmounted with turrets. It has sittings for about 1100 persons; and an organ was introduced in 1882. Its predecessor, well known as the scene of Burns's *Holy Fair*, stood for six centuries on the same site. There is also a Free and a United Presbyterian church, the latter building having been erected at a cost of £2300. The schools under the school board are noted in connection with the parish. A monument, placed in 1830 on the public green at the town-head of Mauchline, marks the spot where five Covenanters were

executed and buried in 1685, during the reign of James VII. The following lines were transferred to it from the original tombstone which it replaced:—

'Bloody Dumbarton, Douglas, and Dundee,
Moved by the devil, and the Laird of Lee,
Dragged these five men to death with gun and sword,
Not suffering them to pray nor read God's word;
Owning the work of God was all their crime—
The Eighty-five was a saint-killing time.'

The cemetery is situated near what was the scene of the brush between Middleton's troopers and the Clydesdale yeomen in 1648. The town has a post office, with money order, savings bank, and telegraph departments, a public library, an office of the Commercial Bank, two hotels, a temperance hall, a gaswork, etc. It carries on extensive manufactures of wooden snuff-boxes, cigar-cases, card-cases, ornaments, and knick-knacks of various kinds in white varnished or tartan-painted wood. The trade began at Cumnock with the fine hinge of the snuff-box, but it was afterwards much extended and developed by the introduction of the painting. Mauchline has also a world-wide reputation for the manufacture of curling stones, while the making of chairs and cabinet goods is an important industry, and woollen and worsted spinning is also carried on. The town was for a very long period noted as a market for cattle and horses. Fairs are held on the first Wednesday after 18 May, and on Thursday after 4 Nov.—the weekly fairs of Ayr and Kilmarnock having superseded the other fairs formerly held here. A coach plies to Catrine (2 miles) in connection with the trains. A carrier goes to Glasgow and back on Tuesday and Friday; to Kilmarnock and Catrine on the same days; and to Catrine and Ayr on Tuesday.

Mauchline was created a free burgh of barony by charter of James IV. in 1510, and so remained till after the Reformation. In 1606, along with other lands and lordships, it passed by Act of Parliament into the hands of Hugh, Lord Loudoun, on which occasion Mauchline received another charter creating it a free burgh of barony, with a weekly market and two fairs yearly. This, however, was unfortunately lost in the conflagration of the Register Office at Edinburgh towards the beginning of the 18th century; and the village has not required power to elect its own magistrates. Its affairs are managed by justices of the peace. Pop. of the town (1831) 1364, (1861) 1414, (1871) 1574, (1881) 1616, (1891) 1454, of whom 669 were males. Houses (1892) occupied 367, vacant 57.

The civil history of Mauchline has been carried so far back as 681, when an invasion of Cruithne from Ireland is said to have been repulsed at the town, or on its site. In 1544 the celebrated reformer and martyr, George Wishart, was invited to preach in the church of Mauchline; but on his arrival he found the place guarded by a party of soldiers, under the sheriff of Ayr. Wishart restrained his adherents from violence, and induced them to follow him to Mauchline Moor, where he preached to them for three hours. The parish was situated in the very heart of the Covenanting district of Ayrshire, and much of its history is interwoven with that of the western Covenanters. In 1661 Mauchline Moor was the halting-place of western Covenanters, previous to their march, which ended in the battle of the Pentlands. The more modern historical interest of Mauchline centres wholly in its connection with Robert Burns (1759-96) during one of the most prolific periods of his poetic genius. The farm of MOSSGIEL, on which the poet lived from 1784 to 1788, and which he subleased from Mr Gavin Hamilton, a writer in Mauchline, lies 1½ mile NW of the town; and within the farmhouse, carefully preserved in a part of the old building, are some very interesting memorials of Burns. It was during his residence at Mossgiel that the genius of Burns was first recognized. Here he wrote *The Cotlar's Saturday Night*, *The Mountain Daisy*, etc. At the back of the farmhouse, indeed, tradition still identifies the field in which the incident occurred which called forth

the latter, and in an adjoining field the poet found the material for the lines 'To a Mouse.' Mr Hamilton's residence, an old relic of the former priory, and known as Mauchline Castle, contains the room in which Burns wrote his parody-sermon called *The Calf*, and that in which he is said to have married his 'Bonny Jean.' The cottage or change-house of 'Poosie Nancy' or Agnes Gibson, the scene of the piece called *The Jolly Beggars*, stands nearly opposite the churchyard gate. 'It was,' says Allan Cunningham, 'the favourite resort of lame sailors, maimed soldiers, wandering tinkers, travelling ballad-singers, and all such loose companions as hang about the skirts of society;' but, though Burns had visited it, it was by no means one of his haunts. Separated from the gable of this house by an intervening lane, called the Cowgate, stood 'The Whitefoord Arms,' a plain thatched building of two storeys, a favourite resort of Burns, and kept by John Dow or Dove, upon whom the poet wrote the burlesque epitaph beginning, 'Here lies Johnnie Pigeon.' It was along the Cowgate that 'Common Sense' or the poet's correspondent, Dr Mackenzie, escaped, when a certain minister approached the tent in *The Holy Fair*. In the Cowgate also stood the house in which Jean Armour lived before she was married to Burns, and the spot is still pointed out where they first met. The house was separated from the Whitefoord Arms by a narrow cross street, and is now replaced by a two-storey building. Beside the churchyard was the house of Nance Tinnock. We have already adverted to the church as the scene of *The Holy Fair*. In the graveyard are to be seen, besides the graves of two of Burns's children, those of the Rev. Mr Auld, Nance Tinnock, etc. As a memento of the centenary of the poet's death, a National Burns' Memorial and Cottage Homes were erected at Mauchline in 1896-97. The cottages consist of one and two apartments, and are for the benefit of deserving persons who from old age, ill-health, or other misfortune are in straitened circumstances. Adjacent to the cottages is a handsome square turreted tower, commanding a magnificent view of the district, with a hall or museum underneath.

The parish is bounded N by Riccarton and Galston, E by Sorn, S by Auchinleck, SW by Ochiltree and Stair, and W by Tarbolton and Craigie. Its greatest length, from NNW to SSE, is $6\frac{3}{4}$ miles; its breadth varies between $\frac{1}{2}$ mile and $3\frac{3}{4}$ miles; and its area is 8988 acres, of which over 70 are water. The parish had 11 acres added to its area in 1891, when the Boundary Commissioners transferred to it the Garfield detached portion of the parish of Sorn. The river Ayr winds $5\frac{1}{2}$ miles west-by-southward, mainly along the south-eastern and south-western boundaries, but for $1\frac{1}{2}$ mile across the southern interior; LUGAR Water, its affluent, curves $2\frac{1}{2}$ miles north-north-westward along the Ochiltree and Stair boundaries; and CESSNOCK Water, a tributary of the Irvine, meanders $4\frac{1}{2}$ miles north-north-westward through the interior, then $2\frac{3}{4}$ miles west-north-westward along the northern boundary. The surface undulates gently, sinking along the Ayr to 190, along Cessnock Water to 220, feet above sea-level; and rising thence to 524 feet near Mossgiel, 606 near Grassyards, 426 at Friendlesshead, and 580 near North Auchinbrain. A large tract of land, formerly called Mauchline Moor, exhibits now no trace of its ancient condition, but shows the generally well-cultivated, arable nature of by far the greater part of the parish. The soil near the town is light and sandy; in a few places it is a rich loam; but in general it is clayey. Thin strata of coal, ironstone, and limestone are found, but not worked; but both white and red sandstone is quarried within the parish. The river Ayr flows between steep red sandstone cliffs, 40 or 50 feet high, and beautifully overhung with wood. A cave cut out of the rocks on the banks of the Lugar is called Peden's Cave, and is said to have been a hiding-place of the celebrated Alexander Peden during the persecutions. Barskimming Bridge, across the Ayr, with a span of 100 and a height of 90 feet, was built towards the close of the 13th century by Sir Thomas Miller, Lord President of the Court

of Session; a railway viaduct crosses the Ayr near Howford Bridge, and its principal arch has a span of 175 and a height of 180 feet. The only lake in the parish was Loch Brown, called Duveloch in old charters, which formerly covered 60 acres; but this has been drained for many years, and its bed is occupied by cultivated fields, and traversed by the railway.

Besides the town of Mauchline, the parish contains the village of Haugh. It is traversed by the Glasgow and South-Western railway between Glasgow and Carlisle; by the high roads between Glasgow and Dumfries, and between Edinburgh and Ayr, which intersect at the town; and by other thoroughfares. The principal mansions are Netherplace, Ballochmyle, Rodinghead, Viewfield, and Beechgrove. Mossgiel Farm deserves mention also. The chief proprietors are Alexander of Ballochmyle, the Duke of Portland, Boswell of Auchinleck, and Campbell of Netherplace.

Mauchline parish is in the presbytery of Ayr and the synod of Glasgow and Ayr; the living is £237 and a manse. The public schools of Crosshands and Mauchline, with respective accommodation for 83 and 474 children, have an average attendance of about 40 and 420, and grants of nearly £40 and £420. Pop. of both civil and ecclesiastical parish (1801) 1746, (1831) 2232, (1861) 2303, (1871) 2435, (1881) 2504, (1891) 2339, of whom 1103 were males and 8 Gaelic-speaking. Houses (1891) occupied 522, vacant 69.—*Ord. Sur.*, shs. 14, 22, 1863-65.

The parochial records go back only to 1670. The ancient parish of Mauchline comprehended also the territory now forming the parishes of Sorn and Muirkirk. Chalmers, in his *Caledonia*, says, that in 1165, during William's reign, Walter, son of Alan, granted to the monks of Melrose the lands of Mauchline, with certain privileges. The monks established a priory of their own order at Mauchline, which remained a cell of Melrose till the Reformation. An old tower, already mentioned, is the sole relic of this building. The power and property of the monks gradually expanded about the nucleus of Mauchline; and 'they contributed greatly to the settlement and cultivation of the district.' Their estates of Mauchline, Kylesmure, and Barmure were afterwards formed into a regality, whose court met at Mauchline village, erected into a free burgh of barony in 1510 by James IV. After the Reformation the ecclesiastical lands, etc., about Mauchline were formed into a temporal lordship in favour of Hugh, Lord Loudoun, whose original grant was dated 1606. The town of Mauchline was at the same time made a burgh of barony. In 1631 what is now Muirkirk, and in 1636 what is now Sorn, were detached from Mauchline parish, which was 'thus reduced to less than a fifth of its former magnitude.' Before the Reformation there had been a chapel on each of these portions. One was on Greenock Water; the other, on the Ayr, dedicated to St Cuthbert, stood E of the present village of Catrine, on a field known as St Cuthbert's Holm.

Besides the relics of the priory in the town, the old tower of Kinganleugh may be mentioned among the antiquities. The Braes o' Ballochmyle, and indeed the whole course of Ayr, is classic ground in Scottish poetry, from its connection with Burns.

Maud or New Maud, a village and a *quoad sacra* parish on the mutual border of New and Old Deer parishes, Aberdeenshire, with a junction station on the Great North of Scotland railway (1861-65), 16 miles SSW of Fraserburgh, 13 W of Peterhead, and $31\frac{1}{2}$ N by W of Aberdeen. Of recent erection, it has a post office, with money order, savings bank, and telegraph departments under Aberdeen, a branch of the North of Scotland Bank, a hotel, a Gothic parish church (1876; 420 sittings), a public and a female school, the Buchan Combination Poorhouse (with accommodation for 138 inmates), and fairs on the last Monday of every month. Two weekly auction marts are held on Wednesdays for the sale of cattle. Erected into a *quoad sacra* parish in 1839, Maud is in the presbytery of Deer and the synod of Aberdeen; minister's stipend, £113 and manse. Pop.

of village (1881) 343, (1891) 377; of *q. s.* parish (1891) 1351.—*Ord. Sur.*, sh. 87, 1876.

Maudiston. See MADDISTON.

Mauldslie Castle, a mansion in Carluke parish, Lanarkshire, near the right bank of the Clyde, 3 miles W of Carluke town. Built for the fifth Earl of Hyndford in 1793, after designs by Adam, it is a large two-storey edifice, with round flanking towers, and stands in a richly-wooded park. Its owner is Sir William W. Hozier (b. 1825; suc. 1878), now Lord Newlands, who was created a baron in 1898. The barony of Mauldslie, a royal forest once, was held by the Danyelstowns from the middle of the 14th century till 1402, by the Maxwells from 1402 till the first half of the 17th century, and from 1649 till 1817 by the Carmichaels, its last two holders being fifth and sixth Earls of HYNDFORD.—*Ord. Sur.*, sh. 23, 1863.

Maulesden, a mansion in Brechin parish, Forfarshire, near the South Esk's left bank, 2 miles W by S of the town. A Scottish Baronial mansion, built in 1853 for the Hon. W. Maule from designs by the late David Bryce, R.S.A., it was acquired by purchase in 1892 by J. B. Don, Esq., for £16,000.—*Ord. Sur.*, sh. 57, 1868.

Maulside, a mansion in Dalry parish, Ayrshire, 2 miles SSW of Beith.

Mauricewood, a mansion in Glencorse parish, Edinburghshire, 1½ mile N by W of Penicuik.

Mavis-Grove, a mansion in Troqueer parish, Kirkcudbrightshire, near the right bank of the Nith, 2½ miles S of Dumfries.

Maw, a hamlet in Markinch parish, Fife, 1 mile SSW of Windyates.

Mawcarse, a station on the Edinburgh and Perth section of the North British railway, 3¾ miles NE by N of Kinross.

Maxton (anc. *Maccus-ton*), a village and a parish on the N border of Roxburghshire. The village, which consists of a short double line of houses, built on either side of the Kelso road, is situated on the W part of the parish within ½ mile of the S bank of the Tweed, 1½ ESE of Newtown St Boswells, and ¼ NW of Maxton station on the North British line from Newtown St Boswells to Kelso, this being 3 miles ESE of Newtown St Boswells, 8½ WSW of Kelso, 12¾ NNW of Jedburgh, and 43½ SE of Edinburgh. Although the village is at a little distance from the Tweed, the church, manse, and burying-ground are close beside the river. Maxton church was dedicated in the 12th century to St Cuthbert, and eventually became the property of the monks of Dryburgh, who held it until the Reformation, when it was placed under the charge of a minister, along with Mertoun, St Boswells, and Smailholm, and had a 'reader' attached to it with a stipend of £20 Scots. In 1792 the church was thatched; but in 1812 and 1866 it was restored and enlarged, and is now as neat and well-built a country church as any in the district. Beneath it is the burial-place of the Kers of Littledean, to the memory of one of whom, Lieut.-General Ker, interred in 1833, there is a tablet in the church, which was placed there by a descendant. The old shaft of the village cross still remains to point out the spot 'where 1000 men of the barony were wont to assemble for war.' It was restored in 1882 by Sir W. R. Fairfax at considerable expense.

Maxton parish is bounded N by Mertoun in Berwickshire, NE by Makerstoun, E and SE by Roxburgh, SW by Ancrum, and W by St Boswells. Its utmost length, from E by N to W by S, is 4¾ miles; its breadth varies between 1 mile and 2½ miles; and its area is 4494½ acres, of which 72½ are water. Besides the village of Maxton, it contains the railway station of Rutherford, 2½ miles E of Maxton. The Tweed curves 4¾ miles east-north-eastward along all the northern boundary through very fine scenery. Beside it the surface sinks to close on 200 feet above sea-level; and thence it rises to 579 feet at Muirhouselaw and 563 at Lilliard's Edge, on the ANCRUM border. The ground is generally productive, especially near the Tweed, where it is a rich clay loam.

A considerable part of the ground is under wood, a small portion is bog land, and the rest is almost entirely in tillage.

The most interesting ruin in the parish is Littledean Tower, which stands on a lofty crag overlooking the Tweed, 1½ mile NE of the village. From the remains of the circular tower, the extreme thickness of the walls that still remain, and the vestiges of other walls, it is plain that Littledean was an important stronghold, the 'keep' of the noted family of Ker of Littledean. The parish is partly traversed by a Roman road, and there are vestiges of a Roman camp on Muirhouselaw. The chief landowners in Maxton parish are the Duke of Roxburgh, Lord Polwarth, Sir Edmund Antrobus of Rutherford, Sir William Ramsay Fairfax, and C. J. Cunningham, Esq. of Muirhouselaw. None of them are resident. Maxton is in the presbytery of Selkirk and the synod of Merse and Teviotdale; the living is worth £280. The public school, with accommodation for 151 children, has an average attendance of about 65, and a grant of over £76. Pop. (1801) 368, (1831) 462, (1861) 497, (1871) 481, (1881) 456, (1891) 473.—*Ord. Sur.*, sh. 25, 1865.

Maxwell Thorns. See DRYFE.

Maxwelltown, a burgh of barony and a *quoad sacra* parish in the parish of Troqueer, Kirkcudbrightshire. It stands on the right bank of the curving Nith, at the eastern verge of Kirkcudbrightshire, directly opposite Dumfries, and is included within the parliamentary boundaries of that burgh. Its site is a bank or low ridge circling along the margin of the river, and it is connected with Dumfries by three bridges, the uppermost one, widened in 1893, being available for carriages. The water supply is that of Dumfries, the waterworks being managed by a joint commission. The older parts of the burgh are poorly built and badly aligned; but the new are pleasant, neat, and airy. A narrow street or alley, immediately on the Nith, N of the uppermost bridge, inhabited mainly by families of the working classes, leads out to the ruins of Lincluden, and bears the name of College Street. A street parallel to this brings down the Glasgow and Dumfries turnpike, is straight and spacious, and has several good houses. A street at right angles with these, and on a line with the bridge, carries westward the Dumfries and Portpatrick road, is also straight and spacious, and at its W end passes off into the country in a series of villa-like houses. A wide brief street forking into two between the bridges, a street somewhat parallel to it on the W, and one or two other thoroughfares are in general of mixed or poor appearance. Corbally Hill, swelling up at the S end but a brief distance from the brink of the river, bears aloft the fine convent and church (1831-84) of the Immaculate Conception, whilst a little lower down is a picturesque building, which, originally a windmill, since 1838 has served the double purpose of an observatory and a museum. Along the face of this fine rising-ground, fronting Dumfries, stands a range of elegant houses. On the brink of the stream, with but a narrow belt of plain intervening from the base of the hill, stands the Dumfries Burgh grain mills, each mill supplied with water-power in one of several parallel dams, extending from a strong high-water weir built diagonally across the whole breadth of the river. The entire town, exclusive of its burgh roods, is about two-thirds of a mile in length, and nearly the same in breadth. Maxwellton has a station on the Castle-Douglas section of the Glasgow and South-Western railway, the large Troqueer tweed mills (1866-70), another tweed mill, a hosiery manufactory, a dye-works, 2 saw-mills, nursery-grounds, etc.; and it shares considerably in the trade and commerce of Dumfries. A handsome new court-house was erected in Terregles Street in 1893-94, containing a court-room, with the usual accessories, and a police office with four cells, also accommodation for married and single members of the force. In the same street is the General Prison for the

south-west of Scotland. The Established church of Maxwelltown *quoad sacra* parish is a Gothic edifice, with a spire and 800 sittings, built at a cost of £2000 in lieu of a previous chapel of ease, which was burned on 28 Sept. 1842. In connection with this church a hall was opened in 1891 at a cost of £1500. A handsome Free church was built in 1866, and an Episcopal mission church (St Ninian's), with about 200 sittings, was erected in 1891, of local red stone. A public school, costing £2200 and accommodating 397 children, was built in 1876. The town originally bore the name of Bridgend, and was such a disorderly village that, according to the byword, 'You might trace a rogue all over the kingdom, but were sure to lose him at the Bridgend of Dumfries.' But in 1810 it was erected into a free burgh of barony, under the name of Maxwelltown, in honour of Mr Maxwell of Nithsdale, its superior, and was placed under the government of a provost, 2 bailies, and 4 councillors; and it speedily underwent great improvement as to at once its police, its trade, the condition of its houses, and the manners of its people. Under the Burgh Police Act of 1892 it is governed by a provost, 2 bailies, and 6 commissioners. Sheriff circuit small debt courts are held on the last Thursday, and justice of peace small debt courts on the first Thursday, of every month. Pop. (1831) 3230, (1861) 3599, (1871) 4198, (1881) 4455, (1891) 4975, of whom 2725 were females, and 2225 were in the *quoad sacra* parish. Houses (1891) inhabited 1104, vacant 70, building 8.—*Ord. Surv.*, sh. 9, 1863. See also DUMFRIES and TROQUEER.

Maxwelton, a suburb or western extension of the burgh of Paisley, Renfrewshire.

Maxwelton, a village in East Kilbride parish, Lanarkshire, $\frac{1}{2}$ mile E by N of East Kilbride town.

Maxwelton, a mansion in Glencairn parish, Dumfriesshire, near the left bank of Cairn Water, $\frac{3}{4}$ miles ESE of Moniaive. The estate has long been held by the Laurie family, one of whom was the 'Annie Laurie' of song.—*Ord. Surv.*, sh. 9, 1863.

Maybole, a town and a coast parish of Carrick, Ayrshire. The town, lying $3\frac{3}{4}$ miles inland, and 200 to 350 feet above sea-level, has a station on the Ayr and Girvan section (1857-60) of the Glasgow and South-Western railway, 9 miles S by W of Ayr, $49\frac{1}{2}$ SSW of Glasgow, 87 SW of Edinburgh, and $67\frac{1}{2}$ NNE of Portpatrick. It stands on the slope and partly along the skirts of a broad-based, flattened hill, with south-eastward exposure, the summit of the hill interveuing between it and the Firth of Clyde; but it commands a pleasant and somewhat extensive view over one-half of the points of the compass into the interior of Carrick. An old rhyme, using one of several obsolete variations of the town's ancient name, says—

'Minnibole's a dirty hole,
It sits aboon a mire.'

The notion conveyed by these words, of the town being situated on miry ground, is now, and probably was always, incorrect. A broad belt of deep green meadow, nearly as flat as a bowling-green, stretches along the base of the hill, and anciently seems to have been a marsh; but it could not have been a marsh of a miry kind, or otherwise than green and meadow; nor does it, even at present, form the site of more than a very small and entirely modern part of the town. The ancient site is everywhere declivitous, abounding with copious springs of pure water; and not improbably was clothed in its natural state with heath. Two sets of names, both very various in their orthography, but represented by the forms *Maiboil* and *Minnibole*, were anciently given to the town. They have greatly perplexed etymologists; but, according to Col. Robertson, are derived from the Gaelic *magh-baile*, 'town of the plain or field.' The lower streets of the town, called Kirklands, Newyards, and Ballony, are not within the limits of the burgh of barony, and consist almost wholly of artisans' houses and workshops. The main street runs nearly due NE, and—with exception of a short thorough-

fare striking off westward at right angles from its middle—occupies the highest ground within the burgh. A considerable space, sloping between it and the low-lying suburbs, is disposed to a small extent in the ancient burying-ground, with the relics of the collegiate church; to a greater extent in four or five incompact and irregularly arranged streets; and to a yet greater extent in fields and gardens which give all the intersecting thoroughfares a straggling or detached appearance, and impart to the whole town a somewhat rural, airy, and healthful aspect.

The only parts of the town which draw the attention of strangers are Main Street and what is called Kirk Wynd. These are narrow and of varying width, quite destitute of every modern adornment, and guiltless of all the ordinary graces of a fine town; yet they possess many features of antique stateliness, decayed and venerable magnificence, which strongly image the aristocratic parts of Edinburgh during the feudal age. As capital of Carrick, the place anciently wielded considerable influence over its province, and contained the winter residences of a large proportion of the Carrick barons. As seat, too, of the courts of justice of Carrick bailiary—the place where all cases of importance in a roistering and litigating age were tried—it derived not a little outward respectability from the numbers and wealth of the legal practitioners who made it their home. In connection, too, with its collegiate church and its near vicinity to Crossraguel Abbey, it borrowed great consequence from the presence of influential churchmen, who, in a dark age, possessed more resources of power and opulence than most of the nobility. No fewer than 28 baronial mansions, stately, turreted, and strong, are said to have stood within its limits. Out of several of these which still remain, two figure in association with such interesting history that they deserve to be specially noticed.

The chief is the ancient residence of the Ailsa or Cassillis family, the principal branch of the Kennedys. This, standing near the middle of the town, bears the name of the Castle *par excellence*, and is a lofty, well-built, imposing pile, one of the strongest and finest of its class. It is occupied by the factor of the Marquis of Ailsa, who is lord of the manor, and is said to have been the place of confinement for life of the Countess of Cassillis, who eloped with the Gipsy chieftain Johnny Faa. (See CASSILLIS.) The Earls of Cassillis, directly and through collateral branches of their family, wielded such power over the province that they were known as the 'Kings of Carrick;' and they used the castle of Maybole as the metropolitan palace of their 'kingdom,' whose limits were thus defined in an old-world rhyme:—

'Twixt Wigtown and the town o' Ayr,
Portpatrick and the Cruives o' Cree,
You shall not get a lodging there
Except ye court a Kennedy.'

Gilbert, fourth Earl, who lived in the unsettled period succeeding the commencement of the Reformation, pushed his power into Galloway, and in 1575 acquired the large possessions of the Abbey of GLENLUCE, just five years after his roasting of Allan Stewart, the commandator of CROSSRAGUEL. A feud, arising from or aggravated by that crime, between the Earls of Cassillis and the Laids of Bargany, issued at last in very tragical events. In Dec. 1601 the Earl of Cassillis rode out from Maybole Castle at the head of 200 armed followers to waylay the Laird of Bargany as he rode from Ayr to his house on the Water of Girvan; and on the farm of West Enoch, near the town, he forced on the Laird a wholly unequal conflict. The Laird, mortally wounded, was carried from the scene of the onset to Maybole, that there, should he show any sign of recovery, he might be despatched by the Earl as 'Judge Ordinar' of the country; and thence he was removed to Ayr, where he died in a few hours. Flagrant though the deed was, it not only—through bribery and state influence—passed unpunished, but was formally noted by an act of council as good service done to the King. The Laird of Auchedrane, son-in-law of the slain baron,

was one of the few adherents who bravely but vainly attempted to parry the onslaught; and he received some severe wounds in the encounter. Thirsting for revenge, and learning that Sir Thomas Kennedy of Colzean intended to make a journey to Edinburgh, he so secretly instigated a party to waylay and kill him, that no witness existed of his connection with them except a poor student of the name of Dalrymple, who had been the bearer of the intelligence which suggested and guided the crime (1602). Dalrymple now became the object of his fears; and, after having been confined at Auchendrane and in the Isle of Arran, and ex-patriated for five or six years as a soldier, he returned home, and was doomed to destruction. Mure, the Laird, having got a vassal, called James Bannatyne, to entice him to his house, situated at Chapel-donan, a lonely place on the GIRVAN shore, murdered him there at midnight, and buried his body in the sand. The corpse, unearched by the tide, was next by the murderers taken out to sea at a time when a strong wind blew from the shore, but was soon brought back by the waves, and cast up on the very scene of the murder. Mure and his son, who had aided him in this horrid transaction, fell under general suspicion, and now endeavoured to make away with Bannatyne, the witness and accomplice of their guilt; but he making full confession to the civil authorities, they were brought to the bar, pronounced guilty, and put to an ignominious death (1611). These dismal transactions form the groundwork of Sir Walter Scott's dramatic sketch, entitled *Auchendrane, or the Ayrshire Tragedy*.

The house formerly occupied as the Red Lion Inn, and anciently the mansion of the provost, is notable as the scene of a set debate between John Knox, the Reformer, and Quentin Kennedy, Abbot of Crossraguel, 28 Sept. 1561. An account of the controversy, written by Knox himself, was republished in 1812 by Sir Alexander Boswell, from a copy—the only one extant—in his library at Auchinleck. Occasioned by a challenge from the abbot in the church of Kirkoswald, the debate was conducted in a panelled apartment, in the presence of eighty persons, equally selected by the antagonists, and including several nobles and influential gentlemen. It lasted three days, and was then broken off through want of suitable accommodation for the persons and retinues of the auditors; but it did good service in arousing public attention to the doctrines of the Reformation. The members of a 'Knox Club,' instituted in 1824 to commemorate the event, and consisting of all classes of Protestants, used to hold a festival to demonstrate their warm sense of the religious and civil liberties which have accrued from the overthrow of the Papal domination.

Other noteworthy buildings are the ancient town-residences of the Kennedys of Knockdow, Colzean, and Ballimore; of the abbots of Crossraguel (called the Garden of Eden), etc., and the new Town Hall, a handsome building with Gothic front, erected in 1887 on the site of the old structure, the tower of which has been left standing. It is situated at the Cross. The Fever Hospital, formerly the West Parish School, was sold by public roup in 1893 for £362. The town, though not rich in public buildings, abounds in commodious and comfortable dwelling-houses, greatly superior, for every domiciliary use, to even the best of its remaining baronial mansions. In 1371 Sir John Kennedy of Dunure, founding a chapel for one clerk and three chaplains, dedicated it to the Blessed Virgin, and endowed it with the five-mark lands of Barrycloych and Barrelach, the six-mark lands of Treuchan, and various other sources of revenue. This collegiate chapel seems to have been the earliest of its kind in Scotland; and afterwards, when similar ones arose, it was called a collegiate church, and its officials were styled the provost and prebendaries. The ground on which the town is built belonged to this church, which now is the burying-place of the Ailsa and other families, whose ancestors stayed its impending ruin. On 19 May 1563 Mass was last sung within its walls to 200 Kennedys, armed with jacks, spears, guns, and other

weapons. The present parish church, at the NE end of the town, is a plain edifice of 1808, with over 1100 sittings. In 1891 an organ, an oak pulpit, and a communion table and chair were placed in it at a cost of £1000. The West *quoad sacra* church, at the SW end, was built as a chapel of ease about 1840 at the cost of Sir C. D. Fergusson, Bart. The Free church dates from Disruption times; and a new Gothic U.P. church, with spire and large stained-glass window, was built in 1880, as successor to one of 1797. There is also a Wesleyan Methodist chapel, and an Episcopal mission (St Oswald, 118 sittings) is worked in connection with Girvan. The fine Roman Catholic church of Our Lady and St Cuthbert was erected in 1876-79 at a cost of £3000, which was mainly defrayed by D. Hunter-Blair, Esq. Second Pointed in style it is closely modelled on the ruined church of Crossraguel Abbey, and consists of a nave, with a semi-octagonal apse, stained-glass windows, richly sculptured bosses, etc. There are two public schools and a Roman Catholic school, the latter of which was built in 1882 at the cost of the Marquis of Bute and Mr Blair.

Maybole, besides, has a post office, with money order, savings bank, insurance, and telegraph departments; branches of the Royal, Commercial, and Union Banks; 3 hotels, workmen's club, gaswork, a combination poor-house for six of the Carrick parishes, farmers' and horticultural societies, etc. Fairs are held on the third Thursday of April and October, the attendance at which is small, and the business done little. Handloom weaving has declined; and boot and shoe making and the manufacture of agricultural implements are now the staple industries, there being quite a number of large shoe factories in the town. As a burgh of barony since 1516, the town is governed by a senior and a junior magistrate; whilst, under the Burgh Police Act of 1892, it is governed by a provost, 2 bailies, and 6 commissioners. The burgh court sits on the first Thursday, and a justice of peace court on the first Wednesday of every month. Pop. (1851) 3862, (1861) 4115, (1871) 3797, (1881) 4474, (1891) 5470, of whom 2766 were males and 2704 females. Houses (1891) inhabited 703, vacant 28.

The parish of Maybole, containing also the villages or hamlets of CULROY, DUNURE, FISHERTON, and MINISHANT, comprises the ancient parishes of Maybole and Kirkbride, the former to the S, the latter to the N. A small detached portion situated on the right bank of the estuary of the Doon, at Abercromby Cottage, and comprising 73 acres, was transferred by the Boundary Commissioners in 1891 to the parish of Ayr. Maybole parish is bounded W and NW by the Firth of Clyde, NE by Ayr, E by Dalrymple and Kirkmichael, SE by Kirkmichael, and S and W by Kirkoswald. Its utmost length, from N to S, is 8½ miles; its utmost breadth, from E to W, is 5½ miles; and its area is 35½ square miles or 22,647 acres, of which 613½ are foreshore and 114¾ water. The 'bonny DOON' winds 6¾ miles north-north-westward to the firth along the Dalrymple and Ayr borders; the Water of GIRVAN flows 1¾ mile south-south-westward along the south-eastern boundary; several rivulets rise in the interior, and run to one or other of these two streams; and half-a-dozen others go direct to the firth. Of four or five tiny lochlets, the only noticeable one is Heart Loch, whose outline is exactly designated by its name, and whose appearance in a wooded hollow is softly beautiful. Perennial springs of excellent water are numerous, especially on the site and in the vicinity of the town; and one of them, called the Well-Trees' Spout, emits a stream powerful enough to drive a mill wheel, or between 160 and 170 imperial gallons per minute. Of various mineral springs, once of medicinal repute, but all neglected now, St Helen's Well, 2¼ miles N of the town on the high road to Ayr, was anciently reputed to have the power on May Day of healing sick or delicate infants. The coast-line, 8½ miles in extent, towards the mouth of the Doon is low and flat, but elsewhere is mostly bold, though but little diversified with either headland or bay. At the HEADS

OF AYR it rises rapidly to 258 feet above sea-level. The eastern and south-eastern districts are an undulating plain, very diversified in surface, never subsiding long into a level, nor ever rising into decided upland. The other districts are a sea of heights, partly arable and partly pastoral, so pleasingly diversified in superficial outline as to want nothing but interspersed wood to render them delightful rambling-ground to a lover of fine scenery. Along the middle of the hill district, parallel with the firth, and $1\frac{1}{2}$ mile distant from it, stretches a range of summits nearly 4 miles long, attaining a maximum altitude of 940 feet above sea-level, and bearing the name of BROWN CARRICK Hill. This range, though heathy in itself, and rising like a screen to intercept a view of the firth and its framework from the interior, commands one of the finest prospects in Scotland. On the SE and S the surgy surface of Carrick stretches away in alternations of green height and bold brown upland till it becomes lost among the blue peaks of the Southern Highlands; on the SW and W are the broad waters of the Firth of Clyde, with Ailsa Craig riding like an ark on the wave, while behind are the serrated mountains of Arran veiled in mist or curtained with clouds of every form and hue; on the N, immediately under the eye, extends the deep sylvan furrow of the Doon, with the Burns Monument glittering like a gem on its margin; and away thence stretches the great luxuriant plain of Kyle and Cunninghame, pressed inward in a long sweeping segment by the firth, dotted with towns which look like cities in the distance, chequered also with a profusion of mansions and demesnes, and gliding dimly away in the perspective into the gentle heights of Renfrewshire, overlooked in the far horizon by the blue summit of Ben Lomond. The same prospect, in much of its extent and most of its elements, is seen from a thousand vantage-grounds of this land of beauty; but nowhere are its scope so unbroken, its groupings so superb, and its effect so striking. Should any one wonder that Burns grew up on the threshold of this home of romance, and for many years might daily have gazed upon its gorgeous visions, and yet has made no allusion to it in his writings, he must remember that the bard, though possessing a keen eye for the beauties of nature, was the painter rather of manners than of landscape—the type in poetry not of Salvator Rosa, but of Hogarth and the limners of Holland.

The geological structure of the coast presents an interesting correspondence in its strata with those of the confronting coast of Arran. The predominant rocks of the interior are Old Red sandstone and trap. The sandstone, in a quarry at St Murray's, often affords beautiful specimens of arborescence, from the presence of the black oxide of manganese, and is traversed by veins of lead ore. The soil of the arable lands is partly light, and partly of a strong, clayey character. Three-fourths of the entire area are in tillage; nearly 1000 acres are under plantation; and the rest is meadow, hill-pasture, or moorland. In feudal times there were within the parish at least fifteen towers or castles, the residences of brawling chiefs. Of these, DUNURE and GREENAN have been noticed separately. The castles of Newark and Killenzie have undergone renovation or repair; but all the others—Auchendrane, Smithstown, Beoch, Craigskean, Garryhorne, Doonside, Dalduff, Glenayas, Sauchrie, and Brochlock—are much dilapidated, or have left but a few vestiges. Numerous camps occur, so small and of such rude construction as evidently to have been thrown up by small invading bodies of those Irish who subdued the Romanised British tribes. Tumuli, the burying-places of a field of carnage, are frequent. Kirkbrido church is still represented by ruins, $\frac{1}{2}$ mile E of Dunure; another pre-Reformation place of worship stood on the lands of Auchendrane; and traces of several others were extant towards the close of the 17th century. In the presbytery of Ayr and synod of Glasgow and Ayr, the civil parish includes nearly half of Alloway *quoad sacra* parish, a small part of Crosshill, all Fisherton, all Maybole proper, and nearly all West Church *quoad sacra*

parish; the livings of the last two being worth £373 and £196, both with manses. Four public schools—Cairn, Fisherton, Ladyland, and Minishant—and St Cuthbert's Roman Catholic school, with respective accommodation for 414, 129, 954, 90, and 107 children, have an average attendance of about 405, 85, 670, 55, and 95, and grants amounting to over £350, £80, £742, £46, and £84. Pop. (1801) 3162, (1841) 7027, (1861) 6713, (1871) 5900, (1881) 6628, (1891) 7569, of whom 3334 were in Maybole ecclesiastical parish, 3242 in West Church, 598 in Fisherton, 362 in Alloway, and 33 in Crosshill.—*Ord. Sur.*, sh. 14, 1863.

Mayen House, a mansion in Rothiemay parish, Banffshire, near the left bank of the winding Deveron, 5 miles ENE of Rothiemay station on the Inveramsay and Keith section of the Great North of Scotland railway. Its owner is E. A. Thurburn, Esq.—*Ord., Sur.*, sh. 86, 1876.

May, Isle of, an extra-parochial island of Fife, in the mouth of the Firth of Forth, $5\frac{1}{2}$ miles SSE of Crail and $10\frac{1}{2}$ NE by N of North Berwick. Its utmost length, from NW to SE, is 1 mile; its utmost breadth is $2\frac{1}{2}$ furlongs; and its area is $146\frac{1}{2}$ acres, of which $14\frac{1}{2}$ are foreshore. The prevailing rock is greenstone; and the shores are precipitous and rocky, the highest point in the island attaining 150 feet above sea-level. On the W the coast presents some semi-columnar cliffs 160 feet high; and at the SE it sinks into a low ridge or reef. There is a small lake or pool at the lower end of the valley, and although there are several wells there is no palatable water, this being brought from Crail by boat, while the rainwater from the roofs is carefully stored. There is good pasture for sheep. Several kinds of seaweed build on the island, and rabbits are plentiful. Cows are kept on the island, and a luncheon of milk and bread may be had at the lighthouse. The May contains the ruins of a 13th century chapel, nearly 32 feet long, which was cleared of rubbish and repointed in 1868. It was dedicated to St Adrian, who, with 6006 other Hungarians, is said to have been killed by the Danes about 870 and buried here. St Monau, one of his alleged followers, by Skene is identified with Moinenn, Bishop of Clonfert in the 6th century, whose relics were probably brought from Ireland to Fife by a body of clerics and laymen expelled by the Danes (*Celtic Scotland*, ii. 311-317, 1877). St Adrian's shrine was formerly resorted to in cases of barrenness. David I. founded a monastery here before the middle of the 12th century, and granted it to the Benedictine abbey of Reading in Berkshire on condition that they should place and maintain twelve priests therein, to say mass for himself and his predecessors and successors. In 1318 all the rights to the Priory of May were transferred to the canons of St Andrews, when a priory at PITTENWEEM appears to have been substituted for that on the island. After the Reformation the island came into the possession of the Balfours of Montquhandie, and afterwards of Allan Lamond, who sold it to Cunningham of Barns. Alexander Cunningham obtained from Charles I. a charter of the island, with liberty to build a lighthouse, for which a tax was imposed on all ships passing up the firth. In 1635 he erected a tower 40 feet high, on the top of which a fire of coals was constantly kept burning. With the estate of Barns, the Isle of May passed to Scot of Scotstarvet by purchase, and came to General Scott of Balcomie, by whose daughter, the Duchess of Portland, it was sold for £60,000 to the Commissioners of Northern Lights. In 1815-16 they rebuilt the tower and altered it in 1886. The present lighthouse, 240 feet high, shows an electric group-flashing white light, visible at a distance of 21 nautical miles. There is a smaller lighthouse on the south side, from which no light is now shown. The vaulted and gloomy cell of the massive old beacon tower has been utilised as a shelter for pilots and fishermen, many of whom are often storm-stayed for several days. Formerly about 15 fishermen with their families lived on the island, and at the end of the fishing season the fishermen of the Fifeshire coast used annually to hold a merry-making on the May;

but the wreck and total loss of a boat full of women, on its passage to the island for this purpose, threw a cloud over this custom, and it has now become obsolete. There are several houses on the island connected with the lighthouse. Pop. (1861) 17, (1871) 17, (1881) 22, (1891) 27, of whom 6 were females.—*Ord. Sur.*, sh. 41, 1857. See John Jack's *Key of the Forth* (1858); an article in *Good Words* (1864); Dr Jn. Stuart's *Records of the Priory of the Isle of May* (1868); and an article in vol. vii. of *Proc. Soc. Ants. Scoll.* (1870).

Mayville, an estate, with a mansion, in Stevenston parish, Ayrshire, 5 furlongs NW of the town.

May, Water of, a small river of the Ochil and Strathearn districts of Perthshire. Rising on John's Hill, at an altitude of 1250 feet, and near the meeting-point of Auchterarder, Dunning, Glendevon, and Fossoy parishes, it runs 11½ miles east-north-eastward and north-north-westward through or along the boundaries of Dunning, Forgandenny, and Forteviot parishes, till, after a total descent of 1217 feet, it falls into the Earn at a point 5 furlongs S by W of Forteviot church. It receives numerous small tributaries from among the Ochils; traverses a wooded glen, rich in picturesque close scenes; makes two beautiful falls called Muckersie Linn and the Humble Bumble; passes the 'Birks of Invermay,' celebrated in song; and is a first-rate trout-stream, but very strictly preserved. The May trout are very beautiful, and as good in quality as in appearance. At the Craigendivots the river is almost overarched with rock for about 200 yards.—*Ord. Sur.*, shs. 39, 40, 48, 1867-69.

Meadowbank House, a mansion in Kirknewton parish, Edinburghshire, 7 furlongs SE of Midcald Junction on the Edinburgh and Glasgow branch of the Caledonian railway. A plain edifice of the close of the 17th century, it has been thrice enlarged since 1795, and stands in a finely-wooded park of 200 acres. Possessed by his ancestors for nearly 200 years, the estate now is owned by John Allan Maconochie Welwood, Esq. (b. 1848; suc. 1885).—*Ord. Sur.*, sh. 32, 1857. See KIRKNEWTON, and John Small's *Castles and Mansions of the Lothians* (Edinb. 1883).

Mealfourvounie (Gael. *Meal-fuar-mhonaidh*, 'mountain of the cold moor'), a mountain in Urquhart parish, Inverness-shire, 11 miles NNE of Fort Augustus. Situated at the foot of Glen Urquhart and Glen Moriston, and forming a conspicuous feature on the NW flank of Loch Ness, it is broad-based and round-backed, and sends up from a stage at two-thirds of its whole elevation a dome-shaped peak, which attains an altitude of 2284 feet above sea-level. The great mass of the mountain, from the summit downward, consists of coarse conglomerate, whose abraded portions are gneiss, granite, quartz, mica-schist, and sandstone, cohering with extremely little cement; and its lower declivities, including seemingly the entire base, consist of a hard compact splintery rock, which has usually been described as primary red quartz, but which may be stratified sandstone completely indurated, and in great measure divested of its stratification by the subjacency of granite, and which is so hard and crystalline as to be quarried and regularly used for causewaying the streets of Inverness. The upper stage or peak of the mountain is very steep on the W, and almost mural on the N and S; and it is connected with the rest of the mountain, on the E, by a long tapering ridge. On the western side, at the bottom of the peak, is Loch nam Breac Dearga (6 × 1½ furl; 1500 feet), whence a streamlet runs 4½ miles south-south-westward and eastward to Loch Ness, tumbling along a broken channel down the face of a frontlet of rock, overshadowed by trees in its lower course, and forming two beautiful waterfalls amidst foliage of the richest tints. On the W side of this rill, near its source, is a rocking-stone 20 feet in circumference, which is movable by two persons. The view from the summit of Mealfourvounie is grand and extensive, and comprehends the whole of the Glenmore-nan-Albin, from Fort George on the NE to Fort William on the SW, a distance of more than 70 miles. On the N

the eye wanders over various scenery away to the mountains of Ross and Caithness; and on the S it takes in the whole of Stratherrick and the country watered by the head-streams of the Spey. Right below is Loch Ness, like a narrow ditch, sunk deeply within steep banks; and at 3 miles' distance the Fall of Foyers glitters in its belt of shining spray between sheets of dark-brown mountain, like a glint of sky struggling through a vertical fissure in the cliffs. Mealfourvounie is noted for being the first landmark seen by mariners after they pass the Moray Firth round Kinnaird Head, or from the S, and for guiding their navigation over most of that vast gulf.—*Ord. Sur.*, sh. 73, 1878.

Mealista or **Eilean Mhealastadh**, an uninhabited island of Uig parish, Outer Hebrides, Ross and Cromarty, on the N side of the mouth of Loch Reasort, and ½ mile from the W coast of Lewis. With an utmost length and breadth of 7½ and 6 furlongs, it rises to a height of 200 feet above sea-level.—*Ord. Sur.*, sh. 98, 1858.

Meal Horn. See DURNES.

Meal Meadhonach. See DURNES.

Mearnaig. See CASTLE-MEARNAIG.

Mearns, a village and a parish of SE Renfrewshire. The village, called Newton-Mearns (a name as old at least as 1306), is pleasantly situated on a rising ground, 410 feet above sea-level, 3½ miles WSW of Busby and 7 SSW of Glasgow. A burgh of barony, with the right of holding a weekly market and two annual fairs, it chiefly consists of a single street on the Glasgow and Kilmarnock highroad, and has a post office under Glasgow, with money order, savings bank, and telegraph departments, a branch of the Union Bank, a gaswork, a hotel, drainage and water-supply schemes, and hydrants in case of fire. Pop. (1881) 900, (1891) 908.

The parish, containing also three-fourths of the town of BUSBY, is bounded N by Neilston, Eastwood, and Cathcart, E by East Kilbride in Lanarkshire, SE by Eaglesham, S by Fenwick and Stewarton in Ayrshire, and NW by Neilston. Its utmost length, from NE to SW, is 7½ miles; its utmost breadth is 3½ miles; and its area is 10,607 acres, of which 325½ are water. EARN Water runs 6 miles north-eastward along the south-eastern boundary to the White CART, which itself flows 7½ furlongs along all the Lanarkshire border, and several more of whose little tributaries take a north-north-easterly course through the interior. On the Neilston boundary lie Long Loch, Harelaw Dam, Walton Dam, Glanderston Dam, Balgray Reservoir, Ryat Linn Reservoir, and Waulkmill Glen Reservoir; and in the interior are Black Loch, Little Loch, Brother Loch, and South Hillend Reservoir. The surface sinks at the northern boundary to 280 feet above sea-level, and rises thence south-westward to 783 feet at Barrance Hill, 895 at Dod Hill, and 928 at James Hill, moorland occupying a good deal of the south-western district. Trap rock, chiefly an early disintegrable greenstone, prevails throughout nearly all the area, but gives place to rocks of the Carboniferous formation about the boundary with Eastwood. The soil in patches of the lower district is stiffish, and lies on a clay bottom, but elsewhere is mostly light, dry, and sharp, incumbent on porous, fractured, rapidly decomposing trap. Mearns has always been distinguished for its fine pasture, and even in the present times of extended cultivation it is very largely devoted to sheep and dairy farming. The earliest name on record in connection with this parish is that of Roland of Mearns, who is mentioned as a witness to the donation which Eschina, wife of Walter the Steward, gave to the monastery of Paisley in the year 1177. Robert of Mearns appears in the same capacity in a grant made to that establishment in 1250. In the 13th century, the barony of Mearns came by marriage to the Maxwells of Caerlaverock, afterwards Lords Maxwell and Earls of Nithsdale. About the year 1648 it was sold by the Earl of Nithsdale to Sir George Maxwell of Nether Pollok, from whom it was soon afterwards acquired by Sir Archibald Stewart of Blackhall, with whose descendants it has since remained. (See ARDGOWAN.) The castle of Mearns is a large square tower

situated on a rocky eminence, 1 mile E by S of the village of Newton-Mearns. It is surrounded by a strong wall, and seems to have been secured by a drawbridge. It has long been uninhabited. Caplerig was anciently a seat of the Knights Templars. Professor John Wilson (1785-1854) received his early education in the manse of Mearns, and so often in his writings does he allude to these scenes of his boyhood that the 'dear parish of Mearns' is nearly as much associated with his great name as if it had been the place of his nativity. Thus opens one of his many apostrophes to Mearns: 'Art thou beautiful, as of old, O wild, moorland, sylvan, and pastoral Parish! the Paradise in which our spirit dwelt beneath the glorious dawning of life—can it be, beloved world of boyhood, that thou art indeed beautiful as of old? Though round and round thy boundaries in half an hour could fly the flapping dove—though the martins, wheeling to and fro that ivied and wall-flowered ruin of a Castle, central in its own domain, seem in their more distant flight to glance their crescent wings over a vale rejoicing apart in another kirk-spire, yet how rich in streams, and rivulets, and rills, each with its own peculiar murmur—art thou with thy bold bleak exposure, sloping upwards in ever lustrous undulations to the portals of the East! How endless the interchange of woods and meadows, glens, dells, and broomy nooks, without number, among thy banks and braes! And then of human dwellings—how rises the smoke, ever and anon, into the sky, all neighbouring on each other, so that the cock-crow is heard from homestead to homestead; while as you wander onwards, each roof still rises unexpectedly—and as solitary as if it had been far remote. Fairest of Scotland's thousand parishes—neither Highland, nor Lowland—but undulating—let us again use the descriptive word—like the sea in sunset after a day of storms—yes, Heaven's blessing be upon thee! Thou art indeed beautiful as of old!' POLLOK CASTLE, noticed separately, is the principal mansion. Giving off a part to Greenbank *quoad sacra* parish, Mearns is in the presbytery of Paisley and the synod of Glasgow and Ayr; the living is worth £329. The parish church, $\frac{3}{4}$ mile SE of Newton-Mearns, is a very old building, altered and enlarged in 1813, with clock-tower and spire. A neat U.P. church, rebuilt about 1840, is at Newton-Mearns; and other places of worship are noticed under BUSBY. Three public schools, Busby, Loganswell, and Mearns, with respective accommodation for 540, 37, and 288 children, have an average attendance of about 340, 20, and 270, and grants amounting to nearly £370, £35, and £294. Pop. (1801) 1714, (1831) 2814, (1851) 3704, (1871) 3543, (1881) 3965, (1891) 3426, of whom 2034 were in the ecclesiastical parish, and 1392 in Greenbank.—*Ord. Sur.*, sh. 22, 1865. See the Rev. Dr Ross's *Busby and its Neighbourhood* (Glasgow, 1883); and chap. i. of Mrs Gordon's *Memoir of Christopher North* (new ed. 1879).

Mearns, The. See KINCARDINESHIRE.

Meathie. See INVERARITY.

Medwin, a troutful rivulet of the Middle Ward of Lanarkshire, formed by the confluence of the North Medwin and the South Medwin at a point $1\frac{1}{2}$ mile SSE of Carnwath village, and winding $1\frac{1}{2}$ mile westward along the boundary between Carnwath and Libberton parishes to the Clyde. The North Medwin, formed by the confluence of Dry and Greenfield Burns, runs $6\frac{1}{2}$ miles south-south-westward, chiefly within Carnwath parish, but partly along the Dunsyre boundary. The South Medwin, rising at an altitude of 1230 feet, runs $13\frac{3}{4}$ miles south-by-eastward and west-south-westward, chiefly along the boundary between Dunsyre and Carnwath parishes on the right, and Linton, Dolphinton, Walston, and Libberton parishes on the left, and falls into the North Medwin about a mile from the confluence of the latter with the Clyde. Trout and grayling are plentiful.—*Ord. Sur.*, shs. 24, 23, 1864-63.

Medwyn, an estate, with a mansion, in Linton parish, NW Peeblesshire, on the right bank of Lyne Water, 1 mile NW of West Linton. Purchased in three lots since 1812 for upwards of £25,000, it is the property of

John Houblon Forbes, Esq. (b. 1852; suc. 1891).—*Ord. Sur.*, sh. 24, 1864.

Meethill, a conical eminence (181 feet) in Peterhead parish, Aberdeenshire, $1\frac{1}{2}$ mile SSW of the town. It seems to be partly artificial, and in feudal times was probably a seat of justice; but in digging the foundation of a tower, which was built upon it to celebrate the passing of the Reform Bill of 1832, a stone crypt was found on its summit, containing a funeral urn.—*Ord. Sur.*, sh. 87, 1876.

Meggernie Castle, a mansion in Fortingall parish, Perthshire, on the left bank of the river Lyon, near the head of the inhabited part of Glenlyon, 22 miles W by S of Aberfeldy. Approached by a stately lime-tree avenue, the finest in Scotland, it comprises, with later additions, a lofty square baronial tower of the 15th century, with high-peaked roof, four corner bartizans, and walls 5 feet in thickness. The estate extends over 32,000 acres—all hill-grazing, with fine grouse moors, and 13,000 acres of it deer forest.—*Ord. Sur.*, sh. 54, 1873.

Megget. See LYNE and YARROW.

Megget Water, a troutful rivulet of Wester Kirk parish, NE Dumfriesshire, rising, close to the Roxburghshire boundary, at an altitude of 1200 feet, and running $7\frac{1}{2}$ miles south-by-westward, till, after a total descent of nearly 800 feet, it falls into the Esk at a point 7 miles NW of Langholm.—*Ord. Sur.*, shs. 16, 10, 1864.

Megginch Castle, a mansion in Errol parish, Perthshire, $6\frac{1}{2}$ furlongs WNW of Errol station on the Perth and Dundee section of the Caledonian railway, and $11\frac{1}{2}$ miles E of Perth. Built by Peter Hay in 1575, it is the seat of Malcolm Drummond, Esq. (b. 1856; suc. 1889).—*Ord. Sur.*, sh. 48, 1868.

Meigle (Gael. *maigh-dhail*, 'field of the plain'), a village and a parish of E Perthshire. The village, lying within $\frac{1}{2}$ mile of the left bank of the Isla, has a station on the Alyth branch (1861) of the Caledonian railway, $1\frac{1}{2}$ mile NNW of Alyth Junction, this being $20\frac{1}{2}$ miles NE of Perth and $17\frac{3}{4}$ NW of Dundee. A seat once of considerable trade, it still has fairs on the last Wednesday of June and October, and also auction mart sales every fortnight. There is a post office, with money order, savings bank, and telegraph departments, and there are branches of the Commercial and Royal Banks, and a hotel. The parish church, gutted by fire in 1869, has since been well restored, and contains 600 sittings. A very remarkable group of sculptured stones—the largest of them 8 feet high, and $3\frac{1}{2}$ broad—was said to mark the sepulchre of Wander, Vanora, or Guinevere, King Arthur's unfaithful queen, who, according to tradition, was imprisoned on Barry Hill in Alyth parish. With the exception of two, which retain their original position in the churchyard, they were all removed in 1882 into the old parochial school, itself now included in the churchyard. They are fully described in Mr Anderson's *Scotland in Early Christian Times* (2d series, 1881). There are also a Free church and an Episcopal church, St Margaret's (1852), in the Gothic style, and containing 130 sittings.

The parish is bounded W by Coupar-Angus, NW by Alyth, and on all other sides by Forfarshire, viz., N by Airlie, E by Eassie, and SE by Eassie and Newtyle. Its utmost length, from NE to SW, is $5\frac{3}{4}$ miles; its breadth varies between $2\frac{1}{2}$ furlongs and $2\frac{3}{4}$ miles; and its area is $4013\frac{1}{2}$ acres, of which 33 are water. Sluggish DEAN WATER meanders $5\frac{1}{2}$ miles west-south-westward—only $3\frac{1}{2}$ miles in a direct line—along the Airlie border, till, at a point $\frac{3}{4}$ mile NNW of the village, it falls into the ISLA, which itself winds $2\frac{3}{4}$ miles west-south-westward along the Airlie boundary. The surface, all in the very heart of STRATHMORE, is almost a dead level, at no point sinking to 100, or much exceeding 200, feet above the sea. Old Red sandstone, suitable for building, has been worked in two quarries; and marl, covered with peat earth, was dug in great abundance at a place near the southern border. The soil, in some places sandy, in others clayey, is mostly a rich dark loam. A tumulus and a large boulder in Belmont Park

are traditionally associated with the death of Macbeth, who really was slain at Lumphanan; and Meigle in pre-Reformation days was an occasional residence of the Bishops of Dunkeld. The late Sir George Kinloch of Kinloch, Bart. (1800-81), bought the fine estate of Meigle from the Earl of Strathmore for £73,000. Other estates, noticed separately, are BELMONT and DRUMKILBO. Including ecclesiastically the Kinloch portion of Coupar-Angus parish, and giving off a part to Ardler parish, Meigle is the seat of a presbytery in the synod of Angus and Mearns; the living is worth £248. At ARDLER or Washington village, a handsome Established church was erected in 1883 by the late Peter Carmichael, Esq. of Arthurston, who also endowed it, and to whom there is a memorial window. This church became *quoad sacra* in 1885. Two public schools, Meigle and Ardler, with respective accommodation for 200 and 144 children, have an average attendance of about 145 and 85, and grants of nearly £160 and £72. Valuation (1884) £10,111, 5s. 3d., (1892) £7578, 4s. 3d. Pop. of civil parish (1801) 946, (1831) 873, (1861) 835, (1871) 745, (1881) 696, (1891) 660; of ecclesiastical parish (1871) 1003, (1881) 966, (1891) 719.—*Ord. Sur.*, shs. 56, 48, 1870-68.

The presbytery of Meigle comprises the *quoad civilia* parishes of Airlie, Alyth, Bendochy, Blairgowrie, Coupar-Angus, Eassie and Nevay, Glenisla, Kettins, Kingoldrum, Lintrathen, Meigle, Newtyle, and Ruthven, and the *quoad sacra* parishes of Ardler, Kilry, Persie, and St Mary's (Blairgowrie). Pop. (1871) 18,564, (1881) 18,269, (1891) 17,123, of whom about 5450 were communicants of the Church of Scotland. The Free Church also has a presbytery of Meigle, with 2 churches in Blairgowrie, and 9 in respectively Airlie, Alyth, Coupar-Angus, Cray, Glenisla, Kirkmichael, Meigle, Newtyle, and Rattray, which 11 churches together had about 2430 communicants.

Meigle Hill. See GALASHIELS.

Meikle Bin, a hill (1870 feet) in the SE of Finty parish, Stirlingshire, adjacent to the meeting-point with Campsie and Kilsyth. A central summit of the Lennox Hills, it occupies such a position as to unite the Finty, Campsie, and Kilsyth sections of these hills; is adjoined on the NE by Little Bin (1446 feet); sends off, from its SW side, a torrent called Bin Burn, running northward as a head-stream of the river Carron; is seen from a great distance in the direction of Lanark; and forms a conspicuous landmark from the Firth of Forth.—*Ord. Sur.*, sh. 31, 1867.

Meikle Earnock. See EARNOCK, MEIKLE.

Meikle Ferry. See DORNOCH, FIRTH OF.

Meiklefolia. See FYVIE.

Meikle Greinord. See GREINORD.

Meikle Law. See LONGFORMACUS.

Meikleour House, a mansion in Caputh parish, Perthshire, near the left bank of the river Tay, $\frac{3}{4}$ mile above the Isla's influx, 2 miles NNW of Cargill station on the Perth and Coupar-Angus section of the Caledonian railway, and 4 S by W of Blairgowrie. Greatly enlarged in 1869, it is a stately chateau-like building, with extensive vineries and finely wooded grounds, its great beech hedge (1746) being 80 feet high and $\frac{3}{4}$ mile long, and being regularly pruned every five or six years. It belongs to the Marquis of Lansdowne, Baron Nairne in succession to his mother, who, as sixth descendant of the first Lord Nairne (cre. 1681), was declared heir to the title of Baroness Nairne. (See AUCHTERGAVEN.) Meikleour village, 5 furlongs N by E of the mansion, has a post office, an inn, the ancient tron for weighing bulky articles, the jogs to which offenders used to be fastened, a cross (1698), and fairs on the fourth Friday of June, the third Friday of August, and the fourth Friday of October.—*Ord. Sur.*, sh. 48, 1868. See chap. xxxi. of Thos. Hunter's *Woods and Estates of Perthshire* (Perth, 1883).

Meikle Roe, an island of Delting parish, Shetland, in St Magnus Bay, 27 miles NNW of Lerwick. Separated from the mainland by Roe Sound (200 yards wide at the narrowest), it has a somewhat circular outline, with

a diameter of $8\frac{1}{2}$ miles. It contains eighteen little fresh-water lochs, and rises in South Ward at the centre to 557 feet above sea-level. Pop. (1851) 290, (1871) 216, (1881) 230, (1891) 213.

Meikle Warthill or Wartle, a village in Rayne parish, Aberdeenshire, $3\frac{1}{2}$ furlongs N by W of Wartle station on the Inveramsay and Macduff section of the Great North of Scotland railway. There is a post office of the name of Warthill under Aberdeen. Near the railway station is Wartle House, a handsome modernised turreted building.—*Ord. Sur.*, sh. 86, 1876.

Meiklewood House, a handsome modern mansion in Gargunnoch parish, Stirlingshire, on the right bank of the winding Forth, $1\frac{1}{2}$ mile NE of Gargunnoch station on the Forth and Clyde section of the North British railway.—*Ord. Sur.*, sh. 39, 1869.

Meiklie, Loch, a lake in Urquhart parish, Invernessshire, 6 miles W of Drumadrochit. An expansion of the river ENRICK, it lies at an altitude of 372 feet; has an utmost length and breadth of 9 and 3 furlongs; contains salmon, trout, and big pike; has, on its banks, the mansions and pleasure-grounds of Lochletter and Lakefield; and is so flanked with picturesque mountains as to form one of the most captivating scenes in the Highlands.—*Ord. Sur.*, sh. 73, 1878.

Mein Water, an impetuous rivulet of Annandale, Dumfriesshire, rising at an altitude of 780 feet on the northern border of Middlebie parish, and running $8\frac{1}{2}$ miles south-south-westward through that and Hoddam parish, past the town of Ecclefechan, till, after a total descent of 690 feet, it falls into the Annan at a point $1\frac{1}{2}$ mile SSW of Ecclefechan. In its course it receives Middlebie Burn.—*Ord. Sur.*, sh. 10, 1864.

Melby, a mansion in Walls parish, Shetland, on the W coast, near Sandness, and 32 miles WNW of the town of Lerwick.

Meldrum, Old (Gael. *meall-droma*, 'hill of the ridge'), a town and a parish of Garioch district, central Aberdeenshire. The town stands 378 feet above sea-level, near the southern boundary of the parish, at the terminus of a branch line (1856) of the Great North of Scotland railway, by rail being $5\frac{1}{2}$ miles NNE of Inverurie Junction and 22 (by road 19) NNW of Aberdeen. Erected into a burgh of barony in 1671, it offers a very irregular alignment, but contains some good houses. Besides the town-hall, which has a tower with illuminated clock, there are a post office, with money order, savings bank, and telegraph departments, branches of the North of Scotland and the Town and County Banks, several hotels, a gaswork, a public hall (1877), a horticultural society, a mechanics' institute, a musical association, a cricket club, a Free Gardeners' lodge, a brewery, an extensive distillery, cattle markets on every third Tuesday throughout the year, and fairs on the first Monday after 26 May and 22 Nov., or on the Whitsunday and Martinmas term days, if a Monday. Under the Burgh Police Act of 1892 it is governed by a provost, 2 bailies, and 6 commissioners. The antique parish church of 1684 was enlarged in 1767, reseated in 1810, repaired in 1886, and underwent extensive improvement in 1892. In 1891 the burying-ground was enlarged, the kirk green improved, and the Kirk road was taken over by the County Council in 1892. The other places of worship are a Free church, a U.P. church (1822), and St Matthew's Episcopal church (1863), the last an Early Decorated edifice, with nave, chancel, organ chamber, vestry, and spire. Pop. (1841) 1102, (1861) 1553, (1871) 1535, (1881) 1494, (1891) 1321, of whom 733 were females. Houses (1891) inhabited 349, vacant 22, building 1.

The parish, called Bethelnie till 1684, is bounded NE and E by Tarves, SE and S by Bourtie, W by Daviot and Fyvie, and N by Fyvie. Its utmost length, from NW to SE, is $6\frac{1}{2}$ miles; its breadth varies between $4\frac{1}{2}$ furlongs and $3\frac{1}{2}$ miles; and its area is $8111\frac{1}{2}$ acres, of which 9 are water. Streams there are none of any size, but the drainage is carried mainly to the Ury and partly to the Ythan. Along the southern boundary the surface sinks to 270 feet above sea-level; and thence it

rises in easy gradient to 564 feet near Chapelhouse, 567 near Bethelnie, and 804 at Core Hill in the NW corner of the parish. The central district presents a diversity of rich well-cultivated table-land, sloping southward, eastward, and westward, and commanding from many standpoints extensive views, on the one hand over Formartine and Buchan, on the other over Garioch to Bennochie. Hornblende rock of a quality that admits of its taking a polish like marble occurs in large detached masses; rock crystal is found on the Core Hill of Bethelnie; limestone occurs on the NE border, and was for some time worked; and eruptive rocks are predominant. The soil of the northern district is mossy, heathy, and nowhere deep or fertile; but elsewhere, especially on the south-westward and southward slopes, is a deep loam. Nearly three-fourths of the entire area are in tillage; more than 500 acres are under wood; and the rest is either pastoral or waste. A small so-called 'Roman camp' on Bethelnie farm has been erased by the plough; a graveyard, around the site of the ancient parish church, St Nathalin's, is at Bethelnie; and another graveyard, with foundations of a small pre-Reformation chapel, is at Chapelhouse, $\frac{1}{2}$ mile from which some ancient sepulchral remains were exhumed in 1837. William Forsyth (1737-1804), the arboriculturist, was a native. Meldrum House, 1 mile N by E of the village, is a large modern Grecian mansion, with finely wooded policies. From the Setons the property passed by marriage in 1610 to the Urquharts; and its present owner is Beauchamp Colclough Urquhart, Esq. (b. 1830; suc. 1861). Another mansion is Tulloch Cottage. Since 1875 giving off a portion to the *quoad sacra* parish of Barthol Chapel, Old Meldrum is in the presbytery of Garioch and the synod of Aberdeen; the living is worth £291. Three public schools—Commercial Road, Kirk Street infant, and Tulloch—with respective accommodation for 350, 126, and 70 children, have an average attendance of about 210, 85, and 35, and grants of nearly £212, £70, and £30. Pop. (1801) 1584, (1831) 1790, (1861) 2343, (1871) 2330, (1881) 2254, (1891) 2019, of whom 1988 were in the ecclesiastical parish.—*Ord. Sur.*, shs. 76, 77, 86, 87, 1873-76.

Melfort, a sea-loch of Kilminver and Kilmelfort parish, Argyllshire, opening between Points Degnish and Ashnish, opposite the middle of Luing island. With a width of $1\frac{1}{2}$ mile at the entrance, it penetrates the land $3\frac{1}{4}$ miles east-north-eastward; is sprinkled with islets; and takes its name from Gaelic words signifying 'the lake of the strong eminence,' alluding to the hills-ranges that flank its shores. It is fed by streams flowing from fresh-water lakes at distances of from 2 or 3 to 7 miles; has on its N side, at a secluded spot amid thick environments of wood, a cave, traditionally said to have been inhabited for a time by the first settlers in Lorn; is overlooked, at the head, by Melfort House; and gives the titles of Viscount and Earl in the peerage of Scotland, and that of Duke in the peerage of France, to the Earl of Perth.

Melgam Water, a rivulet of Lintrathen parish, W Forfarshire. Rising as the Black Water, at an altitude of 1970 feet, in the northern extremity of the parish, it winds 15 miles south-by-eastward—for the last 2 miles along the Kingoldrum and Airlie boundary—till, after a total descent of 1600 feet, it falls into the Isla opposite Airlie Castle. It abounds in trout; and salmon ascend it for 2 miles, as far as the Loups of Kenny.—*Ord. Sur.*, sh. 56, 1870.

Melgund, a ruined castle in Aberlemno parish, Forfarshire, $3\frac{1}{2}$ miles N by E of Auldhar station on the Forfar and Arbroath section of the Caledonian railway. Built, according to tradition, by Cardinal Beaton, it appears to have been a strong and superb edifice of great extent, with a magnificent banqueting hall. It is still represented by large and interesting remains, and gives to the Earl of Minto the title of Viscount (cre. 1813), the first Earl's father, Sir Gilbert Elliot, having married Agnes Murray Kynynmound, heiress of Melgund.—*Ord. Sur.*, sh. 57, 1868.

Melista. See MEALISTA.

Mellerstain, a seat of the Earl of Haddington in the E of Earlston parish, Berwickshire, on a rising-ground near the right bank of the lake-like Eden, 7 miles NW of Kelso. It is a fine mansion, with beautifully wooded grounds. About 1719 Rachel, daughter and heiress of George Baillie of JERVISWOOD and Mellerstain, married Charles, Lord Binning, eldest son of the sixth Earl of Haddington. Their second son took the name of Baillie on inheriting the estates of his maternal grandfather; and his grandson in 1858 succeeded his cousin as tenth Earl of Haddington.—*Ord. Sur.*, sh. 25, 1865. See TYNINGHAME.

Melloncharles, a village in Gairloch parish, Ross and Cromarty.

Melmont or **Molmont**. See GALSTON.

Melness, a hamlet in Tongue parish, Sutherland. The hamlet lies on the W side of Tongue Bay, 34 miles N by W of Lairg station on the Sutherland section of the Highland railway, and has an Established chapel of ease (1888), a Free church, and a public school.—*Ord. Sur.*, sh. 114, 1880.

Melrose (Brit. *Mell-Rhos*, 'the projection of the meadow'), a parish, containing a post-town of the same name, at the extreme northern corner of Roxburghshire. It is bounded N and E by Berwickshire, SE corner by St Boswells parish, S by Bowden parish, SW by Selkirkshire, and W by Edinburgshire. The parish of Melrose was considerably altered in area by the Boundary Commissioners in 1891. The hurgh of GALASHIELS, in Selkirkshire, having secured by Act of Parliament that whatever part of the parish of Melrose may be at any time included within the police limits of the hurgh shall *ipso facto* become part of the county of Selkirk, so much of Melrose parish as was at the date of the Commissioners' Order within the county of Selkirk (that is, so much of it as lay within the burgh of Galashiels) was transferred by them to the parish of Galashiels. There were, however, added to Melrose parish the detached portion of Lauder parish, situated to the west of the Leader Water, and comprising 1302 acres; and so much of the parish of Earlston as lay also to the west of the Leader Water, including its detached part. The boundary is largely natural. Starting at the point at the NW corner where the counties of Edinburgh, Berwick, and Roxburgh meet, it follows the watershed between Leader Water and Allan Water, until it reaches the upper part of Lauder Burn, whence it passes irregularly first NE and then SE, till it reaches the Leader near the Bluecairn Burn, and follows the course of that stream to its junction with the Tweed, and thereafter the course of the Tweed downward for $3\frac{2}{3}$ miles. Along the S side the line follows an irregular course westward over the top of the centre peak of the Eildons (1385 feet), along the S side of Cauldsiels Loch, till it joins the Tweed at Abbotsford Ferry station. It follows the course of the river downward $1\frac{1}{4}$ mile to the junction of Gala Water, whence it follows, in the main, the course of the latter stream to the point where the counties of Selkirk, Edinburgh and Roxburgh meet, and then strikes along the high ground E of Gala Water to the starting-point. The greatest length of the parish, from NW at the point where Edinburghshire, Berwickshire, and Roxburghshire meet, to the lowest point on the Tweed that the parish reaches, is 11 miles; and the average breadth is about 5 miles. From the mouth of Gala Water to the mouth of Leader Water, the Tweed flows $4\frac{1}{2}$ miles across the parish, dividing it into two very unequal portions, that to the S of the river being only about $\frac{1}{2}$ of the whole. In both portions the surface is hilly, and rises for the most part rapidly from the bed of the river Tweed, which is a little under 300 feet above sea-level. On the S the height rises, in the course of $\frac{1}{2}$ mile, to 508 feet near Huntlyburn House, 540 W of Viewhank, and 510 E of Oakdean House. From the first point the rise is continued south-westward to 876 feet above Cauldsiels Loch; and from the other two more rapidly southward to the summit of the EILDON HILLS, of the three tops of which the E (1327 feet) and the centre (1385) are in this parish. To the N of the Tweed the ground

again rises rapidly to an elevation of over 700 feet, and then passes northwards in two ranges of heights, of which that to the E, between the valleys of the Leader and Allan, is 876 feet high near Avenel plantation, 929 between Hóusebyres and Mosshouses, 979 near Jeanfield, 829 near the border W of Blainslie, and 1057 farther to the W between Newhouses and Threepwood; that to the W, between the valleys of the Allan and Gala, is 1018 feet (S) and 1031 (N) at Langlee, 1064 at Buckholm Hill, 1315 at William Law, 1219 at Hawkshawhead, and 1126 at Allanshaws. The lower districts are cultivated, and the upper afford excellent pasture, while plantations and belting of trees are to be found all over the parish. The soil in the southern district is chiefly a strong clay, well adapted for wheat. Along the valley of the Tweed—where there seems to have been at one time a great lake, and where, even within the last two centuries, the river course has evidently in places been changed, since a fine rich haugh now on the S side of the river is called Gattonside Haugh, and its feudal tenures show that it once actually formed a part of the Gattonside lands, which are on the N side of the river—it is a rich alluvial earth; while the northern district varies from light loam mixed with sand on a gravelly bottom, to strong wet clay full of springs, with moss which sometimes overlies marl. The underlying rocks are Lower Silurian, above which, in the S and SE, are sandstones of later age. These are quarried for building purposes, but the rock is of inferior quality, and most of the building-stone used is brought from adjoining parishes. The drainage of the parish is effected on the W by the GALA and the burns flowing into it, of which the Halk Burn is the chief; in the centre by ALLAN Water, which, rising at the NW corner at Blinkbonnie, flows southward for 9 miles to the Tweed, a short distance above Pavilion, 1½ mile above Melrose. It receives a number of smaller burns, of which the chief is Threepwood Burn. The lower part of its course is prettily wooded, and the valley is the prototype of the 'Glendearg' of Sir Walter Scott's *Monastery*. The drainage on the E is carried off by the LEADER and the various burns entering it, of which the Clackmae and Packmans Burns are the chief. In the portion of the parish to the S of the Tweed are Huntly Burn, entering the Tweed opposite GATTONSIDE; Malthouse or Dingle Burn, flowing past the town of Melrose; Bogle Burn, rising on the SE side of the Eildon Hills, and entering the Tweed at Old Melrose; a burn joining the Tweed near Langlands; and the lower part of the course of Bowden Burn. Huntly Burn is closely associated with Thomas the Rhymer (see EARLSTON), and one finely-wooded hollow on its course—a favourite resort of Sir Walter Scott—is known as The Rhymer's Glen. Bogle Burn also is said to take its name from the Boggles or Goblins with whom Thomas was so familiar. The parish is traversed by the main inland road from Edinburgh to Berwick. From N to S, on the E border, along the valley of the Leader, is a main road, leaving the south coast-road at Musselburgh, traversing Lauderdale, crossing the Tweed close to the mouth of the Leader, and joining the first main road ½ mile N of Newtown. The main section of the North British railway, known as the Waverley route, passes through the parish, keeping closely to the line of the first-mentioned main road; while 2 miles beyond Melrose station it is joined by the Berwick and Duns branch of the same system. Half-a-mile SE of the mouth of the Leader, and 2½ miles E of the modern town of Melrose, is a promontory formed by a loop of the Tweed, and measuring 4 furlongs by 2, which is known as Old Melrose, and which is the 'projection' from which the name of the parish is said to come. The banks of the river all round are lofty, wooded, and rocky, and from them the ground rises in a smooth grassy ascent to a small plateau occupied by the modern mansion of Old Melrose. Old Melrose was the site of one of the earliest Columban establishments on the mainland of Scotland. It owed its foundation to St Aidan, who, with a number of brethren from Iona, had, about 635, on the invitation of Oswald, king of Northumbria, established a monas-

tery at Lindisfarne for the purpose of instructing the Saxons in Christianity. Aidan seems to have chosen twelve Saxon youths to be trained and sent out to preach and teach, and one of these, Eata, became, about the middle of the 7th century, the first abbot of the Columban monastery of Melrose. The prior during part of the time, and subsequently his successor, was that St Boisil or Boswell who has given name to the adjoining parish, and he in turn was succeeded by his pupil St Cuthbert. In 839 the monastery was burned by Kenneth, King of Scots, but reappears again rebuilt, and the temporary resting-place of the body of St Cuthbert, which had been removed from Lindisfarne on account of the invasion of the Danes. It seems to have declined about the same time as the parent monastery in Iona, and to have become, in the latter part of the 11th century, ruined and deserted, for when between 1073 and 1075 Aldwin, Turgot—afterwards Bishop of St Andrews and confessor to St Margaret the queen of Malcolm III.—and other monks came from 'Girwy to what was formerly the monastery of Mailros' they found it 'then a solitude,' and they, being persecuted on account of their opinions and threatened with excommunication if they remained, had also soon to withdraw. From this time onward the place was never again the site of a monastery, but there was a chapel dedicated to St Cuthbert, and, till between 1126 and 1136, when David I. exchanged it for the church at Berwick, dependent on the priory of Durham, as the former church had been dependent on the abbey of Lindisfarne. This chapel seems to have been held in great esteem, for when it was burned by the English in the reign of Robert Bruce, in 1321, Symon, Bishop of Galloway, describing the chapel as recently burned by the English, grants 'a relaxation of forty days' penance to all truly penitent and confessed who should, with consent of their diocesan, devoutly visit the chapel of Saint Cuthbert of Old Melros, where that saint lived a monastic life and was celebrated for his miracles; or should contribute of their goods; while between 1417 and 1431 we find Pope Martin V., at the instance of John, dean of Cavertoun, one of the monks of Melrose, granting to all who should make pilgrimage to, or contribution to, the same chapel 'a remission of penance for seven years and seven Lents on all the festivals of St Cuthbert and on certain other holidays.' The place where the chapel stood continues to be called Chapel-knowe, and adjacent portions of the Tweed still bear the names of Monk-ford and Haly-wheel—the holy whirlpool or eddy. Pilgrims from the north approached by a road known as the Girthgate, which led from SOUTRA hospice by Colmslie, near the centre of the northern portion of the parish and across the Tweed to the bend. It seems to have had the privilege of sanctuary. It crossed the river at Bridgend, about 1 mile W of Darnick, where a bridge with stone piers and wooden beams seems afterwards to have been built. Considerable remains of the latter are mentioned by Pennant in 1772 as having been standing when he visited the place. The early monastery seems to have been protected by a wall running across the neck of the peninsula, traces of which remained in 1743, when Milne published his account of Melrose. There are traditions of an abbey called the Red Abbey having stood near the village of Newstead, midway between Old and modern Melrose. In the district N of the Tweed there were chapels at Chieldhelles, at Blainslie on the extreme NE, and, according to Milne, also at Colmslie on Allan Water—said to take its name from the patron, St Columba—and at Gattonside. The present name of the parish seems to have been assumed from the old Culdee settlement, by the monks, when the modern abbey was founded, and applied by them to the whole district occupied by their early possessions, the boundaries of which correspond pretty nearly with the present limits of the parish. At the Reformation, and for a considerable time afterwards, down to about 1534, Melrose, Bowden, Lilliesleaf, and Langnewtown were under the charge of one minister, with a reader at Melrose. In the year

just mentioned it is noticed as a separate charge, and that state of matters continued. The earliest minister was John Knox, whose tombstone still remains in the abbey churchyard, and who was a nephew and namesake of the great Reformer. He died in 1623, and, under the modified Episcopacy of the time, was succeeded by Thomas Forrester, a poet, who was bold enough to introduce into the litany the special prayer, 'From all the knock-down race of Knoxes, good Lord, deliver us.' Besides this he also declared that the Reformation had done incalculable harm to Christianity; that the liturgy was better than sermon; and that bringing corn in from the fields on the Sabbath was a work of necessity—the last of which propositions he practically exemplified. For these and other delinquencies he was deposed by the Glasgow Assembly of 1638.

The principal antiquities, besides those already mentioned and those noticed in the following article and in the account of the EILDON HILLS, are remains of camps between Kittyfield and Leaderfoot; N of Kaeside, near Abbotsford; and at Mars Lee Wood; and border peels at Buckholm on the Gala, in the valley of the Allan, and at Darnick. The principal mansions, most of which are separately noticed, are Abbotsford, Allery, Chiefswood—once the residence of Lockhart, Scott's son-in-law—Drygrange, Eildon Hall, Huntly-burn House—once the residence of Scott's friends, the Fergussons, and the name itself of Sir Walter's choosing—Gattonside House, Ladhope House, Langhaugh, Lowood, Abbey Park, The Pavilion, The Priory, Prior Wood formerly Prior Bank—once the residence of the well-known Edinburgh publisher, Tait, the founder of *Tait's Magazine*, which was established to oppose *Blackwood's Magazine*—Ravenswood, Sunnyside, Threepwood, Whitelee, Wester Langlee, and Wooplaw. Besides the town of Melrose, which is noticed in the following article, the parish contains also the villages of BLAINSLIE (NE), DARNICK (S), GATTONSIDE (S), NEWSTEAD (SE), NEWTOWN (extreme SE), and the hamlet of Eildon. There are no industries, and the population of the parish is mostly engaged in agriculture. In suitable spots there are excellent orchards—legacies of the monks—some of which are very productive, those in the Gattonside district being said to produce more fruit than all the others in the vale of Tweed. About $\frac{3}{4}$ mile WSW of the town of Melrose, on Bowden Moor, is the district lunatic asylum for the counties of Roxburgh, Selkirk, and Berwick, which with its grounds covers a space of 35 acres. The buildings occupy three sides of a rectangle; the principal front to the SW being 377 feet long, and the wings each 148 feet. They are mostly two storeys in height, and two towers are 100 feet high. The asylum was erected in 1870-72, after designs by Messrs Brown & Wardrop of Edinburgh, at a cost, inclusive of site, of £57,000, and there is accommodation for about 246 patients. To the N of Darnick, and about 1 mile W of the town of Melrose, is a rising-ground, called Skimmers or Skirmish Hill, the name being taken from the last great battle among the Borderers proper in 1526. In that year, James V., tired of the dominion of the Douglasses, sent word privately to Scott of Buccleuch to come to his rescue. This Scott did, but the forces of Angus, Home, and the Kerrs proved too strong for him, and his men fled. Pitscottie tells the story at length. The place is now the site of the Waverley Hydropathic Establishment. Erected in 1871, and enlarged in 1876, this is a fine edifice, with accommodation for 150 visitors. Its dining and drawing rooms each are 84 feet long; and there are also a news-room, library, two billiard-rooms, etc., besides every variety of bath. The grounds, 40 acres in extent, are tastefully laid out; and the view around is of singular beauty.

In common with the whole district, the parish suffered severely from the ravages of the English during Hertford's invasions in 1544-45, and at a later date Oliver Cromwell gets the credit of having pounded the ruins of the abbey from the heights above Gattonside. Besides the churches in the town, which are noticed in the following article, there is a U.P. church at Newtown.

Ecclesiastically the parish is in the presbytery of Selkirk and the synod of Merse and Teviotdale, and the living is worth £296 a year. The following are the schools under the Melrose School Board, with their accommodation, average attendance, and Government grant:—Blainslie, 103, about 80, £84; Gattonside, 86, about 30, £27; Langshaw, 50, about 35, £38; Melrose, 365, about 330, £320; Newstead, 86, about 35, £30; and Newtown St Boswell's, 156, about 140, £124. Blainslie and Newtown St Boswell's have evening schools attached. Pop. (1801) 2654, (1831) 4339, (1861) 7654, (1871) 9432, (1881) 11,131, (1891) 4854; of the ecclesiastical parish (1891) 4366.—*Ord. Sur.*, sh. 25, 1865.

The U.P. Church has a presbytery of Melrose, which holds its meetings in the town, and includes 3 churches at Galashiels, 4 at Hawick, 2 at Selkirk, and those at Earlston, Innerleithen, Lauder, Lilliesleaf, Melrose, Newcastleton, Newtown, and Stow.

Melrose, a post town and burgh of barony, in the southern section of the parish just described, between the Tweed and the northern base of the Eildon Hills. The station, a spacious and handsome erection, on the Waverley section of the North British railway system, is $3\frac{3}{4}$ miles ESE of Galashiels, $15\frac{1}{2}$ N by E of Hawick, and $37\frac{1}{4}$ SE by S of Edinburgh. By road the place is 7 miles NE by N of Selkirk, 11 NW of Jedburgh, and 35 SE by S of Edinburgh. The situation and surroundings are very beautiful. Looked at from about the town, the heights that border the Tweed seem to close in at either end, so that the place nestles in the long hill-girt hollow known as the Vale of Melrose. The town, which dates from very ancient times, was originally a small village called Fordcl, and the present name was transferred to it from Old Melrose at or shortly after the foundation of the abbey in 1136. It shared largely and constantly in the fortunes of the monks. During Hertford's invasion, in 1544-45, it was twice plundered and destroyed; and though, after the Reformation it struggled on for a time as the seat of a small trade, it ultimately fell into poverty and decay, a state of matters that lasted well into the 19th century. Then the revival of the taste for Gothic architecture brought the ruins of the abbey into prominence, and this, and the associations of the district with Sir Walter Scott, made it a tourist centre. The tourists were followed by people of independent means, who were led by the beauty and amenity of the neighbourhood to take up here their occasional or permanent residence, and all these causes combined have given Melrose a fresh start in prosperity. The town proper, which is the Kennaguhair of the *Abbot* and the *Monastery*, consists of three streets, branching off from the corners of an open triangular space, known as the market place, close to the station. The street leading northward to Gattonside, and that passing southward by Dingleton, are both narrow and old, but High Street, which leads north-westwards towards Galashiels, has been widened and improved as new buildings have replaced old. The suburbs are principally lines and groups of villas, extending about a mile westward from the end of High Street, by Weirhill and High Cross. Many of the older houses of the town show, amid the general plainness of their walls, stones whose carvings prove that they have come from the ruins of the abbey, at a time when its walls were deemed of so little importance as to be practically a quarry for whosoever chose. In the centre of the market place, supported by five courses of steps, stands the market cross, bearing the date of 1642, and surmounted by the unicorn of the Scottish arms with mallet and rose. It seems to have replaced an older cross of some sanctity, which was destroyed in 1604. A patch of land, called 'the Corse Rig,' in a field near the town, is held by the proprietor on the condition of his keeping the cross in repair. Another cross, which anciently stood on a spot about $\frac{1}{2}$ mile to the W, bore the name of the High Cross, which it has bequeathed to the modern suburb around its site. The so-called jail has long ceased to be used for that purpose, and the lower part is now a store for the victual feu-duties payable by the Duke of Buccleuch's vassals,

while the upper is occasionally used as a public hall. It stands on the site of an older jail, on a stone of which, that is still preserved, there is sculptured one of those anagrams that were from two to three centuries ago somewhat common, viz.:—a mason's 'mell' and a 'rose,' representing the name of the place. In an old gabled house, which projected into the street opposite the King's Arms Hotel, but which is now demolished, General Leslie slept on the night before the battle of PHILIPPAUGH. A suspension bridge (1826) for foot-passengers crosses the Tweed to the N of the town, behind and a little below the Weirhill, and connects Melrose with Gattonside. The parish church, a rather plain building, with a spire and clock, was erected in 1810, and an organ was introduced in 1889 at a cost of £800. It stands on a rising-ground—the Weir Hill proper, the Weir being behind it—in the Weirhill suburb. The Free church, which stands on the same eminence, is a handsome building in the Early English style, with a well-proportioned spire. The U.P. and E. U. churches call for no special notice. The former, which was built at High Cross in 1872 to replace a small barn-like structure in the town, contains 500 sittings; the latter contains 250 sittings. Trinity Episcopal church, in the western part of Weirhill, was built in 1849 after designs by Sir George Gilbert Scott. It is a tasteful building in the Early English style, with a good eastern window and a stone pulpit. It contains 200 sittings. The cemetery is to the S of the Free church. The Corn Exchange, in the market place, was erected in 1862-63, after designs by Cousin, at a cost of about £3000, and is a large handsome structure, serving not only for sales and similar purposes, but also for lectures, concerts, and public meetings. The hall has accommodation for 500 people. The Ormiston Institute, erected and endowed out of a sum of £4000 bequeathed by Mr Charles W. Ormiston of Melrose, comprises a reading-room, with billiard room, smoking room, etc. At the west end of the town a large pond has been formed for skating in winter. The public schools have been already noticed under the parish. The water-works belong to a joint-stock company (1838), and the water, which is very pure, is obtained from springs on the Eildon Hills. The reservoir has a capacity of about 35,000 gallons. Gas is also supplied by a joint-stock company (1836). There are now no industries, but the place was long famous for the manufacture of a fabric called Melrose-land linen, for which there was a demand in London as well as in foreign countries. So early as 1668 the weavers were incorporated under a seal-of-cause from John, Earl of Haddington, the superior of the burgh, and for a considerable period preceding 1766 the quantity of linen stamped averaged annually between 23,000 and 24,000 yards, valued at upwards of £2500. Towards the end of the 18th century, however, the manufacture rapidly declined, and long ago became quite extinct. Cotton-weaving for the manufacturers of Glasgow, which followed, had a short period of success, but soon also became extinct. A bleachfield for linen, which still gives name to a spot on the W slope of the Weir Hill, was also tried but failed; and even the woollen trade, so singularly prosperous in some of the other Border towns, though tried, proved also a failure.

Melrose, under the abbey, was a burgh of regality; but in 1609, when the Abbey and lands were erected into a temporal lordship, it was made a burgh of barony, which status it still retains. There is a baron-bailie appointed by the present superior, the Duke of Buccleuch, but there are no burgh courts and no burgh property, income, or expenditure. An ancient fair, held in spring, called Kier or Scarce-Thursdays fair, was long a famous carnival season; but afterwards became merely a business market, and then died out altogether. The weekly corn and general market has been discontinued for some time, and no fairs are now held, owing to the establishment of weekly cattle sales at Newtown St Boswells.

The town has a post office, with money order, savings bank, insurance, and telegraph departments; branches

of the British Linen Company, Commercial, and Royal banks, and several hotels. A justice of peace court is held on the first Wednesday of every month, and sheriff small debt courts on the Saturdays after the second Monday of February and May, after the first Monday of September, and after the second Monday of December. Among the miscellaneous institutions are a boarding school for boys, a masonic hall, a parish library, bowling, curling, golf, and cricket clubs, a company of rifle volunteers, and a branch of the Society for the Prevention of Cruelty to Animals. The members of the masonic lodge (St John's—not, however, in connection with the Grand Lodge) have, every year, on St John's Eve, a torchlight procession round the abbey, and on Fastern's E'en a football match between the married and unmarried men of the town is kept up along the main street from early afternoon till evening. Pop. of town (1841) 893, (1861) 1141, (1871) 1406, (1881) 1550, (1891) 1432, of whom 890 were females. Houses (1891) inhabited 298, vacant 10.

The ABBEY OF MELROSE, which is the great centre of attraction in the town, stands on low level ground to the E, almost midway between the Eildons and the Tweed. Coming in succession to the Columban establishment already noticed, but moved to a better site, it was founded by David I. in 1136, the monks who were of the Cistercian order, having been brought from Rievaulx in Yorkshire. To them, and 'to their successors, for a perpetual possession,' David granted 'the lands of Melros, and the whole land of Eldune, and the whole land of Dernwic . . . all the fruits, and pasture, and timber in my land, and in the forest of Selkirk and Traquhair, and between Gala and Leadir Water, besides both the fishery on the Tweed everywhere, on their side of the river as on mine, and . . . in addition, the whole land and pasture of Galtuneside.' The original buildings were not finished till 1146, in which year, on 23 July, the church was, with great solemnity, consecrated and dedicated to the Virgin Mary. Malcolm IV. confirmed the grants of his predecessor, and added fresh lands, as also did William the Lyon, in whose reign the monastic possessions increased greatly by gifts from the king, from Alan, his steward, and from the powerful family of De Moreville; and Laurence, Abbot of Melrose, was one of those who, along with the king, swore fealty to Henry II. at York in 1175. Standing near the Border, the abbey could hardly fail to figure in many of the historical transactions of this troublous time. It was in its chapter-house that the Yorkshire barons, united against King John, swore fealty to Alexander II. in 1215. In 1295 Edward I. gave formal protection to its monks, and in 1296, while resting at Berwick, after the apparent general submission of Scotland to his usurpation, he issued a writ ordering a restitution to them of all the property they had lost in the preceding struggle. In 1321 or 1322 the original structure was burned by the English under Edward II., and probably reduced to a state of entire ruin, while William de Peebles, the abbot, and a number of the monks were killed. This led to a grant from King Robert I., in 1326, of £2000, to be obtained from his wards, reliefs, marriages, escheats, fines, etc., in the sheriffdom of Roxburgh, and to be applied to the rebuilding of the church. The sum was a large one for that time, and the whole amount was not realised till long after. In 1329, a few months before his death, Robert wrote a letter to his son David, requesting that his heart should be buried at Melrose, and commending the monastery and the church to his successor's especial favour—favour which was certainly given, for so late as 1369 we find David renewing his father's gift. It is to this grant that we owe a considerable part of the present building. The community, too, enjoyed the favour of some of the English kings, no less than that of its own native monarchs, for in 1328 Edward III. ordered the restoration to the abbey of pensions and lands which it had held in England, and which had been seized by Edward II. In 1334 the same monarch granted a protection to Melrose in common with the other abbeys of

the Scottish border; in 1341 he came here from Newcastle to spend Christmas; and in 1348 he issued a writ, 'de terris liberandis abbati de Meaurose,' ordering the giving-up of certain lands to the abbot. In 1378, Richard II., following the example of Edward, again renewed the protection, but his fruitless expedition into Scotland in 1385 so exasperated him, that, in that year, after spending a night in the Abbey, he caused it to be burned. His conscience would, however, seem to have troubled him on the subject, for four years afterwards the monks were indemnified for the damage he did them by the grant of two shillings on each of 1000 sacks of wool exported by them from Berwick—a privilege revoked, however, in 1390, in consequence of an effort to export 200 sacks more than the fixed number. Notwithstanding these many disasters the place increased in wealth and architectural splendour, and it was not till the more severe damage and dilapidations that befel it during the reigns of Henry VIII., Edward VI., and Elizabeth, that ruin began finally to impend. In 1544 the English penetrated to Melrose, destroyed a great part of the Abbey, and defaced the tombs of the Douglasses; and in 1545 they again, under the leadership of Lord Evers and Sir Brian Latoun, returned to the work of pillage, and on their retreat the Earl of Angus and Scott of Buccleuch avenged the ravaged country and the defaced tombs at the battle of ANCRUM MOOR. The Reformation was rapidly approaching, and though donations were given by various individuals for rebuilding, the Abbey never recovered the damage then suffered. In 1541 James V. obtained from the Pope the Abbeys of Melrose and Kelso to be held in commendam by his illegitimate son James, who died in 1558. In 1560 all the 'abbacie' was annexed to the Crown without power of alienation, but this was altered by subsequent Acts of Parliament, and in 1566 Queen Mary granted the lands to James, Earl of Bothwell. On his forfeiture in 1568 they again reverted to the Crown, and were, by James VI., at the instigation of the Earl of Morton, bestowed in commendam on James Douglas, second son of William Douglas of Loch Leven. Douglas took down part of the walls to build for himself the house which still stands to the N of the cloisters, and which bears the date 1590; but in 1606 the commendator resigned the monastery, with all its pertinents, into the hands of the king, to be erected into a temporal lordship, in favour of William, Earl of Morton. In 1608 the resignation was repeated, but without qualification, the property to be disposed of as 'his hienes sall think expedient,' and so, in 1609, the lands were, with some exceptions, erected into a lordship in favour of Sir John Ramsay, who had assisted King James at the time of the Gowrie conspiracy, and who had already, in 1606, been rewarded with the title of Viscount Haddington. He died, without issue, in 1625, and the estates reverted to the Crown. Sir Thomas Hamilton, a celebrated lawyer, familiarly known as Tam o' the Cowgate, who had, in 1619, been created Earl of Melrose, and who afterwards changed that title for that of Earl of Haddington, eventually obtained the Abbey and the greater part of its domains, and, in more recent times, he has been succeeded in the splendid heritage by the family of Buccleuch.

The monks of this abbey were the first Cistercians who obtained footing in Scotland, and they always held the foremost place among their order throughout the kingdom. In their earlier days they seem to have been frugal and industrious, careful of their rights in opposition to the neighbouring barons,* diligent in the cultivation of

* Many accounts have been preserved of their quarrels with their neighbours. So long and pertinacious was the contest between them and the people in the vale of Gala Water—then called Wedale—about pannage and pasturage, that in 1134 a formal settlement, known as 'the Peace of Wedale,' was made by William the Lyon, assisted by his bishops and barons; and even this does not seem to have been finally successful, for in 1269 we again find that John of Edenham, the abbot, and many of the brethren were excommunicated for violating the Peace of Wedale, attacking some houses of the Bishop of St. Andrews, and slaying one ecclesiastic and wounding others.

their land, in their attention to the building of the church and monastery, and in the promotion of such arts as were known at the time. How they had fallen off before the period of the Reformation is seen in the efforts made for their reform during the 15th century by Innocent VIII., and in the 16th century by the general chapter at Cisteaux, even if we do not accept as necessarily true the declaration of the old words of *Galashiels*:—

'The monks of Melrose made gude kail,
On Fridays when they fasted;
They wanted neither beef nor ale
As long as their neighbours' lasted.'

The regard in which they were held by Bruce and his successors was probably due to the fact that, although exempted by charters and by custom from rendering military service to the Crown, yet they fought under James the Steward of Scotland during the war of the Succession, and again under Walter the Steward, in strenuous support of the infant prince David Bruce. Thus during the invasion of Edward II. in 1322, when Douglas and his band were in the neighbouring forest, watching for an opportunity to molest the English, he was, with a picked body of men, admitted within the precinct of Melrose, whence, according to Barbour,

'A rycht sturdy frer he sent
With out the yate thair come to se.'

And the friar, 'all stout, derff, and hardy,' set forth accordingly in somewhat warlike array, for although 'hys mekill hud helyt haly' was all 'the armour that he on him had,' yet

'Apon a stalwart hors he rad,
And in his hand he had a sper.'

When the scout gave the signal, Douglas rushing out beat back this English advanced guard, and Barbour makes the English return home again; but Fordoun says that it was in revenge for this that Edward burned the abbey in 1322, slew many of the monks, and profanely carried off the silver pix. Declarations were afterwards made by both Stewards, and subsequently confirmed by the Duke of Albany on the day of the Feast of James the Apostle in 1403, that the military service of the monks, having been rendered by the special grace of the abbot and convent, and not in terms of any duty they owed to the Crown, should not be regarded as any precedent for their future conduct.

The only part of the buildings that now remains is the ruin of the church, which, though it wants the dignity of Elgin Cathedral, is yet, from its richness and symmetry, one of the finest pieces of architecture in Scotland. 'In some buildings,' says Dr Hill Burton, writing in *Billings' Baronial and Ecclesiastical Antiquities of Scotland*, 'the plan is massive, and the decorations, as if in contrast to it, light and rich; in others a building comparatively meagre is enriched by the massiveness of the decorations, but here the art both of the designer and the decorator—whether the same person or different—has been employed to the utmost in divesting the material of its natural character of ponderosity, and rearing high overhead a fane such as aerial beings might be supposed to create with the most ductile and delicate material; and he goes on to compare some of the architectural features with those of the cathedrals at Strasbourg and Antwerp. The style is generally given as Perpendicular, but, as the same writer points out, after the war of Independence, Scottish art agrees with Continental and not with English types, and in no ecclesiastical building in Scotland will the depressed four centre arch, characteristic of the true Perpendicular, be found. The ogee canopy or hood, which is its counterpart, is to be found at Melrose, but the arch it surmounts is purely Pointed. How carefully and with what conscientious regard for the dignity and worth of labour the craftsmen toiled, is shown by the beauties only discoverable on close examination, and by finding details high up in air as well finished as if they were where they could be constantly looked at. The monastery buildings stood to the N and NW of the church, but they are

entirely gone, and nothing can now be ascertained as to their extent. A large portion of them must have been removed to provide materials for the house that Com-mendator Douglas erected in 1590, and subsequently the walls were, no doubt, used pretty much as a quarry for whosoever chose. The stones of the vaulted roof constructed over part of the nave in 1618 were obtained from the same source, as were also those of the old town jail, and materials for repairs at the mills and sluices—and indeed there is an old tradition that there is not a house in the village but has in it stones taken from the monastery. The author of the *Monastic Annals of Teviotdale* speaks of a lofty building of excellent masonry that was taken down in 1695, and says it was supposed to have been the hakehouse, as 'it contained several well-constructed ovens, one over another in the different stories.' He also mentions as having then been laid bare, 'a vaulted passage or drain, of such dimensions that two or three persons might easily walk in it abreast,' and passing underground from this place to several other parts of the convent. Milne, who was parish minister, and whose *Account of Melrose* was published in 1743, says that the whole buildings were enclosed by a high wall about a mile in circuit, and describes bases of pillars and other traces of a building to the NE of the church. This was probably the chapterhouse.

The present ruins of the church are evidently, in the main, those of the building erected in 1322, though there have been many subsequent alterations, and indeed the windows and upper walls to the E are probably subsequent to the English devastation in 1385, while portions may date even as late as 1505. We have already seen that the building suffered great damage during Hertford's invasions, and the Reformation happening very shortly thereafter, there was no opportunity for the monks to repair it before they had to quit altogether. Far from a centre of population, no actual harm seems to have been done to it, as to some of the other buildings of the Old Church, in the actual progress of the Reformation; but after its desertion by its inmates, and its partial destruction, wind and weather probably did still more injury. In 1618, when part of the nave came to be used as a parish church, the roof had to be closed up by the unsightly vault of modern masonry that extends from the crossing some 60 feet westward.* A great number of the stone images of saints which filled the numerous niches that adorn the walls, were left untouched till 1649, when they were almost all thrown down and destroyed, why or by whose order is not known.

The church is cruciform, and stands E and W, the total length in that direction being 258 feet while the breadth is 79 feet. The transepts measure 130 feet from N to S, and are 44 feet wide, while the one wall of the square central tower that is still standing is 84 feet high. The nave has had an aisle on each side, and to the S of the south aisle there are eight small chapels separated one from another by walls. The line of the pillars supporting the arches dividing the nave from the aisles has been continued by other two columns on each side, along the sides of the choir, to the chancel and lady chapel. Of these the two to the W, of which only the bases now remain, supported the E wall of the centre tower, and in a line with these a row of pillars has run along from N to S, separating the transepts from, E of the S transept, the chapel of St Bridget, and, E of the N transept, the chapel of St Stephen. Square projections from these, at the NE and SE angles of the choir, have also formed chapels. Except at the corner of that to the NE, the walls of the transepts, chancel, and chapels are still pretty entire, and several of the slender flying buttresses remain. Of the pillars between the aisle and nave only the four next the nave now remain, and along these the elaborate groining of the roof over the S aisle is intact. On the N side of the nave the bases of three

pillars farther W are visible, while the nave itself is covered over by the unsightly 17th century arching already noticed. A small doorway, opening off the N aisle, is the 'steel-clenched postern door' by which Scott in the *Lay of the Last Minstrel* makes the old monk introduce William of Deloraine to the church. It leads out into the space where the cloisters have been, where, on the walls, there are a number of false Gothic arches of great beauty. The carving of the ornaments of these is particularly well preserved and beautiful. 'There is one cloister in particular,' says Lockhart, 'along the whole length of which there runs a cornice of flowers and plants, entirely unrivalled, to my mind, by anything elsewhere extant. I do not say in Gothic architecture merely, but in any architecture whatever. Roses and lilies, and thistles, and ferns, and heaths, in all their varieties, and oak leaves and ash leaves, and a thousand beautiful shapes besides, are chiselled with such inimitable truth and such grace of nature, that the finest botanist in the world could not desire a better hortus siccus, so far as they go.' The roof is quite gone, but there are holes along the walls for the beams. The carving of the doorway itself that leads into the cloister is particularly worthy of notice for its exquisite undercutting. Over the chancel and lady chapel the beautiful groining remains, and in the wall, above the site of the high altar, are the remains of the tracery—still pretty entire—of the beautiful E window where Scott has described the moon as shiuing

'Through slender shafts of shapely stone,
By foliated tracery combined;
Thou would'st have thought some fairy's hand,
'Twixt poplars straight, the osier wand,
In many a freakish knot, had twined;
Then framed a spell, when the work was done,
And changed the willow-wreaths to stone.' †

This window, which is 36 feet high and 16 wide, has five mullions each 8 inches wide, with transoms, and interwoven towards the top with very light and elegant tracery. With this window is here associated the legend connected in most of the other old ecclesiastical buildings with some of the pillars (see ROSLIN). Immediately beneath the site of the high altar is the resting-place of the heart of Robert Bruce, and to the S of it is a dark-coloured slab of polished encruiital limestone, said to mark the grave of Alexander II., who was buried near the high altar in 1249. Other authorities, however, maintain that it marks the burial-place of St Waltheof ‡ or Waldeve, who was the second abbot of the monastery founded by King David, and that it is the slab placed here by Ingram, Bishop of Glasgow (1164-74) who came to Melrose, according to the *Chronica de Mailros*, to open the grave after Waltheof had been buried for twelve years, and found the body in perfect preservation. Scott makes the old monk and William of Deloraine seat themselves on it while waiting till the exact moment for opening the tomb of Michael Scott should arrive.

† The description of Melrose by moonlight, with which the second canto of the *Lay of the Last Minstrel* commences, is now generally admitted to have been purely imaginary. Some of the details, if real, could only have been described by one who had been actually about the building at night, and this in Scott's case does not seem to have been so. Old John Bower who was so long the keeper of the abbey always stoutly maintained that Scott never got the key from him at night, and so could never possibly have been about the ruin by moonlight, and the 'great wizard' is said himself to have once appended to the lines the additional ones—somewhat apocryphal:—

'Then go and muse with deepest awe
On what the writer never saw,
Who would not wander 'neath the moon
To see what he could see at noon.'

Moore indeed maintained that Scott was much too practical a man to go poking about the ruins by moonlight. Bower himself is said in dark nights to have accommodated poetry-struck visitors by means of a lantern set on the end of a pole. Latterly he even preferred his double tallow-candle to the moon itself. 'It does not light up a' the Abbey at aince, to be sure, he would say, 'but then you can shift it about, and show the auld ruin bit by bit, whiles the moon only shines on one side.'

‡ St Waltheof was a son of the wife of David I. by her first husband, Simon, Earl of Huntingdon, and so the grandson of Sward, Saxon Count of Northumberland.

* When the present parish church was built in 1810, it was intended that this vaulting should be removed, as well as the modern wall at the W end of it; but as this would have given increased play to wind, it was thought better, in the interests of the delicate tracery of the E and S windows, to allow it to remain.

The chancel was also the burial-place of the Douglasses, and tombs are pointed out said to be those of William Douglas, the Dark Knight of Liddesdale—whose murder of Sir Alexander Ramsay (see HERMITAGE) and subsequent death in Etrick Forest at the hands of his own chief, William, Earl of Douglas, are well known—and of James, second Earl of Douglas, the hero of Otterburn. The Douglas tombs were all defaced by Sir Ralph, afterwards Lord, Evers in 1544, and after the battle of Ancrum, Evers himself was buried here, his tomb being pointed out in the corner chapel just outside the chancel. Here also is a slab covering the grave pointed out by John Bower the elder as the place that Scott had in mind when describing the burial-place of the 'wondrous Michael Scott.' It is doubtful, however, whether Scott had any particular grave in view, and it is of course unnecessary to point out that the tomb here can have no connection whatever with the real Sir Michael, whose introduction into the *Lay* at that date is merely a piece of poetical licence (see BALWEARIE). At the northern end of the N transept a small doorway leads into the sacristy in which is the tombstone of Johanna, Queen of Alexander II., with the inscription *Hic jacet Johanna d. Ross*. Higher up is a door which has been reached by a flight of steps, and which has probably led to the dormitory. The threshold of this doorway is formed by a part of a very old tombstone: the steps were removed in 1730. Higher up in the wall still is a small circular window, said to represent a crown of thorns. The arches here seem to be those from which the description in the *Lay* has been taken:—

'The darken'd roof rose high aloft
On pillars lofty, and light and small;
The key-stone that locked each riched aisle
Was a fleur-de-lys, or a quatre-feuille;
The corbells were carved grotesque and grim,
And the pillars, with cluster'd shafts so trim,
With base and capital flourish'd around,
Seem'd bundles of lances which garlands had bound.'

On the W side, in elevated niches, are statues representing St Peter with his book and keys, and St Paul with a sword. In the S transept part of the groined roof still remains. In the W wall is a small door giving access to the triforium passages. Over the centre is a shield bearing a pair of compasses and fleurs-de-lis in reference to the profession and native country of the designer. Beside it is the inscription in old English letter:—

'Sa gays ye compas evyn about
sa truth and laute do, hut doute,
behaulde to ye hendes q Johnne Morvo.'

Higher up to the left is also the following in similar characters:—

'John Morow sum tym callit
was I and born in Parysse
certainly and had in keepyng
al mason werk of Santan-
drays ye hve kirk of Glas-
gw Melros and Paslay of
Nyddsdayll and of Galway.
I pray to God and Mari bath
and sweet Sanct John keep this haly kirk
fra skaith.'

This is the division of lines as given on the stone. A slight alteration converts the inscription into the rude rhyme which no doubt it was meant to be. The upper part of the S wall is occupied by a very fine window, 24 feet high and 16 wide, with five lights and elaborate wheel tracery over; beneath the window is a doorway. On the outside the window is surmounted by nine niches, of which the centre one, which is highly wrought, is said to have contained an image of Christ. The eight others and four more on the side buttresses held figures of the Apostles. Over the doorway is a figure supposed to be that of John the Baptist, so placed that the eye is directed upwards as if to the figure of Christ above, and bearing a scroll with the inscription, *Ecce filius Dei*. Beneath this is a shield with the royal arms of Scotland. The pedestals and canopies of the niches on the buttresses are richly carved. One of the pedestals on the W is supported by a monk hearing a

scroll with the inscription, *En venit Jes. seq. cessabit umbra*, and one on the E by a monk having a scroll inscribed *Passus e. q. ipse voluit*. Over the E window there are also niches, some of which contain broken statuettes. That over the centre of the window has two sitting figures with open crowns, said to represent David I. and his queen Matilda. There are many more of these niches on the S side, and in connection with a fine one, containing a statue of the Virgin holding the infant Jesus in her arms, Milne relates a tradition, how, when the person employed to destroy the statues in 1649 struck at this one his first blow knocked off the head of the infant, which, in its fall, struck his arm and permanently disabled him, so that neither he nor any one else cared to recommence the work of destruction.* Some of the gargoyles are curious, and one—a pig playing on the bagpipe, close to the niche just mentioned—has acquired some celebrity.

Of the eight chapels to the S of the south aisle the five farthest to the E are roofed; the others are now open. Each of them is lit by a finely traceried window, and in the wall of each is a piscina. In the one next the transept is a stone inscribed 'Orate pro anima frat. Petre aerarii.' In the third is a monument to David Fletcher, minister of Melrose, who, on the establishment of Episcopacy, was made Bishop of Argyll. The others have long been used as the burial-places of the Pringles of Whitebank and Galashiels. Another branch of the Pringle family had their burying-place, near the cloister door, marked by the simple inscription 'Heir lvis the race of the hous of Zair.' Few of the stones in the churchyard round the church call for particular notice. That of John Knox, minister of Melrose, has been already noticed. Sir David Brewster (1781-1868), who died at Allery, in the parish of Melrose, is buried under the fifth window counting from the W end of the nave. Near the SE corner of the churchyard is the stone erected by Scott—with an inscription written by himself—over the grave of Tom Purdie, long his forester, favourite, and general manager at Abbotsford. On a small red tombstone in the SE, without date but evidently more than 200 years old, is the inscription:—

'The earth goeth
on the earth
glistring like
gold:
The earth goes to
the earth sooner
then it wold;
The earth huilids
on the earth cast-
les and towers:
The earth says to
the earth all shall
be ours.

This was, in 1853, published in *Notes and Queries* as an epigram by Sir Walter Scott, but this was soon contradicted. Inscriptions differing but little from it are found in several English churchyards, and the original lines probably date from the time of Edward III. (see Wheeler's *History and Antiquities of Stratford-upon-Avon*).

The ruins were repaired in 1822 at the expense of the Duke of Buccleuch, and under the superintendence of Sir Walter Scott. Washington Irving has charged the latter with having carried off 'morsels from the ruins of Melrose Abbey' to be incorporated in Abbotsford; but in reality what Irving saw was probably a number of the plaster casts of various ornaments that were made at this time. The proprietor cares diligently for the ruins, and makes repairs whenever necessary. The abbey has been painted or drawn by almost every eminent British landscape painter from Turner downwards, and has been and is every year visited by a very large number of visitors. Burns, who came here

* This 'miracle' is said to have been talked of at Rome, with the additional marvel that the man—known as 'Stumpy Thomson'—was dragged ignominiously to his grave at a horse's heels. This last circumstance is so far true that, the individual in question having died during a severe snowstorm, his coffin was dragged to the churchyard on a horse sledge.

in 1787 during his Border tour, a little before his time in admiration of Gothic architecture as in so many other things, calls it 'that far-famed glorious ruin,' and yet he must have seen part of it when it was by no means at its best. 'On opening the door,' says Grose, or rather Mr Hutchinson for him, 'it is not to be expressed the disagreeable scene which presents itself; the place is filled with stalls, in the disposition of which irregularity alone seems to have been studied; some are raised on upright beams, as scaffolds, tier above tier; others supported against the walls and pillars; no two are alike in form, height, or magnitude; the same confusion of little and great, high and low, covers the floor with pews; the lights are so obstructed that the place is as dark as a vault; the floor is nothing but the damp earth; nastiness and irregularity possess the whole scene.' Dorothy Wordsworth, who visited Melrose with her brother during their Scottish tour of 1803, when they were guided over the ruins by Scott himself, makes similar reference to the want of neatness about the church, and indeed she seems to have thought the ruin overrated. It 'is of considerable extent, but unfortunately it is almost surrounded by insignificant houses, so that when you are close to it you see it entirely separated from many rural objects; and even when viewed from a distance the situation does not seem to be particularly happy, for the vale is broken and disturbed and the abbey at a distance from the river, so that you do not look upon them as companions to each other.' This is somewhat captious, but it is probably a vague expression of the disappointment felt by most on a first visit to the place. This disappointment is an undoubted fact, though why it should exist it is more difficult to say. Possibly it may partly arise from too great expectations, but probably more from the surroundings and the heavy and ungainly 17th century vaulting of the nave. It is only by closer study and familiarity with all the beautiful details—quite lost in a general first view—that the feeling is removed.

The Queen visited the Abbey in 1867, during her stay with the Duke of Roxburghe at Floors Castle. The visit is thus described in *More Leaves from the Journal of a Life in the Highlands*:—'We went by the side of the *Eildon Hills*, past an immense railway viaduct, and nothing could be prettier than the road. The position of Melrose is most picturesque, surrounded by woods and hills. The little village, or rather town, of *Newstead*, which we passed through just before coming to *Melrose*, is very narrow and steep. We drove straight up to the *Abbey* through the grounds of the Duke of Buccleuch's agent, and got out and walked about the ruins, which are indeed very fine, and some of the architecture and carving in beautiful preservation. David I., who is described as a "sair Saint," originally built it, but the *Abbey*, the ruins of which are now standing, was built in the fifteenth century. We saw where, under the high altar, Robert Bruce's heart is supposed to be buried; also the tomb of Alexander II., and of the celebrated wizard, Michael Scott. Reference is made to the former in some lines of Sir Walter Scott's, in the *Lay of the Last Minstrel*, which describes this Border country:—

"They sat them down on a marble stone;
A Scottish monarch slept below."

And then when Deloraine takes the book from the dead wizard's hand, it says—

"He thought, as he took it, the dead man frowned."

Most truly does Walter Scott say—

"If thou wouldst view fair Melrose aright,
Go visit it by the pale moonlight."

It looks very ghostlike, and reminds me a little of *Holyrood Chapel*. We walked in the churchyard to look at the exterior of the *Abbey*, and then re-entered our carriages.

ton's *Monastic Annals of Teviotdale* (1832); *Chronica de Mailros* (Baunatyne Club, 1835); *Liber Sancte Marie de Melros* (Bannatyne Club, 1837); Scott's *Lay of the Last Minstrel*, *Monastery*, and *Abbot*; Washington Irving's *Abbotsford and Newstead Abbey*; Mrs H. B. Stowe's *Sunny Memories of Many Lands*; Billings' *Baronial and Ecclesiastical Antiquities of Scotland* (Edinb. 1852); J. D. Wade's *History of St Mary's Abbey, Melrose, etc.* (Edinb. 1861); and F. Pinches' *The Abbey Church of Melrose, Scotland* (Lond. 1879).

Melrose, Old. See MELROSE parish.

Melsetter, a mansion in Walls parish, Hoy island, Orkney, at the head of Longhope Bay, 18 miles SW of Kirkwall. Its owner is John George Moodie-Heddle, Esq. (b. 1844; suc. 1869).

Melvich, a scattered village in Farr parish, Sutherland, on the left side of the mouth of the Halladale, near the head of a small bay, 17 miles W by S of Thurso. It has a post office, with money order, savings bank, and telegraph departments, under Thurso, a good inn, and a public school. A fair was established here about 1878 for the sale of cattle and stock, on the first Wednesday of October. Immediately NNW is the fishing-village of Portskerra. Pop. of the two villages (1871) 414, (1881) 646, (1891) 493, of whom 161 were in Melvich.—*Ord. Sur.*, sh. 115, 1878.

Melville Castle, the seat of Viscount Melville, in Lasswade parish, Edinburghshire, on the North Esk's left bank, 1 mile NNE of Lasswade village and 1½ W by N of Eskbank station near Dalkeith. Built in 1786 from designs by John Playfair, it is a castellated three-storey edifice of fair white stone, with round corner towers and two-storey wings. The grounds are of great beauty. 'Melville's beechy grove' is celebrated in Sir Walter Scott's *Grey Brother*; and 11 of its beeches, 9 of its oaks, are described in *Trans. Highl. and Ag. Soc.* for 1881 as among the 'old and remarkable trees of Scotland.' Melville barony, originally called Male-ville, from Male, an Anglo-Norman baron, who was governor of Edinburgh Castle in the reign of Malcolm IV., remained in possession of his family till the time of Robert II., when it passed by marriage to Sir John Ross of HAWKHEAD. With his descendants, the Lords Ross, it continued till 1705; and, being afterwards purchased by David Rennie, it passed, by his daughter's marriage, to the eminent statesman Henry Dundas (1742-1811), who was created Viscount Melville in 1802, and whose great-grandson, Henry Dundas, fifth Viscount (b. 1835; suc. 1886), is present proprietor.—*Ord. Sur.*, sh. 32, 1857. See LASSWADE, and John Small's *Castles and Mansions of the Lothians* (Edinb. 1883).

Melville House, a four-storey mansion of 1692, with extensive and beautiful grounds, in Monimail parish, Fife, 3 miles N by W of Ladybank. It contains portraits of Gustavus Adolphus, King of Sweden, and Sir Alexander Leslie, General of the Covenanters, Field-Marshal of Sweden, and first Earl of Leven. Sir Robert Melville (1527-1621), a distinguished diplomatist in the reigns of Mary and James VI., in 1616 was raised to the peerage as Lord Melville of Monimail; and George, fourth Lord Melville, who played an active part in the Revolution times, in 1690 was created Earl of Melville—a title conjoined with that of LEVEN since 1713. At the death in 1860 of the eighth Earl of Leven, the estate went to his eldest daughter, Lady Elizabeth Jane Leslie-Melville, who in 1858 had married Thomas Cartwright, Esq., and is now owned by her son, Thomas Robert Brooke Leslie-Melville Cartwright, Esq. An ancient standing stone, ½ mile SW of the house, rises upwards of 9 feet from the ground, and measures 6 feet in circumference.—*Ord. Sur.*, shs. 43, 40, 1868-67.

Memsie, an estate, with a 17th century mansion (a farmhouse now), in Rathen parish, NE Aberdeenshire, 4 miles SSW of Fraserburgh, under which there is a post office. The estate, which belonged for more than three centuries to the Fraser family, was sold in the early part of the 19th century to Lord Saltoun. Three cairns stood on Memsie Moor, to the N of the mansion. One of them, now removed, had a considerable extent

of vitrified base; another, also removed, contained a peculiarly shaped funeral urn and a short iron-handled sword; whilst the third, still standing, rises to a height of 15 feet, and measures 60 feet in circumference at the base.—*Ord. Sur.*, sh. 97, 1876.

Memus, a place, with a Free church, in Tannadice parish, Forfarshire, $5\frac{1}{2}$ miles NE of Kirriemuir.

Menmuir, a hamlet and a parish of NE Forfarshire. The hamlet lies 5 miles WNW of Brechin, under which it has a post office.

The parish is bounded NW by Lethnot, NE by Stracathro, S by Brechin and Careston, and W by Fearn. Its utmost length, from E to W, is $6\frac{1}{2}$ miles; its utmost breadth, from N to S, is $3\frac{3}{4}$ miles; and its area is 10,228 acres, of which 10 are water. Paphric Burn, coming in from Fearn, first crosses a narrow wing of the interior, and then runs $2\frac{3}{4}$ miles east-north-eastward along the Lethnot boundary to WEST WATER, which itself goes 9 furlongs along the rest of the northern boundary; CRUICK WATER, coming in from the SW, winds $6\frac{3}{4}$ miles east-by-northward near to or along the southern boundary; and Menmuir Burn, rising $1\frac{1}{2}$ mile NW of Menmuir hamlet, runs $4\frac{1}{2}$ miles east-by-southward to Cruick Water. Along the last-named stream the surface declines to 200 feet above sea-level; and thence it rises to 978 feet at White Caterthun, 943 at Brown Caterthun, 880 at the Hill of Menmuir, 1009 at Mansworn Rig, and 1579 at Peat Hill. The district S of the hills, comprising about one-half of the entire area, and forming part of Strathmore, lay mostly, till a comparatively recent period, in a marshy condition; and, though retaining some patches of marshy ground, is now nearly all of it well-reclaimed arable plain. The predominant rocks are greywacke and Old Red sandstone. A neglected chalybeate spring on Balhall Farm was once in much repute. The soil of the lands adjacent to Cruick Water is sharp and gravelly, on the parts of the plain farther N is loamy, and on the hill-slopes is deep sandy clay. The chief antiquities are described in our article on the White and Brown CATERTHUN. BALNAMOON, noticed separately, is the only mansion. Menmuir is in the presbytery of Brechin and the synod of Angus and Mearns; the living is worth £152. The parish church was erected in 1842. There is also a Free church; and a public school, with accommodation for 135 children, has an average attendance of about 90, and a grant of nearly £100. Valuation (1884) £7993, 18s., (1893) £6774, 4s. Pop. (1801) 949, (1831) 871, (1861) 796, (1871) 761, (1881) 755, (1891) 664.—*Ord. Sur.*, sh. 57, 1868.

Menock Water. See MINNICK.

Menstrie, a village formerly in the Clackmannanshire portion of Logie parish, $2\frac{1}{2}$ miles W of Alva, 4 NW by N of Alloa, and $4\frac{3}{4}$ NE of Stirling, but since 1891 in the Clackmannanshire parish of Alva, the Boundary Commissioners having transferred to that parish the whole Menstrie district of the parish of Logie, or that part of the Clackmannanshire portion of the old parish of Logie which lay north of the river Devon. The village stands 75 feet above sea-level, on the left bank of Menstrie Burn, at the southern base of the Ochils, with DUNMYAT (1375 feet) to the NW, and Myreton Hill (1240) to the NE. Power-looms, for weaving Scotch blankets and other woollen goods, were introduced early in the 19th century; and now several factories for the manufacture of different kinds of woollen fabrics give employment to many of the inhabitants. The Dolls or GLENCHIL Distillery (1760) stands 1 mile ESE; and Menstrie besides has a post, money order, and telegraph office, a station on the Alva branch (1863) of the North British, a gaswork, an Established chapel of ease (1880), and a handsome public school (1875). A quaint old house in the village is pointed out as the birthplace of the poet Sir William Alexander (1580-1640), first Earl of Stirling, and also of Sir Ralph Abercromby (1734-1801), the hero of Aboukir Bay.—*Ord. Sur.*, sh. 39, 1869.

Menteith. See MONTEITH.

Menzies. See CASTLE-MENZIES.

Menzion Burn, a rivulet of Tweedsmuir parish, SW Peeblesshire, running 4 miles north-westward to the Tweed, at a point 7 furlongs SSW of Tweedsmuir church.

Merchiston. See EDINBURGH.

Merchiston Hall, a mansion in Falkirk parish, Stirlingshire, 1 mile WNW of the town. It was the birthplace of Admiral Sir Charles Napier (1786-1860), the hero of St Jean d'Acree.—*Ord. Sur.*, sh. 31, 1867.

Merchiston House, a mansion in Kilbarchan parish, Renfrewshire, $1\frac{1}{2}$ mile NNW of Johnstone.

Merkinch. See INVERNESS.

Merkland Cross, an old monument in Kirkpatrick-Fleming parish, SE Dumfriesshire, $2\frac{1}{2}$ miles WNW of Kirkpatrick village. It comprises a base or socket $2\frac{1}{2}$ feet high, and a slightly tapering octagonal pillar 9 feet high, and is supposed to commemorate a Master of Maxwell, Warden of the Marches, who, after a victorious skirmish with the Duke of Albany and the Earl of Douglas, was here assassinated in 1484.—*Ord. Sur.*, sh. 10, 1864.

Merkland Loch, a lake on the mutual border of Ed-drachillis and Lairg parishes, Sutherland, $4\frac{3}{4}$ miles NNW of Overscaig Inn on Loch Shin, and $21\frac{3}{4}$ NW of Lairg station, on the Sutherland section of the Highland railway. Lying 367 feet above sea-level, it extends $2\frac{1}{2}$ miles south-south-eastward; has a maximum width of $2\frac{1}{2}$ furlongs; sends off its superfluous water southward to Loch GRAM, and through that to the head of Loch Shin; and contains fine large red-fleshed trout.—*Ord. Sur.*, sh. 108, 1880.

Merrick, a mountain near the northern border of Minnigaff parish, NW Kirkcudbrightshire, 18 miles N by W of Newton-Stewart. Rising to an altitude of 2764 feet above sea-level, it is the highest summit in southern Scotland, 'while in the gaudeur and desolation of its scenery, in its crags and precipices and deeply-scored gullies, it almost approaches the mountains of the North.'—*Ord. Sur.*, sh. 8, 1863.

Merryston, West, a village in Old Monkland parish, Lanarkshire, close to Easterhouse station, on the Glasgow, Coatbridge, and Airdrie railway, and $3\frac{1}{4}$ miles W of Coatbridge. Pop. (1861) 627, (1871) 541, (1881) 534, (1891) 459.

Merse, a district on the eastern part of the Scottish Border. In modern territorial arrangement it is the largest and most southerly of the three divisions of Berwickshire, and has been computed to comprise 129,600 acres; in loose popular phraseology it is the whole of Berwickshire, including both the Lammermuir and Lauderdale districts; in proper topographical nomenclature, based on strict reference to geographical feature, it is all the low country between the Lammermuirs and the river Tweed, and includes all the Merse district of Berwickshire, with all the parts of Roxburghshire northward of the Tweed; and in ancient political designation it was the entire champaign country between the Lammermuirs and the Cheviots, included all the lowlands of Teviotdale, and was regarded as having Roxburgh town and castle for its capital. It forms, in any view, the eastern part of what were formerly termed 'the marches;' was anciently called March, as being the most important part of the marches; and gives the title of Earl of March to the Earl of Wemyss. The champaign portion of it, whether understood in the widest sense or restricted to Berwickshire, is the largest and richest tract of low country in Scotland; admits some comparison with the champaign of the Lothians, but claims superiority in consequence of that champaign being intersected by the Garleton, Edinburgh, and Pentland Hills; and, as seen from any of multitudes of high vantage grounds, looks to be a continuous expanse of parks and arable farms, yet is much diversified by gentle undulations and by a few considerable isolated heights.

The synod of Merse and Teviotdale ranks as second in the General Assembly's list; comprehends the presbyteries of Duns, Chirnside, Kelso, Jedburgh, Earlston, and Selkirk; and holds its meetings at Kelso on the second Tuesday of October, and at Melrose on the

second Tuesday of April. There is also a Free Church synod of Merse and Teviotdale, comprising the presbyteries of Duns and Chirnside, Kelso, Jedburgh, and Selkirk.

Mertonhall, a fine old house, with a large and well-wooded park, in Penninghamo parish, Wigtownshire, 3 miles WSW of Newton-Stewart. Its owner is Aubrey Paget Livingstone Curwen Boyd. His granduncle, Mark Boyd, Esq. (1805-79), was author of two amusing autobiographical works. An ancient military road traverses the estate; and a 'Roman' spear-head, 9 inches long, was exhumed on it in 1813.—*Ord. Sur.*, sh. 4, 1857.

Mertoun, a Tweedside parish in the extreme SW of Berwickshire, containing Clintmains hamlet, $1\frac{1}{2}$ mile E by N of St Boswells, under which it has a post office. It is bounded N by Earlstoun, and on all other sides by Roxburghshire, viz., NE by Smailholm, E by Makerstoun, S by Maxton, SW by St Boswells, and W by Melrose. Its utmost length, from E to W, is $4\frac{1}{2}$ miles; its breadth varies between $10\frac{1}{2}$ furlongs and $4\frac{1}{2}$ miles; and its area is 6536 $\frac{1}{2}$ acres, of which 161 $\frac{1}{2}$ are water. A small part of the parish (5 acres) on the right bank of the Tweed, east of Dryburgh Abbey and near the village of Lessudden, was transferred by the Boundary Commissioners in 1891 to the parish of St Boswells and to the county of Roxburgh. It had for long, however, been practically treated as part of this parish and county. The **TWEED**—from the influx of Leader Water to Dalcove Ferry—meanders $10\frac{1}{2}$ miles south-south-eastward and eastward along all the boundary with Melrose, St Boswells, and Maxton, though the point where it first touches and that where it quits the parish are only $5\frac{1}{4}$ miles distant as the crow flies. This part of its course is very winding, the river making several large sweeps, especially at Old Melrose, at Dryburgh, and between Mertoun Mill and the Suspension Bridge (erected by Lord Polwarth in 1880). The Mertoun bank, which is generally high, steep, and well-wooded, furnishes some fine bits of cliff scenery. Along the Tweed the surface declines to 190 feet above sea-level, and rises thence to 425 feet near Dalcove Mains, 542 near Clinthill, 588 near BEMERSYDE House, 747 near Gladwood, and 871 near Brothstone. Bemersyde Loch, situated in the NW part of Mertoun, is almost dry in summer, but in winter it affords fair wild-fowl shooting. The soil is mainly a stiff, reddish clay, and, although difficult to work, is productive and highly cultivated. Red sandstone abounds along the Tweed, and was formerly quarried. Mertoun is a well-wooded parish, especially in the S part, which contains the Hexsides beech-wood and Mertoun woods. **DRYBURGH ABBEY** and **BEMERSYDE** have been noticed separately. Mertoun House, a seat of Lord Polwarth, stands close to the Tweed's left bank, 2 miles E of St Boswells. It was built in 1702 from designs by the celebrated architect, Sir William Bruce. (See **HARDEN**.) Gladwood, in the NW of the parish, 3 miles E of Melrose, is the seat of Miss Meiklam (suc. 1882). The Queen stopped here on 22 August 1867 as she was driving from Melrose to Floors Castle. Mertoun is in the presbytery of Earlstoun and the synod of Merse and Teviotdale; the living is worth £325. Its church, built in 1658 and restored in 1820, stands in a wood near Mertoun House, $\frac{1}{2}$ mile SSE of Clintmains. It has accommodation for about 200 people, and a pair of 'joughs' hang beside the main entrance. The public school, built in 1839, and enlarged in 1872, with accommodation for 159 children, has an average attendance of about 70, and a grant of nearly £80. Pop. (1801) 535, (1831) 664, (1861) 729, (1871) 734, (1881) 682, (1891) 622.—*Ord. Sur.*, sh. 25, 1865.

Meshie Water. See **MASHIE**.

Methil, a seaport village in Wemyss parish, Fife, on the Firth of Forth, 1 mile SW of Leven, and $1\frac{1}{4}$ NE of Buckhaven. It is the terminus of the Buckhaven branch of the Edinburgh and Dundee section of the North British railway. Constituted a burgh of barony in 1662 by the Bishop of St Andrews, it has long possessed commercial importance, in consequence of its harbour being one of the best on the S coast of Fife. It

was created a port in 1892, and there is a joint Local Authority for Methil, Buckhaven, and Innerleven. The E pier was greatly injured by a storm in 1803, with the effect of choking the entrance to the harbour, but was restored in 1838 at a cost of more than £6100. A new wet dock, principally for facilitating the shipping of coals, was constructed in 1875. This was sold by the proprietor (R. Erskine Wemyss, of Wemyss, who was also its builder) to the North British Railway Company. It is fitted with hydraulic hoists and cranes, and is lighted with electricity. The formation of a new dock by the railway company was begun in 1894. It is to have an area of $6\frac{1}{2}$ acres, and is estimated to cost £200,000. An Established church, built in 1837-38 at a cost of £1030, in 1875 was raised to *quoad sacra* status, and in 1891 was improved and renovated. There are also a Free church mission station, Kirkland Industrial Society, and a post office, with money order, savings bank, and telegraph departments. A new school—the first public school in the village—has been erected at a cost of £2700. Pop. of village (1836) 508, (1861) 522, (1871) 648, (1881) 754, (1891) 1662; of *q. s.* parish (1881) 2342, (1891) 3802, of whom 579 were in Markinch.—*Ord. Sur.*, sh. 40, 1867.

Methil Hill, a village in Wemyss parish, Fife, 1 mile WNW of Methil. Pop. (1871) 480, (1881) 466, (1891) 503.

Methlick, a village and a parish of NE Aberdeenshire. The village stands, 87 feet above sea-level, on the right bank of the river Ythan, 5 miles W by N of Arnage station on the Buchan and Formartine section of the Great North of Scotland railway, $6\frac{1}{2}$ E by S of Fyvie, and $8\frac{1}{2}$ NW of Ellon. It has a post office under Aberdeen, with money order, savings bank, and telegraph departments, branches of the North of Scotland and the Town and County Banks, Lady Aberdeen's Training Home for Girls, Methlick Institute with reading and recreation rooms, a horticultural society, and fairs (now almost extinct) on the Thursday after 11 May and the Wednesday after 18 Nov.

The parish is bounded N and NE by New Deer, E and S by Tarves, W by Fyvie, and NW by Monquhitter. Its utmost length, from N to S, is $7\frac{1}{4}$ miles; its utmost breadth, from E to W, is $4\frac{3}{8}$ miles; and its area is 14,031 acres, of which $70\frac{1}{2}$ are water. Its detached Inverebrie portion, surrounded on the west by the parish of Tarves and elsewhere by that of Ellon, and comprising 881 acres, was transferred by the Boundary Commissioners in 1891 to Ellon parish. The **YTHAN** flows $2\frac{3}{8}$ miles east-north-eastward along the Fyvie boundary, $3\frac{1}{2}$ miles south-eastward through the interior, and $1\frac{1}{4}$ mile south-eastward along the Tarves boundary. At the Ebie's and Ythan's confluence the surface declines to 38 feet above sea-level, and thence it rises gently to 409 near Cairn in the south-western division of the parish, and in the north-eastern to 485 at Skillmanae Hill and 579 at Belnagoak. The tract along the Ythan is mostly clothed with wood; the south-eastern corner of the parish is occupied by the extensive and beautiful policies of Haddo House; other portions are low country finely diversified with undulations; but much of the north-eastern division is reclaimed moor. Gneiss and syenite are the predominant rocks. The soil on the lands within $1\frac{1}{2}$ mile of either bank of the Ythan is a yellow loam incumbent on gravel or rock; but further back the soil becomes poorer, being chiefly a light black mould or moorband pan; and over a considerable aggregate area is peat moss. About 2500 acres, formerly waste, have been brought into cultivation since the commencement of the 19th century; and nearly as many acres have been planted with Scotch fir and larch. A pre-Reformation chapel stood at a place still known as Chapelton; and another at Andet, dedicated to St Ninian, has bequeathed the name of Chapel Park to a neighbouring farmhouse. Dr George Cheyne (1671-1742), author of a treatise on the *Philosophical Principles of Natural Religion*, and Dr Charles Maitland (1668-1748), the introducer of vaccine inoculation into Britain, were natives of Methlick. **HADDO HOUSE**, noticed separately, is the

only mansion; and the Earl of Aberdeen is sole proprietor. In 1875 a small portion was given off to the *quoad sacra* parish of Barthol Chapel. Methlick is in the presbytery of Ellon and the synod of Aberdeen; the living is worth £330. The parish church at Methlick village was originally dedicated to St Devenick, and as last rebuilt, in 1866, is a handsome Gothic edifice, containing 894 sittings. There is also a Free church; and two public schools—Cairnorrie and Methlick—with respective accommodation for 104 and 282 children, have an average attendance of about 95 and 195, and grants of nearly £90 and £220. Pop. (1801) 1215, (1831) 1439, (1861) 2157, (1881) 2162, (1891) 1905; of *q. s.* parish (1891) 2031.—*Ord. Sur.*, shs. 87, 86, 1876.

Methven, a village and a parish of Perthshire. The village, standing 300 feet above sea-level, has a station on a small branch of the Almond Valley section (1858) of the Caledonian, $1\frac{1}{4}$ mile N by W of Methven Junction, this being $\frac{6}{8}$ miles WNW of Perth. A pleasant, neatly built place, it consists of houses held partly on feu, partly on long leases from the lordship of Methven, and has a post office under Perth, with money order, savings bank, and telegraph departments, a local savings bank (1815), a gas company, a subscription library (1790), curling and bowling clubs, and a jute and linen factory. In 1433 a collegiate church, for a provost and five prebendaries, was founded at Methven by Walter Stewart, Earl of Athole, who four years later was tortured to death at Edinburgh for the murder of his nephew, James I. An extant aisle, now the burying-place of the Smythes of Methven, is thought to have been added in the early part of the succeeding century, by Margaret, queen-dowager of James IV., as one of its stones is sculptured with the royal lion of Scotland, surmounted by a crown. The present parish church is a plain building of 1783, enlarged in 1825, and containing about 1000 sittings. In the churchyard is the tomb of General Sir Thomas Graham, Lord LYNEDOC (1750-1843), the hero of Barossa, who was born at Balgowan. There are also Free and U.P. churches, and a Roman Catholic chapel. Pop. of village (1881) 751, (1891) 657.

The parish, containing also the villages of ALMONDBANK and SCROGGIEHILL, is bounded N by Monzie, NE by Moneydie, E by Redgorton, SE by Tibbermore, S by Tibbermore, Findo Gask, and Madderty, and W by Fowlis-Wester. Its utmost length, from E by N to W by S, is $6\frac{1}{2}$ miles; its breadth varies between 1 mile and $3\frac{1}{2}$ miles; and its area is 18,113 acres, of which $72\frac{1}{2}$ are water. The Tullybeagles detached portion of the parish, which comprised 2823 acres and was almost wholly surrounded by the parish of Auchtergaven, was transferred to that parish by the Boundary Commissioners in 1891. The detached part of Monzie parish, however, situated at The Cairnies, south of the river Almond, and comprising 7953 acres, was given to Methven. The ALMOND winds $3\frac{3}{4}$ miles eastward along all the northern boundary, next $1\frac{1}{2}$ mile east-south-eastward across a north-eastern wing (the Lynedoch property), and lastly $2\frac{5}{8}$ miles south-eastward along the Redgorton border. Its rapid course between bold, rocky banks, here bare, there wooded, offers many beautiful views. Pow Water rises in two head-streams which unite near the SW corner of the parish, and pass away towards the Earn; whilst another stream, rising near the sources of the Pow, meanders $4\frac{1}{2}$ miles eastward through the interior past Methven village, and then goes 3 miles east-north-eastward along the southern boundary to the Almond. Methven Loch ($1\frac{1}{2} \times \frac{3}{4}$ furl.) lies to the W of Almondbank village. The surface of the parish is agreeably diversified with hollows and wooded slopes, sinking in the extreme E to close on 100 feet above sea-level, and rising thence west-north-westward to 431 feet near Drumcairn, 483 near Wester Carsehill, and 653 near Monabuie. Trap and Old Red sandstone are the predominant rocks. A greenstone variety of the trap, well suited for road metal, and a fine-grained pale grey variety of the sandstone, adapted for building, have both been quarried. The soil of the lower grounds, for the most part argillaceous, is elsewhere either loam or gravel; that on some of the high

grounds is moorish. About four-fifths of the entire area are regularly or occasionally in tillage; nearly one-sixth is under wood; and the rest is either pastoral or waste. Of many fine old trees the 'Pepperwell Oak' in front of Methven Castle is the finest, its height being 82 feet, its girth 23 at 1 foot from the ground, and its age 400 years at least. Prior to 1323 the lands of Methven belonged to the Mowbrays, whose ancestor, Roger Mowbray, a Norman, accompanied William the Conqueror to England. 'A branch of this family,' says the *Old Statistical Account*, 'afterwards established itself in Scotland, and became very flourishing. To Sir Roger Mowbray belonged the baronies of Kelly, Eckford, Dalmeny, and Methven, lying in the shires of Forfar, Roxburgh, Linlithgow, and Perth; but, for adhering to the Baliol and English interest, his lands were confiscated by Robert I., who bestowed Eckford, Kelly, and Methven on his son-in-law, Walter, the eighth hereditary lord-high-steward of Scotland, whose son succeeded to the crown in 1371, as Robert II., in right of his mother, Marjory Bruce, daughter of Robert I. The lordship of Methven was granted by him to Walter Stewart, Earl of Athole, his second son, by Euphemia Ross, his second wife; and after his forfeiture (1437), remained in the Crown a considerable time. It became part of the dowry lands usually appropriated for the maintenance of the queen-dowager of Scotland, together with the lordship and castle of Stirling, and the lands of Balquhider, etc., all of which were settled on Margaret, queen-dowager of James IV., who, in the year 1525, having divorced her second husband, Archibald, Earl of Angus, married Henry Stewart, second son of Andrew Lord Evandale, afterward Ochiltree, a descendant of Robert, Duke of Albany, son of King Robert II. Margaret was the eldest daughter of Henry VII. of England, in whose right James VI. of Scotland, her great-grandson, succeeded to that crown on the death of Queen Elizabeth. She procured for her third husband a peerage from her son, James V., under the title of Lord Methven, anno 1528; and, on this occasion, the barony of Methven was dissolved from the Crown, and erected into a lordship, in favour of Henry Stewart and his heirs male, on the Queen's resigning her jointure of the lordship of Stirling. By Lord Methven she had a daughter, who died in infancy, before herself. The queen died at the castle of Methven in 1540, and was buried at Perth, beside the body of James I. Lord Methven afterwards married Janet Stewart, daughter of the Earl of Athole, by whom he had a son, Henry, who married Jean, daughter of Patrick, Lord Ruthven, and was killed at Broughton by a cannon-ball from the castle of Edinburgh, in 1572, leaving a son, Henry, who died without issue, when the lands reverted to the Crown. This third Lord Methven is mentioned on the authority of Stewart's *Genealogical Account of the House of Stewart*. In 1584 the lordship of Methven and Balquhider was conferred on Ludowick, Duke of Lennox, in whose illustrious family it continued till it was purchased from the last Duke, in 1664, by Patrick Smythe of Braco.' His great-grandson, David (1746-1806), assumed the title of Lord Methven on his elevation to the bench; and his grandson, David Murray (b. 1850; suc. 1892) is the present holder. His seat, Methven Castle, on a bold acclivitous rising-ground, $1\frac{1}{4}$ mile E of Methven village, is a stately baronial pile of 1680, with extensive modern additions. In Methven Wood Wallace found a lurking place; and here, on 19 June 1306, was fought the Battle of Methven, in which a small band, under Robert Bruce, was surprised and scattered by Pembroke, the English regent. BALGOWAN, LYNEDOC, and DRONACH Haugh—the last with the grave of 'Bossie Bell and Mary Gray'—are noticed separately. This parish is in the presbytery of Perth, and the synod of Perth and Stirling; the living is worth £325. Almondbank public, Methven public, and Methven female industrial schools, with respective accommodation for 151, 138, and 119 children, have an average attendance of about 60, 95, and 45, and grants of nearly £56, £90, and £40. Valuation (1884)

£13,335, 2s., (1892) £11,271, 8s. 8d. Pop. of civil parish (1801) 2073, (1831) 2714, (1861) 2347, (1881) 1910, (1891) 1747; of ecclesiastical parish (1881) 2041, (1891) 1734.—*Ord. Sur.*, shs. 48, 47, 1868-69.

Mey, a hamlet in Canisby parish, Caithness, on the coast road from Thurso to Huna and Wick, 13 miles E by N of Thurso, and 23 NNW of Wick, under which it has a post and telegraph office, and a public school. **Mey Head**, a small promontory on the coast, terminating 2 miles SW of Stroma island, was the site of the ancient chapel of Mey; and, in consequence of that chapel having been dedicated to St John, is sometimes called St John's Point. The 'Men of Mey' are jagged rocky islets, in a dangerous sweep of sea, immediately off Mey Head, and lie submerged at full and half tide. The shallow Loch of Mey ($4 \times 2\frac{3}{4}$ furl.; 43 feet) lies on the mutual border of Dunnet and Canisbay parishes.—*Ord. Sur.*, shs. 116, 117, 1878-84.

Meyrick. See MERRICK.

Mhorgay, a small uninhabited island of North Uist parish, Outer Hebrides, Inverness-shire.

Miavaig, a hamlet in Harris parish, Outer Hebrides, Inverness-shire, on the N coast of West Loch Tarbert, 32 miles SW by S of Stornoway, under which it has a post office, with money order, savings bank, and telegraph departments.

Midbrake, an estate, with a modern mansion, in the northern section of Yell island, Shetland, 2 miles from Cullivoe.

Midcalder. See CALDER, MID.

Mid Clyth, a hamlet in Latheron parish, Caithness, near the coast, $3\frac{1}{2}$ miles NE of Lyhster. It has a post office under Wick.

Middlebie, a parish of SE Dumfriesshire, at its southern boundary containing KIRTLE-BRIDGE village, with a station on the Caledonian railway, $5\frac{1}{2}$ miles NNE of Annan, $16\frac{3}{4}$ NW of Carlisle, and $3\frac{1}{2}$ ESE of Ecclefechan, under which it has a post and telegraph office. Containing also EAGLESFIELD and Waterbeck villages, 7 furlongs and 3 miles NNE of Kirtle-Bridge station, and each with a post office under Ecclefechan, it comprises the ancient parishes of Middlebie, Pennersax, and Carruthers, united in 1609; was the seat of a presbytery from a period some time after the Reformation till 1743; and took its name, signifying the 'middle dwelling,' or 'middle station,' from a Roman camp, 5 furlongs SSE of the parish church, and midway between Netherbie in Cumberland and Overbie in Eskdalemuir, each about 10 miles distant. It is bounded NW by Tundergarth, E by Langholm and Canonbie, S by Half-Morton, Kirkpatrick-Fleming, and Annan, and W by Hoddam. Its utmost length, from E to W, is $7\frac{7}{8}$ miles; its breadth, from N to S, varies between 7 furlongs and $5\frac{3}{8}$ miles; and its area is 17,592 acres, of which $46\frac{3}{4}$ are water. Formed by two head-streams at an altitude of 570 feet, KIRTLE WATER flows $2\frac{1}{2}$ miles southward through the interior, and then winds $5\frac{1}{2}$ miles south-south-westward along the Kirkpatrick-Fleming boundary; whilst MEIN WATER, rising at an altitude of 780 feet, meanders 7 miles south-south-westward till it passes off into Hoddam on its way to join the Annan. Several burns, also rising on the northern border, run to either Kirtle or Mein Water; and Woodside or All-for-nought Burn, which traces the Half-Morton boundary, is one of the head-streams of the river SARK. Along Mein Water the surface declines to a little below 100, along Kirtle Water to a little below 200, feet above sea-level; and thence it rises, first gently, then more steeply, to 320 feet at the parish church, 809 at Howats Hill, 904 at Risip Hill, 1029 at Muckle Snab, and 1412 at Haggy Hill, whose summit, however, is 300 yards beyond the NE corner of Middlebie. The land thus, along the S and SW, is low and undulating; in the centre has considerable rising-grounds; and along the N and E is wild and hilly, terminating in lofty watersheds with Tundergarth and Langholm, and forming a transition tract between the agricultural valley of Lower Annandale and the pastoral heights of Upper Eskdale. The rocks include sandstone and great abundance of limestone, and were long sup-

posed to include coal. The soil of the lower grounds is mostly clayey, but partly loamy or gravelly, and partly of many kinds in close proximity to one another; that of the higher grounds is chiefly of qualities best adapted for sheep pasture. Less than one-fourth of the entire area is in tillage; about 230 acres are under wood; and the rest of the land is either pastoral or waste. The Roman camp, which has given name to the parish, is at Birrens, 3 miles SE of the famous Roman station on BRUNSWARK Hill; and it has left distinct remains of its fossæ, aggeres, and prætorium. In the Edinburgh Antiquarian Museum are five Roman altars, a sculptured figure of the goddess Brigantia, and three other Roman relics, found at Birrens; as well as three circular mediæval silver brooches, discovered in 1849 in the ruins of the old church of Middlebie. Several peel-houses stood within the parish; and one of them, Blacket House, still stands, in a ruinous condition, with the date 1404 and the initials W[illiam] B[ell] above its outer doorway. Families of the name of Bell long predominated in the population of the parish, inasmuch that the 'Bells of Middlebie' was a current phrase throughout Dumfriesshire, and one of the Bells of Blacket House figured in the tragical story of 'Fair Helen of Kirkconnel Lee,' noticed in our article on Kirkconnel. Burns's biographer, James Currie, M.D. (1756-1805), of Liverpool, received the rudiments of education at the parish school of Middlebie. Giving off a part to Kirtle *quoad sacra* parish, Middlebie is in the presbytery of Annan and the synod of Dumfries; the living is worth £248. The parish church, $1\frac{1}{4}$ mile NNW of Kirtle-Bridge station and $1\frac{3}{4}$ NE of Ecclefechan, was built in 1821. At Waterbeck is a U.P. church (1792), while a plentiful water-supply was introduced in 1893. Hottsbridge public, Middlebie public, Waterbeck female public, and Eaglesfield General Assembly's schools, with respective accommodation for 64, 63, 71, and 155 children, have an average attendance of about 45, 60, 35, and 110, and grants amounting to over £41, £58, £25, and £88. Pop. (1801) 1507, (1841) 2150, (1861) 2004, (1881) 1927, (1891) 1806.—*Ord. Sur.*, sh. 10, 1864.

Middle-Bridge, a small village in Blair-Athole parish, Perthshire, $1\frac{1}{2}$ mile N by E of Blair-Athole village.

Middledean, a hamlet in Dunfermline parish, Fife, $1\frac{3}{4}$ mile N by W of Inverkeithing.

Middleton, a small village in Orwell parish, Kinross-shire, $1\frac{1}{2}$ mile N by E of Milnathort.

Middleton, Kincardineshire. See FETTERCAIRN.

Middleton House, a mansion in Borthwick parish, Edinburghshire, $3\frac{1}{4}$ miles SE by S of Gorebridge. Standing 770 feet above sea-level, in a well-wooded park of 100 acres, it comprises a square central block of 1710, with later projecting wings, and fine gardens. The estate, which was bought by his father in 1842, is held now by William Ritchie, Esq. (b. 1842; suc. 1856). Middleton Inn, a dwelling-house now, on the old road from Edinburgh to Galashiels, $1\frac{1}{4}$ mile E by S of Middleton House, was formerly a somewhat important coach-stage—the occasional meeting-place of Scott and Lord Cockburn. Old Middleton village, 3 furlongs SW of Middleton House, was once a chief haunt of the Gypsies.—*Ord. Sur.*, sh. 32, 1857.

Middleton House, a mansion in Guthrie parish, Forfarshire, $1\frac{1}{4}$ mile SSW of Friockheim. Its owner is Jas. Wm. Bruce Gardyne, Esq.—*Ord. Sur.*, sh. 57, 1863.

Midholm. See MIDLEM.

Midhope Tower, a well-preserved ancient castle in Abercorn parish, Linlithgowshire, near the left bank of Midhope or Pardovan Burn, 4 miles W of South Queensferry. The residence of the Earls of Linlithgow, it consists of a square turreted tower, with an unsightly addition on its E side; and over the doorway is a coronet, with the initials J. L[ivingstone].—*Ord. Sur.*, sh. 32, 1857.

Midlem or Midholm, a village in Bowden parish, Roxburghshire, $4\frac{1}{2}$ miles E by S of Selkirk. It has an Original Secession church and a public school.

Midlock Water, a burn of Crawford parish, Lanarkshire, rising, at an altitude of 1480 feet, close to the

Peeblesshire boundary, and running $5\frac{1}{2}$ miles west-north-westward, till, after a total descent of 600 feet, it falls into the Clyde opposite Crawford village. It contains trout and grayling, and is open to the public.—*Ord. Sur.*, shs. 16, 15, 1864.

Midlothian. See EDINBURGHSHIRE and LOTHIAN.

Midmar, a parish of S Aberdeenshire, whose church stands 615 feet above sea-level, 5 miles S by E of Monymusk station on the Alford branch of the Great North of Scotland railway, 3 W by N of Echt, and 15 W of Aberdeen, under which there is a post and money order office of Midmar. A coach runs between Aberdeen and Midmar daily. The parish is bounded N by Cluny, E by Echt, S by Banchory-Ternan in Kincardineshire, and W by Kincardine O'Neil. The Boundary Commissioners in 1891 effected an exchange of territory between Midmar and Cluny parishes, with the result of connecting the detached part of Cluny with the main portion of its parish, and of transferring to Midmar an intrusive peninsula of the parish of Cluny. In order to equalize the exchange Cluny received an additional portion of Midmar, taken from the NE corner of the parish. Streams there are none of any size; but the drainage is carried partly to the Dee and partly to the Don. In the SE the surface declines to 303, in the N to 333, feet above sea-level; and thence it rises to 1607 at Green Hill on the Cluny boundary in the NW, to 773 a little way N of the church, and to 1332 at Craigour near the southern boundary, this last being one of the summits of the broad-based Hill of FARE, whose highest point (1645 feet) is just 3 furlongs beyond the SW corner of the parish. Granite and trap are the predominant rocks, the former of beautiful texture and capable of taking a fine polish. The soil on the slopes of the hills is sandy, loamy, or clayey; in much of the hollows is reclaimed peat-earth. On Sunhoney farm is a large stone circle, quite entire; and a smaller one stands close to the E of the church; whilst near the old church is the 'Coningar,' an entrenched artificial mound 30 feet high. Midmar Castle stands on the N side of the Hill of Fare, 1 mile SSE of the parish church; is said by tradition to have been founded by Sir William Wallace; and seems indeed to date from times comparatively remote. It was inhabited till the middle of the 19th century, and commands an extensive and very beautiful view to the N and the NE. Dalherrick Muir issaid to have been the scene of a battle between Sir William Wallace and the Comyns; and Douglas Burn, which traverses the Muir, is said to have got its name in commemoration of a hero who fell in the battle. William Meston (1688-1745), the burlesque poet, was a native, the son of a Midmar blacksmith. Midmar is in the presbytery of Kincardine O'Neil and the synod of Aberdeen; the living is worth £241. The parish church was built in 1787. Its ancient predecessor was dedicated to St Nidan, a dedication that must have proceeded from a Welsh source. A Free church stands close to the western, a U.P. church to the north-eastern, boundary; and Midmar and Corsindae Memorial public school, with accommodation for 140 children, has an average attendance of about 125, and a grant of over £120. Pop. (1801) 803, (1831) 1056, (1851) 1166, (1871) 1127, (1881) 1041, (1891) 1031.—*Ord. Sur.*, sh. 76, 1874.

Migdale, Loch, a pretty lake in Creich parish, Sutherland, 1 mile E of Bonar-Bridge. Lying 115 feet above sea-level, it has an utmost length and breadth of $1\frac{1}{2}$ mile and $3\frac{1}{2}$ furlongs; and contains good trout, with great abundance of pike. There is a post office of Migdale under Ardgay.—*Ord. Sur.*, sh. 102, 1881.

Migvie. See TARLAND.

Milesmark, a village in Dunfermline parish, Fife, $1\frac{1}{2}$ mile WNW of Dunfermline town. It stands conjoint with Parnock or Blackburn village, and adjoins the Elgin Colliery. Pop. of the two villages (1861) 755, (1871) 668, (1881) 439, (1891) 482.—*Ord. Sur.*, sh. 40, 1867.

Millfield. See MILLFIELD.

Milheugh. See MILLHEUGH.

Millhouse. See MILLHOUSE.

Milk, Water of, a rivulet of Annandale, Dumfriesshire, rising in Wester Kirk parish, at an altitude of 780 feet, and winding $17\frac{1}{2}$ miles south-south-westward, chiefly along the boundary between Tundergarth on the left, and Hutton, Dryfesdale, and St Mungo on the right, till, after a total descent of 640 feet, it falls into the Annan near Hoddam Castle, $3\frac{3}{4}$ miles WSW of Ecclefechan. It is fed by Corrie Water and a score of lesser burns; in its upper reaches traverses an upland vale abounding in picturesque close scenes; and in its lower ones shares largely in the mild and gentle beauties of the Howe of Annandale. It is an excellent trouting stream, with occasional salmon and sea-trout.—*Ord. Sur.*, sh. 10, 1864.

Mill Bay, a bay on the E side of Stronsay island, Orkney. Opening from the ENE, between Grice Ness and Odin Ness, it measures $1\frac{1}{2}$ mile across the entrance; penetrates the land $1\frac{1}{2}$ mile west-south-westward; is separated by an isthmus $\frac{1}{2}$ mile broad from St Catherine's Bay on the W side of the island; makes a demi-semi-circular sweep around its head; is belted with sandy beaches and benty links; and presents a beautiful appearance.

Millbrex, a post-office village in Fyvie parish, Aberdeenshire, $6\frac{1}{2}$ miles NE of Fyvie station. The *quoad sacra* parish of Millbrex is in the presbytery of Turriff and the synod of Aberdeen; the minister's stipend is £145. Its church was built in 1833 and enlarged in 1836. Pop. of *g.s.* parish (1881) 1406, (1891) 1291, of whom 292 were in Monquhitter parish.—*Ord. Sur.*, sh. 86, 1876.

Millburnbank, a hamlet in Colvend parish, Kirkcudbrightshire, 8 miles ESE of Dalbeattie.

Millburn House, a mansion in Dalsersf parish, Lanarkshire, immediately S of Dalsersf village.

Millburn Tower, a mansion, with extensive wooded grounds, in Ratho parish, Edinburghshire, $\frac{1}{2}$ mile NNW of Gogar station and $5\frac{1}{2}$ miles WSW of Edinburgh. A castellated tower, with a long range of lower building attached, it was built by the Right Hon. Sir Robert Liston, G.C.B., who lived here from 1821 to 1836. His grandniece married Sir William Foulis, Bart. of Woodhall; and their son, Sir James Liston Foulis, ninth Bart. since 1634 (b. 1847; suc. 1858), is present proprietor.—*Ord. Sur.*, sh. 32, 1857. See John Small's *Castles and Mansions of the Lothians* (Edinb. 1883).

Millearne House, a handsome modern mansion, with fine grounds, in Trinity-Gask parish, Perthshire, near the left bank of the river Earn, $3\frac{1}{2}$ miles NNW of Auchterarder.—*Ord. Sur.*, sh. 47, 1869.

Millerhill. See NEWTON, Edinburghshire.

Millerston, a village in Barony parish, Lanarkshire, near the Caledonian railway, at a point where the road from Stirling to Glasgow forks off previous to entering the city by the north and north-east, and about $3\frac{1}{2}$ miles ENE of the centre of the city. It stands, conjoint with Hogganfield village, on the NW shore of Hogganfield Loch; and has a post office under Glasgow, Hogganfield *quoad sacra* parish church, and a Free church. Pop. of Millerston and Hogganfield (1861) 532, (1881) 625, (1891) 598.—*Ord. Sur.*, sh. 31, 1867.

Millfield, a mansion in Polmont parish, Stirlingshire, $\frac{1}{2}$ mile SW of the village.

Millhead or Milnhead, an estate, with a mansion, in Kirkmahoe parish, Dumfriesshire, 4 miles N of Dumfries.

Milheugh, a mansion in Blantyre parish, Lanarkshire, on the left bank of the Rotten Calder, $\frac{1}{2}$ mile N by W of High Blantyre.

Millhouse, a hamlet in Killinan parish, Argyllshire, 3 miles SSW of Tighnabruaich. It has a post office under Greenock.

Milliken, a mansion in Kilbarchan parish, Renfrewshire, $1\frac{1}{2}$ mile WNW of Johnstone. Built in 1829, it is a handsome edifice in the Grecian style, with extensive and beautiful grounds. The estate, which formed part of the ancient barony of Johnstone, belonging to a branch of the Houston family, was purchased in 1733 by James Milliken, Esq., whose daughter and heiress married Gen. William Napier. It now belongs to Archibald M'Kenzie, Esq.—*Ord. Sur.*, sh. 30, 1866

Millikenpark, a village, with a railway station, at the mutual border of Kilbarchan and Abbey-Paisley parishes, Renfrewshire, on Black Cart Water and the Glasgow and South-Western railway, $\frac{1}{2}$ mile WSW of Johnstone station, and $4\frac{1}{2}$ miles W by S of Paisley.

Mill Loch. See LOCHMABEN.

Millnain, a village in Fodderty parish, SE Ross and Cromarty, 3 miles W by N of Dingwall.

Mill-of-Conveth. See LAURENCEKIRK.

Millport, a favourite watering-place on the island of Great CUMBRAE, Butehire. It stretches round a pleasantly sheltered crescent-shaped bay at the S end of the island, and partly overlooks the Little Cumbrae, partly commands the opening through Fairlie Roads to the Bay of Ayr, on the E side of the Firth of Clyde. By water it is $2\frac{1}{2}$ miles NW of the nearest point of the Ayrshire coast, $5\frac{1}{2}$ SSW of Largs, 13 SE of Rothesay, and 24 SSW of Greenock. Built in a crescent following the curve of the bay, and ascending the low heights, the town consists chiefly of neat two-storeyed houses, among which are numerous excellent shops, and some ornamental public buildings. Were the environs only a little less bare of trees, Millport would be one of the prettiest spots on the Clyde. As it is, it commands a lovely panorama over the Clyde and the adjacent shores of Butehire, Ayrshire, and Argyllshire; while its sheltered bay and beach help to make it one of the most desirable West Coast watering-places.

In the middle of the curve, fronting the shore, is the Garrison, a beautiful marine pavilion of the Marquis of Bute, who owns the entire island. The parish church, a handsome building surmounted by a low square tower, is situated on the rising ground behind the town. Built in 1837, it was improved in 1894, when a chancel, a vestry, and a hall were added. There are Free, U.P., and Baptist churches, and a Scottish Episcopal church, St Andrew's (1848). But the finest and most conspicuous edifice in Millport is the Episcopal College and Cathedral or Collegiate Church, founded and endowed by the late Earl of Glasgow. The Cathedral, dedicated to the Holy Spirit, was built in 1849-51 from plans by Butterfield; and in 1876 it was declared the Cathedral of Argyll and the Isles. In the Gothic style of the 13th century, it consists of a nave without aisles, choir with north aisle, which contains the organ, and terminates in a chapel used as a chapter-house; nave and chancel of nearly equal height, divided internally by an open screen of stone. It has good stained glass, 100 sittings, a graceful spire, three bells, etc. The College, which was also a retreat for aged and infirm clergymen, was closed in 1888. The whole range of buildings is situated in beautifully laid-out grounds.

Millport has a post office, with money order, savings bank, and telegraph departments, a branch of the Union Bank, a public hall (1872), a town-hall (1879), a public library, a reading-room, a gas company, a harbour company, bowling, golfing, and football clubs, a public school, etc. The harbour is a creek under Greenock, and is of small capacity. The stone pier, built chiefly at the expense of the Marquis of Bute, stands in 6 feet water at ebb, and 14 feet water at flood tide. An iron pier built in 1871-72 by the Earl of Glasgow, 275 feet long by 18 broad, and with a T-shaped head 80 feet by 25, has been left to fall into disrepair and disuse. Keppel Pier, a timber erection of 1888, was built for the convenience of residents at the upper end of the bay. Near to this pier a Marine Biological station and museum was erected at the end of 1896. Steamer communication is maintained regularly with Wemyss Bay and Largs all the year round, and with other places on the Clyde less regularly, and chiefly in summer. A good shore road encircles the island, and in summer waggonettes are constantly in readiness to make the round. The prosperity of the town depends chiefly on the summer visitors, several thousand of whom visit it annually during the season. Some of the inhabitants carry on fishing and a few minor industries. Millport, ranking as a police burgh since 1864, under the Burgh Police Act of 1892, is

governed by a provost, 2 bailies, and 6 commissioners. Sheriff small debt courts are held in the town in March and September. The municipal constituency numbered over 700 in 1895. Pop. (1839) 932, (1861) 1104, (1871) 1523, (1881) 1749, (1891) 1668, of whom 687 were males. Houses (1891) occupied 395, vacant 403.—*Ord. Sur.*, sh. 21, 1870.

Millseat, a hamlet in King Edward parish, Aberdeenshire, 6 miles NE of Turriff. It has a Congregational chapel built in 1831.

Milltimber, a station in Peterculter parish, Aberdeenshire, on the Deeside railway, $6\frac{1}{2}$ miles WSW of Aberdeen, under which there is a post office.

Milltown. See MILTON.

Milnathort, a little market town in Orwell parish, Kinross-shire, lying 400 feet above sea-level, near the left bank of North Queich Water, and within 1 mile of the NW corner of Loch Leven. Its station on the North British railway is $1\frac{1}{2}$ mile N by E of Kinross station, and $13\frac{1}{2}$ miles WSW of Ladybank Junction. It stands amid a fine tract of country, screened by the Lomond Hills on the E, and by the Ochils on the N and W; and comprises fine well-built streets, which are lighted with gas from the Kinross and Milnathort gas-works (1835). A gravitation water scheme, including a reservoir capable of holding 5,000,000 gallons, was inaugurated in 1892. One of the principal attractions of the place is the public hall, surmounted by a spire with a clock. There are also a post office, with money order, savings bank, and telegraph departments, a branch of the Clydesdale Bank, 2 hotels, a town-hall, 2 schools, a mission hall, a Young Men's Christian Association, etc. A handsome bridge across the Queich was built about 1850, in place of an old inferior structure. Orwell parish church, on a neighbouring eminence, was built in 1729, and has since been completely renovated. It has two large and very handsome stained-glass windows. There are also a Free church and a U.P. church, the latter of which, erected in 1868 at a cost of £3000, is a fine Gothic building with 700 sittings and a spire 125 feet high. The poet Walter Chalmers Smith, D.D., LL.D., was Free Church minister from 1853 till 1858. The only grain market for the county of Kinross is now held at Milnathort, where weekly stock sales by auction take place every Monday. There are also spring and autumn sales of stock on the last Wednesday in April, the first, second, and third Wednesdays in May, the second and third Wednesdays in August, the third and fourth Wednesdays in September, and the second and third Wednesdays in October. Cotton-weaving was long carried on, but went into decline; while the weaving (hand-loom) of woollen shawls and plaids, introduced in 1838, has always continued to prosper. There are also a wool-spinning mill and a linen power-loom factory. Affairs are administered by a committee of the inhabitants. Pop. (1801) 959, (1831) 1772, (1861) 1476, (1871) 1312, (1881) 1269, (1891) 1133, of whom 643 were females. Houses (1891) inhabited 305, vacant 25, building 4.—*Ord. Sur.*, sh. 40, 1867.

Milnearn. See MILEARNE.

Milnefield. See MYLNEFIELD FEUS.

Milne-Graden, a modern mansion, with extensive grounds, in Coldstream parish, Berwickshire, on the left bank of the river Tweed, $3\frac{1}{4}$ miles NNE of Coldstream town. Anciently held by the Gradens, and afterwards by the Kers, the estate now belongs to Miss Milne-Holme.—*Ord. Sur.*, sh. 26, 1864. See PAXTON HOUSE.

Milngavie (popularly *Millguy*), a small town in New Kilpatrick parish, Dumbartonshire. The part of the parish containing Milngavie was in the county of Stirling until 1891, when the Boundary Commissioners placed the parish wholly in Dumbartonshire. The town stands 190 feet above sea-level, on Allander Water, at the terminus of the Glasgow and Milngavie branch (1863) of the North British railway, by road being $5\frac{1}{2}$ miles ENE of Duutocher, $4\frac{1}{2}$ N by W of Maryhill, and 7 ($9\frac{1}{2}$ by rail) NNW of Glasgow. It presents an irregular and somewhat straggling, yet

prosperous aspect; consists chiefly of plain, two-storey houses, many of them whitewashed; carries on extensive industry in a print-work, an extensive paper-mill with railway connection, two bleach-fields, a dyework, a distillery, etc.; and has a hurgh hall, a branch of the Bank of Scotland, a post office under Glasgow, with money order, savings bank, and telegraph departments, a hotel, a gaswork, a mechanics' institution, etc. A. B. Stirling (1811-81), the self-taught naturalist, was a native. An Established church, built as a chapel of ease about 1840 at a cost of £1500, in 1873 was raised to *quoad sacra* status. There are also a U.P. church (1799), an Episcopalian mission room, and St Joseph's Roman Catholic church (1872; 300 sittings). A public and a Roman Catholic school, with respective accommodation for 477 and 138 children, have an average attendance of about 425 and 115, and grants amounting to over £438 and £104. Milngavie is a police hurgh, and under the Burgh Police Act of 1892 it is governed by a provost, 2 bailies, and 6 commissioners. A seal for the burgh was adopted in 1893. Pop. of town (1831) 1162, (1861) 1895, (1871) 2044, (1881) 2636, (1891) 3103, in 599 houses; of *quoad sacra* parish (1881) 2927, (1891) 3527.—*Ord. Sur.*, sh. 30, 1866.

Milnhead. See MILLHEAD.

Milnholm Cross. See CASTLETON, Roxburghshire.

Milntown or **Milton** of **New Tarbat**, a village in Kilmuir Easter parish, NE Ross and Cromarty, 3 furlongs SSE of Kildary or Parkhill station on the Dingwall and Tain section of the Highland railway. It has fairs on the first Tuesday of January, the second Tuesday of March, the second Tuesday of May, and the last Tuesday of October, all old style.—*Ord. Sur.*, sh. 94, 1878.

Milrig, an estate, with a mansion, in Galston parish, Ayrshire, 2½ miles S of the town of Galston. Its owner is Colonel John Spot Tait, Esq. (b. 1843; suc. 1881).—*Ord. Sur.*, sh. 22, 1865.

Milton, a village in Old Kilpatrick parish, Dumbar-tonshire, adjacent to the SE side of Duntocher. It has a cotton-factory, built in 1821 on the site of the Dal-notter iron-works; and it shares generally in the busi-ness of Duntocher. Pop. (1861) 366, (1871) 420, (1881) 499, (1891) 418.

Milton, a village in Old Kilpatrick parish, Dumbar-tonshire, at the E base of Dumhuck Hill, 2 miles E by S of Dumbar-ton. There is a large paper-mill. It was at the Milton print-works, long since stopped, that the first power-loom in Scotland was erected. Milton has also an institute, presented by the late Mr White of Overtoun.

Milton or **Milton of Campsie**, a village in Campsie parish, S Stirlingshire, on the banks of the Glazert, with a station on the Blane Valley section of the North British railway, 1½ mile N of Kirkintilloch, 2 miles ESE of Lennoxton, and 9½ NNE of Glasgow. It is in the near vicinity of two print-works, Kincaid (1785) and Lillyhurn (1831); shares in the industry of a popu-lous and productive district; and has a post office under Glasgow, with money order, savings bank, and telegraph departments. There is an Established chapel of ease and a public school. Pop. (1861) 562, (1871) 714, (1881) 555, (1891) 664.—*Ord. Sur.*, sh. 31, 1867.

Milton, a fishing village in St Cyrus parish, Kin-cardineshire, 1¾ mile SW of Johnshaven. It once was a place of some importance, hut since about 1790 has suffered much injury from encroachment of the sea and other causes, and now is both small and ruinous. A strong chalybeate spring in its vicinity enjoyed for some time considerable medicinal repute.

Milton, a hamlet in Fowlis-Wester parish, Perthshire, 3 miles ENE of Crieff.

Milton, a village in Urr parish, Kirkcudbrightshire, 7 miles N by E of Dalbeattie. Milton Loch, 3 furlongs WNW, lies at an altitude of 420 feet; is ¾ mile long, and varies in breadth between 1½ and 3¾ furlongs; abounds with pike and perch; and sends off a streamlet southward into confluence with Kirkgunzeon or Dal-beattie Burn.—*Ord. Sur.*, sh. 9, 1863.

Milton, an estate, with a hamlet, in Carmyllie parish, Forfarshire, 6 miles W by N of Arthroath. It forms part of a district which was disjoined from St Vigeans in 1606.

Milton-Bridge, a hamlet in Glencorse parish, Edin-burghshire, 2 miles NNE of Penicuik. It has a post office, with money order and savings bank departments.

Milton-Bridge. See MILTON-LOCKHART.

Milton-Brodie, a quadrangular mansion, sheltered by tall trees, in Alves parish, NW Elginshire, 1¾ mile NE of Kinloss station and 5¼ miles SSW of Burghead. Its owner is John William Brodie-Innes.—*Ord. Sur.*, sh. 95, 1876.

Milton-Lockhart, a mansion in Carluke parish, Lan-arkshire, near the right bank of the winding river Clyde, 3 miles WSW of Carluke town. A modern edifice, in the old Scottish Baronial style, after designs by W. Burn, it has grounds of singular beauty, backed by deep ravines and wooded hills. The estate, which belonged to the Whitefords in the 16th and 17th cen-turies, is held now by Major-Gen. David Blair Lock-hart (b. 1829; suc. 1876). Milton Bridge, over the Clyde, is a three-arch structure, on the model of the old bridge of Bothwell, and was erected early in the 19th century.—*Ord. Sur.*, sh. 23, 1865.

Milton, New, a hamlet in Glencorse parish, Edinburgh-shire, 1½ mile NNE of Auchendinny station.

Milton of Balgonie. See BALGONIE.

Milton of Dunipace. See DUNIPACE.

Milton, Whins of, a village in St Niniaus parish, Stirl-ingshire, 2 miles S of Stirling. Pop. (1871) 481, (1881) 487, (1891) 403.

Minard Castle, a mansion, with picturesque grounds, in Kilmichael-Glassary parish, Argyllshire, on the W side of Loch Fyne, 8 miles NE of Lochgilphead and 13½ SSW of Inveraray. There are a post office of Minard, with money order, savings bank, and telegraph depart-ments, a Free church, and a large and elegant public school, erected in 1871 by the late proprietor, John Pender, Esq., M.P. The estate now is owned by Thomas Lloyd, Esq. (h. 1835).—*Ord. Sur.*, sh. 37, 1876.

Minch or **North Minch**, the belt of sea between the mainland of Scotland and the northern portion of the Outer Hebrides. Extending in a north-north-easterly direction, and forming a continuation of the Little Minch outward to the North Sea, it connects at the SE corner with the channels between the mainland and Skye; has a width of from 23 to 45 miles; and is flanked, on all the E side, by the mainland parts of Ross and Cromarty and Sutherland, on all the W side by Lewis island, inclusive of the northern part of Harris. Its name signifies 'the stormy sea;' its currents are regular and very rapid; its depths are mostly great, and generally so variable as to indicate a very rugged bottom; and its water is exceedingly salt.

Minch, Little, the belt of sea between Skye island and the middle portion of the Outer Hebrides. It opens from the expanse of the Atlantic between the mainland of Scotland and the southern portion of the Outer Hebrides; extends north-north-eastward into junction with the Minch; has a breadth of from 14 to 20 miles; and is flanked, on the W side, by Benbecula, North Uist, and the southern part of Harris.

Minchmoor, a broad-based, heather-clad mountain on the mutual border of Traquair parish, Peeblesshire, and Kirkhope parish, Selkirkshire, 2 miles SE of Traquair village. It rises to a height of 1856 feet above sea-level, and forms part of the watershed between the Tweed and the Yarrow. By the wild old road across it, from Selkirk to Pechles—long traversed by the mail—Montrose's cavaliers fled helter-skelter from Philiphaugh; and near the top, on the Tweed side, is the famous Cheese Well, where every passer-by of old was wont to drop in bits of his provisions as votive offerings to the fairies who made this their favourite haunt. The view from the top and its many associations form the theme of the late Dr John Brown's delightful *Minchmoor* (Edinb. 1864).—*Ord. Sur.*, sh. 24, 1864.

Mindork Castle. See KIRKOWAN.

Mingala, an island of Barra parish, Outer Hebrides, Inverness-shire, $\frac{3}{4}$ mile NNW of Bernera, $1\frac{1}{2}$ mile SSW of Pabba, and 9 miles SSW of the nearest point of Barra island. It extends $2\frac{1}{2}$ miles north-north-eastward; measures $1\frac{1}{2}$ mile in extreme breadth; rises, along the W side, in almost mural cliffs, the retreat of innumerable sea-fowl, to an altitude of 900 feet above sea-level; and is mostly pastoral, but contains some arable land. Pop. (1861) 139, (1871) 141, (1881) 150, (1891) 142, of whom 140 were Gaelic-speaking.

Mingary Castle, an ancient fortalice in Ardnarmurchan parish, Argyllshire, on the S shore of the Ardnarmurchan peninsula, at the mouth of Loch Sunart, looking along the Sound of Mull, and confronting the north-western extremity of Mull island, 6 miles N by W of Tobermory and 20 WSW of Salen. Crowning a scarped rock, which rises 24 feet murally from the sea, it measures more than 200 feet in circumference; and has an irregular hexagonal outline, adapted to the configuration of the ground, being broadest on the landward side, where it is defended by a dry ditch. Its high, strong, battlemented, outer wall is seemingly of ancient construction, little fitted to resist artillery; but a three-storey house and some offices are said to have been erected so late as the beginning of the 18th century. Anciently the seat of the MacLans, a clan of Macdonalds, descended from an early Lord of the Isles, it twice was occupied by James IV.—first in 1493, when he issued a charter hence; next in 1495, when he received the submission of the chieftains of the Isles. It was, partly at least, demolished in 1517 by the Knight of Lochalsh; sustained a siege in 1588 by the Macleans, but was relieved by a Government force; and was captured in 1644 by Colkitto, who made it the prison of a small body of Covenanters, including three ministers. Now, though strictly a ruin, it is still in a state of tolerable preservation.

Minginish. See BRACADALE.

Minishant, a hamlet in Maybole parish, Ayrshire, $3\frac{1}{2}$ miles NNE of Maybole town, under which it has a post office.

Minnick Water, a rivulet of Sanquhar parish, Dumfriesshire, rising at an altitude of 1740 feet, on the north-western slope of Lowther Hill, close to the Lanarkshire boundary, and 9 furlongs SSE of Wanlockhead. Thence it runs $6\frac{3}{4}$ miles west-south-westward, receiving in its progress three tributaries, each nearly equal to itself in volume, and falls into the Nith, just below Minnick-Bridge village, 2 miles SE of Sanquhar. Some wildly romantic spots, interesting both for their own scenery and for association with traditions of the Covenanters, are in its banks; and a road goes up all its vale to Wanlockhead, leading thence to Leadhills and Upper Strathclyde.—*Ord. Surv.*, sh. 15, 1864.

Minnick, Water of. See MINNOCH.

Minnichive. See MONAIVE.

Minnigaff (Gael. *monadh-dubh*, 'dark mountainous region'), a hamlet and a parish in the extreme W of Kirkcudbrightshire. The hamlet stands on a low piece of ground at the influx of Penkill Burn to the Cree, $\frac{3}{4}$ mile N of the post-town, Newton-Stewart. Before that town had come into existence this was a place of some importance, for Symson describes it in 1684 as having 'a very considerable market every Saturday, frequented by the moormen of Carrick, Monnygaffe, and other moor places, who buy there great quantities of meal and malt.'

The parish, containing also BLACKCRAIG village and the CREEBRIDGE suburb of Newton-Stewart, is bounded NW and N by Barr in Ayrshire, NE by Carsphairn and Kells, SE by Girthon and Kirkmabreck, and SW by Penninghame in Wigtownshire. Its utmost length, from N to S, is $16\frac{1}{2}$ miles; its utmost breadth, from E to W, is $13\frac{1}{2}$ miles; and its area is $139\frac{1}{2}$ square miles or 89,442 $\frac{1}{2}$ acres, of which 1312 are water. Issuing from Loch Moan ($6\frac{1}{2} \times 3$ furl.; 675 feet), the CREE winds $30\frac{1}{2}$ miles south-westward and south-south-eastward along the Ayrshire and Wigtownshire border to within $2\frac{1}{2}$ miles of the head of Wigtown Bay, up from which it is

navigable for several miles. During this course it is joined by the Water of MINNOCH, entering from Ayrshire, and running $10\frac{1}{2}$ miles southward; Penkill Burn, rising at an altitude of 1970 feet, and running $8\frac{1}{2}$ miles south-south-westward; and Palnure Burn, rising at an altitude of 612 feet, and running $11\frac{1}{2}$ miles south-south-westward (for the last $1\frac{1}{2}$ mile along the Kirkmabreck boundary). The Water of TROOL flows $1\frac{1}{2}$ mile west-south-westward from wooded Loch Trool ($1\frac{1}{2}$ mile \times $1\frac{1}{4}$ furl.; 250 feet) to the Water of Minnoch; and the DEE, issuing from lone Loch Dee (7×4 furl.; 750 feet), runs first $\frac{1}{2}$ mile north-eastward through the interior, then $6\frac{3}{4}$ miles east-south-eastward along the boundary with Kells. Lakes, other than those already noticed, are Loch GRENOCH (2 miles \times 3 furl.; 680 feet) at the Girthon boundary, Loch ENOCH ($6\frac{1}{2} \times 4\frac{1}{2}$ furl.; 1650 feet) at the Ayrshire boundary, the three Lochs of the DUNGEON, Loch Neldricken, Loch Valley, etc.; and streams and lakes alike afford capital angling. The surface is everywhere hilly or mountainous, chief elevations from S to N being CAIRNSMORE of FLEET (2331 feet), Larg Hill (2216), Lamachan Hill (2349), Benyellary (2360), MERRICK (2764), and Kirrieroch Hill (2562), of which Merrick is the loftiest summit S of the Grampians. The general landscape is described by Sir A. Geikie as 'one wild expanse of mountain and moorland, roughened with thousands of heaps of glacial detritus, and dotted with lakes enclosed among these rubbish mounds.' Indeed, with the exception of a warm nook of about 6 square miles in the extreme S, and of some narrow strips of carse-land along the principal streams in the W, the whole region is one vast sheep-walk, where 'heath and moss, rocks and stones without end, and jagged hills, with here and there bright verdant patches on their rugged sides, form the chief features of the scenery.' Large part of this wild district at one time formed part of the far-reaching Forest of Buchan—a name preserved in that of Buchan farm, the house of which stands on the N bank of Loch Trool, and which to the shepherds is known as the 'Four Nines,' from its erroneously estimated area of 9999 acres. The prevailing rocks are clay slate and greywacke, of Upper Silurian age, with intrusive masses and boulders of granite; and nowhere in the South of Scotland are the traces of glaciation to be witnessed on a grander scale than in the Merrick uplands. Veins of lead ore, from 2 to 5 feet thick, occur on the estates of Machermore and Kirroughtree; and at East Blackcraig, on the former property, lead and zinc still are mined, though in much less quantity than formerly. The soil of the low grounds along the Cree and Palnure Burn is mostly a tenacious clay, interspersed with patches of moss; on the other low grounds is dry and gravelly, abounding with stones; and elsewhere is very various. Little more than one-fifteenth of the entire area is in tillage; some 600 acres are under wood; and the rest of the land is pastoral or waste. There is an extensive sawmill and wood work, which employs a large number of the inhabitants. The chief antiquities are GARLIES Castle, three mote hills, several sepulchral tumuli, a standing stone, and some cairns. In 1306 Robert Bruce, with 300 followers, is said to have routed 1500 English under the Earl of Pembroke near the head of Loch Trool, at whose foot a small party of Covenanters were surprised and slain by a troop of dragoons on a winter Sabbath morning of 1685. Alexander Murray, D.D. (1775-1813), the self-taught Orientalist, was the son of a Minnigaff shepherd; Lieut.-Gen. the Hon. Sir William Stewart, who served in seventeen campaigns under Nelson and Wellington, and died in 1827, resided for several years at Cumloden, and is buried in the churchyard, along with John Mackie, Esq. of Bargaly, and James, his son, both Liberal M.P.'s for the county; and Lieut.-Col. Patrick Stewart, C.B. (1832-65), was born at Cairnsmore. Mansions, all noticed separately, are BARGALY, CAIRNSMORE, CUMLODEN, KIRROUGHTREE, and MACHERMORE; and the Earl of Galloway owns more than half of the parish. Giving off a portion to Bargrennan *quoad sacra* parish, Minnigaff is in the presbytery of Wigtown and the synod of Galloway; the living

is worth £292. The parish church, on a lovely spot overlooking Minnigaff hamlet, the town of Newton-Stewart, and the confluence of the Cree and the Water of Minnoch, is a good Gothic edifice of 1836, with tower, organ, three fine memorial stained-glass windows, and a mural tablet to a former minister, and was repaired in 1893. Creebridge and Stronard public schools, with respective accommodation for 116 and 100 children, have an average attendance of about 105 and 95, and grants of over £106 and £96. Pop. (1801) 1609, (1831) 1855, (1861) 1804, (1871) 1529, (1881) 1587, (1891) 1425, of whom 406 were in Creebridge, and 1216 in the ecclesiastical parish.—*Ord. Sur.*, shs. 4, 8, 1857-63.

Minnishant. See MINNISHANT.

Minnoch, Loch. See KELLS.

Minnoch, Water of, a troutful rivulet of Ayr and Kirkcudbright shires, rising, at an altitude of 1980 feet, on the western slope of Shalloch of Minnoch (2520 feet), and running 14½ miles south-by-westward through Barr and Minnigaff parishes, till, after a total descent of 1850 feet, it falls into the Cree at a point 7¾ miles NNW of Newton-Stewart. Its course, except near the end, lies through a moorish upland country.—*Ord. Sur.*, sh. 8, 1863.

Minnock Water. See MINNICK WATER.

Minnyhive. See MONIAIVE.

Minsh. See MINCH.

Mintlaw, a village near the western border of Longside parish, Aberdeenshire, ¾ mile E by S of Mintlaw station on the Peterhead branch of the Great North of Scotland railway, this being 9 miles W by N of Peterhead, 4 E by N of Maud Junction, and 35¼ N by E of Aberdeen. Founded during the first quarter of the 19th century, it has a post office, with money order, savings bank, and railway telegraph departments, a branch of the Town and County Bank, two hotels, and a public school. Pop. (1831) 222, (1861) 240, (1871) 413, (1881) 435, (1891) 402.—*Ord. Sur.*, sh. 87, 1876.

Minto (*Cym. maen-tal*, 'the high stone'), a village and a parish of Roxburghshire. The village, with a post office, lies 1¼ mile N by W of Denholm, the birthplace of the poet Leyden, and 1½ mile E of Hassendean station on the Waverley route of the North British, this being 4¼ miles ENE of Hawick. The parish church here, built in 1831 from designs by William Playfair, is a handsome Gothic building, with a square tower.

Minto parish is bounded N by Lilliesleaf, NE by Ancrum, SE by Cavers, and SW by Wilton. Its utmost length, from E to W, is 4½ miles; its utmost breadth is 3½ miles; and its area is 5620½ acres, of which 19½ are water. It embraces a considerable portion of the suppressed parish of Hassendean. The river TEVIOT flows 4½ miles north-eastward along or close to the Cavers boundary, and from Minto is joined by HASSENDEAN and Grindin Burns. Along the riverside extends a strip of haugh, from 1 to 1½ furlong in breadth, and less than 300 feet above sea-level. It is flanked by a steep bank, behind which the ground slowly rises to the northern boundary. Towards the western extremity of the parish is Hassendean Glen, near the foot of which is a fine petrifying spring. It also contains the spacious mansion-house of Colonel Dickson of Hassendeanburn and Chatto. Towards the eastern part of the parish there is another dell—Minto Glou—of great and attractive beauty. It is intersected throughout its entire length by well-kept walks, and contains many larch trees of so great a size that they are only rivalled by those in the Duke of Atholl's plantations at Dunkeld. These larches were among the first imported into Scotland. At the head of Minto Glen an artificial lake was formed in 1735, and upon a bank rising from its margin Minto House is situated. Opposite the mansion-house stood the old parish church and churchyard, but when the present church was built the burial-ground was converted into a flower-garden.

To the W of Minto House rise the Hills of Minto, 'as modest and shapely and smooth as Clytie's shoulders.' They are 905 and 836 feet high, and, owing to their position, are easily seen from almost every point.

Minto Crags, which form the chief natural feature of the parish, lie E of the Minto Hills. They are a large mass of trap rock, rising from a fairly level piece of ground, and attaining a height of 729 feet. The top is most irregular in outline, while the face, overgrown with ivy, grass, and wild-flowers, is formed of shelving projections, one above the other. Huge blocks, detached from the cliffs above, lie scattered along the bottom of the Crags. Clumps of trees grow, both at the top and foot of the cliff, as well as on the face, wherever they can obtain root-hold. 'The view from the Crags is highly diversified and beautiful. The windings of "the silver Teviot," through a pleasing vale, can be traced for many a mile, the prospect on one side being terminated by the fine outline of the Liddesdale Hills, along with those on the confines of Dumfriesshire, and in the opposite direction by the smoother and more rounded forms of the Cheviots. Ruberslaw rises immediately in front, with Denholmdean on the right, and the narrow bed of the Rule on the left; while behind, to the N, are distinctly seen the Eildon Hills, the Black Hill, Cowdenknowes, Smailholm Tower, Hume Castle, and the Lammermuirs.' The summit of the Crags is crowned by a ruin, called Fatlips Castle, which is supposed to have been the stronghold of Turnbull of Baruhills, a well-known Border freebooter. A small platform, a little way below the top, is called Barnhill's Bed. It was used, in all probability, as a point of outlook. Sir Walter Scott alludes to it in the following lines from *The Lay of the Last Minstrel*:—

'On Minto Crags the moonbeams glint
Where Barnhill hewed his bed of flint;
Who hung his outlawed limbs to rest
Where falcons hang their giddy nest,
'Mid cliffs from whence his eagle eye
For many a league his prey could spy;
Cliffs, doubling, on their echoes borne
The terrors of the robber's horn.'

Nearly two-thirds of the parish are in tillage, the other one-third being pasture land. In the E part of Minto are many plantations, the property of the Earl of Minto. Near the Teviot the soil is light loam; towards the N it is clay. The Crags are formed of eruptive rocks, and in Hassendean Glen is coarse red sandstone conglomerate. The North British railway traverses the parish for 3½ miles, and has a station at Hassendean.

The chief landowners are the Earl of Minto, 'o whom belong two-thirds of the parish; the Duke of Buccleuch, Mrs. E. H. Maxwell Blair, of Teviotbank, and Colonel Dickson of Hassendeanburn. The principal residences are Minto House, Teviotbank, and Hassendeanburn. The first of these is the seat of Lord Minto, to whom this property gives the title of Baron and Earl in the peerage of the United Kingdom. Some time before his elevation to the bench as Lord Minto in 1705, Gilbert or 'Gibbie' Elliot (1651-1718), a grandson of Gilbert Elliot of STOKS, purchased the Minto estate. He had been created a baronet in 1700. The second Sir Gilbert (1693-1766), lord justice-clerk, was an accomplished Italian scholar, and formed a large library at Minto House. The third Sir Gilbert (1722-77) sat as member of Parliament, first for Selkirkshire and then for Roxburghshire. He was a poet of some merit; and his sister, Jean Elliot (1727-1805), was author of that immortal lyric, *The Flowers of the Forest*. The fourth Sir Gilbert (1751-1814) held several political and diplomatic posts, and, on account of his services, was raised to the peerage as Baron Minto in 1797, and as Earl of Minto and Viscount Melgund in 1813. Gilbert John Elliot Murray Kynynmound, present and fourth Earl (b. 1845; suc. 1891), is colonel commanding South of Scotland Volunteer Brigade, and was military secretary to the Marquis of Lansdowne when governor-general of Canada, 1833-86. His mother, Emma Eleanor Elizabeth Hislop (1824-82), was author of *Memoirs of the Right Hon. Hugh Elliot; Life and Letters of Sir Gilbert Elliot, first Earl of Minto; Lord Minto in India; Border Sketches*, etc. See LOCHGILLY and MELGUND.

Minto House, ½ mile NE of the village, is a handsome

four-storeyed building, erected in 1814 from designs by Archibald Elliot, Esq., architect. It contains a valuable library and an interesting museum.

The earliest notices of the barony of Minto occur in the 14th century, at which time it was in the possession of the ancient and powerful family of the Turnbulls. It passed from them to the Stewarts, and at length was sold to Sir Gilbert Elliot, the great ancestor of the present family of Minto. A curious circumstance regarding the church of Minto is, that in 1374 it belonged to the diocese of Lincoln. Minto is in the presbytery of Jedburgh and synod of Merse and Teviotdale; the living is worth £429. The public school, with accommodation for 106 children, has an average attendance of about 75, and a grant of nearly £80. Pop. (1801) 477, (1831) 481, (1861) 430, (1871) 431, (1881) 433, (1891) 430.—*Ord. Sur.*, sh. 17, 1864.

Mistylaw Hills. See LOCHWINNOCH.

Miulie, Loch, or Loch a' Mhuilinn, a small lake in Kilmorack parish, Glenstrathfarrer, NW Inverness-shire, 15 miles WSW of Breathy. An expansion of the river FARREB, it lies at an altitude of 416 feet, has an utmost length and breadth of 7 and 3 furlongs, affords good trout-fishing, and has near its foot a shooting-lodge of Lord Lovat. To an islet in it the old Lord Lovat is said to have retired after the Battle of Culloden, and from a neighbouring mountain to have surveyed the conflagration of his mansion and the houses of his clansmen.—*Ord. Sur.*, shs. 82, 83, 1882-81.

Moan, Loch, a lake on the mutual border of Barr parish, Ayrshire, and Minnigaff parish, Kirkeudbrightshire, $7\frac{3}{4}$ miles ENE of Barrhill station on the Girvan and Portpatrick section of the Glasgow and South-Western railway. Lying 675 feet above sea-level, it has an utmost length and breadth of $6\frac{1}{2}$ and 3 furlongs; is deeply indented in outline and studded with four islets; contains large pike; and sends off the river CREE to the head of Wigton Bay.—*Ord. Sur.*, sh. 8, 1863.

Mochrum (Gael. *magh-dhrum*, 'ridge of the plain'), a village and a coast parish in Machers district, SE Wigtonshire. The village, 2 miles NNE of Port-William and 8 SW of Wigton, is a pleasant little place, with two inns, a post office, the manse and parish church, a public school, and a row of some twenty houses.

The parish, containing also PORT-WILLIAM and ELDRIG villages, is bounded NW by Old Luce, N by Kirkcowan, E by Kirkinner, SE by Glasserton, and SW by Luce Bay. Its utmost length, from NNW to SSE, is $11\frac{1}{4}$ miles; its utmost breadth is $5\frac{3}{8}$ miles; and its area is 40 square miles or 25,601 acres, of which $863\frac{1}{2}$ are foreshore and $666\frac{3}{4}$ water. The coast-line, $9\frac{3}{4}$ miles long, over the first mile from the Glasserton boundary rises steeply to a height of 100 feet sheer out of the water, but elsewhere is fringed by an old sea-margin of flat smooth gravel, 50 yards broad, with high grassy braes beyond. A number of burns rising in the interior run south-south-westward to Luce Bay; but the drainage is partly carried eastward to the Bladenoch by head-streams of the Water of Malzie. Of eleven lakes and lakelets, mostly in the N and NW, the principal are White Loch ($4\frac{3}{4} \times 1\frac{3}{8}$ furl.), ELDRIG Loch (4×1 furl.), Mochrum Loch ($1\frac{1}{2}$ mile \times 3 furl.), and Castle Loch ($1\frac{1}{4} \times \frac{1}{2}$ mile). The last two, $6\frac{1}{2}$ and 8 miles NNW of Port-William, contain a number of islets, with which, and its wooded headlands, Mochrum Loch has no common beauty. The surface is everywhere hilly, chief elevations from N to S being Craigeach Fell (426 feet), the Doon of May (457), Mochrum Fell (646), Bannan Hill (500), Eldrig Fell (432), Milton Fell (418), and East Bar (450)—heights that command a far-away view to the Isle of Man and the mountains of Ireland and Cumberland. Thus, with but small aggregate of level land, Mochrum comprises large tracts of rocky eminence and mossy swamp, bleak and barren in aspect, and thinly interspersed with patches of good dry arable land. The predominant rocks are Silurian, and the soil along much of the seaboard is very fertile loam, either light or strong and deep; on the lands towards the centre is thin and

stony; and on the higher grounds is moorish. Some 200 acres are under wood; and a large extent of moorland has been brought into cultivation. The lands of Mochrum were given in 1368 to Thomas Dunbar, second son of Patrick, Earl of March. The Dunbars, his descendants, who took title from Mochrum, and had their seat at the Old Place or Castle of Mochrum, were a somewhat distinguished family. Cadets of the house founded the families of Dunbar of Clugston and Dunbar of Baldoon. Gavin Dunbar, son of Sir John Dunbar of Mochrum, became prior of Whithorn about the year 1504, was afterwards made preceptor to James V., and became in 1524 Archbishop of Glasgow, in 1528 Lord-Chancellor of Scotland, and in 1536 one of the Lords of Regency during the king's visit to France. The family was raised to the baronetcy in 1694, and is now represented by Sir Uthred James Hay Dunbar, Bart. (b. 1843; suc. 1889). Since the close, however, of the 17th century, the Old Place and the estate of Mochrum have been held by the Earls of DUMFRIES and Marquises of Bute. Engirt with ash-trees, and standing near the NE end of Mochrum Loch, the Old Place consists of two square four-storey towers, and dates from the last quarter of the 15th century. Since 1873 it has been carefully restored by the present Marquis. On an islet in Castle Loch are remains of an older castle; and the ruins of Myrtoun Castle, the seat of the M'ullochs, crown a mote-hill near the shore of the White Loch. Other antiquities are a large double-dyked fort on Barsalloch Brae, the Mote of Boghouse near Mochrum village, the Carlin Stone near Eldrig Loch, a vitrified fort on the Doon of May, remains of Chapel Finian (by the country people called 'Chipper-Finnan' or 'the Well of Finnan') on the shore $5\frac{1}{2}$ miles NW of Port-William, Cairn Buy still further NW, etc. MONREITH, noticed separately, is the principal mansion; and Sir H. E. Maxwell, Bart., M.P., divides most of the parish with the Marquis of Bute. Mochrum is in the presbytery of Wigton and the synod of Galloway; the living is worth £185. The parish church is a plain edifice of 1794, and, as enlarged in 1832 and 1878 contains 800 sittings. Free and U.P. churches are at Port-William; and four public schools—Culshabbin, Eldrig, Mochrum, and Port-William—with respective accommodation for 60, 80, 132, and 220 children, have an average attendance of about 45, 40, 90, and 155, and grants amounting to nearly £45, £40, £80, and £165. Pop. (1801) 1113, (1831) 2105, (1861) 2694, (1871) 2450, (1881) 2315, (1891) 2166.—*Ord. Sur.*, shs. 4, 2, 1857-56.

Mochrum Loch. See KIRKOSWALD.

Moffat, a small village near Airdrie, in the parish of New Monkland, Lanarkshire, with a paper-mill.

Moffat (Gael. *out-val*, 'a long, deep, mountain hollow,' or Irish *maí-fad*, 'a long plain'), a town in the N of the Annandale district of Dumfriesshire, and a parish formerly partly in Dumfriesshire and partly in Lanarkshire, but placed by the Boundary Commissioners in 1891 wholly in the former county. The town is situated at the southern base of the Gallow Hill (832 feet)* on the left bank of the river Annan, 2 miles NNW of the point at which Moffat and Ewan Waters flow into that river. It is distant 51 miles by road, but $63\frac{3}{8}$ by rail, SSW of Edinburgh; 54 by road, but $66\frac{3}{8}$ by rail, SE of Glasgow; 21 by road, but $30\frac{1}{2}$ by rail, NNE of Dumfries; $15\frac{1}{2}$ by road N by W of Lockerbie, and 2 NNE of Beattock station on the main line (1848) of the Caledonian. A railway line, $1\frac{1}{2}$ mile long, which was opened in April 1883, and is now owned by the Caledonian Railway Company, connects Moffat with Beattock. Omnibuses run between the hotels and the mineral well every morning (except Sunday) during the season, and coaches go thrice a week in summer to the Grey Mare's Tail and St Mary's Loch, where are met conveyances from Peebles and Selkirk.

The town is built upon a gentle slope, which rises

* Prof. George Snelair of Glasgow, who died in 1696, ascertained the height of this hill by means of the barometer—the earliest instance probably of its application in Great Britain to this purpose.

slowly northward from 340 to 400 feet above sea-level. The High Street is the chief street, or rather 'place,' being 300 yards long and 50 broad. It is thus described in the *Beauties of Scotland* (1805): 'The street is wide and spacious, handsomely formed and gravelled, exceedingly smooth, clean, and dry in an hour after the heaviest rains, and is a most agreeable walk to the inhabitants, and to the company that comes for goats' whey or the mineral waters.' Since that time the High Street has been modernised by the erection of new, and the remodeling of old, buildings. It contains the principal public edifices, hotels, etc., and at one time, with the closes branching from it, composed the town of Moffat. Of late years, however, owing to the number of people visiting Moffat annually, the building of villas has been greatly encouraged, and several new streets have sprung up. Such are Well Road, Old Well Road, Beechgrove, Havelock Crescent, Academy Road, Hopetoun Place, Ballplay Road, etc. A number of villas have also been erected on the slope of the Gallow Hill.

There are in the town five places of worship, belonging to the Established, Free, United Presbyterian, Episcopal, and Roman Catholic Churches. The parish church, surrounded by fine old trees, is a Gothic edifice seated for 1150 persons. It was built in 1885-87, and with the hall and a manse close by cost between £12,000 and £13,000. The main door is surmounted by a tower 107 feet high, while at the N, E, and NW corners there are spirelets over 50 feet high. An organ was erected in 1893. The Free church is a handsome edifice erected in 1893. The U.P. church, in Old Well Road, was erected in 1863-64, and cost £3000. It is in the Decorated English or Second Pointed style, consists of nave and aisles, and has a lofty tower and spire. From its position it may be seen from almost every point of view. The Episcopal church, situated upon the Kiln Knowes, Millburnside, is an iron structure, built in 1872 at the expense of J. Toulmin Laurence, Esq. of Liverpool. In summer and autumn a Roman Catholic service is conducted in the building previously used as the Episcopal chapel.

Moffat is well supplied with schools. The Academy arose out of the union (1834) of the parish school with the old grammar school, which was founded by Dr Robert Johnstone (1557-1639), George Heriot's brother-in-law, and now furnishes a good classical education. The building, which may lay claim to some beauty, is situated at the foot of the Gallow Hill. With accommodation for 615 children, it has an average attendance of about 330, and a grant of over £337. Morison's Endowed school, in Well Road, is a simple yet pleasing building. William Morison (1796-1837), a native of Moffat and afterwards a Calcutta merchant, left £2000 to be spent in building and endowing a school, in which, in return for a nominal fee, a substantial English education might be had. It has accommodation for 88 children. Annan Water, Evan Water, and Moffat Water public schools, with respective accommodation for 44, 60, and 53 children, have an average attendance of about 25, 20, and 15, and grants amounting to over £20, £31, and £27. There are also two boarding schools for boys, a similar institution for young ladies, and the Moffat Educational Trust.

For its size Moffat possesses a fair proportion of public buildings. The court-house, at the corner of High Street and Well Street, dates from 1772; but the bell in the turret has inscribed upon it the date 1660, along with the Johnstone arms and an earl's coronet. The ground-floor of the court-house has been turned into shops, but the upper rooms are still used by the Town Commissioners for holding courts and discharging other business in. Moffat House, beside the bathe, was erected by the second Earl of Hopetoun in 1761. As the third Earl died in 1817 without heirs male, the house passed into the possession of Lady Anne Johnstone, his eldest daughter, and great-grandmother of the present holder of the house and property—Mr J. J. Hope Johnstone. (See *RAEHILLS*.) It was in Moffat House that Mac-

person was residing (1759) when he entered on that literary forgery, the fabrication of the Ossianic epics, which made so great a stir in the latter half of the 18th century, and even yet arouses curiosity when anything bearing on the subject has been published. A fine public fountain, in the upper part of the High Street, was erected by Mr Colvin of Craigielands in 1875 at a cost of £500. The design is somewhat pastoral. Upon a pedestal of rough-hewn Corncockle red sandstone blocks, 16 feet in height, stands a ram in bronze, designed by the late William Brodie, R.S.A. Round the base are 4 basins of polished granite. Other buildings, which improve the appearance of the town, are the chief hotels and the banks. The Baths, on the W side of High Street, beside the Annandale Arms Hotel, were erected in 1827. The front part of the building is taken up with assembly, reading, and billiard rooms, while the rear part contains the baths, which are of various descriptions—vapour, mineral, etc. There is a well-kept bowling green attached. The Beechgrove grounds, laid out in 1870 at a cost of £600, comprise bowling and lawn-tennis grounds, with an excellent pavilion. Perhaps the most striking building in Moffat is the Hydropathic Establishment, erected in the Renaissance style by Messrs Pilkington & Bell, of Edinburgh, in 1875-77. It is of immense size, comprising a centre and two wings, the former having turrets at either end. There are 5 floors, including the basement, and 300 bedrooms. The dining-hall can accommodate comfortably 300 guests, and the drawing-room, recreation-room, etc., are all on an equally large scale. The baths are of a very perfect description, embracing Turkish, vapour, etc., and the grounds, 25 acres in extent, are beautifully laid out. There are also bowling and lawn-tennis greens.

Moffat has a head post office, with money order, savings bank, insurance, and telegraph departments; branches of the Bank of Scotland, the Union Bank, and the British Linen Company's Bank, a savings bank, 4 hotels, a golf club, an agricultural and horticultural society, a cottage hospital, numerous lodging-houses of all classes, a subscription library with over 4000 volumes, and the Proudfoot Workmen's Institute. The income of the bequest out of which this originated having largely and unexpectedly increased, it was proposed in 1893, besides extending the institute, to invest £7000 to maintain it and the library, and to expend £2000 on the formation and maintenance of a bowling-green and recreation ground therewith; to invest £1000 and give the income to the cottage hospital; to invest £6000 to provide loans to enable workmen to purchase their houses and gardens, etc.; and to erect over the entrance a bronze bust of the donor. During the season concerts, lectures, etc., are given in the Baths Assembly Hall, which is also used for public meetings, and every Friday during the season there is a ball. A building formerly the Episcopal chapel is now used as the Roman Catholic chapel, and there is a Mechanics' Hall in Well Street. A weekly market is held at Moffat every Friday; a lamb fair is held on the Friday of July after Langholm fair; a fair for sheep and cattle, held on the Friday of September after Falkirk Tryst, is known as the Tup Fair; and hiring fairs are held in the months of March and Oct., both on the first of the month. Shows of sheep, cattle, flowers, etc., are connected with the Tup Fair, and draw many to Moffat owing to the high class of the exhibits. The wells in the neighbourhood of Moffat are three in number—Garpol Spa, 3 miles SW; Hartfell Spa, 5 miles NNE; and Moffat Well, 1½ mile NNE of the town of Moffat. The first two are separately described. According to the commonly received story, Moffat Well was found in 1633 by Miss Rachel Whiteford, only daughter of Dr Whiteford, bishop of Brechin, who held a considerable amount of property in the parishes of Moffat and Kirkpatrick-Juxta. But in a work entitled *Fons Moffatensis, seu Descriptio Topographico-Spagyrica Fontium Mineralium Moffatensium in Annandia*, published in 1659, the author, Matthew Mackaile, asserts

that the wells were first discovered in 1653 by a 'valedutinary rustic.' The mineral qualities of the well were also noted by Sir Robert Sibbald in 1683; by George Milligan and Andrew Plummer, M.D., professor of medicine, University of Edinburgh, in 1747; by Dr Garnett in 1800; by J. Erskine Gibson in 1827; by Dr Thomas Thomson, of Glasgow, in 1828; by Dr John Macadam, of Glasgow, in 1854; by Mr William Johnston, of Edinburgh, in 1874; and by others.

The following analysis is that of Dr Murray Thomson:—

LOWER WELL.	1.37 cubic inches of sulphuretted hydrogen gas.	
	4.46 " carbonic acid gas.	
	96.16 grains of solid residue on evaporation.	
	4.60 " carbonate of lime.	
	7.70 " chloride of calcium.	
	6.41 " chloride of magnesium.	
UPPER WELL.	69.00 " chloride of sodium.	
	2.55 " silica.	
	5.80 " organic matter.	
	96.06	
	Traces also exist of carbonate of iron, alumina, chloride of magnesia sulphuret of sodium.	
	0.85 cubic inch of sulphuretted hydrogen gas, tracea of carbonic acid gas.	
UPPER WELL.	54.60 grains of solid residue on evaporation.	
	8.32 " chloride of calcium.	
	1.46 " chloride of magnesium.	
	34.11 " chloride of sodium.	
	3.56 " sulphate of soda.	
	1.81 " silica.	
UPPER WELL.	4.70 " organic matter.	
	53.96	
Traces also exist of oxide of iron and oxide of copper.		

The temperature of the Moffat mineral water is very steady, as was proved by experiments made in 1852-53. From these it appeared that the temperature at all seasons of the year, and under all changes of the atmosphere, is 49½° Fahr. With regard to the smell, taste, and appearance of the waters opinions vary. One writer describes the smell and taste as resembling 'bilge-water, or the scourgings of a foul gun . . . like sulphureous water of Harrogate, but not quite so strong.' Another compares them to the smell and taste of a 'slightly putrescent egg.' The taste is almost invariably disagreeable at first, though, it is said, some grow to like it after a time. The appearance is described in one account as 'sparkling beautifully, especially when first taken from the spring; in another as 'like champagne;' and a third says, 'the water is never decidedly sparkling. It does assume a certain degree of cloudiness from the uniform diffusion through it of very minute gaseous globules.' The Moffat water has been pronounced by doctors a powerful remedy in diseases of the skin, on account of the sulphur and salts held in solution in it. It is also valuable as a means of cure in affections of the lungs, in gravel, rheumatism, dyspepsia, biliousness, etc.

The Moffat Well has enjoyed a growing popularity, as is shown by the number of people who visit the town annually 'to drink the waters.' The favourite time for doing so is between seven and nine o'clock in the morning, when the road between the town and the spa is dotted with people on foot, in carriages, and omnibuses. It is almost the invariable custom to partake of the waters at the well itself, since the gases with which they are impregnated are of so volatile a nature that even the most careful corking is unable to retain them. The well is situated on the slope of one side of a small valley, down which flows the Well Burn, a small stream named from the well beside it. It consists of two springs, an upper and a lower, the latter of which, more strongly impregnated with sulphur and salts, is used for drinking purposes, while the water of the former, conveyed to the town in pipes, is employed in the mineral baths, recommended in certain cases. The well is covered by a small stone building, near which there is a wooden erection with a verandah, built for the convenience of visitors. The appearance of the well is thus described by Turnbull in his *History of Moffat*:—'On reaching the well,

many circumstances strongly indicate the sulphureous nature of the water. The water itself has the characteristic odour of such waters, while the metal stop-cock attached to the pipe, which delivers the supply, is coated with a black shining sulphuret. . . . The small openings in the rock, from which the water of the upper well issues, are alone visible; those of the lower being built over with a fixed pipe, communicator, and stop-cock, to draw off the water at pleasure. The upper apertures are encrusted with a yellowish-white substance, which, when ignited, yields a blue flame, and has the same smell as burning sulphur.' The water oozes out of a rock of greywacke, containing pyrites. It was thought at one time that the taste of sulphur was so far due to a bog in the neighbourhood, but the fact that the bog has disappeared and the sulphur taste still remains is sufficient to discredit that theory. The presence of sulphur in the form of iron pyrites, in the rocks that surround the well, as also in that from which the mineral spring flows, is enough to account for the way and the extent to which the water is impregnated.

Moffat became a burgh of barony and regality in 1635. There is still in existence a burgh charter, dated 1662, by which the barony and regality of Moffat, and of the burgh which stood within it, are transferred to James, Earl of Annandale. This charter was ratified by an Act of Parliament in 1669. When the rights of lords of regalities were done away with, some supposed that Moffat ceased to enjoy those rights which, as a burgh, it had possessed. This was a mistake, however, as was shown by the proprietors of the *Moffat Times* and others (1857), and, as a result, the boundaries of the burgh, as well as its common lands, were marked on the Ordnance Map. Moffat adopted the General Police and Improvement Act in 1864, and under the Burgh Police Act of 1892 is governed by a provost, 2 bailies, and 6 commissioners. The burgh court sits on the first Monday of every month, and sheriff small debt courts are held on the first Friday of April, August, and December. Valuation of burgh, (1893) £15,170, 2s. 6d. Pop. (1841) 1413, (1861) 1463, (1871) 1730, (1881) 2161, (1891) 2291, of whom 1315 were females. Houses (1891) inhabited 473, vacant 49, building 2.

When Moffat was founded is not known, but it must have been at a somewhat early date, as mention is made of the town in the 11th and 12th centuries. From one notice it would appear that the present town was preceded by another, called Auldtoun; but this is doubtful. The town is named, however in a charter granted by Robert I. (1306-29) to Adae Baribitonsorie, and in another granted by David II. (1329-71) to Robert Lage. In Dec. 1332, the army of Edward Baliol, who had been crowned King of Scotland about two months before, encamped at Moffat. Baliol remained there for a time, attempting to win over the lords of that district of Annandale. From Moffat he passed with his army to Annan Moor, and was attacked by night, surprised, and defeated by Sir Archibald Douglas, who had gathered 1000 horsemen at Moffat, and had come suddenly down upon his encampment. Many Scottish knights and nobles were slain; Baliol's army was dispersed in all directions; and he himself was compelled to flee to England. The well-known 'Three Stanin' Stanes' on the Beattock road, 1 mile S by W of Moffat, have been supposed to indicate either the place where the battle took place, or the spot where three officers fell. Both suppositions are improbable, and it is more likely that they are of Druidic origin. When Dumfries was burned in 1448, Gallow Hill at Moffat was chosen as one of the hills of Annandale on which 'balefires' should be kindled in order to raise the alarm and prevent surprise. In this connection, the war-cry of the inhabitants of Moffat—'Aye ready, aye ready'—may be mentioned.

Moffat again appears in the history of Scotland in the times of the Covenanters. The district round about it is full of memories of that period and of those who lived in it. Claverhouse, afterwards Viscount Dundee, sent a report from Moffat, dated 28 Dec. 1678, to the Earl of Linlithgow, commander-in-chief of His Majesty's

forces, in which he described that town as among 'the most convenient places for quartering dragoons. . . . whereby the whole country may be kept in awe.' In the mountains and valleys in the neighbourhood of Moffat the Covenanters were accustomed to lie hid, to hold conventicles, and to elude the pursuit of their enemies. In quieter times, and with the growing popularity of the Wells, Moffat made rapid advances. In 1704 it is spoken of as 'a small straggling town' to which people come to drink the waters. The writer, however, goes on to say—'But what sort of people they are, or where they get lodgings, I can't tell, for I did not like their lodgings well enough to go to bed, but got such as I could to refresh me, and so came away.' In 1745 it must have contained better accommodation, as it was then the favourite summer resort of two well-known Edinburgh physicians, namely, Dr Sinclair and Dr John Clerk, who visited it in turn yearly, and by their presence attracted many of their patients to the town.

In the latter half of the 18th century, however, Moffat became more conspicuous. It was visited by men like John Home, author of the play of *Douglas*; David Hume, philosopher, historian, and agnostic; James Macpherson, the fabricator of Ossian's poems; Dr Alexander Carlyle, of Inveresk; James Boswell, the famous biographer; Joseph Black, the well-known professor of chemistry in Edinburgh University; Dr Blacklock, the blind poet; Hugh Blair, the divine; and many others, whose presence and whose name were sufficient to draw others to the place where they happened to be. An interesting event connected with the visit to Moffat of Home and Macpherson is narrated in the *Account of the Life and Writings of John Home*, by Henry Mackenzie (Edinb. 1822). Mackenzie's work contains a letter of Dr Adam Ferguson, which tells how that Home and Macpherson met at the bowling-green, and soon became intimate. The subject of traditional poetry in the Highlands was discussed, and Macpherson promised to translate some fragments which were in his possession. These, according to the letter, 'were afterwards printed in a pamphlet, and drew that public attention which gave rise to the further proceeding on the subject.' The name of Burns is also connected with the town. He visited it frequently, and in it he wrote the famous song—

'O, Willie brewed a peck o' maut,
And Rah and Allan can' t pree;
Three blither hearts that lee-lang night
Ye wadna find in Christendee.

And here he composed, in addition to many other poems, &c., the epigram called *An Apology for Scrimpitt Nature*.

Since the 19th century began, the progress of Moffat has been both rapid and continuous. New buildings have been erected; fine streets have been laid out; a water supply of 288,000 gallons per diem was brought into the town at a cost of £5000 in 1867; a new system of sewerage was then also carried out; and a cemetery, 3 acres in extent, and $\frac{3}{4}$ mile NW of the town, was beautifully laid out in 1872 at a cost of £700. These and other improvements have tended to make Moffat very popular, and have given it almost a right to the names which have been applied to it of the Cheltenham or Baden of Scotland.* A proof of the healthiness of Moffat may be found in the fact that, when Asiatic cholera was raging at Dumfries (only 21 miles distant), Moffat was practically entirely spared.

*William Black, in his *Strange Adventures of a Phaeton* (1872), observes that, 'if Moffat is to be likened to Baden-Baden, it forms an exceedingly Scotch and respectable Baden-Baden. The building in which the mineral waters are drunk looks somewhat like an educational institution, with its prim white iron railings. Inside, instead of the splendid saloon of the *Conversationshaus*, we found a long and sober-looking reading-room. Moffat itself is a white, clean, wide-streeted place, and the hills around it are smooth and green; but it is very far removed from Baden-Baden. It is a good deal more proper, and a great deal more dull. Perhaps we did not visit it in the height of the season, if it has got a season; but we were at all events not very sorry to get away from it again, and out into the hilly country beyond.'

Moffat has been the place of birth and of residence of some distinguished Scotchmen. Among those born there, the following may be mentioned:—Sir Archibald Johnstone, Lord Warriston (1610-63), is described by M'Crie as 'a profound and accomplished lawyer, an eloquent speaker, and a man of the most active habits,' who 'took a prominent share in the proceedings of the Covenanters, and was among the chief leaders in promoting the league between Scotland and England.' He was created Lord Advocate (1646), Lord Register (1649), and one of Cromwell's peers; at the Restoration took refuge in France; but was brought back to Edinburgh and executed. William Dickson, LL.D. (1749-1821), actively assisted Wilberforce in his attempt to do away with slavery. Dickson was the translator of Carnot's *Treatise on the Calculus* (1801), and the editor of a reprint of Garnett's *Observations on the Moffat Waters* (1820). He died in London, and left a collection of scientific works to the Moffat Library. David Welsh, D.D. (1793-1845), was Professor of Church History in Edinburgh University (1831). He wrote the *Life of Dr Thomas Brown* and *An Introduction to the Elements of Church History*. Walter Boyd (1760-1842) was the chief partner of the firm of Boyd, Benfield & Co., bankers, London and Paris.

Among those connected with Moffat by residence we may note the following:—John Rogerson, M.D. (1741-1823), a famous physician, who acted as first medical adviser to the Empress and court of Russia, purchased in 1805 the estate of Dumerieff, and resided upon it from 1816 till his death. John Loudon Macadam (1756-1836), the inventor of that process of road-making, known as 'macadamising,' resided at Dumerieff for some time, and after a life of hard work, died at Moffat, and is buried in its churchyard. John Finlay (1782-1810), author of *Wallace, or the Vale of Ellerslie, Historical and Romantic Ballads* (1808), etc., was a poet of great promise, whose life was cut short by a sudden illness at Moffat, where he lies buried. John Walker, D.D., known, owing to his eccentricities, as the 'mad minister of Moffat,' was a churchman of some note in his day. He was presented to Moffat parish in 1762, was translated to Colinton parish in 1783, and died in 1803. Dr Walker wrote several books, his favourite subject being natural history.

The parish of Moffat is bounded N by Tweedsmuir in Peeblesshire, NE by Lyne in Peeblesshire and Ettrick in Selkirkshire, E by Ettrick and Eskdalemuir, SE by Hutton and Corrie, S by Wamphray, SW by Kirkpatrick-Juxta, and W and NW by Crawford in Lanarkshire. Its utmost length, from ENE to WSW, is 14 $\frac{3}{4}$ miles; its utmost breadth is 8 $\frac{1}{2}$ miles; and its area is 43,177 acres, of which 205 are water. The parish is traversed by three main roads, leading respectively to Edinburgh, Glasgow, and Selkirk, and by a section of the Caledonian railway, as well as by part of the Beattock and Moffat branch. Moffat is rich in features of natural beauty. River, loch, mountain, valley, combine to render it one of the most picturesque parishes in the South of Scotland.

The ANNAN, rising at an altitude of 1270 feet on the northern border, near the meeting-point of Peebles, Lanark, and Dumfries shires, and not far from sources of the Tweed and Clyde, flows 8 $\frac{3}{4}$ miles south-south-eastward—for 3 $\frac{1}{2}$ miles through the north-western interior, and then along or close to the boundary with Kirkpatrick-Juxta. It is fed by several small streams—Birnock Water, Frenchland Burn, etc., and is joined, 2 miles below Moffat, by Moffat Water on the E and Evan Water on the W. Moffat Water, rising at an altitude of 1800 feet in the north-eastern corner of the parish, close to the Selkirkshire boundary, flows 12 $\frac{1}{2}$ miles south-westward through the parish. It is fed by the following streams:—on the right bank, Tail Burn, flowing from Loch Skene, and Carrifran, Blackshope, and Craige Burns; on the left bank, Bodesbeck, Sail-foot, Selcoth, Crofthead, and Cornal Burns. EVAN WATER, which rises in Lanarkshire, flows for 3 $\frac{1}{4}$ miles south-south-eastward through the western wing of Moffat,

and then passes off into Kirkpatrick-Juxta. GARPOL WATER, too, flows 2½ miles eastward on the boundary with Kirkpatrick-Juxta. The only lake in the parish is 'dark Loch SKENE' (6 × 1½ furl.; 1700 feet), 11½ miles NNE of Moffat.

Moffat parish is very mountainous. The chief mountains are—on the Peeblesshire boundary, Great Hill (1527 feet), Spout Craig (1842), Barry Grain Rig (2012), HARTFELL (2651), Hartfell Rig (2422), Raven Craig (2246), Locheraig Head (2625); on the Selkirkshire boundary, Andrewhinney Hill (2220), Ben Craig (2046), Bodesbeck Law (2173), Capel Fell (2223), Wind Fell (2180); on the boundaries with Eskdalemuir, Wamphray, and Kirkpatrick-Juxta parishes, Loch Fell (2256), Croffhead (2085), Gathshaw Rig (1853); on the Lanarkshire boundary, Mosshope Fell (1567), Beld Knowe (1661), Campland Hill (1571), Black Fell (1528). The parish of Moffat is thus girdled with mountains of higher or lower elevation. The interior of the parish, especially in the N, is, however, almost as mountainous as are the parts bordering on other parishes. Carrifran (2452 feet), Saddle Yoke (2412), Arthur's Seat (2398), Swatte Fell (2388), and White Coomb (2695), may be cited as among the loftiest. The Southern Alps, as the mountains in Moffat parish and the surrounding district are sometimes called, differ from the Highland mountains in being, as a rule, covered with grass up to the very summit. This naturally gives them the appearance of being less rugged and bare than the ranges in the north of Scotland. The valleys through which the Annan and Moffat and Evan Waters flow are very narrow, especially in their upper parts. In some places there is barely room for the roads to pass along the bottom of the valleys. As might be expected, they are extremely picturesque. To quote once more from the *Strange Adventures of a Phaeton*, Mr William Black gives a fine description of the vale of the Annan above the town. 'That was a pretty drive up through Annandale. As you leave Moffat the road gradually ascends into the region of the hills; and down below you lies a great valley, with the river Annan running through it, and the town of Moffat itself getting smaller in the distance. You catch a glimmer of the blue peaks of Westmoreland lying far away in the south, half hid amid silver haze. The hills around you increase in size, and you would not recognise the hulk of the great round slopes but for those minute dots that you can make out to be sheep, and for an occasional wasp-like creature that you suppose to be a horse. The evening draws in. The yellow light on the slopes of green becomes warmer. You arrive at a great circular chasm which is called by the country-folks the Devil's or Marquis of Annandale's Beef-tub—a mighty hollow, the western sides of which are steeped in a soft purple shadow, while the eastern slopes burn yellow in the sunlight. There is no house, not even a farmhouse near; and all traces of Moffat and its neighbourhood have long been left out of sight. But what is the solitude of this place to the wild and lofty region you enter, when you reach the summits of the hills?' etc.

In Moffat parish the soil in the valleys is mainly alluvial; on the lower slopes of the hills it is light, dry gravel. A considerable part of the land is in tillage; but the main part is pasture land. There are a few woods of some extent—the Craigieburn, Bellerraig, and Dumerieff woods may be mentioned. In the uplands the rocks are Silurian; greywacke, containing quartz, sandstone, and gypsum are found; but coal, copper, and limestone, though sought for, have not been discovered.

The parish contains several objects of antiquarian interest. There is an old British fort, 2½ miles from Moffat, on the top of Beattock Hill, and two other forts, not far distant from the town. Cornal Tower, the 'keep' of the Proccornal estate, is a small ruin. Blacklaw Tower is a good example of a border peel-house. Portions of the walls remain, and attest to the strength of the building. In addition to these, the parish also contains other Border towers of a like char-

acter. Places noted for their beauty or wildness are the glen of Bell Craig, in which many rare ferns grow; the Basin of Blackshope, the Deil's Beef-tub, or, as it is sometimes called, the Marquis of ANNANDALE'S BEEF-STAND; the famous waterfall, called the Grey Mare's Tail; Loch Skene, Erickstane, etc.

Mansions, noticed separately, are CRAIGIEBURN and DUMCREEFF; and Mr Hope Johnstone is chief proprietor. Moffat is in the presbytery of Lochmaben and synod of Dumfries; the living is worth £419. The ancient church of Moffat was transferred in 1174 by Robert de Bruce to the Bishop of Glasgow, and was afterwards constituted one of the prebends of the see. A chapel once existed between the Annan and the Evan, at the place still called Chapel. Valuation (1884) £30,071, 5s. 10d., (1893) £27,948, 5s. Pop. (1801) 1610, (1831) 2221, (1861) 2232, (1871) 2543, (1881) 2930, (1891) 2977.—*Ord. Sur.*, sh. 16, 1864.

See W. R. Turnbull's *History of Moffat* (Edinb. 1871); Black's *Guide to Moffat* (4th ed. 1882); and Fairfoul's *Guide to Moffat* (Moffat, 1877).

Moidart. See MOYDART.

Moll. See MOREBATTLE.

Mollance, an estate, with a mansion, in Crossmichael parish, Kirkeudbrightshire, 2½ miles NNE of Castle-Douglas.

Mollinburn, a village in the NE corner of Cadder parish, Lanarkshire, 6 miles NNW of Airdrie.

Molmout. See GALSTON.

Monach, a group of islets in North Uist parish, Outer Hebrides, Inverness-shire, 6 miles SSW of the western extremity of North Uist island, and 9½ WNW of the north-western extremity of Benbecula. A lighthouse on Shillay, the most western islet of the group, shows a white light, flashing every ten seconds, and visible all round the horizon at a distance of 13 nautical miles. It was erected in 1864, and is 150 feet above high water. Pop. (1871) 11, (1881) 13, (1891) 5.

Monadhliath (Gael. 'grey hills'), a chain of mountains in Inverness-shire, extending north-eastward between Glenmore and Strathspey, and culminating in Carn Maig (3087 feet), 16½ miles E by S of Fort Augustus. Heavy, rounded, and barren, its mountains exhibit no grandeur of form. They chiefly consist of granite and quartzite, and rest on an elevated base or plateau of desolate heathy moor. Great herds of black cattle feed amongst their glens, and large flocks of sheep are pastured on their slopes; but their irksome solitudes, their vast and dreary wastes, are abandoned to the grouse, the ptarmigan, the roe, and the red deer.—*Ord. Sur.*, shs. 73, 74, 1878-77.

Monaebrough. See KILSYTH.

Monaltrie House, a commodious mansion in Glenmuick parish, Aberdeenshire, 1 mile N by E of Ballater. It was formerly called Ballater House, and belongs now to Mr Farquharson of INVERCAULD.

Monar, Loch, an alpine lake on the mutual border of Inverness and Ross and Cromarty shires, 25 miles WSW of Beauly. Lying at an altitude of 663 feet above sea-level, it extends 4½ miles east-by-northward, has an utmost breadth of 3¾ furlongs, and from its foot sends off the river FARRER. It occupies a wild hollow overhung to the S by peaked Sgurr na Lapaich (3773 feet), contains good trout and pike, and at its E end has Monar shooting-lodge, surrounded by woods and magnificent scenery, and at its W end Strathmore lodge.—*Ord. Sur.*, sh. 82, 1882.

Monboddo House, an old mansion, amid pleasant plantations, in Fordoun parish, Kincardineshire, 1¼ mile E by S of Auchinblae, and 2¼ miles NNW of Fordoun station, on the Caledonian railway. It was the birth-place of the judge, James Burnett, Lord Monboddo (1714-99), who anticipated Darwin in an evolution theory—of monkeys whose tails wore off with constant sitting. His descendant, James Cumine Burnett, Esq., is present proprietor.—*Ord. Sur.*, sh. 66, 1871.

Moncreiffe House, a mansion in Dunbarry parish, Perthshire, at the southern base of Moncreiffe Hill, on the left side of the river Earn, 1 mile NNE of Bridge-of-

Earn, and 3½ miles SSE of Perth. It is a fine old edifice, built in 1679 from designs by the celebrated architect, Sir William Bruce of Kinross; and its grounds are beautifully wooded, the older trees appearing to have been mostly planted about the time of the erection of the house. There is a grand beech avenue, more than 600 yards long, with a small stone-circle in the middle; and one horse-chestnut, girthing 20½ feet at 1 foot from the ground, is supposed to be the largest of its kind in Scotland, if not indeed in Britain. A roofless chapel (30 × 18 feet), with a N aisle and a small E belfry, stands 300 yards SE of the mansion, thickly embosomed in wood; and since 1357 or earlier has served as the burying-place of the Moncreiffe family. Moncreiffe or Moredun Hill, at the meeting-point of Dunbarny, Rhynd, and East Perth parishes, 3 miles SSE of Perth city, occupies much of the peninsula between the Earn and the Tay, and forms the connecting link between the Ochils and the Sidlaws, except as isolated from them by those two rivers. It chiefly consists of greenstone, displaying on the S side a steep, high precipice of columnar formation; and attains an altitude of 725 feet above sea-level. Its slopes are clothed with many-tinted trees, planted mostly since 1780; and its summit and E shoulder command one of the noblest prospects in Britain—pronounced by Pennant ‘the glory of Scotland.’ An excellent road has been constructed to the summit, and the hill is open to the public at all times, and the policies on Fridays. The high-road from Edinburgh to Perth passes at a height of 182 feet over the W shoulder of the hill, which is pierced by the conjoint tunnel (990 yards long) of the Caledonian and North British railway systems. The Roman legionaries, when they gained the top, cried out ‘Behold the Tiber, behold the Field of Mars!’ and Queen Victoria, driving from Dupplin Castle to Perth on her first progress to the Highlands (6 Sept. 1842), made a halt to gaze on the sunset-illuminated scene. Not far from the flagstaff on the summit is a Pictish hill-fort, whose circular fosse, 16 yards in diameter, is still traceable. From 1248 and earlier the lands of Moncreiffe have been held by the Moncreiffe family; but in 1663 Sir John Moncreiff—represented by Lord Moncreiff of Tulliebole—was forced to sell the estate to his cousin, Thomas Moncreiffe, who in 1685 was created a baronet. Sir Robert Drummond Moncreiffe, present and eighth Bart. (b. 1856; suc. 1879), is proprietor.—*Ord. Sur.*, sh. 48, 1868. See chap. x. of Thomas Hunter’s *Woods and Estates of Perthshire* (Perth, 1883).

Moncur Castle, a ruined fortalice in Inchtute parish, Perthshire, embosomed in wood, within the grounds of Rossie Priory, 5 furlongs NNE of Inchtute village, where there is a station on the Perth and Dundee section of the Caledonian railway. It is said to have been destroyed by fire about the beginning of the 18th century.

Mondynes (anc. *Monachedin*), a farm in Fordoun parish, Kincardineshire, 1½ mile SSW of Drumlithie station on the Caledonian railway. A monolith here, 6 or 8 feet high, and called the Court-stane or Kingstone, perhaps commemorates the murder of Duncan II. in 1094.

Monearn. See CAIRNMONEARN.

Moness Burn, a stream in the south central portion of Dull parish, Perthshire, rising at an altitude of 1970 feet, and running 5½ miles north-by-eastward, till, after a total descent of nearly 1600 feet, it falls into the Tay at a point 3 furlongs N by W of Aberfeldy. It traverses, in the lower part of its course, a deep, narrow, wooded ravine; and makes there two romantic waterfalls, which are celebrated in Burns’s *Birks o’ Aberfeldy*; whilst Pennant characterised them as ‘an epitome of everything that can be admired in waterfalls.’ The upper cascade occurs 1½ mile above Aberfeldy, and consists of a sheer leap of 50 feet; the second, a short way lower down, consists of a series of leaps to the aggregate of at least 100 feet; and the third, at the influx of a tributary, is more picturesque than either of the others, and consists of several brilliant rushing

cataracts. A rustic bridge crosses the ravine; traces of a Roman redoubt are in its mouth; and Moness House adjoins it in the vicinity of Aberfeldy.—*Ord. Sur.*, sh. 55, 1869.

Moneydie, a parish of Perthshire, whose church stands on the right bank of Shochie Burn, 2 miles W of Lunarcy railway station and 6 NNW of the post-town, Perth. It is bounded N by Auchtergaven, E and S by Redgorton, SW by Methven, and W and NW by Monzie. Its utmost length, from E to W, is 3½ miles; its utmost breadth is 3 miles; and its area is 4585 acres, of which 25½ are water. The detached part of the parish, situated south of Moneydieroger, was in 1891 joined to the main portion by the Boundary Commissioners, who transferred to Moneydie the intervening portion of Auchtergaven parish, comprising 121 acres. Shochie Burn winds 5½ miles east-south-eastward and north-eastward, partly along the Monzie and Redgorton boundaries, but mainly through the interior, and passes off from the parish at a point ¾ mile from the Tay; whilst Ordie Burn, its affluent, runs 2½ miles south-eastward along or close to the north-eastern border. Sinking in the extreme E to close upon 170 feet above sea-level, the surface thence rises gently to 236 feet near Coldrochie, 237 near Tophead, 452 near Millhole, and 482 near Ardgath. A very fine grey freestone has been quarried. The soil of the low flat lands is partly a light loam, partly of gravelly character resting on dry, hard, deep gravel; of the lower slopes is a rich loam, incumbent on strong deep clay; and of the highest grounds is a cold wet till, naturally moorish, but now mostly drained and cultivated. A small portion of the entire area is pastoral; 400 acres or so are under wood; and the rest of the land is in tillage. Alexander Myln, who died in 1542, and wrote the lives of the Bishops of Dunkeld, was priest of Moneydie. The Duke of Atholl and the Earl of Mansfield are the chief proprietors. Moneydie is in the presbytery of Perth and the synod of Perth and Stirling; the living is worth £220. The parish church was built in 1813. The public school, with accommodation for 60 children, has an average attendance of about 60, and a grant of over £68. Valuation (1884) £4471, 0s. 6d., (1892) £3755, 3s. Pop. (1841) 315, (1861) 252, (1871) 244, (1881) 233, (1891) 251.—*Ord. Sur.*, sh. 48, 1868.

Moneypool Burn. See KIRKMABRECK.

Moniaive, a village in GLENCAIRN parish, W Dumfriesshire. A burgh of barony under charter of Charles I., it stands, 350 feet above sea-level, between confluent Dalwhat and Craigdarroch Waters, 7½ miles WSW of Thornhill and 16½ NW of Dumfries. With pretty surroundings and a good many neat houses, it has a post office under Thornhill, with money order, savings bank, and telegraph departments, a branch of the Union Bank, 2 hotels, a gaswork, a library, a market-cross (1638), a bowling green, a public hall, an Established chapel of ease (1888), Free and U.P. churches, a public school, and fairs on 25 June o.s. (if a Tuesday, if not, on the Tuesday after), on the Friday in August before Lockerbie (lambs), and on the Saturday in September before Lockerbie (lambs, cattle, hiring, etc.) Dunreggan, on the north bank of the Dalwhat Water, here crossed by a bridge, is now a suburb of Moniaive. Pop. (1841) 667, (1861) 817, (1871) 767, (1881) 699, (1891) 650, of whom 357 were females. Houses (1891) inhabited 193, vacant 34.—*Ord. Sur.*, sh. 9, 1863.

Monich. See MONAICH.

Monifieth (Gael. *monadh-fèidh*, ‘hill of the deer’), a village and a coast parish of S Forfarshire. The village, built along a southward brae, within 300 yards of the Firth of Tay, has a station on the Dundee and Arbroath Joint line, 11 miles WSW of Arbroath, 2½ ENE of Broughty Ferry, and 5½ ENE of Dundee, under which there is a post office, with money order, savings bank, and telegraph departments. It is a thriving place, with a good many very fine villas, a large jute mill, a machine work, an inn, a cemetery, etc. The parish church, rebuilt in 1813, is a plain but conspicuous building; and the graveyard around it contains some beautifully sculpt-

tured antique tombstones. One of two Free churches, standing $2\frac{1}{2}$ miles NW of the village, was erected soon after the Disruption, and is a plain structure; the other, in the village, was founded with much ceremony in November 1871, owed much of its origin to the munificence of the eleventh Earl of Dalhousie, and is a neat edifice in the Gothic style, with 400 sittings. In 1882 the congregation connected with the parish church erected a Sunday-school hall, built and fitted after the best models in America, which has since been used, not only for Sunday-school instruction, but also for lectures, public meetings, and purposes of general utility. It is seated, when used as a lecture-room, for 600 persons, and has two class-rooms, one of which is used as a library; a keeper's house is also attached. This building was one of the first of the kind in Scotland, several others on the same plan having since been built. The idea of the hall was suggested by the Rev. Dr Young, minister of the parish, who had been for upwards of twenty years Convener of the General Assembly's Committee on Sabbath Schools, at a congregational meeting held on the occasion of the twenty-first anniversary of his ministry, and the idea was realised by the cordial and generous contributions of the congregation. The total cost was £2100. A new church, St Margaret's, was opened in 1895. Pop. of the village (1881) 1564, (1891) 1835.

The parish, containing also the villages of DRUMSTURDY and BARNHILL, with four-fifths of the town of BROUGHTY FERRY, is bounded N and NE by Monikie, E by Monikie and Barry, SE and S by the Firth of Tay, and W by Dundee and Murroes. Its greatest length, from N by E to S by W, is $4\frac{1}{2}$ miles; its breadth increases southward from 9 furlongs to $3\frac{1}{2}$ miles; and its area is $6747\frac{1}{2}$ acres, of which 780 are foreshore and $15\frac{1}{2}$ water. A small detached part of the Perthshire parish of Caputh, situated at Broughty Castle, and containing only about half an acre, was in 1891 transferred by the Boundary Commissioners to Monifieth and to Forfarshire. DICTHY WATER, coming in from the W, winds $2\frac{3}{4}$ miles east-by-southward to the Firth at Milton; Murroes Burn runs $1\frac{1}{2}$ mile south-by-westward along the western boundary to the Dichty; and BUDDON Burn first runs $2\frac{1}{2}$ miles east-south-eastward across the northern interior and along the Murroes and Monikie boundaries, and then, after a divergence into Monikie, flows 3 furlongs along all the Barry boundary to the Firth of Tay. The coast, $3\frac{3}{4}$ miles in extent, consists chiefly of low sandy ground, with considerable extent of light downs or links, and long has suffered gradual encroachment by the sea. An almost level plain extends behind the links in the section E of the Dichty; and an elongated swell or low ridge, bold on the S but gently sloping on the N, extends behind the links in the section W of the Dichty. The rest of the land has mostly a southward exposure, attaining 320 feet near Balmossie, 431 at Laws Hill, 357 near Mattocks, and 500 at the north-eastern boundary—eminences that command an extensive and charming view. The sedimentary rock, yielding what is known as 'Arbroath pavement,' has been quarried in the N; and cruptive rocks occur in the S. The soil on the seaboard is partly light and sandy, partly a rich black loam, and generally very fertile; of the central tracts, is mostly an excellent black loam, highly cultivated, and bearing heavy crops; but towards the N is tilly and moorish. About 545 acres are under wood; 910 are pasture (chiefly links); and the rest of the land is in tillage. Antiquities other than those noticed under BROUGHTY FERRY and LAWS, are Cairn Greg, the Gallow Hill of Ethiebeaton, a stone circle known as 'St Bride's Ring,' and sites or vestiges of five pre-Reformation places of worship, at Monifieth village, Chapel-Dockie, Eglishmoniecht, Kingennie, and Broughty Ferry. David Doig, LL.D. (1719-1800), a writer in the *Encyclopædia Britannica* and rector of Stirling Grammar School, was a native. Estates, noticed separately, are GRANGE, LAWS, and LINLATHEN. Giving off the whole of Broughty Ferry *quoad sacra* parish and part of that of St Stephen, Monifieth is in the presbytery of Dundee and the synod of Angus and Mearns; the living is worth

£266. Two public schools, Mattocks and Monifieth, with respective accommodation for 126 and 500 children, have an average attendance of about 100 and 320, and grants of nearly £95 and £313. Valuation (1884) £52,423, 11s., (1893) £54,687, 18s., plus £5186 for railways. Pop. (1801) 1407, (1831) 2635, (1861) 5052, (1871) 7252, (1881) 9521, (1891) 10,531, of whom 3896 were in the ecclesiastical parish of Monifieth, 6253 in that of Broughty Ferry, and 359 in St Stephen's.—*Ord. Sur.*, sh. 49, 1865.

Monigaff. See MINNIGAFF.

Monikie, a hamlet and a parish of S Forfarshire. The hamlet has a station on the Dundee and Forfar Direct section of the Caledonian, and is $11\frac{1}{4}$ miles NE of Dundee, under which there is a post office.

The parish, containing also the villages of CRAIGTON (with a post office under Carnoustie), GUILDY, and NEWBIDDING (with a post office under Dundee), is bounded NW and N by Inverarity, NE by Carmyllie, E by Pan-bridge, SE by Barry, SW by Monifieth, and W by Murroes. Its utmost length, from NNW to SSE, is 6 $\frac{1}{2}$ miles; its utmost breadth is 5 miles; and its area is 9027 $\frac{1}{2}$ acres, of which 106 are water. By Buddon, Pit-airlie, Monikie, and other burns the drainage is carried SSE or ESE to the Firth of Tay or the German Ocean; and the surface has a general north-north-westerly ascent, attaining 118 feet at Mains, 204 near Templehall, 500 at Cambustane, 800 at the Inverarity boundary, and 693 at Gallow Hill. Two ranges of hills, which cross the parish from E to W, divide it into three districts of three different characters. The southern, containing in the extreme S a small tract of sandy downs, approaches within 3 furlongs of the Firth of Tay, and rising thence to the first range, called Downie or Cur Hills, presents a warm and pleasant appearance. The middle district, which forms a valley between the two ranges, at an elevation of about 300 feet above sea-level, produces inferior crops in everything but oats, and during great part of the year has a cold and damp climate. The northern district is chiefly swampy and moorish, and, though partially reclaimed, continues to be better for pasture than tillage. A fine trap rock, admirably suited both for building and for road metal, forms the greater part of the Downie Hills, at whose western extremity is an excellent sandstone, well suited for masonry; whilst the rock yielding what is known as 'Arbroath pavement,' abounds in the N; and all three have been quarried. Beautiful specimens of agate, jasper, and spar are found in the trap of the Downie Hills. The soil of the southern district is rich, sharp, and productive; of the middle district is chiefly a thin black loam, incumbent on cold wet till; and of the northern district is either reclaimed or unreclaimed moss. Denfind, a deep and winding ravine bisecting the Downie Hills, is traversed by Pit-airlie Burn, and spanned by a massive one-arched bridge. Rather more than half of the entire area is in regular cultivation, and some 500 acres are under wood. CAMBUSTANE, with the 'Live and Let Live Testimonial,' and AFFLECK Castle are noticed separately; other antiquities being vestiges of Hynd Castle and the Hair Cairn on the western border, only survivor of several cairns which appear to have been raised there as monuments of some ancient battle. Alexander Balfour (1767-1829), author of *Contemplation* and other poems, and of some songs and novels, was a native. Monikie is in the presbytery of Dundee and the synod of Angus and Mearns; the living is worth £235. The parish church, at the hamlet, was built in 1812. There are also a Free church of Monikie and a U.P. church of Newbidding; and Bankhead public, Monikie public, Newbidding public, and Monikie female Free Church schools, with respective accommodation for 78, 100, 86, and 79 children, have an average attendance of about 35, 70, 75, and 45, and grants amounting to nearly £44, £69, £70, and £30. Valuation (1884) £19,524, 9s. (1893) £9523, 5s. plus £8562 for railways. Pop. (1801) 1236, (1831) 1322, (1861) 1460, (1871) 1397, (1881) 1412, (1891) 1328, of whom 638 were males and 640 females.—*Ord. Sur.*, sh. 49, 1865.

Monimail (Gael. *monadh-maol*, 'bare hill'), a village and a parish of Fife. The village is 9 furlongs NE of Collessie station, on the Ladybank and Perth section of the North British railway, $5\frac{1}{2}$ miles W by S of Cupar, and 4 N by W of the post-town, Ladybank.

The parish, containing also the post offices of Letham (under Collessie) and Bow of Fife (under Springfield), is bounded N by Dunbog, Creich, and Moonzie, E and SE by Cupar, S by Cults, SW and W by Collessie, and NW by Abdie. Its utmost length, from E to W, is $4\frac{1}{2}$ miles; its utmost breadth, from N to S, is $3\frac{1}{2}$ miles; and its area is 6554 acres. Streams there are none of any size, but the drainage is carried eastward to the Eden. The southern portion of the parish is tolerably level, nowhere sinking below 140 or exceeding 287 feet above the sea; but the northern is hillier, attaining 649 feet near Gowdie and 600 at Mount Hill. In the N the soil is mainly composed of clayey loam and decomposed trap, while in the S it is a light, thin alluvium, resting upon gravel. The parish is fairly well-wooded, containing, among others, the Connoquhie and Springfield woods. The Mount was the site of the house of the famous satirical poet, Sir David Lindsay (1490-1555), whom the late David Laing, however, considered to have most likely been born at Garmylton or Garletou near Haddington. The house stood on the S side of the hill, and its place is still marked by some old trees. 'Sir David's Walk,' where, it is said, he was wont to pace up and down while composing his satires, is still pointed out on the top of the hill, which is crowned by the Hopetoun Monument, a Doric column 92 feet high, with a capital of 15 feet, erected to the memory of John, fourth Earl of Hopetoun (1766-1823), the Peninsular hero. A spiral staircase leads to its summit, which commands a fine view of the valley of the Eden and of the Firths of Forth and of Tay. The following well-known Scotsmen have been connected with Monimail, all but the first being natives:—Sir Robert Sibbald (1641-1712), physician, naturalist, and antiquary, who resided at Upper Rankellour; General Robert Melville, LL.D. (1723-1809), an eminent military antiquary; David Molyson (1789-1834), a minor poet; and the two brothers, both 'literary peasants,' Alexander Bethune (1804-43) and John (1802-39). An ancient castle is said to have stood at Balgarvie, but no vestige of it now remains. With reference to it, Sir Robert Sibbald writes: 'It is said that there was here a strong castle, which was taken and levelled by Sir John Pettsworth, as he was marching with the English forces to the siege of the castle of Cupar in the reign of King Robert I.' The lands of Monimail anciently belonged to the Archbishop of St Andrews, who had a castle here, which stood to the N of Melville House. It was originally built by Bishop William Lamberton, who died in June 1323, and appears to have been enlarged and improved by Cardinal Beaton, as a head with a cardinal's cap was carved on different parts of the walls. Archbishop Hamilton resided at the castle of Monimail during a severe illness, when he was attended and cured by the famous Italian physician, Cardan. Fernie Castle is noticed separately, as also are the mansions of Balgarvie, Melville, and Rankellour. Monimail is in the presbytery of Cupar and the synod of Fife; the minister's stipend is £347. The parish church is a handsome edifice of 1796, with a tower. There is a Free church at the Bow of Fife; and two public schools, Easter Fernie and Letham, with respective accommodation for 54 and 103 children, have an average attendance of about 15 and 80, and grants of over £10 and £73. Valuation (1834) £11,564, 4s. 10d., (1893) £3895, 12s. 4d. Pop. (1801) 1066, (1831) 1230, (1861) 1054, (1871) 918, (1881) 834, (1891) 769.—*Ord. Sur.*, shs. 48, 40, 1868-67.

Monkland, an ancient barony in the Middle Ward of Lanarkshire. It long constituted one district or parish; but in 1640 it was divided into the two parishes of Old or West Monkland and New or East Monkland. The name of Monkland was obtained from the district having been the property in early times of the monks of Newbattle. In the early part of the reign of Malcolm IV.

(1153-65), that monarch granted to these monks a large tract of territory, which extended from the boundaries of Lothian on the E to the Clyde on the W, and which constituted a hundred pounds lands of the ancient extent, the monks having ample jurisdiction over all of it. Excepting the lands and manor-place of Lochwood, which belonged to the Bishops of Glasgow, the monks of Newbattle possessed every acre of territory in what are now Old and New Monkland, a considerable part of which they held in their own hands for cultivation, letting out the remainder in lease. From documents still extant it appears that they obtained permission from the landed proprietors of the west of Scotland, as well as those in the Lothians, for free passage for themselves, their servants, cattle, and goods, from their monastery of Newbattle to their domains in Clydesdale; and from King Alexander II. they obtained similar grants of free passage by the usual ways, with permission to depasture their cattle for one night, on every part of the route, excepting upon the meadows and growing corn. The rectorial revenues of Monkland were joined to those of Cadder in forming a rich prebend, which was held as the appropriate benefice of the sub-dean of Glasgow; and, although the period of this arrangement is not known, it continued till the Reformation. Previous to this era a chapel was erected at Kipps, on the borders of the present district of New Monkland, which was the property of the Newbattle monks; and the abbots are said to have held annual courts at it, when they levied their rents and feu-duties, and transacted the other business pertaining to their barony of Monkland. This chapel was destroyed at the stormy period of the Reformation, and its site can scarcely now be pointed out. About the same time the monastery of Newbattle was overthrown, and all the fair domains which had so long remained in the possession of the monks were wrested from them.

In 1587 the barony of Monkland was granted in fee to Mark Ker, the commendator of the abbey, who four years later was created Lord Newbattle; but afterwards the barony was divided, and parcelled out into various hands. A portion called Medrocs fell to the share of Lord Boyd; but a still larger share of the barony was acquired by the wily and hoarding Sir Thomas Hamilton of Binning, King's advocate under James VI. He obtained a charter for it from that monarch in 1602, and at the same time a grant of the patronage of the churches of Cadder and Monkland. Sir Thomas subsequently sold the barony to Sir James Cleland, whose son and heir, Ludovick, disposed of it to James, Marquis of Hamilton. In 1639 the Marquis secured his purchase by a charter from the King, granting him the lands and barony of Monkland, with the right of patronage of the churches of Cadder and Monkland, to be held of the King in fee for the yearly payment of a trifling sum in the name of bleach-ferm. In the reign of Charles II., the College of Glasgow purchased from the Duchess of Hamilton the patronage and tithes of the sub-deanery of Glasgow, as well as of the churches of Cadder and Monkland; and for this a charter was also obtained from the King, which was ratified by act of parliament in 1672. Subsequently to this period the heritors of the parishes of New and Old Monkland purchased the right of presentation to both these parishes from the College, under authority of the act 1690 respecting the purchase of church-patronage.

Monkland is famous for its abundance of coal, iron, and other valuable minerals. Its coal has long been worked, and continues to be worked increasingly; but iron-mining, its staple industry, is of later date. The increase in mining since the iron began to be worked has been almost magical, changing the face of the whole district, chequering it over everywhere with towns and villages, rendering it all a teeming scene of population and industry, drawing through it a network of communications in road and railway and canal, and giving it, through its iron furnaces and coal-pits, a conspicuous or almost distinctive character for streams of flame and clouds of smoke. Its population rose from 8619 in 1801

to 78,476 in 1891. Its economic condition has in consequence become peculiar, presenting a medium character between that of an open country and that of a manufacturing city. The following extract from the official report upon it in 1850 is interesting:—'The large mining villages now no longer exhibit the aspect of extreme filth and neglect for which they were formerly conspicuous. It requires time to bring a population, not yet accustomed to habits of cleanliness, to regard it for its own sake; the masters are, therefore, obliged to employ men and carts expressly to keep the spaces about the houses free from accumulations of refuse, and to look to the drainage, etc. The effect has been salutary in many respects. The agents also occasionally inspect the houses themselves, prevent overcrowding, and fine or dismiss dirty and disorderly families. In many places proper drains have been made, either covered or laid with stone or brick, and hard and dry road-ways have taken the place of the natural soil, which in wet weather was often deep with mud. Much, therefore, has been done towards placing the population in circumstances in which the deficiencies and comforts of domestic life are possible; though the original arrangement of the majority of the mining villages in large squares or long unbroken rows must still remain an obstacle; and it has been so far recognised as such, that in the most of the more recent works it has been abandoned, and the cottages have been built fewer together, larger, and with more rooms, and with garden-ground and all proper conveniences nearest hand.'

Since the above was written the more populous places have become municipal or police burghs with the usual powers of self-government. Under the various school-boards the means of education have been greatly extended, and numerous large schools, well supplied with all approved conveniences and appliances, have been planted throughout the district. Technical and higher education, too, has not been neglected. Among higher class schools there has been established at Coat-bridge the West of Scotland Technical and Mining College. Under the Local Government Act of 1890 the County Council of Lanarkshire, divided into district committees, has done much to improve the locality. Sanitation is well attended to, and a staff of competent inspectors has been appointed, whose members devote their whole time to their duties. Overcrowding is still too prevalent in some places, but it is kept well in check. Drainage and sewage are also seen to, while the water supply has been improved, and there is now little chance of a water famine in periods of drought. Hospitals have been set up here and there not only for infectious diseases, but also for those of a non-infectious nature. Altogether the Local Government Act has given a decided stimulus to the conduct of local affairs, and supplied a means for the social and moral improvement of the people, which will no doubt be greatly extended under the Parish Councils Act of 1894, as isolated populous places are still too much neglected, and there is no opportunity for those most affected compelling an improvement in many ways.—*Ord. Sur.*, sh. 31, 1867.

Monkland Canal, an artificial navigable communication between the city of Glasgow and the district of Monkland in Lanarkshire. It commences in the northern district of Glasgow, or rather is prolonged westward there into junction at Port-Dundas with the Glasgow branch of the Forth and Clyde Canal; and it proceeds east-south-eastward, through the Barony parish of Glasgow, and the parish of Old Monkland, to North Calder Water, at the boundary with Bothwell parish. It sends off four branches, one about a mile in length, to Calder Ironworks, near Airdrie, in the parish of New Monkland; one, about a mile in length, to Gartsherrie Ironworks; one, about $\frac{3}{4}$ mile in length, to Dundyvan Ironworks; and one, also about $\frac{3}{4}$ mile in length, to Langloan Ironworks—the last three all in the parish of Old Monkland.

The project of the Monkland Canal was suggested in 1769, as a measure for securing to the inhabitants of

Glasgow at all times a plentiful supply of coals. The corporation of the city immediately adopted the project, employed the celebrated James Watt to survey the ground, obtained an Act of Parliament for carrying out the measure, and subscribed a number of shares to the stock. The work was begun in 1761; and the operations were carried on till about 10 miles of the canal were formed. The first 2 of these miles, extending from the basin to the bottom of Blackhill, are upon the level of the upper reach of the Forth and Clyde Canal; the other 8 miles, beginning at the top of the Blackhill, are upon a level 96 feet higher. The communication between these levels was at that early time carried on by means of an inclined plain, upon which the coals were lowered down in boxes, and re-shipped on the lower level. The capital which had been declared necessary to complete the undertaking was £10,000, divided into 100 shares; but this sum was found to be altogether insufficient; for, in addition to expending it, a debt of some amount was contracted in executing the above part only of the operations. The concern, in this unfinished state, produced no revenue, and the creditors naturally became pressing. A number of the stockholders, too, refused to make advances either for the liquidation of the debt, or for the completion of the plan. The whole stock of the company was consequently brought to sale, and purchased in 1789 by Messrs William Stirling & Sons of Glasgow. These gentlemen, immediately after acquiring the property, proceeded to complete the canal; and, in 1790, having, in conjunction with the proprietors of the Forth and Clyde Canal, procured a second Act of Parliament, empowering the latter to make a junction between the navigations, by a cut from their basin at Port-Dundas in Glasgow to the Monkland Canal basin, they built locks at Blackhill, and extended the Monkland Canal to the river Calder. On these operations the Messrs Stirling are understood to have expended £100,000.

The Monkland Canal is 35 feet broad at the top and 24 at the bottom. The depth of water upon the locksills is $5\frac{1}{2}$ feet. To connect the upper and lower levels, at Blackhill, there are two sets of four double locks of two chambers. Each chamber is 71 feet long from the gates to the sill, and 14 feet broad; the ascent in each being 12 feet. The level at the top of the Blackhill is continued to Sheepford, 8 miles, where there are two single locks of $11\frac{1}{2}$ feet each, after which the canal goes on upon the level it has then gained to the river Calder. The supplies of water for it are derived from the contiguous streams, from the river Calder, and from the reservoir at HILLENDE, beyond Airdrie, which covers 300 acres of ground near the source of that river, and was formed at the expence of the proprietors of the Forth and Clyde navigation. From the advantage which the canal offers of easy communication with both the eastern and western seas, and from its unlimited command of coal, the vicinity of it has always been considered favourable for the establishment of manufactures, especially of a bulky nature. For a long series of years the revenue of the canal was wholly absorbed by the expenses of its extension and improvement. In 1807, when a dividend first began to be made, the gross revenue amounted to £4725; and in 1814 it was £5087, although the navigation during this year was stopped for eleven weeks, principally by the severe frost, but partly on account of necessary repairs. From 1814 or 1815 up to the year 1825 the traffic continued without much variation, but about the last-mentioned date a great impulse was given to it by the establishment of ironworks in the district of Monkland. When the project of opening up that district by railways to Glasgow and Kirkintilloch was first started, it created much alarm in the Canal Company, lest the traffic should be entirely diverted from their navigation to the new channels. The alarm was not unfounded, but it only induced the company to reduce their dues to about one-third of the rate which had been charged up till that time, and also to expend large sums in making such improvements on the canal, and on things connected with

it, as seemed fitted to facilitate its traffic. One of these improvements was the making of additional reservoirs in the parish of Shotts, all uniting in the river Calder, which flows into the canal at Woodhall, near Holytown, thereby insuring an increased supply of water. Another improvement was the forming of extensive loading basins and wharves at Gartsherrie and Dundyvan, for the reception of traffic from the mineral railways in the vicinity. A third improvement was the making of new locks at Blackhill, near Glasgow, of such character as to excel all works of their class in Great Britain. These locks now comprise two entire sets of four double locks each, either set being worked independently of the other; and they were formed at an expense of upwards of £30,000. In 1850 the increase of traffic still going on, the supplies of water had again fallen short, and even the new locks at Blackhill could not pass the boats without undue delay. An inclined plane with rails was now formed at these locks, 1040 feet in length, and 96 feet in total ascent, at an expense of £13,500, by which empty boats were taken up at a saving of five-sixths of water, and about nine-tenths of time. Each boat was conveyed afloat in a caisson, and the traction was done by steam-power and rope-rolls. This method of transportation for a long time answered admirably, but it has now been discontinued—the caissons and the track lying idle and going quickly to decay and disrepair. In 1846, under parliamentary sanction, the Monkland Canal became one concern with the Forth and Clyde Canal. The purchase price of it to Messrs Stirling & Sons in 1789 is said to have been only £5 per share; but the purchase price to the Forth and Clyde Company in 1846 was £3400 per share. As part of the FORTH AND CLYDE navigation, the Monkland Canal was taken over by the Caledonian Railway Company in 1867.—*Ord. Sur.*, sh. 31, 1867.

Monkland, New, a village and a parish of the Middle Ward, NE Lanarkshire. The village stands $1\frac{1}{2}$ mile NNW of the post-town, Airdrie, adjoining Glenmavis, is the seat of the parish church, built in 1777, with accommodation for over 1000 persons, and has a public school. Pop., with Glenmavis, (1871) 339, (1881) 369, (1891) 454.

The parish contains also the town of AIRDRIE and the villages of Avonhead, East Langrigg, Greengairs, Longriggend, Plains, Riggend, Roughrigg, Wattston, West Langrigg, Clarkston, and Glenboig, with one-eighth of Coatdyke. It is bounded N by Kirkintilloch and Cumbernauld in the detached portion of Dumbar-tonshire, E by Slamannan in Stirlingshire and Torphichen in Linlithgowshire, SE by Shotts, SW by Old Monkland, and W by Old Monkland and Cadder. Its utmost length, from E to W, is $9\frac{3}{4}$ miles; its utmost breadth, from N to S, is $5\frac{1}{2}$ miles; and its area is $31\frac{3}{8}$ square miles or 20,117 acres, of which 232 are water. BLACK LOCH ($\frac{1}{2} \times \frac{1}{2}$ mile) lies right on the Stirlingshire border; and, issuing from it, North CALDER Water winds $2\frac{1}{2}$ miles south-westward along the Slamannan, Torphichen, and Shotts boundary, till it expands into HILLEN Reservoir ($10\frac{1}{2} \times 4\frac{3}{4}$ furl.), after which it meanders $5\frac{1}{2}$ miles south-westward along all the rest of the Shotts boundary, and at Monkland House passes off from this parish on its way to the river Clyde. LUGGIE WATER, a feeder of the Kelvin, flows $6\frac{1}{2}$ miles westward along the Dumbar-tonshire border; but some little head-streams of the river AVEN drain the north-eastern corner of New Monkland towards the Firth of Forth. Along both the Calder and Luggie the surface declines to less than 300 feet above sea-level; and thence it rises very gradually to 577 feet near Gartlee, 672 at Knowehead, 678 at the Hill of Drumgray, 763 near Little Drumbreck, and 771 at Lochend. The parish is intersected in every direction by railways, a great traffic being conducted in connection with the various mines and ironworks, and communication being largely maintained with every part of the kingdom, and especially with Glasgow. Though much of the parish lies more than 600 feet above the sea, yet the dorsal ridge that runs through it from end to end ascends from so broad

a base, so gently and continuously, as nowhere to form any height which, properly speaking, can be termed a hill. Much of the highest grounds is covered with moss, and could not be reclaimed except at great expense; but the lower tracts, on the banks of the streams and along the western border, present an agreeable diversity of vale and gently-rising ground, and are in a high state of cultivation. The soil of the arable lands in the eastern and central parts is mossy and late; but that of the northern and western divisions is partly of a dry character, partly a strong clay. The parish, for a long period, particularly during the Continental war, was famous for its culture of flax. In some years as much as 800 acres were under this species of crop; but the welcome advent of peace, and still more the cheapness and universal introduction of cotton, rendered flax-cultivation here, as elsewhere at that time, unprofitable. The agriculture of the parish has no peculiar features. Its mining industry, however, as noticed in our articles AIRDRIE and MONKLAND, is pre-eminently great, or almost distinctive. The rocks are partly eruptive, partly carboniferous; and so far back as the writing of the *Old Statistical Account*, it is stated that 'coal and ironstone are, or may be, found on almost every farm.' Since then, the working of these minerals has been most extensive, until now there are some fifty coal and ironstone mines at work in the parish. The quality is only equalled by the abundance of the coal, which in many places is found in seams from 9 to 10 feet thick. The ironstone is found both in balls and in seams; and much of it is of the valuable kind called blackband, which is so abundantly mixed with coal as to require little addition of fuel in the burning. Many of the extensive ironworks in the neighbourhood, or even at a distance, particularly those of Calder, Chapelhall, Gartsherrie, Clyde, and Carron, are supplied with ironstone from New Monkland. Limestone also is worked, particularly in the northern district, but not to a great extent. Paper-making is carried on at Caldercruix and Moffat, and calico printing also at the former place; while at Whiterigg and Rawyards there are respectively oilworks and railway waggon works. Several mineral springs, too, exist, chiefly of the chalybeate kind. The Monkland Well, near Airdrie, is the most famous historically, at one time enjoying so high a repute for its efficacy in the cure of scorbutic and other cutaneous diseases, as well as for complaints in the stomach and eyes, as to be a favourite resort even for the wealthy citizens of Glasgow and its neighbourhood; but its character as a watering-place has long ago departed. Alexander Macdonald, M.P. (1821-81), was born at Dalma-couthier farm, and James Begg, D.D. (1808-83), in the manse. Mansions, noticed separately, are AUCHINGRAY and ROOHSOLES. Including the *quoad sacra* parishes of AIRDRIE, FLOWERHILL, CALDERCRUIX, and GREENGAIRS, with most of CLARKSTON, New Monkland is in the presbytery of Hamilton and the synod of Glasgow and Ayr; the living is worth £489. There is a chapel of ease at Glenboig. The parish poorhouse accommodates 204 inmates; an hospital was built in 1881-82 at a cost of £1200; and seven public and two Roman Catholic schools, with total accommodation for 1950 children, have an average attendance of about 1390, and grants amounting to over £1384. Pop. (1801) 4613, (1831) 9867, (1841) 20,515, (1861) 20,554, (1871) 22,752, (1881) 27,816, (1891) 33,860, of whom 17,746 were males, and 8391 were in the ecclesiastical parish.—*Ord. Sur.*, sh. 31, 1867.

Monkland, Old, a parish of the Middle Ward, N Lanarkshire. It contains the towns of Baillieston, Coat-bridge, and Whifflet and Rosehall, with two-thirds of Calder, seven-eighths of Coatdyke, and one-seventh of Tolleross, as also the villages of Bargeddie and Dyke-head, Braehead, Broomhouse, Calderbank, Carmyle, Clyde Iron-works, Faskine, Mount Vernon, Swinton, West Maryston, etc. In shape resembling a rude triangle with northward apex, it is bounded NW by Shettleston, Cadder, and New Monkland, NE by New Monkland, and S by Bothwell, Blantyre, Cambuslang,

and Rutherglen. Its utmost length, from E by N to W by S, is $9\frac{1}{4}$ miles; its utmost breadth is $4\frac{1}{2}$ miles; and its area is $17\frac{3}{4}$ square miles or $11,281\frac{1}{2}$ acres, of which $845\frac{3}{4}$ are water. From Monkland House, North CALDER Water meanders 10 miles west-south-westward along all the Bothwell boundary, till at Daldowie it falls into the CLYDE, which itself curves 4 miles westward along all the boundary with Blantyre, Cambuslang, and Rutherglen. Lochend Loch ($3\frac{1}{2} \times 1\frac{1}{2}$ furl.) communicates with Woodend Loch ($\frac{3}{4} \times \frac{1}{4}$ mile), and this again with Bishop Loch ($1 \times \frac{1}{4}$ mile), which lies on the Cadder boundary, and is one of the principal reservoirs of the Monkland Canal. The banks of all three are tame, with little or no beauty; but their waters contain some large pike. The surface of the parish is generally flat or gently undulating. Along the Clyde, in the extreme SW, it sinks to 32 feet above sea-level; and thence it rises gradually to 207 feet near Mount Vernon House, 356 near Westerhouse, 321 at Shawhead, 345 near Gartsherrie House, and 360 at Castlespails. Whether the fertility of its superficies, or the wealth of its mineral treasures be considered, Old Monkland is one of the most important and wealthy parishes in Lanarkshire. To quote the writer of the *Old Statistical Account*.—‘A stranger is struck with the view of this parish. It has the appearance of an immense garden.’ This account, penned about a century ago, is still generally true, if we except the fact that improved culture has vastly increased the production of the soil, and that the rapid advance of population, the enormous progress of the mineral trade, and a perfect network of railways, have sadly marred those features of rural loveliness for which the district was formerly celebrated. Withal, there are few districts which combine so much of the attributes of country-life with the bustle and stir of manufactures; for the soil of Old Monkland is dotted at every little distance with the villas of the aristocracy of the western capital, with the blazing furnaces and tall chimneys of the iron and coal works, with belts of thriving plantation and clumps of old wood, with orchards, grassy holms, or waving grain, and with the homely farmstead or lowly dwelling of the cottar. From the facilities of obtaining lime and manure, both by canal and railway, a soil which is naturally fertile has been improved to the highest degree; and the yearly value of the agricultural produce of the arable lands of the parish is superior to that of an equal extent of arable lands in most other parts of Scotland. The soil here, on the whole, is much more fertile than the soil above the coal measures in other parts of the country. The arable soil is of three kinds. That along the Calder and the Clyde is a strong clay, changed by cultivation into a good loam; that of the middle districts is a light sand, very fruitful in oats and potatoes; and that towards the N is mainly reclaimed bog or otherwise mossy. In the northern district, the coal crops out, and there are some 1500 acres of peat-moss. In Old as in New Monkland flax used to be largely cultivated, some of the farmers having each as much as from 20 to 30 acres annually under that crop; but the system of agriculture now pursued on the best farms is a four-year rotation of potatoes or turnips, wheat, hay, and oats, with sometimes one year or two of pasture between the hay and the oats.

The parish, however, is chiefly remarkable for its working of coal and iron. In an account of it published before the beginning of the 19th century, one reads: ‘This parish abounds with coal; and what a benefit it is for Glasgow and its environs to be so amply provided with this necessary article! There are computed to be a greater number of colliers here than in any other parish in Scotland.’ The progress in the coal-trade since the period alluded to has been almost magical; and as scarcely a year passes without new pits being sunk, while the old ones continue in vigorous operation, it would seem that scarcely any limits can be set to the vast aggregate production. The pits have a depth of from 30 to 100 fathoms; and the principal

working seams, according to the *New Statistical Account*, are as follows:—‘1. The Upper coal; coarse, and seldom workable; its average distance above the Ell-coal from 14 to 16 fathoms. 2. The Ell or Mossdale coal; 3 to 4 feet thick, of inferior estimation in this parish, and generally too thin to work; but in places a thick coal, and of excellent quality. 3. The Pyotshaw, or Roughell; from 3 to 5 feet thick, and from 7 to 10 fathoms below the Ell-coal. 4. The Main coal. It often unites with the above, and forms one seam, as at Drumpellier in this parish. These two seams are thus sometimes in actual contact, and in other instances separated by a wide interval of 6 or 7 fathoms. 5. Humph coal; seldom thick enough to be workable in this parish, and generally interlaid with fragments of freestone, about 10 fathoms below the main coal. 6. Splint-coal; about 4 fathoms below the Humph, and of very superior quality. It varies from 2 to 5 feet in thickness, and is mostly used for smelting iron. This seam, when of any considerable thickness, is justly esteemed, when got by the proprietors here, a great prize. 7. Little coal; always below splint, the distance varying from 3 fathoms to 6 feet. It is from 3 to $3\frac{1}{2}$ feet in thickness, and is a free, sulphury coal of inferior quality. 8. The Virtue-well or Sour-milk coal, from 2 to 4 feet thick, occurs from 26 to 28 fathoms below the splint. 9. The Kiltongue coal lies 22 fathoms below the Virtue-well, and, like it, is from 2 to 4 feet in thickness. 10. The Drumgray coal lies 6 fathoms below the Kiltongue, and perhaps from 60 to 100 fathoms above the first or upper band of limestone. It is seldom more than 18 or 20 inches thick. There are, besides these 10 seams, about 23 smaller seams between them, none of which are of workable thickness. The total thickness of the coal-measures above the lime may be about 775 feet.’ The same account adds:—‘This large and important coal-field is much intersected with dikes, and a knowledge of these is a knowledge of the strata, and of the manner in which they are affected by them.’

Still more than to its coal, however, is the parish of Old Monkland, in recent times, indebted to its ironstone and ironworks; although it is proper to mention that the ore for the supply of the latter is, to a great extent, drawn from New Monkland. The introduction of the hot air blast (1823), the increasing demand for iron for railway and other purposes, but, above all, the abundant possession of the most valuable of all the iron metals—the blackband—which contains so much coal as nearly to burn itself—are the main causes which have contributed to the almost unparalleled advance of Old Monkland in population and prosperity. To the burning of ironstone were added, in 1830 and the following years, works and machinery for the manufacture of malleable iron; and these have already risen to compare with the pig-iron works, in the proportion of about 30 to 100 in the yearly value of their produce. Everywhere are heard the rattling of machinery, the sonorous stroke of mighty hammers, and the hissing and clanking of the steam-engine; and the flames which perpetually belch from the craters of its numerous furnaces, and for miles around light up the country on the darkest nights, have not inappropriately earned for Old Monkland the title of the ‘Land of Fire.’ Fortunes have here been realised in the iron trade with a rapidity only equalled by the sudden and princely gains of the adventurers who sailed with Pizarro to Peru. It is understood, for example, that the profits of a single establishment in this line during the year 1840 were nearly £60,000; while little more than twenty years before the co-partners of this company were earning their bread by the sweat of their brow, in following the agricultural vocation of their fathers. The principal ironworks in the parish, or immediately adjacent to it, are those of Gartsherrie, Dundyvan, Monkland, Calder, Clyde, Summerlee, Carnbroe, and Langloan. The conversion of iron into steel has given a further impetus to the manufacture, and here are located the extensive works of the Calderbank Steel and Coal Co. The ironstone strata in Old and New Monkland—the strata from which the Monkland

furnaces have their supply—are described in the *New Statistical* as follows: '1. The Upper blackband. It lies about 24 fathoms above the Ell-coal, as indicated in the succession of strata given above. It is of very local occurrence, like all the ironstones, and has only been found worth working at Palacecraig. It is of inferior quality, and only about 18 inches thick.' 2. The blackband, also called Mushet's blackband, from the name of its discoverer, Robert Mushet (1805). This is the great staple commodity for the supply of the iron market, and when found to any extent is a certain source of wealth to the proprietor. Its average depth below the splint is about 15 or 16 fathoms; and it varies in thickness from 14 to 18 inches, and occupies an area of from 8 to 10 square miles. 3. Airdriehill blackband. In this property, which is in New Monkland, there is a band of ironstone, varying from 2 to 4 feet in thickness, lying about 3 feet below the blackband. It is found only in part of the lands of Airdriehill, and is by far the most local of all the ironstones.'

Several kinds of sandstone, and several varieties of trap, within the parish, are in great request for local building purposes, and have been largely quarried. The facilities of communication by road, railway, and canal are remarkably great, having been multiplied and ramified in proportion to the large and rapidly increasing demands of the district for heavy traffic. The principal of them will be found described or indicated in our articles CALEDONIAN RAILWAY, MONKLAND CANAL, and NORTH BRITISH RAILWAY; whilst fuller information as to the various industries is furnished under BAILLIESTON, COATBRIDGE, GARTSHERRIE, GARTURK, etc.

For registration purposes the parish is divided into the three districts of Eastern, Western, and Coatbridge. Giving off the *quoad sacra* parishes of Baillieston, Bargeddie, Calderbank, Coats, Gartscherrie, and Garturk, Old Monkland is in the presbytery of Hamilton and the synod of Glasgow and Ayr; the living is worth £529. The parish church, $\frac{1}{2}$ mile SSW of Coatbridge, was built in 1790 at a cost of only £500, and, as since enlarged, contains 902 sittings. A chapel of ease to it stands at Kenmuir (Mount Vernon). The parish poor-house accommodates 276 inmates; and 19 schools, of which 13 are public and 5 Roman Catholic, with total accommodation for 9525 children, have an average attendance of about 7550, and grants amounting to nearly £8230. Pop. (1801) 4006, (1831) 9580, (1841) 19,675, (1861) 29,543, (1871) 34,073, (1881) 37,323, (1891) 44,616, of whom 24,021 were males, and 12,898 were in the ecclesiastical parish.—*Ord. Sur.*, sh. 31, 1867. See Andrew Miller's *Rise and Progress of Coatbridge and the Surrounding Neighbourhood* (Glasg. 1864).

Monkland Well. See MONKLAND, NEW.

Monklaw. See JEDBURGH.

Monk Myre, a lake (4×1 furl.) in Bendochy parish, Perthshire, $2\frac{3}{8}$ miles SE of Blairgowrie. Originally a shallow reedy pool, covering a bed of rich marl, it was deepened into a lake by extensive digging for removal of the marl.

Monkrigg, an estate, with an elegant modern mansion, in Haddington parish, Haddingtonshire, $1\frac{1}{2}$ mile SSE of the town.

Monk's Burn, a brook in Penicuik parish, Edinburghshire, rising among the Pentland Hills at an altitude of 1480 feet, and running $2\frac{3}{8}$ miles south-by-eastward, till, after a total descent of 770 feet, it falls into the North Esk near Newhall, at the boundary with Peeblesshire, $4\frac{1}{2}$ miles SW by W of Penicuik town. It enters the glen of the Esk in several considerable falls, amidst landscape of much beauty; is overlooked at its mouth, from the opposite side of the Esk, by a height called the Steel, said to have been so called from a skirmish on it with a straggling detachment of General Monk's army; and seems to have got its own name from some association with General Monk.—*Ord. Sur.*, sh. 32, 1857.

Monks Island. See INCHTAVANNACH and MUCK.

Monkstadt, an old mansion in Kilmuir parish, Isle of

Skye, Inverness-shire, near Columbkil Lake, $2\frac{1}{2}$ miles S of Duntulm Castle. It was the seat of the Macdonalds, subsequent to their removal from Duntulm Castle; was occupied by Sir Alexander Macdonald at the time of Prince Charles Edward's disasters after the battle of Culloden; and was the place to which Flora Macdonald conducted the Prince, in the disguise of a maidservant, from the Outer Hebrides.

Monkton, a mansion in Inveresk parish, Edinburghshire, 2 miles SSW of Musselburgh. Its oldest part is said to have been built by General Monk, who made it his favourite Scottish residence.

Monkton, a village and a coast parish of Kyle district, Ayrshire. The village stands 1 mile inland, and $\frac{1}{2}$ mile E by N of Monkton station on the Glasgow and South-Western railway, this being $4\frac{1}{2}$ miles N of Ayr. It has a post office, with money order, savings bank, and telegraph departments. Pop. (1861) 403, (1871) 467, (1881) 354, (1891) 387.

The parish, containing also the watering-place of PRESTWICK and half of the village of New Prestwick, since the close of the 16th or the beginning of the 17th century has comprehended the ancient parish of Prestwic Monachorum or Monkton, part of the ancient parish of Prestwic de Burgo, and the ancient chapelry of Crosby. Monkton proper lies in the middle, Prestwick in the S, and Crosby in the N; and the first got its name from its belonging to the monks of Paisley Abbey, the second from its being the 'habitation of a priest,' and the third from its having 'a dwelling at a cross.' The united parish of Monkton and Prestwick is bounded NW by Dundonald, NE by Symington, E by Craigie, SE by Tarbolton and St Quivox, SW by Newton-upon-Ayr, and W by the Firth of Clyde. Its utmost length, from N by E to S by W, is $4\frac{1}{2}$ miles; its utmost breadth is 3 miles; and its area is 3971 $\frac{1}{2}$ acres, of which 182 are foreshore and 20 $\frac{1}{2}$ water. Rumbling Burn flows south-south-westward to the sea along all the Dundonald boundary, and a little above its mouth is joined by Pow Burn, which, after tracing part of the St Quivox boundary, strikes north-westward across the interior. The coast, $2\frac{1}{2}$ miles in extent, consists of low flat sands, diversified only with sandy bent-covered knolls. The interior rises gently from the shore to 200 feet at the eastern boundary, but looks to the eye to be almost a dead level. Coal has not been worked for fifty or sixty years; and sandstone is no longer quarried. The soil on the coast and over a considerable part of the southern district is light sand incapable of tillage; of the central district is deep rich loam; and of the N and NE is strong earthy clay. Nearly one-fourth of the entire area is pastoral or waste; some 65 acres are under wood; and the rest of the lands is in tillage. The roofless old church of Monkton, St Cuthbert's, is a structure of high antiquity, with walls nearly 4 feet thick, and is said to have been the building near which Sir William Wallace had the singular dream recorded by Blind Harry. In the churchyard is the grave of James Macrae, who rose from a humble position to be governor of Madras, and to whose memory a monument has been erected. The old church of Prestwick, St Nicholas, as ancient probably as that of Monkton, has stone buttresses at the E end, and serves as a landmark to sailors. St Ninian's leper hospital, at Kingcase, between Prestwick and New Prestwick, and near the ruins of the old church of Prestwick, was founded by King Robert Bruce; but only a well remains to mark its site. Mansions are Adamton, Fairfield, Ladykirk, and Orangefield. Monkton and Prestwick is in the presbytery of Ayr and the synod of Glasgow and Ayr; the living is worth £316. The parish church, midway between Monkton and Prestwick villages, was built in 1837, and then superseded the two old churches. One of the earliest efforts of the late David Bryce, R.S.A., it is a very handsome and conspicuous edifice. Other places of worship are Prestwick Free and U.P. churches (1884). Two public schools, Monkton and Prestwick, with respective accommodation for 160 and 304 children, have an average attendance of about 110 and 170, and grants of

nearly £104 and £165. Pop. (1801) 986, (1831) 1818, (1861) 1973, (1871) 1744, (1881) 2121, (1891) 2608.—*Ord. Sur.*, shs. 14, 22, 1863-65.

Monktonhall, a hamlet in Inveresk parish, Edinburghshire, near the left bank of the river Esk, 1 mile SSW of Musselburgh.

Monkwood, a modern mansion in Maybole parish, Ayrshire, on the left bank of the Doon, $4\frac{1}{2}$ miles NNE of Maybole town.

Monquhitter, a parish of Buchan, N Aberdeenshire, containing the villages of CUMINESTOWN and GARMOND, respectively 6 miles E by N and 7 ENE of Turriff, which is the nearest railway station, and under which the former has a post office. It is bounded N by King-Edward, E by New Deer, SE by Methlick, S by Fyvie, and W by Turriff, from which last it was disjoined in 1649. Its length, from NNW to SSE, varies between $2\frac{1}{2}$ and $9\frac{1}{2}$ miles; its utmost width is $5\frac{1}{4}$ miles; and its area is $17,455\frac{1}{4}$ acres, of which $22\frac{3}{4}$ are water. Entering from King-Edward, the Burn of Monquhitter or IDOCH WATER flows $5\frac{1}{2}$ miles south-westward till it passes off into Turriff on its way to the Deveron; whilst Asleed or Little Water runs $7\frac{3}{4}$ miles southward along the eastern boundary on its way to the Ythan. Both streams abound with trout. Along Idoch Water the surface declines to 158 feet above sea-level; and thence it rises northward to 577 feet at the Hill of Cotburn, eastward to 586 at Waggle Hill, from which it again sinks south-south-eastward to 180 feet along Asleed Water. Much of Monquhitter is hilly, bleak, and barren of aspect, and even the rest presents a monotonous appearance, though culture and reclamation have done their best to render it pleasing and productive. Moors, bogs, and morasses were formerly very extensive, but have been greatly curtailed, and, with the exception of the deeper and firmer bogs, are fast approaching exhaustion as a source of fuel. Red sandstone abounds, and has been largely quarried, but does not form a good building material. The soils of the arable lands are a reddish loam and a deep black mould, both incumbent on boulder clay. But a small proportion of the parish is under wood, which does not thrive in any part of Buchan. Lendrum, in the SW corner, is the traditional scene of a three-days' battle between Donald of the Isles and the 'Thane' or Mormaer of Buchan in the latter half of the 11th century, when the Comyns are said to have won the victory. Down to at least 1793 it was firmly believed that corn grown on the 'bloody butts of Lendrum' could never be reaped without strife and bloodshed among the reapers. At Finlay's Mire some Covenanted were cut off by the Ogilvies. Tillymaud and Northburn, with a rental of about £1000, were vested in trustees by the late Messrs Chalmers for charitable purposes in Monquhitter and the city of Aberdeen. AUCHRY House (1767) is the chief mansion. Giving off a portion to Millbren *quoad sacra* parish, Monquhitter is in the presbytery of Turriff and the synod of Aberdeen; the living is worth £258. Previous to the Anti-patronage Act coming into operation, the Duke of Fife was patron of the church and parish; and Monquhitter was the last parish in which the right of presentation was exercised, on 29 Dec. 1874. The parish church, a plain edifice of 1868, stands on a slope to the N of Cuminstown, and contains 1050 sittings. A new graveyard was opened in 1893. A Free church (358 sittings) stands in a hollow to the S of Cuminstown, near whose centre is St Luke's Episcopal church (1844; 130 sittings). Three public schools—Garmond female, Greeness, and Monquhitter—with respective accommodation for 66, 170, and 205 children, have an average attendance of about 25, 95, and 170, and grants amounting to over £20, £82, and £184. Pop. (1801) 1710, (1831) 2004, (1861) 2580, (1871) 2949, (1881) 2794, (1891) 2512, of whom 2220 were in the ecclesiastical parish.—*Ord. Sur.*, shs. 86, 87, 1876.

Monreith, an elegant modern mansion in Mochrum parish, SE Wigtownshire, $1\frac{1}{2}$ mile ESE of Port-William. White Loch ($4\frac{1}{2} \times 1\frac{3}{4}$ furl.) lies within the large and finely wooded park; and a 16th century cross 7 feet

high, has been placed in front of the house. Held by a younger branch of the Maxwells of Caerlaverock since 1481, Monreith is now the property of Sir Herbert Eustace Maxwell, seventh Bart. since 1681 (b. 1845; suc. 1877), who has sat in the House of Commons as member for Wigtownshire since 1880. The small village of Monreith is in Glasserton parish, at the head of little Monreith Bay, $2\frac{1}{4}$ miles SSE of Port-William and $5\frac{1}{2}$ W of Whithorn.—*Ord. Sur.*, shs. 4, 2, 1857-56.

Mons. See DALMENY.

Montagu's Walk. See KINNOULL.

Montblairy, an estate, with a mansion, in Alvah parish, Banffshire. The mansion, on the left bank of the Deveron, $4\frac{1}{2}$ miles NNW of Turriff, was built in 1791 and enlarged in 1825. A handsome three-storey edifice, it contains some interesting portraits, and has well-wooded grounds sloping down to the Deveron. The shooting extends over 4000 acres, and the ground is well stocked with all kinds of low country game. There is also salmon and trout fishing on the Deveron, the salmon being numerous and the trout first-rate. The estate, which belonged in remote times to the Earls of Buchan and Mar, was sold by Major-General Andrew Hay (1762-1814) to the uncle of the late proprietor, Alex. Morison, Esq. (1802-79), and is now held by Col. Frederick de Lemare Morison.—*Ord. Sur.*, sh. 86, 1876.

Montcoffer, a seat of the Duke of Fife in Alvah parish, Banffshire, on the right bank of the Deveron, 3 miles S of Banff. A fine old residence, it stands on the southern declivity of wooded Montcoffer Hill (346 feet).—*Ord. Sur.*, sh. 96, 1876. See DUFF HOUSE.

Monteith, a district of SW Perthshire. Excepting Balquhiddier parish, which anciently belonged to the stewartry of STRATHEARN, the district of Monteith comprises all the lands W of the Ochils in Perthshire, whose waters discharge themselves into the Forth. The vale of the Teith, whence the name is derived, occupies the central and larger part, but is flanked on the one side by the Perthshire section of the upper vale of the Forth, and on the other side by the lower part of the vale of Allan Water. The entire district measures about 28 miles in length from E to W, and 15 in extreme breadth; and includes the whole of the parishes of Callander, Aberfoyle, Port of Monteith, Kilmadock, Kincardine, and Lecropt, with part of the parish of Duablane. Large tracts of it are eminently rich in the finest elements of landscape. Previous to the abolition of hereditary jurisdictions, Monteith was a separate or independent stewartry. Forming with Strathearn the ancient province of Fortrenn, Monteith was the seat of an old Celtic earldom, whose first earl, Gilchrist, appears in the reign of Malcolm IV. (1153-65), and which, about the middle of the 13th century, passed by marriage to Walter Comyn, second son of the great Earl of Buchan. He was one of the regents of the kingdom at the time of his death in 1258, when the Earldom was obtained by his brother-in-law, Walter Stewart, third son of the third High Steward of Scotland. Walter's great-granddaughter, Margaret, conveyed the Earldom by marriage to Robert Stewart, Duke of Albany and Regent of Scotland, whose son and successor, Murdoch, was beheaded at Stirling in 1425. Two years later the earldom of Monteith was granted to Malise Graham, formerly Earl of Strathearn. His seventh descendant, William, for nearly two years was styled Earl of Strathern and Monteith; but on being deprived of those titles, in 1633 was created Earl of Airth and Monteith—a title dormant since 1694, but claimed by the Barclay-Allard family. See Sir Wm. Fraser's *Red Book of Monteith* (2 vols., Edinb. 1880).

Monteith, Lake of, a placid sheet of water in the middle of Port of Monteith parish, SW Perthshire. Lying 55 feet above sea-level, it has an utmost length from E to W of $1\frac{1}{2}$ mile, an utmost breadth from N to S of 1 mile, and a depth in places of 80 feet; and it sends off GOODIE WATER $8\frac{1}{4}$ miles east-south-eastward to the Forth. Its shores display none of the rude magnificence and grandeur that is characteristic of Highland scenery; but, on the other hand, they

present an aspect of soft pastoral beauty which soothes the soul, and fills the contemplative mind with thoughts calm and quiet as its own transparent waters. The northern shore is beautifully adorned with oak, Spanish chestnut, and plane trees of ancient growth—survivors of those which adorned the park of the Earls of Monteith. On the same side, the manse and church of Port of Monteith, with the elegant mausoleum of the Gartmore family, seated close on the margin of the lake, increase the interest of the scene. The lake contains three islands, two of which, from the noble wood that adorns them, add greatly to the beauty of its expanse; whilst a long, narrow, wooded promontory running far into the water diversifies the southern shore. The largest island, called INCHMAHOMIE, has been noticed separately; that immediately to the W bears the name of Inch Talla or Earl's Isle. Here, from 1427, the Earls of Monteith had their feudal stronghold, the ruins of which still exist, comprising an ancient tower and some domiciliary buildings. The smallest island is called the Dog Isle, where the earls had their dog-kennel; while the stables were situated on the western shore of the lake. Twice in September 1869 Queen Victoria drove here from Inverrossachs. The trout-fishing is ruined by the pike.—*Ord. Sur.*, sh. 38, 1871. See P. Dun's *Summer at the Lake of Monteith* (Glasg. 1866); chap. xxv. of Thos. Hunter's *Woods and Estates of Perthshire* (Edinb. 1883); and other works cited under INCHMAHOMIE.

Monteith, Port of, a hamlet and a parish of SW Perthshire. The hamlet lies on the NE shore of the Lake of Monteith, 6 miles SSW of Callander, $4\frac{1}{2}$ E by N of Aberfoyle, and 4 NNW of Port of Monteith station, in Kippen parish, on the Forth and Clyde junction section of the North British railway, this being 13 miles W by N of Stirling, and $17\frac{1}{2}$ NE of Balloch. Erected into a burgh of barony by James III. in 1467, it long was called simply Port, as being the landing-place from Inch Talla and Inchmahome;* and has a little pier, a post office, and a hotel capable of affording excellent accommodation to visitors who wish to enjoy the beautiful scenery of the district.

The parish, containing also the village and station of GARTMORE, since 1615 has comprehended the ancient parish of Port and a portion of that of LANY. It is bounded N by Callander, NE by Callander and Kilmadock, E by Kincardine, S by Kippen and Drymen in Stirlingshire, SW by Drymen, and W by Aberfoyle. Its utmost length, from E to W, is $7\frac{1}{2}$ miles; its utmost breadth, from N to S, is 5 miles; and its area is $36\frac{1}{2}$ miles or 23,599 $\frac{1}{2}$ acres, of which $1361\frac{1}{2}$ are water. The FORTH has here a winding course of $13\frac{3}{4}$ miles—viz., 7 furlongs southward along the western border, $2\frac{1}{4}$ miles south-eastward across the south-western interior, and $10\frac{1}{2}$ miles eastward along all the southern border—though the point which it first touches and that where it quits the parish are but $7\frac{1}{2}$ miles distant as the crow flies. Keltly Water flows $2\frac{1}{4}$ miles east-by-northward along part of the Drymen boundary to the Forth, another of whose affluents, GOODIE WATER, goes 4 miles eastward from the Lake of Monteith ($1\frac{1}{2} \times 1$ mile; 55 feet) till it passes off into Kincardine. Loch DRUNKIE ($9 \times 7\frac{1}{2}$ furl.; 450 feet) lies on the boundary with Aberfoyle, and Loch VENNACHAR ($3\frac{3}{4}$ miles \times 5 furl.; 270 feet) on that with Callander; whilst in the NE interior are Loch Ruskie ($2 \times 2\frac{3}{4}$ furl.; 400 feet) and Lochan Balloch ($2\frac{1}{2} \times 1$ furl.; 1180 feet). The surface of the southern district is low and flat, sinking to 45, and rarely much exceeding 100, feet above sea-level; but N of the Lake of Monteith rise the Monteith Hills (1289 feet), Ben Dearg (1401), Ben Gullipen (1344), and Meall nan Gobhar (812). This upland district, comprising one-third of the whole area of the parish, consists of a congeries of rocky and mountainous elevations, chiefly covered with heath, and admitting cultivation only in some confined hollows and along some narrow skirts.

The SE corner comprises part of Flanders Moss, in all respects similar in character to the famous one of Kincardine. The rest of the parish, including the district along the Forth, consists of rich carse land towards the river, of 'dryfield' towards the hills, and presents an appearance of much fertility and high culture. The transition from the uplands to the lowlands of the parish is sudden and perfect. In the mountains is limestone of the quality of marble, having a blue ground streaked with white, which, when calcined, affords a quicklime of the purest white. A bluish grey sandstone occurs in the champaign district, close in texture, and very suitable for pavements and staircases. The soil of the carse lands is rich argillaceous alluvium; on most other lands of the champaign district is either a very fertile shallow loam, a stiff, intractable, tilly clay, a ferruginous and comparatively barren gravel, or a more or less fertile reclaimed swamp or meadow; on Flanders Moss and on two other smaller tracts is moss; and on the cultivable part of the uplands is chiefly reclaimed moor. An island in Loch Ruskie is the traditional site of a castle belonging to Sir John Monteith, Wallace's gaoler at DUMBARTON. Other antiquities are traces of a Roman road, deflecting from the great Roman road to Brechin; vestiges of a Roman castellum at the north-western extremity of Flanders Moss; traces of an ancient military post on Keirhead, 1 mile NE of the castellum; and the ecclesiastical and baronial ruins on the islands in the Lake of Monteith. Tullimoss, to the NW of the Lake of Monteith, was the scene of a skirmish in 1489 between James IV. and the Earl of Lennox; and a spot called Suir, near Gartmore House, was the place where Rob Roy is said to have taken from the factor of the Duke of Montrose his collection of rents. From 1 to 10 Sept. 1869, the Queen, with the Princesses Louise and Beatrice, stayed at Inverrossachs, 'the recollection of the ten days at which—quiet and cozy—and of the beautiful country and scenery I saw in the neighbourhood, will ever be a very pleasant one' (pp. 116-147 of *More Leaves from the Journal of a Life in the Highlands*, 1884). Mansions are Blairhoyle, CARDROSS, GARTMORE, INVERTROSSACHS, Locheud (1715), and REDNOCK. Giving off portions to the *quoad sacra* parishes of Gartmore, Norriston, and Trossachs, this parish is in the presbytery of Dunblane and the synod of Perth and Stirling; the stipend is £309 and manse. The parish church, at Port of Monteith hamlet, was built in 1873 in the Gothic style of the 13th century, and has a stained E window. Three public schools—Dykehead, Port of Monteith, and Ruskie—with respective accommodation for 57, 72, and 62 children, have an average attendance of about 35, 30, and 35, and grants amounting to nearly £50, £45, and £40. Valuation (1884) £12,649, 3s. 6d., (1892) £11,589, 1s. 3d. Pop. (1801) 1569, (1831) 1664, (1861) 1375, (1871) 1243, (1881) 1175, (1891) 1092, of whom 92 were Gaelic-speaking, and 562 were in the ecclesiastical parish.—*Ord. Sur.*, shs. 38, 39, 1374-69.

Monteviot, a seat of the Marquis of Lothian, in Crailing parish, Roxburghshire, 2 miles E by N of Ancrum and 3 N by W of Jedburgh. It stands near the left bank of the winding Teviot, at the southern base of Peniel Heugh (774 feet), in a park of singular beauty, and is itself an imposing Gothic edifice, rebuilt in the course of the 19th century. At Monteviot died Miss Jean Elliot (1727-1805), author of the *Flowers of the Forest*, it then being occupied by her brother, Admiral Elliot. At Harestanes, within the park but in Ancrum parish, were remains of a stone circle till towards the close of the 18th century; and a neighbouring 'serpent-mound,' being explored by Mr J. S. Phené, F.S.A., in 1872, was found to entomb two skeletons. See NEWBATTLE and CRAILING.—*Ord. Sur.*, sh. 17, 1864.

Montfode, a ruined baronial fortalice, $1\frac{1}{2}$ mile SW of West Kilbride, Ayrshire.

Montgomerie. See COILSFIELD.

Montgreenan, an estate, with a mansion and a railway station, in Kilwinning parish, Ayrshire, $3\frac{1}{2}$ miles ENE of Kilwinning town. Its owner is Robert Bruce

* Some are inclined, however, to refer *Port* to the Latin *porta*, 'a gate, pass, or defile,' this parish being indeed a gate of the Highlands.

Robertson Glasgow, Esq. (b. 1842; suc. 1860). There is a post office, with railway telegraph, under Irvine.—*Ord. Sur.*, sh. 22, 1865.

Montkeggie or **Monkegy**, the ancient name of the parish of Keithhall, Aberdeenshire, which see.

Montlokowre, the name of a hill in Kirkmaiden parish, Wigtownshire.

Mont-Quhanie. See MOUNT-QUHANIE.

Montquhitter. See MONQUHITTER.

Montrave, a mansion of 1836 in Scoonie parish, Fifeshire, 4 miles N of Leven. Its owner is John Gilmour, Esq., jun., of Lundin and Montrave. In 1877 a metal pot was found on the estate, containing 9615 silver coins—8675 of them English, of Edward I. and III. See LARGO.—*Ord. Sur.*, sh. 40, 1867.

Montrose, a parish containing a royal burgh of the same name, on the coast, at the NE corner of Forfarshire. It is bounded N by Logie-Pert parish and by Kincardineshire, E by the North Sea, S by Craig parish, and SW by Dun parish. The boundary with Kincardineshire has evidently followed the course of the North Esk river, but now, both above and below the bridge by which the coast road from Dundee to Aberdeen crosses the river, the line follows an old channel, in the former case to the S, and in the latter to the N, of the modern one. The boundary on the S is the river South Esk, and on the SW the easterly foreshore of the Montrose Basin, along the track of Tayock Burn, which enters it W of Newmanswalls House, and then it follows the course of this stream for almost a mile to a point E of Newbigging. Elsewhere it is artificial. In shape the parish is, roughly speaking, a triangle with blunted corners, the sides being on the N, E, and SW. The greatest breadth across the N end, from the point on the W where Dun, Logie-Pert, and Montrose parishes meet to that on the E at the old mouth of the North Esk river, is $3\frac{3}{4}$ miles; the breadth, from the North Esk opposite Stone of Morphie (Kincardineshire) on the N to the South Esk at Montrose harbour on the S, is $3\frac{5}{8}$ miles; and the area is 4722·415 acres, of which 95·855 are water, 492·172 foreshore, and the rest land. All along the coast, between the rivers, a flat sandy beach is bounded by a line of sandhills, from 20 to 30 feet high, covered with bent. Immediately within these is a belt of sandy undulating ground, with close short herbage, known to the N as Charleton Muir, and to the S as Montrose Links. From this the ground rises, at first gradually, but afterwards more steeply, to the W, the greatest height (317 feet) being reached near the W corner, to the W of Hillhead of Hedderwick. From this rising ground, sometimes known as Montrose Hill, along the lower slopes of which are the numerous villas and houses forming the village of Hillside, there is an excellent view of the Forfarshire and Kincardineshire Grampians; of the end of the vale of Strathmore, with its mansions and woodland; of the Round Tower and spires of Brechin, and the windings of the South Esk, down past the Basin and on to the mouth below the town of Montrose. In the N, along part of the course of the North Esk, there are high wooded banks, while thriving plantations extend along the W side of the Muir of Charleton and Kinnaber. The soil all over the links is sandy, and the shells show that the deposit is a modern one, so that within the recent period Montrose Basin must have been a bay. On the W side of the links is a raised beach of shingle, and to the W of this the soil is very fertile, being a strong clayey loam. A stiff underlying clay of marine origin, and containing remains of starfishes, is worked for the manufacture of bricks and tiles at Dryleys and Puggieston. The former, however, has now been worked for some years. The underlying rocks belong to the Lower Old Red sandstone formation. The drainage of the parish is carried off by the North Esk and the South Esk. The north-western part of the parish is traversed for over $2\frac{1}{2}$ miles by the Perth and Aberdeen section of the Caledonian railway system, and from Dubton Junction station a branch line, 3 miles in length, communicates with the town of Montrose through the SW part of the parish. The

Montrose and Arbroath section of the North British system, crossing the South Esk by a viaduct over $\frac{1}{4}$ mile long, passes by the NW side of the town, and, after a course of $2\frac{1}{2}$ miles, unites with the Caledonian system at Kinnaber Junction to the N. From this line the Montrose and Bervie railway, also belonging to the North British system, branches off at Montrose and runs parallel to the coast along the W edge of Montrose and Kinnaber Links, for a distance of 2 miles, till it crosses the North Esk. The parish is also traversed by the main road along the coast from Dundee to Aberdeen, which, entering at the SW corner of Montrose, passes through the town, and then along the W edge of Montrose and Kinnaber Links, parallel to the Montrose and Bervie railway, till it reaches Kincardineshire at the North Esk, which it crosses by a good stone bridge erected in 1775-80. There are also a number of good district roads, of which the principal are those to Brechin and to Fettercairn. Near the centre of the N border of the parish, 2 miles NNW of the town of Montrose, is Sunnyside Lunatic Asylum, erected at a cost of over £20,000, and subsequently enlarged, and with accommodation for over 500 patients. This institution originated with a Mrs Carnegie of Charleton, and the original building on the links, near the town, was erected in 1780-82. A royal charter of incorporation was obtained in 1810, and the present building was erected in 1860. It is supported by endowments and by fees received for patients, of whom the average number is about 540, about $\frac{1}{4}$ being pauper lunatics. The asylum is considered one of the best establishments of the kind in the country. In 1894 a further extension of the buildings was undertaken, which it is estimated will cost from £10,000 to £15,000. In connection with the asylum an hospital for the treatment of sick and infirm patients was opened in 1891, and cost £16,000. Kinnaber, in the NE of the parish, is associated with the story of George Beattie, author of *John o' Arnha* [see ST CYRUS]. The industries are mostly connected with the town, but there are flax mills on the North Esk, and brickworks at Dryleys and Puggieston. Besides the town of Montrose the parish has also, close to Dubton station, on the NW, the village of Hillside, which is mainly composed of villas. The mansions are Charleton House (burnt down in 1892, but since rebuilt), Newmanswalls House, and Rosemount House. The parish is in the presbytery of Brechin and the synod of Angus and Mearns. The charge is collegiate, with two ministers; the stipend of the first charge is £434, and that of the second £340, both with manses. The civil parish includes also the *quoad sacra* parishes of Melville (in the town of Montrose) and Hillside. Besides the church at the latter place, and those mentioned in connection with the burgh, the free church of Logie-Pert is also just within the border of the parish, on the N. The landward school-board has under its charge Loanhead public school, which, with accommodation for 208 pupils, has an average attendance of about 125, and a grant of nearly £122. Landward valuation (1884) £9151, 13s., (1893) £8724, 11s., plus £2726 for railways. Pop. of parish (1755) 4150, (1801) 7974, (1831) 12,055, (1861) 15,663, (1871) 15,733, (1881) 16,303, (1891) 14,428, of whom 6270 were males and 8158 females. Of the total population in the civil parish in the latter year 10,161 were in the ecclesiastical parish, while 2691 were in the Melville *quoad sacra* parish and 1576 were in Hillside *quoad sacra* parish.—*Ord. Sur.*, sh. 57, 1868.

Montrose (Gael. *Alt-moine-ros*, 'the burn of the mossy point'), a seat of manufacture, a seaport, and a royal burgh in the parish just described, at the mouth of the South Esk. It is, by the Caledonian railway, $9\frac{3}{4}$ miles E of Brechin, $21\frac{1}{2}$ NNE of Arbroath, 38 NE of Dundee, $42\frac{1}{2}$ SSW of Aberdeen, $53\frac{1}{2}$ ENE of Perth, $116\frac{3}{4}$ ENE of Glasgow, and 123 NNE of Edinburgh *viâ* Stirling. By the North British railway it is $13\frac{3}{4}$ miles from Arbroath, $30\frac{3}{4}$ from Dundee, and 90 from Edinburgh *viâ* Tay and Forth Bridges. It is the terminus of the Caledonian branch line from Dubton, and of the Montrose and Bervie line, as well as a main station on the

Montrose and Arbroath railway. The site of the town is a peninsula jutting southwards, bounded on the E by the sea, and on the S and W by the waters of the South Esk. Except for the low sand-bank along the edge of the links, the ground is almost entirely level. To the W of the town the river expands into a broad tidal loch known as the Montrose Basin and measuring 2 miles by $1\frac{3}{4}$ mile. At high water the whole area is covered, but at low water by far the greater portion becomes an unsightly expanse of mud, largely used for mussel culture. As the channel to the NE of the town is only from 115 to 130 yards wide, the tidal current sets up and down with great swiftness—often from 6 to 8 miles an hour; but this rush of water is beneficial, as its force clears off deposits from the town and river, and prevents the formation of any considerable bar across the mouth of the river. In 1670, by running a dyke from near the Forthill along the bank of the South Esk towards Dun, an attempt was made to drain and add to that estate some 2000 acres, but the bulwark—known as the 'Drainer's dike'—had hardly been completed when it was breached and destroyed by a violent storm, traditionally said to have been raised by Meggie Cowie, one of the last local witches. A small portion of the area has been reclaimed by the Montrose and Arbroath railway company. The Basin is frequented by wild geese, ducks, and other aquatic birds. Neither the flatness of the site nor the large expanse of water around seem to have any injurious effect on the health of the inhabitants. On the contrary the almost insular situation of the town makes the climate very mild; and the Basin at high water adds materially to the beauty of the neighbourhood.

History.—The origin of the name of Montrose has given rise to many conjectures—*Mons Rosarum*, the French *Mons-trois* ('three hills'), the British *Montlerrose* ('the mouth of the stream'), the Gaelic *Mon-ross* ('the promontory hill'), *Moin-ross* ('the promontory of the moss'), and *Meadh-an-ross* ('the field or plain of the moss'), have all been brought forward, but the most likely seems to be that at the beginning of the article, which connects the name first with Old Montrose and so with Montrose, and seems also to account for the tradition (certainly unfounded), that the town at first stood at the former place. According to Boece the original name of the town was *Celurca*, but this seems rather to have been a contiguous place, as both Montrose and Salork are mentioned in a charter in the time of Malcolm IV., and again in the time of William the Lyon. All trace of the latter is now gone, but it was possibly higher up the basin than Moutrose. Of the origin of the town nothing is known, but it has a high antiquity, for as early as the 10th century, when the Danes found the estuary a convenient anchorage, there was, according to Boece, a town here, and in 980 the inhabitants were massacred by a band of these searovers. In the 12th century, under Malcolm IV., we find that mills and salt pans had been established, and his successor, William the Lyon, lived in the castle from time to time between 1173 and 1193. In 1244 the town was burned, and at that time it seems to have been one of the considerable places of the kingdom. When it obtained burghal privileges is not known, but probably in the time of David I. At any rate, burgesses of Montrose are mentioned in 1261-62, and in 1296 twelve burgesses went to Berwick, and in presence of Edward I. took the oath of allegiance on behalf of themselves and the burgh. Edward himself was in Montrose the same year, from the 7th till the 12th July, when he lived at the castle which then stood on the Forthill. According to Wyntoun, Blind Harry, and Balfour, it was here that John Baliol 'did render quietly the realme of Scotland as he that had done amis.'

'This Johu the Baliol, on purpos
He tuk and brocht hym til Munros,
And in the castell of that town,
That then was famous in renown,
This John the Baliol dyspoyled he
Of all his robyis of ryaltie.'

But this is a mistake, for, though the ceremony took place while Edward was here, the scene was at Stracathro, whither Edward went for the purpose, returning the same day. The castle was captured by Wallace in the following year, and seems to have been completely destroyed, for there is no more word of it.* Wallace landed here on his return from France:—

'Baith Forth and Tay thai left and passyt by
On the north cost [gud] Guthré was thar gy,
In Munross hawyn thair brocht hym to the land;'

and, according to Froissart, Moutrose was the port whence Lord James Douglas, at the head of a brilliant retinue, embarked in the spring of 1330 to fulfil the last charge of King Robert Bruce to carry his heart to Jerusalem and deposit it in the holy sepulchre. This, however, is against the testimony of the Scottish historians, particularly Barbour, who says Douglas sailed from Berwick. In the rolls of the parliament, held in Edinburgh in 1357 to arrange the ransom of David II., Montrose occupies the central position among the royal burghs, eight preceding and eight following it, and would therefore appear to have, at that period, attained considerable consequence. Subsequently, in the same year, John Clark, one of the magistrates, was among those who became hostages for the payment of the ransom. In 1369, David himself visited the town; and when the truce made between France and England in 1379 was renewed in 1383, with the stipulation that Scotland should be included if that country wished, a band of thirty distinguished French knights, who came to Scotland in the hope of the war going on, landed at Montrose and passed S by Perth to Edinburgh. During the 15th century the inhabitants had a bitter feud against the Erskines of Dun, seemingly on account of oppression endured at their hands, but this was changed by the well-known laird who figured among the Reformers, and who possessed great influence in the town, and established there a school where the Greek language was taught for the first time in Scotland by Pierre de Marsiliers, who had been brought by Dun from France in 1534. In 1648 the English fleet, which was sailing along the coast doing whatever mischief was possible, made a night attack, but the landing parties were, after a stiff struggle, beaten back by the inhabitants with Erskine at their head. Influenced, no doubt, by such a leader, and probably also prepared for the reception of the new views by their trading intercourse with the Continent, and particularly with Holland, the people early embraced the doctrines set forth by the Reformers. The spread of these must have been greatly aided by the teaching of George Wishart, who seems to have been first a pupil of, and then assistant to, Marsiliers, and who taught and circulated the Greek Testament so extensively among his pupils, that in 1538 the Bishop of Brechin summoned him to appear on a charge of heresy, and he had to flee to England. He returned in 1543, and for a time preached and taught openly 'in Moutrois within a private house next unto the church except oue.' When he had again to flee, the people, determined to have what they wished, got another preacher named Paul Methven, originally a baker in Dundee, who, we are told, having administered the sacrament 'to several of the lieges in a manner far different from the Divine and laudable use of the faithful Catholic church, was denounced rebel and put to the horn as fugitive' in 1559, while the inhabitants were ordered to conform to the old state of things and to attend mass. Andrew Melvil, who was born at Baldozie in the adjoining parish of Craig, was one of Marsiliers' later pupils, and his nephew James Melvil, who has in his *Diary* left an interesting account of his

* The castle seems to have been the royal residence when William the Lyon was at Montrose, and Edward I. lived there, but there is no record as to where David II. resided. In 1438 the grant by James III. to David Lindsay, Earl of Crawford, of 'the loftier title' of Duke of Montrose, mentions no castle but only the 'Castledest,' which would seem to imply that the castle was a ruin, or had altogether disappeared. The site was at the Forthill, near where the Infirmary now stands.

studies, was also educated here, but the teacher then (1569) was Mr Andrew Milne. The first minister, after the Reformation, was 'Mr Thomas Anderson, a man of mean gifts bot of singular guid lyff;' and the second was John Durie, who would seem to have been one of the stirring men of the time, for his future son-in-law, James Melvil, describes him on the occasion of their first meeting, when Durie was minister of Leith, as 'for stoutness and zeall in the guid cause mikle renounced and talked of. For the gown was na sooner af, and the Byble ont of hand fra the kirk, when on ged the corslet and fangit was the hagbot and to the fields!' Before his death, too, in 1600, he had received in favour of himself, his wife, and his son, or the longest liver of them, a pension in consideration of 'the greit lang and ernst travellis and labouris sustenit in the trew preaching of Goddis word, besydes the greit charges and expenses, maid be him thir mony zeiris bygane in advancing the publick affayres of the kirk—thairwithall remembering the greit househald and famelie of bairnis quhairwith he is burdynit.' His death took place just immediately before the meeting of the General Assembly of 1600, which was held at Montrose in March in presence of the king, who was busy trying to force on his scheme of Episcopacy. One of the great straggles was about the sitting of the bishops in parliament, but on this and other points the Episcopal party were worsted, chiefly by the influence of Andrew Melvil, who 'remanit in the town all the whyll, and furnisit arguments to the Breithring, and mightelie strytned and incuragit tham.' When reproached by the king for coming, he, 'eftir the auld' maner dischargit his conscience,' and said, 'Sir, tak yow this head, and gar cut it af, gif yie will; yie sall sooner get it, or I betray the cause af Chryst.'

The great Marquis of Montrose was born at Old Montrose in MARYTON parish; but some of his dealings with the neighbouring town of Montrose were of doubtful advantage thereto. In 1644, while he held Aberdeen for the king, a party of his men, headed by Alexander Irvine, younger of Drum, 'passit all over Die, intending onlie to go to Montroiss and to tak the tua brassin cartowis lying thair, if thay war not impedit; . . . and upone Wednesday the 24th of Aprile, be tna houris in the morning, with sound of trumpet thay cam to the toun, who had set on fyres upon thair stepill to walkin the countrie, and wes in armes thame selfis, and rang the commoun hell, bot all for nocht. Thay boldlie enterit Montross, dang the toun's people fra the calsey to thair houssis, and out of the foirstaires thay schot desperately, bot thay war forssit to yeild by many feirfull schotes schot aganes thame; quhair unhappellie Alexander Peirson, one of thair balleis, wes slayne, sum sayes by Nathaniell Gordoun, utheris holdis by ane hieland man, whom the said baillie also slew. Thairefter, it wes said, thay intendit to schip thir cartowis in ane schip lying in Montroiss water, pertening to Alexander Burnet, elder in Abirdene, he consent of Alexander Burnet, his sone, who hapnit to be thair, and had promesit no less, heing ane autecovenanter. Bot, by this Burnetis knowledge, James Scot, now prouest of Montross, with certane of his neighbouris, had quietly convoyit thame selfis with thair best goodis into the said schip. When scho began to flet, scho drawis nar the schoir, quhair young Drum and his men war thinking to schip thair cartowis, according to Alexander Burnetis promeiss foirsaid, and to haue had thame about be sea to Abirdene. Bot, for by thair expectation, this schip schot fyve or six peice of ordinas disperatlie amongis thame, with about fourtie muscattis, quhair, by the gryte providens of God, thair wes hot onlie tuo men killit and smm hurt. Drum seeing this, thay returnit thame selfis, brak the qnheillis of the cartowis, for moir thay culd not do, nor brak them thay nicht not, and threw thame over the schoir, to mak them unserviceable. Drum returnis to the toun, and beginis to brak wp merchand boothis, plunder, and cruellie spolzie ritche merchandice, clothis, silkis, velvotis, and uther costlie wair, silver, gold and silver wark, armes, and all uther

thing, quhairat the hieland men wes not slow. Thay brak wp a pype of Spanish wyne and drank hartfullie. Thay took Patrik Lichtoun, lait prouest, and Androw Gray, prissoneris. Thay left Montroiss in woful cace, about tuo efternone. . . . Thair wes takin 32 hieland men—sum sayis 52—who had unwyslie biddin behind the rest, plundering the Montross goodis, and is takin, schaklit, and sent to Edinbrugh to pay for thair faultis. It is heir to be nottit that, notwithstanding of the many schotis schot within the toun and out of the schip, yit it pleissit God that few wes killit to Drumis syde, except tua or thrie persones, mervallous to sie! and als few to the uther syde, except Alexander Peirson, ballie, who wes schot be Nathaniell Gordoun. Thair intention wes to hane schippit thir cartowis within the foirsaid schip, to haue brocht about when scho cam with hir lading to Abirdene; bot thay gat ane cruell assault, as ye have befoir, and wes nichtellie disapoyntit. The Tutor of Struan, with sum hieland men, did brave service with thair schort gunis. It is said that Drum causit raisse fyre tua severall tymes in Montross, yit Major Gordoun still quenshit and pat out the samen.' Again, in 1645, while the marquis and Bailie were keeping one another, so to speak, in sight, the royalist cavalry were ordered to Montrose, 'with charge to tak thair intertynement, bot no moir. Thay took the same, and wyne aneuche, but did no moir harme to the toun.'

James Melvil mentions 'a pest qnhilk the Lord, for sinne and contempt of his Gospell, sent upon Montros' in 1566; and from May 1648 till February 1649 the plagne again desolated the town, driving crowds to the country in panic, and making such fearful havoc among those who remained, that a large tumulus is pointed out on the links, immediately NE of the town, as the place where many victims to it were interred. In spite of all these misfortunes, the place continued to prosper; the enumeration of the articles in the merchants' boothis plundered by Montrose's men, and mentioned above, would indicate a considerable trade; and a long, contemporary account of it, in the 17th century, describes it as 'a very handsome well-built toun, of considerable trade in all places abroad; good houses, all of stone, excellent large streets, a good tolbuith and church, good shipping of their own, a good shore at the toun, a myle within the river South Esk. . . . It is a very cheap place of all things necessary except house-rent, which is dear, by reason of the great distance they are from stones, and makes their buildings very dear.' There were then on the outskirts 'malthouses and kilns and granaries for cornes, of three storeys high, and some more, and are increased to such a number that in a short time it is thought they will equal if not exceed the toun in greatness. . . . They have a good public revenue, two wind-milnes, ane hospitall with some mortifications belonging to it; they are mighty fyne burgesses and delicate and painfull merchants. There have been men of great snbstance in that toun of a long time, and yet are, who have and are purchasing good estates in the countrie. The generalitie of the burgesses and merchants do very far exceed these in any other toun in the shire.*' About this time, too, the neighbourhood was highly esteemed for its beauty, which was celebrated in Latin verse by John and Arthar Johnston; while Franck, in his *Northern Memoirs* (1658), declares (he must surely have found the fishing in the neighbourhood very good) that it is 'a beauty that lies concealed as it were in the bosom of Scotland, most delicately dressed up and adorned with excellent buildings, whose foundationis are laid with polished stone, and her ports all washed with silver streams that trickle down from the famous Ask.'

* The 'wind-milnes' must have been deemed of some importance, for in the beginning of the 18th century one of the citizens named John Young was sent by the magistrates to Holland to learn the best known methods of constructing and working windmills; and after his return he was the only person to be found in Scotland who understood the management of pumps in coalworks. In an 18th century print a windmill standing to the S of the Steeple, probably about the site of the present Infirmary, forms a prominent feature.

The church became a collegiate charge shortly before the Revolution, the inhabitants agreeing to tax themselves for a stipend to the second minister. This was during the time of the last Episcopal clergyman, David Lyell, who had been a presbyterian, but had conformed. He does not seem to have found his conscience quite easy under the change, or at any rate must have harped uncomfortably over it, for, 'some days before his death, as he was walking in the links about the twilight, at a pretty distance from the town, he espied, as it wer, a woman all in white standing not far from him, who immediately disappeared, and he, coming up presently to the place, saw nae person there, though the links be very plain. Only casting his eye on the place where shee stood, he saw two words drawn or written, as it had been with a staff upon the sand, "Sentenced and condemned;" upon which he came home pensive and melancholy, and in a little sickens and dyes.'

On 21 Dec. 1715 the vessel in which the Chevalier had sailed from France made its appearance off Montrose, where probably a landing would have been made had it not been for the appearance of a ship which was suspected to be a man-of-war. On this account sail was made to the northward, and the actual disembarkation took place at PETERHEAD. In the following year, however, when all hope of success had vanished from the minds of the Jacobites, their forces in the retreat from Perth reached Montrose, where previous arrangements had been made for James to escape to France. Though the matter was kept a profound secret, a rumour of it had got spread abroad among the soldiers, and in order to allay suspicion, the royal baggage had to be sent forward with the main body of the army during a night march towards Aberdeen. James himself had his usual guard paraded before the door of the house where he was, as if for his departure, but slipping quietly out by a back door, he joined the Earl of Mar, and both passed through the gardens to the water's edge, where a boat was ready to carry them on board ship. The house where he had spent the day—and which is said to have been the same as that in which the Marquis of Montrose was born—has long been gone. It was the town house of the Duke of Montrose, and stood behind Peel's monument at the S end of High Street. It was here that James wrote to the Duke of Argyll expressing his regret at the misery caused by some of his operations, and telling how he had left a sum of money to make good the losses sustained. 'Among the manifold mortifications I have had in this unfortunate expedition, that of being forced to burn several villages, etc. as the only expedient left me for the publick security was not the smallest. It was indeed forced upon me by the violence with which my rebellious subjects acted against me, and what they, as the first authors of it, must be answerable for, not I; however, as I cannot think of leaving this country without making some provision to repair that loss, I have therefore consigned to the Magistrates of — the sum of — desiring and requiring of you, if not as an obedient subject, at least as a lover of your country, to take care that it be employd to the designd use, that I may at least have the satisfaction of having been the destruction and ruin of none, at a time I came to free all.' The letter was given to the officer left in command of the army, General Gordon, with instructions to fill up the blanks with the name of the town and the sum, before forwarding it to the Duke of Argyll, the money being the amount left over after providing for the subsistence of the army.

For a short time in 1745 the Royalists had their quarters here, but they were driven out by the Jacobites, whose influence in the neighbourhood seems then to have been considerable. The 'Hazard,' a sloop-of-war of 16 guns and 80 men, was then sent to regain the position, and entering the basin commanded the town with her guns, so that the anti-Government party were compelled to retire. Captain David Ferrier of Brechin, the Jacobite deputy-governor, was not, however, so easily dispossessed of his prize, for entering the town at night

he took possession of the island of Inchbrayock, and erected an earthwork to protect his men. The same afternoon a French vessel, which was coming in with troops, was run on shore out of reach of the 'Hazard's' guns, her cannon were dragged to land and mounted at the island, and the fire opened from these at last compelled the government ship to surrender. The 'Hazard' proved for a time serviceable to Prince Charles Edward, but early in the following year she was driven ashore at the Bay of Tongue and lost to the Jacobites, as was also a large sum of money then on board. Admiral Byng came to avenge her capture, but had to confine himself to sinking the long boat of a French vessel that was lying off the coast. In 1746 the Duke of Cumberland passed through the town—the site of the house where he slept being now occupied by the National Bank—and a garrison was posted at the place, notwithstanding which, on 10 June (the anniversary of the old Chevalier's birthday), the Jacobite ladies showed their constancy by wearing white gowns, while the boys made bonfires along the streets. The officer in command of the station overlooked the matter, as he had no wish to punish ladies and children, but Cumberland with his usual vindictive cruelty had him deprived of his commission, and threatened to cause the children to be whipped at the cross to frighten them from their bonfires, a threat which he is actually said to have had carried into execution in some cases, it being alleged that one of the culprits so treated was Coutts, afterwards the great London banker.

In 1773 Montrose was visited by Dr Johnson and Boswell on their way from Edinburgh to the Hebrides. 'We found,' says Boswell, 'a sorry inn where I myself saw another waiter put a lump of sugar with his fingers into Dr Johnson's lemonade for which he called him "Rascal!" It put me in great glee that our landlord was an Englishman. I rallied the Doctor upon this, and he grew quiet. . . . Before breakfast [the next morning] we went and saw the town-hall, where is a good dancing-room and other rooms for tea-drinking. The appearance of the town from it is very well; but many of the houses are built with their ends to the street, which looks awkward. When we came down from it I met Mr Gleig, a merchant here. He went with us to see the English chapel. It is situated on a pretty dry spot, and there is a fine walk to it. It is really an elegant building, both within and without. The organ is adorned with green and gold. Dr Johnson gave a shilling extraordinary to the clerk, saying, "He belongs to an honest Church." I put him in mind that Episcopalians were but dissenters here; they were only tolerated. "Sir," said he, "we are here as Christians in Turkey." The Doctor himself records his impression briefly. 'We travelled on to Montrose which we surveyed in the morning, and found it well built, airy, and clean. The town-house is a handsome fabric with a portico. We then went to view the English chapel, and found a small church, clean to a degree unknown in any other part of Scotland, with commodious galleries; and what was yet less expected, with an organ.' The town in those days seems to have had a number of beggars, for in the passage immediately following, Johnson remarks that when he had proceeded thus far he had opportunities of observing what he had never heard, 'that there are many beggars in Scotland,' though, to their credit be it said, that they solicited 'silently or very modestly.' The English Episcopal Church that is mentioned is St Peter's, which was founded in 1722, but was unfortunately burned down in 1857, just after it had been repaired.

Except a visit from Burns in 1787, and another from the Queen, who took train to Perth from a temporary station near the present Victoria Bridge, on her return from Balmoral in 1848, the town may be said to have no later history. Although since the latter part of the 18th century it has had less increase of population and less growth of trade and industry than most towns of its class and in its position, it has yet thriven in a steady way that is perhaps better than sudden bursts of pro-

sperity would have been, and there is but little sign of the fulfilment of the old rhyme:—

'Bonnie Munross will be a moss:
Dundee will be dung down:
Forfar will be Forfar still:
And Brechin a braw burgh town.'

The town was the birthplace of Robert Brown (1773-1858), the eminent botanist; Joseph Hume (1777-1855), politician and reformer; Sir Alexander Burnes (1805-41), Asiatic scholar and traveller; Sir James Burnes, his elder brother, who also distinguished himself in India; Sir James Duke (1792-1873), Lord Mayor of London in 1848-49; Sir William Burnett, the inventor of the process known as 'Burnettising' for deodorising bilge water and preserving timber from rotting; and George Paul Chalmers, R.S.A. (1836-78). Alexander and James Burnes were sons of a cousin of Robert Burns, and the former was killed at Cabul, where he was political resident. Old Montrose has given to the family of Graham the successive titles of Earl (1505), Marquis (1644), and Duke (1707) in the peerage of Scotland. This family can be traced back to 1128, when William de Graham witnessed a charter of King David I. to the monks of Holyrood. The early members of the race were all distinguished for their bravery. The first of them connected with Forfarshire was Sir David Graham, who obtained a grant of Old Montrose from Robert I. The first Earl was killed at Flodden, and the third was appointed Viceroy of Scotland in 1604. The first Marquis was James, who figures so prominently in the time of Charles I. His son and successor, who was restored to the title and the estates in 1660, was known as the 'Good Marquis.' Viscount Dundee was sprung from a branch of the same family. The dukedom was conferred on the fourth Marquis as a reward for his steady support of the Union. The family has long ceased to have any connection of interest with either the town or neighbourhood. Their present seat is Buchanan Castle, Stirlingshire.

Streets and Public Buildings.—The town has two principal lines of street running in a general direction from N to S. That to the W is the principal, and from N to S has the names of Northesk Road, Murray Street, High Street, and Bridge Street; that to the E is known to the N as Mill Street, and to the S as Baltic Street and South Esk Street, and is mostly very irregular and narrow. On the W side of High Street a fine wide street—Hume Street—was formed in 1880 to give access to the new station of the Montrose and Arbroath section of the North British railway system. High Street is continued westwards to the river by Castle Street and Shore Wynd, much improved in recent years, but still of unequal width, narrow, and winding. To the W of this, branching off also from High Street, is the wide modern Bridge Street. Along the side of the river is Wharf Street, eastward of which, towards the old station and harbour, are Hill Street, Commerce Street, Ferry Street, Ramsay Street, and River Street. Eastwards of Baltic Street and Mill Street is an open space, mostly laid out as public gardens, which is known as The Mid Links, and about which are a number of excellent houses. The chief cross streets from E to W are Broomfield Road at the extreme N end of the town, Rosehill Road and John Street and New Wynd off High Street and continued across the Mid Links by Union Street. The line by Bridge Street or Castle Street, High Street, Murray Street, and Northesk Road lies along the main coast road from Dundee to Aberdeen.

Till near the end of the 18th century the traffic was conveyed across the South Esk by ferry-boats crossing the river between FERRYDEN and the harbour, but the road was then diverted to the westward, and bridges constructed between Montrose and INCHBRAYOCK,* and across the south channel between Inchbrayock and the S bank of the river. The bridge over the south channel was a substantial stone structure, and still remains; that over the main channel was a heavy timber bridge,

* So named from an old church dedicated to St Braoch.

erected in 1793-96, and deemed a wonderful structure. One of the openings was moved like a drawbridge, in order to allow of the passage of ships up the river. In consequence, however, of an ill-advised narrowing of the channel at its site, the rapid current soon carried away the old bed of the river, and threatened to sweep away the foundations of the bridge; and after various expedients had been tried to prevent its destruction, it eventually became a piece of mere shaking patchwork, and was condemned. In its place it was determined to erect a suspension-bridge, and this, designed by Sir Samuel Brown, R.N., and founded in Sept. 1828, was finished in Dec. 1829 at a cost of £23,000. The distance between the points of suspension is 432 feet, and the total length, including approaches, is about 800 feet. The towers are 22½ feet high from foundation to roadway, and 71 feet high altogether; 39½ feet wide at the roadway; and each is pierced by an archway 18 feet high and 16 wide. At a distance of 115 feet from the towers are the chambers where the ends of the chains are secured. The chains themselves, which are double, and 1 foot apart, are made of the best cable iron, with bars 8 feet 10 inches from centre to centre, and the joints of the upper main chains over the middle of the bar in the lower. The suspending rods are 5 feet apart. In 1838, on the occasion of a boat-race in the river, a large crowd on the bridge rushed from one side to the other, and the sudden strain, owing to some imperfection in one of the saddles on the top of the north tower, causing the upper chain on one side to give way, it fell on the lower chain, killing several people. Had not the under chain proved sufficiently strong to support the sudden strain, the whole crowd would have been precipitated into the water. The bridge was speedily repaired, but in October the same year a violent south-westerly gale produced such violent vibrations as to tear up, destroy, and throw into the river about two-thirds of the roadway. The main chains, however, remained uninjured, but repairs were necessary to the amount of £3000. Hitherto the lateral oscillation in the centre had been as much as from 3 to 4 feet, but now, by the introduction of new supports, designed by J. M. Rendal, London, this was reduced so as not to exceed 3 or 4 inches. A portion of the roadway at each side, reserved for foot-passengers, is railed off from the carriage-way by longitudinal timber traverses, which so abut upon the towers, and extend above and below the roadway, as to thoroughly stiffen the whole structure. When this bridge was first erected, the centre span of the stone one across the south channel was taken down and replaced by a drawbridge to allow vessels to pass up to Old Montrose, but it was removed a few years ago and replaced by a brick archway, and other improvements were carried out at the same time. Financially the suspension-bridge had always been in difficulties, for, notwithstanding the pontage income, there still in 1871 remained a debt of more than £18,000, and as the revenue derived from tolls was then threatened with a great reduction, should the proposed formation of a direct Montrose and Arbroath railway be proceeded with, the company promoting that line became bound to pay annually £983, 6s. in perpetuity as compensation for the anticipated loss. When the Roads and Bridges Act came into operation in 1883 the pontage was finally abolished. Whilst the foundations of the northern towers were being dug, a large number of human bones were found in a small eminence close by on which the castle stood, and which was known as the Castle Hill or Fort Hill. A short distance up the river from the suspension-bridge is the viaduct by which the Arbroath and Montrose railway crosses the South Esk. It was designed by Mr W. R. Galbraith, and is 475 yards long. There are 16 spans, the one at the S side being 63 feet wide, the two at the N side respectively 54 feet and 57 feet 6 inches, and the others 96 feet. The girders are supported on double cylindrical piers sunk in the bed of the river to an average depth of 18 feet, 7 feet 6 inches in diameter up to low water, and thence 5 feet in diameter. It was erected in 1882-83 to

replace the original viaduct constructed in 1878-80, somewhat on the same plan as the first Tay Bridge; but after the disaster to that structure, although it was used for goods traffic, the Board of Trade refused to grant it the necessary certificate for passenger traffic, and it was removed. Across the south channel there is a brick viaduct of 16 arches.

The infirmary, near the N end of the suspension-bridge, was originally connected with the old lunatic asylum noticed in the account of the parish. It afterwards became separate, and the present building, erected in 1839 at a cost of £2500, enlarged in 1865, and again in 1893, includes a dispensary and a mortuary, the latter erected in 1894. It is under the charge of the same directors as the lunatic asylum, and the average annual number of patients is 200. Close by, an old building, formerly public baths, has been fitted up by the local authority as a temporary hospital for the treatment of infectious diseases.

High Street was, till 1748, divided along the centre into two streets by a row of houses called Rotten Row, but it is now a wide handsome open thoroughfare. A few of the houses still present their gables to the street, but these older features are disappearing. Projecting into the street towards the S end are the town buildings, erected in 1763, and with an upper storey added in 1819, a plain erection, with arcaded basement and a pediment containing an illuminated clock. It contains a council-room with a number of portraits of prominent local men, a guild-hall, a court-room, a committee room, and two large apartments used as a public library (founded in 1785; annual subscription one guinea). There is an extensive collection of books amounting to over 25,000 volumes. Besides this there is a trades' library with over 7000 volumes (founded 1819; annual subscription 4s. 4d.) and a grammar school library, founded in 1686, and containing many old and rare books. The old Trades' Hall on the E side of High Street, a short distance N of the town buildings, is now known as the Albert Hall. In 1894 it was resolved by the town council to erect a new public hall in High Street. The statues close by are those of Sir Robert Peel, erected in 1852; and of Joseph Hume, M.P.—a native and for some years member for the Montrose district of burghs—erected in 1859. The prison to the S of the town-hall superseded the old jail in the Steeple. Built in 1832, it is now used only for prisoners with sentences of not more than 14 days, and part of it is used as a police office, court-room, and prison-keeper's house. The Assembly Hall, formerly used as a town-hall, was bought as a congregational hall for the parish church in 1895.

There seems to have been a parish church as early as the 13th century, but the present building, which is immediately E of the town-hall, was erected in 1791 on the site of an older church, and measures 98 by 65 feet. It is one of the largest in Scotland, the double tier of galleries and area containing 2500 sittings. A fine organ was erected in the church in 1885. The square steeple of the older church with its octagonal spire forms a prominent feature in old views of the town. The spire was of later date, having been added in 1694—the date on the vane now in the museum. It was in it that Thomas Forster, a priest, met his death at the hands of John Erskine of Dun, a circumstance that led to the young laird's retirement to the Continent for a season, and thus to his adherence to the doctrines of the Reformation; and on it 'a fyre of joy' burned in June 1566 on the reception of the news of the birth of James VI. The steeple having become somewhat rickety was taken down in 1831, and the present one, 220 feet high, erected in 1832-34 after designs by Gillespie Graham at a cost of £3500, and repaired in 1892. There is a fine brass chandelier which belonged to the old church. Round the building is the old burial ground, containing the grave of Maitland the historian, and in which interment is now restricted. There is another cemetery at Rosehill Road on the NE of the town, and a third has been laid out at Sleepyhillock, near the Tayock

Burn. At Sleepyhillock, too, the formation of an esplanade was begun by the town council in 1894. Melville Established church, built in 1854 as a chapel of ease, is now a *quoad sacra* parish church. St John's Free church, in John Street, a Grecian building, was erected in 1829 as a chapel of ease at a cost of £3969, and contains over 1000 sittings. It was reseated and renovated in 1892, and a handsome hall and vestries were erected behind in the same year. St George's Free church, built soon after the Disruption, contains over 1000 sittings; and St Paul's Free church is a plain Gothic building with a spire (1860). Mill Street U.P. church was built in 1830 for a congregation formed in 1750; John Street U.P. church was built in 1824 for a congregation formed in 1787; and Knox U.P. church, in Castle Street, was built in 1860. The Congregational church, in Baltic Street, was built in 1844 in place of a previous chapel. The Evangelical Union church was built in 1849, and the Wesleyan church at the foot of New Wynd in 1873 in room of an older church dating from 1814. The Scottish Episcopal church (St Mary), in Panmure Place, was built in 1844, and, as restored and enlarged in 1878, is a good Early English edifice, with organ and fine stained-glass windows. The English Episcopal church (St Peter), whose early history has been already referred to, was rebuilt in 1859. St Andrew's Roman Catholic church was erected in Market Street in 1886. Most of the churches have halls in connection with them. Within garden ground on the W side of Murray Street there were, till the beginning of the 19th century, remains of a Dominican monastery. The original building, 'biggit and foundit' and dedicated to the Virgin Mary in 1230 by Allan the Durward, last male representative of the De Lundins, seems to have stood on the portion of the links known as St Mary's, near Victoria Bridge, but in 1516 the monks removed to new buildings in the position first mentioned. Almost nothing more is known of their history except that being disturbed in their new abode by the noises in the streets, they were, in 1524, allowed to return to their first dwelling.

Montrose Academy stands on the Links, and was, as we have already seen, in existence as early as the middle of the 16th century at least. Its early fame and its connection with Wishart and the Melvils has been already noticed. One of the teachers in the 17th century was David Lyndsay, a cadet of the Edzell family, who became Bishop of Brechin, and was afterwards Bishop of Edinburgh when Jenny Geddes threw her stool at Dr Hanna's head. 'The bishop of Edinburgh, named Mr David Lyndsay, cuming to preiche, heving of this tumult cam nevertheles to Sanct Geillis kirk and teichit, but in quietioun. Sermon endit and he going out of the kirk dur, these rascall wemen cryit out aganist bischopis, reddie to stanc him to the death, but being a corpulent man he waistellie put in the Erll of Roxbrughe coche, standing hard besyd, and was careit to his lodging; the samen rascallis still following him and throwing stons at the coche, so that he cescapit narrowlie with his lyf.' Among the later pupils were Joseph Hume and Sir James and Sir Alexander Burnes. The present building, which is surmounted by a low dome, was erected in 1820, and contains accommodation for over 700 pupils. The average attendance is about 400, and the work, embracing the usual secondary subjects, is carried on by a rector, seven masters, and three assistants. There is a very small endowment, so that the income is to a large extent dependent on fees and grants. From funds bequeathed by Mr John Erskine, of Jamaica, in 1786, and Mr William Dorward, a number of bursars are annually taught, and a salary of £50 is paid to one of the assistant masters. In connection with the Academy an excellently equipped Science and Arts School was opened in 1891. Dorward's Seminary, near the Academy, was erected in 1833 partly at the expense of the Incorporated Trades and partly by subscription, and was afterwards transferred to the management of Dorward's Trustees, and later to the School Board. There are 9 schools, 8 of them public,

with accommodation, average attendance, and Government grant as follows:—Academy infant (105, about 65, over £62), Dorward's (352, about 390, nearly £340), Half-time (162, about 90, over £75), Lochside (135, about 85, over £60), North Links (320, about 225, over £195), Southesk (745, about 575, nearly £500), Townhead (566, about 445, nearly £428), White's Place elementary (204, about 190, over £155), Chapel Works half-time (106, about 35, nearly £30). In addition to the School Board there is an Educational Endowments Trust, consisting of seven members, with invested funds amounting to about £3924, exclusive of the value of the Harvieston estate. There are also several private schools and seminaries.

Dorward's House of Refuge, at the N end of the Middle Links, was erected in 1839, and is endowed from a fund of £29,600 bequeathed by William Dorward, merchant in Montrose. It is a neat Elizabethan building, affording accommodation for 150 inmates, but has generally only about 80. It is for old and infirm people and orphans or deserted children, and is managed by trustees from various public bodies. The Museum of the Natural History and Antiquarian Society, a neat building in Panmure Place erected in 1837 and extended in 1889, when a fine hall was added, contains valuable collections of natural history objects, and a fine collection of coins and other antiquities. The barracks, to the NE of the harbour, were originally the buildings of the lunatic asylum, which were transferred to Government in 1860 to be converted into a depot for the Forfar and Kincardine Artillery militia.

Commerce and Trade, etc.—The manufacture of linen yarn and thread was introduced at a comparatively early period, and has been vigorously carried on. An annual market for these products was held in the early years of the 18th century, and drew to it manufacturers from all parts of Forfarshire and Kincardineshire and from some parts of Aberdeenshire, to dispose of their goods. The making of sailcloth was begun in 1745; but after a short burst of prosperity it fell off, and has now become extinct. The manufacture of sailcloth, fine linen, lawns, and cambric was so prominent at Pennant's visit to the town in 1776, as to draw from him a eulogy on the skill and industry employed. Flax-spinning, with newly-invented machinery worked by one of Boulton and Watt's engines, was commenced in Ford's Mill, a factory built for this in 1805; and in 1805-6 the engineman who had charge of the machinery of this work was the great inventor of the locomotive engine, George Stephenson. An engineman's wages in those days could not have been large, but during the year Stephenson was in Montrose he saved a sum of no less than £23. Flax-spinning is now the principal industry, and gives employment to a large number of hands, both in the town and in its neighbourhood, as does also the weaving of part of the yarn into ducks, sheetings, dowlas, canvas, and other fabrics. There are also three ropeworks, mills, machine-making establishments, breweries, and an artificial manure and chemical work. Shipbuilding, that had once been extensively carried on, but had become extinct, has been revived, the Montrose Shipbuilding and Engineering Co., Limited, having been formed in 1892 and carrying on business in a yard at the water side. There is also a small business done in boatbuilding and ship-carpenter work. The registration or custom-house port used formerly to comprehend the whole coast from Buddon Ness on the S to Bervie-brow or Todhead on the N, but is now restricted to the reach from Redhead to Todhead, and therefore includes only Johnshaven and Gourdon. The number of vessels within the smaller range, with their tonnage, has been at various dates as follows:

Year.	Sailing Ships.	Tons.	Steamers.	Tons.	Total Vessels.	Total Tons.
1868	112	17,320	2	40	114	17,360
1875	78	13,529	4	1156	82	14,685
1882	50	9,287	7	2053	57	11,340
1895	17	1,858	11	578	28	2,436

By far the greater part of the ships belong to Montrose. The harbour comprises the whole reach of the South Esk from the bridge to the sea, but is occupied principally in the upper part of that reach. It is naturally very good, and has been well cared for. The entrance is somewhat narrow, and cannot easily be taken, with the wind from certain points; but the depth over the bar is 18 feet at low water of spring tides, and it is therefore accessible at all hours to vessels of large draught. To the N of the fairway is a dangerous bank called the Annat Sands. There are two leading lights, one on the N side of the entrance, and the other on the SE of Rossie Island; while on the promontory at the S side of the mouth of the river is Montroseness or Seurdyness lighthouse, erected in 1870, altered in 1881, and again in 1885, with a double intermittent or occulting white light, its periods of light and darkness being thirty seconds each. The light is visible at a distance of 17 nautical miles. A light of less power but of same character is shown from the lantern up the channel towards Montrose harbour. It has also a fog bell, sounded when fishing boats are at sea. The quays are well constructed and commodious, and have been considerably extended in recent years. A wet dock, measuring 450 by 300 feet, with a depth of 19 feet at spring tides and 15 at neaps, and capable of accommodating 6000 tons of shipping, was formed in 1840 at a cost of £43,000. There is a patent slip, capable of raising vessels of 400 tons. Tramways connect the harbour with both the Caledonian and North British railway stations. The present trustees are five elected by the County Council, the sheriff of the county, the provost and senior bailie of Montrose, 2 members elected by the town council, 9 chosen by the municipal electors, and 4 elected by the town council of Brechin. It was acquired by this body from the town council in 1837, under act of parliament, by which a payment of £600 a year in perpetuity is to be made to the latter body. The following table shows the tonnage of vessels that entered from and to foreign ports and coastwise, with cargoes and in ballast, at various dates:—

	ENTERED.			CLEARED.		
	British.	Foreign.	Total.	British.	Foreign.	Total.
1860	48,882	17,638	66,520	33,790	17,066	50,856
1874	66,915	25,414	92,329	66,902	22,479	89,381
1881	71,319	21,426	92,745	68,122	20,947	89,069
1882	65,998	28,041	94,039	67,450	26,214	93,664
1895	52,943	15,825	68,768	51,982	10,436	62,418

The foreign trade is chiefly with the Baltic and Norwegian ports. The chief exports are grain, manufactured goods, dressed wood for the Australian colonies, potatoes, and fish; and the chief imports are timber, coal, flax, hemp, and wheat. The trade in wood is second only to that on the Clyde. Montrose fishery district embraces the coast from Dundee to Gourdon, and in 1894 had a total of 254 first-class boats, 193 second-class boats, 154 third-class boats, and 5 beam trawl-vessels, with a total tonnage of 6755, and 1179 resident fishermen and boys. Of these, however, only 7 third-class boats, and 3 beam trawl-vessels, with 35 men and boys, belonged to Montrose itself. In the same year the value of boats was £49,470; of the fishing gear, £35,349. The total number of persons employed in connection with them was 1901, the number of barrels of herring salted or cured 39,996, and the number of cod, ling, or hake taken 31,705. Of the whole number of boats, about a fourth belonged to the small fishing village of FERRYDEN.

Municipality, etc.—As already noticed it is uncertain when Montrose became a royal burgh, but in the charters of confirmation and renovation granted by David II. in 1352, and by Robert II. in 1385, there is a rescript of a charter believed to have been granted by David I. Subsequent extension of privileges was granted by James IV. Under the Burgh Politee Act of 1892 affairs are managed by a provost, 4 bailies, and 12 councillors. The corporation is probably the only one in Scotland

that can boast of ever having had female burgesses, since in 1751 the ladies Jean, Mary, and Margaret Falconer, daughters of Lord Falconer of Halkerstone, were raised to that dignity. The police force consists of 12 men (one to every 1081 of the population) including a superintendent, whose salary is £160. The corporation revenue for 1894-95 was £3201. Gas is supplied by a company formed in 1827, whose works are in Lower Hall Street, but in 1894 it was proposed to introduce the electric light. Water was brought first from Glenskenno in 1741 at a cost of £1300; and the present supply, which comes from the North Esk above Kinnaber, was introduced in 1857 at a cost of about £8800. A thorough scheme of drainage was carried out subsequent to 1873. Under various trustees there are 28 charitable funds bequeathed between 1744 and 1891 with capitals varying from £25 to £4000, the interests being chiefly applied to the assistance of indigent persons not paupers. The hospital fund granted by King James VI. in 1587 gives assistance to about 150 persons, who receive quarterly allowances from it. The burgh arms are, On a shield argent, a rose seeded and barbed proper: the supporters are two mermaids

Seal of Montrose.

proper; the crest a hand sinister issuing from clouds, and holding a branch of laurel, with the motto, *Mare dicit, rosa decorat.*

The town has a post office, with money order, savings bank, insurance, and telegraph departments, and offices of the Bank of Scotland, British Linen Company, Commercial, National, North of Scotland, Royal, and Town and County Banks. There is also a National Security Savings Bank, and several hotels. The newspapers are the Liberal *Montrose Review* (1811) and the Conservative *Montrose Standard* (1837), and both are published on Friday. There are three masonic lodges—Kilwinning (No. 15), St Peter's (No. 120), and Incorporated Kilwinning (No. 182). Among the miscellaneous institutions may be noticed the Rossie Pleasure Grounds (to the S of the town, laid out in 1868-70, and open to the public), the Melville Gardens (opened 1876), the West-end Park (laid out in 1890), the Rossie Boys' Reformatory (1857) in Craig parish, a model lodging-house in South Esk Street, the Assembly Hall, now the parish church hall, in High Street, the Lifeboat and Coastguard stations, the Natural History and Antiquarian Society, a Young Men's Christian Association, a branch of the Bible Society, a Town Mission, a Society for Improving the Condition of the Poor, a Destitute Sick Society, a Ladies' Clothing Society, a Temperance Society, six Good Templar Lodges, Courts of Foresters and Shepherds, a Rechabites' Tent, a branch of the Shipwrecked Fishermen and Mariners' Royal Benevolent Society, a Choral Union, a Tonic Sol-fa Association, six golf clubs—the links affording one of the best golfing greens in Scotland—a curling club, bowling clubs, a cricket club, and a football club. The Volunteer Hall was opened in 1833; and there are an artillery and two rifle volunteer corps, in connection with which the Angus and Mearns Rifle Association (1860) holds a prize meeting on Montrose Links annually in August. The Memorial Hall, which was opened in 1878, received several additions in 1894. Sheriff small debt courts for the parishes of Craig, Dun, Logie-Pert, Lunan, Maryton, and Montrose are held on the third Friday of January, March, May, July, September, and November; and there is a justice of peace small debt court on the first Monday of every month. The weekly market is on Friday, and there was formerly an annual fair—which figures in *John o' Arnha*—on 3 May, Rood Day, whence the name Ruid or Rood Fair. This and another old fair held in July, and lasting four days, are now abolished, and fairs are held on the Fridays after Whitsunday and Martinmas (*o.s.*)

Montrose unites with Arbroath, Brechin, Forfar, and Bervie in returning a member to parliament, and is the returning burgh. Parliamentary constituency (1895-96) 1871, municipal constituency 2435. Valuation (1883-84) £57,142, 13s. 6d., (1895-96) £58,142. Pop. of parliamentary burgh (1831) 12,055, (1841) 13,811, (1851) 15,238, (1861) 14,563, (1871) 14,548, (1881) 14,973, (1891) 13,048, of whom 7419 were females and 5629 males. The falling off in the population since the census of 1881 is accounted for by a great depression in the local trade, causing a considerable exodus from the town.

See also Jervise's *Memorials of Angus and Mearns* (Edinb. 1861); and Mitchell's *History of Montrose* (Montrose, 1866).

Montrose and Arbroath Railway, a section of the North British system extending from Arbroath northward to Montrose. Opened in 1880, it cost about £220,000. Proceeding almost due north to Lunan, it there touches the shore, and after reaching Ferryden crosses the South Esk to the back of Montrose. Seuding off a branch about a mile long into junction with the Montrose and Bervie line, it proceeds about 3 miles NW into junction with the Caledonian railway. There are three viaducts near Lunan Bay, and other two, costing £8000 and £18,000, take it across the two arms of the South Esk. Its Montrose station stands upon land reclaimed from the Montrose Basin by means of a lofty sea-wall fully a mile long.

Montrose and Bervie Railway, extending 13 miles NNE from the former to the latter place. Authorized in 1860 on a capital of £70,000 in shares and £23,000 in loans, it was opened in 1865, and is connected at Montrose with the Montrose and Arbroath railway.

Montrose, Old. See MARYTON.

Monymusk, a village and a parish of central Aberdeenshire. The village stands 302 feet above sea-level, within 3 furlongs of the Don's S bank, and $\frac{3}{4}$ mile N by W of Monymusk station on the Alford branch of the Great North of Scotland railway, this being $8\frac{1}{2}$ miles E by S of Alford, $7\frac{1}{2}$ WSW of Kintore Junction, and $20\frac{3}{4}$ (19 by road) WNW of Aberdeen. A place of high antiquity, it was almost entirely rebuilt about 1840, and now forms a neat square, with some fine old trees in the centre. It has a post office, with money order, savings bank, and telegraph departments, and a hotel.

The parish is bounded N by Oyne, NE by Chapel-of-Garioch, E by Kennay, S by Clunay, and W by Tough and Keig. Its utmost length from E to W, is 5 miles; its breadth increases westward from $\frac{1}{4}$ mile to $4\frac{1}{2}$ miles; and its area is 10,816 acres, of which $87\frac{1}{2}$ are water. The Don winds 10 miles east-south-eastward, partly along the Keig, Oyne, and Kennay boundaries, but mainly through the north-eastern interior; and Ton Burn, its affluent, traces all the southern and south-eastern boundary. Sinking along the Don to 250 feet above sea-level, the surface then rises westward to 1244 feet at Pitfichie Hill, 1469 at Cairn William, and 1306 at Greu Hill. Granite is the predominant rock in the hills and is largely quarried. Felspathic rock, of quality suitable for pottery purposes, also occurs, and was for some time worked by an agent of one of the Staffordshire potteries. Iron ore containing 65 per cent. of iron, has long been known to exist, but has not been worked on account of the dearth of fuel. The soil of the arable lands is partly clayey, but principally a light loam. About three-sevenths of the entire area are in tillage; nearly one-third is under wood; and the rest is either pastoral or waste. The proportion under wood, it will be noticed, is very large, the planting of larches, spruces, Scotch firs, and hardwood trees having been begun in 1716, and carried on constantly to the present time. A field beside the Don, $\frac{1}{2}$ mile E of Monymusk House, is said to have been the camping-ground of Robert Bruce's army before the Battle of Barra (1308), and bears the name of Campfield. Antiquities are vestiges of two ancient Caledonian stone circles, a sculptured standing-stone and Latin cross, the roofless ruin of Pitfichie Castle, and vestiges of a chapel,

which was one of the earliest seats of the Culdee missionaries in the North of Scotland. Malcolm Ceanmhor in 1078, proceeding on a military expedition against the rebels of Moray, arrived at Monymusk; and, finding that its barony belonged to the Crown, he vowed it to St Andrew, in order to gain the victory, and is said to have marked out the base of the church tower with his spear. In 1170 we hear of the Keledei or Culdees of 'Munimusc,' for whom thirty years later Gilchrist, Earl of Mar, appears to have built a priory, whilst enforcing on them the canonical rule. Disputes arose between them and the Bishops of St Andrews, and by 1245 the Culdees had quite given place to 'the prior and convent of Munimusc, of the order of St Augustine' (Skene's *Celtic Scotland*, ii. 389-392, 1877). The very foundations of the priory were dug up about 1726. Alexander Nicoll, D.C.L. (1793-1828), an eminent Orientalist and Regius Professor of Hebrew in the University of Oxford, was a native. Monymusk House, on the left bank of the Don, 3 furlongs NE of the village, is a large old building, with a valuable library and a good collection of paintings. In 1712 the estate was purchased from Sir William Forbes, Bart., of the Pitligo family, for £116,000 by Sir Francis Grant, Bart. (1660-1726), who, on his elevation to the bench in 1709, had assumed the title of Lord Cullen. His seventh descendant, Sir Arthur Henry Grant, ninth Bart. since 1705 (b. 1849; suc. 1887), is sole proprietor of the parish. Monymusk is in the presbytery of Garioch and the synod of Aberdeen; the living is worth £208. The parish church, St Mary's, on the E side of the village square, is a very old building, parts of it being doubtless coeval with the priory. Comprising the Norman basement of a W tower ($17\frac{1}{2} \times 15\frac{1}{2}$ feet; 50 high), a nave ($48\frac{3}{4} \times 20\frac{1}{2}$ feet), and a choir ($16\frac{3}{4} \times 14\frac{3}{4}$ feet), with a later polygonal apse, it was enlarged by a N aisle, reroofed, and reseated for 580 worshippers in 1822, when the spire was also renewed. The spire, getting into disrepair, was removed in 1891, and the tower finished with a stone battlement. Its two pure Norman arches of Queen Margaret's time are objects of much interest. It was renovated in 1894. An Episcopal church, containing 150 sittings, was converted from secular purposes in 1801. Three public schools—Sir Arthur Grant's, Monymusk, and Tillyfourie—with respective accommodation for 75, 163, and 99 children, have an average attendance of about 55, 85, and 55, and grants amounting to nearly £46, £93, and £42. Valuation (1884) £6989, 15s. 5d., (1893) £6533, 16s. 3d., plus £1651 for railway. Pop. (1801) 900, (1831) 1011, (1861) 988, (1871) 996, (1881) 1155, (1891) 1025.—*Ord. Sur.*, sh. 76, 1874.

Monymuk Water, a rivulet of Haddington and Berwick shires. Rising among the Lammermuir Hills at an altitude of 1112 feet, and running $7\frac{3}{4}$ miles south-south-eastward through or along the borders of Innerwick, Oldhamstocks, and Abbey St Bathans parishes, it falls into Whitadder Water at Abbey St Bathans hamlet.—*Ord. Sur.*, sh. 33, 1863.

Monzie, a parish of central Perthshire. In the quadram village of Monzie, which since 1891 is in the parish of Crieff, and stands on the left bank of Shaggy Burn, 3 miles NNE of the post-town, Crieff, only one house remains of what about the year 1844 was the abode of 118 people.

Considerable alterations were made by the Boundary Commissioners in 1891 on the area of Monzie parish, the effect of which was to transfer the parish centre to the part of the parish which was the centre of population and wealth. The Innerpeffray detached portion of Monzie, comprising 1107 acres, and also the part of the parish in which the parish church was situated, were transferred to the parish of Crieff; part of the detached portion which lay south of the river Almond, at The Cairnies, and comprising 7953 acres, was transferred to the parish of Methven; and the Auchnafree detached portion, comprising 8684 acres (including 1910 acres in Glenshervie, determined by decree of the Court of Session in 1885 to be part of Crieff parish), was transferred to the parish of Monzievairst and Strowan. But there

were added to Monzie so much of the parish of Auchtergaven as lay to the west and south-west of Tullybelton estate and to the west of the eastern boundaries of the farms of Gourdiehill and Woodend on the Atholl estate; the Mullion detached part of the parish of Redgorton, comprising 1261 acres; and so much of the parish of Fowllis-Wester as lay north of the river Almond at The Cairnies. The parish as now formed is situated in Logiealmond, and does not differ greatly in extent from the *quoad sacra* parish of Logiealmond. With an utmost length, from E to W, of $7\frac{1}{2}$ miles, and an utmost breadth, from N to S, of 5 miles, it is bounded NW by Little Dunkeld, NE and E by Auchtergaven, SE by Moneydie and Methven, S by Methven, and SW and W by Fowllis-Wester. The ALMOND winds 6 miles eastward, along the southern border; Milton Burn runs to it $4\frac{1}{2}$ miles south-south-eastward through the centre of the western half of the parish; Shochie Burn, another of its affluents, runs $2\frac{1}{2}$ miles south-eastward through the eastern portion and along the greater portion of the Moneydie boundary till it leaves the parish previous to traversing Moneydie on its way to join the Tay; and Shiligan Burn, rising in the NW corner of the parish, on the slopes of the Meall Reamhar (2025 feet), after traversing the NW district in a SE direction, turns to the SW, and from about the middle of the parish forms its western boundary till near Lethendy cottage, when it traverses the SW corner of the parish eastward to the Almond. The parish boundaries elsewhere are mostly artificial. The surface sinks to 450 feet along the Almond, and rises to 654 feet near Saddlebank, 773 near Montreal, 1913 at Meikle Crochan, and 2044 at Meall nan Caoraich, on the Little Dunkeld boundary.

The rocks of this formerly large and scattered but now compact parish include excellent slate, red sandstone compact and durable, and limestone of indifferent quality. The soil of most of the arable lands is light, dry, and fertile. 'Weems,' or subterranean dwellings, have been discovered in Monzie Park, where also are remains of several stone circles. Monzie Castle, 5 furlongs SSW of Monzie hamlet (though all three are now in the parish of Crieff), bears date 1634, and is a square, three-storey, battlemented pile, with a western two-storey wing, and round towers flanking the angles. In its beautiful grounds are four out of five larches, coeval with those of DUNKELD (1738), and one of them 18 feet in girth at 3 feet from the ground. The estate belongs to George Johustone, Esq. of LATHRISK, his father having purchased it from Alex. Cameron-Campbell, Esq., who died in 1869, and who from 1841 to 1843 was Conservative member for Argyllshire. (See INVERAWE.) Monzie is in the presbytery of Auchterarder and the synod of Perth and Stirling; the living is worth £234. The parish church, at the hamlet, was built in 1831. There is also a Free church of Monzie; and Kinglands and Logiealmond public schools, with respective accommodation for 31 and 73 children, have an average attendance of about 10 and 70, and grants of over £16 and £80. Valuation (1884) £8868, 1s. 1d., (1892) £5509, 10s. 11d. Pop. of civil parish (1871) 803, (1881) 753, (1891) 501; of ecclesiastical parish (1871) 324, (1881) 304, (1891) 273.—*Ord. Sur.*, shs. 47, 48, 1869-68.

Monzievairst and Strowan, a parish of Upper Strathearn, central Perthshire, whose church, $\frac{1}{2}$ mile from the Earn's N bank, is $3\frac{3}{8}$ miles ENE of Comrie and $3\frac{3}{4}$ WNW of the post-town, Crieff. It comprises the ancient parishes of Monzievairst and Strowan, united prior to 1662, and until 1891 consisting of a main body and four detached sections, the area of the whole being 26,493 $\frac{3}{4}$ acres, of which 5970 belonged to those sections, and 400 $\frac{1}{2}$ were water. Of the detached sections, all lying in Glenartney, the largest, comprising 4563 acres, and containing Auchnashelloch and Findhuglen farms, was transferred by the Boundary Commissioners in the latter year to the parish of Muthill. The other three detached sections, two of them situated near Culti-bregan, the other at Easter Meiggar, and comprising respectively nearly 1 acre, 58 acres, and 1348 acres, were transferred to the parish of Comrie. There were,

however, added to the parish of Monzievaired and Strowan the Auchnafree detached portions of the parishes of Monzie (6774 acres), Crieff (1910 acres), and Fowlis-Wester (590 acres), besides certain 'lands claimed by no parish,' lying to the west of the Monzie and Crieff detached portions. The parish is bounded N and NE by Dull, E by Fowlis-Wester and Crieff, S by Muthill, W by Comrie, and NW by Kenmore. Its utmost length, from N to S, is $11\frac{3}{4}$ miles; and its width varies from $2\frac{1}{2}$ to 6 miles. From Comrie village to near Crieff town the EARN flows $5\frac{1}{2}$ miles east-by-southward, partly along the Comrie boundary, but mainly across the interior; following the line of its banks more or less closely, is the Comrie extension of the Caledonian railway to Crieff. Turret Burn, rising on the eastern side of Ben Chonzie at an altitude of 2000 feet, runs $8\frac{1}{2}$ miles south-eastward and southward—passing in its course through Loch Turret, and for the last 2 miles running along the Crieff boundary, till, after a descent of 1900 feet, it falls into the Earu at a point $\frac{1}{2}$ mile W of the town of Crieff. The LEDNOCK, over the last $3\frac{3}{4}$ miles of its course, runs south-south-eastward along the Comrie boundary to the Earn at Comrie village. Through GLENALMOND, in the northern portion of the parish, the new-born Almond has an easterly course of about 6 miles. The largest sheets of water are Lochan Uaine ($1 \times \frac{1}{2}$ furl.; 1523 feet) and Loch Turret (1 mile \times $2\frac{1}{2}$ furl.; 1127 feet) towards the head of GLENTURRET; Ochertyre Lake ($4\frac{1}{4} \times 1\frac{1}{4}$ furl.); and St Serf's Water ($1\frac{1}{2} \times \frac{1}{2}$ furl.). Along the Earn the surface declines to close on 100 feet above sea-level, and thence it rises southward to wooded Torlum (1291 feet), northward to Tomachaistel (434), Drumachargan (512), Creag Each (988), Creag Chaiseau (1809), and Carn Chois (2571). Along the Almond the surface declines to 880 feet, the chief elevations on the southern bank being *Ben Chonzie (3048 feet) and *Auchnafree Hill (2565), and on the northern bank Auchnafree Craig (2526), Lechrca Hill (2470), *Meall nam Fuaran (2631), *Carn Bad an Fhraoich (2619), and a nameless summit on the north-west boundary (2838), where asterisks mark those summits that culminate on the confines of the parish.

The line of junction between the clay slate and the Old Red sandstone passes north-eastward from Glenartney to Glenturret; and both slate and sandstone have been quarried. The soil of the low grounds is light, gravelly, and fertile; that of the hills is much of it moorish. Much of the woodland is natural forest; and, as an old song tells, the oak is a favourite tree:—

'By Auchertyre there grows the aik.'

The remains of Castle Cluggy, comprising a tower 18 feet square within the walls, stand on a gentle rising-ground, which runs into the middle of Ochertyre Lake, and must anciently have been an island, or nearly so, accessible only in one place by a drawbridge. Formerly of much greater extent than now, the castle is traditionally said to have belonged to the Red Comyn, the rival of Bruce, who here, about 1306, besieged Malise, Earl of Strathearn. It is called 'an ancient fortalice' in a charter of the year 1467; and it was inhabited for some time about the middle of the 17th century by Sir William Murray, first baronet of Ochertyre. Towards the head of the lake is an artificial crannoge. An ancient castle of the Earls of Strathearn stood on the summit of Tomachaistel, a beautiful eminence 3 miles W of Crieff, commanding very romantic prospects, and possessing the greatest capabilities of military defence in days before the invention of gunpowder. The foundations of this castle were still visible in 1832, when they were removed to give place to a monument in memory of General Sir David Baird of FERN-TOWER (1757-1829), the hero of Seringapatam. This monument still is a conspicuous feature in the general landscape of Upper Strathearn, the damage caused by a thunderbolt in 1878 having since been made good by public subscription. It is an obelisk 82 feet high, an exact imitation of Cleopatra's Needle, and is formed of blocks of Aberdeen granite, some of them weighing 5 tons each. In

1511 eight score of the Murrays, with their wives and children, were massacred by a body of Drummonds and Campbells, the former having taken refuge in the heather-thatched church of Monzievaired, while the latter, who were at feud with them, set fire to the church, and prevented their escape from the flames. The mausoleum of the Murrays of Ochertyre now stands on the site of the church, and is a Gothic building of 1809, with stained-glass windows. On the estate of Ochertyre are vestiges of two Roman posts of observation, commanding views of the camps at Dalginross and on the Moor of Orchil. Many sepulchral cairns near the Earn have been removed as material for stone fences; but a very large one, called Cairn Chainichin, 'the monumental heap of Kenneth,' still exists, and is supposed to have been raised to the memory of Kenneth, King of Alban, who was slain at 'Moeghavard' in 1004. Vestiges of a pre-Reformation chapel exist to the S of Lawers House; and an ancient cross, bearing the sacred initials I. N. R. I., stands a little to the SW of Strowan, on a spot where markets used to be held. Among distinguished natives may be mentioned the two Colonels Campbell of Lawers, who figured in the 16th and 17th centuries; Colonel Alex. Dow (d. 1779), author of a History of Hindostan; Sir Patrick Murray (1771-1837), judge and statesman; and Sir George Murray (1772-1846), quarter-master-general to the British army throughout the Peninsular War, and afterwards statesman and cabinet minister. Mansions, noticed separately, are CLATHICK, LAWERS, OCHERTYRE, and STROWAN. Giving off portions to Comrie and West Church (Crieff), this parish is in the presbytery of Auchterarder and the synod of Perth and Stirling; the living is worth £225. The old church of Monzievaired (Gael. *monadh-a-bhaird*, 'the bard's hill') was dedicated to St Serf, and that of Strowan to St Ronan or Rowan, whence the name *Strowan* itself. Both were in use on alternate Sundays till 1804, when the present church was built. The public school, with accommodation for 133 children, has an average attendance of about 50, and a grant of over £60. Valuation (1884) £11,613, 1s. 2d., (1892) £9912, 16s. 6d. Pop. (1801) 1033, (1831) 926, (1861) 782, (1871) 744, (1881) 700, (1891) 593, of whom 490 were in the ecclesiastical parish.—*Ord. Sur.*, shs. 47, 39, 1869.

Moodiesburn, a village in Cadder parish, Lanarkshire, $6\frac{1}{2}$ miles ENE of Glasgow, and $1\frac{1}{4}$ mile NE of Garnkirk station on the Caledonian railway.

Moonzie, a very small parish of N Fife, whose church stands 3 miles NW of the post-town, Cupar. It is bounded W and NW by Creich, NE by Kilmarny, SE by Cupar, and SW by Monimail. Its utmost length, from NNW to SSE, is 2 miles; its utmost breadth is $1\frac{3}{4}$ mile; and its area is 1257 $\frac{1}{2}$ acres. Sinking to less than 200 feet above sea-level along the boundaries, and rising to 453 feet near the church and 430 at COLLUTHIE Hill, the surface presents a pleasing diversity of hill and dale. A considerable loch or marsh on Lordscairnie farm was drained about the beginning of the 19th century; and Moonzie Burn, issuing from what was once its bed, runs eastward to the river Eden's estuary. Trap tufa is the predominant rock. A few acres on the top of Colluthie Hill are under plantation; about 36 acres on Lordscairnie farm are reclaimed moss, under the plough; and all the rest of the parish has excellent soil, partly a strong clay, chiefly a black loam, and is in a state of high cultivation. An interesting antiquity is Lordscairnie or 'Earl Beardie's' Castle. This is said to have been built about the middle of the 15th century by Alexander, fourth Earl of Crawford, commonly called 'Earl Beardie' from his great beard, or the 'Tiger Earl' from the fierceness of his disposition. All that remains of it is the keep or donjon, and a round tower which formed a defence for the wall that surrounded the courtyard. This ruin is four storeys high, and appears to have lost nothing of its original height, with the exception of the bartizans. It is 53 feet long and 42 broad without the walls. The walls are strongly built, and between five and six feet thick. The ground-floor—as is common in such structures—appears to have been wholly occupied by cellars

having arched stone roofs. The second floor was occupied entirely with the great hall, which is 40 feet long and over 20 feet broad. The defence of the castle and its outworks was anciently strengthened by a broad morass, which appears to have entirely surrounded the slight rising ground on which they were situated. COLLUTHIE, noticed separately, is the only mansion. Moonzie is in the presbytery of Cupar and the synod of Fife; the living is worth £210. The church, which from its elevated position serves as a landmark to mariners entering the Firth of Tay, is a small old building, containing 171 sittings, and greatly improved by extensive repairs in 1882. In 1890 the windows were all filled in with cathedral glass, and one figure window gifted to the church. Although it is impossible to ascertain the exact date of the present structure, there can be no doubt as to its great antiquity. The church and teinds of the parish of Moonzie were gifted in 1238 by Bishop Malvoisin to a religious fraternity at Scotlandwell in Kinross-shire. About 1564 Moonzie was conjoined with Cupar, but this arrangement lasted only a few years, after which it was again made a separate parish. After the Revolution, we find it stated in the Kirk Session records, that, when the minister was 'outed,' the great hall of Earl Beardie's castle was fitted up as a meeting-place for him and his adherents; and in 1693 'the Session appoynts that the seats now standing in the meeting-house at [Lords'] Cairnie be transported with all conveniency to the Kirk.' The public school, with accommodation for 53 children, has an average attendance of about 35, and a grant of over £45. Valuation (1884) £2614, 7s., (1893) £1748, 14s. Pop. (1801) 201, (1831) 188, (1861) 179, (1871) 154, (1881) 148, (1891) 128.—*Ord. Sur.*, sh. 48, 1863.

Moorbeck, a hamlet on the coast of Cummertrees parish, Dumfriesshire, 2 $\frac{3}{4}$ miles SW of Annan.

Moorfoot, a double range of moorish hills, chiefly on the eastern part of the southern border of Edinburghshire, and partly on the mutual border of Edinburgh and Peebles shires. Commencing on the W side of the head of the vale of Gala Water, and hindered only by that vale from being continuous with the Lammermuirs, it extends south-westward in two mutually divergent lines to the E flank of the vale of Eddleston. With a roughly triangular outline, about 10 miles in length and 6 in mean breadth, it comprises masses and summits, generally rounded, sometimes isolated, and nowhere linked into continuous ridge; culminates in BLACKHOPE SCAR (2136 feet); consists of Lower Silurian rocks; and has mostly a bleak and pastoral character.—*Ord. Sur.*, shs. 32, 24, 1857-64.

Morange. See INVERVALE.

Moranside. See MUIRAVONSIDE.

Morar, a territorial district and a lake of SW Inverness-shire. The district is bounded N by Loch Nevis, E by the district of Lochiel, S by Arasaig, and W by the Sound of Sleat. Its utmost length, from E to W, is 19 miles; and its breadth varies between 4 and 9. Loch Morar bisects a great part of it lengthwise, and divides it into two nearly equal sections, which are called respectively North and South Morar. The lake, which is 11 $\frac{3}{4}$ miles long and from 5 furlongs to 1 $\frac{3}{4}$ mile broad, is overhung nearly all round, and, at a very brief distance, by water-shedding Highland heights. Its foot is 'very prettily wooded—a pleasant contrast to the wilder scenery of the upper end. The shore here is much indented; and there are two or three picturesque islands, on the largest of which, in the hollow of a tree, Simon Fraser, Lord Lovat, found a hiding-place in June 1746.' On the E Loch Morar is fed by streamlets coming from the lochlets Beoraid and Anamack; and it discharges its superfluous on the W by a stream of only a few furlongs in length into a small bay. Its waters contain good store of salmon, sea-trout, and loch trout. MALLAIG, the terminus of the proposed extension of the West Highland railway from Fort

William by way of Loch Eil, Loch Eilt, and Arasaig, is situated in North Morar, at the entrance to Loch Nevis, on the Sound of Sleat. North Morar belongs to the parish of Glenelg, South Morar to that of Ardnarmurchan; and both are included, in a large sense, in the comprehensive district of Lochaber. Morar is mainly peopled by Roman Catholics; and in 1889 a chapel (Our Lady of Perpetual Succour and St Cumin) was built at Beoraid. Morar, 43 miles WNW of Fort William, is the seat of Eneas Ronald Macdonell, Esq.

Moray Firth, the largest and most regular arm of the sea indenting the coast of Scotland, and the largest opening on the E coast of Great Britain. Taking it in its widest sense it may be roughly described as a triangle with one angle at DUNCANSBAY HEAD in CAITHNESS; another at Cairnbulg Point, 3 miles E of Kinnaird's Head, in Aberdeenshire; and the third at the mouth of the BEAULY river. From Duncansbay Head to Cairnbulg Point across the mouth of the Firth the distance in a straight line is 78 $\frac{1}{2}$ miles, while, in a straight line, the distance from Duncansbay Head to the mouth of the Beauly is 96 miles, and from the mouth of the Beauly to Cairnbulg Point 95 miles. The coast-line along the NW side—which is bounded by the counties of Caithness, Sutherland, and Ross and Cromarty—is considerably broken, first by Sinclair Bay N of Wick, next by the DORNOCH Firth, and again by the CROMARTY Firth. The coast-line on the S—which is formed by the counties of Inverness, Nairn, Elgin, Banff, and Aberdeen—is much even, the largest breaks being at Burghead Bay and Spey Bay. The principal rivers flowing directly into the firth are the WICK and BERRIEDALE from Caithness, the HELMSDALE and BRORA from Sutherland, the BEAULY and NESS from Inverness-shire, the NAIRN from Nairnshire, the FINDHORN, LOSSIE, and SPEY from Elginshire, and the DEVERON from Banffshire. The depth near the mouth is about 60 fathoms at the deepest part. All along the bottom of the firth near the centre is a deep trough or channel known among the fishermen as the 'Trink'—i.e., Trench. Its width and depth vary, but where the bottom is not rocky the hollow is about $\frac{1}{2}$ mile wide and sinks to a depth of some 15 fathoms below the ordinary bottom level. Where it passes through rocks the sides become more or less perpendicular and the channel narrower. It marks the former course of a large river, which must—in the pleistocene period of British history when the country was united to the Continent—have had its main source in the BEAULY, and which, after receiving all the present rivers of the firth as tributaries, flowed NW to join an enormous stream which, formed by the joint waters of all the rivers that now flow into the North Sea, poured its mighty volume into the Atlantic Ocean to the NE of the Shetland Islands. At the bottom of the Trink there is a deep deposit of mud, and in some places it is a favourite habitat for skate and ling. The waters of the firth abound with fish, and the coasts are studded with small fishing villages, while Wick, Helmsdale, Banff and Macduff, and Fraserburgh are four of the chief stations in the north for the prosecution of the herring-fishing by first-class boats. Of the 27 fishery districts into which Scotland is divided the Moray Firth has the 6 entire districts of Banff, Buckie, Findhorn, Cromarty, Helmsdale, and Lybster, and portions of Fraserburgh and Wick. As regards general fishing, in 1894 out of a total of 4054 first-class, 3353 second-class, 5196 third-class boats, and 77 beam trawl-vessels, or a total of 13,180 boats in all the fishery districts of Scotland, 1378 first-class, 541 second-class, and 348 third-class boats, or a total of 2267, belonged to Moray Firth ports, exclusive of several creeks in the Fraserburgh and Wick fishery districts; while of a total of 44,534 persons employed in connection therewith, 9522 were employed among the Moray Firth villages; and the value of the boats (exclusive of beam trawlers), nets, and lines was calculated at respectively £230,391, £165,630, and £30,071, out of totals for all Scotland of £636,580, £503,824, and £122,462. Of 1,518,077 barrels of herring caught and cured in Scotland in the

same year, 84,560 barrels were brought into Moray Firth ports, the small proportion being explained by the number of boats that leave the district to fish at other stations. Of 3,903,043 cod, ling, and hake caught in 1894—of which, however, 1,877,812 are from Shetland alone—64,172 were brought into ports along this coast.

The description and limits already given apply to the firth in its widest extent, but the name is sometimes more particularly confined to that portion which lies to the SW of a line drawn from Tarbatness in Ross-shire to Stofield Head near Lossiemouth in Elginshire. This inner portion of the firth measures 21 miles along the line just mentioned, and 39 miles in a straight line thence to the mouth of the Beaully river. It consists of three portions, the outer running up as far as the projecting points of Chanoury (Ross) and Ardersier (Inverness), and forming a triangle 21 miles across the mouth, as already stated, 23 in a straight line along the Ross-shire side, and 32 in a straight line along the Inverness-shire, Nairnshire, and Elginshire side. The points just mentioned project about $1\frac{1}{2}$ mile beyond the general line of the coast on each side and overlap one another, but so as to leave a passage at right angles to the main line of the firth and $\frac{3}{4}$ mile wide. This strait gives admission to the much shallower portion known as the Inner Moray Firth or Firth of Inverness, extending from Fort George 8 miles south-westward to the mouth of the Ness, with an average breadth of from $2\frac{1}{2}$ to 3 miles, with Munloch Bay running off on the NW side and Petty Bay on the SE side. Immediately to the W of the mouth of the Ness the waters of the firth are narrowed by the projecting point at Kessoek to 650 yards, but they broaden out again into the Beaully Firth, which extends westward for $6\frac{1}{2}$ miles, with a breadth of from $1\frac{1}{2}$ to 2 miles. This portion of the firth is very shallow, and nearly the half of its whole area is laid bare at low water. The fishing in the Inverness and Beaully basins is very poor except as regards the capture of garvies or sprats, which are found there in immense numbers, about 10,000 crans being sent to the southern markets every year. The three portions of the firth just described correspond to the *Æstuarium Vararis* of the ancient geographers.

The coast-line along the firth varies considerably. From Duncansbay Head to Helmsdale, on both sides of the Cromarty Firth, between Burghead and Lossiemouth, between Buckie and Banff, and along a considerable portion of the Aberdeenshire coast, it is rocky, but elsewhere low. It is well cultivated, and the reaches to the W of Fort George are finely wooded.

Moray, Province of, an extensive district lying to the S of the inner portion of the firth just described. It is almost co-extensive with one of the seven provinces into which, during the Celtic period, we find the whole of modern Scotland divided. The northern boundary was the Moray Firth and the river BEAULY as far as KILMORACK; from this point the line passed to the S along the watershed between Glen Farrar and the streams flowing to Loch Ness. After rounding the upper end of Glen Clunie it turned eastward along the watershed between Glen Loyne and Glen Garry, and between the river Garry and the streams flowing to the river Oich; then SE by the lower end of Loch Lochy, as far as the SW end of Loch Laggan, and on to Beinn Chumbaun, whence it followed the line between the modern counties of INVERNESS and PERTH, by Loch Erich, the Athole Sow, and Carn-na-Cain, to Cairn Ealar. From that hill it followed the boundary of INVERNESS-SHIRE and BANFF-SHIRE, along the Cairngorms, and down the Water of Ailnack. Here, however, it left the county boundaries and followed this stream to the Aven above Tomintoul, and then followed the course of the Aven to the Spey, and the latter river back to the Moray Firth. The province thus included within its limit the whole of the counties of Elgin and Nairn, the greater part of the mainland division of the county of Inverness, and a portion of the county of Banff. In later times the signification has sometimes been considered as rather co-extensive with the sway of the Bishop of Moray, and

so with the jurisdiction of the modern synod, but this must hold true as applying more to ecclesiastical authority than to territorial limits. At one time the province must have stretched across the island from sea to sea, for, in one of the statutes of William the Lion, Ergadia, *i.e.*, Arregaithel, or the whole district W of the watershed between the German Ocean and the Atlantic Ocean, and extending from Loch Broom on the N to Cantyre on the S, is divided into 'Ergadia, which belongs to Scotia,' and 'Ergadia which belongs to Moravia.' This part afterwards fell into the hands of the Earls of Ross. The Highland line, marking the division between the Highlands and the Lowlands, passed across the province in a general north-westerly direction from the junction of the Aven and Spey to the mouth of the river Nairn; the part to the NE of this line being peopled with Lowlanders, who suffered continually from the peculiar ideas entertained by their Highland neighbours regarding *meum* and *tuum*. Peopled by an alien race, whose introduction will be noticed afterwards, greatly more peaceable, and less acquainted with the use of arms than the inhabitants of the Highland districts, the rich and fertile plain of Moray was regarded by the Highland Caterans as open and ever available spoilage ground, where every marauder might, at his convenience, seek his prey. So late in fact as the time of Charles I., the Highlanders continually made forays on the country, and seem to have encountered marvellously little resistance. In 1645 we find Cameron of Lochiel apologising to the laird of Grant for having carried off cattle from the tenant of Moyness, and giving the reasons that he 'kuew not that Moyness was ane Graunt, but thoct that he was ane Moray man,' and that the spoilers did not intend to hurt the laird of Grant's friends but to take booty from 'Murray land quhare all men take their prey.' The Moray people, it has been remarked, appear to have resembled the quiet saturnine Dutch settlers of North America who, when plundered by the Red Indians, were too fat either to resist or to pursue, and considered only how they might repair their losses; and the Celts, looking on the Lowlanders as strangers and intruders, thought them quite fair game, and could never comprehend how there could be any crime in robbing a 'Moray man.' So late as 1565, as appears from the rental of the church-lands in that year, the inhabitants of the 'laich' remained entirely a distinct people from the Highlanders, and all bore names of purely lowland origin. Nearly all the interest of Moray as a province, and often all the associations of the name are connected with its lowlands in the N. These have long been famed for mildness and dryness of climate, though the rivers that wind through them, having their sources among mountains high enough to arrest the moisture brought in from the Atlantic by the south-west winds, are sometimes liable to sudden freshets. The great floods of 1829, so admirably recorded in Sir Thomas Dick Lauder's *The Moray Floods*, form an extreme example. Probably no part of Scotland, not even East Lothian, can compete with Moray in regard to the number of spontaneous testimonies which have been borne to the richness of its soil. An old and common saying asserts that Moray has, according to some versions, 15, according to others, 40 days more of summer than most other parts of Scotland. Holinshed (practically an Anglicised form of Bolland's translation of Boece's *Chronicle*) says, 'In Murray land also is not onelic great plentie of wheat, barlie, otes, and suchlike grainc, besides nuts and apples, but likewise of all kinds of fish, and especially of salmon.' George Buchanan extols the province as superior to any other district in the kingdom in the mildness of its climate and the richness of its pastures. 'So abundant,' he says, 'is this district in corn and pasturage, and so much beautified as well as enriched by fruit trees, that it may truly be pronounced the first county in Scotland.' Whitelock, in Cromwell's time, says, 'Ashfield's regiment was marched into Murray-land, which is the most fruitful country in Scotland.' William Lithgow (1583-1645), after glancing

at Clydesdale and the Carse of Gowrie, says, 'The third most beautiful soil is the delectable plain of Moray, whose comely gardens, enriched with corns, plantings, pasturage, stately dwellings, overfaced with a generous Octavian getury, and topped with a noble Earl, its chief patron, may be called a second Lombardy, or pleasant meadow of the north.' Sir Robert Gordon of Straloch, describing the province in 1640, says, 'In salubrity of climate, Moray is not inferior to any, and in richness and fertility of soil it much exceeds our other northern provinces. The air is so temperate, that when all around is bound up in the rigour of winter, there are neither lasting snows nor such frosts as damage fruits or trees. There is no product of this kingdom which does not thrive there perfectly, or, if any fail, it is to be attributed to the sloth of the inhabitants, not to the fault of the soil or climate. Corn, the earth pours forth in wonderful and never-failing abundance. Fruits of all sorts, herbs, flowers, pulse are in the greatest plenty, and all early. While harvest has scarcely begun in surrounding districts, there all is ripe and cut down, and carried into open barnyards, as is the custom of the country; and, in comparison with other districts, winter is hardly felt. The earth is almost always open, the sea navigable, and the roads never stopped. So much of the soil is occupied by crops of corn, however, that pasture is scarce; for this whole district is devoted to corn and tillage. But pasture is found at no great distance, and is abundant in the upland country, and a few miles inland; and thither the oxen are sent to graze in summer when the labour of the season is over. Nowhere is there better meat nor cheaper corn, not from scarcity of money but from the abundance of the soil.' Notwithstanding, however, this fertility, years of comparative scarcity were by no means infrequent. During the summer of 1743, 'the dear year,' so memorable all over Scotland, thousands of the people of Moray wandered among the fields devouring sorrel, the leaves and stems of unfilled pulse, and whatever could mitigate the pangs of hunger, while many died of actual starvation or diseases brought on by want of food. Even so late as 1782, the noted year of the 'frosty har'st,' or harvest, the province suffered severely from famine. When the era of agricultural improvement set in, and many districts, becoming aware of their poverty, made a sudden and strenuous movement towards wealth, Moray was content to live on its fame, and so soon lost its pre-eminence, which it has, however, since regained, as may be seen from the notices of the agricultural condition of the counties of Elgin, Nairn, and Inverness. Some portions were long rendered barren by a curious layer known as 'Moray Coast' or 'Pan.' This was a thin stratum of sand and gravel which, by the infiltration of black oxide of iron, had become a hard compact mass, capable of damaging ploughs when brought into contact with it. It at the same time occurs at the distance of about a foot from the surface, and offers unconquerable resistance to the attempts of trees or shrubs to penetrate it with their roots. The only method of dealing with it is to lay it bare, break it up with a pickaxe, and expose the fragments to the slow influence of the weather. The physical characteristics and present condition of the province are discussed in the articles on the counties of Inverness, Elgin, Nairn, and Banff, and it remains here to notice historical details connected rather with the district as a whole than with the individual counties into which it has been broken up.

At the beginning of the Christian era we find the eastern part of Moray inhabited by the Vacomagi, to the W of whom were the Caledonii with, according to Ptolemy, a town called Banatia, on the E side of the river Ness; another called Ptoroton, on the promontory where Burghead now stands; and a third called Tuessis, on the bank of the Spey; and subsequently we find the district included in Northern Pictavia, of which the capital was situated somewhere near Inverness. The Pictish nation seems to have been formed by a union of various Celtic tribes or *tuaths* which united to form *mortuaths* or confederations, and these

mortuaths again to form a larger confederation embracing the whole realm. The mortuaths were governed by Mormaers, and seem to have corresponded to the districts that afterwards became the provinces governed by the original great territorial Earls of Scotland. That the country N of the Firths of Forth and Clyde was, during the Celtic period of its history, divided into seven provinces is certain, and there are, in the oldest records, accounts of them by name. One dating from the 12th century tells us that the region formerly known as Alban, was divided by seven brothers into seven parts. 'The principal part was Engus and Moerne, so-called from Engus, the eldest of the brothers. The second part was Adtheodble and Gouerin. The third Strathdeern and Meneted. The fourth Fif and Fothreve. The fifth Mar and Buchen. The sixth Muref and Ros. The seventh Cathanesia Cismontane and Ultramontane.' The seven brothers were the seven kings of these districts, and are regarded by Dr Skene as the Eponymi of the people of the seven provinces. The tuaths themselves seem to have corresponded with the smaller divisions that appear as thanages, and so we may identify the localities of some of them by the thanedoms of Dyke, Brodie, Moyness, and Cawdor, along the shore of the Moray Firth between the river Nairn and the Burn of Lethen; the great district of Moravia proper between the Lethen and the Lossie; and along the Lossie farther E was Kilmalemoock, the greater part of which now forms the parish of St Andrews-Lhanbryd and Essy. Cromdale and Rothiemurchus seem also to have been thanedoms. The Mormaers were also styled Ri or King, and one, termed the Ardri, always held a loose sway over all. The succession was tanistic, that is, hereditary in a family but elective as to the person, the senior male capable of ruling being chosen in preference to the direct descendant; and it seems even to have been regulated by that particular form where the supreme power passed alternately from one to the other of two branches of a family. It will be seen from what has been said already, that at this early date Moray and Ross were united and formed but one province. The oldest form of the name seems Moreb or Muireb, and Morovia and Moravia also occur.

In the latter part of the 9th century Harald Harfager having swept the northern seas of the Vikings, made offer of the Jarldom of Orkney to one of his most noted warriors Rognvald, who, however, preferring to return to Norway, obtained Harald's consent to making over the dignity and dominion to his brother Sigurd. Though the tenure of the Jarldom was conditional on his suppression of Viking plundering, this ruler seems to have had somewhat elastic notions as to how far this was binding in the case of raids made on other countries than Norway, and consequently we find him invading Scotland, and making himself master of a considerable portion of the North. According to one account, he held 'all Caithness and much more of Scotland—Maerhaefui (Moray) and Ross—and he built a burg on the southern border of Maerhaefui.' He did not, however, long enjoy his conquests, for, as has been noticed in the article FORRES, he died of a wound inflicted by the tooth of the dead Mormaer Melbrigda or Malbride, whose head he was carrying fastened to his saddle. On Sigurd's death the Jarldom reverted to the descendants of Rognvald, and they were, for long, so much occupied with family feuds that probably they were unable to bestow much thought or attention on a turbulent province, and so, during the greater part of the 10th century, Moray must have been more or less free from the Norse dominion and under the independent rule of its native Mormaers. According to the Landnamabok, Thorsteinu conquered the whole of the north, and forced more than half of Scotland to acknowledge him as king, but his conquest, if ever firm, must have been of but short duration. The people of Moray were, however, only relieved from attack on the N to have to meet it from the S. The kings of Alban had begun to dream of a united Scotland under one ruler, and in the beginning of the 10th century Donald II. was slain

at Forres, whither he seems to have penetrated on a military expedition. His son, Malcolm I., was, according to the *Ulster Annals*, slain at Fetteresso by the men of the Mearns in 954, but later annalists attribute his death to the men of Moray, and fix it at Ulcrn or Vlern near Forres, which used formerly to be identified with Auldearn, but which is more probably Blervie, which is close to Forres. The locality was very fatal to the family, for Duff, Malcolm's son and successor, is also said to have been killed at Forres by the governor of the castle in 967. His body was concealed in a deep pool under a bridge near at hand, and till it was found the sun did not shine on the spot.

Towards the end of the century, however, matters once more changed as regarded the Norse. The Mormaer then was Melbrigda, son of Ruaidhri, who in the quarrel for power between Liotr and Skáli, the great-grandsons of Rögnvald, seems to have sided with the latter. Both leaders were slain, but Liotr's party triumphed. That ruler was in 980 succeeded by his nephew, Sigurd the Stout, who, either from a desire to avenge his kinsman's death, or from wish for greater power, proceeded vigorously to assert the old rights, and, after a severe struggle, succeeded in wresting the province from 'Findlaec, son of Ruadri, Mormaer Moreb,' brother of the Melbrigda just mentioned, and the Finleikr Jarl of the Sagas. Sigurd fell in 1014 at the battle of Cluantarbh or Clontari, fighting against Brian Boroimne, King of Munster, and after his death, Findlaec once more became ruler of Moray, and reigned till 1020, when it is recorded that he was slain by the sons of his brother Melbrigda, one of whom, Malcolm, succeeded to power and ruled till his death. As both he and Findlaec are, in the *Ulster Annals* and in *Tighernac*, designated as Ri Albain, their dominion probably extended at this time beyond the limits of Moray proper, a supposition which is confirmed by the Book of Deer, in which it is recorded that this Malcolm gave to the clerics of Deer lands, situated, probably, in the neighbourhood of their monastery, and so in a district usually under the rule of the Kings of Alban. Malcolm was succeeded by his brother Gilcomgan, who was burned in his rath in 1032, probably by Maelbaethe, who is better known to us as Macbeth. From a notice in the *Saxon Chronicle* the province was then quite independent, and the Mormaer had the power of a Ri or King. It is there stated that King Cnut in 1031 invaded Scotland, and received the submission not only of the King of Scots but also of two other Kings, Maelbaethe and Iehmarc; and as Drumalban and the river Spey formed the boundaries of Scotland proper these two rulers would represent the districts lying beyond.

What was the real cause of the great contest that arose on the death of Malcolm II. in 1034 will probably never be exactly settled, but, the male line being extinct, it in all probability originated in rival claims set up by Malcolm's grandsons. A daughter of Malcolm was the second wife of Sigurd the Stout, and the mother of his youngest son Thorfinn, who was, at his father's death in 1014, a boy of five years old. His grandfather created him Earl of Caithness, and by 1034 he held considerable power in the Orkneys besides. When Malcolm died, Duncan, who was the son of his eldest daughter, claimed the kingdom, and his claim was admitted by the southern part of the realm, but Thorfinn disputed his right to any part of the north. According to the sagas, Duncan, who there figures as Karl Hundason, desired to exact tribute and homage from Thorfinn, and on his refusal to render either, bestowed the title of Earl of Caithness on his nephew, or one of his leading supporters called Moddan, and about 1040 sent him northward with a large army to take possession of the region. Thorfinn, supported by Thorkel Fostri his foster-father and by his Norsemen, defeated Moddan, and driving him back beyond the Moray Firth, made war 'far and wide in Scotland.' Duncan, bent on vengeance, got together a fleet and collected a very large army, 'as well from the south as the west and east of Scotland, and all the way south from

Satiri [Kintyre]; and the forces for which Earl Modan had sent also came to him from Ireland. He sent far and near to chieftains for men, and brought all this army against Earl Thorfinn.' The fleet was defeated in the neighbourhood of Duncansbay Head; and no better fortune awaited the army in the great struggle that took place somewhere between Burghhead and Forres when

'The wolves' bit [sword] reddened its edges
In the place called Torfness.
A young ruler was the cause.
This happened on a Monday.
In this congress south of Eckial,
The thin [well-sharpened] swords sung,
When the valiant prince fought
Against the ruler of Skotland.'

Torfness seems to have been Burghhead, where was probably the burg already referred to as having been built by Sigurd; while Eckial or Ekkial, which was by Worsaae, and afterwards by Dr Joseph Anderson in his edition of the *Orkeyinga Saga*, identified with the Oykel on the border of Sutherlandshire, is now by Dr Skene, and with much greater probability, considered to be the Findhorn—and indeed some of the accounts expressly say that the battle was fought 'south of Breidafjord,' the Norse name for the Moray Firth. The Irish division was defeated almost at once; and a long and fierce contest between the Norwegians and the Scots, headed by Duncan himself, ended in the victory of Thorfinn and the flight of the Scottish king. What the fate of the latter was the writer of the saga does not seem to have known, for he adds doubtfully, 'some say he was slain,' but by other writers it is recorded that he died at or near Elgin, and some of them even fix the place at Bothgouanan, which Dr Skene identifies with Pitgaveny. In the *Register of St Andrews* it is recorded that 'Donchath Mac-Trini abbatiss de Dunkeld et Bethoc filiæ Malcolm-Mac-Kinat interfectus a Macbeth-Mac-Finleg in Bothgouanan et sep. in Iona; but whether he died of his wounds or was murdered may be left somewhat doubtful, though the probabilities seem in favour of the latter. Be that as it may, Macbeth, who as Mormaer of Moray fought on the side of Duncan against the old enemies of his lands, at once after his defeat passed over to the side of the conqueror; and the new allies overran the kingdom as far S as the Firth of Forth, whereby Macbeth became able to style himself King of Moravia and of Scotland.

When Malcolm Ceanmhor, the son of Duncan, came to his own again, Macbeth was slain in 1056 or 1057, and Lulag, son of the Gilcomgan already mentioned, succeeded as Mormaer of Moray, and for a short time maintained a claim to be styled King of Scotland. He does not seem to have been able to hold the lowlands against Malcolm, but to have retired to the mountain fastnesses of Loebaber, to a stroughold on Loch Deabhra, the gleu leading to which is still known as Glen-Ri, near which he was slain in 1058. He was succeeded by his son Maelsnechtan or Maelsnechtai, who still maintained the independence of his native district, and who appears in 1078 again opposing Malcolm, who after the death of the great Thorfinn in 1064 seems to have made another powerful effort to gain a firm hold of the north. According to the *Ulster Annals*, and contrary to the usual fate of his race, Maelsnechtan died 'in peace' in 1085 or in 1086. During the troubles that took place between the death of Ceanmhor and the accession of Alexander I., the semi-independence of the province probably became more or less complete; and so it is not to be wondered at that we find the latter king, somewhere between 1114 and 1120—the *Ulster Annals* say 1116—compelled to assert his power by force of arms, and with such vigour and success that the Mormaer—probably Angus—was driven across the Firth into the mountain fastnesses of Ross and Sutherland. The death of Alexander and the accession of David I. provoked a fresh outbreak, headed by Angus, with whom was associated Malcolm, his brother, or, according to other accounts, an illegitimate son of Alexander I. This

Angus was the son of a daughter of Lulag, who succeeded Macbeth, and therefore a nephew of the Maelsnechtan already mentioned, but, in accordance with the new feudal system, then slowly developing, he appears as Earl of Moray, so that Maelsnechtan was the last of the Mormaers. The leaders probably relied somewhat for success on the fact that, at the time (1130), David was in England, and that therefore much might be accomplished before he had time to oppose them; but in this they were deceived, for David's cousin, Edward, son of Siward, Earl of Mercia, raising a force, met and defeated them in the parish of Stracathro in Forfarshire, on the SW bank of the West Water, a little above its junction with the South Esk, and, following up his success, entered Moray and obtained possession of the whole district. Angus was slain in the battle, and with him became extinct the line of the old Celtic Mormaers. From his title of earl, and the fact that the *Saxon Chronicle*, in noticing the event and recording his death, declares that 'there was God's right wrought upon him, for that he was all forsworn,' it may be inferred that he had previously sworn allegiance to David. For the next two hundred years the district seems to have been considered too fiery and dangerous to be entrusted to the control of any single ruler; and, though various Custodes Moraviae are mentioned in the intervening period, not till the reign of Robert Bruce was there another Earl of Moray. The hold thus acquired David vigorously confirmed by the erection of royal castles and the creation of king's burghs, while an equally powerful agent in the work of civilisation and pacification was brought into play by the establishment of the Priory of URQUHART and of the Abbey of KINLOSS. He seems also to have resided in the district at different times, and to have been successful in personally winning the favour and allegiance of his turbulent northern subjects, for at the Battle of the Standard in 1138, the rearguard, led by the king himself, consisted of Scots and Moray men.

The death of David was the signal for fresh troubles, and on the accession of his grandson, Malcolm IV., Malcolm Macbeth, who claimed to be sprung from Earl Angus, raised the Celtic population in revolt, and aided by the petty prince of Argyll, to whose daughter he was married, made a vigorous effort to regain his patrimony. Somerled was, however, compelled to make peace in 1159, and in 1160 Malcolm entered Moray and inflicted signal punishment on the rebels. Many of the inhabitants of David's burghs were probably strangers, and now his successor determined to carry this policy still farther by dispossessing large numbers of the natives, scattering them throughout the country, and giving their possessions to settlers on whose fidelity he could rely. Fordun speaking of his treatment of the inhabitants, says that he 'removed them all from the land of their birth, and scattered them throughout the other districts of Scotland, both beyond the hills and on this side thereof, so that not even one native of that land abode there, and he installed therein his own peaceful and peculiar people,' who would seem to have been Flemings. This must, however, be somewhat of an exaggeration. 'Such a story of wholesale transmigration,' says Cosmo Innes, 'cannot be true to the letter. Some old institutions unquestionably survived the measure; and a native rural population in the condition of that of Scotland in the 12th century could have no political sentiments, nor he called to account for political conduct. That there was some revolution, however, seems proved by charter evidence, and by the sudden appearance at that time, in the records of the province, of a great number of Southerners obtaining grants of land in Moray, for whom room must have been made by some violent displacement of the former lords of the soil, . . . and thus it came to pass that Berowald of Flanders obtained the lands of Innes all from Spey to Lossie, except the priory lands of Urquhart.' This clearance would seem to have affected the low district along the shore of the Moray Firth more than the other districts, and the latter were from 1174 to 1187 in a chronic state of dis-

affection and rebellion, part of the Celtic population and the Norse settlers claiming that the family of Macbeth should be restored to their former position, and that a northern chief, Donald Ban or MacWilliam, descended from Malcolm Ceannmor and the Norwegian princess Ingibiorg, was of the nearer line of the royal family, and therefore the rightful sovereign; while those who cared but little for this were alienated through anger at the disgraceful bargain of William the Lyon with the English. Though the first active outbreak seems to have taken place in 1181, it was not till 1187 that the King found time to attend to the North, but in that year he entered Moray at the head of a large army, and, fixing his headquarters at Inverness, detached a body of troops to lay waste the western parts of the province. In the decisive battle, which took place in the upper valley of the Spey, at a place called Mamgarvia, probably in Laggan, MacWilliam was slain. From the number of charters granted by William at different times and different places in Moray, he seems to have been often in the north, and, as he followed up his success by reducing Ross to subjection, and bringing Sutherland and Caithness directly under the power of the crown, he kept the North quiet for the rest of his reign. Hardly, however, had Alexander II. succeeded, when, in 1215, Donald Ban, son of the Donald who was killed at Mamgarvia in 1187, having obtained assistance from Ireland, rebelled and burst into Moray at the head of a large army. He was, however, attacked and defeated by Ferquhard Macintagart, the lay possessor of the extensive lands of the old monastery at Applecross, and the pretensions of both the MacWilliams and the Macbeths were finally extinguished by Alexander in 1222, from which time onward the historical events are all connected with national matters. Alexander seems to have had a great liking for the 'Laich of Moray,' and we find him keeping Yule at Elgin in 1231; and again in 1242,

'The Kyng and the Qwene alsua,
And ane honest court wyth tha,
That ilk yhere in Murrawe past.'

He founded and endowed many of the religious houses in the district, and was a great benefactor to several of the burghs. Alexander III. does not seem to have visited the province very often, though he appears to have been here shortly before the battle of Largs. One of the claimants for the crown, after the death of Alexander III., was John Cumyn, who had, on the death of his uncle, Walter, Earl of Menteith, in 1258, become Lord of Badenoch, but otherwise Moray does not seem to have been connected with the contest of succession that then arose, nor with events in the inglorious reign of John Baliol. After that 'Tulchan' monarch was deprived of the crown, Edward I., having set himself to subdue the kingdom, marched north with a large army, and, crossing the Spey on 25 July 1296 near Bellie, entered the province and advanced as far as Elgin, whence detachments of his force were sent to occupy the castles of Forres, Nairn, Inverness, Dingwall, and Cromarty. Finding, however, that the country was quiet, and that all the leading nobles were favourably disposed towards his rule, he extended his march no farther, but returned southwards by ROthes and so through Banffshire and Aberdeenshire. Traditionally, Wallace passed along the sea-coast and crossed thence to Cromarty where he destroyed the castle, but it seems doubtful whether he was ever so far north, though a revolt against the English rule was stirred up by Sir Andrew Moray, the younger of Petty and Bothwell, and seems to have spread over the whole district. This was in May and June in 1297, and we find him associated with Wallace down to the close of the year, after which he disappears from history during the rest of the reign of Edward I. On the second English invasion in 1303 Edward again penetrated to Moray, but this time advanced to Kinloss and thence southward into Badenoch where he spent some time at LOCHINDORB Castle.

After the close of the war of independence we find

Bruce erecting the district once more into an Earldom, in favour of his nephew, Thomas Randolph, and the King himself seems to have been several times in the north, but almost nothing is known of his movements. During the troubles that followed his death Moray remained stanch to his son, and seems to have been partly held by Sir Andrew Moray on his behalf; and later David II. himself came to Inverness in 1369 in order to have an interview with John, Lord of the Isles, some of whose turbulent subjects had been in rebellion. In 1371 King Robert II. granted to Alexander, his fourth son by his first wife, Elizabeth Mure, the whole lands of Badenoch which had belonged to the Comyns, and at a later date in the same year he was appointed King's Lieutenant in the north. Two years later he was made Earl of Buchan, and as he was Earl of Ross in right of his wife, he was for a time the most powerful noble in the country. He scarcely, however, maintained the dignity of his position, for, better known as the Wolf of Badenoch, he thoroughly deserved the title, and some of his exploits will be found noticed in the articles on Elgin, Forres, and Lochindorb.* Hardly recovered from the effects of the Wolf's deeds the lower part of the province again suffered in 1402 from an inroad of Alexander, third son of the first Lord of the Isles, at the head of a large following; and in 1411 his brother Donald, second Lord of the Isles, passed through on his way to the battle of HARLAW. After the progress of James I. through Moray in 1427. (see INVERNESS) Donald, the then Lord of the Isles, assembled a force and advanced with it as far as Lochaber, but there he was met by the royal forces and his army dispersed. He afterwards made submission, but his lieutenant, Donald Balloch, in 1431, again advanced to Lochaber with a large body of followers. This led to another royal visit to the north, but the route is not clear. The time indeed does not seem to have been a pleasant one in the regions, for a writer in the Chartulary of Moray says that 'in these days there was no law in Scotland, but the more powerful oppressed the weaker, and all the realm was one mass of robbery. Murder, plundering, fire-raising went unpunished, and justice was banished from the land.'

One of the Douglasses being Earl of Moray, we find the province concerned in the contests that arose in 1452 with the 'banded earls' (see ELGIN). The earl did not succeed in getting his vassals to join him in any number when he took part in the Douglas rebellion of 1454-55, but after his death James Douglas stirred up Donald, Lord of the Isles, with whom he had taken refuge, to invade the mainland, where 'at last he past to Lochaber, and therefrom to Murray, where he invaded . . . with great cruelty, neither sparing old nor young, without regard to wives, old, feeble, and decrepit women, or young infants in the cradle, which would have moved a heart of stone to commiseration; and burned villages, towns, and corns, so much thereof as might not goodly be carried away, by the great prize of goods that he took.' These disorders caused James II. to come north in 1455 and set the Earldom of Moray, which was now bestowed on his infant son David, in thorough order. He remained here for two years, and part of the country was thrown waste to provide a forest for his hunting. In 1464 James III. was here; and in 1474 or 1475 John, Lord of the Isles, surrendered to the Crown the sheriffdoms of Inverness and Nairn, which were in 1492 granted to the Earl of Huntly, whose influence in the north was supreme from this time till the Reformation. James IV. must frequently have passed through the province on his way to and from the shrine of St Duthac at Tain, which he often visited; and in the Treasurer's accounts for 1504 we find payments recorded to 'the maidens of Forres that dansit to the king,' and others 'that dansit' to him at Elgin and Darnaway. During the time of James V. and the minority of Queen Mary, the whole of the north and north-west was in a very disturbed state, and the portions of Moray about Badenoch and Lochaber

and to the NW of the Great Glen were in an almost continual state of warfare; and in 1556 the Queen Regent, Mary of Guise, advanced to Inverness to try to settle matters, but her attention on her return to the south being almost immediately drawn off by the beginnings of the Reformation, matters were but little improved, the cause being in part the disturbances created by the Lord of the Isles, in part the quarrels among the clans themselves, and in part the bad government of Huntly.

No sooner, however, had Queen Mary assumed the government, than, acting probably under the advice of the great Earl of Murray, she determined to adopt severe measures, and, setting out in 1562, reached Elgin on 6 Sept. Her doings at INVERNESS, where she was from the 11th to the 15th of the same month, are noticed in that article; and Huntly's power was broken almost immediately afterwards at the battle of Corrichie in Aberdeenshire. Fresh feuds again broke out in consequence of the murder of 'the bonny Earl of Moray' by the Earl of Huntly at Donibristle in 1592, and these were prolonged and intensified by the proceedings in 1594 against the Earls of Huntly, Angus, and Errol, who were charged with plotting with Philip of Spain for the restoration of the Catholic religion in Scotland. It was on this occasion that mass was said for the last time in Elgin Cathedral, though groups of worshippers of the old faith are said to have by stealth frequented corners of it down to the reign of Queen Anne.

In 1603-4 the district seems to have suffered severely from plague, for the magistrates of Elgin sent to Edinburgh for Thomas Ahannay and two servants 'for clenging of the infected parts, together with the bodies of the persons infected,' and the sheriffs of Elgin, Nairn, and Inverness were authorised by the Lords of Council to assess for the expenses, amounting to 600 merks. The province suffered considerably during the civil wars in the time of the Stewart kings, partly in consequence of the people generally declaring for the cause of the Solemn League and Covenant, and partly from the district becoming the scene of one of the campaigns of Montrose and his ally, Lord Lewis Gordon, who indeed obtained the unenviable notoriety of being classed by a rhymist of the period with two of the worst plagues of an agricultural country:—

* The gule, the Gordon, and the hoodie-craw
Are the three warst evils Moray ever saw.'

Probably, however, the author had more than Lord Lewis in his mind when he thus irreverently spoke of the descendants of the 'Cock of the North.' In Sept. 1644 Montrose came northward by Aberdeen, and 'begins to marche towards Spey side, bot could not win over the water, the boitis being drawin on the uther side, and Moray convent in armes;' and so he turned back, only, however, to return again after his victory at Inverlochy. In the following year he marched rapidly on the low country, and 'merchit bak throw Lochquhaber with displayit baner towards Innerniss with incredibill diligens; and fynding the toune stronglie fortifeit and garrisonis lying about or rather within the toune, . . . thairfor merchit peacebly by Innerniss down throw the coutrie of Moray;' and of such of the proprietors as would not join him he 'plunderit, spolzeit, and brynt' the houses and lands, and 'sent out paitreis throw the coutrie with fyre and plundering.' The Committee of Estates sitting at Elgin broke up, and many of the townspeople fled, with 'thair wyves, barnes, and best goodis,' to SPYNE and other strongholds. The Marquis reached Elgin on 19 Feb., and was joined by Lord Lewis Gordon shortly after. He received 4000 merks to save the town from being burned; 'bot his soldiouris, especiallie the Laird of Grantis soldiouris, plunderit the toun pitfullie, and left nothing tursabill oncareit away, and brak down bedis, burdis, insicht, and plenisning.' Thereafter he marched southward, but returned again in May, following up Hurry and his Covenanters, who preceded him by two days, and whom he shortly afterwards defeated at the battle of AULDEARN. This victory was

* The inscription on his tomb in Dunkeld Cathedral was made to record that he was a man 'bonæ memoriæ!'

but the prelude to fresh plundering and spoiling, during which Elgin was partially burned, and then the Royalist army passed on its way southward to the final disaster at PHILIPHAUGH. Much, however, as the district thus suffered, the adherence of the men of Moray to Presbyterianism was political rather than religious, and they consequently never showed that zeal for the cause which marked the people of the southern and western counties of Scotland. The other historical events connected with the province, such as the landing of Charles II. at Gar-mouth and the battle of CROMDALE, are noticed in detail in conjunction with the different places with which they are more particularly connected, and need not now be further alluded to. In 1746 the Highland army on their northward retreat broke up into three divisions, one of which followed the Highland road by the upper waters of the Spey, and by Duthil on to Inverness; a second marched by the braes of Angus and Strathdon to Elgin, where they were joined by a third body, which had retired along the great coast road; and the whole army was reunited at Inverness. The Duke of Cumberland entered the province on 12 April, and on the 16th was fought the Battle of CULLODEN, the last in which opposing armies met in array on British soil. After their defeat the Highlanders retired south-eastward by Moy and Badenoch to the place of their final dispersion at Clova. The clan distribution to the SW of the Highland line was: the Grants, Shaws, and Macphersons along Strathspey; the Mackintoshes along the upper portions of the valleys of the Findhorn and Nairn; the Frasers to the SE and N of Loch Ness, and also in Strath Affric and Glen Cannich; the Chisholms in Strath Farrer and Strath Glass; the Grants to the NW of Loch Ness; and to the S of them the Glengarry Macdonalds.

The division into the present shires seems to have taken place in the second half of the 13th century, but for long after that their boundaries were somewhat variable. From the time of Queen Mary no Scottish or British sovereign visited the province till 1872, when Queen Victoria passed through on her way to Dunrobin Castle on a visit to the Duke of Sutherland, and she again traversed the 'laich' on her way to Loch Maree in 1877.

The *Earldom* of Moray was long one of the most important in Scotland. The first Earl, Angus, was, as we have seen, in direct descent from the old Celtic Mormaers; but after his death in 1130 no Earl was allowed to exist for nearly two centuries, the management of the province being kept in the hands of the Crown, or committed for brief periods to different Scottish nobles, as when, during the early part of the 13th century, we find Malcolm, Earl of Fife, thus acting at one time, and William Cumyn at another, each being simply styled *Custos Moravie*. This state of matters came to an end about 1313 or 1314, when Robert Bruce granted the whole of the province to his nephew and trusted friend Sir Thomas Randolph. The charter, which bears no date, but which must have been granted shortly before the convention at Ayr in 1315, defines the estate as including the lands of Fochabers and Boharm beyond the Spey, thence extending up that river to Badenoch, including Kincardine, Glencairn, Badenoch, Maymeze, Locharkedh, Glengarry, and Glenelg, passing along the NW border of Argyllshire to the western sea, bounded on the N by the Earldom of Ross to the river Farrar, and thence down that stream and the Beauly to the Moray Firth. The estate and the title of the Earldom were, according to the original principle of peerages, inseparable, the title becoming extinct upon the alienation of the estate. Randolph died in 1332, and was succeeded by his eldest son, Thomas also, who was killed at DUFFLIN in 1332, 28 days after his accession. The second son, John, who then succeeded, was taken prisoner by the English at the battle of Kilblain in 1335, but was exchanged for the Earl of Salisbury in 1341. Becoming Warden of the West Marches, he accompanied David II. on his expedition into England, and was killed at the battle of Durham in 1346. There being no male heir the

Earldom then reverted to the Crown, but Patrick Dunbar, who was married to the daughter of the first Earl—Black Agnes, whose name is well known in connection with her defence of Dunbar Castle—was generally styled Earl of Mar and Moray. His second son, John Dunbar, who was married to Marjory, daughter of Robert II., was made Earl of Moray in 1372; but his domains were lessened by the large districts of Badenoch, Lochaber, and Urquhart, which were constituted into a lordship for the King's son, Alexander, better known as the Wolf of Badenoch. The succeeding Earls were Thomas, the son of John, his son also called Thomas, and James, the cousin of the third Earl, with whom the male line became again extinct,* and the succession passed to Archibald Douglas, the husband of the younger of the two daughters left by Thomas Dunbar. Supported by the influence of his brother, the Earl of Douglas, he obtained the Earldom in 1446; but having joined the family rebellion of 1452, and being killed in 1455, the title and possessions again passed to the Crown, with whom they remained till 1501, when the honour was granted to James Stewart, an illegitimate son of James IV., who died in 1544 without issue. From 1548 to 1554 the Earldom was granted to the Earl of Huntly, but was again, from 1554 to 1562, in the possession of the Crown. In the latter year it was bestowed on James Stewart, afterwards the well-known Regent, and in his line it still remains. In 1563 he obtained a second charter limiting the succession to heirs male, in 1566 a fresh one opening the succession to heirs general, and in 1567 a ratification by the Estates of the deed of 1563. At his death he left two daughters, and James Stewart, Baron Doune, who married the eldest, Lady Elizabeth, assumed the title of Earl of Moray. This Earl figures in history as the Bonnie Earl of Moray, and is the hero of the ballad of that name.

'He was a braw gallant,
And he played at the glove
And the bonnie Earl of Moray
He was the Queene's luve.'

He was in 1592 murdered at Donibristle by the Earl of Huntly, who was nominally acting on a commission to pursue the Earl of Bothwell and his associates, of whom Moray was alleged to be one, but is supposed in reality to have been instigated to the deed by King James VI. 'It was,' says Sir James Balfour, 'given out and publicly talked that the Earle of Huntly was only the instrument of perpetrating this facte to satisfie the Kinges jelsie of Murray, quhom the Queine, more rashlie than wyslie, some few dayes before had commedit in the Kinges heirriege, with too many epithetts of a proper aud gallant man.' His son and successor was by the King's special efforts reconciled to Huntly, and married his daughter, Lady Anne Gordon. He obtained in 1611 a fresh charter of the Earldom with entail to male heirs only. His grandson, Alexander, fifth Earl, was Secretary of State and Lord High Commissioner between 1680 and 1686. Francis, the ninth Earl (1737-1810), was noted as an agriculturist, and is said to have planted on his estates upwards of thirteen millions of trees. The present Earl, Edmund (b. 1840), succeeded in 1895. The other titles are Baron Doune (1581) and Baron St Colme (1611), both in the peerage of Scotland, and Baron Stewart of Castle Stewart (1796) in the peerage of Great Britain. The family seats are DARNAWAY Castle in Elginshire, DONIBRISTLE Castle in Fifeshire, Castle Stewart in Inverness-shire, and Doune Lodge in Perthshire.

Of the early religious state of the province almost nothing is known. St Columba's visit to INVERNESS is noticed in that article, and other traces of the Culdee church and its influence remain in the gifts already mentioned made by some of the early Mormaers to the clerics of Deer as well as in the associations of the names

* The fourth Earl had a son, Sir Alexander Dunbar of Westfield, by his first marriage with his cousin Isabella Innes of Innes, but as she was within the forbidden degree, and died before a Papal dispensation could be procured, this son was deemed illegitimate, and very wrongly barred from the succession.

of St Gernadius, St Moran, and St Bride, and other early clerics, with different localities. There are also accounts of old churches not connected with any saint's name at Birnie, Elgin, and Kintrae, near the latter of which is also Inchagarty or 'the priest's island.' The ancient *Diocese*, of later date, has been already noticed in the article ELGIN. With it the modern *Synod* of Moray is nearly co-extensive. The latter body meets at Elgin and Forres alternately, on the fourth Tuesday of April. It includes the presbyteries of Strathbogie, Abernethie, Aberlour, Elgin, Forres, Inverness, and Nairn, and contains 53 *quoad civilia* parishes, 11 *quoad sacra* parishes, 8 chapels of ease, and 2 mission churches. There is also a synod of Moray in connection with the Free Church, including the same presbyteries as in the Established Church. It contains 58 churches. The Episcopal Church has a united diocese of Moray, Ross, and Caithness, with the cathedral and bishop's residence at Inverness, and churches at Aberchirder, Aberlour, Arpafellie, Dingwall, Elgin, Fochabers, Forres, Fortrose, Glen Urquhart, Highfield, Huntly, Inverness, Keith, Milto-Brodie, Nairn, Strathnairn, Tain, Thurso, and Wick.

See also the works cited under ELGIN and INVERNESS; Cordiner's *Antiquities and Scenery of the North of Scotland* (1780 and 1878); Sir Thomas Dick Lauder's *Account of the Great Floods in the Province of Moray in 1829* (Edinb. 1830, 3d and 4th ed.; Elgin, 1873); Gregory's *History of the Western Highlands and Isles of Scotland* (1st ed., Edinb. 1836; 2d, Glasgow, 1881); Skene's *Chronicles of the Picts and Scots* (Edinb. 1867), and his *Celtic Scotland* (Edinb. 1876-80); *A Genealogical Deduction of the Family of Rose of Kilravock* (edited by Cosmo Innes for Spalding Club, 1848); Spalding's *Memorials of the Troubles in Scotland* (Spalding Club, 1850); *The Book of the Thanes of Cawdor* (Spalding Club, 1859); *Anc Account of the Familie of Innes* (Spalding Club, 1864); and Sir William Fraser's *The Chiefs of Grant* (1884).

Moraylaws, a village near Auldearn, in Nairnshire.

Moray's Cairn, a quadram large stone tumulus, supposed to have been commemorative of a battle, in Alves parish, Elginshire.

Morayshire. See ELGINSHIRE.

Mordington, a hamlet and a coast parish of SE Berwickshire. The hamlet lies 4 miles WNW of the post-town, Berwick-on-Tweed. The parish, containing also the fishing hamlet of Ross, since 1650 has comprehended the ancient parishes of Mordington and LAMBERTON. It is bounded NW by Ayton, NE by the German Ocean, SE by the Liberties of Berwick, SW by Hutton, and W by Foulden. Its utmost length, from NNE to SSW, is $5\frac{1}{2}$ miles; its breadth varies between $1\frac{1}{4}$ furlong (at the glebe) and $2\frac{3}{4}$ miles; and its area is $3069\frac{3}{4}$ acres, of which $114\frac{1}{4}$ are foreshore and 16 water. WHITADDER Water winds $2\frac{1}{2}$ miles south-south-eastward along all the Hutton boundary, though the point where it first touches and that where it quits the parish are only $1\frac{1}{2}$ mile distant. Its serpentine folds and steep rocky wooded banks are singularly picturesque. One burn rises and runs 3 furlongs in the interior, and then goes 2 miles south-south-westward to the Whitadder along the Foulden boundary; and another, running $\frac{3}{4}$ mile north-eastward to the sea along the north-western border, in the last part of its course makes a series of waterfalls down the gully cut by it in the precipitous cliff. The coast, $2\frac{3}{4}$ miles in extent, and trending in a south-south-easterly direction, rises steeply from the sea to a height of 200 feet, and is all a bold breastwork of rugged sandstone, pierced with many caverns, where smugglers once hid their stores. Here and there huge masses of detached rock stand out into the sea; and only in the extreme N is there a small recess, Ross Bay, with the conjoint fishing village of Ross and BURNMOUTH, the latter in Ayton parish. The North British railway skirts the brink of the cliffs; and beyond it the surface rises westward to 614 feet at Lambertton Moor, 712 at Hab or Habchester near the meeting-point with Foulden and Ayton, and 649 at the Witches' Knowe—heights that command a magnificent

view of the Eildons, the Lammermuirs, the ocean, and Bambrough Castle. Sandstone and poorish limestone are plentiful; coal has been worked; and ironstone occurs in small veins. The soil for some distance from the Whitadder is a stiff clay, yielding good crops of wheat and beans, and thence to the coast is mostly a light loam, well suited for turnips, and for sheep-grazing; but that of the loftiest parts of the high grounds is mostly thin and poor, and partly heathy. The barony of Mordington, which at one time belonged to a family of its own name, was granted by Robert Bruce to Thomas Randolph, Earl of Moray; and, passing at the third Earl's death to his sister, Black Agnes, Countess of Dunbar, was given as a dowry to her daughter Agnes, who married Sir James Douglas of Dalkeith. It continued to be held by his descendants, the Earls of Morton, till 1581, when it reverted to the Crown; but in 1634 the lands and barony of Over Mordington were conferred on another James Douglas, the second son of the tenth Earl of Angus; and in 1641 he was created Baron Mordington in the Scottish peerage—a title which became dormant in 1791. Mordington House, on a rising ground to the NE of Mordington hamlet, was Cromwell's headquarters when he first passed the Tweed in July 1650; and now is the seat of Charles Robert Campbell Renton of Lambertou (b. 1867; suc. 1891). EDRINGTON CASTLE and Edrington House have been noticed separately. A sequestered glen, the scene, it is said, of the famous song of *Tibbie Fowler o' the Glen*, lies in the southern district, not far from Edrington House. At the boundary of the parish with the Liberties of Berwick stands the hamlet of Lambertou, which for some time vied with Gretna as a place of runaway marriages. On Habchester are vestiges of a so-called Danish camp, consisting of two trenches whose mounds, 18 or 20 feet high, appear to have been faced with stones brought toilsomely from the bed of the Whitadder; and on the abrupt Witches' Knowe a woman is said to have been burned for sorcery so late as the beginning of the 18th century. Mordington is in the presbytery of Chirnside and the synod of Merse and Teviotdale; the living is worth £200. The parish church, at Mordington hamlet, was built in 1869, and contains 173 sittings. A Free church, a little S of the parish church, contains 172 sittings; and the public school, with accommodation for 57 children, has an average attendance of about 50, and a grant of over £54. Pop. (1801) 330, (1831) 301, (1861) 377, (1871) 402, (1881) 367, (1891) 324.—*Ord. Sur.*, shs. 34, 26, 1864.

More or **Rumore**, a promontory on the west coast of Ross and Cromarty, lying between Loch Greinord and Loch Ewe.

Morebattle, a Border village and parish of E Roxburghshire. The village stands, 320 feet above sea-level, on a gentle eminence, not far from the left bank of the winding Kale, $4\frac{1}{2}$ miles SW of Yetholm and $7\frac{1}{2}$ SSE of Kelso, under which it has a post office with money order, savings bank, and telegraph departments. A coach runs between Morebattle and Kelso once daily.

The parish, comprising the ancient parish of Mow, is bounded NW by Linton, NE by Yetholm, E and SE for 10 miles by Northumberland, SW by Hounam, and W by Eckford. Its utmost length, from NNW to SSE, is $9\frac{5}{8}$ miles; its utmost breadth is 7 miles; and its area is $35\frac{1}{2}$ square miles or 22,518 acres, of which $189\frac{1}{2}$ are water. KALE Water flows $4\frac{1}{2}$ miles northward and westward, partly along the Hounam and Linton boundaries, partly across the western interior; and BOWMONT Water, formed at Cocklawfoot (780 feet) by head-streams that rise among the Cheviots on the English Border at altitudes of from 1700 to 2350 feet, runs $7\frac{1}{2}$ miles north-westward and northward till it passes off near Hayhope into Yetholm parish. Yetholm or Primside Loch ($3\frac{1}{2} \times 1\frac{1}{2}$ furl.) lies just on the Yetholm boundary. Along Bowmont Water the surface declines to 385, along Kale Water to 220, feet above the sea; and chief elevations, from N to S, are *Linton Hill (926 feet), Clifton Hill (905), *Windshaw Hill (1067), Morebattle Hill (719), the CURR (1849), the

*Schel (1979), *Auchopecairn (2422), and *Windygate Hill (2084), where asterisks mark those summits that culminate on the confines of the parish. Indeed, excepting two small tracts in the extreme NW and N, all Morebattle consists of hills and narrow valleys, and runs up along the whole boundary with England to the highest summits of the CHEVIOTS. Its heights command, in many instances, very grand and map-like views of Teviotdale, Merse, and Northumberland, fringed on the E by the German Ocean; and generally have a graceful outline and a deep verdure, unlike the usual stern features of a mountainous district. Only a fair proportion of wood is wanted to complete that blending of grandeur into beauty which is due to the district's natural form and clothing. The predominant rocks are eruptive; and the soil of the arable lands is mostly light, well suited to the turnip husbandry. The higher grounds are chiefly disposed in pasture. Corbet Tower, near the Kale's left bank, 1 mile SSE of the village of Morebattle, was burned by the English in 1522 and 1545. Rebuilt in 1575, it gradually fell into decay, till early in the 19th century it was renovated by Sir Charles Ker of Gateshaw, though never inhabited. Whitton Tower, $1\frac{1}{2}$ mile SSW of the village, was sacked by the Earl of Surrey in 1523, and burned by Hertford in 1545, and is now in a ruinous condition. Other towers and peel-houses of the parish which figure in Border records have disappeared, but on many of the heights are encampments. The church of Merebole or Morebattle ('village on the mere or lake') belonged to Glasgow cathedral as early as the 12th century, but was the subject of pertinacious controversy regarding the right to its temporalities; and eventually, in 1228, was declared to be a prebend of Glasgow, whose archdeacon should receive thirty marks a year for a mansion, but should claim nothing of the rectory. There were two pre-Reformation chapels in the parish—the one at Clifton on Bowmout Water, and the other at Whitton, now called Nether-Whitton. Mow or Moll included the highest grounds or southern and south-eastern parts of the united parish. Its village stood on Bowmout Water near Mowhaugh, $5\frac{1}{2}$ miles S of Yetholm; and its church stood a little lower down the river. The church belonged to the monks of Kelso. Those of Melrose also held lands in the parish; and their refusal to pay the tithes gave rise to a dispute, which was finally settled in 1309. The principal residences are Lochside, Otterburn, and Gateshaw. Morebattle is in the presbytery of Kelso and the synod of Merse and Teviotdale; the living is worth £309. The parish church, at the village, was built in 1757. In the village are also a Free and a U.P. church, the latter representing the oldest Secession congregation in the South of Scotland. Their first minister, Mr Hunter, was ordained in 1739, and was the earliest Secession licentiate; but he died a few months after his ordination. The original meeting-house stood at Gateshaw Brae or Corbet, and the present one was built in 1866. A great religious meeting, conducted by a body of Secession ministers from a distance, was held in 1839 on Gateshaw Brae to celebrate the centenary of Mr Hunter's ordination. Two public schools, Morebattle and Mowhaugh, with respective accommodation for 181 and 40 children, have an average attendance of about 100 and 15, and grants amounting to nearly £100 and £30. Pop. (1801) 785, (1831) 1055, (1861) 1031, (1871) 986, (1881) 1003, (1891) 846.—*Ord. Sur.*, sh. 18, 1863.

Moredun, a mansion in Liberton parish, Edinburghshire, $3\frac{1}{2}$ miles SSE of Edinburgh.—*Ord. Sur.*, sh. 32, 1857.

Moredun Hill. See MONCREIFFE.

Morgay. See MORGAY.

Morham, a parish of central Haddingtonshire, whose church stands 4 miles ESE of Haddington. Bounded W and NW by Haddington, NE by Prestonkirk, and SE by Whittingham and Garvald, the parish has an utmost length from ENE to WSW of $3\frac{3}{4}$ miles, an utmost breadth of $1\frac{1}{2}$ mile, and an area of 2087 $\frac{1}{2}$ acres. The surface, drained to the Tyne by Bearford Burn, is part of a gently

undulating plain, with northward declension, which sinks little below 200, and little exceeds 400, feet above sea-level. A pretty little glen forms the minister's pasture glebe; but elsewhere the scenery is tame and bare. Trap rock abounds, and sandstone has been quarried; whilst coal of inferior quality was formerly worked, and the parish is now wholly agricultural. The soil in general inclines to clay. Morham Castle, which stood near the parish church, has wholly disappeared, as has also the village, which in the time of Queen Mary was comparatively large. The Earl of Wemyss is the principal proprietor. Morham is in the presbytery of Haddington and the synod of Lothian and Tweeddale; the living is worth £194. The parish church, a plain stone building, was built in 1724. The public school and school-house were erected in 1875 at a cost of £1300; the school, with accommodation for 60 children, has an average attendance of about 35, and a grant of over £40. Valuation (1884) £2837, 5s., (1893) £2535, 5s. Pop. (1801) 254, (1831) 262, (1861) 281, (1871) 204, (1881) 209, (1891) 199.—*Ord. Sur.*, sh. 33, 1863.

Morie, Loch. See MARY'S LOCH.

Morir. See MORAR.

Morishill, an estate, with a mansion, in Beith parish, Ayrshire, close to Beith station. Its owner is John Shadden-Dobie, Esq. (b. 1819; suc. 1883).—*Ord. Sur.*, sh. 22, 1865.

Morison's Haven, a harbour in Prestonpans parish, Haddingtonshire, adjacent to the boundary with Edinburghshire, about a mile WSW of Prestonpans town. Formed in 1526 by the monks of Newbattle for exporting coal from their lands of Prestongrange, it was called originally Newhaven, afterwards Acheson's Haven, eventually Morison's Haven; and it serves now as the port for Prestonpans, and for extensive neighbouring works and collieries of the Prestongrange Coal and Firebrick Company. It received the name Acheson's Haven from Alex. Acheson, an ancestor of the late Earl of Gosford (governor-general of Canada) and an Edinburgh merchant, under whose superintendence it was formed. About 1873 a village for the neighbouring work-people and a large brick and tile work were erected. The tidal harbour afforded a very limited reach for the loading of vessels, and in 1875-77 it was improved and extended, but its usefulness is marred by silt.—*Ord. Sur.*, sh. 32, 1857.

Moriston, a beautiful river of NW Invernessshire, issuing from Loch CLUNIE (606 feet above sea-level), and flowing 19 $\frac{1}{2}$ miles east-north-eastward, till, after a total descent of 556 feet, it falls into Loch Ness at INVERMORISTON, 7 miles NNE of Fort Augustus. It receives, within 3 $\frac{3}{4}$ miles of its exit from Loch Clunie, the tribute of the Loyne and the Doe; riots wildly along picturesque GLEN MORISTON, now from side to side, now on reaches of deep, rocky, ledgy channel, here in gorge or narrow ravine, there in tiny lacustrine expansions studded with romantic rocks or wooded islets; is so impetuous as to have repeatedly swept away bridges from its path; and makes, in its last reach, a foaming cataract, margined with wood, and overhung by green or wooded hills. Its waters contain abundance of trout, and have been made accessible to salmon.—*Ord. Sur.*, shs. 72, 73, 1880-73.

Morlich, Loch, a lake in Rothiemurchus parish, Invernessshire. It is 1 mile long by about half a mile broad, and its altitude is 1046 feet.

Mormond, a station in Strichen parish, NE Aberdeen-shire, on the Formartine and Buchan branch of the Great North of Scotland railway, $2\frac{1}{2}$ miles ENE of Strichen and $7\frac{3}{4}$ S by W of Fraserburgh. Mormond House, in Rathen parish, on Cortes estate, 5 miles S of Fraserburgh, and 9 furlongs WNW of Lonmay station, was erected early in the 19th century by John Gordon, Esq. of Cairnbulg, and is a commodious mansion, with an elegant portico, an artificial lake ($2\frac{1}{2} \times \frac{3}{4}$ furl.), and finely wooded grounds. Its owner is William Fraser Cordiner, Esq. Mormond Hill, on the mutual boundary of the three parishes of Strichen, Rathen, and Lonmay, $6\frac{1}{2}$ miles SSW of Fraserburgh, rises in two summits—

the higher to the W—of 769 and 749 feet above sea-level, and serves as a landmark to mariners. On its south-western brow, overlooking Strichen village, is the figure of a horse which, occupying a space of nearly half an acre, consists of pieces of white quartz rock, fitted into cuttings in the turf, and was formed about the beginning of the 19th century by the tenantry of the Strichen estate, to commemorate the war-horse of Lord Lovat. The figure of a stag on the seaboard face of the hill, directly over Whiteside farm, occupies a space of nearly an acre; measures 240 feet from the tip of the antlers to the hoof; consists of similar materials to those of the 'White Horse;' appears in bold relief from the contrast of its quartzite stones to the circumjacent mossy soil; and was formed in 1870 by Mr Cordiner to serve as a conspicuous landmark. A massive cairn of quartzite stones stands in the near vicinity of the stag, and was erected in the latter part of 1870, to commemorate the formation of the stag. A waterspout, which burst on the SW shoulder of the hill, one July morning of 1789, tore vast masses of moss from their native bed, made cavities 18 to 20 feet deep, and poured such a deluge down Ugie Water as swept away bridges, and lodged masses of moss on the river's banks down to its mouth at Peterhead. See STRICHEN.—*Ord. Sur.*, shs. 87, 97, 1876.

Morningside. See EDINBURGH.

Morningside, a mining village in Cambusnethan parish, Lanarkshire, with stations on branch lines of both the Caledonian and North British railways, 3 miles by road E by N of Wishaw, and 7 by railway SSE of Holytown. It has a post and telegraph office, a public school, two collieries, an iron and brass foundry, and an extensive fire-clay and terra-cotta goods manufactory. Pop. (1861) 780, (1871) 428, (1881) 740, (1891) 748.—*Ord. Sur.*, sh. 23, 1865.

Morphie, an estate in St Cyrus parish, Kincardineshire, 4 miles N of Montrose. Its owner is Francis Barclay Grahame, Esq. (b. 1833; suc. 1877).—*Ord. Sur.*, sh. 57, 1868.

Morrison's Haven. See MORISON'S HAVEN.

Morrison. See LESGERWOOD.

Morrison, Inverness-shire. See MORRISON.

Morrison, East and West, two villages in Old Monkland parish, Lanarkshire.

Morroch, a small rocky bay 2 miles SE of Portpatrick.

Morthill. See MURKLE.

Mortlach (anciently Murthlak, Murthelach, and Murthlache; Gael. *Mohr-tulloch*, 'the great hills'), a parish near the centre of Banffshire. It is bounded N by Boharm parish, NE by that of Botriphnie, for fully 3½ miles near and at the extreme E corner by Glass parish in Aberdeenshire, SE by Cabrache parish, S and SW by Inveraven parish, and W by Aberlour parish. The boundary is largely natural, following along the NE a line of rising grounds, at the E corner for 1½ mile the course of the Deveron, along the SE Edinglassie Burn and the rising grounds between the basins of the Fiddich and the Deveron, along the SW the line of heights between Glens Fiddich and Rinnes and Glenlivet, and at the W corner and W side for 4¼ miles the Burn of Favat to nearly its junction with the Corryhabbie Burn. The shape of the parish is very irregular, but the greatest length, from Hillhead of Kininvie on the N to Cook's Cairn on the S, is 11½ miles; the greatest breadth, from the boundary with Aberlour parish between the Convals on the W to the Deveron at Haugh of Glass on the E, is 9½ miles; and the area is 34,283·681 acres, of which 99·661 are water. The height above sea-level varies from 600 to 900 feet along the northern border, and from this it rises along the western border to the Little Conval Hill (1810), Meikle Conval (1867), the Round Hill, on the flank of Ben Rinnes (1754), and the Hill of Auchmore (1672) at the S end of Glen Rinnes; in the centre, between Glen Rinnes and Glen Fiddich, to Jock's Hill (1568), Laird's Seat (1498), Thunderslap Hill (1708), Tor Elick (1420), Hill of Glenroads (1544), and Corryhabbie Hill (E, 2653; W, 2393); in the Wood of Kininvie to Scat Hill (1194), and along the NE

border, to Tips of Clunymore (1296), Carran Hill (1866), Tips of Corsemal (1839); between the Markie and Fiddich to the Hill of Mackalea (1529), and the Scalp (1599); and along the SE border to Meikle Balloch Hill (1529), Cairn Crome (1657), Hill of Clais nan Earb (1717), Scat Hill (1987), and Cook's Cairn, the extreme S (2478). About one-sixth of the whole area is arable land, either alluvial along the valleys of the streams or poor high-lying land along the slopes of the glens. About 700 acres are under wood, and the rest of the parish is either upland pasture or heathy moor. The soil varies from good fertile loam—particularly along the lower Fiddich, 'Fiddichside for fertility' being an old district proverb—to thin clay. The underlying rocks are granite, dark clay slate—both worked to a small extent for building purposes—and limestone of excellent quality, which is extensively worked at Tinninver and elsewhere, and in some places passes into an inferior quality of marble. A rock suitable for whetstones is also found, as well as traces of antimony, lead, alum, and some small garnets. Near Kininvie House is a spring highly charged with lime, and there are chalybeate springs at several places. The drainage of the parish in the E is effected by the Markie and some other small streams that flow into the Deveron; and in the SW by the Favat and Corryhabbie Burns, which, after separate courses of about 3½ miles, unite at Mill of Laggan to form the Dullan which, for over 5 miles, drains the western part of the parish along the centre till it unites with the Fiddich at Dufftown. The S, centre, and N of the parish is drained by the Fiddich—which has here, from its source till it quits the parish on the NE, a course of almost 15 miles—and the streams that flow into it. The glen through which the upper waters of the Dullan flow is known as Glen Rinnes, and that along the upper waters of the Fiddich as Glen Fiddich, the surrounding district forming a deer forest belonging to the Duke of Richmond. It was by the road along Glen Rinnes that the Queen drove when she visited Glen Fiddich Lodge in September 1867. Her Majesty's impressions are thus recorded in *More Leaves from the Journal of a Life in the Highlands* (1884):—'We drove on for an hour and more, having entered *Glen Rinnes* shortly after *Tomnavoulin*, with the hills of *Ben Rinnes* on the left. There were fine large fields of turnips, pretty hills and dales, with wood, and distant high hills, but nothing grand. The day became duller, and the mist hung over the hills; and just as we sat down by the roadside on a heathery bank, where there is a very pretty view of *Glenlivet*, to take our tea, it began to rain, and continued doing so for the remainder of the evening. Lindsay, the head keeper, fetched a kettle with boiling water from a neighbouring farmhouse. About two miles beyond this we came through *Dufftown*—a small place with a long steep street, very like *Grantown*—and then turned abruptly to the right past *Auchindown*, leaving a pretty glen to the left. Three miles more brought us to a lodge and gate, which was the entrance of *Glenfiddich*. Here you go quite into the hills. The glen is very narrow, with the Fiddich flowing below, green hills rising on either side with birch trees growing on them, much like at *Inchroory*, only narrower. We saw deer on the tops of the hills close by. The carriage-road—a very good one—winds along for nearly three miles, when you come suddenly upon the lodge, the position of which reminds me very much of *Corn Davon* (near Balmoral, not far from Loch Bulig), only that the glen is narrower and the hills just round it steeper.'

Both Dullan and Fiddich are good fishing streams, and except where the latter is within the deer forest of Glen Fiddich, they are open to the public. There is some pretty scenery along their banks, particularly on the Dullan about the 'Giant's Chair,' and at the small waterfall called the 'Lincn Apron.'

Many parts of the slopes in these glens are occupied by crofters, to whose comfortable position the following testimony is borne by a writer in the *North British Agriculturist* (1883), speaking of Mortlach, Glenlivet,

Cabrach, and Kirkmichael. After noticing the village groups at Knockandow in Glenlivet and elsewhere, and the benefit they confer on the district by retaining in it tradesmen who might otherwise be lost, and by forming also nurseries for the best of agricultural labourers, though 'the ground would have been worth more to the landlord in its natural state,' he proceeds:—'Where no such thing as village order is observed, and people have planted themselves down on the hillside, the size of the crofts is greater, though still various. Even in this case the rent is only the eighth part of a sovereign—that is to say, if there was no arable land to start with. Some, however, had such facilities for reclamation that from 20 to 30 acres are now under the plough, in a few cases in the parish of Mortlach. Nevertheless, the rent goes on at the same mite year after year. Some of the crofts were made up of outlying portions of arable farms. In other words, the land had been under the plough before. In that case a common rent is £2 for from 7 to 10 acres—sufficient to keep two cows and a stirk, or a cow, a calf, and a pony. This is extremely cheap. The crofters seem content, and so they may. They cannot fail to observe that their brethren on most other properties are not so leniently or generously treated. Within the last few weeks we ascertained that many crofters in the same county, who occupy land on other properties that was arable before they got it, pay nearly three times as much rent as the Duke of Richmond and Gordon's small holders do. In fact, we have not, from one end of Scotland to the other, found so generous treatment dealt out to small holders. . . . That they [the crofters] have for so many years been, and still are, sitting almost "rent free," and are generally happy and prosperous, in our opinion, deserves notice, particularly at a time when almost all that is heard or read publicly of crofters, takes the form of grievances, rack-renting, and alleged ill-treatment. The Duke has a very small revenue indeed from his crofts, but they serve, as already explained, a good purpose, not only for his own estates, which are very extensive, but for the country. . . . His crofters occupy an enviable position among their brethren. In this respect, as in others, the Duke shows a noble example to his brother landlords.' The chief industry in the parish is distilling—there being distilleries at Mortlach, Glen Fiddich, Balvenie, Parkmore, and Convalmore. There are also lime-works at Tiniver, Richmond, and Parkmore, and wool mills at DUFFTOWN. A pass near Auchindoun Castle, called the Glacks of Balloch, is said to be the locality alluded to in the song of *Roy's Wife of Aldivalloch*, and the writer in the *Old Statistical Account* says that 'Tibbie Fowler of the Glen' also lived near Auchindoun, but the allusion to Tintock Tap seems to negative this statement. The mansions are Buchrumb House, a building in the baronial style, erected in 1873-74; and Kininvie House, erected partly in 1725-26 and partly in 1840-42, but with a keep dating from the end of the 15th or the beginning of the 16th century. The Leslies of Kininvie are cadets of the family of Balquhain, and have held the estate since 1521. The Duke of Richmond and Gordon has a shooting-lodge in the S of the parish, in Glen Fiddich. The old castles of Auchindoun and Balvenie are separately noticed; and Keithmore, 2 miles E of Dufftown, was the property of Alexander Duff, one of whose sons became Duff of Braco, and the ancestor of the present Duke of Fife. There is a circular British hill fort on the top of Little Conval Hill; and in Glen Rinnes, not far from Mill of Laggan, are three large stones lying on a spot known as The King's Grave. Below the church of Mortlach (3½ furlongs S of Dufftown), on the bank of the Dullan, is the Stone of Mortlach, a so-called 'runic' stone, with the usual symbols, a drawing of which will be found in the first volume of the Spalding Club *Sculptured Stones of Scotland*. The traditional account of it is, that it was erected to commemorate a victory which Malcolm II. gained over the Northmen or 'Danes' at this spot in 1010. This battle rests pretty much on a brief mention in Fordun and a full and elaborate account in Boece, where we are told

that the Scots being likely to be beaten, Malcolm looked up to the chapel dedicated to St Moloc, which was near at hand, and lifting up his hands, prayed to God for aid, vowing that if it were granted he should erect there a cathedral church and found a bishop's see. His prayer was heard, the rout was stayed, and his army returned to the fight; while Malcolm himself, finding the leader Evetus prancing up and down the field without a helmet, as if the Scots had been finally defeated, slew him with his own hand, and the Danes were driven into Murrayland, totally defeated. That some battle may have taken place is highly probable, as the Norsemen, under Sigurd the Stout, had just before overrun the province of MORAY, and they may, therefore, while attempting to press across the Spey and penetrate Alban, have been met and defeated by the king of the latter region; but all the details given by Boece must be received as merely proofs of that spirit of invention which characterised him, and which has made so much of the early history of Scotland, down even to our own day, a mere tissue of fabricated legends. Fordun merely states that Malcolm, in 1011, thinking over the many benefits he had received from God, determined to promote the power of Christianity, and so founded a new bishopric at 'Murchillach, not far from the place where he had obtained a victory over the Norwegians.' It is, however, certain that, as we must reject the fictitious details of the battle, we must reject as equally untrue both the date and the circumstances of the foundation of the see of Mortlach. In fact, there never was a see of Mortlach. 'It was not,' says Dr Hill Burton, 'the day when kings of Scotland erected bishoprics off-hand. We have here an instance of the provoking practice by which history and documents were tampered with, for the purpose of carrying into remote antiquity the phraseology and practices of later ages of the Church.' The records of the see of Aberdeen, from which, probably, both Fordun and Boece drew, still remain, and remain in a suspicious state. 'The charters,' says Cosmo Innes, 'quoted by him [Boece] are all to be found in the extant registers, and some of the alterations of the record and dates superinduced on the margin agree in so surprising a way with his book that they give the impression of his own hand having made them.' All the first five charters recorded in the *Registrum Episcopatus Aberdonensis* must, we fear, be regarded as forgeries—and indeed, in the first, which has been originally written so as to refer to Malcom III., an attempt at alteration has been subsequently made, so as to try to make it refer to Malcolm II. There is also other evidence that proves that at that time the only bishopric in Scotland was that of Dunkeld. If we admit that Malcolm III. may have granted some lands to Mortlach for ecclesiastical purposes, and that a church scribe in the diocese of Aberdeen afterwards recorded this in a form common at the time when he wrote, we have allowed all that the authentic evidence will permit. The ordinary story of the foundation of the see by Malcolm II., and of its transference to Aberdeen by David I., must be rejected. Mortlach was, however, the site of a religious establishment at a very early date, and if Malcolm did not look up and see 'a chapel dedicated to St Moloc,' he might have done so. The patron saint is sometimes also styled St Wollock, Makuuolokus, or Makuolocus, and is assigned to the beginning of the 8th century; but he must rather be identified with the Irish saint, Moloc or Mo-luag, who was a disciple of St Brendan, and who died, according to the *Chronicon Hyense*, in 592.* He assisted St Boniface in his labours in the north, and may possibly himself have taught at Mortlach and in the neighbourhood, for his name is also associated with a well in the parish of Glass. Whether this was so, and he was the founder of the cell, or whether it was founded and dedicated to him by one of his disciples, cannot be settled; but when

*Although a good deal of confusion exists as to St Moloc and St Wollock, they seem to have been entirely different persons, the feast of the former being on the 25th June and of the latter on 29th January. Both seem to have laboured in the north. St Moloc's fair at Mortlach was held on the flat ground below the church about the sculptured stone already noticed.

the Columban Church began to spread over the north in the 8th century, one of their monastic establishments was fixed here; and in a Bull of Adrian IV. in 1157 we find 'villam et monasterium de Murthillach cum quinque ecclesiis et terris eisdem pertinentibus,' and also the dependent 'monasterium de Cloueth' or Clova, confirmed to Edward, the first Bishop of Aberdeen. Heads of and connected with this monastery were probably the four clerics who figure as the bishops of the supposititious see, viz.: Beyn, Donort, Cormac, and Nectan. Practically nothing is known of them but their names. The present church, which consists of a main portion standing E and W, with an aisle projecting from the centre of the N side, was long implicitly believed to date from the 11th century; and a mark 18 feet from the W end of the main portion was pointed out as showing the point from which, in accordance with Malcolm's vow, it was lengthened three spear-lengths. The eastern portion, measuring 72 feet by 28, and with walls more than 4 feet thick, formed of small round stones, such as may be found in the bed of the Dulnan, set in run line, dates probably from the 12th century, and it has been afterwards really extended for 18 feet to the W in much later masonry. The N aisle was added in 1826. In 1876 the whole building was extensively repaired at a cost of £1400, and 10 feet were added to this northern portion. During the operations, it was found that an old three-light lancet window in the E gable had been partly built up, and this is now restored to its original condition and filled with stained glass. An old effigy of a knight in armour, supposed to represent Alexander Leslie, the first of Kininvie, which used to stand upright, has been replaced in its proper position in an arched recess. An old circular-headed doorway was also discovered, which shows that the floor of the church must originally have been about six feet below its present level. An old 'jouis' which was dug up inside has been fastened to the wall. In a niche in the wall is also an old ecclesiastical hand-bell. Prior to the repairs in 1826 three skulls, traditionally those of Danes slain in the battle, occupied niches in the wall of the church. Both in the church and in the churchyard there are a number of interesting monuments, from 1417 downwards; but many of the inscriptions that existed at the beginning of the 19th century have now become illegible. In 1888 an organ was introduced, and in 1893 a parish hall was erected in Albert Place, Dufftown, at a cost of £1500. The other churches are noticed in the article on the police burgh of DUFFTOWN, in which they stand; and a new Established church was built in the *quoad sacra* parish of Glenrinnnes in 1884. Four public schools—Auchindoun, Kininvie, Mortlach, and the female—and Dufftown Roman Catholic school, with respective accommodation for 73, 41, 538, —, and 138 pupils, have an average attendance of about 30, 40, 370, —, and 35, and grants of over £36, £42, £380, —, and £30.

The parish is in the presbytery of Strathbogie and the synod of Moray, and the living is worth £245. The civil parish contains also part of the *quoad sacra* parish of Glenrinnnes. Prior to the Reformation it was in the deanery of Mar in the diocese of Aberdeen. After the formation of presbyteries and synods it was placed at first in the synod of Moray, but after the union of the synods of Banff and Aberdeen it was placed in the presbytery of Fordyce in the synod of Aberdeen, in which it remained till 1688, when it was again transferred to the presbytery of Strathbogie and the synod of Elgin, an arrangement sanctioned, however, by the General Assembly only in 1706. There are good district roads throughout the parish, and the N end is traversed for 4½ miles by the Keith and Elgin section of the Great North of Scotland railway system, with a station called Dufftown 1 mile N of the police burgh of that name. The principal proprietors are the Duke of Richmond and Gordon and the Duke of Fife. Valuation (1884) £10,736, (1893) £13,159, 13s. 8d., including £1396 for the railway. Pop. (1801) 1876, (1831) 2633, (1861) 3095, (1871) 3059, (1881) 2934, (1891) 3035, of whom 1456 were males and 1579 females, while 281

were in the *quoad sacra* parish of Glenrinnnes.—*Ord. Sur.*, shs. 85, 75, 1876.

Morton, a parish of Upper Nithsdale, NW Dumfrireshire, containing the post-town of THORNHILL, 1 mile SW of Thornhill station on the Glasgow and South-Western railway, this being 14¼ miles NNW of Dumfries and 28¼ SE of Cumnock. Containing also CARRONBRIDGE village, the parish is bounded N by Durisdeer, NE by Crawford in Lanarkshire, E and S by Closeburn, and W by Penpont and Durisdeer. Its utmost length, from NNE to SSW, is 6½ miles; its width varies between 1½ and 2½ miles; and its area is 8126½ acres, of which 90 are water. The NITH curves 2½ miles southward along or close to all the Penpont border, and is joined by CARRON Water, coming in from Durisdeer, and running 3¼ miles south-south-westward along the boundary with that parish, and also—just within Closeburn—by CAMPLE Water, which, rising on Wedder Law, runs 8 miles south-south-westward, mainly along the Closeburn border. Morton Loch (3½ × ½ furl.) is the only sheet of water of any size. The surface declines along the Nith to less than 200 feet above sea-level, and rises thence to 1075 feet at Deer Camp, 1452 at Bellybought Hill, and 2185 at Wedder Law on the Lanarkshire border. Along the Nith, and a short way up the Cample, are beautiful belts of very rich holm or haugh, liable to inundation, but well protected by embankments. Screening the holm-lands, a considerable ridge of rising ground swells up from the margin, somewhat bold near the middle, but gentle in gradient at either extremity. The summit of this ridge is occupied by the town of Thornhill, and commands a picturesque prospect of a considerable extent of the valley and hill-screens of the Nith. North-eastward of the town rise two other hilly banks, parallel and of different height, running across the parish like huge natural galleries. Beyond the more northerly, the surface descends at a gentle gradient, and forms a valley; and then it shoots up in bold pastoral heights, which occupy about one-third of the whole area, form part of the Southern Highlands of Scotland, and climb up to the water-shedding line between the two great basins of the Lowlands. The rocks of the lower grounds are Devonian, those of the uplands are Silurian; and Gateleybridge quarry yields excellent freestone. The soil of the first or most southerly low ridge of the parish is a light but fertile loam on a gravelly bottom; that of the ridges immediately N of Thornhill is heavy and retentive, and lies on a clayey bottom; that of the interior valley is partly alluvial and all excellent; and that of the mountainous district gives frequent way to the naked rock, and is elsewhere so thin and poor as to bear but a mottled sward of heath and coarse grass. A considerable tract, lying principally between Thornhill and the upper valley, is still un reclaimed, but would repay improvement. Nearly three-tenths of the entire area are in cultivation; 1167 acres are under wood; and the rest is either pastoral or waste. Towards the centre of the parish, 2½ miles NNE of Thornhill, on the brink of the glen of a little tributary of Cample Water, stands Morton Castle, one of the least dilapidated ruins of its class in Nithsdale. What remains, although but a fractional part of the original structure, measures 100 by 30 feet. The S front is nearly entire, rises to the height of 40 feet, has at each corner a circular tower 12 feet in diameter, and is from 8 to 10 feet thick in the wall. The glen on the N side, with its water dammed up to form Morton Loch, and deep encroachments on the other sides, must have rendered the place very strong. Of several conflicting accounts which are given of the proprietorship of this castle, perhaps the most plausible is that of the Macfarlane MSS. in the Advocates' Library, as quoted by Grose. According to this, the castle, of unknown origin, was held, in the minority of David Bruce, by Thomas Randolph, Earl of Moray; and, afterwards passing into the possession of that branch of the Douglasses who became Earls of Morton, gave them their title, and was allowed by them, in their solicitude about other strengths, to go to

ruin. Yet the castle has smart competition for the honour thus assigned it, especially with the lands of Mortoune, in the ancient parish of East CALDER, Edinburghshire. (See DALMAHOY.) A little way N of the castle, on the other side of the glen, are remains of Deer Camp, a strong fortification with entrenchments, which seems to have been a Roman fort or castellum; and 800 yards S of the castle, on a rising ground, is the vestige of a small station or camp called Watchman Knowe. In various parts, principally in the vicinity of the castle, there formerly existed, or were found, memorials of the ancient Britons and of the feudal times. Close to Gateleybridge quarry, 2 miles ENE of Thornhill, is the Upper Nitbsdale Combination Poorhouse, built in 1854-55 at a cost of £5218, and having accommodation for 126 inmates. The Duke of Buccleuch is almost sole proprietor. Morton is in the presbytery of Penpont and the synod of Dumfries; the living is worth £395. The places of worship are noticed under THORNHILL. Four schools—Morton public, Morton infants' public, Carronbridge (Duke of Buccleuch's), and Gateleybridge public—with respective accommodation for 202, 159, 141, and 61 children, have an average attendance of about 105, 65, 85, and 55, and grants amounting to nearly £120, £55, £95, and £50. Pop. (1801) 1255, (1831) 2140, (1861) 2253, (1871) 2099, (1881) 2118, (1891) 1855.—*Ord. Sur.*, shs. 9, 15, 1863-64. See Dr. C. T. Ramage's *Drumlanrig Castle and Morton* (Dumf. 1876).

Morton. See HALF MORTON.

Morton Hall, a mansion in Liberton parish, Edinburghshire, $3\frac{3}{4}$ miles S of Edinburgh. Built in 1769 and improved about 1835, it is a fine edifice, with beautifully wooded grounds. The estate, which was bought by his ancestor in 1641, is now the property of Major-Gen. Henry Trotter (b. 1844; suc. 1874).—*Ord. Sur.*, sh. 32, 1857. See CHARTERHALL, and John S. Mack's *Castles and Mansions of the Lothians* (Edinb. 1883).

Morton House, a mansion in Liberton parish, Edinburghshire, $4\frac{1}{2}$ miles S of Edinburgh. Here, on the 10th Aug., died the historian, John Hill Burton, LL.D. (1809-81).

Mortoune. See CALDER, EAST.

Morven, a mountain in Latheron parish, S Caithness, culminating, $7\frac{3}{4}$ miles NNW of the Ord of Caithness, at an altitude of 2313 feet above sea-level. It serves as a landmark throughout most of the Moray Firth, and commands extensive and magnificent views.—*Ord. Sur.*, sh. 109, 1878.

Morven, a round-topped felspathic mountain (2862 feet) on the mutual border of Gleumnick and Logie-Coldstone parishes, SW Aberdeenshire, $5\frac{1}{4}$ miles N of Ballater. The view from it extends over the most of Scotland, there being scarcely a county that is not visible. The Queen ascended it, with the Princess Alice, on 14 Sept. 1859; and 'the view,' she writes, 'from it is more magnificent than can be described; so large and yet so near everything seemed, and such seas of mountains with blue lights, and the colour so wonderfully beautiful.'—*Ord. Sur.*, sh. 75, 1876.

Morven, an indefinite region in the Highlands, figuring, or supposed to figure, in Ossian's poems. The name, which in Gaelic orthography is Mor-Bheinn, signifies simply the 'Great Mountain,' and, as occurring in Ossian, it seems to designate either the Highlands generally or such portions of them as most abound in fastnesses or alpine heights.

Morvern or Morven, a parish of NW Argyllshire, containing a post office of its own name, with money order, savings bank, and telegraph departments. It forms the greater part of a peninsula, extending southward between Lochs Suinart and Linnhe to the Sound of Mull, and connected with the district of Ardgour by an isthmus of 6 miles. With a roughly triangular outline, it is bounded NW by Loch Suinart, N by Loch Suinart, Ardnamurchan, and Kilmallie, SE by Loch Linnhe, and SW by the Sound of Mull, which divides it from the island of Mull. Its utmost length, from E to W, is 20 miles; its utmost breadth is 15 miles; and

its area is $141\frac{3}{4}$ square miles or 90,737 acres. It comprises also the small islands of Oronsay and Carna, in Loch Suinart; and its extent of coast-line, even exclusive of these, is little short of 100 miles. A chain of lakes, partly marine and partly fresh-water, commencing with Loch Teacuis on the NW, and terminating with Loch Aline in the S, nearly isolates most of the district lying along the Sound of Mull from the upper and much the larger district, the Braes of Morvern. Streams and torrents are everywhere numerous; and here and there are fine cascades and other interesting features of water scenery. The general surface, however, is bleak, tame, heathy upland. Its highest summits are Glashven (1516 feet) in the SE, BENEADDAN (1873) in the N, Beinn Mheadoin (2423) in the E, and Fuar Bheinn (2511) on the Ardnamurchan boundary. Several others of its mountains, also, have a considerable altitude; but all are destitute of what writers on landscape call character, and, when seen in connection with the bold ranges of Appin and Mull, look very uninteresting. Yet there are portions of the parish which present very striking features. Much of its seaboard along the Sound of Mull is highly picturesque; and the valley of Unimore, occupied by the chain of lakes from Loch Teacuis to Loch Aline, overhanging on one side by a range of high precipitous rocks, on the other by Beneaddan, is one of the most brilliant pieces of scenery in the Highlands, blending together nearly all styles of landscape from the gently beautiful to the terribly sublime. Professor Wilson pronounced this valley no less than 'an abyss of poetry,' exclaiming also—

'Morvern and morn, and spring and solitude,
In front is not the scene magnificent?
—Beauty nowhere owes to ocean
A lovelier haunt than this! Loch Unimore!
A name in its wild sweetness to our ear
Fittingly denoting a dream-world of peace!'

Less than one-twentieth of the entire area is in tillage; little more than one-thirtieth is under wood; and the rest is either pastoral or waste. Much of the arable land lies along the Sound of Mull, either on rapid declivities, or at a considerable elevation above the sea. The soil in general is a poor, light, open earth, in places intermixed with gravel and small stones. The woods extend chiefly along the side of Loch Suinart, round the shores of Loch Aline, and in the SW district adjacent to the junction of Loch Linnhe with the Sound of Mull. A predominant rock is gneiss, originally covered by a deposit of secondary rocks, consisting of limestone and sandstone, with coal occasionally interspersed—a deposit overwhelmed by trap, which in its turn has been much abraded and worn away. The situation of the coal is, on certain occasions, very remarkable; and occurring as it does on the summits of primary mountains of great elevation, it is quite fitted to startle a geologist nearly as much as a coal surveyor. Sandstone of excellent building quality has been quarried at Loch Aline and Artornish. Lead ore was formerly mined at Lurg in Glendubh, a glen which runs parallel to Loch Suinart; and copper ore was mined at Ternate, on the estate of Artornish. Three interesting old castles are noticed under ARTORNISH, LOCH ALINE, and KILLUNDINE. There are, on the sea-coasts, remains of several small forts, which were probably erected in the times of the Danish invasions. Of several tumuli, one, Carn-na-Caillich, or the 'old wife's cairn,' is a lofty pile of loose stones, 243 feet in circumference. On elevated spots, in various parts of the parish, but especially along the coast of the Sound of Mull, are Druidical circles of various diameters, but in no instance exceeding 24 feet. Dunfhuinn, Fingal's fort or hill, situated on the farm of Fiuarnag, and now part of the glebe, is a curious round rock of considerable height, very steep, yet partly covered on the sides with greensward, and washed at the base by a frolicsome stream which moves between high banks, and leaps along in little cataracts. The area on the top of the hill measures about half a rood,

bears evident marks of having been encircled by a wall, and commands an extensive prospect. A village was formed some years ago at Lochaline, and a new and substantial pier was built near it in 1833; so that now this locality is a seat of trade to the parish; yet Tobermory and Oban, the former about 4 miles distant from the nearest point of the parish, are still convenient resorts for marketing. Norman Macleod, D.D. (1783-1862), was a son of the parish minister; and his son, Norman Macleod, D.D. (1812-72), has given a vivid description of Morvern in his *Recollections of a Highland Parish* (1868). Mansions, noticed separately, are Loch ALINE House, DRIMNIN, and KILLUNDINE. Giving off portions to Aharacle and Strontian *quoad sacra* parishes, Morvern is in the presbytery of Mull and the synod of Argyll; the living is worth £230. The present parish comprises the ancient parishes of Kiltuintaik and Kilocolumkill, united, it is believed, shortly after the Reformation. There are two parish churches, belonging respectively to the two ancient parishes, and both situated on the coast, 9 miles from each other. That of Kiltuintaik, the 'cell of Winifred,' was built in 1780, and contains 300 sittings; while that of Kilocolumkill, the 'church of the cell of Columba,' was built in 1799, and contains 500 sittings. The minister preaches in them alternately, and also preaches occasionally at places in the inland districts of the parish. A new church, opened at Ferinish in 1892, was presented to the people by Mrs Cheape of Killundine. There are also a Free church, and Drimnin Roman Catholic church of St Columba (1838; 80 sittings). Four public schools—Bunavullin, Claggan, Kinloch, and Lochaline—with respective accommodation for 55, 68, 42, and 67 children, have an average attendance of about 30, 10, 15, and 40, and grants amounting to nearly £50, £20, £30, and £60. Pop. (1801) 2033, (1831) 2137, (1861) 1226, (1881) 828, (1891) 820, of whom 644 were Gaelic-speaking, and 749 in the ecclesiastical parish.

Moss, an estate, with a mansion, in Killearn parish, SW Stirlingshire, 1½ mile SSW of Killearn village, and 4½ miles SSW of Balforn. See KILLEARN.

Mossat. See KILDRUMMY.

Mossbank. See GLASGOW, p. 153.

Mossbank, a village in Delting parish, Shetland, 29 miles N by W of Lerwick, under which it has a post office. Here is also a U.P. church.

Mossburnford, a place in Jedburgh parish, Roxburghshire, near the right bank of Jed Water, 4 miles SSE of Jedburgh town. A haronial fortalice here continued to be inhabited till about the middle of the 18th century.

Mossend, a town in Bothwell parish, Lanarkshire, 7 furlongs E by N of Bellshill, 1½ mile W of Holytown, and 4½ miles S by E of Coatbridge. Of recent origin, it has a station on the Caledonian railway, a post office with money order, savings bank, and telegraph departments, extensive iron and steel works, public and Roman Catholic schools, and a fine new Roman Catholic church, erected in 1883-84 from designs by Messrs Pugin. Pop. (1871) 1501, (1881) 2101, (1891) 3157, of whom 1738 were males.—*Ord. Sur.*, sh. 31, 1867.

Mossend, a village in West Calder parish, Edinburghshire, on the left bank of West Calder Burn, 3 furlongs N of West Calder village. Pop. (1871) 940, (1891) 669, (1891) 730.

Mossend, a village in the parish of Borthwick, Edinburghshire, consisting chiefly of miners' houses.

Mossfennan House, a good two-storey mansion in Broughton and Glenholm parish, Peeblesshire, on the left side of the Tweed, 8½ miles SE of Biggar. Purchased by his ancestor in 1753, the estate now is held by the Trustees of the late Rev. William Welsh, D.D.—*Ord. Sur.*, sh. 24, 1864.

Mossgiel, a farm in Mauchline parish, Ayrshire, 1 mile N by W of Mauchline town. Extending to 118 acres, it was rented for £90 a year from 1784 till 1788 by Robert Burns and his brother Gilbert, the latter of whom continued to tenant it till 1800. The 'auld clay biggin' of his *Vision*, it was the place where the poet wrote many of his most famous pieces; and, though

itself destitute of scenic beauty, except for the views that it commands, his fame has clothed it with charm and literary interest.

'Hither romantic pilgrims shall hetake
Themselves from distant lands. When we are still
In centuries of sleep, his fame will wake,
And his great memory with deep feelings fill
These scenes that he has trod, and hallow every hill.'

We may not omit Wordsworth's sonnet on this plain but consecrated spot:—

"There I" said a stripling, pointing with much pride
Towards a low roof with green trees half concealed,
"Is Mossgiel Farm, and that's the very field
Where Burns ploughed up the Daisy." Far and wide
A plain below stretched seaward, while, descried
Above sea-clouds, the Peaks of Arran rose;
And, by that simple notice, the repose
Of earth, sky, sea, and air was vivified.
Beneath "the random hield of clod or stone,"
Myriads of daisies have shone forth in flower
Near the lark's nest, and in their natural hour
Have passed away: less happy than the one
That, by the unwilling ploughshare, died to prove
The tender charm of poetry and love.'

The original farm-steading, a low thatched house, with kitchen, bedroom, and closet, the floors of kneaded clay, the ceilings of moorland turf, was almost entirely rebuilt not long before the close of 1859. While residing here Burns published, in 1786, by the advice of his superior and patron, Mr Hamilton, the first edition of his poems.—*Ord. Sur.*, sh. 14, 1863. See Wm. Jolly's *Robert Burns at Mossgiel* (2d ed. 1881), and an article in the *Century Magazine* (1883).

Mossgreen, a village in the N of Dalgety parish, SW Fife, near the larger village of Crossgates. A public school, built in 1876 at a cost of £1900, is a handsome Gothic edifice, with accommodation for 268 children; and an Established church, built as a chapel of ease at a cost of £600, and raised to *quoad sacra* status in 1879, contains 500 sittings. The *quoad sacra* parish, with an endowment of £100, is in the presbytery of Dunfermline and the synod of Fife, and had a pop. (1831) of 1609, (1891) 1819, of whom 952 were in Dalgety, 843 in Aberdour, and 24 in Inverkeithing.—*Ord. Sur.*, sh. 40, 1867.

Moss House. See Moss.

Mossknowe, a good modern mansion in Kirkpatrick-Fleming parish, SE Dumfriesshire, 5 furlongs SSE of the village. Its owner is William Mair Graham, Esq. (b. 1832; suc. 1882).

Mosspsaul. See EWES.

Moss-Side, a village in Nairn parish, Nairnshire, 3 miles WSW of the town.

Mosstodloch, a village in Speymouth parish, Elginshire, near the left bank of the Spey, 1½ mile NW of Fochabers.

Moss-Tower, a farm in Eckford parish, Roxburghshire, 3 furlongs NE of Eckford village. A peel-house here, situated in a marsh, and accessible only by a causeway, seems to have been one of the strongest fortresses on the Scottish Border. Tradition makes it a residence of one of the Earls of Bothwell; but history knows it only as belonging to the Scots of Buccleuch, whose descendant, the Duke of Buccleuch, still owns the farm. It was thrice destroyed by the English, in 1523, 1544, and 1570. Strongly rebuilt after the first and the second demolitions, but allowed to remain a ruin after the third, at length, in the latter part of the 18th century, it was all taken down as building material for the neighbouring farm-offices.—*Ord. Sur.*, sh. 25, 1865.

Motherwell, a town in Bothwell, Dalziel, and Hamilton parishes, Lanarkshire, on the Caledonian railway, at the junction of the two lines from the N and S sides of Glasgow, and at the intersection of the cross line from Holytown to Lesmahagow, ½ mile from the left bank of South Calder Water, 1½ from the right bank of the Clyde, 2½ miles NE of Hamilton, 2½ SSE of Holytown, 12½ SE by E of Glasgow, 15½ NW of Carstairs Junction, and 43 W by S of Edinburgh. It took its name from a famous well, dedicated in pre-Reformation times to the Virgin Mary; and it

occupies flat ground, 300 feet above sea-level, amid richly cultivated and well-wooded environs. Founded in the early years of the 19th century, Motherwell having previously had no existence, it is said, even as a village, it consists largely of the dwellings of miners and operatives employed in the neighbouring collieries and ironworks, and serves, in connection with the railway junctions, as a great and bustling centre of traffic. It ranks as a police burgh, and under the Burgh Police Act of 1892 is governed by a provost, 4 bailies, and 7 commissioners. In 1837 a handsome town-hall was erected, the cost of the building being about £7000. Motherwell has a post office, with money order, savings bank, insurance, and telegraph departments, for which new and extensive premises were provided in 1894, branches of the Bank of Scotland, the British Linen Co., the National, and the Clydesdale Banks, several hotels, a new hospital (1893-94), a Co-operative Society for which new buildings were erected in 1894, the Conservative Club (a handsome building erected in 1892 and costing £3000), two building societies, the combination poorhouse for Dalziel, Bothwell, Cambusnethan, and Shotts parishes, with accommodation for 120 inmates, and a Saturday paper, the *Motherwell Times*. In 1877 a splendid water supply was brought in from two burns on the estate of Lee at a cost of over £14,000, and in 1894 a large extension cost the burgh over £30,000. In the latter year also an extension of the gasworks took place, and in 1895 steps were taken to have the electric light introduced. In 1887 the Dalzell Jubilee Park was gifted by Lord Hamilton of Dalzell. In Merry Street is the new parish church of Dalziel erected in 1874 at a cost of £5700, and greatly enlarged and improved in 1896-97 at a cost of £5000; whilst the former parish church (1789; enlarged 1860) belongs now to the *quoad sacra* parish of South Dalziel, constituted in 1880. A new Free church in Windmill Street, built in 1892 at a cost of about £1900, has 410 sittings, with an arrangement for adding 500 more when required. It is named the Clason Memorial, in commemoration of the Rev. James Clason, parish minister from 1808, and who erected the Dalziel Free Church shortly after the Disruption in 1843. One of the two U.P. churches was built in 1881 at a cost of £3750, and from its site—the highest in the town—appears a conspicuous steeple. There are also a Primitive Methodist Chapel, an Evangelical Union chapel, a Baptist chapel (1894), an Episcopal church (1894), and the Roman Catholic church of Our Lady of Good Aid (1873; enlarged 1883). In 1896-97 a new Technical School was erected at an estimated cost of fully £15,000, to accommodate about 1600 pupils. No Scottish town has grown so rapidly as Motherwell, such growth being due to the vast extension of its mineral industries. Besides the works of the Glasgow Malleable Iron and Steel Company—the largest in Scotland—there are several other extensive iron and steel works. In or about the town are also boiler works, bolt and rivet works, brick, tile, and fire-clay works, quarries, steam crane works, and spade and shovel works. Complaints having been made concerning the damage to surface buildings, and the consequent hindrance to feuing and building, caused by the mineral workings, Government in 1893 promised their aid by endeavouring to pass remedial legislation. Valuation of the burgh (1895) £78,586. Pop. (1841) 726, (1861) 2925, (1871) 6943, (1881) 12,904, (1891) 18,726, of whom 10,270 were males, and 3585 were in Hamilton parish. Houses (1891) inhabited 3414, vacant 68, building 47.—*Ord. Sur.*, sh. 23, 1865.

Moulin, a village and a parish of NE Perthshire. The village, in the S of the parish, stands 500 feet above sea-level, and 7 furlongs NNE of Pitlochry station on the Highland railway. Although somewhat modernized it still consists in the main of a collection of small cottages, irregularly situated along the line of road, and contains the parish church, a public school, a hotel, and a post office under Pitlochry. The former church, built in 1831, was burned in 1873. Moulin has a horse fair on the first Tuesday in March.

The parish, containing also PITLOCHRY village, KILLIECRANKIE station, and the hamlets of KINNAIRD, AULDCRUNE, and ENOCHDUB, is bounded NW by Blair Athole, NE and SE by Kirkmichael, S by Logierait, and SW by Dull. Its greatest length, from ENE to WSW, is 14½ miles; and its breadth varies between 1½ and 8¼ miles. Prior to 1891 Moulin had two detached portions, situated at Strathgarry and Ballyoukan, and comprising respectively 259 and 176 acres. These the Boundary Commissioners transferred to the parishes of Blair Athole and Logierait, giving in return, from Logierait the estate of Fonab, and from Blair Athole the estate of Reinakyllich. The latter district, however, had been represented on the Ordnance Survey Map as already belonging to Moulin. The outline of the parish is exceedingly irregular. The general surface is a congeries of hills and mountains, intersected by the valleys and ravines of the various streams. The fields round the village form a level portion of arable land, 1½ mile long by ½ broad, known as the Howe of Moulin. This is one of the most fertile spots in Perthshire, and has been called the Garden of Athole. The rest of the arable land is on the slopes and margins of the rivers. The highest point in the parish is the summit of BEN VRACKIE (2757 feet). The other hills, mostly heath-clad, though some are wooded, are not very lofty; those of GLENFEARNACH are beautifully verdant. The river GARRY, coming from the NW, flows 3 miles south-south-eastward, through the Pass of Killiecrankie, and along the western boundary, till it falls, near Faskally House, into the TUMMEL, which itself winds several miles east-south-eastward across the interior of the parish. Both streams abound in river-trout, salmon, sea-trout, and grilse; and the scenery on their banks within the parish is beautiful and grand, culminating in the Pass of KILLIECRANKIE. The Allt Girnaig joins the Garry at the upper end of the Pass, while six or seven burns—the longest 4 miles—join the Garry and Tummel within the parish. A line of summits, running parallel to these two chief streams, about 4½ miles distant, separates the SW or Athole part of the parish from the NE, which belongs to the district of Strathairdie. The ARDLE or Ardle, which is here the main stream, is formed by the confluence of the Allt Fearnach, the Brerachan, and the Allt Doire nan Euni, the separate courses of which also lie in or along the bounds of the parish for some miles. Cascades occur on nearly all the running waters of the parish. Those at Edradour and Urrard are particularly admired, and have been celebrated in song, but the Falls of Tummel excel them both in beauty, size, and fame. Loch Broom (5½ × 2 furl.), a small lake frequented by anglers, lies in the hollow of a hill near the meeting-place of Moulin, Logierait, and Kirkmichael parishes. Mica-slate veined with quartz is the chief rock; limestone occurs in boulders of a fine marble texture, but is little worked; granite, quartz, and fluor-spar are found detached; and rock-crystal is found on Ben Vrackie. The parish is traversed by a good road up the Tummel and Garry, by another up the Ardle and Brerachan, and by a third connecting these. Mansions are Baledmund, Balnakeilly, Dirnanean, FASKALLY, KINDROGAN, STRATHGARRY, and URRARD. The main industry of the parish is agriculture; and what little manufacture or commerce there is centres in the rising village of PITLOCHRY. The parish contains two distilleries, one corn-mill, and two saw-mills. Giving off a portion to the *quoad sacra* parish of Tendamry, Moulin is in the presbytery of Dunkeld and the synod of Perth and Stirling; the living is worth £185. Places of worship, besides the parish church, are noticed under PITLOCHRY, and a chapel of ease is at Straloch. Three public schools—Moulin, Pitlochry, and Straloch—with respective accommodation for 135, 319, and 104 children, have an average attendance of about 85, 255, and 15, and grants amounting to nearly £80, £282, and £30. Valuation (1884) £21,289, 17s. 10d., (1892) £25,180, 9s. 4d. Pop. (1801) 1908, (1831) 2022, (1861) 1831, (1871) 1793, (1881) 2066, (1891) 2381, of whom 883 were Gaelic-speaking.

The principal antiquity is a ruin near Mouliu village, supposed to have been either a religious house or a castle of the Earls of Athole and Badenoch. It is generally referred to the 11th or 12th century, and seems to have measured 80 feet by 76, with a round turret at each corner. The remains, which consist of most of the walls on three sides and chief part of one turret, are surrounded and grown over with trees. The building is known in the district as the Black Castle. Caledonian standing-stones, Druidical circles, Pictish forts, and sites of pre-Reformation burying-grounds are in different parts of the parish. The main events in the history of Moulin parish are the Battle of KILLIECRANKIE in 1689 and a remarkable religious revival in 1800. Among the men connected with this parish was the Rev. Dr Stewart, author of a Gaelic grammar, and during whose ministry of nineteen years occurred the religious revival mentioned. Famous natives of Moulin are the Rev. Alexander Duff, D.D., LL.D. (1808-78), the first missionary of the Church of Scotland to India, and subsequently of the Free Church; Duncan Forbes (d. 1868), Professor of Oriental Literature at King's College, London; Donald M'Intosh (b. 1743), compiler of the Gaelic 'Proverbs'; and Captain Colin Campbell of Finnab, the gallant defender of the unfortunate Scottish colony of Darien (1700).—*Ord. Sur.*, shs. 55, 56, 1869-70.

Mound. See FLEET.

Mount Annan, a mansion, with beautiful grounds, in Annan parish, Dumfriesshire, near the left bank of the river Annan, and 2 miles N of the town. Its owner is Mrs Pasley Dirom.—*Ord. Sur.*, sh. 10, 1864.

Mount Benger, a farm in Yarrow parish, Selkirkshire, on the left side of Yarrow Water, 12 miles WSW of Selkirk. James Hogg (1772-1835), the 'Ettrick shepherd,' in 1821 took a nine years' lease of it, and during its tenure lost upwards of £2000. 'A gay cculd place,' he remarks of it in the *Noctes*, 'staunnin' yonder on a knowe in a funnel, in the thoroughfare of a perpetual sigh.'—*Ord. Sur.*, sh. 16, 1864.

Mount Cameron. See KILBEIDE, EAST.

Mount Charles, a mansion in Ayr parish, Ayrshire, on the right bank of the Doon, 2½ miles S of Ayr town.

Mounteviot. See MONTEVIOT.

Mountflowerly, a hamlet in Scoonie parish, Fife, 1 mile WNW of Leven.

Mountgerald House, a mansion in Kiltarn parish, Ross and Cromarty, near the NW shore of the Cromarty Firth, 2 miles NNE of Dingwall. Its owner is George Dalziel, Esq.—*Ord. Sur.*, sh. 93, 1881.

Mountgreenan. See MONTGREENAN.

Mount Hecla. See UIST, SOUTH.

Mount Hill. See MONIMAIL.

Mount Melville, a mansion in Cameron parish, Fife, 2½ miles SW of St Andrews. See ST ANDREWS.

Mount Misery. See KILMARONOCK.

Mount Oliphant, a farm in Ayr parish, Ayrshire, 4 miles SSE of Ayr town. The home of Robert Burns (1759-96) from his seventh to his nineteenth year, it familiarised him with 'Alloway Kirk,' the 'Banks and Braes o' Bonnie Doon,' and other themes of his poetry. His father leased it 80 or 90 acres for £40 a year from his kind master, Provost Ferguson of Doonholm, who lent him £100 to stock it; but the land was hungry and sterile, the seasons proved rainy and rough, his cattle died, and the family had a hard time of it.—*Ord. Sur.*, sh. 14, 1863.

Mount Pleasant. See GRETNA and NEWBURGH.

Mountquhanie, a good modern mansion in Kilmany parish, Fife, 5 miles NNW of Cupar. Its owner is David Gillespie, Esq.—*Ord. Sur.*, sh. 48, 1863.

Mountstuart, a seat of the Marquis of Bute, in Kingarth parish, Bute island, Buteshire, within ¼ mile of the E coast and 5 miles SSE of Rothesay, from which it is approached by a splendid avenue 1½ mile long. The original mansion, built in 1712-18 by the second Earl of Bute, was a spacious but very plain edifice, consisting of a main block (200 × 50 feet), with wings to the W of both the N and S gables. This main block was destroyed by fire on 3 Dec. 1877, the damage being

estimated at £14,000; but a beautiful Catholic chapel, which had been recently formed in the N wing, was saved, besides the plate, much of the furniture, Rubens' portrait of himself, Kneller's portrait of Lady Mary Wortley Montague, and paintings by Nasmyth, Ramsay, etc. As rebuilt since 1879, from designs by Mr Rowand Anderson, at a cost approaching £200,000, Mountstuart is a magnificent Gothic pile (230 × 150 feet). The great central hall (60 feet square), with the grand staircase on one side, and the inner vestibule on the other, each about 30 feet square, is surrounded on all sides by a Gothic arcade, constructed in various beautiful marbles; and to right and left of it are the dining and drawing rooms (each 53 × 22 feet). The outer walls of the first and second floors are of reddish sandstone, but the upper storey above the main cornice and parapet is brick, with oak frame. Special features of the exterior are the high-pitched roofs and dormers, the angle turrets, the corbelled oriel windows, and a stone balustrade in front of an open gallery. Sir John Steuart, a natural son of Robert II., received from his father about 1385 a grant of lands in the isle of Bute, along with the hereditary office of sheriff of Bute and Arran. His sixth descendant, Sir James Stuart, was created a baronet in 1627; and his grandson, Sir James, in 1703 was raised to the peerage as Earl of Bute, Viscount Kingarth, and Lord Mountstuart, Cumra, and Inchmarnock. John, third Earl (1713-92), played a leading part in the first three years of the reign of George III.; and John, his son (1744-1814), in 1796 was created Marquis of Bute in the peerage of the United Kingdom. His great-grandson, Sir John Patrick Crichton-Stuart, present and third Marquis (b. 1847; suc. 1848), holds extensive acres in Buteshire and Ayrshire. He was admitted into the Roman Catholic Church in 1868. The Mountstuart grounds are extensive, and besides showing a great variety of beauty, attest the marvellous mildness of the climate. An avenue of limes is held in high estimation, while the beech avenue is considered one of the finest in the kingdom. Shrubs of all kinds, including some natives of tropical countries which, it is said, cannot be successfully grown even in the south of England or the Isle of Wight, flourish here with the utmost luxuriance, in some cases assuming even larger proportions than in their indigenous soil and climate. The mildness of the climate is further apparent from the fact that Lord Bute has been able to keep a number of kangeroos at Mountstuart now for several years.—*Ord. Sur.*, sh. 29, 1873. See also DUMFRIES HOUSE.

Mount Teviot. See MONTEVIOT.

Mount Vernon, a residential district in Old Monkland parish, Lanarkshire, 5 miles E of Glasgow, with a station on the Rutherglen and Coatbridge section of the Caledonian railway, and another on the Hamilton branch of the North British railway. Kenmuir Established chapel of ease is in this district.

Mousa, an island in Dunrossness parish, Shetland, 11 miles S by W of Lerwick, and 10 NNE of Sumburgh Head. It measures 1½ mile in length and ¾ mile in extreme breadth. A 'Pictish' round tower on it, called Mousa Burgh, is perhaps the most perfect antiquity of its class in Europe. It is 42 feet high, and measures 50 feet in exterior, 20 feet in interior, diameter; contracts in form somewhat like the bust of a well-formed human body; and consists of double concentric walls, each about 5 feet thick, with a passage or winding staircase between them. Its low narrow doorway conducts to the interior by a low narrow passage 15 feet long, such as to admit only one person at a time, and even him only on all fours. Built of the surrounding shingle, without mortar, it shows no mark of a tool; and its builders certainly were unacquainted with the arch. As to its origin and purpose we are left to conjecture; but tradition records that Erlaud, the son of Harold, having carried off a beautiful Norwegian widow, was for some time besieged by her son in the burgh of Mousa.

Mouse Water, a stream of the Upper Ward of Lanarkshire, rising at an altitude of 1100 feet on the north-eastern verge of the county, 1½ mile NNE of Wilson-

town. Thence it winds $15\frac{1}{2}$ miles south-westward through Carnwath, Carstairs, and Lanark parishes, till, after a total descent of 805 feet, it falls into the Clyde 330 yards below Lanark Bridge. It receives, in its progress, the tribute of DIPPOL WATER; and traverses first a bleak moorish country, next a pleasant cultivated tract, lastly the profound and romantic chasm of CARRLAND Crags. (See CLYDE.) The Caledonian railway crosses it in the vicinity of Cleghorn station; two bridges cross it at Mousemill, and three at respectively Cleghorn, Lockhartford, and Cartland Crags; and one of the two at Mousemill is very ancient. Small detached pieces of jasper have been found in its bed; sandstone was formerly quarried adjacent to it near Mousebank; and old disused mining-shafts are on the banks of its upper reaches.—*Ord. Sur.*, sh. 22, 1865.

Mouswald, a village and a parish of S Dumfriesshire. The village stands $2\frac{3}{8}$ miles ESE of Raeks station, and 7 ESE of Dumfries, and has a post office under Ruthwell. It occupies a site once covered with forest, in the eastern vicinity of Lochar Moss, and thence derives its name, written anciently Mosswald, and signifying 'the forest near the moss.' There is a public school, and in 1887 William F. Carruthers, Esq., of DORMONT, proprietor of the village, introduced and presented to the inhabitants a gravitation supply of water.

The parish is bounded N by Lochmaben, E by Dalton, S by Ruthwell, SW by Caerlaverock, and W by Torthorwald. Its utmost length, from N by W to S by E, is $4\frac{1}{2}$ miles; its breadth increases southward from $1\frac{3}{4}$ to $4\frac{1}{4}$ miles; and its area is $5891\frac{1}{4}$ acres, of which $2\frac{1}{2}$ are water. Lochar Water for $1\frac{1}{2}$ furlong traces all the Caerlaverock boundary; Wath Burn, coming in near its source from the N, traces all the western boundary to Lochar Water, and looks mostly like a mossy grass-grown ditch; and four small burns rise in the interior, and run sluggishly to Wath Burn. Springs of pure water are numerous and copious; and one of them, called St Peter's Well, near the parish church, is a continuous fountain for 100 feet, and, running to the Wath Burn's largest tributary, prevents that rivulet from ever freezing for a considerable way below their confluence. The south-western district, to the extent of nearly 900 acres, is part of LOCHAR MOSS, only 30 to 40 feet above sea-level; the central district is variously flat and undulating; and the northern consists of spurs from the broad-based range of Tinwald and Torthorwald, rising so gradually as to be arable to the summit, attaining an extreme altitude of 816 feet above sea-level, and commanding an extensive and very beautiful view. Greywacke and greywacke slate are the predominant rocks; blue limestone is found on Bucklerhole Farm; and fine white sand underlies Lochar Moss. The soil of the lands adjacent to Lochar Moss is partly reclaimed bog; of the low tracts further E and N is light and sandy; and of the higher grounds is tolerably deep and rich. Mouswald Mains or Place, the ruined fortalice of the Carruthers family, was the largest of five square strongholds, of which Raffles is the most entire. Other antiquities are a strong double-ditched camp on Burrow Hill; a watch-tower on Panteth Hill; Tryal Cairn, 288 feet in circumference, $\frac{1}{4}$ mile NE of the parish church; and a recumbent effigy of Sir Simon Carruthers of Mouswald. ROCKHALL, noticed separately, is the only mansion; and Sir A. D. Grierson, Bart., is chief proprietor. Mouswald is in the presbytery of Lochmaben and the synod of Dumfries; the living is worth £294. The parish church, on a fine eminence adjacent to Mouswald village, was built about 1830, and is a handsome edifice, seen from most parts of the parish. The Free church of Rnthwell stands at the southern boundary, 7 furlongs SSE of Mouswald village; and Mouswald public school, with accommodation for 135 children, has an average attendance of about 60, and a grant of over £55. Pop. (1881) 558, (1891) 500.—*Ord. Sur.*, sh. 10, 1864.

Mow. See MOREBATTLE.

Moy. See DYKE.

Moy and Dalarossie (Gael. *Magh*, 'a plain,' and *Dal-Fhearghais*, 'Fergus' dale'), a parish in the NE of

Inverness-shire, and partly in Nairnshire until 1891, when the Boundary Commissioners restricted it to the former county by transferring its Nairnshire portion to the Nairnshire parish of Cawdor. The parish was thus reduced in area by 5588 acres, of which 50 were water. It is bounded N by the parish of Croy and Dalcross, NE by Nairnshire, E by the parish of Duthil and Rothiemurchus, SE by the parishes of Alvie and Kingussie, S by Laggan, SW by the parish of Boleskine and Abertarf, and W and NW by the parish of Daviot and Dunlichity. On the N the boundary is that of the county; elsewhere it is largely natural, following, along the SE, the line of heights that form the watershed between the basins of the Findhorn and Dulnan, thereafter between the basins of the Findhorn and the Spey, round the head-waters of the Findhorn on the S, and along the NE between the basin of the Findhorn and the streams that flow first to Loch Ness and afterwards to the river Nairn. At the NW corner it crosses this line and takes in part of the hollow down which the Dalriach Burn (river Nairn) flows. The greatest length of the parish, from Carn nan tri-tighearnan on the N, south-south-westward to the source of the Findhorn, is 26 miles; and the average breadth about 7 miles, except at the N end where it is more, and at the S end where it tapers to a point. The area is 106,572 acres, of which 635 are water. The parish may be said to consist of two straths, that in the NW occupied by Loch Moy and the streams flowing into it, and the much larger one, extending south-westward through the length of the parish, being occupied by the Findhorn and the streams flowing into it. The height above sea-level rises from 750 feet at the point where the Findhorn leaves the parish on the NE to the heights of Beinn Bhreac (1675) N of Moy Burn, Meall Breacribh (1809) SE of Moy Burn, Carn nan tri-tighearnan (2013) and Carn na Sguabaich (1522) on the N border; Carn an t-Seanliathanaich (2056 and 2076) and Carn Glas (2162) on the NE border; Carn nam Bain-tighearna (2040), Carn na Larach (1957), Carn Phris Mhoir (2021), Carn Dubh aig an Doire (2462), Carn na Luibe Glaise (2326), Carn na Guaille (2300), Carn Coire na h-Easgairn (2591), Carn na Cuillich (2556), Carn Sgulain (2606), Am Bodach (2709), another Carn Sgulain (3015), Carn Ballach (3000), and Carn Mairg (3087), all along the SE and latterly among the Monadhliath mountains; Carn Odhar na Criche (2670), Fiadh Fardach (2805); Borrach Mor (2686), Carn na Saobhaidhe (2558), Meall a Phioibaire (2464), Carn Odhar (2618), Carn Ghriogair (2637), the ridge between this and Carn na Saobhaidh (2455), the latter itself (2321), Carn Glac an Eich (2066), Beinn Bhreac and the heights to the E of it averaging about 1800 feet, Carn nan Uisgean (2017), Beinn a' Bheurlaich (1575), and Beinn na Buchanich (1312) on the W and NW border. Except Beinn Bhreac and Meall Breacribh these are all on or close to the border, and along the E side of the Findhorn, from N to S, there are also Carn Mor (1500), Carn Torr Mheadhoin (1761), Carn an t-Seanliathanaich (2076), Carn a' Choire Mhoir (2054), Creag an Tuim Beg (1453), An Socach (1724), Carn Coir Easgrabath (2449), and Calbh Mor (2668)—the last three among the Monadhliath mountains. To the W of the Findhorn, from S to N, are Carn Coire na Creiche (2702), Eiloch Bhan (2538), Carn Leachir Dubh (2133), Carn a' Choire Ghalanaich (2240), Beinn Bhreac Mhor (2641), Aonach Odhar (2103), Carn an Rathaid Dhuibh (2195), another of the several Beinn Bhreacs (1969), Carn na Seannachoil (1787), Creag a' Bhealaidh (1724), Carn a' Bhadain (1333), Carn Moraig (1832), Tom na h-Ulaidh (1238), and Carn an Loin (1319)—the last two S of Loch Moy. It will thus be seen that the greater portion of the parish lies high above sea-level, and so the only inhabited portions are the small glen in which Loch Moy is, and a narrow strip along the banks of the northern portion of the course of the Findhorn at a height of from 800 to 1200 feet. Except along those portions where there are patches of alluvium, the soil is a thin clay or moss. About 2000 acres are under wood, natural or planted; in

the N end and along the banks of the Findhorn, from 3000 to 4000 acres are arable; and the rest is pasture or waste. On the higher grounds there is good hill shooting. The underlying rocks are granite and gneiss. The drainage of the parish is effected along its entire length, from SW to NE, by the river Findhorn, which has, following the windings from its source to the point where it quits the parish on the E side, a course of 32 miles. Formed by the union of the river Eskin with the Abhainn Cro Chlach, it receives on the E the Elrick Burn, the Allt an Duibhidh, the Allt Fionndairnich, the Allt a' Mhuilinn Creag Bhreac, the Allt a' Mhuilinn, the Allt Lathachaidh, the Clune Burn, the Allt na Feithe Shielich, and the Burn of Edinchat; and on the W Allt Creagach, Allt Feitheanach, Allt Odhar Mor, Glenmazeran Burn, Kyllachie Burn, Allt Nierath, Allt na Frithe, and the Funtack Burn. The upper portion of the valley is known as Strath Dearn, the Gaelic name of the river being Earn or Eire. It is a narrow strath, with the bottom more or less broken and the steep hills grassy rather than heathy. Along the upper ten miles, except the summer shielings, hardly a dwelling is to be seen; afterwards there are alluvial banks and well-marked river terraces, and further N, just where the river quits the parish, is the commencement of the wild gorge of Streens, where the narrow strip of ground along the edge of the river is completely overshadowed either by hills or in some places by granite precipices. Kyllachy is associated with the name of Sir James Mackintosh, whose patrimony this estate was, and where (though he was born in the parish of Dores) he spent many of his earlier years; while the present holder, William Mackintosh, one of the judges of the Court of Session, takes from it his judicial title of Lord Killachy.

The north-western part of the parish is occupied by the glen of Moy, the drainage of which is carried off by the Funtack Burn, which has a course of about 2½ miles from Loch Moy to the Findhorn. It receives from the NE the small Burn of Tullochlarly, and from the SW Allt a Chail. Loch Moy, the only considerable sheet of water in the parish—the smaller Lochan a Chaoruinn on the Dalriach Burn, farther to the NW, and some other still smaller lakelets being hardly worth mentioning—is 1½ mile long and 3½ furlongs wide at the broadest part. The surface is about 893 feet above sea-level, and the area is about 200 acres; but in 1884, as the result of operations carried out for improving the drainage of Moy Hall and of between 200 and 300 acres of damp soil on the home farm of Moy, the level of the loch was reduced 4 or 5 feet. The loch is surrounded by woods, and the reclaimed margins have been planted. On a small wooded island, of some 5 or 6 acres in extent, the ruins of a castle, long inhabited by the chiefs of Mackintosh, are still to be seen. A paved road, with buildings on each side, seems also to have extended along the island. It was first occupied in 1337, and is said to have had in 1422 a garrison of 400 men. The castle was inhabited down to 1665. In 1762 two ovens were discovered, each capable of baking 150 lbs. of meal. Connected with the chief who erected this island fortress, it is told that at the house-warming he incautiously, before a wandering harper, expressed his pleasure at being for the first time able to retire to rest free from fear of Allan Macroby, fourth chief of Clanranald of Moidart. The story was carried by the harper to Allan, who at once summoned his vassals, and rested neither day nor night till, arrived at Loch Moy, he crossed at night to the island in currachs, and having stormed the castle, carried Mackintosh a prisoner to Castle Tirrim, where he kept him for a year and a day, at the end of which period he dismissed him with the advice, 'never to be free from the fear of Macdonald.' The outlet of the loch is associated with a clan disaster that seems to have occurred between 1410 and 1420. During a feud between the Cumyns and the Mackintoshes, the latter were all driven to take refuge on the large island in Loch Moy, and their foes, thinking this a capital opportunity to put an end to the whole of their

troublesome neighbours, determined to dam up the waters of the loch so as to drown them all. One of the Mackintoshes, however, proved equal to the occasion, for having procured a raft, 'and supplying himself with twine, he descended in the dead of night to the dam. This was lined towards the water with boards, through which the adventurer bored a number of holes with an auger, and in each hole he put a plug with a string attached.' When everything was ready he pulled all the strings at once, and the water rushed out with such force as to carry away the embankment and the whole of the Cumyns who were encamped behind it. Such at least is the tradition of the district. At an excursion of the Inverness Field Club to the district in 1881, it was stated that some of the hero's descendants were still tenants on the Mackintosh estates at Dalcross, and were locally known as 'Torrie,' the word *torra* being the Gaelic for auger. In the centre of the island there is now a granite obelisk, 70 feet high, erected in 1824 in honour of Sir Æneas Mackintosh, Bart., the twenty-third chief, who died in 1820. About 200 yards SE of the main island is the small Eilan nan Clach, formed of boulders, and only about 12 yards across and 3 feet above the old level of the water. It was used as a prison, the captive being chained to a stone in the centre. A gallows stood on it till about the end of the 18th century, and the prisoners were either set free or executed within twenty-four hours. Both islands figure in Morritt's ballad of *The Curse of Moy*, and are associated with many of the other traditions of the district. The loch receives at the W end Moy Burn, with two smaller streams. The fishing is fair, but the trout are small. At the NW corner is Moy Hall, the seat of Mackintosh of Mackintosh. It was formerly a plain building, used as a jointure house, but large additions and alterations have since been made at a cost of £14,000. The entrance-hall has been designed in imitation of that at the old castle of Dalcross; and in the library are a sword, said to have been presented by Pope Leo X. to James V., and by him given to the then chief of Mackintosh; the sword worn by Dundee at Killiecrankie; a sword that formerly belonged to Charles I.; and a gold watch that belonged to Mary Queen of Scots. A mile and a half W of the loch is the pass known as Stairsneach-nan-Gael, or the 'threshold of the Highlanders,' across which is the principal passage from Badenoch and Strathspey to the low country about Inverness and Nairn, just as the Streens led to that about Forres and Elgin. Once through this, the clansmen returning from a foray in the 'laich' considered themselves safe, and the chief of Mackintosh is said to have exacted from the neighbouring clans a tax called 'the collop or steak of the booty,' for permitting their quiet passage with their plunder. The hollow of Ciste Creag-nan-eoin, near by, is said to have been sometimes used as a place of concealment for the women and children in times of danger. The whole pass, of which Stairsneach-nan-Gael is only the narrowest part, is known as Creag-nan-eoin, and was in 1746 the scene of the incident known as the 'Rout of Moy.' Prince Charles Edward Stuart, on his march northward, had on 16 Feb. advanced in front of his troops with only a small escort, in order to pass the night at Moy Hall, where he was received by Lady Mackintosh—sometimes called 'Colonel Anne,' on account of the spirit with which, in defiance of her husband, who remained loyal to the House of Hanover, or perhaps in obedience to his secret wishes, she raised the clan for the Jacobite cause. Lord Loudoun, who was in command of the garrison at Inverness, having received intelligence of the visit, started with a force of 1500 men, with high hopes of effecting the important capture of the Prince. Word of the movement was brought by a boy in breathless haste from Inverness, and the lady and one of her trusted followers, Donald Fraser of Moybeg, proved equal to the occasion. Fraser and four men were sent to take up their position in the darkness at Creag-nan-eoin. After placing his men some distance apart, Donald waited the arrival of the royal troops, and on hearing

them coming up, gave the command in loud tones for 'the Mackintoshes, Macgillivrays, and Macbeans, to form in the centre, the Macdonalds on the right, and the Frasers on the left,' while at the same time all the party fired off their muskets. The flashes coming from different points, Loudoun fancied that he was confronted by a whole division of the Highland army, and a man being killed by one of the random shots, a panic set in, and the royalists fled in headlong haste to Inverness, and hardly halted till they had crossed Kessock Ferry into Ross-shire. Lady Drummair, in whose house both Charles Edward and the Duke of Cumberland lived in Inverness, was the mother of 'Colonel Anne.' Fraser's descendants remained on the estate till 1840. About $\frac{1}{2}$ mile NW of the scene of the 'Rout' is a small cairn called Uaigh-an-duine-bhèo, or 'the living man's grave,' on account of a vassal of the Laird of Dunmaglass having been here buried alive as a punishment for perjury. In a dispute as to marches he had gone to a certain spot and sworn by the head under his bonnet, that the earth under his feet belonged to the Laird of Dunmaglass, but on examination it was found that there was a cock's head concealed in his bonnet, and that his brogues contained earth, and so he paid the penalty of his falsehood. To the NE of the loch, near the source of the Burn of Tullochray, is the traditional scene of the slaughter of the last wolf of Strath Dearn, the story of which—except for the Scottish dialect—is well told in Chap. iii. of Sir Thomas Dick Lauder's *Account of the Great Floods of 1829 in the Province of Moray*, where there is also an interesting account of the ravages of the Findhorn and the other streams in the parish during this great flood. During the clan period Moy was, as may be inferred from what has been already said, wholly in the possession of the Mackintoshes. A main road from Inverness by Daviot enters the parish on the NW by the hollows of Craggie Burn and Moy Burn, and at the Free church above Tomatin House crosses the river by a bridge erected at a cost of £2600, to replace one swept away by the flood of 1829, and strikes south-eastward through Duthill to Carrbridge, and so to the highland road through Strathspey. From the mouth of Glen Moy downward, and from Findhorn Bridge upward to Dalveg 8 miles from the source of the river, there are good district roads, and from the E end of Loch Moy the old military road formed by General Wade struck westward by Creag-nan-coin and on to Inverness. Across the northern portion of the parish in a north-westerly direction, and following more or less closely the line of this main road, runs the new Aviemore and Inverness branch of the Highland railway. There is a Kirkton at Moy, where there is a post and telegraph office, and a hamlet at FREEBURN, between Moy and Findhorn Bridge. At the latter place great cattle and sheep fairs are held. Mansions and shooting lodges are Moy Hall, Tomatin House, Kyllachy Lodge, Dalmigavie Lodge, and Glenmazeran Lodge.

The parish is in the presbytery of Inverness and the synod of Moray, and the living is worth £274 a year. A church of 'Dalfergussyn in Stratherne' is mentioned in the Chartulary of Moray between 1224 and 1242, and again subsequently as Tallaracie, and the name is possibly taken from Fergus, bishop and confessor, whose missionary labours extended as far N as Caithness, and to whom the church had been dedicated. The church of Moy is mentioned in 1222. Moy was divided between Dyke and Dalarossie in 1618. The church was included in the parish now described, and stands on the S bank of Loch Moy. It was built in 1765 and repaired in 1829. The church of Dalarossie proper is 7 miles distant on the bank of the Findhorn, and was built in 1790. Each contains about 450 sittings, and is surrounded by a churchyard. There is a Free church midway between, at Findhorn Bridge. The public schools of Dalarossie and Raibeg, with respective accommodation for 50 and 90 children, have an average attendance of about 20 and 50, and grants amounting to over £35 and £65. Pop. (1755) 1693, (1821) 1334, (1831) 1098, (1861) 1026, (1871) 1005, (1881) 822,

(1891) 730, of whom 365 were males, and 557 Gaelic-speaking.—*Ord. Sur.*, shs. 84, 74, 73, 1876-77-78.

Moy, Broom of, a village in Dyke and Moy parish, Elginshire, near the left bank of the Findhorn, $1\frac{1}{2}$ mile W by N of Forres.

Moydart or **Moidart**, a district in the south-western extremity of the mainland of Inverness-shire, and a sea-loch on the boundary between Inverness-shire and Argyllshire. The district is bounded on the N and NE by Arasaig; on the SE and S by Loch Shiel, the river Shiel, and Loch Moydart, which divide it from Argyllshire; and on the W by the Atlantic Ocean. Its greatest length, from E to W, is 18 miles; and its mean breadth is 7 miles. Its coast is deeply indented by Lochs Nuanagh, Aylort, and Moydart; and its interior, though thoroughly Highland, possesses little interest. The principal objects challenging attention are the mansion of Kinlochmoydart, a Roman Catholic chapel, the ruined Castle Tirrim, and some woods along Loch Shiel and portions of the coast. The district forms part of the enormous parish of Ardnamurchan. Loch Moydart, opening due SE of Eigg island at a distance of 9 miles, penetrates 5 miles east-south-eastward; it is split over two-thirds of its length by Shona island; lies mostly among low heathy hills; and, except for having on its shores Kinlochmoydart House, Castle Tirrim, and some patches of wood, wears a bare and forbidding aspect. The section S of Shona is the main channel. See Rev. C. MacDonald's *Moidart; or, Among the Clanronalds* (Oban, 1889).

Moy Lodge, a pretty shooting-box in Laggan parish, Inverness-shire, on the right bank of the Spean, $1\frac{1}{2}$ mile below its exit from Loch Laggan, 5 miles from Inverlair station on the West Highland railway, and 38 $\frac{1}{2}$ miles SW of Kingussie. On the ARDVERIKIE estate, it is the property of Sir John Ramsden, Bart., of Byrom, Yorkshire.—*Ord. Sur.*, sh. 63, 1873.

Moyness, a village in AULDLEARN parish, Nairnshire, 5 miles ESE of Nairn.

Muasdale, a village, with an inn and a post office, in Killeen and Kilchenzie parish, Kintyre, Argyllshire, 4 miles S by W of Tayinloan.

Muchairn. See MUCKAIRN.

Muchalls, a village in Fetteresso parish, Kincardineshire, with a station on the North-Eastern section of the Caledonian railway, 5 miles NNE of Stonehaven, under which it has a post office, with money order, savings bank, and railway telegraph. Muchalls Episcopal church (St Ternan's) was built in 1831, and enlarged in 1865 and 1870. Four predecessors—the oldest dating from 1624—stood 1 mile to the S. There is a public school, with accommodation for 55 children. Muchalls Castle, on a rising-ground, is a venerable edifice; and was long the seat of the baronet family of Burnett of Leys.—*Ord. Sur.*, sh. 67, 1871.

Muck, an Inverness-shire island in the parish of Small Isles and the district of Mull, 3 miles NNW of the nearest point of the mainland, and 2 $\frac{1}{2}$ SSW of Eigg. Its length, from ENE to WSW, is 2 $\frac{3}{4}$ miles; its maximum breadth is 2 miles; and its area is 1586 acres. The surface is undulating throughout, and only one solitary decided hill, near the W end, shoots up from the general level, attaining the height of 600 feet. The shores are in general low and rocky, but at the W end they rise into cliffs of 50 or 60 feet in height. There are several more or less convenient landing-places for fishing-boats, and two small piers, but there is no safe harbour. The body of the island is trap of the predominant varieties of basalt and fine greenstone, but at the bay of Camusmore the protrusion of beds of sandstone and limestone indicates the presence of a lower strata of secondary rocks. The soil of Muck is fertile when under tillage, and bears a rich crop of grass. The supply of spring-water is ample. But the chief natural want of the island is fuel, peat having to be procured with labour and expense from the neighbouring islands or the mainland. The main industry of the inhabitants is fishing.

Muck was for a long period the property of the Abbey of Iona, and its present name is said to be a corruption

of Monk-island. Its Gaelic form is Eilean-nan-Muchd, signifying the 'island of the swine,' and this has been given by Buchanan in the literal translation 'insula porcorum.' An islet called Horse Island lies on the N side of Muck, separated from it only by a rocky narrow channel, which is left dry at low water in neap tides. Pop. of Muck (1831) 155, (1861) 58, (1871) 53, (1881) 51, (1891) 48, of whom 23 were females, and 40 Gaelic-speaking.

Muckairn, a *quoad sacra* parish in Lorn district, Argyllshire, forming the southern portion of the *quoad civilia*-parish of ARDCHATTAN and Muckairn, and containing TAYNUILT station on the Callander and Oban railway (1880), 15½ miles E by N of Oban and 7¼ WNW of Stirling. It is bounded E by Glenorchy and Innishail, SE by Kilchrenan, SW and W by Kilmore and Kilbride, and N by the lower waters of Loch Etive, dividing it from Ardochattan. Its utmost length, from N to S, is 6½ miles; its utmost breadth, from E to W, is likewise 6½ miles; and its area is 21,025½ acres, of which 106 are foreshore and 175½ water. Loch NANT (7½ × 2¾ furl.; 605 feet) lies on the Kilchrenan boundary, and sends off a stream 5¼ miles northward to Loch Etive; the reedy Black Lochs (1½ mile by 37 yards to 1½ furl.; 95 feet) send off Lusragan Burn 3½ miles northward along the Kilmore boundary; and the upper 6 miles of the river LONAN belong to Muckairn. The surface is everywhere hilly, but nowhere mountainous, chief elevations from N to S being Druim Mor (453 feet), Death Choinhead (1255), and Beinn Ghlas (1691). The coast, 8½ miles in extent, is low, but in places rocky, much indented with bays and headlands. Copse of oak and birch and mountain ash clothe much of the northern portion of the parish, whose arable area is small compared with the pastoral. There are sites of three pre-Reformation chapels, a standing-stone, and remains of several stone circles. Annexed to Ardochattan in 1637, Muckairn was constituted a *quoad sacra* parish by the ecclesiastical authorities in 1829, and reconstituted by the Court of Teinds in 1846. It is in the presbytery of Lorn and the synod of Argyll; the living is worth £146. The parish church, at Taynuilt, was built in 1829. There is also a Free church; and two new public schools, Achaleven and Taynuilt, with respective accommodation for 107 and 100 children, have an average attendance of about 70 and 75, and grants amounting to nearly £95 and £140. Pop. (1841) 812, (1871) 620, (1881) 615, (1891) 722; of registration district (1871) 786, (1881) 831, (1891) 962, of whom 726 were Gaelic-speaking.—*Ord. Sur.*, sh. 45, 1876.

Muckerach. See MUCKRACH.

Muckersie. See FORTEVIOR.

Muckhart, a parish in the Ochil district of SE Perthshire, containing Pool village, 3½ miles NE of Dollar. In outline resembling a rude triangle with eastward apex, it is bounded NW and N by Glendevon, NE and SE by Fossoway in Kinrossshire, and SW and W by Dollar in Clackmannanshire. Its utmost length, from E to W, is 3½ miles; its utmost breadth is 3¼ miles; and its area is 4960½ acres, of which 33 are water. Along or near to all the Fossoway boundary, the 'crystal DEVON' winds 8½ miles east-south-eastward and west-south-westward, though the point where it first touches and that where it quits the parish are only 4½ miles distant as the crow flies. During this course it exhibits the finest of its famous scenery, described in our articles CROOK OF DEVON, DEVIL'S MILL, RUMBLING BRIDGE, and CALDRON LINN, and since the opening of the Devon Valley railway visited by great numbers. The surface sinks in the extreme SW to 95 feet above sea-level, thence rising northward to 654 feet at Law Hill, 1442 at Seamab Hill, and 1500 at Commonedge Hill. The hills have fine outlines, verdant slopes, and benty or heathy shoulders and summits; and Seamab, an eastward spur of the Ochils, terminates in a conical summit. The rocks of the hills, and throughout great part of the area, are mainly eruptive; but those near the Devon are carboniferous, and comprise workable strata of sandstone, limestone, ironstone, and coal. The soil in the

upper districts is light and gravelly, more or less mossy; in portions of the middle districts is clayey; and in the lower grounds, particularly near Dollar, though sandy, produces very good oats and barley. Nearly two-thirds of the entire area are in tillage; about 290 acres are under wood; and the rest of the land is either pastoral or waste. A fragment remains of Castleton House, built in 1820 by William Lambert, Archbishop of St Andrews; and stone coffins have been found from time to time. In 1645, when the Marquis of Montrose captured and destroyed Castle Campbell, then belonging to the Earl of Argyll, every house in the parish, not excepting the church, was burnt. The Rev. Adam Gib (1714-88), a leader of the Antiburghers, was a native; and Ebenezer Henderson, LL.D. (1809-79), author of *Annals of Dunfermline*, died at Astral Villa. Blairhill, on the Devon's right bank, 4 miles ENE of Dollar, is the seat of James Richard Haig, Esq., F.S.A. (b. 1831; suc. 1865). Giving off a portion to Blairingone *quoad sacra* parish, Muckhart is in the presbytery of Kinross and the synod of Fife; the living is worth £188. The parish church is a commodious edifice of 1838. There is also a U.P. church, one of the oldest in the denomination; and a public school, with accommodation for 137 children, has an average attendance of about 60, and a grant of over £65. Valuation (1884) £5918, 15s. 4d., (1893) £5264, 2s. 8d. Pop. (1801) 538, (1841) 706, (1861) 615, (1881) 601, (1891) 542, of whom 539 were in the ecclesiastical parish.—*Ord. Sur.*, shs. 39, 40, 1869-67.

Muckle or Meikle Loch, a lake in Slains parish, Aberdeenshire, 1¼ mile WNW of the coast near Slains Old Castle, and 4¼ miles E by N of Ellon. Lying 134 feet above sea-level, it has an utmost length and breadth of 4 and 2½ furlongs; was formerly of much greater extent than now; is overhung, to the N, by Round Top (216 feet); has a mean depth of 20 feet, and a maximum depth of 52; and sends off a streamlet to the river Ythan.—*Ord. Sur.*, sh. 87, 1876.

Muckle Burn, a stream of Nairn and Elgin shires, rising at an altitude of 1190 feet above sea-level, and winding 19½ miles north-north-eastward, through or along the borders of Ardcald, Auldearn, and Dyke parishes, till it falls into FINDHORN Bay.—*Ord. Sur.*, shs. 84, 94, 1876-78.

Muckle Roe. See MEIKLE ROE.

Muck, Loch. See DALMELLINGTON.

Muckrach House, a mansion in the parish of Duthill and Rothiemurchus, Invernessshire, on the left bank of the Dulnain, 4 miles SW of Grantown. It is the property of the Countess-Dowager of Seafield. Muckrach Castle, built in 1598 by the second son of John Grant of Freuchie, was the first possession of the Grants of Rothiemurchus, and is now a roofless ruin, itself somewhat picturesque, and beautifully situated.—*Ord. Sur.*, sh. 74, 1877.

Muckcross. See ST ANDREWS.

Mudale, a rivulet of the SW of Farr parish, Sutherland. Issuing from Loch na Meide or Loch Maddy (3¼ miles × 70 yards to 5¼ furl.; 490 feet above sea-level) at the meeting-point with Tongue and Durness parishes, it winds 7½ miles east-south-eastward till it falls into the head of Loch NAVER (247 feet) near Altaharrow inn. It affords good trout and salmon fishing, the trout running up to 2 lbs.—*Ord. Sur.*, sh. 108, 1880.

Mugdock, an ancient barony in Strathblane parish, Stirlingshire, and New Kilpatrick parish, Dumbartonshire. From Maldwiv, Earl of Lennox, it was acquired in the 13th century by David de Graham, ancestor of the noble family of Montrose; and became, in 1646, the seat of their principal residence—Mugdock Castle, at the SW corner of Mugdock Loch, 2½ miles N by W of Milngavie. A massive quadrangular tower, of unknown antiquity, this was so defended by a deep broad fosse, drawn around it from the lake, as to be inaccessible to any force that could be brought against it in the old times of rude warfare; was one of the scenes of the bacchanalian orgies of the Earl of Middleton and his associates, when employed in subverting the popular liberties under Charles I.; is now, and has long been,

a ruin; and, together with its lake, figures finely amid the pleasant surrounding scenery. Mugdock Reservoir ($5\frac{1}{2} \times 3$ furl.), one of the two great store-places of the Glasgow water-supply from Loch Katrine, lies $\frac{3}{4}$ mile N of Milngavie, at an altitude of 311 feet above sea-level. See GLASGOW, p. 165; and Sir William Fraser, *The Lennox* (2 vols., Edinb. 1874).

Mugdrum, an estate in Newburgh parish, Fife, and Abernethy parish, Perthshire, comprising Mugdrum Inch in the Tay and lands on the S side of the river, all contiguous to the Perthshire boundary. Mugdrum Inch measures $7\frac{1}{2}$ furlongs in length, $1\frac{1}{4}$ furlong in extreme breadth, and about 32 acres in area; and is mostly under cultivation; population (1891) 26. Mugdrum House, opposite the middle of the island, immediately W of Newburgh town, is a plain massive edifice of 1786, with extensive and finely-wooded grounds. Its owner is Edmund de Haya Paterson-Balfour-Hay, Esq. (b. 1849; suc. 1868). Mugdrum Cross, within the grounds, comprises a large ohlong stone base, and a square stone pillar; displays, on its eastern face, in four compartments, very curious ancient sculptures; and is believed to have originally had arms, making it literally a cross.—*Ord. Sur.*, sh. 48, 1868.

Muick, a stream of Glenmuick parish, SW Aberdeenshire. Rising on Cairn Taggart, at an altitude of 3150 feet, near the Forfarshire border, it first dashes $1\frac{1}{2}$ mile east-south-eastward to wild and picturesque DHU LOCH ($5\frac{1}{2} \times 1\frac{1}{2}$ furl.; 2091 feet), thence hurries 2 miles east-by-southward to dark Loch Muick ($2\frac{1}{2}$ miles \times $\frac{1}{2}$ mile; 1310 feet), and thence runs $9\frac{1}{2}$ miles north-north-eastward, till, $\frac{1}{2}$ mile above Ballater Bridge and at 665 feet of altitude, it falls into the Dee. Midway it forms a fine waterfall, 36 feet high, the Linn of Muick; and everywhere it is very impetuous, having repeatedly carried away such bridges over its course as were of wooden construction. ALT-NA-GIUTHASACH, the royal shooting-lodge, stands near the foot of Loch Muick, on whose waters the Queen and Prince Alherth were first rowed 30 Aug. 1849. 'The scenery,' she wrote then, 'is beautiful, so wild and grand—real severe Highland scenery, with trees in the hollow;' and again, under date 7 Oct. 1863, 'Loch Muick looked beautiful in the setting sun as we came down, and reminded me of many former happy days I spent there.' The lake affords capital trout-fishing, and the stream contains both salmon and smallish trout.—*Ord. Sur.*, sh. 65, 1870.

Muick, Argyllshire. See MUCK.

Muir, **Muiralehouse**, or **Muirton**, a village in St Ninians parish, Stirlingshire, $\frac{3}{4}$ mile SSE of Bannockburn.

Muiravonside (popularly *Moranside*), a parish of SE Stirlingshire, traversed by the Slamannan and the Edinburgh and Glasgow sections of the North British railway, with the stations of Manuel, Causewayend, Bowhouse, Blackstone, and Avonbridge. It also contains Almond Iron-works, Blackbraes, Maddiston, and Standrigg villages, with parts of Linlithgow Bridge, Rumford, and Avonbridge. It was anciently part of Falkirk parish, and does not appear on record as a separate parish till the year 1606. It is bounded S by Slamannan, SW by Falkirk, NW by Polmont, and on all other sides by Linlithgowshire, viz., N by Borrowstounness, and SE by Linlithgow and Torphichen. Its utmost length, from ENE to WSW, is $6\frac{1}{2}$ miles; its utmost breadth is 3 miles; and its area is $8015\frac{1}{2}$ acres, of which $51\frac{1}{2}$ are water. The river AVEN, from which Muiravonside derives its name, winds $2\frac{3}{4}$ miles ESE along Slamannan boundary, $9\frac{1}{4}$ north-eastward and west-by-northward along all the Linlithgowshire border, though the point where it first touches and that where it quits the parish are only $6\frac{1}{2}$ miles distant. Over most of its course it is curtained with wood, or flanked with the sides of a romantic dell, or otherwise picturesque. The Hollock, Manuel, Sandyford, and other hurns, rise in the interior and run to the Aven, but are all short and small. Sinking in the extreme N to less than 200 feet above sea-level, the surface thence rises south-westward to 493 feet at Whiterig, 524 near Glendend, 547 near Candy House, 641 at Greencraig, and 546

near Blackhillend. Thus the extreme W of the parish is part of the moorish plateau which flanks the S side of the great dingle traversed by the Forth and Clyde Canal, whilst the rest of it all declines in ever-varying ridges toward the dell of the Aven and the Carse of Forth. The higher grounds have rarely an elevation of more than 200 feet above the hollows at their base; yet they command a gorgeous prospect of the basin of the Forth, from Stirling to the Lothians, and from the flanks of the Carse to the Ochil Hills. The rocks are partly eruptive, partly carboniferous. A fine-grained blue trap has been largely quarried, as also has sandstone of very close grain, with a fracture resembling that of marble, and with capacity of retaining sculpture uninjured through centuries. Coal, which was formerly worked on only a limited scale, is now mined very extensively; and ironstone, yielding metal of the finest quality, but containing a large percentage of refuse, is worked by the Carron Company. The soil of the western district is partly spongy, and nearly all cold and wet; of the eastern district is light and gravelly, enumbered with many stones; and in parts of the interior is clayey. Much that was formerly moor and moss has nearly all been brought under the plough; and a fair proportion of the entire area is occupied by plantation, so disposed as to embellish tracts naturally bleak and dismal. MANUEL Priory is noticed separately; and other antiquities are a series of fortified eminences extending from Harlelar to Sight Hill, with ruins of a pre-Reformation chapel at Ballenbriech. Muiravonside House, on the left bank of the Aven, $3\frac{1}{2}$ miles SW of Linlithgow, is the seat of John Stirling, Esq. (b. 1860; suc. 1893). Mr Forbes of Callendar is chief proprietor. Giving off a portion to Blackbraes *quoad sacra* parish, Muiravonside is in the presbytery of Linlithgow and the synod of Lothian and Tweeddale; the living is worth £316. The parish church, 3 miles W by S of Linlithgow, was built about 1808. There is also a Free church. Three public schools—Blackbraes, Drumbowie, and Muiravonside—with respective accommodation for 364, 541, and 175 children, have an average attendance of about 295, 365, and 170, and grants amounting to over £285, £345, and £150. Valuation (1884) £21,534, 11s. 4d., (1892) £22,450, 5s. 6d. Pop. (1801) 1070, (1831) 1540, (1841) 2238, (1861) 2660, (1881) 2713, (1891) 3671, of whom 2208 were in the ecclesiastical parish.—*Ord. Sur.*, sh. 31, 1867.

Muirburn, a mansion in Glassford parish, Lanarkshire, on the left side of Avou Water, $2\frac{1}{2}$ miles NE of Strathaven. Its owner is William Barry, Esq.

Muirdrum, a village in Panhride parish, Forfarshire, $5\frac{1}{2}$ miles SW of Arbroath, and $2\frac{1}{2}$ NW of Carnoustie, under which it has a post office.

Muirend, a collier village in Dalgetty parish, Fife, 5 furlongs S of Crossgates.

Muirresk, a mansion in Turriff parish, Aberdeenshire, on the right bank of the Deveron, 2 miles W by S of Turriff town. Its owner is Henry Alexander Farquhar-Spottiswood, Esq.—*Ord. Sur.*, sh. 86, 1876.

Muirfield, a mansion in Dirleton parish, Haddingtonshire, $3\frac{1}{2}$ miles NNW of Drem Junction on the Dunbar section of the North British railway.

Muirfoot Hills. See MOORFOOT.

Muirhead or **West Benhar**, a village in Shotts parish, Lanarkshire, $3\frac{1}{2}$ miles W by S of Whitburn. Pop. (1871) 868, (1881) 1412, (1891) 1110.

Muirhead, a village in Cadder parish, Lanarkshire, $\frac{1}{2}$ mile SSW of Chryston, and $\frac{6}{8}$ miles ENE of Glasgow, under which it has a post office. Pop., with Chryston, (1881) 721, (1891) 899.

Muirhead, a village in Old Monkland parish, Lanarkshire, close to Baillieston station.

Muirhead, a village in Bothwell parish, Lanarkshire, near Bellshill.

Muirhead, a village on the SW border of Kettle parish, Fife, $2\frac{3}{4}$ miles SSW of Kettle village.

Muirhead of Liff, a village in Liff and Benvie parish, Forfarshire, near the Perthshire boundary, $4\frac{1}{2}$ miles NW of Dundee.

Muirhouse, a village in Dalry parish, Ayrshire, 2½ miles NE of Dalry village.

Muirhouse, a mansion in Crumond parish, Edinburghshire, on the shore of the Firth of Forth, 1½ mile NNE of Davidson's Mains and 4½ miles WNW of Edinburgh. Only two round towers remain of a previous mansion (*circa* 1670); and the present house is a picturesque Tudor edifice of about 1830, with a square battlemented tower and beautiful well-wooded grounds. Its drawing-room is adorned with several frescoes by Zephaniah Bell. Purchased by his ancestor in 1776, the estate belongs now to William Davidson, Esq. (b. 1843; suc. 1885).—*Ord. Sur.*, sh. 32, 1857. See John Small's *Castles and Mansions of the Lothians* (Edinb. 1883).

Muirhouse, Forfarshire. See MURROES.

Muirhouses, a village in Carriden parish, Linlithgowshire, 2¼ miles SE of Borrowstounness.

Muirhouseton. See MURLESTON.

Muirkirk, a town and a parish in the NE of Kyle district, Ayrshire. The town, lying near the right bank of the Ayr, 720 feet above sea-level, has a station, the junction of the Douglasdale branch of the Caledonian with the Muirkirk branch of the Glasgow and South-Western railway, 10¼ miles ENE of Auchinleck, 25¾ E by N of Ayr, 57¾ SSE of Glasgow (only 30 by road), and 49¾ SW of Edinburgh. With environs bleaker perhaps than those of any other town in Scotland, Leadhills and Wanlockhead alone excepted, it is the seat of an extensive iron manufacture, and was brought into existence through the discovery and smelting of iron ore (1787). A small predecessor or nucleus existed previously under the name of Garan; and the transmutation of this into the town of Muirkirk is noticed as follows in the *Old Statistical Account*.—'The only village, or rather *clachan*, as they are commonly called, that deserves the name, lies at a small distance from the church, by the side of the high road, on a rising-ground called Garanhill, which therefore gives name to the range of houses that occupy it. They have increased greatly in number since the commencement of the works; and new houses and streets have risen around them. Many houses besides, some of them of a very neat structure, have been built at the works themselves; and others are daily appearing that will, in a short time, greatly exceed in number and elegance those of the old village, formerly, indeed, the only one that the parish could boast.' The place has undergone great fluctuations of prosperity; but since about 1830, and especially since the formation of the railway, it has been very flourishing, inasmuch as to rank among the great seats of the iron manufacture in Scotland. The works of the Eglinton Iron Company have several blast furnaces and rolling mills; and coal-mining and lime-burning are actively carried on. New works for collecting ammonia as a by-product at the furnaces were erected at a large outlay in 1883. In 1894 a drainage scheme, estimated to cost £1100, was begun. Muirkirk has a post office with money order, savings bank, and telegraph departments, a branch of the Clydesdale Bank, 2 hotels, a gas company, and fairs on the Tuesday after 18 Feb. for hiring shepherds, and the Thursday nearest 21 Dec., when shepherds meet to restore sheep which have strayed from their owners. Baird's Institute, the gift of J. G. A. Baird, M.P., and erected in 1887, consists of reading-room, recreation room, library, etc., and cost over £2000. The parish church, built in 1812, renovated in 1883 at a cost of £1700, and repaired in 1893, contains 800 sittings. Other places of worship are a Free church built soon after the Disruption, a U.P. church (1823), an E.U. church, and St Thomas' Roman Catholic church (1856), enlarged and improved in 1882, when a presbytery also was built at the cost of the Marquis of Bute. Pop. (1881) 3470, (1891) 3329.

The parish, containing also GLENBUCK village, formed part of Manchine parish till 1681, and, then being constituted a separate parish, received, from the situation of its church, the name of Kirk of the Muir, Muirkirk, or Muirkirk of Kyle. It is bounded S by Auchinleck, W by Sorn, and on all other sides by Lanarkshire, viz.,

N by Avondale, NE by Lesmahagow, and E by Douglas. Its utmost length, from E to W, is 10½ miles; its utmost breadth, from N to S, is 8 miles; and its area is 47½ square miles or 30,429½ acres, of which 200½ are water. Two artificial reservoirs, together covering 121 acres, are noticed under GLENBUCK. Issuing from the first of these, and traversing the second, the river Ayr winds 6¾ miles west-south-westward through the interior, then 2¾ miles west-north-westward along the southern boundary. Its principal affluents during this course are GARPEL WATER, running 4¼ miles north-westward, and Greenock Water, running 9¾ miles south-westward. Along the Ayr, in the extreme W, the surface declines to 567 feet above the sea; and chief elevations to the N of the river are *Burnt Hill (1199 feet), Meanleugh Hill (1192), Black Hill (1169), *Godbush Hill (1556), and *Priesthill Height (1615); to the S, Wood Hill (1234), *Wardlaw Hill (1630), the Steel (1356), and *CAIRNTABLE (1944), where asterisks mark those summits that culminate on the confines of the parish. On all sides, then, except the W, or over a sweeping segment of 25 miles, its boundary is a water-shedding line of heights. The interior is a rough and dreary expanse of moorish hills, tame in outline, and clad in dark purple heather, here rising in solitary heights, there forming ridges which run towards almost every point of the compass. Cairntable, on the boundary with Lanarkshire, near the SE extremity, is the highest ground, and commands, on a clear day, an extensive and varied prospect. At most one-sixth of the entire area has ever been regularly or occasionally in tillage; and all the remainder, excepting about 250 acres of plantation, is disposed in sheep-walks—some of them so excellent that Muirkirk black-faced sheep have carried off the first prize at several of the Highland Society's shows and at the Paris Exhibition of 1867. In the 12th century a natural forest extended over a large part, perhaps nearly the whole, of the parish; and has left dreary memorials both in such names as Netherwood and Harwood, now borne by utterly treeless farms, and in long trunks and branches deeply buried in moss. The mountain-ash is almost the only tree that seems to grow spontaneously. It adorns the wildest scenes, and unexpectedly meets the eye by the side of a barren rock and sequestered stream, seen seldom save by the birds of the air or the solitary shepherd and his flock. Coal lies on both sides of the Ayr, at no greater depth than 60 fathoms, in six seams aggregately 30½ feet thick, and severally 3½, 3, 7, 9, 2½, and 5½. It is mined, on the most approved plans and in very large quantities, both for exportation and for local consumpt and manufacture. Ironstone occurs in the coal-field in five workable seams, so thick that three tons of stone are obtained under every square yard of surface. Limestone likewise is plentiful, and is worked with the ironstone and coal. Lead and manganese have been found, but not in such quantity as to repay the cost of mining. The parish is deeply and pathetically associated with martyrs of the Covenant. A Martyrs' Monument was erected in the New Cemetery in 1887; and upon Priesthill farm is one to the 'Christian carrier,' John Brown, who, on 1 May 1685, was shot by Claverhouse in presence of his wife and family. On the top of Cairntable there are two large cairns. Among the principal proprietors are the Earl of Home, John G. A. Baird, M.P., and Charles Howatson, Esq. of Glenbuck, who in 1893 added to his property the estate of Tardoes at the price of £11,000. Giving off Glenbuck *quoad sacra* parish, Muirkirk is in the presbytery of Ayr and the synod of Glasgow and Ayr; the living is worth £194. Furnace Road, Glenbuck, Muirkirk, and Wellwood public schools, and St Thomas' Roman Catholic school, with respective accommodation for 479, 284, 329, 57, and 190 children, have an average attendance of about 355, 235, 230, 15, and 60, and grants amounting to nearly £325, £245, £230, £30, and £55. There is an evening school in Main Street with an average attendance of over 50. Pop. (1881) 5123, (1891) 5165, of whom 3966 were in Muirkirk ecclesiastical parish, and 1199 in Glenbuck *quoad sacra* parish.—*Ord. Sur.*, shs. 15, 23, 1864-65.

Muir of Ord. See ORD.

Muir of Rhyynie or **Rhyynie**, a village in Rhyynie parish, Aberdeenshire, standing 600 feet above sea-level, near the left bank of the Water of Bogie, 4 miles SSW of Gartly station on the Huntly section of the Great North of Scotland railway, and 13 $\frac{3}{4}$ NW of Alford. A neat place, it serves as a centre of trade for some extent of surrounding country, and has a post office (Rhyynie), with money order, savings bank, and telegraph departments, branches of the North of Scotland Bank and the Town and County Bank, two inns, a police station, a public school, the parish church, a Free church, a Congregational chapel, and the Episcopal church of Auchindoir, St Mary's (1859; 80 sittings). Cattle fairs are held on the Saturday before the fourth Monday of January, February, March, April, May, November, and December, the Thursday after the first Tuesday of September, *o.s.*, and the day in October after Kennethmont fair; hiring-fairs on the Mondays before 26 May and 22 Nov. Pop. (1861) 349, (1871) 482, (1881) 442, (1891) 445.—*Ord. Sur.*, sh. 76, 1874.

Muirshiel, a mansion in Lochwinnoch parish, Renfrewshire, on the left bank of the Calder, 4 $\frac{1}{2}$ miles NW of Lochwinnoch town.

Muirside, a village in Old Monkland parish, Lanarkshire, 3 furlongs SW of Baillieston.

Muirton. See MARYKIRK.

Muirton, Stirlingshire. See MUIR.

Muirton, a village in Blairgowrie parish, Perthshire, 1 mile S by W of the town.

Muldron, a mansion of 1823 in West Calder parish, SW Edinburghshire.

Mull, an island of NW Argyllshire, separated from the mainland by the Sound of Mull and the Firth of Lorn, whilst the western extremity of the Ross of Mull is divided by the narrow Sound of Iona from the island of the same name. The remaining shores of Mull are washed by what used to be known as the Deucalionian Sea. The island of Mull is the third largest in the Hebridean group, Skye and Lewis alone being larger. It lies within 4 miles of the promontory of Ardnamurchan on the N, within 7 miles of Oban on the E, and within 24 miles of Rudha Mhail Point is Islay on the S. Its greatest length, from ENE to WSW, is 30 miles; its greatest breadth, from WNW to ESE, is 29 miles; but the extreme irregularity of its form, arising from the indentations of its coast-line, prevents any adequate notion of its size being given by these measurements. Indeed, its circumference may be safely put down at 300 miles; if one follows all the ins and outs of the coast; and its area (including Iona, Gometra, Ulva, and some smaller islets) is 351 $\frac{1}{4}$ square miles or 224,802 acres. The island has been fancifully described as presenting the general aspect of a cray-fish, the long narrow peninsula called the Ross of Mull forming the tail, and the eastern coast-line forming the curved back. Were a line drawn from Treshnish Point on the NW to the headland on the W side of Loch Buy, the main body of the island lying to the E of that line would form an irregular parallelogram of 25 miles by 14, extending NW and SE; but this would be indented in several parts by the sea, especially in the W, where Loch-na-Keal would run for 8 miles E of the line. Between this line and the main ocean the island would consist only of 6 $\frac{1}{2}$ miles of the peninsula of Gribon between Loch-na-Keal and Loch Scridain, and about 16 miles of the Ross of Mull, which, notwithstanding its great length, has a mean breadth of little over 4 miles. No fewer than 468 islands, islets, and insulated rocks lie adjacent to Mull, and many are within the parish of Mull, but they are not included in the above measurements. By far the greatest irregularity of coast-line is on the W and S, especially the former; while the N and E, protected by the mainland, are comparatively unbroken. The chief inlets on the W coast, in order from N to S, are Loch Cuan, Calgary Bay, Loch Tuadh (between Ulva and Mull), Loch-na-Keal, and Loch Scridain, stretching between the peninsula of Gribon and the Ross of Mull. Loch Lathaich is an inlet of the sea on the N coast of the

Ross. Along the S and SW coast, in order from W to E, the chief islets are Ardalanis and Carsaig Bays, Loch Buy, Loch Spelve, and Loch Don. Tobermory Bay is on the NE coast. Of the neighbouring islands the chief are Gometra, Ulva, Staffa, Iona, Kerrera, and Lismore.

Mull has a boisterous coast, a wet and stormy climate, and a rough, unpromising, trackless surface, redeemed only by a few spots of verdure and cultivation in the sheltered valleys, or at the head of the various lochs and inlets. Lord Teignmouth in 1838 described it as 'a vast moor,' though of a spot near Tobermory he said that it is 'a sequestered scene of much beauty, recalling to the Italian traveller, in miniature, the recollection of Terni. Sacheverell, 150 years ago, was struck with its resemblance to Italian scenery. A lake is enclosed by an amphitheatre of hills, covered with oak, interspersed with torrents, forming picturesque cascades.' Modern taste sees much to admire in the misty hills and stretching moors of Mull; and in many places the scenery is grand, and even magnificent. The northern district rises from the sea, sometimes in grassy slopes, sometimes in rocky cliffs or naked terraces, and sometimes in sheer walls of basaltic pillars. The picturesque SE seaboard rises from the coast, with much variety of contour, to a mean altitude of more than 2100 feet above sea-level. Its culminating point, BENMORE (3185 feet), 8 miles inland, is the highest summit in Mull; lesser elevations, from N to S, being Cairn Mor (1126), Spyon More (1455), Dun-da-gu (2505), Creachbeinn (2344), and Ben Buy (2352). The W peninsula of Gribon has an average breadth of 5 miles, and is formed of trap terraces receding inland, and rising in their highest crest to 1400 feet, whence lofty plateaux extend to the shoulder of Benmore. The predominant rock throughout Mull is trap, to a large extent hasaltic and columnar. Granite and metamorphic rocks are found in the W part of the Ross of Mull; and there is a quarry of fine red granite directly opposite Iona, whose cathedral has been largely built of that stone, which was also employed by the late Duke of Sutherland in the internal improvements of Dunrobin Castle. Syenite, blue clay, limestone, and sandstone belonging to the Lias and Oolitic formation are also found. Fresh-water lakes are common. The largest are Loch Frisa in the N; Loch Houran, in the S, near the head of the salt-water Loch Buy; and Loch Ba, in the W, near the head of Loch-na-Keal. Streams are numerous, but, from the size and configuration of the island, are necessarily small. The soil, except on a small rocky district at the extremity of the Ross of Mull, and on the shoulders and summits of some of the mountains, is comparatively deep and fertile, and bears a larger proportion of pasture than Skye. But the beating rains and violent storms of Mull render it one of the least suitable of the Hebrides for grain cultivation. It is much more suited for exclusive attention to grazing. The cows of Mull are numerous and of excellent quality, and some southern breeds of sheep have thriven very well on its moist but verdant pastures. Natural forests were at one time extensive and flourishing, but they are now much scantier. Coppices of larch, Scotch fir, pine, etc., have been planted in the N; and the ash grows with vigour and beauty in sheltered spots in the E. Mull and the adjacent islands were divided into several parishes during Romish times, but at the Reformation these were united into the single parish of Mull. This is now subdivided into the *quoad civilia* parishes of Kilninian and Kilmore, Kilfinichen and Kilvickeon, and Torosay; and into the *quoad sacra* parishes of Tobermory, Salen, Kinlochspelve, Iona, and Ulva. The only town and the seat of the civil administration is Tobermory, in the NW. The chief villages and residences will be found named in the separate articles on the various parishes, to which reference must be made for more detailed information. The Mull Agricultural Association holds an annual show of cattle and produce at Salen about the middle of September. Valuation (1896) £33,966. Pop. (1851) 7485, (1861) 6834, (1871) 5947, (1881) 5229, (1891) 4691, of whom 2437 were females, and 4013

Gaelic-speaking. Houses occupied (1891) 1036, vacant 80, building 6.

There are a number of interesting castles or fortalices on the rugged shores of Mull, to which Scott alludes in his *Lord of the Isles*. The chief are those of AROS, DUART, and Moy. Other antiquities consist of barrows, cairns, camps, small forts, gravestones, and sculptured stones; for an account of which see a paper in the *Proceedings of the Scot. Soc. of Antiq.*, 1833-34. A leading event in the past history of Mull was the fierce sea-battle between Angus of the Isles and the Earl of Crawford and Huntly, which was fought in the 15th century, and has given name to Bloody Bay, a little N of Tobermory.

The presbytery of Mull includes the *quoad civilia* parishes of Ardnamurchan, Coll, Kilfinichen, Kilninian, Morvern, Torosay, and Tyrec, and the *quoad sacra* parishes of Acharacle, Hylipol, Iona, Kinlochspelve, Salen, Strontian, Tobermory, and Ulva. Pop. (1871) 15,233, (1881) 13,933, (1891) 13,424, of whom about 1230 are communicants of the Church of Scotland. The Free Church also has a presbytery of Mull, whose eleven churches have about 2000 members and adherents.

Mull, Sound of, the boomerang-shaped belt of sea separating the island of Mull from the Scottish mainland, is identical in the N with the lower part of Loch Sunart, and in the S with the upper part of the Firth of Lorn. Sometimes it is regarded as stretching between, but excluding these. In this more limited sense, the sound stretches from the headlands of Bloody Bay on the NW, to Duart Point on the SE of Mull, a distance of 19 miles. Along its length it is flanked only by Morven on the mainland side; varies from 11 furlongs to 3½ miles in breadth; and has only 5 or 6 inconsiderable inlets, of which Loch Aline in Morven, and the Bays of Salen and Tobermory in Mull, are the chief. In the larger signification the name is extended to include the channel stretching beyond Duart Point to the headlands of Loch Bay and the northern point of Seil island—in all, a total length of 36 miles. This has occasionally a breadth of 8 to 10 miles, and embraces Kerrera and the smaller islands; and is flanked on the S by Mid and Nether Lorn. The Sound of Mull is deep, but navigation is difficult from the meeting of the tides and the fierce gusts which sweep down from the high hills on either side. The scenery is very beautiful and varied; and along its shores rise the picturesque and often striking ruins of old Highland towers and keeps, such as DUART, ARTORNISH, and AROS. The opening and much of the scene of Sir Walter Scott's *Lord of the Isles* is laid on the Sound of Mull. He refers to the difficulty of navigation in the passage:

'With eve the ebbing currents boiled
More fierce from strait and lake,
And midway through the channel met
Conflicting tides that foam and fret,
And high their mingled billows jet,
As spears that, in the battle set,
Spring upward as they break.'

Mulroy. See KILMONIVAIG.

Munadhliath. See MONADHLIATH.

Munches, a handsome modern mansion of granite, with finely-wooded grounds, in Buittle parish, Kirkcubrightshire, near the right bank of Urr Water, 2 miles S of Dalbeattie. Its owner, Wellwood Herries Maxwell, Esq. (b. 1817; suc. 1858), from 1863 to 1874 was M.P. for the Stewartry.—*Ord. Sur.*, sh. 5, 1857.

Muncraig Hill. See BORGUE.

Munlochy, a village in Knockbain parish, Ross and Cromarty shire, ½ mile W of the head of Munlochy Bay, 5½ miles WSW of Fortrose, and 6¾ N by W of Inverness, with a station on the Black Isle branch of the Highland railway from Muir of Ord to Fortrose, opened in 1894. It has a post office, with money order, savings bank, and telegraph departments, a public school, a public library and reading-room, yearly games of the Black Isle Athletic Association, a football club, a Good Templar lodge, a jetty, and a considerable ex-

port trade in wood—props, staves, and sleepers. Munlochy Bay, an inlet of the Moray Firth, extends 2¾ miles westward; has a maximum width of ½ mile; and is an excellent fishing station.—*Ord. Sur.*, shs. 83, 84, 1881-76.

Murdoch Isle. See ARD, LOCH.

Murdostoun Castle, a mansion in Shotts parish, Lanarkshire, near the right bank of South Calder Water, 2 miles N of Newmains. Its owner is Robert King Stewart, Esq. (b. 1853; suc. 1866).—*Ord. Sur.*, sh. 31, 1867.

Murie House, a mansion in Errol parish, Perthshire, 1½ mile WSW of Errol village. The estate was sold in December 1872 for £78,500, and now belongs to John Broun Broun-Morison, Esq. of Finnerdie and West Errol (b. 1840; suc. 1866). Law Knoll, an artificial mound within the park, measures 120 feet in diameter at the base, 30 in diameter at the top, and 20 in vertical height; stands at the head of an old avenue of lofty oaks; and seems to have once been a seat of feudal courts of justice.—*Ord. Sur.*, sh. 48, 1868.

Murieston House, a mansion in Midcalder parish, Edinburghshire, on the left bank of Murieston Water, 2 miles SSW of Midcalder village. An old castellated edifice, it had fallen into decay, when it was partially rebuilt about 1836. Murieston Water, issuing from COBINSKAW Reservoir, runs 7¼ miles north-north-eastward through West and Mid Calder parishes; and falls into Linnhouse Water in the vicinity of Midcalder village, near the Linnhouse's influx to the Almond.—*Ord. Sur.*, sh. 32, 1857.

Murkle Bay, a creek (4 × 2½ furl.) on the S side of DUNNET Bay, N Caithness, at the mutual border of Thurso and Olrig parishes, 4 miles ENE of Thurso town. It was formerly noted for its fisheries and its manufacture of kelp, and is capable of being rendered a safe retreat to vessels in distress, from tempests in the Pentland Firth. Murkle estate, lying around the bay, belongs to Sir Robert C. Sinclair, Bart. of STEVENSON. The traditional scene of a victory over the Danes, it is said to have originally been called Morthill or 'the field of death.'—*Ord. Sur.*, sh. 116, 1878.

Murlaggan, a village in Kilmonivaig parish, Inverness-shire, near the right bank of the Spean, 16 miles ENE of Fort William.

Murlingden, a mansion in Brechin parish, Forfarshire, 1½ mile NNW of the town.

Murrayfield, a mansion in St Mungo parish, Dumfriesshire, near the right bank of the Water of Milk, 1¼ mile E by S of Lockerbie.

Murrayshall, a mansion in Scone parish, Perthshire, 3 miles NE of Perth. Built by Sir Andrew Murray in 1664, and restored in 1864, it is the seat of Major Henry Stewart Murray-Graham (b. 1848; suc. 1881). Murrayshall Hill (918 feet), a prominent summit of the Sidlaws, is crowned by an obelisk erected in 1850 to the memory of Lord LYNEDOCH.—*Ord. Sur.*, sh. 48, 1868.

Murrayshall, an estate, with a mansion, in St Ninians parish, Stirlingshire, 2¾ miles SW of Stirling. Forming part of the POLMAISE property, it includes the western portion of the battlefield of Bannockburn; contains an interesting series of superpositions of rock, from columnar trap near the surface down to bituminous shale at a depth of 157 feet; and has a limestone quarry.—*Ord. Sur.*, sh. 39, 1869.

Murraythwaite, a mansion in Cummertrees parish, Dumfriesshire, 5½ miles WSW of Ecclefechan. Its owner is William Murray, Esq. (b. 1865; suc. 1872).—*Ord. Sur.*, sh. 10, 1864.

Murrin. See INCHMURRIN.

Murroch Burn, a rivulet of Dumbarton parish, Dumbartonshire, rising on Knockshanoach, adjacent to Dumbarton Muir, at an altitude of 870 feet above sea-level, and running 4½ miles south-westward, along a glen containing abundant supplies of limestone, till it falls into the river Leven, 9 furlongs N of Dumbarton town.—*Ord. Sur.*, sh. 30, 1866.

Murroes, a parish of S Forfarshire, containing two small hamlets—Kellas or Hole of Murroes, 3¼ miles N

of Broughty Ferry and 5 NE of the post-town Dundee; and Burnside of Duntrune (originally and more accurately Burnside of Easter Powrie), $4\frac{1}{2}$ miles NE of Dundee. The nearest station is at Kingennie, on the Dundee and Forfar section of the Caledonian railway.

The parish is bounded N by Inverarity, NE by Monikie, E and SE by Monifieth, S by Dundee and Mains, SW by Mains, and W by Tealing. Including the former Duntrune detached portion of Dundee—which, comprising an area of 794 acres, and being almost surrounded by Murroes, was transferred to it by the Boundary Commissioners in 1891—it has a very irregular outline, with an extreme length from N to S of $3\frac{3}{4}$ miles, an extreme breadth of $2\frac{1}{4}$ miles, and an area of 6098 $\frac{1}{2}$ acres, of which 7 are water. The surface has almost everywhere an undulating character, sinking in the S to a little less than 200 feet above sea-level, and rising north-westward to 378 near Barns of Wedderburn, northward to 443 near Kerryston Bank, 479 near Braeside, and 800 at the meeting-point with Monikie and Inverarity. It mostly presents a pleasant and highly cultivated appearance, and is drained by two streamlets, Sweet or Murroes Burn and Fithie Burn, which fall into Dichty Water. The predominant rocks are trap and sandstone; and there are one or two quarries for the production of pavement and other kinds of stone. The soil is a black loam, partly deep and fertile, partly light and less productive. The principal antiquities are remains of Ballumbie, Powrie, and Wedderburn Castles; and the site is shown of Ballumbie chapel and graveyard, discontinued prior to 1590. The old mansion-houses of Gagie (1614) and Muirhouse still stand, with crow-stepped gables, massive walls and staircases, etc. Gagie is now an ordinary dwelling-house; and the Muirhouse, close to the church, from which the parish derives its name, is occupied as a farm-grieve's residence. Catherine Douglas, whose arm was crushed in a vain attempt to bar the door against James I.'s murderers at Perth (1436), is said to have been espoused to the heir-apparent of the Lovels of Ballumbie. Robert Edward, author of an elegant Latin account of Forfarshire (1678), was Episcopal minister of Murroes in the reign of Charles II. In 1589-90 the Rev. Henry Duncan removed from Ballumbie to Murroes, retaining Ballumbie in charge. This seems to indicate that there were originally two parishes—Ballumbie and Murroes—which would partly account for the very irregular shape of the parish. The only mansion is BALLUMBIE. Murroes is in the presbytery of Dundee and the synod of Angus and Mearns; the living is worth £197. The parish church, built in 1848 over the vault of the FOTHERINGHAM family, is a neat edifice in the Gothic style, with a bell turret and several stained-glass windows. The public school, with accommodation for 165 children, has an average attendance of about 95, and a grant of over £100. Valuation (1884) £10,791, 7s., (1893) £8697, 16s., plus £1668 for railway. Pop. (1881) 749, (1891) 905.—*Ord. Sur.*, sh. 49, 1865.

Murtle House, a modern Grecian mansion in Peterculter parish, Aberdeenshire, near the left bank of the Dee and close to Murtle station on the Deeside railway. The estate is part of an ancient barony which once belonged to Aberdeen city, and is traversed by a burn of its own name.—*Ord. Sur.*, sh. 77, 1873.

Murtly Castle, a seat of Walter Thomas James Scrymgeour-Steuart Fotheringham, Esq., in Little Dunkeld parish, Perthshire, near the right bank of the Tay, $4\frac{1}{2}$ miles ESE of Dunkeld and $2\frac{1}{2}$ WNW of Murtly station on the Highland railway, this being $10\frac{1}{2}$ miles N by W of Perth, and having a post office, with money order, savings bank, and telegraph departments. Old Murtly Castle, said to have been a hunting-seat of the kings of Scotland, includes a keep of unknown antiquity and a beautiful modern addition. Its interior is richly adorned with paintings and other works of art. A little to the S is the new castle, a splendid Elizabethan structure, designed by Gillespie Graham, which, however, was left unfinished at the death of its projector in 1838, and has not been completed. The small pre-Reforma-

tion chapel of St Anthony the Eremita, to the N of the old castle, in 1846 was gorgeously restored for a Roman Catholic place of worship. It is now dismantled, but is occasionally used as a Protestant place of worship. Between the two castles is a fine garden, laid out in 1669, and retaining much of its old Dutch character, with terraces, pools, and clipped hedges. The grounds are of singular beauty, both natural and artificial, with the 'Dead Walk' or ancient yew-tree avenue, the Douglasii Avenue, the Lime Avenue (1711), the Deodara or Sunk Terrace, and every variety of hill and dell, wood and stream, carriage-drive and sequestered walk. Perth Lunatic Asylum, $\frac{1}{4}$ mile N of Murtly station, erected in 1864 at a cost of £30,000, and afterwards enlarged at a cost of nearly £10,000, has accommodation for 260 inmates, and is almost completely shrouded with trees. The grounds, comprising some 60 acres, are tastefully laid out.—*Ord. Sur.*, sh. 48, 1868. See GRANTULY, and chap. vi. of Thomas Hunter's *Woods and Estates of Perthshire* (Perth, 1883).

Musdile or Mousedale, an islet in Lismore parish, Argyllshire, adjacent to the SW end of Lismore island. LISMORE lighthouse stands on it.

Musselburgh, a post-town and parliamentary burgh in Inveresk parish, Edinburghshire, is situated near the mouth of the Esk, $2\frac{1}{2}$ miles ESE of Portobello, $3\frac{1}{2}$ W of Tranent, $3\frac{1}{2}$ N by E of Dalkeith, and $5\frac{1}{2}$ by road (6 by rail) E by S of Edinburgh. Its station is the terminus of a branch line of the North British railway, opened in 1847. The parliamentary boundaries much exceed the limits of the town of Musselburgh proper. This latter lies all on the right bank of the Esk, and excludes the beautiful rising grounds and picturesque village of Inveresk on the S; while it occupies as its site a flat expanse a few feet above sea-level, divided on the N from the Firth of Forth by the grassy downs known as Musselburgh Links. The more extended boundaries of the burgh are N, the beach; E, Ravenshaugh Burn; S, Inveresk lands; and W, the burn at Magdalen Bridge. These limits comprise a length of $2\frac{3}{4}$ miles from E to W, an extreme breadth of $\frac{3}{4}$ mile N and S along the Esk, and about 400 yards of mean breadth over about $\frac{1}{2}$ mile at each end. They include the large suburb of Fisherrow, lying face to face with Musselburgh proper, along the left bank of the Esk; the considerable suburb of Newbigging, stretching in one main street for $\frac{1}{4}$ mile S from Musselburgh proper; the small villages of Westpans and Levenhall, near the mouth of the Ravenshaugh Burn; the hamlet at Magdalen Bridge on the W, besides considerable areas not yet built upon. The environs are picturesque, and are studded with many villas and mansions; those parts of the public roads especially which fall within the legal limits of the burgh, but are just beyond the present town proper, being flanked with neat and pleasant-looking villas, many of them surrounded with gardens. The Musselburgh Heritages Company has also built a number of villas at Linkfield, near the liuks. (See *ESK*, *INVERESK*, *NEWHALLES*, *PINKIE*, etc.) A certain extent of the land within the burgh, especially to the S, is occupied by fertile and prosperous market gardens. The links of Musselburgh, on the NE of the town, are also embraced within the burgh limits. They have long been noted as a golfing ground, and are crowded in the season with players from Edinburgh and the vicinity. The course consists of 9 holes; and forty strokes to the round is considered good play. The chief hazard, a deep and wide sand 'bunker,' is locally known as 'Pandy' or 'Pandemonium.' In 1816 the liuks became the chief scene of horse-racing in the Lothians. An irregularly oval race-course, about 2400 yards in circumference, stretches eastward along the links from a point 100 yards E of the Esk, and, for a considerable part of it, lies close to the beach. At the end next the town there has been erected a stand. On this course races have annually taken place every autumn since 1817, which are known indifferently as the Edinburgh or the Musselburgh Race Meeting. Still more ancient is the practice of archery on the links. Every year the Royal Company of Archers,

the Queen's Bodyguard in Scotland, compete there for a silver arrow, which was originally presented by the burgh. The winner each year receives a 'riddle of claret' from the town; and is bound to append a gold or silver medal to the arrow before the next year's competition. The custom was instituted before the close of the 16th century; and the arrow, which is carefully preserved and is still annually shot for, has a series of medals, in almost unbroken succession from 1603 to the present time, attached to it.

Musselburgh proper consists mainly of the High Street, running with varying breadth along the line of the Edinburgh and Berwick road for a distance of almost 650 yards. The houses on either side present a fairly well-built and comfortable appearance, without much pretension to handsomeness. The street in its central parts expands to a considerable breadth, giving a pleasant and spacious air to the town. The High Street had formerly gates at its E and W ends. Two large pillars still mark where the former was placed; they bear the burgh arms and the date 1770. The W gate was at the old bridge, noticed below. A second street, known as Mill Hill, runs for about 450 yards NE from the end of the iron foot-bridge to the links, and derives its name from an old mill belonging to the town. Various lanes and less important streets run parallel and at angles with these two main thoroughfares. Newbigging suburb stretches S at right angles to the High Street, from a point opposite the Cross. The suburb of Fisherrow, which lies between the E side of the Esk and the sea, consists of several parallel streets, and for all purposes it is regarded as part of Musselburgh, from which it is only separated by the river. It contains no buildings of any importance; and is, on the whole, inferior in appearance to Musselburgh proper. Mall Park, the suburb beside the station, which is at the SW extremity of the town, was about 1878 laid out for feuing, and several new tenements and works have been erected there. The Mall, from which the suburb derives its name, is a short but beautiful avenue, leading from the W end of the High Street to the station, and overarched on both sides with fine trees. These trees were preserved to the town in 1846-47 by the energy of the Rev. Mr J. G. Beveridge, parish minister, who got up a petition successfully praying the directors of the railway, then building, so to modify the original plans as to leave uninjured these great ornaments to the town.

The town-hall, on the N side of the wide central expansion in the High Street of Musselburgh, is a comparatively modern edifice, bearing the date 1762. It was altered in 1875-76 at a cost of £1000, was renovated in 1885, and contains a public hall 48 feet long by 37 broad and 30 high, to hold 600; and includes apartments for the council and police business of the burgh. Adjacent to it is the tolbooth, built in 1590 of materials taken from the ancient Loretto chapel, noticed below. This is said to be one of the earliest instances in Scotland of the use of ecclesiastical materials in the construction of a secular building; and the action drew upon the burghesses of Musselburgh, for about two centuries, an annual sentence of excommunication at Rome. The tolbooth never had any pretensions to architectural beauty, and it suffered much from the weather; but about 1840 it underwent renovation and a certain amount of ornamentation. Adjoining it is a small and curious steeple (more ancient than the main body of the tolbooth itself), with a clock presented to Musselburgh by the Dutch States, in order to encourage commercial relations between the townspeople and the Dutch. It bears the date 1496, and had new dials affixed in 1883, the working parts of the clock being still in wonderful preservation. In 1746 a number of rebels were confined in the tolbooth; and even yet it is used for the detention of prisoners for short periods. In front of the tolbooth stands the old cross, consisting of a heavy square pedestal, surmounted by a pillar, on the top of which is a unicorn supporting a shield with the arms of the burgh. The cross indicates the old position of the *Midraw*, a row of houses that stood in the middle of

part of the High Street, and long interfered with its width and beauty. At the W end of the High Street is a monument erected in 1853 to the memory of David Moir, M.D., long prominent in the town as a public man and a physician, and well known to wider circles as the 'Delta' of *Blackwood's Magazine*. The monument consists of a statue 8½ feet high, by Handy-side Ritchie, on a pedestal 20 feet high, the base of which bears a suitable inscription. There are several buildings of antiquarian and historic interest within the limits of the burgh. On the margin of the links, immediately beyond the ancient eastern gate of the town, stood a celebrated chapel and hermitage, dedicated to Our Lady of Loretto. The chapel, founded most likely in 1533 by Thomas Douchie, a hermit, enjoyed a reputation for sanctity and miraculous powers akin to those ascribed to the famous Church of Loretto in Italy. Keith says the Musselburgh chapel was connected with the nunnery of Sciennes in Edinburgh; possibly it only placed itself under its protection. The hermitage attached to the chapel, inhabited by a solitary ascetic, added to the sanctity of the place, to which large numbers of pilgrims resorted annually. James V. himself performed a pilgrimage on foot to the chapel from Stirling in August 1536, before departing to France to woo a wife. The evils which too often sprang up with the assembling of heterogeneous crowds at shrines and pilgrim resorts, were not absent from Loretto; and Sir David Lyndsay of the Mount directed one of his biting satires against the Loretto pilgrimages. The chapel is sometimes called St Alareit or Lariet, by old writers, e.g. by the Earl of Glencairn in a satirical letter against Romish friars, purporting to come from 'the halie Hermet of Alareit,' and preserved by Knox in his *History of the Reformation*. In 1544 the chapel, along with much of the town, was destroyed by an English army, under the Earl of Hertford. Though repaired after this event, it was finally destroyed in the 16th century and the monks dispersed by a popular outbreak consequent on the exposure of a fraudulent miracle and other impositions of the monks, its materials being used, as we have seen, to build the tolbooth of Musselburgh; and it is now only represented by a mound-covered cell, measuring 12 feet by 10. The property afterwards belonged successively to the Lauderdale family and to the celebrated Lord Clive. The present schoolhouse of Loretto stands on the site of the ancient chapel. There were two other chapels in the town of Musselburgh, similar in character to that of Loretto, but of much less note; both have disappeared. The house in which occurred, on 20 July 1332, the death of the great Randolph, Earl of Moray, the friend and ally of Robert the Bruce, stood till 1809 at the E end of the S side of the High Street. The inhabitants are said to have formed a guard round the house during the earl's illness, and to have received for their devotion some reward, in the form of town privileges, from the Earl of Mar, the succeeding regent. It is also said that the motto of the burgh, 'Honesty,' was derived from Mar's openly expressed opinion that the burghers were 'honest fellows' in acting as they did on this occasion. At the W end of the High Street stands the house in which Dr Smollett was received by Commissioner Cardonell. In the Dam Brae, a back street, there are still extant portions of the Musselburgh Kilwinning Masonic Lodge, built in 1612. In the villa of Eskside, near the Fisherrow end of the iron bridge, dwelt for some time Professor Stuart; and within its garden is the study of his son Gilbert, a detached, two-storeyed, circular building, in which several of the works of the latter were written. PINKIE HOUSE, in the SE outskirts of the town, is separately noticed. The manse of Inveresk, standing near the parochial church, which has been already noted in the article INVERESK, was built in 1806, and is supposed to occupy the site of the pre-Reformation parsonage. The former manse, built in 1681, had many literary associations. Within its walls were composed Williamson's sermons, and great part of Home's tragedy of *Douglas*. During the incumbency of Dr Carlyle, the manse was a favourite

resort of Robertson, Hume, Campbell, Logan, Mackenzie, Smollett, Home, Beattie, etc.; and when Dr Carlyle died, among his papers was found a complete copy of Collins's long-lost *Ode on the Superstitions of the Highlands*.

The river Esk flows through the town from SW to NE in a broad shallow stream, separating Musselburgh proper from Fisherrow. For the most part, its bed is disfigured with banks of gravel; and its waters are dirty; but in times of flood it sometimes attains considerable depth. In 1894 the town council erected a weir and made certain improvements on the bed of the river within the burgh boundary. Along the banks of the stream on either side run public walks, planted with trees. It is spanned by five bridges in and near the town. The chief communication between Musselburgh and Fisherrow is an elegant stone bridge of 5 elliptic arches, erected in 1806-7 from a design by Sir John Rennie. Across this passes the road between Edinburgh and Berwick. Some way higher up, the Esk is crossed by a railway viaduct, which, erected in 1877-78 at a cost of between £2000 and £3000, consists of two spans of malleable iron, 97 and 75 feet long, resting on substantial piers of masonry. Near the station, between these two, and about 220 yards above the former, stands another stone bridge, believed to be originally of Roman workmanship, though many times repaired. It is narrow in the roadway and high in the centre; and it was formerly defended in the middle by a gate, some traces of which exist in the side wall. It has 3 arches, each 50 feet wide, with a spring of only 10 feet; and the segment of the circle is so much depressed in several parts towards a straight line, as to suggest that the frame or cover must have sunk during the erection of the bridge. The bridge is used only by foot passengers, for access is attained to it by steps at each end; but it is interesting as having been for ages the grand thoroughfare between the SE of Scotland and the Metropolis. While the Scottish army was passing along this bridge after the Battle of Pinkie in 1547, Lord Graham, eldest son of the Earl of Montrose, and several others were killed upon it by a shot from the English vessels lying off the mouth of the Esk. A mound was thrown up at Inveresk churchyard by Protector Somerset of England to defend the bridge as a pass, and was afterwards used for the same purpose by Cromwell. The Chevalier's Highland army traversed the bridge in 1745, on their way to the field of Prestonpans. About 250 yards below the stone bridge of 1807 stands an iron foot-bridge upon iron pillars, replacing an earlier wooden bridge on the same site.
