Churches.—The parochial church, as well as the interesting mansions, etc., of the vicinity are noticed in INVERESK and other articles. Northesk *quoad sacra* church stands on the N side of Bridge Street, in Fisherrow, not far from the principal bridge. It is a neat modern edifice, erected in 1838 at a cost of £2500 from designs by William Burn. Northesk and New Craighall *quoad sacra* parishes include all the civil parish W of the river. The Episcopal church, St Peter's, on the S side of the E part of the High Street, was built in 1865. It is in the Gothic style, and has a tower and spire, several fine stained-glass windows, and 220 sittings. There is also an Episcopal chapel in connection with Loretto school, with a new organ of 1880; and in 1880 Lady Mary Oswald's mission chapel (1843) in Newbigging was converted into the Roman Catholic church of Our Lady of Loretto. Other places of worship are a Free church, Bridge Street U.P. church, Mill Hill U.P. church (rebuilt 1894), a Congregational chapel (1800), and an Evangelical Union chapel.

Schools.—Musselburgh grammar-school dates from the latter part of the 16th century, though the present building was erected in 1835. It has 3 class-rooms and accommodation for 350 scholars. Before the Education Act it was under the town council, and endowed by them with £20 annually; it is now under the burgh school board, which consists of a chairman and six members. The following are the schools under the board with accommodation, average attendance, and

government grant:—Grammar (350, about 180, nearly £190), Fisherrow (1093, about 780, nearly £685), Musselburgh (424, about 385, over £400), and St Peter's Episcopal (262, about 250, nearly £230). Of the private schools in Musselburgh, the chief is Loretto boarding school for boys, erected in the 18th century partly by Lord Clive for a residence, and conducted after the method of English public schools. It has become as well known on the other side of the Border as on this.

Musselburgh has a post office, with money order, savings bank, insurance, and telegraph departments, and branches of the Commercial, National, and Royal Banks. The chief hotels are the Musselburgh Arms and the Royal Hotel; and there is also a temperance hotel. The healthiness of Musselburgh, together with its comparative retirement yet easy accessibility to Edinburgh, renders it suitable for the situation of private lunatic asylums, of which there are 2 in Fisherrow, 1 at Newbigging, and 1 near Inveresk. The proximity of the links has largely encouraged the game of golf, and several clubs have club-houses at or near the links. Among these are the Bruntsfield Links Golf Club (1761), whose club-house includes a former Episcopal chapel; the Edinburgh Burgess Golfing Society (1735), the Honourable Company of Edinburgh Golfers (prior to 1744), and the Royal Musselburgh Golf Club (1774). These clubs are in the habit of holding competitions for medals and prizes over Musselburgh Links, once or oftener during the year. Among the charitable institutions, the Boy's Industrial School at the Redhouse in Mill Hill, and the Home for Girls at Levenhall, deserve special notice. Two funds, known respectively as Bruce's and Hastie's, are also in operation, under trusteeship of the minister, provost, etc. The former is for the relief of the poor; and the latter is to provide loans to decent tradesmen, and young men starting in business within certain local limits. It may be interesting to note, that perhaps the first evening school for poor lads in Scotland was started in Musselburgh about 1834 by the Rev. Mr Beveridge, the minister of the parish.

Industries.—Musselburgh is very favourably situated for the purposes of manufacture; but its industrial history has been fluctuating and curious. A broadcloth manufactory, begun in the end of the 17th century, was long carried on, though to no great extent. A kind of checks, known as 'Musselburgh stuffs,' was made in the early part of the 18th century from coarse wool, at the price of from 2½d. to 5d. a yard, and was exported for cheaper wear in America, until cotton fabrics drove it from the market. The manufacture of both coarse and fine woollen cloth lingered in Musselburgh till nearly the end of the 18th century. About 1750 a cotton factory was begun, and employed in the town and environs about 200 looms; but the competition of other parts of the country compelled it to close—a fate which likewise befell a manufactory of thicksets, waistcoats, handkerchiefs, etc., which was started on a small scale near the end of the same century. A china manufactory at West Pans was compelled to abandon the finer manufactures and devote itself to the productions of coarser earthenware, from a similar cause. There are in the burgh pottery and brick and tile works. A starch work at Monkton, S of Musselburgh, paid in 1792 upwards of £4000 of excise duty, but was given up in the following year. A salt work, very long in operation at Pinkie Pans, still exists; but the adjacent chemical work is not now in operation. There was also a chemical manufactory near the links. Brewing was once extensively carried on in Musselburgh, but since the end of the 18th century it has undergone a great decrease, and is now carried on by only two firms. The tanning and currying of leather is carried on in three establishments, and there is a manufacture of sheepskin mats. The manufacture of sail-cloth was commenced on a small scale in 1811, and rose in a few years to a flourishing condition. The weaving of hair-cloth, principally for chair and sofa covers, was commenced in 1820, and in 1838 employed nearly 200 persons, but has now died out. The making of nets and twine is an important industry, dating from

1820. It was carried on in a factory built in 1854 near the station, which was doubled in size in 1867, and superseded a smaller factory of 15 years' standing. The present establishment is probably the largest net-factory in the country, and produces a very large quantity of goods. It includes a weaving shed, hemp-repairing and hemp-spiuning departments, and a cotton mill. Beside the net-factory stands a large paper-mill, producing enormous quantities of printing, writing, and enamelled papers. There are also an extensive wire-mill and tinning and galvanizing work, and 2 corn-mills in the burgh. Seed-crushing, oil-refining, glue-making, and salt-extraction employ a number of hands. The manufacture of golf clubs and balls deserves also to be included among the industries.

Fishing and Harbour.—The fishing industry of the burgh has its seat entirely in Fisherrow, on the W side of the Esk. White fishing has been from a very early date a staple source of income; but the Fisherrow boats are also in the habit of actively carrying on the herring fishery, both in the Forth and on the E coast of England. The fisher population of Fisherrow share in great part the exclusiveness and other peculiarities of the Newhaven fisher folk; and the women of the two places are dressed in similar costume. The harbour of the burgh is usually spoken of as Fisherrow harbour; and is situated more than half a mile W of the mouth of the Esk. An attempt was made in the beginning of the 18th century to change its position to the mouth of the river, but the basin was quickly filled up by the deposits of the stream; and before the middle of the century a return had to be made to the former and present site, which is believed to have been used as a port, even in Roman times. In the Middle Ages some commerce seems to have been carried on between Holland and Musselburgh; and before Leith attained its present pre-eminence, Fisherrow was probably of some little importance. It is believed that the sea has even in modern times receded at this point of the coast, from the fact that English vessels could command the bridge in 1547 with their guns; while there is ample geological evidence to prove that at one time the inland hill on which Inveresk church now stands was the sea-cliff. The present harbour is a small tidal basin, enclosed by two substantial stone piers. Standing on the inner edge of a broad expanse of sand, it is shallow at the best of times; and when the tide is out is quite inaccessible to boats. The average depth at high water is 7 feet in neap tides and 10 in spring tides. The burgh is proprietor of the harbour, but for many years nothing has been done to it, except in the way of necessary repairs. About fifty years ago the present West Pier was built, and the expense left a debt of £6000 on the harbour, while the annual income, barely and irregularly £100, has been quite insufficient to pay the interest on this capital sum, and the debt of unpaid interest has been steadily growing. The fishing boats belonging to this harbour vary from the smallest size up to 46 tons, and the wealth brought into the town by these in the shape of fish perhaps counterbalances the deficit in the revenue. The dues leviable by the town, which are believed to be increasable only by Act of Parliament, are 2s. 6d., 5s., and 7s. 6d., according to the size of boat. The harbour still carries on a little coasting-trade, importing rock-salt from Carrickfergus, and salt, pipeclay, linseed, and a little tanners' bark from England. There are no exports, though rails were laid on the unfortunate West Pier in the expectation that the shipping of coal and minerals would develop. Even the existing trade, small though it is, appears to be on the wane. The custom-house is in New Street; and the port ranks as a creek under Leith.

Municipal History.—Musselburgh, before being constituted a parliamentary burgh, was a burgh of regality. David I. granted the manor of Great Inveresk or Musselburghshire, including Musselburgh, Fisherrow, Inveresk Church, with their pertinents, to the monks of Dunfermline; and this was confirmed by Gregory IX. in 1236; while subsequent grants by certain of David's

successors increased the original baronial jurisdiction to one of regality. Alexander II. added the right of free forestry, and Robert III. gave the monks all the new customs leviable within the burgh. The church of Inveresk was administered by 'vicars of Muscilburgh,' whose names occasionally appear among those of distinguished and influential men as witnesses to charters. After the Reformation the regality and the appertaining property passed to John Maitland, Lord Thirlestane, with whose descendants (the Earls and the Duke of Lauderdale) it remained till 1709, when it was finally purchased by the Duchess of Monmouth and Buccleuch. In 1747, when hereditary jurisdictions were abolished, the Duke of Buccleuch claimed £3000 for the regality of Musselburgh; but for that and certain other rights he only received £3400. The Duke of Buccleuch remained, however, the superior of the burgh. The burgh holds a charter from John, Earl of Lauderdale, confirming various grants and charters of the monks of Dunfermline; and especially, of a charter by Robert, commendator of Dunfermline, dated 1502. This last charter secured various rights and privileges to the bailies, councillors, and community of the burgh; and permitted the magistrates to hold courts for the punishment of offenders, and to levy small dues and customs. This charter of Lord Lauderdale was confirmed by Charles II. on 21 July 1671; and under this last confirmation the property of the burgh is now held. In 1632 a charter under the great seal erected Musselburgh into a royal burgh; but in the same year the magistrates of Edinburgh prevailed upon those of Musselburgh to consent to renounce that privilege. Practically, however, it continued to enjoy most of the rights of the royal burgh except that of parliamentary representation, which, however, was at last secured for it by the Reform Bill of 1833. In connection with the above-noted action of the Edinburgh magistrates, it is interesting to recall the old rhyme:

'Musselburgh was a burgh
When Edinburgh was nane,
And Musselburgh 'll be a burgh
When Edinburgh is gane.'

Present Municipal Government.—Musselburgh, under the Burgh Police Act of 1892, is governed by a provost, 2 bailies, and 6 commissioners. The magistrates hold small debt courts for sums not exceeding £5, and for minor criminal offences. The police force is amalgamated with the county constabulary, and the drainage system has been efficiently carried out. In 1881 an arrangement was put in force, according to which the Edinburgh Water Trust supplies the burgh with water, derived from the Moorfoots, and superseding an older system of waterworks. The gasworks on the links supply Musselburgh and part of Portobello. Extensive property at one time belonged to the burgh, consisting largely of feus, but it has been much alienated. About 1845 it was found that the finances of Musselburgh had been so clumsily managed, that it was forced to become bankrupt, with a debt of about £19,000. Since that time the revenues have been in the hands of trustees; and the town council controls only some £150 annually; though several of its members are, *ex officio*, members also of the board of trustees. The harbour, as already explained, is a serious burden on the finances. The debt now amounts to £9300. Musselburgh unites with

Seal of Musselburgh.

* It may be interesting to note that this rhyme has been explained as a pun, as *brogh* or *brugh* signifies a 'mussel-bed'; but the honest men of Musselburgh reject this interpretation as unsatisfactory.

Leith, Portobello, and Newhaven in returning a member to parliament. The corporation revenue in 1894-95 was £3000; whilst the municipal and the parliamentary constituency numbered 1808 and 1446 respectively. In 1895-96 the annual value of real property was £35,113 (£26,663 in 1884). Pop. of parliamentary burgh (1841) 6366, (1851) 7092, (1861) 7423, (1881) 7880, (1891) 8888, of whom 4631 were females, whilst 5085 were in Fisherrow, 3503 in Musselburgh, and 300 in West Pans. Houses (1891) inhabited 1865, vacant 167, building 15.

History.—Musselburgh is believed to derive its name from a mussel-bank near the mouth of the Esk; its earliest name appears to have been Eskemuthe or Esk-mouth; and its next, including the manor over which it presided, was Musselburghshire. It is mentioned as Eskemuthe by Simeon of Durham as early as the 7th century; and the probability is that even in the earliest times it was the centre of a well-peopled district. Considerable Roman remains have been discovered in its immediate neighbourhood. Where the church now stands, on the summit of the hill of Inveresk, an altar was erected to the sun-god Apollo, and the pratorium was in the adjacent grounds of Inveresk House. Remains of a Roman villa, too, were discovered about the end of the 18th century. When the Lothians were formally ceded to the Scottish king in 1020, the *Ecclesia de Muskilburgh*, dedicated to St Michael, passed under the jurisdiction of St Andrews. In 1201 the barons of Scotland assembled at Muschelburg to swear fealty to the infant son of William the Lyon, afterwards Alexander II. In 1544 part of the town, including the chapel of Loretto, the council-house, and the tolbooth, were burned by an English army under Somerset. Three years later, the fatal battle of Pinkie was fought; and in 1548 Lord Grey, who commanded the English horse at Pinkie, razed the towns of Dalkeith and Musselburgh; and Tytler says that on this occasion the archives and charters of the latter burgh were destroyed. In 1638 the Marquis of Hamilton, bearing a commission from Charles I. to destroy the power of the Covenanters, was met by thousands of these people on the links of Musselburgh, prepared to defend their religion. In 1650 the chief part of Cromwell's infantry encamped on the links, while his cavalry was quartered in the town, and they remained there during nearly two months. The site of Cromwell's own tent used to be pointed out opposite Linkfield House. During the rising of 1715 the town of Musselburgh was put to some expense in providing men and money, both for its own defence and to share in the defence of Edinburgh. In the '45, as has already been noted, Prince Charles the Pretender marched through part of the town on his way to the battle of Prestonpans; and the burgh was required to pay a sum for the uses of that leader. Again, on his way to England, Charles led his army through Musselburgh. The remaining history of the burgh, to be gleaned from the council-books, which are tolerably perfect from about 1679, is uneventful. From 1792 till near the end of the continental war, Musselburgh was the site of a military wooden barracks so extensive as to accommodate more than 2000 men of the militia and volunteer cavalry. In 1797 and subsequent dates, Sir Walter Scott, as quartermaster of the Edinburgh Light Horse, was much in Musselburgh; and about the same time the very different novelist 'Monk Lewis' was a resident in Fisherrow. The presence of so large a body of troops added greatly to the business of the burgh, and when the last regiment finally marched away, a wag gave expression to the general despondency of the burghers by writing on the walls 'A town to let.' Musselburgh has suffered very severely from cholera, no less than four visitations of that disease having taken place since 1831-32. The first was, however, the worst, no fewer than 500 deaths being caused by it.

Reference has already been made to the famous literary men connected with Musselburgh and Inveresk. The parish was the birthplace of David Macbeth Moir (1798-1851); of William Walker (1791-1867), an eminent portrait engraver in London; of John Burnet (1785-

1868), an engraver, and his brother James (1788-1816), a landscape painter; of Alexander Handyside Ritchie (1804-70), sculptor, a favourite pupil of Thorwaldsen; and of Gilbert Stuart (1742-86), historical writer. Lord Clive and Sir Ralph Abercromby were, at different times, inhabitants of the villa of Loretto. Logan, the poet and divine; Lieutenant Drummond, inventor of the 'Drummond lights'; and Mary Somerville, were educated in the parish. The parish is the death-place of the Earl of Randolph, previously noted; and of Major-General Stirling, captor of the standard of the Invincibles in Egypt. See James Paterson's *History of the Regality of Musselburgh* (Muss. 1857).—*Ord. Sur.*, sh. 32, 1857.

Muthill, a village and a parish of Upper Strathearn, central Perthshire. The village lies 270 feet above sea-level, 3 miles S of Crieff and $1\frac{1}{2}$ mile W by N of Muthill station on the Tullibardine and Crieff branch (1866) of the Caledonian railway, this being 5 miles NNW of Crieff Junction and 22 NNE of Stirling. A seat of the Culdees at the close of the 12th century, it was later the residence of the Deans of Dunblane, and for some time after the Reformation gave name to the present presbytery of Auchterarder. The Highlanders burned it in the '15; and now it is one of the best-built and pleasanterest villages in Scotland, having a post office, with money order, savings bank, and telegraph departments, two hotels, a library, a masonic lodge, a bowling club, two curling clubs, a horticultural society, the Poulton Hall, a Young Men's Christian Association and Reading-room, and drainage and water works, constructed in 1872 at a cost of £1600. Engirt by immemorial yew-trees, the Romanesque square, saddle-roofed belfry, 70 feet high, of the ancient church adjoins the ruins of the later nave and aisles, rebuilt by Bishop Michael Ochiltree of Dunblane about the year 1430. The present parish church, erected in 1826-28 at a cost of £6900 from designs by Gillespie Graham, is a handsome Gothic edifice, containing 1600 sittings. Other places of worship are a Free church and St James's Episcopal church, the latter a Gothic structure erected in 1836. Pop. of the village (1881) 882, (1891) 815.

The parish, containing also a small suburb of Crieff, included till 1857 the parish of ARDOCH. It is bounded N by Monzievairst, NE by Crieff, E by Trinity-Gask, SE by Blackford, S by Ardoch, Dunblane, and Kilmadock, W by Callander, and NW by Comrie. The Boundary Commissioners in 1891 transferred to it the Auchnashelloch detached portion of the parish of Monzievairst and Strowan, comprising an area of 4563 acres; also, so much of the parish of Crieff at South Forr as lay to the south of the river Earn; but gave to the parish of Comrie the part of Muthill parish that was situated at Cowden. The utmost length of the parish of Muthill, from E to W, is $9\frac{1}{4}$ miles; and its utmost breadth, from N to S, $5\frac{3}{8}$ miles. The EARN winds $5\frac{5}{8}$ miles south-eastward along all the Crieff border; and MACHANY WATER, from a point $\frac{3}{4}$ mile below its source, flows $8\frac{1}{2}$ miles eastward across the middle of the parish, then 1 mile along the Blackford boundary, till it passes off near Muthill station into Blackford, $3\frac{1}{4}$ miles above its influx to the Earn. Three sheets of water are the quiet little Loch of Balloch ($1\frac{1}{2} \times 1$ furl.); the splendid artificial Pond of Drummond ($5 \times 2\frac{1}{2}$ furl.), curtained with wood, and flanked to the N by rocky Concraig (273 feet); and, immediately E of it, Benniebeg Pond ($4 \times \frac{3}{4}$ furl.), all in the NE corner of the parish. The surface sinks along the Earn to 95 feet above sea-level, thence rising to 1291 feet at conical pine-clad Torlum on the northern border, 1089 at *Corryaur, 969 at Dunruchan Hill, 876 near Culloch, 1129 at Little Hill, 1748 at Ben Clach, 1653 at *Slymaback, 2067 at *Beinn Odhar, and 2179 at *Uamh Bheag, where asterisks mark four summits that culminate on the southern boundary. The western half of the parish, lying within the Highlands, is bleak, barren, and wildly pastoral; the eastern luxuriates in the picturesqueness and fertility of strath and glen, of pleasant slopes and diversified surface. The NE corner, consisting of a large tract, is one of the most delightful

parts of Strathearn. Along the margin of its level and hanging grounds sweeps a hilly ridge, green and cultivated, terminating westward in the most conspicuous object in the parish, the hill of Torlum. To the S of the ridge which ends in this fine hill, lies a narrow vale, the basin of the Machany; and, screening that vale along the other side, runs a naked and chilly upland range, akin in character to the Highland heights of the W, and abruptly losing itself among their huddled mass. This range, commencing on the E, in what is called the Muir of Orehill, bears the name of Corryaur, and forms the watershed between the tributaries of the Forth and those of the Earn. Seen from a height on its southern border, the eastern part of Muthill appears 'an extensive plain, richly wooded, and studded with noblemen's and gentlemen's seats—to the left the grounds of Drummond Castle, haeked by Torlum and lofty Ben Vorlich—in the foreground, the village of Muthill, embosomed in wood, with Crieff and Crieff Knoek beyond, overtopped by the Grampian range—a landscape of singular beauty, variety, and grandeur.'

The predominant rocks are sandstone and trap; and the former has been quarried for building material, the latter for road-metal. The soil along the Earn is alluvial; and that on the ascent thence to the watershed is, first, a light irretentive soil on a free bottom; next, a strong sandy soil, with a mixture of gravel, on a wet retentive bottom; and next, a poor moorish soil, naturally covered with heath and whins. Commanding a view eastward for 40 or 50 miles is a small rock close by Drummond Castle, called Eagle's Craig, and, by the country people, Beacon Hill, whose top is flat and covered to a considerable depth with ashes. A Roman road ran north-north-eastward from Ardoch to the Roman redoubt of Kaims Castle at the southern boundary and Strageath Camp (95 × 80 paces) on the left bank of the Earn. BLAIRINROAR, in the NW of the parish, by Gordon was supposed to be the scene of the battle of the GRAMPAINS; and two wells here, Straid and St Patrick's, were long regarded with superstitious awe, the former being deemed good for hooping-cough;

whilst at a third, the Well of Struthill, lunatics would be left bound overnight, as by the Tomb of St FILLAN. Near the Mill of Steps, 1½ mile S by W of Muthill village, was born, about the middle of the 18th century, a blacksmith's daughter, Glog by name, of exceeding beauty, who, on the outward voyage to America, was captured by an African corsair, and, being sold to the Emperor of Morocco, was admitted into his harem, and at length was raised to the dignity of Empress. Mansions noticed separately, are DRUMMOND CASTLE and CULDEES CASTLE; and the Earl of Ancaster is much the largest proprietor. Taking in the Innerpeffray section of Crieff, Muthill is in the presbytery of Auchterarder and the synod of Perth and Stirling; the living is worth £363. Blairinroar, Drummond Street, and Innerpeffray public schools, and Muthill Episcopal school, with respective accommodation for 40, 267, 56, and 72 children, have an average attendance of about 15, 150, 20, and 60, and grants amounting to over £25, £145, £30, and £50. Valuation (1884) £22,513, 6s., (1892) £20,649, 18s. 8d. Pop. of civil parish (1861) 2001, (1881) 1702, (1891) 2123; of ecclesiastical parish (1881) 1729, (1891) 1639.—*Ord. Sur.*, shs. 47, 39, 1869.

Mutiny Stones. See BYRECLEUCH.

Muttonhole. See DAVIDSON'S MAINS.

Mylnefield Feus, a village at the Forfarshire border of Longforgan parish, Perthshire, 4 miles W of Dundee, under which it has a post office (Mylnefield), with money order and savings bank departments. Mylnefield House stands 1 mile to the W. Pop. (1871) 357, (1881) 348, (1891) 552.—*Ord. Sur.*, sh. 48, 1868.

Myot Hill. See DENNY.

Myrehead. See DRYFESDALE.

Myres Castle, a mansion in Auchtermuchty parish, Fife, ½ mile S of Auchtermuchty station. A fine old building, greatly enlarged about 1828, it is the property of Andrew H. Tyndall-Bruce, Esq.—*Ord. Sur.*, sh. 40, 1867.

Myreton, Clachan of, a tiny hamlet in Glasserton parish, Wigtownshire, at the E side of Monreith Park, 3 miles E by N of Port William.

N

NAIRN (Gael. *Uisge-Nearn*, 'the river of alders'), a river on the S side of the Moray Firth, partly in Inverness-shire and partly in Nairnshire, rising in the former county at a height of 2500 feet above sea-level near the top of Carn Ghriogair (2637), near the southern extremity of the parish of Daviot and Dunlichity, to the E of Loch Ness, and 10 miles due E of the point where the river Foyers enters that loch. The river flows NW for 3¼ miles, and then, taking the name of the Nairn, flows 1 mile N, and from that in the main an irregular north-easterly course to the sea. Measuring in a straight line the whole course from source to sea is 30½ miles, and following windings it is about 38 miles. Of the straight course, 18½ miles are wholly in Inverness-shire; the next 7 are through a district where the county boundaries are very irregular, and each in turn reaches or crosses the river; and the remaining 5½ miles are wholly in Nairnshire. It receives no tributaries of any great size, the principal from source to mouth being, on the SE, the river Brin, the Flichity Burn, the Fernae formed by the combined streams of the Allt Beag and the Uisge-Dubh; the united stream of Allt na Fuarghlaie and Midlaigrs Burn, Craggie Burn, Cawdor Burn, formed by the junction of the Allt Dearg and the Riereach Burn, and Rait Burn. From the SW there is a stream from Loch Duntlichag (702 feet) and a smaller one from Loch Bunachton (701). The upper part of the course is in the parish of Daviot and Dunlichity, and the lower in the parishes of Croy and Dalcross and of Nairn. The upper part of the course in Inverness-shire, from 400 to 700 feet above sea-level, is

through a glen from 1 to 1½ mile wide, flanked by bare heathy hills—those on the SE having a height of from 1500 to 2000 feet, and those to the NW of from 700 to 1000 feet. There is a good deal of haugh land, and many farms are scattered along the glen, which is known as Strath Nairn, while at many points, particularly about Daviot and higher up at Farr, the lower heights and hill skirts are covered with thriving plantations, and elsewhere there are coppices of alder and hireh. The heights to the SE are of gneiss; those to the NW of Old Red sandstone. Patches of till are found up to about 1700 feet to the SW, and during the later glacial epoch the whole strath seems to have been occupied by a small glacier, which has left numerous traces of its moraines. Along the portion of the course through Nairnshire the heights bounding the basin are much lower, reaching on both sides an altitude of from 200 to 300 feet, and the country is fertile and well wooded. During the great floods of 1829 the river was in high flood, and did a great deal of damage, the current being so strong that in one case a heavy mass of machinery from a fulling-mill was carried along for 11 miles. The salmon fishing used to be very poor, in consequence of a weir at the Nairn mills near the mouth, but these were in 1882 purchased by the proprietors along the river at a cost of £3150, and the dam removed. The rod season is from 11 Feb. to 15 Oct., and the trout fishing is good. A district hoard was constituted in 1863, but it having been allowed to lapse in 1876, a new one was constituted in 1884.—*Ord. Sur.*, shs. 73, 74, 84, 1876-78.

Nairn, a parish at the mouth of the river just mentioned, on the sea-coast, in the NW of Nairnshire. It is bounded N by the Moray Firth, E by the parishes of Auldearn and Ardelach, S by the parish of Cawdor, SW by the parish of Cawdor and the parish of Croy and Dalross, and W by Inverness-shire. The boundary line is almost entirely artificial and highly irregular, the parish being formed by a compact portion on the N—measuring 5 miles from E to W, and 2 miles from N to S—from the SE corner of which a long, straggling projection, varying in breadth from 1 to 1½ mile, runs S for 3 miles to the Burn of Blarandualt. The area is 9549 acres, including 86 of water, 454 of foreshore, and 19 of tidal water. Of this area 162 acres belonged to the Raitknock detached portion of the parish of Cawdor until 1891, when the Boundary Commissioners transferred it to Nairn parish. The surface slopes from the sea-beach till it reaches, along the S of the parish, a height of 120 feet, and in the southern prolongation already mentioned it reaches, at Hill of Urchany, a height of over 700 feet. Almost the whole of the surface is under cultivation or woodland. The soil about Kildrummie on the S, round the town of Nairn, and along the coast is sandy and light; along the river it is sand mixed with clay; and throughout most of the southern district it is a good rich loam. The underlying rock is Old Red sandstone. The drainage is effected by the river Nairn, which has a course of 4 miles along the centre and towards the E of the parish and by Lochdhu Burn, which, rising in the SW, has a course of 3 miles, first E and then N, till it reaches the sea 1½ mile W of the mouth of the Nairn. Close to the town of Nairn, on the SW, is the poorhouse for the Nairn Poor-law Combination, which includes the parishes of Abernethy, Ardelach, Ardersier, Auldearn, Cawdor, Cromdale, Croy, Duthil, Dyke, Edinkillie, Nairn, and Petty. It is a plain building, with accommodation for 75 paupers, and the average number of inmates is about 45. Besides Kilravock Castle and Geddes House, which are separately noticed, the mansions are Achareidh, Fir Hall, Househill, Larkfield House, Ivybank, Millbank, Newton, and Viewfield. Geddes is associated with the name of John Mackintosh (1822-51), 'The Earnest Student,' the story of whose life has been so gracefully told by Dr Norman Macleod. At Geddes House once stood a chapel dedicated to the Virgin Mary, but which appears in the Ordnance Survey Map under the somewhat unrecognisable title of St Warn's Chapel. No remains of it are now to be seen, but the site and the surrounding ground is still used as a churchyard, and it is the burial-place of the family of Kilravock, by whom the chapel was founded at least as early as the first half of the 13th century. In the 15th century it was held in high repute for sanctity, and in 1475 Pope Sixtus IV. granted relief for 100 days' penance to all who made pilgrimage to it at certain festivals, or contributed a certain amount to the repair of the building. Three-quarters of a mile E of Geddes House are the ruins of Rait Castle, anciently the seat of the Mackintoshes of Rait, and prior to that a branch of the Cumyns, and also, it is said, of the family of Rait of Rait, which disappeared from the county in the end of the 14th century, and became, according to Shaw in his *History of the Province of Moray*, the founders of the family of Rait of Halgreen in Kincardineshire. The last of the Nairn family was, according to the same authority, Sir Alexander Rait, who, between 1395 and 1400, murdered the then thane of Cawdor. There seems also to have been at an early date a chapel here dedicated to the Virgin Mary; for incidental mention is made in 1343 of 'the hermit of the chapel of St Mary of Rait.' Close to the castle are the remains of an old British fort, called Castle-Findlay. The parish is traversed in the N for 5½ miles by the main coast road from Inverness to Aberdeen, and also for 4½ miles by the Inverness and Forres section of the Highland railway system with a station at Nairn, while in 1894 it was proposed to construct a branch line from Nairn to Cawdor. Besides the town of Nairn, there are the small hamlets of Del-

nies and Moss-side, both in the northern portion of the parish.

The parish is the seat of a presbytery in the synod of Moray, and the living is worth £326 a year. The churches are noticed in the following article. Under the landward school board the public schools of Delnies and Geddes, with respective accommodation for 138 and 69 pupils, have an average attendance of about 70 and 65, and grants of over £65 and £55. Pop. (1801) 2215, (1831) 3266, (1861) 4486, (1871) 4869, (1881) 5368, (1891) 5250, of whom 2913 were females, and 866 Gaelic-speaking, while 1236 were outside the limits of the police burgh.—*Ord. Sur.*, sh. 84, 1876.

The presbytery of Nairn comprehends the parishes of Ardelach, Ardersier, Auldearn, Cawdor, Croy, and Nairn. Pop. (1871) 11,497, (1881) 12,642, (1891) 11,984, of whom about 740 are communicants of the Church of Scotland. The Free Church has also a presbytery, comprising the Free churches in the same parishes, which six churches together have over 2600 members and adherents.

Nairn (formerly *Invernairn*), the county town of Nairnshire, and a royal and police burgh on the W bank of the river of the same name, at its mouth, and near the E side of the sea-coast of the parish just described. By rail it is 9½ miles W by S of Forres, 15½ ENE of Inverness, 21½ W by S of Elgin, 92¾ NW of Aberdeen, 145 SSW of Wick, 176½ NNW of Edinburgh via Forth Bridge, Dunkeld, and Forres, and 191 N of Glasgow. It is a seaport, and the Highland railway facilitates intercourse with the surrounding country and the transit of goods and produce. In 1894 it was proposed to construct a branch line to Cawdor, about 5 miles to the south-west. Nairn is an important and well-known watering-place, in which connection it has been styled the 'Brighton of the North;' and though this is a somewhat lofty title, it is nevertheless a clean, bright, pleasant, little town, with a remarkably dry climate, partly due to small rainfall, which averages about 23 inches annually, and partly to the rapidity with which the light sandy soil of the neighbourhood absorbs moisture. The adjacent beach, which is sandy, and has a very gentle slope, affords excellent bathing ground, well sheltered and secluded, and for those who do not care for open-air bathing, provision is made in the Public Baths to be afterwards noticed. The surrounding country has also many attractions, both from beauty and historical associations (see AULDEARN, BRODIE, CAWDOR, DARNAWAY CASTLE, FINDHORN, FORRES, KILRAVOCK CASTLE, etc.); while the view across the Firth and along the shore beyond is very good. By London physicians the town is often recommended for invalids requiring a dry and bracing, yet moderate climate, and more than half of the visitors every year come from London and the S of England.

History.—The burgh is of considerable antiquity, and some writers have held that it was here that Sigurd built his burg in the latter part of the 9th century (see MORAY), and have identified it with the Narmin of Boece. This identification, though found in the later editions of Camden, and generally given on his authority, can be traced no farther back than Bellenden's translation of Boece, and was probably adopted by Camden from Holinshed's *Chronicle*, which is merely an Anglicised form of Bellenden. Gordon of Straloch and the writer in the *Old Statistical Account* mention an old castle whose site was then covered by the sea, and the latter asserts that there were people then alive who remembered seeing vestiges of it; while, on the other hand, Shaw, in his *History of the Province of Moray* (and he was well acquainted with the district, as he was for fifteen years minister of the adjoining parish of Cawdor), says that no Danish fort or any tradition of it existed. The existence of the royal burgh is said to date from the time of William the Lyon, according to charter mention in the reign of Alexander II., when the king granted certain lands to the Bishop of Moray 'in excambium illius terre apud Invernarn quam Dominus Rex Willelmus, pater meus, cepit de episcopo Moraviensi

ad firmandum in ea castellum et burgum de Invernaren. The castle stood in what was known as the Constabulary garden near High Street, and in the 13th century the sheriffs of Nairn were *ex officio* keepers of it. In 1264 Alexander de Moravia, the then sheriff, was repaid by the royal treasurer for expense incurred in plastering the hall, in placing locks on the doors of the keep, and in providing two cables for the drawbridge. In the 14th century the office of sheriff and constable of the castle became hereditary in the family of Cawdor, and with them it remained till the abolition of hereditary jurisdictions in 1747, when the then thane claimed £3000 as compensation for the first office, and £500 for the second. The lauds and town itself were granted by Robert I. to his brother-in-law, Hugh, Earl of Ross, and they probably continued in the possession of that family till the forfeiture of John, Earl of Ross and Lord of the Isles, in 1475. At that period the tenure of the lands in Nairnshire, which had been formerly held under the Earls of Ross, was changed to a crown-holding; and a similar change very probably took place with regard to the town of Nairn, which then begins to be styled in records the king's burgh and the royal burgh of Nairn; unless it may be thought that the terms of Robert I.'s grant of the earldom of Moray to Thomas Randolph (which cannot easily be reconciled with the Earl of Ross's charter) are sufficient to prove that Nairn, as well as Elgin and Forres, was then of the rank of a royal burgh. The town stands across the line marking the division between the highlands and lowlands which intersects High Street about Rose Street. The part of the town NE of this was inhabited by Saxon-speaking fishermen, the part to the SW by Gaelic-speaking Highlanders, and hence the story that James VI., when twitted, after his accession to the English throne, about the inferior importance of the towns of his old kingdom, replied that, however that might be, he had a town in Scotland 'sae lang that the inhabitants of the one end did not understand the language spoken at the other;' and when Dr Johnson passed through the town 170 years later, he found no great change had taken place, for he says: 'At Nairn we may fix the verge of the Highlands; for here I first saw peat fires, and first heard the Erse language.' He is otherwise very hard on the town, for he says: 'We came to Nairn, a royal burgh, which, if once it flourished, is now in a state of miserable decay; hut I know not whether its chief annual magistrate has not still the title of Lord Provost.' In the Covenanted troubles of the 17th century the burgh does not seem to have taken a very active part, or to have suffered much, though, after the battle of Auldearn, Montrose's men burned and destroyed Cawdor's house in the town. The Duke of Cumberland spent the night of 14 April in the Laird of Kilravock's town-house here, and the night following at the old house of Balblair not far off. To the W of the town, between Balblair and Kildrummie, are the fields where the Royalist army encamped, where they held their rejoicings on the Duke of Cumberland's birthday, the 15 April, and where they were when the Highlanders attempted their night surprise. The only distinguished native of the town was Lieutenant-Colonel James Grant, C.B. (1827-92), son of a former parish minister. Colonel Grant accompanied Speke in his journey to the sources of the Nile in 1863, and gave an account of the expedition in his *Walk across Africa*.

Streets, etc.—The principal street, High Street, extends from the river south-westward for about $\frac{1}{2}$ mile, and contains now a number of very good buildings. From it the older streets branch off, but along the sea and on the W side there are large numbers of handsome villas, many of them built for the purpose of being let to visitors, but others built by their proprietors as sea-side residences for themselves. The county buildings, near the middle of the NW side of High Street, were erected in 1818, and greatly improved in 1870. They have a good front and spire, and, besides providing accommodation for the county offices, contain a large

county hall, used also as a court-room. The prison cells erected behind have, since the passing of the Prisons Act, become almost useless. The public hall was projected in 1865, and built by a joint-stock company at a cost of about £1200. It contains a large hall, with accommodation for 800 persons, supper-rooms, and ante-rooms. On the SE of the town the railway crosses the river Nairn by a handsome stone bridge of four arches, each with a span of 70 feet and 34 feet high. A little farther down the river is the bridge for the great coast road. It was originally built by Rose of Clava in 1632, but has since been very extensively repaired in consequence of damage received in heavy floods in 1782 and 1829. The parish church, erected in 1893-94 at the corner of Seabank Road on a site presented by Colonel Clark of Achareidh, provides accommodation for 1200 worshippers. It is a very handsome church in the Early Gothic style, with square tower above the entrance, the estimated cost of the edifice being £8000, and superseded a plain erection of 1811, containing 900 sittings. The new Free church to the S is a fine building, Early French Gothic in style, erected in 1880-81 at a cost of £7000, and containing 1200 sittings. There is a handsome spire with clock and bell. The U.P. church, erected in 1851-52, contains 512 sittings. The Congregational church, erected in 1804 at a cost of £575, contains 416 sittings. St Columba's Scottish Episcopal church is an Early English edifice of 1857, containing 225 sittings; and St Mary's Roman Catholic church (1864) contains 150. There is also a small English Episcopal church. At the SW end of the town is Rose's Academical Institution, built by subscription on ground given by Captain Rose, and supported by endowment, subscriptions, and fees. Near it is a monument erected by old pupils as a memorial of Mr John Strath, who was for 40 years parish schoolmaster. In 1890 a statue was erected to the memory of Dr Gregor, a well-known Indian medical man. Church Street and the Monitory public schools, and St Mary's Roman Catholic school, with respective accommodation for 348, 470, and 50 pupils, have an average attendance of about 270, 275, and 35, and grants amounting to about £245, £220, and £25. There are also some private schools. The Town and County Hospital, to the W of the town, was erected by subscription in 1846, and is supported by donations and subscriptions. It is managed by directors chosen by the subscribers. The Northern Counties Convalescent Home is situated at Nairn, and there is a cemetery E of the town. There is also a museum, containing a valuable cabinet of minerals.

Two large bathing establishments possess all kinds of artificial baths, cold, tepid, and warm. The Marine Hotel salt-water baths are open to the public at all seasons. Near the sea-shore is a large swimming-bath, erected in 1872-73 at a cost of about £1500. The main building is a square measuring 91 feet each way, covered with a glass roof. The plan of the bottom has been so ingeniously managed, that, while the depth of water slopes gradually from 1 foot 3 inches to 6 feet, yet there is a swimming course all round of about 100 yards. Water is pumped from the sea by a centrifugal pump worked by steam, and the bath when full holds 140,000 gallons. A large number of bathing coaches ply on the beach during the summer months.

A wharf and harbour were constructed at the mouth of the river in 1820, according to a plan by Telford, the principle being to increase the depth of the river, and by straightening its course from the bridge downwards to increase the scour, and so prevent the silting up of the opening. Inclusive of a sum paid for injury to the neighbouring salmon fishings, the operations cost £5500, but so great was the damage done by the flood of 1829 that only very small vessels and fishing boats frequented the place. Fresh works, on a similar plan, were afterwards again constructed; a breakwater of wood and stone, 400 yards long, was extended from the E side of the river, so as to afford shelter against the only winds to which the harbour is exposed; and further

improvements have subsequently been made. The rise of spring tides in the harbour is about 14 feet, and of neaps 11 feet. In its custom-house relations it is a creek under the port of Inverness. In 1894 there were 78 boats belonging to the place, of which 46 were first-class, 27 second-class, and 5 third-class; and connected with them there were 250 resident fishermen and boys. Most of these boats prosecute the herring fishing from ports farther down the firth. The exports are timber, corn, potatoes, eggs, smoked haddocks, herrings, and freestone; and the imports are foodstuffs, soft-goods, hardware, lime, manures, and coal. The white fishing is successfully prosecuted, and there are good salmon fishings along the coast on both sides of the river. The harbour affairs are managed by the town council. There are excellent sandstone and granite quarries within a few miles of the town, and a well-known distillery at Brackla is 4 miles off.

Municipality, etc.—Any charters erecting the town into a royal burgh, or granting or ratifying its privileges, appear to be lost; but a charter of confirmation, granted by James VI. in 1597 and approved by act of parliament, refers to one of Alexander I. The town is now governed by a provost, a deau of guild, a treasurer, 3 bailies, and

Seal of Nairn.

11 councillors. Under the Burgh Police Act of 1892 there are 9 commissioners of police, but the police force is incorporated with that of the county, which has its headquarters in the town. The corporation at one time possessed a considerable amount of landed property, but most of it has been alienated. The revenue is about £1000 a year. Gas is supplied by a private company formed in 1839. Water was introduced many years ago, and in 1884 the supply was improved by the erection of a concrete collecting well near the springs at Urchany, the cost of the improvement being about £900. In 1878-80 a scheme for the utilisation of the sewage was carried out. The whole refuse is carried across the river in an iron pipe 18 inches in diameter, and spread by irrigation over the surface of a salt marsh, from which the sea has been dammed out by an embankment of clay down to the rock. The pipe is carried across the river on two iron cylinders filled with concrete, and this portion has been converted into a foot-bridge, while beyond it is embedded in an embankment, on the top of which is a walk. The total cost was £3000, of which £1542 was spent on the irrigation scheme alone. The arms of the town are St Ninian in a proper habit, holding in his right hand a cross fitchée, and in the left an open book.

The town has a head post office, with money order, savings bank, insurance, and telegraph departments; offices of the British Linen Company, Caledonian, National, and Royal banks, a National Security Savings Bank, and several hotels. The newspapers are the *Nairnshire Telegraph* (1841), published on Wednesday, and the *St Ninian's Press* (1892) on Saturday. There is a masonic lodge and a Foresters' court; and among the miscellaneous institutions may be noticed

the Volunteer Hall, the Seamen's Hall, the Literary Institute, the Nairn Friendly Society, a branch of the Shipwrecked Mariners' Society, the Nairn Building Society, a Farming Society, the Mackenzie Bursary Fund, John Rose Troup's Charitable Fund, the Ladies' Benevolent Society, the Nairn Coal and Meal Fund, the Swimming Club and Humane Society, the Rowing Club, the Bowling Club, the County Cricket Club, the Golf Club, and the 10th and 11th batteries of the Highland Artillery Volunteers. Ordinary and small debt sheriff courts are held every Tuesday during session. Quarter sessions are held on the first Tuesdays of March, May, and August, and on the last Tuesday of October. Ordinary weekly markets are held on Thursday. Fairs for cattle and other live stock are held monthly on the Saturday after Beaul, and hiring fairs on the Thursdays preceding 26 May and 22 Nov.

Nairn unites with INVERNESS, FORRES, and FORTROSE in returning a member to serve in parliament. Parliamentary constituency (1895-96) 564; municipal constituency 726 (162 females). Valuation (1884) £13,710, (1895) £15,333, inclusive of railway. Pop. of royal burgh (1881) 4645, (1891) 4640; of parliamentary burgh (1841) 2388, (1851) 2977, (1861) 3435, (1871) 3735, (1881) 4161, (1891) 4014, of whom 1726 were males, and 2288 were females. Houses (1891) inhabited 859, vacant 50, building 2.

Nairne. See AUCHTERGAVEN and MEIKLEOUR.

Nairnshire, a small county in the N of Scotland, on the S shore of the Moray Firth. It is bounded N by that arm of the sea, E by Elginshire, and S and W by Inverness-shire. The Boundary Commissioners in 1891 effected a considerable readjustment of the boundaries of Nairnshire in connection with the neighbouring counties of Elgin, Inverness, and Ross and Cromarty, with the result that the county contains now but five parishes, one of these—Croy and Dalross—being, however, still left partly in Inverness-shire. Of the parishes partly in Nairnshire and partly in Elginshire, Dyke and Moy has been placed wholly in the county of Elgin; and the two detached parts of the Nairnshire parish of Ardclach have also been transferred to Elginshire, to the parish of Edinkillie. Of those partly in Nairnshire and partly in Inverness-shire, Cawdor has been placed wholly in the former county, and Davity and Dunlichity wholly in the latter; while Moy and Dalrossie has been restricted to its Inverness-shire portion, the Nairnshire portion having been transferred to Cawdor. By the latter transfer no change has been made on the boundary. The parish of Croy and Dalross, too, except a detached part in Inverness-shire which was transferred to the parish of Luverness, was redivided between the two counties in such a way as to avoid the inconveniences caused by the former boundary, with the result of leaving the parish pretty equally divided between them. As regards the county of Ross and Cromarty, a large part of the parish of Urquhart and Logie-Wester formed a detached portion of Nairnshire. This portion consisted simply of the barony of Ferintosh, and had been for years treated as part of Ross and Cromarty for most county purposes. The Commissioners completed the transfer by disjoining it from Nairnshire and annexing it to Ross and Cromarty. These detached portions of Nairnshire had been included in the county since 1476, when William, Thane of Cawdor, had influence enough to have all his lands in the neighbouring counties included in the county of Nairn, where the main body of his estates lay. Ferintosh is the Gaelic *Fearn-tosh*, 'The Toishach's or Thane's land.' For further details concerning the parish boundaries, see the separate articles.

The outline of the county is very irregular, and to a large extent artificial. Starting from the NE corner at the middle of the bank known as the Bar, midway between the mouth of the river Nairn and that of the river Findhorn, it proceeds irregularly S by E to the Muckle Burn, close to Earlsmill, and after following the course of that stream for 2 miles again strikes in its former direction to the Findhorn at the bend SW of

Dounduff. After following the course of the Findhorn for 7 furlongs it strikes SE to the high ground between the basins of the Dorbeck and the upper tributaries of the Findhorn, which—except for a zigzag to the E at Lochan Tutach and another to the E at Lochindorb—it follows S and S by W to its most southerly point at Carn Glas (2162 feet). The principal summits along this line, from N to S, are Carn Dubhaidh (1000 feet), Hill of Aitnoch (1351), Carn nan clach Garbha (1362), Carn Allt Laoigh (1872), and Carn Glas. From this last summit the line passes irregularly north-westward—between the basins of the Edinchat Burn (SW) and the Leonach and Rhilean Burns (NE), all flowing to the Findhorn—by Carn an t' Sean-liathanaich (SE, 2076; NW, 2056) and Carn Torr Mheadhoin (1761) to the Findhorn, which it reaches near the upper end of the Streens, midway between Polochaig and Ballerochan. It turns up the river for 5 furlongs, and then strikes first N by W to the summit of Carn nan tri-tighearnan (2013 feet), and thence westward to the Dalriach Burn near its source. It follows the course of this stream for $1\frac{1}{2}$ mile to the bend where the burn turns to the S, and then passes NW to the top of Beinn na Buchanich, whence the course northward to the shore of the firth, $3\frac{2}{3}$ miles E of Ardersier Point at Fort George, is a series of most involved zigzags too complicated to be here particularly described. The length of the county is $17\frac{1}{2}$ miles from the mouth of the Nairn on the N to Carn Glas on the S, and the mean breadth is about 11 miles. Of the total area of the county 25,692 acres were under cultivation in 1896, and 13,443 were under wood, while 2976 were under permanent pasture, and the rest was rough grazing, heath, and waste, there being a considerable amount devoted to grouse. Among the counties of Scotland Nairnshire is thirtieth as regards area, thirty-second as regards population, and thirty-third as regards valuation.

The portion of the county near the coast is part of the well-known 'laich of Moray.' It is fertile and well-wooded, and within 2 miles of the shore rises to an average height of from 70 to 80 feet above sea-level. Within the next 6 miles this rise is continued to a height of about 600 feet, and the whole district is under cultivation or covered with thriving woods. South of the 800 feet contour line the whole county is wild moorland, with an average height of from 1200 to 1500 feet, and having, besides the heights already mentioned, along the boundary the tops of Carn Maol (1000), Creag an Daimh (1180), Carn a Chrasgie (1314), Carn na Callich (1218), Beinn Bhuide Mhor (1797), Carn Sgumain (1370), Maol an Tailleir (1373), Carn na Sgubaich (1522), and Carn a Garbh glaic (1523). The drainage of the S and E is effected by the Findhorn and its tributaries. The Findhorn enters the county near the centre of the SW side, and flows across towards the NE, quitting it near Dounduff after a course of almost 19 miles. From the S it receives the Tomlachan, Leonach, and Rhilean Burns, which drain the extreme S of the county, but none of the other tributaries are of any great size or importance. The centre of the county is drained partly by the Muckle Burn—which, rising at Carn a Chrasgie, has a north-easterly course of about 16 miles ere it passes into Elginshire—and its tributaries the Blarandualt Burn (W) and the Lethen Burn (E); and partly by the Riereach Burn and Allt Dearg which rise in the SW, and, joining near Cawdor, flow to the river Nairn. The drainage on the W is carried off by the Nairn and by a small burn that flows into the sea $1\frac{1}{2}$ mile W of the mouth of the Nairn. The lochs are neither large nor important. In the NE corner, near the sea, and within $\frac{1}{4}$ mile of one another, are Loch Loy ($1\frac{1}{2} \times \frac{1}{4}$ mile) and Cran Loch ($3 \times 1\frac{1}{2}$ furl.); near the NW border is the Loch of the Clans ($1\frac{1}{2} \times 1$ furl.); and on the border, and partly in Inverness-shire, is Loch Flemington (1 mile \times $1\frac{1}{2}$ furl.); near the centre of the E side is Loch Belivat (3×1 furl.); near the centre of the county the Loch of Boath ($2 \times \frac{1}{2}$ furl.); and on the E boundary a portion of Lochan Tutach. None of the lochs are of importance for angling, and,

except the Findhorn, the Nairn, and Cawdor Burn, none of the streams.

Geology.—The geological features of Nairnshire, though presenting no great variety, are nevertheless of considerable interest and importance. The rock formations occurring within the boundaries of the county may be classified as follows: 1. the stratified crystalline rocks with the associated granite masses; 2. the representatives of the lower and upper Old Red Sandstone; 3. the glacial, post-glacial, and recent deposits, which attain a remarkable development. The belt of low ground bordering the Moray Firth is occupied by members of the Old Red Sandstone, while the high-lying districts are composed of metamorphic and igneous rocks. Indeed the distribution of the rock formations in this county furnishes ample proof of the close relation between the superficial features and the geological structure.

In the tract lying between the basins of the Nairn and Findhorn, the stratified crystalline rocks are thrown into a great synclinal fold, the axis of which runs approximately from Dallaschyle southwards in the direction of Creag an Daimh. In the Riereach Burn, and in the streams which unite to form the Muckle Burn, the general inclination of the strata is towards the NW and WNW, but as we proceed towards the W boundary of the county we find that the same strata gradually swing round till the strike is nearly at right angles with its former course. This change in the strike of the beds, which is evidently due to an extensive fold, may be followed in the streams draining the W slope of Carn nan tri-tighearnan, and in the higher reaches of Allt Dearg. There is little variety in the lithological character of the strata throughout the area just indicated, as they consist for the most part of grey micaceous flaggy gneiss, thin bedded mica schists, and bands of micaceous quartzite.

In the centre of the synclinal fold, however, between Dallaschyle and Creag an Daimh, the flaggy gneiss is overlaid by a more massive series, in which the foliation is not so well marked, and the mica is not so abundantly developed. Far up on the northern slope of Carn nan tri-tighearnan there is to be found an interesting band of porphyritic gneiss, containing large crystals of felspar, round which the quartz, felspar, and mica curve in irregular folia. In general character this rock resembles the well-known bands of porphyritic gneiss or foliated granite to be found in the county of Banff. Throughout the area occupied by these stratified rocks there are numerous veins of granite, diorite, and amphibolite. The best example of the last-mentioned occurs near Rehiran, about 3 miles southwest of Cawdor, the chief constituent being hornblende, which is associated with a small quantity of mica and felspar.

There are three masses of granite within the limits of the county. Of these by far the largest is situated along the E boundary, extending from Lethen Bar Hill S by Ardelach and Glenferness to the Bridge of Dulsie, a distance of 6 miles. The second area lies along the W border, between Ben nan Cragan and Ben Buidhe Mhor; while the third extends from Rait Castle E to near Kinstearry. Though of limited extent, the last of these granite masses is of considerable commercial value, as the rock forms an admirable building stone, and when polished presents a beautiful appearance. The beauty of the rock is due to the presence of large crystals of pink orthoclase felspar, which are developed porphyritically in the midst of the quartz, felspar, and mica. Indeed the lithological character of the rock is so distinct that boulders of it can be detected in the superficial deposits, far to the E, in the low grounds of Elgin and Banffshire.

The relations between these ancient crystalline rocks and the overlying strata of Old Red Sandstone age clearly show that the old land surface must have undergone considerable denudation prior to Old Red times. Not only do the breccias rest on a highly eroded platform; they frequently fill up considerable hollows in the

metamorphic series. Even at that far off time, there must have been hollows or valleys between Dallaschyle and the Hill of Urchany, and between the latter hill and Lethen Bar; but there is no evidence pointing to the conclusion that the valleys of the Findhorn and Nairn were excavated at that ancient date. Beginning first with the lower Old Red Sandstone strata, it is observable that the inland boundary, when followed from Lethen Bar W to the valley of the Nairn at Cantray, maintains a sinuous course. From Lethen Bar the boundary line sweeps in a great curve by Littlemill and the Wine Well round the N margin of the granite of Park. From the latter point it stretches SW by Little Urchany to the ravines S of Cawdor, where it forms a similar curve to that described, thence winding round the ridge of gneiss at Dallaschyle to the S slope of the valley of the Nairn. The general succession of the strata belonging to the lower division is remarkably uniform in different parts of the county; the chief variation being due to the irregular thickness of the basement breccias. Resting unconformably on the gneiss, and forming the lowest member of the series, we find a coarse breccia, which is composed of angular and sub-angular fragments of the underlying rocks. Though the dominant ingredients consist of gneiss and quartzite, it is of importance to note that the breccia at certain localities is largely made up of granitic detritus. On the NW slope of the Lethen Bar Hill, and again in the valley of the Nairn near Cantray, numerous blocks of granite are met with in the basal beds which have been derived from the adjacent granite masses. It is obvious therefore that the latter must have been exposed to denudation ere the lowest beds of the Old Red Sandstone in this county were deposited on the sea floor. By far the best section of the basal breccias and conglomerates is exposed in the ravine S of Cawdor, where the Riereach Burn has cut a narrow gorge through them. From their development at this locality there can be little doubt that they fill a bay in the ancient coast-line, a supposition which gains support from the fact that the basement breccia thins away to a few feet against the projecting spurs of gneiss at Rait Castle and Dallaschyle. The strata just described are succeeded by the well-known fish bed, which forms such an important horizon in the Moray Firth basin. At certain localities thin reddish sandstones are intercalated between the breccias and the fish bed. The latter presents the features so characteristic of this important zone, the fish-remains occurring in the heart of limestone nodules, while the nodules are embedded in soft clays or shales. At several localities it has proved highly fossiliferous. Of these, perhaps the most celebrated within the county is Lethen Bar, where numerous ichthyolites have been obtained in a fine state of preservation. The old quarry where the limestone was formerly wrought is now covered up, but by making a series of trenches through the boulder clay in the farm of Brevail it is still possible to exhume excellent specimens. On the farm of Clune, close by Brevail, fossils have also been met with in the fish bed. The following species, among others, have been gathered from these localities: *Pterichthys Milleri* (Ag.), *P. cornutus* (Ag.), *P. oblongus* (Ag.), *P. productus* (Ag.), *Cocosteus oblongus* (Ag.), *Diplacanthus striatulus* (Ag.), *Cheirolepis Cummingsæ* (Ag.), *Osteolepis major* (Ag.), *Glyptolepis leptopterus* (Ag.).

The fish bed caps the NW slope of Lethen Bar Hill, and is isolated from the outcrop on the N bank of the Muckle Burn, near Lethen House. This stream has cut down to the basal conglomerate underlying the fish bed, and displays excellent sections of the breccias between Fleenasgael and Buruside. To the W of the projecting spur of gneiss and granite at Rait Castle and Park the clays with the fossiliferous limestone nodules reappear at Knockloan about 3 miles S of Nairn, while in the valley of the Nairn they are to be met with on the N bank of the river between Cantray and the W boundary of the county. Owing to the vast accumulation of superficial deposits in the low-lying parts of Nairnshire there is no continuous section of the strata

which succeed the fish bed. From the various exposures, however, it is evident that the general character of the beds is widely different from the massive sandstones of the upper division. They consist of fissile micaceous shales, which are frequently charged with beautiful specimens of *Psilophyton*, grey grits and sandstones, well-bedded flagstones and shales. Indeed the general order of succession of the lower Old Red Sandstone in Nairnshire closely resembles that in the adjacent portions of Inverness-shire.

To the S of the main boundary line of the lower division there are two small outliers of coarse conglomerates and sandstones, which evidently belong to the same series. One of these occurs in the Muckle Burn near Highland Boath, while the other is met with in the Findhorn basin near Drynachen Lodge. The former rests unconformably on the ancient crystalline rocks, while the latter is brought into contact with them by two parallel faults. Though they are now completely isolated from each other as well as from the main area, they clearly indicate the original extension of the members of the lower division far up the slopes of the Highland hills.

An interesting feature connected with this formation in Nairnshire is the evidence of an unconformity between the upper and lower divisions of the system. Attention has already been directed (see ELGINSHIRE, geological description) to the magnificent section of the upper Old Red Sandstone in the Findhorn N of Sluie. The strata present the same characters in the Muckle Burn between Earlsmill and Whitemire and along the shore at Nairn. Grey and reddish grey false-bedded sandstones, with bands of fine conglomerate and thin seams of red clays or shales, follow each other with little variation. The sandstones frequently contain pellets or nodules of green clays, which decompose readily under atmospheric agencies. These beds have been largely quarried in the neighbourhood of Nairn, and various old quarry holes are to be seen along the ancient coast-line bounding the 25-feet terrace. Numerous plates of *Pterichthys major*, recently named *Asterolepis maximus* by Dr Traquair, have been obtained from these sandstones at Nairn. The great divergence in lithological character and organic contents between the members of the upper and lower divisions in this county was first detected by Dr Malcolmson, and the unconformity between the two divisions has been recently demonstrated by Sir Archibald Geikie. From the manner in which the sandstones of the upper division steal across the edges of the lower Old Red strata as we pass E from the town of Nairn towards the Muckle Burn at Glen-shiel, it is evident that there is a gradual overlap of the one series on the other. Near the latter locality the upper Old Red Sandstone rests on the oldest members of the lower division, while still further E, in the Findhorn section, the former rests directly on the ancient crystalline rocks. It follows therefore that during the interval which elapsed between the lower and upper divisions of this formation the members of the lower Old Red Sandstone must have undergone considerable denudation.

Between the Old Red Sandstone period and glacial times there is a gap in the geological record of the district. If any of the secondary formations were ever deposited in the low grounds of the county they have been completely removed by denudation. The superficial deposits of glacial and post-glacial age are splendidly developed in the lower districts; indeed, owing to this fact, few glaciated surfaces are exposed by means of which the direction of the ice-flow can be determined. At the granite quarry near Newton of Park an admirable example is seen of a striated surface, the striae pointing E and a few degrees S of E. Along the W border of the county, between the Nairn valley and the coast-line, the ice-markings trend to the N of E. When these facts are viewed in connection with the evidence supplied by the adjacent counties of Inverness and Elgin, it is apparent that the ice issuing from the Great Glen towards the Moray Firth moved first of all in an ENE direction, and was gradually deflected towards the E

and the ESE on approaching the plains of Nairn and Moray.

In certain parts of the county there are two distinct boulder clays, which are separated by an important series of inter-glacial sands, gravels, and finely laminated clays. The older of the two boulder clays is usually more tenacious than that which overlies the inter-glacial beds, and the stones are generally more distinctly grooved. Admirable sections showing the order of succession of this glacial series are exposed in the streams draining the Cawdor moors. An examination of the stones embedded in the boulder clays shows that even in the areas occupied by the gneiss striated blocks of red sandstone occur in considerable abundance, thus indicating that the ice was compelled to move E along the slopes of the hills, bearing along with it the detritus from the Old Red Sandstone tracts to the areas occupied by the metamorphic series.

In the valley of the Nairn at Clava, Mr Fraser, C.E., Inverness, has obtained marine shells from fine blue clay underlying boulder clay. This locality was formerly included in Nairnshire, but by the recent Boundary Commission it has been transferred to the county of Inverness. This high level shell-bearing deposit has been investigated by a committee appointed by the British Association, and the results of their examination have been published in the report of the Nottingham meeting (1893). By means of excavations at the surface and trial bores, the committee constructed the following section showing the sequence of deposits at this locality:

1. Surface soil and sandy boulder clay, . . . 43 feet.
2. Fine sand, 20 "
3. Shelly blue clay, with stones in lower part, 16 "
4. Coarse gravel and sand, 15 "
5. "Brown clay and stones," 21½ "
6. Solid rock. (Grit of Old Red Sandstone age.)

The shelly clay was proved to be 16 feet thick in the main section, and appeared to be continuous for a distance of 190 yards in a nearly horizontal position. It contains a small proportion of stones, usually well rounded, and chiefly near the base, varying considerably in relative proportion from those in the overlying boulder clay and underlying gravel. This variation is specially marked in the blocks of Old Red Sandstone. For example, the proportion of Old Red blocks in the shelly blue clay is only 17 per cent., while in the overlying boulder clay and underlying gravel it varies from 70 to 80 per cent. There is, further, a difference in the appearance of the sand in the shelly clay and that occurring both above and beneath it. The report also states that the variety of shells in the clay is limited. They are chiefly shallow-water species; some might have lived at depths varying from 15 to 20 fathoms or in shallower water nearer the shore, but the majority are littoral forms. Though the fauna is not intensely Arctic, it implies colder conditions than the present, there being a considerable number of Arctic species common in the glacial beds in the west of Scotland. The prevailing shell is *Littorina littorea*, but the following, among other forms, were noted—*Astarte compressa*, *A. sulcata*, *Leda pernula*, *L. pygmaea*, *Mytilus edulis*, *Tellina Baltica*, *Buccinum undatum*, *Natica Groenlandica*, etc. In this deposit barnacles (Balani) and crab claws were also obtained, together with Ostracoda and Foraminifera. It is important to note that the shells are remarkably well preserved, many retaining their epidermis. They do not show any abrasion or other effects of ice action. Relying solely on the condition of the organic remains, one would infer that the deposit is *in situ*, and indicates a depression of the land to the extent of over 500 feet. Though such was the general opinion of the committee, a minority considered that the evidence was not sufficient to establish this conclusion.

Resting on the upper boulder clay there is a great development of morainic gravels on the moory ground between the basins of the Nairn and Findhorn; sometimes forming long sinuous ridges upwards of ¼ mile in length, which enclose shallow lochans or patches of

peat. By far the most interesting development of the kamiform series occurs in the low ground between Nairn and the W boundary of the county. Beginning at Meikle Kildrummie this prominent ridge of sand and shingle is traceable W to Loch Flemington, a distance of 3 miles. At the former locality the height of the kames is about 100 feet above the sea-level, and towards the W limit they rise to the level of 140 feet. This long kame forms a prominent feature on the broad platform of sand and gravel to the S of the railway between Nairn and Fort George. It stands indeed at the edge of the belt of fertile ground formed by the 100-foot terrace. In addition to this ancient terrace there are remains of the 50-foot beach to the E of the town of Nairn, though of limited extent. But along the shores of the firth between Fort George and the mouth of the Findhorn the 25-foot terrace is well developed, though covered to a considerable extent by vast accumulations of blown sand. The inland cliff, which consists of stratified sands, gravel, and clay resting on boulder clay, and which marks the border of this ancient beach, is easily followed from Fort George to Loch Loy. The terrace is of variable breadth, sometimes measuring only 200 yards from the present coast-line, sometimes 2½ miles across.

One of the most interesting features connected with this sea beach is the great development of sand drift on its surface, particularly in the neighbourhood of Culbin. Formerly one of the most fertile tracts in the province of Moray, where stood the mansion-house of Culbin among richly cultivated fields and homesteads, the area occupied by the Culbin sandhills is now but a desert waste, whose contour is changed by every wind that blows. The invasion of the sand-drift took place in 1694, and so effectual was the inroad that only a small portion of the estate escaped, which was buried by succeeding storms. Various interesting relics are now and again picked up where the drifting of the sand has laid bare part of the old cultivated land. These consist of coins and farm implements, but numerous flint arrow heads belonging to neolithic times are also met with in isolated heaps. A considerable development of sand dunes rests on the 25-foot beach near Fort George, but to the E of the town of Nairn, between Loch Loy and the mouth of the Findhorn, the features which they present are worthy of special note. The Maviston Sandhills, which lie about 4 miles to the E of Nairn, consist of two prominent dome-shaped masses of sand—the one lying to the E of the other—which are partly surrounded by small conical heaps of sand. Each of these sand domes slopes gently to the W at an angle of 5°, while at the E limit the angle of inclination is between 30° and 40°. Beyond the county boundary the extensive forest named the Low Wood covers the plain of the 25-foot beach, which is dotted at intervals with minor accumulations of blown sand. To the E of this plantation lies the tract of the Culbin Sands, measuring about 3 miles in length and about 2 miles in breadth. The centre of the area is occupied by a succession of great ridges of sand upwards of 100 feet high, sloping towards the W at a gentle angle of a few degrees and with a much higher inclination towards the E. These dome-shaped accumulations are surrounded by conical heaps and ridges trending from WSW to ENE, and varying in height from 10 to 30 feet. The surface of the great domes as well as the minor heaps are beautifully ripple-marked by the wind, and sections of the mounds display excellent examples of false bedding. With reference to the question of their origin the following explanation has recently been given: 'There is a combination of circumstances in that district favourable to their formation. The Findhorn carries an enormous quantity of sand at present to the sea every year, and this denudation must have proceeded steadily since glacial times. When this sediment is discharged into the sea, it is borne W and SW by the currents along the shore, and is eventually deposited on the shelving beach by tidal action. It is then caught up by the winds and borne inland in an E direction. But in addition to this it is

highly probable that the prevalent W winds caught up the deposits of sand belonging to the 100-foot beach and swept them onwards in the direction of the Culbin area. Viewed in this light these sandhills give us some idea of the enormous denudation which is constantly going on over the surface of the land.' The course of the Findhorn at its mouth was changed after the advance of the Culbin Sands. Formerly it flowed in a westerly direction from Binsness for a distance of 3 miles and joined the sea at the old bar, but owing probably to the sand drift it was compelled to flow in a northerly direction into the sea.

Soils and Agriculture.—The soil in the eastern part of the 'laich' is a rich free loam, overlying sand or gravel, and in the western part is in some places a stiff strong clay, in others a sharp mould inclining to gravel. In the uplands the arable lands are haughs along the valleys of the streams, or light stony or sandy soil on the slopes and braes. There are about 300 acres on an average annually under beans, rye, vetches, fallow, etc. The permanent pasture not broken up in rotation is 3000 acres. There has been, as in most of the other northern counties, a very great decrease in the area under wheat.

The agricultural live stock in the county at different dates is shown in the following table:—

Year.	Cattle.	Horses.	Sheep.	Pigs.	Total.
1854	8304	1826	28,230	1489	39,849
1870	5506	1123	17,278	733	24,640
1877	6513	1247	16,971	932	25,663
1883	5676	1292	18,799	926	24,693
1896	6297	1458	19,666	683	28,104

The early returns seem again faulty. Not much attention is given to the breeding of pure stock, and the cattle are mostly crosses. The sheep in the lowlands are mostly Leicesters, though Cheviots are also kept; those in the uplands are blackfaced. The farms are generally held on leases of 19 years. There were in the county, in 1891, 268 farmers employing 381 men, 193 boys, 55 women, and 3 girls. The principal mansions, most of which are separately noticed, are Achareidh, Boath, Cawdor Castle, Coulmony, Delnies House, Fir Hall, Geddes House, Glenferness House, Househill, Ivybank, Kilravock Castle, Kinsteary, Lethen House, Millbank, Nairngrove, Nairnside, Newton, and Viewfield. Manufactures there are practically none, except at Brackla Distillery, 3½ miles SW of the town of Nairn; and besides agriculture, and those connected with the town and the coast fishings, the only industries are the sandstone and granite quarries—the latter at Kinsteary, opened up in 1872.

Roads, etc.—The Forres and Inverness section of the Highland railway traverses the whole of the county from E to W near the coast for a distance of 8½ miles, while the Aviemore and Inverness section of the same railway traverses the western corner of the county for a short distance, at the point where the river Nairn enters the shire, leaving it by a viaduct across the river. The main coast road from Inverness to Aberdeen passes along near the line of railway from the town of Nairn; a good road strikes south-westward to Croy, and another south-eastward by Bridge of Logie (Findhorn) to the road from Forres to Grantown. From a point 1 mile S of Bridge of Logie a branch goes off to the NE and joins the Forres road, while another passes S by W to Duthil. General Wade's military road from the Highland road to Fort George enters the county ½ mile W by S of Lochan Tutach, and, crossing the Findhorn at Dulsie, passes through the centre of the county in a north-westerly direction till it enters Inverness-shire, 1 furlong SE of Fort George railway station. There are also a large number of good district roads.

The only royal or police burgh is Nairn; the only burgh of barony or village with more than 300 inhabitants is Auldearn; and the principal smaller villages are Cawdor, Delnies, and Newton. The civil county comprises the four entire *quoad civilia* parishes of Nairn,

Auldearn, Ardcloch, and Cawdor, and half of Croy and Dalcross. The parishes of Ardcloch, Auldearn, Cawdor, Croy, and Nairn are ecclesiastically in the presbytery of Nairn, in the synod of Moray. Within the limits of the county there are 5 places of worship connected with the Established Church, 5 in connection with the Free Church, 1 in connection with the U.P. Church, 1 in connection with the Congregational Church, 1 in connection with the Scottish Episcopal Church, 1 in connection with the English Episcopal Church, and 1 in connection with the Roman Catholic Church. In the year ending Sept. 1894, there were 17 schools (15 public), which, with accommodation for 1841 children, had 1486 on the rolls, and an average attendance of 1162. Their staff consisted of 24 certificated, 2 assistant, and 10 pupil teachers. Nairnshire, with a constituency of 803 in 1895-96, unites with Elgin in returning a member to serve in parliament. The county is governed by a lord-lieutenant, 18 deputy-lieutenants, and 55 justices of the peace. It forms a part of the sheriffdom of Inverness, Elgin, and Nairn, but there is now no resident sheriff-substitute, the office being conjoined with that of Elginshire. Ordinary and small debt courts are held at Nairn weekly on Tuesday during session; justice of peace courts are held as required; and quarter-sessions are held at Nairn on the first Tuesdays of March, May, and August, and on the last Tuesday of October. The County Council is composed of 20 members, 14 of whom are representatives of as many electoral divisions, and 6 are for the burgh of Nairn. The council is divided into the following committees:—Standing Joint Committee (composed partly of county councillors and partly of commissioners of supply), County Road Board, Roads and Public Health Committee (including one representative from each of the five parochial boards), Finance Committee, County Valuation Committee, Executive Committee under the Contagious Diseases (Animals) Acts, Public Health Committee, and Court-House and County Buildings Committee. The county has a police force of 8 men (1 to each 1252 of the population) under a chief constable, with a salary of £135 a year. The number of registered poor on the roll at 26 Sept. 1894 was 183, with 87 dependants. The expenditure for Poor-Law purposes in the same year was £2667. The Poor-Law Combination has been noticed under the parish of Nairn. The proportion of illegitimate births averages about 11 per cent. The death-rate averages about 14 per thousand. Valuation (1674) £1264, (1815) £14,902, (1849) £20,156, (1862) £25,982, (1884) £37,143, (1895) £37,045, of which £1470 is for the railway. Pop. of registration county, which takes in the part of Croy in Inverness-shire, (1871) 8372, (1881) 8847, (1891) 8544; of civil county (1801) 8322, (1811) 8496, (1821) 9286, (1831) 9354, (1841) 9217, (1851) 9956, (1861) 10,065, (1871) 10,225, (1881) 10,455, (1891) 9155, of whom 4284 were males, 4871 females, and 1894 Gaelic-speaking. In 1891 the number of persons to each square mile was 57, the number of families 2088, the number of houses 1888, and the number of rooms 9030. Of the whole population 1443 men and 159 women were, in 1891, engaged in occupations connected with farming and fishing, of whom 1130 men and 85 women were connected with farming alone, while 858 men and 269 women were engaged in industrial occupations; and there were 1042 boys and 1032 girls of school age.

The county of Nairn seems to have been separated from Inverness in the second half of the 13th century. Such separate history as the district has is noticed for general purposes in the article MORAY and separate incidents; and the antiquities are noticed in the articles on the separate parishes, as well as in those on CULODEN and KILRAVOC CASTLE. During the clan period the 'laich' was held by the Earl of Moray, and the upper districts by the Mackintoshes. In the middle of the 17th century Nairnshire was celebrated for its witches, the place most infested with them being the neighbourhood of Auldearn. A crazy woman named Isobel Gowdie made, in 1662, a long confession of the delinquencies in this connection of herself and many

others. She declared that the body was 'so numerous, that they were told off into squads and *covines*, as they were termed, to each of which were appointed two officers. One of these was called the Maiden of the Covine, and was usually, like Tam o' Shanter's Nannie, a girl of personal attractions, whom Satan placed beside himself and treated with particular attention, which greatly provoked the spite of the old hags, who felt themselves insulted by the preference. When assembled they dug up graves' to possess themselves of the dead bodies for the purpose of making charms and salves from the bones. They also metamorphosed themselves into different forms—crows, cats, and hares seeming to have been those most common—and rode on straws, beautiful stalks, and rushes, though seemingly more for their own pleasure than on business. Satan, according to poor Isobel's tale, proved but a hard master, scourging and beating them sometimes without mercy, but this notwithstanding they were always ready to obey his behests, and do all kind of harm to their neighbours, stealing their crops, shooting at them with elf-arrows, and forcing their mischievous way into all houses not fenced against them by vigil and prayer. See Alexander Macdonald's 'Agriculture of the Counties of Elgin and Nairn' in *Trans. Highl. and Ag. Soc.* 1884.

Nant, Loch, a lake in Lorn district, Argyllshire, on the mutual border of Kilchrenan and Muckairn parishes, 4 miles NW of Port Sonnachan on Loch Awe. Lying 605 feet above sea-level, it has an utmost length and breadth of $7\frac{1}{2}$ and $2\frac{3}{4}$ furlongs, and sends off a rivulet $5\frac{1}{4}$ miles northward to Loch Etive. This stream, running nearly parallel to the river Awe, along a narrow thickly-wooded glen with precipitous sides, makes several waterfalls, passes Taynult village, and during the lower part of its course takes down the road from Port Sonnachan to Oban. Like the lake it affords good trout-fishing, and contains both sea-trout and salmon.—*Ord. Sur.*, sh. 45, 1876.

Na-Nuagh, Loch, a sea-loch on the mutual border of Arasaig and Moidart districts, Inverness-shire. Opening opposite Eigg island, it penetrates the land $6\frac{1}{2}$ miles east-north-eastward; has a maximum breadth of $3\frac{3}{4}$ miles; and sends off, at an acute angle, from its SE side, a bay, Loch Aylort. See BORRODALE.

Naughton, a mansion in Balmerino parish, Fife, $4\frac{1}{2}$ furlongs S of the Firth of Tay, and $4\frac{1}{2}$ miles SW of Newport. Built towards the close of the 18th century, but much altered and improved since, it is the seat of Miss Morison-Duncan. Naughton Castle, to the N of the mansion, is said to have been built by a natural son of William the Lyon, and is now reduced to a few fragments of the lower parts of the side walls. Dolhanha, a Culdee establishment in connection with that of St Andrews, is stated by Sibbald to have stood near the Castle's site. The estate belonged so early as the time of Alexander III. to the Hays, ancestors of the noble family of Errol; went by marriage in 1494 to the Crichtons; and passed by sale in 1737 to the Morisons.—*Ord. Sur.*, sh. 48, 1868.

Naunt, Loch. See NANT, LOCH.

Navar. See LETHNOT.

Nave or Noamh, an islet of Kilchoman parish, Islay island, Argyllshire, to the W of the mouth of Loch Gruinnard, 10 miles N by W of Bowmore. Its name signifies 'Holy,' and alludes to an ancient church and a large burying-ground. The church is still represented by some ruins, and the burying-ground contains some clay-slate grave-stones, with curious sculptures.

Naver, a lake and a river of Farr parish, Sutherland. Loch Naver, lying 247 feet above sea-level, and commencing near ALTAHARROW inn, 21 miles N by W of Lairg station on the Sutherland section of the Highland railway, and 17 S by W of Tongue, extends $6\frac{1}{2}$ miles east-north-eastward, and has a maximum breadth of $4\frac{1}{4}$ furlongs. Its depth in some parts is 30 fathoms, and BENCLIBRICK rises from its southern shore to a height of 3154 feet. It receives at its head the River of MUDALE, is fed by sixteen other streams and rivulets, and contains near its SE shore a tiny islet, on which is

a circular Pictish tower, built of large stones without any cement. Its waters are stocked with salmon, grilse, sea-trout, and trout, but, whilst the trout-fishing is poor, 52 salmon have been killed by a single rod in seven weeks. The salmon run about 10 lbs. and trout are often got up to 3 lbs., while salmo-ferox add their attractions. Parts of the shore are pebbly, others rocky and sandy. The surrounding scenery is of great beauty. The immediate banks are well tufted with natural wood, and the surface behind rises generally into abrupt rocks or low hills, but soars on the S into alpine Benclibrick, the second highest mountain in Sutherland, whilst the backgrounds to the E and W are formed by the grand summits of Kildonan and what until 1891 was the Reay country, but is now included in Farr parish.

The river Naver (the *Nabarus* of Ptolemy) issues from the foot of Loch Naver, and winds $18\frac{1}{4}$ miles north-by-eastward through broad green meadows or between steep birch-clad slopes, till it falls into Torrisdale Bay, 9 furlongs W of Bettyhill of Farr. It is joined, $\frac{1}{2}$ mile above its mouth, by the Abhainn a' Mhail Aird, running $7\frac{1}{2}$ miles north-by-eastward from Loch CORR, and higher up, by forty-six lesser streams and rivulets. The Naver as a salmon river is the earliest and by far the best of all the rivers in the N of Sutherland. Its vale, Strathnaver, the finest strath perhaps in the county, contains a considerable extent of fertile haughland, a mixture of sand, gravel, and moss, which for many years prior to 1820 was cultivated by upwards of 300 families. But since the famous Sutherland 'evictions' Strathnaver has been wholly pastoral.—*Ord. Sur.*, shs. 108, 109, 115, 114, 1878-80.

Navity, a mansion in Ross and Cromarty parish, $2\frac{1}{2}$ miles S of the town.

Neartay, a small island in the Sound of Harris, Outer Hebrides, Inverness-shire, $2\frac{1}{2}$ miles N of North Uist, and 3 E of Bernera.

Neaty, Loch. See KILTARLITY.

Needle's Eye. See GAMRIE.

Neidpath Castle, an old baronial fortalice in Peebles parish, Peeblesshire, on the Tweed's N bank, 1 mile to the W of Peebles town. It is the strongest and most massive of the numerous feudal strongholds still extant in Peeblesshire; and, though ruinous and partly fallen, it still exhibits an imposing quadrangular pile. Its walls are 11 feet thick, and consist of greywacke stones held together by a cement as hard almost as themselves. The castle stands on a rock at the lower end of a wide semicircular bend of the murmuring Tweed. The concave bank, or that on the side of the castle, is very steep, and of great height; the convex bank commences with a little plain half encircled by the river, and rises in a bold and beautiful headland, which seems to stand sentinel over the bend. Amidst this scene, the castle commands, on the NW side, an important pass; and on the E it overlooks the opening vale of the Tweed and the bridge and town of Peebles. Pennicuik in his *Description of Tweeddale* sings of it—

'The noble Nidpath Peebles overlooks,
With its fair bridge, and Tweed's meandering brooks.
Upon a rock it proud and stately stands,
And to the fields about gives forth commands.'

The woods which embowered the castle were felled by 'Old Q.' the last Duke of Queensberry, either meanly to impoverish the estate before it should fall to the heir of entail, or to fling what he could in the lap of his natural daughter. Wordsworth, who came hither with his sister Dorothy on 18 Sept. 1803, has thus denounced this act of vandalism:

'Degenerate Douglas! thou unworthy Lord,
Whom mere despite of heart could so far please,
And love of havoc (for with such disease
Fame taxes him), that he could send forth word
To level with the dust a noble horde,
A brotherhood of venerable trees,
Leaving an ancient dome and towers like these,
Beggar'd and outraged! Many hearts deplored
The fate of those old trees; and oft with pain

The traveller at this day will stop and gaze
On wrongs which Nature scarcely seems to heed;
For shelter'd places, bosoms, nooks, and bays,
And the pure mountains, and the gentle Tweed,
And the green silent pastures yet remain.'

The seventh Earl of Wemyss replanted the demesne, which now once more is beautifully wooded. The S or older part of the castle has tumbled in huge masses to the margin of the Tweed; the later, albeit ancient, portion has recently been refaced, and thereby not improved in aspect, as neither by a tall white chimney. On the keystone of the courtyard archway is the crest of the Hays of Yester, a goat's head over a coronet, with a bunch of strawberries (French *fraises*) beneath, symbolical of the name Fraser. Rooms on two floors are tenanted still by the keeper; and the top, which commands a magnificent prospect, is gained by a narrow corkscrew staircase.

The castle was anciently the chief residence of the powerful family of the Frasers—proprietors first of Oliver Castle in Tweedsmuir, and afterwards of great part of the lands from thence to Peebles,—sheriffs of the county, and progenitors of the families of Lovat and Saltoun. The last male of them in Tweeddale was the valiant Sir Simon Fraser, who thrice in one day defeated the English in the battle of Roslin Moor (1302), and by the marriage of whose elder daughter Neidpath Castle passed in 1312 to the Hays of Yester, ancestors of the Earls and Marquises of Tweeddale. By one of them, probably Sir William Hay, in the early part of the 15th century, the newer portion was added. In 1587 James VI. was at Neidpath, which in 1650 was garrisoned by the young Lord Yester for the King's service, and held out against Cromwell longer than any other place S of the Forth, but, being battered by shot on its southern or weakest side, was at last forced to surrender. In 1686 the Tweeddale estate was purchased by the first Duke of Queensberry for £23,333, and by him was settled on his second son, the Earl of March. During the first half of the 18th century it was the summer home of the Earls of March, the third of whom in 1778 became by inheritance fourth Duke of Queensberry. At the latter's death without male issue in 1810, it was transmitted to the Earl of Wemyss, the descendant of a daughter of the Queensberry family. Towards the close of the 18th century Neidpath was for some time occupied by Prof. Adam Ferguson the historian, and Sir Walter Scott speaks of cheerful days he spent then within its walls. Of Ellen, Earl March's child, the 'Maid of Neidpath,' history tells nought, but the world knows her through the lyrics of Scott and Campbell.—*Ord. Sur.*, sh. 24, 1864.

Neilsland House, a mansion in Hamilton parish, Lanarkshire, 3 miles SW of Hamilton town. The estate, which belonged to a junior branch of the Hamilton family from 1549 to 1723, was sold in 1871 for £23,000.—*Ord. Sur.*, sh. 23, 1865.

Neilston, a town and a parish in the Upper Ward of Renfrewshire. The town lies 430 feet above sea-level, on the rivulet Lovern, 2 miles SW of Barrhead, 5½ S of Paisley, and 10 SW of Glasgow. Occupying the brow of a gentle eminence, amid a delightful landscape, it presents an old-fashioned yet neat and compact appearance, and has a post office under Glasgow, with money order, savings bank, and telegraph departments, a branch of the Clydesdale Bank, a gaswork, a station on the Glasgow, Barrhead, and Kilmarnock Joint railway, an agricultural society, a public library, a company of rifle volunteers, etc. The parish church, dating from about the middle of the 15th century, retains a beautiful specimen of Gothic architecture in its N window, and has a spire and a clock. In a vault beneath it are buried William Mure, D.C.L. (1799-1860), Liberal-Conservative M.P. for Renfrewshire 1846-55, and author of a *Critical History of the Language and Literature of Ancient Greece*; his son, Lieut.-Col. William Mure (1830-80), Liberal M.P. for Renfrewshire 1874-80; and other members of the Caldwell family. A Free church was built in 1873; and St Thomas Roman Catholic

church, with 350 sittings, in 1861. Pop. (1836) 2506, (1861) 2357, (1871) 2125, (1881) 2311, (1891) 2113. Houses (1891) inhabited 469, vacant 34.

The parish, containing also six-sevenths of BARRHEAD town, is bounded N by Abbey-Paisley, SE by Mearns, S by Stewarton, Dunlop, and Beith, and W by Lochwinnoch and Abbey-Paisley. Its utmost length, from NE to SW, is 6½ miles; its breadth varies between 1½ and 4½ miles; and its area is 20 square miles or 12,862 acres, of which 381 are water. On the Mearns boundary are seven sheets of water—Long Loch, Harelaw Dam, Walton Dam, Glanderston Dam, Balgray Reservoir, Ryat Linn Reservoir, and Waulkmill Glen Reservoir; two more lie on the northern and north-western border; and in the interior are five—Commore Dam, Craighall Dam, Snyptes Dam, Kirkton Dam, and Loch Libo (3½ × 1 furl.; 395 feet). This last, by the side of the railway, 2½ miles SW of the town, by Dr Fleming was pronounced superior, in picturesque scenery, to Rydal Water in Cumberland. 'Loch Libo,' he says, 'presents a scene of unparalleled beauty. Its lofty hills, on both sides, are wooded with fine old trees to the water's edge. Its oblong or oval figure pleases the eye; while its smooth and glassy surface is disturbed only by the heron and wild-duck, swimming and fishing upon it. Standing at the turn of the road, as you ascend northward, and looking W when the sun, in a fine summer evening, is pouring its rays upon it, the effect is enchanting.' The artificial collections of water, in the form of reservoirs or dams, for economical purposes, are all of great volume, and springs of the purest water abound. One of them, issuing from the solid rock, at a place called Aboon-the-brae, is so copious as to discharge 42 imperial gallons every minute. By LEVERN WATER the drainage is mainly carried north-north-eastward, by LUGTON WATER partly south-south-westward. The surface is exceedingly irregular and uneven. At the north-eastern border it sinks to 120 feet above sea-level, thence rising to 725 feet at the Fereneze Hills, 848 at Corkindale Law or Lochlibo-side Hill, 854 at Neilston Pad, 734 at Howcraigs Hill, and 863 near Long Loch. Of these Corkindale Law commands one of the widest and most magnificent views in Scotland. On one side are seen Dumbarton Castle, the vale of the Leven, Loch Lomond, Ben Lomond, and a vast sweep of the Grampians; on another the vale of the Clyde from Bowling Bay to Hamilton, the Kilpatrick and Campsie Hills, the city of Glasgow, a summit or two of the Ochils, the Lomonds of Fife, the Bathgate Hills, the Pentlands, Tinto, and the Lowthers; on another the hills of Kyle, of upper Nithsdale, and of Kirkcubrightshire, and sometimes, in the far distance, the tops of the Cumberland mountains; and on another the great plain of Ayrshire, Brown-Carrick Hill, the flanks of Loch Ryan, the mountains of Mourne in Ireland, the whole sweep of sea from Donaghadee to the Cumbraes, with Ailsa Craig in the centre, and the lofty mountain masses of Arran on the W side. The predominant rock is trap; but both at the eastern and western extremities of the parish, rocks of the coal formation, including limestone and ironstone, abound. Rare or curious minerals are sufficiently plentiful to draw the attention of mineralogical collectors. The soil of the flat eastern district is of a dry loamy nature, occasionally mixed with gravel, and generally resting on clay or till; that of the middle district is the *débris* of trap rock, irretentive of water, and well fitted for dairy pasture; whilst that of the western district is largely moorish or mossy. Two-thirds of the entire area are regularly or occasionally in tillage; fully 500 acres are under wood; and the rest is either pastoral or waste. The appliances of manufacture, in the form of printfields, bleachfields, and cotton spinning-mills, are great and many, serving, along with the mansions, villas, towns, and villages, to give much of the lower part of the parish a character intermediate between the urban and the rural. The printing of calicoes and the bleaching of cloth were commenced here in 1773; the spinning of cotton was introduced in 1780; and so rapid was the progress of these departments of industry, as well as of others related to them, that Sir

John Sinclair, in connection with the making up of the *Old Statistical Account* in 1792, selected Neilston as one of three parishes to show to the French Chamber of Commerce the status which manufactures had reached in the best rural districts of Scotland. The manufacturing prosperity so soon attained in Neilston has been continued till the present day, receiving stimulus from the formation of the Glasgow, Barrhead, and Kilmarnock railway, and keeping up a rivalry, proportionably to its population, with the prosperity of Paisley and Glasgow. The lands of Neilston, Crookston, Darnley, and others in Renfrewshire belonged in the 12th century to the family of Croc, from whom they passed in the succeeding century to a branch of the illustrious house of Stewart by marriage with the heiress, Marion Croc. This branch became Earls and Dukes of Lennox; and one of its members was Henry Lord Darnley, husband of Queen Mary, and father of James VI. of Scotland. In process of time the estate of Neilston passed from them, and was divided amongst a number of proprietors. In the *New Statistical Account*, Crawford is represented as saying, in his *History of Renfrewshire*, that, 'passing from the house of Stewart, the lordship of Neilston came by marriage into that of Cunningham of Craigends;' whereas Crawford makes that statement with regard merely to a portion called ARTHURLEE, which had belonged to a branch of the Darnley family, and which now belongs to various proprietors. The transmission of the estates since Crawford's time is given by his continuator, Robertson. None of the castles of the ancient proprietors remain; but mansions belonging to some of the present landowners, as well as villas belonging to other gentlemen, are numerous and elegant. Giving off the *quoad sacra* parish of Barrhead, and a portion to Caldwell *quoad sacra* parish, Neilston is in the presbytery of Paisley and the synod of Glasgow and Ayr; the living is worth £350. The Rev. Alexander Fleming, D.D. (1770-1845), a leading spirit of the Church Extension Scheme, was minister from 1804; and his *Life* (1883) contains much of interest relating to Neilston. Eight schools, with total accommodation for 2420 children, have an average attendance of about 1880, and grants amounting to over £1950. Pop. (1801) 3796, (1831) 8046, (1861) 11,013, (1871) 11,136, (1881) 11,359, (1891) 11,374, of whom 5211 were males and 6163 females, and 3573 were in the ecclesiastical parish.—*Ord. Sur.*, shs. 22, 30, 1865-66.

Neish Island, a wooded artificial islet of Comrie parish, Perthshire, in the middle of the lower part of Loch Earn, opposite St Fillaus village. On it are the remains of an ancient castle of considerable strength. In the early part of the 17th century the small remnant of the clan Neish that had survived the battle of GLENBOLTACHAN, subsisted on this isle by plundering, till, one winter night, they were surprised and slain—all save one man and a boy—by their ancient foes, the Maenabs.—*Ord. Sur.*, sh. 47, 1869.

Neldricken, Loch, an isleted lake ($5\frac{1}{2} \times 2\frac{1}{2}$ furl.; 1175 feet) in the NE of Minnigaff parish, Kirkcudbrightshire, $16\frac{1}{2}$ miles NNE of Newton-Stewart. It lies among wild uplands; is almost cut in two by a peninsula; contains both pike and 2lb. trout; and sends off a stream $1\frac{1}{2}$ furlong south-south-westward to Loch Valley ($8 \times 1\frac{1}{2}$ furl.; 1070 feet), out of which Gairland Burn goes $1\frac{1}{2}$ mile south-westward to Loch TROOL.—*Ord. Sur.*, sh. 8, 1863.

Nell, Loch, a fresh-water lake in Kilmore and Kilbride parish, Lorn, Argyllshire, $2\frac{3}{4}$ miles SE of Oban. Lying 43 feet above sea-level, it extends $1\frac{1}{2}$ mile south-westward; has a varying width of $1\frac{1}{2}$ and 3 furlongs; contains good trout; at its head receives the LONAN rivulet; and from its foot sends off the Nell, 2 miles south-south-westward to the head of salt-water Loch Feachan. See KILMORE AND KILBRIDE.—*Ord. Sur.*, sh. 45, 1876.

Nemphtar, a village in Lanark parish, Lanarkshire, on the high grounds (605 feet) above the right bank of the Clyde, 2 miles WNW of Lanark town. It lies among beautiful braes, straggling along them for a con-

siderable distance; covers the site of an ancient chapel of the Knights Templars; and has a public library and a school.—*Ord. Sur.*, sh. 23, 1865.

Nenthorn, a parish of SW Berwickshire, whose church stands 4 miles NW of Kelso, under which it has a post office. With an irregular outline, rudely resembling an hour-glass, it is bounded W by Earlston, N by Hume, and on all other sides by Roxburghshire, viz., NE by Stichel, SE by Kelso, and S by Kelso and Smailholm. In 1891 an exchange of territory was effected by the Boundary Commissioners between the parishes of Nenthorn and Hume, by which the Mellerstain detached part of the latter parish, comprising 39 acres, was transferred to Nenthorn, and so much of the farm of Hardiesmill Place, extending to 44 acres, as was situated in Nenthorn was transferred to Hume parish. The utmost length of Nenthorn parish, from WNW to ESE, is $4\frac{1}{2}$ miles; its breadth varies between $2\frac{1}{2}$ furlongs and $2\frac{1}{2}$ miles; and its area is 3473 acres, of which $24\frac{1}{2}$ are water. EDEN WATER winds $2\frac{3}{4}$ miles south-south-westward along or near all the Earlston boundary, then $5\frac{1}{2}$ miles east-by-southward—for 3 furlongs, near Burnbrae, across the neck of the hour-glass, and elsewhere along or near to the Smailholm and Stichel boundaries. It thus has a total course here of $8\frac{1}{2}$ miles, though the point where it first touches and that where it quits the parish are but $4\frac{3}{8}$ miles distant as the crow flies. At Mellerstain it broadens to a lake; and near Newton-Dou forms a fine waterfall, 40 feet high, Stichel Linn. In the extreme E the surface declines to 165 feet above sea-level; and thence it rises with gentle undulations, till it reaches a maximum height of 665 feet at Blinkbonny. Trap rocks, incumbent on coarse red sandstone, include some basaltic columns, like Samson's Ribs at Edinburgh; and marl, both shell and clay, has been found in considerable quantity. The soil at the W end is improved vegetable mould on cold till; and everywhere else is a rich and fertile clayey loam. Upwards of 300 acres are under wood; and all the rest of the area is enclosed and cultivated. The parish appears to have been established during the 13th century, and was formed of the manors of Naithanshirn and Newton, lying respectively W and E of the line where the Eden passes from the southern to the northern boundary. The chapel of Naithanshirn became the parish church, whilst that of Newton continued a chapel. Both, previous to the parochial erection, were subordinate to the church of Ednam; and both were given in 1316-17 by the Bishop of St Andrews to the Abbot of Kelso, in exchange for the church of Cranston in Midlothian. The manors belonged in the 12th century to the Morvilles, the hereditary constables of Scotland, and followed the fortunes of their other possessions till the downfall and forfeiture of John Baliol. Nenthorn House, near the left bank of the Eden, $4\frac{1}{2}$ miles NW of Kelso, is the property of Mr Ritchie. Newton-Dou, near the Eden's right bank, 3 miles NNW of Kelso, is a fine mansion of 1816, with grounds of singular loveliness, and a wide and beautiful view. It was originally the property of the Dons, who held a baronetcy from 1667 till 1862, and are now represented by Sir John Don-Wauchope, Bart. of EDMONSTONE; but in 1847 it was purchased for £80,000 by the late Charles Balfour, Esq. of BALGONIE, whose son, Charles Barrington Balfour, Esq. (b. 1862; suc. 1872), is the present proprietor. Lesser proprietors are the Duke of Roxburgh and the Earl of Haddington. Nenthorn is in the presbytery of Kelso and the synod of Merse and Teviotdale; the living is worth £182. The parish church was built in 1802, and the Free church dates from Disruption times. A public school, with accommodation for 105 children, has an average attendance of about 60, and a grant of over £60. Pop. (1801) 395, (1831) 380, (1861) 461, (1871) 434, (1881) 454, (1891) 391.—*Ord. Sur.*, sh. 25, 1865.

Neptune's Staircase. See CALEDONIAN CANAL.

Nerston, a village in East Kilbride parish, Lanarkshire, $1\frac{1}{2}$ mile N by E of East Kilbride town. Its name is a contraction of North-East-Town.

Nesbet. See NISBET.

Ness, an estate in the parishes of Dores and Inverness, with a mansion called Ness Castle, near the right bank of the river Ness, 3 miles SSW of the town of Inverness. Formerly in the possession of Lord Saltoun, and afterwards of Sir John Ramsden, by whom it was bought for £90,000 in 1871, it is now the property of Charles Fountaine Walker, Esq.—*Ord. Sur.*, sh. 83, 1881.

Ness, a river carrying off the surplus water of the drainage basin of Loch Ness. As noticed in our description of that loch, it issues from the NE end of Loch Dochfour over a weir constructed to keep the water of the loch at a proper height for the Caledonian Canal, and has from this a course of about 7 miles, nearly parallel to the line of the Canal, till it reaches the Moray Firth below Inverness. The channel has a regular inclination over a gravelly bottom, and the stream is about 180 feet wide, with a mean depth in summer of about 3 feet, and in winter of often double that amount. The lower part of its course is noticed in the article on INVERNESS. It is an excellent salmon river, and the fishing season lasts from 11 Feb. to 15 Oct.

Ness or Cross. See BARVAS.

Ness or Whiting Ness, a small precipitous headland (98 feet), pierced with a great cavern, in St Vigeans parish, Forfarshire, 1 mile ENE of Arthroath. The cavern was laid open by the removal of some rocks in the course of quarrying stones for the harbour of Arthroath; and it comprises two compartments, an outer and an inner. The outer compartment measures 300 feet in length, 16 in extreme width, and from 6 to 30 in height; and, over its roof and its sides, makes a splendid display of stalactites. The inner compartment lies directly beyond the outer one; is neither so high nor so wide; and measures only 100 feet in length.—*Ord. Sur.*, sh. 49, 1865.

Ness Castle. See NESS.

Ness Glen, a ravine in Dalmellington parish, Ayrshire, traversed by the river Doon from Loch Doon to near Dalmellington town. It is one of the finest examples in Britain of a true rock gorge, the stream having worn down a channel little more than its own width, with perpendicular sides, into the rock to a depth of from 100 to 200 feet. The heights along the sides are beautifully wooded, and a walk formed alongside the river leads through the hollow.

Ness, Loch, a large lake in Inverness-shire, occupying a considerable portion of the bottom of the Great Glen of Scotland, $6\frac{1}{2}$ miles SW of Inverness. It is a long narrow sheet of water extending from NE to SW, with a length of $22\frac{1}{2}$ miles, from Bona Ferry on the NE to near Fort Augustus on the SW, and an average breadth of about 1 mile, while the surface is 50 feet above sea-level. The bottom slopes very rapidly, and reaches a depth of 40 to 60 fathoms at no great distance from the shore, while the depth in the centre is from 106 to 130 fathoms. The sides are very straight and even, that to the SE being broken only by the mouths of the inflowing streams; while that to the NW has, 6 miles from the NE end of the loch, Urquhart Bay, measuring 1 mile across the mouth, and $\frac{1}{2}$ mile deep at the mouths of the Enrick and Coiltie, and, $10\frac{1}{2}$ miles farther to the SW, Invermoriston Bay, at the mouth of the river Moriston. Both sides are formed by lofty heights, which, on the SE, have an average height of 800 to 1000 feet, and on the NW of from 1200 to 1500 feet, while at many points both rise higher. The principal heights along the former side, beginning at the N end, are Tom Bailgeann (1514 feet), Carn an Fheadain (1445), both opposite Urquhart Bay; Meall an Targaidh (1016), opposite Invermoriston Bay; Beinn a' Bhacaidh (1812), Borlum Hill (1000), and Creag Ardochy (1417). On the NW side, beginning at the N end, the principal heights are Carn a Bhodaich (1642 feet), Carn an Leitire (1424), Meall na h-Eilach (1525), Sron Dubh (1436), Meall Fuar-mhonaidh (Mealfourvounie, 2284), and Burach, S of the river Moriston (1986). The loch receives the drainage of an area of 670 square miles, the principal streams that flow into it being the Oich and Tariff, on either side of Fort Augustus at the SW end; the Moris-

ton, Coiltie, Enrick, and a number of smaller burns, all on the NW side; and the Doe, Foyers, and Farigaig, with a number of smaller burns, all on the SE side. At the lower end it communicates by the narrow strait at Bona Ferry with Loch Dochfour, which is in reality only a continuation of it, and from which the surplus water is carried off by the river NESS. The Caledonian Canal, which links it at the SW end with Loch Oich, and at the NE end with the sea, is separately noticed. At the SW end the loch is in the parish of Boleskine and Abertariff, and the south-eastern half the rest of the way is in the parish of Dores, and the north-western half in Urquhart and Glenmoriston and Inverness, all those meeting along the centre line. There is an excellent road—originally military roads formed by the soldiers under the command of General Wade—along each bank. At the NE end there is a ferry at Bona, and another 12 miles farther to the SW from Foyers to Ruskich Inn. On account of the great depth its waters never freeze. It is well known that there is a fault along the line of the Great Glen, and this seems to mark a line of permanent weakness in the crust of the earth, for at the time of the great earthquake at Lisbon, on 1 Nov. 1755, the waters of Loch Ness became violently agitated, a series of waves rolling along the loch towards the upper end, and dashing for 200 yards up the course of the Oich, 5 feet above the usual level of that stream. The pulsation of the water lasted for about an hour, and after a huge wave had been dashed against the NW bank, the surface resumed its wonted calm.

Except at a narrow part at the NE end of the loch, where, on the E, there is a fine belt of low ground about Aldourie, the mountain ranges that flank the glen slope from 1000 feet steeply down to the water's edge, giving the narrow valley an unnaturally contracted appearance, and greatly heightening the effect of its length. Along considerable stretches these steep banks are finely wooded, and this, with the red colour of much of the rock, makes the scenery, whether from the water or from the banks, very beautiful. 'The profuse admixture,' say the Messrs Anderson, with particular reference to the tract between Glen Urquhart and Glen Moriston, 'of oak with hirsch and alder, adds much to the richness and tone of colouring. Dark and dense masses of pine are frequently seen crowning the craggy heights above, while beneath, the rowan and hawthorn trees mingle their snowy blossoms or coral berries with the foliage of the more gigantic natives of the forest. The road is overhung by the fantastic branches of the yet youthful oak, while the stately ash, rooted in the steep declivities below, shoots up its tall, straight, and perpendicular stem, and with its scattered terminal foliage slightly screens the glassy lake or purple ground-colour of the opposite hills; and the airy birch droops its pensile twigs round its silvery trunk, "like the dishevelled tresses of some regal fair." Fringing rows of hazel hushes line the road; and in autumn their clustering bunches of nuts invite the reaching arm.' Of the opposite side, between Inverfarigaig and Dores, Dr Macculloch speaks in equally high terms. 'It is,' he says, 'a green road of shaven turf holding its bowery course for miles through close groves of birch and alder, with occasional glimpses of Loch Ness and of the open country. I passed it at early dawn, when the branches were still spangled with drops of dew; while the sun, shooting its beams through the leaves, exhaled the sweet perfume of the birch, and filled the whole air with fragrance.' The many points of interest and beautifully placed mansions around the shores come naturally under the different parishes, and will be found noticed there. Except with the net, the fishing is poor, though the loch abounds in trout; and, though salmon pass through on their way to the Oich and other rivers, yet they are never taken with the rod.—*Ord. Sur.*, shs. 73, 83, 1878-81.

Nessock. See PORTNESSOCK BAY.

Ness-Side House, a mansion in Inverness parish, near the right bank of the Ness, $2\frac{3}{4}$ miles SSW of the town.

Nesting, a parish of Shetland, whose church stands on the NW side of South Nesting Bay, 8 miles N of the post-town, Lerwick. It comprises the ancient parishes of Nesting, Lunnasting, and Whalsay; and includes a district of the eastern mainland, the inhabited islands of Whalsay and Bound, Brurie, Gruna, and Housie Skerries, and a number of uninhabited islets. The mainland district, extending from Lunnass to Gletness, is bounded N by Yell Sound, E and SE by the North Sea, and W by Tingwall and Delting. Its utmost length, in a direct line from NNE to SSW, is 15 miles; its breadth varies between 1 mile and 5½ miles; and the area of the whole parish is 48½ square miles or 30,983 acres. The islands form the two groups of Whalsay and Out-Skerries, and lie mostly at distances of from 2 to 8 miles E of the nearest points of the mainland. They constitute the *quoad sacra* parish of Whalsay and Skerries, which is separately noticed. The coast of the mainland district projects the bold headlands of Lunna Ness, Lunning Head, Stava Ness, Eswick, and Railsbrough, and is deeply indented by the voes or bays of Swining, Vidlin, Dury, South Nesting, and Cat Firth. The interior in its physical features and agricultural character differs little or nothing from those of the other parts of the mainland. It contains a score of little fresh-water lakes, and attains a maximum altitude of 423 feet above sea-level at Laxowater Hill. Gneiss is the predominant rock; but granite, syenite, mica slate, and crystalline limestone also occur. About 1000 acres are in tillage; and most of the rest of the land is either pastoral or waste. The inhabitants give but secondary attention to agriculture, being mainly employed in the fisheries. There are lighthouses on the Out-Skerries and Whalsay island. Giving off Whalsay and Skerries *quoad sacra* parish, Nesting is in the presbytery of Oluafirth and the synod of Shetland; the living is worth £165. The parish church, built in 1794, is amply commodious. An Established chapel of ease is at Lunna in Lunnasting; and the five schools of Lunnasting, South Nesting, Whalsay, Livister, and Skerries—all of them public but the last—with total accommodation for 388 children, have an average attendance of about 270, and grants amounting to nearly £310. Valuation (1884) £2695, 18s. 2d., (1893) £2125, 6s. 8d. Pop. (1801) 1941, (1831) 2103, (1861) 2583, (1871) 2679, (1881) 2626, (1891) 2589.

Nethan, a stream of Lesmahagow parish, Lanarkshire, rising close to the Ayrshire border, at an altitude of 1550 feet above sea-level, and running 13 miles north-eastward, till, after a total descent of 1355 feet, it falls into the Clyde at Crossford, 4¾ miles NW by W of Lanark. It receives in its progress Logan Water and a number of burns; traverses, in the first 3½ miles of its course, a bare, moorish upland tract; and thereafter runs along a picturesque narrow vale, well-adorned with natural wood, and embellished with mansions and parks, into a deep ravine. At a point 1¼ mile SSW of Crossford it is spanned by a viaduct of the Lesmahagow railway, loftier from foundation to parapet than either the great viaduct at Newcastle-on-Tyne, or the Britannia Bridge across the Menai Strait; and midway between the viaduct and Crossford it is overhung by the ruin of CRAIGNETHAN Castle, the prototype of Sir Walter Scott's 'Tillietudlem.'—*Ord. Sur.*, sh. 23, 1865.

Nether Ancrum. See ANCRUM.

Nether Buckie. See BUCKIE.

Netherburn, a village in Dalscrf parish, Lanarkshire, with a station on the Lesmahagow branch of the Caledonian railway, 3¾ miles SSE of Larkhall. It has a post office. Pop. (1881) 347, (1891) 336.

Netherbyres. See AYTON.

Nethercleuch. See APPEGARTH.

Netherdale House, a mansion in Marnoch parish, Banffshire, near the left bank of the Deveron, 3½ miles SE of Aberchirder. Its owner is Thomas Gilzean Rose-Innes, Esq.—*Ord. Sur.*, sh. 86, 1876.

Netherfield House, a mansion in Avondale parish, Lanarkshire, 1½ mile ENE of Strathaven.

Netherhall, a mansion in Largs parish, 1½ mile N of

the town. It is the seat of Lord Kelvin, LL.D., D.C.L., President of the Royal Society (1891-95), and since 1846 Professor of Natural Philosophy in the University of Glasgow (b. 1824).—*Ord. Sur.*, sh. 29, 1873.

Nether Kilrenny. See KILRENNY.

Netherlaw, a mansion and an estate in Rerwick parish, Kirkcudbrightshire, on the right bank of Abbey Burn, 5 furlongs W of Port Mary, and 7 miles SE of Kirkcudbright. It is the property of John Gladstone Mackie, Esq.—*Ord. Sur.*, sh. 5, 1857. See FORGLEN.

Netherley, an estate, with a mansion and a public school, in Fetteresso parish, Kincardineshire, 6 miles NNW of Stonehaven, under which it has a post office.

Nethermill, a village, with a public school, in Kirk-michael parish, Dumfriesshire, 9½ miles NNE of Dumfries.

Nethermuir House, an old mansion in New Deer parish, Aberdeenshire, 1½ mile NNW of Auchnagatt station. Mr Dean Leslie is the present owner.—*Ord. Sur.*, sh. 87, 1876.

Netherplace, a mansion in Mauchline parish, Ayrshire, immediately W of the town. Its owner is William Kentigern Hamilton-Campbell, Esq. (b. 1865; suc. 1886).—*Ord. Sur.*, sh. 14, 1864.

Nether Pollok. See POLLOK.

Nether Rankelour. See RANKELOUR.

Netherton. See HAMILTON.

Netherton or Netherton Quarry, a village in New Kilpatrick parish, Dumbartonshire, on Garscube estate, near the river Kelvin, 5 miles NW of Glasgow. It adjoins a quarry of very fine buff-coloured sandstone, and has a public school. There is a chapel of ease at Temple of Garscube, erected in 1891-92 at a cost of about £3700.

Netherurd House, a plain three-storey mansion, with well-wooded grounds, in Kirkurd parish, W Peeblesshire, 2¾ miles SSE of Dolphinton station and 7¼ NE of Biggar. The estate was purchased in 1834 for £18,000 by the late John White, Esq. (1808-80), and now belongs to his daughter Miss Jane A. White.—*Ord. Sur.*, sh. 24, 1864.

Nethy. See ABERNETHY, Inverness-shire.

Nethybridge. See ABERNETHY, Inverness-shire.

Neudos. See EDZELL.

Nevay. See EASSIE AND NEVAY.

Nevis, Ben. See BEN NEVIS.

Nevis, Bridge of, a hamlet in Kilmonivaig parish, SW Inverness-shire, on the right bank of the Water of Nevis, 1 mile ENE of Fort William.

Nevis, Loch, a beautiful arm of the sea in Glenelg parish, Inverness-shire, on the mutual border of Knoydart and Morar districts. Opening from the Sound of Sleat, it strikes 14½ miles south-eastward and east-by-northward; contracts in width from 4 miles to 2 furlongs; is screened by mountains rising suddenly from its shores, and clothed far up, in many parts, with wood; and receives, at its head and on its sides, a number of mountain torrents. Loch Nevis is said to mean the 'lake of heaven,' whilst Loch Hourn, to the N, means the 'lake of hell.' Steamers touch occasionally at INVERIE. At the entrance to the loch, on the Morar shore, stands Mallaig, the terminus of the proposed extension from Fort William of the West Highland railway.

Nevis, Water of. See GLENNEVIS.

Newabbey, a village and a parish of E Kirkcudbrightshire. The village stands on the right bank of Newabbey Pow, at the northern base of Criffell (1867 feet), 6 miles ESE of Killywhan station on the Dumfries and Castle-Douglas section of the Glasgow and South-Western railway, and 7¾ S of Dumfries, under which it has a post office, with money order, savings bank, and telegraph departments. Here also are two inns, a public school, the parish church, a Free church, and St Mary's Roman Catholic church (1824; 150 sittings). The old parish church of 1731, on the S side of the abbey ruins, has been demolished; and a new one was built of granite in 1876-77 on the lands of Friar's Yard at a cost of £2400. A Latin cross in plan, 13th century

Gothic in style, it has an open timber roof, 400 sittings, and a belfry 40 feet high.

Sweetheart or New Abbey, after which the parish is named, lies just to the E of the village. It took the latter designation, 'New,' to distinguish it from Dundrennan Abbey in Lerwick parish, which was founded 130 years earlier, and came to be popularly called the Old Abbey. New Abbey itself, which, like all Cistercian abbeys, was dedicated to the Virgin, was founded in 1275 by Devergoil, who also founded Baliol College, Oxford, and built the old bridge at Dumfries. She was third daughter of Allan, lord of Galloway, a great-great-granddaughter of David I., and mother of the vassal king, John Baliol. Her husband, John de Baliol, had died in 1269 at Barnard Castle. There he was buried, all but his heart, which Devergoil caused to be embalmed and casketed in a 'coffyne of evrie'—

'And always when she gaed till meat,
That coffyne she gart by her set;
And till her lord, as in presens,
Ay to that she dyd reverens.'

When in 1290 she died at the age of eighty, her body, according to her directions, was brought from Barnard Castle to New Abbey, and buried in a rich tomb before the High Altar, the heart of her much-loved lord being laid on hers. Hence the name *Dulce Cor* or Sweetheart Abbey. Hugh de Burgh, prior of Lanercost, according to the manuscript chronicle of that house, composed an elegy for Devergoil, which was inscribed on her tomb:—

'In Dervorgil, a sybil sage doth dye, as
Mary contemplative, as Martha pious;
To her, oh deign, high King! rest to impart,
Whom this stone covers, with her husband's heart.'

The abbey was colonised by Cistercian monks, and appears to have been richly endowed. Grose assigns to it possessions, which seem, from the charter of the bishopric of Edinburgh, to have belonged to the Abbey of Holyrood. But irrespective of these, it owned the churches of Newabbey, Kirkpatrick-Durham, Cross-michael, Buittle, and Kirkcolm, the baronies of Lochkinderloch and Lochpatrick, and much other property. In 1513 the monks placed themselves and their tenants under the protection of Lord Maxwell; in 1544 they feued to his family at a low rate, in compensation for services done them, their barony of Lochpatrick; and in 1548 they gave him the five-mark lands of Loch-Arthur, and constituted him heritable baillie of the whole jurisdiction over all their lands. The property was in 1587 vested in the Crown by the annexation act; granted in 1624 to Sir Robert Spottiswood and Sir John Hay; resigned by them in 1633, to be given to the bishop of Edinburgh; given back, soon after the suppression of Episcopacy, to Sir Robert Spottiswood; and sold by his heir to the family of Copeland. Part of it, however—consisting of the lands of Drum in Newabbey—was burdened with a mortification by Queen Anne, in favour of the second minister of Dumfries. John, the last abbot but one, sat in the parliament of August, 1560, which approved the Confession of Faith; and the last and most noted abbot was Gilbert Brown, who had a written controversy, on the doctrines of Romanism, with the famous John Welsh of Ayr (then of Kirkcudbright). The prototype of Scott's 'Abbot,' he was denounced in 1596 by the commissioners of the General Assembly to the king as a Jesuit and excommunicated papist, and recommended to be seized and punished. Ten years later he was with difficulty apprehended by Lord Cranston, captain of the Border guard, and, after brief imprisonment, banished the kingdom. He died at Paris in 1612. The exquisite ruins of Sweetheart Abbey rise from the middle of a fine level field of 25 acres, the Precinct, round which ran a boundary wall of granite boulders, 8 or 10 feet high. The ruins served as a quarry till 1779, when £42 was subscribed by the parish minister and some of the neighbouring gentry to purchase their preservation; and since 1862 several hundreds have been spent on repairs, the removal of disfigurements, etc. The goodly chapter-

house suffered most from ruthless dilapidation; and little remains now but the ruined conventual church—a cruciform structure, mainly late First Pointed in style. With an extreme length of 203 feet, it consisted of a six-bayed nave (110 × 66 feet), a transept (115 feet long), an aisleless choir (28 feet wide), and a central saddle-back tower (92 feet high). In the roof of the S transept is an escutcheon, charged with 2 pastoral staves in *saltire*; over them a heart, and beneath them 3 mullets of 5 points, 2 and 1; said to be the arms of the abbey. An inscription over the escutcheon was taken on report by Grose to be '*Christus Maritus meus*;' but since has been found to run, 'Chus tim o' nid'— 'Choose time of need.' The beautiful W rose window, the E window, and those of choir, clerestory, and N transept are fairly entire, but elsewhere mullions and tracery are wanting; and the whole of the roof is gone. 'The predominating forms,' to quote from Billings, 'have all the graceful solemn dignity of the Early English style in its best day; and the Second Pointed or Decorated style has just come in to give richness and variety to the tracery of the windows. Some features, such as the depression of the upper window of the transept, are instances of the independent eccentricity of some of the Gothic artists.' The Abbot's Tower, $\frac{1}{4}$ mile NE, is a strong square ruin, 40 to 50 feet high.

The parish, containing also Drumburn village, 3 miles SSE of Newabbey, in 1633 was also known as Lochkinderloch, from its ancient church having stood on the larger islet in Loch Kindar. It is bounded NW by Lochrutton, NE by Troqueer, E by the estuary of the river Nith, S by Kirkbean, SW by Colvend, and W by Kirkgunzeon. Its utmost length, from NW to SE, is $7\frac{1}{2}$ miles; its breadth varies between $1\frac{1}{2}$ and 4 miles; and its area is 15,372 acres, of which 1709 are foreshore and 464 $\frac{3}{4}$ water. Loch Arthur or Lochend Loch ($4\frac{1}{4} \times 2\frac{3}{4}$ furl.; 250 feet) lies on the Kirkgunzeon border, and sends off Kirkgunzeon Lane. Glensome Burn or Newabbey Pow, which rises near this, winds $7\frac{1}{2}$ miles east-south-eastward to the estuary (for the last $\frac{1}{2}$ mile along the Troqueer boundary), and is joined by Kinharvie Burn, running across the parish in a more or less easterly direction, by Glen Burn, running $3\frac{1}{2}$ miles north-north-eastward, and by a third, running 7 furlongs north-by-eastward from Loch Kindar ($6\frac{1}{2} \times 2\frac{1}{2}$ furl.; 100 feet). Triangular Lochaber Loch ($4\frac{1}{4} \times 3$ furl.; 300 feet) lies on the Troqueer border. The shore, 3 miles in extent, is low; inland, the surface rises to 1867 feet at CRIFFEL, 593 at Glen Hill, with its Waterloo Monument (a round granite tower of 1816, 50 feet high, with winding stair), 1335 at *Meikle Hard Hill, 1350 at *Cuil Hill, 1050 at *Lotus Hill, and 705 at Lochbank Hill, where asterisks mark those summits that culminate on the Colvend and Kirkgunzeon border. The predominant rocks are Plutonic; the Criffel group, which occupies all the southern and south-western district, being a mass of granite, intruding on the Lower Silurian. Coarse limestone, of little value, occurs in the SE. The soil of the arable land in the N is clay or moss incumbent on till; on the slopes at the skirts of the uplands is principally a mixture of loam and gravel; and on the carse lands is alluvial clay. About two-fifths of the entire area are regularly or occasionally in tillage, one-thirteenth is under wood, and the rest of the land is either pastoral or waste. A rock-ing-stone, 15 tons in weight, lies on the eastern base of Lochbank Hill. Old coins have been turned up in the vicinity of the abbey; and in 1875 an oak canoe, 45 feet long and 5 wide, was found in Loch Arthur, its forward half being now in the Edinburgh Antiquarian Museum. At Ingleston is a moat, and in Loch Kindar an artificial crannoge. Mansions, noticed separately, are KINHARVIE and SHAMBELLIE. Newabbey is in the presbytery and synod of Dumfries; the living is worth £283. Lochend and Newabbey public schools, with respective accommodation for 95 and 160 children, have an average attendance of about 50 and 115, and grants of about £55 and £120. Pop. (1801) 832, (1831) 1060, (1861) 1063, (1871) 931, (1881) 906, (1891) 866.—*Ord. Sur.*, shs. 5, 6, 9, 1857-63. See vol. iv. of Billings' *Baronial and*

Ecclesiastical Antiquities (Edinb. 1852), and chap. xxvi. of Harper's *Rambles in Galloway* (Edinb. 1876).

New Aberdour. See ABERDOUR, Aberdeenshire.

New Ardrossan. See ARDROSSAN.

Newark, a small *quoad sacra* parish in the town of Port Glasgow, Renfrewshire. Constituted by the Court of Teinds in 1855, it is in the presbytery of Greenock and synod of Glasgow and Ayr. The minister's stipend is £335. Its church was built in 1774 as a chapel of ease and repaired in 1891. The ancient barony of Newark, which in 1373 belonged to Sir Robert Dan-yelstoun, knight, and passed by marriage to the Maxwells in 1402, lay partly in the parish of Port Glasgow, but chiefly in that of Kilmalcolm. But the ancient baronial residence, which still is fairly entire, stands in Port Glasgow parish, on a spit of land projecting into the Clyde, in the eastern vicinity of the town of Port Glasgow, and forms a prominent feature in the landscape, whilst itself commanding a splendid view of the surrounding scenery. Forming three sides of a square, the fourth side being open towards the S, it bears over its main door the monogram of Patrick Maxwell, with this inscription beneath: 'The Blessings of God be heirin, Anno 1597;' but the two blocks forming the southern extremities of its eastern and western wings were probably built in the second half of the preceding century. It ceased to be inhabited by its owners at the beginning of the 18th century, but still is maintained in weather-tight condition by the present owner, Sir Michael Shaw-Stewart, Bart. The site of the town of Port Glasgow originally bore the name of Newark; and the bay, which was converted into a spacious wet dock at a cost of £35,000, with large quays and bond warehouses, together with extensive enclosed spaces for timber, still bears the name of Newark Bay. Pop. of *q. s.* parish (1871) 3359, (1881) 3287, (1891) 3713—*Ord. Sur.*, sh. 30, 1866. See 'Notes on Newark Castle,' by G. Washington Browne, in vol. xvi. of *Proc. Soc. Ants. Scotl.* (Edinb. 1882).

Newark, an old baronial fortalice in Mayhale parish, Ayrshire, on the N slope of Brown Carrick Hill, 1½ mile S by E of the mouth of the river Doon, and 3 miles S by W of Ayr. It belongs to the Marquis of Ailsa; and, not very long ago restored and almost renovated, is now inhabited.

Newark. See ABERCROMBIE.

Newark, an ancient chapelry on the SE coast of Lady parish, Sanday island, Orkney. Its church measured only 12 feet by 10, and can still be traced. A Scandinavian round tower stood contiguous to the church; and, by diggings about the year 1835, was found to have had two concentric walls, the inner one fully 6 feet thick, and enclosing a space of 12 feet in diameter.

Newark Castle, a ruinous Border stronghold in the parish and county of Selkirk, on the right bank of Yarrow Water, 4½ miles WNW of Selkirk town. It stands, 520 feet above sea-level, on a gentle eminence, half encircled by the stream, and backed by Newark Hill (1450 feet) and Fastheugh Hill (1645), whose lower slopes are richly clothed with wood. A massive square tower, four storeys high, with windows high up and small, it was built some time before 1423, when a charter of Archibald, Earl of Douglas, styles it the 'New Werk,' in contradistinction to the neighbouring Auldward, no trace of which now remains. It was a royal hunting seat in Ettrick Forest; and the royal arms are carved on a stone in the W gable. It was taken by the English under Lord Grey (1543); a hundred prisoners from the battle of Philiphaugh were shot in its courtyard (1645); and after the battle of Dunbar it was occupied by Cromwell's invading army (1650). The barons of Buccleuch were captains of Newark Castle at an early date; and it now belongs to the Duke of Buccleuch, whose seat of 'sweet BOWHILL' stands a little lower down the river. In the years of her widowhood, it was the residence of Anna, Duchess of Buccleuch and Monmouth, whose husband, James, Duke of Monmouth, was beheaded for insurrection in the reign of James VII., but it was not her birthplace, as often

asserted. At Newark the 'Last Minstrel' is made to sing his 'lay' to the sorrowing Duchess:—

'He pass'd where Newark's stately tower
Looks out from Yarrow's hirschen bower:
The Minstrel gazed with wishful eye—
No lumber resting-place was nigh.
With hesitating step, at last,
The embattled portal-arch he pass'd,
Whose ponderous gate and massy bar
Had oft roll'd back the tide of war,
But never closed the iron door,
Against the desolate and poor.
The Duchess mark'd his weary pace,
His timid mien, and reverend face,
And bade her page the mentals tell
That they should tend the old man well,
For she had known adversity
Though born in such a high degree;
In pride of power, in beauty's bloom,
Had wept o'er Monmouth's bloody tomb!'

The appearance of Newark and of the landscape round is finely noticed by Wordsworth, who twice was here, in 1814 and 1831, on the last occasion with Sir Walter Scott:—

'That region left, the vale unfolds
Rich groves of lofty stature,
With Yarrow winding through the pomp
Of cultivated nature;
And, rising from these lofty groves,
Behold a Ruin hoary!
The shatter'd front of Newark's Towers,
Renov'd in Border story.'

Mary Scott, the flower of Yarrow, is supposed by many to have been born in Newark Castle; but she was really a native of the neighbouring parish, a daughter of the Scotts of DRYHOPE. The scene of the fine old ballad, *The Sang of the Outlaw Murray*, though also belonging to Yarrow parish, is almost universally identified by the country folk with Newark Castle.—*Ord. Sur.*, sh. 25, 1865. See James F. Hunnewell's *Lands of Scott* (Edinb. 1871), and Sir William Fraser's *Scotts of Buccleuch* (2 vols., Edinb. 1878).

Newarthill, a mining village in Bothwell parish, Lanarkshire, 1¼ mile E by S of Holytown, and 3 miles ENE of Motherwell. Standing amid a rich mineral tract, it has a post and money order office under Motherwell, a U.P. church (1810), and a public school. Pop. (1841) 968, (1861) 1382, (1871) 1530, (1881) 1355, (1891) 1522.—*Ord. Sur.*, sh. 31, 1867.

Newbattle (anc. *Neubottle*, 'new dwelling'), a village and a parish in the E of Edinburghshire. The village stands, 150 feet above sea-level, on the left side of the river South Esk, ¾ mile NNE of Dalhousie station, ¾ SE of Eskbank station, both on the Waverley section of the North British railway, and 1 S by W of the post-town, Dalkeith. Of high antiquity, in spite of its name, it has dwindled to a mere hamlet, which, lying low, among orchards and gardens, is sheltered nearly all round by rising-grounds.

The parish, containing also Newton Grange and Easthouses villages, with small portions of Dalkeith, Gorebridge, and Hunterfield, comprises the ancient parishes of Newbattle and Maisterston. It is bounded NW by Lasswade and Dalkeith, N by Dalkeith and Cranston, E by Cranston, SE by Borthwick, S by Borthwick, and W by Cockpen. Its utmost length, from NNW to SSE, is 3¾ miles; its width varies between 2 and 4¾ miles; and its area is 5224¾ acres. The beautiful South Esk flows 2½ miles north-north-eastward, mainly across the north-western interior, but partly along the Cockpen and Dalkeith boundaries; and GORE WATER, its affluent, flows 5½ furlongs west-north-westward along the southern boundary. Just above Dalhousie station the vale of the Esk is crossed by the Waverley section of the North British railway, on a viaduct 400 yards long, comprising 24 arches of brick, supported by massive abutments of masonry, and rising 70 feet above the bed of the stream. The ends of this stupendous viaduct are prolonged by high embankments, which are secured by retaining walls of vast thickness. In the N, along the South Esk, the surface declines to 135 feet above sea-level; and thence it rises south-south-eastward, until it attains a maximum altitude of 876 feet. A slight summit here on the hilly

ridge was anciently a post for observing the country around, and was crowned by a quadrangular enclosure, about 3 acres in area, believed to have been a Roman camp, and now covered with dense plantation. Great part of the ridge was, at no distant period, in a waste condition—some of it marshy or moorish; but all, excepting some trivial pendicles, is now in a productive state, some of it wooded, and mostly good arable land. Some 300 acres are under wood, and nearly all the rest of the parish is in tillage. The soil in the valley of the Esk is a rich deep loam, lying on sharp gravel; that on the N and W sides of the hill is first a loam, next a strong clay, and next a whitish sandy earth; whilst that on the south-eastern slope of the hill is fertile vegetable mould. There are extensive gardens and orchards for Fordel Dean. The rocks belong to the Carboiferous Limestone series; and the valley of the Esk is part of the true coal measures of Dalkeith and Dalhousie. Limestone and sandstone are obtained in plenty from surface quarries; and coal can be mined in upwards of twenty seams, from 1½ to 8 feet thick. Employment is also afforded by a paper-mill. The road from Edinburgh to Kelso, by way of Lauder, bisects the NE wing of the parish; and that from Edinburgh to Galashiels runs closely parallel to the western boundary, and is connected with roads to the E and to the W.

The prime object of historical interest in the parish of Newbattle is Newbattle Abbey. This was anciently, as its name imports, a monastery, and is now the seat of the Marquess of Lothian. David I. founded the monastery in 1140 for a colony of Cistercian monks from Melrose. He bestowed on them the district of Northwaite, now called Moorfoot; the lands of Balnebuch on the Esk; some lands, a salt-work, and rights of pasturage and wood-cutting in the carse of Callendar in Stirlingshire; a salt-work at Blakeland in Lothian; the right of pannage, and the privilege of cutting wood in his forests; and the patronage of several churches, with a right to some of their revenues. David's example was followed by Malcolm IV.; by the Countess Ada, the widow of Earl Henry; by William the Lyon, who gave the monks the lands of Mount Lothian, and, with some special services, confirmed the grants of David and Malcolm; and even by Alwyn, the first abbot of Holyrood, who relinquished to the inmates of the new abbey the lands of Pettendreich on the Esk. Various other persons also gave them lands in the country, tofts in the town, and churches in the several shires. Alexander II.—who delighted to reside at Newbattle—obtained a grave there for his consort, Mary; and, deeply moved by so affecting a circumstance, gave the owners of the place various donations and rights for the salvation of her, of himself, and of his predecessors. The monks likewise acquired much property and many privileges by purchase; in particular, they obtained the lands of MONKLAND in Lanarkshire, and secured the right of cutting a road to them for their own proper use. In 1203 Pope Innocent, by a bull, confirmed all their possessions and privileges; and, by another bull, he prohibited all persons from levying tithes from lands which they either held or cultivated. David II. gave the monks a charter, enabling them to hold their lands within the valley of Lothian in free forestry, with the various privileges which belonged to a forestry. But the monks, though figuring chiefly as accumulators of worldly property, incidentally conferred great advantages on the occupations of husbandry, of mining, and of commerce; for they incited and directed agricultural operations, they discovered—and perhaps were the first to discover—Scottish coal, and brought it from the mine, and they constructed a sea-port, and gave Scotland a specimen of the arts of traffic. See HADDINGTONSHIRE and MORISON'S HAVEN.

The first abbot of Newbattle was Ralph, who, in 1140, accompanied the colony from Melrose. John, the eighteenth abbot, had to act a part in the difficult transactions respecting the succession to the Crown after the demise of Alexander III. In March 1290, he sat in the great parliament at Brigham; in July 1291,

he swore fealty to Edward I. in the chapel of Edinburgh Castle; and in 1296 he again, with his monks, swore fealty to Edward, and, in return, obtained writs to several sheriffs for the restoration of his property. In Jan. 1297, Edward directed his treasurer, Cressingham, to settle with the abbot for the 'form' due by the abbey of Newbattle for his lands of Bothkennar. Whether Abbot John witnessed the accession of Robert Bruce is uncertain. In 1385 the abbey was burned during the inroad of Richard II.; and the forty succeeding years saw the monks employed in the work of its restoration. Patrick Madour, who was abbot in April 1462, collected the documents which at present form the Chartulary of Newbattle; and in Oct. 1466 he instituted a suit in parliament against James, Lord Hamilton, 'for the spoliation of a stone of lead-ore,' taken from the abbot's lands of Premure in Clydesdale, and triumphantly compelled the coronet to make compensation, and do obeisance, to the cowl. Andrew, who was abbot in May 1499, granted his lands of Kinnaid in Stirlingshire to Edward Bruce, 'his well-deserving armiger,' for the yearly payment of 16 merks; and in Dec. 1500, he gave to Robert Bruce of Binning and his wife, the monastery's lands of West Binning in Linlithgowshire, for the yearly compensation of four shillings. During James Hasmall's abbacy, in 1544, the abbey was burned by the Earl of Hertford. The last abbot, Mark Ker, second son of Sir Andrew Ker of CESSFORD, turning Protestant in 1560, obtained the vicarage of Linton; and in 1564 was made the first commendator of Newbattle. In 1581 he obtained a ratification by parliament of his commendatorship; and he appears to have annually drawn from the abbey property £1413, 1s. 2d. Scots, besides 99 bolls of wheat, 53 bolls 2 pecks of bere, and 250 bolls 2 firloths of oats—subject, however, to several disbursements, and particularly to the remarkable one of £240 Scots for six aged, decrepit, and recanted monks. He died in 1584, an extraordinary lord of the court of session. Mark, his son, who had a reversion of the commendatorship, on succeeding, had it formally confirmed; and in 1587, he obtained from the facile James VI. a grant of the whole estates of the monastery as a temporal barony, and afterwards, in the same year, got the grant ratified by parliament. In Oct. 1591 he was dignified with the title of Lord Newbattle, and had his barony converted into a temporal lordship; and in the parliament of next year he saw his title and its basis finally recognised. In 1606 he was created Earl of Lothian; and Anne, his granddaughter, conveyed that title to her husband, Sir William Kerr, Knight, whose father, Sir Robert Kerr of the FERNIEHAST line, was created Earl of Ancrum in 1633. Robert, their son, the fourth Earl of Lothian and third of Ancrum, in 1701 was raised to the higher dignity of Marquess of Lothian; and his seventh descendant, Schomberg-Henry Kerr, is present and ninth Marquess (b. 1833; suc. 1870). See MONTEVIOT.

The monastic buildings were ruthlessly removed when the present mansion was erected, the crypt of the abbey, coeval doubtless with its foundation, actually forming part of the ground-floor of the present mansion. It was restored in 1878, when, too, was discovered the well-preserved basement of a cruciform chapel (239 × 113 feet), with numerous pillars and elaborately sculptured stones. Otherwise, in the words of Sir John Scot of Scotstarvet, the Commendator and his eldest son 'did so metamorphose the building that it cannot be known that ever it did belong to the Church, by reason of the fair new fabrick and stately edifices built thereon.' Further extensive alterations were made in 1650 and subsequent years; and Newbattle Abbey to-day is simply a large and commodious building, with a castellated front. In the library are several illuminated MSS. in folio, which formerly belonged to the monks, and are written on vellum, in black letter, on every page being adorned with pictorial illustrations of the subjects of which they treat. Many valuable paintings and portraits enrich the gallery, particularly a Titian, a Murillo,

several Vandykes, and some family portraits. Around the mansion is a level lawn of upwards of 30 acres. On one side it is watered by the South Esk, which, after brawling among the rocks of Cockpen, here flows in a quiet stream, and is overhung with plantations; on the other side it is skirted by a waving line of woods, which complying with the ascents and undulations of the banks, stretches upward in a many-curved surface, and exhibits a beautiful variety of shades. The belts of wood which flank the two sides of the lawn approach each other at the ends, and, embowering the mansion and its park, exclude them from outer view. At the lower end of the lawn, which now stretches to the eastward of Newbattle Abbey, the river is spanned by an antique bridge of one circular arch, with plain square ribs, usually called the Maiden Bridge. From the SW a fine old entrance, 'King David's Gate,' opens on to the stately avenue 520 yards long; and the Newbattle Beech, behind the house, is the finest and largest tree in Scotland, being 95 feet high, and $37\frac{1}{2}$ in girth at 1 foot, and $21\frac{1}{2}$ at 5 feet, from the ground. The spread of its branches is 350 feet in circumference; and it is still growing, and making more wood year by year. The Queen saw this tree on 4 Sept. 1842; and George IV. also was at Newbattle in Aug. 1822.

Woodburn is another mansion, lately purchased by the Marquess of Lothian; and a third, considerably larger, called Newtongrange House, was built not long ago by John Romans, Esq. The Marquess of Lothian owns three-fourths of the parish. Giving off a portion to Stobhill *quoad sacra* parish, Newbattle is in the presbytery of Dalkeith and the synod of Lothian and Tweeddale; the living is worth £338, while, in addition the minerals under the glebe are feued in perpetuity to the minister for a sum which gives £120 a year. The saintly Robert Leighton (1613-84) was minister from 1641 to 1653; and his request to be allowed to preach, not 'to the times,' but 'for eternity,' is entered in the records of the presbytery of Dalkeith and of the Newbattle kirk-session, which have been published in vol. iv. of *Procs. Soc. Ants. Scotl.* The parish church is a quaint edifice of 1727, with stained-glass windows and a spire 70 feet high. It was restored and renovated in 1895, when a large organ was introduced, and the "Ancrum Aisle" opened. Two public schools—Easthouses and Newbattle—with respective accommodation for 62 and 679 children, have an average attendance of about 45 and 425, and grants of nearly £40 and £380. Pop. (1881) 3346, (1891) 3560, of whom 2843 were in the ecclesiastical parish.—*Ord. Sur.*, sh. 32, 1857. See Cosmo Innes' *Registram S. Marie de Neubolte* (Bannatyne Club, Edinb. 1849), and John Small's *Castles and Mansions of the Lothians* (Edinb. 1883).

Newbigging, a hamlet in Newtyle parish, Forfarshire, 1 mile NW of Newtyle railway station on the Dundee and Newtyle section of the Caledonian railway.

Newbigging, a village in Monikie parish, Forfarshire, $7\frac{1}{2}$ miles ENE of Dundee, under which it has a post office. Here also are a U.P. church and a public school.

Newbigging. See AUCHTERTOOL and LETHNOT.

Newbigging, a village in Carnwath parish, Lanarkshire, $\frac{3}{4}$ mile NNW of Newbigging station on the Carstairs and Dolphinton branch of the Caledonian railway, this being $4\frac{1}{2}$ miles E of Carstairs junction. It has a post office under Carnwath and a public school.

Newbigging. See MUSSELBURGH.

Newbridge, a hamlet, with an inn, in the Edinburghshire portion of Kirkliston parish, on the right bank of Almond Water, 3 miles W by S of Edinburgh. It suffered great devastation by cholera in 1832.

Newburgh, a seaport village in Foveran parish, Aberdeenshire, on the right side of the river Ythan, 7 furlongs from the sea, 5 miles SE of Ellon station on the Buchan and Formartine section of the Great North of Scotland railway, and $13\frac{1}{4}$ NNE of Aberdeen, under which it has a post office, with money order, savings bank, and telegraph departments, and with which it communicates daily by bus. Pleasantly situated, it contains several substantial and commodious houses;

possesses important facilities both for manufacture and for fishing; ranks as a support of Aberdeen; and carries on commerce chiefly in exporting grain, and in importing coal, timber, lime, and bones. There is a place of worship belonging to the Church of Scotland, in connection with which there is a lectureship of £25 per annum, bequeathed by the late John Mather, Esq.; also, a Free church hall, a public school (Mather's), a lifeboat house, two hotels, several granaries, and stores for lime and artificial manure. Extensive manure works here give employment to a great portion of the population, and have several schooners and steam vessels engaged in the exports and imports of the place. Pop. (1871) 570, (1881) 645, (1891) 654.—*Ord. Sur.*, sh. 77, 1873.

Newburgh, a town and a parish in the extreme NW of Fife. A royal and police burgh and a seaport, the town has a station on the Ladybank and Perth section of the North British railway, $11\frac{1}{4}$ miles ESE of Perth, $7\frac{1}{2}$ NW of Ladybank, and $46\frac{1}{2}$ N of Edinburgh by the Forth Bridge. It mainly consists of the well-built High Street, running $\frac{1}{2}$ mile E and W within 300 yards of the Firth of Tay, but includes some lanes leading down to the shore, and the southern suburb of Mount Pleasant, in Abdie parish. Great part of it is of recent erection; and even the oldest existing portions have nearly all been rebuilt since about the close of the 18th century. Its situation near the firth is exceedingly pleasant; and both from its own appearance, with gardens and orchards, and from the charming aspect of its environs, Newburgh presents a fine picture either to observers going up or down the river, or to observers on neighbouring vantage-grounds. The views, too, from itself and its vicinity are fine. Even to a traveller on the railway, coming up from Ladybank to Perth, the prospects at Newburgh are remarkably striking and diversified, comprising first a sudden revelation of the whole basin of the lower Tay, and next a close view of Newburgh itself, its upper terrace rising on the S, and the main body nestling below on the N, and projecting into the lake-like expanse of the firth. The principal public building is the town-house, with a spire, erected in 1808; and attached to this is a building of considerable size, built about 1830, for the accommodation of the dealers in the stock market. The parish church, St Catherine's, is an elegant Gothic structure, erected in 1833 from designs by William Burn, and containing 1000 sittings. In 1882 it was adorned with a stained-glass window, representing scenes in the life of Christ. Other places of worship are Free, U.P., Evangelical Union, and Baptist churches.

Newburgh has a post office, with money order, savings bank, insurance, and telegraph departments, a branch of the Commercial Bank, a savings bank, several hotels, a gas company (1836), waterworks (1877), a cemetery, a public library (1861), a reading-room and coffee-house (1881), 2 bowling clubs, a curling club, a public hall, a masonic hall, the Livingstone Hall, and a gardening society. A fair is held on the third Friday of June.

In the 17th century, Newburgh was so devoid of trade as to be described in Cunningham's essay on Cross Macduff as 'a poor country village;' and till pretty far in the following century, although gradually improving, it remained much the same. Until within a few years of the publication of the *Old Statistical Account*—1793—its inhabitants had been chiefly employed in husbandry; but the linen-trade had occupied them to a certain extent, and when that Account was published the greater portion of them were engaged in that manufacture. At that time, however, there were only two persons who employed workmen; the greater part of the linen manufactured being woven by individual weavers on their own account, who sold their webs, when finished, at Perth, Dundee, Cupar, Auchtermuchty, and Glasgow. But the trade went on and prospered; and numerous manufacturers arose, not only to employ all the weavers in Newburgh, but also to furnish work for considerable numbers in Aberargie, Abernethy, Strathmiglo, Auchtermuchty, Dunshelt, Cupar, Springfield, Pitlessie, Kettle, Markinch, Falk-

land, and other places. The principal branch is the weaving of sheetings, partly for the home markets and partly also for exportation. The manufacture of floor-cloth, malting, quarrying, and the timber trade also afford employment, while the benefits derived from the salmon fishery and from the sale of fruit likewise add considerably to the welfare of the place. The harbour consists of a long pier parallel to the river, and five projecting piers at right angles to it. The principal exports are linen, grain, and potatoes; and the principal imports are timber, coals, and miscellaneous small goods. The Perth and Dundee steamer touches daily in summer.

Newburgh, in spite of its name, is a town of considerable antiquity; and it took that name, it is said, in distinction to the decaying old town of Abernethy, not far off. The present town, or rather its remote nucleus, originated with the abbey of Lindores. In 1266 Alexander III. erected it into a burgh of barony in favour of the abbot with all the usual privileges of such burghs. In the charter it is called 'novus burgus juxta monasterium de Lindores.' In 1456 it was made a royal burgh, and its charter was confirmed in 1631. In 1457 John, Abbot of Lindores, confirmed by charter the ancient privileges of the burgesses of Newburgh; and on the 4th of July of the same year he granted them the lands of Vodrufe (Wodriffe) and the hill to the S of it—about 400 acres in all—for which they were to pay to the abbot homage and common service used and wont, with 40 bolls of barley. These acres originally belonged to burgess proprietors, but are now, with a few exceptions, the property of E. P. B. Hay, Esq. of Mugdrum. In 1593 James VI. and in 1631 Charles I. confirmed the ancient charter, and conferred all the privileges of a royal burgh; but Newburgh never exercised its right of sending a member to the Scottish parliament, and consequently at the Union was not included in any of those sets of burghs which were invested with the right of sending members to the

British parliament. The town is governed by a provost, a senior and a junior baillie, a treasurer, and thirteen councillors, with a town clerk. Under the Burgh Police Act of 1892 there are nine commissioners of police, including the provost and two bailies, and courts are held at regular periods. The royalty extends $1\frac{1}{2}$ mile to the S and W beyond the town, but excludes the harbour and extensive suburbs.

Seal of Newburgh.

Burgh valuation (1884) £4597, 15s. 7d., (1893) £2367, 12s. 2d. Pop. of burgh (1831) 2458, (1851) 2638, (1861) 2281, (1871) 2182, (1881) 1852, (1891) 1506; of town (1861) 2733, (1871) 2777, (1881) 2374, (1891) 1685, of whom 932 were females.

The parish of Newburgh, disjoined from Abdie in 1632, and subsequently enlarged by an annexation from Abernethy, is bounded N by the Firth of Tay, E by Abdie, SE by Collessie, S by Auchtermuchty, and W by Abernethy in Perthshire. Its utmost length, from N to S, is $3\frac{1}{2}$ miles; and its utmost breadth, from E to W, is $2\frac{1}{2}$ miles. Its area was enlarged in 1891 by the Boundary Commissioners, who transferred to it so much of the former Fifeshire portion of the Perthshire parish of Abernethy as lay to the east of the lands of Pitmedden, and the Wester Lumbenny detached part of the parish of Abdie, which comprised 448 acres. The coast-line, 2 miles in extent, is low; and the firth, with a width here of $1\frac{1}{2}$ mile, is divided by Mugdrum island ($7\frac{1}{2} \times 1\frac{1}{2}$ furl.) into the North and the South Deep. The northern part of the parish is a beautiful and finely wooded level; the southern, crossed by the ridge of the Ochils, is an alternate series of hills and valleys, rising to 777 feet at Ormiston or Blackcairn Hill, and 640 near Easter Lumbenny. The predominant rocks of the low level tract in the N are Devonian; whilst those of

the hills are eruptive—chiefly greenstone masses, with boulders of granite, gneiss, quartz, and mica-slate. The soil in the eastern part of the low grounds is rich carse clay, in the western is gravelly, and on the hills is either a loose black loam or a more compact ferruginous mould, generally shallow yet very fertile. Nearly two-thirds of the entire area are in tillage; rather more than one-ninth is under fruit-trees or wood; and the rest of the land is either pastoral or waste.

About a mile from the Tay, on the slope of the Ochils, in a pass leading up from the N of Fifeshire to Strathearn, is a small cairn of stones, known by the name of Sir Robert's Prap. This marks the place where a fatal duel occurred towards the close of the 17th century, between Sir Robert Balfour of Denmiln and Sir James Macgill of Lindores. A little way W of the town stands a curious antiquity, called Mugdrum Cross, which, together with Mugdrum House and Mugdrum island, is noticed in the article MUGDRUM. In the pass leading to Strathearn, 200 yards E of Sir Robert's Prap, on high ground overlooking Strathearn westward to the Grampians, stands another antiquity, similar to Mugdrum Cross, but far ruder, and much more celebrated. This is Cross Macduff, mentioned by Wyntoun in his *Cronykil* (circa 1426), and anciently bearing an inscription which, though preserved in record, has greatly puzzled philologists. The cross itself is said to have been granted to Macduff as a sanctuary, for his successful aid against Macbeth, and is reported to have been broken in pieces by the Reformers, on their way from Perth to Cupar (1559); nothing now remains, however, but the large square block of freestone which formed the pedestal. This is $3\frac{1}{2}$ feet high, and $4\frac{1}{2}$ in length by $3\frac{3}{4}$ in breadth at the base. There are several holes or indentations on its different faces, which really have been formed by nodules of iron pyrites falling out, but which a comparatively recent tradition says were nine in number, and at one time contained nine rings. There is no appearance of any socket in which the cross had been fixed; so that it must have been placed upon the surface of the stone, without any other support than that of its own base. The cross formed the girth or sanctuary for any of the clan Macduff, or any related to the chief within the ninth degree, who had been guilty of 'suddand chaudmelle,' or unpremeditated slaughter. Any person entitled to this privilege, and requiring it, fled to the cross, and laid hold of one of the rings, when punishment was remitted on his washing nine times at the stone, and paying nine cows and a colpendach or young cow. The washing was done at a spring still called the Nine Wells, emitting a stream so copious as now to be employed in the operations of a bleachfield; and the oblation of the nine cows was made by fastening them to the cross's nine rings. Such is the current account, repeated time after time; but the nine rings and the nine washings have not the slightest support in record. In every instance, we are further told, the person claiming sanctuary required to give proof of belonging to the clan Macduff, or of possessing consanguinity to the chief within the given degree; and whenever any claimant failed to produce this evidence, he was instantly put to death, and buried near the stone. There were formerly several artificial cairns and tumuli around the cross, and one rather larger than the rest about 50 yards to the N, which were all popularly regarded as the graves of those who had been slain here in consequence of failing to prove themselves entitled to the sanctuary, but which have all been obliterated by the levelling operations of the ploughshare. 'Superstition,' says Cant, 'forbids the opening of any of them; no person in the neighbourhood will assist for any consideration, nor will any person in or about Newburgh travel that way when dark, for they affirm that spectres and bogles, as they call them, haunt that place.' With the removal of the traces of the graves, superstitious fears attached to the spot have died away. Sir Walter Scott has made the traditions and antiquities of this place the subject of a short dramatic poem, entitled *Macduff's Cross*, in the course of which he has very

accurately described both the cross itself and its accidents. He says—

'Mark that fragment,
I mean that rough-hewn block of massive stone,
Placed on the summit of this mountain pass,
Commanding prospect wide o'er field and fell,
And peopled village and extended moorland,
And the wide ocean and majestic Tay,
To the far distant Grampians. Do not deem it
A loosen'd portion of the neighbouring rock,
Detach'd by storm and thunder. 'Twas the pedestal
On which, in ancient times, a cross was rear'd,
Carved with words which foil'd philologists;
And the events it did commemorate
Were dark, remote, and undistinguishable,
As were the mystic characters it bore.'

LINDORES Abbey and the mansion of PITCAIRLIE are noticed separately. Newburn is in the presbytery of Cupar and the synod of Fife; the living is worth £308. The public school, with accommodation for 464 children, has an average attendance of about 315, and a grant of nearly £330. Landward valuation (1884) £3155, 17s. 4d., (1893) £3453, 2s. 4d. Pop. of entire parish (1801) 1936, (1841) 2897, (1861) 2693, (1871) 2529, (1881) 2191, (1891) 1812.—*Ord. Sur.*, sh. 48, 1868. See Alex. Laing, LL.D., *Lindores Abbey and the Burgh of Newburn* (Edinb. 1876).

Newburn (anc. *Drumeldrie*), a coast parish of SE Fife, containing Drumeldrie village, $\frac{1}{4}$ mile E by S of Upper Largo. It is bounded NE and E by Kilconquhar, SE by Elie, S by the Firth of Forth, and W and NW by Largo. Its utmost length, from N by W to S by E, is $3\frac{1}{2}$ miles; its breadth varies between $\frac{1}{2}$ and $1\frac{1}{2}$ mile; and its area is 3218 acres, of which 178 $\frac{1}{2}$ are foreshore. The shore, extending $1\frac{1}{2}$ mile along the eastern curve of Largo Bay, is flat and sandy; and from it the surface rises northward, until at the western border it attains a maximum altitude of 785 feet on the eastern slope of green conical LARGO Law (965 feet). The general landscape, at once within itself and in views beyond, is a brilliant assemblage of hills and dale, of wood and water. The rocks are partly carboniferous, but chiefly eruptive; and the soil, though various, is generally fertile. About five-sixths of the entire area are in tillage; nearly 140 acres are under wood; and the rest of the land is pastoral. The parish being thus quite rural, the inhabitants depend on agriculture for employment. John Wood, who founded in 1665 Wood's Hospital in Largo, left the small estate of Orkie to endow a school at Drumeldrie, where certain boys of the name of Wood were to be educated and brought up. By a change effected by the Endowed Schools Commission, the boys are now boarded out. Gilston House, $3\frac{1}{2}$ miles NNE of Largo, and Lahill, $\frac{1}{4}$ mile ENE, are the seats of John Henry Baxter, Esq., and Mrs Robert Rintoul. Another estate, noticed separately, is BALCHRISTIE. Newburn is in the presbytery of St Andrews and the synod of Fife; the living is worth £229. The parish church, a little way ENE of Drumeldrie, was built in 1815, and is amply commodious. The public school, with accommodation for 90 children, has an average attendance of about 35, and a grant of nearly £35. Valuation (1884) £5248, 10s. 6d., (1893) £4300, 7s. 8d. Pop. (1801) 412, (1841) 419, (1861) 374, (1871) 362, (1881) 344, (1891) 322.—*Ord. Sur.*, sh. 41, 1857.

Newbyres. See GOREBRIDGE.

Newbyth, a village in the SE of King-Edward parish, N Aberdeenshire, 3 miles NNE of Cummintown and 8 ENE of Turriff, under which it has a post office. Founded in 1764 by James Urquhart, Esq., on his estate of Byth, it stands 350 feet above sea-level, and consists of two streets, crossing each other nearly at right angles. Most of the villagers rent small lots of ground, in addition to their feu-holdings of about $\frac{1}{2}$ acre; and neighbouring peat-mosses still yield a good supply of fuel, though their area has been greatly reduced by advancing cultivation. In 1892 two bequests for the poor, of £500 and 200, were left, the trustees being the minister and kirk session of the parish church. The church, containing 500 sittings, and successor to

one of 1793, was built as a chapel of ease in 1851, in 1867 was raised to *quoad sacra* status, and in 1890 was fitted up with heating and lighting appliances. The parish is in the presbytery of Turriff and the synod of Aberdeen; its minister's stipend is £150. There are also a Free Church preaching station and a public school, enlarged in 1875. This and two others, Crudie and Upper Brae, with respective accommodation for 242, 218, and 121 children, have an average attendance of about 130, 85, and 100, and grants amounting to over £140, £70, and £85. Pop. of village (1871) 609, (1881) 491, (1891) 398; of *quoad sacra* parish (1871) 2216, (1881) 1932, (1891) 1847, of whom 14 were in Aberdour.—*Ord. Sur.*, sh. 86, 1876.

Newbyth, a mansion, with finely-wooded grounds, in Whitekirk parish, Haddingtonshire, on Peffer Burn, $\frac{1}{2}$ mile ENE of East Fortune station, and 3 miles NNW of East Linton. Standing amid beautiful scenery, it is a castellated edifice, erected from designs by William Adam towards the close of the 18th century. Since the early part of the 17th century the estate has been held by a younger branch of the Bairds of Auchmedden, members of which were John Baird (1620-98), created a lord of session as Lord Newbyth, and General Sir David Baird, K. C. B. (1757-1829), the captor of Seringapatam, created a baronet in 1809. His grand-nephew, Sir David Baird, third Bart. (b. 1832; suc. 1852), is present proprietor. See GILMERTON and FERN-TOWER.—*Ord. Sur.*, sh. 33, 1863. See vol. ii. of John Small's *Castles and Mansions of the Lothians* (Edinb. 1883).

Newcastleton. See CASTLETON.

New Craighall. See CRAIGHALL.

Newe. See CASTLE-NEWE.

Newfield, an estate, with a mansion, in Dundonald parish, Ayrshire, $1\frac{1}{2}$ mile SE of Drybridge station. Its owner, William Finnie, Esq. (b. 1828; suc. 1846), was M.P. for North Ayrshire 1868-74.—*Ord. Sur.*, sh. 22, 1865.

New Galloway. See GALLOWAY, NEW.

Newhailes, a mansion in Inveresk parish, Edinburghshire, $1\frac{1}{2}$ mile W by S of Musselburgh, and $\frac{1}{2}$ N by E of Newhailes station on the North British railway, this being $4\frac{1}{2}$ miles E by S of Edinburgh. It was built by Sir David Dalrymple, Bart. (1726-92), the eminent lawyer, antiquary, and historian, who took the title of Lord Hailes on his elevation to the bench in 1766, and whose great-grandson, Sir Charles Dalrymple, Bart. (b. 1839; suc. 1849), was M.P. for Buteshire, 1868-85.—*Ord. Sur.*, sh. 32, 1857.

Newhall, an estate, with a mansion, in Penicuik parish, Edinburghshire. The mansion, on the North Esk's left bank, within a curvature of the stream, $4\frac{1}{2}$ miles SW of Penicuik town, during the 16th century and an unknown period preceding, belonged to a family of the name of Crichton. In 1646 Dr Pennicuik became its proprietor; and here was born his son, Dr Alexander Pennicuik (1652-1722), poet and physician. (See ROMANNO). In 1703 Newhall was acquired by Sir David Forbes, under whose son and successor, John, it became a favourite resort of some of the most eminent literati of the 18th century. While inhabited by the Crichtons it was an irregular castle, and with its appendages covered the whole breadth of the point on which it stands, formed by a strip or low spur from the base of the Pentlands, cloven down on each side by a deep ravine, and terminating in the glen of the Esk. It was mainly rebuilt soon after 1703, and enlarged in 1785; but the ground-floor in the front of the present modernised mansion, which was part of one of the towers, is vaulted in the roof, and has on every side slits for defence; and it is so strong as, in one place, to have a closet cut out of the thickness of the wall. The eastern ravine, overhung by remains of a small round tower, is densely wooded; and a dark and romantic rill leaps along it in several beautiful cascades, and flings up its spray amid the deep shades of the woods. The western ravine is overhung by a point on which stood anciently a religious establishment of some note, and a prison; and though this ravine

is dry, it vies with the other in romance, and, like it, is shaded with thick foliage. A walk, which goes round the site of the chapel and prison, forms a noble terrace from the W end of the house, looking up the glen and over to a mineral well among copsewood and pines on the other side. A farm in the immediate neighbourhood bears the name of Spital, and probably formed an endowment for supporting, under the management of the religious foundation of Newhall, a hospice for the refreshment and shelter of travellers. George Meikle Kemp (1794-1844), the designer of the Edinburgh Scott Monument, was the son of a shepherd on the Newhall estate. Purchased from the Hays for £14,000 in 1783, the Newhall and CARLOPS property belongs now to Horatio Robert Forbes Brown (b. 1854; suc. 1866), whose grandfather edited Pennicuik's Works, and did much to beautify the grounds of Newhall, which he identified with the scenery of the *Gentle Shepherd*. (See HABBIE'S HOWE.)—*Ord. Sur.*, shs. 32, 24, 1857-64. See vol. ii. of John Small's *Castles and Mansions of the Lothians* (Edinb. 1883).

Newhall House, an elegant modern mansion in Resolis parish, Ross and Cromarty shire, near the southern shore of the Cromarty Firth, 2 miles S by W of Invergordon.

Newhalls, a village in Dalmeny parish, Linlithgowshire, on the coast of the Firth of Forth, in the eastern vicinity of Queensferry.

Newharthill. See NEWARTHILL.

Newhaven, a fishing town in North Leith parish, Edinburghshire, on the southern shore of the Firth of Forth, $1\frac{1}{2}$ mile E of Granton, 1 mile WNW of the centre of Leith, and $2\frac{1}{4}$ miles N by W of Edinburgh Post Office. It communicates with the city both by tram and by the Leith branches of the Caledonian and North British railways, Newhaven station on the former lying 3 furlongs S by W, and Trinity station on the latter $3\frac{1}{2}$ furlongs W by S. 'Our Lady's Port of Grace'—as Newhaven was called of old—originated in the general impetus given to trade and commerce during the prosperous reign of James IV. (1488-1513). Owing to the depth of water, a yard and a dock were erected for shipbuilding, and a harbour constructed for the reception of vessels, whence it received the name of Newhaven. Here, in 1511, was built 'ane varie monstrous great schip called the *Michael*,' which required such a mass of timber for her construction 'that she waisted all the woodis in Fyfe, except Falkland Wood, besides the timber that came out of Norway.' And here it was, on 1 May, 1544, that the English force landed under the Earl of Hertford, of which Hill Burton says that 'unless we may find some parallel in Tartar or African history, it will scarce be possible to point to any expedition so thoroughly destitute of all features of heroism or chivalry.' Ere this, however, the rising haven had been strangled in its birth by the jealousy of the citizens of Edinburgh, who purchased the superiority from James V. Its chapel of Our Lady and St James—a dependency seemingly of St Anthony's preceptory at Leith—was suppressed at the Reformation; and Newhaven sank into a mere fishing village. Signs of antiquity there are none, except that a house near the W end of the town exhibits a large pediment sculptured with a pair of globes, a quadrant, an anchor, and an antique war-galley, and bearing inscription, 'In the name of God, 1538.' Still, the place has an old-fashioned air; and the red-tiled, two-storey houses, with outside stairs and jutting gables, the strings of bladders, and the big boats, hauled up on the shore or rocking in the harbour, all give it a picturesque look, which is lacking in modern watering-places. Then the people themselves, belike of Scandinavian origin—the stalwart, weather-beaten fishermen, 'like blue sea pnif-balls;' and the Amazonian fishwives, whom the late Charles Reade has drawn so well in *Christie Johnstone* (1853): 'On their heads they wear caps of Dutch or Flemish origin, with a broad lace border, stiffened and arched over the forehead, about three inches high, leaving the brow and cheeks unnumbered. They have cotton jackets, bright red and yellow, mixed in patterns, confined at the waist

by the apron-strings, but bobbled below the waist; short woollen petticoats, with broad vertical stripes, red and white, most vivid in colour; white worsted stockings, and neat though high-quartered shoes. Under their jackets they wear a thick spotted cotton handkerchief, about one inch of which is visible round the lower part of the throat. Of their petticoats, the outer one is kilted, or gathered up towards the front, and the second, of the same colour, hangs in the usual way. Their short petticoats reveal a neat ankle, and a leg with a noble swell; for Nature, when she is in earnest, builds beauty on the ideas of ancient sculptors and poets, not of modern poetasters, who with their airy-like sylphs and their smoke-like verses fight for want of flesh in women and want of fact in poetry as parallel beauties. These women have a grand corporeal tract; they have never known a corset! so they are straight as javelins; they can lift their hands above their heads!—actually! Their supple persons move as Nature intended; every gesture is ease, grace, and freedom.' Such—*plus* the heavy creels—are the fishwives, of whom, driving through Newhaven on 16 Aug. 1872, the Queen saw 'many, very enthusiastic, but not in their smartest dress.' In their smartest dress, however, were those who, on occasion of the London Fisheries Exhibition (1883), were hospitably entertained by the Prince and Princess of Wales at Marlborough House, on Sunday, 20 May, and who afterwards visited Windsor at the invitation of the Queen.

The Main Street extends for 350 yards E and W along the old sea-margin of the Firth, 33 to 80 yards wide, and 14 to 26 feet above sea-level. Behind, the ground rises southward to a bank 72 feet high, which is crowned by a row of villas. In front is the tidal harbour, reconstructed in 1876-77 at a cost of £10,000 and measuring 500 by 300 yards, with a free-way 70 feet wide. The curving W breakwater of concrete, 540 feet long, in 1881 was surmounted by a sea-wall 6 feet high; and a lighthouse stands at the end of the E pier, which, with its westward return-head, has a total length of 750 feet. To the west of Newhaven stands TRINITY, a large district consisting mainly of neat villa residences, and having sea-baths and a chain pier which is much resorted to by swimmers. According to the latest returns, Newhaven has 12 first-class, 99 second class, and 5 third-class boats, manned by 416 fishermen and boys. The *quoad sacra* parish church is a Perpendicular building of 1838, altered in 1885, and extensively improved in 1892; and the Gothic Free church was greatly improved in 1883 by the addition of a spire 120 feet high, as also of a vestry with a hall above. The Peacock Hotel has long been famed for its fish-dinners; and Newhaven besides has a post office, with money order, savings bank, and telegraph departments, a branch of the Royal Bank, a Free Fishermen's Hall, and a school—the Victoria public—which, with accommodation for 503 children, has an average attendance of about 480, and a grant of nearly £520. The Madras school is now closed. Pop. of *quoad sacra* parish (1871) 3977, (1881) 4694, (1891) 6085.—*Ord. Sur.*, sh. 32, 1857. See Mrs Cupples' *Newhaven, its Origin and History* (1888).

Newhills, a parish of SE Aberdeenshire, containing AUCHMILL and STONEYWOOD villages, with BUXBURN station on the Great North of Scotland railway, 4 miles NW of the post-town, Aberdeen. It anciently formed the SE corner of the extensive parish of Old Machar, but having acquired a chapel in 1663 on the lands of Keppelhills, with mortification of those lands for maintaining a minister, it was constituted a parish in 1666, and took the name of Newhills in allusion to the changed status of Keppelhills. It is bounded N by Dyce, E by Old Machar and Woodside, S and SW by Peterculter, W by Skene, and NW by Kinnellar. Its length, from N to S, varies between $2\frac{1}{2}$ and 5 miles; its utmost breadth, from E to W, is $4\frac{1}{2}$ miles; and its area is 10,321 $\frac{1}{2}$ acres, of which 39 are water. The river Don winds $2\frac{3}{4}$ miles south-south-eastward along the Old Machar boundary; and six burns drain the interior, either to the Don or towards the Dee. The surface, in the vicinity of the Don, is low and flat sinking to 50 feet above sea-level;

elsewhere it rises westward to 403 feet near Craihstone House, 604 near Kingswells manse, 578 at Cloghill, and 870 at Brimmond Hill. Granite is the prevailing rock, and is extensively quarried, both for home use and for exportation. The soil, in the low level tract, is a deep rich mould; elsewhere is mostly black, light, shallow, and spongy. Nearly one-ninth of the entire area is pastoral or waste; 400 acres are under wood; and the rest of the land is in tillage. Antiquities are a large cairn, several tumuli, remains of a Caledonian stone circle, and vestiges of an old chapel; whilst a chief curiosity is a cavern in a ravine of Elrickhill, supposed by the vulgar to penetrate for miles under ground, and celebrated in legend as the retreat of a noted robber and his gang. The granite quarries and extensive paper works employ a large number of the population. Oldmill Reformatory (1857), near the eastern border, $2\frac{1}{2}$ miles W of Aberdeen, is a large building, occupied by about 100 boys. A cottage home for convalescents, with accommodation for from 12 to 15 patients, was opened in 1882. Mansions are Cloghill, Craihstone, Fairley, Hazlehead, Kingswells, Springhill, Stoneywood, and Waterton. Giving off a portion to Craigiebuckler *quoad sacra* parish, Newhills is in the presbytery and synod of Aberdeen; the living is worth £739. The parish church, $1\frac{1}{4}$ mile W by S of Auchmill, is a good building of 1830. Other places of worship are Stoneywood Established chapel of ease (1879), Newhills Free church at Auchmill, Kingswells Free church (4 miles W of Aberdeen), and St Machar's Episcopal church (1880) at Buxburn. Six public schools—Blackburn, Buxburn, Keppelhill, Kingswells, Stoneywood, and Stoneywood infant—with respective accommodation for 116, 480, 95, 140, 329, and 120 children, have an average attendance of about 85, 385, 50, 60, 145, and 80, and grants amounting to nearly £80, £375, £45, £60, £170, and £60. Pop. of civil parish (1801) 1305, (1831) 2552, (1861) 3463, (1871) 4210, (1881) 5480, (1891) 5252; of ecclesiastical parish, (1891) 5390.—*Ord. Sur.*, sh. 77, 1873.

Newholme, an estate, with a mansion, in Dolphinton parish, Lanarkshire, on the left bank of South Medwin Water, 5 furlongs SE of Dunsyre station on the Dolphinton branch of the Caledonian railway. It was the property and death-place of the distinguished Covenanter, Major Learmont (1595-1683), who commanded the Covenanter horsemen at the battle of Rullion Green. For upwards of thirty years the estate has belonged to the Lockharts of LEE.—*Ord. Sur.*, sh. 24, 1864.

Newington. See EDINBURGH.

Newington, a village in Holywood parish, Dumfriesshire, $3\frac{1}{2}$ miles NNW of Dumfries.

Newington, a mansion in Kilmany parish, Fife, 4 miles NNW of Cupar.

New Keith. See KEITH.

New Kilpatrick. See KILPATRICK, NEW.

New Lanark. See LANARK, NEW.

Newlands, a village in St Ninians parish, Stirlingshire, near Bannockburn.

Newlands, a parish of N Peebleshire, containing the hamlet of ROMANNO Bridge, $3\frac{1}{2}$ miles SSE of Linton, $4\frac{3}{4}$ SW of Lamanacha station on the Dolphinton branch of the North British railway, and $19\frac{3}{4}$ SSW of Edinburgh. Within it also are LAMANCHA station and Mountain Cross post office, with money order, savings bank, and telegraph departments, whilst LEADBURN and MACBIE HILL stations lie just beyond its northern and north-western borders. It is bounded N by Penicuik in Edinburghshire, E by Eddleston, SE by Lyne, S by Stobo, SW by Kirkurd, and NW by Linton. Its utmost length, from NNE to SSW, is $9\frac{3}{4}$ miles; its breadth varies between $\frac{1}{2}$ mile (at Leadburn) and $5\frac{3}{4}$ miles; and its area is 12,560 $\frac{1}{2}$ acres, of which 42 $\frac{1}{2}$ are water. The drainage of the northern extremity is carried by Lead Burn to the North Esk, but elsewhere belongs to the Tweed, as LYNE WATER winds $6\frac{3}{4}$ miles south-by-eastward, partly along the Linton and Stobo boundaries, but mainly through the interior. During this course it is joined by DEAD BURN, flowing 3 miles south-south-westward; FLEMINGTON Burn, $4\frac{1}{2}$ miles

south-westward; and TARTH WATER, $2\frac{7}{8}$ miles south-eastward along the Kirkurd and Stobo boundary. In the extreme S the surface sinks to 670 feet above sea-level, thence rising to 1234 feet at Drochil Hill, 1221 at Woodhill, 1453 at Drum Maw, and 1570 at Wether Law, from which again it gradually declines to 862 feet at Leadburn station. The rocks in the hills are mainly eruptive; in the upper part of the vale are carboniferous. Sandstone of excellent quality has been largely worked to the W of Lyne Water, as also has limestone on Macbie Hill estate. Common black bituminous coal exists in the upper part of the vale, and fairly rich iron ore occurs in fissures of the higher grounds. There are several chalybeate springs; and artificial ponds are at Whim, Lamanacha, and Macbie Hill. The soil of the arable lands is chiefly a clayey loam, incumbent on close stiff till. Nearly one-third of the entire area is regularly or occasionally in tillage; some 350 acres are under wood; and the rest of the land is chiefly disposed in pasture. Antiquities other than DROCHIL CASTLE are the ROMANNO Terrace and remains of circumvallations, popularly called 'Rings,' on Henderland, Borelands, Drochil, Whiteside, and Pendreich Hills. The poet, Dr Alexander Pennicuik (1652-1722), was proprietor of Romanno; the Rev. Charles Findlater (1758-1838), author of the *View of the Agriculture of Peebleshire*, was 48 years minister; and Lord Chief Baron Montgomery (1721-1803) was born at Macbie Hill. Mansions, noticed separately, are BORELAND, CALLEND, HALMYRE, LAMANACHA, MACBIE HILL, ROMANNO, and WHIM. Newlands is in the presbytery of Peebles and the synod of Lothian and Tweeddale; the living is worth £330. The parish church, near the left bank of Lyne Water, 7 furlongs S of Romanno Bridge, is an edifice of 1838. A little way lower down is the beautiful ruin of its ancient predecessor, roofless and ivy-clad, with First Pointed E window and round-headed S doorway. The old graveyard is still in use, and contains a headstone to R. Howelston (1767-1870). Near Boreland, close to the Linton border, is a U.P. church; and two public schools, Lamanacha and Newlands, with respective accommodation for 67 and 90 children, have an average attendance of about 40 and 55, and grants of nearly £45 and £65. Pop. (1801) 950, (1831) 1078, (1861) 987, (1871) 851, (1881) 819, (1891) 715.—*Ord. Sur.*, sh. 24, 1864.

Newlaw, a hill in Berwick parish, Kirkcudbrightshire, $1\frac{1}{4}$ mile NW of Dundrennan, and $3\frac{1}{2}$ miles ESE of Kirkcudbright. It has an altitude of 599 feet above sea-level, and commands a very extensive and magnificent view of the Kirkcudbrightshire seaboard and the Irish Sea, horizoned by the Isle of Man and the Irish Mountains of Mourne.—*Ord. Sur.*, sh. 5, 1857.

Newliston, an estate, with a mansion, in Kirkliston parish, Linlithgowshire, $1\frac{1}{4}$ mile SW of Kirkliston station on the Dalmeny and Ratho section of the North British railway. It was the property and favourite residence of the celebrated soldier, John, second Earl of Stair (1679-1747); and the plantations in its grounds are said to have been so planted as to represent the British array on the eve of the battle of Dettingen. The present mansion, built about 1794 from designs by William Adam, is the seat of Thomas Alexander Hog, Esq. (b. 1835; suc. 1858), his ancestor having bought the estate about the middle of the 18th century.—*Ord. Sur.*, sh. 32, 1857. See John Small's *Castles and Mansions of the Lothians* (Edinb. 1883).

New Luce. See LUCE, NEW.

New Machar. See MACHAR, NEW.

Newmains, a small town in Cambusnethan parish, Lanarkshire, on the cross-railway from Morningside to Holytown, 2 miles ENE of Wishaw, and 6 by railway SE of Holytown. The town, including the Coltness Ironworks, is supplied with gas by a company, and provided with an excellent water-supply. The streets are regularly formed, and the place has a neat appearance. Standing amid a rich mineral tract, and inhabited chiefly by miners and ironworkers, it has a post office, with money order, savings bank, and telegraph

departments, a railway station, the Coltness memorial *quoad sacra* church (erected in 1878 by James Houldsworth, Esq., of Coltness, in memory of his eldest son), St Bridget's Roman Catholic church (1871; 300 sittings), a Roman Catholic school, and an elegant edifice, erected by the Coltness Ironworks Company at a cost of £3000, to serve as both a school and a chapel of ease. The school affords regular instruction, under a full staff of teachers, to over 600 children, and is maintained by the Ironworks Company. Pop. (1861) 2020, (1871) 2545, (1881) 2682, (1891) 2598, of whom 1389 were males. Houses (1881) occupied 479, vacant 5, building 1.—*Ord. Sur.*, sh. 23, 1865.

New Maud. See MAUD.

Newmill. See KEITH.

Newmilns, a town in Loudoun parish, Ayrshire. Lying 250 feet above sea-level, on the right bank of the river Irvine, which divides it from Greenholm suburb in Galston parish, it has beautiful environs ('Loudoun's bonny woods and braes'), serves as a seat of retail trade for a considerable extent of surrounding country, and presents a tolerably well-built, pleasant appearance. Previous to the extension of the Galston and Newmilns branch line to Darvel, its station was the terminus of that branch of the Glasgow and South-Western railway, and is 2 miles E by N of Galston and 7½ E by S of Kilmarnock. In the middle of the town is an old tower, whose early history is unknown, but which about 1681 was Captain Inglis' headquarters and the prison of seven Covenanters captured near Kilmarnock, who were immediately set free by the daring of friends outside. Newmilns has a post office, with money order, savings bank, and telegraph departments, branches of the Clydesdale, Union, and Royal Banks, several hotels, two gas companies, a police station, a town-hall, a temperance hall, Ayrshire mission to the deaf and dumb, Brown's Workmen's Institute and Reading-room, an agricultural society, a public library, and a fair on the Thursday in July of Glasgow fair week. Places of worship are Loudoun parish church (1845; 1200 sittings), a Free church, and a U.P. church (1833; 780 sittings); and the schools are two, public and Lady Flora's. The staple industry is muslin and lace weaving. Newmilns was made a burgh of barony by a royal charter of 1490, and under the Burgh Police Act of 1892 is governed by a provost, 2 bailies, and 6 commissioners. Pop. (1841) 1988, (1861) 2810, (1881) 2860, (1891) 3704, of whom 1921 were females, and 816 were in Greenholm.—*Ord. Sur.*, sh. 22, 1865.

New Monkland. See MONKLAND, NEW.

Newmore, an estate, with a mansion, in Rosskeen parish, Ross and Cromarty shire, 3½ miles NNW of Invergordon. Its owner is George Inglis, Esq.—*Ord. Sur.*, sh. 94, 1878.

Newpark, a station in West Calder parish, Edinburghshire, on the Cleland section of the Caledonian railway, 2 miles SW of West Calder village.

Newport, a small seaport town in Forgan parish, Fife, on the Firth of Tay, 11 miles NNE of Cupar by road, and 1½ mile SSE of Dundee by water, with two stations on the Tayport section of the North British railway, 2½ miles W by S of Tayport, and about a mile from Wormit, at the southern end of the Tay Bridge. It became a burgh in 1887. Consisting of two parts, Easter and Wester Newport—the station at the former place being for goods as well as passengers—it was constituted, in 1822, by act of parliament, the ferry-station from Fife to Dundee; and presents a pleasant, well-built appearance, with many elegant villas and other private residences, arranged in terraces on the slopes descending to the firth. It commands a brilliant view of Dundee and a great extent of the Tay's basin; and is a favourite summer resort of families from Dundee and other places, having at the same time become the permanent abode of not a few professional and business men. As a creek of Dundee, it carries on some commerce, in exporting agricultural produce, and importing lime and coal; and has a post office, with money order, savings bank, insurance, and telegraph departments,

a town hall, a hotel, a ferry harbour, a gaswork, Established, Free, and U.P. churches, a Congregational church, a Scottish Episcopal church, a Roman Catholic church (1890), a public school, and the Blyth Memorial Public Hall, erected at a cost of £4000. Formed immediately subsequent to 1822, after designs by Telford, the ferry harbour is a splendid structure, 350 feet long and 60 wide. It projects into a depth of 5 feet at low water of spring tides, has on each side a carriage-way, and communicates with Dundee hourly by steamer. The *Mars*, training ship lies at anchor a few hundred yards off the shore. The Established church was built as a chapel of ease in 1871 at a cost of £1350. It contains 450 sittings; and in 1878 was raised to *quoad sacra* status. The U.P. church, built in 1881 at a cost of over £2000, is a cruciform Gothic edifice, with 400 sittings and a spire 80 feet high. The Episcopal church (St Mary), erected in 1887 and consecrated in 1888, is an Early Gothic edifice with 247 sittings. Pop. of *g.s.* parish (1881) 1775, (1891) 1864; of town (1841) 260, (1871) 1507, (1881) 2311, (1891) 2548, of whom 1550 were females. Houses (1891) inhabited 543, vacant 34, building 3.—*Ord. Sur.*, sh. 49, 1865.

Newseat, a station, near the W border of Peterhead parish, Aberdeenshire, on the Peterhead branch of the Buchan and Formartine railway, 3¼ miles W by N of Peterhead town.

Newshot Island, a low and marshy islet (1 × ¼ mile) of Inchinnan parish, Renfrewshire, in the river Clyde, 2 miles NNW of Renfrew, and about half a mile below the junction of the Cart with the Clyde.

Newstead, a village in Melrose parish, Roxburghshire, on the right bank of the Tweed, 1 mile E of Melrose town, under which it has a post office. It is thought by some antiquaries to occupy the site of the Roman town Trimontium, which Skene, however, places on BRUNSWARK Hill; and it probably owes its present name to the erection, in its vicinity, of an ancient ecclesiastical edifice, intermediate in date and character between the Columban monastery of Old Melrose and the Cistercian Abbey of Melrose. Roman coins, a Roman altar, a stone slab with a boar in relief (the badge of the Tenth Legion), and other Roman relics have been found adjacent to it; some ancient substructions, with marks which might relegate them to the Roman times, have been discovered in its neighbourhood; and a series of ancient pits, one of them containing a Roman spear and some pieces of Roman pottery, was laid open in 1846 at the forming of an adjacent reach of the Waverley section of the North British railway. A field, called the Red Abbey Stead, was found, not many years ago, to contain hewn blocks of red sandstone; and is supposed to have been the site of the ancient ecclesiastical edifice. The viaduct of the Berwickshire railway, which crosses the Tweed ¾ mile ENE of Newstead, was erected in 1866, and, rising 133 feet above the water-level, is a most imposing structure.—*Ord. Sur.*, sh. 25, 1865.

Newton, a parish of NE Edinburghshire, containing the post-office village of Millerhill, with a station on the Waverley section of the North British railway, 2 miles NNW of the post-town, Dalkeith, and 6½ SE of Edinburgh. Since the Reformation it has comprehended the ancient parishes of Newton (to the SE) and Wymet or Woolmet (to the NW). Bounded SW and NW by Liberton, NE by Inveresk, and SE by Dalkeith, it has an utmost length from NW to SE of 2½ miles, a varying width of 1½ and 2 miles, and an area of 2034 acres, of which 1½ are water. BURDIEHOUSE Burn runs 2½ miles east-north-eastward along or close to all the north-western boundary; the south-eastern is traced for 1½ mile by Park Burn, next for 3 furlongs by the North Esk, and for the last furlong by the united Esk. Between, the surface rises very gently, at no point much exceeding, and at none sinking much below, 200 feet above sea-level. In the NW the rocks belong to the Carboniferous Limestone series, but elsewhere they are part of the true coal-measures; and coal has been largely worked for nigh three centuries. The soil

along Burdiehouse Burn is strong argillaceous carse land; towards the centre is rich loam; and towards the SE is stiff clay or light and sandy. Save for Edmonstone Park and a narrow strip of Dalkeith Park, both of which are well wooded, nearly all the parish is in a state of high cultivation. Woolmet, $2\frac{1}{2}$ miles NW of Dalkeith, though now but a farmhouse on the Wemyss estate, is a fine old building of the Scottish Baronial type; and Woolmet church, hard by, has been converted into the mausoleum of the Wauchope family. From 1240 to the Reformation it was held by Dunfermline Abbey, as from 1158 was the old church of Newton, which, standing near the North Esk's left bank, $\frac{3}{4}$ mile SE of Millerhill, is now represented only by its tower. EDMONSTONE HOUSE, noticed separately, is the principal residence; and Sir John Don-Wauchope, Bart., the Earl of Wemyss, and the Duke of Buccleuch are chief proprietors. Newton is in the presbytery of Dalkeith and the synod of Lothian and Tweeddale; the living is worth £386. The parish church, $\frac{3}{4}$ mile WSW of Millerhill, built in 1742, was reconstructed and repaired in 1890, when Lady Gardiuer Baird presented a carved oak pulpit, a communion table, and a font; and a memorial to Sir J. Don Wauchope, Bart., was unveiled in 1894. Two public schools, Edmonstone and Newton, with respective accommodation for 66 and 195 children, have an average attendance of about 45 and 150, and grants of nearly £40 and £150. Pop. (1881) 1307, (1891) 1180.—*Ord. Sur.*, sh. 32, 1857.

Newton, a village in Renfrew parish, Renfrewshire, 7 furlongs SW of the town.

Newton, a collier village in Pencaitland parish, Haddingtonshire, 3 miles SE of Tranent. It has a reading-room (1880) and a proprietary school.

Newton, a village in Cambuslang parish, Lanarkshire, with a station on the Rutherglen and Holytown section of the Caledonian railway, $5\frac{1}{2}$ miles SE of Glasgow. It has a post office under Glasgow, with money order and savings bank departments, a public school, an Established chapel of ease, and St Columba's Episcopal church (1875; 200 sittings). The extensive works of the Steel Company of Scotland and the Clyde Nail Co. are located here, while near it is Newton House. Pop. (1881) 730, (1891) 868.—*Ord. Sur.*, sh. 31, 1867.

Newton, a village in Wick parish, Caithness, 1 mile SW of Wick town.

Newton, an old but commodious mansion, with well-wooded grounds, in CULSALMOND parish, Aberdeenshire, $2\frac{1}{2}$ miles NE of Insh. Its owner is Alexander Morison Gordon, Esq.—*Ord. Sur.*, sh. 86, 1876.

Newton, a hamlet in Strachur parish, Argyllshire, on the E shore of Loch Fyne, 4 miles SW of Strachur village.

Newtonards, a stately mansion, surrounded by thriving plantations, in Holywood parish, Dumfriesshire, near the left bank of Cairn Water, 7 miles WNW of Dumfries.

Newton Castle, an old mansion in Blairgowrie parish, Perthshire, on elevated ground, $\frac{1}{2}$ mile W by N of the town. A good specimen of the domestic castellated style of the latter part of the 17th century, it figures picturesquely in both near and distant views, and commands a brilliant and most extensive prospect along Strathmore.—*Ord. Sur.*, sh. 56, 1870.

Newton-Don. See NENTHORN.

Newton-Douglas. See NEWTON-STEWART.

Newton-Grange, the principal village in Newbattle parish, Edinburghshire, 5 furlongs ESE of Dalhousie station, and 2 miles S of Dalkeith. Previous to 1834 its inhabitants were solely employed as husbandmen, but it has since made such progress as to become the chief seat of population in the parish. The Marquis of Lothian's collieries, his extensive brick and tile work, and extensive paper mills near at hand, make this village an industrious centre of labour. It has a post office under Dalkeith; the Marquis's colliery schools, managed by his lordship's appointments; a public school, a Free church, and a gaswork (1873). The colliery part of the village has a painfully unpicturesque appearance, the houses, like most mining villages in

Scotland, being built in rows nearly all of a uniform height and elevation, with no attempt at external embellishment, and of the very cheapest character. The village received its name of Newton-Grange in contradistinction to the elder grange (or granary) of Newbattle Monastery—namely, Preston-Grange (that is, Priests'-town Grange), East Lothian. On the front wall of a building named the 'Abbey Grana'y,' and occupying the site of the original mansion-house, which was erected at the beginning of the 15th century and removed in 1872, is a representation in stone of an abbot with a book in hand and a pick and shovel by his side, intended to personify 'Abbot James,' who is said to have been really the first miner in Scotland, as previous to his day coals were got chiefly by open quarrying. The modern mansion, the property of John Romans, Esq., is an imposing structure erected in a park adjacent. Pop. (1861) 787, (1871) 677, (1881) 1010, (1891) 957.—*Ord. Sur.*, sh. 32, 1857.

Newton Hall, an estate, with a mansion, in Yester parish, Haddingtonshire, 2 miles SSW of Gifford. Held since the time of James VI. by a family of the name of Newton, supposed to have been related to Sr Isaac Newton, it is now the property of William Drummond Ogilvy Hay-Newton, Esq. (b. 1832; suc. 1863.—*Ord. Sur.*, sh. 33, 1863).

Newton Hall, a modern mansion in Kennoway parish, Fife, $1\frac{1}{2}$ mile NW of Cameron Bridge station.

Newtonhill, a railway station near the coast of Fetteresso parish, Kincardineshire, on the Scottish North-Eastern section of the Caledonian railway, $\frac{3}{4}$ miles NNE of Stonehaven, and $10\frac{1}{2}$ S by W of Aberdeen. There is an Episcopal school here.

Newton House, a mansion in ALVES parish, Elginshire, $3\frac{3}{4}$ miles W by N of Elgin. Erected in 1793, and enlarged and remodelled in 1852, it is a fine Baronial edifice, whose park stretches southward to the wooded Knock (335 feet), on which a three-storey octagonal tower was built in 1827 to the memory of the Duke of York. The estate was purchased from the Hon Arthur Duff in 1793 by George Forreath, Esq.; and now belongs to his grand-nephew, Colonel Frederick Prescott Forreath, Esq.—*Ord. Sur.*, sh. 95, 1876.

Newton House, a mansion in Crawford parish Lanarkshire, near the right bank of the Clyde, opposite Elvanfoot station, with which it is connected by an elegant three-arch bridge (1824). It was built by Alexander Irving, Lord Newton (1760-1832), a senator of the college of justice, and was the residence of the antiquary, George Vere Irving, Esq., who died in 1869.—*Ord. Sur.*, sh. 15, 1864.

Newton House, a mansion in Kirkhill parish, Invernesshire, near the head of the Beaulie Firth, $1\frac{1}{2}$ mile W by S of Lentan station.

Newton, Long. See LONGNEWTON.

Newton-Mearns. See MEARNS.

Newtonmore, a village in Kingussie parish, Invernesshire, near the left bank of the Spey, and $\frac{1}{2}$ mile NNW of Newtonmore station on the Highland railway, this being $27\frac{1}{4}$ miles SW of Grantown. It has a post office, with money order, savings bank, and telegraph departments, a public school, and fairs on the Tuesdays of April and October after Beaulie. Pop. (1871) 305, (1881) 306, (1891) 364.—*Ord. Sur.*, sh. 64, 1874.

Newton of Ferintosh, a hamlet in Urquhart and Logie-Wester parish, Ross and Cromarty shire, $1\frac{3}{4}$ mile SE of Conon Bridge. It has a post office under Dingwall.

Newton of Panbride, a north-eastern suburb of CARNOUSTIE, in Panbride parish, Forfarshire, on the coast, adjacent to Westhaven, and including Gallalaw. Pop., jointly with that of Westhaven, (1881) 593, (1891) 909.

Newton of Pitcairns, a southern suburb of DUNNING village, in Dunning parish, Perthshire. Pop. (1861) 333, (1871) 270, (1881) 235, (1891) 159.

Newton-on-Ayr. See NEWTON-UPON-AYR.

Newton-Stewart, a town in Penninghame parish, E Wigtownshire, on the right bank of the river Cree, which here is spanned by a five-arch granite bridge, erected in 1813, at a cost of £6000, in place of an earlier

bridge of 1745, and leading to the suburb of Creebridge in Minnigaff parish, Kirkcudbrightshire. Its station on the Castle-Douglas and Portpatrick railway, at the junction with the Wigtonshire railway, is 23½ miles E by N of Stranraer, 7 N by W of Wigtown, and 49½ W by S of Dumfries. Owing its origin to a ford across the river, Newton-Stewart derives its name from William Stewart, the second Earl of Galloway's third son, who here built several houses, and in 1677 obtained a charter from Charles II., erecting it into a burgh of barony; but the earliest feu-contract is dated 1701. The idle—those who hung loose upon society—were the first to flock to the incipient town. The advantages of the feus invited to it peasants who had accumulated a few pounds. Smuggling did something to promote its advancement. A decent inn or two, a few shops, and some workrooms for ordinary artisans were soon called for, by its being a convenient stage between Creetown and Glenluce, and a suitable depot and resort for an extensive tract of circumjacent country, so that by 1792 the population had risen to 900. About 1778 William Douglas, Esq., the founder of Castle-Douglas, purchased the estate of Castle-Stewart, and, changing the name of the village to Newton-Douglas, obtained for it under this name a second charter, erecting it into a burgh of barony, and commenced vigorous efforts to make it a seat of important manufacture. A company, with him at its head, erected, at an expense of upwards of £20,000, a large factory for spinning cotton, and connected it with the introduction and support of cotton-weaving. A Mr Tannahill, under the patronage of Mr Douglas, commenced a small manufacture of coarse carpets; and a tannery of long standing received now stimulating encouragement, and was managed with judgment and success. These and other circumstances concurred to promise that the village would, under its new lord, rapidly rise to be a place of no small consequence; but they promised incomparably more than they performed. The new name of Newton-Douglas soon fell into disuse, and gave place to the former name of Newton-Stewart. The carpet factory proved an utter failure. The cotton factory worked well for a few years, declined, was abandoned, stood for years unoccupied, and in 1826 was purchased by Lord Garlies for a twentieth part of the original cost, and converted into a quarry for the building of cottages and farmhouses. Even the weaving of cotton for the manufacturers of Glasgow, though it had formed a ready resource for the town's weavers, went rapidly into decline, inasmuch that the number of hand-loom, during the ten years following 1828, decreased from 311 to 100. Of former industries, tanning and currying alone continues to prosper; and the purchase of wool for the Yorkshire markets, furnished from the surrounding country, is at present the staple trade. Some commerce is carried on through the small harbour of Carty (a creek of Wigtown), a little below the town, principally in the exportation of rural produce, and in the importation of lime, sandstone, coals, and general merchandise. A weekly market is held on Friday, and a cattle market on the second Friday of every month, on Friday the 27 June or the Friday nearest that date, and on Friday before Dumfries horse market in November. Hiring fairs are held on the second Friday of April and on 28 June.

Newton-Stewart, unlike most other modern towns, was not founded on any regular plan; and, in consequence, long bore the appearance of a straggling village—builders raising their houses high or low, small or great, on a line with others or in recesses or projections, as caprice, accident, or convenience suggested. Irregularity has been so far corrected that the place now consists chiefly of a long principal street, with the town-house in the centre. At the close of the 18th century all the houses were thatched, and most of them had only one storey; but now more than half of them are slated and two-storeyed. Of late years, too, a number of fine villas have been built above the town, many respectable families having been attracted to the place by its excellent schools. The general building material is trap

throughout the body of the walls, and either granite or sandstone in the lintels and other conspicuous parts. The town-hall is a plain oblong building, with a cupola-roofed clock-tower. Penninghame parish church, a handsome Gothic edifice of 1840, with a graceful spire, was built from designs by William Burn at a cost of £5000, and contains 1200 sittings; in 1881 a mission hall was added behind it at a cost of £500. Princes Street Free church till 1876 was Reformed Presbyterian; that of Creebridge dates from Disruption times. In 1878 was built a fine U.P. church, in 1876 the Roman Catholic church of Our Lady and St Ninian, and at Challoch, 2 miles NW of the town, is All Saints' Episcopal church (1872), a beautiful specimen of Early English, with organ, stained glass, three bells, etc. The Ewart Institute, erected in 1864 at a cost of £5000 from funds bequeathed by James and John Ewart, merchants, is a handsome edifice, with a schoolroom at either end, and the principal's house and boarding school in the middle. Other institutions are the Douglas Academy, which is incorporated with the Ewart Institute under the title of the Newton-Stewart Educational Trust; the Galloway Girls' Industrial Home, for the support of about fifty destitute and orphan girls; a mechanics' institute, etc. The Macmillan Hall is a magnificent building erected in 1888 at a cost of £5000, from funds bequeathed to the town by the late Miss Macmillan. The Victoria Hall is capable of accommodating 700 people, and the Albert Hall half that number. In 1875 a monument, 57 feet high, was erected by public subscription at a cost of £1000 to Randolph, ninth Earl of Galloway (1800-78). It is situated on a quadrangular space near the bridge over the Cree, while about 3 miles to the north of the town are the remains of Castle-Stewart.

Newton-Stewart has a post office, with money order, savings bank, insurance, and telegraph departments, branches of the British Linen, Clydesdale, and National Banks, 4 hotels, waterworks (1882), gasworks, a handsome police station (1870), a horticultural society, a horse-breeding association, two bowling greens, a lawn-tennis club, a masonic hall, and a Saturday Conservative newspaper, the *Galloway Gazette* (1870). Under the Burgh Police Act of 1892 the town is governed by a provost, 2 bailies, and 6 commissioners. Pop. (1881) 3070, (1891) 2738.—*Ord. Sur.*, sh. 4, 1857.

Newton-upon-Ayr, a former suburb of, but now amalgamated with the town of Ayr, and a small coast parish of Kyle district, Ayrshire, combining, by an Order of the Secretary for Scotland dated Jan. 31, 1895, with the parishes of Ayr and St Quivox to form the new parish of Ayr. Newton, lying on the right bank of the river Ayr, is separated only by that river from Ayr royal burgh, and forms part of Ayr parliamentary and municipal burgh. On its W side is the Firth of Clyde, on its E the suburb of Wallacetown, within St Quivox parish, and so closely contiguous is it to Wallacetown that a stranger would fail to discover the line of demarcation. It seems to have sprung from a hamlet in or about the time of Robert Bruce; and, constituted a burgh of barony somewhere between 1208 and 1446, it got new charters, confirming all previous privileges, from James VI. in 1595 and 1600—charters which assume it to have been a burgh beyond the memory of man. Newton Castle, here, long the seat of the Wallaces of Craigie, was a strong baronial fortalice, situated among gardens and groves, and demolished in 1701; for fifty years after which date the place consisted almost wholly of thatched one-storey houses. Then, but especially towards the commencement of the 19th century, it began to undergo much improvement and extension, and now comprises three or four old small streets, a main street 80 feet wide, and several modern and regular streets between the main one and the firth. For sixty years prior to 1832 it mainly depended on the working of coal seams which underlay all the parish; but, these becoming exhausted, it now shares in the commerce and industries of Ayr, under which also are noticed its schools, station, and general features. The parish church was built in 1777 and enlarged in 1832.

North Newton Established church was erected in 1884 at a cost of £3200. There are also Free and U.P. churches. Previous to its amalgamation with Ayr, Newton had 2 bailies and 7 councillors.

The parish, disjoined in 1779 from that of Monkton and Prestwick, is bounded N by Monkton and Prestwick, E by St Quivox, S by the last $\frac{2}{3}$ mile of the river Ayr, which separates it from Ayr, and W by the Firth of Clyde. Its utmost length, from N by E to S by W, is $1\frac{3}{8}$ mile; its utmost breadth is $7\frac{2}{3}$ furlongs; and its area is 696 acres, of which 99 $\frac{1}{2}$ are fore-shore and 12 water. The coast includes a small rocky point at the northern extremity, but elsewhere is flat and sandy. The interior is very nearly a dead level, with an elevation very little above high-water mark. The rocks belong to the Carboniferous formation, much disturbed by upheavals of trap. Coal was formerly plentiful, but was mined to exhaustion in all its workable seams. Sandstone of good quality abounds in the N, and has been largely quarried. The soil was naturally a barren sand, but underwent great improvement by intermixture with blue shale, brought up from the coal mines. This parish is in the presbytery of Ayr and the synod of Glasgow and Ayr; the living is worth £197. Pop. of entire parish (1801) 1724, (1831) 4020, (1861) 5124, (1871) 4877, (1881) 6511, (1891) 8564.—*Ord. Sur.*, sh. 14, 1863.

Newtown. See FINTRY.

Newtown or Newtown St Boswells, a village in Melrose and St Boswells parishes, Roxburghshire, with a station (St Boswells) on the North British railway, at the forking of the lines to Hawick and Kelso, and at the junction of the Berwickshire railway, $3\frac{1}{2}$ miles SE of Melrose and $40\frac{1}{2}$ SE of Edinburgh. Lying 370 feet above sea-level, at the eastern base of the Eildons, and within 5 furlongs of the Tweed's right bank, it contains some commodious houses, and presents a pleasant appearance. Its waterworks, formed in 1876 at a cost of more than £400, draw their supplies from the Eildon Hills; and it has a post office, with money order, savings bank, and telegraph departments, branches of the Royal and Commercial Banks, a hotel, a U.P. church (1870), a public school, two large stock sales almost every week, and hiring fairs on the first Mondays of March, May, and November. Pop. (1871) 302, (1881) 423, (1891) 481.—*Ord. Sur.*, sh. 25, 1865.

Newtown, a village in Borrowstounness parish, Linlithgowshire, $\frac{1}{2}$ mile S of the town. Pop. (1861) 816, (1871) 672, (1881) 671, (1891) 567.

New-Trows, a small village in Lesmahagow parish, Lanarkshire, $1\frac{1}{2}$ mile S of Lesmahagow town.

Newtyle, a village and a parish of SW Forfarshire. The village, standing on a north-westward slope, 250 feet above sea-level, has a station on the Dundee and Newtyle section of the Caledonian railway, $1\frac{1}{2}$ mile SSE of Alyth Junction, and $16\frac{2}{3}$ miles (by road 11) NW of Dundee. Founded in 1832 in connection with the railway which was then being projected, it had assigned for its site an arable field of 15 acres, belonging to Lord Wharncliffe, and was aligned on a regular plau, in building lots, on 99 years' lease. It offers a neat and cleanly appearance, and has a post office under Coupar-Angus, with money order, savings bank, and telegraph departments, a branch of the Commercial Bank, a police station (1870), a public library, a curling club, an artificial manure factory, a Free church, and the parish church. The last is a handsome Gothic edifice, erected in 1872 on the site of its predecessor at a cost of £3000. It contains 560 sittings, and has a tower 85 feet high, with a two-dial clock. A U.P. church of 1835 towards the close of 1883 was converted into the Wharncliffe Public Hall, under the management of trustees. Pop. of village (1841) 505, (1861) 619, (1871) 542, (1881) 443, (1891) 414.

The parish, containing also the hamlet of NEWBIGGING, is bounded NW by Meigle in Perthshire, NE by Eassie and Glamis, SE by Auchterhouse, S by Lunnidie, and SW by Kettins. Its utmost length, from E to W, is 4 $\frac{1}{2}$ miles; its utmost breadth, from N to S, is $3\frac{1}{2}$ miles;

and its area is 5194 $\frac{1}{4}$ acres, of which 2 $\frac{1}{2}$ are water. The north-western part of the parish, with a mean breadth of $1\frac{1}{4}$ mile, forms part of the level ground of Strathmore, and sinks to less than 200 feet above sea-level. Thence the surface rises south-eastward to the Sidlaw Hills, attaining 1134 feet at Kinpurnie Hill, 870 at Hatton Hill, and 881 at Newtyle Hill. The two last flank an opening or pass through the Sidlaws, the Glack of Newtyle, which pass was always regarded in the old unsettled times as a strong natural military fastness. It now is traversed both by the Dundee and Newtyle railway and by the high road from Dundee to Alyth; and it reveals at its western outlet a sudden and very grand view of Strathmore. Trap rock is plentiful, and has been quarried for road metal; a heavy grey slate in the hills was formerly used for roofing; and sandstone of excellent quality for building is quarried in several places. The soil of the higher grounds is light, sharp, and productive, mostly a mixture of sand or gravel with black earth or clay; that of the level tract within Strathmore is of similar quality, but sometimes richer, and lies on better substrata. The hills are profitable to the very summit, even the least valuable parts of them being clothed with verdure and forming excellent sheep-walks. Since 1850 great improvements have been effected on the Belmont or Earl of Wharncliffe's estate in the way of reclaiming, planting, draining, fencing, etc. About five-eighths of the entire area are in tillage; nearly 300 acres are under wood; and the rest consists of natural pasture. The ruins of HATTON Castle and the scanty vestiges of BALCRAIG have both been separately noticed. A small square camp near Auchtertyre is said to have been occupied for some nights by the Marquis of Montrose's army, and has left some traces. Two spots in the NW, called Grahame's Knowe and King's Well, are said to have got their names from lying on the route of Macbeth northward from his fortress on Dunsinane. A high-lying field near Keillor, that bears the name of Chester Park, is supposed to have been the site of a Roman camp; and a tumulus, seemingly of the ancient Caledonian times, a little way to the W, has a large standing-stone marked with rude hieroglyphics. The Earl of Wharncliffe owns nine-tenths of all the parish. Newtyle is in the presbytery of Meigle and the synod of Angus and Mearns; the living is worth £148. The public school, with accommodation for 313 children, has an average attendance of about 125, and a grant of nearly £115. Valuation (1884) £9323, 8s., (1893) £6313, 2s., plus £6243 for railway. Pop. (1801) 718, (1831) 904, (1861) 1139, (1871) 931, (1881) 911, (1891) 833.—*Ord. Sur.*, shs. 48, 56, 1868-70.

Newtyle Hill, a wooded eminence (996 feet) in Caputh parish, Perthshire, on the left side of the river Tay, $1\frac{1}{2}$ mile E by S of Duukeld. Its summit commands a brilliant near view of Dunkeld, Birnam, and Murtly, and fine distant views northward to the Grampians, southward to Perth. Newtyle farm around it contains two ancient standing-stones and the site of a cross erected by one of the Deans of Dunkeld to mark the spot at which pilgrims caught their first view of Dunkeld Cathedral.—*Ord. Sur.*, sh. 48, 1868.

Niddrie-Marischall, a mansion in Liberton parish, Edinburghshire, on the left bank of Burdiehouse Burn, 2 miles S by W of Portobello and $3\frac{1}{2}$ ESE of Edinburgh. The park is entered by an ivy-clad archway; and the house itself is a fine old baronial building, bearing date 1636, but modernised towards the close of the 18th century by William Adam. Lord Cockburn tells in his *Memorials* how for many years almost all his 'Saturdays, Sundays, and holidays were passed at Niddrie. I sighed over every holiday as lost that was not. Part of the house is very old, but it never had any architectural or much historical interest. But the garden! the garden! unseen and unseeing, it was a world of its own. That unvalued flat space of only four or five acres contained absolutely everything that a garden could supply for "man's delightful use;" peaches and oaks, gravel walks, and a wilderness "grotesque and wild," a burn

and a bowling-green, shade and sun, covert and lawn, vegetables and glorious holly hedges—everything delightful either to the young or the old. Eden was not more varied. And Eden is well worthy of its reputation if it was the scene of greater happiness. After a long and unbroken course of domestic security and pleasure, death began, about 1815, to extinguish, and circumstances to scatter, the gay and amiable family of which I was virtually a member; and I have since seldom revisited the generally silent walls. But the days of Niddrie are among the last I can forget.' Hugh Miller, too, worked as a mason for ten months here in 1823, and lodged in a one-roomed cottage near the village of Niddry Mill. In *My Schools and Schoolmasters* he describes his rambles in the Niddrie woods, his introduction to the Carboniferous System, the lately manumitted collier slaves, his comrades' debauchery, and their unsuccessful strike. Near the W end of the house stood St Mary's chapel, founded by Robert Wauchope in 1387, and demolished by a mob from Edinburgh in 1638. This Robert was probably the first of the Wauchopes of Niddrie-Marischall, illustrious members of which family were Gilbert, who sat in the Reformation parliament of 1560, and John, a distinguished Covenanter, who was knighted by Charles I. in 1633. Lieut.-Col. Andrew Gilbert Wauchope, C.B., C.M.G. (b. 1845; suc. 1874), is present proprietor. A fire in Niddrie colliery in 1884 cost seven lives.—*Ord. Sur.*, sh. 32, 1857.

Niddry Castle, a ruined baronial fortalice in Kirkliston parish, Linlithgowshire, near the Union Canal and the Edinburgh and Glasgow line of the North British railway, 1 mile SSE of Winchburgh. A strong square tower, roofless, but otherwise fairly entire, it was hither that Lord Seton conducted Queen Mary on the night of her escape from Lochleven Castle, 2 May, 1568. From Niddry she sent a messenger to ask assistance of the Court of England, and next day she rode on to HAMILTON. Niddry now is the property of the Earl of Hope-toun, and gives him the title of Baron Niddry.—*Ord. Sur.*, sh. 32, 1857.

Nigg (Gael. 'a nook'), a parish in the extreme NE of Kincardineshire. It is bounded N by the Dee and by Aberdeen Bay, E by the North Sea, on the S and W by Banchory-Devenick parish, and NW by the Dee, which separates it from Aberdeenshire. The boundaries are thus natural on all sides except the S and W. By the City of Aberdeen Act of 1891, the city is made to embrace a portion of the parish of Nigg situated at Torry. Though it was suggested to the Boundary Commissioners that the city of Aberdeen should be placed wholly in the county of Aberdeen, by transferring this portion of the parish of Nigg from Kincardineshire to Aberdeenshire, no decision was come to by them in the matter. The greatest length, from the Dee at Torry Point on the N to the point where the boundary reaches the sea on the S, is 4 miles; the greatest breadth, from the Dee at Poll-down Mills on the W to the sea-coast on the E, is 2½ miles; and the area is 4606·584 acres, including 132·434 of foreshore and 42·283 of water. From the N and NW the ground slopes upwards to a height of 267 feet on the road W of Loirston Loch, and 275 on the road E of it. Along the coast on the E there are cliffs of from 60 to 80 feet high. The portions to the NNW and along the E are cultivated, but throughout the S there is a barren ridge covered with stony moss and heath. About half the parish is arable or under wood, and the soil of the cultivated portions varies from good black loam to clay, the former being the more plentiful. The underlying rock is mostly granite. The drainage is effected by a number of small rills flowing either to the Dee or to the sea. In the SW of the parish is Loirston Loch (2 by 1 furl.), covering about 20 acres. The northern portion of the parish is formed by the promontory of Girdleness with portions of the works of Aberdeen Harbour, Girdleness Lighthouse, and Torry Point battery. The two former are noticed in connection with Aberdeen and Girdleness. The latter was erected in 1831-33 to protect the mouth of the Dee. To the N of Girdleness Lighthouse is Greyhope Bay, which was in

1813 the scene of the wreck of the whaler *Oscar*. To the S of the lighthouse is Nigg Bay, ½ mile wide across the mouth and ¾ mile deep. It has also the names of Fiacre, Fittack, or Sandy Bay. Further S the coast is rocky and irregular, with long narrow creeks; and at several places there are caves, though none of them are of any great size. To the W of the Bay of Nigg is the old church of St Fittack, with a beltry bearing date 1704. The main building is older, but only the ruined and roofless walls now remain. Some distance S of the church, a spring dedicated to St Fittack was long held in high veneration, and was the scene of superstitious observances which, in the early part of the 17th century, seem to have caused much tribulation of spirit to the kirk-session of Aberdeen. Frequent ordinances forbid the inhabitants to resort to it, and in 1630 'Margrat Davidson, spous to Andro Adam, was adjudged in ane unlaw of fyve poundis to be payed to the collector for directing hir nowriss with hir bairne to Sanct Fiackres well, and weshing the bairne tharin for recovrie of hir health; and the said Margrat and her nowriss were ordanit to acknowledge thair offence before the session for thair fault, and for leaving ane offering in the well. The said day it was ordanit be the hail session in ane voce That quhatsumever inhabitat within this burgh beis fund going to St Fiackres well in ane superstitious maner for seeking health to thamescliffs or bairnes, shall be censured in penaltie and repentance in such degree as fornicatouris ar efter tryall and conviction.' All penalties seem, however, to have been ineffectual, for pilgrimages were made to it by the Aberdeen citizens down to the beginning of the 19th century. 'In the month of May,' says the minister of the parish, writing in the *Old Statistical Account* in 1793, 'many of the lower ranks from around the adjacent city come to drink of a well in the bay of Nigg, called the Downy-well; and, proceeding a little farther, go over a narrow pass, *The Brig of ae Hair*, to Downy-hill;' the latter being an eminence rising to a height of 214 feet above sea-level and about ½ mile S of Nigg Bay. Of St Fiacre—the Celtic form of whose name was Ma Futac, whence the ordinary form St Fittack—but little is known. The ordinary accounts make him the son of Eugenius IV., king of Scotland, and place him in the first half of the 7th century. Adopting a religious life, he went to France and had a hermitage at Breuil in Brie. The French word *fiacre*, meaning a hackney-coach, is said to be taken from his name, either because such vehicles were first introduced for the convenience of pilgrims going from Paris to visit his shrine, or, according to another account, because the first person to hire out coaches was one Nicolas Sauvage, whose house in the *Rue Saint-Martin*, in Paris, was marked by an image of St Fiacre. Mention of the church of Nigg occurs onwards from the time of William the Lyon, who granted it to the Abbey of Arbroath. Alexander II. followed up the grant by another of the whole lands of Nigg, and with the Abbey of Arbroath they remained till the Reformation, when the superiority passed to the Panmure family, with whom it remained till 1786, when part of it passed to the town of Aberdeen and Menzies of Pitfoddes. Names connected with the ecclesiastical possession of the parish still remain at Abbot's Walls, near the centre of the W side of the parish, and at Spital Burn. The former used to be known as Abbot's Hall, and near it was one of the residences of the Abbot of Arbroath. The *Old Statistical Account* mentions the ruins of it as having been recently removed. The burn probably takes its name from having had near it an hospital or hospice for pilgrims and travellers. The villages in the parish are Cove, Burnbank, and Charles-town. At Torry there was formerly a chapel dedicated to St Fotinus, and in 1495 James IV., on account of the great reverence he had 'beato martiri Sancto Thome ac Sancto Fotino patrono ville de Torry,' erected the village into a free burgh of barony, a privilege which has, however, been allowed to lapse. The village and district of Torry now form part of the city of Aberdeen, having been included in that city's boundaries in 1891,

as already stated. There is a Free church at Torry, and the district is connected to Aberdeen by a handsome granite bridge over the Dee, erected in 1876-81. There is a branch post office, with money order, savings bank, and telegraph departments, and not far off is a large brick and tile work and a preserved provision manufactory. Cove, which is separately noticed, had, in 1894, 10 first-class, 3 second-class, and 3 third-class boats, and 54 resident fishermen and boys. Burnbank is on the coast about a mile N of Cove. The parish is traversed by the great coast road from Aberdeen to Dundee, which, crossing the Dee by the bridge at Torry, or by the Wellington Suspension Bridge farther up the river, passes S through the centre; while another branch, which crosses the Dee at Bridge of Dee, runs along the western border. The Caledonian railway passes northward along the coast till close to Nigg Bay, whence it curves westward across the Dee to Aberdeen, the total length of the Nigg portion being 5 miles. There is a station at Cove on the coast. A principal mansion is Loriston House.

The parish is in the presbytery and synod of Aberdeen, and the living is worth £235 a year. The present church, near the centre of the parish, is a good granite building, erected in 1829 at a cost of £1800. It has a high square tower, which is seen for a long distance all round. Cove public and Kirkhill public schools, with respective accommodation for 211 and 164 pupils, have an average attendance of about 100 and 130, and grants amounting to over £80 and £90. The Torry public school is now under the Aberdeen burgh school board. Valuation (1884) £14,390, 14s., (1893) £11,247, 11s., plus £2421 for railway. Pop. (1801) 1148, (1831) 1684, (1861) 2074, (1871) 2348, (1881) 2935, (1891) 4513.—*Ord. Surv.*, sh. 77, 1873.

Nigg, a parish in the NE of Ross and Cromarty, on the N side of the entrance to the Cromarty Firth. It contains a village of the same name. The parish is bounded NNW, N, and NE by Fearn, E and ESE by the Moray Firth, S by the entrance to the Cromarty Firth, and W and NW by Logie-Easter. Except on the NNW, N, and NE the boundary is natural, that along the NW and W being formed by the burn that passes Shandwick House (Logie-Easter) and the channel called 'the Pot,' formed by the course of this burn over the Sands of Nigg at low water. The greatest length of the parish, from Shandwick village on the NE to the ferry at the entrance to the Cromarty Firth on the SW, is 5½ miles; the greatest breadth, from the boundary with Logie-Easter parish SE to the Moray Firth, is 3 miles; and the area is 7818 acres. The indentation of the Cromarty Firth to the W of the parish, 4 miles across the mouth and 2 miles deep, is known as the Bay of Nigg. At high tide the depth of water is from 4 to 8 feet, but at low water the whole area is laid bare and becomes dry, except where the burns continue their courses over the sand to the main firth. It is frequented by ships of small burden bringing coals, lime, and slates, and exporting timber and potatoes. It abounds in shells and shallow-water fish, and supplies bait for a very large proportion of the cod and haddock fishers along the shores of the Moray Firth. Along the Bay of Nigg, to the W and NW, the ground is flat and low, and from this it slopes gradually south-eastward to the Hill of Nigg, whence it again slopes, at first ruggedly and then precipitously, downward to the shore of the Moray Firth. The Hill of Nigg is a tract of high ground extending through the whole parish, along the shore of the Moray Firth, and about 5 miles in length and 1½ mile in breadth, with a height of from 300 to 600 feet above sea-level. It is partly covered with straggling plantations, and has on the side next the Moray Firth a front of lofty precipices over 200 feet high. At the S end it terminates in the Northern Sutor of Cromarty, overhanging the entrance to the Firth of the same name. It belonged in ancient times to the Bishops of Ross, who had a residence in the parish, and was then called 'the Bishop's forest.' Of the whole parish about 3500 acres are under cultivation or wooded, and the rest of the area is either pasture land

or waste. The soil of the arable portions is a good black loam, becoming lighter near the coast, and from 1 foot to 4 feet deep. Along the Hill of Nigg the soil is thin and cold. The underlying rocks are granitic gneiss, Old Red Sandstone, and on the coast at the NE corner, at Shandwick, are patches of liassic shales and limestones. There is a fine section of the Old Red Sandstone exposed along the Northern Sutor containing two beds with fossil fishes, which were, like all those in the Cromarty district, discovered by Hugh Miller:—'Selecting,' he says in the *Cruise of the Betsy*, 'as a hopeful scene of inquiry the splendid section under the Northern Sutor, I set myself doggedly to determine whether the Old Red Sandstone in this part of the country has not at least its two storeys of organic remains, each of which had been equally a scene of sudden mortality. I was entirely successful. The lower ichthyolite bed occurs exactly one hundred and fourteen feet over the great conglomerate, and three hundred and eighteen feet higher up I found a second ichthyolite bed, as rich in fossils as the first, with its thorny Acanthodians twisted half round, as if still in the agony of dissolution, and its Pterichthyes still extending their spear-like arms in the attitude of defence. The discovery enabled me to assign to their true places the various ichthyolite beds of the district. Those in the immediate neighbourhood of the town [of Cromarty], and a bed which abuts on the lias at Eathie, belong to the upper platform; while those that appear in Eathie Burn, and along the shores at Navity, belong to the lower. The chief interest of the discovery, however, arises from the light which it throws upon the condition of the ancient ocean of the Lower Old Red, and on the extreme precariousness of the tenure on which the existence of its numerous denizens was held. In a section of little more than a hundred yards there occur at least two platforms of violent death—platforms inscribed with unequivocal evidence of two great catastrophes, which, over wide areas, depopulated the seas.' The liassic shales of Shandwick are also richly fossiliferous. The Hill of Nigg was one of the hunting-grounds of the Fions, who used to leap across the Cromarty Firth on their hunting-spears, but whose race became extinct in consequence of all their women and children having been burned to death in Glen Garry, while the men were here engaged in hunting. Two miles along the shore, northward from the Northern Sutor, is the King's Cave; while a path above, leading to the top of the precipice, is called the King's Path. It is said to take its name from the shipwreck near it of a traditional king of Denmark. His three sons, who accompanied him, were drowned, and one was buried at Nigg, another at Shandwick, and another at Hillton of Cadboll in Fearn parish, and it was at their graves that the sculptured stones at these places were erected. The Nigg stone originally stood near the gate of the parish burying-ground, but having been blown down in 1725 was afterwards fixed to the eastern end of the church. One side has a cross, with the usual knotted sculpturing and various figures of men and animals. That at Shandwick stood on the brow of an eminence, behind the village, but was blown down during a violent gale in 1847, and broken into three pieces. This also bears on one side a cross, and is very similar in style to the Nigg stone. A mile and a quarter SW of Shandwick village is a green mound, with a so-called Danish camp on the top. Near the brow of the Northern Sutor is a little green knoll called Dunskaith, on which it is said that a fort was erected by William the Lyon in 1179. The view from this point is very fine, the entire Firth of Cromarty and the rich country around lying spread out as if on a map. From other points also, along the summit, the view of the Moray Firth and its shores is equally good.

The drainage of the parish is carried off by a number of small streams. The principal mansion is Bayfield House. Besides Nigg village, at the church, the parish contains, on the extreme NE, the fishing village of Shandwick, and on the extreme SW the fishing villages of Balnabradich and Balnapaliug. In 1894 Shandwick

had 6 first-class, 5 second-class, and 2 third-class boats, with 40 resident fishermen and boys. There is a ferry 1 mile wide connecting the S of the parish with Cromarty, and a road passes from the landing-place northward towards Tain. Nigg station, on the Dingwall and Tain section of the Highland railway, is in the parish of Logie-Easter, and 4 miles N of the village of Nigg, which is by the ferry about 3 miles N by E of Cromarty. The parish is in the presbytery of Tain and synod of Ross; and the living is worth £271 a year. The parish church, which was built in 1626, and has since been several times repaired, contains 425 sittings. One of the Episcopal ministers of the 17th century figures in the *Answer to Scotch Presbyterian Eloquence Displayed*, as telling his parishioners that in eternity 'they would be immortalised, so that nothing could hurt them: a slash of a broadsword could not hurt you, saith he; nay, a cannon-ball would play but *buff* on you.' In 1756 the parishioners had a three years' struggle against an obnoxious presentee to the church, and when at last he had gained his cause, and four members of presbytery arrived to carry out his induction, the church was found empty. 'Not a single member of the congregation was to be seen. While in a state of perplexity what to do in such a strange condition, one man appeared who had it in charge to tell them, "That the blood of the people of Nigg would be required of them if they should settle a man to the walls of the kirk,"' after which message he departed, leaving the members of presbytery so much disturbed that they referred the whole matter back to the General Assembly, which, however, ordered the induction to be carried out. The people, after struggling on for ten years by themselves, at length left the national church and became seceders. The bold messenger was Donald Roy, an ancestor of Hugh Miller, whose gifts of prayer and even prophecy or second sight are still remembered in the north. The Free church, erected soon after the Disruption, is $\frac{3}{4}$ mile N of the Established church. One of its ministers was John Swanson, the early and intimate friend of Hugh Miller. A U.P. church, $\frac{1}{4}$ mile to the NE, built in 1871, is a Norman structure, with a square tower, and contains 500 sittings. It superseded an older and slightly larger church, built in 1803. The public schools of Nigg and Pitcairn, with respective accommodation for 100 and 85 pupils, have an average attendance of about 45 and 55, and grants of over £45 and £55. Pop. (1801) 1443, (1831) 1404, (1861) 1253, (1871) 1201, (1881) 1000, (1891) 930.—*Ord. Sur.*, sh. 94, 1878.

Ninemileburn, a village, with a public school, in Penicuik parish, Edinburghshire, on Monks Burn, near Habbie's Howe, 4 miles SW by W of Penicuik town.

Ninewells, a mansion in Chirnside parish, Berwickshire, on the left bank of Whitadder Water, $\frac{3}{4}$ mile S by W of Chirnside village. Embosomed in woods, it is a handsome Tudor edifice of 1840-41, successor to an older mansion, which was the boyish home, though not the birthplace, of the historian and philosopher, David Hume (1711-76), and his occasional residence after his fame was won. It was the seat, too, of his nephew and namesake, Baron Hume (1756-1838), the eminent writer on criminal jurisprudence. The present proprietor is James Alexander Ross-Hume, Esq. (b. 1852; suc. 1864).—*Ord. Sur.*, sh. 34, 1864.

Nine-Wells. See NEWBURGH.

Nisbet, a small village in Crailing parish, Roxburghshire, near the left bank of the river Teviot, with a station on the Jedburgh branch of the North British railway, 3 miles NNE of Jedburgh station. See CRAILING.

Nisbet, a fine old castellated mansion, belonging to Lord Sinclair, in Edrom parish, Berwickshire, near the left bank of Blackadder Water, $2\frac{1}{4}$ miles SSE of Duns.—*Ord. Sur.*, sh. 26, 1864. See HERDMANSTON.

Nith (*Novius* of Ptolemy), a river mainly of Dumfriesshire, but partly also of Ayrshire and Kirkcudbrightshire. It rises at an altitude of 1400 feet above sea-level, between Enoch Hill (1365 feet) and Prickney Hill (1676), 9 miles S of the town of Cumnock. Thence

it flows $70\frac{3}{4}$ miles with a general south-south-easterly course, till, after for $10\frac{1}{4}$ miles expanding into an estuary with a channel 70 to 500 yards wide, it falls into the Solway Firth, $14\frac{1}{4}$ miles S by E of Dumfries, and 6 WNW of Silloth in Cumberland. As the crow flies the distance from source to mouth is only 42 $\frac{1}{2}$ miles. The first $15\frac{3}{4}$ miles of its course belong to Ayrshire; the last $16\frac{1}{2}$ divide Dumfriesshire from Kirkcudbrightshire. It bounds or traverses the parishes of New Cumnock, Kirkconnel, Sanquhar, Durisdeer, Penpont, Morton, Closeburn, Keir, Dunscore, Kirkmahoe, Holywood, Dumfries, Terregles, Troqueer, Caerlaverock, New-abbey, and Kirkbean; and in our articles on these seventeen parishes full details are given as to the towns, villages, mansions, ruins, and other features of its course. Its principal affluents are Afton Water, Kello Water, Crawick Water, Euchar Water, Minnick Water, Enterkin Burn, Carron Water, Cample Water, Scar Water, Duncow Burn, Cluden Water, Cargen Pow, and Newabbey Pow, all thirteen of which are noticed separately. The Nith contains salmon, sea-trout, trout, and grayling, but is not so good a fishing stream as the Esk, the Liddel, or the Annan. The Nith, till after it gets away from Ayrshire, is one of the most cheerless of streams, sluggish and shallow, seldom more than 15 feet wide, deeply tintured with moss, and rarely graced with plantation, greensward, or even a bold bank, to relieve the dreary monotony of its moorland landscape. Its banks, till below Sanquhar, though quite redeemed from the dreariness which characterises them in Ayrshire, are simply agreeable, consisting chiefly of a verdant vale overlooked by uplands of varied contour but little grandeur; lower down, they are exquisitely rich in many varieties of landscape, now exhibiting a narrow acclivitous pass, diversified with wood, escarpment, and rock, now bursting into an expanse of valley, blooming as a garden, and screened with warm-coloured and finely outlined mountain-heights, and now presenting such rapid alternations of slope, undulation, haugh, and hill as charm and surprise the eye by the mingled wealth and number of the transitions. For $3\frac{1}{2}$ miles after receiving the Scar, the river runs between the beautiful grounds of Keir, slowly rising like a green and softly wooded gallery on the one hand, and the fine expanse of the luxuriant plain of Closeburn, darkly overhung by the Queensberry heights, on the other. It now becomes pent up for about 2 miles by the low and diversified terminations of spurs from the mountain-ranges on the background; and while traversing this space it is decked with mansion, park, wood, and lawn, amidst nooks and recesses, hilly abutments and diversified slopes, till picturesqueness becomes profuse and almost excessive. On its clearing this sort of gorgeous pass—in the course of which the great Nithsdale road crosses it by the well-known 'Auld-girth Brig,' which Carlyle's father helped to build—the hills recede from it in sweeps, describing the arc of a circle; and while they form soft and finely-featured screens which terminate on the one side in the low green heights of Mouswald, and on the other in the bold grand form of Criffell, they enclose an oval plain of from 6 to 8 miles in breadth. Along the middle of this, the joyous and pebbly Nith runs, amidst constant verdure, multitudinous gardens, and other elements of lovely landscape, to the sea. Nowhere is the magnificence, or at least the rare and romantic character, of the famous Solway 'bore' displayed with finer effect than in the estuary of the Nith. Owing principally to the tide's impetuosity, the navigation of the river is difficult to seamen unacquainted with its peculiarities; but it has been greatly improved. (See DUMFRIES.) The valley, all down from New Cumnock to Dumfries, principally along its W side, and generally very close to the stream, is traversed by the GLASGOW AND SOUTH-WESTERN RAILWAY.—*Ord. Sur.*, shs. 14, 15, 9, 10, 6, 1863-64.

Nithsdale, the western one of the three great divisions of Dumfriesshire, takes name from its being drained and traversed by the river Nith. It anciently comprehended the whole basin of the Nith, together with some

tracts beyond that basin; and it was then, for some time at least, called Strathnith or Stranith. Its limits varied at different times, and seem never to have been exactly defined. At present it excludes all the parts of the Nith basin within Ayrshire and Kirkcudbrightshire, yet is understood to include tracts in Dumfriesshire exterior to that basin, and drained by Lochar Water. But it is not a political division of territory, and does not require to be precisely defined. Its chief features, from the boundary of Dumfriesshire with Ayrshire down to the influx of the Nith into the Solway Firth, have already been noticed in our account of the river Nith. The soil of the greater part of its arable lands is light and dry; capable, except in frost and snow, of being ploughed at any period during winter; and well-fitted for an early reception of seed. In most of the other two divisions of the county the soil is wet, and, when ploughed early in winter, is so apt to run into grass, and to have corn sown on it choked, that it cannot, without imprudence on the part of the husbandman, receive the seed till spring. One plough on a farm in Nithsdale will, in consequence, turn up nearly as much ground as two will in the wet parts of the other districts. Owing to so important a difference, the Nithsdale farms are, in general, much larger than those of Annandale and Eskdale.

In the reign of David I., Nithsdale, then called Stranith, was held by a Celtic chief of the name of Dunegal, from whom genealogists trace the descent of the celebrated Randolph, Earl of Moray. Four sons of Dunegal seem, after his death, to have shared his extensive possessions of Stranith; only two of whom—Randolph and Duvenald—can now be traced. Randolph, the eldest son, obtained the largest share, and, as head of the family, was superior of the whole, transmitting the designation of Lord of Stranith to his posterity. He married Bethoc, the heiress of lands in Teviotdale, and gave his name Randolph as a surname to his descendants. Thomas Randolph, his grandson, who was sheriff of Roxburgh in 1266 and chamberlain of Scotland from 1267 to 1278, married Isabel, eldest daughter of Robert Bruce, Earl of Carrick, and sister of Robert Bruce, the restorer of the monarchy. Their son was the famous Sir Thomas Randolph of Stranith, who, for his eminent services, obtained from his uncle the earldom of Moray, the lordship of Annandale, and other estates. Duvenald, the younger son of Dunegal of Stranith, appears to have obtained the barony of Sanquhar, the lands of Morton, and some other possessions in Upper Nithsdale; and he was probably the Duvenald who, along with Ulric, led the men of Galloway at the Battle of the Standard in 1138, and fell in the conflict. His descendants assumed, in the 13th century, the surname of Edgar from the name of his son; and they continued in the 14th century to hold various lands in Dumfriesshire. Richard Edgar, during the reign of Robert Bruce, possessed the castle and half the barony of Sanquhar, with some adjacent lands; and Donald Edgar obtained from David II. the captainship of the clan Macgowan in Nithsdale.

Other considerable families were possessed at an early period of lands in the district. Sir John Comyn held the manors of Dalswinton and Duncow; whilst the progenitors of the Lords Maxwell possessed Caerlaverock, and held out its ancient castle against many a stout siege. Under Robert II. Nithsdale obtained new superiors. Sir William Douglas, natural son of Sir Archibald Douglas, Lord of Galloway, wedding Giles, the daughter of the king, received with her a grant of Nithsdale, and was constituted sheriff of Dumfries. His only child, his daughter Giles—called 'the Fair Maid of Nithsdale,' who inherited her father's lordship and sheriffdom—married, first, Henry Sinclair, Earl of Orkney, and next, in 1418, Alexander Stewart, the son of James, who was the brother of Robert II., and had obtained from Robert Bruce the lands of Durisdeer. Her son, by her first marriage, was William, Earl of Orkney, who inherited Nithsdale and the sheriffship of Dumfries, but who, in 1455, was induced to resign them

to James II. for the earldom of Caithness. Sir Robert Crichton of Sanquhar in 1457 is styled Vicecomes de Nithsdale, and again in 1459 sheriff of Nithsdale; and his son Robert obtained in 1464 from James III. a confirmation of the sheriffship, and in 1468 a grant of the office of coroner of Nithsdale. The two offices of sheriff and coroner, between the Restoration and the Revolution, passed into the possession of the Douglasses of Drumlanrig. This family—whose eventual identification with the Scotts of Buccleuch has placed under the shadow of the united ducal coronets of Buccleuch and Queensferry such magnificent portions of Nithsdale, Eskdale, Teviotdale, Ettrick Forest, and other districts in the Border counties—continued to hold the offices till the abolition of hereditary jurisdictions. In 1620, Robert, eighth Lord Maxwell, was created Earl of Nithsdale. William, fifth Earl, taking part with the Pretender in 1715, was attainted, and condemned to be beheaded; but, through the address and courage of his Countess, the Lady Winifred Herbert, a daughter of the Marquis of Powys, he made an extraordinary escape from the Tower.

Nithhill, a village in the SE corner of Abbey-Paisley parish, Renfrewshire, near the right bank of Leveru Water, with a station on the Glasgow, Barrhead, and Kilmarnock Joint railway, 2 miles NE of Barrhead, and $4\frac{1}{2}$ WSW of Glasgow, under which it has a post office. It has a Free church, an endowment school, a Roman Catholic school, and chemical works (1807); and it is largely inhabited by workers in neighbouring coal-mines and quarries. Pop. (1881) 1001, (1891) 1048.—*Ord. Sur.*, sh. 30, 1866.

Nivingston, an estate, with a mansion, in Cleish parish, Kinross-shire, 3 miles SSW of Kinross.

Noblehill, a village in Dumfries parish, Dumfriesshire, 1 mile E of the town.

Noblehouse, a farm in Newlands parish, Peeblesshire, 3 miles ESE of Linton, and 17 S by W of Edinburgh. It was once a famous posting establishment and inn.

Nochty, Water of, a rivulet in Strathdon parish, SW Aberdeenshire, formed by two head-streams at an altitude of 1263 feet, and running $4\frac{1}{2}$ miles south-eastward to the Don at Invernochty, opposite Strathdon church.—*Ord. Sur.*, sh. 75, 1876.

Noddle Burn. See LARGES.

Noe. See GLENNOE.

Noltland Castle, a ruin near the northern coast of Westray island, Orkney, 20 miles N of Kirkwall. It was built by the governor, bishop, or princely prelate Thomas de Tulloch in 1420, towards the close of which century it was besieged by Sir William Sinclair of Warsetter. Having fallen into possession of Sir Gilbert Balfour, master of Queen Mary's household, it nearly became a place of refuge of the unfortunate queen after her flight from Lochleven, the word having been given to prepare it for her reception. It was besieged again and captured by Earl Patrick Stewart, and gave refuge to the last surviving officers of the Marquis of Montrose's army, when it became a ruin, periodically illuminated in celebration of the births and marriages of the Balfours. Offering the mingled character of palace and fortress, but seemingly never completed, it now presents the appearance of a huge grey oblong pile, with ranges of embrasures resembling tiers of port-holes, and with attached dismantled masses of masonry. Its open quadrangle is entered by an ornamental arched port; and it includes, on the ground flat, a great hall 62 feet long and 24 wide, overarched with a strong stone roof about 20 feet high. See David Vedder's *Orcaadian Sketches*.

Noness, a coast village in Dunrossness parish, Shetland, 2 miles SSE of Sandwick.

Noop or **Noup**, a small bay and a headland on the NW coast of Westray island, Orkney. With a breadth across the entrance of $4\frac{3}{8}$ miles, and a depth thence to its inmost recess of $1\frac{3}{8}$ mile, the bay looks northward so as to be fully exposed to the fury of the Atlantic, and is crossed by a reef, the Bow of Rackwick, which has proved fatal to many a vessel. Noop Head, flanking

the W side of the bay, projects north-westward from an eminence called Noop Hill, has a bold beetling character, and is sometimes designated the Stack of Noop.

Noop or Noup of Noss. See NOSS.

Noranside, an elegant mansion in Fearn parish, Forfarshire, 3 furlongs from the left bank of Noran Water, and 7 miles W by N of Brechin.

Noran Water, a Forfarshire stream, of Tannadice parish mainly, but partly also of Fearn and Caraldston. It is formed, at an altitude of 890 feet above sea-level, by the confluence of two rivulets, the longer of which, Trusty Burn, rising at 2160 feet, runs 3 miles south-south-eastward. Noran Water itself flows 10½ miles south-south-eastward and east-south-eastward, till at a point 4¼ miles WSW of Brechin and 140 feet above the sea, it falls into the river South Esk. It traverses picturesque scenery, and its clear rapid waters yield capital trout-fishing.—*Ord. Sur.*, sh. 57, 1868.

Norby, a village in Walls parish, Shetland, near Sandness, and 32 miles WNW of Lerwick.

Normandykes, a military antiquity in the SW corner of Peterculter parish, Aberdeenshire, crowning a gentle eminence on the N side of the river Dee, opposite several fords of the river, 7 miles WSW of Aberdeen. It seems to have been a Roman camp, 938 yards in length and 453 in breadth; is wrongly believed by some antiquaries to occupy or indicate the site of the ancient town of Devana; and has been so obliterated as now to be represented by only a small reach of dyke and ditch, forming part of the fence of an adjoining field.—*Ord. Sur.*, sh. 77, 1873.

Norman's Law. See ABDIE.

Norries Law. See LARGO.

Norrington, a *quoad sacra* parish in Monteith district, S Perthshire, containing THORNHILL village, 4 miles WSW of Doune, and 9¼ WNW of Stirling. Constituted in 1877, it is in the presbytery of Dunblane and the synod

of Perth and Stirling. Its church, which originated in an endowment by Gabriel Norrie about the year 1670, was rebuilt in 1812, and contains 870 sittings. There is also a Free church of Norrington. Pop. (1881) 1031, (1891) 899.—*Ord. Sur.*, sh. 39, 1869.

North-Barr, Renfrewshire. See INCHINNAN.

North Berwick. See BERWICK, NORTH.

North British Railway, a railway whose name was first applied only to the line from Edinburgh to Berwick with a branch to Haddington, and now forming the largest railway organisation in Scotland. The earliest sections of the North British railway, as now consolidated, were the Monkland and Kirkintilloch, the second railway in Scotland, opened in 1826, and the Ballochney, opened in 1828, which, with the Slamannan, opened in 1840, were amalgamated as one line in 1848 under the name of the Monkland railways, were afterwards amalgamated with the Edinburgh and Glasgow, and came to the North British in 1865, as subsequently noticed. A more direct portion of the original North British was the Edinburgh and Dalkeith, which ranks as the fifth railway in point of time in Scotland, and which was opened in 1831. This line obtained some celebrity under its title of the 'Innocent Railway,' given to it by Dr Robert Chambers in one of his essays, indicating its safety and slow-going character as compared with lines on which locomotives were used. 'In the very contemplation of the innocence of the railway you find your

heart rejoiced. Only think of a railway having a board at all the stations forbidding the drivers to stop by the way to feed their horses!' This railway, running from Edinburgh to Dalkeith and Dalhousie, with branches to Leith and Fisherrow, was 17½ miles in length. Prior to its absorption by the North British in 1845, it was used chiefly for the conveyance of coals and farm products, but had also a regular service of passenger omnibuses, drawn by horses. Some parts of this 'Innocent Railway' have been converted into modern railways, and other parts have been put out of use, and form wooded mounds that may some day puzzle the antiquary. The next portion of the system was the Edinburgh and Glasgow, opened in 1841, and amalgamated with the North British in 1865, having previously absorbed the Monkland railways, as stated above. The Edinburgh and Bathgate line (authorized in 1846) is leased to the North British Company for 999 years. In 1842 the Edinburgh, Leith, and Granton railway was opened, and this was amalgamated with the Edinburgh and Northern on the opening of that line from Burntisland in Fife to Perth and Tayport (for Dundee) in 1847, the amalgamated railways being named the Edinburgh, Perth, and Dundee railway, and being absorbed in the North British in 1862. The railway which gives its title to the system was opened in 1846, and consisted of the main line, 58 miles in length, and the branch to Haddington, 5 miles. In the previous year the powers of the Edinburgh and Hawick Company had been acquired before any steps at construction were taken, and this line (of which the utilised section of the 'Innocent Railway' formed a part) was opened as an integral portion of the North British. By the formation of the Border Union railway, Hawick to Carlisle and the Border Counties, Hexham in Northumberland to Riccarton (forming a junction there with the preceding), and by the construction of many branches, and the absorption of many lines independently constructed, the North British became the large organisation now embraced under that name.

The company, as consolidated, serves the whole of the SE of Scotland from the Tay to the Tweed, and stretches to several westerly points, besides holding in the N a half share of the Dundee and Arbroath railway, the lines by the coast to Montrose and Bervie, and running powers to Aberdeen. Its southern termini are Berwick, Hexham, Carlisle, and Silloth, and the other terminal points to which it reaches are Hamilton, Glasgow, Craigendoran (for Clyde watering-places), Helensburgh, Lerbeth, Stirling, Aberfoyle, Balloch (for Loch Lomond), Fort William, Mallaig, Bauavie (for Caledonian Canal and Inverness), Perth, and Bervie. Besides this there are numerous branches and cross lines that fill up the scheme, such as the branches to Kelso (where the Berwick branch of the North-Eastern railway is joined), to Langholm, Jedburgh, and Selkirk; the line from Newtown St Boswells to Earlston and Duns, through Berwickshire to Reston on the main line; the branches to Gretna, Port Carlisle, and Silloth; and the line running from Galashiels to Innerleithen and Peebles, with branch to Dolphinton, and returning to main line at Eskbank. There are also short lines to Penicuik, Roslin, and Polton; to North Berwick, Haddington, Macmerry, Musselburgh, and Fisherrow harbour; and the connecting link between South Leith and Portobello. Those branches are all S of the Forth, in connection with the main and Carlisle lines. Edinburgh forms a central point in the system, at which all the main lines converge. Westward, the lines go to Glasgow, with branches to Bo'ness, Grangemouth, and Lerbeth; and the southern route to Glasgow (formed out of the Bathgate railway and westward continuations), with lines through the coal districts of Airdrie, Slamannan, Bothwell, Hamilton, and Morningside. The company holds half of the ordinary share capital of the City of Glasgow Union railway, and also possesses an extensive system of lines, largely underground, in Glasgow, their object being both to promote local city traffic and to obtain a quicker route from Helensburgh, etc., to the chief station in the city. The lines running immediately out of Glas-

Seal of North Berwick.

gow are those to Craigendoran, Helensburgh, Balloch, Maryhill, Strathblane, Killearn, and Aberfoyle, through the 'Rob Roy' country. The branch from Dumbarton to Balloch (Jamestown) on the shore of Loch Lomond, joins the Forth and Clyde line, from Balloch through the Buchanan country to Stirling, made in 1854, and worked by the North British. The company owns the line from Stirling to Dunfermline and Thornton (with branch to Cambus and Alva), also from Alloa by Dollar and Kinross to Ladybank, the main route from Burntisland to Perth and Dundee, the East of Fife line from Thornton to Anstruther, a branch from Leuchars to St Andrews, a branch from the same junction to Tayport, and a line between the Tay Bridge and Tayport *via* Newport. The Anstruther and St Andrews railway gives railway communication to Crail and the East Neuk of Fife. From the scattered nature of the numerous branches, the working of the line is of an involved and intricate nature, and although the mileage of line is the largest in Scotland, the revenue of the railway is slightly less than that of the Caledonian railway. The railway, at the beginning of 1894, consisted of 1015 $\frac{3}{4}$ miles of line owned, 23 miles partly owned, and 48 $\frac{1}{2}$ miles leased or rented by the company, 32 miles of the Union Canal (which had been purchased by the Edinburgh and Glasgow in 1848), and ferries over the Forth at Queensferry and Burntisland, and over the Tay from Tayport to Broughty Ferry, about 8 miles in all. In addition to this the company work other lines of 27 $\frac{3}{4}$ miles, and run trains over 122 $\frac{1}{2}$ miles of 'foreign' railways, making a total of over 1200 miles of public communications directly or partly in the control of the company. At March 1894 the capital expenditure of the company amounted to £51,812,291, consisting of shares £38,178,442, debenture stocks £12,492,573, loans £401,912, premiums received on issue of stock £739,363. The remarks made on the capital of the Caledonian Railway Company (vol. i., p. 219) apply equally to this account of capital, and need not be repeated.

In the half-year last reported the company carried 752,439 first class and 13,585,956 third class passengers, making, with 15,735 season tickets, a total of 14,354,130 passengers, yielding, with mails and parcels, a revenue of £632,897. The goods and mineral traffic, with live stock, yielded a revenue of £1,047,980. The total revenue exceeded 1 $\frac{1}{2}$ million of money for the half-year. This traffic required the services of 698 locomotive engines, 2715 passenger vehicles, 50,481 waggons of various kinds, besides steamers to conduct the ferry traffic. Including the steamer passages, this plant traversed, in the passenger department, 3,964,079 train miles, and in goods service, 3,976,285 train miles, being a total of 7,940,364 miles. The revenue earned amounted per train mile to 38·82d. in the passenger traffic and 64·43d. in the goods traffic. The affairs of the company are administered by a board of fifteen directors.

The outline of the railway given in the foregoing brief narrative of its origin and extent shows that the company commands a large and important district. As a local line it has entire control of the counties of Berwick, Roxburgh, Haddington, Edinburgh, and Fife, and it competes with the Caledonian for through or local traffic at the principal places in Scotland. Owning the shortest and most level route between Edinburgh and Glasgow, as well as subsidiary route by Bathgate and Coatbridge, it offers the best means of communication between these cities, but by agreement the traffic receipts between these places are divided between the companies in fixed proportions without reference to the actual number of passengers carried by each. As regards London, the North British forms an integral part of the East Coast route by York, Newcastle, and Berwick, completed in 1850 when the Queen opened the Royal Border Bridge at Berwick; and the 'Flying Scotsman' between Edinburgh and London, performing the distance between the cities in 3 $\frac{1}{2}$ hours, is one of the fastest trains in the world. Through the line *via* Hawick to Carlisle, the

North British also forms a part of the Midland route to England; the trains northward from London, etc., forking at Carlisle, westward by the Glasgow and South-Western, and east and north by the North British. Through Fife, besides a monopoly of local service, the company maintains an excellent service of trains to Perth, Dundee, Arbroath, Montrose, Aberdeen, etc., *via* the Forth and Tay Bridges (the shortest route), and has through connections with the Highland and Great North of Scotland lines.

In the construction of the North British, there have been many considerable engineering works, including the great bridges over the Tay and the Forth, to be subsequently noticed. The original line, Berwick to Edinburgh, presents no extensive works, though offering to the traveller some highly picturesque glimpses as it touches the sea near Berwick and at Dunbar, and passes the defile of Peasebrig. The Border Counties line, from Hexham in Northumberland to Riccarton (with branch to Rothbury and Morpeth), takes the traveller through a district of great interest, and climbing over the Cheviot Hills crosses the Border at a high elevation. From Carlisle northward to Hawick the line is not important in any engineering sense, but in the ascent and descent of the watersheds and the passage of Whit-rope tunnel the line shows gradients and curves which rendered the use of 'bogies' engines a matter of necessity in working the fast express trains. The summit level at Falahill is frequently in winter the scene of obstructions from snow drifts. As this line passes through the Scott country and the scenes of Border story, it attracts large numbers of visitors annually, especially to Melrose (for Melrose and Dryburgh Abbeys, and Abbotsford), Kelso, Jedburgh, etc., also to Selkirk, Innerleithen, and Peebles for angling in St Mary's Loch and the many fine streams throughout the district, and on the local lines to Roslin Chapel, etc. Between Edinburgh and Glasgow, the main line is a notable and costly engineering work, it having been made before the power of locomotives to overcome gradients and curves was properly understood. It includes two extensive stone viaducts over the Almond and Avon, and the cuttings and tunnel near Winchburgh were made at immense cost. From Cowliars the Queen Street high level station is reached by an inclined tunnel which has been much shortened and improved in recent years. Trains leaving Queen Street station are assisted up the incline by a rope and stationary engine. The low level trains, running east and west, have a station of their own at Queen Street, directly below and communicating with the high level station. The Edinburgh and Glasgow line passes close to Linlithgow, a favourite resort to visit the royal palace there, but in too many places, particularly at Falkirk, the line avoids the towns, partly from the desire to make straight as well as level runs on the railway, and partly from the idea in those early times that the vicinity of a railway was not desirable. The town of Falkirk is best reached by the Grahamston station on the Larbert junction line, the station being actually in the town, while that on the main Glasgow line is about 2 miles distant. At Cowliars the company maintains large engineering and carriage building works, where between 2000 and 3000 persons are employed.

Although Mr Bouch had in 1849 expressed his determination to bridge both the Tay and the Forth estuaries, and had lodged a claim as early as 1864 for a bridge over the Forth about a mile above Charleston, it was not till 1863 that the first proposal for a Tay Bridge was made public, and not till July 1870 that the bill for this purpose received the royal assent. As originally designed, the Tay Bridge differed in some of its details from the scheme ultimately carried out. As eventually built, the bridge was within a few yards of 2 miles long: it consisted of eighty-five spans, namely, seventy-two in the shallow water on the north and south sides varying from 29 to 145 feet; and thirteen larger spans over the fairway channel, two of these being 227 feet, and eleven 245 feet wide. The rails rested on the upper members of the girders generally, and on the lower members of the thirteen large spans.

The system of wrought-iron lattice girders was adopted throughout, Mr Bouch adhering to the form of construction which had been successfully employed in other works designed by him. The piers were originally intended to be of brickwork, but after the fourteen nearest the south shore had been thus erected, the fifteenth showed a failure of the anticipated foundation, which led to the abandonment of brick and the introduction of iron. In the lesser piers the group of pillars consisted of four of 12 inches diameter, and for the larger spans three pillars were used, disposed in two triangular groups of three each, and stiffened with cross bracing. After many vicissitudes and delays caused by unexpected difficulties in carrying out the work, the line was completed continuously from shore to shore on the 22nd of September 1877, after which date there was a heavy ballast traffic across the river, testing the carrying power of the bridge in a satisfactory way. The inspection of the work by Major-General Hutchinson, R.E., on behalf of the Board of Trade occupied three days, and on the 31st of May 1878, the bridge was opened with much ceremony and rejoicing, the engineer being presented with the freedom of the town of Dundee. Traffic on the bridge was at once begun, and a direct service of trains from Edinburgh and Glasgow to Aberdeen was organised, saving much time and inconvenience by the abandonment of the ferry crossing and the double change of conveyance it involved. The improvement was fully appreciated by the public, and in June 1879 the Queen crossed the bridge on her journey southwards from Balmoral. As a mark of royal approval of the striking achievement of the engineer, the Queen commanded the attendance of Mr Bouch at Windsor, and he received the honour of knighthood on the 26th of June 1879.

The traffic was continued uninterruptedly till the evening of Sunday the 28th of December 1879, when a violent hurricane arose, and during the passage of a train from Edinburgh across the bridge, the central portion fell into the river, carrying with it the entire train and its load of about seventy passengers, all of whom lost their lives.

In 1878 a company composed of the railways interested in that route had been formed to construct a suspension bridge over the Forth at Queensferry on the plans of Bouch, but the disaster to the Tay Bridge paralysed the operations, the Board of Trade demanded a larger margin of safety in the design, and the construction of the bridge was abandoned. For details of the design which was subsequently adopted and successfully carried out see our article FORTH BRIDGE.

Within two years of the fall of the Tay Bridge the North British Railway Company obtained an act authorising the construction of a new viaduct, differing in many points of detail from the original structure. Starting from nearly the same points N and S, the new bridge stands about 50 yards W of the old. In the number and arrangement of spans it is identical, and in the method of sinking the foundations and bringing up the structure above high-water mark the process is the same. It differs (1st) in being a double instead of a single line, by which the lateral stability and carrying capacity are increased; (2d) in the upper structure being in solid plates of malleable iron, instead of groups of cast iron columns; and (3d) in being less in elevation above high water o.s.t. The reduction in the height caused an obligation to be imposed on the company to tow all vessels proceeding to Perth or elsewhere above bridge. The engineer of this bridge was Mr Barlow.

Another work of engineering importance is the bridge over the Esk at Montrose. This bridge as designed by Bouch failed, owing to the bad foundation furnished by the 'back-sands,' and considerable expense was incurred in erecting a new lattice girder bridge, which was opened in 1882. A fine iron bridge, designed by Bouch, crosses the Dryden burn on the Edinburgh and Rosslyn line, and the bridge crossing the Tweed below Melrose, carrying the railway to Earslton, is an imposing stone structure, and as it carries a single line only it appears

very slender owing to its great height, and having shown some indications of yielding at one end, the piers have been strongly reinforced there.

The character of the traffic borne by the North British railway is much diversified. As a passenger line it ranks first in Scotland, a larger proportion of its revenue being derived from this source than is the case with its great rival line the Caledonian. It is the sole means of railway communication over a very large district, and in the denser parts of the country it maintains a lively competition with the other lines. In mineral traffic it has connection with docks or harbours at Leith (by two lines), Bo'ness, Burntisland, Methil, Charleston, Glasgow (by the Stobcross docks), Silloth, etc. It has considerable fish traffic from Dunbar, Eyemouth (to which a railway is made), Granton, Anstruther, etc. Its tourist district embraces the Scott country, Loch Lomond, Loch Long, Glenfalloch, Crianlarich, the hitherto unopened country with unrivalled scenery between Tyndrum and Fort William, now rendered easily accessible by the West Highland railway, which leaves the North British at Craigendoran, all watering places on and *via* the Clyde through Craigendoran, and such interesting historical places as Lochleven, Dunfermline, Falkland, St Andrews, and Linlithgow. Its importance as a part of the shortest route from Edinburgh to London, and as the best line from Edinburgh to Glasgow, has already been adverted to, and over both those lines it conducts an important part of the postal service. The history of the North British has been one of many vicissitudes. In Mr Richard Hodgson it possessed a man of great energy and foresight, and his endeavours to realise a gigantic and well-compacted system plunged the company into serious financial difficulties, which formed the subject of a special investigation in 1867. It is one of the features of the later history of the company, that most of Mr Hodgson's ideas have since been carried out. By great boldness he secured the access to Carlisle from Hawick, which, had it fallen into the hands of the Caledonian, would have made the now picturesque and favourite 'Waverley Route' *a cul de sac*. On Mr Hodgson's downfall the company secured a man of no less ability and courage in Mr Stirling of Kippendavie, who for fifteen years ruled the destinies of the railway. It was under his direction that the company pushed into the great Lauroshshire coalfield by the 'Coatbridge undertaking,' which made the Edinburgh and Bathgate railway a through line, and by special lines running to Hamilton, etc. The Glasgow connection was strengthened by the construction of the Stobcross docks and connecting lines, while northward the construction of the Forth and Tay Bridges, the acquirement of one-half of the Dundee and Arbroath, the new railway to Montrose, and the purchase of the Bervie line indicate a policy pointing to a direct route to Aberdeen and the north, entirely independent of those 'running powers' from Larbert to Perth, and from Arbroath to Aberdeen, already held as the fruits of keen parliamentary strife.

A part of the policy of the company has been to encourage the formation of local lines, and after their execution and working have been tested, to absorb them into the system under terms more or less favourable. Under various heads throughout this work (BERWICKSHIRE RAILWAY, BLANE VALLEY RAILWAY, GLASGOW CITY AND DISTRICT RAILWAY, etc., etc.), will be found particulars of a number of railways which have been in this way amalgamated with the North British.

North Bute. See BUTE, NORTH.

Northesk. See MUSSELBURGH.

Northfield, an estate, with an elegant mansion, in Annan parish, Dumfriesshire, on the left bank of the river Annan, 1 mile N of the town.

North Isles, the northern one of the three parishes of Orkney, comprehending the *quoad civilia* parishes of Shapinsay, Rousay and Egilshay, Stronsay, Cross and Burness, Lady, and Westray and Papa, with the *quoad sacra* parishes of Eday and North Ronaldshay. Pop. (1871) 9312, (1881) 9373 (1891) 1249

8780, of whom about 900 are communicants of the Church of Scotland.

Northmaven, a parish of Shetland, comprehending the northernmost part of Mainland, with a number of neighbouring islets, and containing Hillswick village, with a post, money order, and telegraph office, on the W side of Ura Firth, 17 miles NNW of Voe, and 36 NNW of Lerwick. Resembling an isosceles triangle with north-north-eastward apex, it is connected at its southern corner with the rest of Mainland by an isthmus only 100 yards wide; and even this is nearly all submerged by spring tides. Its utmost length, from N by E to S by W, is 17 miles; its utmost breadth is 11 miles; and its land area is $76\frac{1}{2}$ square miles, or 49,037 acres. The principal islets are Nibon, Uyea, and Lamba; and most of them afford good pasture, but all are uninhabited. The Mainland district, except at the isthmus connecting it with Delting parish, is completely surrounded by the sea. Deeply indented by Ura Firth, Ronas Voe, Burra Voe, Colla Firth, Gluss Voe, and other bays or voes, it has nearly everywhere a bold and rock-bound coast, so engirdled by skerries, towering islets, and fantastically-outlined rocks as at all times, but especially in a storm, to present grandly picturesque and romantic scenery. Portions of the W coast, in particular, consist of stupendous crags, rising rapidly to a height of 300 and 500 feet above sea-level, and seeming to have been rather rent by storm and billow than torn by volcano or upheaved by earthquake. Islets or other objects of still more remarkable appearance bear the names of Drons, Scraada, Doreholm, Ossa-Skerry, and Maiden-Skerry. Fethaland Point in the extreme N, and Esha Ness in the extreme SW, are the principal headlands; and the former terminates a small peninsula, enclosed by a stone fence. Numerous fresh-water lakes of no great size are scattered over the moors, whose general surface is hilly, broken, and rough, attaining 389 feet at the Skirds, 567 near White Grunafirth, and 1475 at precipitous Ronas Hill—the highest summit in Shetland. The rocks, from Ronas Voe to Ura Firth, are chiefly Old Red sandstone and limestone, of coarse description; elsewhere they include granite, syenite, gneiss, syenitic greenstone, diallage, and porphyry. Chromate of iron occurs in places, but not of the best quality; and agates and garnets are found. The soil in some spots along the coast is light and sandy, in others is loamy or clayey; and over most of the interior is moss immediately incumbent on solid rock. Almost everywhere it is very thin. The arable lands are chiefly scattered pendicles around the bays or elsewhere near the shore, and probably not more than one-tenth of the entire area is under cultivation. The crofters, indeed, pay more attention to fishing than to agriculture. The chief antiquities are a chain of rude watch-towers, remains of Picts' houses, and ruins of two pre-Reformation churches at Ollaberry and North Roe. Northmaven is in the presbytery of Olnafirth and the synod of Shetland; the living is worth £212. The parish church, at Hillswick, was built in 1733, and reseated in 1825. Other places of worship are an Established chapel of ease (repaired in 1891), and a U.P. church at Ollaberry, a Congregational chapel at Sullam (1828), and a Wesleyan chapel at North Roe (1828). Five public schools—Eshaness, North Roe, Ollaberry, Sullam, and Urafirth, with respective accommodation for 60, 80, 77, 40, and 60 children, have an average attendance of about 30, 50, 50, 20, and 40, and grants amounting to nearly £35, £50, £50, £25, and £50. Valuation (1884) £2352, 12s. 9d., (1893) £2003, 1s. 2d. Pop. (1881) 2269, (1891) 2197.

North Medwin. See MEDWIN.

Northmuir, a village in Kirriemuir parish, Forfarshire, 1 mile N by W of the town.

North of Scotland Railway, Great. See GREAT NORTH OF SCOTLAND RAILWAY.

North Queensferry. See QUEENSFERRY, NORTH.

North-Water-Bridge, a hamlet near the mouth of North Esk river, at the boundary between Forfar and Kincardine shires, with a station on the Bervie branch

of the North British railway, $3\frac{1}{2}$ miles N of Montrose, and with a post office under Laurencekirk.

North-West Castle. See STRANRAER.

North Yell. See YELL.

Norton, an estate, with a modern mansion, in Ratho parish, Edinburghshire, 1 mile N by W of Ratho village.

Noss, one of the islands forming BRESSAY parish, Shetland, the number of which was curtailed by the Boundary Commissioners in 1891. Noss is 1 furlong E of Bressay island, from which it is separated by a narrow and dangerous sound. Triangular in shape, it has an utmost length and breadth of $1\frac{1}{3}$ mile, and is reckoned one of the most fertile and pleasant islands in Shetland. A promontory on its E side is called Noss Head. But the most interesting object connected with it, and one of the greatest curiosities in Shetland, is a holm or islet on its SE side, called the Holm of Noss. This islet, only 500 feet long, 170 broad, and 160 high, is perfectly mural, rising sheer up to its greatest altitude on all sides from the sea, and possessing a level and richly-swarded surface. The opposite rock on Noss island is also mural, and of the same height as the Holm; and is separated from it by a channel 240 feet wide. In former years a wooden trough or cradle suspended to ropes and made to acquire a sliding motion, with sufficient capacity to convey a man and one sheep at a time, served to keep the Holm in command as a valuable piece of sheep pasture. Off the E coast a rock called the Noup of Noss towers up like a stupendous tower, and attains, on one side, a precipitous and almost perpendicular height above sea-level of 592 feet. Pop. (1841) 24, (1861) 14, (1871) 24, (1881) 3, (1891) 3.

Noss Head, a bold rocky promontory on the S side of Keiss or Sinclairs Bay, $3\frac{1}{2}$ miles NNE of Wick, Caithness. A little W of it stand the ruins of CASTLE-GIRNIGOE AND SINCLAIR, the ancient stronghold of the Earls of Caithness. From the cove or small bay of Mursligoe, frequented by seals, a dry passage leads through a rock into a vast cave under Noss Head. A lighthouse, built in 1849 at a cost of £12,149, stands on Noss Head, with its lantern elevated 175 feet above the level of the sea. Its light is a revolving light, attaining its brightest state once in every half-minute, visible at a distance of 18 nautical miles. It shows white from N 45° E, through north and west, to S 33° W; and red from S 33° W, through south, to S 70° E in Sinclairs Bay. The lighthouse is in N latitude 58° 28' 38", and in W longitude 3° 3' 5".—*Ord. Sur.*, sh. 116, 1878.

Northland Castle. See NORTLAND.

Noth, Tap o'. See RHYNIE.

Noup Bay. See NOOP.

Noup of Noss. See NOSS.

Novar, an estate, with a mansion, in ALNESS parish, Ross and Cromarty shire, near the NW shore of the Cromarty Firth, and $1\frac{1}{2}$ mile N of Novar station on the Highland railway, this being $6\frac{1}{2}$ miles NE of Dingwall. Backed by wooded heights, the mansion is a handsome edifice, with a large collection of valuable works of art, and with charming grounds, which were much improved and adorned by Sir Hector Munro, K.C.B., whose victory of Buxar (1764) placed Hindustan at the feet of the English. The estate belongs now to his great-grandson, R. C. Munro-Ferguson, Esq. of RAITH, M.P.—*Ord. Sur.*, sh. 93, 1881.

Nungate. See HADDINGTON.

Nunlands House, a mansion in Foulden parish, Berwickshire, $3\frac{1}{2}$ miles S by E of Ayton. Anciently held by the abbey of Dryburgh, the estate was purchased in 1870 by the late Mr Wilkie of FOULDEN for £3550, and is now the property of his son, James Bruce Wilkie, Esq.—*Ord. Sur.*, sh. 34, 1864.

Nunraw Castle, a mansion at the NE border of Garvald parish, Haddingtonshire, $\frac{1}{2}$ mile ESE of Garvald village, $3\frac{1}{2}$ miles ENE of Gifford, and 7 S by E of East Linton. Standing on the western edge of a deep and precipitous glen, it was built about the middle of the 15th century as a peelhouse or fortalice on lands belonging to the Cistercian nunnery of ABBEY, near Hadding-

ton. Although it has been modernised, it still is a fine old building. The work of renovation laid bare the painted ceiling of its old refectory, bearing date 1461, and emblazoned with the arms of the kings of Arragon, Navarre, Egypt, etc. The estate was purchased from R. J. A. Hay, Esq. of Linplum, in 1880, by Walter Wingate Gray, Esq. (b. 1856).—*Ord. Sur.*, sh. 33, 1863. See John Small's *Castles and Mansions of the Lothians* (Edinb. 1883).

Nunton, a village on Benbecula island, South Uist parish, Outer Hebrides, Inverness-shire, 18 miles SSW of Lochmaddy. It takes its name from an ancient nunnery, which was demolished to furnish building material for the mansion and offices of the principal landowner of the parish; and it has a post office under Lochmaddy, and a branch of the Commercial Bank.

Nybster, a coast village in Wick parish, Caithness, 10 miles N of Wick town.

OA, a headland and a *quoad sacra* parish in Kildalton parish, Islay island, Argyllshire. The headland, flanking the S side of Laggan Bay, $3\frac{1}{2}$ miles NW of Port Ellen and $7\frac{1}{2}$ S of Bowmore, overlooks the E side of the entrance of Loch Indal; has a beetling, lofty, imposing character; is crowned with the ruins of DUNAIDH Castle; was originally called Keannoath; is now called the Mull of Oa; and often gives its name of Oa to much or all of the entire south-eastern peninsula of Islay. The *quoad sacra* parish, which comprises the southern part of that peninsula, and which has for its post-town either Port Ellen or Bowmore, was constituted first by the ecclesiastical authorities, next in 1849 by the court of teinds. It is in the presbytery of Islay and Jura and the synod of Argyll; its minister's stipend is £160 with a manse. The church was built at the expense of government in the first half of the 19th century. Pop. (1871) 367, (1881) 247, (1891) 210, of whom 200 were Gaelic-speaking.

Oakbank, a village, with oil-works, in Kirknewton parish, Edinburghshire, close to Midcalder Junction. It has an Established mission church, a public school, and a post office under Midcalder. Pop. (1871) 355, (1881) 506, (1891) 979.

Oakfield. See BEATH.

Oakley, a village at the mutual border of Carnock and Culross parishes, Fife, with a station on the Stirling and Dunfermline branch of the North British railway, $4\frac{3}{8}$ miles W by N of Dunfermline. Built in connection with the Forth or Oakley Ironworks (1846), it chiefly consists of stone, one-storey, slated dwelling-houses, disposed in rows, with intervening spaces more than double the breadth of the streets of the New Town of Edinburgh; and has a post office, with St Margaret's Roman Catholic church (1843) and school. The ironworks, now stopped, had six furnaces, with stalks 180 feet high; and the engine-house was built with walls so deeply founded and so massive as to comprise 60,000 cubic feet of stone below the surface of the ground. Pop. (1861) 1817, (1871) 1127, (1881) 312, (1891) 369, of whom 123 were in Culross.—*Ord. Sur.*, sh. 40, 1867.

Oakshawhead. See PAISLEY.

Oakwood Tower, a ruined baronial fortalice in Selkirk parish, Selkirkshire, on the right bank of Etrick Water, $4\frac{1}{2}$ miles SW of Selkirk town. It belonged in the 13th century to the famous wizard, Sir Michael Scott of BALWEARIE, in the 16th to Wat Scott of HARDEN; and is now the property of Lord Polwarth.—*Ord. Sur.*, sh. 17, 1864.

Oathlaw, a parish in the centre of Forfarshire, whose church stands $4\frac{1}{2}$ miles NNE of the post-town, Forfar. It includes part of the ancient parish of Finhaven, an alternative name which it still sometimes goes under. It is bounded N by Tannadice, E and SE by Aberlemno, S by Rescobie, and SW, W, and NW by Kirriemuir. Its utmost length, from E to W, is $5\frac{3}{8}$ miles; its breadth varies between $5\frac{1}{2}$ furlongs and 2 miles; and its area is $5317\frac{3}{4}$ acres, of which $43\frac{3}{4}$ are water. The river South Esk first flows $\frac{2}{3}$ mile along the westernmost part of the northern boundary, then lower down meanders $2\frac{5}{8}$ miles eastward along two other parts of the Tannadice border

and across the north-eastern interior; and Lemno Burn runs to it east-north-eastward, first 7 furlongs on the Rescobie boundary, next $3\frac{1}{2}$ miles through the interior. In the W a very powerful spring of excellent water rises from a bore 160 feet deep, which was sunk in an unsuccessful search for coal; and, being situated in the midst of a corn field, was covered over from view, and caused to send off its superfluity in a drain. Along the South Esk the surface declines to 143 feet above sea-level; and the highest point in the parish is the Hill of Finhaven (751 feet), which extends along the south-eastern boundary. A gentle slope descends thence to Strathmore; an expanse of plain occupies nearly all the centre and the N; and a tract along the South Esk towards the E lies so little above the level of that river's bed, and was formerly so subject to inundation by freshets, that it had to be protected by costly embankments. The predominant rocks are Old Red Sandstone and conglomerate; and the soil is mostly of a loamy character, incumbent on 'pan.' There are quarries of excellent freestone. Nearly 1200 acres are under wood; and all the rest of the land, except a very few acres, is in tillage. The chief antiquities are noticed in our articles on FINHAVEN and BATTLE-DYKES. Mansions are Finhaven and Newbarns. Oathlaw is in the presbytery of Forfar and the synod of Angus and Mearns; the living is worth £180. The parish church, built in 1815, is a neat edifice with a tower. The public school, with accommodation for 95 children, has an average attendance of about 90, and a grant of nearly £90. Valuation (1884) £5559, 5s., (1893) £4622, 14s. Pop. (1801) 384, (1831) 533, (1861) 399, (1871) 452, (1881) 440, (1891) 399.—*Ord. Sur.*, sh. 57, 1868.

Oban, a parliamentary burgh in the united parish of Kilmore and Kilbride, Argyllshire. A post and market town and seaport, and capital of the district of Lorn, it stands on the coast of Mid-Lorn, opposite the northern end of the island of Kerrera, curving round the head of a deep and beautiful semicircular bay, 24 miles N of the W end of the Crinan Canal, 33 NW by W of Inveraray, 92 NW by N of Glasgow, and 136 WNW of Edinburgh. The site of Oban is one of the most beautiful in Scotland, and one of the most healthy. The island of Kerrera, stretching from the northern horn of the semicircular bay to a considerable distance past the southern horn, completely guards the bay, and makes it a tranquil and spacious haven, from 12 to 20 fathoms deep, entered only by channels on the N and S. The southern entrance, called Kerrera Sound, bends so far inward from the bay as to become lost to view; while the northern entrance, though all seen from the town, appears to be blocked up by the island of Lismore, 5 miles off; so that the bay and adjoining channels have all the appearance of a landlocked lake. Its shores are chiefly low and gravelly, although immediately behind the town the ground rises into a protecting row of heights overhanging the town. On the N and E side especially the cliffs are bold, and are picturesquely covered with pine trees and ivy, while a grey conglomerate cliff stands at the southern promontory of the bay. The view commanded from the heights behind Oban, on which many houses and villas have been built, is extensive and magnificent. To the S is the Sound of

Kerrera; westward, beyond Kerrera, rise the mountains of Mull; while away beyond Lismore to the NW, and past the entrance to the Sound of Mull, tower the peaks of misty Morven; still further NE lies Glencoe with its dark mountains, seen across the Braes of Appin; while nearly due E Ben Cruachan lifts its double peaks. Situated thus, in the midst of such romantic scenery, Oban is surrounded with places of interest, and has become the headquarters of all who desire to visit the West Highlands. Its natural situation, its accessibility, and its safe and commodious bay have splendidly fitted it to become the capital of the West Highlands and 'the Charing Cross of the Hebrides.' Oban is the focus of steam communication, by land and sea, between the south and the north-western parts of Scotland. It is the terminus of an important railway line, affording direct communication with Edinburgh and Glasgow; it is the final point of the so-called 'royal route' from Glasgow *via* the Crinan Canal, carried on in the splendid steamers *Columba* and *Iona*; it is an important port of call for steamers after they have 'rounded the Mull' of Kintyre on their voyage from Glasgow to Stornoway; it is the starting-place for numerous steamer-routes throughout all the western coast and islands, and for coach-journeys to numberless places and points of interest on the mainland; and it is the headquarters of the Royal Highland Yacht Club. These facts give Oban its character. During the winter the town is quiet and dull, but by the end of June it awakens to a hurried, brisk, active existence, which lasts for the rest of the summer and autumn. When the tourist season once begins, Oban is bustling and gay. Train and steamer and coach pour streams of eager pleasure-seekers into the town—all countries of the world, all ages and ranks, being represented in its hotels and streets. The shriek of the engines, the clear tones of the steamer-bells, and the rumble of wheels are heard more frequently; the hotels hoist their flags; bands play on the promenade; graceful white-sailed yachts glide into the bay and drop anchor; tourists and canvas-shoed yachtsmen throng the streets and shops; and there is a general air of bustle and of coming and going—for Oban is a place of passage and not of rest. Tourists go to Oban simply for the purpose of getting to somewhere else. Beautiful as the situation of the town is, its chief attraction to visitors is the ease with which, from Oban, they can reach other parts of the Highlands. Thus it is that although the appearance of Oban in the season is always the same, the individuals who make up the scene are always changing. Though the number of families who spend a month or two here in the summer is yearly increasing, comparatively few people, except the proprietors of the villas on the outskirts of the town and the heights behind, visit Oban for more than a week at a time. The prosperity of the town depends on this annual stream of tourists; and the character of its trade, its municipal policy, and its later history have been determined by this consideration.

Oban, in 1850 but 'a respectable-looking range of white-washed houses fronting the harbour,' has for its main street a broad thoroughfare, curving round the bay, and flanked upon one side by the quays, on the other by substantial and handsome shops and hotels. As it leaves the town at the N end, this street assumes the character of an esplanade, and the shops give way to magnificent hotels and pretty villas. Towards the S end of this street another extends at right angles to it, directly back from the sea, while there are various side and back streets. Although much has recently been done in the way of improving the appearance of the town, its beauty and convenience have been sadly interfered with by the careless and injudicious way in which the original streets and lanes were laid out. In 1859 the fashionable northern quarter of Oban, known as the 'Corran,' was feued from the proprietor of Dunolly, and in the two following years the northern esplanade and Columba Terrace, including the Great Western Hotel, were built. Since then the town has been steadily growing, numerous villas being built, especially on the surrounding heights.

The neighbouring proprietors have done a great deal to beautify the place by planting the environs with fir, larch, oak, spruce, etc., one especially planting 763 acres within eight years. In 1894 the esplanade, previously widened for some distance, was extended by the town council an additional 280 yards. The main body of the town is cut into two parts by a small stream. Over 200 yards of the frontage of the town on the shore is occupied by the large quay and sea-wall built by the Callander and Oban Railway Company. The construction of this work was begun in February 1880, and during the summer of that year a staff of divers were employed 16 hours daily in laying the foundations. The superstructure is of concrete, and the total length of the sea-wall is 670 feet. Handsome waiting-rooms are provided for the convenience of the passenger traffic, while travelling cranes and lines of rails assist the loading and unloading of cargo. Besides this railway quay there are other two older piers, one of which was improved and enlarged in 1836 by the joint efforts of certain townsmen and the late Marquis of Breadalbane, although the latter managed to obtain control of the whole. The pier, however, at which the steamers touch is quite out of keeping with the surroundings. The anchorage in the bay is good and safe, and every summer is crowded with yachts of all sizes, and other craft. During the operations of cutting a canal along the side of Loch a' Mhailinn, a marsh at the south end of the town ('the Oban puddle'), for the purpose of draining it, a submerged structure was discovered, which Dr Munro, author of the *Lake Dwellings of Scotland*, thinks is the best and most extensive in Scotland, and surmises to be of the iron age.

With the exception of the court-house and the churches, the most imposing buildings in Oban are all connected with its tourist traffic; they are the quays, the hotels, and the railway station. The new court-house and police station, in Albany Street, were completed in 1889 from the designs of the late Mr D. Macintosh of Oban. The style of the architecture is severe classic, the external appearance being commanding and boldly detailed. The parish church, built as a chapel of ease in 1821, was taken down and a new one erected in its place in 1893-94 at a cost of about £3000. St Columba's Established church was built in 1875 from designs by David Thomson, of Glasgow, at a cost of about £5000; and is seated for between 500 and 600. It is a handsome Gothic edifice, with a spire 120 feet high and stained-glass windows. On the face of the rising-ground behind the town stands conspicuously a Free church, of light early Gothic architecture, with a low Norman tower and pointed spire, built in 1846 from a design by Mr Pugin. Another Free church, a handsome building, was erected in 1893-94 at the corner of Argyll Square, almost opposite the railway station—the service here being conducted entirely in English. The other churches are a U.P., built in 1867; Congregational, built in 1820, and rebuilt in 1880; St Columba's Roman Catholic pro-cathedral (1886); and the Scottish Episcopal church of St John the Evangelist, a late Gothic edifice of 1863, with a nave of 1882, and 400 sittings. It was consecrated by the late Archbishop Tait, then Bishop of London, in 1864. Three schools—the High, Roman Catholic, and Episcopalian—with respective accommodation for 1099, 110, and 106 children, have an average attendance of about 740, 65, and 75, and grants of over £1100, £80, and £70. The Lorn Combination Poorhouse, with accommodation for 234 inmates, was opened in 1862. The railway station, erected in an open and commanding site near the quay, is one of the prettiest buildings in the town. It is a single-storeyed building of varnished white and pitch pine, iron, and glass. It was opened on 1 July 1830, and, including the pier, cost between £50,000 and £60,000. It is proposed to widen the line at Oban, and to extend the pier and the quay and sea-wall, and make other improvements. Oban has even more hotels in proportion to its size than Edinburgh, there being no less than 15, besides several temperance hotels. Several of them are of the most palatial dimensions and

appointments. Even so long ago as 1773 Boswell remarked with approval the accommodation which he and Dr Johnson received in the little clachan at Oban; and the hotel-keepers of the town have not lost their reputation. The chief hotels (in order northward along George Street from the railway terminus) are the Station Hotel, opened in 1881; Queen's, King's Arms, Caledonian, and the Imperial. The Argyll, the Columba, and the Oban Hotels are close to the north pier, while the Royal is near the railway station. Overlooking the N end of the bay are the Great Western, built in 1863, but since incorporating two adjoining villas, and with a dining-hall holding 200 people; and the Alexandra, which has acquired a kind of extra-professional fame for the large and fine collection of modern paintings, ancient furniture, and *bric-à-brac* which it contains. On the heights above the town stands the Grand Hotel. There are, besides, a goodly number of temperance hotels. Also overlooking the town and bay, and forming a prominent object in the view, rise the unfinished walls of a proposed hydropathic establishment. Towards the end of 1896 another company was formed, called the Palace Hotel & Hydropathic Co., to finish the building and fit it up in the most luxurious style and with all the modern accessories of such establishments, and so make it one of the finest in the kingdom. On a neighbouring height it is proposed to erect a granite tower. A cottage hospital was erected in 1894. Dunollie Castle, a ruin, is situated about a mile N of the town, while Dunstaffnage Castle is about 3 miles distant. The 'Serpent Mound,' of much interest to antiquarians, lies 3 miles to the south. One great want at Oban, however, is a sandy beach.

Oban has a post office, with money order, savings bank, insurance, and telegraph departments, branches of the Bank of Scotland, and the Royal, Clydesdale, Commercial, National, and North of Scotland Banks. Most of the banks are handsome buildings. The office of public works (Western Highlands and Islands) is in Oban. Other institutions are the Oban Scientific and Literary Association, the members of which meet weekly during the winter; an agricultural society, a horticultural society, bowling, curling, golf, and boat clubs, a gaswork, the Shipwrecked Fishermen and Mariners' Royal Benevolent Society, several circulating libraries, and a masonic lodge, formed in 1791. There is a corps of artillery volunteers, formed in 1859 at the very beginning of the volunteer movement. The Royal Highland Yacht Club was instituted in Oct. 1881, and has its headquarters at Oban. The club-house is in a villa near the Great Western Hotel. Its members fly the blue ensign of the navy and a blue badge bearing a crown on a St Andrew's cross. The Argyllshire gathering and games are held in Oban in September, the hall in connection with which was enlarged in 1894. Three weekly newspapers are published in Oban; the *Oban Times* (1866) appears on Saturdays, and is independent in politics; the *Oban Telegraph* (1876) is published on Fridays, and is Liberal; and the *Oban Express*, also on Friday and also Liberal. Cattle markets are held in Oban on the Monday before the last Wednesday of May, and on the Friday before the last Wednesday in October; horse markets are held on the first Tuesday of March, and on the first Tuesday of September, and on the Tuesday before the fourth Thursday of November; a sheep and wool market is held on the Wednesday after the second Thursday of July; and hiring markets are held on the second Tuesday of April and the first Friday of November.

The construction of the Callander and Oban railway was begun in 1867; in 1870 the line was open to Killin; in 1873 to Tyndrum; and in 1877 to Dalmally. The remaining 24 miles took three years to complete, but on 11 June 1880 the first goods engine steamed into Oban, and on the 30th the line was formally opened with much ceremony and great public rejoicing. In connection with the line it is proposed to construct a line from Oban to Ballachulish, a branch line from Dalmally to Inveraray, and also one from Lochearnhead to the Crieff

and Comrie railway, and thus bring Perth and Dundee in more direct contact with Oban. The prosperity of the town has been much enhanced by this perfecting of its communications with the south, which brings it within four or five hours of Edinburgh or Glasgow. In summer there are numerous routes open to the tourist by steamer: to Glasgow and the Clyde *via* the Crinan Canal in the fine steamers *Iona* and *Columba*; to Skye and Lewis; to Ballachulish (for Glencoe) and Fort William; to Mull, Staffa, and Iona, and the Hebrides; and up the Caledonian Canal to Inverness and intermediate places. There are numerous circular tours, including that to Crinan, Ardrishaig, Ford, and Loch Awe; to Gairloch, Loch Maree, Inverness, and Caledonian Canal; and to Portree, Strome Ferry, Inverness, and Caledonian Canal. There is a steady communication by sea between Oban and many places during winter as well. There are two sailings in the week from Glasgow to Stornoway by powerful sea-going steamers which sail round the Mull of Kintyre and call at Oban; goods steamers which carry passengers sail from Oban to Islay and Colonsay three times a week; and there is also a goods steamer to Tobermory and other points in the Hebrides. In winter there are also two sailings weekly from Glasgow to Oban, Ballachulish, Fort William, and Inverness. In 1881 a daily mail steamer service began between Oban and Fort William, and Oban and Tobermory. In summer public coaches run to various points of interest in the neighbourhood, including among others that to Loch Nell, the Serpent's Mound, and Connell Ferry; to Dunstaffnage Castle; to Glenshellach and Glenmore; to Pass of Melfort; and by train to Connell Ferry, and from the inn at North Connell to Ledaig, Barcaldine Castle, the shore of Loch Creran, Barcaldine House, and back by Ardchattan Priory to North Connell.

The first industry attempted to be established at Oban was fishing; and in 1786 the Government Fishery Board appointed it a fishing-station. The industry, however, languished, probably on account of the distance from markets and the poverty of the fishers' gear; and the station was abandoned. So long before as 1713, however, a store-house had been erected by a Renfrew trading company at Oban; and a humble commerce had gradually grown up. In 1773 two brothers named Stevenson started a business uniting shipbuilding with commerce, which lasted for 30 years. As merchants they dealt in wool, oak-bark, fish, and other produce of the neighbourhood; and their success attracted others to the little town. With the development of steam communication Oban gradually grew larger, though the character of its chief industries changed. An attempt to revive the shipbuilding trade in 1867 failed; and so did later efforts to start a brewery and a farina mill. At present the manufactures of Oban are limited to the distillation of whisky. Its shops are good, and its supply of merchandise excellent. Besides supplying the wants of the summer tourists, on whom the town mainly subsists, Oban purveys for a considerable district around. It has also large sawmills.

Oban was raised to a burgh of barony in 1811 by a royal charter in favour of the Duke of Argyll; but this was set aside by the Court of Session; and in 1820 a new charter was granted in favour jointly of the Duke and Mr Campbell of Combie. Under this charter the burgh was governed by a provost and council until the Reform Act of 1832, by which it was formed into a parliamentary burgh, when, however, the title of provost merged in that of senior bailie. The area of the parliamentary burgh was defined as 'the space on the mainland included within a circle described with a radius of one-half mile from the point as centre where the street leading to the old Inveraray road meets the street along the shore.' In 1862 Oban adopted the Lindsay Act of that year, and was erected into a police burgh. In 1881 the town council successfully applied to parliament for powers to extend the municipal and police boundaries of the burgh, by an area which included 344 inhabitants. At the same time powers were acquired to increase the number of council-

lors, to regulate the maintenance of the roads, and to introduce a new water supply. The dearth of water in 1880 was so great that it had to be carted from house to house. The former supply was derived from Loch Glencruitten and Loch Mossfield, capable of storing 6,000,000 and 5,000,000 gallons respectively. The new supply is derived from Loch-na-Glenna Bheathrack, which can hold 90,000,000 gallons, giving 30 gallons a head per diem to a population of 10,000. The estimated cost was £10,000. The town council now consists of a provost, 2 bailies, and 6 councillors, who are also police commissioners under the Burgh Police Act of 1892. The municipal constituency (1893-94) was 974. There is now a resident sheriff-substitute in Oban, and courts are held every Friday during session. Oban unites with AYR, Irvine, Campbeltown, and Inveraray in returning a member to parliament. Parliamentary constituency

Seal of Oban.

(1895-96) 738. Annual valuation (1883-84) in original burgh £24,540, (1895-96) £32,070, railway £2130; in extended part of burgh £3574, railway £257—total £38,031. Corporation revenue (1894-95) £6834. Pop. (1791) 586, (1821) 1359, (1841) 1398, (1851) 1742, (1861) 1940, (1871) 2413, (1881) 4046, (1891) 4946, of whom 2647 were females and 2697 Gaelic-speaking. Houses (1891) occupied 932, vacant 71, building 1.

History.—About the middle of the 18th century the site of Oban was occupied by a few thatched hovels, whose inmates supported life by fishing and farming. In 1773 Mrs Grant of Laggan visited it and mentioned it in the first of her *Letters from the Mountains*. In the same year Dr Johnson and Boswell were ferried over from Mull to Oban, and spent a night there. In 1786 the Government Fishery Board erected Oban into a fishing station; but the fishing proved unproductive, and the station was abandoned. Its subsequent commercial progress has been already described in connection with its industries. In 1809 Oban became the headquarters of a militia regiment, 1200 strong, raised in the district of Lorn, and disbanded about 1813. Sir Walter Scott visited the burgh in 1814, the year in which he published his *Lord of the Isles*. The interest which this poem awoke in the scenes in which its action is laid, brought many visitors to Oban, in a gradually increasing stream; and the influence of Scott has always been regarded as one of the first causes of Oban's present prosperity. The first feus at Oban had been given off in 1803; but only in 1820 good substantial houses began to be built, in consequence of the growing fortunes of the place. The parish church and the Caledonian Hotel were among the earlier buildings of any note. For some time the headquarters of the Hebridean Survey were at the burgh; and from 1866 to 1870 a corps of ordnance surveyors had their headquarters at Oban during the survey of most of Argyllshire. In August 1847 the town was illuminated in honour of a visit from the Queen ('one of the finest spots we have seen,' says her *Journal*); and in 1863 royalty again visited it in the person of Prince Alfred, then a lieutenant on board the *Racoon*. During the Crimean War the town was the headquarters of the Argyll and Bute regiment of rifles, which had been called out under the Marquis of Breadalbane by royal warrant. In 1861 the regiment was changed to an artillery force; and in 1863, when the Duke of Argyll became lord-lieutenant of the county, its headquarters were changed to Campbeltown, in spite of a petition from the magistrates of Oban. The chief landed proprietors in and near Oban are, to

the south, Robert Macfie of Airds, and, to the north, McDougall of DUNOLLY. Mr. Macfie's predecessors were the Campbells of Sonachan, who inherited from the Duke of Argyll, before whom the McDougalls of Dunolly held large estates in Lorn. Lord Breadalbane and his trustees were the successive proprietors from 1837 to 1866 of North Oban, the former having purchased the lands from Campbell of Combe.—*Ord. Sur.*, shs. 45, 44, 1876-84. See T. Gray's *Week at Oban* (Edinb. 1881).

Obney Hills. See AUCHTERGAVEN.

Ocheltree. OCHILTREE.

Ochil Hills, a range of high hills extending from the conjunction of the counties of Stirling, Perth, and Clackmannan, in the vicinity of the town of Stirling, 2 miles from the left bank of the Forth, in a north-easterly direction, to Parton Craigs, on the right bank of the Tay, below the city of Perth. The range runs parallel to the Grampians or mountain-rampart of the Highlands; it forms the screen on the Lowland side of Strathallan and Lower Strathearn—component parts in the large sense of Strathmore; and it lies across the head of the whole peninsula of Fife, defending it and the low ground of Clackmannan, Culross, and Kinross from the scourge of the storms which come down the glens and gorges of the Grampians. Its length is about 24 miles, its average breadth 12. Its SE side, especially toward the Forth, is steep, and in places almost perpendicular; and its NW side rises with a greater abruptness than belongs to most of the Scottish ranges. Its summits are highest at its SW end, and might, especially there, as well as in other parts of the range, be termed mountainous, but for the vicinity of the Highland alps. Three of the summits overlooking the Forth are BENCLEUCH (2363 feet), in the parish of Tillicoultry, the loftiest of the range; DUNMYAT (1375), in the parish of Logie, advancing a little from the contiguous range, breaking almost sheer down in stupendous rocky cliffs into the plain, and commanding a prospect over the basin of the Forth and its tributaries, which, for united gorgeousness and extent, is probably unsurpassed by any other in Britain; and King's Seat (2111), 2 miles NW of Dollar. The prospect from King's Seat, while very extensive and brilliant in itself, fully reveals the relative position of the Ochils. An intelligent observer has thus described it:—'I had now under my eye a circular space of 100 miles in diameter, comprising nearly one-third of the surface of Scotland, and probably two-thirds of its wealth. On the N were the rugged Grampians, rising ridge behind ridge. In the outer line—which is low and uniform—the Pass of Killiecrankie is distinctly seen as a great natural chasm. Below is the well-wooded plain of Perthshire, a part of which is concealed by the spurs or branches of the hills on which you stand. On the W the higher parts of the chain of the Ochils confine the view; but you easily distinguish the summits of Benmore, Ben Ledi, Ben Lomond, and various hills towards the Atlantic. On the S the eye roams over a vast and fertile region, extending from the Campsie Hills to the Lammermuirs, with Edinburgh, Arthur's Seat, the Bass, the Pentlands, and part of Stirlingshire. The Devon is seen immediately below, winding through the valley like a silver thread. Beyond it is the Firth of Forth, clear, luminous, and tranquil like a mirror, and enshrined in the heart of a richly cultivated country. The windings of its upper part, with the islets, capes, and peninsulas which they form, are seen to more advantage here than from Stirling Castle. The small hills between the Ochils and Kincardine do not present the slightest inequality of surface, but seem sunk and confounded with the valley of the Devon; while the fields, that cover the whole space, with their hedgerows and strips of planting look like the diminutive plots of a nursery. On the SE is seen Kinross, with Loch Leven and its two islets, and beyond these the black mural front of the Lomonds, variegated with streaks of red. On the other side of the Firth are the undulating and well-wooded district of West Lothian and the fertile Carse of Falkirk, in the

middle of which an opaque cloud marks the site of Carron. The lower part of the firth is specked with little vessels, and perhaps right before you is a steam-boat, which, when seen on a pretty large surface of water, with its long train of smoke, forms, in my humble opinion, a picturesque object in the landscape, in spite of all that poets have said in its disparagement.'

The Ochils everywhere, within their own limits, present rich groupings of scenery and pleasing pictures of rural life—swelling hills, verdant to the top, and thickly dotted with sheep and cattle; rivulets rushing along the gorges and the vales, or falling in hoarse murmurs down the precipitous cliffs; and villages, hamlets, and farmhouses, skirted or enclosed with wood. The individual hills are generally long, round-backed, and either covered with verdure or under cultivation up to their summits; and, with some remarkable exceptions, their chief acclivities are rapid, and face the N. Defiles, glens, and valleys everywhere discover the range into small masses and single hills, and are generally of so rich a character in soil and culture as to blend brilliantly with the landscape of the acclivities. Offshoots of the range, but so low that they rarely exceed 500 feet above sea-level, run down the whole peninsula of Fife, and, along with the beautiful Lomond Hills, and some less considerable isolated heights, impart to it that undulated contour which so pleasingly characterises its appearance. These offshoots and the main range may be viewed as enclosing the outer edge or north-eastern extremity of the great coal-field of Scotland, which extends, though not without marked interruptions, from the river Girvan in Ayrshire to the banks of the Eden in Fife. The rocks are eruptive; and the main range is singularly rich in minerals; and, besides yielding up round its base large supplies of coal and of stratification superincumbent on the coal-measures, has furnished large quantities of various valuable metals. See ALVA.—*Ord. Surv.*, shs. 39, 40, 43, 1867-69. See Beveridge's *Between the Ochils and the Forth* (1838).

Ochiltree, a village and a parish in Kyle district, Ayrshire. The village stands, 320 feet above sea-level, on the left bank of Lugar Water, at the influx of Burnock rivulet, 1½ mile N of Ochiltree station on the Ayr and Cumnock branch of the Glasgow and South-Western railway, 4 miles W of Cumnock, 11½ E of Ayr, and 13 SSE of Kilmarnock. It has lost its former employments of snuffbox-making, cotton-weaving, and the manufacture of reaping hooks; but it has a brick and tile work and a sawmill, and is a pleasant little place, having a post office under Cumnock, with money order and savings bank departments, one or two inns, and a reading-room and library. John Knox here wedded his second wife, a daughter of the 'good Lord Ochiltree;' and here in Nov. 1666, between the rising at Dalry and the battle of Rullion Green, the Covenanters, who had mustered at the Bridge of Doon, were joined by three parties under Welsh, Guthrie, and Chalmers. At Ochiltree they heard sermon by one of their preachers, marshalled their army, appointed their officers, and held a council of war to examine their condition and prospects, at which they resolved that no further help could be looked for from the south or south-west, but that many adherents would join them in Clydesdale, and that therefore they should straightway march eastward. Pop. (1831) 642, (1861) 709, (1871) 699, (1881) 523, (1891) 499.

The parish, containing also Sinclairston hamlet, 4¾ miles SW of Ochiltree village, till 1673 included the present parish of Stair. It is bounded NW by Stair, NE by Mauchline and Auchinleck, E and SE by Old and New Cumnock, S by Dalmellington, and W by Coylton. Its utmost length, from N to S, is 8½ miles; and its breadth varies between 9¾ furlongs and 5¾ miles. In order to do away with the detached parts of the parish of Stair and make it self-contained, an exchange of territory was effected by the Boundary Commissioners in 1891 between it and the parish of Ochiltree. One of the two detached portions of Stair parish—namely, that situated at Drogan, and containing 1821 acres—

was transferred to Ochiltree, while the other was connected with the main body of Stair by annexing to that parish the intervening portion of Ochiltree. LUGAR Water winds 4¼ miles north-westward along all the north-eastern boundary; the Water of COYLE, at two different points, traces 5¼ miles and 9 furlongs of the western boundary; and several rivulets, rising in the interior, run to one or other of these two streams. Belston Loch (2 × 1½ furl.), near Sinclairston, is the largest of four small lakes, two of them artificial. Along the Lugar the surface declines to 280, along the Coyle to 230, feet above sea-level, and thence it rises southward to 497 feet at Killoch, 935 at Auchlin Rig, 1019 at Auchingee Hill, and 1191 at Stannery Knowe. Sandstone is the predominant rock, but several coal-pits are at work, and ironstone exists. The soil is mostly a clayey loam, incumbent on stiff retentive clay; and two-thirds of the entire area are in tillage. A thriving plantation of no great breadth stretches nearly across the parish parallel with the Ayr road; and this, with the plantations of Barskimming, Auchinleck, and Dumfries House, in the adjacent parishes, relieves the landscape from coldness of aspect. Moss of various depths covers a considerable area, both in the uplands and in the low grounds, and frequently expands into flow moss or wet bog. The ancient barony of Ochiltree belonged from the 14th century, or earlier, till the 16th century, to the family of Colville, several of whom figure in history as knights. In 1530 it was exchanged by Sir James Colville with Sir James Hamilton of Finnart, for the barony of East Wemyss in Fife; and in 1534 it was exchanged by its new possessor with Andrew Stewart, third Lord Avondale, for the barony of Avondale in Lanarkshire. In consequence of the latter exchange, Stewart, in 1543, was created Lord Stewart of Ochiltree, a title that became dormant in 1675. The barony, coming into the possession of the first Earl of Dundonald, was granted by him to his second son, Sir John Cochrane; was forfeited by Sir John in 1685, but re-acquired by his son from the Crown in 1686; was purchased from the Cochrane family about 1737 by Governor M'Rae, who left it to Miss Macquire, afterwards Countess of Glencairn; and was re-sold about 1817 in lots to different proprietors. The old castle of Ochiltree stood by the side of the Lugar, on the brow of a high rocky bank, whence arose the name Ochiltree, signifying 'the lofty dwelling-place;' but nothing of the castle now remains, the whole having been carried away piecemeal for building houses and dykes on the adjoining farms. Another old barony in the parish bears the name of Traboch, signifying 'the dwelling-place of the tribe,' and is now included in the Auchinleck property. A farm on this estate, called Hoodstone, was tenanted from the 13th till the 19th century by a family of the name of Hood, descendants, it is said, of the famous English outlaw, Robin Hood. At Auchencloich, in the upland district, are the ruins of an old castle, unknown to either record or tradition. An ancient camp occupied part of the site of the village of Ochiltree, but little or nothing is known respecting it. The Marquis of Bute is one of the chief proprietors. Ochiltree is in the presbytery of Ayr and the synod of Glasgow and Ayr; the living is worth £286. The parish church, at the village, was built in 1789. There is also a Free church; and two public schools, Ochiltree and Sinclairston, with respective accommodation for 191 and 133 children, have an average attendance of about 150 and 120, and grants of nearly £160 and £125. Pop. (1801) 1308, (1831) 1562, (1861) 1676, (1871) 1656, (1881) 1493, (1891) 1910, of whom 963 were females; of ecclesiastical parish (1891) 2062.—*Ord. Surv.*, sh. 14, 1863.

Ochiltree, a hamlet in Linlithgow parish, Linlithgowshire, 3 miles SE of Linlithgow town. An old castle stood adjacent to its N side, and traces of a Roman camp are on an eminence a little to the S.

Ochiltree. See PENNINGHAME.

Ochterlony, a mansion in Rescobie parish, Forfarshire, 1½ mile WSW of Guthrie station, at the junction

of the Forfar and Arbroath with the Forfar and Montrose sections of the Caledonian railway. Erected in 1821 by Mr Stephens, the then proprietor of the estate of Balmadies or Ochterlony, it is now the seat of Sir David Ferguson Ochterlony, third Bart. since 1823 (b. 1848; suc. 1891).—*Ord. Sur.*, sh. 57, 1868.

Ochertyre, a mansion in Kincardine parish, Perthshire, near the right bank of the Teith, $4\frac{1}{2}$ miles NW of Stirling, and $4\frac{1}{2}$ SE of Doune. It was the residence of John Ramsay (d. 1814), the associate of Dr Blacklock, Robert Burns, and Sir Walter Scott; and later was the seat of the Right Hon. Sir David Dundas, Q.C. (1799-1877), Liberal M.P. for Sutherland 1840-52 and 1861-67. His nephew, Colin Mackenzie Dundas, Esq. (b. 1842; suc. 1879), is present proprietor.—*Ord. Sur.*, sh. 39, 1869.

Ochertyre, a mansion in Monzievaird parish, Upper Strathearn, Perthshire, 3 miles NW of Crieff. It stands on a skirt of the Grampians, sloping southward to Ochertyre Lake ($4\frac{1}{2} \times 1\frac{1}{4}$ furl.), and is a plain but commodious modern edifice, with a finely wooded park, which both contains and commands many views of exquisite beauty. Patrick Moray, the first of Ochertyre, who died in 1476, was the third son of Sir David Moray of Tullibardine; and William, his eighth descendant, was created a baronet in 1673. Sir Patrick Keith Murray, present and eighth Bart. (b. 1835; suc. 1861), is fifteenth in direct descent from the first laird of Ochertyre. He grants permission to a number of the leading inhabitants of Crieff, and those who keep summer lodgings, to fish on the loch, which is studded with beautiful islets and indented with charming little bays.—*Ord. Sur.*, sh. 47, 1869. See MONZIEVAIRD, and chap. xxxvii. of Thomas Hunter's *Woods and Estates of Perthshire* (Perth, 1883).

Ockraquay, a village on the E coast of Dunrossness parish, Shetland, 10 miles SSW of Lerwick.

Odin's or Lord Lovat's Cave, a cavern in Laggan Point, at the E side of Loch Buy, Mull island, Argyllshire, 17 miles WSW of Oban. It measures 300 feet in length, from 20 to 45 in width, and from 40 to 120 in height; and leads, by a narrow, difficult, descending passage, to another cave, 150 feet long, 12 wide, and 24 high.

Odingswick. See OTTERS WICK.

Ogilface, an ancient baronial fortalice in Torphichen parish, Linlithgow, $3\frac{1}{2}$ miles W of Bathgate. It belonged to the ancient family of De Bosco, Barons of Ogilface; passed to the Earls of Linlithgow; seems to have been a structure of some strength, but of no great size; and is now represented by only traces of the foundations.

Ogilvie. See GLENOGILVIE.

Ogilvie, a ruined castle in Blackford parish, Perthshire, on a part of the Ochil Hills called from it the Braes of Ogilvie, 1 mile SE of Blackford village. It appears to have been a place of great strength, both in structure and in position.

Ogle. See GLENOGLE.

Ogstoun. See DRAINIE.

Oich, a loch and a rivulet of Kilmonivaig and Bolckine parishes, in the Great Glen, Inverness-shire. Lying 105 feet above sea-level, between Lochs Ness and Lochy, the lake has a length from SSW to NNE of 3-7 miles, whilst its breadth varies between 1 and $2\frac{1}{2}$ furlongs. It forms the summit-level of the CALEDONIAN CANAL navigation; is gemmed with two wooded islets, and encircled by verdant banks and picturesque hills; receives, on its western side, the tribute of the GARRY; and at INVERGARRY commands a romantic vista view into Glengarry. Its waters are so stored with salmon, trout, and pike as to afford prime sport to anglers. The rivulet, issuing from the foot of the lake, runs $6\frac{1}{2}$ miles north-north-eastward to Loch Ness (50 feet) at Fort Augustus. It is flanked by low rocky heath-clad hills, and yields capital salmon and trout fishing.—*Ord. Sur.*, shs. 63, 73, 1873-78.

Oikell, a river of Sutherland and Ross and Cromarty, rising at an altitude of 1500 feet above sea-level, and

running $35\frac{1}{2}$ miles south-south-westward and east-by-southward along the mutual border of Creich parish in Sutherland and Kincardine in Ross and Cromarty, through Loch Ailsh ($7 \times 4\frac{1}{2}$ furl.; 498 feet) and the KYLE OF SUTHERLAND, till it falls at Bonar-Bridge into the head of the DORNOCH FIRTH, which, strictly speaking, is its estuary. The Oikell's principal tributaries are the CASSLEY and SHIN on its left bank, and the Eing and CARRON on its right. Several hundred yards above the inn of Oikell-Bridge, which is $18\frac{1}{2}$ miles WNW of Bonar-Bridge and 18 WSW of Lairg station on the Sutherland section of the Highland railway, the Oikell, tumbling along a rugged and declivitous channel, makes a series of wild cataracts, which terminate in one bold and very formidable fall. The banks which overhang this multiplied lion are quite precipitous, and exhibit from their crevices, at spots where no soil can be detected by the eye, several large fir trees springing up from curiously twisted roots. For several miles below this point, the vale of the stream, or Strathoikell, is flanked by heath-clad hills, whose dreariness is relieved only by occasional clumps of stunted birch and a few verdant meadows on the margin of the stream. Three miles above the influx of the Cassley, an impetuous burn tumbles headlong into the vale; and at a brief distance from its mouth rises an elevated grassy bank, which is crowned by a burying-ground. This part of the vale is called Tuitean-Tharbhach ('fertile fall of slaughter')—a name which alludes to a fierce onslaught, towards the close of the 14th century, on a freebooting party of the Macleods of Lewis by a body of the men of Sutherland. From Tuitean-Tharbhach to the Cassley the stream runs tortuously along a winding strath; and, while markedly Highland in its screens, has a profusion of birch and alder coppice upon its immediate banks, and in one place is overhung by a forest of firs. At the junction of the Cassley a fine view is obtained of Rosehall House, embosomed in extensive woods, near the foot of Glen Cassley, and of the old walls of Castle-na-Coir, situated in a meadow on the left bank of the Oikell. The river is navigable by boats from the sea to Rosehall, and brings up the tide to a point only $1\frac{1}{2}$ mile lower down. The united waters of the Oikell and the Cassley form a fine large river, and make a well-defined boundary-line between Ross and Sutherland. The strath, down to Bonar-Bridge at the head of the firth, is everywhere beautiful, and forms part of the ancient district of Ferrinbusklyne or Sleischillis, which the bishops of Caithness obtained in the 12th century as a gift from the Earls of Sutherland. From Rosehall to about 3 miles above the influx of the Shin, it forms on the one side a craggy barrier, and on the other a low expanse of continued forest, and winds perpetually in its progress; lower down are broad meadows along the edge of the stream, pretty clumps of coppices on the declivities, and groups and sprinklings of neat stone cottages picturesquely perched upon rocky heights. The Oikell yields capital salmon and trout fishing.—*Ord. Sur.*, sh. 102, 1881.

Oisinneach, Lochan. See DOWALLY.

Old Aberdeen. See ABERDEEN.

Oldany. See OLDNEY.

Oldhamstocks (anc. *Adhamstoc*, 'old dwelling-place'), a village and a parish of E Haddingtonshire. The village stands on the left bank of Oldhamstocks Burn, 3 miles S of Innerwick station on the Dumbar and Berwick section of the North British railway, $18\frac{1}{2}$ E by S of Haddington, and $3\frac{1}{2}$ W by S of Cockburnspath, under which it has a post office. It contains the parish church of Oldhamstocks, an ancient edifice, the Free church of Cockburnspath, and a public school.

The parish, containing also the village of BILSDEAN, until 1891 consisted of a main body, chiefly in Haddingtonshire, partly in Berwickshire, and a detached section entirely in Berwickshire. The Boundary Commissioners, in the year mentioned, transferred the detached portion (situated at Butterdean, and containing 1417 acres) to the Berwickshire parish of Coldingham, and then placed Oldhamstocks wholly in Haddingtonshire. The parish

is bounded NE by the German Ocean, E by Cockburnspath, S by Abbey St Bathans, and SW and NW by Innerwick. Its utmost length from NE to SW, is $5\frac{1}{2}$ miles; its width varies between $7\frac{1}{2}$ furlongs and $2\frac{1}{2}$ miles; and its area is 7530 acres, of which $110\frac{3}{4}$ are foreshore, and 930 (in the extreme S) belonged to Berwickshire. Oldhamstocks Burn, drawing head-streams from Innerwick, winds $2\frac{3}{4}$ miles east-by-northward across the interior to Berwick or DUNGLASS Burn, which runs $4\frac{1}{2}$ miles north-north-eastward along the Berwickshire border to the sea, through the deep wooded ravine of Dunglass Dean. MONYNT WATER, a tributary of the Whitadder, runs $2\frac{1}{2}$ miles south-eastward along the south-western boundary; and the Weir Burn, also on its way to the Whitadder, meanders $3\frac{1}{2}$ miles through the southern district, part of the way forming the boundary of the parish. The coast, only $1\frac{1}{2}$ mile long, trends south-eastward to the mouth of the Dunglass Burn, and presents a bold rocky front to the German Ocean, rising rapidly to a height of over 100 feet. Thence onward the surface ascends to the Lammermuirs watershed, chief elevations being *Cocklaw Hill (1046 feet), Wightman Hill (1153), Heart Law (1233), *Corse Law (1042), and *Laughing Law (1008), where asterisks mark those summits that culminate on the confines of the parish. The rocks of the hills are Silurian, of the sea-board are carboniferous; and coal has been worked in a stratum lying near the surface, whilst sandstone, limestone, and ironstone are found. The soil is generally sharp and dry, very fertile towards the sea, but barren and heathy on the hills. The only antiquity is Castledykes, close to Bilsdean. DUNGLASS, noticed separately, is the only mansion. Oldhamstocks is in the presbytery of Dunbar and the synod of Lothian and Tweeddale; the living is worth £320. The public school, with accommodation for 100 children, has an average attendance of about 85, and a grant of nearly £90. Valuation (1884) £6895, (1893) £4468, 11s. Pop. (1801) 575, (1831) 720, (1861) 615, (1871) 592, (1881) 568, (1891) 443.—*Ord. Sur.*, shs. 33, 34, 1863-64.

Oldney or Oldany, a triangular island of Assynt parish, W Sutherland, on the S side of the entrance to Kylesku, within 80 yards of the mainland, and 7 miles N of Lochinver. With an utmost length and breadth of $1\frac{1}{2}$ and 1 mile, it rises to a height of 336 feet above sea-level; is covered with excellent sheep pasture; and belongs to a sheep farm of its own name on the neighbouring coast.—*Ord. Sur.*, sh. 107, 1881.

Old Water of Cluden. See KIRKPATRICK-IRONGRAY.

Oliver Castle, an ancient baronial fortalice in Tweedsmuir parish, SW Peebleshire, on the left side of the river Tweed, nearly opposite Tweedsmuir church, $13\frac{1}{2}$ miles SSE of Biggar. Crowning a rising-ground which now is tufted with a clump of trees, it was the original seat of the Frasers, ancestors of the noble families of Lovat and Saltoun, and passed from them to the Tweedies, who figure in the introduction to Sir Walter Scott's *Betrothed*, and whose maternal descendant, Thomas Tweedie-Stodart, Esq. (b. 1838; suc. 1869), is proprietor of Oliver House, a plain modern mansion hard by. Oliver Castle was the remotest of a chain of strong ancient towers, situated each within view of the next all down the Tweed to Berwick, and serving both for defence and for beacon-fires in the times of the Border forays. It was eventually relinquished and razed to the ground.—*Ord. Sur.*, sh. 24, 1864.

Ollaberry, a village on the E coast of Northmaven parish, Shetland, at the head of a small bay, 17 miles NNW of Voe, and 36 NNW of Lerwick. It has a post office under Lerwick, a ruined church, an Established chapel of ease, a U.P. church, and a public school.

Ollagirth, a village in Tingwall parish, Shetland, 10 miles NW of Lerwick.

Olna Firth, a bay in Delting parish, Shetland, opening from the head of Roe Sound or the inner reach of St Magnus Bay, and penetrating 3 miles east-south-eastward to the village of Voe, which is 19 miles NNW of Lerwick. With a maximum width of $\frac{3}{4}$ mile, it has a serrated or tortuous outline; and is completely land-

locked. The presbytery of Olmafirth, in the synod of Shetland, comprehends the *quoad civilia* parishes of Delting, Nesting, Northmaven, Sandsting, and Walls, the *quoad sacra* parish of Whalsay, and the chapelries of Olmafirth, Luuna, Ollaberry, Sandness, Papa Stour, and Foula. Pop. (1871) 12,528, (1881) 11,513, (1891) 10,917, of whom about 2450 are communicants of the Church of Scotland.

Olrig, a coast parish of N Caithness, containing CASTLETOWN village, 5 miles E by S of the post-town, Thurso. It is bounded N by DUNNET Bay, NE by Dunnet parish, SE and S by Bower, and W by Thurso. Its utmost length, from WNW to ESE, is $5\frac{1}{4}$ miles; its breadth varies between $2\frac{3}{4}$ furlongs and $4\frac{1}{2}$ miles; and its area is $15\frac{3}{4}$ square miles, or $10,336\frac{3}{4}$ acres, of which $32\frac{3}{4}$ are water and $289\frac{3}{4}$ are foreshore. The coast, $3\frac{1}{2}$ miles in extent, to the E comprises some sandy links, near Castletown has a small but commodious harbour, and in the W is indented by small Murkle Bay. The interior is partly flat and partly hilly; forms, for some distance from the coast, a continuous expanse of fertile cultivated land; and rises, towards the S, into gentle, verdant, finely-pastoral uplands. Olrig Hill (463 feet), 2 miles SW of Castletown, is crowned with vestiges of an ancient watch-tower, and commands a view of the southern Orkneys, great part of Caithness with the Sutherland hills beyond, and nearly all the Moray Firth away to the coasts of Elgin, Banff, and Aberdeen shires. Durran Hill (388 feet) is $2\frac{1}{2}$ miles S by W of Castletown; Durran Loch, to the NE of Durran Hill, has long been drained, rich meadow-land and pits of marl now occupying its former bed. The rocks are Devonian, and, including abundance of sandstone and limestone, supply vast quantities of pavement-flag for exportation. The soil of the cultivated lands is good, principally a deep clay, with occasional patches of sand or till. Great improvements in the way of draining, fencing, and reclaiming, have been effected on both the Ratter and Olrig estates—on the former by sheriff Traill in the first half of the 19th century. Fully three-fifths of the entire area are in tillage; some 20 acres are under wood; 500 are links or moss; and the rest is capital pasture. Antiquities are six Picts' houses, the watch-tower on Olrig Hill, and the sites of a nunnery on Murkle estate, of St Trothan's chapel to the S of Castletown, and of St Coomb's Kirk on the Links of Old Tain, which last is said to have been overwhelmed by sand. Olrig House, 1 mile SSW of Castletown, is the seat of James Smith, Esq. (b. 1832; suc. 1853). Olrig is in the presbytery of Caithness and the synod of Sutherland and Caithness; the living is worth £236. The parish church at Castletown is a handsome edifice of 1841, designed by Mr Cousin of Edinburgh. There are also Free and Original Secession churches; and five schools—Castletown public, Durran public, Murkle public, Tain District public, and Olrig female—with respective accommodation for 200, 35, 116, 60, and 172 children, have an average attendance of about 125, 15, 90, 35, and 70, and grants amounting to nearly £190, £30, £125, £40, and £80. Valuation (1884) £8879, 17s., (1893) £7548. Pop. (1801) 1127, (1831) 1146, (1861) 2059, (1871) 2028, (1881) 2002, (1891) 1837.—*Ord. Sur.*, sh. 116, 1878.

Omoa. See CLELAND.

Onich, a village in Kilmallie parish, Inverness-shire, at the northern side of the entrance to Loch Leven, $2\frac{1}{2}$ miles WNW of Ballachulish ferry. It has a post office and a public school. Slate quarrying was begun here on the Lochiel estate in 1872.

Orangefield, an estate, with a mansion, in Monkton parish, Ayrshire, 1 mile NNE of Prestwick station on the Glasgow and South-Western railway.

Oransay, an island in Colonsay parish, Argyllshire, near the S end of Colonsay island, and $5\frac{1}{2}$ miles N by W of the nearest point of Islay. It is separated from Colonsay by a channel only from 100 yards to 1 mile wide, and dry at low water; measures $2\frac{3}{4}$ miles from E to W, by $1\frac{1}{2}$ mile from N to S; and has an indented, irregular outline, with a rugged, hilly, but not high

surface. According to tradition, Columba and Oran, his colleague, the latter of whom gave name to the island, first landed here from Ireland in 563, when Columba, finding he could see the Irish coast from Cairn-Cul-ri-Erinn, its highest hill, durst not tarry, but proceeded northward to Iona. Long after, in the 14th century, an Austin priory was founded here by one of the Lords of the Isles as a cell of Holyrood Abbey. This priory has left remains more interesting than any in the Western Highlands and Islands, excepting those of Iona. Transitional Early English in style, its roofless church measures 77½ feet in length and 18 in width, has a fine three-light Gothic E window, and adjoins a very peculiar cloister, forming a square of 40 feet without and 28½ within. In Pennant's time (1772) one of the sides of the cloister had five small round arches; whilst two other sides, confronting each other, showed seven low triangular-headed arches, with plain square columns. A side chapel contains a sculptured tomb of an abbot of 1539, and a stone with figures of dogs, a stag, and a ship under sail; and in the churchyard is a finely sculptured cross of 1510, resting on a graduated pedestal, and bearing on its head a sculpture of the crucifixion. Other antiquities, such as cairns and tumuli, are numerous. Pop. (1871) 48, (1881) 10, (1891) 23. See an article by W. Stevenson in *Proc. Soc. Ants. Scotl.* (1881).

Oransay, a rocky island of Morvern parish, Argyllshire, in Loch Sunart, 2½ miles E of that loch's deflection from the NW end of the Sound of Mull. It groups with Carna islet, and is washed by impetuous tides from the W, rushing towards the land-locked upper reaches of the loch.

Oransay, Skye, Inverness-shire. See ISLE-ORNSAY.

Orchardton, a mansion, with beautiful grounds, in Renwick parish, Kirkcudbrightshire, near the head of Orchardton Bay, 6½ miles SSE of Castle-Douglas. Its owner is William Douglas Robinson-Douglas, Esq. (b. 1851; suc. 1878). Orchardton Tower, 1½ mile NNE, is the only round tower in Galloway. It was a seat of a branch of the Maxwells; and the strange story of its 'Wandering Heir' is told in Miss Goldie's *Family Recollections* (Edinb. 1841).—*Ord. Sur.*, sh. 5, 1857.

Orchil, an estate, with a mansion, in Ardoch parish, Perthshire, 3½ miles NW of Blackford station on the Dunblane section of the Caledonian railway.

Orchy, a stream of Glenorchy parish, Argyllshire, rising, close to the Perthshire boundary, at an altitude of 2700 feet, and 5½ miles SSE of Loch Lydoch. Thence it winds 10¾ miles north-north-westward and west-south-westward under the name of the Water of Tulla, until it expands into Loch Tulla (2¼ miles × 5 furl.; 555 feet), and receives there an important tributary from the mountains flanking the E side of the upper part of Loch Etive. It next runs 16½ miles south-westward to Loch Awe (118 feet) at KILCHURN CASTLE—rapidly and turbulently along the valley of Glenorchy proper, but tranquilly and sluggishly along the vale of Dalmally. Its waters contain abundance of salmon, sea trout, yellow trout, and perch.—*Ord. Sur.*, shs. 54, 46, 45, 1872-76.

Ord, a *quoad sacra* parish of N Banffshire, whose church, 3 miles SSE of Tillynaught station on the Huntly and Tillynaught section of the Great North of Scotland railway, was built as a chapel of ease in 1836. In 1891 the church was renovated, and an organ was presented by the minister. Ord shares with MARNOCHE the benefits of the Glasgow Bequest. The parish, constituted in 1869, is in the presbytery of Fordyce and the synod of Aberdeen; its minister's stipend is £100. Pop. (1871) 884, (1881) 851, (1891) 783, of whom 143 were in Alvah, 355 in Banff, 185 in Boyndie, and 100 in Marnoch.—*Ord. Sur.*, sh. 96, 1876.

Ord or Muir of Ord, the southern part of the Mullbuie, Ross and Cromarty, near the boundary with Inverness-shire. A flat sandy tract, it is traversed by the public road from Inverness to Tain, and by the Highland railway, with the station of Muir of Ord, 3 miles N of Beaully. The Black Isle railway, opened 2 Feb. 1894,

and 1½ miles long, leaves the main line at Muir of Ord and terminates at Fortrose. The muir is the scene of great cattle, sheep, and horse markets, usually denominated the markets of BEAULY; has a tabular or flat surface, and a sandy soil; contains two ancient standing-stones, said to commemorate a great clan fight; and adjoins a tract on the E containing a very large number of ancient Caledonian cairns and stone circles. Ord House, 1¼ mile W of the station, is the seat of Alex. Watson Mackenzie, Esq. (b. 1827; suc. 1887).—*Ord. Sur.*, sh. 83, 1881.

Ord or Ord-of-Caithness, an abrupt, broad, lofty, granite mountain overhanging the sea, on the mutual border of Sutherland and Caithness, 4 miles by road NE of Helmsdale. The old road over it, formerly the only land ingress to Caithness, traversed the crest of its stupendous seaward precipices at a height and in a manner most appalling to both man and beast; and even the present road, formed in 1811, rises to an elevation of 726 feet above sea-level, and has very stiff gradients. 'The Ord-of-Caithness,' says Miss Sinclair, 'was formerly pre-eminent for being the most dangerous bit of road in Scotland. . . . During the last century, whenever the late Earl of Caithness, my grandmother Lady Janet Sinclair, or any of the chief landed proprietors, entered that county, a troop of their tenants assembled on the border of Sutherland, and drew the carriage themselves over the hill, a distance of two miles, that nothing might be trusted in such a scene to the discretion of quadrupeds. . . . The mail-coach now rattles down the whole descent of the Ord, scarcely deigning even to use a drag!' According to an old-world superstition, no Sinclair may, without fearful foreboding of evil, cross the Ord on a Monday; forty Sinclairs, led by the Earl of Caithness, having on that day ventured over the barrier on their way to the field of Flodden, where—with the exception of the drummer, who was dismissed before the battle began—all were cut down by the sword.—*Ord. Sur.*, sh. 109, 1878.

Ordbain Hill. See LOCH-AN-EILEIN.

Ordhead, a place in Monymusk parish, Aberdeen-shire, 3½ miles NNW of Monymusk station on the Alford branch of the Great North of Scotland railway. It has a post office under Aberdeen.

Ord Hill. See KNOCKBAIN.

Ordie Burn, a Perthshire rivulet, rising in the extreme W of Auchtergaven parish, and running 8½ miles east south-eastward, chiefly within Auchtergaven parish, partly on the boundary between that parish and Moneydie, and across the NE corner of Redgorton. It receives, towards the end of its course, the large tribute of Shoehie Burn; traverses, for ½ mile after the influx of that tributary, an artificial bed made for it by the Luncarty Bleachfield Company; gives to the part of its basin within Auchtergaven the name of Strathord; is an excellent trouting stream; and passes through a steep bank into the Tay a little above Luncarty. See AUCHTERGAVEN.—*Ord. Sur.*, shs. 47, 48, 1869-68.

Ordie Loch, a lake in Dunkeld and Dowally parish, Perthshire, 6 miles N of Dunkeld. Lying 980 feet above sea-level, it has an utmost length and breadth of 5 and 3½ furlongs, sends off DOWALLY Burn to the Tay, and contains abundance of fine large trout. On 12 Oct. 1865 the Queen, with the Princess Helena and the Duchess of Athole, 'took a short row on Loch Ordie, which looked extremely pretty, wooded to the water's edge and skirted by distant hills.'—*Ord. Sur.*, sh. 56, 1870.

Ordiquhill, a parish of Banffshire, to the N containing CORNHILL village, ¼ mile SSE of Cornhill station, this being 8½ miles SW by W of Banff, under which it has a post and railway telegraph office. It is bounded NW by Fordyce, NE by Boyndie, SE and S by Marnoch, and SW by Grange. Its utmost length, from NE to SW, is 4½ miles; its utmost breadth is 2¾ miles; and its area is 4758 acres, of which 3¾ are water. The drainage is carried north-north-eastward by head-streams of the Burn of Boyne; and in the extreme N the surface

declines to 240 feet above sea-level, thence rising to 410 feet near Rothen, 711 at Corn Hill, 865 at Culvie Hill, 890 at Wether Hill on the southern border, and 1409 at Knock Hill on the meeting-point with Grange and Fordyce, the summit of which last, Knock Hill, is covered by a stratified bed of moss 15 to 20 feet deep. The predominant rocks are mica slate and gneiss, with some granite; but they mostly lie under thick deposits of coarse, gritty, ferruginous clay. Trap boulders are everywhere plentiful; serpentine rock, prolonged from the famous beds and pits near Portsoy, occurs along the eastern base of Knock Hill; and specimens of garnet, tourmaline, asbestos, and rock-cork are found. The soil is in most parts deep, but lies on a cold retentive bottom. Till 1842 nearly half the entire area continued to be pastoral or waste; but the greater part of it has since been brought under the plough; and some 350 acres are under wood. Park House, 1½ mile SSE of Cornhill station, is a good and commodious mansion, enlarged in 1829. Its owner, Thomas Duff Gordon-Duff (b. 1848; suc. 1892), is sole proprietor. (See BOTRIPHNE.) Ordiquhill is in the presbytery of Fordyce and the synod of Aberdeen; the living is worth £244. The parish church, 2 miles SSW of Cornhill station, is a neat edifice of 1805. There is also a Free church; and Park female and Ordiquhill public schools, with respective accommodation for 73 and 120 children, have an average attendance of about 50 and 75, and grants of nearly £45 and £80. Valuation (1884) £3477, (1893) £4102, 3s. 5d., including £757 for railway. Pop. (1801) 510, (1831) 655, (1861) 764, (1871) 761, (1881) 714, (1891) 684. — *Ord. Sur.*, shs. 86, 96, 1876.

Ord-of-Caithness. See ORD.

Ore, a sluggish rivulet of SW Fife, flowing 17 miles east-by-northward through or along the borders of Beath, BALLINGRY, AUCHTERDERRAN, Kinglassie, Dysart, and Markinch parishes, till it falls into the Leven at a point 7 furlongs W of Cameron Bridge station. Its banks are everywhere flat, though in places prettily wooded; its current is muddy; and the trout, pike, and perch of its waters afford but indifferent fishing. See LOCHORE HOUSE.—*Ord. Sur.*, sh. 40, 1867.

Orkney, a group of islands and islets off the eastern part of the N coast of Scotland, and forming a county by themselves, though uniting with the Shetland Isles (another county) in sending a member to Parliament. Orkney was one of the three counties in Scotland in which no change was effected by the Boundary Commissioners either in the county or parish boundaries. It is separated from the mainland of Scotland by the Pentland Firth, contains 29 inhabited islands, 39 smaller islands used for grazing purposes, locally known as *holms*, and a large number of waste rocky islets or skerries. The islands extend from N latitude 58° 44' * (Brough Ness at the S end of South Ronaldsay) to N latitude 59° 23' 40" (Point of Sinross in the N of North Ronaldsay), and from W longitude 2° 22' 34" (Start Point in Sanday) to W longitude 3° 26' 22" (Rora Head at the W end of Hoy). The distance in a straight line from Point of Sinross SSW to Brough Ness in South Ronaldsay is 50 miles, or SSW by S to Tor Ness in Hoy is 53½ miles, and the greatest width of the group is from Burgh Head in Stronsay on the E to Outshore Point midway between Marwick Head and Bay of Skall on the W side of Pomona on the W, a distance of 29½ miles. The islands are divided into three groups. The first, nearest the mainland, is known as the South Isles, and comprises the large islands of Hoy (W) and South Ronaldsay (E) and the smaller ones that surround them. To the N of Hoy is Graemsay, E are Risa, Fara, Flotta, etc. To the N of South Ronaldsay and separated from it by Water Sound is Burray with the smaller islands of Glimps Holm and Hunda, on the S are the Pentland Skerries, and SE is Swona. The water space between North and South Walls is the well-known anchorage

of Longhope. The passage between Fara and Flotta is Weddel Sound, and between Flotta and Switha is Switha Sound. The passage between Flotta and South Ronaldsay is the Sound of Hoxa. The South Isles are separated from the mainland by the Pentland Firth, the distance across which, from Dunnet Head to Tor Ness (Hoy), is 7½ miles, from St John's Point to Tarff Tail (Swona) 6¾ miles, and from Duncansbay Head to Brough Ness (South Ronaldsay) 6½ miles. The second group lies to the N of those just described, and consists of Pomona or the Mainland—the principal island in the Orkneys, containing nearly half the entire area and more than half the whole population—and the smaller islands to the NE. The deep sweep of Kirkwall Bay on the N and Scapa Bay on the S [see KIRKWALL] narrows Pomona at one point so that it is divided into two parts of unequal size, that to the W being the larger. Off the NE coast of this larger portion are the islands of Rousay—with the smaller islands of Egilsay (E), Viera (SE), and Eynhallow (SW)—and Gairsay with Sweyn Holm; off the S coast, but nearer Hoy, is the small island of Cava. To the N of the smaller eastern portion is Shapinsay with Helliar Holm; to the SE is Copinsay with the Horse of Copinsay and Corn Holm; to the S is the small Lamb Holm. This the Mainland group is separated from the NE of Hoy by Hoy Sound; from the E of Hoy, and from Fara, Flotta, and the NW of South Ronaldsay, by Scapa Flow; and from Burray by Holm Sound. The third group lies NE of the Mainland islands, and consists of Westray, Eday, and Stronsay in a line from NW to SE, with Papa Westray to the NE of Westray, Sanday NE of Eday, and North Ronaldsay still farther to the NE. To the E of Papa Westray is the small Holm of Papa, NE of Eday is the Calf of Eday, SW of it are Muckle and Little Green Holms, and W of it are Fara and Holm of Fara. To the N of Stronsay is Holm of Huip, NE is Papa Stronsay, S is Auskerry, W is Linga Holm, and NW is Little Linga. This group is known as the North Isles, and sometimes Rousay and Shapinsay are included in it. Westray and Eday are separated from Rousay and Egilsay by the Westray Firth (varying from 4 to 8 miles wide), and the portion of sea E of Shapinsay and SW of Stronsay is known as Stronsay Firth. Westray is separated from Papa Westray by Papa Sound (1½ mile), and from Holm of Fara by Rappness Sound (1½ mile) and Weatherness Sound (3 furl.) Eday is separated from Fara by Sound of Fara (varying from 1 to 1½ mile), from Muckle Green Holm by Fall of Warness (1½ mile), from Calf of Eday by Calf Sound (½ mile), and from the SW of Sanday by Eday Sound (1¾ mile) and Lashy Sound (at Calf of Eday, 1 mile). Stronsay is separated from Linga Holm by Linga Sound (¾ mile), from Auskerry by Ingale Sound (2½ miles), from Papa Stronsay by Papa Sound (½ mile), from Holm of Huip by Huip Sound (¾ mile); and between Holm of Huip and the SW end of Sanday is Spurness Sound (1½ mile). The sea N of Eday, between Westray and Sanday, is known as the North Sound; while along the S coast of Sanday, between that island and Stronsay, is Sanday Sound (4½ miles at narrowest point), and between Sanday and North Ronaldsay is the North Ronaldsay Firth (2 miles 3 furlongs at the narrowest part). Except along the cliffs of the southern and western sides the coast-line of all the islands is extremely irregular, there being everywhere numerous deep bays. Of these the chief are Long Hope, near the SE end of Hoy; Pan Hope in Flotta; Widewall Bay on the W side, and St Margaret's Hope in the N end, of South Ronaldsay; Echnaloch Bay in the NW of Burray; Bay of Ireland and Scapa Bay on the S side of Pomona; Bay of Firth and Bay of Kirkwall opening off the Wide Firth, Bay of Meil and Inganess Bay opening off Shapinsay Sound, and Deer Sound farther E, all in Pomona; Veantrow Bay on the N side of Shapinsay; Saviskail Bay on the N side of Rousay; Bay of Pierowall on the E side of Westray, opposite the S end of Papa Westray; Bay of Tuquoy on the S side of Westray; Fersness Bay on the W coast of Eday; St Catherine's Bay on the W coast, Bay of Holland on

* The Pentland Skerries, which are held to belong to Orkney, are still farther S, the latitude of the Little Skerry being 58° 40' 30".

the S coast, Odin Bay and Mill Bay on the E coast, of Stronsay; North Bay on the W coast, Backaskail Bay, Kettletoft Bay, Cat-a-Sand, and Lopness Bay on the S coast, Scuthvie Bay on the E coast, and Otters-Wick Bay on the N coast, of Sanday; and Linklet Bay in North Ronaldsay. The surface of the islands lies low, and, except Hoy, none of them can be called hilly. The general rise is from NE to SW, a height of 333 feet being reached at the Ward Hill at the S end of Eday; 880 at the Ward Hill in the SW of the Mainland, midway between Bay of Ireland and Scapa Bay; and 1420 at Cuilags, 1564 at the Ward Hill, and 1308 at Knap of Trewieglen, the three highest points in Hoy and in the whole group of islands. Except in the Pentland Firth, where the depth of the sea reaches 40 fathoms, the water in the straits between the islands and in their immediate neighbourhood is nowhere deeper than 20 fathoms. If these sounds are, however, of moderate depth, their number and the broken and winding outline of the coast are evidences of the hard struggle that constantly takes place between the land and the Atlantic surge. 'The intricate indented coast-line, worn into creeks and caves, and overhanging cliffs; the crags and skerries, and sea-stacks, once a part of the solid land, but now isolated among the breakers; the huge piles of fragments that lie on the beach, or have been heaped far up above the tide-mark, tell only too plainly how vain is the resistance, even of the hardest rocks, to the onward march of the ocean. The rate of waste along some parts of these islands is so rapid as to be distinctly appreciable within a human lifetime. Thus the Start Point of Sanday was found in 1816 to be an island every flood tide, yet even within the memory of some old people then alive it had formed one continuous tract of firm ground. Nay, it appears that during the 10 years previous to 1816, the channel had been worn down at least 2 feet.' Through these narrow sounds the tidal wave, rushing along with a speed varying from 4 miles an hour at neap to 12 miles an hour at spring tides (the latter being the speed it is said to attain in the Pentland Firth), causes currents and eddies that everywhere require the greatest skill and care in their navigation, and that become in stormy weather, often for days and sometimes even for weeks, quite impassable. 'With such tideways, the slightest inequality in the bottom produces a ripple on the surface, increasing in places to the dangerous whirlpools called *rösts* or roosts, which have, in the case of the Pentland Firth, so long given it a bad name amongst mariners. What those *rösts* are, especially when a flood spring is met dead on end by a gale from the opposite quarter, only those who have seen them or similar tidal-races can realise. . . . When the Channel Fleet were in the north in 1874, they attempted to pass to the westward through Westray Firth in the teeth of a strong spring flood, but all the Queen's horse-power, and all the Queen's men could not do it, and they had to turn tail.'

The scenery of the Orkneys is somewhat tame. 'The Orkney Islands,' says Sir Archibald Geikie, 'are as tame and as flat as Caithness. But in Hoy they certainly make amends for their generally featureless surface. Yet even there it is not the interior, hilly though it be, but the western coast cliffs which redeem the whole of the far north of Scotland from the charge of failure in picturesque and impressive scenery. One looks across the Pentland Firth and marks how the flat islands of the Orkney group rise from its northern side as a long low line until westwards they mount into the rounded heights of Hoy, and how these again plunge in a range of precipices into the Atlantic. Yellow and red in hue, these marvellous cliffs gleam across the water as if the sunlight always bathed them. They brighten a grey day, and grey days are only too common in the northern summer; on a sunny forenoon, or still better on a clear evening, when the sun is sinking beneath the western waters, they glow and burn, yet behind such a dreamy sea-born haze that the onlooker can hardly believe himself to be in the far north, but recalls perhaps memories

of Capri and Sorrento and the blue Mediterranean.' Inland from this coast-line is the highest ground in the islands, and there are hilly, though less rugged, districts in Rousay (sometimes called the Orcadian Highlands), and in the western parts of the Mainland and of Eday, but these grassy or heath-clad heights, with the rounded outlines and undulating character seemingly inseparably associated with the Old Red Sandstone formation, have but little of the picturesque, a want still further increased by the utter absence of wood. This last often altogether removes or at least conceals bareness of outline; but though trees of considerable size must once have existed all over the islands, none—except those mentioned at KIRKWALL and a few others in sheltered situations, and these of small size—are now able to withstand the force of the violent winter winds, which shake such as may be planted round and round, till the roots are slackened and fatally injured, and the plant dies. Although, however, the low-lying land and the green or brown softly-swelling heights, unrelieved by any wood, are apt to become somewhat monotonous—a monotony that also exists along the coasts, which generally lie low, except where, on the W and S, they present long lines of cliff to the sea—there are times when the islands present features of great beauty, a beauty which is, however, almost always associated with the constant presence of water, often of the sea, with all the sense of power which that presence gives. It is almost impossible to get out of sight of either lochs or the sea, from which, indeed, no place in Orkney is more than five miles distant, and most places very much less. 'In calm weather the sea, landlocked by the islands, resembles a vast lake, clear and bright as a mirror, and without a ripple, save from the gentle impulse of the tide. Here a bluff headland stands out in bold relief against the horizon; there the more distant islet is lost in sea and sky; on one side a shelving rock sends out a black tongue-like point, sharp as a needle, losing itself in the water, where it forms one of those reefs so common among the islands, and so fatal to strangers, but which every Orkney boatman knows, as we do the streets of our native town; while on the other side a green holm, covered with cattle and ponies, slopes gently to the water's edge. Then there is the dovetailing and intercrossing of one point with another, the purple tints of the islands, the deep blue of the sea, the indentations of the coast, the boats plying their oars or lingering lazily on the waters, the white sails of the pleasure yachts contrasting with the dark brown canvas of the fishing craft, and here and there a large merchant vessel entering or leaving the harbour—all these combine to make a lovely picture, in which the additional ornament of trees is not missed. You feel that trees here would be out of their element. In calm weather they are not needed, in a storm they would seem out of place. Any one who has seen an Orkney sunset in June or July tracing its diamond path across island, reef, and tideway, must confess that it is scarcely possible to suggest an addition to its beauty.' (See FERNIEHERST.) One has, however, to see the hilly districts in the midst of thick driving mists, or the narrow tideways during a storm, to be able to appreciate thoroughly all the grandeur which the district is capable of assuming, and the truth of the sailor-poet Vedder's description of his fatherland, when he speaks of it as a

'Land of the whirlpool,—torrent,—foam,
Where oceans meet in madd'ning shock;
The heeling cliff,—the shelving holm,—
The dark insidious rock.
Land of the bleak, the treeless moor,—
The sterile mountain, sered and riven,—
The shapeless cairn,—the ruined tower,
Scathed by the bolts of heaven,—
The yawning gulf,—the treacherous sand,—
The roaring flood,—the rushing stream,—
The promontory wild and bare,—
The pyramid, where sea-birds scream
Aloft in middle air.'

'If, however,' says Dr Clouston of Sandwick, 'the tourist has the good fortune to be in Orkney during a

storm, he will cease to regret the absence of some of the softer and more common beauties of landscape in the contemplation of the most sublime spectacle which he ever witnessed. By repairing at such a time to the weather shore, particularly if it be on the W side of the country, he will behold waves, of the magnitude and force of which he could not have previously formed any adequate conception, tumbling across the Atlantic like monsters of the deep, their heads erect, their manes streaming in the wind, roaring and foaming as with rage, till each discharges such a Niagara flood against the opposing precipices as makes the rocks tremble to their foundations, while the sheets of water that immediately ascend, as if from artillery, hundreds of feet above their summits, deluge the surrounding country, and fall like showers on the opposite side of the island. All the springs within a mile of the weather coast are rendered brackish for some days after such a storm. Those living half a mile from the precipice declare that the earthen floors of their cots are shaken by the concussion of the waves. Rocks that two or three men could not lift are washed about, even on the tops of cliffs which are between 60 and 100 feet above the surface of the sea when smooth, and detached masses of rock of an enormous size are well known to have been carried a considerable distance between low and high water mark. Having visited the west crags some days after a recent storm, the writer found sea insects abundant on the hills near them, though about 100 feet high; and a solitary limpet, which is proverbial for its strong attachment to its native rock, but which also seemed on this occasion to have been thrown up, was discovered adhering to the top of the cliff, 70 feet above its usual position. Short storms of great violence are not the worst, being surpassed by the long continuance of an ordinary gale, and during great storms the devastation and ruin are very great. During a particularly severe storm in 1862, in Stroma (in Caithness), in the Pentland Firth, the sea swept right over the N end of the island, rose bodily up the vertical cliffs at the W end, lodged fragments of wreckage, stones, seaweed, etc., on the top, 200 feet above ordinary sea-level, and then rushed in torrents across the island, tearing up the ground and rocks in its course towards the opposite side.

As in Caithness and the Hebrides, one of the peculiar features of the Orkneys is the immense number of lochs scattered everywhere about, and some of them of considerable size. Of these the principal are the lochs of Stenness, Harray, Boardhouse, Swannay, Hundland, Isbister, Banks, Sabiston, Skail, Clumly, Bosquoy, and Kirbister in the western portion of the Mainland; Loch of Tankerness in the eastern part of the Mainland; Heldale Water and Hoglinns Water in Hoy; Muckie Water, Peerie Water, and Loch of Wasbister in Rousay; Loch of St Tredwell in Papa Westray; Loch Saintear and Swartmill Loch in Westray; Meikle Water in Stronsay; and Bea Loch, Longmay Loch, and North Loch in Sanday. The total loch area is probably nearly 20,000 acres. In most of the lochs the fishing is free, and even in those that are preserved permission to fish is not very difficult to obtain. Formerly the fishing in most of the lochs and the streams connected with them was poor, and the number and size of the trout was small, as otters and other illegal methods of fishing were largely employed, but since Orkney was erected into a fishery district in 1881 matters have been much improved. The net season of the district is from 25 Feb. to 9 Sept., and the rod season from 25 Feb. to 31 Oct.

The land area of the islands is 375·7 square miles or 240,476 acres. Inclusive of skerries the total number of islands and islets is 90, but of these only 40 are of any size, and only 29 are inhabited all the year round, while a few others are temporarily inhabited during the summer months only. The inhabited islands, with their populations in 1881 and 1891 are as follows:—Auskerry (8; 7), Burray (685; 681), Cava (25; 13), Copinsay (5; 9), Eday (730; 647), Egilsay (165; 147), Fara (Eday 72; 58), Fara (Hoy 68; 76), Flotta (425; 423),

Gairsay (37; 33), Graemsay (236; 223), Holm (8; 8), Holm of Damsay (0; 4), Hoy (1380; 1320), Hunda (8; 7), Lamb Holm (8; 7), Mainland (17,165; 16,498), Papa Stronsay (23; 27), Papa Westray (345; 337), Pentland Skerries (17; 14), North Ronaldsay (547; 501), South Ronaldsay (2557; 2315), Rousay (873; 774), Sanday (2082; 1929), Shapinsay (974; 903), Stronsay (1274; 1275), Swona (47; 42), Westray (2200; 2108), and Viera or Wire (80; 67).

Partly owing to their situation and partly owing to the influence of the Gulf Stream, the Orkneys have a much more equable temperature throughout the year than in most places on the mainland of Great Britain, the total average range of temperature being about 16°, while at Thurso the range is 20°, at Leith 22°, and at London 25°. In this respect the Islands resemble the SW coast of England and the W coast of Ireland. The influence exerted by the temperature of the sea is shown by the fact that the coldest month is not, as in the other parts of the kingdom, January, but March, when the mean average temperature is about 38·5°. The warmest month is August, when the mean average temperature is 54·5°, and in this point again the agreement is with the SW of England and the W of Ireland, July being the warmest month elsewhere. The mean annual temperature is about 45°, and the average annual rainfall 34·3 inches, which is less than might be supposed. There is but little frost and less snow, and never any great continuance of either. The heaviest rains and the most prevalent and strongest winds are from the SW and SE. Winds between the NW and NE are cold but dry and healthy, and though they prevail during spring and sometimes till past the middle of June and check the progress of vegetation, they have not the piercing quality that is so often felt in the spring winds along the E coast of Scotland. Calms are of short duration, and changes of weather are very sudden. Fogs are somewhat frequent during summer and the early part of autumn, and come on and disperse quickly. The few thunder-storms that occur happen mostly in winter, during high winds and continued falls of rain or snow. The spring is cold and late; the summer, though short, is remarkable for the rapidity with which growth takes place; and the winter is in general a steady series of high winds, heavy rains, and ever-varying storms. Owing to the latitude the evenings in summer are long, and when fine, form the greatest charm of the season. At the longest day the sun rises at 2 minutes past 3, and sets at 23 minutes past 9, and even after he has sunk he leaves his glory behind in the bright glow that lies along the northern horizon, tinging the sky with hues of yellow and green that cannot be described but need to be seen. For a month at this time the light is so strong all night through that small print may be read without difficulty. At the shortest day the sun rises at 10 minutes past 9 o'clock and sets at 17 minutes past 3, but the long nights are often lit up by brilliant displays of aurora borealis. Seals of different species abound, and the walrus has been seen about the coast on different occasions, but they were merely stray specimens that had wandered too far S. Herds of the caïng whale are numerous, and large numbers of them often run themselves ashore, while examples of almost all the other species of whales are from time to time seen and occasionally captured. The list of birds is long, including no fewer than 236 species. It includes all the British birds of prey, except the rough-legged buzzard, the bee hawk, and the orange-legged falcon. Rooks have settled in large numbers in recent years, and starlings are everywhere very numerous. Grouse are lighter in colour than those of the mainland, but are plump and well-conditioned. Ptarmigan, which used to be found in Hoy, are now exterminated. There are nearly 400 species of native plants, including the rare variety of the adder's-tongue fern, *ophioglossum vulgatum* var. *ambiguum*, which is found only here and in the Scilly Islands; the horned pond-weed, *zannichellia polycarpa*, in the Loch of Kirbister in Orphir parish; *carex fulva*

var. *sterilis*, also in Orphir; *ruppia spiralis*, in the Loch of Stennes; and *ruppia rostellata* var. *nana*, in Firth.

Geology.—The Orkney islands are composed of strata belonging mainly to the Old Red Sandstone formation. On the Mainland there is a small area occupied by ancient crystalline rock on which the members of the Old Red Sandstone rest unconformably. They extend from Stromness W to Inganess, and they are prolonged S into the island of Graemsay. Consisting of fine grained granite and grey micaceous flaggy gneiss, these rocks must evidently be grouped with the great series of metamorphic rocks of the Highlands of Scotland. They represent part of the old land surface, which rose above the sea-level at the beginning of the Lower Old Red Sandstone Period.

In the island of Hoy there is a remarkable development of the Upper Old Red Sandstone, but in all the other islands the strata belong to the lower division of that formation. Beginning with the representatives of the lower division, we find that a great synclinal fold traverses the Orcadian group from Scapa Flow N by Shapinsay to the island of Eday, the centre of which is occupied by a series of coarse silicious sandstones and marls, with bands of conglomerate containing pebbles of quartzite, gneiss, and granite. In the island of Eday this arenaceous series rests conformably on the flagstones which cover such wide areas on the Mainland and the other islands, but when we pass S to the Mainland it is observable that the massive sandstones are brought into conjunction with the flagstones by two powerful faults.

A traverse across the N islands from Westray to Eday, and thence to Sanday, reveals the order of succession of the strata. The island of Westray is composed of well-bedded rusty flags, which along the W shore are gently inclined to the W, while on the cliffs in the SE part of the island they dip to the ESE. The hills display those characteristic terraced slopes which are so typical of the flagstones when they are inclined at gentle angles. The islands of Fara Holm and Fara, situated between Westray and Eday, consist also of flagstones with a similar ESE dip, and these beds are continued in Eday along the W coast, between Fara's Ness and Seal Skerry. It follows therefore that we have a gradual ascending series from the SE headlands of Westray to the W coast of Eday. The strata in the latter island form a syncline, the axis of which runs approximately N and S. Hence the same beds reappear on opposite shores, rising from underneath the massive silicious sandstones, which form the smooth flowing hills in the centre of Eday. The gradual transition from the flagstones to the overlying arenaceous series is admirably displayed on the beach at Kirk of Skail and on the S side of Lonton Bay on the E coast. From the grey calcareous flagstones at the base there is a gradual passage through hard white sandstone, red shales, and flagstones to the massive red and yellow sandstones. Similarly on the W coast, between Fara's Ness and the sandy bay lying to the E of that promontory, there is clear evidence of the alternation of the sandstones and flags at the base of the arenaceous series.

The members of the arenaceous series are repeated in the island of Sanday, partly by faults and partly by undulations of the strata. They occupy a strip of ground, about 1 mile broad, between Spur Ness and Quoy Ness. At the former locality they are abruptly truncated by a N and S fault, which brings them into conjunction with the underlying flagstones, while near the latter promontory they graduate downwards into the flagstones. Again in the SE portion of Shapinsay a small portion of the arenaceous series is met with, which to the S of Kirkton is separated from the flagstone by a small fault, but from the marked alternations of sandstones and flags exposed on the coast, there can be little doubt that the strata mark the base of the massive sandstones. This small patch of the arenaceous series is invested with considerable interest from the fact that they are associated with diabase lavas indicat-

ing contemporaneous volcanic action. At no other locality in Orkney have traces of bedded lavas or tuffs been found in the Lower Old Red Sandstone. These diabase lavas are exposed on the coast between Haco's Ness and Foot, whence they can be followed for about half a mile, exhibiting the vesicular amygdaloidal characters of true lava flows. The microscopic examination of this rock reveals the presence of a considerable quantity of altered olivine associated with plagioclase feldspar, augite, and magnetite.

Attention has already been directed to the fact that, on the Mainland, the sandstones and marl which form the highest members of the Lower Old Red Sandstone in Orkney are separated from the flagstones by two powerful faults. The dislocation bounding the arenaceous series towards the NW can be traced from Orphir Kirk to Smoogra Bay, and thence by Scapa Bay to Inganess Head. The effect of this main fault is admirably seen near the quarry, on the W side of Scapa Bay, where it is accompanied by a minor dislocation. Again, the fault truncating the series on the E side runs nearly parallel with the coast from Howquoy Head by Scapa to Inganess Bay. From Kirkwall NW to the headlands of Birsá, the flagstones roll with gentle undulations, rising into terraced hills on the moory ground N of Loch Stennes. Similarly they spread over the E part of the island, between Inganess Bay and Deer Ness.

In the minor islands composing the S group, viz., Cava, Fara, Flotta, Burray, and South Ronaldsay, the strata consist of alternations of flagstones with red and yellow sandstones and red marls, resembling the beds at the base of the arenaceous series already described. From the manner in which the strata in these various islands are inclined towards Scapa Flow, it is obvious that the latter must occupy the centre of a synclinal trough, and that the synclinal fold is gradually dying out towards the S.

The Orcadian flagstones have yielded fish remains, crustaceans, and plants, but no fossils have been obtained from the arenaceous series, which occupies the centre of the great synclinal fold. From the flagstones near Stromness, Hugh Miller exhumed the specimen of *Asterolepis* referred to in *The Footprints of the Creator*. One of the best fossiliferous localities is on the shore of the Mainland near Skail, and still another occurs in Brackness Bay, W of Stromness.

The representatives of the Upper Old Red Sandstone are only to be found in Hoy, where they form one of the noblest cliffs in the British islands. This elevated tableland, rising in isolated peaks to a height of 1400 feet, has been carved into a series of narrow valleys, which, during the glacial period, nourished local glaciers. In some respects the Upper Old Red Sandstone of Hoy resembles lithologically the conformable arenaceous series of the lower division. The beds have the same massive false-bedded character, and the sandstones are frequently interstratified with red marls and shales. But there is one important difference in the relations which they respectively bear to the underlying flagstones. In Hoy the sandstones of Upper Old Red Age are underlain by a platform of bedded lavas and ashes, which rest with a marked unconformity on the underlying flagstones, whereas the Eday sandstones, as already indicated, graduate downwards into the flagstones. The volcanic rocks lying at the base of the great pile of massive sandstones are admirably exposed on the cliff on the NW side of the island, from the Kaim of Hoy to the Old Man, and they are traceable round the slopes of the Hoy and Cuilags Hills. At the latter locality the volcanic rocks comprise three lava flows with interbedded tuffs; but when they are traced S along the sea cliff towards the Old Man they gradually thin out till they are represented only by one bed of amygdaloidal porphyrite. It is evident, therefore, that some of the centres of eruption must have been situated in the NE part of the island from the increased thickness of the beds in that direction. There are some indications of the centres of eruption still to be found in that region.

These 'necks,' which are filled with coarse volcanic agglomerate, are situated between the Kaim of Hoy and Quoy Bay.

The unconformable relation between the members of the upper and lower division may be studied along the sea cliff on the NW side of the island, but perhaps one of the most favourable localities is at the base of the Old Man. Owing to the flagstones being inclined at a higher angle than the members of the upper division, the sheet of amygdaloidal porphyrite spreads over the edges of the flagstones, while the porphyrite is overlaid by an enormous pile of red and yellow sandstones.

Several dykes of basalt traverse the Old Red Sandstone of Orkney. Some of the best examples occur on the shore of the Mainland between Brakness and Skail, while others are exposed on the beach near Orphir.

The glacial phenomena of Orkney are rather remarkable, partly on account of the presence of shells in the boulder clay at various localities, and partly owing to the variety of stones in the deposit which are foreign to the islands. From an examination of the striated surfaces throughout the group it would seem that, during the primary glaciation, the ice crossed the islands from the SE towards the NW. There are several examples showing some divergence from this trend, but the prevalent direction of the striae varies from WNW to NNW. Excellent examples of striated surfaces may be noted on the cliff tops near Noup Head, Westray, in the bay E of Fara's Ness in Eday, and on the slopes of the Stennie Hill in the same island. Again, in Kirkwall Bay, a short distance to the E of the Picr, an excellent example of striated flagstones is exposed on the beach where the boulder clay has been recently removed by the action of the sea.

The boulder clay occurs mainly round the bays, where fine sections are frequently seen, revealing the character of the deposit, as for instance in Kirkwall Bay, in Odin Bay in Stronsay, on the E and W shores of Shapinsay, in the bay E of Fara's Ness in Eday, and other localities. Consisting generally of a stiff gritty clay devoid of stratification, in which finely striated stones are very abundant, it resembles the ordinary boulder clay of Scotland. The blocks embedded in the clayey matrix are to a large extent local, being composed of flagstones, sandstones, and conglomerate grits, while in the neighbourhood of Stromness fragments of granite and gneiss, derived from the ridge of crystalline rocks, are also present in the deposit. But in addition to these, the following rocks, which are foreign to the islands, are represented: chalk, chalk flints, oolitic limestone, oolitic breccia, oolitic fossil wood, dark limestone with *Lepidostrobus* of Calceiferous Sandstone Age, quartzite, schists, and pink, porphyritic felsite. These blocks were in all probability derived from the E of Scotland, and chiefly from the Moray Firth basin. A careful search in the various boulder clay sections throughout the islands hardly fails to bring to light some of these foreign blocks. They have been found in South Ronaldsay, the Mainland, Shapinsay, Stronsay, Eday, and North Ronaldsay. From an examination of the evidence supplied by the dispersal of the stones in this deposit it is apparent that the ice-flow must have crossed the islands from the North Sea towards the Atlantic. This conclusion is supported alike by the distribution of the local blocks as well as by the presence of rocks derived from the basin of the Moray Firth. Equally interesting is the occurrence of fragments of marine shells in the clayey matrix which have been smoothed and striated like the stones in the deposit. It is difficult to determine many of the species owing to the fragmentary character of the remains, but the following have been obtained from different sections: *Saxicava arctica*, *Astarte*, *Cyprina islandica*, *Mytilus*, and *Mya truncata*. Various species of foraminifera have also been met with after washing the clay.

In Hoy and the Mainland the existence of local glaciers after the period of extensive glaciation is proved by the occurrence of moraines in the valleys and on the hill slopes. Though erratics are not very abundant in

the Orkneys, there is one remarkable boulder of hornblende gneiss at Saville in Sanday measuring 90 cubic feet above ground.

Soils and Agriculture.—Though in some places sand, and in others clay or moss, is found of great depth, yet the general soil of Orkney is shallow, lying upon either till or rock within 2 feet of the surface, and often so near as to be touched by the plough. The greater part of it is peat or moss, forming, from the nature and nearness of the subsoil, often a wet, spongy, and almost irreclaimable moorland; but elsewhere the moss is benty, or what the Orcadians call yarta soil, which can be brought under cultivation with little difficulty. Loams of various qualities, and sometimes, though never to any great extent, approaching to clay, cover a considerable area; and there is also a considerable proportion of sandy soil, which in places, particularly in Westray, Stronsay, and Sanday, passes into beds of loose shifting sand, quite barren and overlying the real soil. Of the arable land the larger proportion is sandy—no disadvantage in such a damp climate—or good loam, while the remainder is dry benty moss. There is a considerable extent of peat, which is cut for fuel, but this has been done in many cases so injudiciously that the whole lower soil is washed away. The peat mosses contain stems and roots of birch and pine trees, sometimes measuring nearly 1 foot across, which show that, notwithstanding their present bare condition, the islands were once well covered with wood. At this time, too, the land must have stood at a higher level than now, as mosses extend—at Otterwick Bay in Sanday, at Deerness in the Mainland, and elsewhere—under the sea.

Nearly all the land in Orkney is freehold, but burdened with payments—originally in kind, but now commuted—to the Crown, or to the Marquis of Zetland, as the Crown donatory. These payments, though of various origins, all bear the name of feu-duties, and are exigible on account either of the Crown's having come in the place of the King of Norway, to whom the islands paid tribute till 1468, or of its having acquired rights by purchase and forfeiture, or of its having acquired the claims of the Bishop of Orkney. The feu-duties are in some cases very heavy, but the ground held by small proprietors only pays as feu-duty about a tenth of what it would as rent. A considerable proportion of the land was originally held under udal, odal, or allodial tenure*—a system which required no written right; but, owing to the actings of Earls Robert and Patrick Stewart and to very numerous and frequent transferences by sale, it has come now, in the great majority of instances, to be held under charter and sasine, as in every other district of Scotland. The great proportion of the farms are small.

Under the old system of things, when only the strip along the coast was cultivated, and the interior of the islands was all common, the cultivated portions of farms were arranged in clusters called towns, and a proper Orcadian town consisted of a portion of ground partly under crop and partly in pasture—the infield pasture—and always, except where there was a natural

* Under allodial tenure all male descendants of the original owner had rights over his possession that they were unable to divest themselves of. When an odaller died his real estate became divisible equally among his sons, the only preference being that the eldest son could claim the chief farm. The sons thus in turn became odallers, and so the process went on. No owner could dispose of his land unless he could show that he was compelled to do so by poverty, and then the property had first to be offered to the next-of-kin. If they refused to buy, it might then be sold to any one; but the purchaser might at any moment, no matter what length of time had elapsed, be called on to restore it on repayment of the price by the original seller, or any of the descendants of the original owner; and if it were purchased or redeemed by any distant kinsman of the first possessor, any other kinsman nearer in blood might again have it given up to him. Tenure thus soon became so insecure, that it would have simply been waste for any one to expend money on improving land which might not be long his; and the system was, in consequence, so perfectly adapted to retard or even destroy the natural progress of the district, that it cannot be regretted that it has now become extinct, though the manner in which this was accomplished may be very much deprecated. The odallers were practically peasant nohles.

boundary, separated from 'the hill' or common moor by a strong fence. The town was provided with a number of houses corresponding to the number of farms, and severally occupied by the different tenants. Each resident in a town had, besides his possessions within the dyke, the privilege of sending his live stock to 'the hill' or common moor, and liberty to cut turf on the mosses and sea-weed on the shore. The farms varied in size from 10 to about 40 acres of arable land, which was thought to be as much as could be conveniently worked by one of the old Orcadian wooden ploughs. Some of the proprietors and large farmers began, early in the 19th century, to put their arable ground under regular rotation of crops, and to cultivate turnips and artificial grasses; but it was long ere the bulk of the small farmers and crofters could be induced to imitate them, and so up till 1840 they continued to torture their land out of heart by alternate crops of oats and bere, with little or no other aid than doses of sea-weed, until, the returns hardly exceeding the seed corn, the land was left to recover its tone by the slow means of a long natural fallow. Since 1840 progress has been rapid, and now, allowing for the climate and the soil, farming is as good in Orkney as in almost any county in Scotland. The great proportion of the farms are small, and a curious feature all through the islands is the number of small proprietors found in every parish, and more particularly in those of Harray and Birsay in the Mainland, who work their own holdings. The extent of ground under crop and permanent pasture rose from 23,990 acres in 1855 to 86,949 acres in 1870, and to 112,148 in 1883, but fell slightly in 1896 to 105,990 acres. It is possible that a small proportion of the increase may be accounted for by the defective condition of the earlier returns.

The acreage under the various crops at different dates is given in the following tables:—

GRAIN CROPS.—ACRES.

Year.	Wheat.	Barley or Bere.	Oats.	Total.
1855	15	3014	7963	10,992
1866	33	6131	24,714	30,878
1874	1	5722	29,084	34,807
1883	...	5641	32,751	38,422
1896	...	4539	33,899	38,438

GRASS, ROOT CROPS, ETC.—ACRES.

Year.	Hay, Grass, and Permanent Pasture.	Turnips.	Potatoes.
1855	...	3,017	1301
1867	25,061	9,559	3307
1874	40,654	11,955	3216
1883	54,806	14,387	3104
1896	49,603	14,501	2845

There are from 40 to 50 acres annually under rye, beans, and pease, about 320 acres under other green crops than those mentioned, and only 243 acres fallow. The usual rotation is the five shift, and the average yield of barley per acre is about 33 bushels, and of oats about 33 bushels, while turnips and potatoes are very variable, and run from 14 and 5 tons respectively upwards.

The agricultural live stock in the county at different dates is shown in the following table:—

Year.	Cattle.	Horses.	Sheep.	Pigs.	Total.
1855	8,128	1899	10,815	1337	22,179
1867	22,823	...	31,648	5432	...
1874	26,354	5733	34,062	4375	70,554
1883	25,624	6092	31,584	4745	68,045
1896	28,397	6614	35,228	3845	74,084

The cattle are small, but have been greatly improved in recent years by the introduction of shorthorn bulls, and on some of the larger farms the native breed has been replaced by polled cows from the mainland. The native sheep were the small short-tailed Norwegian

sheep introduced here, as in the Hebrides, probably at the time of the Scandinavian conquest; but these have now been driven away to the distant North Ronaldsay and to the wilder parts of Hoy, and their places taken by Cheviots and crosses between Cheviots and Leicesters. The horses are small, and the pigs, probably from their free life, differ a good deal in shape and appearance from those of the mainland counties. Poultry of all kinds, particularly geese, are everywhere extensively reared—a vast quantity of eggs being exported annually. During the last hundred years the total value of the Orcadian exports has risen from £23,000 to over £300,000, more than half of which is derived from the sale of live stock.

Industries.—Fish of all sorts are very plentiful around the Orcadian shores, but it was long ere the people availed themselves of the riches of the sea. Herring-fishing seems to have begun in 1815, and for many years thereafter a large number of boats prosecuted this industry from Stronsay. Orkney forms one of the Scottish fishery districts, and there were belonging to the islands in 1894, 116 first-class boats, 42 second-class boats, and 534 third-class boats, with 1706 resident fishermen and boys. The principal stations for first-class boats were Stronsay, with 11; Walls, with 9; Holm, on the eastern Mainland district, with 8; Burray, with 18; and South Ronaldsay, with 16. For third-class boats, the principal stations are Stronsay, with 30; Eday, with 30; Westray and Papa Westray, with 143; and South Ronaldsay, with 58. These boats were valued at £11,464, and the fishing gear at £10,229, while the total number of persons employed in connection with them, inclusive of the fishermen, was 4356. In the same year some 600 boats prosecuted the herring-fishing within the district, and these had a total catch of 260,957 cwt., which were landed chiefly at Stromness. Cod-fishing employed a considerable number of boats in the last quarter of the 18th century, particularly about Stronsay, but was afterwards neglected. It revived again in the early years of the 19th century during the great European wars, as the fishing ground was less exposed than the Dogger Bank to annoyance from privateers. After that there was a temporary period of decline, but it now is an important and thriving industry, prosecuted by the natives of the North Isles in open boats, and from other places by well-appointed smacks, which fish in the waters about Iceland and the Faroe Isles. In 1894 the cod, ling, and hake captured numbered 613,977. Lobster-fishing was introduced by an English company in the beginning of the 19th century, and about 1814 the annual number sent to London reached 120,000, valued at £1500. Though not so productive as formerly, it is still pursued with fair success, as is also oyster-dredging. When the whale-fishing was prosecuted in the neighbourhood of Davis Strait the whalers used to ship a considerable number of men from the Orkneys, but the number of those that go is now very much diminished, especially since the shifting of the fishing ground farther N. For many years subsequent to 1741 large numbers of the men in the employment of the Hudson Bay Company were Orcadians, and some of them, like Dr Rae, the well-known explorer, held positions of importance; but the life in the frozen North seems now to have lost its attractions, and but few of them find their way to the fur region.

The manufacture of linen-yarn and cloth, introduced in 1747, was long extensively carried on, but received a severe check during the great continental war in the beginning of the 19th century, and has since practically disappeared. The manufacture of kelp was first introduced in 1722, in Stronsay, by James Fea of Whitehall, and notwithstanding its subsequent importance made way at first but very slowly. But by 1750 the annual manufacture had reached about 900 tons. This had increased in 1790 to almost 3000 tons, and in 1826 it reached its highest, when 3500 tons were manufactured. The amount of labour involved may be estimated if we keep in mind that about 24 tons of sea-weed had to be

burned to produce 1 ton of kelp. Leaving out of account a short period during the Peninsular War, when the price reached £20 a ton, the annual value of the kelp exported from 1740 to 1760 was about £2000; in 1770 it was £6000; in 1780, £10,000; in 1790, £17,000; and in 1826, £24,500. The events which destroyed the trade elsewhere [see *HEBRIDES*] had the same effect here in 1832, and caused the same amount of suffering and disaster among workers and proprietors; but the industry is reviving in the North Isles, where the annual manufacture has again reached about 1500 tons; and as the Orkney kelp is of superior quality it finds a fairly good market. The making of straw-plait for ladies' bonnets and gentlemen's hats was introduced about 1800, and developed so rapidly that in 15 years afterwards it afforded employment for from 6000 to 7000 women, and the value of what was exported was about £20,000. The material then employed was split ripened wheat straw, but the plait produced from this was very brittle and flimsy. On the introduction, by Messrs Muir of Greenock, of an imitation of Leghorn plait, the wheat straw was given up, and unripened, unsplit, boiled and bleached rye-straw substituted; and the manufacture of Tuscan-plait (as the imitation was called) flourished until the reduction of the duty on foreign straw-plait allowed foreign competition first to press it hard, and finally to put an end to it altogether. The commerce and one or two of the smaller industries are noticed under *KIRKWALL*, under which the means of communication between the mainland of Scotland and the islands are also noticed. Under the Act obtained in 1857 for the purpose, good district roads were formed throughout the islands. A telegraph cable was laid in 1876* from Scrabster through Hoy Sound to Stromness, and a cable was laid in 1871 from Orkney to Shetland.

Formerly the farm-buildings on nearly all the small holdings were built of stones and clay, or stones and clod, thatched with straw, with the fire in the centre of the floor and the smoke finding its way out by a hole in the roof, as is occasionally found still in the Hebrides. The door, less than five feet high, afforded ingress and egress to every inmate, whether quadruped or biped, with or without feathers. This is now greatly changed for the better, and in most districts an aspect of much greater care and regard for comfort is to be seen, and the houses contrast strongly with those of a similar class in the western islands and mainland. The walls are built of good dry stoue rubble, pointed with lime both inside and out. Even the smallest have two apartments, well lighted, and the roof slated or well thatched. Attached to many of the cottages and connected with the barn is a small round antique-looking tower, used as a kiln for drying corn. All this must, however, be understood as applying only to the smaller holdings, as the buildings on the large farms are as good and well-appointed as anywhere in the N of Scotland.

The Orcadians, though sprung from the same Scandinavian stock as the Shetlanders, have, probably from their more extensive and ready intercourse with the mainland, fewer and less marked peculiarities of manner, and it is but seldom that you find a decidedly Scandinavian face. The men, a fine powerful race, have, too, lost much of the swinging walk that is to be found among the Shetlanders, and have more of the slow plodding step characteristic of the agricultural labourer. They are very gentle in their manner and in their style of speech, and yet cool and brave in the face of danger. From the nature of their country, many of them are first-rate boatmen, and during the season of egg-gathering the risks run and the escapes made lead to a habit of at least seeming indifference to danger and death, numerous stories being told of the matter-of-fact way in which such things are treated. Many of the old superstitions lingered long and lovingly about the whole group of islands, but they have now retreated into the more out-of-the-way district, where beliefs in fairies, in

* This superseded a cable laid in 1869 from Brough in Caithness to Aith Hope in the S end of Hoy.

the right-hand course and the left-hand course, a dislike for turbot or even the mention of the name of turbot while at sea, and other ideas of a similar kind, are still held, though they are now kept a good deal out of sight, as things not to be talked of to scoffers. The language is a variety of Scotch with a peculiar accent or intonation, the voice rising and falling in a sort of rough cadence, and the peculiarity varies from island to island, so that those acquainted with the whole district can distinguish the natives of the different islands. 'Thou' and 'thee' are used instead of 'you,' and there are many peculiar words which are survivals of Norse. The place names in Orkney belong almost without exception to this dialect, and many Norse family names still survive among the common people, while some of the small crofter proprietors in the parish of Harray, in the western district of the Mainland, are said to retain not only the old name, but also the very lands, held by their forefathers many centuries ago. This parish was the last stronghold of the Norse tongue in Orkney, and it is said to have been spoken here down to 1757.

The only royal burgh is Kirkwall; the only other town is Stromness, which is a burgh of barony—both on the Mainland; and the only village with more than 300 inhabitants is St Margaret's Hope, in South Ronaldsay. Orkney is divided into eighteen entire *quoad civilia* parishes, Westray—which includes Westray, Papa Westray, Holm of Papa, Wart Holm, and Rusk Holm; Cross and Burness—which includes the W part of Sanday, Holms of Spurness, Holms of Ire and North Ronaldsay; Lady, including the E part of Sanday and Start Point; Stronsay and Eday—which includes Stronsay and Eday with the islands about them, with Muckle and Little Green Holms and Auskerry; Rousay and Egilsay, including Rousay, Egilsay, Viera, Eynhallow, and the smaller islands about; Shapinsay, including Helliar Holm; Evie and Rendal, Harray and Birsay, Sandwick, Stromness, Firth and Stenness, and Orphir, all in the western portion of Pomona, and the first including Gairsay, Sweyn Holm, and some small holms in the Wide Firth, and the last including Cava in Scalpa Flow; Kirkwall, at the narrow part of Pomona; St Andrew's and Holm, in the eastern part of the Mainland, the former including Copinsay and the latter Lamb Holm; Hoy and Graemsay, and Walls and Flotta, both in Hoy, and the former including Graemsay, and the latter Risa, Fara, Flotta, Switha, and South Walls; and last, South Ronaldsay, including the island of the same name, Burray, Hunda, Glimps Holm, Swona, and the Pentland Skerries. The *quoad sacra* parishes of St Mary's (South Ronaldsay), Birsay (Harray and Birsay), Deerness (St Andrew's), Flotta (Walls and Flotta), Stenness (Firth and Stenness), Eday and Fara (Stronsay and Eday), North Ronaldsay (Cross and Burness), and the mission stations of Rendal (Evie and Rendal), Burray (South Ronaldsay), Graemsay (Hoy and Graemsay), North Walls, Rusness (Lady), and Rapness (Westray and Papa Westray) are also included.

There are Established churches within all the parishes and *quoad sacra* parishes, and there are also 15 places of worship and 4 stations in connection with the Free Church, 13 in connection with the U.P. Church, 1 in connection with the United Original Seeders, 2 Congregational churches, 1 in connection with the Evangelical Union, 3 Baptist churches, 2 Episcopal churches, and 1 Romau Catholic chapel. In the year ending Sept. 1894 there were in Orkney and Shetland 122 schools (119 public), which, with accommodation for 10,999 children, had 9072 on the rolls, and an average attendance of 7057. Orkney, with a constituency of 3806 in 1895-96, unites with Shetland in returning a member to serve in parliament. It is governed by a lord-lieutenant, a vice-lieutenant, 11 deputy-lieutenants, and 66 justices of the peace; forms a division of the sheriffdom of Caithness, Orkney, and Shetland; and has a resident sheriff-substitute. Ordinary courts are held at Kirkwall every Tuesday throughout the session. Sheriff small-debt courts are also held at Kirkwall every Tuesday during the session; and circuit courts are held at Strom-

ness on the third Thursdays of March, June, and September, and on the first Thursday of December, and at St Margaret's Hope on the second Thursdays of April, June, and September. Justice of peace courts are held at Kirkwall as required, and at Stromness on the last Thursday of every month. Quarter-sessions meet at Kirkwall on the first Tuesdays of March, May, and August, and on the last Tuesday of October. The County Council is composed of 27 members, 25 of these being for as many electoral divisions and 2 for the royal burgh of Kirkwall. The divisions are classed into 4 districts—namely, Mainland District, with 12 councillors; North Isles District, with 8; South Ronaldsay District, 2; Walls District, 3. The average number of registered poor in 1894 was 644, with 199 dependants; the receipts for poor-law purposes were £8871, and the expenditure £7853. There is a combination poorhouse near Kirkwall. The proportion of illegitimate births averages about 6.5 per cent., and the death-rate averages about 16 per thousand. The principal markets are at Dounby on the second Thursday of every month; Firth, on the third Monday of every month; Hosen, on the second Wednesday of February and June and the first Wednesday of November; Kirkwall, on the first Monday of every month and the first Tuesday after 11 August; Sanday, on the first Wednesday of April, on the Wednesday before Kirkwall Lammas Market, and on the first Wednesday of November; South Ronaldsay, on the first Wednesday after 11 November; Shapinsay, on the second Monday of March and on the first Monday before Kirkwall Lammas Market; Stromness, on the first Wednesday of every month, and the first Tuesday of September; Stenness, on the first Tuesday of March, the first Tuesday after the second Wednesday of June, and the Tuesday after the first Wednesday of November; Tankerness, on the last Thursday of each month; Wasdale, on the first Wednesdays of February and June and the last Wednesday of October; Walls, on the first Fridays of June and November; Westray, on the third Thursday of March and the first Thursday of August; and at Rousay, on the last Wednesday of March and the third Wednesday of July. The 1st Orkney Artillery Volunteer Corps, with headquarters at Kirkwall, have batteries at Kirkwall (2), Sanday, Shapinsay, Stromness, Stronsay, Holm, Evie, and Birsay. Valuation (1653-71) £4672, (1815) £20,938, (1833-84) £70,623, (1895-96) £62,152. The civil and registration counties are identical. Pop. (1801) 24,445, (1811) 23,238, (1821) 26,679, (1831) 28,847, (1841) 30,507, (1851) 31,455, (1861) 32,395, (1871) 31,274, (1881) 32,044, (1891) 30,453, of whom 14,298 were males and 16,155 females. In the same year the number of persons to each square mile was 81, the number of families 7182, the number of houses 6409, and the number of rooms 19,810.

Ecclesiastically the whole of Orkney is embraced in the Synod of Orkney, which contains the presbyteries of Kirkwall, Cairston, and North Isles. It meets at Kirkwall on the third Tuesday of April. The presbyteries of Kirkwall and Cairston are separately noticed; the presbytery of North Isles contains the parishes of Cross and Burness, Lady, Rousay and Egilsay, Shapinsay, Stronsay and Eday, and Westray and Papa Westray, and the *quoad sacra* parishes of Eday and Fara, and North Ronaldsay. The Free Church has also a synod of Orkney, which forms, however, only one presbytery, and includes the charges at Birsay, Deerness, Evie and Rendal, Firth, Harray and Sandwick, Holm, Kirkwall, North Ronaldsay, Orphir, Papa Westray, Rousay and Egilsay, Sanday, South Ronaldsay, Stromness and St Andrews. The U.P. Church has a presbytery of Orkney, with charges at Burray, Eday, Firth, Holm, Kirkwall, Rousay, Sanday, Sandwick, Shapinsay, South Ronaldsay, Stromness, Stronsay, Westray and Wick.

History.—The derivation of the name is uncertain. *Orc* is given in the Welsh Triads as one of the three principal isles of Britain, and it is also given as the modern Welsh name of the Orkneys. The present name is sometimes derived from the British *Orch*, which means 'on the edge or bordering,' and *ynys*, or *inis*, 'an

island,' in which case it would mean the bordering islands. Other derivations are the Scandinavian *Orkin*, 'a sea monster,' and *ey*, 'an island,' and *Ork*, or *Oerk*, 'a desert or uninhabited place,' and *ey*, 'an island;' but the whole matter must be left in the realms of conjecture. The first historical mention seems to be by Diodorus Siculus, who in the year 57 mentions Cape Orcas as one of the extremities of Britain. In A.D. 86 Agricola's fleet passed northward, after the battle of Mons Grampius or Graupius, and must have reached these islands whence the sailors saw or fancied they saw the renowned Thule. Pomponius Mela mentions the islands about the middle of the second century, and states their number at 30. Pliny gives the number at 40, and Ptolemy at 30, while Solinus, writing in 240, and having heard probably only of the islands next the mainland, puts it at 3. From Claudian's account of the exploits of Theodosius in the end of the 4th century, we are able to infer that the Saxons had settlements among the islands, or visited them; and Nennius in his *Historia Britonum* says that in 449 the Saxon chiefs Oetha and Ebissa, 'with forty keels' laid waste the Orkneys. The next reference is in Adamnan's *Life of St Columba*, where it is stated that the Saint was, when he visited Brude, King of the Picts, A.D. 563, in some concern for Cormac, grandson of Lethan, 'who not less than three times went in search of a desert in the ocean, but did not find it,' and who, he knew, would 'after a few months arrive at the Orcaes;' so he 'recommended him in the following terms to King Brude in the presence of the ruler of the Orcaes: "Some of our brethren have lately set sail and are anxious to discover a desert in the pathless sea; should they happen, after many wanderings, to come to the Orcaean islands, do thou carefully instruct this chief, whose hostages are in thy hand, that no evil befall them within his dominions;"' and we are further told that 'so it afterwards came to pass, and to this advice of the holy man Cormac owed his escape from impending death.' Who the people were who inhabited them, or what was their connection with Brude, is not clear, but it may be reasonably supposed that they were Picts, who, lying on the borders of the northern Pictish kingdom, were somewhat turbulent. Nennius, who wrote about the middle of the 9th century, says that the people were Picts in his day, and among the Scandinavians who afterwards peopled the islands, the traditions of an early race of 'Pights,' who were small men, have been very persistent. Before the death of Brude, which took place in 534, Ædan, king of Dalriada, had, according to the *Ulster Annals*, sent an expedition against the Orkneys, and from this time there is no further mention of them for almost a century; but probably the expedition had been successful, and the group had been under Dalriadic rule, for in 682 we find Brude mac Bile, the then king of the Northern Picts, undertaking an expedition against them, and adding them again to the Pictish domains. During this period Christian missionaries had spread all over the islands and reached as far as Iceland, as we know from the Irish Monk Dicuil, who wrote a treatise *De Mensura Orbis Terrarum* in or about 825. Though this early Christianity disappeared after the Norse occupation, traces of it still remain in the islands named Papa, that being a name given by the Norsemen to the early Christian missionaries, as well as in the islands of Ronaldsay, the Norse name of which was Rinanseoy or St Ninian's or Ringan's Isle, in the sculptured stones similar to the early Christian monuments of the mainland of Scotland, in the old square-shaped ecclesiastical bells that have been found at several places, and in the names of places where chapels had been dedicated to various of the early Irish and Columban saints.

The Norse rovers seem to have begun to visit Britain regularly in search of plunder about the close of the 8th century, and by the middle of the 9th, Olaf the White had established a powerful kingdom in Ireland. When Harald Harfagri therefore by his victory of Hafursford in 872 made himself master of Norway, and many of the large landowners and their followers

opposed to his usurpation or dispossessed of their territories were compelled to flee from his anger, one of the first districts in which they sought shelter and safety was among the Orkney Islands; and having settled permanently there, as well as in Iceland, the Færos, and the Hebrides, they 'turned their haven of refuge into a base of operations for retaliatory warfare, harrying the coasts of Norway during the summer months and living at leisnre in the islands during winter on the plunder.' Harald was not, however, to be thus treated with impunity, so in 875 he fitted out a fleet and made a descent on both Orkneys and Hebrides, subduing them and bringing them under his government. As Ivar the son of Rögnvald, Jarl of Moeri, one of his chief supporters, was killed, in Sauday probably, during the fighting, and probably also with an eye to a vigorous and powerful ruler who would be able to maintain the conquest, Harald appointed this Rögnvald also Jarl of Orkney, but as the latter preferred to return to Norway, he was allowed to hand over the title and power to his brother Sigurd, who indulged the restless nature of himself and his followers by expeditions against the mainland of Scotland, in the course of which he conquered the greater portion of Caithness, Sutherland, Ross, and Moray, in the latter of which districts he finally died [see FORRES and MORAY]. He was succeeded by his son Gutorm, who, however, ruled only one year, when he died, and was succeeded by Hallad, son of Rögnvald, for whom his father had obtained the earldom on the news of Sigurd's death reaching Norway. Contrary, however, to the spirit of the times, Hallad was a man of peace, and wearying of the struggle with his piratical subjects—if they may so be called—soon returned to Norway. He was succeeded by his brother Einar,* who proved a rigorous ruler. He is said to have been the first to teach the Orcadians to use turf for fuel, and so he came to be known as Torf-Einar. He was succeeded by his son, Thorfinn, who by his marriage with Grelauga, daughter of Duncan, Earl of Caithness, again united the mainland Norse districts to the Orkney Jarldom. He left five sons, who devoted their energies to murdering one another, till Hlodver, the last of them, was left in sole possession of power, which, however, he did not long enjoy. At his death in 980 his son, Sigurd the Stout, succeeded, and had to defend his mainland possessions, first against Finleikr, Mormaer of Moray, and father of Macbeth, and again, according to the *Njal Saga*, against Finleikr's successor, Melsnechtan, and another Scottish Mormaer, who is called Hundt. In both contests he was successful, and made himself master of the greater part of the North of Scotland, penetrating even S of the Moray Firth [see MORAY]. He was, however, afterwards reconciled to King Malcolm, and obtained his daughter as a second wife, after which his forays against the Scottish dominions ceased. This latter event came about, as the *Orkneyinga Saga* tells, in the following manner: 'Olaf, Tryggvi's son, returning from a viking expedition to the west, came to the Orkneys with his men and seized Earl Sigurd in Rörvaag [in Hoy, or according to *Olaf's Saga* at Asmundarvag, also in Hoy], as he lay there with a single ship. King Olaf offered the Earl to ransom his life on condition that he should embrace the true faith and be baptized; that he should become his man and proclaim Christianity over all the Orkneys. He took his son, Hundt or Hvelp, as a hostage, and left the Orkneys for Norway, where he became King; and Hundt stayed with him some years, and died there. After that, Earl Sigurd paid no allegiance to King Olaf. He married the daughter of Malcolm, King of Scots, and their son was Earl Thorfinn; his elder sons were Sumarlidi, Brusi, and Einar.' Such was the second introduction of Christianity among the islanders. Sigurd's second marriage took place about 1006, and as Scotland was now shut against his enter-

prise, he soon began to look about for fresh fields of adventure. Thoroughly tired of the repose of his own shores, he started in 1014 to assist Brodir, a Viking Leader, against Brian Boroimc, King of Munster. On Good Friday in that year, the great battle of Christianity against Paganism was fought, and the Pagans were defeated. Sigurd no sooner tried himself to carry forward his magic banner, which brought victory to him before whom it was borne, but death to him who bore it, than he fell pierced by a spear, and so died the ablest of all the early Norse Jarls. It was in connection with this battle that the weird sisters sang that ghastly song which Gray has paraphrased in the *Fatal Sisters*, and the Norse version of which was preserved in North Ronaldsay till the latter half of the 18th century. King Malcolm gave the Earldom of Caithness to Thorfinn, then only five years of age, and Sumarlidi, Brusi, and Einar divided the Orkneys among them, but by the death of the first, and the murder of the last, Brusi obtained the whole of the islands. Thorfinn resembled his father in vigour and ambition; he commenced, at the age of fourteen, his career as a viking, and often, even during his grandfather's reign, kept the coast in fear by his daring and ruthless exploits. On the death of his two half-brothers and the succession of Brusi, he claimed a share, and ultimately got a third. When Duncan succeeded Malcolm, he claimed tribute from Thorfiuu, who refused it, and hence the war in which Duncan lost his life at the hands of Macbeth [see MORAY], and after which Thorfinn took possession of a considerable portion of Scotland, and became the most powerful of the Jarls. On the death of Brusi, his son, Rögnvald Brusison, came over from Norway and claimed his father's share of the islands, but he came to terms with Thorfinn, and there was no fighting for eight years, when the quarrel broke out afresh and Rögnvald was defeated and fled, only, however, to return in a few years and try the fortune of war again. This time he was killed, and Thorfinn thereafter held undisputed sway. In 1047 he was reconciled to King Magnus of Norway, who recognised him as Jarl of Orkney. Thereafter he visited Rome to obtain pardon for his many misdeeds, and after his return devoted the larger part of his time to the government of his dominions, his old excursions being abandoned. He died in 1064, and was succeeded by his sons, Paul and Erlend, who ruled jointly till they were deposed by King Magnus, who made his own son, Sigurd, Jarl. On Sigurd's accession to the throne of Norway in 1103, Hakon, son of Paul, and Magnus, son of Erlend, succeeded and ruled jointly till 1115, when Magnus (the St Magnus to whom the cathedral at Kirkwall is dedicated) was murdered in Egilsay. Notwithstanding this foul deed, Hakon seems to have been a good ruler. His sons, Paul and Harald, succeeded, but Harald was accidentally put to death by his mother—by a poisoned shirt, the *Saga* say, which was intended for Paul. Kali, son of Kol, who had married a sister of Magnus, now claimed half the islands, and had his claim allowed. He changed his name to Rögnvald, and was the founder of the cathedral at Kirkwall, but there was for many years after this a conflict between different claimants, whose rights or supposed rights are too complex to be here minutely detailed. The Norse line finally became extinct in 1231, with the murder of the then Jarl John.

The earldom of Caithness was then given by Alexander II. to Magnus, second son of Gilbride, Earl of Angus, who seems to have also received the earldom of Orkney from the King of Norway, but little is known of him or of his successors. One of them, Magnus III., accompanied the great expedition which King Haco assembled in the Orkneys in 1263, and survived the battle of Largs, for his death is recorded in 1273. The return of the broken-hearted Haco is noticed under KIRKWALL. This Magnus was succeeded by his son Magnus IV., who is styled Earl of Orkney in the document by which Margaret Maid of Norway was declared next heir to the Scottish throne. John and Magnus V. succeeded, and with the latter the Angus line ended.

* Another brother, Rollo, is said to have desired the post, and when his brother was preferred, he started for France, where, taking possession of Normandy, he founded the line which was by-and-by to send a sovereign to England.

His daughter had married Malise, Earl of Strathorne, who, about 1321, succeeded to the earldom in right of his wife, and his son Malise, who succeeded, was confirmed in the earldom of Orkney by the King of Norway, but he was afterwards deprived of it on suspicion of treason in 1357. In 1379 Henry St Clair or Sinclair and Malise Sparre preferred claims to it as heirs of this Malise of Stratberne. How the former was descended from, or connected with, him seems to be involved in inextricable confusion, but his title to succeed must have been sufficiently clear at the time, for in the year mentioned he was formally recognised by King Hakon of Norway. The death of Hakon shortly afterwards enabled him to become semi-independent, and he seems to have acted very much like a small king. While William Sinclair, the third of the line, held the earldom, the young King of Scotland, James III., pressed by Christian I., King of Denmark, Norway, and Sweden, for payment of a long arrear of 'the annual of Norway' for the HEBRIDES, compromised the matter by marrying Margaret, princess of Denmark, and as only 2000 crowns of her dowry of 60,000 were forthcoming in ready money at the time, he received the Orkneys in pledge for 50,000 crowns and the Shetlands for 8000 more. As the islands were never ransomed, they became thenceforth attached to Scotland. In 1470-71 the earldom of Orkney and the lordship of Shetland were, as to their 'haill richt,' purchased by James III. from the Sinclairs and annexed to the Crown, not to be alienated except in favour of a lawful son of the king. But the royal rights were somewhat involved. The power of the Bishop of Orkney, which had, since Bishop William (see KIRKWALL), grown up from littleness to grandeur under the administration of the later earls, was, to a certain extent, co-ordinate with that of the king as lord of the islands. 'The old bisshopric of Orkney was a greate thing, and lay sparsism throughout the haill parochines of Orknay and Zetland. Beside his lands, he bad ye teinds of aucteen kirks: his lands grew daily, as delinquencies increased in the countray.' Many small proprietors, too—odallers—bad heritages mixed up everywhere with the lauds of the quondam earls and with those of the bishop; and while they paid scat to the superior of the soil, they claimed to retain Norwegian customs and to be governed by Norwegian laws. Down to the death of James III. in 1488, the islands were almost entirely managed by the bishop, but in 1489 and in 1501, Henry, Lord Sinclair, obtained from James IV. leases of the earldom at the extremely low rent of £336, 13s. 4d. Scots, at which it had been leased to the bishops; and though he fell at Flodden in 1513, the property was given in successive leases to his widow, Lady Margaret, at the same rent. In 1529, the Earl of Caithness and Lord Sinclair, for what purpose is not very clear, but doubtless in some way to increase their own power and wealth, invaded Orkney at the head of an armed force, but were met by the Orkney men at Summerdale, in Stenness, and totally routed, the Earl being killed and Lord Sinclair taken prisoner. In 1530 a grant of the islands in feu was made—in defiance of the Act of annexation under James III., and also of Lady Margaret Sinclair's lease—to the Earl of Moray, the natural brother of James V., but it never yielded him any proceeds. About 1535 the islands were honoured by James V. with the only royal visit they have received from Scottish or British sovereigns. The king remained some time in the then bishop's palace, which stood on the W side of Victoria Street at Kirkwall, receiving homage and administering justice. In 1540 the favourable leases to Lady Margaret Sinclair were terminated, and Oliver Sinclair of Pitcairns—whose name is associated with the shameful Rout of Solway—became the last lessee of the Sinclair family, at, however, the advanced rent of £2000. The last of his two leases expired in 1548, and of the former greatness of the family in Orkney there now remains no trace.

The earldom of Orkney became part of the jointure of the widow of James V., and was by her placed under the administration of one Bonot, a Frenchman, and the

Earl of Huntly. How it was disposed of during the fourteen years following her death in 1560 is not known, the only records of the islands being respites and pardons for murder. In 1564 Lord Robert Stewart, a natural son of James V., received a charter granting him for an annual rent of £2000, 13s. 4d. Scots, not only the offices of Sheriff of Orkney and Fowd of Shetland, but the whole lands, whether held odally or otherwise. The grant does not seem to have been at first acted on, but Stewart, who was also commendator of Holyrood, had exchanged temporalities with the bishop, and thus united the crown and episcopal rights. In 1567, a little before Queen Mary's marriage, he had to give up his rights in favour of Bothwell, who was at the same time created Duke of Orkney, but did not long enjoy his title or domains. At the close of the same year it was debated in parliament 'quhider Orknay and Zetland sal be subject to the commone law of this realme or gif thair sal bruike thair awne lawis?—when it was found that thair ought to be subject to thair awne lawis.'

Lord Robert Stewart seems to have resumed possession after Bothwell's flight, but his heavy oppression of the people caused such an outcry, that at length he was deprived of his lordship, only, however, to receive it again in 1581, from which date he held the islands till 1587, when the grant was revoked, and they were leased to Sir John Maitland of Thirlstane and Sir Ludovick Ballantine for two years at a rent of £4000 Scots a year. In 1589 they were again granted to Lord Robert Stewart at a rent of £2073, 6s. 8d. Scots, and in 1591 they were given to him in life-tenure and to his son Patrick in fee. Lord Robert died in 1591, and his son succeeded; but a fresh outcry arising against his exactions, there was a brief resumption by the Crown. Lord Patrick, however, obtained a new charter in 1600, which, while not granting him the 'whole' lands or the 'superiority,' and binding him to administer justice according to the old laws of the country, yet concentrated in him the rights of both Crown and bishop.

Earls Robert and Patrick both aimed at destroying the odal system, and as lands so held could not be alienated without the consent of all the heirs in the Fowdra court, they so summoned and adjourned this court and filled it up with creatures of their own, that it became a mere instrument in their hands; they silenced and overawed the refractory odallers by their men-at-arms, and they employed their rights over the temporalities of the bishopric as a pretext for levying fines from such landholders as incurred any censure of the church. They thus succeeded in wresting much landed property from the rightful owners, and terrified not a few of the odal proprietors into a surrender of their peculiar privileges, an acknowledgment of feudal vassalage, and an acceptance of tenure by charter. The rent of the earldom, too, being paid chiefly in kind, they increased it by increasing the value of the weights used; raising the mark from 8 ounces to 12, and the lispnd from 12 pounds to 18. Earl Patrick even excelled his father in his despotism, compelling the people to work like slaves in carrying on buildings and other works for him, confiscating the lands of the inhabitants on the most trivial pretences, carrying off the movable goods of any one who dared to leave the islands without special permission from himself or his deputies, and—crowning display of his savage temper and avarice—ordaining that 'if any man tried to snuply or give relief to ships, or any vessel distressed by tempest, the same shall be punished in his person and fined at the Earl's pleasure.' Bishop Law, however, interfered, more because the Earl's claims clashed with his tbau from any desire for justice, and Earl Patrick was summoned to Edinburgh in 1609 and kept in prison there and at Dumbarton till 1615. In 1614 his illegitimate son, Robert, had seized the Castle of Kirkwall and the steeple of the cathedral, and held them with an armed force, but the outbreak was put down by the Earl of Caithness, and both father and son were executed at Edinburgh in 1615 on a charge of treason.

Under the pretext that a forfeiture might injure those

proprietors who had resigned their odal tenures and accepted charters, the lands of the earldom were not immediately declared forfeited, and many of the proprietors were alarmed into the measure of asking and accepting charters from the Crown in the usual feudal form; while all, fearing another taskmaster akin in character to the two last, importuned the King to annex the islands inalienably to the Crown. James VI., after thus all but completing the ruin of the odal tenures, formally annexed 'the lands of Orkney and Zetland to the Crown to remain in all time coming,' and though he admonished the people by proclamation against all fear of the islands reverting 'to their former condition of misrule, trouble, and oppression,' he made no restoration of the lands which had been unlawfully seized by the last earls, and setting up the rental of Earl Patrick as the rule for future guidance, he immediately began to let the islands out to a series of farmers-general. The people, thus oppressed without mercy, petitioned the King that no man might 'be interposed between his Majesty and them, but that they might remain his Majesty's immediate vassals.' In response to this appeal the islands were for a few years closely annexed to the Crown, but were soon again leased out as before, and subjected to such oppression as was utterly incompatible with any prosperity.

In 1643 they were, with all the regalities belonging to them, granted by Charles I. in mortgage to the Earl of Morton, but were redeemable by the Crown on payment of an alleged debt of £30,000. They were confiscated by Cromwell, but after the Restoration were again in 1662 given back to the Earl of Morton, under whose arbitrary control the Fowdra court was abolished. In 1669 they were again, by act of parliament, annexed 'for ever' to the Crown and leased out as before, but in 1707 were granted in mortgage—redeemable for £30,000, but with an annual feu-duty of £500—to James, Earl of Morton, who was appointed admiral and hereditary steward and justiciary. In 1742 the Earl, though his revenues from the islands amounted to £3000 a year, pretended that they did not yield a rental equal to the interest of the supposed mortgage, and contrived on this pretext to get an act of parliament declaring them irredeemable. On the abolition of the hereditary jurisdictions in 1747 he received compensation, but being harassed by lawsuits in connection with the weights and other matters, he sold the whole in 1766 to Sir Lawrence Dundas, afterwards Earl of Zetland, with whose descendants they still remain. The title of Earl of Orkney in the peerage of Scotland was granted in 1696, together with those of Viscount Kirkwall and Baron Dechmont to the Fitzmaurice family, who are, however, connected territorially with Wigtownshire. The bishopric lands are in possession of the Crown. The antiquities of the Orkneys are numerous and interesting, and the brochs or burghs, cairns, Picts' houses, castles, and old churches will be found noticed either under the islands or parishes in which they are. Some of the more important are treated separately.

Ormiclate, a place in South Uist island, Outer Hebrides, Inverness-shire, 4 miles S of Howmore. Cattle fairs are held at it on the third Wednesday of July and the first Wednesday of September.

Ormidale, a mansion in Kilmodan parish, Argyllshire, on the W side of Glendaruel, 7 miles N by E of Tighnabrauch. Steamers touch at a pier on Loch Riddon, a little to the S.

Ormiston, a village and a parish of W Haddingtonshire. The village stands, 274 feet above sea-level, near the left bank of the Tyne, 2½ miles SSE of Tranent, 8 WSW of Haddington, 6 ENE of Dalkeith, and 12 ESE of Edinburgh. Sir Thomas Dick Lauder described it in 1848 as 'occupying the central point of the valley, and with the red-tiled roofs of its houses rising here and there over the trees in which it is embosomed. Its main street, running ENE, with a row of trees upon either side, has the width of an English village, and from its centre arises a rude old cross, near which at the close of last century stood a pre-Reformation chapel, then used as the parish school-house. The village has now a certain air of decay about it, but in our younger days we remember that some of its best houses were inhabited by respectable persons of *demifortune*, who came here to live cheap, so that it afforded a quiet, genteel, and innocent society.' John Cockburn of Ormiston (1685-1758), the pioneer of Scottish agriculture, here founded a farmers' club in 1736, the first, it is thought, of its kind in the kingdom. In the ten years before he had also established a brewery and distillery, a linen factory, and a bleachfield, the second most likely in Scotland. These all have been long extinct; but Ormiston has a post office, with money order, savings bank, and telegraph departments, an inn, and a station on the Macmerry branch of the North British railway, and from it deviates the proposed Gifford and Garvald railway. At the east end of the village a monument to the memory of the late Dr Moffat, missionary to South Africa, who was born here, was erected in 1885 at a cost of £250, raised by public subscription. It is an obelisk of Peterhead granite, stands 20 feet high, and has a bronze alto-relievo of the missionary by D. W. Stevenson, R.S.A. Pop. (1791) 600, (1831) 335, (1861) 349, (1871) 349, (1881) 378, (1891) 555.

The parish, which since 1648 has had the barony of Peaston annexed to it from Pencilaitland, is bounded NW by Tranent, E by Peucaitland and Salton, SE by Humble, and W by Cranston in Edinburghshire. In shape resembling roughly an E, it has an utmost length from NNW to SSE of 4 miles, a varying breadth of 3 furlongs and 3 miles, and an area of 3443½ acres. The TYNE, here little more than a brook, runs 1½ mile north-eastward across the northern district and along the Cranston and Pencilaitland boundaries; Bellyford Burn, its affluent, runs 2½ miles eastward, partly on the boundaries with Trauent and Pencilaitland, partly across the NE corner; and Kiuchie Burn, its sub-affluent, traces two other parts of the Pencilaitland boundary. Sinking along the Tyne to 270 feet above sea-level, the surface thence rises gently till at Dodridge Law on the southern border it attains a height of 700 feet. The parish of Ormiston 'is English in appearance, the Tyne running slowly in a deep alluvial bed through meadows, and the fields being everywhere divided by hedgerow trees, whilst the extensive and united woods of Ormiston Hall, Woodhall, and Fountainhall form a sylvan district of so great magnitude as, when we consider the rich agricultural county in which it is situated, might almost be termed a forest.' The rocks belong to the Carboniferous Limestone series. Sandstone has been quarried, of poorish quality, for building; limestone has been largely worked in the S; coal exists in at least three workable seams, and appears to have been

mined from early times; whilst ironstone also seems to exist. The soil along the Tyne is a light loam incumbent on gravel; in tracts further back is a stiff clay incumbent on till; on both the northern and southern borders is naturally moorish; but has been greatly improved by cultivation; and on a small tract in the W is an alluvium, producing good natural grass. About 180 acres are under wood; 140 are meadow and constant pasture; and nearly all the remainder is in tillage. From the Ormes, who bequeathed their name to the parish, the lands of Ormiston passed to the Lindsays, and from them by marriage (1368) to the Cockburns, two of whom held the office of Lord Justice-Clerk in the 17th century. In 1748 John Cockburn, mentioned above, was obliged to sell the estate to the Earl of Hopetoun, with whose descendants it has since remained. Ormiston Hall, 9 furlongs S of the village, is a building of 1745, in the tea-canister style of architecture that then prevailed. By 1832 three additions had been made to it in a similar style, one canister added alongside of another; but as it has no external pretension, it gives no offence, and within is extremely comfortable. The older house, 200 yards to the W, forms part of a court of offices. Hither on a December night of 1545 the Reformer George Wishart 'passed upon foot, for it was a vehement frost. After supper he held comfortable purpose of the death of God's chosen children, and merely said, "Methink that I desire earnestly to sleep," and therewith he said, "Will we sing a psalm." Which being ended, he passed to chamber, and sooner than his common diet was passed to bed, with these words, "God grant quiet rest." Before midnight the place was beset about that none could escape to make advertisement. The Earl Bothwell came and called for the laird, and declared the purpose and said that it was but vain to make him to hold his house, for the Governor and the Cardinal with all their power were coming; but and if he would deliver the man to him, he would promise upon his honour that he should be safe, and that it should pass the power of the Cardinal to do him any harm or seath. . . . As thus promise made in the presence of God, and hands stretched out upon both the parties for observation of the promises, the said Master George was delivered to the hands of the said Earl Bothwell, who, immediately departing with him, came to ELPHINSTONE, where the Cardinal was.' So runs John Knox's narrative; and less than four months after Wishart was burnt at St Andrews. In the flower garden grows a spreading yew-tree, 18 feet in girth and 38 in height, which seems to have been a tree of mark so long ago as 1474, and still is in great vigour. An aisle of the ancient church, disused since 1696, still stands near the older house; and on Dodridge Law are remains of a circular fort. Natives were Admiral Sir William Hope-Johnstone, K.C.B. (1798-1878), and the Rev. Robert Moffat, D.D. (1797-1883), the African missionary, as already mentioned. The Earl of Hopetoun is chief proprietor. Ormiston is in the presbytery of Dalkeith and the synod of Lothian and Tweeddale; the living is worth £264. The parish church, built in 1836, is a handsome Early English edifice. A hall was opened in connection with it in 1889 at a cost of £400. There is also a Free church; and two public schools—Crossroads and Ormiston—with respective accommodation for 153 and 168 children, have an average attendance of about 95 and 160, and grants amounting to nearly £95 and £160. Valuation (1884) £7095, 17s., (1893) £6588, 11s. 5d. Pop. (1801) 766, (1831) 838, (1861) 915, (1871) 911, (1881) 1026, (1891) 1178.—*Ord. Sur.*, sh. 33, 1863. See Sir Thomas Dick Lauder's *Scottish Rivers* (1874), and John Small's *Castles and Mansions of the Lothians* (Edinb. 1833).

Ormiston. See ECKFORD.

Ormiston, a mansion in KIRKNEWTON parish, Edinburghshire, 5 furlongs WSW of Midcalder Junction on the Caledonian railway. Scottish Baronial in style, it was built in 1851 from designs by the late David Bryce, R.S.A. Its owner is William Wilkie, Esq. (b. 1857; suc. 1883), his grandfather having purchased the estate

at the beginning of the century.—*Ord. Sur.*, sh. 32, 1857.

Ormsary, a mansion in South Knapdale parish, Argyllshire, near the E shore of Loch Caolisport, 13 miles SSW of Ardrishaig. Its owner is W. F. Ord Campbell, Esq.

Ornsay or Oronsay. See ISLE-ORNSAY.

Orphir (*garpha*, 'fibrous peat'), a village and a parish in the S of Orkney. The village stands on the southern coast of Pomona, near the W end of Scapa Flow, 9 miles WSW of Kirkwall, under which it has a post office.

The parish consists mainly of a section of Pomona, but includes the island of Cava and the skerry called Barrel of Butter. The Pomona section is bounded N by Firth and Stennes, NE by Kirkwall, S by Scapa Flow, and SW and W by Hoy Sound. Its utmost length, from E to W, is 7 miles; its breadth varies between $2\frac{1}{2}$ and $3\frac{3}{4}$ miles; and the area of the entire parish is 12,762 acres. CAVA island has been separately noticed. Barrel of Butter skerry, lying $1\frac{1}{2}$ mile SSE of the nearest point of the mainland, has a curious outline, and is well known to seamen. The bold and rocky coast of the Pomona section, $13\frac{1}{2}$ miles in extent, on the S is finely indented by Houton, Myre, Swanbister, and Waulkmill Bays. Inland the surface rises gradually in a series of undulations and hills, with intersecting dales, chief elevations being Houton Head (195 feet), Veness Hill (206), and Roo Point (74) along the coast, with Gruf Hill (619) and Ward Hill (880) behind—heights that command a view of twenty-five islands and twenty-three parishes, or of most of Orkney and much of Caithness and Sutherland, besides a large expanse of the eastern and western oceans. The eastern district abounds in heathy rising-ground and peat-mosses, which furnish fuel to both Orphir and Kirkwall; and everywhere are dales which were not brought under tillage till 1818 or later, but are now in a state of high cultivation. The Loch of Kirkbister ($1\frac{3}{8} \times \frac{1}{2}$ mile; 49 feet above sea-level) contains plenty of sea and loch trout. Springs of pure water are very numerous and mostly copious; a few are chalybeate, and enjoy some local medicinal celebrity. Trap rock, suitable for building, is frequent; but sandstone of various kinds and quality predominates, and yields both pavement-flag and roofing slate. Fine white and blue clay, used for colouring hearthstones, is at Staugro; and bog iron ore is comparatively plentiful. The soil in a few places on the seaboard is a rich loam mixed with small boulders; elsewhere is mostly either clay or moss, separate or in mixture. The principal antiquities are three tumuli; remains at Swanbister of a circular tower, 180 feet in circumference, which was probably the residence of Sueno Boerstop, who was killed at the house of Jarl Paul towards the close of the 11th century; and ruins or vestiges of several pre-Reformation chapels. Claistron House, near the W coast, 17 miles W by S of Kirkwall, was the birthplace of Sir William Honyman, Bart., Lord Armadale (1756-1825), a lord of session. Other mansions are Smozrow and Swanbister. Orphir is in the presbytery of Cairston and synod of Orkney; the living is worth £167. The parish church was built in 1829, and contains 574 sittings. The Free church was rebuilt in 1885 at a cost of £1000; and Kirkbister and Orphir public schools, with respective accommodation for 85 and 103 children, have an average attendance of about 65 and 90, and grants of nearly £75 and £115. Valuation (1884) £1834, (1893) £2613, 18s. Pop. (1801) 864, (1831) 996, (1861) 1133, (1871) 1040, (1881) 1015, (1891) 1001, of whom 13 were on Cava.

Orr. See ORE.

Orrin, a stream of Urray parish, SE Ross and Cromarty, rising at an altitude of 2450 feet above sea-level, and $2\frac{1}{2}$ miles N of Loch Monar. Thence it flows 26 miles ENE, till it falls into the Conan opposite Brahan Castle, 4 miles SSW of Dingwall. During the first $3\frac{1}{2}$ miles of its course it expands into Loch na Caoidhe ($8\frac{1}{2} \times 1\frac{1}{2}$ furl.) and Am Fiar Loch ($5 \times \frac{3}{4}$ furl.; 998 feet); and lower down it traces for $3\frac{1}{2}$ miles the northern boundary of Kilmorack parish, Inverness-shire. A very fitful stream, subject to violent freshets, it chiefly

traverses a mountain glen, called after it Glen Orrin, but eventually enters the low flat lands of Strathconan, and here yields very good salmon fishing. A wooden bridge across it, behind Urray Manse, erected at the expense of Mr M'Kenzie of Seaforth, was swept away by the flood of 1839, when a stronger bridge was built at the cost of the county. A fertile tract around the confluence of the Orrin and the Conan used sometimes, for weeks or even months, to be so flooded as to present the appearance of a lake; but now, by means of drainage-works constructed in 1869, is entirely free from overflow.—*Ord. Sur.*, shs. 82, 83, 1882-81.

Orsay or **Oversay**, an islet in Kilchoman parish, Argyllshire, at the point of the Rhynns of Islay, flanking the W side of the entrance to Loch Indal, and lying 12 miles NW of the Mull of Islay. It has a lighthouse, erected in 1825 at a cost of £8056, and showing a light which flashes once in every five seconds, and is visible at the distance of 18 nautical miles. Pop. (1871) 13, (1881) 15, (1891) 9.

Orton House, a mansion in Rothes parish, Elginshire, near the left bank of the Spey, and 5 furlongs N by E of Orton Junction on the Keith and Elgin section of the Highland railway, this being 8½ miles W by N of Keith, and 9½ SE of Elgin. It is a large and handsome modern four-storey edifice, with a massive portico and finely wooded grounds. Purchased by her great-grandfather, the first Earl of Fife, about the middle of the 18th century, the estate belongs now to Miss Wharton-Duff. A beautiful Gothic mausoleum, 1¼ mile NNE of the mansion, was built in 1844. It occupies the site of St Mary's pre-Reformation chapel, connected with which was a holy well, whither multitudes flocked on the first Sunday in May.—*Ord. Sur.*, sh. 85, 1876.

Orwell, a parish of north Kinross-shire, containing the post-town and station of MILNATHORT and the village of Middleton. It is bounded N by Dunning, Forteviot, and Arngask (all in Perthshire), E by Strathmiglo (in Fife) and Portmoak, S by Loch Leven and Kinross, and W by Fossoway. Its utmost length, from E to W, is 7½ miles; its breadth varies between 2¼ and 2½ miles; and its area is 13,132½ acres. Loch LEVEN, for 1½ mile, forms the eastern part of the southern border; North Queich Water, draining all the western and south-western districts, runs 2 miles east-south-eastward along or near to the Kinross boundary to Loch Leven, and receives many little tributaries from the NW and N; and the river EDEN is formed at Burnside by head-streams from the north-eastern district. The surface of all the south-eastern district is level or diversified only with gentle swells and rising-grounds, its altitude ranging between 353 and 500 feet; beyond it rises gradually into hilly heights, the Braes of Orwell; and then, towards the northern and western borders, it suddenly shoots up into a frontier range of the Ochils, whose highest points are Warroch Hill (1133 feet), Slungie Hill (1354), Dochrie Hill (1194), and Tilliery Hill (1087). Eruptive rocks, comprising greenstone, clinkstone, amygdaloid, and porphyry, form most of the hills; and Devonian rocks, much intersected, disturbed, and contorted by trap, prevail throughout the low grounds. Red sandstone is the principal Devonian rock; grey sandstone and limestone occur near the eastern boundary; and calc spar, baryta, heulandite, laumontite, analcine, and iserine are found. The soil of the lower districts is partly loam, but principally a sandy clay, mixed here and there with till or gravel; that of the arable parts of the braes is generally a sharp good gravel, well suited for potatoes and turnips. About three-fifths of the entire area are in tillage; nearly 700 acres are under wood or in gardens; and the rest is either pastoral or waste. The chief antiquities are two standing stones on Orwell farm, remains of the vast cairn of CAIRNAVAIN among the Ochils, BURLEIGH Castle in the eastern vicinity of Milnathort, and the site of the ancient chapel of Orwell, on the shore of Loch Leven, which Robert Bruce in 1315 gave to Dunfermline Abbey. Orwell is in the presbytery of Kinross and the synod of Fife; the living is worth £203 and

manse. The parish church, a Free church, and a U.P. church are noticed in our article on MILNATHORT. Reid Memorial and the public school, with respective accommodation for 151 and 190 children, have an average attendance of about 80 and 115, and grants of nearly £75 and £105. Pop. (1801) 2036, (1831) 3005, (1861) 2399, (1871) 2248, (1881) 2031, (1891) 1852.—*Ord. Sur.*, sh. 40, 1867.

Osnaburgh. See DAIRSIDE.

Ospisdale, an old mansion, with picturesque grounds, in Creich parish, Sutherland, 6 miles W of Dornoch. Its owners are the trustees of the late John Reoch Gilchrist, Esq. By the roadside, at the foot of the fine avenue, stands a large monolith, 14 feet high.—*Ord. Sur.*, sh. 103, 1878.

Ossian or **Ouchan, Loch**. See GLENGULBIN.

Ossian's Grave. See CLACH-NA-OSSIAN.

Ossian's Hall, a summer-house in Little Dunkeld parish, Perthshire, on the left bank of the Bran, 1½ mile WSW of Dunkeld. Placed on the summit of a rock, 40 feet above a long, foaming cataract of the Bran, it is so constructed as to command a downward view of the falls from a bow window, yet entirely to hide it in the circuit of the walls. The window is fitted with a picture of Ossian on a sliding panel; and is so contrived that, while the picture engages a visitor's attention, the panel suddenly flies asunder, and discloses—

'One loud cascade in front, and lo!
A thousand like it, white as snow—
Streams on the walls, and torrent foam
As active round the hollow dome.
Illusive cataracts! of their terrors
Not stripped, nor voiceless in the mirrors,
That catch the pageant from the flood
Thundering adown a rocky wood.'

Wordsworth—the poem is his—came hither with his sister Dorothy on 8 Sept. 1803. In 1869 the 'intrusive pile' was wantonly destroyed with gunpowder, but in 1879-80 it was restored to its former condition.—*Ord. Sur.*, sh. 47, 1869.

Otterburn. See LONGFORMACUS.

Otter House, a mansion in Kilfinan parish, Cowal, Argyllshire, near the E shore of Loch Fyne, 5½ miles NW of Tighnabraich. Its owner is Gaven Rankin, Esq. Otter Ferry, across Loch Fyne, 9½ miles NNW of Tighnabraich, is 1½ mile broad, and forms the communication with Lochgilphead. At Otter Ferry there is a post office under Greenock.—*Ord. Sur.*, sh. 29, 1873.

Otterston. See DALGETY.

Otterswick, a bay on the NE side of Sanday island, Orkney. It was originally called Odinswic, and is traditionally believed to occupy the site of a wooded plain, which was overwhelmed by the sea. Opening from the NE, it looks across North Ronaldshay Firth to North Ronaldshay island; penetrates 5¼ miles south-westward, in a manner to cut the northern part of Sanday into two peninsulas; measures 4 miles across the entrance; and tapers gradually towards a point. Its shores are low, and subject to inundation in easterly gales at spring tides; and it affords safe anchorage for vessels of any size, and contains a vast abundance of shell-fish.

Ouan or **Uaine, Loch**. See MONZIEVAIRD.

Ousie or **Ussie, Loch**. See FODDERTY.

Outer Hebrides. See HEBRIDES.

Out-Skerries. See HOUSIE.

Over-Bervie. See GLENBERVIE.

Overbie. See CASTLE-O'ER.

Overlee, a farm on the White Cart, 3 miles SSE of Pollokshaws, Renfrewshire. An ancient subterranean village was discovered here about 1812.

Oversay. See ORSAY.

Overscaig Hotel, an inn in Lairg parish, Sutherland, near the NE shore of Loch Shin, towards its head, 17 miles NW of Lairg village.

Overton, an estate, with a mansion, in Avondale parish, Lanarkshire, 5 furlongs N by E of Strathaven.

Overton, a village in Dregghorn parish, Ayrshire, adjacent to the Kilmarnock and Irvine branch of the

Glasgow and South-Western railway, $3\frac{1}{2}$ miles E of Irvine. Pop. (1871) 308, (1881) 413, (1891) 381.

Overtown, an elegant modern Gothic mansion on the W border of Old Kilpatrick parish, Dumbartonshire, 2 miles ENE of Dumbarton. Its owner, John Campbell White (b. 1843; suc. 1884), was raised to the peerage of the United Kingdom in 1893 under the title of Baron Overtown of Overtown.—*Ord. Surv.*, sh. 30, 1866.

Overtown, a large village in Cambusnethan parish, Lanarkshire, near a station of its own name on the Caledonian railway, $1\frac{1}{2}$ mile SE of Wishaw, and $3\frac{1}{2}$ miles NW of Carluke. Lying amid a rich mineral country, and inhabited chiefly by workers in the mineral field, it has a post office with money order, savings bank, and telegraph departments under Wishaw, a school of the Coltness Iron Co., a Roman Catholic school, and a *quoad sacra* parish church. The latter, built in 1874-75 at a cost of over £2000, is an Early English edifice, with a bold square tower 80 feet high, and 600 sittings. The parish is in the presbytery of Hamilton and the synod of Glasgow and Ayr. Pop. (1861) 364, (1871) 1517, (1881) 1293, (1891) 1385; of *g.s.* parish (1891) 2180.—*Ord. Surv.*, sh. 23, 1865.

Oxcar, a rock in the Firth of Forth, SE of Inchcolm, with a lighthouse (1884-86) 73 feet high.

Oxenfoord Castle, a seat of the Earl of Stair, in Cranston parish, Edinburghshire, near the left bank of the river Tyne, $1\frac{1}{2}$ mile N of Ford, and 4 miles ESE of Dalkeith. Remodelled towards the close of the 18th century by Robert Adam, and subsequently much enlarged by William Burn, it is a magnificent edifice, with extensive and beautiful grounds. It contains a fine library, and portraits and paintings by Jameson, Angelica Kaufmann, Thomson of Duddingston, etc. The estate, called formerly Oxford, from 1661 till 1706 gave the title of Viscount Oxford, in the peerage of Scotland, to the family of Macgill, whose heiress, Elizabeth, in 1760 married her cousin, Sir John Dalrymple, Bart., of Cousland, a great-great-grandson of the first Viscount Stair. Their son, Sir John, in 1853 succeeded as eighth Earl of Stair.—*Ord. Surv.*, sh. 33, 1863. See LOCHINON, and John Small's *Castles and Mansions of the Lothians* (Edinb. 1883).

Oxna, an island in Tingwall parish, Shetland, $3\frac{1}{2}$ miles SW of Scalloway. It has an utmost length of $6\frac{1}{2}$ and $5\frac{1}{2}$ furlongs, and rises at Muckle Ward to 115 feet above sea-level. Pop. (1871) 29, (1881) 30, (1891) 31.

Oxnam (anc. *Oxenham*), a hamlet and a parish of SE Roxburghshire. The hamlet lies upon Oxnam Water, $4\frac{1}{2}$ miles SE of Jedburgh, the nearest town and railway station, and under which it has a post office.

The parish is bounded W and NW by Jedburgh, NE by Eckford, E by Hounam, and SE and S by Northumberland. Its utmost length, from NNW to SSE, is $10\frac{3}{4}$ miles; its utmost breadth is $5\frac{1}{2}$ miles. In order to unite the two detached portions of the parish of Jedburgh with the main portion of that parish, a part of the parish of Oxnam that abutted on these was transferred by the Boundary Commissioners in 1891 to Jedburgh; but to make up for this a part of the latter parish lying east of the Oxnam Burn was transferred to Oxnam. Oxnam Burn, rising at an altitude of 695 feet, runs $5\frac{1}{2}$ miles NW through the interior, then about 2 miles along the Jedburgh boundary; and after quitting this parish it winds 3 miles NW through the parish of CRAILING, till, after a total course of $9\frac{3}{4}$ miles and a total descent of 455 feet, it falls into the Teviot at a point $\frac{1}{2}$ mile NNE of Crailing village. From $\frac{1}{4}$ mile below its source, KALE WATER (hero Long Burn) runs $5\frac{1}{2}$ miles north-north-eastward, mainly across the south-eastern interior, but partly along the Jedburgh and Hounam boundaries. The COQUET, a stream belonging almost wholly to England, flows along the Northumberland border for the first $\frac{3}{4}$ mile of its course; a tributary of JED WATER traces 3 miles of the south-western border; and the Jed itself, after receiving that tributary, runs $2\frac{3}{4}$ miles north-north-westward along the same boundary. The surface is hilly, sinking in the extreme N to 340 feet above sea-level, and rising southward

thence to the rounded pastoral CHEVIOTS. Chief elevations, from N to S, are Bloodylaws Hill (809 feet), Cunzierton (1100), Birkenside (763), Peg Law (932), Lawsuit Law (825), Dod Hill (977), Plenderleith (1198), Hindhope Hill (1349), Brownhart Law (1664), Grindstone Law (1535), and Hungry Law (1643), of which the three last rise on or close to the English Border. Several of these heights command a magnificent view of Teviotdale and the Merse away to the German Ocean. The southern district, to the extent of one-third of all the area, is nearly filled with masses of the Cheviots, dome-like hills, smooth and green; the northern is much diversified in surface, including offshoots of the Cheviots, and abounding in ravines, picturesque defiles, and romantic dells; and the banks of Oxnam Burn are beautifully undulated, and rise into various slopes of the adjoining heights. Limestone is found near the Jed, but cannot well be worked; and sandstone, hard, white, and thought to belong to the Carboniferous formation, abounds in the S, intersected by a thick dyke of trap. Transition rocks prevail throughout the N. The soil of the arable lands is loamy, clayey, or gravelly. Less than one-sixth of the entire area is in tillage; plantations cover some 600 acres; and the rest of the land is pastoral or waste. The Cheviot breed of sheep is in great favour, and has been brought to a condition of high excellence. A weak chalybeate spring near Fairloans enjoyed once some medicinal repute, but went eventually into neglect. The Roman Watling Street from Yorkshire to the Lothians, running $7\frac{1}{2}$ miles along the eastern and north-eastern boundary, remains throughout much of its length in good preservation; is still used as a drove road; and once was a favourite camping-ground of Border Gypsies. Other antiquities are a fairly entire Caledonian stone circle, remains of another stone circle, several circular camps, vestiges of DOLPHISTON and two other mediæval fortalices, and remains of a pre-Reformation chapel. The Rev. Thomas Boston, one of the founders of the Relief Church, was minister for some time prior to 1757. Giving off a portion to Edgerston *quoad sacra* parish, Oxnam is in the presbytery of Jedburgh and the synod of Merse and Teviotdale; the living is worth £307. The parish church, built in 1738, and enlarged and restored in 1880, contains 230 sittings. A specimen of the old joughs is fixed outside the S wall. Oxnam public school, with accommodation for 130 children, has an average attendance of about 50, and a grant amounting to nearly £55. Pop. (1801) 688, (1831) 676, (1861) 627, (1871) 695, (1881) 683, (1891) 684, of whom 607 were in the ecclesiastical parish.—*Ord. Surv.*, sh. 17, 1864.

Ox Rocks, rocky islets of Kirkholm parish, Wigtownshire. See AIREs.

Oxton or **Agston**, a village in Channelkirk parish, Berwickshire, near the right bank of Leader Water, 5 miles NNW of Lauder, under which there is a post and money order office. The parish church and a public school are in the village, as also the Bovial Club and a reading-room and library.

Oykell. See OIKELL.

Oyne, a parish in Garioch district, central Aberdeenshire, having a post office, with money order and savings bank departments, also a railway telegraph office, and a station on the Huntly section of the Great North of Scotland railway, 4 miles W by N of Inveramsay Junction and $2\frac{1}{4}$ miles NW of Aberdeen. It is bounded N by Culsalmund, NE by Rayne, E by Chapel of Garioch, S by Monymusk, W by Keig and Premnay, and NW by Insch. Its utmost length, from N to S, is $6\frac{1}{2}$ miles; its breadth varies between $1\frac{1}{2}$ and $3\frac{1}{2}$ miles; and its area is 10,141 acres, of which $10\frac{1}{2}$ are water. The DON flows $2\frac{1}{2}$ miles east-south-eastward along the southern, the URY 3 miles south-eastward along the north-eastern boundary; and to the Ury run the Burn of Shevock along the Culsalmund border, and GADIE Burn across the interior. The surface sinks along the Don to 300, along the Ury to 283 feet; and thence it rises to 415 feet at the parish church, 558 at Ardoyne, 1698 at the Mither

Tap of BENNOCHIE, and 1340 at Millstone Hill. Bennochie, parting the Gadie's valley from the Don's, and occupying close upon half of the entire area, forms a stupendous barrier between the northern and the southern district, the former of which has the richest soil, and contains four-fifths of the population. Granite is the predominant rock, and has been quarried; trap of hard texture and a deep blue hue is used for dykes and ordinary masonry; and rock crystal, topaz, jasper, and shorl are found. The soil of the low grounds is mostly friable and fertile; on the slopes of Bennochie is much mixed with granite *débris*; and on the higher parts of the mountain is heath or moss, which here and there gives place to deep bog, furnishing supplies of peat-fuel to several neighbouring parishes. Nearly 3000 acres

are in tillage; about 1850 are under wood; and the rest of the surface is either pastoral or waste. Antiquities are three stones with Runic sculptures and the ruins of HARTHILL Castle. The historian John Leslie (1526-96), who afterwards was Bishop of Ross, became parson of Oyne in 1559. PITMEDDEN, PITTOBRIE, TILLYFOUR, and WEST HALL are mansions. Oyne is in the presbytery of Garioch and the synod of Aberdeen; the living is worth £221. The parish church, built in 1807, stands conspicuously on an eminence $1\frac{1}{2}$ mile E by S of the station. There is also a Free church; and a public school, with accommodation for 150 children, has an average attendance of about 110, and a grant of over £120. Pop. (1801) 518, (1831) 796, (1861) 1127, (1871) 1050, (1881) 962, (1891) 883.—*Ord. Sur.*, sh. 76, 1874.

P

PABA or Pabaidh, an island of Uig parish, in West Loch Roag, Outer Hebrides, Ross and Cromarty, $\frac{1}{4}$ mile from the nearest point of the W coast of Lewis. With an utmost length and breadth of 1 mile and 5 furlongs, it rises to a height of 100 feet, and contains two fresh-water lakelets.—*Ord. Sur.*, sh. 104, 1858.

Pabba, an islet of Strath parish, Skye island, Inverness-shire, at the entrance of Broadford Bay, $2\frac{1}{2}$ miles SE of Sealpa. With a somewhat circular outline, about a mile in diameter, it is surrounded by low reefs encroaching on its shores, and forms a flat plateau 89 feet high, the ascent to which is abrupt and mural on the SE, but gentle on the NW. It consists chiefly of limestone, but partly of micaceous shale and partly of interspersed trap; and contains remains of a small chapel. Pop. (1871) 6, (1881) 10, (1891) 7.

Pabbay, an island in Barra parish, Outer Hebrides, Inverness-shire, $1\frac{3}{4}$ mile NNE of Mingala, $2\frac{1}{2}$ miles SSW of Sandera, and $6\frac{1}{2}$ S of Barra island. With a length of nearly $1\frac{1}{2}$ mile and an utmost breadth of 1 mile, it chiefly consists of a gneiss hill, rising to a height of 800 feet above sea-level, and presents a somewhat precipitous face to the W. Pop. (1871) 24, (1881) 26, (1891) 13.

Pabbay, an island in Harris parish, Outer Hebrides, Inverness-shire, $2\frac{1}{4}$ miles W of Cape Difficulty, and $3\frac{1}{2}$ N of Bernera. With a length of $2\frac{1}{2}$ miles from E to W, and a width of $1\frac{1}{2}$ mile from N to S, it rises to an altitude of 1000 feet above sea-level; and as seen from a distance presents a conical outline. It formerly grew very fine crops of corn, but it has in a great degree been rendered barren and desolate. Sand-drift has overwhelmed its SE side; the spray from the Atlantic almost totally prevents vegetation in the NW; and only on the SW, where it is sheltered by Bernera, does the island retain anything like its former fertility. Pop. (1841) 333, (1861) 21, (1871) 8, (1881) 2, (1891) 3.

Padanaram, a village, with a public school, in Kirriemuir parish, Forfarshire, 2 miles W by N of Forfar, under which it has a post office.

Paisley, a large parliamentary burgh in the Upper Ward of Renfrewshire and in the NE part of the county. It is a seat of important manufactures, a river port, the political capital of the Upper Ward, and the sixth most populous town in Scotland. It stands on both banks of the river White Cart, about 3 miles from its junction with the Clyde, and is in the Abbey parish of Paisley, which has been already noticed. Paisley has been greatly improved and extended in the last quarter of the 19th century. In the east end of the town especially great extensions have been effected, while in the north, south, and west much advance has also been made. The town has a railway station, with separate platforms for the Caledonian and the Glasgow and South-Western railway companies, and by rail is 3 miles SSW of Renfrew, 3 E by N of Johnstone, 7 W by S of Glasgow, 16 ESE of Greenock, and $33\frac{1}{2}$ NNE of Ayr. On the Caledonian

railway St James' station accommodates the district to the W. The South-Western has two lines running from Glasgow to Paisley, one with Gilmour Street station on the Main line, and the Canal line with two stations, Hawkhead and Canal. A new station has been erected at Corsebar Junction, also a new west-end station. There are two branch lines—one to Renfrew, and the other to Potterhill, with a station close to Gleniffer Braes. Part of the site of the burgh is a gentle hilly ridge extending westward from the Cart; part is the N side of a similar ridge running parallel on the S, and the rest is partly low ground lying between and around these ridges on the W bank of the river, and partly an expanse of level ground lying along the E bank. There is good scenery around the town; and from the rising grounds to the southward good views of the valley of the Clyde, the Kilpatrick Hills and some of the Grampians, of the valley of the Gryfe, and of Gleniffer Braes and many of the scenes of Tannahill's poems, may be obtained.

The municipal and parliamentary boundary begins on the NW between Candren and East Candren, and passes southward along Candren Burn to North Braidland; from that ESE to Potterhill, thence NE to beyond Bathgo Hill (135 feet), and from that north-westward to Knock Hill* (84) on the extreme end, whence it strikes back to the starting point. The distance in a straight line from Bathgo Hill on the E to Braidland on the W is 3 miles, and from Knock Hill on the N to Potterhill on the S is $2\frac{1}{2}$ miles, but a portion of the area is not built on. The town proper consists of the old town, the new town, and a number of suburbs. The old town occupies the chief ridge westward of the Cart, and covers an area of about a mile square. The new town, which stands on the E side of the river, includes the Abbey buildings, and occupies the ground formerly used as the Abbey gardens. It was founded in 1779 by the eighth Earl of Abercorn, and the streets are pretty regularly laid out. The suburbs of Charleston, Lylesland, and Dovesland form an addition to the S of the old town; Maxwellton, Ferguslie, and Millerston form a long straggling extension to the W. Williamsburgh forms a small extension to the E of the new town, and there are other suburbs at Carriagehill, Castle Head, Meikleriggs, and Mossvale. The streets at Walneuk and Smithhills to the W of the new town were in existence before it, and Seedhills is so old as to have belonged to the original burgh. The straggling nature of the town causes it to occupy more ground than corresponds with the population. The main line of streets runs from E to W along the road from Glasgow by Johnstone to

* Knock Hill is the traditional spot where Marjory Bruce, wife of Walter the High Steward of Scotland, was thrown from her horse and killed (1316); and till 1779 there were remains of a pillar or cross, said to have been erected to mark the place, and known as Queen Bleary's Cross, although Marjory never was Queen, and Blear-eye was the name given to her son, afterwards Robert II., and not to herself. The monument was destroyed in the year just mentioned by a farmer, who used the pillar as a door lintel and the stones of the supporting steps to repair a fence.

Ayrshire, and the line from E to W bears the name of Glasgow Road, Garthland Street, Gauze Street, Smith-hills Street, The Cross, High Street, Well Meadow Street, and Broomlands Street; beyond which is Ferguslie, and further W Elderslie, Thorn, and Johnstone. From the Cross the old irregular Causewayside Street strikes south-south-westward, and from it a long straight street, George Street, passes westward to Broomlands Street. The main cross connection between George Street and Causewayside Street is Canal Street. Below the railway station is County Place, and to the N of the line opposite the station is Old Sneddon Street, from the W end of which Back Sneddon Street (E), Love Street (centre), and St James Street and Caledonia Street along the Greenock Road (W) all branch off. Many of the streets of the new town are named from the fabrics used in the manufactures of the town. The streets of the old town are narrow, and still contain many of the old houses of the 17th and 18th centuries, but changes in this respect are rapidly taking place, as may be seen in the widening of High Street and the many new buildings recently erected or still being built along it. On the rising-ground to the S there are a number of detached villas. To the N of the main line of streets is the railway, elevated above the level of the streets. Until the line approaches the station it is used by both the Caledonian and Glasgow and South-Western companies, when it branches off, the Caledonian passing north-westward towards Greenock, and the Glasgow and South-Western west-south-westward, till near Elderslie it sends off a branch north-westward to Greenock, while the main line passes on to Ayrshire. The Glasgow, Paisley, and Johnstone Canal, after having lost a large portion of its trade, was in 1883-85 converted into a railway by the Glasgow and South-Western company. In its palmy days the canal is said to have carried over 300,000 passengers a year in its light passenger boats. So late as 1814 the only carriage communication with Glasgow was by a coach, which conveyed the cotton-spinners and yarn merchants to town once a week on the mornings of market days, and brought them home in the evening.

History.—The derivation of the name is somewhat doubtful. The older forms are Passelet, Passeleth, and Passelay, for which the conjectural derivations have been given of 'the moist pasture-land,' from the British *Pasgel-lath*, or 'the flat stone shoal,' from the British *Bas-lech* or the Gaelic *Bas-leac*, the latter derivation having reference to the ledge of rock running across the channel of the White Cart near the town. In the 16th century the name was changed into Paslay and Pasley, and in the course of the 18th century it took its present form. Paisley was till very recently looked on as the site of the Roman station of Vanduara, properly Vandogara, mentioned by Ptolemy, the identification resting mainly on the resemblance of the name of the station to the British *Gwen-dwr* or 'white water,' which was supposed to have been the name then given to the White Cart. Principal Dunlop, writing in the end of the 17th century, and Crawford, who published his history of Renfrewshire in 1710, both describe Roman remains in the neighbourhood. Principal Dunlop says:—'At Paisley there is a large Roman camp to be seen. The prætorium or innermost part of the camp is on the west end of a rising-ground, or little hill, called Cap Shawhead, on the south-east descent of which hill standeth the town of Paisley. The prætorium is not very large, but hath been well fortified with three fosses and dykes of earth, which must have been large, when to this day their vestiges are so great that men on horseback will not see over them. The camp itself hath been great and large, it comprehending the whole hill. There are vestiges, on the north side, of the fosses and dyke, whereby it appears that the camp reached to the river Cart. On the north side the dyke goeth alongst the foot of the hill; and if we allow it to have gone so far on the other side, it hath enclosed all the space of ground on which the town of Paisley stands, and it may be guessed to be about a mile in compass. Its situation was both strong and pleasant, overlooking the whole

country. I have not heard that any have been so curious as to dig the ground into this prætorium; but when they tread upon it it gives a sound as if it were hollow below, where belike there are some of their vaults. Near to this camp, about a quarter of a mile, stand two other rises or little hills, the one to the west, the other to the south, which with this make almost a triangular form, where have been stations for the outer guards. The vestiges of these appear and make them little larger than the prætorium of the other camp of the same form, without any other fortification than a fosse and a dyke.' The large camp must have been at Oakshawhead, and the outposts at Woodside and Castle Head, but the extension of the town has now obliterated the traces of them. Gordon, in 1725, traced a military road from the great Clydesdale Road at Glasgow, across the Clyde by a ford that remained till 1772, and on to Paisley. In his *Celtic Scotland*, published in 1876 (Vol. i., p. 73), Dr Skene combats the old view, objecting to the *Gwen-dwr* theory on the principle that rivers do not change their names, and also giving reasons for thinking that Vandogara was at Loudon Hill, on the river Irvine in Ayrshire; and so the matter rests.

The first authentic reference to the present place must, therefore, be supposed to be in 1157, when King Malcolm IV. granted a charter in favour of Walter, the son of Alan, High Steward of Scotland, confirming a gift (not now extant) of certain extensive possessions, which King David had conferred on Walter. Lands called Passeleth formed part of those specified in the grant; and on these lands, on the E bank of the river, Walter founded the famous Abbey of Paisley. No village appears to have been on the lands when the monastery was founded, but the opposite bank was soon occupied by one inhabited by the retainers and 'kindly tenants' of the monks, to whom it belonged. Under the fostering care of the church, and belonging to an abbey specially favoured by the Bruces and Stewarts, it must have thriven, and towards the end of the 15th century it had an opportunity of thriving still more, for Abbot Shaw, who had sided with the rebellious nobles against James III., obtained from the new government in 1488 a charter creating the village of Paisley a free burgh of barony, with 'the full and free liberty of buying and selling in the said burgh, wire, wax, woollen and linen cloths, wholesale or retail, and all other goods and wares coming to it; with power and liberty of having and holding in the same place, bakers, brewers, butchers, and sellers both of flesh and fish, and workmen in the several crafts, . . . likewise to possess a cross and market for ever, every week, on Monday, and two public fairs yearly, for ever; namely one on the day of St Mirren, and the other on the day of St Marnoch;' and in 1490 the abbot and chapter granted to the magistrates of the burgh in feu-farm the ground on which the old town stands, and certain other privileges. The neighbouring burgh of Renfrew, to which the Paisley people had formerly been subject, looked on all this as an invasion of its privileges, and entered into a series of quarrels with the new burgh, and even went the length of violently seizing goods exposed for sale in order to compel payment of customs. The result of a lawsuit was a decision in favour of the magistrates of Paisley, given, however, on the ground that that town lay within the regality of the abbey, and was not therefore included in the charter granted to Renfrew in 1396, as the regality grant to the abbey was of prior date to that given to the burgh. This settled the matter, and the town remained subject to the abbot, and after the Reformation to the commendator till 1658, when the magistrates purchased the superiority of the town and other privileges from William Lord Cochrane, who was then Lord of Paisley. In 1665 they obtained a royal charter confirming the burgh in its lands and privileges, and in 1690 an act of parliament to allow them to hold two additional fairs. From this time, Paisley, holding directly of the Crown, has had practically all the privileges of a royal burgh, except that down to the passing of the Reform Bill of 1832 it had no direct parliamentary

representation. In 1489 King James IV. in the course of his military operations visited the town, and he was here again in 1504 and 1507. It was at Paisley that the Lords of the Congregation assembled in 1565, but on the appearance of the royal troops at Glasgow they moved off to Hamilton. In 1597 there was expectation of a visit from the Queen, and in 1617 James VI. himself made his appearance at the abbey, where he was hospitably entertained; but there is a local tradition that 'the bailies supplicated his Majesty not to enter into their bounds, their common *burse* being then so miserably reduced that they could not entertain him with that sumptuousness befitting their respective estates.' The next visit of a member of the royal family was that paid by the late Duke of Albany, when at Blythswood House, in 1875. Queen Victoria visited Paisley in August 1888, when its fourth anniversary as a burgh was being celebrated, and received a most loyal reception. In 1588 and again in 1602 the town suffered severely from the plague; and the gates, of which there were then five—one at the bridge, one at the foot of St Mirren Street, one in High Street, one in Moss Street, and one in the School Wynd—were guarded with great vigilance, while no person was allowed to admit any one into the town by the gardens behind the houses. There was another outbreak of plague in 1645. In 1649 the town seems to have furnished a troop of horse for service in the army that was defeated at Dunbar, and subsequently the magistrates again provided six troopers for service against the English—proceedings which procured for the inhabitants the presence of a garrison of Cromwellian soldiers, whose support seems to have been felt as a very heavy burden. Paisley does not seem to have suffered so much as other places in the west during the Covenanting troubles, but the Cross was the scene in 1685 of the death of two farmers named Algie and Park from the neighbouring parish of Eastwood, who were executed for refusing to take the oath of abjuration. They were buried at the Gallowgreen, near the foot of Maxwellton Street; but when it was to be built on in 1779, their remains were removed to Broomlands burying-ground, which now forms part of the cemetery, and an obelisk was there erected to their memory in 1835. Between 1677 and 1697 a considerable number of reputed witches were executed, but none of the cases, except that afterwards alluded to, are of any general note. With the rest of the west the district hailed the Revolution of 1688 with great eagerness, and furnished its quota to the Renfrewshire men who went to Edinburgh to support the Convention. There is no record of the behaviour of the burgh in connection with the Union in 1707, but in 1715 we find a number of the townsmen binding themselves to raise and maintain a body of men because 'considering the imminent danger we are in from the threatened invasion of the Pretender, and the danger from many within our own bosoms that are to join with him, . . . it lies upon all honest men as their indispensable duty to provide tynously for the defence of our Sovereign and our own sacred and civile interests.' In August of the same year a guard of 20 men was set every night, two flags were purchased, and a number of muskets, and 20 men were sent to the Duke of Argyll at Stirling, and one hundred and twenty Paisley Volunteers also joined the expedition against the Macgregors [see LOCH LOMOND]. During the Rebellion of 1745 Paisley raised a company of militia to aid the Hanoverian forces, and was in consequence fined £1000 by Prince Charles Edward when he was at Glasgow, £500 of which was paid. From this time till 1819 the history of the town is connected with the development of trade, but in that year a body of Chartists from Glasgow, who had been attending a great reform meeting at Meiklerigg Moor, attempted to march through the town with flags, contrary to an order of the magistrates. The police interfered, and serious rioting ensued, lasting for several days. The Paisley Chartists took an active part in the Unions and in the intended rising on 1 April 1820, and many of them had in consequence to flee to America. Except the outbreaks of cholera in 1832, 1834, and 1848,

and the troubles thereby occasioned, the subsequent history of the place may be said to be trading and municipal.

The town is the 'Greysley' of Alexander Smith's story of *Alfred Hagart's Household*, where the town, as it appeared about 1840, and as in some respects it still appears, is described.

Manufactures and Trade.—The grant of erection of Paisley as a burgh of barony is interesting, as giving us some knowledge of the commoner articles then bought and sold in the place, but we have little more indication of them till the close of the 17th century. In 1695 the population is given as 2200, and about the same time Principal Dunlop tells us in his *Description of Renfrewshire* that by the river 'boats came to Paisley with Highland timber and slates—6000 in a boat—fish of all sorts, and return with coal and lime.' There must too have been manufactures by this time, for Crawford, whose *History of Renfrewshire* was published in 1710, says that 'This burgh has a weekly mercat on Thursday, where there is store of provisions. But that which renders this place considerable is its trade of linen and muslin, where there is a great weekly sale in its mercats of those sorts of cloath; many of the inhabitants being chiefly employed in that sort of manufactory.' About the same time Hamilton of Wishaw described Paisley as 'a very pleasant and well-built little town; plentifully provided with all sorts of grain, fruits, coalls, peats, fishes, and what else is proper for the comfortable use of man, or can be expected in any other place of the kingdom.' The town then consisted of one principal street (High Street), about half a mile in length, with a few lanes branching off from it.

The free-trade with England opened up by the Union in 1707 tended to develop the manufactures, and considerable quantities of imitation striped muslin and linen checks called Bengals were made and disposed of, the latter, however, only in small quantities. By 1730, when the first disastrous effects of the Union had passed off, and the benefit of the free-trade with England and the Colonies had begun to be felt, the linen trade increased greatly, and the maker, instead of selling to wholesale merchants in Glasgow, began to make journeys into England on his own account; while the manufacture of handkerchiefs was mostly replaced by that of goods of lighter texture, some of them plain lawns, others striped with cotton, and others richly figured. This manufacture had, for 1786, a value of £165,000, but it is now extinct. The manufacture of white sewing thread made from linen yarn and known as 'ounce' or 'nuns thread' was introduced in 1722 by Christian Shaw, famous for her connection with the Renfrewshire witches [see BARGARRAN], and Paisley soon became the chief seat of its production. By 1744 there were 93 thread mills, and by 1791 137 mills turning out goods valued at £60,000 a year, a sum which was afterwards exceeded. Through the action of competition, however, and the introduction of cotton thread, it fell off almost as rapidly as it had risen, and by 1812 Paisley had only 12 mills fully at work making linen thread alone. As, however, the use of linen fell off, that of cotton grew, and the manufacture of cotton thread is now one of the staple industries of the place, giving employment to over 5000 persons. About the middle of the 18th century a considerable amount of linen gauze was manufactured, and in 1759 a beginning was made with silk gauze in imitation of that of Spitalfields. The success of this new departure exceeded all expectation, and being vigorously prosecuted, the whole silk-gauze trade was soon centred here, and considerable quantities of goods sent not only to England and Ireland, but also to the Continent. Within the next twenty years silk-gauzes had become the chief manufacture, not only in Paisley but also in Renfrewshire, and this state of matters lasted till 1784, when changes in fashion led to a rapid falling off, very soon ending in the total extinction of the trade for some time. It revived in 1819, but has again declined, and is almost extinct. During the decay of this trade after 1784 the manufacture of

muslins was set agoing as a substitute for it, but after a short time of prosperity it too fell off by the removal to Glasgow of the principal manufacturers engaged in it. It is, however, still carried on in one or two establishments.

The manufacture of the shawls known as Paisley shawls, for which the town had long been celebrated, was introduced during the best period of the muslin trade, and though at first limited and confined to the manufacture of soft silk shawls, it at length outstripped the muslin, and, branching out in various lines, became for many years one of the leading industries of the town. In consequence, however, of the change of fashion, Paisley plaids are not now worn, and the trade is consequently not in its former thriving condition. Imitations of India shawls were made in soft silk, in spun silk, in cotton, and in mixtures of the three. Ladies' dresses also were made of the same materials, in the same style of raised work on white grounds with small figured spots. Imitations, likewise, were made in silk of the striped scarfs and turbans worn by the natives of oriental countries, and called zebras. Closer imitations of real India or Cashmere shawls were next produced from mixtures of fine wool and silk waste. Yet notwithstanding the energy and enterprise displayed, the Paisley manufacturers found to their great astonishment that France could produce shawls superior in quality to those of home manufacture, a result obtained by the use of genuine Cashmere wools. Thus set on their mettle, the home producers also imported their wool, much of it in the form of yarn, while the improved Jacquard loom enabled them to turn out better work. Much cloth, also, for Cashmere shawls and plaids was imported from France and from England merely to be filled up and finished in Paisley. The patterns of the Paisley shawls were contrived with reference to the best patterns of India and France, but with individually characteristic details. Besides these, there are several very extensive starch and corn-flour works, bleach works, machine works, chemical works, soap works, dyo works, print works, brick works, preserves works, a brewery, a distillery, shipbuilding yards, and the extensive works of Doulton & Co.

Between 1786 and 1791 the Cart was rendered navigable for ships drawing not more than 5 feet of water; and between 1835 and 1842 attempts were made to deepen and improve it still farther, at a cost of over £20,000, but not very successfully, a reef of rocks across the bed of the river preventing any great depth from being reached. A scheme for the further improvement and deepening of the river was begun in 1885, when borrowing powers for £100,000 were obtained from Parliament, and since then commodious quays have been erected and the river made navigable for vessels drawing 15 feet of water. Further works are in progress, and it has been decided to provide railway connections, &c. Between 1838 and 1844 shipbuilding was vigorously carried on, the swiftest river steamers then on the Clyde having been built at Paisley; and for the Cart must be claimed the honour of having definitely settled the advantage of iron over wood in the construction of ships. The Cart Trust consists of 6 representatives from the town council and 3 from the ratepayers, including a chairman and a deputy-chairman.

As in all weaving towns, the fluctuations of trade and the consequent disastrous change in the condition of the working-people connected with the manufactures have been very great. The causes may be inferred from what has been said as to the changes in the industries. So many persons were thrown out of employment about 1840 that for a considerable time nearly one-third of the entire population became dependent on public charity, and the depression continued so long and looked so hopeless that many of the artisans emigrated. The number of inhabited houses in 1841 was 10,133, and in 1846 only 9694, showing a decrease of 439, which must have represented about 2000 persons, and in 1847 and 1849 the mortality rose from fever and cholera to nearly 1000 above the average. The whole state of the weavers

and the weaving trade has, too, since then been almost totally changed by the introduction of steam-power and of large factories. 'Previous to 1818,' says Mr David Gilmour, 'when the shawl branch of our local industry was in its infancy, so to speak, both weavers and their boy-helpers must have had comparatively easy lives; but onward for many years, so long, indeed, as the weavers remained masters—for latterly the boys ruled *them*—things assumed a very different aspect. As the shawl trade waxed, the trade in silk, gauze, and other fine fabrics waned; and the manners and general bearing of those engaged appeared to me then, and still appear to my mind, as different as the goods they manipulated. At the date just named, the inhabitants numbered 34,800, of whom there were from 6000 to 7000 weavers, and of these not fewer than from 4000 to 5000 required the assistance of a drawboy; now [1874], when the population has reached 50,000, the weaving body is reduced to 1750, only 750 of whom are on the electors' roll, and there is not one drawboy in town. New industries, steam-power, and the Jacquard machine have all contributed to the changed character of the people—in some respects for the better, and in others for the worse. In old times every weaver, being his own master, came and went at his convenience; when he took a day's pleasure—fishing, curling, bowling, or berrying, as the case may happen—he made up work for it before or after, as pleased him; the loom was his own property; and he was answerable to his employer only. The introduction of the Jacquard has changed that condition of the weaver entirely. With only 1750 looms in town, there are not, I presume, over 750 owners of looms, all the other hands being but "journeymen," who are not responsible to the manufacturers but only to the master weaver. With the loss of social standing, the old spirit of independence and much of the greedy intellectual research have vanished; what these have been replaced by I will leave others to name and designate. Handloom weaving factories have no doubt done much to destroy that peculiar individuality of character for which the class was noted, when the town was one huge weaving factory of master weavers, and the well-being and comfort of the whole population were directly or indirectly dependent on the produce of the "shuttle e'e." The picture had its shade as well as its sun, however. When trade failed, which from its fancy nature and other causes it did frequently, want and its accompanying wail were all but universal; it was only the provident that escaped destitution. Many of these having saved some money were induced to feu a piece of ground, and had a house built for themselves, which, from ever-recurring stagnations of trade, fell into the hands of the superior. At this day not one of whole streets of houses built from the savings of weavers remain in the possession of the original feuars or their descendants.'

Of a total population in 1891 of 66,425, no fewer than 14,806 males and 10,152 females were engaged in industrial handicrafts, or were dealers in manufactured substances, and of these 3008 males and 7453 females were connected with work in textile fabrics. Of these, 610 men and 118 women were connected with the manufacture of wool, 17 men and 25 women with that of silk, 539 men and 5144 women with the manufacture of cotton and linen (including thread), and of these totals, 373 men and 4468 women were connected with thread works alone; while 1718 men and 2015 women were undefined weavers, factory hands, scourers, dyers, etc., of whom 206 men and 1139 women were factory hands—and 35 men and 51 women were connected with the manufacture of fancy goods, tapestry, etc.

Public Buildings, etc.—The Municipal Buildings, formerly the County Buildings, which stand along the side of an open area in the centre of the town, were built in 1818 at a cost of about £23,000, and enlarged about 1850 at a cost of £10,000. They form a quadrangular castellated pile, with projecting hexagonal turrets on the front. The new County Buildings, Italian in style and opened in 1890, are situated in St James Street, and cost about £25,000. They contain the county hall, with

committee rooms and sundry other apartments for the various county officials, police cells, and justice of peace court hall. The Sheriff Court House, in the same street, and contiguous to the new County Buildings, forms another magnificent edifice in the Italian style, and was opened in 1885, having cost about £15,000. The court hall can accommodate about 300 persons. The Post Office, in County Square, was opened in 1893, and took the place of that in St Mirren Street. Its style of architecture is Tudor or Domestic Gothic, which has been adopted so as to have the office in harmony with the Municipal Buildings and those of the Joint-line station. From ground floor to the ridge of the roof the height is 40 feet. The public office, on the ground floor, is 40 feet long by 20 wide, and 15 feet from floor to ceiling. The sorting room, immediately behind this, is 57 by 25 feet, and is lighted from the roof. The telegraph room is on the floor above the public office. When the late premises were opened in 1876 there were 6 clerks and 17 postmen; on the opening of the present premises, 17 clerks and 59 postmen. The Central (Gilmour Street) railway station, which has been entirely reconstructed, possessing separate platforms with distinct lines for the Caledonian and Glasgow and South-Western railways, is close to the Municipal Buildings. The platform is, as has been already noticed, high above the level of the town streets. The George A. Clark Town Hall, one of the most magnificent halls in Scotland, was erected in the New Town from a bequest of the late George A. Clark of New Jersey, connected with the firm of J. & J. Clark, thread manufacturers, who left £20,000 for the purpose—the difference between this sum and the actual cost of the hall (£100,000) having been subscribed by the three surviving brothers of the Clark family, and the organ, a splendid instrument costing £3500, erected at the expense of the venerable mother of the family. The hall was designed by Mr Lynn of Belfast; and its foundation stone, at the corner of Abbey Close and Smithhills Street, was laid in October 1879. The main front to Abbey Close somewhat resembles St George's Hall, Liverpool, and shows a pediment with six Corinthian columns, each 30 feet high, over massive square piers, between which are the entrances. On the N side is a small portico with Ionic pillars. Rising above the side next the river are two square towers, of which that to the N contains a clock and bells, and that to the S is used as a ventilating shaft. The large hall indicated by the chief portico has floor space of 80 by 60 feet, and the total space is 130 by 60 feet. It is seated for 2000 persons, and has galleries, cloak-rooms, orchestra, etc. The organ is in a richly-carved oak case, designed in the Ionic style, and measuring 45 feet high, 32 wide, and 15 deep. There are 49 sounding stops and 11 couplers, and the instrument is remarkable for its balance of tone. The N portico indicates a smaller hall, with accommodation for 300 persons. The clock in the N tower is a very fine one, with a double gravity escapement, and the quarter-hours and hours are chimed and struck on a peal of six bells with the notes D, C, B flat, F flat, F, and E flat, the last weighing 20 cwts. and being used for striking the hours. There is also a carillon of bells, with the notes F, E flat, D, D flat, C, B flat, A flat, G, F, and E flat, which ring a different tune for each day of the month. They are played by keys, and are the finest in Scotland. The statues in the niches of the bell tower represent the seasons. They were executed by Mr James Young, Glasgow. The hall was opened on 30 Jan. 1882 amid great rejoicings, and the smoking and reading-rooms, which are on the S side, on 20 June of the same year. In close proximity to the hall is a bronze statue (1885), by Mr John Mossman, of its founder. The Free Public Library and Museum, on the N side of High Street, was erected in 1869-71, at a cost of over £15,000, the whole expense of the building having been defrayed by the late Sir Peter Coats, on condition that the town adopted the Free Libraries Act. In 1877 a large collection illustrative of the natural history and manufactures of India was presented to the museum by Mr R. M. Adam of Agra,

and a large addition had to be made to the museum, Sir Peter Coats giving the additional ground required, and also ultimately the sum needed for the new building; while his brother, the late Mr Thomas Coats of Ferguslie, undertook the erection of portions behind the main structure to be used as an observatory, entrance by Oakshaw Street. Opened in 1883, it contains an excellent transit instrument, a good telescope, and other appliances. It is under the management of the Philosophical Society, and is open to strangers on any day by ticket obtainable from a member of the Society, and to the people of Paisley thrice a week at a small charge. The structure is Ionic in style, with a tetrastyle portico and wings. The principal entrance is from High Street, and is reached by a flight of steps leading to an entrance hall, and the other portions of the building contain a lecture hall (50 by 35 feet), a reading-room and library, a museum, a picture gallery, a reference library, and committee and cloak rooms. The reading-room and library contain about 20,000 volumes, of which over 9000 were received from the old Paisley library established in 1802, while the reference library contains nearly 10,000 volumes. The nucleus of the contents of the museum and over 5000 of the books in this valuable reference library were presented by the Paisley Philosophical Society, which was originally established in 1808. Other public buildings are the Baths, the Good Templars' Hall (1881), the Masonic Hall (1883), the Liberal Club, the Conservative Club (1880), the Neilson Institution (1852), and the Drill Hall. The Barracks in the suburb of Williamsburgh, to the E of the town, on the S side of the Glasgow road, erected in 1822, and with accommodation for a battalion of infantry, are now disused and empty. On the opposite side of the road are the militia barracks. The Coffee-room buildings at the Cross, erected in 1809, Ionic in style, are now occupied by the Savings Bank. The Exchange Buildings on the E side of Moss Street, erected in 1837, and occupying the site of a former flesh market, are now partly used as a theatre. The Infirmary, in Bridge Street, dates from 1784, but the present building was erected about 1850. There is a dispensary attached. The new infirmary at Calside, Neilston Road, was built in 1896-97. Towards its erection a sum of £15,000 was given by the trustees of the late W. B. Barbour, formerly M.P. for the burgh. In connection with the new infirmary a Nurses' Home, to accommodate thirty inmates, was presented by Peter Coats, jun., Esq., its cost to be £10,000. Gleniffer Home for incurables is at Corsebar Road. The poorhouse for ABBEY parish, about a mile SSW of the town near Riccartbar, is an Elizabethan structure (1850), with buildings disposed round two courts, and with accommodation for 655 inmates. Beside it is the parochial lunatic asylum, which has accommodation for 98 inmates; and further W is the burgh lunatic asylum, erected in 1876. This has a main building of T shape, with a large entrance-hall and kitchen, dining-hall, etc., in the central portion. The wards for male and female patients are on each side, and the engine-house, washing-house and laundry, are behind the main building. The cost, exclusive of site, was £12,500, and there is accommodation for 203 patients. Paisley Burgh Poorhouse has accommodation for 283 inmates. The Cemetery, laid out in 1845, is on Woodside ridge in the Old Town, and includes the old Broomlands churchyard, which was laid out about 1779. It is beautifully situated and laid out, and contains some good monuments, including that to Algie and Park already noticed; one erected by public subscription in 1867 in memory of the Chartists Hardie, Baird, and Wilson, who were executed at Stirling and Glasgow in 1820; one to Fillans, with a fine figure of Rachael weeping for her children; one to the Rev. Patrick Brewster (1788-1859), long minister of the Abbey church; one to Andrew Park (1807-63), a local poet; one to Brodie, the donor of the Brodie Public Park; and a memorial cross at the grave of the late Mr Thomas Coats, which with basement and what may be described as the pedestal, stands 22 feet high. The cross, elaborately carved,

is sculptured out of a single stone, and its dimensions are $11\frac{1}{2}$ by $3\frac{1}{2}$ feet across the arms. There is a fine new cemetery at Seedhills, and there are also burying-grounds at several of the churches. Belonging to the town are also the Peter Brough Bequest Fund and the Duncan Wright Endowment.

Three bridges cross the river Cart (exclusive of the railway bridges), and connect the old and new towns. The old stone bridge at the end of High Street used to be very narrow and inconvenient, as were also the other two, but under the Improvement Act of 1877 they have all been greatly widened and improved, the old Sneddon* Bridge (now known as Abercorn Bridge) and Seedhill or Abbey Bridge having been reconstructed with iron girders, and the Old Bridge itself again further improved in connection with the erection of the Clark Hall. When the first tolbooth was erected is not exactly known—seemingly by Abbot Tervas in the 15th century—but by the middle of the 18th century the existing one had become very insecure, and in 1756 the magistrates resolved to erect a new one at the Cross, on the same site, at a cost of £325. It had a steeple of considerable height, which remained till 1870. It was perfectly sound till 1868, but in that year a deep drain dug near it injured the foundation, which had already become somewhat insecure in consequence of the street level having been lowered, and it began to lean over in a dangerous manner. It was at first shored up, but was ordered to be taken down in 1869. An unsuccessful attempt was made to interdict the magistrates from removing it, and it disappeared completely in 1870. It was at the Cross steeple that public executions latterly took place, and the bats to which the gibbet was fastened are now in the museum. The Abbey grounds were first feued in 1757 by Lord Dundonald, and a considerable portion of the Abbey ruins were used as building material by the feuars in the erection of the houses adjoining the Abbey. Some of these were removed in 1874, including the town houses of Abercorn and Dundonald, but others still remain. A house in High Street in the old Scottish style, with the arms of the Sempills on its front, was erected in 1862 on the site of Lord Sempill's old town mansion. In 1618 the town council erected a Town's Hospital on the N side of High Street with materials taken from the old chapel of St Roque, and part of the building became subsequently a school. In 1723 the old building was taken down, and a new one erected, which contained a public hall and a clock steeple known as the 'Wee Steeple,' in which there was a bell which was rung when funerals were passing. On one part of it was the inscription—

'He that hath pitie on the por
Of grace and mercie sall be sor;'

and on another—

'Quha gives the puir, to God he lends,
And God, again, mare grace him sends.'

The school was removed to a building in School Wynd in 1788, and in 1807 the whole buildings were disposed of, and the house No. 82 High Street erected on the site. The house in which Professor Wilson—Christopher North—was born, on the S side of High Street, and another house in which he spent his boyhood, also in High Street immediately to the W, both still remain directly opposite the Free Library, though the first has been altered. The position of the house in which the poet Tannahill was born, in Castle Street, is marked by a tablet placed on the house that now occupies the site; and the house in which he spent most of his life and wrote most of his songs—a cottage built by his father—still stands in Queen Street further to the W. The house, in Seedhill, in which the poet and American ornithologist, Alexander Wilson, was born, was demolished in 1841, but the house by which it was replaced is marked by a marble tablet with the inscription—'This tablet was erected in 1841 by David Anderson, Perth, to mark the birthplace of Alexander Wilson, Paisley, poet and American ornithologist.'

* Sneddon was acquired by the town in 1655 and feued in 1749. The name is supposed to be a corruption of Snowdoun.

A statue of Wilson was erected within the Abbey grounds in 1874 at a cost of about £700. It consists of a bronze statue 7 feet 6 inches high, resting on a pedestal of grey granite 10 feet high. The figure, which was modelled by J. G. Mossman, Glasgow, shows the naturalist leaning against the stump of a tree with a bird in his hand, while his gun is behind him, his hat and portfolio at his feet, and his favourite blue parrot close at hand. Not far distant is the bronze statue erected in 1883 as a memorial of Tannahill the poet. The statue is 7 feet 6 inches high, and is set on a red granite pedestal. The motive is furnished by a bronze bas-relief affixed to the front of the pedestal. This shows three country girls, of whom the centre one is singing from a ballad which she holds in her hand, while her companions listen. There is a tradition that Tannahill during a solitary country walk once heard a group of girls thus intently occupied with one of his own songs, and the statue here represents the poet in the supposed attitude of an unseen listener. The statue and bas-relief were designed and executed by D. W. Stevenson, A.R.S.A., Edinburgh. The total cost was about £1200, and the funds were provided by a series of annual concerts which had been given on the braes of GLENIFFER. By a continuation of the same open-air concerts a sum of money was acquired sufficient for the erection of a bronze Burns statue. It is from the design of Mr. F. W. Pomeroy, stands in the Fountain Gardens on a red granite pedestal, with a panel containing a scene from Tam o' Shanter, and was unveiled by Lord Rosebery on 26 September, 1896. In 1894 statues were erected to the memory of Sir Peter and Mr Thomas Coats at a cost of about £2000 each, and it was agreed to erect one to the memory of Mr W. B. Barbour. The Fountain Gardens, on the N side of the town, between Love Street and Caledonia Street, and extending to over 7 acres, were acquired and laid out, at a cost of about £20,000, by the late Mr Thomas Coats of Ferguslie, and handed over by him to the town in 1868. The ground was originally laid out early in the century by an old citizen, Mr John Love, and was named Hope Temple Gardens. It was acquired by Mr Coats in 1876. The site was then well laid out and belts and clumps of trees planted between the walks, which converge on a central fountain, while there is a smaller fountain at each of the four angles of the gardens. One of the trees is an oak grown from an acorn taken from the celebrated Wallace Oak of Elderslie. In 1877 an additional place of recreation for the public was provided at Carriage Hill to the S of the town. This was the ground known as the Brodie Park, which was bequeathed for that purpose by Mr Robert Brodie in 1871. It covers about 22 acres, and, inclusive of the sum spent in laying it out, cost about £19,000. The central part of the racecourse, to the NW of the town, about 40 acres in extent, has by Act of Parliament become the property of the community, and is now named St James's Park. Dunn Square is an ornamental open space presented to the town in 1892 by William Dunn, M.P. for the burgh. It adjoins the Town Hall, and cost over £4000. In 1894 the Quarry Grounds, Mill Street, were reserved and converted into a public park or open space for the benefit of the inhabitants of the east end of the town.

Churches.—The most prominent of the churches is of course the part of the old Abbey of Paisley which is still used as the parish church for Abbey parish. The remains of the Abbey are on the E side of the Cart opposite the Clark Hall. It was founded about 1163 by Walter, High Steward of Scotland, for monks of the Cluniac order of reformed Benedictines, and its first inmates came from the Cluniac priory of Wenlock in Shropshire, the High Steward's native county. They were originally settled at Renfrew, but afterwards transferred their place of residence to Paisley, where, finding a church already dedicated to St Mirren or Mirinus, a confessor who is said to have spent a considerable part of his life at the place, and who, according to the Aberdeen Breviary, was buried there, they combined his

name with those of St James and of their patron saint at Wenlock, St Milburga, grand-daughter of Penda, king of Mercia, and so dedicated the monastery church to St James, St Milburga, and St Mirren. The monastery was so richly endowed by the founder and his successors, as well as by the Lords of Lennox, that it soon became one of the most opulent houses in Scotland, none surpassing it except St Andrews, Kelso, Dunfermline, and Arbroath. Until 1219 it was only a priory, but it then received a bull from Pope Honorius constituting it an Abbey and separating it from the parent house at Wenlock, a privilege confirmed in 1334 by Pope Benedict, who declared the abbot entitled to wear a mitre and ring, and the other marks of his dignity. What may have been the nature of the original buildings it is impossible to tell, for they were burned by the English in 1307 during the war of independence, and seem to have been almost entirely destroyed, and, notwithstanding that the Stewarts had their residence at hand, and that the abbey was their family burial-place before their accession, and even occasionally afterwards, for both the queens of Robert II. were buried here as well as Robert III., but little seems to have been done towards rebuilding or repair till the 15th century, although in 1380 a charter was obtained from Robert II. erecting the lands of the abbey in Dumbartonshire into a jurisdiction of regality, and another from Robert III. in 1396 erecting the estates in Renfrew, Ayr, Roxburgh, and Peebles into a similar jurisdiction. The powers of the abbot were afterwards still further extended in 1452 by James II., who granted to the regality court the power of trying the four crown pleas; and again in 1483 by James IV., who added the power of 'repleging' the tenants and inhabitants of the abbey estates from the king's courts. The greater part of the buildings now existing seem to have been erected by Abbot Thomas Tervas, who died in 1459, and Abbot George Shaw (1472-99). Of the former the *Auchinleck Chronicle* says that he 'wes ane richt gud man and helplyk to the place of ony that ever wes, for he did mony notahil things and held ane nobil hous and wes ay wele purvait. He fand the place al out of gud reule and destitute of leving and al the kirkis in lordis handis and the kirk unbiggit. The body of the kirk fra the hucht stair up he biggit, and put on the ruf and theekit it with slats, and riggit it with stane, and biggit ane great porcioun of the steeple and ane staitlie yet hous, and brocht hame mony gud jowellis and clathis of gold, silver, and silk, and mony gud bukis, and made statelie stallis and glassynnit mekle of al the kirk, and brocht hame the staitliest tabernakle that wes in al Skotland, and the maist costlie; and schortlie he brocht al the place to fredome and fra nocht till ane mighty place and left it out of al kind of det and al fredome, till dispoone as them lyk, and left ane of the best mysteris that was in Skotland, and chandillaris of silver and ane letren of brass with mony uther gud jowellis.' Abbot George Shaw, a younger son of Shaw of Sauchie in Stirlingshire, besides adding to the buildings, surrounded the abbey gardens and grounds by a magnificent stone wall, which ran from the N transept along the line of Lawn Street to the Wall Neuk, where it turned and ran along the line of Inkle Street; it then turned to the S by the edge of Mill Road till it terminated at the Pigeon-house on the edge of the Cart, close to the waterfall at Seedhill mills. A stone with the inscription in old English characters—

'Thei callit ye Abbot Georg of Schawe,
Abont yis Abbay gart mak yis waw;
A thousande four hundred zbeyr
Anchy and fyve, the date but ueir.
Pray for his saluatioun
That made this nobil fundacioun'—

taken from the wall was formerly placed over the lintel of the door of a dwelling-house at the corner of Lawn Street and Inkle Street, but it is now fixed to the wall E of the door of the Public Library. The fifth line of the inscription was effaced by order, it is said, of one of the presbyterian ministers of the burgh, who thought

it savoured too much of prayer for the dead. Grose says that in his time there was at one of the corners of the wall a statue of the Virgin with the motto below:—

'Hac ne vade via nisi dixeris Ave Maria
Sit semper sine vae, qui tibi dicit Ave.'

The wall remained nearly entire till 1781, when the Earl of Abercorn sold the stones to the feuars of the New Town, who used them for building their houses, and a portion near Seedhill Bridge remained till after the middle of the 19th century. The first tower that was erected seems to have had insecure foundations, as it fell. The last abbot, John Hamilton (1525-45), rebuilt it at immense cost, but about the close of the century it again 'fell with its own weight, and with it the Quire of the church;' at least so says Hamilton of Wishaw, but another account states that it was struck by lightning. In 1557 a body of Reformers attacked the abbey, 'burnt all the ymages and ydols and popish stuff in the same,' and drove the monks out of the building, but owing to the somewhat unusual attachment of the people to the old faith, the abbey was 'steyked' against the reforming preachers, and in 1563 the charge was brought against the abbot of 'in the town of Paslay, Kirkyard and Abbey place thereof, openlie, publiclie, and plainlie, taking auricular confession in the said kirk, toun, kirkyaird, chalmeries, barns, middens, killogies thereof,' but he seems to have got off lightly. Although John Hamilton had properly ceased to be abbot in 1545, he retained the abbacy, by consent of the queen, in trust for his nephew, Lord Claud Hamilton. He adhered to the cause of Queen Mary, and was consequently in 1568 declared a traitor by Regent Murray, and in 1571 captured and hanged. Lord Claud, having been present at the battle of Langside in the Queen's interest, was forfeited, and the lands of the abbey were bestowed on Robert, son of William Lord Sempil, till 1585, when Lord Claud returned from England and was restored to his property and rights. Two years later the whole property which he had held hitherto merely as commendator, was erected into a temporal lordship, and granted to him and his heirs and assigns in fee, while he himself was created Lord Paisley. In 1652, his grandson and successor, the second earl, sold his opulent lordship to the Earl of Angus, from whom next year the larger part of it was purchased by Lord Cochrane, afterwards Earl of Dundonald. Large portions were at different times sold by the Dundonald family, and in 1764 what remained was repurchased from Thomas, eighth Earl of Dundonald, by James, eighth Earl of Abercorn, to whose descendant, the Duke of Abercorn, it now belongs.

The church, when entire, appears to have consisted of a nave, choir, N transept, and a chapel known as the chapel of St Mirren and St Columba, which occupies the place where the S transept should have been. The total outside length of the building has been 265 feet. Internally the nave is 93 feet long and 59½ wide, including side aisles. The choir, which has no aisles, is 123½ feet long and 32 wide; and the transept is 35 feet wide, and the distance from the N wall to the wall of St Mirren's chapel is 92½ feet, all these measurements being internal. The walls of the choir only rise a foot or two above the level of the ground, but the piscina and sedilia still remain, as well as the foundations of the pillars on which rose the central tower. The N transept, with its magnificent, and finely traceried window, 25 feet high and 18 wide, was saved from demolition with so much of the rest of the building, by being claimed about 1758 by the heritors as their property. Within the choir lie the remains of King Robert III. and Marjory his daughter. When Queen Victoria visited Paisley in 1888, as already mentioned, she caused a recumbent Gothic cross of Sicilian marble to be placed over the royal tomb in commemoration of her visit. The nave, the only part now roofed, is still used as the parish church of Abbey parish. The W front contains a doorway with an arcade on each side, and on one side is a turret with a staircase. Above the doorway are three

windows. The present eastern gable of the church is in the centre merely a screen of modern masonry filling up the arch beneath the western wall of the centre tower. There is a porch at the W end of the N wall and at the E end of the S wall. On the wall of the former is a stone with the inscription in old English characters—

'Joh s d Lyhtgw abhas hujus monastii xx die mesis Januarii ano dm mccccxxiiii elegit fieri sua sepultura.'

The interior of the nave is fine, and the style of the triforium is somewhat peculiar. On each side five massive clustered columns, 17 feet in height, divide the nave from the aisles, and the pillar on each side at the W end is much thicker than the others, as if they had been meant originally to support the weight of western towers. 'From the imposts of the columns spring pointed arches with delicate and graceful mouldings. On the centre pillar to the south is sculptured in relief an antique coat of arms with grotesque supporters. From a floor formed above the first tier of arches spring those of the triforium. They are large and semicircular, springing from clustered columns.' Within these arches are included two pointed ones, with a short column between, and the space between the heads of these minor arches and that of the principal arch is open and finely cusped. From the top of the spandrils between each pair of arches a semi-hexagonal projection stands out supported by a double row of blocked corbels, which in their turn are supported by grotesque figures that seem as if groaning under the weight. The breadth of the triforium arches, as compared with their height, gives this part of the building a somewhat squat, not to say ungraceful look. In the clerestory over each circular triforium arch are two windows, and the clerestory gallery, while passing through the wall over the keystone of each triforium arch, passes out round the semi-hexagonal projection already mentioned, no doubt to afford a perfectly solid wall over each of the nave pillars, so that there may be firmer support for the roof. The whole style is Decorated. On the SW pillar are the old colours carried by the Renfrewshire militia from 1803 to 1855; and built into the walls are some old monuments removed from the floor. The original roof was finely groined, but of this only a small portion near the W end of the S aisle now remains. The whole nave underwent repair in 1788-89, but until about twenty years ago it remained in a very miserable condition. 'In 1859,' says Dr Cameron Lees, the historian of the Abbey, 'when I was inducted to the second charge, a more dreary place of worship it was impossible to conceive. It was like a charnel house. The burial-ground outside reached above the sill of the windows. The floor was earthen, and you were afraid if you stirred your foot you would rake up some old bones that lay uncomfortably near the surface.' Thanks to the exertions of the Rev. Mr Watson and of Dr Lees himself, several thousand pounds were collected and spent in remedying this state of things. The interior was cleared out and new pews put in. An organ was introduced, and many of the windows are now filled with stained glass, the principal being windows to the memory of Mr Thomas Coats of Ferguslie, the Spicers of Elderslie, the Earl of Glasgow, and the Whites of Overtoun. One, placed as a memorial of Sir William Wallace, was inserted by the St Andrew's Society of Glasgow. In the W end of the N aisle is a mural tablet, apparently erected to the memory of John Hamilton, the last abbot. The chapel of St Mirren and St Columba, better known as the Sounding Aisle, is on the S side on the site of the S transept. It is about 48 feet long by 24 wide, and the 15 feet of the floor at the E end is higher than the rest. This chapel was founded and endowed in 1499 by James Crawford of Kilywynnat, burgess of Paisley, and Elizabeth Galbraith his spouse, who were buried within the church, where their tombstone is still to be seen. The lands given for the support of the chaplain were those of Seedhill and Wellmeadow. Near the SE corner is the

piscina, and beneath the great eastern window the altar had stood. Beneath the window is a frieze, with three carved compartments on the N side and seven on the S side. What the figures represent is doubtful, but probably the seven on the S represent the seven sacraments, viz., matrimony, communion, extreme unction, ordination, confirmation, penance, and baptism. The eastern window is now filled with stained glass, placed there by the Duke of Abercorn in 1879 in memory of those members of the Abercorn family who are here buried, the family vault being beneath. There are other two monuments connected with the Abercorn family, but the great object of interest is the altar tomb known as Queen Bleary's tomb, and believed to have been erected in memory of Marjory Bruce, wife of Walter the High Steward, and only daughter of Robert Bruce, who was killed by a fall from her horse at Kuock, to the north of the town. According to Dr Boog, one of the ministers of the parish, who wrote an account of it in the *Transactions of the Society of Antiquaries of Scotland* for 1831, this tomb has had rather a curious history. 'It retained,' he says, 'its original situation till John, Earl of Dundonald, who succeeded his brother William in 1704, having for his second lady married the Duchess-Dowager of Beaufort, her grace wishing, it is said, to have the chapel fitted up for the service of the Church of England, the tomb was then removed and placed in a corner of the Abbey Garden. This must have been prior to 1720, when Earl John died; his lady survived but a short time. The tomb, rebuilt in its original form, occupied this corner till the time that Thomas, Earl of Dundonald, resolving to feu off that part of the garden, found it in his way, and had it again removed or rather taken to pieces; and the stones of which it was composed were then laid aside and forgotten—so much forgotten that the writer of this, whose connection with Paisley took place in 1774, was above fourteen years in the place before knowing that such a monument had existed, or that its materials might possibly be discovered.' When the church was repaired, however, in 1788-89, the stones were found, and Dr Boog, with a care that does him the highest credit, had them carefully put together, though it was found that one side stone and one end stone were wanting. The figure itself had been left in the chapel, sunk in the pavement close by one of the walls. Whether it represents Lady Marjory or not must remain doubtful, but the fine carvings show that the person to whose memory the tomb had been raised must have been of high rank. It is certainly peculiar that the figures on the sides should be those of ecclesiastics. From the presence of a shield charged with a lion rampant some have imagined that it is the tomb of Euphemia Ross, wife of Robert II., but the lion rampant is also the cognisance of the family of Stewart of Blackhall, lineally descended from Robert III. The elaborately carved canopy at the head is particularly noteworthy and uncommon. A suspicion might arise that it does not belong to the tomb, and may have originally been over a canopied figure, but a minute inspection does not bear this out, and the top of the canopy, which in such a case would not be seen, is here elaborately carved with a representation of the crucifixion.

The popular name of the 'Sounding Aisle' is applied to the chapel on account of the wonderful echo, which was first described by Pennant with a considerable amount of exaggeration. 'The echo,' he says in his *Tour*, 'is the finest in the world. When the end door, the only one it has, is gently shut, the noise is equal to a loud peal of thunder. If you strike a single note of music you hear the same gradually ascending with a countless number of repetitions. If a good voice sings, or a musical instrument is well played on, the effect is inexpressibly fascinating, and almost of a celestial character. When a musical instrument is sounded it has the effect of a number of instruments of a like size and kind played in concert. A single instrument sounding a particular note, and then instantly its fifth or any other concordant note, both sounds can be heard,

as it were, running into and uniting with each other in a manner particularly agreeable. But the effect of a variety of instruments playing in concert is transcendently enchanting, and excites such emotions in the soul as to baffle the most vivid description, and there is a good deal more to the same effect. Either, however, Pennant was particularly keen-eared when he was at Paisley, or the reconstruction of the large altar tomb has injuriously affected the echo; at any rate it has become seriously injured since his day, for although it is still strong it can hardly now be described as dying away 'as if at an immense distance,' or 'diffusing itself through the circumambient air' with almost 'a celestial character.' To the N of the nave and the W of the Sounding Aisle was the cloister court, and the other buildings of the monastery seem to have stood to the SW, but of these no trace now remains. When the houses in Abbey Close were removed in 1874, an old foundation was found which was supposed to be that of the 'staitlie yett house' erected by Abbot Thomas Tervas. St Roque's chapel, which stood at the top of Castle Street, was pulled down in 1618, the materials being used in the erection of the town's hospital.

The original Low or Laigh Church was built in 1736, but the congregation removed in 1819 to St George's Church in George Street, which is a good Grecian building, erected in that year at a cost of £7000, and renovated in 1894 at an expense of about £2400. The organ and organ chamber were added in 1874, and in 1898 a hall, class-rooms, and lavatories at a cost of £1200. The High Church at Oakshawhead was built in 1756, and the steeple was added in 1770. The Middle Church was built in 1782; the Gaelic Church (St Columba), originally a chapel of ease, in High parish, in 1793; and Martyrs' Church, also originally a chapel of ease, in High parish, in 1835. The latter underwent extension in 1894-95. The South Church, originally a chapel of ease, in Laigh parish; and the North Church, originally a chapel of ease, in Middle parish, do not call for particular notice. The former was renovated in 1891 at a cost of £1650. Greenlaw is a chapel of ease under Abbey parish, and there is also Nethercraigs and Lawn Street mission, the hall for which was rebuilt in 1893. The Arthur Allison Memorial Hall was presented in 1893 to the kirk-session of Abbey parish for mission and Sunday school work. The Free High Church is a good building in the Norman style, with a massive square tower 100 feet high. The other Free churches are the Gaelic, Martyrs', Middle, Oakshaw, Sherwood, South, and St George's. The United Presbyterian churches are those of Abbey Close (1827), Canal Street (1783), George Street (1822), Thread Street (1808—all with over 1000 sittings each), Lylesland, Mossvale, Oakshaw Street, and St James' Church at Underwood Road, which, built in 1880-84, and replacing a former church erected in 1820 and with 1212 sittings, is particularly worthy of note. Cruciform in plan, it has a deep polygonal apse, wide side aisles, and twin transepts on each side. The whole interior is finished with stone, with open woodwork roof. The floor is laid in tessellated mosaic work. Behind the church are halls, class-rooms, session room, and vestry, and in the apse is an organ. There is a fine peal of bells in the spire, which rises to a height of 180 feet. The style is Early French Gothic; the number of sittings is 1100; and the total cost, exclusive of special gifts—such as the bells, reading desks, organ and screen, etc.—and the cost of site, was about £19,000. The spire first erected had to be removed in consequence of the failure of its foundation, and the present one is founded on iron cylinders filled with cement and sunk about 40 feet into the underlying clay. There are also a Reformed Presbyterian church, a Congregational church at Old Sneddon, an Evangelical Union church in Gilmour Street, 3 Baptist churches, a United Original Seceders church, built in 1893 at a cost of fully £3000, and seated for 500 persons; a Unitarian church, a Primitive Methodist church, a New Jerusalem church, Trinity Episcopal church (1828; chancel and transepts, 1884; 600 sittings), St Bar-

nabas Episcopal mission station, and two Roman Catholic churches, St Mirren's (1808; 1008 sittings) and St Mary's (1891; 900 sittings); but none of them call for more particular notice, except the Coats Memorial Baptist Church (1894), which is by far the grandest of the Paisley churches. The style of the edifice throughout is an adaptation of the most perfect period of Gothic art—namely, that of the 12th and 13th centuries. The plan is of Cruciform outline, but to meet more advantageously the requirements of Protestant worship the nave is made broader and shorter than the usual Cathedral proportion, while the external aisles attached to it are reserved for passage ways only. The transepts on either side are narrower than the nave, and their aisles are likewise unseated. The means for celebrating the sacrament of baptism is provided prominently in the chancel, and is elaborately treated in marble. A very important feature of the design is the tower, reared on the intersection of the nave and transepts. Starting above the main arches of the church roof on an oblong plan, the tower, reaching the first stage above the roof, resolves into a pure square, and is thus carried up to accommodate the sound-chamber and next the belfry. The latter presents two double windows, all richly treated with shafts and carved work. The richest effects, however, are seen in the chancel, which is lighted by three tall lancet windows. The sills are 22 feet above the chancel floor. The wall surface under the sills is filled with three elaborately carved panels of alabaster, the work of Mr Robert Bridgman, Lichfield. The central panel is a representation of the baptism of our Saviour, that on the left representing the Nativity and Adoration, while that on the right hand represents the Last Supper. A magnificent organ, one of the finest in Europe it is said, has been erected. The architect for the whole works was Mr Hippolyte Blanc, A.R.S.A., Edinburgh, and the edifice has been erected in memory of the late philanthropist, Thomas Coats of Ferguslie.

Schools.—The Grammar School and Academy dates as an institution from 1576, and stood originally in School Wynd, on the site of the manse of the chaplain of St Ninian's chapel in Abbey Church. In 1756 it was removed to another building farther up the wynd; and in 1864 a new school, which is a handsome Tudor building, with accommodation for 580 scholars, was provided at a cost of about £3478. Up till 1873 it was managed by the town council and a committee of subscribers, but then in terms of the Education Act it passed into the hands of the School Board. It is at present conducted by a rector, eight masters, and two mistresses. A new grammar school has been constructed at Crossflat, Glasgow Road, for which a sum of £15,000 was in 1894 apportioned to the School Board by the trustees of the late W. B. Barbour. It was estimated to cost about £19,000. The John Neilson Educational Institution on Oakshawhead was erected and endowed in 1851-52 from a bequest of £20,000 made by Mr John Neilson of Nethercommon. It is a handsome building in the form of a Greek cross with a central dome, and the work is carried on by six masters and five mistresses, and is under the control of the Paisley Educational Trust. Under the burgh school board are twelve public schools—East, West, North, South, Campbell, Carbrook Street, Ferguslie, George Street, Central, Stevenson Street, Stow, Williamsburgh, and Ferguslie (half time), and these, with total accommodation for 8354 pupils, have an average attendance of about 8100, and grants amounting to over £8700. A new public school is to be built in Carbrook Street, with accommodation for 800. It is also proposed to erect a new Technical School in George Street. The other schools are the Industrial school, Miss Kibble's Reformatory Institution (1859), and three Roman Catholic schools; also, St Margaret's Convent school (middle class). The Government School of Art and Design, established in 1848, is not far from the County Buildings.

Municipality, etc.—After the crown charter of 1665, Paisley was in all but the election of a member of par-

liament on the same footing as a royal burgh, and by the Reform Act of 1833 it was made a parliamentary burgh. The municipal government is carried on by a provost, six bailies, a treasurer, and sixteen councillors, who also act as police commissioners and water and gas commissioners. The

Seal of Paisley.

police force in their employment is 68 officers (1 to every 1053 of the population), and the superintendent's salary is £290. The gasworks are at the NW of the town. They were originally established in 1823 by a joint-stock company with a capital of £16,000. In 1845 their management was transferred to the police commis-

sioners, and afterwards to the town council. They were largely extended in 1896. It is proposed to introduce the electric light. The first water supply was introduced by a joint-stock company in 1834-38, the water being brought from Stanley Dam, about 2 miles to the SW. Since 1870 it has also been drawn through the Stanley filters from works at Nethertrees about 7 miles distant, constructed in 1869-70 at a cost of £77,000, the receiving tank at Stanley being about 10 feet higher than the top of the High Church steeple, or nearly 300 feet above the level of the greater part of the town. Power for further extension was obtained in 1875-76, and new works carried out between that and 1881 at a cost of £20,000. The new reservoir then constructed at Glenburn has storage accommodation for 80,000,000 gallons. In order to meet the extra consumption of water through the extension of the water supply to Kilbarchan, an additional filter was constructed at Craigenfeoch in 1893 capable of filtering 60,000 gallons a day. A further extension was proposed in 1896-97 at a cost of about £50,000. The system is under the management of the town council. A new fire-engine station was erected in 1896-97; and a steam roller for the macadamised roads was in 1894 added to the property of the burgh at a cost of £500. The corporation property was in 1833 estimated to be worth £58,125, and the debts on it were £33,000, but the unsuccessful attempt to deepen the Cart proved such a heavy drain that in 1843, during a period of great commercial depression, the authorities had to suspend payment, and not till 1877 was the town again clear of debt. The corporation revenue in 1894-95 was £15,810, exclusive of £105,133 from the water and other trusts; and the revenue of the Cart trust estate was £1344. The trade societies representing the old trade incorporations are the old weavers, maltmen, hammermen, grocers, and merchants. The town has a head post office, with district branches. The Paisley Bank was established in 1787, and the Paisley Union Bank a few years after, but the former was merged in the British Linen Company's Bank in 1837, and the latter in the Union Bank of Scotland in 1838, while the Paisley Commercial Bank, established in 1839, was soon amalgamated with the Western Bank. The banks at present in Paisley are branches of the Bank of Scotland, British Linen Company, Clydesdale, Commercial, National, Royal, and Union Banks. There is also a branch of the National Security Savings Bank, a tramway company, and several good hotels. The newspapers are the *Daily Express* (1874), the *Paisley and Renfrewshire Gazette and Paisley Herald* (1853), and the *Paisley Chronicle* (1885), both published on Saturday, and the *Paisley Mirror* (1894), published on Friday. There are four Masonic lodges, the Royal Victoria Eye Infirmary, Paisley Philosophical Institution, a juridical society, lodges of Good Templars (with a hall erected in 1881), Foresters, Shepherds, Free Gardeners, Rechabites, and Oddfellers, four Co-operative Societies, numerous friendly

societies, Liberal and Conservative clubs and associations, two theatres, a Young Men's Christian Association, a Christian Benevolent Society, a Mission to the Deaf and Dumb, a Sabbath School Union, an Art Institute, an Association for Improving the Condition of the People, an Heritable Property Investment Society, two Building Societies, a branch of the Bible Society, several curling, bowling, bicycle, lawn tennis, rowing, skating, angling, cricket, and football clubs, several horticultural societies, Renfrewshire Agricultural Society, an Ornithological Society, a Burns Club, a Tannahill Club, a Philharmonic Society, a Choral Union, and Rifle Volunteers. The burgh has besides a Convalescent Home at West Kilbride. There is a weekly market on Thursday, and fairs on the third Thursday of February and May, and the second Thursday of August (St James's Day) and November. At that in August there are general holidays, and Paisley races are held. Ordinary sheriff courts for the Upper Ward of Renfrewshire are held every Tuesday during session, sheriff small-debt courts every Thursday during session, and justice of peace courts every Friday.

Paisley returns a member to serve in parliament. Parliamentary constituency (1895) 9322, municipal constituency 11,110, including 1788 females. Valuation (1874) £148,946, (1884) £223,366, (1895) £295,443. Pop. (1733) 3396, (1753) 4195, (1801) 24,324, (1811) 29,541, (1821) 38,500, (1841) 48,125, (1851) 47,952, (1861) 47,406, (1871) 43,240, (1881) 55,638, (1891) 66,425, of whom 35,746 were females. Houses (1891) inhabited 13,594, uninhabited 652, building 43.

Paisley has produced many notable men, and indeed a somewhat apocryphal story is told that at a gathering in town when the toast of 'the Poets of Paisley' was proposed, every man in the room rose to reply! Among the poets and distinguished men, natives of the place, may be mentioned George A. Clark (1823-73); Sir Peter Coats, philanthropist (1808-90); Thomas Coats of Fergulie (1809-83), public benefactor, and his son Sir Thomas, created a baronet in 1894; Alexander Dunlop, father of William Dunlop, Principal of Glasgow University from 1690 to 1700; James Fillans (1808-52), sculptor, who, though born at Wilsontown in Lanarkshire, was removed to Paisley so early that he may be claimed as a native; William Findlay (1792-1847), minor poet; John Henning (1771-1851), sculptor; William Kennedy (1799-1849), minor poet; John Love, D.D. (1756-1825), an eminent divine; Andrew Park (1807-63), minor poet; Andrew Picken (1788-1833), miscellaneous writer; Ebenezer Picken (1769-1816), minor poet and miscellaneous writer; David Semple (1808-78), author of *St Mirin* and other works on local history; Robert A. Smith (1780-1829), musical composer, who, although born in England, was the son of a Paisley 'body,' and was himself brought to the place at a very early age; Andrew Symington, D.D. (1785-1853), professor of theology in the Reformed Presbyterian Church; Tannahill (1774-1810), poet; Dr James Thomson, the first professor of divinity in the Relief Church; Alexander Wilson (1766-1813), minor poet, miscellaneous writer, and American ornithologist; Professor John Wilson, 'Christopher North' (1785-1854), poet and essayist; his brother, James Wilson (1795-1856), naturalist; and William Rae Wilson (1772-1849), the eminent traveller. Distinguished men connected with the place, but not natives, have been Patrick Adamson (1543-91), Archbishop of St Andrews; Rev. James Begg (1809-83), Free Church leader, who was minister of the Middle parish from 1832 to 1835; Robert Boyd of Trochrig (1578-1627), Principal of Edinburgh and Glasgow Universities, and finally minister of Paisley, but the people, headed by the Master of Paisley, brother of the Earl of Abercorn, and his mother, offered such opposition to his ministry that he retired; Robert Brodie (1807-71), benefactor to the town; Rev. Robert Findlay (1721-1814), professor of theology in Glasgow University; Andrew Knox (d. 1632), minister of Paisley, afterwards Bishop of the Isles, and subsequently of Raphoe in Ireland; Rev. Robert Miller (d. 1752), author of the *History of the Propagation of Christianity*,

who was minister from 1709; William Motherwell—who by education may almost be counted a Paisley man—(1797-1835), poet, antiquary, and journalist; Thomas Smeaton (1536-83), Principal of Glasgow University; Alexander Smith (1829-67), poet and author, who here followed for some time his profession as a pattern designer; Dr Robert Watt (1774-1819), author of the *Bibliotheca Britannica*; and Dr John Witherspoon (1722-94), minister of the Laigh parish, afterwards president of the College of New Jersey, theological writer.

The parish of Paisley until 1891 had a detached part separated from the main portion by a narrow strip of Abbey parish, and within this detached part was a detached part of Abbey parish. The Boundary Commissioners united the Paisley detached part to the main portion by annexing a portion of the intervening part of Abbey parish, and the detached part of Abbey parish was then transferred to the Paisley parish. The parish of Paisley is divided ecclesiastically into the High, Laigh, and Middle parishes, all within the burgh, and all till 1736 forming part of Abbey parish. The *quoad sacra* parish of Martyrs' is partly taken from Abbey parish and partly from High Church parish, that of North Church from Middle Church parish, that of St Columba from High Church parish, that of South Church from Abbey parish and Laigh Church parish. The populations in 1891 were—9425 in High Church parish, 6075 in Laigh Church parish, 5715 in Middle Church parish, 11,086 in Martyrs', 7989 in North, 2409 in St Columba's, and 7901 in South, the rest being in Abbey parish.

The PRESBYTERY OF PAISLEY comprehends the *quoad civilia* parishes of Abbey-Paisley, Eastwood, High Church Paisley, Houstoun, Inchinnan, Kilbarchan, Laigh Parish Paisley, Lochwinnoch, Mearns, Middle Parish Paisley, Neilston, and Renfrew; the *quoad sacra* parishes of Barrhead, Bridge of Weir, Caldwell, Cardonald, Elderslie, Greenbank, Johnstone, Levern, Linwood, Martyrs' Paisley, North Paisley, South Paisley, St Columba's Paisley, Pollokshaws, and Thornliebank; and the chapels of Shawlands (Eastwood), Laigh Cartside (Johnstone), Howwood (Lochwinnoch), Greenlaw (Paisley), and the mission stations of Nethercraigs and Lawn Street (Paisley). It meets at Paisley on the first Wednesdays of February, May, July, September, and December, and on the third Wednesdays of March and October. The Free Church has also a presbytery of Paisley with 8 churches in Paisley, 2 at Pollokshaws, and 9 at respectively Barrhead, Bridge of Weir, Houstoun, Inchinnan, Johnstone, Lochwinnoch, Neilston, Nitshill, and Renfrew, and a preaching station at Elderslie. The U.P. presbytery of Paisley includes 8 churches at Paisley, 2 at Beith, 2 at Johnstone, and 6 at respectively Bridge of Weir, Kilbarchan, Kilmalcolm, Langbank, Lochwinnoch, and Renfrew.

Cameron Lees' *The Abbey of Paisley, from its Foundation to its Dissolution* (Paisley, 1878); Craig's *Historical Notes on Paisley and its Neighbourhood* (Paisley, 1881); William Hector's *Vanduarra, Odds and Ends, Personal, Social, and Local, from Recollections of Bypassed Times* (Paisley, 1881); and *Memorial of the Inauguration of the Clark Hall* (Paisley, 1882).

Palace, a mansion of 1882 in Crailing parish, Roxburghshire, 4 miles NNE of Jedburgh.

Palace-Brae. See BLAIRINGONE.

Palace-Craig and Faskine. See FASKINE.

Paldy or Palladius. See FORDOUN.

Palnackie. See BUTTLE.

Palnure Burn, a rivulet of Minnigaff parish, W Kirkcudbrightshire, rising at an altitude of 612 feet above sea-level, and running 1½ miles south-south-westward—for the first 1¼ mile along the boundary with Girthon, and for the last 1½ mile along that with Kirkmabreck—till it falls into the Creec at a point 2¾ miles NNW of Creetown. It is navigable to Palnure or Palnure Bridge, a village in Minnigaff parish, on the right bank of the stream, with a small quay for vessels of 60 tons, and a station on the Dumfries and Portpatrick railway, 3¼ miles ESE of Newton-Stewart. Lead and copper have been found at Palnure, but the workings have been abandoned.—*Oral. Surv.*, sh. 4, 1857.

Pananich. See PANNANICH WELLS.

Panbride, a hamlet and a coast parish of SE Forfarshire. The hamlet lies 1¼ mile NNE of the post-town, Carnoustie.

The parish, containing also MUIRDRUM village and the NEWTON OF PANBRIDE suburb of CARNOUSTIE, with the fishing villages of West Haven and East Haven, is bounded N by Carnyllie, NE by Arbirlot, SE by the German Ocean, SW by Barry, and W by Monikie. Its utmost length, from NW to SE, is 4½ miles; its breadth varies between 9 furlongs and 2½ miles; and its area is 6614 acres, of which 298½ are foreshore and 9 water. This area includes the former Inverpeffer detached portion of St Vigeans parish, comprising 1108 acres, which was transferred by the Boundary Commissioners in 1891 to the parish of Panbride. Monikie Burn, coming in from Monikie parish, runs 4½ miles south-eastward across the interior to the sea between East and West Haven. Its dell, called Battie's Den, is mostly flanked by steep or mural rocky banks, 20 to 50 feet high, and is spanned, at a romantic spot, by a bridge taking over the road from Dundee to Arbroath. Another rivulet, also coming in from Monikie, and traversing a similar dell, runs 2¼ miles east-south-eastward across the northern interior, next 1½ mile south-south-eastward along the north-eastern boundary, and next 1½ mile through the interior, till it falls into Monikie Burn at a point ¼ mile NE of the parish church. The coast, closely followed for 2¼ miles by the Dundee and Arbroath Joint railway, is low but very rocky, with a pebbly beach, and shows a series of ancient sea-margins some way from the present shore line. The interior presents for the most part a flat appearance, but is diversified by the dells of the rivulets, and rises gently to 300 feet at Pitlivie and 487 at the northern boundary. The predominant rocks are Devonian. Sandstone of excellent quality for masonry is quarried; sandstone of the slaty kind, which yields the Arbroath paving-stone, is comparatively plentiful; and limestone exists, but not abundantly nor of good quality. The soil on the seaboard is sandy; in the central district is clay or loam; and towards the W and N is moorish. Rather more than three-fourths of all the land is arable, and some 600 acres are under wood. The inhabitants are principally engaged in fishing and agricultural pursuits, and some are employed in the Panbride bleach-works. The barony of Panbride belonged for several ages to the ancestors of the historian Hector Boece (1465-1536), who himself, however, appears to have been a native of Dundee; whilst the barony of Panmure passed by marriage about 1224 to Sir Peter de Maule, ancestor of the Earl of Dalhousie. PANMURE HOUSE, noticed separately, is the principal residence; and the Earl is sole proprietor. Panbride is in the presbytery of Arbroath and the synod of Angus and Mearns; the living is worth £225. The parish church, at Panbride hamlet, is a cruciform Gothic edifice of 1851. At the E gable of it is the burial vault of the Earls of Panmure, erected by George, third Earl, in 1681. A Free church was built in 1856; and two public schools, Muirdrum and Panbride, with respective accommodation for 50 and 274 children have an average attendance of about

30 and 225, and grants amounting to over £22 and £230. Valuation (1884) £11,711, 13s. (1893) £12,743, plus £1941 for railway. Pop. (1801) 1538, (1831) 1268, (1861) 1299, (1871) 1331, (1881) 1395, (1891) 1741, of whom 909 were in Newton of Panbride and West Haven; of ecclesiastical parish (1891) 1625.—*Ord. Sur.*, sh. 49, 1865.

Panhope, a bay on the E side of Flotta island, Orkney. Looking towards Burray island, it enters from the SE of Scapa Flow; penetrates $1\frac{1}{2}$ mile west-south-westward, with a mean breadth of from 7 to 2 furlongs; forms an excellent natural harbour or 'hope'; and took the prefix of its name from a salt-pan formerly worked on its shores.

Pannure House, a seat of the Earl of Dalhousie, in Panbride parish, Forfarshire, $4\frac{1}{2}$ miles NW. of Carnoustie. Standing 350 feet above sea-level, and surrounded by beautiful gardens and policies, 550 acres in extent, it commands a fine prospect, especially to the S and the E. In 1852-55 it was almost rebuilt from designs by the late David Bryce, R.S.A., of Edinburgh, and now is a spacious and stately edifice in the French Renaissance style of architecture. Near it are the foundations of an ancient castle, long the seat of the Barons of Pannure. That barony was acquired by marriage about the year 1224 by Sir Peter de Maule, whose thirteenth descendant in 1646 was raised to the Scottish peerage as Baron Maule of Brechin and Navar and Earl of Pannure. Both titles were forfeited by the fourth Earl for his share in the '15; but that of Baron Pannure, in the peerage of the United Kingdom, was conferred in 1831 on his great-great-nephew, the second son of the eighth Earl of Dalhousie; and his son, Fox Maule Ramsay (1801-74), succeeded in 1860 to the earldom of Dalhousie. See BRECHIN, CAMBUSTANE, and DALHOUSIE CASTLE.—*Ord. Sur.*, sh. 49, 1865.

Pannanich Wells, an inland watering-place in Glenmuick parish, Aberdeenshire, near the right bank of the Dee, 2 miles ENE of Ballater. Its four chalybeate wells, all near one another, on the N side of Pannanich Hill (1896 feet), are said to have been discovered by an old woman about the year 1760, and soon began to attract notice for their medicinal virtue. They differ somewhat one from another in properties, but all contain carbonates of iron and lime, with small proportions of other ingredients; are chalybeate, stimulant, and tonic; and have been found beneficial for gravelly, scorbutic, and scrofulous complaints. Under date 3 Oct. 1870, the Queen writes in *More Leaves from the Journal of a Life in the Highlands* (1884)—'I had driven with Beatrice to Pannanich Wells, where I had been many years ago. Unfortunately almost all the trees which covered the hills have been cut down. We got out and tasted the water, which is strongly impregnated with iron, and looked at the bath and at the humble but very clean accommodation in the curious little old inn, which used to be very much frequented. Brown formerly stayed here for a year as servant, and then quantities of horses and goats were there.' The late Sir James Thompson Mackenzie of Glenmuick greatly improved the accommodation for visitors to the wells.—*Ord. Sur.*, sh. 65, 1870.

Papa, one of the smaller of the Shetland Islands, about a mile N of the nearest point of Burra island, and $2\frac{1}{2}$ miles SW of Scalloway. On the reconstruction of the parishes of Bressay and Lerwick by the Boundary Commissioners in 1891, Papa was transferred from the former to the latter parish. It comprises only 148 acres. Pop. (1881) 14, (1891) 23.

Papa Sound, a strait between Stronsay and Papa Stronsay islands, in Orkney. Making a semicircular curve of $1\frac{3}{4}$ mile, it has a breadth of from $\frac{1}{2}$ to 1 mile, and projects into Stronsay a bay that forms an excellent harbour, well sheltered by Papa Stronsay.

Papa, Sound of, a strait in the W of Shetland, between the Ness of Melby on the Mainland and Papa Stour island. It is $2\frac{1}{2}$ miles long and 1 mile broad at the narrowest; and it is swept by a rapid, dangerous, tidal current.

Papa Stour, an island of Walls parish, Shetland.

Lying on the S side of the entrance of St Magnus Bay, 34 miles NW of Lerwick, it is separated by the Sound of Papa, 1 mile broad at the narrowest, from the north-western extremity of the Mainland section of Walls, and measures $2\frac{3}{4}$ miles in length west-north-westward, whilst its breadth varies between $4\frac{1}{2}$ furlongs and $2\frac{1}{2}$ miles. It is engirt, at near distances, by picturesque porphyritic stacks, shooting vertically from the sea like stupendous towers or castellated keeps; on its S side is pierced by several magnificent and very curious caves, the abodes of numerous seals; is indented by several small voes or creeks, which afford shelter to fishing-boats; and has excellent beaches for drying fish, which were used for that purpose in the 18th century by a great fishing company. The surface rises at Hoo Field to 115, at Virda Field to 288, feet above sea-level; and is disposed partly in arable land, with a generally fertile soil, partly in common pasture, naturally good, but much injured by maltreatment. Papa Stour was a northern centre of the early Culdees, serving as a sort of Iona to Shetland; and retained till a recent period the ancient Norwegian sword dance noticed in Sir Walter Scott's *Pirate*. It contains the Established church of Papa chapelry, a post office under Lerwick, and a public school. Pop. (1881) 254, (1891) 244.

Papa Stronsay, an island of Stronsay and Eday parish, Orkney, lying off the NE of Stronsay island, and separated from it by Papa Sound, $\frac{1}{2}$ mile broad at the narrowest. With a very irregular outline, it has an utmost length and breadth of $\frac{3}{4}$ mile; is low and flat; has so fertile a soil as might render it, under proper management, one continuous cornfield; and contains vestiges of two pre-Reformation chapels and the site of an ancient burying-ground. Pop. (1881) 23, (1891) 27.

Papa Westray, an island of Westray parish, Orkney, $1\frac{1}{2}$ mile E of the northern part of Westray island, and $22\frac{1}{2}$ miles in a direct line N by E of Kirkwall, but 25 by the shortest sea-route. Its utmost length, from N by E to S by W, is $4\frac{3}{4}$ miles; and its breadth varies between $\frac{1}{2}$ and $1\frac{3}{4}$ mile. The surface culminates in North Hill (156 feet), beyond which the northern extremity forms a bold and lofty headland, the Mull of Papa, well known to mariners, and pierced with a cavern, from 48 to 60 feet wide, and upwards of 70 feet high. The southern half is partly occupied by a fresh-water lake, the Loch of St Tredwall ($7 \times 3\frac{1}{2}$ furl.), on an islet in which are ruins of a pre-Reformation chapel. The soil, to the extent of some 1000 acres, is very fertile, and under regular cultivation. Midway along the E coast is a pastoral islet, the Holm of Papa, which is denized by myriads of sea-fowl. The whole island of Papa Westray, with the exception of a small glebe, belongs to a single proprietor, Thomas Traill (b. 1822; suc. 1840). His mansion, Holland, stands near the middle of the island, in which are also a remarkably large Piets' house and three vitrified cairns, and which was the scene of the death of Ronald, Earl of Orkney, by the hand of Thorfinn, Earl of Caithness. Anciently a separate and independent parish, Papa Westray, though now annexed to Westray, has still its own parish church, besides a Free church, a public school, and a post office under Kirkwall. Pop. (1881) 345, (1891) 337.

Papigoe, a coast village in Wick parish, Caithness, $1\frac{1}{2}$ mile ENE of Wick town.

Paplay. See HOLM.

Paps of Jura. See JURA.

Park, an elegant Grecian mansion of 1822, with beautiful grounds, in Drumoak parish, Aberdeenshire, close to the Dee's left bank, and 1 mile SW of Park station on the Deeside section of the Great North of Scotland railway, this being 11 miles WSW of Aberdeen. The estate, which was anciently part of a royal chase, was given by David II. to Walter Moigne, but so early as 1348 was by John Moigne disposed of to Alexander Irvine of Drum. It was sold by the Irvine family in 1737 to Mr Duff of Culter; in 1807 to Thomas Burnett for £9000; in 1821 to William Moir; and in 1839 for £28,000 to Mr Kinloch. The present proprietor is James Penny, Esq.—*Ord. Sur.*, sh. 66, 1871.

Park, a mansion in Ordiquhill parish, Banffshire, 1½ mile SSE of Cornhill station on the Huutly and Banff section of the Great North of Scotland railway, this being 8½ miles SW by W of Banff. It was enlarged in 1829, and is a spacious and handsome edifice. Its owner is Thomas Duff Gordon-Duff, Esq. (b. 1848; suc. 1892). See BOTRIPHNE.—*Ord. Sur.*, sh. 86, 1876.

Park. See LOCHS.

Park Burn. See MAAR.

Parkfoot. See LONGCROFT.

Parkgate, a hamlet in Kirkmichael parish, Dumfriesshire, 8 miles NNE of Dumfries, under which it has a post office.

Parkgate, a hamlet in Kirkcudbright parish, Kirkcudbrightshire, on the coast of the Dee estuary, 2½ miles S of Kirkcudbright town.

Park Hall, a mansion in Polmont parish, Stirlingshire, 1½ mile ESE of Polmont station.

Parkhill. See KILMUIR-EASTER.

Parkhill, a mansion in New MACHAR parish, Aberdeenshire, on the left side of the Don, ¾ mile ESE of Parkhill station upon the Formartine and Buchan branch of the Great North of Scotland railway, this being 7½ miles NNW of Aberdeen. A handsome and commodious edifice, it has extensive, well-wooded grounds of great beauty, and commands a superb view up the valley of the Don. Its owner is Alexander Gordon-Cuming-Skene, Esq. of Pitlurg (b. 1857; suc. 1882).—*Ord. Sur.*, sh. 77, 1873.

Parkhill, an estate, with a modern mansion, in St Vigeans parish, Forfarshire, 3 miles N of Arbroath.

Parkhill, an estate, with a modern mansion, in Polmont parish, Stirlingshire, 3 furlongs N of Polmont station.

Park House, a mansion in Inchinnan parish, Renfrewshire, 2½ miles NW of Renfrew.

Parkhouses, a village in Wilton parish, Roxburghshire, 2½ miles NNE of Hawick.

Park, Loch. See BOTRIPHNE.

Park Place, a castle in Old Luce parish, Wigtonshire, 5 furlongs WSW of Glenluce village. Crowning a flat-topped eminence in the midst of a little wood on the W side of the Water of Luce, and built by Thomas Hay in 1590, it is a lofty turreted edifice, with crows-stepped gables, itself conspicuous, and commanding a wide view. It was deserted for Dunragit about 1830, and now is only partially occupied by labourers.—*Ord. Sur.*, sh. 3, 1856.

Partick, a police burgh in the Partick parliamentary division of Lanarkshire and in the parish of Govan, on the N of the Clyde and the W of the Kelvin, adjacent to the W extremity of Glasgow. Partick is of very ancient date, for King Morken, traditionally associated with St Mungo (see GLASGOW), had a residence at Pertmet, which is supposed to be Partick, and in the chartulary of Glasgow mention is early and frequently made of Perdeyc or Perthik. In our article GOVAN it has been mentioned that lands at Perdeyc were among those granted by David I. to the Bishop of Glasgow in 1136; and within the next century there was an episcopal residence at the place, for in 1277 we find a grant made by Maurice, Lord of Luss, of wood for the repair of the Cathedral, and this document is dated from 'Perthik,' where Luss is presumed to have been at the time on a visit to the bishop. In the chartulary there is also a notarial instrument bearing on the arbitration by the Bishops of Dunkeld, Brechin, Orkney, and Galloway, on certain differences that had arisen between Bishop William of Glasgow and his chapter. This deed bears date 30 June 1362, '*apud manerium dicti domini Glasguensis episcopi de Perthik.*' An old castellated building, which stood immediately to the W of the junction of the Kelvin and Clyde, and the ruins of which remained down till about 1836, used to be regarded as the remains of this residence; but it was really of much later date. Chalmers, in his *Caledonia*, describes it as built in 1611 by Archbishop Spottiswoode, but this is a mistake; for though the building was undoubtedly erected in or about 1611, the work was carried out, not for Spottis-

woode, but for George Hutcheson, the founder of Hutchesons' Hospital, Glasgow. That this is so is abundantly proved by the contract (still in existence) for its construction entered into between Hutcheson and William Miller, mason in Kilwinning, in which the standard foot, by which the various dimensions of the building were to be settled, is specially declared to be 'ye said George's awn fute.' Hamilton of Wishaw, in his *Description of the Sheriffdom of Lanark*, also writes to the same effect:—'Where Kelvin falls into Clyde is the house of Pertique, a well-built and convenient house, well planted with barren timber, large gardens enclosed with stone walls, which formerly belonged to George Hutcheson, founder of the Hospital Hutcheson in Glasgow.' It is possible, however, that Hutcheson's house may have been built on the site of the bishop's residence, and though no traces of the latter have come down to recent times, the early references leave no doubt of the fact of its existence.

At the close of the 18th century, according to Dr Strang, Partick was 'a rural village, nestling among umbrageous trees, and standing by the side of a limpid and gurgling stream, which flowed through its centre.' It was almost a Sabbath day's journey from Glasgow, and contained 'a dozen or two comfortable and clean cottages,' among which the most noteworthy was a public-house known as 'The bun and yill house,' to which a club of jovial spirits used every Saturday, at the proper season, to resort for a dinner of duck and green peas. From this condition Partick was first awakened up about forty years ago, when villas began to be built about it, and now an excellent villa quarter covers the whole of the north-western part of it. The rest of it is devoted to 'lands' for the artisan class, and the streets are busy with din and bustle, while the noise of the riveters' hammers breaks loudly in from the adjacent boiler and shipbuilding works, where most of the working-class inhabitants find employment. It communicates with the city and Whiteinch by tramway cars, and has extensive flour-mills, a post office with money order, savings bank, insurance, and telegraph departments, and a town-hall. (For churches, schools, etc., see article GOVAN.) In 1834, when Partick became a *quoad sacra* parish, the population was under 3000; in 1852, when the police burgh was originally constituted under the General Police Act of 1850, the population was 5337. The Lindsay Act was adopted in 1866, and the affairs are now, under the Police Act of 1892, managed by a provost, 4 bailies, and 10 commissioners. Parliamentary constituency (1894) 12,709; municipal, 9200. The income in 1893 was £22,630. Rental (1881) £130,628, (1893) £188,187. Pop. (1871) 17,707, (1881) 27,410, (1891) 36,538. Houses (1891) inhabited 7475, uninhabited 676, and building 234.

In 1887, as a memorial of the Jubilee of Queen Victoria, the commissioners of Partick acquired and laid out as a public park (now named the Victoria Park) some 50 acres of ground near the W end of the burgh. The park contains a pond for model yachts and waterfowl, the greater part of which is in winter available for skating. In the midst of a clump of trees, at the W end, part of an old quarry has been converted into a rock garden, and here also, when the work of laying out the ground was proceeding, there was discovered the remains of a grove of fossil trees of carboniferous age. These show, in the shaly rock, a number of boles and spreading roots, which have been all carefully cleared and exposed. They are now protected from the weather by a roofed building, erected by public subscription through the exertions of some of the members of the Glasgow Geological Society. Sixteen acres of agricultural land to the NW of the park are to be included in it when the tenant's lease expires, in a year or two. To the W of the park, and standing within grounds an acre and a half in extent, is the Orphanage of the Glasgow Institution for Orphan and Destitute Girls, opened in 1891, and accommodating 60 girls. To the W of Partick is Whiteinch, with a population employed in the adjoining shipbuilding yards.

Parton, a post-office hamlet and a parish of central Kirkcudbrightshire. The hamlet, lying near the northern shore of the lakelike expansion of the river Dee, has a station on the Dumfries and Portpatrick railway, $6\frac{3}{4}$ miles NW of Castle-Douglas, and near it is a slate quarry.

The parish, containing also CORSOCK village, is bounded NW and N by Balmacellan, E by Kirkpatrick-Durham, SE by Crossmichael, and SW by Balmaghie and Kells. Its utmost length, from E to W, is $6\frac{3}{4}$ miles; its utmost breadth, from N to S, is $6\frac{1}{2}$ miles; and its area is $16,248\frac{1}{2}$ acres, of which $407\frac{1}{2}$ are water. URR Water flows $4\frac{3}{4}$ miles southward along all the eastern boundary; and two of its affluents, Crogo and Plan Burns, trace part of the northern and south-eastern boundaries. The KEN and the DEE, from the middle of Loch Ken to the middle of the lake-like expansion of the Dee, a distance of $5\frac{1}{2}$ miles, wind along all the south-western border, here widening to 700 feet, and there narrowing to 100. Dullarg Burn runs to Loch Ken along the north-western boundary, and Barend Burn through the interior, whilst Boreland and Craichie Burns fall into the Dee. Of seven lakes and lakelets, much the largest is CORSOCK Loch ($2\frac{1}{4}$ by $1\frac{3}{4}$ furl.; 550 feet), in the NE corner of the parish. A chalybeate spring of small note is on Little Mochrum Farm; and another on Upper Dullarg Farm, supposed to be similar to the old spa of Moffat, at one time drew considerable attention, but has been destroyed by draining operations. Sinking along Loch Ken and the Dee to 150, along Urr Water to 250, feet above sea-level, the surface thence rises to 619 feet near Boghall, 737 near Shaw, 850 at Glenhead Hill, and 1038 at Mochrum Fell. The rocks are mainly Silurian; and slates of tolerable quality, though inferior to English, have been quarried in the northern vicinity of Parton hamlet. The soil of the arable lands is mostly light, incapable of yielding heavy crops. From the middle of the 15th to the middle of the 19th century Parton barony was held by the Glendonwyn family; now it belongs to Benjamin Rigby Murray, Esq. His seat, Parton Place, is situated on a rising ground, with fine old trees, $1\frac{3}{4}$ mile ESE of Parton station, and commands a fine view of the broad part of the Dee. Other mansions, noticed separately, are CORSOCK and GLENLAIR. Antiquities are remains of Corsock Castle, an old causeway across the Dee below the influx of the Ken, two artificial circular mounds near Parton village, two cairns, and remains of the old parish church (1592), which now is used as a family burying-place, and whose carved oak pulpit of 1598 has found its way to the Edinburgh Antiquarian Museum. Giving off a portion to Corsock *quoad sacra* parish, Parton is in the presbytery of Kirkcudbright and the synod of Galloway; the living is worth £320. The present parish church, at Parton hamlet, was built in 1834. The public school, with accommodation for 118 children, has an attendance of about 50, and a grant of over £60. Pop. (1801) 426, (1831) 827, (1861) 764, (1871) 737, (1881) 716, (1891) 692, of whom 413 were in the ecclesiastical parish.—*Ord. Sur.*, shs. 9, 5, 1863-57.

Pathhead. See KIRKCALDY.

Pathhead, a village in the northern extremity of Crichton parish, Edinburghshire, on the right side of the river Tyne, in the eastern vicinity of the old decayed village of Ford, 5 miles ESE of Dalkeith, $3\frac{3}{4}$ N of Tynehead station on the Waverley route of the North British railway, and 11 SE of Edinburgh. Standing 500 feet above sea-level on the slope and crown of an ascent from the Tyne, it takes its name from being at the head of this ascent or path; extends along both sides of the road from Edinburgh to Lauder; and has charmingly picturesque environs, including parts of the Oxenford and Vogrie estates, but chiefly consisting of feus from the Crichton property. Its main street, straight and airy, consists in great measure of neat and substantial one-storey houses; a magnificent bridge over the Tyne, with five arches, each 80 feet high and 50 in span, connects it with Ford; and it has a Roman Catholic church (St Mary, 1872) and school, a police station,

and an inn. Pop. (1841) 843, (1861) 735, (1871) 667, (1881) 583, (1891) 545.—*Ord. Sur.*, sh. 33, 1863.

Pathhead. See CUMNOCK, NEW.

Path of Condie or Pathstruie, a small village, in Forteviot parish, Perthshire, near the left bank of the Water of May, $5\frac{1}{2}$ miles SSE of Forteviot station on the Caledonian railway. It has a post office (Pathstruie) under Forgandenny, a U.P. church, and a public school.—*Ord. Sur.*, sh. 40, 1867.

Patie's Mill. See GALSTON.

Patiesmuir or Pettymuir, a village on the S border of Dunfermline parish, Fife, $2\frac{1}{2}$ miles S of Dunfermline.

Patna, a village in Straiton and Dalmellington parishes, Ayrshire, on the river Doon, with a station upon the Ayr and Dalmellington branch of the Glasgow and South-Western railway, 10 miles SE of Ayr. Situated in a bleak, confined, tumulated landscape, and forming part of a mineral field rich in coal and ironstone, it has chiefly been built since the commencement of the 19th century. Its Straiton section consists for the most part of one-storey houses, arranged in a main street and a contiguous row; and the inhabitants are chiefly miners, or otherwise connected with the mineral traffic. Patna has a post office, with money order and savings bank departments, railway telegraph, a handsome granite fountain (1872), an Established church, a U.P. church (1838), and a public school. The Established church was built as a chapel of ease in 1837, and in 1877 was raised to *quoad sacra* status. Pop. of village (1841) 231, (1861) 470, (1871) 766, (1881) 603, (1891) 456; of *g.s.* parish (1881) 1179, (1891) 908.—*Ord. Sur.*, sh. 14, 1863.

Pattack. See LAGGAN.

Pavilion. See ADDRESSAN.

Pavilion, a mansion in Melrose parish, Roxburghshire, on the left bank of the Tweed, near the influx of Allan Water, $2\frac{1}{2}$ miles NW of Melrose town. It was the Scottish seat of the Lords Somerville, the nineteenth and last of whom died in 1870; and it now belongs to the seventeenth Lord's daughter, the Hon Mrs Henry.—*Ord. Sur.*, sh. 25, 1865.

Paxton House, a mansion in HUTTON parish, Berwickshire, near the left bank of the Tweed, $4\frac{1}{2}$ furlongs below the Union Bridge, and 5 miles W by S of Berwick. Built in the latter half of the 18th century, after designs by the celebrated Adam, it is an imposing dark freestone edifice, with handsome massive front, a very fine picture gallery, and a large and beautiful park. Its owner is Col. David Milne-Home, of Wedderburn (b. 1837; suc. 1890). George Home, his ancestor, was a member of the Mirror Club, and at Paxton was visited by Henry Mackenzie ('The Man of Feeling'), Lord Craig, and other leading literati. Paxton village, $\frac{3}{4}$ mile to the N, has an inn, a public school, Good Templar Hall and lodges, a horticultural society, a reading-room, and a post and money order office under Berwick. See MILNE-GRADEN.—*Ord. Sur.*, sh. 26, 1864.

Pearsie, an estate, with a mansion, in Kingoldrum parish, Forfarshire, near the right bank of Proseu Water, $4\frac{1}{2}$ miles NNW of Kirriemuir. Its owner is Alex. Maclagan Wedderburn, Esq.—*Ord. Sur.*, sh. 56, 1870.

Pease-Dean, a deep, thickly wooded ravine, traversed by a brook, in Cockburnspath parish, Berwickshire, extending 3 miles northward to the German Ocean at a point $1\frac{1}{2}$ mile E of Cockburnspath village. It is flanked by heights rising from 100 to 727 feet above sea-level; has steeply acclivitous sides; was regarded in the old times as a natural barrier against invasion of the east of Scotland by the English; and occasioned the line of the North British railway to deflect from a direct course south-eastward, and to run for $2\frac{1}{2}$ miles south-by-eastward along the crest of its left bank. The old road from Berwick to the Lothians, which crossed it near the mouth, and went down and up its steep sides in a series of zigzags, was the only route by which an English army could proceed on the E past the Lammermuirs; and on Oliver Cromwell's arrival at it in 1650 was reported by him to his parliament to be a place 'where one man to hinder was better than twelve

to make way.' A bridge of 1786, which crosses it on the line of the old road, measures 300 feet in length, 16 in breadth, and 127 in height; and was long regarded as one of the most wonderful structures in Scotland.—*Ord. Sur.*, sh. 34, 1864.

Peebles, a royal and police burgh, the county town of Peebleshire, and a parish in the same county. The town, 547 feet above sea-level, stands on the left bank of the Tweed, which here is joined from the N by Eddleston Water. It is 27 miles S of Edinburgh by the North British railway, 53½ by the Caledonian, and 22 by road; 53¾ ESE of Glasgow by rail, and 47 by road; 15¾ E by N of Biggar by rail; 19 E by N of Symington Junction; 18¾ WNW of Galashiels by rail, and 17¾ by road; 19 NW of Selkirk by road; and 54 NNE of Dumfries by road. Peebles has two railway stations, one of which is on the North British line from Edinburgh to Galashiels by Leadburn Junction, and the other of which is the terminus of the Peebles Branch of the Caledonian railway. The section of the former, between Edinburgh and Peebles, was opened for traffic in 1855, and the part between Peebles and Galashiels in 1864, at which date was also opened the Caledonian branch from Symington Junction to Peebles. A short line of railway connects the two systems—the North British and the Caledonian. Starting from the station of the latter, it runs along the right bank of the river, which it crosses by an iron bridge at the foot of Tweed-Green, and then joins the North British line. Omnibuses await the principal trains to take visitors to the Hydropathic Establishment and to the Tontine Hotel; and in the season a conveyance runs between Peebles and Neidpath Castle, about a mile to the west.

Peebles is built mainly on a peninsula formed by the river Tweed and Eddleston Water. The situation of the town is very beautiful, and at the same time somewhat secluded, owing to the lofty hills which entirely surround it. Near the river, and on either side of it, lie stretches of flat meadow-land, from which the ground slopes upwards. Upon the N ascent, the New Town, as it is called, is partly built. It contains the chief street of Peebles—the High Street. The New Town dates from the 16th century, when it was erected on a more secure site than that occupied by the Old Town. It was surrounded by a wall and defended by bastle-houses, but both the wall and the houses have now almost wholly disappeared. The names Northgate, Eastgate, Portbrae, however, still preserve the recollection of Peebles as a walled town. Beyond the western extremity of the High Street, numerous villas have been erected of late years, and the ground on the S bank of the Tweed has also been built upon to such an extent that the collection of houses there has been called by Chambers 'a species of third town which promises to exceed the others in dimensions.' The Old Town lies chiefly on the right bank of Eddleston Water. At one time it must have been of considerable size and importance, as it contained the church of St Andrew and that of the Holy Cross, as well as the abodes of the clergy. Of late years it too has been greatly enlarged by the erection of new houses and a large number of fine villas standing in their own grounds. The town of Peebles, says the author of the *The Beauties of Scotland* (1805), 'is, upon the whole, well built; its principal street is spacious and well paved, and terminates on the W in a stately church of modern architecture.' 'The town of Peebles,' wrote Dorothy Wordsworth in 1803, 'looks very pretty from the Neidpath road; it is an old town, built of grey stone.' 'The climate of Peebles,' says a third account of 1881, 'is exceedingly healthy. Though the town is 550 feet above sea-level, the air is not so cold as might be expected. . . . The surrounding hills, which almost envelop the town, form a barrier to the winds, and the full force of a storm is thus seldom felt. Mists are rare. Few of the houses are much affected with damp, on account of the soil whereon they are built being principally composed of gravel and sand.' The Tweed, at Peebles, is crossed by a stone bridge of five arches,

which seems to have been built about 1467. In 1835 it was widened, a change very necessary, since it was so narrow that foot passengers had to take refuge in recesses over the piers when carriages, etc., were crossing over. There are several bridges over Eddleston Water and an iron bridge over the Tweed, by means of which the railway crosses the river, while about a mile below the town, in a romantic glen, Sir John Adam Hay, Bart., has thrown across the Tweed also a much-admired wire bridge.

The town of Peebles contains altogether six places of worship. The new parish church, erected in 1885-87 at a cost of £9500, stands on the site of one which was built in 1779, and contains 1260 sittings. Of thirteenth century Gothic, with tower and crown 130 feet high, its east front faces the High Street, and its south front faces the bridge over the Tweed. Three silver communion cups bear date 1684. The Free church, erected in 1871-72, is situated at the eastern extremity of the town. It is a handsome building in the Early Pointed style, with a spire 100 feet high. It contains sittings for 610 persons. The West U.P. church was erected about 1832. It was originally a Relief church. The East U.P. church, commonly known as the Leckie Memorial Church, was erected in 1875-76 from designs by Messrs Peddie & Kinneir. It is built in the Gothic style, in the form of a parallelogram, with a massive broach spire at one angle. It has a very fine situation, as it is built on the slope which rises from Tweed-Green to High Street, and in consequence looks directly upon the river. St Peter's Episcopal church contains 220 sittings. A new chancel was added in 1882, and the interior much improved, when a new organ was added to the church. The pulpit is of beautiful marble, the font of Caen stone; and there is a stained-glass window in the chancel. The Roman Catholic church, St Joseph's, in Rosetta Road, replaced in 1858 a chapel of much smaller dimensions. The present one has accommodation for 300 persons.

So early as 1464 the bailies appointed Sir William Blaklok schoolmaster of the burgh; and in 1555 they agreed to provide the master with an 'honest chamber,' and also with the use of the tolbooth to teach his bairns reading and writing English. 'Latinists' are mentioned in 1559; and in 1563 the council ordained the master to wait on the bairns, and not to go to hunting or other pleasures in time coming without licence of the aldermen. Education was made compulsory in 1637; and in 1688 the magistrates ordered the master to teach all children *gratis* whose parents were unable to pay the fees. Four public schools—Bonnington Park (evening), English, Second English, and Halyrude, with respective accommodation for —, 617, —, and 473 scholars, have an average attendance of 10, 400, —, and 275, and grants amounting to over £21, £390, —, and £280.

There are in Peebles few public buildings, and these, for the most part, are of plain and unadorned appearance. The most striking are the Hydropathic Establishment and the Chambers Institution. The Town-Hall, which stands in High Street, was built in 1753; and behind it is the Corn Exchange (1860). The County Hall is also in High Street. It was erected in 1844, is in the Tudor style, and has inferior accommodation. The prison beside it was legalised in 1844, but closed in 1878. The building in High Street, which forms the front of the Chambers Institution, has an interesting history connected with it. At one time the property of the Cross Church, it fell in 1624 into the hands of the Hays, Lords Yester. It next passed to the Queensberry family (1687), and was sold by the fourth Duke of Queensberry to Dr James Reid in 1781. Dr W. Chambers obtained possession of it in 1857, and 'for purposes of social improvement, presented it as a free gift to his native town.' He made considerable alterations upon the building—chiefly inside—and erected on the S side of the quadrangle a large hall, which harmonises very well with the other buildings. In the centre of this quadrangle has been placed the old

cross of Peebles, noticed below. The institution was opened 11 Aug. 1859. It embraces a public lending library with about 17,000 volumes, a large reference library, a public reading room, and several rooms for private study, a gallery of art, a county museum, and a hall. It is maintained partly by endowment and partly by small fees, payable by visitors and others. The buildings were repaired in 1880 at a cost of £1000. The civic corporation act as trustees. The Museum contains some fine copies of famous Egyptian antiquities, as well as collections of fossils, birds, casts, etc. In the hall there has been placed a portrait of Dr Chambers, by Gordon, painted in 1858.

Peebles has a post office, with money order, savings bank, insurance, and telegraph departments, a gaswork, and branches of the Bank of Scotland, the Commercial Bank, and the British Linen Co.'s Bank. The premises of all three are in High Street. Those of the Bank of Scotland and of the British Linen Co. are handsome buildings, erected in 1860 and 1883. Peebles having early adopted the oil-gas process of enriching coal gas for public combustion, its name is frequently given to the process. There are numerous hotels in the town, as well as a Hydropathic Establishment. The chief hotels are the Tontine, the Commercial, and the Cross Keys. The first, as the name implies, was built by subscription, under the agreement 'that any age might be entered, and the longest liver should have the whole.' It was erected in 1808 at a cost of £4030. The Cross Keys Hotel is interesting, because it and a former landlady have been considered the originals of the 'Cleikum Inn' and 'Mcg Dadds' in Scott's *St Ronan's Well*. Above the doorway is written *The Original Cleikum Inn*, underneath which is the date 1653, and, indeed, the building has an antiquated appearance. It is approached from the Northgate through an arch, which leads into a courtyard, at the end of which the house—once known as the 'Yett' (*i.e.*, gate)—is situated. At one time it was the town-house of the Williamsons of Cardroua, who appear to have risen from burghesses of Peebles to county gentlemen. The Hydropathic Establishment lies a little way E of the town on the slope of Ven Law (1066 feet). It was erected in 1878-81, at a cost of £70,000, in the French Renaissance style. The building is extremely handsome, and the deep brown-red colour of the stone with which it has been built contrasts well with the dark green of the trees round about it. There are five floors and accommodation for 200 visitors. The public rooms are spacious and elaborately decorated, the bedrooms comfortably furnished, and the baths of the most complete description. The grounds, 26 acres in extent, have been laid out with greens for lawn tennis, croquet, bowling; and there are ponds for curling and skating. Peebles has numerous clubs and societies. There are clubs for golf, cricket, football, bowling, and curling, in addition to a Conservative Club, a Liberal Association, a Liberal-Unionist Club, a Farmers' Club, and a Horticultural Society. Among the societies are the Auxiliary to the National Bible Society, the Boys' and Girls' Religious Society, a Young Men's Christian Association, and a telephone exchange and call office. Besides these there are a Hammermen's Incorporation, a Guildry Corporation, an Independent Order of Good Templars, the Court Neidpath Ancient Order of Foresters, the Peebles Kilwinning Lodge of Freemasons, and two companies of Volunteers. A newspaper called the *Peebleshire Advertiser and County Newspaper* (1845) is published every Saturday. The weekly market is on Tuesday. A fair is held on Tuesday after 18 July, and *Siller Fair* on Tuesday before 12 December. Hiring fairs are held on the first Tuesday of March—*Fasten E'en Fair*—on Tuesday before 12 May, and on the second Tuesday of October.

The only industry, prosecuted with vigour in the town, is the manufacture of woollen goods. There are four woollen mills, employing a large number of hands. About the beginning of the 19th century the manufacture of cotton goods was introduced, but unsuccessfully, and this failure cannot but be contrasted with

the success that has attended the woollen trade. Trade is greatly benefited by the increasing number of people who spend the summer at Peebles. Quite recently new waterworks in connection with the Manor supply were inaugurated.

Under the Burgh Police Act of 1892 the town is governed by a provost, 2 bailies, and 6 commissioners.

The sheriff court sits every Friday during session, and the sheriff-small debt court every alternate Friday. From the Union till 1832 Peebles had a parliamentary representation; but now it votes only in the election of the member for Peebles and Selkirk shires. Municipal constituency (1896) 1033, including 248 females. Corporation revenue (1883) £697, (1895) £741.

Valuation (1884) £10,112, (1896) £13,498, plus £1513 for railways. Pop. of royal burgh (1841) 1908, (1861) 2045, (1881) 2609, (1891) 3059; of town and police burgh (1861) 2045, (1871) 2631, (1881) 3495, (1891) 4704, of whom 2593 were females. Houses (1891) inhabited 951, uninhabited 52, building 12.

In and about the town of Peebles there are several objects of antiquarian interest. Of the town wall, built about 1570, when the country was in a most distracted condition, only a few fragments now remain. To judge from the height and thickness of these, it could not have been, even at the best, a great defence. Beginning at the parish church—on whose site Peebles Castle formerly stood—it stretched along Tweed-Green to its eastern boundary, then struck N to where the Free church now stands, and again E back to the parish church. The portions still extant are on the E side. In addition to the protection afforded by the town wall, the burghesses sought to defend themselves by erecting bastel-houses, which were three-storeyed buildings entered through a low doorway. The ground floor, and occasionally the upper floors, were arched, and the roof covered with thatch, which, in an emergency, could be stripped off, set on fire, and thrown down upon the enemy outside. No vestiges now remain of the Castle of Peebles. Built, in all likelihood, in the reign of David I., it was inhabited from time to time by Scottish kings (see under History), and must have existed as late as 1685, when it is mentioned for the last time in the rental book of the Earl of Tweeddale's estates. Although its size is not certainly known, still it probably was not of much greater extent than the 'Peel Houses' of that period. Towards the close of the 17th or in the beginning of the 18th century, it had fallen into decay, and doubtless had come to be regarded, like many other ruins in Scotland, as nothing better than a quarry from which stones might be had for building with comparatively little trouble. When the prison was built, part of the foundations of the castle were laid bare. NEIDPATH CASTLE is situated 1 mile W of the town.

The ruins of the Cross Church and of the church of St Andrew are within the burgh. The former are situated in the old town, not far from the station of the North British Railway Company. The way in which the name of this church arose is thus described by Fordoun (the account is condensed): 'Upon the 9th May 1261, a magnificent and venerable cross was found at Peblis, which is supposed to have been buried at the time of Maximin's persecution in Britain, about the year 296. Shortly afterwards, there was found about three or four paces distant from the spot where the glorious cross was discovered, a stone urn, containing the ashes and bones of a human body. These relics were thought by some

Seal of Peebles.

to be the remains of the person whose name was engraven on the stone on which the cross lay; for on the upper side of the stone were these words, "The place of St Nicholas, the bishop." In this place, where the cross had been found, frequent miracles were wrought; on which account the King, by the advice of the Bishop of Glasgow, caused a stately church to be erected there, in honour of God and of the Holy Rood.' This church was 102 feet in length, 32 in width, and 24 in height. At the back of the church was a convent, also erected by the King. In the English invasion of 1548-49, when so many abbeyes and churches were burned, the Cross Church escaped uninjured. From 1560 to 1784, when the present parish church was built, it served as the parish church. At that date nearly all the walls were pulled down to furnish material with which to build the new church, and now the remains of this once extensive building are very inconsiderable. On its N side a mound, overgrown with grass, marks the burial-place of the Earls of March. The burial-place of the Hays of Haystoun is on the S side, where there is also a part railed off said to have been formerly the property of the Earls of Morton. The parish church of St Andrew lies about $\frac{1}{2}$ mile W of the Cross Church. It was founded in 1195 by Bishop Jocelin of Glasgow, and, owing to the large endowments which it received, soon became important. In 1543 it was made a collegiate church; but in 1548 it was burned by the English, from which disaster it never recovered. When the Cross Church became the parish church at the Reformation, there was no object to be gained by restoring that of St Andrew, and accordingly it fell gradually into a ruin, the tower alone resisting successfully the action of wind and weather. In 1883 Dr William Chambers, for whom this old tower seems to have had an especial interest, restored it at his own expense; and his grave is beneath its shadow. The churchyard contains some curious old tombstones. The oldest bears the date 1699. Another, dated 1704 and erected to the memory of three members of a family called Hope, has the following verse upon it:

'Here lie three Hopes enclosed within,
Death's prisoners by Adam's sin;
Yet rest in Hope that they shall be
Set by the Second Adam free.'

Another has:

'My glass is run, and yours is running;
Repent in time, for judgment's coming.'

In the churchyard a part set aside has been called the *Stranger's Nook*, and in it lie buried the remains of some French officers who died at Peebles while living there on parole. Of the Chapel of the Virgin, which adjoined the Castle and stood across the head of High Street, no traces now remain. It is not known at what time it was erected, but of its extreme antiquity there can be no doubt. In appearance it was a long, narrow Gothic building. For years after the Reformation it was employed as the meeting-place of the kirk-session and presbytery, and was only removed to make way for the present parish church. The place where the Hospital of St Leonard once stood is marked by a single tree. The hospital (rather "hospitium") was designed for the relief of the poor and the aged.

Other antiquities in the town and parish are the following. The ancient Cross of Peebles, first erected in the Old Town, and afterwards removed to the High Street, was given to Sir John Hay, Bart., in 1807, and set up by him at Kingsmeadows. In 1859 it was restored to the town by Sir Adam Hay, Bart., and placed in the court of the Chambers Institution. In 1895 it was restored to its original position. According to the writer of the *New Statistical Account* of the parish, 'the cross was a work of great antiquity, having been erected by one of the Frasers of Neidpath Castle before the time of Robert the Bruce, and bears the arms of the Frasers.' It consisted of an octagonal column, 12 feet in height and $3\frac{1}{2}$ in circumference. A number of shields round the centre and capital of the pillar bear the burgh arms. A house in High Street, inhabited for genera-

tions by a family called Turnbull, bakers by business, bears a stone with implements used in baking carved upon it, and with the inscription, 'God provides a rich inheritans; 1717. W T.' A small one-storeyed shop that stood in the High Street, a few doors E of the Chambers Institution, and was used by Mungo Park (1771-1805), the famous African traveller, as a surgery, has been removed and a new building erected on its site. Though enjoying a good practice, Park doubtless found existence in a Scotch country town rather dull. This may explain why he gave up his profession to enter upon his second and fatal expedition to the Niger. A house standing at the corner between High Street and Northgate bears the name 'Cunzie Neuk' or 'Cunye Neuk.' It is said that it derived its name from a house, erected as early as 1473, on the same site, and so called, according to some, because money was coined there. It is more likely, however, that it obtained its name from the fact of its being a corner house.

There are not fewer than seven hill forts in the parish, erected by the Britons as defences against their various foes. These forts are on Meldon Hill, Janet's Brae (2), Cardie Hill, Kittlegairy Hill, Cademuir Hill (2), Camp-law. The extent of these and their history have been carefully treated in the chapter entitled 'Early History and Antiquities,' in Dr Chambers's *History of Peeblesshire*.

History.—When Peebles was first founded is not known, but that it must have been at a very early date is certain. Its name, which is spelt Peblis, Peeblis, Peebles, is derived, according to Chambers, from *pebyll*, which means 'movable habitations, tents, or pavilions.' If this derivation is correct, the word meaning tents has been transferred, by a common figure of speech, to the place where they were pitched. The natural surroundings of the town, which is well sheltered and amply supplied with water, make this far from unlikely. A tradition of the 6th century connects Peebles with the patron saint of Glasgow—St Mungo. According to it, he visited the town and planted a church there, and 'Saint Mungo's Well' still calls to remembrance the visit of the bishop. It is not, however, before the 12th century that history takes the place of tradition. Although the view that Peebles was created a royal burgh by David I. is probably wrong, and that according to which it was created a royal burgh by David II. in 1367 correct, the town still had, even at the earlier date, a certain position in Scottish history. In the 12th century a rector of Peebles, afterwards Bishop of Glasgow, vindicated at Rome the resistance of the Church of Scotland to the claim of superiority over it made by the Archbishop of York. At that time there were in the town a church, a mill, and a brewery.

Peebles stood in a country which then afforded good hunting, and in consequence its castle, which may have been built in the reign of David I., was used as a royal residence by various kings when residing in that part of the kingdom. David I. himself, Malcolm IV., his son William the Lion, Alexander II., and Alexander III. may be mentioned. During one of his invasions of Scotland, Edward I. spent some time at Peebles, from whose castle he dated more than one charter. In 1304, Peebles, with its mills, etc., was granted by him to Aymer de Valence, Warden of Scotland, and his heirs. The right to hold a fair was given to the town by King Robert the Bruce, but the charter which conveyed it has disappeared. In 1329 David II. visited Peebles, and in the Scottish Parliament, which met after the battle of Durham (1346) and during the King's captivity, to ratify the agreement entered into with England, two commissioners from Peebles took part. This, combined with the creation of Peebles into a royal burgh (1367), shows that, even at that early period, the town was regarded as important. In 1406 Sir Robert Umphraville, Vice-Admiral of England, made a raid upon Peebles, and as Hardyng relates—

'Brent the town upon their market-day,
And mete their cloth with spears and bows sere
By his bidding without any nay.'

The next monarch whose name is connected with Peebles is James I. of Scotland. After his return from captivity in England, he visited the town on several occasions. There it is almost certain that he would see the sports of Beltane Day (May 1), which, in turn, might well suggest to him the idea of *Peblis to the Play*. According to Chambers, 'the festivities of Beltane originated in the ceremonial observances of the original British people, who lighted fires on the tops of hills and other places in honour of their deity Baal; hence Beltane or Beltien, signifying the fire of Baal. The superstitious usage disappeared, . . . but certain festive customs on the occasion were confirmed and amplified, and the rural sports of Beltane at Peebles, including archery and horse-racing, . . . drew crowds not only from the immediate neighbourhood, but from Edinburgh and other places at a distance.' Numerous local allusions and intimate acquaintance with the humours and customs of the age prove that the poem was written by one who had witnessed the rejoicings of Beltane Day; and all that is known of King James I. makes it very likely that he was the author of *Peblis to the Play*. In the poem of *Christ Kirk on the Green*, which has been ascribed both to James I. and James V. the sports at Peebles are also alluded to. Chambers points out as evidencing the popularity of James I., that after he had been murdered at Perth (1437) money was subscribed by the inhabitants sufficient to have a mass said daily for the King's soul.

The reign of James II. is interesting in connection with Peebles, because in it begin the burgh records. The 4th October 1456 is the earliest date to which it is possible to go back. To the reign of his successor, James III., a poem called *The Tales of the Thrie Priestis of Peebles* must be referred. It is constructed, to a certain extent, on the same lines as the satirical poems of Sir David Lindsay, especially as regards the parts in which the faults and failings of the clergy are severely criticised. From James IV. the town obtained a charter of confirmation in 1506, and during the greater part of his reign was very prosperous. The quietness that had lasted during it served only to increase the disturbance and tumult that broke out after his death. In 1547 an expedition set out from Peebles to besiege and recover the house of Langhup, held at that time by the English. In December 1565 Darnley visited Peebles. Different reasons are assigned for his sojourn in it. One account says that he was sent thither by the Queen; another, that he came seeking more congenial pleasures than those afforded by the capital; a third, that he came to it in order to have an interview with his father, the Earl of Lennox, unknown to the Queen. The next notice of interest with regard to the town occurs in 1604. In that year there was, as Birrel relates in his *Diary of Events in Scotland*, 'ane grate fyre in Peiblis town.' This destroyed a large part of what had been built again after 1545. In 1645 the plague, which had been causing terrible devastation elsewhere, reached Peebles, and created a panic among the inhabitants. One result was, that for a time 'there was no meeting of the congregation for fear of the pestilence.' While terror was thus inspired by the plague, anxiety, almost as great in extent, though different in cause, was occasioned by the victorious progress of the Marquis of Montrose. After having been defeated at Philiphaugh (13 Sept. 1645), he fled to Peebles, where he sought to gain the assistance of some of the neighbouring lairds, in which attempt, however, he was far from being successful. Five years later, a division of Cromwell's army was stationed at Peebles. It is said that the soldiers found stabling for their horses in the Church of St Andrew while they were attempting to reduce Neidpath Castle, held by Lord Yester. Twenty years after the former visitation, Peebles was again full of terror lest the plague should break out among them. The ravages of this—the Great Plague—were confined to England and Ireland, and Scotland escaped unharmed.

In the struggles of the Covenanters after a simpler

worship and a purer faith Peebles took a conspicuous part, and at the battle of Bothwell Brig many from the parish were present. The rebellion of 1715 had not affected Peebles, but in 1745 it had to receive a division of the Pretender's army, which was marching into England by way of Moffat. According to R. Chambers's account in the *History of the Rebellion of 1745-46*, the Highlanders showed a quite unlooked-for aspect of character, behaving with moderation such as they were never expected to display.

In his history of the burgh, Chambers gives a most minute account of the way in which, on one pretence or on another, the property in land belonging to Peebles was frittered away, chiefly in the 18th century. Such property consisted for the most part of extensive commons in different parts of the parish. Of these, Caidmuir, Kings Muir, Glentress, Hamildean Hill, Eshiels, Venlaw, may be mentioned. For long it clung to the fragments that were left—Heathpool Common, a small piece of Glentress, and the farm of Shielgreen, but these, too, eventually had to be parted with.

When the 'scare' caused by the anticipated invasion of Britain by Bonaparte was at its height Peebles showed much patriotism, and a large number of the able-bodied among the inhabitants enrolled themselves in the volunteers and yeomanry, as well as in the militia. Three regiments of militia occupied Peebles in turn until 1814, when peace was concluded. The burgh served for a time as the place of residence of officers of different nationalities fighting under the French flag, who were out on parole. They made themselves very agreeable, gave representations of stage-plays, acted as surgeons, etc., and by their manners made a favourable impression upon the inhabitants. In 1846 great improvements were effected upon the town at the cost of £1000. 'The High Street was lowered two or three feet throughout its entire length, drains were built, unsightly projecting buildings and stairs were removed, and the side-ways, so cleared, were laid with pavement.' Since that date the history of the burgh has been uneventful. At the same time the town has gradually advanced to greater beauty than it once possessed, and now it is almost worthy of its nearly unique situation beside the waters of the 'silver Tweed.'

The following well-known Scotsmen have been connected by birth with Peebles. The fourth Duke of Queensberry (1725-1810), 'Old Q,' as he was called, was born in the building now forming part of the Chambers Institution, but used at that time as a town house by the Queensberry family. His influence in all things pertaining to the burgh was immense, but not always employed for the good of the town. Sir John Elliot (d. 1786), after a life of adventure at sea, began to practise as a doctor in London. He quickly gained great fame, whose extent is shown by his being appointed physician to the Prince of Wales, and by his being created a baronet (1778). William Chambers (1800-1883) and Robert Chambers (1802-1871) may be taken together, as their success in life was the result of their united efforts. They were born in a house in Biggiesknowe, in the Old Town, erected by their father in 1796. In company the two brothers started as publishers, and brought out *Chambers's Journal* (1832), an educational course embracing works in many departments of science, literature, etc.; an encyclopædia in 10 volumes, etc., etc. Both have also been authors. The writings of William Chambers are chiefly hooks of travel and papers on various questions, which as a rule appeared in the Magazine, besides a memoir of his brother (1872; new ed. 1883). Those of his brother are more ambitious and varied. They include, among others, *Traditions of Edinburgh* (1824), *Popular Rhymes of Scotland* (1826), *Dictionary of Eminent Scotsmen* (1835), *Romantic Scottish Ballads* (1859), *Domestic Annals of Scotland* (1856-61), *Book of Days* (1862-63), and *Vestiges of Creation* (anon. 1844; acknowledged 1884). Robert Chambers also composed songs and ballads. William Chambers is chiefly remembered for his gifts to Peebles

and to Edinburgh, of which city he was Lord Provost in 1865. The Chambers Institution in his native town has been already described, and his restoration of St Andrews Tower referred to. During his tenure of office the capital underwent many improvements, of which the opening up of the spacious thoroughfare between the South Bridge and George IV. Bridge, called Chambers Street, was not the least important. In 1879 he offered to restore St Giles' Cathedral at his own cost if certain conditions were complied with. These were arranged, and St Giles' was reopened on 23 May 1883, just three days after his death. John Veitch, LL.D. (1829-94), was educated at the Grammar School, Peebles, from which he passed to Edinburgh University. He was appointed Professor of Logic, Rhetoric, and Metaphysics in St Andrews University (1860), and four years later was invited to Glasgow University to lecture on the same subjects as Professor of Logic, etc. Dr Veitch wrote and translated several philosophical works, composed numerous pieces of poetry, collected into *Hill-side Rhymes* (1872) and *The Tweed and Other Poems* (1875), and will probably be best remembered by his *History and Poetry of the Scottish Border* (1878; 2nd ed., 2 vols., 1893). Henry Calderwood, LL.D. (b. 1830), received his education at the High School, the Institution, and the University of Edinburgh, to the chair of Moral Philosophy in which he was appointed in 1868. His principal works are *The Philosophy of the Infinite* (1854), *Handbook of Moral Philosophy* (1872), *The Relations of Mind and Brain* (1879; 2nd ed. 1884), and *The Relations of Science and Religion* (1881).

The parish of Peebles was partly also in Selkirkshire until 1891, when the Boundary Commissioners placed it wholly in Peebleshire. It is bounded N by Eddleston, E by Innerleithen and Traquair, S by Yarrow, SW by Manor, and W by Manor, Stobo, and Lyne. Its utmost length, from N to S, is 9 miles; its utmost breadth, from E to W, is 5½ miles; and its area is 16,686½ acres, of which 3172½ were in Selkirkshire, whilst 89 are water. The TWEED divides the parish into two parts, of which the northern is the larger. Entering it on its W side, the river winds 1½ mile east-by-southward along the Manor boundary, next 3½ miles eastward through the heart of the parish, and afterwards for ¾ mile on the boundary with Traquair. Thus if one follows its windings, the Tweed has a total course line of 5½ miles. On the N bank it receives the tribute of Lyne Water, Eddleston Water, and Soonhope Burn. Meldon Burn runs 2½ miles south-by-westward along the boundary with part of Eddleston and the whole of Lyne parish, and falls into LYNE WATER, which itself runs 3 furlongs south-south-eastward along all the Stobo boundary. EDDLESTON Water, flowing at right angles to the Tweed, divides the northern part into two sections, of which the eastern is the larger. It has a course of 2½ miles within the parish, before it joins the Tweed at Peebles. Soonhope Burn, rising at an altitude of 1750 feet in the NE corner of the parish, flows 4½ miles south-south-westward, and falls into the Tweed at Kerfield, ½ mile below the town. On the S bank the Tweed receives MANOR Water, which flows for the last 5½ furlongs on the boundary with Manor, and GLENSAX Burn, rising at an altitude of 2100 feet in the southern extremity of the parish, and running 6½ miles north-north-eastward—for the last 1½ furlong along the Traquair boundary. Besides these, there are numerous small streams, tributaries of the above; and both great and small afford good fishing. The vale of Tweed, in the neighbourhood of Peebles especially, expands to a considerable breadth, and contains scenery of great beauty. It has an altitude near the river of from 550 to 495 feet.

The following are the highest hills:—*Dunslair Heights (1975 feet), *Cardon Law (1923), *Makeness Kipps (1839), *Whiteside Edge (1763), Meldon Hill (1401), Collie Law (1380), Heathpool Common (1516), and South Hill Head (1239), in the division N of the Tweed; Cademuir (1359), Preston Law (1863), *Hundleshope Heights (2249), and *Dun Rig (2433), in the part

S of the Tweed, where asterisks mark those summits that culminate on the confines of the parish. These hills, generally speaking, are lowland in character, though those in that portion of the parish which was formerly in Selkirkshire are somewhat rugged and covered with heather.

Greywacke is the predominant rock, and has been largely employed for building purposes. In the bottom of the valleys the soil is clay mixed with sand; on the lower ascents it is loam on gravel; and on the sides of the hills it is rich earth. The parish is mainly pastoral, there being good feeding for sheep. The chief proprietors are the Earl of Wemyss and Sir Duncan E. Hay of Haystoune, Bart. Mansions, noticed separately, are Kingsmeadows, Kerfield, Venlaw House, and Rosetta. The parish is traversed by the two railways mentioned, and by excellent roads which branch out from the town of Peebles in all directions. Antiquities are described under the town, and in the articles CADEMUIR and NEIDPATH CASTLE.

Peebles is the seat of a presbytery in the synod of Lothian and Tweeddale. The living is worth £363 with manse. Pop. (1801) 2088, (1831) 2750, (1861) 2850, (1871) 3172, (1881) 4059, (1891) 5261.—*Ord. Sur.*, sh. 24, 1864.

The presbytery of Peebles comprises the *quoad civilia* parishes of Drummelzier, Eddleston, Innerleithen, Kirkurd, West Linton, Lyne, Manor, Newlands, Peebles, Stobo, Traquair, and Tweedsmuir, with the *quoad sacra* parish of Walkerburn. Pop. (1871) 11,164, (1881) 12,749, (1891) 13,901, of whom about 3370 are communicants of the Church of Scotland. See BIGGAR.

Peebleshire or **Tweeddale**, an inland county in the S of Scotland, is bounded on the N and NE by Edinburghshire, E and SE by Selkirkshire, S by Dumfriesshire, and on the SW and W by Lanarkshire. The Boundary Commissioners in 1891 effected a rearrangement of the boundaries between the counties of Peebles and Selkirk. The parishes of Innerleithen and Peebles, that were partly in both counties, were placed wholly in Peebleshire; the two Peebleshire portions of the Selkirkshire parish of Yarrow were transferred to the county of Peebles (to the parish of Traquair), while the large detached Megget section of the Peebleshire parish of Lyne and Megget was transferred to Selkirkshire (to the parish of Yarrow), the name of the parish being now simply Lyne; and the Peebleshire part of the parish of Culter, which parish was situated partly in the county of Peebles and partly in that of Lanark, was transferred to the Peebleshire united parish of Broughton, Kilbucho, and Glenholm—this transfer, however, causing no change in the county boundaries. For more particulars regarding these changes, see the articles on the different parishes mentioned. The county derives its former name from its chief town, Peebles; the latter from the fact that the source, and nearly half of the course, of the river Tweed lies within its borders. The boundary runs on the N and NE in a jagged line from the Pentland Hills by Carlops and Leadburn to Kingside Edge; thence S to the Moorfoot Hills, and by Windlestraw Law and Garthope Burn to the Tweed, whose course it crosses at Holylee; thence westwards along the S bank of the Tweed to the Haystoun Burn, though with four bold and irregular loops running almost due S into Selkirkshire, and including the basins of the Bold Burn, Findland Burn, and Quair Water; and so S by the line of Waddinshope Burn, Glenrath Heights, Blackhouse Heights, and Henderland to St Mary's Loch, a reach of which forms a small part of the S boundary of the shire. From St Mary's the boundary next runs along a line of heights by Loch Skene and Hart Fell to Tweed's Cross, where it turns N to form the W limit of the shire by Clyde Law, Black Dod, Culter Fell, Hartree, Skirling, Netherurd, and Medwin Water to the Pentland Hills, which form the NW boundary. The outline thus traced presents the appearance of an irregular triangle, facing W, SE, and NE, with rounded angles, and most broken by indentations on the SE base line, where there are projections into Selkirkshire.

The lengths of the sides are—along the W face, from N to S, 26 miles; along the SE face, 30 miles; and along the NE, 23 miles: The extreme length of the county, from N to S, is 29 miles; and its extreme breadth, from E to W, is 21 miles. It lies between 50° 24' and 55° 50' N latitude, and between 2° 45' and 3° 23' W longitude, and is the twenty-fourth county of Scotland in point of size, and the thirty-first in population.

The surface of Peeblesshire attains a higher average level than that of any other of the southern Scottish counties. The lowest ground is in the narrow vale of the Tweed, just where it enters Selkirkshire, and lies between 400 and 500 feet above sea-level. The highest ground in the county is on the S border, where the summits of the Hartfell group rise. The highest peak is, however, Broad Law (2754 feet), in Tweedsmuir parish, 4 miles from the S border. At a general view the county seems to be an assemblage of hills, more or less high, and more or less closely grouped; but these are intersected in all directions by pleasant and fertile valleys or deep gorges, each with its stream flowing through it. Professor Veitch thus describes the view from the top of Broad Law: 'On all sides, but particularly to the east of us, innumerable rounded broad hill-tops run in a series of parallel flowing ridges, chiefly from the south-west to the north-east, and between the ridges we note that there is enclosed in each a scooped-out glen, in which we know that a burn or water flows. These hill-tops follow each other in wavy outline. One rises, falls, passes softly into another. This again rises, falls, and passes into another beyond itself; and thus the eye reposes on the long soft lines of a sea of hills, whose tops move and yet do not move, for they carry our vision along their undulating flow, themselves motionless, lying like an earth-ocean in the deep, quiet calm of their statuesque beauty.' The character of the county is distinctly pastoral. The hills, 'too plain to be grand, too ample and beautiful to be commonplace,' are for the most part softly rounded, and have gentle slopes, clothed with rich verdure and hanging woods; while the numerous streams, the private demesnes, and the highly cultivated farms, combine to make the scenery beautiful and pleasing without being romantic or wild. The lofty grounds in the S, however, and the ridge running WSW from Minchmoor on the E, are much more rugged and desolate. The main river-valley is that of the Tweed, which stretches in a semicircle from the extreme SW corner, through the heart of the county, and on to the E angle; forming a main artery, into which nearly all the water-courses flow. Over a great proportion of its length this central basin is little more than a series of gorges, affording space for nothing except the river and the public road; it nowhere expands into vales of more than 3 miles in breadth, and seldom into haughs of more than a few furlongs; while its banks are oftener heights or abrupt risings than plains or gentle slopes. From this central line of river-course the county everywhere rises in a series of irregularly shelving ascents towards the boundaries.

Mountains.—A glance at the map shows that a great part of the boundary of Peebleshire is mountainous, and that the ranges on the borders are among the highest in the county. Thus shut in by a natural barrier, and in ancient times having the thick forest of Ettrick on its eastern frontier, Peebleshire has had a more secluded history than its neighbourhood to the metropolitan county might have suggested. On the NW lies a section of the Pentland Hills, extending over an area 5½ miles long by 3 broad. The chief summits there in order from E to W are Craigengar (1700 feet), Faddon Hill (1526), Byrehope Mount (1752), Kingseat (1521), Mount Man (1753), West Cairn Hill (1844), and East Cairn Hill (1839). The N and NE border, from the sources of the North Esk to those of the Caddon, is occupied by the Moorfoot Hills, where large works were constructed in 1875-85 in connection with the Edinburgh water supply; the principal summits of that range within Peebleshire, from the NW to the NE and thence S, are

Carlops Hill (1490 feet), Kingside Edge (891), Lochhill (1560), Jeffries Corse (2004), Dundreich (2040), Powbeat (2049), Blackhope Scars (2136), Middle Hill (1978), East Side Height (1944), and Whitehope Law (2038). Windlestraw Law (2161 feet), still on the NE border, is about 4 miles N of the Tweed. To the S of the Tweed the chief summits are less regularly near the border of the county. In the irregularly outlined section which forms the NE part of the SE border, the chief summits, in order from N to S, are Flora Rig (1567 feet), Kirkhope Law (1758), Bold Rig (1280), Orchard Rig (1463), Pipers Knowe (1444), Minchmoor (1856), Hare Law (1670), Stake Law (two peaks, 2229 and 1784), Dun Rig (2433), and Duchaw Law (1779); while in the irregularly disposed ranges that run from Haystoun southwards through the parishes of Peebles and Manor, the principal border mountains are Cademuir (1359), Preston Law (1863), Seawd Law, Hundleshope (2249), Glenrath Hill (2049), and Heights (2205), Horsehope Hill (1938), Blackhouse Heights (2213), and Black Law (2285). In the mountain-covered parish of Tweedsmuir, which forms the southern extremity of the shire, the chief summits are Locheraig Head (2625 feet), overlooking Loch Skene, Cape Law (2364), Hartfell (2651), and Barry Grain Rig (2012), all on the S border; and Clyde Law (1789), and Black Dod (1787) on its W border. Continuing in order towards the N along the W boundary of the county, the chief summits are Coomb Dod (2082 feet), Coomb Hill (2096), Culter Fell (2454), Cardon Hill (2218), Langlaw Hill (1208), between Skirling and Broughton, Broomy Law (1399), Shaw Hill (1121), and Mendick Hill (1480), a beautifully rounded summit, lying to the S of the Pentlands and W of Linton. In the interior of the county there are several summits and groups that are noteworthy. The Cloich Hills in the N of Eddleston parish attain the height of 1570 feet in Wether Law. Further S, between Eddleston Water and the Leithen, are Cardon Law (1928 feet), Whiteside Edge (1763), Lamb Law (1804), and Makeness Kippis (1839); and between the Leithen and Tweed, Dunslair Heights (1975), Sherra Law (1844), Black Law (1762), and Lea Pen (1647). South of the Tweed a range of high hills runs from near Cademuir southwards along the W side of Manor Water valley, with Hunt Law (1591 feet), Breach Law (1884), Scrape (2347), Pykestone Hill (2414), Long Grain Knowe (2306), and Dollar Law (2680), as chief summits. Other hills, still to the SE of the Tweed, and in the parishes of Drummelzier and Tweedsmuir, are, from N to S, Drummelzier Law (2191 feet), Glenstivon Dod (2256), Taberon Law (2088), Polmold Hill (1548), Lairdside Knowe (1635), Birkside Law (1951), Cramalt Craig (2723), Broad Law (2754), Clockmore (2100), Cairn Law (2352), Eric Hill (2259), Molls Cleuch Dod (2571), and Garetlet Dod (2263); and N of the Tweed and Biggar Water are Broughton Heights, with Wether Law (1872) and Flint Hill (1756); to the S and E of these Trahenna Hill (1792) and Penvala (1764); and Meldon Hill, NW of the town of Peebles (1401), known as 'the hill of fire,' was a place of worship of the ancient Britons.

Rivers and Lakes.—With the exception of the Medwin Water in the NW, which flows into the Clyde, a few streamlets which join the head-waters of the North and South Esk in the N, and some smaller rivulets, all the streams of Peebleshire are tributary to the Tweed, which has already been indicated as the chief river of the county. The source of the Tweed is identified in a small fountain, called Tweed's Well, at the base of the hill Tweed's Cross, in the south-western part of Tweedsmuir parish. Thence it flows in a semicircular course through the heart of the county, traversing first the parish of Tweedsmuir and part of Drummelzier, then dividing Drummelzier from Glenholm and Stobo, cutting next a section of the last-named parish and touching the N boundary of Manor, and thence flowing through Peebles to become the boundary between Innerleithen and Traquair, until it finally leaves the county at Holylec, after a course of 41 miles. On the further side of the range which gives birth to the Tweed, rise

Annan and the Clyde, a fact commemorated in the popular rhyme:—

'Annan, Tweed, and Clyde,
A' rise oot o' ae hill-side.'

The valley of the Tweed in Peeblesshire has already been described. Until the practice of draining became common, the lands on the banks of the river used to suffer from floods in times of heavy rains or snow, though at ordinary times the depth of the stream varies from about 2 to 4 feet. There are several fords within the limits of the county; though for a very long period there was but one bridge, viz., that at the county town. The waters of the Tweed abound in salmon, trout, and other fresh-water fishes. The mountain and hill mosses which flank either side of this main river are intersected by a perfect network of smaller tributary streamlets, few of any great length and confined mostly to narrow ravines and gorges. The chief affluents of the Tweed, from its source to the point at which it quits Peeblesshire, are, on the right bank, Core Water, Glencairgie Burn, Fingland Burn, Hawkshaw Burn, Fruid Water, Menzion Burn, Talla Water, with its feeder, Gameshope Burn, issuing from Gameshope Loch, and Harestanes Burn—all in Tweedsmuir parish; Polmood Burn, between that parish and Drummelzier; Stanhope Burn, Powsail Burn, with its feeders, Drummelzier and Scrape Burns, in Drummelzier parish; Manor Water, with its feeders, in Manor parish; Haystoun or Glensax Burn, joined by Waddinshope and Crookston Burns, in Peebles parish; and Kirkburn, Quair Water, with its feeders, and Bold Burn, in Traquair parish. On its left bank the chief affluents of the Tweed are Badlieu Burn and Glenwhappen Burn, in Tweedsmuir parish; Kingledoors Burn, in Drummelzier; Biggar Water, in the united parish of Broughton, Kilbucho, and Glenholm; Hopstead or Stobo Burn, in Stobo; the river Lyne, between Stobo and Peebles; Eddleston or Peebles Water and Soonhope Burn, in Peebles parish; and Horsburgh Burn, Leithen Water, Walker Burn, and Gatehope Burn (the boundary of the county), in Innerleithen. Several of these affluents have noteworthy tributaries. The only other independent streams of Peeblesshire are the North and South Esks. The former, rising in the extreme N, forms for 5 miles the boundary with Edinburghshire. The only Peeblesshire tributary of the South Esk, which rises in Portmore Loch and flows N, is the Tweeddale Burn, which forms some miles of the E boundary with Edinburghshire. Many of the streams abound in trout or other fish; and the angling waters of the shire attract very many visitors every year. The lakes of this county are neither large nor numerous. Portmore or Eddleston Loch is about 2 miles in circuit, and is situated towards the NE, in Eddleston parish; Slipperfield, ½ mile less, lies towards the NW, in Linton parish; Gameshope Loch, a still smaller expanse of water, lies in the far S, in Tweedsmuir parish. All are stocked with such fresh-water fish as perch, pike, or trout. The chief medicinal springs are those of Heaven-Aqua Well in Linton, and the celebrated Spa of INNERLEITHEN.

Geology.—The various geological formations represented in this county range from the Silurian to the Carboniferous, which are overlain by glacial and recent deposits. They may be readily grasped from the accompanying table:—

Recent and Post-Tertiary.	Peat, alluvium. Morainic gravels in river terraces and kames, moraines and boulder clay.	Millstone Grit.	Red sandstones.
Carboniferous.	Middle group of coals and ironstones.	Lower group of limestones and coals.	Upper group of white sandstones, shales, and cementstones.

Old Red Sandstone.

Lower Old Red Sandstone.

Upper Silurian.

Ludlow and Wenlock.

Llandovery.

Caradoc.

Lower Silurian.

Upper Llandeilo.

Arenig.

Upper group of conglomerates and sandstones. Middle group composed of contemporaneous volcanic rocks. Lower group of chocolate-coloured sandstones and marls.

Sandy shales, sandstones, and grits, with characteristic Ludlow and Wenlock fossils.

Massive grits and greywackes (Queensberry). Birkhill black shale group. Lowther Shales with fossiliferous limestones and conglomerates of Wrae, Kilhucho, etc., with greywackes and shales. Hartfell black shales.

Black shales, mudstones, and greywackes, with Glenkiln fossils.

Radiolarian cherts and mudstones. Contemporaneous and intrusive volcanic rocks.

The largest area of Silurian strata forms part of the ancient table-land of the south of Scotland, bounded on the north side by the Old Red Sandstone and Carboniferous rocks of the great central valley. Important areas embracing representatives only of the upper division of the system are met with in the Pentlands, where they are surrounded by younger Palæozoic rocks.

Beginning with the largest area, it is observable that the members of the lower division, comprising Arenig, Llandeilo and Caradoc strata, form a belt upwards of 5 miles in width, extending along the northern margin of the Silurian table-land. They are repeated by innumerable sharp folds frequently inverted, and hence mere superposition is no indication of the true order of succession of the beds. Partly by the sequence of graptolites embedded in the black shales, established by Professor Lapworth, and partly by cherts abundantly charged with radiolaria and the associated volcanic rocks, it is possible to unravel the complications of that region. The best development of the volcanic rocks—the oldest members of the system now exposed at the surface—is met with along the northern margin of the table-land between Broughton and Leadburn. Consisting of slaggy diabase lavas and tuffs, with occasional intrusive igneous rocks (altered dolerites), they indicate widespread volcanic activity at the beginning of the Silurian period. They occur along narrow boat-shaped arches of the strata traceable for no great distance and plunging underneath a group of cherts. At one or two localities, black shales, hitherto unfossiliferous, immediately overlie the volcanic series, but as a rule the radiolarian cherts are in contact with the lavas. The various zones of chert, forming hard silicious ribs, are conspicuous features in the stream sections and on the moors between Broughton and Leadburn. From the abundance of the radiolaria in some of the zones, which occur only in deep water deposits of existing seas, it is evident that these cherts must have accumulated in clear, if not comparatively deep, water in Palæozoic time. Next in order we find black shales yielding graptolites partly of Llandeilo and partly of Caradoc age. These are overlain in turn by greywackes and shales followed by the Lowther shales. The latter form a narrow belt stretching across the country from the Kingledoors Burn, north of Tweedsmuir, by Wrae and Stobo to the Moorfoot Hills. At Stobo they have been quarried for slates, and were formerly much used for this purpose in the vale of the Tweed, but they have been entirely superseded by the Welsh slates. This subdivision is associated with lenticular bands and nodules of limestone and conglomerate charged with fossils, of which the Wrae Limestone is an excellent example. The organic remains obtained from the latter locality, though not numerous, seem to indicate the Caradoc age of the beds. Fossiliferous pebbly grits occur at Kilbucho, yielding Caradoc forms, which are

probably the equivalents of the fossiliferous conglomerates in the Leadhills area. Owing to the extraordinary inversions of the strata, the Lowther shales dip to the NW, and hence appear to underlie the strata already described which lie to the north. But this apparent sequence is in reality deceptive.

Passing now to the Llandovery rocks they floor the greater part of the county to the south of the area just referred to. A line drawn from Kingledores Burn, north of Tweedsmuir, NE by Stobo and Lyne, to the Moorfoot Hills, marks the northern limit of this division of the system. Within the Llandovery area there are certain boat-shaped lenticles of the underlying black shale series of the Moffat district. They are of special interest and importance because they are charged with graptolites. By means of these organic remains, the black shale series have been divided into three great divisions—Glenkiln, Hartfell, and Birkhill—corresponding to the Upper Llandoilo, Caradoc, and Lower Llandovery rocks of Wales. An excellent development of the latter series occurs on Hartfell, at the southern limits of the county. Indeed the middle division takes its name from the splendid sections on the western slope of this mountain. In these sections only the upper part of the Glenkiln black shales is visible and the higher portion of the Birkhill shales has disappeared, their place being occupied by other sediments. Resting on the black shales just described, grey shales or mudstones are found, with occasional pebbly grits and conglomerate bands. They contain a dark band crowded with the characteristic graptolite (*Graptolithus Griestonensis*). The great series of massive grits of Llandovery age, following next in order, form some of the highest ground in the south of Scotland. Broad Law and Cramalt, reaching 2754 feet and 2723 feet respectively, are composed of these beds. Owing to the amount of decomposed rock, an extensive covering of peat is met with on the surface of this broad table-land, but on the sides of the glens, and especially towards the comb-shaped hollows at the head of the valleys, crags and lines of *débris* occur.

In the Pentland Hills the Upper Silurian rocks occur in several isolated areas in the midst of the Old Red Sandstone. Of these the largest and most important development extends from the head of the Lyne Water to the county boundary at the North Esk Reservoir, and E as far as the Greenlaw Hill. Excellent sections are exposed in the stream courses, and especially in the North Esk, where the strata are highly inclined and show various minor foldings, the general dip being to the NW. At the base, grey, green, and red shales are met with, passing upwards through grits and sandstones into brown sandy shales and sandstones, weathering with a concretionary structure, which are overlaid by soft red shale and red sandy conglomerate, forming the basement beds of the Lower Old Red Sandstone. From the fossils obtained from these beds it would appear that they represent the Ludlow and portion of the Wenlock rocks of Wales. These isolated patches of Upper Silurian strata are the oldest rocks of the Pentland chain; indeed, they are of special importance on account of the perfect gradation existing between them and the earliest deposits of Old Red Sandstone Age.

Of the intrusive igneous rocks associated with the Silurian formation of this county, the oldest consist of quartz-felsites. A group of dykes is well seen in the Leithen Water, and in the neighbourhood of Grieston, where they generally coincide with the line of strike of the sedimentary rocks. The large basalt dykes of Tertiary age, so abundantly represented in Lanarkshire, are also met with in this county, though to a limited extent. A few examples occur near the county boundary at the head waters of the Tweed.

The Lower Old Red Sandstone of Peeblesshire is divisible into three groups, like the representatives of the same formation in Lanarkshire. The lower division, consisting of red sandstones and marls, rests conformably on the Upper Silurian rocks of the Pentland Hills, as already indicated, and has shared in the convolutions which have affected the latter. The members of the

middle group are composed of porphyrites, melaphyres, and tuffs, which are merely a prolongation to the ENE of the volcanic series occurring to the S of Douglas and Tinto in Lanarkshire. An important feature connected with this middle division is the relation which it bears to the lower group. In the Pentland Hills the volcanic rocks of the middle group rest unconformably on the lower series, as is the case on the slopes of Tinto in Lanarkshire, but when they are traced still farther to the SW in the latter county they are found to be perfectly conformable with each other. The upper group consists of conglomerates, the pebbles of which have been derived from the volcanic series, and these are overlaid by sandstones. Occasional beds of porphyrite and tuff are intercalated with these conglomerates and sandstones.

In the Esk section, where the perfect conformity between the members of the lower group and the Upper Silurian rocks is visible, the Lower Old Red strata consist of soft marls and sandstones, with red felspathic conglomerates containing pebbles of granite, feldstone, quartz, and arenaceous rocks. It is interesting to note the occurrence of Ludlow fossils in these strata for some distance upwards from the base of the series. The area occupied by the lower group, however, is very limited compared with the other subdivisions. The latter form a belt of ground stretching across the county in an ENE direction from Skirling to Linton, near which locality they are unconformably overlaid by the Carboniferous formation. Throughout this tract the strata are arranged in a great synclinal fold, the centre of which is occupied by the conglomerates and sandstones of the upper group, while the contemporaneous volcanic rocks rise from underneath them on either side of the trough. It ought to be borne in mind, however, that the volcanic series is not traceable continuously along the SE side of the trough, owing to the existence of a great dislocation which brings different members of the Lower Old Red Sandstone into conjunction with the Silurian rocks. Sometimes only a portion of the volcanic series is exposed on the N side of the fault, sometimes no trace of them is to be found, and the conglomerates and sandstones of the upper division are found in apposition with the Silurian strata. A glance at the Geological Survey Map of the district (sheet 24, 1 inch) shows how the great trough just referred to gradually becomes shallower towards the SW, and hence at the county boundary near Skirling the porphyrites of the volcanic series curve round the conglomerates at the base of the upper group. The deepest part of the basin occurs to the NW of Romano Bridge, where the highest members of the Lower Old Red Sandstone of this county are to be found.

There is only a small development of the Carboniferous formation within the county. The red sandstones and conglomerates forming the base of the system are exposed in the basin of the Medwin Water at the NW boundary of the county, where they lap round the Lower Old Red strata and stretch E to the Cairn Hills. They are well exposed in the stream courses, and on the slopes of Craigenkar, and the hills lying to the S, where they have a gentle inclination towards the W. The most important development of the Carboniferous rocks in Peeblesshire occurs in the neighbourhood of Carlops and Leadburn, where the SW termination of the Edinburgh coalfield is met with. This portion of the basin is bounded on the N and S by two great faults running nearly parallel with each other; that on the S side brings the Carboniferous rocks into conjunction with the Silurian strata and an outlier of Old Red conglomerate; while the fault on the N side throws them against the Lower Old Red Sandstone. The former of these two faults has been traced across the country from the neighbourhood of Leadburn in this county to the valley of the Stinchar in Ayrshire—a distance of 70 miles, and throughout the greater part of its course it throws different members of the Old Red Sandstone against the Silurian rocks. It is of importance to observe, however, that it is not traceable at the surface along the boundary line of the Carboniferous

formation to the NE of Leadburn in Midlothian. The members of the Carboniferous Limestone series and the Calciferous Sandstones overlie its position without any apparent dislocation, and at this part of its course it may be older than the Carboniferous Limestone. It is probable, therefore, that this fault may have formed a line of weakness during successive geological periods. It is only along the SW side of the basin that the unconformity between the Carboniferous rocks and the Old Red Sandstone is traceable for any distance. In this area the red sandstones and conglomerates which usually form the basal beds of the Carboniferous system are hardly, if at all, represented. The beds are more nearly allied to the Upper or Cementstone group, consisting of green and grey sandstones and shales, with occasional thin seams of limestone. At Hartside a thin limestone exposed at the roadside probably represents the Burdighouse Limestone of Midlothian.

The members of the lowest division of the Carboniferous Limestone series overlie the strata just described: There are two prominent seams of limestone which are traceable round the margin of the basin from Carlops by Whitefield to Leadburn. These are succeeded by the representatives of the middle division, which in this area contain few workable coal seams. Of these, the Corby Craig seam has been chiefly mined, but along with this bed occur the Beattie, Stony, and Rumbles seams. The Flaiks Limestone, representing one of the bands which overlie this coal-bearing series, is exposed in the buru below Mitchellhill. An important outlier of the Carboniferous Limestone series occurs near Spitalhaugh to the S of Linton, within the area occupied by the Lower Old Red Sandstone. A band of limestone forms the lowest member of the series, which is succeeded by false-bedded sandstones and shales containing a thin seam of coal. Like the outliers of similar strata occurring in the Old Red Sandstone area S of Tinto, the existence of this fragment of Carboniferous Limestone resting unconformably on Old Red strata points to a gradual subsidence of the land barrier, and the overlap of higher members of the Carboniferous system.

In the neighbourhood of Auchincorth Moss the Millstone Grit is believed to exist, though the ground is much obscured with peat and glacial deposits.

During the great extension of the ice, the general direction of the ice movement was towards the E. Striae and *roches moutonnées* are not very abundant, but in the valleys of the Silurian table-land, as well as over the lower grounds, there is a great development of boulder clay. An interesting feature connected with the boulder clay of Peeblesshire is the occurrence of stratified sands, gravels, and clays in the deposit. Professor James Geikie has described some examples which were exposed during the cutting of the tunnel at Neidpath, where the stratified beds were inclosed in boulder clay. The sands, gravels, and clays were in all probability more extensive when originally deposited, but had been denuded by the ice sheet which accumulated the upper boulder clay. Along the valley of the Tweed and all its chief tributaries there are high level gravels, probably of glacial origin, which are frequently arranged in the form of kames. Still more interesting is the great development of moraines in the valleys draining the high grounds of the county. Indeed, nearly all the valleys in the White Coomb and Broad Law area contain traces of the later glaciers. Perhaps the best examples are to be met with in the Winterhope Burn. Moraines are to be met with also in some of the tributaries of the Tweed, as in the Talla and Fruid valleys. (See Geological Survey Map, sheet 24, and memoir descriptive of the sheet.)

Minerals and Soil.—Blue clay slate is found in Traquair and Stobo parishes, and has long been extensively worked. Coal is found in the NE extremity of the county, chiefly near Carlops, and white sandstone abounds in the same district. Red sandstone of a firm texture and useful for building forms the hilly ridge of Broomylees, on the mutual border of Newlands and

Linton. Limestone also abounds in the carboniferous district, and is extensively quarried and calcined for manure at Carlops, Whitefield, and Macbiehill. A bed of ironstone and some iron ore lie in the coal-field section, but are not rich enough to be remuneratively worked. Lead used to be worked in the vale of Leithen and on the Medwin estate; and silver has been found mixed with the galena in the latter quarter. Galena was also found in the glens of some of the tributaries of Quair Water. A great variety of clays lies over a considerable part of the Carboniferous formation, including a very thick bed of fire-clay, like that of Stourbridge, and a small seam of fuller's earth. Alum-slate is also found; and red and yellow ochres, with veins of manganese, occur. Much of the soil of Peeblesshire must remain unturned by the plough; and there is very great diversity in the character of the arable land. Among the hills every hollow or level patch is occupied with moss of various depths, generally yielding supplies of peat. Moss of another kind, found on the higher slopes, though in its natural state moist, forms under the influence of ploughing and manuring a more or less fertile character. The skirts of the heath-clad hills and the high dry-lying flats, especially in Linton, are covered generally with a sandy moorish soil; and sand and clay, often mingled with gravel, extend over most of the other high-lying lands. The river-plains or haughs have generally a prevailingly light and sandy soil, though sometimes there is a more or less strong admixture of clay. Loam, whether clayey, sandy, gravelly, or stony, occurs only in the old croft lands, which have been blackened and mellowed by long and constant manuring and cultivation.

Climate.—'With its rounded grassy hills,' says Chambers, 'offering the finest sheep pasture, its alluvial vales, and clear streams, the county is free of any properties detrimental to general salubrity. With the absence of stagnant pools or unwholesome marshes is now to be remarked a high degree of improvement by the reclamation of waste lands and subsoil drainage, resulting in a singular lightness and dryness of atmosphere.' It may be added that the numerous plantations throughout the county aid this effect. The average annual rainfall is 29 inches, less than that of the adjoining counties.

The flora and fauna of Peeblesshire have been described in Chambers's *History of Peeblesshire* as somewhat limited. The same authority mentions as the chief indigenous trees and shrubs, the Scotch fir, ash, oak, elm, aspen, rowan or mountain ash, birch, alder, willow, hazel, hawthorn, elder, wild cherry, haggerberry, sloe, juniper, whin or furze, dog rose, Scots rose, honeysuckle, ivy, common bilberry, whortleberry or blaeberry, red bilberry, cranberry, and three species of heath. Among trees not indigenous are the sycamore or plane, larch, spruce, silver and other firs, and yew. Alpine plants are scarce, but ferns are abundant in many parts. The most abundant kind of heath is the common ling or heather; but bell-heather and cross-leaved heath also abound; but many, even of the high hills, are covered with grass and not heath. Wild flowers are numerous and varied. Among the rarer plants that have been found in Peeblesshire are the flowering rush, spindle-tree, bird's-eye primrose, filmy fern, and the moss *Buxbaumia aphylla*. Red deer and roe-deer are now extinct in this county. The chief mammals now are the fox, otter, weasel, stoat, hedgehog, common and water shrew, mole, squirrel, brown and water rat, common and field mouse, field vole, common and Alpine hare, rabbit, and the common and long-eared bat. The badger and polecat are now rare. The white eagle used to build in some parts of this county, but has long ceased to do so. The peregrine falcon is now rare, though at one time Posso Craigs were famous for its falcons of this breed. Other hawks and a great variety of smaller birds are indigenous to the shire. Black and red grouse, partridge, and pheasant (the latter artificially introduced) afford good sport in the season. The quail, golden plover, and dotterel are sometimes seen. The

adder or viper is common, but very irregularly distributed. The chief fishes are the salmon, salmon-trout, common trout, pike, perch, and eel.

Industries.—The industries of Peeblesshire are agriculture, sheep-farming, and manufacturing, and a little mining. According to the returns for 1891, 20·2 per cent. of the male population were engaged in agriculture, 32·7 per cent. in industrial employments, 3·9 per cent. in commerce; 37·2 per cent. unproductive, and the remainder variously employed. Of the women 71·9 per cent. were unproductive, 7·8 per cent. were in domestic service, and the rest variously employed. The ancient forests of Leithen, Traquair and Ettrick, and a vast extent of copses in the centre, W and N, formerly adorned and sheltered nearly all Tweeddale, protecting the pasturage and encouraging agriculture. So early as the reign of David I. this woodland district was dotted with the parks of manors of princes and barons, and the granges and churches of monks, and with mills and kilns and brew houses. Farming and grazing flourished, corn was raised in abundance, dairies and orchards were numerous. This time of prosperity lasted for about two centuries from 1097; but it was followed by 400 years of retrogression and wretchedness, in which the demolition of the natural protection of the woods was one of the first and most fatal steps. Dr Pennieuk, who published his well-known *Description of Tweeddale* in 1715, saw the work of renovation commence; and he praised the young landowners for beginning to form plantations, which, as he foresaw, have enriched as well as embellished the county to the present day. The rural population, though industrious enough, were 'yet something artful, stubborn, and tenacious of old customs. There are,' Pennieuk goes on, 'amongst them that will not suffer the wraek to be taken out of their land, because (say they) it keeps the corn warm, nor sow their bear-seed, be the season wet or dry, till the first week of May be over, which they call *Rumchie* week, nor plant trees nor hedges, for wronging the undergrowth, and sheltering the birds of the air to destroy their corn; neither will they trench and ditch a piece of useless boggy ground, for fear of the loss of 5 or 6 feet of grass, for a far greater increase; which, however, with a custom they have of overlaying [over-stocking] the ground, which they term *full blemishing*, makes their cattle generally lean, little, and give a mean price in a market.' In 1830, Archibald, Earl of Islay, afterwards third Duke of Argyll, began his famous attempt to reclaim a piece of boggy ground (which he appropriately rechristened as Whim) by draining and planting; and about the same time Sir Alexander Murray of Stanhope raised his plantations and wrote his tracts on agricultural matters; while the desire for improvements gradually spread among other proprietors in the county. The agricultural history of Peeblesshire was written by Rev. Charles Findlater in 1802, who chronicled the successive steps in the advance. About 1763 or 1764 Mr George Dalziel, inn-keeper first at Linton and then at Noblehouse, was the first who sowed turnip in the open fields; while Mr James Macdougall, a small farmer of Linton, originally from the neighbourhood of Kelso, was, in 1778, the first person to introduce the rotation of cropping, the cultivation of turnips for the use of sheep, the growing of potatoes in the open fields, and some other reforms. Till 1750 grain used to be winnowed by the wind on hill tops, but about that date fanners were introduced. The flail had almost disappeared by 1832, its place being taken by thrashing-mills worked by water or horse-power. A very considerable impetus was given to agriculture in 1788, by the security of tenure introduced by the Earl of March, who gave long leases of 57 years. The tenants were encouraged to erect better farm buildings, and to lay out more labour and capital in clearing, enclosing, and improving the land; and although ultimately, in 1821, the leases were reduced by the House of Lords as incompetent on an entailed estate, the advantages were not wholly allowed to disappear. During the 19th century the farmers and landowners

of Peeblesshire have made steady progress; and in proportion to its natural capacities, Tweeddale rivals even Haddingtonshire itself in the enlightened methods and skill of its agriculturists. The introduction of guano and other light fertilizers has enabled cultivation to be extended to much land to which previously the steepness of the hills had prevented the carting of dung; much hill-pasture has, in this way, been converted into productive arable land. So early as 1775 observers had begun to notice the diminution in the number of small farms and peasant proprietors in Peeblesshire; and the process has gone on since then, although even yet there are small holdings in all parts of the shire. Chambers, writing in 1864, says that rents are generally from £250 to £800, though in some instances upwards of £1000 is paid. The general average per acre he puts at 32s. or 33s. per acre, except in the neighbourhood of towns or villages, where as much as £4 per acre is paid. Leases are generally for 19 years, rarely for 21 or any other number of years, except in the case of sheep-farms, which are let on leases of from 9 to 15 years. The most common rotation, according to the same authority, is a five years' one:—(1) Oats after lea; (2) potatoes, turnips, or other green crops; (3) barley, oats, or wheat; (4) grass, for hay or pasture; (5) grass, as pasture. Hinds or married ploughmen receive from £13 to £15 in money, together with various perquisites, such as a cow's keep, 65 stones of oatmeal, a month's food during harvest, etc. A griever receives about £24 in money. Young men living with the farmer receive £18 to £20; boys, up to £8 a year; female servants, from £8 to £10. The botby system of lodging farm labourers is unknown in the county; but the bondager system prevails to a certain extent. The following table indicates the principal crops, and the acreage under each in various years:—

	1874.	1882.	1893.	1896.
Barley,	1,881	1,188	951	322
Oats,	9,319	9,263	8,335	8,611
Pease,	28	73	5	43
Turnips,	5,144	4,748	4,196	4,233
Potatoes,	626	333	245	385
Cabbage, etc.,	380	333	245	385
Other Green Crops,	134	135
Bare Fallow,	137	4	27	15
Grass, Permanent Pasture,	10,371	13,977	16,406	14,952
Grass in Rotation,	13,001	12,004	12,860	18,544

In 1874 there were 9041 acres under plantation; in 1882, 10,177; and in 1891, 9490. Market gardens and nursery grounds occupied only 7 acres in 1896.

The following table shows the quantity of farm stock at various dates:—

	1874.	1882.	1893.	1896.
Horses,	916	892	1,165	1,162
Cattle,	6,533	5,643	6,331	7,023
Sheep,	201,259	189,753	186,670	190,861
Pigs,	955	872	593	705

In Peeblesshire, as may be inferred from the preceding statistics, as well as from the nature of the surface, sheep-farming is a highly important industry. In many cases, arable farming is combined with it by the same farmer, but the hills in Tweedsmuir near the upper course of the Tweed, and those flanking the valleys of the Leithen and Manor, are too high for agriculture, and are entirely devoted to sheep-pasturing. This industry had already begun to be of importance in Peeblesshire in the beginning of the 17th century. In the short account of the county which appeared in 1654, along with Timothy Pont's Map in Blew's *Atlas*, mention is made of the good and wholesome pasturage for sheep to be found, especially in the S next Selkirkshire; and Pennieuk, in 1715, mentions that the county is 'stored with such numbers of sheep that in the Lintoun mercats, which are kept every Wednesday during the months of June and July, there have frequently been seen 9000 in the customer's

roll, and most of all these sold and vented in one day.' The introduction of turnip growing on a large scale doubtless encouraged the keeping of sheep during the 18th century, which has very much developed since. The Cheviot breed predominates generally, but in the more exposed and inclement lands the black-faced breed is found to be hardier. In some parts a cross between one of these breeds and the Leicester breed is found suitable. Linton market ceased to be held in 1856; Melrose, Lanark, and Lockerbie are now the chief marts for the Peebleshire flock-masters. Sheep-farms are let on leases generally from 9 to 15 years; the rent is usually calculated according to the number of sheep a farm can support, and the kind of sheep is also taken into account, with their estimated value and productiveness. Rents thus vary from 5s. to 10s. and even 12s. per sheep. Shepherds are sometimes paid in the same manner as hinds; receiving about £20 in money, besides perquisites; but in most cases he receives no money, but is entitled to the proceeds from a certain number of sheep, known as the 'shepherd's pack,' which feed along with his master's flock. The Teeswater or other short-horn black cattle are kept for grazing and stock purposes; while the Ayrshire breed is preferred for dairy purposes, to which most attention is given in the northern parishes. The horses are chiefly of the Clydesdale breed. Pigs and poultry are tolerably ubiquitous; and bees are kept, chiefly in the lower parts of the county.

The manufacturing industries of Peebleshire are wholly centred in a few towns and villages, in spite of the abundant water power and other natural advantages of the county. The woollen manufacture, carried on chiefly at INNERLEITHEN, WALKERBURN, and PEEBLES, is the chief staple. Other industries are referred to in our articles on these places, and BROUGHTON, CARLOPS, and LINTON. The commerce of the county restricts itself to the export of the produce of the sheep, and of arable and dairy farms; and the import and retail of the small amount of goods required for local consumption.

Railways and Roads.—The county is very well provided with means of communication. A branch of the North British railway enters it at Leadburn Junction in the N, passes Eddleston station before reaching Peebles, where it turns eastwards along the Tweed, passing Cardrona, Innerleithen, and Walkerburn stations before it enters Selkirkshire, where it joins the main line at Galashiels. Another line, from the Caledonian station at Symington, crosses the W boundary about the middle, and follows the course of the Biggar Water and Tweed to Peebles, passing Broughton, Stobo, and Lyne stations. A shorter reach of the North British railway branches off at Leadburn towards the W, and runs through the northern part of the county, past the stations of Lamanacha, Macbie Hill, and Broomlee, and meets the Caledonian line at Dolphinton. In spite of the hilly nature of the county, good roads are tolerably plentiful, except in the mountainous and rough districts to the S of the Tweed, where there are only rough tracks. The highroad from Edinburgh enters Peebleshire at Leadburn, and runs directly S alongside the railway and Eddleston Water to Peebles; thence a road runs down Tweeddale, through Innerleithen and Walkerburn, into Selkirkshire; while a second proceeds up the valleys of the Tweed and Biggar Water, through Broughton, and thence to Glasgow *via* Biggar, throwing off, near Lyne church, another branch, which runs up part of the Lyne and Tarth Waters and through Kirkurd parish, and thence also to Glasgow. A third road from Peebles runs S along the course of the Manor Water to Megget and St Mary's Loch. A road from Edinburgh to Dumfries enters the county at Leadburn, runs SW to Kirkurd, where it is joined by another road entering the county at Carlops, and thence proceeds through the western part of the shire parallel to the head waters of the Tweed, till it leaves Peebleshire in the extreme S of Tweedsmuir parish. Another branch of the Carlops road turns more to the W at Linton, and enters Lanarkshire at Kippis, whence it proceeds to Dumfries *via* Biggar and Moffat. Most of the larger

river-valleys, as those of the Lyne, Leithen, Quair, etc., are traversed by shorter roads connecting with one or more of these main arteries of traffic. A turnpike road runs along the S bank of the Tweed to Traquair, and thence on into Selkirkshire. A mountain track, which strikes off near Traquair, and passes over the summit of Minchmoor, was at one time an important thoroughfare between Peebles and Selkirk, and was the route by which the Marquis of Montrose fled after the battle of Philiphaugh. Another mountain track in the S, traceable from the neighbourhood of Drummelzier over the left shoulder of Dollar Law, and along part of Craiger Burn, is called 'The Thief's Road,' from having been a common route of the Border forayers. It is sometimes also called the 'King's Road,' because James V. is said to have gone by it to execute justice on the notorious Cockburn of Henderland.

The only towns are Peebles and Innerleithen; the only villages with more than 300 inhabitants are Walkerburn (1288) and Linton (359). The remaining chief villages are, in order roughly from N to S, Carlops, Eddleston, Skirling, Broughton, and Drummelzier. The chief seats are Traquair House, The Glen, Cardrona House, Kailzie House, Glenormiston, Holylea, Venlaw, Kerfield House, Kingsmeadows, Portmore, Darnhall, Cringletie, Medwyn House, Garvald House, Spitalhaugh, Bordland House, Callands, Scotston, Romanno House, Castle Craig, Netherurd, Rachan House, Mossfennan, Glencotho, Stobo Castle, Barns, Hallyards, Drummelzier House, Dawick House, Whim, Polmood, Quarter, Cairnmuir, Lamanacha, Macbie Hill, Pirn, Hartree, Badlieu, Leithen Lodge, Logan, Braxfield, Fingland, Winkston, and Halmyre. Peebleshire is governed by a lord-lieutenant, a vice-lieutenant, a convener, 11 deputy-lieutenants, a sheriff, and a sheriff-substitute. The meetings of the sheriff court are noted in our article PEEBLES. The County Council is composed of 20 members—17 for as many electoral divisions, and 3 for the burgh of Peebles. The police force in 1896 consisted of 12 men, and a chief constable with a salary of £100. Peebleshire and Selkirkshire together have one representative in parliament. The county constituency in 1895-96 was 2756. Heritable property in the county has advanced very much in value along with the advance in the general prosperity. According to the valuation made in the reign of Alexander III., and known as the Old Extent, the annual rental of lands in Peebleshire was £1274, but by the destructive wars of succession that was reduced to £863 in 1368. In 1657 the assessed annual rental had again risen to £4328; in 1802 it was estimated at £26,000; in 1863 (exclusive of burghs and railways) it was £90,927; in 1876 (also exclusive) it was £115,162; in 1883-84 £118,260; and in 1895-96 £116,774; railways £21,555; Edinburgh and District Water Works, £1565. Peebles is one of the least densely populated of Scottish counties, having only 43 persons to the square mile, the average for the entire country being 135. Ross and Cromarty, Argyll, Inverness, and Sutherland, alone have a scantier population. Pop. (1801) 8735, (1811) 9935, (1821) 10,046, (1831) 10,578, (1841) 10,499, (1851) 10,738, (1861) 11,408, (1871) 12,330, (1881) 13,822, and (1891) 14,750, of whom 7838 were females, 113·3 to every 100 males. Only 68 persons, or 46 of the population, were Gaelic-speaking. Separate families, 3163. Houses (1891) occupied 2988, vacant 280, building 22.

There are fourteen *quoad civilia* parishes in Peebleshire, viz., Broughton, Drummelzier, Eddleston, Innerleithen, Kirkurd, Lyne, Manor, Newlands, Peebles, Skirling, Stobo, Traquair, Tweedsmuir, and West Linton. Tweeddale and Lothian give name to a synod in the Established Church of Scotland, and to one in the Free Church also. Twelve of the fourteen parochial charges in Peebleshire belong to the presbytery of Peebles; the other two, Skirling and the united parish of Broughton, Kilbucho, and Glenholm, belong to the presbytery of Biggar in the same synod. A small part included in Yarrow parish is in the presbytery of Selkirk and the synod of Merse and Teviotdale. The Estab-

lished Church has 15 places of worship in the county; the Free Church, 5; U.P. Church, 4; Scottish Episcopalian, 2; Roman Catholic, 2; Congregational, 1. There are in the shire 24 schools (21 of them public), which, with total accommodation for 3034 children, have 2456 on the registers, and an average attendance of about 2060. The staff includes 38 certificated, 6 assistant, and 8 pupil teachers. All the parishes, save four, are assessed for the poor. There were, in 1894, 147 registered poor, with 87 dependants, on whom was spent a total of £1995. The only pothouse is that of Peebles Union at Peebles. There is no hospital in the county. There is a joint lunacy board for Midlothian and Peebleshire, with an asylum at Roslynlee in the former county. The percentage of the illegitimate births was 8·9 in 1871, 9·1 in 1873, 6·5 in 1876, 10·3 in 1880, 8·6 in 1882, and 6·7 in 1894. The 6th Rifle Volunteer Battalion (the Royal Scots) has its headquarters at Penicuik in Midlothian, and the Haddington, Berwick, Linlithgow, and Peebles Artillery Militia (2nd Brigade) at Dumbar.

Tweeddale gives the title of Marquis to the family of Hay, whose family seat is Yester House in Haddingtonshire. The creations are Baron Hay of Yester, 1488; Earl of Tweeddale, 1646; and Marquis of Tweeddale, Earl of Gifford, and Viscount of Walden in 1694; in the peerage of the United Kingdom Baron Tweeddale of Yester, 1881; hereditary Bailie or Chamberlain of the Lordship of Dunfermline. Other noblemen and baronets connected with the county are Lord Elibank of Darnhall; the Earl of Wemyss and March, Viscount of Peebles, Baron Douglas of Neidpath, Lyue, and Minan, with his seat at Barns; Sir Thomas David Gibson-Carmichael, fourteenth baronet, of Durie and Skirling, with his seat at Castle Craig; Sir Duncan E. Hay, tenth baronet, of Smithfield and Haystoune, with seat at Kingsmeadows; Sir Graham Graham Montgomery, third baronet, of Stanhope; Sir James Naesmyth, fifth baronet, of Posso; Sir James R. Fergusson, second baronet, of Spittlehaugh; and Sir Charles Tennant, first baronet, of The Glen.

Antiquities.—Peebleshire abounds in relics of its early British inhabitants and their Teutonic invaders, and not the least interesting of these is the topographical nomenclature, which, though very largely Celtic, also affords examples of the blending of the two races of languages. There are remains of what are called Druid circles at Sheriffmuir in Stobo, near Tweedsmuir church, and at Gatehope in Innerleithen. Tombs and tumuli with stone coffins and human remains have been found in nearly every parish, chiefly in the W, and especially along the valley of the Lyne. A tumulus near the junction of the Powsail and Tweed is pointed out as the burial-place of the great enchanter Merlin. Standing stones, whatever they serve to mark, are found at Bellanrig in Manor, Sheriffmuir in Stobo, Cademuir in Peebles, and on the Tweed in Traquair and Innerleithen, and at Harestanes. On very many of the tops of the lower hills and knolls are found relics of ancient hill-forts, oval and round, of various sizes and probably of various ages. They seem to have been placed so as to command the routes and passages through the county. Chambers enumerates over 50 of these—5 in Eddleston parish, 8 in Peebles, 3 in Innerleithen, 6 in Traquair, 4 in Manor, 3 in Stobo, 1 in Drummelzier, 1 in Tweedsmuir, 1 in Lyne, 2 in Skirling, 10 in Broughton, Kilbucho, and Glenholm, 3 in Kirkurd, 2 in West Linton, and 5 in Newlands, being one or more in every parish of the county. The largest is Milkieton Rings in Eddleston. Large artificial earthen terraces, like gigantic flights of steps, are seen on some of the steep hill-sides. They are probably connected with ancient methods of agriculture. The chieftare at Purvis Hill in Innerleithen, on Nohlehall farm in Newlands, Roger's Crag in Halmyre, Torwood near Kailzie, on a hill below Venlaw House, and at Kilbucho. There are the remains of a large and interesting Roman camp at Lyne, of a smaller one at Linton near Whitefield, and doubtful traces of a third in Manor. Castles and peel-towers, consisting for the most part of a single tower, are very abundant in the county, and are to be referred to feudal times.

Their number and their relative position are a tacit testimony to the wildness of the times that built them, for they are generally built so that one might signal by fire to its neighbour the approach of the hostile invader. Chambers enumerates the chief as follows:—'Thence [Holylee, at the issue of the Tweed into Selkirkshire] communication through Peebleshire was kept up, generally zigzagging across the river, to Scrogbank, Caherstone, Bold, Flora, Purvis Hill, Pirn, Traquair, Grieston, Ormiston, Cardrona, Nether Horsburgh, Horsburgh, Peebles, and Neidpath. At Peebles signals went northwards to Smithfield, Hutchinfeld, Shielgreen, Foulage, Cringletie, Blackharony, and the high grounds on the borders of Midlothian. Southwards Peebles communicated with Haystoun. Pursuing the course of the river Neidpath was seen at Caverhill, which sent signals up Manor Water, and also to Barns, whence there were communications with Lyne, Easter Happlew, Dawick, Stobo, Dreva, Tinnis, Drummelzier, Stanhope, Quarter, Wrae, Mosfennan, Kingledoors, Oliver Castle, Polmood, and Hawkshaw. Ascending the Lyne there were towers to be communicated with at Wester Happlew, Stevenston, Callands, Kirkurd, and Skirling; also at Romano, Halmyre, Carlops, Coldecoat, Briglands, Whiteford, and probably some other places.' The more interesting and important towers and castles are mentioned in separate articles; and additional antiquities are noted in the articles on PEEBLES and the various parishes and villages.

History.—When the Romans penetrated to the south of Scotland the district that is now Peebleshire was inhabited by a tribe to whom the invaders gave the name of Gadeni. The Roman occupation of the region was probably neither very intimate nor very long, and traces of their camps, etc., are few; while their northern thoroughfare, known as Watling Street, passes half a mile outside the nearest point of Tweeddale. After the departure of the Romans the county became exposed to the successive attacks of the Scoto-Irish and the Angles and Frisians; and though it formed for some time part of the Cymric kingdom of Strathelyde or Cumhria, it was afterwards included in the Saxon kingdom of Northumbria; and finally, when the whole south of Scotland was handed over to Malcolm, King of Scots, in 1088, became amalgamated with the Scottish kingdom. Peebleshire shared in the benefits which Scotland received from the influx of the more civilised Saxons who fled before the Norman invasion of England in 1066; and after Henry II.'s edict in 1155 banishing all foreigners from England a number of industrious and skilful Flemings are said to have settled at Peebles, and possibly to have planted and fostered the woollen industry there. In the reign of David I. (1124-53) Peebleshire advanced in importance; there were royal castles at Peebles and at Traquair; and the town of Peebles began to be visited and privileged by the successive Scottish monarchs. It is probably to the 12th century that the older castles in the county should be referred. Early in that century the deanery of Peebles—answering tolerably closely to the present shire—was erected and placed in the archdeaconry of Teviotdale, in the new diocese of Glasgow. There were, however, no large aheys or important religious houses ever founded in Peebleshire, the chief ecclesiastical building being the Church of the Holy Rood, founded at Peebles by Alexander III. Before 1286 the shire had already been recognised; and two sheriffis—one at each of the royal seats—exercised jurisdiction. These, however, were superseded by a single sheriff in 1304, while Edward I. held the district. Carlops and Crossryne Hill were the northern limits of the region surrendered in 1334 by Edward Baliol to Edward III. In the wars of the succession Peebleshire suffered severely, and was several times harried by the English in spite of its mountain harriers; while the turbulent and lawless Border barons distracted it, along with the other southern counties, with their feuds and forays. This state of disturbance continued more or less violently down to the time of Charles I. and Cromwell. In 1650 Cromwell's troops

besieged and took Neidpath; and the justice of peace records of the county, which begin in 1656, contain in the first volume a series of instructions from the council of the Protector. Peeblesshire was not one of the centres of the Covenanters; nor did the rebellion of 1715-45 affect it very much, though in the latter year a division of the Chevalier's army marched through the county on their way to England. The high sheriffship of Peebles had become almost hereditary in the family of the ancestors of the Earl of Tweeddale, who in 1686 sold his land, etc., to the second Duke of Queensberry. The latter gave them to his son, the Earl of March, and the representatives of the last, in 1747, claimed £4000, but received only £3200, for the sheriffdom of Peebles on the abolition of hereditary jurisdictions. The first sheriff-depute under the new order was James Montgomery, who afterwards rose to be Chief Baron of the Exchequer and first baronet of Stanhope. From the union of the Scottish and English parliaments in 1707 till 1832 Peeblesshire returned one member; while the burgh of Peebles united with Selkirk, Linlithgow, and Lanark in returning a second. In 1832, however, the burgh and county were made a united constituency with one member, and this continued till 1868, when the present division was made.

Eminent Men.—There are few old families in Peeblesshire, for lands and houses there have changed hands repeatedly; and even the nobleman who derives his title of Marquis from the shire is not in possession of his ancestral lands. The Horsbrughs of Horsbrugh boast the longest unbroken line of descent in the shire. Among the old historical families most frequently heard of in connection with some feud or raid are the Tweedies of Drummelzier and the Veitches of Dawick, the Hays of Yester, Geddeses of Rachen, Hunter of Polmood, Murrays of Blackbarony and Elibank, and the Frasers of Neidpath. The mighty wizard Merlin is said to have lived, died, and been buried in Peeblesshire; and some authorities identify Caetcoit Celedon, the site of King Arthur's seventh battle, with Cademuir. St Ninian, otherwise Ringan, is said to have introduced Christianity to the district; and St Kentigern, called also St Mungo, is said to have preached here in the middle of the 6th century. Among less mythical personages we note Sir Johu Stewart of Traquair, who became Lord High Treasurer of Scotland, and in 1633 was created Earl of Traquair; the lords of session Cringletie, Murray, and Henderland; Sir David Murray, fourth baronet of Stanhope, who was the Chevalier's secretary in the '45; and James Geddes, younger of Rachau (1710-48), author of *An Essay on the Composition and Manner of the Ancients, particularly Plato*. Alexander Pennicuik, author of the *Description of Tweeddale*, was, though he spent his life in Peeblesshire, probably a native of Midlothian. Other noteworthy natives of Peeblesshire are noted under PEEBLES and the various parishes.

The literary associations of Peeblesshire are both numerous and interesting. Very frequent reference is made to Tweeddale person and place in the minstrelsy of the Scottish border, whether ballad or simple song, and the Tweed has given rise to more poetry than any river in Scotland. One of the most pathetic ballads in the language is *The Lament of the Border Widow*, placed in the mouth of the wife of the notorious Cockburn of Henderland, whom James V. 'justified' in 1529. Among the poems which have rendered various spots in the county famous are *Tweedside*, by John, Earl of Tweeddale (1645-1713); the old ballad of the *Logan Lee*, a place about 14 miles from Tweed's-Well; Robert Crawford's (1695-1732) *Bush aboon Traquair*, and Principal Shairp's new version under the same name; and William Laidlaw's tender ballad *Lucy's Flittin'*, which has immortalised the Glen. A graphic, if somewhat burlesque, picture of Scottish lowland life in the early 15th century is given in *Pebblis to the Play*, usually ascribed to James I.; and a more satirical account of clerical vices towards the end of the same century, in the anonymous *Thrie Priestis of Peebles*. Alexander Geddes (1737-1802), formerly tutor in the Earl of

Traquair's family, wrote about 1781, *Linton; a Tweeddale Pastoral*, in honour of the birth of the eighth Earl of Traquair. Scotston House in Newlands parish was for a time the residence of Smollett the novelist, whose sister had married Mr Telfer, the proprietor. The banks of a small rivulet flowing into the North Esk near Carlops are popularly identified as the scene of Allan Ramsay's famous pastoral *The Gentle Shepherd*; four trees near the Tweed, on the farm of Patervan in Drummelzier, mark the former site of the hamlet referred to by Burns in his song,

'Willie Wastle dwelt on Tweed,
The spot they ca'd it Linkumoddie;'

and several of James Hogg's songs have their scenes in Peeblesshire, as *Over the Hills to Traquair*, *The Bridal of Polmood*, *The Brownie of Bodsbeck*. Sir Walter Scott has many allusions to Peeblesshire in his works—prose and poetry; thus, e.g., *St Ronan's Well* is identified with Innerleithen Spa; and the old house of Traquair is one of the prototypes of 'Tullyveolan' in *Waverley*. In Manor parish, also, stood the cottage of David Ritchie, 'The Black Dwarf,' whom Scott visited in 1797, while staying with the aged Professor Adam Ferguson at the neighbouring mansion of Hallybards. The conduct of the fourth Duke of Queensberry in ruthlessly denuding the banks of the Tweed at Neidpath of their beautiful timber, called forth an indignant sonnet from Wordsworth. More modern poets are the Rev. James Nicol (1793-1819), native of Innerleithen, and minister of Traquair, who wrote *Where Quair rins sweet among the Flowers*; Thomas Smibert (1810-45), born at Peebles, whose *Io anche! Poems chiefly Lyrical*, contains some local pieces; and the late Professor Veitch of Glasgow, who, besides his *Tweedside and Hillside Rhymes*, wrote a sympathetic account of Border history and poetry.

See Dr Alexander Pennicuik's *Description of Tweeddale* (1715; reissued with notes 1815; 3d ed. 1875); Captain Armstrong's *Companion to the Map of Tweeddale* (1775); Rev. Charles Findlater's *General View of the Agriculture of the County of Peebles* (1802); Dr William Chambers' *History of Peeblesshire* (1864); an article on the 'Topography and Agriculture of Peeblesshire,' by Lawrence Anderson, in *Trans. Highl. and Ag. Soc.* (1872); and Professor John Veitch's *History and Poetry of the Scottish Border* (1878).

Peel Fell. See CASTLETON, Roxburghshire.

Peelwalls. See AYTON.

Peffer or Peffrey, a picturesque stream of Fodderty and Dingwall parishes, Ross and Cromarty, rising at an altitude of 1750 feet above sea-level, and winding 9½ miles south-south-eastward and east-by-northward, till it falls into the Cromarty Firth, near its head, and just below the town of DINGWALL. See STRATHPEFFER.—*Ord. Sur.*, shs. 93, 83, 1881.

Peffer Mill. See LIBERTON.

Peffers, The, two streamlets in the N of Haddingtounshire, rising within a brief distance of each other in a meadow in Athelstaneford parish, and flowing the one westward to Aberlady Bay, the other eastward and north-eastward to a creek 1¼ mile N of Tynninghame House. West Peffer Burn has 6½ or 7 miles of course; and, except for the ¾ mile immediately below its source, flows the whole way between Dirleton parish on its right bank, and Athelstaneford and Aberlady parishes on its left. East Peffer Burn has 6 miles of course, though, measured along its nominal tributary but real head-water of Cogtal Burn, it has at least 8; and it flows, over most of the distance, through Prestonkirk and Whitekirk parishes. Each stream has a fall, from source to mouth, of not more than 25 or 30 feet, and is consequently sluggish in its motion, looking like a large drain, and corresponding in character to the import of its name, 'the slowly running river.' The entire strath traversed by both streams, though now a rich alluvial mould, was anciently a morass, bristling with forest, and tenanted by wild boars and beasts of prey. Large oaks have often been found inhumed in moss on

the banks, their tops generally lying towards the S. At the widening and deepening of the bed of the streams a number of years ago, for preventing an overflow and stagnation of water during winter, several stag-horns were dug up very near the surface of the former bed.—*Ord. Sur.*, sh. 33, 1863.

Peirceton. See PERCETON.

Pencaitland (Cymric *pen-caeth-llan*, 'head of the narrow enclosure'), a village and a parish in the W of Haddingtonshire. The village, lying 271 feet above sea-level, is $3\frac{1}{2}$ miles SE of Tranent, $5\frac{1}{2}$ SW of Haddington, and $1\frac{3}{4}$ mile SE of Winton station on the Macmerry branch of the North British, this being 13 miles E by S of Edinburgh. 'The Tyne,' wrote Sir Thomas Dick Lauder in 1847, 'divides it into two parts, called Easter and Wester Pencaitland. Wester Pencaitland contains an ancient market-cross; but the most interesting and picturesque feature of the village is the old church, with its small octagonal belfry, in Easter Pencaitland, embosomed in a grove of tall and stately trees. We have long been in the habit of considering the manse as a gem amongst clergymen's residences of the same kind. Situated on the sunny slope, amid shrubberies and garden stretching down the river, it seems to be the very nest of human content' (*Scottish Rivers*, Edinb. 1874). Everard de Pencaithlan granted the church to Kelso Abbey for the salvation of his lord, King William the Lyon (1165-1214); but John de Maxwell in the first half of the 14th century conveyed the advowson to the monks of Dryburgh, and with them it continued till the Reformation. The Pencaitland aisle is of pre-Reformation date; but the body of the church was built towards the close of the 16th century, the tower in 1631. As restored in 1882, at a cost of £275, it contains 480 sittings. In 1889 an organ was added. At the W end is a quaint epitaph 'to the memorie of um³² Ka. Forbes, spouse to M. Io. Oswald, Anno dom. 1639;' and in the churchyard is an Iona cross to James, sixth Lord Ruthven (1777-1853). David Calderwood (1575-1650) the historian, and Robert Douglas (c. 1600-73), were ministers here. Pencaitland has also a Free church and a post office, with money order and savings bank departments, a parish library, a horticultural society, a Foresters' court, and bowling and curling clubs. An elegant public hall has been built in Wester Pencaitland by Mrs Trevelyan of Tyneholm at a cost of £1200, in memory of her husband, Arthur Trevelyan, Esq., who died in 1880.

The parish, containing also Newtown village, is bounded N and NE by Gladsmuir, E by Salton, S and W by Ormiston, and NW by Tranent. Its utmost length from ENE to WSW is $4\frac{3}{8}$ miles; its breadth varies between $4\frac{1}{2}$ furlongs and 4 miles; and its area is 5075 $\frac{1}{2}$ acres. The TYNE meanders 5 miles east-north-eastward—for $2\frac{1}{2}$ miles across the middle of the parish, and elsewhere along or close to the Ormiston and Salton boundaries; Birns, Keith, or Salton Water flows to it $1\frac{3}{8}$ mile northward along the boundary with Salton; and Kinchie Burn, a feeder of Birns Water, runs $2\frac{3}{8}$ miles east-by-northward across the southern interior and along the southern boundary. Beside the Tyne the surface sinks to 200 feet above sea-level; and thence it rises gently northward to 400 feet at Winton Hill, and southward to 479 near Fountainhall. Thus while it offers no marked natural feature, this parish wears a pleasant English aspect, its well-enclosed, well-cultivated farms being prettily diversified with meadows and woods. The rocks belong mainly to the Carboniferous Limestone series. Coal, though lying on the outer margin of the Lothian coalfield, abounds, is of excellent quality, is found at a depth of about 170 feet from the surface, and is mined for the supply of the southern and south-eastern district of the county and part of Lauderdale. An inferior kind is found at a considerably less depth. Carboniferous limestone, enclosing numerous fossils of the kinds usual to this rock, is also found and worked to a small extent. Sandstone has been worked in several quarries; and that of the Jerusalem quarry has long been celebrated, being of

laminated texture, of a uniform grayish-white hue, and yielding blocks of from 20 to 30 feet in length. The soil is naturally wet and clayey, but has been greatly improved. About one-thirteenth of the entire area is covered with wood, partly plantation and partly natural oak and birch; nearly 200 acres are laid out in artificial pasture; and all the rest are regularly tilled. Pencaitland House, now a ruin, in the immediate vicinity of Wester Pencaitland, was the seat of James Hamilton (1660-1729), who on his elevation to the bench assumed the title of Lord Pencaitland. The estate of Pencaitland belongs now to his descendant, Mrs Nisbet Hamilton Ogilvy, whose seat, WINTON CASTLE, is noticed separately, as also is a third mansion, FOUNTAINHALL. Pencaitland is in the presbytery of Haddington and the synod of Lothian and Tweeddale; the living is worth £229. Pencaitland public school, enlarged in 1887, at an expense of £1300, to accommodate 193 children, has an average attendance of about 80, and a grant of over £80. Valuation (1884) £7891, 13s., (1893) £7394, 7s. 4d. Pop. (1801) 925, (1831) 1166, (1861) 1187, (1871) 1320, (1881) 1107, (1891) 1125.—*Ord. Sur.*, sh. 33, 1863.

Penersax. See MIDDLEBIE.

Penicuik (Cymric *pen-y-cog*, 'hill of the cuckoo'), a town and a parish in the S of Edinburghshire. A burgh of barony and a police burgh, the town, which stands, 600 feet above sea-level, on the left bank of the river North Esk, by road is 12 miles N by W of Peebles and 10 S of Edinburgh; whilst its station at the terminus of a branch line (1872) of the North British railway is $15\frac{1}{2}$ miles distant from the latter city. It is also easily reached from GLENCORSE and POMATHORN stations. From its wide main street, running NE and SW, two streets diverge north-north-westward and south-south-eastward; the Valleyfield suburb lies close beside the river; and KIRKHALLE, though treated in the Census as a separate village, forms with Fieldsend and Shottstown part of Penicuik. The place wears a well-built airy appearance, superior to that of most towns of its size; contains some good shops and spacious well-to-do dwellings; and has a town hall, a post office, with money order, savings bank, insurance, and telegraph departments, a branch of the Clydesdale Bank, 2 hotels, a gas company, a drinking fountain (1864), angling, bowling, cricket, and curling clubs, horticultural and ornithological societies, a drill hall, a cemetery, hiring fairs on the third Friday of March and the first Friday of October, etc. In the churchyard, at the NE end of the main street, stands the Romanesque tower of the old parish church, St Kentigeru's, whose nave has been converted into three mausoleums. In front is the present church, a plain edifice of 1771, with a tetrastyle Doric portico, a clock, and a stoue cross. It was enlarged in 1837, and greatly improved in 1880, being seated now for 1200. In 1891 an organ was added at a cost of £150, and the church further improved. The Free church, built in 1862-63 at a cost of £2050, is a Gothic structure, with a large four-light window, 600 sittings, and an unfinished spire. Other places of worship are a U.P. church (1867), a Roman Catholic chapel (1882), and the Episcopal church of St James the Less (1882), the last an Early English edifice, with nave and apsidal chancel, a marble altar, and 182 sittings.

The paper-works of Messrs Alexander Cowan & Sons are among the oldest, best-known, and most extensive in Scotland. There are three mills at Penicuik; but as these stand within a few hundred yards of each other, they are worked as one establishment. The central position is occupied by the Valleyfield Mill, which is by far the largest of the three. Its nucleus was built in 1709* by Mr Anderson, printer to Queen Anne, or by his widow. In 1779 Mr Charles Cowan bought the mill, and with the exception of the years 1810-14, when it was fitted up by Government for the reception of 6000

* Among several curious old tombstones in the churchyard is one to 'Annabel Millar, spouse to Thomas Rutherford, paper-maker at Penicuik, who died 1 April 1735.'

French prisoners of war,* the premises have since continued in the family. As time wore on, the accommodation in the Valleyfield Mill became unequal to the requirements of an increased trade, and a neighbouring corn-mill was acquired in 1803 and converted into a paper manufactory. This mill is now known as Bank Mill, because it was at first devoted to making paper for bank-notes. In 1815 the operations of the firm were further extended by the purchase of a paper-mill belonging to Mr Nimmo of Edinburgh, and now known as the Low Mill. A few years after the close of the French war the Valleyfield Mill was repurchased from Government, fitted out with the most improved appliances, and started afresh in 1821. The late Mr Alexander Cowan was among the first in Britain to appreciate the value of the paper-making machine, and to introduce it into the trade; and both he and his successors have ever shown a readiness to seek out and adopt whatever appliances or arrangements gave promise of improving or facilitating the manufacture of paper. Besides their three mills at Penicuik, Messrs Cowan have a fourth at MUSSELBURGH. About 5000 tons of paper are made annually, all being the finer kinds of writing and printing papers. The water-wheels and steam engines employed in the mills are equal to over 600 horse-power, and about 800 persons are engaged in the various departments. The Esk Paper Mill of Messrs James Brown & Co. was the first cotton mill in Scotland, and was afterwards used as cotton and paper mills, but is now entirely devoted to the latter trade. A large reading and recreation room, provided with periodicals and amusements, was presented by this firm to their workers in 1891. There is also an iron-foundry; but, next to paper-making, the most important industry is the raising of coal, shale, and ironstone.

Under the Burgh Police Act of 1892, Penicuik is governed by a provost, 2 bailies, and 6 commissioners. Pop. of town (1841) 907, (1861) 1570, (1871) 2157, (1881) 3793, (1891) 3606, of whom 3002 were in the police burgh, 44 were in Lasswade parish, and 1891 were females. Houses (1891) inhabited 774, vacant 90.

The parish, containing also HOWGATE village, was anciently called St Mungo. In 1616 it gave off a portion of its territory to form with Pentland the parish of Glencorse, and since 1635 it has included the quondam parishes of Mount Lothian and St Catherine. It is bounded W and NW by Currie, NE by Colinton, Glencorse, Lasswade, and Carrington, E by Temple, S by Eddleston and Newlands in Peebleshire, and SW by Linton in Peebleshire. Its utmost length, from WNW to ESE, is 9½ miles; its breadth varies between 5 furlongs and 5½ miles; and its area is 29½ square miles or 18,966½ acres, of which 86½ are water. The beautiful river North Esk flows 5 miles south-south-eastward and east-by-northward along the Peebleshire border, and not far below its source expands into the North Esk reservoir (¼ × ½ mile). It next goes 4½ miles north-eastward through the interior, and lastly, 1½ mile north-north-eastward along the Lasswade boundary. During this course it is joined from Penicuik parish by MONKS BURN, Black Burn, and Cuiken Burn, the two last tracing parts of the Lasswade and Glencorse boundaries. Another of its affluents, Logan or Glencorse Burn, has been fully described in our article on GLENCOARSE parish. Fullarton Water runs north-north-eastward along the Temple boundary on its way to the South Esk; and Bavelaw Burn, a feeder of the Water of Leith, traces part of the Currie border. Copious springs of excellent water afford

* Esk Paper Mill, which then was a cotton factory, was at the same time converted into barracks for 1500 soldiers. Penicuik became active and stirring, and was considerably enriched, but suffered damage in the moral tone of its people. The reversion of the mills, at the close of the war, from their warlike occupancy to the manufacture of paper, was felt to be an event of general joy, and was celebrated by a general illumination. On a spot in the grounds of Valleyfield, where upwards of 300 of the prisoners of war were interred, stands a neat chaste monument, from a design by Hamilton, with the inscriptions, "Grata quies patriæ, sed et omnia terra sepulchrum," and "Certain inhabitants of this parish, desiring to remember that all men are brethren, caused this monument to be erected."

abundant supplies to every district; some are known to have petrifying or chalybeate qualities, and the waters of one, on the banks of the North Esk, near Spital Hill, have a bitter taste, and are taken medicinally by the people of the district. At Cuiken Burn's influx to the North Esk the surface declines to 496 feet above sea-level; and the highest point in the south-eastern division of the parish is Auchencoth Moss (976 feet) at the Linton boundary. The north-western is very much hillier, occupied as it is by the slopes and summits of the PENTLAND HILLS—Paties Hill (1500), West Kip (1806), Scald Law (1898), Carnethy Hill (1890), Hare Hill (1470), and Black Hill (1628), of which Scald Law, or the Sisters, is the highest point in the range. Including some lesser summits and a number of intersecting glens and hollows, the parish of Penicuik presents a grand western background to a great expanse of rich lowland landscape, and embosoms a variety of charming scenes, of which the most famous are noticed under HABBIE'S HOWE. The rocks of the hills are eruptive, for the most part porphyry; whilst those of the south-eastern district are variously Silurian, Devonian, and carboniferous, thickly overlaid in places with diluvium. Sandstone, of various qualities, is plentiful; limestone has been largely quarried; coal abounds, but is so much intersected by trap dykes that it has not been very much worked; and ironstone mining has become an important industry in the parish, while a few garnets and pieces of heavy spar have been found. The soil of the arable lands is exceedingly various, and comprises clay, sand, gravel, moss, and numerous combinations of two or more of these. About two-fifths of the entire area are in tillage, one-twentieth is under wood, and the rest of the land is either pastoral or waste. Penicuik House, near the North Esk's left bank, 1¼ mile WSW of the town, was built in 1761 by Sir James Clerk from his own designs, and is a large oblong Grecian edifice, with an octo-style Ionic portico. The lofty entrance-hall is adorned with statuary and with Roman antiquities from Cramond and Middlebie; and the roof of the great drawing-room, or 'Ossian's Hall,' is painted with twelve life-size figures, by Runciman, of characters in the poems of Ossian. The grounds, 1000 acres in extent, are of great beauty, the house itself standing on a level holm in a bend of the river, with a picturesque glen behind carrying up the view to the ruins of BRUNSTANE Castle and the western extremity of the Pentlands—a little plain in front, gemmed with pond and garden, and overhung by wooded ascents, by swells and eminences on either side, dis severed by ravines, and moulded into many curves of beauty. In front of the house is an artificial lake, and westward is another large piece of water well stocked with fish. These ponds are notable as the scene of the boyish boatings which kindled the enthusiasm of John Clerk of Eldin (1736-1812), the brother of Sir James, for nautical studies, and remotely led to the production of his *Essay on Naval Tactics*. The offices, 280 feet distant, form a large square, with a rustic portico and an elegant spire and clock; and, behind them, serving as a pigeon-house, is an excellent model of the quondam celebrated Roman Temple on the Carron, called by Buchanan 'Templum Termini,' but popularly denominated ARTHUR'S OVEN. On the opposite side of the river, at the end of an avenue on the top of the bank, and ½ mile from the house, stands an obelisk, raised by Sir James Clerk to the memory of his own and his father's friend and frequent visitor, Allan Ramsay (1686-1758). On a conical eminence directly in front of the house, and 3 furlongs distant, stands the round Flag Tower (1750), which is seen at a great distance. On another eminence close on the Esk, and midway between the house and the town, stands another tower, formerly called Terregles, the original seat of the ancient proprietor of the parish; and onward from it to the termination of the grounds at the village is a profusion of pleasant and striking scenes. About a furlong above the garden, on the margin of the Esk, is Hurlycove, a subterranean passage 147 feet long, 7 high, and 6 broad, with a dark cell in the middle in which are seats for 6 or 8 persons, the

whole cut out of the solid rock in 1742. Directly opposite this is another artificial sheet of water, stored with perch and trout. John Clerk (1611-74), the son of a Montrose merchant, having made a fortune in Paris, in 1646 purchased the lands and barony of Penicuik from Dr Alexander Pennicuk; and John, his son, was created a baronet in 1679. His sixth descendant, Sir George Douglas Clerk, eighth Bart. (b. 1852; suc. 1870) is present proprietor. (See J. Small's *Castles and Mansions of the Lothians*, Edinb. 1883.) Other properties, noticed separately, are NEWHALL and LOGAN HOUSE. Penicuik is in the presbytery of Dalkeith and the synod of Lothian and Tweeddale; the living is worth £313. Howgate public, Kirkhill public, Nine Mile Burn public, Penicuik public, and Penicuik infant public schools, with respective accommodation for 103, 301, 103, 746, and 125 children, have an average attendance of about 60, 265, 35, 280, and 90, and grants amounting to nearly £50, £275, £40, £320, and £80. In addition there are Penicuik Episcopal school, a Roman Catholic school, and Valleyfield infant and Industrial school, with respective accommodation for 254, 107, and 192 children, an average attendance of about 180, 60, and 30, and grants of nearly £175, £50, and £25. The Wellington Reformatory Farm school (1857) is 2 miles from the town. Pop. (1881) 5309, (1891) 4914.—*Ord. Sur.*, shs. 32, 24, 1857-64. See John J. Wilson's *History of Penicuik* (1891).

Peniel Heugh. See CHRAILING.

Penkill Burn. See MINNIGAFF.

Penkill Castle, a mansion in DAILLY parish, Ayrshire, 3 miles E by N of Girvan. It has paintings by W. Bell Scott, and memories of Rossetti.

Penkiln. See KIRKMAADRINE.

Pennan, a fishing village in Aberdour parish, Aberdeenshire, on a small bay adjacent to the boundary with Banffshire, 4 miles ENE of Gardenstown. It nestles snugly at the foot of steep acclivities flanking the shore, owns 35 fishing boats, and has a post office under Fraserburgh, with money order, savings bank, and telegraph departments. Pennan Head is a slight projection, 1 mile ENE of the village, and, rising rapidly inland to a height of 562 feet, commands a view of the seaboard westward to the Bin of Cullen, and eastward to Kinnairds Head. The fourth and last Lord Fraser, who was in hiding after the '15, lost his life through a fall from the cliff here, 12 Oct. 1720.—*Ord. Sur.*, sh. 97, 1876.

Pennick, a small village in Auldearn parish, Nairnshire, 4 miles E by S of Nairn.

Penninghame, a parish of NE Wigtownshire, containing the post-town and station of NEWTON-STEWART, 7 miles N by W of Wigtown and 49½ W by S of Dumfries. It is bounded N by Colmonell in Ayrshire and Minnigaff in Kirkcudbrightshire, E by Minnigaff and Kirkmabreck in Kirkcudbrightshire, S by Wigtown, and W by Kirkcowan. Its utmost length, from NW to SE, is 14¾ miles; its breadth varies between 9 furlongs and 5½ miles; and its area is 54⅓ square miles or 34,562 acres, of which 851 are foreshore and 262½ water. The 'crystal CREE' winds 18 miles south-south-eastward along part of the northern and all the eastern boundary to the head of Wigtown Bay; and the BLADENOCH, issuing from Loch MABERRY (1¼ mile × 3 furl.; 405 feet), at the meeting-point with Colmonell and Kirkcowan, winds 17 miles south-south-eastward along all the western and ¼ mile of the southern boundary till it passes off into Wigtown parish. Bishop Burn, rising near Merton Hall, runs 6½ miles south-eastward—for the last 4 along the Wigtown border—to the upper part of Wigtown Bay; and seven burns or rills rise in the interior and run to the Cree, ten to the Bladenoch. Of twelve other lakes and lakelets the largest are Loch DORNAL (5 × 4½ furl.; 380 feet), on the Ayrshire boundary; Loch Ochiltree (7 × 4½ furl.; 390 feet), 1½ mile ESE of Loch Dornal; and triangular Loch Eldrig (2¾ × 1 furl.; 180 feet), 3¾ miles W of Newton-Stewart. Springs of pure water are numerous, and one is chalybeate and medicinal. Cree Moss, occupying the SE corner, along the Cree to Wigtown Bay, is a flat tract of nearly 2000 acres, which seems to have been suc-

cessively submarine, forest, and mosh-and has, to a considerable extent, undergone reclamation into productive corn land. The rest of the surface, in a general view, is a long, broken swell, inclining to the rivers, and, from S to N, attaining 401 feet at Barraer Fell, 322 at Eldrig Hill, 451 at Glenhapple Fell, 493 at Glasoch Fell, and 604 at a point ¾ mile E by S of Loch Ochiltree. It presents, for the most part, a tumulated moorish aspect; and, though somewhat embellished in portions of the southern district, is everywhere else prevailingly bleak. Many beautiful and agreeable spots lie among the moorlands, especially along the Cree; and much of the moorlands themselves is capable of reclamation into arable land. Greywacke of several varieties is the predominant rock, and in one place has been quarried for building; whilst granite, abounding in boulders from a few pounds to many tons in weight, is sometimes mixed with red or green syenite, and is much used for both rubble and polished masonry. The soil in Cree Moss is a heavy clayey loam; on the higher arable lands is dry, and suitable for various crops, particularly barley; and in the northern district, ranges from marsh to a quality similar to that on the higher arable lands. Rather less than one-third of the entire area is regularly or occasionally in tillage; some 1450 acres are meadow, and 570 under wood; and the rest of the parish is either pastoral or waste. The old military road ran from Newton-Stewart towards Glenluce; and near Loch Ochiltree are traces of the DELL'S DYKE. Other antiquities are CASTLE-STEWART, 3 miles NNW of Newton-Stewart; ruins of the old parish church at the decayed hamlet of Penninghame, 3 miles S of Newton-Stewart; the site of Penninghame Hall, a little further S; ruins of St Ninian's chapel (1508), 1¼ mile N of Castle-Stewart; and the site of Kery or Keir chapel, of earlier erection, 2½ miles further N. The bishops of Galloway resided at Penninghame Hall; and the Rev. Dr William M'Gill (1731-1807), a minister of Ayr, whose *Practical Essay on the Death of Jesus Christ* occasioned a strong sensation in the latter part of the 18th century, was born at Carsenestock. Penninghame House, on the banks of the Cree, 4 miles NNW of Newton-Stewart, was partly destroyed by fire in 1887, and again in 1894. Its owner is Mrs Heron Maxwell Blair. Other mansions are Corsbie, Corvisel, Killiemore, Merton Hall, and Mochrum Park. Giving off its northern portion to BARGRENNAN *quoad sacra* parish, Penninghame is in the presbytery of Wigtown and synod of Galloway; the living is worth £361. Its five churches have all been noticed under NEWTON-STEWART. The following are the schools, with accommodation, average attendance, and government grant: Corsbie infant public (121, 100, £75), Grange public (100, 55, £55), Loudon public (54, 35, £40), Penninghame public (240, 260, £225), Challock Episcopal (55, 35, £25), and St Ninian's Roman Catholic (180, 40, £30). Pop. (1801) 2569, (1831) 3461, (1861) 4061, (1871) 3940, (1881) 3940, (1891) 3593, of whom 2332 were in Newton-Stewart and 3411 in the ecclesiastical parish.—*Ord. Sur.*, shs. 4, 8, 1857-63.

Pennon. See PENNAN.

Pennycross, a modern mansion in Kilfinichen and Kilvieckon parish, Mull island, Argyllshire, near the NW shore of Loch Buy, 4 miles SSE of Pennyghael.

Pennyquick. See PENICUK.

Pennyghael, a modern mansion in Kilfinichen and Kilvieckon parish, Mull island, Argyllshire, near the northern shore of Loch Scridain, 16½ miles WSW of Auchnacraig. There is a post, money order, and telegraph office under Oban.

Pennygown, a bay in the north of Torosay parish, island of Mull, Argyllshire, on the east coast of the island.

Pennygown and Torosay. See TOROSAY.

Penpont (Cymric *pen-y-pont*, 'head of the bridge'), a village and a parish of Upper Nithsdale, NW Dumfriesshire. The village stands 200 feet above sea-level, near the left bank of Scar Water, 15 miles NNW of Dumfries, 3 WSW of Thornhill station on the Glasgow

and South-Western railway, and 2 W by S of Thornhill town, under which it has a post office, with money order, savings bank, and telegraph departments. A pleasant little place, it is lighted with gas, and well supplied with water. Pop. (1861) 494, (1871) 632, (1881) 437, (1891) 407.

The parish is bounded N by Sanquhar, NE by Durisdeer, E by Mortou, SE by Closeburn, S by Keir, and SW by Tynron and the Kirkcudbrightshire parish of Dalry. Its utmost length, from WNW to ESE, is 13 miles; its utmost breadth is 4 miles; and its area is $34\frac{1}{2}$ square miles or 22,099 $\frac{1}{2}$ acres, of which 138 $\frac{1}{2}$ are water. SCAR WATER, rising in the extreme NW at an altitude of 1600 feet above sea-level, winds 17 miles east-south-eastward—for the last 5 $\frac{1}{2}$ miles along the Tynron and Keir boundary—until, at a point $1\frac{1}{2}$ mile above its influx to the Nith, it passes off into Keir. During this course it is joined by GLENMANNO, CHANLOCK, and eighteen other burns. The NITH curves 2 $\frac{1}{2}$ miles east-by-southward along the eastern border; and MAAR or Park Burn, its affluent, traces much of the Durisdeer boundary. The surface is hilly, sinking at the south-eastern extremity to 190 feet above sea-level, and rising thence to 717 feet near Auchenaught, 996 at Auchenbainzie Hill, 1211 at Merkland Hill, 1813 at CAIRNKINNA Hill, 1441 at Craighasher, 1581 at Glenwhargen Craig, 1640 at Countam, 1658 at Rough Hill, and 1902 at Corse Hill, of which the three last culminate right on the confines of the parish. The scenery in the N W is wildly but romantically upland, sending up summits which compete in all the elements of mountain landscape with any S of the Grampians; in the central district it is still upland, but of softer feature and lessened elevation; and in the SW it passes through the gradations of towering hill, considerable eminence, and gentle swell, till it finally subsides into a belt of alluvial plain. Two-thirds or more of the whole area are arranged lengthwise into four steep ridges and three deep narrow glens, each of the latter watered by a very pure and plentiful stream. Scar Water's hill-screens over great part of its course are so steep and high, tufted with copses below, and dotted over with sheep in the ascent, and its basin is so narrow and rocky, so rapid in gradient, and so embellished with trees and cultivation, as to be rife with picturesqueness and romance. The ridge between it and Chanlock Burn comes boldly and steeply down in the form of a mountain-wedge, to their point of confluence, there being feathered all over with trees, and confronting hill-screens on the opposite sides of the glens, arrayed in the richest green, with which it forms, as seen a little down the course of the united stream, one of the finest landscapes. In the bosom of the Scar's left mountain flank, 2 $\frac{1}{2}$ miles above this point, rises almost sheer from the glen the stupendous crag of Glenwhargen, a mountain mass of nearly naked stone, amidst highlands where all else is green or russet—one of the greatest curiosities in the South of Scotland. About $1\frac{3}{4}$ mile SE of it appears the summit of Cairnkinna, crowning a gradual ascent and commanding a view of large parts of Nithsdale and Annandale, considerable portions of Ayrshire, Kirkcudbrightshire, and Clydesdale, and some blue and hazy summits in Cumberland. Park Burn runs cheerily through the pleasure-grounds of DRUMLANRIG Castle, and on the Durisdeer side is overlooked by that stately ducal pile. The prospect down both the Nith and the lower Scar is extensive and enchanting, and presents a foreground of highly cultivated haughs and hanging plains, diversified by swells and gentle eminences, thriving woods, and pretty villas, with a singularly varied background, now boldly and abruptly mountainous, and now retreating slowly upw^{ard} from lowland to soaring summit. From a plain, ^Wate of the church and manse, on the Scar's left bank, ^{and} ¹mile from the nearest reach of the Nith, both riv^{ers} are distinctly seen for about 8 miles, first separate, ^{then} united, their pools appearing at intervals as ^{mill}sheets of water, and their haugh-ground conver^{ging} on a occasion of a heavy freshet, into a little inland s^{ettle}ment in breadth. Not far from this

point a modern bridge spans the Scar between two steep rocks, on the site of an antique so-called Roman bridge, whose one large semicircular arch, completely mantled with ivy and woodbine, was removed in 1801. The banks of the stream here are high and skirted with wood, the channel rocky and obstructed with loose blocks; and, at GLENMARLIN Pool a little way above, the stream forms a series of foaming cataracts.

Barely one-eighth of the entire area is capable of cultivation; but improvements of every sort on the land have been conducted, and still are carried forward, with the greatest energy and success. The woods of Drumlanrig are very extensive; and its magnificent gardens (1830-36), which, together with the elegant cottage for the gardener, from a design by Mr Burn, cost upwards of £11,000, fling enchantment over the district along the Park Burn. Orchards and small gardens are objects of general care. The soil in the many arable spots among the hills is light, early, easily improvable, and very fertile. The herbage on the uplands is excellent. White and red sandstone abounds in the lower district; trap has been quarried for building material from among the hills; lead ore exists, and is thought to be plentiful; and coal is said to have been accidentally stumbled upon, but has never been formally searched for. Dow or Dubh Loch was famed in the days of superstition for its alleged power of healing all sorts of diseases, and had its water-spirit, to whom devotees left some part of their dress as an offering. Glenmanno Burn, an early and wild little tributary of the Scar, through a bleak sheep-walk among the hills, is associated with curious and stirring anecdotes of a sheep farmer, John M'Caul or 'Strong Glenmanno' (1621-1705), an account of whose strange feats of physical strength is still preserved in the Session Records. At the confluence of Park Burn with the Nith are vestiges of Tibbers' Castle, supposed to have been of Roman origin, and to have got its name in honour of Tiberius Cæsar. This castle was garrisoned by the English in the early part of the wars of the succession, and was taken by surprise by Sir William Wallace. The barony on which the castle stands, and a hill in its vicinity, also bear the name of Tibbers. A Roman causeway is traceable up the Scar and into Tynron; and there are vestiges of a Roman encampment. An ancient obelisk or Runic cross, 10 feet high, fixed in a socket of two steps, stands on the Boatford estate. Its sculptures or inscriptions are almost defaced; nor does it figure in either record or any distinct tradition. There are likewise in the parish two motes, and four very large cairns. For 4 $\frac{1}{2}$ miles at the upper end, the parish has no road; for 5 $\frac{1}{2}$ more it has only one along the Scar, but elsewhere it is tolerably well provided. Its southern margin is traversed by the road from Thornhill to Moniaive; and all its south-eastern district has near access to the Thornhill and Carronbridge stations of the Glasgow and South-Western railway. The Duke of Buccleuch owns six-sevenths of all the parish. Penpont is the seat of a presbytery in the synod of Dumfries; the living is worth £288. The parish church, built in 1867 at a cost of £3000 from plans by the late Charles Howitt, architect to His Grace, is a handsome Gothic edifice, said to be one of the finest parish churches in Scotland, with 500 sittings, an organ, and a spire 120 feet high. The East Free church dates from Disruption times; the West (1791) till 1876 was Reformed Presbyterian; and the present Reformed Presbyterian church was built in 1875, and contains 300 sittings. At BURNHEAD is a U.P. church (1800); and two public schools, Penpont and Woodside, with respective accommodation for 190 and 40 children, have an average attendance of about 175 and 15, and grants of nearly £195 and £30. Pop. (1801) 966, (1831) 1232, (1861) 1326, (1871) 1323, (1881) 1176, (1891) 1063.—*Ord. Sur.*, shs. 9, 15, 1863-64.

The presbytery of Penpont, meeting at Thornhill, comprises the *quoad civilia* parishes of Closeburn, Durisdeer, Glencairn, Keir, Kirkconnel, Morton, Penpont, Sanquhar, and Tynron, the *quoad sacra* parish of Wanlockhead, and the chapelry of Moniaive.

Pop. (1871) 13,171, (1881) 12,932, (1891) 11,969, of whom about 2780 are communicants of the Church of Scotland. The Free Church also has a presbytery of Penpont, with churches of Closeburn, Glencairn, Penpont, Sanquhar, and Wanlockhead, which six churches together have about 1400 members.

Penshel. See WHITTINGHAME.

Penston, a collier village in Gladsimir parish, Haddingtonshire, 3 miles S of Longniddry station on the North British railway, and 2½ E by S of Tranent. The barony of Penston, lying around the village, belonged towards the close of the 13th century to William de Baliol, nephew of John Baliol of Barnard Castle, the father of King John Baliol; and passed to his descendants, the Baillies of LAMINGTON. It had, near the village, a strong old mansion, now represented by only the garden; has been famous, since the 14th century, for excellent coal; and yielded coal, in the time of Oliver Cromwell, under a yearly rental of £400.—*Ord. Sur.*, sh. 33, 1863.

Pentland, an ancient but suppressed parish near the centre of the county of Edinburgh, and containing the hamlets of Pentland and New Pentland, which stand on or near the road from Edinburgh to Peebles by Liberton, and 4½ miles S of Edinburgh. The name has probably, notwithstanding the author of *Caledonia* to the contrary, been taken from the adjoining hills, the old name of which, as well as of the Firth, seems to have been Petland or Pictland. This title they are now supposed to have acquired from having formed the debatable ground or boundaries to the S and the N of the Pictish territories. The parish church, which stood at the village of Pentland, seems to have been granted to the monks of Holyrood at the founding of that abbey, and was confirmed to them in 1240, but before the death of Alexander III. it was an independent rectory, which in the 14th and two following centuries was under the patronage of the earls of Orkney and barons of Roslin. The parish was suppressed after the Reformation, and the northern part annexed to Lasswade, while the southern, comprehending the barony of Falford, was united to the parish of St Catherine, now Glencorse.

Pentland Firth, a strait along the E portion of the N coast of Caithness, separating the Orkney islands from the mainland of Scotland. Its length, from a line drawn on the E from Duncansbay Head to Old Head at the SE point of South Ronaldsay, to a line drawn on the W from Dunnet Head to The Barry in Hoy, is 14 miles. The width from Duncansbay Head to Brough Ness in South Ronaldsay is 6½ miles, and the width from Dunnet Head to Tor Ness in Hoy is 7¾ miles. In the centre the width is greater, as a triangular projection, measuring 10 miles along the base from E to W and 4 deep, is sent off to the N between the islands of South Ronaldsay and Flotta and Hoy, and passes by the Sound of Hoxa into Scapa Flow. Three and a half miles WNW of Duncansbay Head is the island of STROMA, included in the county of Caithness, and separated from the mainland by the Inner Sound (1½ mile). The lighthouse on Stroma having been found insufficient, a new first-class erection, estimated to cost £15,000, was begun in 1894. The works contracted for include, besides the lighthouse tower itself, at the north end of the island, a fog syren, etc. Six and a half miles N by W of Duncansbay Head is the island of Swona, included among the Orkneys and belonging to the parish of South Ronaldsay; and 4¾ miles NE of Duncansbay Head, and at the eastern entrance to the Firth, are the Pentland Skerries, consisting of Muckle Skerry, with Little Skerry ¾ mile S by E, Lougher Skerry ¾ mile SE, and Clottaek Skerry 1 mile E by S. The two last are tidal, and as the whole group lies right in the middle of this much frequented passage, and at a point where approach to either shore is dangerous from the strength of the current, it early became necessary to mark them by night, for which purpose a lighthouse was erected on the Muckle Skerry in 1794. The rocks are at present marked by two fixed lights

placed in towers, one of which is 170 feet, and the other 140 feet, high. These are 100 feet apart from SSW to NNE, and are visible at a distance of 18 and 19 nautical miles. The only inhabitants of the Skerries are the lighthouse keepers and their families, who numbered 19 in 1861, 14 in 1871, 17 in 1881, and 14 in 1891.

Though the Pentland Firth is the most dangerous passage in the British seas, it must be traversed by all vessels passing from the E of Scotland to the Atlantic, or from the W to the North Sea, except those small enough to be accommodated by the Caledonian Canal, and hence over 5000 vessels pass through every year in spite of the danger and difficulty of the navigation. This danger and difficulty arises from the extreme rapidity with which the tidal current here runs—from 6 to 12 miles an hour—and from the eddies by which it is in many cases accompanied. The chief of these latter, which are caused either by turns of the tide-race or by sunk reefs forming obstructions along the bottom, are the line of breakers off Duncansbay Head known as the 'Boars' or 'Bores of Duncansbay;' the line of breakers off St John's Point midway between Duncansbay Head and Dunnet Head, known as the 'Merry Men of Mey;' the whirlpool at the N corner of Stroma, known as the 'Swelkie' (see ORKNEY); and the whirlpool near Swona, called the 'Wells of Swona.' The current during flood flows from W to E, and during ebb from E to W, and ships have to wait at either end till the set of the stream is in the direction in which they wish to pass, as it is utterly useless to attempt to push on against the flow. The stream along the coasts flows in a direction opposite to that of the central or main current. 'The flood tide,' says the writer of the account of the parish of Dunnet in the *New Statistical Account*, 'runs from west to east at the rate of ten miles an hour, with new and full moon. It is then high-water at Scarfskerry [midway between Dunnet Head and St John's Point] at nine o'clock. Immediately as the water begins to fall on the shore, the current turns to the west; but the strength of the flood is so great in the middle of the firth that it continues to run east till about twelve. With a gentle breeze of westerly wind, about eight o'clock in the morning, the whole firth seems as smooth as a sheet of glass, from Dunnet Head to Hoy Head in Orkney. About nine the sea begins to rage for about 100 yards off the Head, while all without continues smooth as before. This appearance gradually advances towards the firth and along the shore towards the east, though the effects are not much felt upon the shore till it reaches Scarfskerry Head, as the land between these points forms a considerable bay. By two o'clock the whole firth seems to rage. About three in the afternoon it is low-water on the shore, when all the former phenomena are reversed—the smooth water beginning to appear next the land and advancing gradually till it reaches the middle of the firth.' These opposite currents are perplexing to those unacquainted with the firth, but the boatmen of the adjacent coast know them well, and invariably make use of them when sailing about. In a calm, more particularly during a fog, the danger is increased rather than diminished, for ships drift along while the crew believe them to be stationary. At full spring tides the rise of the sea is 8½ feet, and on extraordinary occasions 14 feet, while at neap the rise is from 3½ to 6 feet, and the firth is most stormy when a spring flood-tide is running against a gale blowing from the opposite direction. The islands and the adjoining coast suffer most severely when gale and flood act together. The great storm of December 1862 in particular distinguished itself by the havoc which it wrought along these shores. It swept the sea over the north end of the island of Stroma, and redistributed the ruins of the island. The waves ran bodily up and over the vertical cliffs on the west side, 200 feet in height, tearing portions of the wrecked boats, stones, seaweed, and other rubbish, on the top. They rushed in torrents across the tidesalms, tearing up the ground and rocks in their way, and towards the old mill at Netherton on the opposite side. This mill had often before been worked by water, but was ruined from spray

thrown over these cliffs, but never had such a supply been furnished as by this gale. One curious phenomenon was noticed at the south end of Stroma: the sea there came in such a body between the island and the Caithness coast, that at intervals it rose up like a wall, as if the passage was too narrow for the mass of water which, forced onwards from the Atlantic between Holburn Head on the Caithness shore and the Old Man of Hoy on the Orkney side, passed bodily over the cliffs of Stroma. Even in summer the effects of a gale are often grand and almost sublime. 'Nowhere else,' says Sir Archibald Geikie, 'round the British islands can the tourist look down on such a sea. It seems to rush and roar past him like a vast river, but with a flow some three times swifter than our most rapid rivers. Such a broad breast of rolling, eddying, foaming water! Even when there is no wind the tide ebbs and flows in this way, pouring now eastwards now westwards, as the tidal wave rises and falls. But if he should be lucky enough to come in for a gale of wind (and they are not unknown there in summer, as he will probably learn), let him by no means fail to take up his station on Duncansbay Head or at the Point of Mey. He will choose if he can a time when the tide is coming up against the wind. The water no longer looks like the eddying current of a mighty river. It rather resembles the surging of rocky rapids. Its surface is one vast sheet of foam and green yeasty waves. Every now and then a huge billow rears itself impatiently above the rest, tossing its sheets of spray in the face of the wind which scatters them back into the boiling flood. Here and there, owing to the configuration of the bottom, this turmoil waxes so furious that a constant dance of towering breakers is kept up. . . . Solid sheets of water rush up the face of the cliffs [of Duncansbay Head] for more than 100 feet, and pour over the top in such volume, that it is said they have actually been intercepted on the landward side by a dam across a little valley, and have been used to turn a mill.'

Pentland Hills, a group of hills commencing in Edinburghshire, 3 miles SW of Edinburgh, and extending thence south-westward for 16 miles through the counties of Edinburgh, Peebles, and Lanark, to near Carnwath, where they slope into Clydesdale. The average breadth is from 4 to 6 miles. They nowhere form a continuous chain or ridge, but are broken up by many intersecting ravines and hollows, the principal being the valley occupied by the Glencorse Burn near the NE end, and the Cauldstane Slap between East and West Cairn Hills near the centre. Through the latter there is a rough cross road from the Edinburgh and Lanark road up the valley of the Water of Leith, to the Edinburgh and Dumfries road, by Penicuik and Biggar, at Linton; and at many points the hills are traversed by footpaths. Along the NW the rocks belong to the Calciferous Sandstone series of the Carboniferous System, while along the SE they belong to the Lower Old Red Sandstone System, and bave to the N a thick series of interbedded porphyrites of the same age. At several points there are patches of Upper Silurian rocks, which are above North Esk reservoir and elsewhere very richly fossiliferous. These must have been, at one time, wholly covered to a depth of from 6000 to 7000 feet by carboniferous rocks, all of which have been removed by denudation. Ice action has been traced over 1600 feet above sea-level, and erratics that must have come from the NW are found over 1000 feet up. There are numerous springs and streams, those near the N end providing the water supply of Edinburgh, Leith, and Portobello, the principal reservoirs being Torduff, Clubbidean, and Bonaly, on the N near Bonaly Tower; Glencorse and Loganlee reservoirs, in the basin of Glencorse Burn or Logan Water; and Listonshiels and Bavelaw (Threipmuir and Harelaw) reservoirs, in the basins of the Water of Leith and its tributary, Bavelaw Burn. Other reservoirs are North Esk reservoir, for regulating the supply to the mills along that stream, and Cobinshaw and Crosswood reservoirs on Muriean and Linhouse Waters, and connected with the supply of the Union

Canal. Besides the streams already mentioned, there is Lyne Water on the SW, flowing by Linton to the Tweed near Lyne church. The appearance of the bills varies considerably, but is everywhere more or less rounded. In some districts they are bleak and heathy, but in others they are green and covered with excellent pasture. The scenery along their skirts and in some of the glens of the intersecting streams is very pretty; and near the centre of the SE side along the North Esk at Carlops, on the borders of the counties of Edinburgh and Peebles, are Habbie's Howe, and the rest of the scenery rendered classic in Ramsay's *Gentle Shepherd*; while 1½ mile N by W of Penicuik, on the shoulder of Carnethy, is the scene of the battle of RULLION GREEN. The principal summits from NE to SW are Allermuir Hill (1617 feet), Castlelaw Hill (1595), Bells Hill (1330), Black Hill (1623), Carnethy (1890), Hare Hill (1470), Scald Law (the highest, 1898), West Kip (1806), East Cairn (1839), West Cairn (1844), Mount Maw (1753), Craigen-gar (1700), Byrehope Mount (1752), Faw Mount (1356), King's Seat (1521), Fadden Hill (1526), Millstone Rig (1439), White Craig (1425), Catstone Hill (1470), Black Law (1336), Harrows Law (1360), Black Birn (1213), Bleak Law (1460), Med Hill (1347), and Left Law (1210). From Catstone Hill a scattered series of hills pass southward by Mendick Hill (1480 feet), Blyth Hill (1007), and Broughton Heights (1872), and connect the Pentlands with the Southern Uplands. In 1825 Lord Cockburn could write of the Pentlands, 'There is not a recess in their valleys, nor an eminence on their summits, that is not familiar to my solitude.' But about 1883 considerable dispute and litigation was originated with regard to the public rights of way across the hills, and the question may now be taken as pretty well settled. Most of them have been carefully marked out by posts and direction boards erected by the Scottish Rights of Way and Recreation Society.—*Ord. Sur.*, shs. 32, 24, 1857-64.

Perceton, an estate, with a mansion, in DREGHORN parish, Ayrshire, on the right bank of Annick Water, 2½ miles NE of Irvine. Its owner is Miss Mure-Macredie.—*Ord. Sur.*, sh. 22, 1865.

Persie, a *quoad sacra* parish and a registration district of NE Perthshire. Its church, near the right bank of the Black Water, 9 miles NNW of Blairgowrie, was built as a chapel of ease about 1735 at a cost of £150. Persie is in the presbytery of Meigle and the synod of Angus and Mearns; its minister's stipend is £117. Three schools—Blackwater, Strone of Cally, and Drimmie Burn—with respective accommodation for 60, 86, and 58 children, have an average attendance of about 40, 45, and 20, and grants amounting to nearly £60, £65, and £40. Pop. (1871) 820, (1881) 715, (1891) 596.—*Ord. Sur.*, sh. 56, 1870.

Pert. See LOGIE-PERT.

Perth (perhaps from Gaelic *Bar-tatha*, 'height of Tay'), formerly also St Johnstoun, is the name of an ancient city, four parishes, and a district in the SE of Perthshire. The city is a royal and parliamentary burgh, a river port, a post and market town, the seat of a presbytery and synod, the capital of its county, and one of the assize towns of Scotland. It is situated on the river Tay, at the junction of several important railways, 15¾ miles SSE of Dunkeld, 21¾ WSW of Dundee, 89¾ SW by S of Aberdeen, 47¾ NNW of Edinburgh *vid* Forth Bridge, 33 NE of Stirling, and 62½ NE of Glasgow. Its bounds include three cognominal parishes and part of St Paul's a fourth, besides portions of Kinnoull and Scone parishes. The main part of the town, including all the ancient quarters, is on the right bank of the Tay; but the chief suburb, named Bridgend, is situated on the left bank immediately opposite. The site of the whole is a flat-bottomed hollow or plain bisected by the river Tay and environed with rising ground, and overlooked from a little distance by an amphitheatre of well-wooded hills, whose skirts are thickly dotted with villas. The situation of Perth, its beautiful environments, its fine buildings, and its magnificent view, amply justify its old title of 'The Fair

City.' The more prominent natural features in the vicinity are the broad river, with Moncreiffe island, to the SE of the city; Moncreiffe Hill to the S, and Kinnoull Hill to the N, of the Tay; Craigie Hill to the SW, and the two public parks. The views from points of vantage on these hills are very extensive and beautiful. According to an anecdote, repeated in every description of the city, when the Roman legionaries, in their march of invasion, came in view of the city's site as seen from the southern approach, they cried out '*Ecce Tiber! Ecce Campus Martius!*' But Sir Walter Scott, looking at the comparison from a Scotsman's point of view, wrote the retort long after—

'Behold the Tiber! the vain Roman cried,
Viewing the ample Tay from Baiglie's side.
But where's the Scot that would the vaunt repay,
And hail the puny Tiber for the Tay?'

The two public meadows or parks of Perth are called Inches (*i.e.*, islands), from the fact that they used at one time to be insulated by the Tay, along the right bank of which they still extend. Separated from each other by the main body of the city, they add very greatly to its beauty and airiness, and serve as spacious grounds for the recreation of the inhabitants. They are said to have been exchanged by the Mercer family (their original possessors) for a vault under St John's church, and this gave rise to the couplet—

'Folks say the Mercers tried the town to cheat,
When for twa Inches they did win six feet.'

The North Inch, which has received considerable additions at comparatively modern dates, begins near the main bridge, and extends northwards beyond the town, forming an oblong measuring about 1400 yards by 330, and containing an area of 98 acres. Previous to about 1790, when the present road was formed considerably to the W, this Inch was traversed through the middle by the road to Dunkeld and Inverness. A racecourse, curving at the extremities, and measuring about 950 yards from end to end, is laid out upon it parallel to the river bank. The Perthshire Hunt races are held here annually, and those of the Caledonian Hunt once every four years. The Inch is used now for military reviews, golf, and other games; and in ancient times it seems to have been the favourite arena for judicial combats. Here a combat took place under Robert Bruce between Hugh Harding and William de Saintlowe; and in the reign of Robert III. it was the scene of the deadly encounter between the clans Chattan and Kay or Quhele, so graphically described by Scott in his *Fair Maid of Perth*. The South Inch stretches southwards from a point opposite the north end of Moncreiffe Island, about 130 yards S of the Central Station, and forms a square of about 680 yards each way, with an area of 72 acres. An avenue of stately trees surrounds it on three sides; and the Edinburgh Road, opened about 1760, which traverses its centre, is also similarly shaded. The trees on the N side were removed in 1801, when the handsome houses of Marshall Place were begun. King's Place also overlooks its N side; and on the W is a line of ornate villas called St Leonard's Bank, and the buildings of the railway station. The South Inch had formerly a racecourse, and was anciently used for witch-burnings, military displays, and archery practising; and stones were set up on it at a distance of 500 fathoms from each other, to mark the proper flight of an arrow.

Streets.—The old part of Perth, or what existed prior to the extensions begun towards the end of the 18th century, forms the central division of the present town, and occupies less than one-half of the entire area. The course of the Tay at Perth is pretty nearly due S; and the city lies on its right or W bank, chiefly between the North and South Inches, though it extends in breadth further to the W than either of the parks, and a considerable section lies to the NW behind, or to the W of, the North Inch. The plan of the city is very regular, the chief streets being parallel to each other, while most of the other and connecting streets run at right angles

to them. In the older part of the city, between the Inches, two wide streets, about 160 yards from each other—High Street and South Street or Shoegate—run parallel from E to W, through the entire breadth of the town. The latter, which is the more southerly, used to be called the Southgate and the 'Shoegate,' and at its western extremity are County Place and York Place, from which the main entrance to the General Station turns southward, while the Glasgow Road continues westward, crossing the railway line by a bridge. Parallel to these, in order as we proceed northwards from High Street, are Mill Street, Murray Street, Foundry Lane, Union Lane, and the broad Athole Street, from the E end of which Charlotte Street runs SE to the bridge, along the S margin of the North Inch. These parallel streets are short; and the triangular region betwixt their E ends and the river is less regularly disposed than the rest of the old town. Proceeding southwards from South Street, we come upon the following parallel streets: Canal Street, Victoria Street (continued W as Paradise Place), South William Street, and Marshall Place (continued W as King's Place). At right angles to these, and extending along the river bank from Inch to Inch, is a comparatively modern and very handsome promenade called Tay Street, in which are some of the finest buildings in the city. In order, towards the W, the following streets run parallel to Tay Street for more or less of its length: Speygate and Watergate, between Canal Street and High Street; Princes Street, which continues the road from Edinburgh from the N margin of the South Inch to South Street, whence St John Street, a few yards to the E, leads to High Street, between which and the bridge George Street runs; Meal Vennel, between South and High Streets; Scott Street, between King's Place and South Street; the broad thoroughfare, known successively as King Street, South Methven Street, and Methven Street, and running due N and S the entire way from King's Place to the S to Athole Street in the N. Still further W Pomarium and Leonard Street, the latter leading from the General Railway Terminus, converge at the SW end of Hospital Street and are carried N in New Row to High Street. Caledonian Road runs N from the Station Hotel, and continues past the Perth Auction Mart to the S end of Catherine Street. The more historic part of the town is that lying E of King and Methven Streets and N of and including Canal Street. The numerous connecting short streets in that quarter are of all characters, new, old, and renovated. All the streets at one time lay on so low a level as to be constantly liable to inundations from the river; but a long process of improvement has raised them to their present level. The buildings were not a whit better than those of other Scottish towns, and the streets of Perth were just as neglected and filthy; but very great improvements have been successfully carried through, and the 'Fair City' is by no means behind its neighbours in cleanliness and healthiness. High Street is spacious, and contains some fine buildings, and abounds in historic association. St John's Street was opened in 1801, and has some of the best shops. George Street was laid out about 1770, and the northern part of Princes Street about the same time. The southern half of Princes Street, together with the entire S of the town, between Canal Street and the South Inch, has been built on the site of the Spey Gardens since 1801. The north-western wing of the town, lying W of the North Inch, N of and including Athole Street, and NE of Barrack Street, which runs NW from the W end of Athole Street, along the Dunkeld Road, is a yet more modern suburb, consisting for the most part of handsome rows of villas and mansions. The suburb of Bridgend lies stretched along the left bank of the Tay, N and S from the eastern end of the bridge. Its chief streets run parallel with the river, under the names Commercial Street (to the S), Main Street, and Strathmore Street. It lies in Kinnoull parish.

Bridges.—A large timber bridge is said, but on no good authority, to have been thrown across the Tay at

Perth by Agricola. In October 1210 an anointed bridge of stone was swept away by a great inundation of the river. Another bridge was built, which is spoken of as having been repaired in 1329. This, or a new bridge, was much damaged by floods in 1573, 1582, and 1589. After being temporarily repaired with timber, it was between 1599 and 1617 entirely rebuilt of stone; but in 1621, just four years after its completion, it was finally demolished by a flood. 'The people,' says Calderwood, 'ascribed this wrack to iniquity committed in the town; for there was held the last General Assembly, and another in 1596, when the schism in the Kirk began; and in 1606 here was held that parliament at which bishops were erected, and the lords rode first in their earlett gowns.' In spite of the aid of subscriptions from James VI., Charles I., Charles II., and other powerful patrons, all attempts to replace the bridge were long abortive; and from 1622 till 1772 communication between the banks was carried on solely by a ferry. The present handsome bridge was founded in 1766 and opened in February 1772, at the N end of George Street, considerably to the N of the site of the old bridge. It was built after designs by Smeaton at a cost of £26,631, and has nine arches and a total length of 840 feet. It was widened in 1871 at a cost of £3061, by the addition of footpaths carried on projecting iron brackets; before that date its width from parapet to parapet was 22 feet, of which 18 were carriage way. From this bridge, itself a noble and elegant structure, one of the favourite views of the city and of Strathtay is obtained. Of the original cost the city subscribed £2000; Government gave £4000, and £700 a year for 14 years; whilst the Earl of Kinnoull gave £500, besides strenuously exerting himself to obtain the rest of the money. The viaduct of the Dundee and Perth section of the Caledonian railway crosses the Tay below this bridge, its centre portion resting on Moncreiffe island. This structure, constructed of a combination of stone, iron, and timber, describes the segment of a circle, was completed in 1864 at a cost of over £24,000, and has a total length of 1180 feet. It is designed to open on the Perth or N side so as not to hinder the navigation of the Tay, and a footpath runs along its N side. The reach of the Tay between the eastern side of Moncreiffe island and the eastern bank is called the Willow Gate.

Chief Buildings.—The Municipal Buildings, facing the river, occupy the site of the former town-hall and police office, and have a frontage of 72 feet to Tay Street and of 57 to High Street. They form a handsome edifice in the old Tudor style, including a reproduction of the old tower of St Mary, which was a feature of the former building, and were built at a cost of about £12,000 from designs by Mr Heiton. The memorial stone was laid on 10 June 1877, and the Council Chamber was opened on 7 Nov. 1879. This chamber, a spacious hall 41 feet by 25, has three handsome stained-glass windows facing High Street, representing subjects from Sir Walter Scott's *Fair Maid of Perth*; a fourth, also facing High Street, representing Queen Victoria and the late Prince Consort; and a fifth, facing Tay Street, representing the capture of Perth by King Robert Bruce in 1311. The Burgh Court in the same building measures 30 feet by 22. The Council Chamber and the Burgh Court were destroyed by fire in 1895, but immediately afterwards restored. The old buildings which the burnt pile superseded consisted partly of remains of a very ancient chapel dedicated to St Mary, and partly of an edifice dating from 1696. A new police office was erected in 1895-96, the Sandeman public library in 1896-97, and a new post office in 1897. Further S, also in Tay Street, between South and Canal Streets, stand the handsome County Buildings, erected in 1819 on the site of Gowrie House, from a design by Mr Smirke, at a cost of £32,000. The main building, fronting the Tay, and shown in our illustration, is constructed of fine polished sandstone, and has an elegant portico, whose pediment is supported by twelve massive fluted columns. It contains a spacious entrance hall, a judiciary hall in the form of the segment of a circle, with a gallery capable of holding 1000

people; the sheriff's court-room, the sheriff clerk's office, and other official apartments. The county hall, measuring 68 feet by 40, occupies the south wing of the principal building, and contains portraits of the fourth Duke of Atholl, of Lord Lynedoch by Sir Thomas Lawrence, and of Sir George Murray by Pickersgill. A committee-room to the right of the county hall measures 30 feet by 30; and an apartment in the upper storey, described as a tea or card room, measures 44½ feet by 30, and contains a portrait of Neil Gow by Sir Henry Raeburn. Considerable alterations were made in the interior of the County Buildings in 1866-67, and a new courthouse and other offices were erected on the N side with the aid of £13,273 granted by Government. A bronze tablet, bearing a representation of Gowrie House by Sir John Steel, occupies a blank window of the edifice, and commemorates the historic building which once occupied the site. Behind and extending to the Speygate are the City and County Prisons, erected at the same time as the County Buildings, with which they communicate by a subterranean passage. They are surrounded by a high wall, have undergone considerable improvement since their erection, and were legalised in their present form in 1845. They comprise a governor's house, and two prison blocks to the N and S respectively. The General Prison for Scotland is noticed below. Further S along Tay Street is the Volunteer Drill Hall, with a frontage of 80 feet, and consisting of a main portion with two storeys and two wings of a single storey each; and just beyond the railway line is the Water-house, at the foot of Marshall Place. This building, and the ingenious hydraulic and other machinery connected with it, were planned by Dr Anderson, then rector of the Perth Academy, and elected in 1837 to the chair of Natural Philosophy in St Andrews University. Erected in 1830 at a cost of £13,610, it presents the appearance of a Roman temple with a detached column, which is the chimney. Though it appears to be constructed wholly of solid stonework, in reality the upper part, beyond the balustrade, decorated with carved pilasters and surmounted by a leaden cupola, is a cast-iron tank. A filtering bed, 300 feet long, is constructed on the N end of Moncreiffe island, whence a powerful suction pipe, laid under the bed of the river, conducts the purified water to a tank under the reservoir. Two steam-engines then pump the water up 55 feet into this reservoir, which, with the assistance of a smaller reservoir in the W of the town, long supplied Perth with an ample quantity of water. An extension of the waterworks was, however, completed on 23 June 1880 at a cost of £30,000. These works consist of two additional reservoirs—one at Burghmuir and the other at Viewlands. The former, which is 300 feet above the river, and uncovered, supplies the upper parts of Bridgend and grounds over 180 feet level. The latter at 200 feet above the river is covered in, and supplies the W side of the town lying below 150 feet level and the lower part of Bridgend. The former reservoir at Wellhill is retained to supply the district lying between South Street and Marshall Place. Two engines, each of 40 horse power, have been erected to pump the water out to the new reservoirs; and two separate sets of pumps are also provided. About 17 miles of piping from 3 to 15 inches in diameter have been laid; and hydrants for fire and cleansing purposes have been placed on the distributing pipes at distances of from 80 to 100 yards. The gasworks of the Perth Gaslight Company stand in Scott Street, and were erected in 1824 at a cost of £19,000 from plans also by Dr Anderson, and from the first made use of a simple but ingenious and effective system of gas-purification invented by the same gentleman. The City Hall, in Kirkside, west of St John's Church, was built in 1844, measures 98 feet by 66, and can accommodate 2000 people. It contains some interesting paintings, among which are *The Battle of the Amazons* (16 feet by 8), by the Chevalier Tarilla and Luca Giordano; *Prometheus*, by Michael Angelo Caravaggio; *The Magdalene*, by Andrea Vaccari; *Esau Selling his Birthright*, by Luca Giordano; *The Forum Romanum*, by Vanvitelli; *St Andrew*, by Ribera (Lo Spagnoletto);

and a group of *Early Reformers* from an unknown hand. The Guild Hall stands on the S side of High Street, W of the site of the ancient cross; and the Freemasons' Hall or Royal Arch Mason Lodge stands in Parliament Close, off the N side of High Street, and occupies the site of the old parliament house removed in 1818. A public hall and other buildings were erected at Burrelton in 1896-97. The Natural History Museum, and the Working Boys' and Girls' Hall, form one block of buildings. The City and County Infirmary and Dispensary, between York Place and Kinnoull Causeway, was erected in 1837, after designs by W. M. Mackenzie, at a cost of about £6000; but large wings were added on the E and W in 1869 at a cost of upwards of £5000. It is an elegant and spacious building, and the extensions are built on the pavilion system, connected with the main body by enclosed corridors, and serve respectively as fever and convalescent wards. The management is in the hands of a large body of directors from the county and city, holding office, some *ex officio* and some by election. A dispensary was commenced in 1819; and in 1834, when it adopted the self-supporting system, a second was started on the former lines. King James VI.'s Hospital, between Hospital Street and King Street, is a large, stately, and well-arranged three-storeyed structure, built in the shape of the letter H. Originally founded in 1569 by James VI., or rather by the Regent Moray, 'to provide by all honest ways and means an hospital for the poor maimed distressed persons, orphans, and fatherless bairns within our burgh of Perth,' it was endowed with the confiscated property of three suppressed monasteries, and has now a revenue of £600 per annum. The first erected hospital, a building three storeys high with many spacious apartments, was destroyed in 1652 by Cromwell to provide materials for his fort (see below), and the present building, the foundation stone of which was laid in 1748, was completed in 1750 at a cost of £1614, partly defrayed by public subscription. Till about 1812 it served as an almshouse for the residence of the recipients of the charity; but in that year the managers determined to administer a system of out-door relief only, which is still enjoyed by a number of poor, who must reside within the limits of the burgh. The building is now utilized as the home of several religious and philanthropic agencies. It stands on the site of the old Carthusian Monastery. In the NW of the city are the barracks with spacious yards. Originally built in 1793 to accommodate 200 cavalry, they were afterwards transformed into infantry barracks, and latterly have been adapted for both branches of the service. The open square in front is large enough for the parade and inspection of 1000 men under arms. The militia barracks are in James Street. At the junction of Mill and Methven Streets a small bridge spans the 'Town's lade' or aqueduct from the river Almond; to the W are seen the Perth Mills, which until transferred to the city by a charter of Robert III. were called the King's Mills; and to the E Perth Public Baths, built in 1846 by public subscription at a cost of about £1300. Adjoining the baths is a public wash-house. Immediately to the N of the Municipal Buildings is a clubhouse; and immediately to the N of the County Buildings is a handsome tenement, built in 1872, and known as Victoria Buildings. Both of these are in Tay Street, as are also the Custom House and the Office of Inland Revenue, and the Moncreiffe Memorial Museum, built in the Scottish Baronial style. The last was erected by subscription under the auspices of the Perthshire Society of Natural Science, in which the late Sir Thomas Moncreiffe took much interest. The Museum of the Literary and Antiquarian Society of Perthshire is deposited in the elegant building in George Street, erected by subscription in 1822-24 to commemorate the public services of Provost Marshall. This Marshall's Monument is built somewhat after the style of the Pantheon at Rome; it is circular in form, and is surmounted by a dome, but it has an Ionic portico. The lower part is occupied by the public library and reading-room; the upper storey by the museum. Other monuments are statues of Scott

and Prince Albert. The first consists of a statue and pedestal in the South Inch, at the foot of King Street, and is the work of a local artist. It was erected, of course, with special reference to Scott's *Fair Maid of Perth*. The statue of Prince Albert stands on a pedestal at the S end of the North Inch, and is by Brodie. It was unveiled by Her Majesty, Queen Victoria, on 30 Aug. 1864. The quondam Theatre Royal, built in 1820 for £2625, stands at the junction of Athole and Kinnoull Streets, but for many years has been occupied as a manufactory. In Stormont Street, which runs N from Athole Street, is St Joseph's Convent (R.C.), and in Bowerswell Road, Kinnoull, St Mary's Monastery. Melville Street is continued by Balhousie Street, which leads to the Castle of Balhousie. Perth Poorhouse, on the Glasgow Road, cost £12,000. Several of the bank offices are handsome buildings. The Bank of Scotland occupies a three-storeyed edifice with balcony and ornamented front, built in 1847, and formerly the head office of the Central Bank. The Union Bank has an ornate building in George Street, and the Commercial in South Street. The Savings Bank adjoins the post office, and fronts the Tay in Tay Street. There are still some important buildings on the outskirts or outer margin of the city which deserve notice. In the W and near the railway line is the large and convenient Perth Auction Mart, opened in 1875. It includes covered and open pens capable of accommodating 15,000 sheep and 1500 cattle, besides a spacious hotel, lodgings for servants, stabling for 40 horses, and shelter for shepherd's dogs. South of the market, and in the SW of the town, about 290 yards W of NW corner of the South Inch, is the General Railway station. It is the meeting-point of the North British, Caledonian, and Highland railways, and it is very completely furnished with waiting-rooms and offices, and has a new and comfortable station hotel, entered from the platform by a covered way. Its refreshment rooms are large and well fitted; and the Queen has made use of them and of the hotel repeatedly in her journeys to and from Balmoral. There is a special 'bay' for the Dundee traffic, which enters the station from the W over the large viaduct across the Tay, at right angles to the main lines. Princes Street station is another station on the Dundee line, at the S end of the thoroughfare indicated. At the S end of the tree-shaded avenue across the South Inch stands the General Prison for Scotland, a large and sombre mass of buildings covering about 18 acres. The original portion was erected in 1812 at a cost of £130,000 to serve as a *dépôt* for the French prisoners of war. It was capable of holding 7000 such prisoners, over whom a daily guard of 300 soldiers were mounted, supplied by 3 regiments stationed in the barracks and town. It was used as a military prison, however, only for about two years; and in 1841 it was remodelled for its present purpose at a cost of £28,000. It was opened on 30 March 1842 in two wings, with accommodation for 535 prisoners. A third wing was added in 1853, and a fourth in 1859. In 1859 a new prison was built to accommodate 58 juveniles on the associated system of Parkhurst, but this was afterwards adapted for the reception of 58 male criminal lunatics. An hospital for the accommodation of 30 female lunatics was opened in 1881. The prison now contains separate accommodation for 723 and associated accommodation for 62 prisoners. Male and female prisoners under sentence of imprisonment, and female convicts under sentence of penal servitude, are received at Perth for their whole sentence; and except in the case of female convicts the separate system prevails. The prison is under the direction of four commissioners under the Prisons (Scotland) Act, 1877, who have also to superintend all prisons in Scotland, and the expenses of the prison are paid out of the public funds. It is under the immediate direction of a governor and deputy governor, and is supplied with a staff of 3 teachers, besides Scripture readers, chaplain, and visiting clergymen, etc. At the SE corner of the South Inch, and next the river, is the slaughter-house. Across the river, and occupying a site on the W slope of Kinnoull

Hill, is Murray's Royal Asylum for the Insane, incorporated by royal charter, and managed by a body of directors, some acting *ex officio*, some for life, and some as annually elected directors. The institution had its origin in funds left by Mr James Murray of Tarsappie, a native of Perth; and cost from first to last about £40,000. It was opened for the reception of patients in 1827, and was much enlarged in 1834 and 1865. It is built in the Doric style, after designs by Mr Burn of Edinburgh. The county district lunatic asylum is at MURTRY. Other interesting buildings are referred to under the head of antiquities later; and the churches, educational institutions, and hotels are subsequently noted. The site of the Old Cross is indicated by an octagonal figure in the causeway of High Street between the Kirkgate and Skinner-gate.

Churches.—The most curious public edifice of Perth, the most ancient and the most largely connected with historical events, is the Church of St John, originally called the Kirk of the Holy Cross of St John the Baptist, which stands in a large open area, on the W side of St John Street. Tradition ascribes its foundation to the Picts; but there seems to be little doubt that it was one of the earliest stone churches built in Scotland; and historical documents, as well as portions of the edifice itself, indicate that in the 12th and 13th centuries it was both magnificent and extensive. In 1227 it was granted to the monks of Dunfermline, and in their possession it was suffered to fall into disrepair. Robert the Bruce ordered it to be restored, but after his death in 1329 the restorations ceased. It was afterwards largely repaired in the first half of the 15th century; and at the time of the Reformation the whole structure was in complete repair, and contained a great number of altars. But in 1559 its whole interior ornaments, altarpieces, and images were completely demolished on the memorable day when John Knox denounced the service of the mass, in a sermon that led to the demolition of the monasteries in Scotland. 'The manner whereof was this,' to quote the Reformer's own narrative: 'The preachers before had declared how odious was idolatry in God's presence; what commandment He had given for the destruction of the monuments thereof; what idolatry and what abomination was in the mass. It chanced that the next day, which was the 11th of May, after that the preachers were exiled, that after the sermon, which was vehement against idolatry, that a priest in contempt would go to the mass; and to declare his malapert presumption, he would open up ane glorious tabernacle which stood upon the high altar. There stood beside certain godly men, and amongst others a young boy, who cried with a loud voice, "This is intolerable, that when God by His Word hath plainly damned idolatry, we shall stand and see it used in despite." The priest, hereat offended, gave the child a great blow, who in anger took up a stone, and, casting at the priest, did hit the tabernacle, and broke down ane image; and immediately the whole multitude that were about cast stones, and put hands to the said tabernacle, and to all other monuments of idolatry, which they despatched before the tentmen in the town were advertised (for the most part were gone to dinner), which noised abroad, the whole multitude convened, not of the gentlemen, neither of them that were earnest professors, but of the rascal multitude, who, finding nothing to do in that church, did run without deliberation to the Grey and Black Friars', and, notwithstanding that they had within them very strong guards kept for their defence, yet were their gates incontinent burst up. The first invasion was upon the idolatry, and thereafter the common people began to seek some spoil; and in very deed the Grey Friars' was a place so well provided, that unless honest men had seen the same, we would have feared to have reported what provision they had. Their sheets, blankets, beds, and coverlets were such as no earl in Scotland hath the better; their napery was fine. There were but eight persons in convent, yet had eight puncheons of salt beef (consider the time of the year, the 11th day of May), wine, beer, and

ale, besides store of victuals effeiring threoto. The like abundance was not in the Black Friars', and yet there was more than became men professing poverty. The spoil was permitted to the poor; for so had the preachers before threatened all men, that for covetousness' eake none should put their hand to such a reformation, that no honest man was enriched thereby the value of a groat. Their conscience so moved them that they suffered those hypocrites take away what they could of that which was in their places. The Prior of Charterhouse was permitted to take away with him even so much gold and silver as he was well able to carry. So was men's consciences before beaten with the Word that they had no respect to their own particular profit, but only to abolish idolatry, the places and monuments thereof, in which they were so busy and so laborious that within two days these three great places, monuments of idolatry—to wit, the Grey and Black Friars', and Charterhouse monks (a building of a wondrous cost and greatness)—was so destroyed that the walls only did remain of all these great edifications.'

The N transept was entirely renewed in 1823. As it now stands, the church is of various dates. Its total length is 207 feet; it is cruciform in shape; and the central square tower, 155 feet high, is the chief relic of the original structure. The tower is surmounted by a tall octagonal spire of oaken beams, covered with lead; and it contains several bells, of which the oldest are one dated 1400, and St John the Baptist's Bell, now called the ten o'clock bell, because it is rung every evening at that hour, dated 1506. A third is supposed to be the old curfew bell, which was cast in 1526. Outside of the spire are placed a set of small musical bells, which chime certain airs at the half-hours, being connected by machinery for that purpose with the public clock on the tower below. In 1336 Edward III. is stated by Fordun to have stabbed his brother, John, Earl of Cornwall, before the high altar, for ravaging the western counties of Scotland; but English historians merely record that the Earl died in the October of that year at Perth. In Scott's novel the church is the scene of the trial by bier-right to discover the slayer of Proudpute. Below it is the burial vault of the Mercers, which they are said to have obtained in exchange for the two Inches; though another story, founding on the Mercer arms, declares that this family gave three mills in the towu for their vault. The interior of the church is divided into the three parish churches—Middle, East, and West. The East Church, which was restored in 1893, and the choir in 1893-94, contains the burial-place of the Gowrie family, a blue marble tombstone with figures believed to represent James I. and his Queen, both buried in the Carthusian Monastery, and a monument erected by the officers of the 90th regiment or the Perthshire Volunteers to their comrades who fell in the Crimea. It has 1314 sittings; and the stipend is £193. The Middle Church is situated to a great extent below the tower; and four massive pillars in the centre support that superstructure. It was partially destroyed by fire in 1894, and immediately afterwards restored. The stipend is £210. A fund of £300 was raised in 1891 for the permanent augmentation of the stipend. The West Church was partly rebuilt in 1828, and restored in 1894. It has 800 sittings; and the stipend is £200. The other Established churches are St Paul's in South Methven Street, an octagonal building of no architectural excellence and surmounted with a tall steeple, built in 1807 at a cost of £7000, with accommodation for 1000 people, and a stipend of £256. An organ was introduced in 1891. St Leonard's, a handsome edifice, built in 1835 at a cost of £2450 from designs by Mr Mackenzie, on the E side of King Street, opposite the head of Canal Street, with 991 sittings, and a stipend of £370, formerly a chapel of ease, but now a *quoad sacra* parish church, underwent extensive alterations in 1891 at a cost of £1800, and an organ was introduced in 1892; and St Andrew's, built as a chapel of ease in 1884-85, and erected into a *quoad sacra* parish in 1889, which is situated on the south side of

Athole Street, has 750 sittings, and the stipend is £320. KINNOLL parish church is on the E bank of the Tay. The West Free church, in Tay Street, was erected in 1870-71, after designs by J. Honeyman of Glasgow, at a cost of about £8000, in the Continental Pointed style of the middle of the 13th century. Exclusive of the vestry and presbytery hall it measures 114 feet by 63; it has a buttressed tower and spire rising to the height of 212 feet, and forming a conspicuous object in our view of the town; and it contains 950 sittings. The Free Middle church, in Tay Street, contains 830 sittings. St Leonard's Free church, built in Marshall Place in 1883, at a cost of £7500, in Scottish Gothic style, has accommodation for 1000 people. St Stephen's Free church, in Paradise Place, is a Gaelic charge, and has 850 sittings. Knox's Free church, in South Street, has 600 sittings; as has also St Paul's in New Row. The North U.P. church was opened on 7 Nov. 1880 on the site of a former church dating from 1791. Erected at a cost of over £7000, it is Romanesque in style, and contains 1200 sittings. The South or Wilson U.P. church, on the S side of High Street, was built in 1740, and was one of the four structures occupied by the founders of the Secession body; and it has 831 sittings. The East U.P. church, in South Street, has 672 sittings; and York Place U.P. church has 800 sittings. St John the Baptist's Episcopal church, in Princes Street, was built in 1851 in Early English style, on the site of a former plain edifice, and is seated for 500; it has a tower and spire 150 feet high. St Ninian's Episcopal cathedral, Athole Street, in Early Middle Pointed style, from designs by Butterfield, is the cathedral church for the united diocese of St Andrews, Dunkeld, and Dunblane. The choir and transepts were built and consecrated in 1850, and the nave in 1890. A lofty open screen of stone separates the nave from the choir, and there is a Galilee porch at the west end. It is seated for 900. St John's Roman Catholic church, in Melville Street, was built in 1832, and contains 500 sittings; and the church of St Mary or Our Lady of Perpetual Succour was built on Kinnoull Hill in 1870 in Early English style, and adjoins previously existing collegiate buildings of Redemptorist Fathers. The Original Secession chapel, in South Street, was built in 1821, and contains 390 sittings; the Congregational chapel, in Mill Street, was built in 1824, and contains 300 sittings; the Evangelical Union, in High Street, contains 420 sittings; the Methodist chapel, in Scott Street, contains 400 sittings; and the Baptist chapel, in Canal Street, contains 1200 sittings. There is also a Glassite meeting-house in High Street. The first public burying-place was round St John's Church; but in 1580 the cemetery of the demolished Greyfriars' Monastery, east of Princes Street, took its place, and continued to be the only burial-place in the city until about 1844, when a new cemetery was opened at Wellshill in the NW part of the town.

Schools, etc.—Perth Academy, a fine edifice ornamented with Doric pillars and balustrades, stands in Rose Terrace overlooking the W side of the North Inch. The building was erected in 1807, from designs by Mr Burn, at a cost of about £7000—voluntarily subscribed, the city giving £1050—to accommodate the Grammar School and Academy; it underwent extensive alterations and additions in 1896. Perth Grammar School is said to date as an institution from the middle of the 12th century; and it long enjoyed the reputation of being one of the best classical schools in Scotland. In 1550 it was attended by 300 boys, some of them sons of the nobility and gentry; and it had then for its rector Andrew Simpson, whose Latin grammar was used in burgh schools till superseded by Ruddiman's *Rudiments* in 1714. Among its scholars were the Admirable Crichton and the great Earl of Mansfield. Several of its other rectors have distinguished themselves for scholarship; among them was John Row, from 1632 to 1641, later minister in Aberdeen, and author of *Institutes of the Hebrew Language*. The Academy was established in 1760, and had a prosperous career in a

separate condition. The two institutions are now united under the name of Perth Academy, and are placed under the burgh school board, which consists of a chairman and 8 members. It has a staff of a rector, 5 other masters, and 4 assistants, and one mistress and female assistants. The following are the seven schools under the burgh school board, with accommodation, average attendance, and approximate government grant:—Central District (370, 305, £325); Southern District (563, 445, £430); Northern District, Balhousie (726, 565, £615); Kinnoull (454, 385, £435); Cherrybank (190, 135, £145); Caledonian Road (1026, 935, £1030); Craigie, Western District (632, 525, £585). In addition to these there are the following schools, with accommodation, average attendance, and government grant:—St Andrew's Episcopal (309, 260, £220); St Ninian's Episcopal (305, 195, £155); and St John's Roman Catholic (317, 245, £215). There is also Sharp's Institution (340, 190, £200). The School of Art and Science, dating from 1863, is also under the management of the school board, and is held at the Academy. Sharp's Educational Institution was erected in South Methven Street by bequest of Mr John Sharp, late baker in Perth. The large and commodious building was opened 10 Sept. 1860. It comprises, besides infant, junior, and senior departments, an industrial school for girls, and a recently-erected technical school (for boys), with a well-appointed lecture-room, laboratory, and work-room. The testator left instructions that special provision should be made for branches of education peculiar to girls. The institution is under the government of the Perth Educational Trust. Stewart's Free School, in Mill Street, is under the patronage of the deacons of the trades incorporation. Perth Educational Trust consists of governors chosen from the following public bodies: Town Council, 2; School Board, 2; Sharp's Trust, 2; Duncan's Trust, 2; and one nominated by the sheriff. The Munro Melville Trust is managed by six governors, acting *ex officio*. There is an Industrial School for girls at Wellshill; while the Fechny Industrial School, in the same neighbourhood, and instituted in 1864 with a bequest by Mrs Fechny, is set apart for boys.

Perth has a head post office with all the usual departments; offices of the Bank of Scotland, the Union, British Linen Co., Royal, National, Commercial, Clydesdale, and Town and County banks. It is also the headquarters of the Savings Bank of the County and City of Perth, established in 1838 and certified under the Act of 1863, 'for the safe custody and increase of small savings belonging to the industrious classes' of the neighbourhood. Sums of from 1s. to £200 are received from individual depositors, and may be withdrawn whenever required. On 8 February, 1893, there were 22,336 individual depositors, having a capital of £675,813, which with £13,272 belonging to charitable institutions and societies, gave a total deposited in the bank of £689,091. This sum includes the capital inserted for the district banks at Alyth, Blairgowrie and Rattray, Crieff, Coupar-Angus, Caputh, Dunkeld, and Dunning. The principal hotels are the Station, Royal George, Royal British, Salutation, Queen's, and the Waverley Temperance Hotel. Among the charitable institutions are the Infirmary and Dispensary, a small-pox hospital, destitute sick society for Perth and Bridgeend, societies for indigent old men and women, Perth Ladies' Clothing Society, King James VI's Hospital, Perth Ladies' House of Refuge for Destitute Girls, a society for relief of incurables in Perth and Perthshire, with Hillside Home in Perth, Perth Sick Poor Nursing Society, and the Lethendy mortifications. Among the sporting clubs are Perth Curling Club (with curling pond off Balhousie Street), Friarton and St John's (of Perth) Curling Clubs, Perth Bowling Club (with green on the W of the North Inch), New Club in Tay Street, Perth Hunt, Royal Perth Golfing Society and County and City Club, James VI's Golf Club, Perthshire Cricket Club, Perth Lawn Tennis Club, Kinnoull Recreation Club, Perth Anglers' Club, instituted 1858, Perthshire Fishing Club, instituted 1880, and Perth Amateur

Swimming Club. Other institutions are the Literary and Antiquarian Society, with a museum in Marshall's Monument; Perthshire Society of Natural Science, established in 1867, with a natural history museum and lecture-hall in Tay Street, the Society of Solicitors, a branch of the British Medical Association, a branch of the Educational Institute of Scotland, Bridgend Institute, Victoria Institute, the Mechanics' Library, instituted 1823, Perth University Extension Society, a musical society, a literary society, Public Baths and Washing-house (Mill Street), Perth Public Swimming Baths, Dunkeld Road, erected by the corporation in 1887, a model lodging-house, horticultural and temperance societies, a city mission, and branches of the Scottish Girls' Friendly Society. Local lodges of Freemasons meet in the masonic hall at stated intervals. There are also Foresters, Shepherds, and Good Templar lodges, and Rechabite tents. Perth is the depot for the 1st, 2d, and 3d battalions of the Royal Highlanders, and of the 42nd regimental district, and it is the headquarters of the 4th Perthshire Volunteer Battalion Royal Highlanders. *The Perthshire Courier*, established in 1809, is published every Tuesday afternoon; the *Perthshire Advertiser and Strathmore Journal*, established in 1829, every Monday, Wednesday, and Friday; *The People's Journal* for Perthshire, established in 1858, every Saturday; and the *Perthshire Journal and Constitutional*, established 1832, every Monday and Wednesday afternoon. The three former are Liberal, the last Conservative, in politics. A tramway, over 3 miles in length from its terminus in the Glasgow Road to the extreme end of the village of Scone, was opened in 1895.

Manufactures, Commerce, Harbour, etc.—The manufactures of Perth were at an early period extensive; and although they have undergone many fluctuations, they are still tolerably important and diversified. Gloves were early and long a staple product, and between 2000 and 3000 pairs were annually made, chiefly for home consumption. Side by side with this manufacture flourished the dressing of sheep and lamb skins to provide the materials for the gloves; and these industries were formerly so important as to give name to Skinner-gate, one of the oldest streets in the town. Both are now quite extinct, although tanning is, of course, carried on to an average extent. The linen trade of Perth rose to great importance in the 18th century, and fostered intercourse between the merchants of the city and the inhabitants of Germany and Flanders. A report in 1794 stated that this was the staple trade of the town; and that linen and cotton goods to the value of £100,000 were annually produced by about 1500 looms in the city and suburbs. The manufacture of cotton fabrics superseded that of linen during the wars with France; but about 1812-15 received a severe check. Similarly the manufactures of umbrella gingham, checks, pullicates, and imitation Indian shawls and scarfs have all been introduced into the town, flourished awhile, and sunk into insignificance. The spinning of flax and tow yarns was commenced about 1830 in a mill with 1250 spindles; and the manufacture of a mixed cotton and woollen fabric in 1844. Ship-building began to be carried on in 1830; and in 1837 the first iron steam vessel built on the E side of Scotland came from a Perth yard, but the industry has now dwindled, only one sailing-ship of 110 tons having been built since 1877. In the latter part of the 18th century a printing press in the town was remarkable for the number and excellence of its publications, among which was the *Encyclopædia Perthensis*, said to have been at the time the largest work produced in Scotland out of Edinburgh, and printing is still carried on to a considerable extent. There are four dyeworks at Perth, the largest of which was erected mainly in 1865 in the N part of the town, and is the largest establishment of the kind in Scotland. It has agencies in all parts of the country, and dyes goods from even remote parts of England and Ireland. It draws a plentiful supply of water from the Tay by means of 18-inch pipes; and employs many hundreds of hands. Glass manufactur-

ing is carried on, and that of ink by two houses. There are, besides, manufactories of linen, table-napery, etc.; and of wineceys, floorcloth, ropes and twine, bricks and tiles, chemicals, etc. Iron-works, foundries, breweries, distilleries, and grain mills give employment to many of the inhabitants.

Perth was early a commercial centre of importance and reputation. Alexander Neckam, who died Abbot of Cirencester in 1217, noticed the town in a Latin distich, quoted in Camden's *Britannia*, and thus Englished by Bishop Gibson, translator of Camden's work:—

Great Tay through Perth, through towns, through country flies,
Perth the whole kingdom with her wealth supplies.

Perth merchants carried on trade with the Netherlands before 1286 and long after, and visited the Hanse towns in their own ships. Germans and Flemings very early frequented the city in turn; many settled in it; and had it not been for the usual short-sighted restrictive policy adopted towards foreigners, would have developed its trade and manufactures even more rapidly and more extensively than they did. The rebellion of 1745 demonstrated the convenience of Perth as a focus of trade for the N part of Scotland; and after that date the commerce of the city once more revived, but it has never again assumed a leading position among the commercial towns of Scotland. In 1840 it was made a head port, and as such it has jurisdiction down the Tay as far as Carncase Burn on the right, and Powgavie on the left. Since 1894 it has ceased to be a separate port, being included with Dundee.

The original harbour adjoined the old bridge at the foot of High Street, at the place called Old Shore, but in consequence of the gradual accumulation of gravel in it, was removed, first to the South Shore, opposite the Greyfriars' burying-place, and next to the Lime Shore, opposite the S end of the South Inch, and quite away from the town. The channel, even below this point, became also greatly impeded with sandbanks, so that sloops of 60 tons were the largest craft that could make Perth, and even these had to be lightened. The trade of Perth was thus seriously affected, and accordingly in 1830 and 1834 acts of parliament were obtained to authorise the deepening of the channel, and the construction of larger quays and a wet dock. These with other changes were estimated to cost £54,315, and were to be finished before June 1854, under the direction of thirty commissioners. But owing partly to the want of funds and partly to the diversion of trade on the construction of the railways, they remained unfinished for a long time after that date. Vessels of 200 tons burden, however, can now berth in the harbour, and a steamer plies between Perth and Dundee in summer. The commissioners becoming bankrupt in 1854 procured an act of parliament, transferring all their liabilities (then about £86,000) to the city; and the harbour debt at present is thus a mere matter of figures between the harbour and city. The following table shows the state of harbour revenues and debt at various dates—

Date.	Income.	Expenditure.	Excess of Expenditure.	Debt due to City.
1857-58	£1874	£3556	£1682	£87,631
1867-68	1310	4307	2997	110,194
1877-78	892	5974	4481	147,796
1882-83	1900	6189	4888	171,296
1892-93	769	7293	6524	219,118

These figures show a steadily declining income and a steadily rising expenditure. The excess of the latter is annually borrowed from the city and added to the total amount of the debt. A short branch railway, now forming part of the Caledonian system, was formed in 1852 between the harbour and the general terminus. The quay frontage is at present 1300 feet. The following table gives the tonnage of vessels that entered and

cleared from and to foreign countries and coastwise with cargoes and in ballast:—

Year.	ENTERED.			CLEARED.		
	British.	Foreign.	Total.	British.	Foreign.	Total.
1853	21,689	19,092
1867	8617	3757	12,404	8515	532	9,047
1873	6155	2034	8,189	6561	2255	8,816
1882	6895	4248	11,143	6972	3798	10,770
1883	6938	2829	9,767	6900	2531	9,731
1893	5612	5336	10,948	5519	5336	10,855

Of the total, 118 vessels of 10,948 tons that entered in 1893, 4 of 340 tons were in ballast, and 89 of 6039 tons were coasters; whilst the total, 117 of 10,855 tons of those that cleared included 91 ships in ballast of 8992 tons, and 112 coasters of 9830 tons. The total tonnage of vessels registered as belonging to the port was 9654 in 1841-44, 4945 in 1861, 3429 in 1873, 2064 in 1878, 803 in 1884, and 238 in 1893, viz.—5 sailing vessels (253 tons) and 2 steamers (35 tons). Much of the trade of the city is carried on in bottoms of other ports of registry, especially of Dundee. The principal imports are Baltic timber, coals, cement, slates, oil-cake, and artificial manure; and the principal exports are potatoes, grain, and timber. But the whole trade of Perth has been affected by the development of railways, which has attracted most of the shipping that enters the Tay to Dundee, with which it is included, as already stated. The customs revenue of Perth in 1837 was £6270; in 1864, £16,308; in 1874, £17,104; in 1882, £20,776; and in 1893, £45,006.

As may be inferred from the size of its auction mart, Perth is an important centre for the sale of sheep and cattle, and very large numbers of these animals change hands here annually. Besides the sales of the local dealers, there are still several fairs held at Perth. The First of Luke, Palmsune'en, and Midsummer fairs, all for cattle and horses, are held respectively on the first Fridays of March, April, and July. St John's Day Fair, for cattle, horses, and sheep, takes place on the first Friday in September; Little Dunning Fair, for cattle, butter, and cheese, on the third Friday in October; and a hiring fair on the Friday after Martinmas (o.s.)

Municipal History.—In David I.'s confirmation charter to Dunfermline Abbey (1127) is mentioned the 'burgh of Perth;' and by David Perth claims to have been made a royal burgh, although its oldest royal

rights and privileges of the burgh. Till 1482, in the reign of James III., Perth was generally regarded as the capital or seat of government of the country, and even at present takes precedence of all royal burghs except Edinburgh. The burgh records are of great antiquity, and supply an uninterrupted list of magistrates from 1465. It is interesting to note that among the list of chief magistrates, there appear very often the names of some of the neighbouring nobility, as, e.g., the Earl of Gowrie, Earl of Montrose, Earl of Atholl, Lord Ruthven, Viscount Stormont, Threipland of Fingask, etc. The burgh is now governed by a lord provost, four bailies, a lord dean of Guild, a treasurer, and nineteen councillors, who are also commissioners of police, gas, and water. The burgh is divided into four wards for the election of the council; the number of voters in 1895-96 was 5952, of whom 1432 were females. The burgh possessed a seal as early as the first half of the 13th century; but at the beginning of the 15th century it used a different seal, representing on one side the beheading of John the Baptist, and on the other his enshrinement. The number of the police force in 1895 was 40, including a superintendent, with a salary of £200. Burgh, police, and guildry courts are held in the town. A sheriff court is held every Tuesday and Friday during session, and at least once in each vacation. The convener court consists of the deacons of the various trade-guilds, viz., the hammermen, bakers, gloves, wrights, tailors, fleshers, shoemakers, and weavers; but the ancient rigidly maintained privileges of these incorporations have for some time ceased to exist. The entire corporation revenue in 1894-95 was £5749. The following table shows the sources and amount of the revenues of the city of Perth at different dates; the income which it derives from the harbour being excluded:—

	1867-68.	1877-78.	1882-83.	1892-93.
Customs,	£590	£644	£771	£755
Inches—Grazing, etc.,	505	405	452	355
Feu-duties,	1544	1468	1457	1697
Houses, etc.,	290	301	303	297
Mills and Waterfalls,	618	429	450	411
Arable Lands,	375	321	374	311
Fishings,	1265	1320	612	563
Seats in the Churches,	414	430	415	355
Cemeteries,	248	133	226	161
Shore-dues,	106	73	106	63
Miscellaneous,	361	364	208	578
Total,	£6216	£5888	£5374	£5546

Perth returns one member to parliament, the parliamentary constituency numbering 4520, and the municipal 5952, in 1895. Valuation (1876) £90,148, (1884) £113,960, (1895-96) £159,221, including railways. Pop. of royal burgh (1871) 22,274, (1881) 27,207, (1891) 30,110; of parliamentary burgh (1831) 19,238, (1841) 20,407 (1851) 23,835, (1861) 25,250, (1871) 25,585, (1881) 28,949, (1891) 29,899, of whom 16,199 were females, and 799 Gaelic-speaking. Houses (1891) occupied 6283, vacant 245, building 3.

Antiquities.—With the exception of St John's Church already described, there are no ancient buildings of interest extant in Perth, though it has the memory of many now vanished. Military walls, of sufficient strength to resist vigorous sieges, surrounded the town from a very early date till far into the 18th century. Their builder and the date of their origin is unknown, although Adamson, in the *Muses Threnodie*, boldly ascribes them to Agricola. They often underwent partial demolitions and changes, but now have completely disappeared, with the exception of a small fragment still to be seen in an entry off George Street. The walls seem at one time to have been strengthened with forts, of which the Spey Tower was one. This, the last remnant of the fortifications, stood near the site of the County Buildings, and contained a strong prison, in which Cardinal Beaton imprisoned certain Protestants whom he caused to be put to death. From its walls also he witnessed their execution. The tower was demolished in 1766. The

Seal of Perth.

charter is dated 1210, and attributed to William the Lion. There are numerous minor charters by Robert I., David II., Robert III. (one conferring the right of choosing a sheriff), and James VI.; but the governing and most important charter in the possession of the city is dated 1600, under the hand of James VI., confirming all previous charters and the whole

Monk's Tower, demolished in 1806, formed the former south-eastern angle of the old city-wall, and had a ceiling curiously decorated with allegorical and symbolical paintings at the command of the first Earl of Gowrie. A fosse or aqueduct, supplied with water from the Almond, went round the outside of the walls, but this has very largely been built over or narrowed. The old castle of Perth stood without the walls at the end of the Skinner-gate, and, before the erection of the Blackfriars' Monastery, was the usual Perth residence of the Scottish kings. A very large and strong citadel, built by Cromwell's army in 1652 on the South Inch, was one of the four erected after the battle of Dunbar to overawe Scotland. It was a solid and stately work, 266 feet square, with earthen ramparts and deep moat filled with water, and it had a bastion at each corner, and an iron gate on the side next the town; a pier was built beside it. Many buildings, including the hospital, the school-house, and parts of the bridge, were demolished to supply the materials for this work; and the gravestones and walls were taken from the Greyfriars' churchyard for the same purpose. Soon after the Restoration the citadel was given by Charles II. to the town, and almost immediately was used as a quarry; in 1666 it was sold for 4702 marks, but under conditions which made the wreck of it again public property, when it was finally removed piece-meal. During some years before the building of the barracks a remnant of it was used as a cavalry stable for 200 horses, a riding school, etc.; but now the trenches have been filled up, and all traces of its existence have disappeared from the spot, across which the Edinburgh road now passes. The old Parliament House, which has left its name in Parliament Close off High Street, lingered as a humble tenement, inhabited by the poor, yet with a few tarnished relics of its former grandeur, till 1818, when it was taken down to make room for the Royal Arch Freemasons' Hall. A stone in the causeway of the High Street marks the site of the former pillory; and between Skinner-gate and Kirkgate, in the same street, others define the site of the market cross. In 1668 Robert Mylne of Ballargie, the King's master-mason in Scotland, built, for £200, a new cross (in room of that demolished by Cromwell), which was 12 feet high, had a flight of steps within, and terminated in a terrace, and was emblazoned with both the royal and the city arms. In 1765 this fine structure was decreed by the town council to be a mere worthless obstruction to the thoroughfare, and it was accordingly sold by auction for £5 to a mason, who immediately removed it. Earl Gowrie's palace, scene of the Gowrie conspiracy in 1600, stood on the site now occupied by the County Buildings; was surrounded by a garden; and in the prosperous days of the city was known as the Whitehall of Perth. Built in 1520 by the Countess of Huntly, and afterwards purchased by Lord Ruthven, it passed, after the murder of the Earl of Gowrie, into the possession of the city, which presented it in 1746 to the Duke of Cumberland. For some time it had been possessed by the Earl of Kinnoull, who received it Charles II. in 1663. The Duke of Cumberland sold it to Government, by whom it was used for many years as artillery barracks; and finally resold to the city in 1805, when it was demolished, and its materials sold for about £600, to make room for the present County Buildings. The last fragment disappeared in 1865. Lord Chancellor Hay, the Earl of Errol, the Earl of Atholl, the Bishop of Dunkeld, Lord Crichton of Sanguhar, Lord John Murray, and other nobles had mansions in the city, but all have now disappeared. In Curfew Row there is an old tenement considerably modernized, formerly the Glovers' Hall, and now pointed out as the house of Simon Glover, father of the 'Fair Maid;' while the Skinners' or Glovers' yard in front (now covered with buildings) was the supposed scene of the conflict between Hal o' the Wynd and Bonthron. Old Perth abounded in ecclesiastical buildings and establishments. The Blackfriars' or Dominican Monastery, on the N side of the town, was founded in 1231 by Alexander II. It was a frequent residence of the kings, on which account

it is sometimes spoken of as a palace; and it had a church attached to it, in which some parliaments were held. From the Gilten Arbour in its garden Robert III. witnessed the combat of the clans, already alluded to. In 1437 the monastery was the scene of the murder of James I. The Carthusian Monastery or Charter-house, the only house of the order in Scotland, stood on the present site of James VI.'s hospital, and was founded in 1429 by James I. or his Queen for thirteen monks and their servants. Its church contained the tombs of James I., his Queen, and of Margaret, mother of James V. The sumptuous building was a great ornament to the city, but was completely destroyed by the mob in 1559. The same fate befell the Greyfriars' or Franciscan Monastery, founded in 1460, in the SE of the town, by Lord Oliphant. The Whitefriars' Monastery, known as the 'Prior and Convent of the Carmelite Friars of Tulilum, near Perth,' dated from the reign of Alexander III. St Leonard's Nunnery stood a little S of the town, and was founded in the 13th century. Along with the other nunnery of St Mary Magdalene, it was suppressed on the erection of the Carthusian Monastery, to which the revenues of both were assigned. Our Lady's Chapel, or the chapel of St Mary, already an old building (1210), was destroyed then by a flood; and was afterwards built farther from the river, and eventually became part of the old town buildings, taken down in 1876. St Ann's Chapel, dedicated to the mother of the Virgin, had attached to it an hospital for the poor, and stood on the S side of St John's Church. The chapel of Our Lady of Loretto or Allareit stood near the head of South Street, on the N side. The Rood Chapel, or Chapel of the Holy Cross, stood at the N side of the South Street port. St Paul's Chapel, founded in 1434 by Sir John Spens of Glen Douglas, had an hospital for strangers and poor, and stood at the NW corner of the New Row. SS. James' and Thomas's Chapel stood on the S side of St John's Church. St Catherine's was founded in 1523 by Sir John Tyrie, provost of the collegiate church of Methven, and had an hospice for poor travellers; it stood at Claypots, in the W of the town. St Laurence's Chapel was founded before 1405, and was granted by Robert III. to the Dominicans, who suffered it to go to ruin. At the junction of the Watergate and High Street, a marble tablet on the front of a house notes that 'Here stood the Castle of the Green,' an ancient house in which golfers used to keep their clubs and balls. The house now occupying the site was built in 1788, and on clearing the site for its erection, two underground chambers were found, each 26 feet by 14, covered with a flat arch, and with strongly cemented walls of masonry 3½ feet thick. Some local antiquaries have not scrupled to recognise in these the remains of an ancient British temple, said by Holinshed to have been founded at Perth by a grandson of King Lear, and traditionally reported to have preceded the Castle of the Green on its site. Other remains and relics have been exhumed in the course of excavations, going to prove that the level of the streets has been considerably raised in the course of time.

History.—Both the etymology of the name and the earliest site and date of the city of Perth have been keenly discussed by antiquaries. Some are for identifying it with the 'Victoria,' some with the 'Orrea,' of Ptolemy (2d c. A.D.); but Victoria Skene places at Loch Orr in Fife, whilst 'Orrea must have been situated near the junction of the Earn with the Tay, perhaps at Abernethy.' Others, again, assert that the present city was only founded by William the Lyon after the destruction by the Tay of 'Bertha' or Old Perth in 1210; and Bertha they place at the mouth of the Almond, 2½ miles higher up the Tay. All that is certain is that Perth is of very high antiquity; and that for some time it was known as St John's town or St Johnstoun. The latter name, though it occurs in some ballads and other old writings, is said never to have been generally adopted by the people. It survives in the phrase a 'St Johnstoun's tippet,' meaning a hempen halter, from the fact or statement that each of the 300 burghesses, who

marched to oppose the Queen-Regent, Mary of Guise (1559), wore a rope round his neck, as a symbol of the punishment he would deserve if he deserted his colours. The vicinity of SCONE, where the Scottish kings were crowned, and the magnificence of the ecclesiastical buildings at Perth gave it the character of capital of the kingdom till 1482, in the reign of James II. Fourteen parliaments are said to have been held in it between 1201 and 1459; and sixteen out of thirty-seven ecclesiastical councils held in Scotland between 1201 and 1405 took place at Perth. In the history of Scotland, Perth figures very prominently. In 1298 Edward I. of England fortified it as the capital, and his deputy, Aymer de Valence, took up his residence in it. In 1311 Robert Bruce took the city by storm, razed the walls, and filled up the moat. After the battle of Dupplin in 1332, Perth came into the hands of Edward Baliol, and three years later was skilfully fortified and strongly garrisoned by Edward III. But in 1339, Robert, Lord High Steward, regent of the kingdom, laid siege to the fortress, and compelled it to surrender. Perth in the reign of Robert III. is well described by Sir Walter Scott in his *Fair Maid of Perth*; and the novel contains a graphic account of the chief outstanding historical event of the time, viz., the judicial combat between the clans Quhele or Chattan and Kay, which took place on the North Inch, in 1396, before the king and his nobles. The following is Dr Hill Burton's more prosaic account of the same interesting event: 'On the 23d of October 1396, on the beautiful diluvial meadow by the Tay called the North Inch of Perth, lists were staked off as for a great tournament, and benches and stands were erected for spectators. A vast crowd gathered there of all ranks, from the king himself downwards. The spectacle which drew them together was a battle between two bodies of the wild Highlanders, thirty on each side. They were to fight in their native fashion with axes, swords, or bows, having no defensive armour. The chronicles mention an odd incident in the arrangements. A combatant on one side losing heart swam the Tay and made off. The question then came how the equality of numbers was to be made up. A common artificer of Perth—a little man, but strong and able at his weapon—agreed to fill the empty place for a small fee, and a life provision should he survive after having done his work well; and the bargain was accepted. Though but briefly noted as a piece of eccentric courage in a person of humble condition, this incident has come up so often and in so many shapes in literature and tradition that the story of the Gow-chrom, or Crooked Smith as he is sometimes called, is as familiar as many leading events in history. Such a contest would make a lively variation in the monotony of the tournament, with its stately etiquettes and regulated restraints. It was the nature of the beings brought together to fly at each other like wild cats, and kill in any way they could. The affair was as bloody as heart could desire. Of one side but ten remained, all wounded; of the other but one.' The object of this extraordinary conflict is quite uncertain, and even the families to which the leaders in the fight belonged, are not definitely known. The earliest account of the affair is given by Wynthoun (about 1422):

'They thre score ware clannys twa,
Clahynnbè Qwhewyl, and Clachinyha,
Of thir twa kynns ware thay men
Thretty again thretty then,
And thare thair had than chiftanys twa—
Scha Ferqwharis sone wes one of thay,
The tother Cristy Johnesone.'

Wynthoun makes no mention of the volunteer, who is introduced first by Bower, who wrote about 1445. See also pp. 310-318 of vol. iii. of Skene's *Celtic Scotland* (1880). In 1437 Perth was the scene of the assassination of James I., who was murdered in the Blackfriars' Monastery. The king had spent his Christmas at the monastery, and still lingered as the guest of the monks. Various portents are related, which warned the king of his approaching death. But James jested and die-

regarded all superstitious warnings. On the evening of 20 Feb., the arch-conspirator Sir Robert Graham, followed by a large body of retainers, overcame the king's guards and broke into the royal apartments. The king was chatting with the queen and her ladies in the reception-room, having laid aside his robes and his weapons. On the first alarm he rushed to fasten the door, but found that treachery had removed the bar. The windows were too securely fastened to admit of escape; but recollecting a vault underneath the room, the king prised up some planks of the floor, and leapt down. The ladies could do but little to resist the conspirators; but one is said to have dared the courageous deed thus described by D. G. Rossetti in his fine ballad on this *King's Tragedy*,

'Like iron felt my arm, as through
The staple I made it pass—
Alack it was flesh and hone—no more!
'Twas Catherine Douglas sprang to the door,
But I fell hack Kate Barlass.'

The conspirators burst into the room, discovered the king's hiding-place after a little delay, and beheld their victim standing at bay. Till a few days before there had been an opening into the court-yard from the vault by which the king might have escaped, but James had ordered it to be built up, because the balls at tennis were apt to fall into it. The first two conspirators who leapt into the vault were seized by the king with his naked hands, and their throats bore the mark of his fingers for long afterwards; but with their daggers they overcame his resistance; others of the accomplices came to their assistance, and the poet-king fell with 16 wounds in his breast. But his murder was fully avenged by his widow, who relentlessly tracked out his assassins and put them to death with the cruellest tortures. In the early history of the Reformation in Scotland Perth made a considerable figure. In 1544 it was the scene of the martyrdom of five Protestants, who were burned at the instance of Cardinal Beaton. But a few years later it saw the first blow struck in the wholesale destruction and disfigurement by the mob of the Roman Catholic churches and monasteries in Scotland; the first impetus having been given by a sermon preached in St John's church by John Knox on 11 May 1559, and celebrated for two centuries after by a weekly service. This demonstration of popular feeling, though unpremeditated and condemned by the leaders of the Reforming party, was a true indication of the disposition of the town; and although the Queen Regent immediately obtained possession of the city and reintroduced the old worship under the guard of a French garrison, the citizens rose in revolt as soon as she had departed. In 1600 Gowrie House in Perth was the scene of the mysterious occurrence known as the Gowrie conspiracy, which resulted in the assassination of the Earl of Gowrie, then provost of the city, and his brother, on the pretext that they had attempted to murder the king, James VI. King James had been prevailed upon by Alexander Ruthven, brother of the Earl of Gowrie, to visit Gowrie House, the pretext being a story of a mysterious captive with a large store of foreign gold. James, who was hunting at Falkland at the time, rode to Perth, accompanied by about twenty attendants, among whom were the Duke of Lennox and the Earl of Mar. After dinner, the king was led aside by Alexander Ruthven, and when his attendants missed him, they were told he had left Gowrie House by a back way. For what had really happened we are chiefly dependent on what is practically the king's own account. Ruthven conducted him by the great staircase, and through several apartments, the doors of which he carefully locked after him, to a small turret at the SW corner of the southern wing of the house, and overhanging the wall. More direct access to this turret was obtained by the 'black turnpike' stair, which led into the larger apartment, off which the turret opened. In this chamber—one window of which looked into the courtyard, and the other into the Speygate—James found no captive, but an armed

man; and an excited and threatening colloquy ensued between the king and Ruthven. The latter retired to bring his brother the Earl, but returning almost immediately attempted to seize and bind the king's hands. A desperate struggle then followed, during which the armed man, according to his own account, stood entirely neutral, except only that he first opened the window over the Speygate, and then the other over the courtyard. In the struggle James was thrust near this latter window, and putting his head out he called lustily for help. One of his attendants, Sir John Ramsay, hearing the alarm, hastened up the 'black turnpike,' burst into the turret, and stabbed the king's assailant, whose dead body the king himself hurled down the stair. Meanwhile the alarm had spread, and the Earl of Gowrie, eluding the efforts made to seize him, rushed up the turnpike stair, followed by five friends. These were met by the king, Ramsay, and another; and after a brief contest, Gowrie fell dead under Ramsay's sword. The other attendants of the king, hearing the alarm, hastened to his assistance by the great staircase, but they were retarded by the massive doors, which they had to break down with hammers; and when at last they made their way to the turret, the tragic event had been accomplished. The alarm quickly spread among the townspeople, who crowded about the palace, threatening vengeance for the death of their beloved provost; but the magistrates succeeded in quieting them, and the king stole away at night by boat across the Tay. The object of this affair has never been satisfactorily cleared up. Burton says that 'the theory that the whole was a plot by the Court to ruin the powerful house of Gowrie must at once, after a calm weighing of the evidence, be dismissed as beyond the range of sane conclusions.' He leans to the belief that it was a genuine conspiracy, not to murder but to kidnap the king, in order to gain political influence. In Perth, however, the former view is still cherished, and it is ably supported by Mr Louis A. Barbé in his *Tragedy of Gowrie House* (Paisley, 1887). On 2nd Sept. 1644, the day after his victory of TIBBERMORE, Perth was taken possession of by the Marquis of Montrose; and in 1651, when besieged by Oliver Cromwell, the citizens, by a deceptive appearance of military bustle and alertness, secured good terms of surrender. In 1689, Claverhouse, with 80 horse, seized the city. In 1715 the city was occupied by Mar for the Pretender, and James VIII. was proclaimed king at the cross; and in January of the following year he visited Perth in person. Again in 1745 Perth became a centre of the Jacobite rising; and from 4 till 11 Sept. Prince Charles and his army remained within its walls. On both occasions the burgesses were subjected to a tax of several hundred pounds. Though after 1482 Perth was no longer a frequent residence of the kings, it has received many royal visits. James VI. visited it in 1601 and 1617, and Charles I. in 1633; and both monarchs were received with pageants and rejoicings. Queen Victoria visited Perth on 6 Sept. 1842, and on 29 Sept. 1848, she spent a night at the Royal George Hotel. Perth has suffered a good deal from inundations and plague, and it is still liable to the former. There were great floods in 1210, 1621, 1740, 1773, 1814, 1847, and 1849. There is an old Gaelic prophecy to the effect that 'Great Tay of the waves will sweep Perth bare;' and there is a Lowland rhyme, equally threatening, concerning two streams which fall into the Tay about 5 miles from the town—

'Says the Shochie to the Ordie
Where shall we meet?
At the Cross of Perth
When men are a' asleap.'

It is said that this prophecy was harmlessly fulfilled by building the stones of an old cross into the bridge across the Tay. Plagues visited Perth in 1512, 1585-87, 1608, and 1645, and cholera in 1832. Allan Ramsay's poem on *Bessie Bell and Mary Gray* describes the fate of two young ladies, who, though they had retired into the country for fear of the plague, yet caught the infection

from a young gentleman of Perth who visited them, and is said to have been in love with both. The real event is said to have happened in 1645.

James, fourth Lord Drummond, was created Earl of Perth in 1605; and the fourth Earl, who embraced the Jacobite cause, received the title of Duke of Perth from James II. at St Germain's in 1695. The earldoms of Perth and Melfort, attainted in 1695 and 1715, were restored by Act of Parliament in 1853 to George Drummond, sixth Duc de Melfort, Comte de Lussan, and Baron de Valrose (France), the fifth descendant of the third Earl of Perth. See DRUMMOND CASTLE.

Among the natives of Perth are Henry Adamson (1581-1639), poet, author of *The Muses Threnodie*; Patrick Adamson or Constantine (1543-92), tulchan Archbishop of St Andrews and Latinist, who was educated at Perth grammar school; the Rev. William Row (1563-1634), anti-episcopalian divine; and his brother, the Rev. John Row (1568-1646), author of *Historie of the Kirk of Scotland*, 1558-1637, printed for the Wodrow Society in 1842; William Murray (1705-93), Lord Chief Justice and first Earl of Mansfield; Robert Sandeman (1723-71), founder of the religious sect of the Glassites or Sandemanians; James Bisset (1742-1832), artist and author of rhyming directories, etc.; David Octavius Hill, R.S.A. (1802-70); Charles Mackay, LL.D. (1814-89), journalist and poet; and the Rev. George Clark Hutton, D.D. (b. 1825), a prominent U.P. divine. The Reformer John Row (1525-80), whose two sons have been noticed above, was minister of Perth from 1560. John Ruskin, as a child, spent every alternate summer at Perth. His father's sister, he tells us, 'lived at Bridgend, and had a garden full of gooseberry bushes, sloping down to the Tay, with a door opening to the water, which ran past it clear-brown over the pebbles, 3 or 4 feet deep, an infinite thing for a child to look down into.'

The parish of Perth is bounded NW by Tibbermore, NE by Scone, E by Kinnoull and Kinfauns, SE by Rhynd, S by Dunbarney, SW by Forgandenny, and W by Aberdalgie. The greatest length, from NNW to SSE, is 4½ miles, and the greatest breadth 2 miles. Until 1891 there were inclosed within the area of the parish two detached portions of the parish of Tibbermore. One of these portions—that situated at York Place, Perth—and the greater part of the other or Tullylumb portion, were wholly within the parliamentary and municipal boundary of the burgh of Perth. The Boundary Commissioners, in the year mentioned, transferred to the parish of Perth the whole of the former and so much of the latter as lay within the burgh boundary, but transferred to the parish of Tibbermore the part of Perth parish which lay north of the Scouring Burn and west and north of the burgh boundaries. The parish in 1807 was divided into the East, Middle, West, and St Paul's *quoad civilia* parishes. The West Kirk, Middle Kirk, and St Paul's lie almost entirely within the town; but the East Kirk parish includes the landward portion, with the villages of Dovecotland, Tulloch, Craigie, Cherrybank, Pitheavlis, Craigend, and Friarton; and it measures 4½ miles long, though its breadth is variable and slight. The landward district has various hills of a ridgy character, but soft in outline in the S and W; the highest is MONCREIFFE Hill, and the others vary from 300 to 600 feet. The rest of the surface gradually slopes down into the fertile plain which extends along the Tay, and is largely covered with highly cultivated arable land and wood. Among the beautiful woods which adorn the neighbourhood of Perth are Craigie Wood and St Magdalene Wood. The famous Perth nurseries are on the E bank of the Tay, adjoining the richly wooded Kinnoull Hill. The Almond divides the parish from Redgorton, and the Tay forms the entire eastern boundary. Greenstone, basalt, and other trap rocks form the higher hills; there is a large bed of conglomerate, chiefly porphyritic trap, in the SW; and Old Red Sandstone, dipping towards the NW, lies beneath most of the rest of the area. The soil on the higher grounds is mostly a rich loam; on the lower, a clayey alluvium upon gravel. The chief proprietors are the

Earls of Mansfield and Kinnoull, Lord Elibank, and the city of Perth. The valuation for the parish of Perth, beyond the burgh, in 1891-92 was £2271. Pop. (1891) Middle parish, 4225; West, 3776; St Paul's, 2669; East, 8666; St Leonard's *q. s.*, 3908; and St Andrew's *q. s.*, 3274.

These parishes are in the presbytery of Perth and the synod of Perth and Stirling; St Leonard's *quoad sacra* parish comprises parts of the East and West Kirk and Tibbermore parishes. The presbytery of Perth comprehends the *quoad civilia* parishes of Aberdalgie, Abernethy, Collace, Dron, Dunbarney, Errol, Forgandenny, Forteviot, Kilspindie, Kinfauns, Kinnoull, St Madoes, St Martins, Methven, Moneydie, the four Perth parishes, Redgorton, Rhynd, Scone, and Tibbermore; the *quoad sacra* parishes of Logiealmond, St Andrew's, and St Leonard's in Perth, and Stanley. The Free Church and the U.P. Church have also presbyteries of Perth. The synod of Perth and Stirling comprehends the presbyteries of Dunkeld, Weem, Perth, Auchterarder, Stirling, and Dunblane. The Free Church has also a synod of Perth and Stirling.

See *Perth Memorabilia* (1806); J. Maidment's *Chronicle of Perth from 1210 to 1668* (Maitland Club, 1831); George Penney's *Traditions of Perth* (1836); David Peacock's *Perth: its Annals and its Archives* (Perth, 1849); John P. Lawson's *Book of Perth* (1847); John Wilson's *Presbytery of Perth* (Perth, 1860); R. S. Pittis' *Ecclesiastical Annals of Perth to the Reformation*; R. Milne, D.D., *The Blackfriars of Perth* (1893); and other works cited under PERTSHIRE.—*Ord. Sur.*, sh. 48, 1868.

Perth, District of, is one of the districts into which Perthshire was divided by Act of Parliament in 1795 for the statutory jurisdiction of justices of peace in small debts. It includes the parishes of Aberdalgie, Abernethy, Arngask, Dunbarney, Dron, Forgandenny, Forteviot, Findo-Gask, Kinnoull, Methven, Moneydie, Perth, Redgorton, Rhynd, Scone, Tibbermore, the lands of Clevega and Inverduunning in Dunning, the lands of Logiealmond in Monzie, and the lands of Friarton in St Martins. Perth district, one of two into which the sheriffdom of Perthshire is divided, comprehends all the above parishes (Aberdalgie to Tibbermore), besides those of Abernyte, Alyth, Auchterarder, Auchtergaven, Bendochy, Blackford, Blair Athole, Blaigowrie, Caputh, Cargill, Cluny, Collace, Comrie, Crieff, Coupar-Angus, Dull, Dunkeld, Dunning, Errol, Fortingall, Fowlis-Wester, Glendoven, Inchture, part of Kenmore, Kilspindie, Kinclaven, Kinfauns, Kinloch, Kinnaid, Kirk-michael, Lethendy, Little Dunkeld, Logierait, Longforan, Madderty, Meigle, Moneydie, Monzie, Monzievaird, Moulin, Muthill, Rattray, St Madoes, St Martins, Trinity-Gask, and part of Weem.

Perthshire is a large inland county in the centre of Scotland. It is bounded NW by Inverness-shire, N by Inverness-shire and Aberdeenshire, E by Forfarshire, SE by Fifeshire and Kinross-shire, S by Clackmannanshire and Stirlingshire, SW by Stirlingshire and Dumbartonshire, and W by Argyllshire. Under the Orders of the Boundary Commissioners there were considerable alterations effected in 1891 on the boundaries between Perthshire and the adjoining counties of Fife, Forfar, Kinross, and Stirling. Of the parishes partly in Perthshire and partly in Fife, Abernethy and Arngask (the latter partly also in Kinross) were placed wholly in Perthshire; while Culross and Tulliallan, that were wholly detached from Perthshire, were transferred to Fife. Of the parishes partly in Perthshire and partly in Forfarshire, Alyth, Coupar-Angus, and Kettins were placed wholly in the former county, and Liff wholly in the latter. Caputh parish was restricted to Perthshire, its three detached Forfarshire portions having been transferred to Forfarshire parishes. Fowlis-Easter, which for ecclesiastical and educational purposes had been joined to the Forfarshire parish of Lundie, was transferred wholly to the county of Forfar. Of the parishes partly in Perthshire and partly in Kinross-shire, Arngask (as already mentioned) and Forgandenny were placed wholly in the former county, and Fossoway and Tullibole

was placed wholly in the latter. And of the parishes partly in Perthshire and partly in Stirlingshire, Lecropt (slightly altered in area) has been placed wholly in Perthshire, and Kippen and Logie (the latter much altered in area) have been placed wholly in Stirlingshire, while the Perthshire portion of the parish of Alloa was also transferred to Stirlingshire (to the parish of Logie). For further particulars regarding these changes, and for information regarding the extensive rearrangement of the boundaries of the interior parishes of the county, see the separate articles throughout the work. The county boundary is in great part natural and well-defined, but in some places it is quite artificial. From a point on the SW within about 3 miles of the head of Loch Fyne to a point in the course of the Isla near Airlie Castle on the E, the boundary line along the W, N, and most of the E of the county follows the watershed or summit-lines of some of the loftiest and most elongated mountain-chains in Scotland. The only exceptions to this are at the points where the Moor of Rannoch places Loch Lydoch and the little Lochanachly on the W border, and where the S half of Loch Erich forms part of the NW boundary. The line then follows the Isla more or less closely to its confluence with the Dean. After turning NW for $3\frac{1}{2}$ miles along the Dean, the boundary again bends S, and making a considerable loop westwards, strikes the Firth of Tay at Invergowrie, 3 miles above Dundee, after an irregular course of 27 or 28 miles. Thence it continues along the N bank of the Tay for 11 miles, crosses to the S bank at Mugdrum island, and runs 36 miles to the SE in a sinuous and irregular line along the ridges and streamlets of the Ochils to a point upon the South Devon about a mile W of Blairingone. Thence it proceeds in a northern and western direction along various watercourses, including the upper waters of the Devon, and follows in a south-westerly direction the Wharry Burn and the Allan Water to the junction of the latter with the Forth. Thence the boundary follows the Forth and its head-stream, the Duchray, for 30 miles to a point within $3\frac{1}{2}$ miles of Ben Lomond; thence NW by Lochs Arklet and Katrine, along Glengyle Water and the heights round the N end of Loch Lomond; and so up a tributary of the Falloch, through Lochanlarig to Crochrechan, the point whence the boundary was first traced. The outline thus traced presents the appearance of an irregular circle, described with a radius of about 32 miles from a centre near the head of Glenalmond. The extreme length of the county, from E to W, is about 70 miles; its extreme breadth, from N to S, about 56 miles; and its total area some 2500 square miles, lying between $56^{\circ} 7'$ and $56^{\circ} 57'$ N lat., and between $3^{\circ} 4'$ and $4^{\circ} 50'$ W long. It is the fourth county of Scotland in point of size, and the eighth in population.

'Amid all the provinces in Scotland,' writes Scott in *The Fair Maid of Perth*, 'if an intelligent stranger were asked to describe the most varied and the most beautiful, it is probable he would name the county of Perth. A native, also, of any other district of Caledonia, though his partialities might lead him to prefer his native county in the first instance, would certainly class that of Perth in the second, and thus give its inhabitants a fair right to plead that—prejudice apart—Perthshire forms the fairest portion of the northern kingdom.' Its scenery includes some of the loveliest as well as some of the most romantic and grandest scenes in Scotland, and all kinds of landscape are represented within its borders. Its mountains, lochs, and rivers, its wild moors and smiling fertile plains, its passes and glens, its waterfalls and its forests, have all in turn justly been the subjects of admiration and praise. Hardly less interesting has been the romantic course of its history and the wild character of its people, for it is in Perthshire that the division between the Lowlands and the Highlands of Scotland may be located. A line drawn irregularly NE from Loch Katrine through Crieff and Dunkeld and thence eastwards to Strathardle would, in general, have the Highlands to the N and the Lowlands to the S, though of course there are many tracts which are of an

intermediate character throughout the shire. Thus no general description of the aspect of the county would fit all or nearly all its diverse characteristics. In a general view Perthshire has a south-eastern slope. Though about the region of the moor of Rannoch in the NW it receives one or two inconsiderable streams from the W, it nowhere sends even a burn in return; and all along the rest of the W and all along the N it is walled in by a stupendous mountain barrier which effectually shuts off intercommunication except at a few passes, such as those at the head of the rivers Shee, Bruar, and Garry. Mountain ridges stretch far into the interior southward from the northern barrier, south-eastward from the inner edge of Rannoch Moor, and eastward from the western range; these generally spring from the higher ranges in lofty broad-based masses, and vary in breadth while they diminish in height as they advance towards the interior of the county; and they are separated from each other by wild, deep, narrow glens, which sometimes, however, expand into stretches of valley or mountain plain. Eventually they die away, or several ridges or ranges merge into one; while almost everywhere they send off spurs and irregular massy projections and sub-ranges, so that the county, from a bird's-eye view, would seem to be covered with a confused assemblage of peaks, and ranges, and mountain groups. A few isolated mountains, as for example Schiehallion, stand in the wider spaces between the mutual recessions of the ridges. Towards the S of the Highland line the county is much less rugged, and its hills are lower; while across the whole county, at the base of the Highland hills, runs from SW to NE the valley known as STRATHMORE. The northern part of the valley of the Forth, which lies in Perthshire, is even more level and lowland in its character. But the lie of the mountains, the position of the chief valleys or straths, and the general river system of the county are described more particularly below.

It will be convenient here to note the ancient divisions of Perthshire, which still have a local significance, though no longer a judicial or civil existence. Menteith comprehended all the territory W of the Ochils and drained by the Forth and its tributaries except the parish of Balquhider. Breadalhane included the western division of the county from the NW boundary to the S screen of Glendochart; its north-western corner was termed Rannoch. Strathearn included Balquhider and all the country drained by the Earn and tributaries and the country N of Menteith. Methven comprehended a small territory round the present village, NW of the city of Perth. Athole was a very large territory embracing the whole north and north-western parts of the county down to the heights overlooking Dunkeld and Blairgowrie. Strathardle and Glenshee, along the rivers Arde and Shee in the E, were subdivisions of Athole. Stormont stretched in a zone 7 miles broad from the Erich and Isla to near Dunkeld, immediately S of Athole; Gowrie was a district on the eastern frontier between Stormont and the Tay, and Perth was a district embracing Strathtay between Stormont and the point at which the Carse of Gowrie met Strathearn. Constant reference to these divisions is made in the geography of Perthshire.

Mountains.—The chief mountains of Perthshire are grouped under the names GRAMPPIANS, SIDLAWS, and OCHILS, each the subject of a separate article, to which reference is made for detailed description. The Ochils occupy the S, the Sidlaw Hills the SW, and generally speaking the Grampians occupy the remainder of the country, their immense mass being intersected by numerous glens and straths, of which the three chief—Rannoch with Strathummel, Strathtay with Loch Tay, and Strathearn—run from W to E to join the longer and narrower valley which conducts the Garry and the lower waters of Tay from NW to SE through the county. The chief summits of the Grampians in the three northern parishes of Fortingall, Blair Athole, and Kirkmichael, embracing Rannoch and most of the Forest of Athole, are, round Loch Lyon, about the middle of the W order of the county, BEN CREACHAN

(3540 feet), BEN AOHALLADER (3399), BEN VANNOOH (3125), Creag Mhor (3305), and Ben Heasgarnich (3530); S of the Lyon, Meall Ghaordie (3407); between the Lyon and Loch Rannoch, Carn Gorm (3370), CARN MAIRG (3419), and SCHIEHALLION (3547); N of Lochs Lydoch and Rannoch, from W to E, Carn Dearg (3084), Sgur Gaibhre (3128), BEN PHARLAGAIN (2836), and BEN MHOLACH (2758). Thence eastwards along the northern boundary of Athole the chief peaks are BEN UDLAMAN (3306 feet), Bruach nan Iombrean (3175), Glas Mheall Mor (3037), Carn na Caim (3087), Leathad an Taobhain (2994); Beinn Bhreac (2992), BEN DEARG (3304), Carn an Fhidleir (3726); An Sgarsoch or Scarsach Hill (3300), BENGLO, with the highest of its five peaks, Carn Gabhar (3671), CARN LIATH (3193), Carn an Righ (3377), Carn Bhac (3014), Beinn Iutharn Mhor (3424), Beinn Iutharn Bheag (3011), Glas Thulachan (3445), Ben Vuroch (2961); Carn Bhinnein (3006), Carn Geoidh (3194); Cairn Well (3059), Craig Leacach (3238), and Cairn Aighe (2824). In the district N of the Tay and between the southern ends of Fortingall and Kirkmichael the chief mountains are Beinn Eagach (2259 feet), and FARRAGON HILL (2559) in Dull parish, and BEN VRACKIE (2757) in Moulin. Rising S from Loch Tay are Creag Gharbh (2084), Meall Gleann a' Chloidh (2238), Creag Uigeach (2840), Beinn Bhreac (2341), and Creagan na Beinn (2909); and northwards, Meall nan Tarmachan (3421) and BEN LAWERS (4004), the loftiest summit in Perthshire. Meall Dearg (2258 feet) is the highest point in Little Dunkeld. In the four parishes forming the SW corner of the shire the chief mountains are, in Killin, Beinn Dheiceach (3074 feet), Beinn Chalninn (3354), Creag Mohr (3305), CRAIG-CHAILLIACH (2990 feet), BEN ODHAR (2948), BENLOY (3078), BENMORE (3843), AM BINNEIN (3827), BEN-ACHROIN (3101), Ben Dubh-chraige (3204), and Beinn Oss (3374); in Balquhider, Beinn Tulachan (3099), Stob Garbh (3148), Stob Coire an Lochan (3497), and Stuc-a-Chroin (3189); in Callander, Parlan Hill (2001), Meall Mor (2451), An Garadh (2347), Meall Cala (2203), BEN VANE (2685), BEN LEDI (2875), and Beinn Each (2660); and in Aberfoyle, Beinn Bhreac (2295), BEN VENUE (2393), and Beinn an Fhogharaidh (2000). In the remaining parts of Strathearn the highest mountains are, in Comrie parish, N of the Earn river and loch, Creag nan Eun (2790 feet) and BEN CHONZIE (3048), and to the S, Ben VOIRLICH (3224) and Meall na Fearnna (2479); in Glenalmond, at the point where Dull, Fowlis-Wester, and Monzievaird parishes meet, Beinn na Gainimh (2367); in Kilmadock, Uamh Bheag (2179) and Uamh Mhor or Uamvar (2168), N of the Braes of Doune. The summits as we advance towards the E are less elevated. Stormont district, though in many places showing wild Highland scenery, does not attain any very high summit; among its mountains are BENACHALLY (1594 feet), between Clunie and Caputh; Ashmore Hill (1277), in Blairgowrie; and Drumdearg (1383) and Mount BLAIR (2441), in Alyth parish. The OCHILS lie entirely in the S of the shire, and stretch north-eastwards along the S border from the Forth near Stirling to the neighbourhood of Perth. Among the chief summits in Perthshire, in irregular order, from SW to NE, are Mickle Corum (1955), Little Corum (1683), Blairdenon Hill (2072), Tambeth (1279), Core Hill (1780), Wether Hill (1574), East Bow Hill (1562), Carlownie Hill (1552), Steele's Knowe (1594), Sim's Hill (1582), Muckle Law (1306), Craig Rossie (1250), Rossie Law (1064), John's Hill (1500), Corb Law (1558), Skymore Hill (1302), Cock Law (1337), and Castle Law (1028). The SIDLAW Hills occupy the part of the county to the E of the Tay and N of the Carse of Gowrie, and stretch far beyond the limits of Perthshire into Forfarshire. The chief summits in the former county, in order roughly from the S towards the N, are Kinfauns Hill (555 feet), Kinnoull Hill (729), Evelick or Pole Hill (944), Beal Hill (849), Black Hill (1182), Dunsinane Hill (1012), King's Seat (1235), Blacklaw Hill (929), and Balo Hill (1029). The Obney Hills are a small detached group of the Grampians lying immediately to the S of Dunkeld, and including Birnam Hill

(1324 feet), Meikle Crochan (1915), and Craig Liath (1399). Amongst the hills of Perthshire noted for other reasons than mere height are the Braes of Balquhiddy, stretching E and W to the N of Loch Voil, and the Braes of Doune, to the N of the Teith, between Doune and Callander, while many of the so-called 'forests' are wide regions of mountain-land, nearly destitute of trees, and covered chiefly with heather. Such, for example, are the famous Forest of Athole in the N, the Forest of Cluny in Stormont, Rannoch Forest in Rannoch, and the Forest of Glenfinlas in the SW.

Rivers and Lakes.—The Tay, with its tributaries, drains almost the entire county of Perth, except a tract 45 miles long and from $3\frac{1}{2}$ to 18 broad in the extreme S. Its course lies in a rough parabolic curve through the centre of the shire from its source in the W to its mouth in the E. Although it is not called the Tay until it issues from Loch Tay, this great river draws its origin from the two head-waters, the Lochy and the DOCHART, which rise on the Argyllshire border and flow into the SW end of Loch Tay. The latter of these is $13\frac{1}{2}$ miles long; and reckoning that as part of the Tay, it gives the total length of the Tay as about 140 miles, draining an area of about 2000 square miles. From its ultimate source on Benbuy, 1000 feet above sea-level, the Tay or Dochart flows through the southern portion of Killin parish to Loch Tay, whence, emerging at the NE end, it flows generally towards the NE, till it is joined at Ballinluig by the Tummel, when the united streams turn SE and then S till they reach the Firth of Tay. Just before entering Loch Tay the Dochart receives from the left the Lochay. The chief affluents on the right bank of the Tay, from Loch Tay downwards, are Urlar or Moness Burn at Aberfeldy, Balnaguard Burn from Grandtully Hill, the BRAN, the Ordie and Shochie, the ALMOND, and the EARN. On the left bank the chief affluents are the LYON, DERGULICH Burn, Tullypowrie Burn, the TUMMEL, Allt Rìgh an Lagain, DOWALLY Burn, the ISLA, and St Martin's Burn. Into the estuary of the Tay there flow from Perthshire from the N the Pow of Errol and other small streams.

Many of these streams have themselves considerable affluents. The Bran receives in its 19 miles' course from Glen Quaich and through Loch Freuchie, on the left the FENDER, Cochill Burn, Tombane Burn, and the united Ballinloan and Pitleoch Burn, and various less important streamlets from the S. The ALMOND has a course of 30 miles, and receives on the right bank the Fendoch Burn, and on the left the Glenservie and Milton Burns. The EARN, flowing from Loch Earn, has a course of 46 miles; and receives on the right bank the Ruchill, Machany, Ruthven, May, and FARG; and on the left the LEDNOCK and the Turret. The Lyon receives on the right bank the Invervane Burn and the Allt Da Ghob; and from the left the Allt Coire Eachainn, Allt Odhar, and the KELTNEY BURN from Schiehallion. By means of the Tummel the drainage of the large north-eastern district of the county finds its way into the Tay. From Loch Lydoch on the western border the GAUR flows eastwards into Loch Rannoch, and only receives the name Tummel on issuing thence at the eastern end. This chain of water-way receives from the right or S the Inverhadden Burn, the Allt Strath Fronan or Allt Kynachan from the northern slopes of Schiehallion, the Kinnardochy Burn, the Frenich and other burns flowing into Loch Tummel; on the left the ERICHT, from Loch ERICHT, flowing into Loch Rannoch, which also receives the ANNET Burn, the Allt na Moine Buidhe, the FINCASTLE Burn, and the GARRY. This last descends 1000 feet in its course of 22 miles from Loch Garry in the NW corner of the shire; and it receives on its right bank the ERICHDIE at Struan, and on the left the EDENDON, Allt Geallaidh, and Ender, uniting the waters of the Allt Glas Choire, Allt a Mhuillinn and Allt a Chireachain, the BRUAR, the TILT, and the Allt Giraig. The Tilt, flowing down from the northern mountain rampart, receives on the right the Tarff and the united stream of the Allt Mhaire and Allt Diridh; and on the left the Glen More Water and

the Fender. The ISLA, flowing from the Forfarshire Grampians, drains the NE of Perthshire; and within the borders of that county receives on the right bank ALYTH BURN, the ERICHT Water, and the LUNAN. The ERICHT Water is formed by the union of the AIRDLE and BLACKWATER, and receives on its right bank the Lornty (7 miles) from Loch Benachally; while the Airdle itself is formed by the union of the Briarachan and the Fearnach. The Blackwater flows from the Spittal of Glenshee, where the Allt Bheag, the Lochy, and Tatinich unite to form its stream, but for some miles the united stream is called the Shee. The south-western portion of Perthshire is drained by the river FORTH, which forms for a considerable distance the southern border. The Duchray and AVONDOW, the two head-waters of the Forth, rise on Ben Lomond and in Aberfoyle parish respectively, and flow parallel, the former chiefly on the border between Perthshire and Stirlingshire, and the latter through Lochs CHON and ARD in Aberfoyle to their junction at a point 1 mile W of the hamlet of Aberfoyle. East of this point the Forth receives on its left or Perthshire bank the GOODIE, the TEITH, with its affluents the KELTIE and Rednock, the ALLAN, with its affluents the Danny, KNAIK, Bullie, Millstane, Muckle, Lodge, and Wharry Burns, and the DEVON. The Teith is formed of two confluent streams, each about 20 miles long, the one flowing from the S slopes of BEN-A-CHROIN through Loch Voil and Loch Lubnaig, and bearing successively the names Balvaig, Ire, and LENY; while the other flows from Loch KATRINE through Loch ACHRAY and Loch Vennachar to join the Leny and form the Teith at Callander. The FALLOCH, in the W of the county, falls into the N end of Loch Lomond after a course of $10\frac{1}{2}$ miles from its source on BEN-A-CHROIN. The FILLAN, flowing from the N slopes of Benloy into Loch Dochart, is sometimes regarded as the remotest head-stream of the river Tay.

The courses of many of these rivers lie through scenery of the grandest and most beautiful description, which, for the most part, will be found noted in the separate articles on the chief streams. A prominent feature of Perthshire river-scenery is that afforded by the waterfalls and rapids, among which are those of BRUAR and FENDER, near Blair Athole; the Falls of Tummel, and the BLACK SPOUT at Pitlochry; the Falls of Moness at Aberfeldy; of the Lochay, near its junction with the Dochart; the Falls of Acharn, on the ACHARN Burn, flowing into the eastern end of Loch Tay; CAMPSIE Linn, on the Tay near Stanley; the Falls of the Bran, near Dunkeld; Muckersie Linn and Humblebuckle on the May; the DEVIL'S MILL on the LEDNOCK, near Crieff; and CALDRON Linn, on the Devon near Rumbling Bridge. The lakes of Perthshire are very numerous, but as all those that are either renowned for their natural beauty or interesting from historical or literary associations, are separately noticed, no more than a catalogue of them is given here. The largest lochs in Perthshire are Loch Tay, Loch Earn, Loch RANNOCH in Breadalbane, Loch ERICHT or Erochd on the boundary with Inverness-shire, and Loch KATRINE in the W of Menteith. Next in size comes Lochs Laidon or LYDOCH, on the boundary with Argyllshire; GARRY, between Rannoch and Athole; TUMMEL, in Athole; LUBNAIG, on the mutual border of Balquhiddy and Menteith; VOIL, in Balquhiddy; and VENNACHAR and Lake of Monteith in Monteith. For convenience in indicating the position of the still smaller lochs, we regard Perthshire as divided into four parts—NW, NE, SW, and SE—by a line running N and S from Ben Dearg to Dunblain, and a line running NE and SW from Glenfalloch along the S of Loch Tay to Mount Blair. In the NW are Loch-a-Vealoch, Loch-a-Breaclaich, Loch-a-Londonich, Lochan-a-Chlaidh, Lochs CHOIN, Dhu, Eaigh, Essan, Kinnardochy, Larigceelie, Lyon, Maragan, Loch-na-Lairige, Loch Sron-Smeair, Loch Tubhair, and the Lochs of Roro, viz., Loch-a-Chait, Loch Girre, and Loch Damh. In the NE are Boar's Loch, Lochs BROOM, Duin, Eun, GLASSIE, Loch, Mharich, Moraig, Na-Nean, Oishnie, and Schechernich

or Bainie. In the SW are Lochs ACHRAY, ARD, BOLTAHAN, CHON, DOINE, Drimnagowtan or Ben-craigh, DHU, DRUNKIE, Machaich, Ruskie, and Tunet. In the SE are Lochs BENACHALLY, Ballach, CLUNIE, CRAIGLUSH, Dowally, DRUMMOND, Dupplin, FREUCHIE or Fraochie, FENDER, Kennard, Lowes, Muir Dam Loch and Peppermill Loch, Lochs Monzievaird, Na-Craig, Ordie, Oyl, Skiach, Tilt, Valigan, Vach, Voulin, and the Stormont Lochs, viz., Lochs Monksmyre and Haremyre, Saints Loch, BLACK, White, Fergus, Rae, and Marlie or DRUMELLIE Lochs. Spring water in all the hilly districts is both plentiful and exceedingly good; but in the CARSE of GOWRIE, in the low lying parts of Monteith, and a few other low level spots it is scarce or of inferior quality. There is an allusion to this in the proverb, quoted by Pennant, to the effect that the people of the Carse of Gowrie 'want water in the summer, fire in winter, and the grace of God all the year round.' The chief mineral springs are those at Pitkeathley at the BRIDGE of EARN. The chief glens and passes of Perthshire are perhaps the following: the TROSSACHS, between Loch Achray and Loch Katrine, GLENALMOND, GLENDEVON, GLENDOCHART, GLENFALLOCH, GLENLOCHY, GLENLYON, GLENOGLE, GLENSHEE, and GLENTILT, each on the river indicated in its name; the passes of ABERFOYLE, LENY, and KILLIBCRANKIE. Glendevon and Gleneagles are both said to have been the route by which the Romans crossed the Ochils. The plains and valleys of this county are numerous, and some of them are very extensive. In addition to those that are named from the river flowing through them, as Glentilt, Strathtay, etc., we may mention Strathmore, stretching north-eastward from Perth into Forfarshire, and forming part of the great plain from Dumbarton to Brechin. To the S of it lies the fertile CARSE of GOWRIE, stretching for 15 miles between the Sidlaw Hills and the estuary of the Tay.

Geology.—By far the larger portion of this county is occupied by a great series of strata, belonging mainly to the crystalline schists of the Highlands. They are arranged in parallel zones, the long axes running approximately in an ENE and WSW direction. Along the Highland border they are bounded for a considerable distance by the great fault crossing the country from Stonehaven to the Firth of Clyde; while to the N of Crieff and E by Dunkeld they are unconformably overlaid by the members of the Lower Old Red Sandstone. From the researches of the Geological Survey, it would appear that there is a definite order of succession in the metamorphic series in this county. Close to the great fault, the strata, which are comparatively unaltered in the neighbourhood of Callander and Comrie, consist of cherts and igneous rocks, greywackes and shales, with bands of black shales, the latter indistinguishable from some of the beds in the Moffat series of the S of Scotland. They are overlaid by the Aberfoyle slates, graduating upwards through schistose flags, pebbly grits, and sericite schists into a great mass of grits capping Ben Voirlich. From the border fault west to Ben Voirlich the general inclination of the strata is towards the north-west, and hence there appears to be an ascending series from the Highland border to the Ben Voirlich grits. The latter are succeeded by the limestone series of Loch Earn and Loch Tay, followed apparently in order by garnetiferous mica schists, calcareous sericite schists, graphite schists with bands of limestone and quartzites. Recent discoveries in the course of the Geological Survey of the Highland border have thrown some light on the probable age of the strata in that region. Near Callander igneous rocks and cherts have been found along inverted axial folds, followed in order by black shales with thin limestone, grey shales, greywackes, and grits. Elsewhere along the Highland border, these cherts have yielded radiolaria similar to those in the cherts of Arenig age in the south of Scotland. Where they have not been deformed by earth movements, the igneous rocks resemble some of the volcanic materials underlying the Arenig cherts in the Southern Uplands. The black shales have yielded pecu-

liar markings, recalling the forms of graptolites characteristic of the lower divisions of the Silurian system in the south of Scotland. But as yet no graptolites have been identified beyond dispute. There is therefore reasonable evidence for maintaining that the igneous rocks, radiolarian cherts, black shales, greywackes, and grits near Callander are in all likelihood the equivalents of the Arenig volcanic rocks, radiolarian cherts, and some of the overlying Lower Silurian strata of the south of Scotland. Should this correlation prove to be correct, it will have a most important bearing on the stratigraphy of the Eastern Highlands. It opens the question of the relation of these less altered strata at Callander to the crystalline schists of the Eastern Highlands, and it further shows that mere superposition is no indication of the order of succession of the beds.

The geological structure of the Old Red Sandstone area in Perthshire resembles that of Forfarshire (see article FORFARSHIRE). The anticlinal fold in the volcanic series of the Sidlaws is continued in the Ochils, while the strata overlying the ancient lavas and tuffs occupy the syncline between the chain of the Ochils and the fault along the Highland border. In Perthshire, however, there is no trace of the succession of sandstones, flags, and shales underlying the volcanic series in Kincardineshire. The group of strata occurring to the N of the fault and resting unconformably on the metamorphic rocks probably occupy a position at the base of the volcanic series. These beds of lava and agglomerate are met with to the N of the fault E of Dunkeld, and we may justly infer that they represent the volcanic rocks of the Sidlaws and the Ochils in an attenuated form. On the S side of the great syncline the lowest beds are exposed along the crest of the arch of the Ochils, near the Yetts of Muckhart, where they consist of very coarse agglomerates and occasional lava flows. These are succeeded by a considerable thickness of porphyrites, with some intercalations of agglomerate. Again, the beds of tuff predominate, till eventually the volcanic ejections become so intermittent that sedimentary strata are mainly represented. The total thickness of the volcanic series in the N limb of the anticline of the Ochils is upwards of 6000 feet. It is probable, however, that, though this enormous accumulation of volcanic materials was deposited over a gradually sinking area, a good many of the cones ultimately raised their peaks above the level of the water, and became subaerial. The highest beds of this series, in the vicinity of Bridge of Allan, Auchterarder, and other localities, consist of coarse conglomerates of well-rounded fragments of the porphyrites of the Ochils, and where this horizon reappears to the N of the great syncline vast beds of conglomerate occur, composed of the same materials. Near the top of the zone they alternate with sandstones and marls, but eventually they pass underneath a group of grey and chocolate-coloured sandstones with plant remains which are well seen in the Allan between Bridge of Allan and Dunblane and onwards by Auchterarder and Perth to the county boundary. On the estate of Westerton at the county boundary, near Bridge of Allan, a specimen of *Eucephalaspis Lyellii* was found in a sandstone quarry, where the sandstones underlie a bed of lava, marking the close of the contemporaneous volcanic activity of the Ochils. This fossiliferous zone is probably on the same horizon as the fish-bed on Turin Hill in Forfarshire. The beds just described are succeeded by red sandy clays and marls, occupying the greater part of the low lying ground traversed by the Teith down to its point of junction with the Forth. They are traceable along Strathallan and over the low ground between that valley and the Earn, while further to the E splendid sections of the same beds may be seen in the Tay between Murthly and Perth. As described in the article on the geology of Forfarshire, Strathmore is paved with these strata, which in that area form the highest beds in the centre of the syncline. In Perthshire, however, the red sandy clays and marls are overlaid by an immense thickness of conglomerates, which

are splendidly developed on Uam Var, forming the highest members of the Lower Old Red Sandstone in this county. As we approach the fault the inclination of the beds increases till it is almost vertical, and in some cases the strata are actually inverted. It is interesting to note that as we approach the Highland border the sedimentary strata gradually become coarser, the sandstones are more pebbly, and the boulders in the conglomerates are larger. From the occurrence of metamorphic rocks in the Uam Var conglomerates, which have been derived from areas lying far to the N of the great fault, it is evident that the crest of the Grampian chain at least must have been exposed to denudation during the deposition of the highest beds of the Lower Old Red Sandstone.

The strata which now fall to be described have been grouped with the Upper Old Red Sandstone. They are prominently developed near Bridge of Earn, and extend underneath the estuary of the Tay and the Carse of Gowrie to near Dundee. Bounded on the N and S by two parallel faults, the strata are brought into conjunction with the Lower Old Red volcanic rocks on both sides of the estuary of the Tay. It is only to the W of this area, between Forgandenny and Bridge of Earn, that the basement beds are found resting unconformably on the denuded volcanic rocks. Though some fragments of the latter occur in the breccias, yet the pebbles consist mainly of quartzite or vein quartz derived in many cases from the Lower Old Red conglomerates. The Upper Old Red Sandstone of Perthshire consists mainly of marls and brick red sandstones generally much honey-combed and very friable. In the neighbourhood of Errol they have yielded excellent specimens of the genera of fishes which are characteristic of this formation.

To the N of the Ochils the only rocks of Carboniferous age are contained in a small outlier covering a few acres of ground about half a mile to the S of Bridge of Earn. The strata consist of blue clays with sandstones and calcareous bands belonging to the Cementstone series; the blue clays having yielded *Estheria* and plant remains. Though this outlier is insignificant in extent, it is of the utmost importance in proving the extension of the Carboniferous system over a part of Scotland, from which it has been removed by denudation. It further shows that during the early part of that period the Ochils must have formed a barrier between the Tay and the Howe of Fife, for these strata do not resemble the Calciferous Sandstones as developed in the E of Fife. They are like the type of strata known as the Ballagan series, underlying the volcanic rocks of the Campsie Fells. At a later stage, however, this barrier must have been submerged and buried underneath the deposits belonging to higher divisions of that formation.

On the S side of the Ochils the parishes of Culross and Tulliallan, which since 1891 have formed part of the county of Fife, are wholly occupied by Carboniferous strata. These may be grouped with the Clackmannan Coalfield, to which no reference has been made in the description of the latter county. In this area all the subdivisions of the Carboniferous system in central Scotland are represented. The lowest beds, consisting of red marls and sandstones, are seen on the Gairney, a tributary of the Devon, near the Caldron Linn, where they pass underneath the Cementstone series. It is probable that these beds represent the W extension of the red sandstone group of the Howe of Fife. The Cementstone group, comprising green and grey clays and shales, with occasional bands and nodules of cementstone and calcareous sandstone, are well exposed in the Devon, above and below the Caldron Linn. The Carboniferous Limestone series, with its three typical subdivisions, forms the E boundary of the Clackmannan Coalfield, extending from a point near Dollar to the shore at Culross. The middle division, rich in coals and ironstones, forms the Oakley Coalfield, and beds occupying the same horizon were formerly extensively wrought beneath the Forth at Preston Island. Resting on this subdivision come the members of the upper

group, comprising the Index, the Janet Peat, and Castlecary Limestones. Associated with the Janet Peat Limestone is a thick seam of ordinary coal, and a thin bed of gas coal, which was wrought at Culross in the olden time, and some of the workings extended for a considerable distance under the bed of the Forth.

Intermediate between the beds just described and the Coal-measures come the sandstones of the Millstone Grit division, which are extensively quarried. To these succeed the representatives of the Coal-measures forming the Clackmannan Coalfield, and comprising several valuable seams of coal and ironstone, which are here given in ascending order: Slaty Band Ironstone, Coals-naughton Main Coal, Cherry and Splint Coals, Nine-foot Coal, and Upper Five-foot Coal. By a series of parallel faults running in an E and W direction, the coal seams are repeated several times to the S. The red sandstones overlying the Coal-measures occur at the Devon Ironworks near Tillicoultry, which is consequently the deepest part of the coalfield.

The metamorphic rocks of this county are pierced by masses of granite, quartz-felsite, and epidiorite, some of which are older and some later than the earth movements. Examples of granitic intrusions are to be found in the vicinity of Loch Erich and Loch Rannoch, and in Glen Tilt. Quartz-felsite occurs in the form of dykes, as for instance along the Highland border between Crieff and Callander, and in the form of sheets between Loch Earn and Loch Tay. Intermediate igneous rocks occur in the form of dykes, and these in turn have been intersected by basalt dykes probably of Tertiary age. In like manner the basalt rocks are met with in this double form; the sheets being mainly confined to the Carboniferous strata. The Abbey Craig, near Stirling, is a continuation of a great mass of dolerite intruded more or less along the bedding of the lower limestones. Truncated like the Carboniferous rocks by the great fault skirting the Ochils, it appears to underlie the Clackmannan Coalfield, for, where these limestones emerge in the Cleish Hills in Fife, a similar sheet accompanies them. That these sheets are not confined, however, to the Carboniferous rocks is evident from the occurrence of a remnant of such an intrusive mass on the top of Ben Buck in the Ochils. Numerous examples of basalt dykes are traceable throughout the county. Two or three of these parallel dykes, after traversing the volcanic rocks of the Ochils and the Old Red Sandstone area to the W, obliquely cut across the great fault, running W by Loch Lubnaig and Loch Katrine to Loch Lomond.

This county presents ample evidence of glaciation belonging partly to the general and partly to the later ice-movement. The ice-worn surfaces of the Ochils, Kin-noull Hill, and the Sidlaws, are excellent examples of the former, while the *roches moutonnées* of the Highland glens, and notably of the Trossachs, attest the influence of the later glaciers. Even the peaks of some of the mountains within the Highland border are beautifully glaciated, and are strewn with boulders foreign to them. The general trend of the ice-movement along the margin of the Highlands is from NW to SE, with certain local variations. Where the county joins with Stirling and Dumbarton, the trend of the ice-markings is N and S, near Callander about SSE, and in the Comrie district about SE. When the ice reached the low ground it veered still more towards the E, and after traversing the plain the course of the ice-flow was slightly deflected by the chain of the Ochils. Where the ice crossed the range the direction of the movement changed to a little N of E.

In favourable situations the boulder clay is invariably met with. It is worthy of note, however, that the Highland glens have been denuded to a large extent of this deposit by the action of the later glaciers. Where the latter were only partially developed, or where they did not exist, it fills the valleys to a great depth. The later glaciers were splendidly developed in many of the Highland glens, as is abundantly shown from the distribution of moraines. Excellent examples

of these are to be met with along the banks of Loch Katrine, between Strone-a-Chlachar and Loch Lomond, and along the railway from Callander to the head of the Dochart. But perhaps the finest group in the county occurs at the head of Glen Garry and on the col between the Garry and Glen Truim.

Numerous examples of boulders which have travelled far from their parent source are to be met with. The Ben Voirlach grits and certain diorites and hornblende schists among the Highland rocks, along with the massive Old Red conglomerates, supplied large boulders, which have been widely distributed by the ice. This dispersion was chiefly accomplished during the primary glaciation, and the direction of the movement of the boulders coincides with that of the ice-markings. But not only are large masses of the Highland rocks distributed over the low grounds, many of them have been carried over the highest cols in the Ochils. The observer may frequently note the occurrence of these foreign blocks which have been washed out of the boulder clay along the stream courses on the S side of the Ochils. 'Samson's putting-stone' is the name given to a well-known boulder of Highland schist situated on a knoll of Old Red conglomerate overlooking the Trosachs road near Coillantogle Ford.

The 100-foot beach forms the upper terrace at Bridge of Allan, and skirts the Carse of Stirling, stretching as far as Dollar, and forming some outlying patches in Clackmannanshire. It is also traceable up the valleys of the Tay and the Earn. The deposits consist of sands, gravels, and brick-clays, which frequently show crumpling of the beds. From this fact, as well as from the occurrence of boulders in the brick-clays, it is evident that floating ice must have existed in the sea during their deposition. The Carse of Stirling, as well as the Carse of Gowrie, mark the level of the 50-foot sea beach. The clays of this terrace sometimes alternate with beds containing hazel-nuts, along with oyster and other shells, which are the same as are now to be found on our shores, though of a larger size. Kitchen middens occur on the bluffs above the 50-foot beach, indicating the presence of neolithic man where the sea washed the base of these cliffs.

Where the Highland glens debouch on the plains along the Highland border great masses of gravel are met with, which are arranged sometimes in the form of kames, sometimes in irregular sheets. The Tay, Allan, Almond, Earn, Teith, and other streams spread these deposits over the low grounds. Some of the kamiform ridges may have been accumulated in channels underneath the ice, some may have been formed along the sides of the glaciers where they extend beyond the mouths of the valleys, and spread in a fan-shaped manner over the plains; each successive ridge being laid down as the glacier retreated step by step. When the glacier shrank back into the glens the materials were deposited as ordinary lateral and terminal moraines.

Along the foot of the S slope of the Ochils, both the 100 and 50 feet beaches merge into cones of gravel and sand, which slope gently upwards to the mouths of the glens. The accumulation of this detritus is still in progress, owing to the denudation of the volcanic rocks forming the chain. The gravel, sand, and detritus borne down the steep slopes are, for the most part, deposited where the glens debouch on the plains in low fan-shaped cones, the features of which are dependent on the angles of inclination of the two slopes. On these cones are built various towns and villages, such as Blairlogie, Menstrie, Alva, Tillicoultry, and Dollar. Though the material forms a dry subsoil, yet the towns built in such situations are more or less subject to disastrous floods from the shifting of the stream courses.

Extensive alluvial flats or terraces occur along the banks of some of the chief rivers, such as the Tay, the Earn, and Teith, which have been formed by river action in the usual manner. That the sea has had nothing to do with the formation of these terraces is evident from the fact that the slope of each successive terrace corresponds with the slope of the stream. Where

tributaries form cones of detritus at the points of junction with the main streams, these alluvial deposits are terraced in a similar manner.

Economic Minerals.—Those of the greatest value are the coals and ironstones of the Carboniferous formation. In the metamorphic rocks of the Highlands massive limestone occur in Glen Tilt, where they have been worked for marble; at Blair Athole, Pitlochry, Loch Tay, Glen Lyon, Loch Earnhead, Loch Rannoch, and Callander. A calcareous breccia occurs along the great fault bounding the Highlands, which at several places has been worked as a limestone. Fire-clay occurs throughout the Carboniferous strata on the S side of the Ochils. Silver, copper, lead, and cobalt occur among the volcanic rocks of the Ochils, and were formerly wrought. The matrix of the metalliferous deposits is usually barytes. The Spa Water of Bridge of Allan issues from the workings of an old copper mine. At Tyndrum, argentiferous galena has been worked; zinc blende, copper pyrites, and small quantities of a cobalt ore are also found there. At Tomnadashan, S of Loch Tay, grey copper with copper and iron pyrites and molybdenite occur; while at Corrie Bui rich argentiferous galena and two pieces of gold have been found. Roofing slate is met with along the Highland border, and has been wrought chiefly at Aberfoyle, Comrie, and Dunkeld.

Soils.—The soils in a county so large and so diversified in character are naturally of the most varied description. A deep stiff clay forms the flat tract for 18 miles along the Forth from Gartmore Bridge to the Bridge of Allan; and by far the larger part of the Carse of Gowrie has a deep rich clay also, loam appearing only on the eminences in that fertile region. A pale brown clay extends along the Earn from Forteviot Bridge to the Tay; and clayey soils occur elsewhere in the county. Haugh soil of fine alluvium occurs in the Allan, Goodie, and Devon; around Killiu and in parts of Glendochart, Glenfillan, and other glens in various regions. Loam or fertile vegetable mould forms a fine bank from Rednock House to Blair Drummond, and extends over part of Strathearn; over most of the Tay valley below Dunkeld; over a large area in Strathmore; and over nearly all the SE slopes of the Sidlaws. Till is very widely diffused; a poor kind of it covers the NW face of the Ochils from Dunblane to Abernethy; other qualities skirt the moor between the Teith and Forth, and occupy areas round the Lake of Monteith and on the NW point of the Sidlaws; and on many of the other hills. A light sandy or gravelly soil appears in most of the valleys N of Dunkeld and Alyth, and W of Crieff and Callander, and is found in very abundant quantity all over the county. Moorish and alluvial soils interrupt its continuity in many parts. Moorland, or a thin stratum of moss upon sand or gravel, has given name to Orchillmoor, Sheriffmuir, Methven, Alyth, Dunsinane, and other moors; but much of these have now been reclaimed for agriculture.

Climate.—The climate is affected partly by the prevailing inclination of the general surface to the SW, but chiefly by the special configuration of the various parts. The temperature corresponds to the position of the county between Highlands and Lowlands; and strikes the medium between the northern and southern counties; but is, of course, exposed to great local variations. Easterly winds bring rain and unsettled weather on Gowrie, Stormont, Glenshee, and Strathardle, while the weather is dry and serene in Breadalbane. Westerly winds on the other hand bring up rain from the Atlantic over Monteith, Breadalbane, and Rannoch; while they leave the eastern regions quite unaffected. Neither class of winds can advance very far into the interior without being in great part disburdened of their moisture by the mountain-ranges. Northerly winds have their power much broken by the rampart of mountains in the N. According to observations made over a series of five years, west winds prevail from 165 to 220 days in the year; fair weather from 189 to 250 days; rain from 95 to 141; and frost from 11 to 66 days. The

PERTSHIRE

PERTSHIRE

mean height of the barometer was found during three consecutive years to be from 29.59 to 29.71; and of the thermometer from 41 to 42½. The annual rainfall over five years varied between 31.45 inches and 38.4.

Animals.—The deer forests of Perthshire contain large herds of red-deer; fallow-deer, though not native, are found near some of the residences of the nobility; and roe-deer are also common in some places. The fox, otter, stoat, weasel, squirrel, and water-rat are among the common wild animals of Perthshire; and the wild-cat and badger among those that are almost extinct. Eagles still have their eyries among the mountains of this county; and several kinds of hawks and owls are also reckoned among its birds, in addition to a very large number of the commoner kinds. Game birds are very numerous; and the grouse-moors of Perthshire afford some of the best sport to be obtained in that way in the world. Ptarmigan is found only on the loftier mountains; and capercaillie, originally a native, but reintroduced from Norway after its extinction in Scotland, is abundant in many parts. The woodcock also breeds regularly. Perthshire abounds in excellent salmon and trout streams; while the salmon-fishing in the river Tay and in its estuary is of a very valuable description. Scottish pearls are found in the Tay, in the shells of a fresh-water mussel tolerably common in that river and its tributaries. The county has some reputation among entomologists for the number of rare insects to be found in it.

Industries.—The industrial sources of wealth of Perthshire include agriculture, sheep-farming, the letting of lands and waters for sport, and a small proportion of manufactures and commerce. According to the returns in 1891, 13,116 persons were engaged in agricultural employments, 304 in fishing, 7178 in domestic, 3751 in professional, 4383 in commercial, and 26,070 in industrial; of the last 1313 were employed in woollen industries, 2414 in cotton and flax, 1032 in hemp and jute, 21 in coal and shale mining, 1 in ironstone mining, and 26 in shipbuilding. Of the whole 67,383 were unoccupied and unproductive, of whom 46,515 were females, and 36,986 children.

Only about one-fifth of the entire surface of the county is under tillage, the rest being taken up by pasture, woods, and deer-forests. The methods and conditions of agriculture naturally vary very much in the different parts of so large a region, but on the whole the agricultural condition of the shire may be pronounced to be excellent. Nearly all the lowlands and many of the glens are in a high state of cultivation. Large tracts of moorland and moss have been reclaimed; others have been enriched; and draining, special manuring, and careful rotation have all lent their aid to improve the soil. The most common term for a farm lease is 19 years, at rents which run from £1 to £4, 10s. per Scottish acre. But sheep-farms bring only about 2s. 6d. per acre, or from 12 to 17 bushels of grain per acre, the money value being determined by the fiars prices for the year. During the last 30 years the lowest fiars price for the quarter of best wheat was 20s. 6d.; of best oats, 14s. 11d.; per boll of 140 lbs. of oatmeal, 12s. 8d. The highest prices were respectively 64s. 4d. in 1867, 28s. 11d. in 1868, and 22s. 9d. in 1867. In 1894 the prices were 20s. 6d., 16s. 8d., and 14s. 7d. The following table indicates the principal crops and the acreage under each in various years:—

	1874.	1882.	1893.	1896.
Wheat,	14,503	7,498	4,269	4,222
Barley,	22,572	24,454	15,226	13,251
Oats,	65,511	71,136	67,620	63,991
Rye,	337	385	667	925
Pease,	108	118	19	51
Potatoes,	17,362	17,723	14,319	12,560
Turnips, etc.,	32,614	31,837	29,835	29,614
Cabbages, etc.,	205	166	239	223
Other Green Crops,	1,055	947	52	46
Bare Fallow,	1,941	2,461	1,576	1,452
Grass, Permanent Pasture,	96,288	84,239	100,579	104,805
Grass, in Rotation,	92,943	101,731	99,168	97,626

The following table shows the amount of farm-stock at various dates:

	1874.	1881.	1882.	1893.	1896.
Horses,	10,131	10,997	10,856	13,433	13,677
Cattle,	83,327	76,634	74,955	78,060	78,003
Sheep,	703,959	675,081	684,920	737,150	730,950
Pigs,	9,911	7,741	9,465	6,878	8,228

The pastures of Perthshire are exceedingly varied, and are thus adapted to the rearing of a very great diversity of stock. The Angus and Fife breeds of cattle prevail in the Carse of Gowrie, and about Perth and the Bridge of Earn; the Argyllshire in Rannoch, Glenlyon, Glenloch, Strathfillan, and other places in the west; the Lanarkshire, or those from the lower ward of that county, much akin to the Galloway breed, in Monteith; and the Ayrshire and Galloway in various parts. Breeds of black cattle have been introduced from Devonshire, Lancashire, Guernsey, and even from the East Indies; but these have become quite blended with each other and the former existing breeds. The stock of sheep has, as well as the cattle, undergone much improvement. The old stock was the whiteface, which in the Highlands required to be housed in cots every night during winter and spring; but about 1770 the blackfaced breed was introduced, and has now, both in the pure breed and in numerous crosses, almost entirely ousted the former. Goats were formerly numerous, but have given way to sheep and tillage. Poultry is, of course, like swine, ubiquitous. Dovecots are rare in the Highlands, but abound about Perth and Coupar, the Carse of Gowrie, and in Monteith. Game has already been alluded to.

Woods.—Perthshire in early times was densely covered with forests, whose remains are still seen in such detached portions as the Black Forest of Rannoch, and in the tree-trunks that are occasionally even yet dug up. In feudal times the woods were sadly diminished, and the county gradually assumed a naked and treeless aspect. In more modern times, however, the proprietors in Perthshire, to whom the fourth Duke of Atholl, 'the planting duke,' first gave the example, set themselves to remedy this great defect; and at present the county, aided by its peculiar configuration, its diversity of soil, and its climate, may be described as the great tree-growing county of Scotland. In 1812 Perth had 203,880 acres under wood, thus showing the largest acreage of any county in Scotland, the next return being Aberdeen with 148,800. 'In 1871 Perthshire had only 83,525 acres, or 179,205 less than 60 years earlier, and 94,563 acres in 1881. According to returns made in 1891, Perthshire had fallen to the third place among the counties, with 93,233 acres, Inverness having 98,733, and Aberdeen 108,868. Mr Hunter in his *Woods, Forests, and Estates of Perthshire* (1883), in which full details of the whole subject are given, estimated the value of the woods in the county then at about three and a half million pounds sterling. The following table shows the acreage under various forms of forestry in different years:—

	1872.	1882.	1893.
Orchards, etc.,	1,098	394	434
Nursery Grounds,	239	99	81
Woods,	83,525	94,563	93,233

As indicated before, the number of deer and the extent of deer-forests in Perthshire is very great. The rent obtained for deer-forests is very much above the ordinary agricultural or pastoral rent of a tract in the Highland districts; and the tendency of late years has been rather to increase than to diminish the amount of land occupied by deer-forests. It having been asserted, however, that much land has been thrown into deer-forests which would be more valuable agriculturally and would sustain many crofters, a Deer Forests Commission was appointed in 1893 to inquire into their economic value, etc. The chief deer-forests in Perthshire in 1894,

with their extent, owners, and highest and lowest points in feet above sea-level, were:—

Deer-Forest.	Owner.	Acres.	Highest point in feet	Lowest point in feet
Atholl,	Duke of Atholl	35,540	3671	620
Fealar,	Do.	14,500	3424	1200
Glenbruar, . . .	Do.	11,000	3250	1400
Drummond Hill,	Marquis of Breadalbane	2,400	1500	380
Glenartney, . .	Earl of Ancaster	19,310	3244	500
Rannoch,	Sir Robert Menzies	12,000	3128	1153

Besides these there are over 400 different grouse-shootings in the county, partly occupied by the proprietors, and partly let at rents varying from £30 to £1100 per annum; while the shootings under £20 yearly rent represent an annual aggregate of £700. About 73 different fishings are also reckoned, those not occupied by their proprietors bringing in rents varying from £2 to £250. The net fishings not included in these represent about £10,000 annually. The total sum paid to proprietors of lands in Perthshire as sporting rent is the largest paid in any county of Scotland; but, of course, only a small part of it can be regarded as income flowing into the county. The wants, however, of a large shooting tenancy, with their households and attendants, support a considerable amount of trade in Perthshire; while direct employment is given to many of the native inhabitants as gamekeepers, gillies, boatmen, etc. According to the *Sportsman's and Tourist's Guide* for August 1896, the amount paid as rent for shootings and deer-forests in Perthshire was £61,325, and for rod-fishings £1700. The large number of tourists, also, who annually pour into the county to visit its beautiful and celebrated spots, must not be forgotten among the sources of wealth of Perthshire.

Perthshire cannot be called in any comprehensive sense a manufacturing or a commercial county. It contains no great centre of trade, and is the seat of no special industry of importance. The busiest commercial city is the county town, but even that has a steady rather than a flourishing business. Particulars of the main industries of the county will be found in the special articles on PERTH and the other towns and parishes. The linen trade, though long established, has not attained any very striking importance, and is quite subordinate to that of Forfarshire. Its main seats in Perthshire are PERTH, COUPAR-ANGUS, and BLAIR-GOWRIE. The cotton industry, once flourishing, has now much declined, but there are mills at Deanston, founded in 1785, and Stanley. Woollen manufactures are represented by factories for tweeds at Killin, Pitlochry, etc.; for tartans and galas at Auchterarder, and by mills at Crieff, Dunblane, Kincardine, and Burnfoot in Glendevon, and several other places. There are bleaching-fields at Luncarty and Cromwellpark, and elsewhere in the neighbourhood of Perth. Dye-works, especially at PERTH, breweries, linseed-oil mills, distilleries, as well as a considerable miscellany of less important manufactories and industrial institutions, are also included in the resources of the county. A very considerable trade in cattle, sheep, and agricultural produce is carried on; and centres, along with all other trade, mainly in PERTH. Some of the small ports along the N side of the estuary of the Tay, as Port Allen, carry on a tolerably active commerce. The mineral wealth of Perthshire is inconsiderable, or at least has been worked to an inconsiderable extent, but quarrying for various sorts of building stone is carried on in many of the parishes. Fairs are held at stated times in numerous places, besides the county town; and weekly markets are kept in the principal towns and villages.

Railways and Roads.—Perthshire contains portions of three chief railway systems—CALEDONIAN, NORTH BRITISH, and HIGHLAND—and of the CALLANDER AND OBAN and the WEST HIGHLAND RAILWAYS. The Caledonian line enters the county from the S, a little S of Bridge of

Allan, and runs north-eastwards to Perth by Dunblane and Crieff Junctions. From the latter junction, near Auchterarder, a branch runs to Comrie, another line also connecting at Crieff with Perth by Methven Junction. From Perth the Caledonian railway has two exits, one across the river Tay by viaduct and through the Carse of Gowrie to Dundee (20½ miles), leaving Perthshire and entering Forfarshire, just before Invergowrie station. The second exit runs north-eastwards from Perth by Stanley Junction, and throwing off branches to Blairgowrie (5 miles) at Coupar-Angus, and to Alyth (5½) at Meigle, leaves the county finally 2 miles E of Alyth Junction. From Dunblane the Dunblane, Doune, and Callander branch runs off NW, and is continued from Callander up Strathyre, Glen Ogle, and Glen Dochart to Tyndrum on the W boundary, and thence on to Oban in Argyllshire by the Callander and Oban line, which is worked by the Caledonian Company, and has a branch to Killin (4 miles), at the head of Loch Tay. It may be here mentioned that a steamer sails from Killin Pier at the head of Loch Tay to Kenmore at the foot three times a day during summer, and twice a day in winter. The North British line extends from a point between Abernethy and Newburgh in Fife, up past the Bridge of Earn to Perth, a distance within 9 miles; while by the Glenfarg section a direct route is opened up between Perth and Edinburgh *via* the Forth Bridge. The greater portion of the Aberfoyle branch of the same Company's Forth and Clyde railway lies in Perthshire; while the West Highland railway, from the Clyde at Craigendoran to Fort William, and worked by the North British, passes through the county on the west at two different places—in the one case traversing Glen Falloch and Strath Fillan, and in the other the Moor of Rannoch. The Highland railway branches off NW from the Caledonian line at Stanley Junction, and proceeds up the valley of the Tay by Dunkeld to Ballinluig, and thence up Glengarry by Pitlochry, Blair Athole, etc., to Drumochter Pass on the NW boundary, where at the highest point (1500 feet) reached by any railway in the country, it enters Inverness-shire. Its length from Perth is about 53 miles. At Ballinluig a branch proceeds westwards to Aberfeldy, a distance of 9 miles. The roads in Perthshire are substantially made and well kept. From the S the main Edinburgh road enters the county a few miles SE of Perth, and arrives at that city across the South Inch; and the Glasgow road to Perth passes through Stirling, Dunblane, and Auchterarder. From Dundee the road approaches from the E through the Carse of Gowrie; and a fourth road enters the county town from Comrie, Crieff, and Methven. From Perth the great Highland road runs northwards alongside the Highland railway during its entire course in the shire. Another thoroughfare runs north-eastwards to Coupar-Angus, where it forks, sending one branch E into Forfar, and another northwards by Blairgowrie through Glen Shee, and thence on to Braemar in Aberdeenshire. Besides, there are numerous and convenient connecting roads, especially in the S and SE. Further N the means of communication, except along the larger river valleys, are less carefully constructed and less numerous.

The cities in Perthshire are Perth, Dunkeld, and Dunblane; the only royal burgh is Perth; the burghs of barony are Abernethy, Alyth, Auchterarder, Blairgowrie, Craig of Madderty, Crieff, and Longforgan; the police burghs are Perth, Aberfeldy, Abernethy, Alyth, Blairgowrie, Callander, Coupar-Angus, Crieff, Doune, Dunblane, and Rattray. The towns with more than 2000 inhabitants are Perth, Alyth, Auchterarder, Blairgowrie, Coupar-Angus, Crieff, Dunblane, and Rattray. Towns with between 1000 and 2000 inhabitants are Aberfeldy, Callander, New Scone, Pitlochry, and Stanley. The villages with between 300 and 1000 inhabitants are Abernethy, Almondbank, Bankfoot, Birnam, Blackford, Blair Athole, Bridge of Earn, Burrelton, Comrie, Deanston, Doune, Dunkeld, Dunning, Errol, Huntingtower, Killin, Longforgan, Luncarty, Methven, Muthill, MyInfield, and Thornhill. Other principal villages are Aberbank, Aberdargie, Aberfoyle, Acharn, Amulree, Arntully,

Balbeggie, Balbrogie, Balbunnoch, Balhaddie, Balledgarno or Ballerno, Ballendean, Ballinluig, Balnasuin, Balwhanaid, Bankfoot, Bellycloan, Blairmore, Borelandpark, Bridgend, South Bridgend, Bridge of Earn, Bridge of Teith, Bridgeton, Buchanty, Buchany, Buttergask, Butterstone, Cairnbeddie, Cairniehill, Caolvaloch, Caputh-Wester, Caroline-Place, Chapelhill, Cherrybank, Clathy, Clifton, Coliace, Cottown, Cragdallie, Cragganester, Craggantoul, Craigend, Craigie (in Perth parish), Craigie (in Clunie), Cromwellpark, Dalginross, Dargie, Dovecotland, Drums, Drumvaich, Dull, Flawercraig, Forgandenny, Forteviot, Fowlis Wester, Friarton, Fungarth, Gartmore, Gilmerton, Grange, Greenloaning, Guildtown, Hawkstone, Heriotfield, Hillyland, Inchtute, Inver, Kenmore, Kilmahog, Kilsplindie, Kinbuck, Kincairney, Kingoodie, Kinnaid (in Gowrie), Kinnaid (in Moulin parish), Kinrossie, Kintulloch, Kirklane, Kirkmichael, Leetown, Lochearnhead, Logierait, Longleys, Mains-of-Errol, Meikle, Meikleour, Methven, Moulin, Nethermains, New Rattray, Norriston, Pitheavlis, Pilmiddie, Pitrodie, Pool, Rait, Ross, Rottearn, Ruskie, Ruthvenfield, St Davids, St Fillans, Sancher, Scrogiehill, Smithyhaugh, Spittalfield, Sronforan, Strathyre, Strowan, Thornhill, Tomacher, Tombreck, Tulloch, Tyndrum, Washington, Waterloo, Weem, Westown, Wolfhill, Woodlane, and Woodside. The mansions and private seats in the county are very numerous, but the following are the chief: Blair Castle and Dunkeld House (Duke of Atholl), Doune Lodge (Earl of Moray), Drumkilbo (Earl of Wharmcliffe), Dupplin Castle and Balhousie Castle (Earl of Kinnoull), Elcho Castle (Earl of Weynyss), Taymouth Castle, Auchmore House, and Glenfalloch (Marquis of Breadalbane), Scone Palace and Logiealmond (Earl of Mansfield), Gleneagles (Earl of Camperdown), Belmont Castle (Right Hon. Sir Henry Campbell-Bannerman), Strathallan Castle (Viscount Strathallan), Invermay (Lord Clinton), Pitheavlis (Lord Elibank), Duncrub Park (Lord Rollo and Dunning), Rossie Priory (Lord Kinnaid), Ferntower (Lord Abercromby), Drummond Castle (Earl of Ancaster), Meikleour House and Aldie Castle (Marquis of Lansdowne), Kilbryde Castle (Sir James Campbell, Bart.), Pitfour Castle (Sir E. A. S. Richardson), Castle-Menzies, Foss House, and Rannoch Lodge (Sir Robert Menzies), Monereiffe House (Sir Robert Drummond Moncreiffe), Delvine (Sir Alexander Muir Mackenzie), Dunira House and Comrie House (Sir Sidney J. Dundas), Kinloch House (Sir J. G. S. Kinloch), Bamff House (Sir J. H. Ramsay) Grantully Castle (Lady Stewart), Garth Castle (Sir Donald Currie), Deanston House (Sir John Muir), Lanrick Castle (Sir Robert Jardine), and Ochertyre House (Sir Patrick Keith Murray). Other houses, belonging chiefly to untitled owners, are Abercairney Abbey, Aberuchill House, Airvoirlach, Ardargie, Ardoch, Atholl Bank, Auchleeks, Auchterarder, Balbrogie, Baledmund, Balhaldie, Ballechin, Balmyle, Balnakeilly, Balruddery, Barclayhill, Barnhill, Bellwood, Birnam Hall, Birnam House, Blairdrummond, Blairhill, Bolfracks, Bonhard, Bonskeid, Boquhan, Braco Castle, Broich, Cambusmore, Cardean, Cardross, Carey, Carpour, Carse-Grange, Clathick, Cluny, Colquhalzie, Condie, Coralbank, Craighall, Cultoquhey, Dalchosnie, Dalguise, Dalhonzie, Dunalastair, Derculich, Dirnanean, Dollerie, Donavound, Drumearn, Drumfark, Dunbarney, Dunsinane, Easter-tyre, Edinample Castle, Edinchip, Edradynate, Errol Park, Evelick, Faskally, Findynate, Fonab, Forneth, Gartincaber, Gartmore, Gask, Glenawc, Glenbuckie, Glencarse, Glendelvine, Glendoick, Glenericht, Glenfeochan, Glenlyon, Gorthy, Hill of Ruthven, Huntingtower, Castle Huntly, Inchbrakie, Inehmartin, Inehyra, Invertrossachs, Jordanstone, Keir House, Keithick, Kilgraston, Killiechassie, Kindrogan, Kincairney, Kinfauns Castle, Kinnaid, Kippendavie, Lawers, Leny, Lintrose, Loyal House, Lude, Lyndoch, Megginch, Meikle, Methven, Millearne, Millhead, Moness, Monzie, Murrayshall, Murie, Murthly Castle, Mylnefield, Newhouse, Newmill, Orchill, Pitcairns, Pitnacree, Rednock, Rottearns, Ruthven-Field, Ruthven, Seggieden, Snaigow, Stanley, Stenton, Stobhall, Strowan, Tullymet, and Woodend.

Perthshire is governed by a lord-lieutenant, a vice-lieutenant, 43 deputy-lieutenants, a sheriff, a sheriff-substitute, and nearly 250 justices of the peace. The deputy-lieutenants and justices are classed in nine divisions corresponding to the nine administrative districts (originally ten, including that of Culross) into which the county was divided by act of parliament in 1795 for extending the jurisdiction of justices of peace in small debt causes. These districts are those of Perth, Auchterarder, Blairgowrie, Carse, Coupar-Angus, Crieff, Dunblane, Dunkeld, and Weem. But this division of the county refers only to the statutory duties; the ordinary jurisdiction of justices extends over the entire county. The sheriffdom is divided into two districts, the Eastern and the Western. The meetings of the Eastern sheriff court are noted under PERTH; the Western court meets at Dunblane every Wednesday during session. Circuit courts for small debt causes are held at regular intervals at Blairgowrie, Crieff, and Aberfeldy. The County Council is composed of 60 members, for as many electoral divisions. Of these, 15 represent the First or Perth District, 12 the Second or Blairgowrie District, 11 the Third or Highland District, 12 the Fourth or Central District, and 10 the Fifth or Western District. The council is divided into the following committees:—The Committee on Highways and Public Health (composed also partly of Parochial Board representatives), the County Road Board, the Standing Joint Committee (composed also partly of Commissioners of Supply), the District Lunacy Board (with two members from Perth Town Council), County Valuation Committee, Finance Committee, Bills Committee, Weights and Measures Committee, Technical Education Committee, Small Holdings Act Committee, County Secondary Education Committee (appointed partly by County Council and partly by Chairmen of School Boards), etc. The county police force, exclusive of the members of Perth city police, in 1895 numbered 79 men, with a superintendent with a salary of £363. There are prisons at Perth and Dunblane. By the Redistribution of Seats Act of 1885 Perthshire was divided into two divisions—the Eastern and the Western—each of which returns one member to Parliament. The parliamentary constituency of the Eastern division in 1895-96 was 7708; of the Western 8187. The annual value of real property in 1674 was £28,330; in 1815 it was £555,532; in 1849, £706,878; in 1876, £966,461; in 1884, £998,773; and in 1895-96, £812,705, exclusive of £118,140 for railways and waterworks, which brings up the total to £930,845. The parish with the lowest assessed rental was Lethendy with £2371; the parish with the highest was Crieff with £34,166. The railways, etc., were assessed as follows:—Caledonian, £55,402; North British, £8740; Highland, £12,800; Callander and Oban, £10,646; Glasgow Corporation Waterworks, £17,520; Dunfermline Waterworks, £23957; Dundee Waterworks, £4374. Perthshire is one of the least densely populated counties of Scotland, having only 50 to the square mile, while the average for the whole country is 135. Only Kirkeudbright, Peebles, Ross and Cromarty, Argyll, Inverness, and Sutherland have a sparser population. Pop. (1801) 125,583, (1811) 134,390, (1821) 138,247, (1831) 142,166, (1841) 137,457, (1851) 138,660, (1861) 133,500, (1871) 127,768, (1881) 129,007, (1891) 122,185, of whom 64,359 were females, *i.e.*, 111·29 to every hundred males; while 14,124 or 11·55 of the population were Gaelic-speaking. Separate families, 28,879. Houses (1891) occupied 26,688, vacant 2302, building 79.

The civil county previous to the Reformation and during the time of Protestant Episcopacy in Scotland contained the seats and most of the territory of the dioceses of Dunkeld and Dunblane, and some parishes of the archdiocese of St Andrews. Since the final establishment of Presbyterianism very many changes in the constitution of its presbyteries and the distribution of its parishes have occurred, which it would be useless to trace. At present the county contains 71 *quoad civilia* parishes, of which 1—PERTH—is divided into 4 *quoad sacra* parishes. Besides these there are 22 *quoad*

sacra parishes and 13 chapels of ease. The parishes of Perthshire are Aberdalgie, Aberfoyle, Abernethy, Abernethy, Alyth, Ardoch, Arngask, Auchterarder, Auchtergaven, Balquhiddier, Bendochy, Blackford, Blair Athole, Blairgowrie, Callander, Caputh, Cargill, Clunie, Collice, Comrie, Coupar-Angus, Crieff, Dron, Dull, Dunbarney, Dunblane, Dunkeld and Dowally, Dunning, Errol, Findo-Gask, Forgandenny, Forteviot, Fortingall, Fowlis-Wester, Glendevon, Inchture, Kenmore, Killin, Kilmadock, Kilspindie, Kincardine, Kinclaven, Kinfauns, Kinnaird, Kinnoull, Kirkmichael, Lecropt, Lethendy and Kinloch, Little Dunkeld, Logierait, Longforgan, Madderty, Meikle, Methven, Moneydie, Monzie, Monzievaird and Strowan, Moulin, Muckart, Muthill, Perth, Port of Monteith, Rattray, Redgorton, Rhynd, St Madoes, St Martins, Scone, Tibbermore, Trinity-Gask, Weem. These are variously divided among the presbyteries of Dunkeld, Weem, Perth, Auchterarder, and Dunblane, in the synod of Perth and Stirling; the presbyteries of Meikle and Dundee in the synod of Angus and Mearns; and the presbytery of Kinross in the synod of Fife. The Established Church has 109 places of worship in the county, the Free Church 65, U.P. 26, Scottish Episcopalian 33, Roman Catholic 11, Baptist 4, Congregational 4, and other denominations 5. There are in the shire 191 elementary day schools (168 of them public), which, with total accommodation for 26,554 children, have 20,653 on the registers, and an average attendance of about 16,750. The population of the registration county in 1891 was 142,423. All the parishes save six are assessed for the poor. In 1894 there were 1853 registered poor, with 767 dependants, on whom was spent a total of £25,860. Fifteen parishes form the poor-law combination of Upper Strathearn, and eleven that of Athole and Breadalbane. The county asylum is at Murthly. In the same year there were 463 pauper lunatics maintained in the county at a total expense of £11,782, and the percentage of illegitimate births was 9.3. Perthshire contains the 42nd regimental district, and the depot for the 1st, 2d, and 3d battalions of the Royal Highlanders (Black Watch). Perth is the headquarters for the 4th (Perthshire) Volunteer Battalion Royal Highlanders, and Birnam for the 5th (Perthshire Highland) Volunteer Battalion Royal Highlanders.

Antiquities.—The antiquities of Perthshire are both numerous and interesting, but for anything beyond a brief mention of the most important, reference must be made to the articles on the various parishes and towns. Caledonian cairns, standing stones, cromlechs, and stone circles are found scattered over the entire county; and there are famous rocking-stones at Abernethy, Dron, and Kirkmichael. There is a vitrified fort on Craig Rossie, one of the Ochils; and on Castle Law there are the remains of what is said to be a Scandinavian camp, 500 feet in diameter. But by far the most important military antiquity is the famous Roman camp at ARDOCH, the largest of the kind in the kingdom. There are other Roman camps at Fendoch, Dalginross, Fortingall, and Dunkeld; and there are various stretches of Roman road more or less distinctly traceable in different regions. The curious high-pitched bridge across the Tay at Aberfeldy is an interesting specimen of the engineering of General Wade, of road-making fame. The cylindrical tower at Abernethy is the most interesting of the old watch-towers. There are localities and objects traditionally associated with King Arthur at Meikle, with Fingal at Glenalmond, and at Monzie and Killin, and with Ossian at Monzie and in Glen Beg. The quondam town of BERTHA is separately noted. At SCONE is the historic palace, and also the Boot-hill. Among the interesting castles, some now in ruins, are Macbeth's on Dunsinane Hill, Huntingtower or Ruthven, Castle-Campbell, Garth, Doune, Elcho in Rhynd, Drummond, Blair Athole, Kinclaven, Moulin, and Glasclune. The cathedrals at DUNBLANE and DUNKELD are described under those towns; other ecclesiastical and religious institutions were the collegiate churches of Methven and Tullybardine;

and abbeys or priories, etc., at Scone, Inchaffray, Inchmahome, Abernethy, Coupar-Angus, Strathfillan, Elcho, and Loch Tay.

History.—The ancient inhabitants of Perthshire were known as the Daranii, Horestii, etc., and the names of the Caledonian 'towns' of Alaunea on the Allan, Lindun near Ardoch, Victoria on the Ruchill, and Orrea on the Tay, have been recited by antiquarians. The county was traversed by the Romans under Agricola and Severus, and on their retirement became chief centre of a Pictish kingdom with capitals at Abernethy and Forteviot. A subsequent Scoto-Saxon monarchy held its seat at Perth and Scone; and the former of these places became, as we have seen, the capital of modern Scotland, and remained so till 1482. Most of the history of the county centres in PERTH, with the exception of the obscure feuds of the Highlands clans. The chief battles fought within the limits of the shire are Mons Grampius in A.D. 86 (see GRAMPAINS), where Agricola won a victory; Luncarty, where the Danes were defeated by Kenneth III. in 990; Methven, 1306; Dupplin, 1332; defeat of the Covenanters by Montrose at Tibbermore, 1645; Killiecrankie, 1689; and Sheriffmuir, 1715; while in 1745-46 the county was deeply involved in the proceedings of the rebellion. The ancient jurisdictions have already been mentioned; it only remains to say that Monteith was a stewardry, Breadalbane a bailliary or separate jurisdiction of its earls, Strathearn a stewardry, Methven a separate regality, and Athole a regality of very large extent. Since the abolition of hereditary jurisdictions in 1747, the sheriff, with his substitutes, has exercised jurisdiction over the county.

Literary Associations.—The romantic character of Perthshire scenery has attracted much attention from poets and novelists. Shakespeare's play of *Macbeth* has immortalised Birnam and Dunsinane. Sir Walter Scott lays the scene of *The Lady of the Lake* at Loch Katrine and the Trossachs; and much of *Rob Roy* is transacted in the same SW corner of the shire. Many of the scenes of *Waverley* are also laid in Perthshire; and Craighall claims to be the chief prototype of 'Tullyveolan' in that novel. Some of Burns's most beautiful lyrics have had a Perthshire inspiration; and the *Birks o' Aberfeldy*, *The Humble Petition of Bruar Water*, *Allan Water*, *On Scaring some Waterfowl in Loch Turrit*, are among the best known. The *Braes o' Doune* and *Braes o' Balquhiddier* have also been celebrated in poetry; and Mallet has sung *The Birks o' Invermay*. Many Jacobite songs have reference to Perthshire, not the least noticeable being James Hogg's *Cam' ye by Athole*. The Baroness Nairne's beautiful ballad *The Auld House* was written in the old House of Gask. The incident which gave rise to Wordsworth's poem *Stepping Westward* occurred at Loch Katrine.

See James Robertson, *General View of the Agriculture of the County of Perth* (Perth, 1799); vol. x. of *The New Statistical Account* (Edinb. 1845); *Perthshire Illustrated* (Lond. 1844); John Dickson, 'Report on the Agriculture of Perthshire,' in *Trans. Highl. and Ag. Soc.* (Edinb. 1868); J. C. Guthrie, *The Vale of Strathmore* (Edinb. 1875); P. D. Drummond, *Perthshire in Bygone Days* (Lond. 1879); W. Marshall, *Historic Scenes in Perthshire* (Edinb. 1830); T. Hunter, *Woods, Forests, and Estates of Perthshire* (Perth, 1883); R. S. Fittis, *Illustrations of the History and Antiquities of Perthshire* (Perth, 1874), *Perthshire Antiquarian Miscellany* (1875), *Historical and Traditional Gleanings Concerning Perthshire* (1876), *Chronicles of Perthshire* (1877), *Sketches of the Olden Times in Perthshire* (1878), *Book of Perthshire Memorabilia* (1879), and *Recreations of an Antiquary in Perthshire History and Genealogy* (1880); A. H. Millar, *Castles and Mansions of Perthshire* (1890); besides works cited under DUNKELD, INCHAFFRAY, INCHMAHOMIE, KEIR, MONTEITH, PERTH, and SCONE.

Peterculter, a parish of SE Aberdeenshire, containing Cults, Murtle, Milltimber, and Culter stations on the Deeside branch (1853) of the Great North of Scotland railway, 4, 5½, 6½, and 7¾ miles WSW of Aberdeen.

There is a railway sub-post office of Peterculter, with money order, savings bank, and telegraph departments. It is bounded N by Skene, NE by Newhills, E by Old Machar, S by Banchory-Devenick and Maryculter, SW by Drumoak, and W by Echt. Its utmost length, from west to east, is 8 miles; and its utmost breadth, 4 miles. The former detached portion of the parish situated at Bieldside was in 1891 united to the main portion by the Boundary Commissioners, who transferred to Peterculter the intervening Deebank detached portion of the Kincardineshire parish of Banchory-Devenick, and also the two districts in Aberdeenshire that were common to the parishes of Banchory-Devenick and Peterculter. By this transfer all Banchory-Devenick north of the Dee has become part of Peterculter; but by another Order of the Commissioners, which came into force a year later, the small part of Peterculter and of Aberdeenshire situated at Inch of Culter, south of the Dee, was transferred to the parish of Maryculter and to the county of Kincardine. The DEE, curving 7 miles east-north-eastward along all the southern boundary, is joined at the parish church by LEUCHAR BURN, which flows 6½ miles south-eastward along the Skene horder and across the interior. The Leuchar itself is fed by Gormack Burn, tracing 3 miles of the Drumoak boundary, and below its influx is often known as the Burn of Culter. The surface declines along the Dee to 50 feet above sea-level, and rises thence to 322 feet at Eddieston Hill, 450 at Beins Hill or the Weather Craig, and 706 at Kingshill Wood. Gneiss is the predominant rock in the eastern and northern portions of the parish, granite in the western; and the latter has been largely quarried at Anguston. In the E the soil is sandy or gravelly, with a mixture of vegetable earth; whilst in the arable parts of the other districts it is variously a red earth or clay, a thin sandy soil on gravel and rock, and a mixture of black earth or reclaimed moss and clay. Nearly one-sixth of the entire area is under wood, plantations chiefly of larch and Scotch firs; and about two-thirds are in tillage, a good deal of swampy and moorish land having been reclaimed in the course of the last half century. In the parish are situated the Culter Paper Mills (1751). Cults is a modern village with some handsome villas, chiefly the residences of Aberdeen merchants. NORMANDYKES, the chief antiquity, is noticed separately, as also are the mansions of COUNTESSWELLS, CULTER, and MURLE. Peterculter is in the presbytery and synod of Aberdeen; the living is worth £190. The parish church, originally dedicated to St Peter and built in 1779, stands close to the Dee's left bank, near Culter station. It was enlarged and renovated in 1895. Nearly 2 miles to the N is Peterculter Free church; and three public schools, Countesswells, Craigton, and Eddieston, and Cults private endowment school, with respective accommodation for 57, 180, 89, and 154 children, have an average attendance of about 40, 165, 60, and 130, and grants of nearly £35, £165, £50, and £110. Pop. (1881) 1908, (1891) 3629.—*Ord. Sur.*, shs. 77, 73, 67, 1871-74.

Peterhead, a parish containing a town of the same name in the NE of Aberdeenshire, and in the extreme E of the Buchan district of that county. The old name was Peterugie, which was exchanged for the present one about the end of the 16th century. It is bounded NE by St Fergus, E by the North Sea, SSW by Cruden parish, and W by the parish of Longside. The boundary along the NE is formed for 4½ miles by the river Ugie—whence the old name of the parish—and here, as well as to the E, the boundary is natural; on the SSW and partly on the W it is artificial. The shape of the parish may be roughly described as a parallelogram with very irregular sides except on the SSW, where it is almost straight. The greatest length, from NW, at the point where the boundary line of St Fergus quits the Ugie NW of Roundhillcock, to Cave o' Meachie on the coast on the SE, is 6½ miles; the greatest breadth, a line at right angles to this, from North Head at the town of Peterhead to Mill of Dens on the SW, is 4½ miles; and the area is 9449·267 acres, inclusive of

235·620 foreshore and 44·055 water. The height of the surface rises from sea-level along the eastern border westward with irregular undulations to Cowsrieve (229 feet) and Black Hill (350), and another rising-ground turns eastward to the shore at Stirling Hill (209), in the extreme SE of the parish. Near the centre of the sea-coast is the conical Meethill (181 feet). The coast, following the larger windings, measures about 7½ miles, and from it the promontories of Peterhead, Salthouse Head, and Buchan Ness project, these forming the most easterly points of Scotland. Between the point occupied by the town and Salthouse Head is Peterhead Bay, fully ¾ mile wide across the mouth, and ¾ mile deep, with rocky and shingly shores. Between Salthouse Head and Buchan Ness is Sandford Bay, 1 mile wide across the mouth, and ½ mile deep, and with a considerable portion of its shore formed by a fine sandy beach. Near the south-eastern point, however, a line of cliffs pierced by numerous chasms and caves begins and continues from Buchan Ness till the southern boundary of the parish is reached. Only a small portion of the area is under wood, and there are about 100 acres of bare rock and 400 of moory and mossy ground; but the rest is all under cultivation, the soil varying from sand to rich black loam and stiff clay. The underlying rocks are granite or granitic, and are extensively quarried, the red varieties, so well known commercially as 'Peterhead granite,' being largely used for ornamental purposes and for monuments. Upwards of 35,000 tons of this stone, chiefly in large blocks, were used in the construction of the London Docks. The drainage is carried off by a few rivulets flowing to the Ugie or directly to the sea. Old Craig or Ravenscraig Castle, a fine old ruin with great thickness of wall (9 feet), is on the bank of the Ugie. It was the seat of the Cheynes, who by marriage became connected with the Keiths of Inverugie; and James IV. in 1491 granted to Sir Gilbert Keith of Inverugie the superiority of the lands of Tortastoun, Buthla, the 'Scottis Myln,' and the rock commonly called the Ravinniscraig, and further given him permission to erect on the last a castle or fortalice, with battlements, machicoling, portcullis, and drawbridge, and all other defences that might be found necessary. Boddam Castle, on the coast near Buchan Ness, was the seat of another branch of the same family, the Keiths of Ludquharne, Baronets of Nova Scotia; and the Earls-Marischal, who had their castle at Inverugie in the parish of St Fergus to the N, ½ mile E of Ravenscraig, were the founders and original superiors of the town. After their forfeiture part of the property was purchased by a fishing company, whose affairs having become embarrassed, it was again sold in 1728 to the Governors of the Merchant Maiden Hospital in Edinburgh. This institution, having purchased another portion of the Marischal estate from the York Buildings Company in 1783, is now superior of the town and proprietor of the adjacent estates. The annual rental of these properties is now probably about half the total amount originally paid for them. There are traces of Picts' houses near Boddam, and the Meethill seems, from its name, to have been latterly the Moat-hill or seat of heronial jurisdiction. At an earlier period it must have been a sepulchral mound, for when the foundation of the tower on the top was being dug, an urn and some human remains were found. The tower by which the hill is surmounted was erected in honour of Earl Grey after the passing of the Reform Bill. The landward industries are farming, hrickworks, 1 mile S of the town at Invernettie, and 2½ miles W near Downiehill, a distillery at Invernettie, granite working, and several grain mills. The parish is traversed by the coast road which passes from the town of Peterhead southward by Boddam to Ellon, and thence to Aberdeen, and northward by a road to Fraserburgh; and by another main road which passes from the town westwards by New Pitligo to Banff. During the period of railway speculation a line was projected to pass from Aberdeen to Peterhead, and thence along the whole S coast of the Moray Firth, but the scheme fell to the ground like so many others in the crash that

followed the railway mania. The line subsequently formed northward from Aberdeen passed inland by Iuverurie and Huntly, and the parish had no railway communication till 1862, when the Formartine and Buchan section of the Great North of Scotland system was extended through the northern portion to the town of Peterhead. There are also stations at Newseat and Invergie, the former 40½ and the latter 42½ miles from Aberdeen. In 1894 a branch line was begun from Ellon to Boddam in the S of the parish. There are a number of small properties, and the chief residences are Sandford Lodge, Invernettie Lodge, Dens, Meet-hill House, Blackhouse, Balmoor, Richmond, Cock-law, Berryhill, and Ellishill House. Besides the town of Peterhead the parish contains the fishing villages of Boddam, Burnhaven, and Buchanhaven, which are all separately noticed, as are also Buchan Ness and the lighthouse there. The parish was first known as Invergie of St Peter to distinguish it from Invergie of St Fergus on the opposite bank of the Ugie, then as Petergie, and finally as Peterhead. Up to 1641 it included Longside, but that parish was then disjoined on account of 'the wydnes of the said parochine [of Peterhead] and of the many comunicantis within the samen.' It is in the presbytery of Deer and the synod of Aberdeen, and the living is worth £469 a year. It includes the *quoad sacra* parishes of Blackhill, Boddam, and East Church, the latter connected with the town, where the churches are noticed. The landward school board has under its charge the four public schools of Blackhills, Boddam, Burnhaven, and Tortorston, which, with respective accommodation for 130, 480, 237, and 101 children, have an average attendance of about 75, 280, and 75, and grants amounting to over £70, £270, £105, and £65. Pop. of parish, inclusive of the burgh and the villages, (1801) 4491, (1831) 6695, (1861) 9796, (1871) 11,506, (1881) 14,257, (1891) 15,830. Of the whole population 8562 were in the ecclesiastical parish proper, 5000 were in East Church *q. s.*, 404 were in Blackhill *q. s.*, and 1864 in Boddam *q. s.*—*Ord. Surv.*, sh. 87, 1876.

Peterhead, a parliamentary burgh, a head-port, and the chief town in the Buchan district of Aberdeenshire, occupying a peninsula in the NE of the parish just described. It is one of the terminal stations (the other being Fraserburgh) on the Formartine and Buchan section of the Great North of Scotland railway system, and is by rail 44½ miles NNE of Aberdeen, but by road only 33. The peninsula, which shares with Buchan Ness the distinction of being the most easterly land in Scotland, is about 7 furlongs from E to W and 6 furlongs from N to S, and is almost wholly occupied by the town. Up to the latter part of the 16th century the only portion of the town existing was the fishing village of Keith-Inch, which stands on the extremity of the peninsula, and is separated from the rest of the place by the harbour, the isthmus that at one time formed the connection having been pierced in the course of harbour improvements. Immediately W of the harbour and along the N shore of Peterhead Bay is Peterhead proper, which passes farther W still into the suburbs of Ronheads (N) and Kirktown (W), and the parliamentary boundary also includes the village of Buchanhaven on the NW. The principal street in Keith-Inch extends from NE to SW, and is called Castle Street. The principal streets in the rest of the town are Broad Street and Marischal Street, running westward from the harbour and at right angles to it; Queen Street and Longate crossing these from NNW to SSE; but there are many other well-edified thoroughfares. The appearance of the buildings is somewhat peculiar, the houses being built of the granite found in the neighbourhood, pick or axe dressed and close-jointed.

Somewhat isolated by its position, the town has but little history. Prior to the Reformation the land on which the town stands, together with a considerable extent of adjoining country, belonged to the abbey of Deer; but in 1560 it was granted by Queen Mary to Robert Keith, son of the fourth Earl Marischal, and

passed to the Earl's nephew and successor, George, by whom in 1593 the modern Peterhead was founded, the village being created a burgh of barony. At this time the inhabitants of Keith-Inch are estimated to have numbered only 56, and the feuars to whom the town's charter was granted were only 14, most of them seemingly fishermen. Some of the older houses still remain. During the troublous times in the first half of the 17th century the people, as was necessary, took the same side as the Keiths, and indeed in 1642 the place was highly favoured as being the scene of a supernatural hint of troubles to come, for 'About the 5th of November, in ane seamanis house of Peterheid there was hard, upone the night, beating of drums, uther tymes sounding of trumpets, playing on pifferis, and ringing of bellis, to the astonishment of the heireris. Trubles follout.' In 1715 the people again followed the Marischal fortunes, and the Chevalier St George, after finding himself unable to land at Montrose, thought Peterhead a fit place for his purpose and came ashore here, but did not make himself known; and 'he and his five companions having lodged ane night in the habit of sea-officers at Peterhead and another at Newburgh, a house of the Earl Marischal, on the twenty-fourth [of December] they passed *incognito* through Aberdeen with two baggage horses, and at night came to Fetteresso, the principal seat of the Earl of Marischal.' In 1720, with the other forfeited estates of the Earl Marischal, the town was sold to the York Buildings Company, on whose break-up six years afterwards it was purchased for £3000 by the governors of the Edinburgh Merchant Maiden Hospital, who are still the superiors. At one time Peterhead had some repute as a watering-place, with both baths and mineral wells, but the reputation is now considerably gone. The mineral waters of Peterhead were reckoned about 1680 as one of the six notable things in Buchan; and previously, in 1636, Andrew More, professor of physic in King's College, Aberdeen, had written in their favour. The most famous of the wells is the Wine-well, on the S of the town, where the water is very strongly impregnated with carbonic acid, muriate of iron, muriate of lime, and muriate of soda. There are two very good baths. In the neighbourhood of the town, at a height of 20 or 30 feet above the level of the sea, fossil shells in great quantities, and of various kinds, are to be found. A vivid description of Peterhead at the beginning of the 19th century is given in John Skelton's *Crookit Meg* (Lond. 1880).

Public Buildings, etc.—The Town Hall, at the W end of Broad Street, was built in 1788, and has a spire 125 feet high, and an illuminated clock. The chief public hall, the Music Hall, founded with masonic honours in 1872, is a large and beautiful building with upper and lower halls, and smaller halls and ante-rooms. The Courthouse, a handsome building in Queen Street, was built in 1869-70, at a cost of £2600, from designs by Messrs Peddie & Kinneir. In the centre of Broad Street is the Market Cross, which was erected after the town was made a parliamentary burgh by the Reform Bill of 1832. It is a granite pillar, Tuscan in style, and surmounted by the arms of the Earls Marischal. A monument to Field-Marshal Keith (younger brother of the Earl who was forfeited in 1715), who afterwards rose to eminence in the Prussian army under Frederick the Great, was erected in 1869 in front of the Town Hall, the statue being presented by the King of Prussia. It is a copy in bronze of that erected to the memory of the Marshal in Prussia. On the pedestal, which is 8 feet high, is the inscription: 'Field-Marshal Keith, born at Invergie, 1696; killed at the battle of Hochkirchen, 14th October 1758. The gift of William I., King of Prussia, to the town of Peterhead, August 1868. *Probus vivit, fortis obit.*' A cemetery, laid out in 1868-69, contains a Runic cross of polished granite, 14 feet high. The parish church, at the W end of the Kirktown, was built in 1803, and has a tower, lantern, and spire rising to a height of 118 feet.* It was remodelled internally in 1894. The East *quoad sacra* church contains 700 sittings. The Free church, in St Peter

Street, was built soon after the Disruption, and is a substantial building with Tudor features containing 1146 sittings. There is also another Free church—South Church—erected in 1872. The U.P. church in Charlotte Street, built in 1858 and First Pointed in style, contains 500 sittings. It superseded a former church erected in 1800. The Congregational church (1870) is a plain building with 450 sittings. The Methodist church, in Queen Street (1857), superseded an old church, and has about 200 sittings. There is also a Baptist meeting-house in King Street. The Episcopal church (St Peter) in Merchant Street, built in 1814 and containing 675 sittings, is a 'Churchwarden Gothic' building, with a nave and an apsidal sanctuary. The organ was erected in 1867. The Roman Catholic church (St Mary), in St Peter Street, is a good Early Pointed edifice of 1851, containing 200 sittings. The following eight schools, the first six of which are public, have accommodation, average attendance, and approximate Government grants as follows:—Academy (518, 345, £385), Buchanhaven (156, 125, £115), North (568, 230, £225), Female (550, 310, £300), Infant (316, 320, £270), North Infant (216, 180, £155), the Free church female school (460, 455, £460), and St Peter's Episcopalian school (273, 295, £255). Of these the Academy was founded on 15 June 1846, it was stated, 'for affording the means of a liberal education to all classes of the inhabitants.' There is also the Institute, a private school.

Harbour and Trade, etc.—The port of Peterhead, with its two harbours, is one of the most valuable on the E coast of Scotland, the peninsula at the extremity of which it is situated being often the first land reached by vessels arriving from the northern parts of continental Europe, or when overtaken by storm in the North Sea. Its claims for foremost consideration in the question of the erection of a great harbour of refuge on the E coast of Scotland were some years ago actively pressed on the Government; and in 1883 a memorial, signed by 7882 'shipowners, shipmasters, mariners, fishermen, and others connected with, and frequenting the east coast of Scotland,' was presented to the Treasury in support of these claims. The signatures were obtained all along the Scottish coast and from many parts of the English coast, even as far S as London, 131 of those who signed being members of Lloyds. The chief points urged were, '1st, its position with regard to the two great natural harbours of the Forth and Cromarty; 2d, its position on a part of the coast where ships and boats are placed in circumstances of the greatest danger; 3d, its position as regards the great fishing industry of Scotland; 4th, its position as a place of easy access and departure in any wind; and lastly, its position as regards extent, depth of water, the kind and quality of the anchorage ground to be enclosed, and its proximity to an abundant supply of material for its construction. In these aspects,' the petition continued, 'the South Bay of Peterhead is the best, if not the only site for a National Harbour of Refuge on the east coast of Scotland. It is situated midway between the Firth of Forth and Cromarty. The coast on either side of it is of an exposed and dangerous character; it is the centre of the great fishing industry on the east coast; it is an easy point of access and departure, being the most prominent headland on the coast; it is so formed by nature as to afford all the physical advantages of ample space, depth of water, and anchorage of the best description; and it is in the vicinity of extensive granite quarries from which inexhaustible supplies of material can be obtained for the construction of the works.' Petitions to the same effect were also presented by 30 insurance associations, shipping companies, etc., as well as by the Harbour Trustees, who pointed out that for 200 years all the nautical authorities were agreed that Peterhead had exceptional advantages as a site for a harbour of refuge; that a Royal Commission following a Select Committee's report in 1857 had recommended a grant of £100,000 in aid of a local contribution of £200,000, but that the

locality was too poor to raise such a sum; and that the port was connected with Norway by a submarine telegraph cable. In 1884 the report was issued of the sub-committee appointed to investigate the question of the most suitable place for a harbour of refuge on the east coast of Scotland, to be constructed by convicts; and in it the sub-commissioners declare that they 'have no hesitation in recommending that the harbour should be at Peterhead.' Thus recommended, Peterhead was selected as the site of the national harbour of refuge on the Scottish east coast, and the work was forthwith begun at the South Bay, where there is good anchorage. A large convict prison has been erected, and certain works in connection with the harbour of refuge have also been prosecuted on an extensive scale, and have given employment to a large amount of free labour. Much has also been done in the way of quarrying, etc., in connection with the breakwater.

From its natural advantages the harbour early attracted attention, and it is said that some of the engineers of Cromwell's army on visiting the place expressed great disappointment that they had not done so before fixing on Inverness as the site of their great northern fort, as they considered the situation of Peterhead very much better. But, however that may be, it is certain that the first parliament of Charles II, passed an Act 'for a contribution for repairing the harbours of Peterhead;' and later, we find one Henry Middleton, in Clerkhill, very diligent in harbour matters, and the port receiving in consequence the name of Port Henry. In 1705 there is an act of the Scottish parliament authorising voluntary contributions from all the churches of the three Lothians and west of the Forth for further repairs, and in 1729, and again in 1739, the Convention of Royal Burghs authorised a contribution from all royal burghs for the same purpose. These early harbours seem to have been to the N of those that now exist, but in 1773 the present South Harbour was commenced after designs by Smeaton, and it was deepened and otherwise improved in 1807 under an Act of Parliament that was then obtained. The North Harbour was begun in 1818, after designs by Telford, and was improved in 1821, 1837, and 1855. These are respectively 7 and 11 acres in extent, and at the entrance to each there is a lighthouse. Near the North Harbour is the recently constructed boat harbour of Port Henry, which was deepened in 1896, when new piers and jetties were constructed. From the nature of the place vessels in both harbours were often windbound for considerable periods, and a canal was formed between the harbours, so that vessels could be warped from the one to the other. It is spanned by a cast-iron swing bridge which cost £8000. In 1872-73 and 1875-76 fresh Acts of Parliament were obtained and new works carried out, and a middle harbour formed; while in 1894 was passed the Peterhead Harbours Act, the various objects of which are to authorise harbour works (the estimated cost of which is over £40,000), to construct a fish market, and to acquire a short line of railway at Peterhead. There are now three basins hewn out of solid rock and covering an area of 21½ acres. The depth of the basins varies from 12 to 18 feet at spring tides, but at medium low water is only 5 to 7½ feet. Off the North Harbour are two graving docks. The revenue has risen from £100 in 1800 £4000 in 1849, and £8260 in 1883, to £11,947 in 1895. The revenue can be applied only to the maintenance of the harbours, the payment of the interest on the debt, and the liquidation of the principal, no person or body of persons having any pecuniary interest in them. About half the revenue is derived from fishing-boats and half from general trade. The management is vested in the presence of the governors of the Merchant Maiden Hospital in Edinburgh, the provost of Peterhead, and 13 elected trustees. Prior to 1715, and again during the Peninsular war, the harbour was protected by small forts at the entrance, but these have vanished.

Peterhead was made a head-port in 1838, its limits extending southward to the mouth of the Ythan, and westward to the Powk Burn. It includes the sub-ports

PETERHEAD

or creeks of Boddam, Fraserburgh, Pittullie, and Roseheart. The number of vessels belonging to the port with their tonnage has been, at various dates, as follows:—

Year.	Vessels.	Tonnage.
1795	28	over 3,000
1837	82	11,022
1861	80	13,687
1875	70	9,916
1884	51	7,243
1896	34	2,327

Of these, in 1884, 6 vessels of 1274 tons, and in 1896 4 of 202 tons, were steamers. The Greenland seal and whale fishing has been carried on since 1788, when the first whaler was fitted out. Though it has been more vigorously prosecuted from Peterhead than from any other British port the trade has had great fluctuations. From 1788 till 1803 only 1 ship went to the north every year; from 1804 to 1814 there were from 2 to 7 every year; from 1814 to 1830 the number was from 8 to 16, and by 1857 this had risen to 32. Since then, however, it has again declined, till in 1884 there were only 9 vessels, and now, owing to the exhaustion of the Arctic fishing grounds, the industry is threatened with extinction. The following table shows the tonnage of vessels that entered from and to foreign and colonial ports and coastwise, with cargoes and in ballast, at various dates:—

	ENTERED.			CLEARED.		
	British.	Foreign.	Total.	British.	Foreign.	Total.
1866	42,504	3,894	46,398	34,783	380	35,163
1867	30,767	4,961	35,728	27,501	5,059	32,560
1874	67,344	11,808	79,152	70,454	10,815	81,269
1883	58,497	29,342	87,839	56,859	29,459	86,318
1896	78,346	47,089	125,435	77,285	47,818	125,103

Of the total 999 vessels of 125,435 tons, that entered in 1895, 195 of 39,042 tons were in ballast, and 853 of 92,228 tons were coasters; whilst the total 978 of 125,103 tons, of those that cleared, included 403 ships in ballast of 51,292 tons and 808 coasters of 85,290 tons. The principal exports are agricultural produce, herring, and other fish, oil, and granite; and the principal imports are timber, lime, coal, wool, salt, flour, iron, and soft goods.

Peterhead is also the centre of one of the twenty-seven fishery districts into which Scotland is divided, and embraces all the villages lying between Buchanhaven and Newburgh, both inclusive. To the district there belonged, in 1894, 336 first-class boats, 130 second-class boats, and 69 third-class boats, employing 1046 fishermen and boys, and of these to Peterhead itself there belonged 147 first-class, 40 second-class, and 35 third-class boats, with 430 resident fishermen and boys. In the same year the total number of persons employed in connection with the herring fishery in the district was 7324, the value of the boats employed was £63,826, and of the fishing gear £55,033. The number of boats actually fishing in the district, most of them from Peterhead itself, whether they are drawn by the possibility of getting in and out of the harbour at low water, was 580, and the number of barrels of herring caught by them 262,527, of which 194,550 were exported to the Continent, mostly to Libau, Königsberg, Danzig, Stettin, and Hamburg. The total number of cod, ling, and hake cured within the district in 1894 was 65,674. During the herring fishing season the population of the town is increased by from 3000 to 4000 individuals connected with this industry.

The manufacture of linen was once carried on, but is now extinct. A woollen manufactory was started in the Kirktown in the early part of the 19th century, and produced excellent superfine cloth. After languishing and disappearing for a time altogether, it was revived in 1854 by a company by whom the manufacture of woollens of different sorts is still vigorously prosecuted. The other industries, besides those mentioned in connection with the parish, are three saw-

PETERHEAD

mills, boatbuilding yards, ropeworks, granite polishing, and brewing.

Municipality, etc.—Under the superiority of the Governors of the Merchant Maiden Hospital the community acquired a separate government in 1774, and after the passing of the Reform Bill of 1832, and the subsequent Act of 1833, when the burgh became parliamentary, a keen dispute long existed whether the remaining portion of the moss-lands, commonage, and pasturage originally granted to the community by the Earl Marischal, fell to be managed by the baron-bailie and a committee of the feuars, or by the new magistrates; the finding was in favour of the community of feuars, who continue as a distinct body to manage their own affairs. Under the Burgh Police Act of 1892 affairs are managed by a provost, 4 bailies, and 7 commissioners. Water is brought in pipes from copious springs 2½ and 4½ miles distant, and a service reservoir was constructed in 1897 to contain 1,000,000 gallons. Gas is supplied by the commissioners, whose works are in Longate. The town has a post office with mouey order, savings bank, and telegraph departments, branches of the Commercial, North of Scotland, Town and County, and Union banks, a branch of the National Security Savings Bank, consulates for Denmark, France, Germany, Norway and Sweden, and Russia, and several hotels. The newspapers are the *Buchan Observer* (1862), published every Tuesday, and the *Peterhead Sentinel* (1856), which is published every Tuesday and Friday. The town having adopted the Free Libraries Act in 1890, the Free Public Library and Museum, a handsome structure, was erected in 1892 at the corner of Queen Street and St Peter Street, Mr Carnegie of Pittsburg having contributed handsomely to the building fund. The museum contains a great variety of specimens from the animal and mineral kingdoms, and a very complete collection of coins, the nucleus of the contents having been bequeathed by the late Mr Adam Arbuthnot. Among the other institutions may be noticed two masonic lodges, a reading society (1808) and a Mechanics' Institute (1836), both of them with libraries, that of the former numbering upwards of 5000 volumes, and that of the latter about 1000; several mutual improvement associations, a golf club, the Buchan Field Club, a lecture hall, and the usual religious and philanthropic associations. There are also public baths, an epidemic hospital, a coastguard station and naval reserve depot. A weekly market is held on Friday, and there are fairs on the Fridays before 26 May and 22 Nov. A sheriff court is held on the first three Fridays of the month for the parishes of Peterhead, Cruden, Slains, Old Deer, New Deer, Rathen, Longside, Crimond, Strichen, Fraserburgh, Lonmay, Tyrie, Aberdeen, Pitsligo, St Fergus, and Logie-Buchan. Justice of peace courts are held as required.

Peterhead unites with ELGIN, Banff, Cullen, Inverurie, and Kintore in returning a member to serve in parliament, and it is also the returning burgh for East Aberdeenshire. Parliamentary constituency (1895) 1646; municipal constituency 1946, including 300 females. Corporation revenue (1894-95) £690. Valuation (1884) £38,264, (1895-96) £44,830, plus £760 for the railway. Pop. (1801) 3264, (1831) 5112, (1841) 5158, (1851) 7298, (1861) 7541, (1871) 8621, (1881) 10,922, (1891) 12,915, of whom 5688 were males and 6507 females. Houses inhabited 2549, uninhabited 251, building 8. Of the total population 172 men and 116 women were connected with the civil and military services or with professions, 14 men and 696 women were employed as domestic servants, 470 men and 13 women were engaged in commerce, 660 men and 37 women were connected

Seal of Peterhead.

with agriculture and fishing, 1913 men and 592 women were connected with industrial handicrafts or were dealers in manufactured substances, and there were 2367 boys and 2346 girls at or under school age. See Peter Buchan's *Annals of Peterhead from its Foundation* (Peterhead, 1819).

Pettinain, a village and a parish in the Upper Ward of Lanarkshire. The village is 3 miles S by E of Carstairs Junction (only 1½ mile in a straight line), and 3½ miles NNW of Thankerton, under which it has a post office.

The parish is bounded N by Carstairs and Carnwath, E by Libberton, SE by Covington, SW by Carmichael, and W by Lanark. Its utmost length, from E to W, is 3½ miles; its utmost breadth, from N to S, is 2½ miles; and its area is 3997½ acres, of which 98 are water. The CLYDE winds 2½ miles north-north-westward along all the eastern boundary, 4½ miles west-south-westward along all the northern, and 1½ mile southward along all the western. It thus has a total course here of 8½ miles, though the point where it first touches and that where it quits the parish are only 3½ miles distant as the crow flies. A result of various changes of its channel is that five little peniciles of Pettinain parish are now situated on its right bank. A considerable tract of haugh land, about 615 feet above the sea, adjoins the river, so low and level as to be covered with water at the time of freshets, and then having the appearance of a lake. The ground rises by a gentle acclivity, and with unequal surface from the haugh; and a ridge of hills extends across the SW district, from the vicinity of the river into Covington, rising to an extreme altitude of 1131 feet, and having three summits called Cairn Grife, Westraw Hill, and Swaites Hill. The rocks of this hill ridge are porphyry and sandstone, the former an excellent road-metal, but the latter ill-suited to building purposes. The soil of the low grounds is variously recent alluvium, rich loam, sharp gravel, and poor sand. That of the higher grounds is generally of a moorish character, incumbent on till. About 2435 acres are in tillage, 1107 are pastoral, and 366½ are under wood. Thirteen-fourteenths of the entire rental belong to Sir Windham Carmichael Anstruther, Bart. of CARMICHAEL, whose uncle in 1817 inherited the estate from the last Earl of Hyndford. Its mansion, Westraw House, now a farmhouse, 5 furlongs W of the village, was the Earl's favourite residence, and was probably built by his ancestor, the first Lord Carmichael, towards the middle of the 17th century. About 1780 the ruins of a house were pointed out at Clowburn, at which tea is said to have first been introduced to Scotland. It was brought from Holland, according to tradition, by Sir Andrew Kennedy, whose wife succeeded to the lands of Clowburn in 1677, and who, being 'Conservator of the Scotch Nation' at Campvere, had received it as a present from the Dutch East India Company. On the highest ground in the S of the parish are vestiges of an ancient British fort, Cairn Grife, whose two concentric ramparts, 5 to 7 yards apart, enclose an area of 100 square feet. Pettinain is in the presbytery of Lanark and the synod of Glasgow and Ayr; the living is worth £214. The chapel of 'Pedyneane,' originally dependent on Lanark, was granted to Dryburgh Abbey by David I. about the year 1150. The parish church, on the site of the ancient chapel, has a heltry bearing date 1696, with the inscription, 'Holiness becomes God's House.' As repaired in 1820, it contains 234 sittings. The public school, with accommodation for 64 children, has an average attendance of about 30, and a grant of over £36. Valuation (1884) £4800, 10s., (1893) £4275, 9s., including £777 for railway. Pop. (1801) 430, (1821) 490, (1841) 416, (1861) 407, (1871) 366, (1881) 360, (1891) 259.—*Ord. Sur.*, sh. 23, 1865.

Petty, a parish on the S side of the Moray Firth, in the extreme NE of the county of Inverness. It is bounded N by the parish of Ardersier, for ¼ mile at the NE corner by the parish of Nairn, E and SE by the parish of Croy, SW by the parish of Inverness and Bona,

and NW by the Moray Firth. The boundary is artificial except along the Firth, and on the N, where it follows the course of a small stream. The greatest length, from the point on the NE between Lambhill and Blackcastle where the parish and county boundaries reach the coast road from Inverness to Nairn, to the point on the SW where the line crosses the same road near Culloden Brickworks, is 7¼ miles; the average breadth is about 2 miles; and the area is 10,686 acres, inclusive of 877 of foreshore and 33 of water. Until 1891 a small part of the parish, embracing 321 acres, extended into Nairnshire, but in that year the Boundary Commissioners extended the Inverness-shire boundary so as to include the whole parish of Petty. A central hollow, from 30 to 40 feet above sea-level, passes along the parish from NE to SW, and from this the surface slopes to the SE to a height varying from 150 feet at the N end to over 300 near the S end, along the ridge above Culloden Moor. Between the central hollow and the sea in the N, there is a strip of flat ground sloping gradually to the shore; in the centre and S the ground slopes up to a height of over 100 feet, and then down to a terrace along the 50-feet contour, from which there is a rapid fall to the shore. The coast is low and sandy and with a very gentle slope, so that a considerable amount of foreshore is uncovered at low water. At the W corner of the parish the triangular Alterlie Point projects nearly ½ mile beyond the ordinary coast-line, and N of it is a small bay, sometimes called Petty Bay and sometimes Alterlie Bay. Almost the whole surface is under cultivation or woodland, but there is mossy and benty land extending probably to nearly 1000 acres. There are about 1800 acres under wood. The soil toward the sea is light loam and clayey sand, but along the hollow and on the south-eastern slope it is much stronger and very fertile. The underlying rock belongs to the upper Old Red Sandstone system. In the NE about half of Loch Fleming (4 by 1½ furl.) lies within the parish, and 1½ mile SW of it is the small Lochan Dinty. The drainage is carried off by a number of small streams, those in the S uniting and flowing into the sea at Petty Bay, and those in the centre and N uniting and flowing into the sea at the extreme N corner of the parish. The mansions are Castle Stuart (1¼ mile WSW of Dalcross station), Flemington (¾ mile NE of Fort George station), and Gollanfield (7 furlongs ENE of Fort George station). The first is a seat of the Earl of Moray, and is a fine example of the castellated mansion of the early part of the 17th century. Traditionally the date of its erection is earlier, some making it a residence of James IV., others assigning it to the Regent Murray; but the building bears date 1625, and Sir Robert Gordon, in his *History of the Earldom of Sutherland*, says that in 1624 the Clan Chattan went 'to ano hous which he [the Earl] hath now of late built in Pettie called Castell Stuart, they drive away his servants from thence, and doe possess themselves of all the Earl of Moray his rents in Pettie.' This date is also borne out by the style of the building, a large high-roofed structure of several storeys, with the great hall and principal rooms in the upper part. In front there is a square projecting tower at each end. That to the W, which contains the main staircase, seems somewhat older than the rest of the building. Formerly the castle was surrounded by a fine park and an orchard noted for its greens; but the trees were all cut down about 1835, the park ploughed up, and the roof of the building removed, so that had not the proprietor's attention been called to it the whole would soon have been a ruin. It was then repaired, and is now used as a shooting-box. Lying close to the olan grounds and in possession of the Earls of Moray, whom the Highlanders looked on as foes, Petty was much exposed to inroads for plunder. One such attack has been already noticed, and other two that occurred early in the 16th century are known as the 'Herschips of Petty.' The first was in 1502, when Sir James Dunbar of Cumnock, and his brother, David Dunbar of Durris, 'and thar complices epulyet the landis of Petty and Geddes,'

as well as of 'Halhill, the Fischertone and Hurlehurst,' though for what reason does not seem certain. Elizabeth, the daughter of Sir James Dunbar, was married to John Ogilvie of Strathnairn, who resided at Halhill Castle (which is by some supposed to have stood on the site of the present Castle Stuart, but by others is placed, with more probability, on the rising ground near the centre of the sea coast of the parish, at the school), which was, in 1513, the scene of the second herschip of Petty, the leaders of the plunderers on this occasion being the captain of Clan Mackintosh and Rose of Killravock. Behind Castle Stuart is the church of Petty, and on the bank to the W of it are two large tumuli or moat hills. In the churchyard many of the chiefs of Mackintosh lie buried, and the procession at the funeral of Lachlan Mackintosh, who died in 1731, reached from Dalcross Castle to the churchyard, a distance by road of about 4 miles. In the Bay of Petty close at hand is the famous boulder known as 'the travelled stone of Petty.' It is from 6 to 7 feet long, from 5 to 6 feet wide, and about 6 feet high, and with a projecting ledge all round it near the lower side. It originally served as a march stone between the properties of the Earl of Moray and Forbes of Culloeden, but was, during the month of February 1799, moved about 260 yards to the WNW. A severe frost during that month had caused an accumulation of about 18 inches of ice over most of the bay, and this, during the night of the 19th, was capable of lifting the mass of stone so as to allow it to be floated by the tide, aided by a powerful gale of wind, to its present position. (See a paper by Sir Thomas Dick Lauder in the *Memoirs of the Wernerian Society*, vol. iii.) Anciently in the possession of the powerful northerly family of De Moravia, the barony of Petty passed into the possession of the Earls of Moray till Archibald Douglas was forfeited in 1455, when it fell into the hands of the Crown. It was granted to Ogilvie of Findlater, who again disposed his interest to the Earl of Moray. The parish is traversed by the main road from Inverness to Nairn with a branch passing off at Newton near the SW end, and leading through the village of Campbelltown to the ferry at Fort George. The cross road from the SW end of Flemington Loch to Fort George is a portion of one of General Wade's military roads, and there are a number of good district roads. Railway communication is obtained by the Forres and Inverness section of the Highland Railway system which passes through the centre of the parish from NE to SW, with stations at Dalcross (6½ miles from Inverness) and at Fort George (9½ miles from Inverness and 3 from the Fort itself); while the Aviemore and Inverness section of the same railway, making here a deep bend to the NE, crosses the SE corner of the parish, previous to joining the main line near Culloeden station.

The parish contains a village of the same name near the church, with a post office under Inverness. Petty is in the presbytery of Inverness and synod of Moray, and is formed of the old parishes of Petyn and Bracholy, which were united after the Reformation, and the original church was dedicated to St Columba, and is said to have occupied the site of a Culdee cell. The present church, built in 1839, includes a portion of a previous church. The living is worth £257. The Free church is on the side of the road from Inverness to Forres, 1½ mile E by N of the parish church. Two public schools, East and West, with respective accommodation for 104 and 150 children, have an average attendance of about 115 and 85, and grants of nearly £100 and £70. The Earl of Moray is the largest proprietor. Pop. (1881) 1531, (1891) 1298, of whom 645 were females, and 524 Gaelic-speaking.—*Ord. Sur.*, sh. 84, 1876.

Pettycur. See KINGHORN.

Phantassie, an estate, with a mansion, in Prestonkirk parish, Haddingtonshire, ½ mile E by N of East Linton. It was the birthplace of George Rennie (1749-1828), the eminent agriculturist, and also of his brother John (1761-1821), the celebrated engineer. Its present owner is Mrs Mitchell-Innes.—*Ord. Sur.*, sh. 33, 1863.

Pharay, North, an island of Stronsay and Eday parish, Orkney, 7 furlongs W of Eday island, from which it is separated by the Sound of Pharay. It has an utmost length, from N by W to S by E, of 1½ mile; and an utmost breadth of ½ mile. A pastoral islet, the Holm of Pharay (6½ × 2 furl.), ¼ mile to the N, is separated from it by Lavey Sound. Pop. (1841) 67, (1861) 82, (1871) 83, (1881) 72, (1891) 58.

Pharay, South, an island of Walls and Flotta parish, Orkney, 4½ furlongs E of Hoy, 3¼ NW of Flotta, and 8½ S of Cava. It has an utmost length from NNW to SSE of 1½ mile, an utmost width of 7½ furlongs, and a maximum altitude of 139 feet above sea-level. Pop. (1841) 55, (1861) 45, (1871) 53, (1881) 68, (1891) 76.

Philiphaugh, a mansion in Selkirk parish, Selkirkshire, near the left bank of Yarrow Water, a little above its influx to the Ettrick, 3 miles WSW of Selkirk town. In 1528 Patrick Murray of Falahill, the grandson of the 'Outlaw Murray,' obtained a charter of the lands of Philiphaugh; his descendant, Sir J. F. P. Nesbitt-Murray, seventh Bart. since 1704 (b. 1842; suc. 1882), sold them in 1889 to W. S. Steel, Esq. The flat diluvial plain between the house and the town is celebrated as the scene of Montrose's defeat by Leslie on the morning of 13 Sept. 1645. Ettrick Water, just after the Yarrow's confluence, makes a gentle curve to the right, and stealing along the base of a lofty bank, on whose summit at one point stands the town of Selkirk, leaves on its left bank a beautiful haugh 400 to 500 feet above sea-level, which extends north-eastward from a cove-clad eminence called Harehead Hill (1046 feet) to some high ground on the margin of the stream, a little below Selkirk. This plain is Philiphaugh; it is about 1½ mile in length and ¼ mile in mean breadth, and being defended on the one side by the river with its bulwark-fashioned bank, and overhung on the other by a stretch of bold uplands, which intervene between the Yarrow and the Tweed, it possesses naturally, and on a grand scale, many of the securities and conveniences which were desiderated by the Romans in their camps. Montrose, after he had won six splendid victories over the Covenanters, was on his march southward to pour his conquering troops upon England, when Philiphaugh invited him to repose, and wooed him to destruction. Observing the advantageousness of the ground, he strengthened it with some trenches, and posted upon it his infantry, amounting to 1000 men; and seeing how near it stood to the town of Selkirk, he there quartered his 500 horse, and courted a night's freedom from a soldier's care. General Leslie, with his sturdy and high-spirited Covenanters, arrived at Melrose on the evening of Montrose's bivouac; favoured next morning by a thick mist, he reached Philiphaugh, and was in position for the onslaught before being descried by a single scout. Montrose was apprised of danger only by the yell which followed the tiger's leaping upon his prey; he knew nothing of Leslie's vicinity till the rattle of musketry announced his activity in the encampment; and when he reached the scene of conflict, he beheld his army dispersed and fleeing in irretrievable panic and confusion. After making a bold stand, a desperate but unavailing attempt to recover his lost fortunes of the hour, he cut his way through a body of Leslie's troops, fled up Yarrow and over the wild and lofty mountain-path of Minchmoor, and stopped not till he arrived at Traquair, 16 miles from the scene of action. His defeat produced at once conclusive advantages to the Covenanters, and ruin to the hapless cause of Charles I. in Scotland. Upwards of a mile SW of the present farm-stead of Philiphaugh, and overhanging the Yarrow immediately above its confluence with the Ettrick, there are still traces of an entrenchment thrown up by Montrose. Two miles farther up the Yarrow, close to the ruin of Newark Castle, is a field called Slain-man's-lee, in which tradition says the Covenanters, a day or two after the fight, put many of their prisoners to death. In Selkirk the house is still standing which was occupied by Montrose on the night of his ill-judged security; and in the centre of the battlefield is a small obelisk, inscribed, 'To the memory

of the Covenanters who fought and fell on the field of Philiphaugh, and won the battle there, 1645.—*Ord. Sur.*, sh. 25, 1865.

Philipstoun, a village in the W of Abercorn parish, Linlithgowshire, 3 miles E by N of Linlithgow, with a post office. To the NE of it is Philipstoun House, the residence of Lieut.-Col. James Hare of CALDER HALL (b. 1836; suc. 1878), the Earl of Hopetoun's factor.—*Ord. Sur.*, sh. 32, 1857.

Philorth, a mansion in Fraserburgh parish, NE Aberdeenshire, 2 miles S by E of the town. What looks to be the oldest part of it bears date 1666; but additions and alterations have been made from time to time, the latest in 1874. There are some fine old hardwood trees around the house, and extensive plantations have been formed since 1780. The estate has belonged to the Frasers since the latter half of the 14th century; and a prophecy, falsely ascribed to Thomas the Rhymer, predicts that—

'As lang as there's a Cock o' the North,
There'll be a Fraser in Philorth.'

In 1669 Sir Alexander Fraser of Philorth succeeded his cousin, Alexander Abernethy, as tenth Lord Saltoun; and his descendant, Alexander William Frederick Fraser, is present and eighteenth Baron Saltoun since 1445 (b. 1851; suc. 1886). See FRASERBURGH and SALTON.—*Ord. Sur.*, sh. 97, 1876.

Phladda. See FLADDA.

Physgill, a good old mansion, with fine plantations and some grand old trees, in GLASSERTON parish, SE Wigtownshire, 2 miles SSW of Whithorn.

Picts' Work Ditch. See CATRAIL.

Piehills, a village in Ruthwell parish, Dumfriesshire, 9½ miles WNW of Annan.

Piercetoun. See PERCETON.

Piershill Barracks. See JOCK'S LODGE.

Pike Fell. See EWES.

Piltanton Burn. See LESWALT.

Pinkie, an estate, with a mansion, in Inveresk parish, Edinburghshire, at the E end of the town of Musselburgh. Forming two sides of a quadrangle, Pinkie House is a château-like building of various dates. Its older part, a massive square tower, with picturesque corner turrets, was originally a country seat of the Abbots of DUNFERMLINE; and, so passing to Alexander Scton, first Earl of Dunfermline, by him was enlarged, repaired, and decorated in 1613. One may notice its noble 'Painted Gallery,' 96 feet long, whose roof is adorned with heraldic and mythological emblems in blue and red and gold; the so-called 'King's Room,' and a lofty chamber, its roof decorated with pendants, which is said to have been occupied by Prince Charles Edward on the night after Prestonpans. Among numerous portraits is one by Jameson of Sir Thomas Hope of Craighall. In front of the house is a lofty stone fountain of fine and elaborate architecture; and around it are beautiful old-fashioned gardens. The Princes Henry and Charles are said to have spent three years of their boyhood at Pinkie House. On the death of the fourth and last Earl of Dunfermline (1694), the estate passed to the first Marquess of Tweeddale, and by the sixth Marquess was sold in 1778 to Sir Archibald Hope of Craighall, Bart., whose descendant, General Sir William Hope, fourteenth Bart. since 1628 (b. 1819; suc. 1892), is the present proprietor. See vol. iv. of Billings' *Baronial Antiquities of Scotland* (1852), and vol. ii. of Small's *Castles and Mansions of the Lothians* (1883).

The battle of Pinkie arose out of an invasion of Scotland, in 1547, during the infancy of Queen Mary, by the Protector Somerset. News having arrived that an English army of 12,000 foot and 2000 horse was at Newcastle on its march to Scotland, a Scottish army of 30,000 men was hastily mustered to take post on Edmonston Edge, 2½ miles SW of Musselburgh, to stop the invaders and protect the capital. Somerset, on coming up, was supported by a fleet of 30 ships of war, and 30 transports laden with ammunition and provisions, lying in the firth opposite the mouth of the

Esk; and, drawing up his army on Falside Brae, 1½ mile E of Musselburgh, he extended his right over the grounds of Walliford and Drummore towards the sea. The Scottish position being too strong to admit of his assailing it, he firmly maintained his post, and awaited an attack. A body of the Scotch horse, 1500 strong, rushed down upon him on the 9th of September, at Edgebucklin Brae, at the E end of Musselburgh links, and threw away a great part of their strength in a useless skirmish; and all the rest of the Scottish army, under delusive notions on the part of their leaders, left their strong position next day, and defiled along the old bridge of Musselburgh, to close with the English on the E bank of the Esk. As they passed the bridge, and marched up the hill of Inveresk on the W side of the church, they were galled by cannon-shot from the English galleys in the bay, and lost the Master of Graham, eldest son of the first Earl of Montrose, and many of his followers. Descending eastward down a slope, they began to be sheltered from the shot, and, passing through the How Mire, which lies at the foot of the slope, and was then a morass, though now drained and cultivated, they saw the English army and the battlefield immediately before them, on a gently hanging plain which recedes from the How to the base of Carberry Hill and Falside Brae. The conflict which followed was tremendous, but had too many details, and is too well-known, to admit or to need minute narration. After four hours' sternly debated and general conflict, during which the Scots won achievements, but could not profit by them for want of sufficient horse, and the English could make no impression with their cavalry on the hedges of pointed spears which enclosed the antagonist foot battalions, the van of the Scots was somewhat driven in by a concentrated attack, and a body of Highlanders, who had forgotten their duty to plunder the bodies of the slain, mistook the retrograde movement for flight, flung down their arms, took to their heels, infected the Lowlanders with their panic, and drew the whole army after them in an indiscriminate race. The Scots ran towards the coast, towards Dalkeith, and towards Edinburgh; and in each direction they were hotly pursued by the English, and hewn down in vast numbers. 'With blode and slaughter of ye enemie,' says Patten, 'this chase was continued v miles in length westward fro the place of their stand- ing, which was in ye fallow felde of Undreske, untill Edinborowe parke, and well nigh to the gates of the toune itself, and unto Lyeth; and in breadth nie XIII mile from the fryth sandes up unto Daketh southwarde: in all whiche space the dead bodies lay as thik as a man may meette cattell grasing in a full plenished pasture. They ryvere ran al red with blode; soo that in the same chase wear counted, as well by sum of our men that sunwhat diligently did maike it, as by sum of them takè prisoners that very much did lament it, to have been slayne above XIII thousande. In all thys cumpos of grounde, what with weapons, armes, handes, legges, heddes, blode, and dead bodyes, their flight mought have easily been tractet to every of their IIII refuges.' Another account—quite sufficiently exaggerated—states the loss of the Scots in killed at 10,000, and that of the English at not 200.—*Ord. Sur.*, sh. 32, 1857.

Pinnmore, a mansion in Colmonell parish, Ayrshire, 6 miles NE of Colmonell village, and near Pinnmore station on the Girvan and Portpatrick section (1876) of the Glasgow and South-Western railway, this being 5 miles S by E of Girvan. Seated on a rising-ground, at one of the loveliest bends of the river Stinchar, and surrounded by beautifully wooded hills, it was a Scottish Baronial edifice of the 16th and 17th centuries; and, destroyed by fire in 1876, it was next year restored in a similar style of architecture. Its owner is Hugh Hamilton, Esq. There is a post and railway telegraph office of Pinnmore.—*Ord. Sur.*, sh. 7, 1863. See A. H. Millar's *Castles and Mansions of Ayrshire* (Edinb. 1885).

Pinwherry. See COLMONELL.

Piper's Grave. See DEWAR.

Piper's Heugh. See STEVENSTON.

Pirn, an estate, with a mansion, in Stow parish, Edinburghshire, on the right bank of Gala Water, 3 miles NNW of Stow village. Remains of a Roman camp are at Pirntaiton, 2 miles farther NNW, near Fountainhall station on the Waverley route of the North British railway.—*Ord. Sur.*, sh. 25, 1865.

Pitbladdo, an estate, with a mansion, in Cupar parish, Fife, 2 miles NNW of the town.

Pitcairlie, an estate, with a mansion, in Newburgh parish, Fife, 2½ miles N of Auchtermuchty. Its owner is Robert Cathcart, Esq. (b. 1833; suc. 1857).—*Ord. Sur.*, sh. 48, 1868.

Pitcairn or Pitcairngreen (Gael. *pitht-a-chairn*, 'hol-low of the cairn'), a village in Redgorton parish, Perthshire, near the left bank of the Almond, 1½ mile N of Almondbank station, and 4½ miles by road NW of Perth. Founded towards the close of the 18th century on the estate of Lord Lynedoch, and advantageously situated for water power, it was predicted, in a poem by Mrs Cowley, to become a rival to Manchester, but has long ceased, except for being associated, with places near it, in the works of a factory and two bleaching greens, to give promise of reaching any high destiny. Pitcairn-field, Bridgeton of Pitcairn, Cromwell Park, and Wood-end, are villages near it; and Pitcairnfield has bleaching works, Cromwell Park has bleaching works and a factory, Bridgeton of Pitcairn has a U.P. church, and Pitcairngreen itself has a Free church and a public school. The U.P. church was built in 1797, and contains 450 sittings.—*Ord. Sur.*, sh. 48, 1868.

Pitcairns, an estate, with a modern mansion, in Dunning parish, Perthshire, 5 furlongs ESE of Dunning village.

Pitcaithly, a place, with mineral wells, in Dunbarry parish, Perthshire, amid pleasant scenery, 1 mile SW of Bridge of Earn, and 4½ miles S of Perth. The wells have been known for their medicinal properties from time immemorial, but were not scientifically noticed till 1772. Five in number, they bear the name of the East, the West, the Spout, the Dunbarry, and the Southpark, and have all the same properties, differing from one another only in the quantity or proportions of their saline ingredients. They are esteemed useful in scrofulous, herpetic, and scorbutic complaints, and in cases of dyspepsia and general debility. A gallon of the water of one of them, according to analysis by the late Professor Thomson of Glasgow, contains 155·28 grains of chloride of calcium, 90·12 grains of common salt, 3·44 grains of chloride of magnesium, and 12·13 grains of sulphate of lime; while a gallon of another contains 168·58 grains of chloride of calcium, 117·84 grains of common salt, 4·16 grains of chloride of magnesium, and 25·92 grains of sulphate of lime. A large lodging-house, for the accommodation of visitors, stands beside the wells; but Bridge of Earn is the favourite lodging place of visitors, and is daily supplied with water from the wells for their use.—*Ord. Sur.*, sh. 48, 1868.

Pitcaple, a village and a mansion in Chapel-of-Garioch parish, Aberdeenshire. The village, standing near the right bank of the Ury, has a station on the Huntly section of the Great North of Scotland railway, ¾ mile WNW of Inveramsay Junction, 5 miles NW of Inverurie, and 21½ NW of Aberdeen. There is a post office, with money order, insurance, savings bank, and telegraph departments. The mansion, Pitcaple Castle, stands in the vicinity of the village between the railway and the Ury, and is partly an ancient edifice, which was in ruins towards the close of the 18th century, but was restored from designs by W. Burn about 1830, and again underwent extensive repairs in 1873. It is notable for the detention in it of the Marquis of Montrose on his way as a prisoner to Edinburgh, and for visits to it by James IV., Queen Mary, and Charles II. Its owner is Henry Lumsdon, Esq. (b. 1825; suc. 1859).—*Ord. Sur.*, sh. 76, 1874.

Pitcastle, a modern mansion in Logierait parish, Perthshire, near the left bank of the Tay, 5½ miles W by N of Ballinluig Junction.

Pitcorthie, a mansion in Carnbee parish, E Fife, 1¼ mile ENE of Colinsburgh.

Pitcruvie. See BALCRUVIE.

Pitcullo, an estate, with a mansion, in Leuchars parish, Fife, 4½ miles NNE of Cupar.

Pitcur, an estate, with a village and a ruined castle, in Kettins parish, Forfarshire. The village stands at the foot of the Sidlaw Hills, near the boundary with Perthshire, 3 miles SE of Coupar-Angus, and is sometimes called Ford of Pitcur. The ruined castle was the ancient baronial seat of the Hallyburtons, who acquired the barony of Pitcur in 1432; and the estate was sold in 1880 for £235,000 to the late Graham Menzies, Esq. Here, too, is one of the finest weems or cave-dwellings in Scotland. See HALLYBURTON House.

Piteadie Castle. See KINGHORN.

Pitempton, a village in Mains and Strathmartine parish, Forfarshire, 3 miles NNW of Dundee.

Pitferrane. See PITFERRANE.

Pitfichie Castle, a roofless ruin in Monymusk parish, Aberdeenshire, 1¼ mile NNW of Monymusk station on the Alford branch of the Great North of Scotland railway. It belonged, with a small estate around it, to the family of General Hurry, who figured in the times of the Covenanters; and it passed to the Forbes family, proprietors of the Monymusk estate.

Pitfrane, a mansion in Dunfermline parish, Fife, amid a fine park, 2¼ miles WSW of Dunfermline town. The estate belonged to the Halketts from 1399 to 1877, when Sir Peter Arthur Halkett, eighth Bart. since 1697, sold it, with Keavil, for £132,500 to Lawrence Dalgleish, Esq.—*Ord. Sur.*, sh. 40, 1867.

Pitfour, an estate, with a mansion, in Old DEER parish, Aberdeenshire, 2 miles W by N of Mintlaw. The mansion is a large square building, and the park and policies are of great beauty, £80,000 having been spent on improvements by the late Admiral Ferguson, whose son, George Arthur Ferguson, Esq. (b. 1835; suc. 1867), is the present proprietor.—*Ord. Sur.*, sh. 87, 1876.

Pitfour Castle, a mansion in St Madoes parish, Perthshire, 7 furlongs S by E of Glencarse station, on the Perth and Dundee section of the Caledonian railway, this being 6 miles E by S of Perth. Built by the present proprietor's great-grandfather, and enlarged by his father, it is a spacious quadrangular structure, standing on an artificial terrace, and surrounded by beautiful grounds. Its owner is Sir Edward A. Stewart-Richardson, fifteenth Bart. since 1630 (b. 1872; suc. 1895).—*Ord. Sur.*, sh. 48, 1868.

Pitheavlis. See PITTHEAVLIS.

Pitlochry, a prosperous village in Moulin parish, in the western parliamentary division of Perthshire, is situated on the left bank of the river Tummel, and has a station on the Highland railway, 6½ miles SE of Blair Athole and 12¾ NNW of Dunkeld. Partly from its position, in the midst of and near most romantic and picturesque spots in Highland scenery, and partly from its healthy situation and salubrious climate, the village annually attracts a large number of tourists, visitors, and invalids. Its development, which, as the census returns show, has been considerable, is entirely due to its two qualifications of picturesque situation and healthy climate. In the immediate vicinity are BEN VRACKIE (2757 feet), the pretty little waterfall known as the BLACK SPOUT, the village and castle of MOULIN, the Falls of TUMMEL, the junction of the Tummel and the Garry, the Bridge of Cluny, and the Pass of KILLIECRANKIE; while only a few miles off are BLAIR ATHOLE, Falls of BRUAR, Loch Tummel, KIRK-MICHAEL, ABERFELDY, DUNKELD, and other celebrated spots. A considerable number of houses for letting purposes have been built of late years, and Pitlochry has long ranked as a favourite summer resort. The most important provision for visitors has been the erection of two hydropathic establishments, the Athole and the Pitlochry.

The village consists mainly of one street, built along either side of General Wade's highroad between Dunkeld

and Blair Athole, but at the little bridge which spans a small burn tributary to the Tummel near the centre of the village another road leads uphill to several newer and shorter rows of houses. Till lately, Pitlochry had no Established church nearer than Moulin, though services were conducted in what is now the public school. But in 1884 there was erected, on an elevated site, a neat chapel of ease in the Norman-Gothic style, which cost £2000, and accommodates 468 persons. On an eminence E of the church is a Celtic cross (1889) to Dr Alexander Duff (1806-78), first missionary of the Church of Scotland to India, and afterwards of the Free Church, who was born in a neighbouring farmhouse. The neat Free church, on the slope overlooking the main street, was built to supersede the older structure raised at the Disruption in 1843, about a mile to the N, and afterwards used as a school. At the SW end of the village is the Gothic Episcopal church of the Holy Trinity (1853; enlarged, 1890; 200 sittings). A Baptist church, with 300 sittings, was erected in 1884. The Athole hydropathic establishment is a very large and striking building, and occupies an elevated site to the S of the town, commanding a lovely and extensive view. It was built in 1875 at a cost of over £100,000, and it is surrounded with tastefully laid-out grounds, extending to between 30 and 40 acres; access is obtained to it by an avenue which gradually ascends from the lodge on the level of the public road, and in it accommodation is provided for about 250 visitors. The Pitlochry hydropathic establishment was opened in 1890, and commands an extensive view of the surrounding country.

Pitlochry has a post office, with money order, savings bank and telegraph departments, branches of the Commercial and Union banks, and the Bank of Scotland, a savings bank, two hotels, and a gaswork. The railway station is both handsome and commodious; lawn tennis courts were opened in 1883; and a pretty fountain has been erected in the town to the memory of Colonel Butter, yr. of Faskally, who died in 1880. There are also the Atholl Horticultural Society, a company of rifle volunteers, a bowling club, reading and refreshment rooms, and recreation grounds; while in 1894 the first steps were taken towards the erection of a public hall and of the Barbour Institute buildings.

Though at one time spoken of as a centre of trade for Perthshire N of Strathtay, Pitlochry has but little commerce. There are fairs for cattle and horses on the Saturday before the first Wednesday of May, and on the third Wednesday (o.s.) of October; and for sheep on the third Tuesday of August. There are two distilleries, two sawmills, and a small tweed factory. An addition to the water supply was introduced in 1892 from Altassen Burn at an expense of about £3000. Pop. (1841) 291, (1861) 334, (1871) 510, (1881) 777, (1891) 1136, of whom 647 were females and 287 Gaelic-speaking. Houses (1891) inhabited 211, vacant 17, building 4.

Though now possessing comfortable and elegant houses, Pitlochry at no distant period was a mere rude Highland village, with only some two or three slated houses. Prince Charlie, on his way to Culloden, is said to have occupied what was at the time the mansion-house of the Pitlochry property. The parochial registers, whose first entry is dated 1707, mention that owing to the presence of the rebel army in 1745-46, public worship was suspended for several Sundays. The modern prosperity of the place dates from about 1845, when the Queen visited Blair Castle. Sir James Clarke, the royal physician, was struck by the character of the air and climate of the place, and began to prescribe to his patients a residence at Pitlochry. It is related that on one occasion one of the neighbouring landowners went to London to consult Sir James Clarke, and was assured of a cure if he spent some time at Pitlochry or its neighbourhood! Sir James Simpson, of Edinburgh, was also convinced of the wholesomeness of the air of Pitlochry.—*Ord. Sur.*, sh. 55, 1869.

Pitlour House, a mansion in Strathmiglo parish, Fife, 1½ mile N by W of the village. Its owner is William 1834

Baillie Skene, Esq. (b. 1838; suc. 1866).—*Ord. Sur.*, sh. 40, 1867.

Pitmedden House, a modern mansion, with a square corner tower, in Dyce parish, Aberdeenshire, 2 miles NNW of Dyce Junction. Its owner is George Thompson, Esq. (b. 1804), Provost of Aberdeen 1847-50, and Liberal M.P. for that city 1852-57.—*Ord. Sur.*, sh. 77, 1873.

Pitmedden House, a commodious modern mansion in Udney parish, Aberdeenshire, 3 miles NNW of Udney station. Formerly the property of the Seton baronet family, it now belongs to Alex. Keith, Esq.—*Ord. Sur.*, sh. 77, 1873.

Pitmiddle, a village in Kinnaird parish, SE Perthshire, 3 miles WNW of Inchtute.

Pitmilly, an estate, with a mansion, in Kingsbarns parish, Fife, 4½ miles NNW of Crail. Its owner is Charlton James Blackwell Monypenny (b. 1867; suc. 1886).—*Ord. Sur.*, sh. 49, 1865.

Pitmuies, a mansion in Kirkden parish, Forfarshire, ¼ mile S of Guthrie station on the Perth and Aberdeen section of the Caledonian railway. Its owner, Sir Leonard Lyell, Bart. of KINNORDY, succeeded to the estate in 1876.—*Ord. Sur.*, sh. 57, 1868.

Pitnacree, an estate, with a mansion, in Logierait parish, Perthshire, near the left bank of the Tay, 4 miles W by N of Ballinluig Junction on the Highland railway.

Pitreavie, an estate, with a mansion, in Dunfermline parish, Fife, 2½ miles SE of Dunfermline town. It was acquired about 1615 by Sir Henry Wardlaw, chamberlain to Queen Anne of Denmark, whose son was created a Baronet in 1631. His grandson, Sir Henry Wardlaw, in 1696 married Lady Elizabeth Halkett (1677-1727), author of the pseudo-archaic ballad of *Hardyknute*, and, according to Dr Robert Chambers, of most of the historical Scottish ballads. The battle of Pitreavie or Inverkeithing was fought on the level ground to the S of Pitreavie House, Sunday, 20 July 1651. In it 6000 Cromwellians, under Overton and Lambert, defeated 4000 adherents of Charles II., under Brown and Holburn, the loss on the royalist side being 1600 killed and 1200 taken prisoners.—*Ord. Sur.*, sh. 32, 1857.

Pittrichie. See PITTRICHIE.

Pitrodie. See KILSPINDIE and ERROL.

Pitscandly, an estate, with an old mansion, in Rescobie parish, Forfarshire, 2 miles NE of Forfar.

Pitscottie, a hamlet in Ceres parish, Fife, on the right bank of Ceres Burn, 1½ mile NE of Ceres village and 3 miles ESE of Cupar, under which it has a post office. It takes its name, signifying the 'little hollow,' from its position between two confronting rising-grounds at the entrance to Dura Den; and two flax spinning-mills were erected at it in 1827. A 'countrie hous covered with strae and ried,' which stood on a small adjoining plateau now occupied by the modern farmstead of Pitscottie, was the residence of Robert Lindsay, author of the quaint *Chronicles of Scotland* from 1436 to 1565. Pitscottie Moor, in the immediate neighbourhood, was a frequent meeting-place of the Covenanters for field preachings; and is named in a decree of 1671 against certain ousted ministers.—*Ord. Sur.*, sh. 41, 1857.

Pitsligo, a coast parish of Buchan, N Aberdeenshire, containing the fishing villages of ROSEHEARTY and PITULLIE or Sandhaven, 4½ and 2½ miles W by N of Fraserburgh, which is the nearest railway station. It is bounded N by the Moray Firth, E by Fraserburgh, SE by Rathen, S by Tyrie, and SW and W by Aberdour. Its utmost length, from E to W, is 3½ miles; its utmost breadth, from N to S, is likewise 3½ miles; and its area is 4891⁷/₁₀ acres, of which 247⁷/₁₀ are foreshore and 3³/₁₀ water. The coast, 4½ miles in extent, to the E of Roseheartly is partly sandy, partly low shelving rocks; but westward rises boldly from the firth to a height at Braco Park of 151 feet above sea-level. Inland the surface attains 130 feet at Hillhead, 215 near the parish church, and 259 near the Mains of Ardlaw at the SW boundary. The principal rocks are sand-

stone, clayslate, and limestone; and the soil, for the most part light, is very diversified, and ranges on almost every farm from clay or loam to light mould or reclaimed moss. Less than 20 acres are under wood; and the rest of the parish, with small exception, is all in tillage. The fine old ruin of Pitsligo Castle stands $\frac{1}{2}$ mile SSE of Rosehearty village. Its oldest portion, the S tower or keep, was built in 1424, and measuring 80 by 36 feet, with walls 9 feet in thickness, was 114 feet high. Later parts of the building, which formed a hollow quadrangle, bear the dates 1517, 1663, and 1666. In 1633 Alexander Forbes was created Baron Forbes of Pitsligo—a title forfeited by his great-grandson, Alexander (1678-1762), for his share in the '45, and now claimed by the eldest son of Lord Clinton (see FETTERCAIRN) and Sir Charles Stuart Forbes, Bart. Pitullie Castle, $\frac{1}{2}$ mile to the E, is also a ruin, bearing the dates 1651, 1674, and 1727. It was probably built by the Saltouns, and enlarged by the Cumines. A number of cairns have all but disappeared. Disjoined from Aberdour in 1633, Pitsligo had for its first minister the celebrated Covenanter Andrew Cant (c. 1590-1663), who in 1638, however, was transferred to Newbattle. It is in the presbytery of Deer and the synod of Aberdeen; the living is worth £217. The parish church, 1 mile S by E of Rosehearty, from its conspicuous position is sometimes called the 'Visible Kirk.' It was built by the first Lord Pitsligo in 1630-34, and, as repaired in 1836, contains 504 sittings. The belfry and the carved woodwork of the Forbes aisle, both of Dutch workmanship according to tradition, are much admired. There are also Sandhaven (1882) and Rosehearty Established mission churches, Pitsligo Free church (1844) at Rosehearty, Sandhaven Free mission church (1881), and Rosehearty U.P. church (1799). Three public schools—Pitsligo, Rosehearty, and Sandhaven—with respective accommodation for 186, 422, and 218 children, have an average attendance of about 50, 240, and 155, and grants amounting to nearly £40, £215, and £135. Pop. (1801) 1256, (1831) 1439, (1861) 1890, (1871) 2218, (1881) 2582, (1891) 2290.—*Ord. Sur.*, sh. 97, 1876.

Pitsligo, New, a town and a *quoad sacra* parish in Buchan district, N Aberdeenshire. The town, in the SW of Tyrie parish, near the spot where the Peterhead road branches off east and west to Fraserburgh and Banff, stands 459 feet above sea-level on the eastern slope of Turlundie Hill (651 feet), 11 miles SW of Fraserburgh, $\frac{1}{4}$ W by N of Strichen station, and $\frac{1}{2}$ NW of Brucklay station, both on the Fraserburgh branch of the Great North of Scotland railway. Founded in 1787 by Sir William Forbes, Bart. of Pitsligo, on the site of the rural hamlet of Caik or Cavocho, it was inhabited about the beginning of the 19th century almost entirely by illicit distillers, and then presented a mean and most miserable appearance. It has, however, undergone such improvement and renovation as now to consist almost wholly of substantial and comfortable houses, with neatly kept gardens, and to comprise two parallel streets, nearly a mile in length. Its outskirts and environs are flanked with wood, and of pleasant aspect; and near it are extensive granite quarries. It for some time carried on a considerable linen trade, but the hand manufacture of bobbin-lace is now the staple industry; and it has a post office, with money order, savings bank, and telegraph departments, a branch of the Union Bank, a National Security Savings Bank (1841), 2 hotels, a public library, a horticultural society (1837), gaswork, and fairs on the Wednesday after 26 February, the Wednesday after 25 May, and the Wednesday after 5 October. The erection of a public hall was begun in 1894. The parish church, standing near the top of the hill, and forming the most conspicuous object in the town, was built in 1798 and renovated in 1853. It has triplet lancet windows, ornate surmounting crosses, a beautiful belfry, and about 1000 sittings. Other places of worship are a plain Free church, a Congregational chapel, and the Episcopal church of St John the Evangelist (1871; 468 sittings), an Early English structure erected at a cost

of £3000. The *quoad sacra* parish, comprising portions of Tyrie, Aberdour, New Deer, and Strichen parishes, measures 6 miles in length and 5 in extreme breadth; was originally constituted for only its Tyrie section by the General Assembly in 1799; and was reconstituted for its present extent, first by the General Assembly in 1835, and next by the Court of Teinds in 1853. It is in the presbytery of Deer and the synod of Aberdeen; the minister's stipend is £170. Glasslaw public, New Pitsligo public, and St John's Episcopalian schools, with respective accommodation for 70, 464, and 314 children, have an average attendance of about 45, 275, and 115, and grants amounting to nearly £50, £280, and £105. Pop. of *q.s.* parish (1871) 3090, (1881) 2964, (1891) 2436, of whom 184 were in Aberdour, 160 in New Deer, 44 in Strichen, and 2048 in Tyrie. Pop. of town (1841) 1262, (1861) 1773, (1871) 2094, (1881) 2056, (1891) 1686, of whom 976 were females. Houses (1891) inhabited 431, vacant 39, building 2.—*Ord. Sur.*, sh. 87, 1876.

Pittairthie Castle. See DUNINO.

Pittarrow. See FORDOUN.

Pitteadie Castle. See KINGHORN.

Pittenane. See PETTINAIN.

Pittencrieff, a mansion in Dunfermline parish, Fife, in the south-western vicinity of the town. Built about 1610, and enlarged in 1740, with stones from the Palace ruins, it is the seat of James M. Hunt, Esq., the Pittencrieff estate having been sold in 1762 for £11,000, in 1787 for £17,600, and lastly in 1800 for £31,500. See DUNFERMLINE.—*Ord. Sur.*, sh. 40, 1867.

Pittendrieck, the seat of Sylvester Deas, Esq., eldest son of the late Lord Deas, one of the judges of the Court of Session. It is in the vicinity of Lasswade village, Edinburghshire.

Pittenweem (Celt., *? Pet-an-weem*, 'the town of the cave'), a small parish containing a town of the same name in the SE of the county of Fife, on the shore of the Firth of Forth. The parish is bounded N by the parish of Anstruther-Wester (landward), E by Anstruther-Wester (burghal), S by the Firth of Forth, W by the parish of St Monans or Abercrombie, and at the NW corner by the parish of Carnbee. The boundary line on the E and W is artificial, but on the N it is formed by the Dreel Burn. Between this parish and that of Anstruther-Wester the boundary line, previously badly defined, was rectified in 1891 by the Boundary Commissioners. All to the west of the Chain Road and the parliamentary boundary of the burghs of Pittenweem and Anstruther-Wester is now in the parish of Pittenweem, and all to the east in that of Anstruther-Wester. The detached part of Anstruther-Wester and the two detached parts of Pittenweem (all three comprising only about an acre each) were at the same time made to exchange parishes. The greatest length, from E to W, is $1\frac{1}{2}$ mile, and the average breadth about $\frac{3}{4}$ mile. The coast is rocky, and the surface rises steeply from the shore to a height of from 50 to 60 feet, but does not rise much thereafter, the extreme height being 82 feet. The whole surface is cultivated, the soil being mostly a very fertile black loam. The underlying rocks are carboniferous, with limestone and some small seams of coal, wrought so extensively towards the end of the 18th century as to employ about 400 men. The parish is traversed throughout its entire length by the coast road from Elie to Crail, and also by a stretch of the Thornton and Anstruther section of the North British railway system; is in the presbytery of St Andrews and the synod of Fife; and the living is worth £174. It was after the Reformation united with St Monans, Anstruther, and Kilrenny under the charge of one minister; but James Melvil (nephew of the famous Andrew), who succeeded the first minister, Mr William Clark, in 1586, 'finding the four congregations a burding intolerable and importable, with a guid conscience, . . . sett himself cairfullie for the separating and severall planting of the said congregations, resolving to tak himself to Kilrynnie alean;

and delt with Pittenweim, and causit thame prepeare ane auditorie and kirk within thair awin town, in the quhilk he teaocht to thame, bathe on the Sabothe and week dayes, nocht intermitting his ordinarie doctrines in the uther kirkis, untill Pittenweim was provydit and plantit with a minister of thair awin, and that without hurt or impearing of the stipend of the kirk of Anstruther Waster; and the parish became independent about 1588. The churches are noticed in connection with the burgh. Landward valuation (1875) £904, 19s. 8d., (1885) £658, (1893) £575, 8s., exclusive of railway. Pop. (1801) 1072, (1831) 1317, (1861) 1710, (1871) 1803, (1881) 2119, (1891) 1991, of whom 913 were males and 1078 were females.

The TOWN OF PITTENWEEM, near the E end of the parish just described, is a seaport and a royal burgh, and has a station on the Thornton and Anstruther section of the North British railway. By rail it is 9 miles E of Largo, 17½ E of Thornton Junction, and 1¼ mile W of Anstruther. By road it is 5½ miles SE of Crail, and 11 S by W of St Andrews. Like so many of the Fife fishing towns, it is a place of considerable antiquity, and probably dates back to the 13th century. It belonged originally to the priory, afterwards mentioned, and was by James III. created a burgh of barony. In 1542 James V. granted a further charter constituting the town a royal burgh, and in 1547 the prior and convent executed two charters granting to the 'provost, bailies, council, community, burgesses, and inhabitants, the burgh as the same was builded or to be builded, and the harbour thereof, and all moors, mosses, and waste ground, common ways, and other commonties, liberties, customs, anchorages, etc., belonging thereto.' In 1593 James VI. further increased the property of the town by granting to it the 'great house or lodging of the monastery of Pittenweem,' and all these charters were confirmed by Act of Parliament in 1633. Nor were the inhabitants unmindful of their royal benefactor, for when James passed through the burgh on his way to Anstruther House, where he spent a night, he was received by the magistrates, councillors, and minister 'in their best apparel,' and accompanied by a guard of twenty-four of the stoutest men of the place also in their 'best apparel' and armed with partisans; and besides these there were 'other twenty-four with muskets.' Substantial provision was also made for the royal appetite at a table spread at 'Robert Smith's yeet,' where, for the entertainment of the King and his train, there were provided 'sundrie great bunnis of fine flour and other wheat bread of the best order, baken with sugar, cannell, and other spices fitting, as also ten gallons of ale, with canary, sack, Rhenish wine, tent, white, and claret wines;' and when his Majesty departed there was a salute of 'thirty-six cannon, all shot at once.' It was at Pittenweem that the customs collector of Fife was, in 1736, robbed by Wilson and Robertson—an incident which, though of little local importance, resulted in the Porteous riots in Edinburgh, and thus aided in the invention of the plot of Scott's *Heart of Midlothian*. The house in which the robbery took place is on the N side of the street to the N of the church. In 1779 the squadron of Paul Jones lay for some time off the harbour, but otherwise the 18th and 19th century history of the place has been of a most uneventful nature.

The town has three main streets with cross intersecting lanes. Of these one follows the line of the coast along the low ground at the harbour; a second, High Street, runs parallel to this on the top of the slope; and a third, still farther N, is along the Elie and Crail road; the second is the principal thoroughfare. Near its E end is the parish church, originally a structure of the first half of the 17th century, but extensively remodelled and altered in 1882. The old tower at the W end still remains with the old clock and bells. It has a balustraded top and a spire, and in the base is a small chamber, with door and grated window looking to the street, which has evidently been used as the tolbooth. Fixed to the W wall of the

steeple is the town cross, a simple pillar with the town arms in the middle and the date 1754 on the top. Down the slope to the S is the Cove Wynd, in which the plain town-hall (1821-22) occupies the site of the refectory of the priory. Farther down the lane on the E side is the entrance to the cave or weem from which the name of the town is said to be derived. It is a long cave with two branches, in one of which is a small hollow supplied with good water from crevices in the rock, and both well and cave are associated with the name of St Fillan. In one corner are the remains of a spiral stair, cut in the live rock, which led to the grounds of the priory above, where it is said to have been connected with a secret underground passage. The priory buildings and grounds covered a space of from 2 to 3 acres to the E of Cove Wynd and the church. The northern gateway was removed in 1805 to make room for the Episcopal church. The chief entrance was on the E side, and not far off is the Great House of the priory, and to the S what is termed the Prior's Hall. The priory dates from about 1114, but the buildings that remain are of much later date. The ruins, about 30 feet in height, are composed of massive blocks mantled with ivy. One of the later priors was John Rowle, who was a lord of Session in 1544, and accompanied the Regent Moray to France in 1550. In 1583 William Stewart, a captain in the King's guard, descended from Alan Stewart of Darley, obtained a charter of the priory and lands of Pittenweem, and in 1606 his son, Frederick Stewart, got them erected into a temporal lordship with the title of Baron Pittenweem; but he disposed the superiority to the Earl of Kellie, and dying without issue, the title became extinct. The superiority was afterwards surrendered by the Earl of Kellie to the Crown. The Great House is intimately associated with David Low (1768-1855), the well-known Episcopalian Bishop of Ross and Argyll. Behind the eastern entrance is the 'witch corner,' where the Pittenweem witches were buried. The town seems to have been very much troubled with witches at various times, and the last of them caused a great commotion in 1705, when several poor women were, at the instigation of a hysterical boy, imprisoned and placed at the mercy of a guard of 'drunken fellows, who, by pinching and pricking some of them with pins and elisions, kept them from sleep for several days and nights together.' Under this gentle treatment some of them became 'so wise as acknowledge every question that was ask'd them.' One of them, Janet Corphat, was put in the prison under the steeple—probably the cell that still remains—but escaped by the low window, and got away to Leuchars. Sent back by the minister of that parish, she was set on by a rabble, 'who fell upon the poor creature and beat her unmercifully, tying her so hard with a rope that she was almost strangl'd; they dragg'd her through the streets and alongst the shoar by the heels' till they were disturbed by one of the magistrates. Gathering again, however, they 'streach'd a rope betwixt a ship and the shoar to a great height, to which they ty'd her fast; after which they swing'd her to and fro from one side to another, in the meantime throwing stones at her from all corners until they were weary. Then they loos'd her, and with a mighty swing threw her upon the hard sands, all about being ready in the meantime to receive her with stoues and staves, with which they beat her most cruelly. . . . They laid a heavy door upon her, with which they prest her so sore that she cried out to let her up for *Christ's sake* and she would tell the truth. But when they did let her up, what she said could not satisfy them, and therefore they again laid on her the door, and with a heavy weight of stoues on it prest her to death; and to be sure it was so they called a man with a horse and a sledge, and made him drive over her corps backward and forward several times.' These and other particulars of similar brutal behaviour may be read in the pamphlets published at the time in connection with the case, which excited a great deal of attention, and led to legal proceedings against the magistrates,

which must have led some of them at least to wish for no more witches in the neighbourhood.

No fewer than thirty breweries are said to have been once in operation about the town, but they have long since vanished, and the present industries are connected with the harbour, which is a creek under Kirkcaldy, fishuring being largely carried on. Greatly improved in 1855, the harbour has an outer and inner basin, and is safe and commodious, but suffers from its small depth of water. The imports are of the usual description for such a place, and the exports are principally grain and potatoes. A large number of the inhabitants are fishermen, and in 1893 the port, which is for fishery purposes included in the Anstruther district, had 47 first-class fishing boats, and 15 second-class boats, in connection with which 220 resident fishermen and boys found employment. Few of the boats prosecute the fishing from the port itself. Besides the Established church already noticed, there is on the N side of the town a U.P. church erected in 1846, and an Episcopal church erected in 1805-7, and enlarged in 1869. The latter has an unbroken line of ministers since the Revolution. Two public schools, the East and the South, with respective accommodation for 321 and 220 pupils, have an average attendance of about 220 and 155, and grants of nearly £225 and £125. A distinguished native was John Douglas (1721-1807), Bishop of Salisbury, eminent for his literary abilities as well as for his ecclesiastical position; also the brothers Henderson, founders of the Anchor line of ocean-going steamers. A halfpenny weekly paper was published here about the middle of the century, varying in size and day of publication, however, according to the exigencies of the printer, who combined in his own person the entire staff.

A burgh of barony under the priors, and after 1542 a royal burgh, Pittenweem is now, under the Burgh Police Act of 1892, governed by a provost, 2 bailies, and

Seal of Pittenweem.

6 commissioners, and unites with Kilrenny, Craig, Anstruther-Easter, Anstruther-Wester, Cupar, and ST ANDREWS in sending a member to parliament. Parliamentary constituency (1895) 235, municipal constituency 296, including 62 females. The corporation revenue in 1895 was £366. There is a post office, with money order, savings bank, and telegraph departments, branch offices of the Clydesdale and National banks, a National Security Savings bank, golf links, and a gaswork. Valuation (1885) £6216, (1895) £5878, including railways. Pop. (1831) 1309, (1861) 1617, (1871) 1760, (1881) 2116, (1891) 1991, of whom 913 were males and 1078 females. The parliamentary burgh, which is slightly smaller than the royal burgh, had at the same time 1962 inhabitants, of whom 897 were males and 1065 females. In the royal burgh there were 444 houses, and in the parliamentary burgh 437; while 78 were uninhabited, and 2 were being built.—*Ord. Sur.*, sh. 41, 1857.

Pittheavlis, an estate, with a mansion, in East Perth parish, Perthshire, 1 mile SW of the city. It is the

property of Lord Elibank. See DARNHALL.—*Ord. Sur.*, sh. 48, 1868.

Pittodrie, an old mansion in Chapel of Garioch parish, Aberdeenshire, on the north-eastern slope of Bennachie, 1 mile SW of Piteale station, on the Great North of Scotland railway. Its owner is Henry Knight Erskine, Esq. (b. 1853; suc. 1870).—*Ord. Sur.*, sh. 76, 1874.

Pittrichie, a plain commodious mansion of 1819 in Udney parish, Aberdeenshire, 3 miles W by N of Udney station.

Pitullie or Sandhaven, a fishing village in PITSLIGO parish, N Aberdeenshire, on the Moray Firth, 2½ miles W by N of Fraserburgh, under which there is a post and telegraph office of Sandhaven. The harbour, formed in 1840, possesses 33 fishing boats. Pop. (1871) 399, (1881) 585, (1891) 526.—*Ord. Sur.*, sh. 97, 1876.

Pladda, an island of Kilmorie parish, Buteshire, in the Firth of Clyde, 5¾ furlongs S of the south-eastern extremity of Arran. Measuring 3½ by 1½ furlongs, it is low and green; and has a lighthouse, erected partly in 1790, partly in 1826, and showing two fixed lights, the one above the other, at elevations of 77 and 130 feet above high-water level, and visible at the distance of 14 and 17 nautical miles. There is also a fog-horn, which sounds for 5 seconds with an interval of 10 seconds. The Sound of Pladda, between the island and Arran, has a chain of rock nearly right across, with depths of from only 2 to 4 feet of water, so that it is unnavigable by any sea-borne vessels.—*Ord. Sur.*, sh. 13, 1870.

Pladda. See FLADDA.

Plaidy. See TURRIFF.

Plean, a village and a *quoad sacra* parish in St Ninians parish, Stirlingshire. The village, lying 3 miles SSE of Bannockburn, has a post office under Bannockburn, a public school, and an asylum or hospital for 48 old men, more especially soldiers and sailors, founded by Col. Francis Simpson, who died in 1831, having bequeathed upwards of £30,000 and an estate for the purpose. The inmates are clothed and fed, and have a small allowance of pocket-money. Plean House is in the western vicinity of the village. The *quoad sacra* parish, constituted in 1878, is in the presbytery of Stirling and the synod of Perth and Stirling; the living is worth £130. Pop. of *q. s.* parish (1881) 1037, (1891) 845.—*Ord. Sur.*, sh. 39, 1869.

Pleasance, a village in Auchtermuchty parish, Fife, 1½ mile NNW of the town.

Pleasance, a village near the centre of Dumfriesshire, 8½ miles NNE of Dumfries.

Plockton, a village in Lochalsh parish, Ross and Cromarty, on the S side of the lower part of Loch Carron, 4 miles W by S of Strome Ferry station on the Diugwall and Skye railway, and 6½ NNW of Balmacara. It ranks as a burgh of regality, engages extensively in fishing, and has a post office, with money order, savings bank, and telegraph departments, a Parliamentary church, a Free church, and a public school. The church has the status of a *quoad sacra* parochial church, but has not assigned to it any definite territory. Pop. (1861) 539, (1871) 516, (1881) 440, (1891) 422.

Plotcock, a collier village in Hamilton parish, Lanarkshire, 5 miles SSE of the town of Hamilton.

Pluscarden (old forms *Ploschardin* and *Pluscardyn*, locally often *Pluscarty*), a district measuring about 4 miles by 2, and forming the south-western portion of the parish of Elgin. It is a long valley of no great width, with the drainage along the whole length carried off by the Black Burn, a tributary of the river Lossie. The low ground is from 170 to 200 feet above sea-level, and on the NW side the Eildon or Heldun Hill rises very steeply to a height of 767 feet, and on the SE side the Hill of the Wangie rises with a less rapid slope to a height of 1020 feet. At the extreme SW end the valley is contracted into a narrow glen. There is a post office under Elgin, a Free church, and a public school. Though the glen is pretty in itself, the chief interest lies in the well-preserved ruins of a Cistercian priory on a beautiful haugh near its centre, and 6 miles SW of Elgin. This, one of the three monasteries of the

Cistercian Order in Scotland, the others being BEAULY and ARDCHATTAN, was founded by Alexander II. in 1230. Before the foundation of the priory there seems to have been an older church on a different site, and the valley was known as the Vale of St Andrew, a name which was retained in the new foundation, the dedication of Pluscarden—or Pluscardine, as the name of the priory is often given—being to the Virgin Mary, John the Baptist, and St Andrew. Although the monks, who were of the Valliscaulian branch of the order, found but few friends after Alexander's death, the community was a very wealthy one, and in Bajimont's Roll in 1274 the monastery is taxed at £533, while Beaulay and Ardchattan are entered at £200. Under the protection of the Bishops of Moray, whose authority was fully recognised in 1345, the Cistercians held possession till 1454, when Benedictines were introduced from URQUHART, though there seems to be no truth in the assertion that this was rendered necessary by the corrupt life of the older monks. The last of the Benedictine priors was Alexander Dunbar, who died in 1560; and the first of the lay priors was Lord Alexander Seton—a son of the Lord George who was so faithful a servant to Queen Mary—who in 1577 was succeeded by James Douglas, an illegitimate son of Regent Morton; but on Morton's fall and death in 1581 Seton again resumed possession, parliament expressly declaring 'the pretended gift to James Douglas, son natural to late James Earl of Morton, of nane avail in all times coming.' The monks do not seem to have been disturbed in their possession of the priory itself, and they gradually died out, only one remaining in 1586. In 1595, Seton, then Lord Urquhart, sold Pluscarden to Kenneth Mackenzie of Kintail, from whose descendants it passed in 1649 (probably in connection with the rebellion raised in that year by Thomas Mackenzie of Pluscarden) to Sir George Mackenzie of Tarbat. In 1662 the then Sir George sold the priory and lands to the Earl of Caithness, Major George Beatman and Joan Fraser, his wife; and in 1664 the Earl resigned his share to the other owners, from whom, in 1687, the property was purchased by Brodie of Lethen for his grandson, James Grant of Grant, who, in 1710, sold it to Duff of Dipple, and through him it has descended to the present possessor, the Duke of Fife. A considerable portion of the ruins of the priory still remains, and the grey ivy-clad walls, the soft deep green turf, the old trees that must date from the early times of the monastery, and the heights in the background covered with thriving wood, all combine to form a very pleasant picture. The buildings have been partly in the First and partly in the Second Pointed styles. The church lay to the N, and the nave seems never to have been built. To the S of the south transept was a narrow chapel dedicated to St Mary, and farther S still the chapter-house and calefactory. Over the last three buildings were the dormitories. West of the calefactory was the refectory, to the N of which was the cloister court. To the SSE of these buildings are traces of walls where the prior's house is said to have stood. The precinct is still marked out by the high and massive wall with the principal gateway on the E, and in the N wall are recesses where the fathers had kept their bee-hives. The church has consisted of a choir and two transepts, the latter with aisles on their E sides; at the intersection is a square tower. From the S transept a stone stair leads to the dormitories. In the outside angle, between the choir and the north transept, is what is called the Dunbar Vestry, with a good groined ceiling, on the central boss of which are the Dunbar arms. It was probably erected by the last Benedictine prior. The lintel of the window into the choir is formed by a slab of stone, with a finely incised cross, dating probably from the 13th century. St Mary's aisle, to the S of the south transept, used probably as the sacristy, has a curious portion cut off in one of the corners, with a peculiar slit in the wall near the door. It has possibly been used as a confessional. The chapter-house is square, and has a vaulted roof, with groins passing from the side walls to a central pillar. The walls of the choir, the transepts with their

side aisles, the pretty little vestry, St Mary's aisle, the square chapter-house, the calefactory, the dormitories, and the central tower, are still almost entire. On the arch over the entrance from the crossing to the choir, and also on an arch in St Mary's aisle, there are traces of fresco painting. The former is described by Cordiner, in 1788, as having been very perfect in his time. 'There,' he says, 'St John, about to write in an attitude expressive of attention to the objects before him, is seated under a canopy, and, accompanied by his well-known eagle, lifts his eyes to the concave of the arch above, where the glowing colours of that splendid bow which is seen in the cloud in the day of rain attracts our notice.' The sitting figure and the rainbow are still visible, but they are sadly weathered and destroyed. According to the same author, there were still more wonderful frescoes in St Mary's aisle, but no trace of these, except the ornament on the arch mentioned, now remains. The buildings that now exist are of various dates from the middle of the 13th to the middle of the 16th century. The first structure had become ruinous by 1398, but how far this was due to slenderness of proportion, and how far to injury by fire, is uncertain. Both the causes mentioned may indeed have operated, for the first is quite apparent from the numerous alterations made for the purpose of giving additional strength—e.g., windows lessened in size, archways partly built up, etc.—and the walls in many places show traces of fire. Probably to injury from the latter cause may be ascribed the curious casing of later masonry by which the pillars supporting the central tower have been strengthened. The calefactory has a vaulted roof supported by two pillars, and is now used as a church for the district, a purpose for which it was fitted up in 1821 by the then Earl of Fife.* At the same time the dormitories were re-roofed, and that part of the building is now used as a ball-room for the district! The church was at first a chapel of ease under Elgin, but at the Disruption, the minister and most of the people joining the Free Church, the Earl of Fife made over the use of the room to the majority. The pulpit is the one procured in 1680 for Old St Giles' Church in Elgin, and sold to the Earl of Fife's factor for £5 when that church was pulled down in 1826 [see ELGIN]. It has a rim for the baptismal font, and a stand for an hour-glass, both made of characteristic twisted iron work. The old monastery grounds are now used as nursery grounds for young trees to be used in plantations on the Fife estates in the neighbourhood; but a number of old trees, dating from monastic times, still remain. The *Book of Pluscarden* is an early history of Scotland based on Bower, and supposed to have been written in the priory, about 1461, by a monk named Maurice Buchanau. It was published in the *Historians of Scotland* series in 1877. See also the works referred to under ELGIN; E. Chisholm Batten's *Charters of the Priory of Beaulay* (Grampian Club, Lond. 1877); and S. R. Macphail's *History of the Religious House of Pluscardyn* (Edinb. 1881).

Polkemmet, a two-storey Scottish Baroual mansion in Whitburn parish, Linlithgowshire, 1½ mile W of Whitburn town. A large addition was made in 1822; but the older part is known to be of earlier date than 1620, when the estate was sold by the Shaws to the Baillies. Its present proprietor is Sir George Baillie, third Bart. since 1823 (b. 1856; suc. 1890).—*Ord. Sur.*, sh. 31, 1867. See John Small's *Castles and Mansions of the Lothians* (Edinb. 1888).

Polla. See DURNES.

Pollewe. See POOLEWE.

Pollok Castle, a mansion in Mearns parish, Renfrewshire, 2½ miles SE of Barrhead. Crowning a rising ground, among fine old trees, and commanding an extensive view, it was a châteaux-like four-storeyed edifice, erected in the latter half of the 17th century, and twice enlarged, on the last occasion in 1856; but on the night of 31 July 1882 it was wholly destroyed by fire,

* This occupation was at first intended to be only temporary till the choir should be fitted up for use in public worship, but various delays and changes led to things being left as they were.

the damage being estimated at £30,000. Its owner, James Crawford Fergusson Pollok, Esq. (b. 1868; suc. 1893), represents the ancient families of Pollok of Pollok and Crawford of KILBERNIE and Jordanhill, both dating from the 12th century, Robina Pollok, an ancestress, having married Sir Hew Crawford of Jordanhill soon after the middle of the 18th century.—*Ord. Sur.*, sh. 22, 1865.

Pollok House, a mansion in Eastwood parish, Renfrewshire, near the right bank of the White Cart, $\frac{1}{2}$ mile WNW of Pollokshaws. Erected in 1747-52, it is a plain quadrangular four-storeyed building, with beautiful grounds, and on 15 Aug. 1859 was honoured by a visit from the Prince of Wales. Its woods of grand old timber suffered severely from the storm of Nov. 1893, which devastated so much of the wooded portions of the country. A very fine specimen of the *Ampelopsis hederacea* or Virginian Creeper extends from one root a distance of 310 feet, and covers 344 square yards of wall. Visitors are allowed to the grounds in summer on Saturdays from 2 to 7 o'clock. Pollok formed part of the broad estates that were granted by David I. to Walter the High Steward about the year 1124. The superiority was acquired by Roland de Mearns, and afterwards by the Maxwells of CAERLAVEROCK; and about 1270 the lower division of Pollok, commonly called Nether Pollok, was given by Sir Aymer Maxwell of Maxwell, Caerlaverock, and Mearns, to his younger son, Sir John Maxwell, the first of the Maxwells of Pollok. Among his descendants, who by marriage were allied to royalty, were the brave young Sir John, who earned his spurs well at Otterburn (1388); Sir John, who fell at the battle of Dryte Sands (1593); Sir George, for bewitching whom, in 1677, five persons were strangled and burnt; Sir John, created a Baronet in 1682; and Sir John, the eighth Bart. (1791-1865), at whose death the estate and the baronetcy devolved on his nephew, William Stirling, Esq. of Keir. From him, the late Sir William Stirling-Maxwell, the estate of Pollok passed in 1878 to his elder son, Sir John Maxwell Stirling Maxwell (b. 1866).—*Ord. Sur.*, sh. 30, 1866. See EASTWOOD, KEIR, CROOKSTON, DARNLEY, HAGES CASTLE; Sir Wm. Fraser's *Memoirs of the Maxwells of Keir* (2 vols., Edinb. 1865); and his *Cartulary of Pollok-Maxwell* (Edinb. 1875).

Pollokshaws, a town and a *quoad sacra* parish in the civil parish of Eastwood, in the eastern division of Renfrewshire. The town, popularly known as the Shaws, is on the White Cart, where it is joined by Auldhouse Burn, and has a station on the Glasgow, Barrhead, and Kilmarnock railway, 3 miles SSW of Glasgow, and another on the Cathcart District circular railway (opened 1894), on which there is also a goods station. It is also the terminus of a line of the Glasgow Corporation tramways. With a pleasant situation in the midst of an undulating and fertile tract of country, it is a seat of manufacturing industry. A printfield, one of the earliest in Scotland, was established in 1742, and bleaching and handloom weaving, which were introduced soon after, were long extensively carried on. A tannery for the manufacture of chamois leather, which was begun in 1782, and was the earliest in Scotland, did not prosper. A cotton mill, erected about the end of the 18th century, was the first in Scotland lighted with gas. Calico printing, which was long carried on, having declined, turkey-red dyeing took its place, and was vigorously carried on till 1837, when it was given up, and since then the staple industries have been dyeing, power-loom weaving, bleachfields, print-works, paper-mills, and iron-foundries. The bridge over the Cart dates from 1654, but it has since been widened and repaired. The town-house, with its spire, and the trades' hall, do not call for particular notice. The *quoad sacra* parish church, originally Auldfield chapel of ease, in King Street, was built in 1840. Eastwood parish church, on the SW, built in 1862-63 at a cost of £3500, is a good Early English structure with 1050 sittings, nave and transepts, and a tower and spire 130 feet high at the W end. It superseded an older church of 1781, and was reopened in March 1877,

after improvements, including a three-light stained window, new choir seats, etc. There are also two Free churches in King Street and Rosendale Road, a U.P. church, an Original Secession church, a Primitive Methodist chapel, and the Roman Catholic church of St Mary Immaculate (1865; 800 sittings; redecorated 1884), but none of them call for particular notice. Four schools—the Academy, public, infant, and Roman Catholic—with respective accommodation for 884, 471, 150, and 508 pupils, have an average attendance of about 690, 315, 45, and 405, and grants amounting to nearly £750, £345, £40, and £425. The town was erected into a burgh of barony by Crown charter in 1814, the council consisting of a provost, a baillie, and six councillors, being elected by all inhabitants paying £4 of rent and upwards; but the municipal government is now carried on by the commissioners appointed under the Burgh Police Act of 1892. Water and gas are alike supplied by the Glasgow Corporation. There is a fever hospital at Cowglen, and an hospital at Darnley is supported jointly with the County Council District Committee. There is a post office, with money order, savings bank, and telegraph departments, under Glasgow, branch offices of the British Linen Company, Clydesdale, and Commercial Banks, a public library, established in 1844, a young men's literary and mutual improvement association, a trades' friendly society, a tract and destitute sick relief society, a horticultural society, and a weekly newspaper, the *Pollokshaws News*, and some other institutions. Justice of peace courts are held every Monday for criminal cases, and first Monday of each month for civil cases. Pop. of town (1831) 4627, (1861) 7648, (1871) 8921, (1881) 9363, (1891) 10,405, of whom 5544 were females, and 7172 were in Pollokshaws *quoad sacra* parish. Houses (1891) inhabited 2267, vacant 137, building 1.—*Ord. Sur.*, sh. 30, 1866.

Pollokshields. See GLASGOW.

Polmailly House, a mansion in Urquhart parish, Inverness-shire, near the left bank of the Enrick, 2 miles W by N of Drumdnadrochit.

Polmaise Castle, a mansion in St Ninians parish, Stirlingshire, near the right bank of the meandering Forth, 3 miles ESE of Stirling. About 1568, William Murray of Touchadam married a daughter and co-heiress of James Cuninghame of Polmaise; and their descendant, Lieut.-Col. John Murray (b. 1831; suc. 1862), is present proprietor.—*Ord. Sur.*, sh. 39, 1869.

Polmont (Gael. *poll-monaidh*, 'pool of the hill'), a village and a parish of E Stirlingshire. The village stands $\frac{3}{4}$ mile NNE of Polmont Junction on the Edinburgh and Glasgow section of the North British railway, this being $4\frac{3}{4}$ miles W by N of Linlithgow, $22\frac{1}{2}$ W by N of Edinburgh, 3 E by S of Falkirk, and 25 ENE of Glasgow. It has a post office, with money order, savings bank, and telegraph departments. Pop. (1861) 429, (1871) 455, (1881) 519, (1891) 485.

The parish, containing also a small portion of GRANGEMOUTH, and the villages of Craigs, Redding, East Shieldhill, and Wallacestone, was disjoined from Falkirk in 1724. It is bounded NE by the Firth of Forth and Borrowstounness in Linlithgowshire, SE by Muiravonside, and SW and NW by Falkirk. Its utmost length, from NE to SW, is $6\frac{1}{2}$ miles; its breadth varies between $2\frac{1}{2}$ furlongs and $3\frac{1}{2}$ miles; and its area is 7289 $\frac{1}{2}$ acres, of which 1697 $\frac{3}{4}$ are foreshore and 79 $\frac{1}{2}$ water. The Firth of Forth, which washes the parish for a distance of 2 miles, from the mouth of the Carron to that of the Avon, is fringed at low water by an expanse of foreshore, 7 furlongs to 2 miles broad. The AVON winds $5\frac{1}{2}$ miles west-north-westward and north-eastward along all the Linlithgowshire border; GRANGE or West-quarter Bnrrn flows $3\frac{1}{4}$ miles north-north-westward, mainly along the Falkirk boundary, to the mouth of the Carron; and the UNION CANAL traverses the parish for $2\frac{1}{2}$ miles, from E to W, immediately S of the railway. The coast is low and flat; a broad tract inward thence is carse land, rising only 14 feet above sea-level, protected on the coast side by a strong embankment, and all too valuable to bear anything but grain; a tract

southward thence, forming the middle district, has an undulating surface, and rises to altitudes of 253 and 263 feet; and the south-western extremity is partly undulating, partly moorish, and rises gradually to an eventual altitude of 552 feet. Much of the landscape is embellished and beautiful; and many standpoints command extensive and brilliant views. The rocks belong chiefly to the Carboniferous formation, and include valuable strata of sandstone, coal, and ironstone, all of which have been largely worked. Excellent clay, too, abounds, and is used in two tile and brick works. Mineral springs, strongly impregnated with iron, are in several places. The soil of the carse lands is deep fine clay, quite free from stones, but abounding in marine shells; that of the other districts is partly clayey, partly mossy, but chiefly gravelly or sandy. About 120 acres are under wood; 650 are pastoral or waste; and all the rest of the land is in tillage. The principal mansions are Westquarter, Polmont Park, Polmont House, Polmont Bank, Parkhall, Clarkston, and Millfield; and the chief antiquity is part of the line of ANTONINUS' WALL, now destitute of every vestige of masonry or mound. The Duke of Hamilton takes from this parish the title of Baron Polmont (cre. 1643). Giving off a portion to Grange-mouth and Shieldhill *quoad sacra* parishes, Polmont is in the presbytery of Linlithgow and the synod of Lothian and Tweeddale; the living is worth £290. The old kirk, built in 1731, stands, an ivy-clad ruin, in the midst of the churchyard, its interior planted with roses, yews, and rhododendrons. The new parish church is a handsome Gothic edifice of 1844, and was adorned in 1876 with two stained memorial windows. Robert Henry, D.D. (1718-90), the historian of England, is buried in the churchyard. There is also a Free church at Polmont village. Blairlodge Academy, standing within its own grounds of 30 acres, has accommodation for 300 boarders. It has a chapel to accommodate about 500 persons, and within the grounds there is also an hospital. Six schools, with total accommodation for 1100 children, have an average attendance of about 850, and grants amounting to nearly £830. Pop. (1801) 2197, (1831) 3210, (1861) 4111, (1871) 3910, (1881) 3955, (1891) 4949, of whom 2901 were in the ecclesiastical parish.—*Ord. Sur.*, sh. 31, 1867.

Polmood Burn. See TWEEDSMUIR.

Polnoon Castle, an ancient parish in Eaglesham parish, Renfrewshire, near a head-stream of White Cart Water, 5 miles S by E of Busby. It was built with the ransom of Harry Hotspur, whom Sir John Montgomerie had taken prisoner at Otterburn (1388); and it long was a chief seat of the EGLINTON family; but it is now represented by only a few smooth mounds of rubbish.—*Ord. Sur.*, sh. 22, 1865.

Poltalloch, the ancient seat of the Malcolm family, in Kilmartin parish, Argyllshire, on the eastern shore of Loch Craignish, 10 miles NNW of Lochgilphead. Its present proprietor is Lord Malcolm of Poltalloch (b. 1833; suc. 1893), raised to the peerage in 1896.

Poltanton Burn. See LESWALD.

Polton, a group of places in Lasswade parish, Edinburghshire, adjacent to the North Esk river, and within $\frac{1}{2}$ mile SSW of Lasswade village. It contains the terminus of the Eskbank, Lasswade, and Polton line, $10\frac{1}{2}$ miles by rail SSE of Edinburgh; the papermills of Messrs Annandale & Son; Polton House (Rt. Dundas, Esq. of Arnanston), etc.—*Ord. Sur.* sh. 32, 1857.

Poltonhall, a village in Cockpen parish, Edinburghshire, $\frac{3}{4}$ mile SSW of Bonnyrigg, and $1\frac{1}{2}$ mile S by W of Lasswade. Pop. with Dalhousie Colliery (1871) 312, (1881) 595, (1891) 923.

Polwarth, a village and a parish of central Berwickshire. The village, an ancient place, stands near the northern border of the parish, on ground originally swampy, but now drained, 3 miles NNE of Greenlaw, and 4 SW of the post-town Duns. Two old thorn trees formerly stood in the centre of the village green; and a custom prevailed for upwards of 300 years down to the commencement of the 19th century, of dancing at every marriage round these trees—a custom celebrated in

several songs, particularly one by Allan Ramsay, set to the tune of 'Polwarth on the Green.'

The parish, containing also Marchmont station at the south-eastern border, is bounded NW by Longformacus, N by Langton, SE by Fogo, and SW and W by Greenlaw. Its utmost length, from E by N to W by S, is $4\frac{1}{4}$ miles; its utmost breadth is $2\frac{1}{4}$ miles; and its area is 3013 acres, of which $13\frac{1}{2}$ are water. A small lake ($1\frac{3}{4} \times 1$ furl.) lies near the western border; and the drainage is carried eastward towards Blackadder Water by the Kirk Burn and other rivulets. The surface, on the mutual border of the Merse and the Lammermuir district, declines in the extreme E to 370 feet above sea-level, and rises westward till it attains a maximum altitude of 933 feet at Kyles Hill. The predominant rocks are various kinds of sandstone; but Kyles Hill consists of a hard reddish porphyry. The soil of the uplands is moorish, and elsewhere is mainly argillaceous, but here and there is sand or gravel. Nearly 400 acres are under wood; rather less than half of the entire area is in tillage; and nearly all the remainder is pasture, moor, or moss. MARCHMONT HOUSE, noticed separately, is the only mansion; and Sir J. H. P. Hume Campbell, Bart., is sole proprietor. Polwarth is in the presbytery of Duns and the synod of Merse and Teviotdale; the living is worth £289. The parish church, $\frac{3}{4}$ mile SSE of the village, crowns the edge of a beautiful glade in the grounds of Marchmont, and was rebuilt by the patriot Patrick Hume, first Earl of Marchmont, in 1703. According to a Latin inscription of that date, its predecessor was consecrated prior to 900, and restored in 1378. In 1684 Patrick Hume concealed himself in the family burial vault beneath the church, where he remained for several weeks, supplied every night with food by his celebrated daughter Grizel, afterwards Lady Grizel Baillie (1665-1746). The public school, with accommodation for 55 children, has an average attendance of about 35, and a grant of nearly £50. Pop. (1801) 291, (1831) 288, (1861) 251, (1871) 249, (1881) 227, (1891) 203.—*Ord. Sur.*, shs. 25, 26, 1865-64. See Miss Warrender's *Marchmont and the Humes of Polwarth* (1894).

Pomathorn, a station in the S of Lasswade parish, on the Peebles railway, near Howgate village, $2\frac{1}{2}$ miles NE of Leadburn, and 15 S of Edinburgh.

Pomona or **Mainland**, the chief and much the largest of the Orkney islands, containing Kirkwall, the capital of the group. It lies southward of the centre of the Orkney archipelago; is washed, on the W and the N, by the Atlantic Ocean; is separated, on the NE, by narrow sounds from Rousay, Gairsay, Shapinshay, and some smaller adjacent islands, and by Westray Firth and Stronsay Firth from the entire group of the North Isles; is washed, on the E, with exception of two or three intervening islets, by the German Ocean; and is separated, on the S, by Holm Sound, Scapa Flow, and Hoy Sound from Burray, South Ronaldshay, Flotta, Hoy, and some smaller islands. Its utmost length, from E to W, is $24\frac{1}{4}$ miles; its utmost breadth, from N to S, is $16\frac{1}{2}$ miles; and its area, in consequence of great and numerous indentations on its outline, is probably not more than 150 square miles. Its western district, to the extent of about 16 miles by 11, is fairly compact, and has a somewhat ellipsoidal outline; but its eastern district is mostly cut by intersections of the sea into a series of peninsulas and isthmuses, and ranges in breadth from a maximum of $8\frac{1}{2}$ miles to a minimum of 2 or 3 furlongs. Safe harbourage and places of anchorage occur at brief intervals on all the north-eastern, the eastern, and the southern coasts; and are particularly good at Kirkwall Bay, Deer Sound, Holm Sound, and Stromness. Several fresh-water lakes—Stenness, Kurbister, Skail, Boardhouse, Hundland, Swannay, and others—lie in the interior; abound in various kinds of trout; and emit considerable water power; but there are no streams larger or longer than mere burns; and salmon waters of any kind are entirely wanting. No spot is further than $4\frac{1}{2}$ miles from the sea; and by far the larger part of the area is not more than 2 miles. The western coasts, in

general, are bold and precipitous, and often rise in mural cliffs, pierced with caves and natural arches, or torn and shattered into detached masses and isolated pinnacles; the western district, though nowhere mountainous or wildly upland, comprises a considerable extent of hill and moor; and the other districts, though all comparatively low, likewise include many breadths and patches of moorish land; but some large fertile valleys, possessing the double advantage of a sheltered position and a loamy soil, lie among the hills; and an extensive aggregate of good arable land lies round the moors or along the shores. The parishes into which Pomona is divided are Birsay, Sandwick, Stromness, Evie, Rendall, Harray, Firth, Stenness, Orphir, Kirkwall, St Andrews, Deerness, and Holm; but Birsay and Harray, Evie and Rendall, Firth and Stenness, and St Andrews and Deerness, are each pair mutually united. Pop. (1801) 13,929, (1831) 15,787, (1861) 17,240, (1871) 16,541, (1881) 17,165, (1891) 16,498. See ORKNEY.

Ponfeigh, a collier village in Carmichael parish, Lanarkshire, with a station on the Lanark and Douglas branch of the Caledonian railway, near the right bank of Douglas Water, $4\frac{1}{2}$ miles S of Lanark.

Poniel Water. See DOUGLAS.

Pool. See MUCKHART.

Poolewe, a fishing village and a *quoad sacra* parish in Gairloch parish, Ross and Cromarty. The village stands at the head of Loch Ewe, and at one of the western terminations of the military road from Dingwall through the centre of the county, 2 miles NNW of the foot of Loch Maree, 6 NNW of Gairloch village, 7 S by W of Aultbea, $2\frac{7}{8}$ WNW of Auchnasheen station on the Dingwall and Skye railway, and $5\frac{1}{2}$ W by N of Dingwall. The curing of salmon and trout is carried on to a great extent. There was an extensive iron furnace in operation here about two hundred years ago. Coaches, carrying the mails, run daily from Auchnasheen to Poolewe and Aultbea in connection with the morning train from Dingwall, returning in time to catch the evening train for Dingwall in winter and morning train in summer. A chief point of communication across the Minch with the Outer Hebrides, it serves as a conjoint centre with Gairloch village and Kinlochewe for visiting the superb scenery of Loch Maree; and has a post office, with money order, savings bank, and telegraph departments, an inn, an Established church, a Free church, and a public school. The Established church was built in 1828, and contains 350 sittings. The *quoad sacra* parish, constituted by ecclesiastical authority in 1838, and reconstituted by civil authority in 1851, is in the presbytery of Lochcarron and synod of Glenelg. The minister's stipend is £165. Pop. of *q. s.* parish (1871) 2623, (1881) 2317, (1891) 2110, of whom 1988 were Gaelic-speaking.—*Ord. Sur.*, sh. 91, 1882.

Port-Appin, a village in Lismore and Appin parish, Argyllshire, on the E shore of Loch Linnhe, opposite the NE end of Lismore island, and $3\frac{1}{2}$ miles SSW of Appin village. It has a post office and a temperance hotel, and is a ferry station.

Port-Askaig. See ASKAIG, PORT.

Port-Bannatyne. See KAMESBURGH.

Portcarren, a village on the SE shore of Lismore island, Argyllshire, $5\frac{1}{2}$ miles NNW of Oban.

Port-Charlotte, a village in Kilchoman parish, Islay island, Argyllshire, on the W coast of Loch Indal, opposite Laggan Point, $7\frac{1}{2}$ miles SW of Bridgend, and 16 SW of Port-Askaig. It has a post office, an inn, a distillery, and a public school. Pop. (1861) 562, (1871) 484, (1881) 502, (1891) 570.

Port-Crinan. See CRINAN.

Port-Edgar. See QUEENSFRERY.

Port-Ellen, a seaport village in Kildalton parish, Islay island, Argyllshire, at the head of a small bay, 6 miles NNE of the Mull of Oa, $11\frac{3}{4}$ SSE of Bowmore, and 17 W by S of Gigha. Founded in 1824, and named in compliment to Lady Ellinor Campbell of Islay, it rose rapidly into importance as a place of local commerce; and on a rocky promontory near the middle of its bay is a commodious quay, constructed in 1826,

improved in 1832, and enlarged and further improved in 1881 by the late John Ramsay, Esq. of Kildalton, who became proprietor of the parish in 1863, and did much for it in the way of agricultural improvements, etc. It has also safe anchorage ground and a lighthouse; is visited by the steamers which ply between Islay and Glasgow; carries on a considerable amount of fishing; and has a post office, with money order, savings bank, and telegraph departments, a branch of the Royal Bank, two inns, and a public school. Pop. (1841) 904, (1861) 1007, (1871) 979, (1881) 989, (1891) 893.

Port-Elphinstone, a southern suburb of INVERURIE, in Kintore parish, Aberdeenshire, on the right bank of the river Don. It took its name, and during 1807-54 derived its importance, from being situated at the NW end of the quondam Aberdeen Canal; it now contains an extensive goods station of the Great North of Scotland railway, and is still a convenient centre of trade; and it has a post and money order office under Inverurie, extensive grain mills, paper-mills, a brewery, and a public school. Pop. (1861) 421, (1871) 435, (1881) 473, (1891) 556, of whom 385 were within Inverurie burgh.—*Ord. Sur.*, sh. 76, 1874.

Port-Errol or Ward-of-Cruden, a coast village in Cruden parish, Aberdeenshire, at the mouth of the Water of Cruden, $11\frac{1}{2}$ miles NE of Ellon, under which it has a post office, with money order, savings bank, and telegraph departments. A station of the herring fishing, it has a lifeboat and rocket apparatus, a hotel, 41 boats, and a harbour, whose inner basin is 300 feet long and 150 to 175 feet wide. It has a station on the Cruden railway, begun in 1894, between Ellon on the Buchan and Formartine section of the Great North of Scotland railway, and Boddam on the coast near Peterhead. The Aberdeen Lime Co. here ships corn, and imports coal, manures, etc. There is a Congregational church. Pop. (1881) 493, (1891) 490.—*Ord. Sur.*, sh. 87, 1876.

Portessie, a fishing village in Rathven parish, Banffshire, $1\frac{1}{2}$ mile ENE of Buckie, under which it has a post office, with money order, savings bank, and telegraph departments. It possesses 117 fishing boats, employing 350 men and boys; and has a Wesleyan Methodist chapel. Pop. (1793) 178, (1841) 411, (1861) 575, (1871) 877, (1881) 1061, (1891) 941.—*Ord. Sur.*, shs. 95, 96, 1876.

Port-Float. See FLOAT BAY.

Port-Gill. See GILL.

Port-Glasgow, a parish, with a parliamentary burgh of the same name, on the N coast of the Lower Ward of Renfrewshire. It is bounded N by the Clyde, E and S by Kilmalcolm, and W by Greenock. The boundary on the E and S is artificial, but on the N it is formed by the Clyde, and on the W by Devol Burn to a point about $\frac{1}{2}$ mile above Wallace's Loup. The greatest length of the parish, from the corner of the West Harbour on the N to the extreme southern point, is fully $1\frac{1}{2}$ mile; the greatest width, from Laigh Auchinleck on the E to Wallace's Loup on the W, is barely $1\frac{1}{2}$ mile; and the area is 1031·772 acres, of which 39·381 are foreshore and 48·524 water. There is a flat strip along the Clyde on the N side from 13 to 20 feet above sea-level, and from this the ground slopes rapidly up to the 200-foot line which lies immediately to the S of the burgh, and still more rapidly to the 500-foot line farther to the S. From this the rise to 600 feet is more gradual, and the highest points are 700 feet on the SW and 656 near the extreme S. The soil of the flat tract along the Clyde is a very fertile loam, but that along the higher ground is cold and poor. The underlying rocks are mostly volcanic. The drainage of the parish is effected by Devol Burn on the W—along the course of which there are several small waterfalls—and some smaller burns all flowing to the Clyde. In the SW is Doughtiehill Dam or Reservoir (2×1 furl.) The only object of interest beyond the town is Newark Castle in the NE, which is separately noticed. A line across the Clyde from Newark Castle to Cardross is the lower limit of the jurisdiction of the Clyde Trustees; while below this the

care of the channel and estuary is under the Clyde Lighthouse Trust. The parish is traversed from E to W by the main line of road from Glasgow along the edge of the river and Firth, and by the Glasgow, Paisley, and Greenock branches of both the Caledonian and Glasgow and South-Western railways. From the former the Wemyss Bay branch strikes off close to the western boundary of the parish.

Civilly, the parish was, prior to 1695, in the parish of Kilmalcolm, and ecclesiastically, it is divided into the parishes of Port-Glasgow and Newark, the latter originally established in 1774 as a chapel of ease, but constituted as a *quoad sacra* charge in 1855. Both are in the presbytery of Greenock in the synod of Glasgow and Ayr, and the living of Port-Glasgow is £380. The churches are noticed in the following article, and the landward school board is united with that of East Greenock. The industries are noticed under the town. The principal landowner is Sir Michael Shaw-Stewart, Bart. of Greenock and Blackhall. Pop. of entire parish (1801) 3865, (1831) 5192, (1861) 7204, (1871) 9912, (1881) 10,913, (1891) 11,973, of whom 6012 were males and 5691 females. Of the whole population 11,891 were at that time within the parliamentary boundary, and 8260 were in the ecclesiastical parish.—*Ord. Sur.*, sh. 30, 1866.

Port-Glasgow, a seaport and parliamentary burgh on the Firth of Clyde, occupying the whole of the northern portion of the parish just described. It has a station on the Glasgow and Greenock section of the Caledonian railway, 19 $\frac{3}{4}$ miles WNW of Glasgow. The site is a belt of flat alluvial ground 13 to 20 feet above sea-level, lying along the shore of the Clyde, and as the ground to the S rises by two successive stretches of hill to over 500 feet, the appearance from the river is picturesque. The town itself is well built; the principal streets following the line of the bay occupied by the docks, and minor ones running parallel to these or striking off at right angles. The districts to the W and S are occupied by villas. Founded in the middle of the 17th century, it has none of the ancient historical associations belonging to many of the other burghs along the Clyde. The earlier seaports connected with the trade of Glasgow were situated on the Ayrshire coast, but between 1650 and 1660 the commerce of the great city of the west had so much increased that the distant harbours were found expensive and inconvenient, and the community resolved to have a harbour of their own. The deepening of the bed of the Clyde was as yet unthought of, and after unsuccessful efforts to acquire ground at Troon and at Dumbarton, a deputation of the council reported on 4 Jan. 1668 that they had had 'ane meiting yeasternight with the lairds, elder and younger, of Newark, and that they had spoke with them anent the taking of ane piece of land of theirs in feu, for loading and livering of their ships there, anchoring and building ane harbor there, and that the said lairds had subscriyvit a contract of feu this morning: quhilt was all allowed and approve be said magistratis and counsell, and efter this the twa feu contracts made between the saidis lairdis of Newark, elder and yor., and the towne were red and subscriyvit, being that the saids Newark, elder and yor., had set ane merk land, as a pairt of their lands of Newark to the towne, in feu for payment yeirlie of four merks feu dewtie, and relieving them of the king's taxatioun efferand to a merk land.' On the 13 acres thus acquired the town soon began to grow, as the erection of a pier and docks was set about at once, and the place, under the name of New Port-Glasgow, was by Crown charter constituted a free port and a burgh of barony. From this time until its trade received a very severe check from the deepening of the Clyde and the consequent transference of the greater portion of the commerce to Glasgow, the port prospered steadily. In 1710 it was constituted the principal custom-house port of the Clyde, and soon afterwards the town extended its original limits so greatly that it came in contact with, and practically absorbed the village of Newark—a burgh of barony belonging to Hamilton of Wishaw. Port-Glasgow thus became two burghs of barony subject to two different

superiors—a state of matters that was found so inconvenient that an act of parliament was obtained in 1775 erecting them into a separate municipality under councillors called trustees. Besides other provisions, power was given to bring in water; to pave, clean, and watch the streets; to erect public markets; and to repair the quays. Harbour matters have all along been diligently attended to, and the original graving dock, built in 1762, and subsequently improved at great expense, was the first graving dock in Scotland. It was in 1873-74 superseded by a new one of improved construction. The length of its floor is 310 feet, the width at the entrance 45 feet, the depth of water on the sill at low water is 6 feet, at high water of neap tides 14 feet, and at high water of spring tides 16 feet. The original harbour occupied the position now covered by the West and East Harbours, the wet dock to the E, which is capable of floating very large vessels, having been formed, in 1834 and subsequent years, in a bay called Newark Bay. It covers an area of 12 acres, and cost about £40,000. Farther E still are ponds and enclosures for the storage of timber. All the basins are well sheltered, easy of access, and lie in a convenient position with regard to the fairway of the Clyde, which is at this point somewhat narrowed by shoals, but is clearly and carefully marked out by buoys and beacons. Harbour affairs are managed by a body of trustees, comprising the provost, 2 bailies, and 2 councillors of the place, the lord provost and senior bailie of Glasgow, 4 members elected by the shipowners and ratepayers, and 4 from the stockholders' trustees. The number of vessels registered in the port, with their tonnage, has been at various dates as follows:—

Year.	No. of Vessels.	Tonnage.
1818	133	19,133
1843	74	12,952
1845-49	...	12,860
1854	67	8,464
1868	39	9,671
1875	35	15,133
1884	34	11,321
1895	43	26,489

The great falling off owing to almost the whole of the coasting trade being removed to Glasgow in consequence of the deepening of the Clyde, and the subsequent improvement due to the natural growth of the port itself, is clearly shown. In 1868, 29 ships, with a tonnage of 8851 tons, were sailing vessels, while 10 with 820 tons were steamers; in 1884, 18 ships of 8570 tons were sailing vessels, while 16 with 2751 tons were steamers; and in 1895, 18 ships, with a tonnage of 23,190, were sailing vessels, and 25 of 3299 tons were steamers.

The principal trade is with Canada, and the next with the West Indies, these two branches of commerce employing about three-quarters of the tonnage entering the port. Trade is also carried on with the United States, the Mediterranean, and the East Indies. The Canadian import trade is chiefly in timber. The principal exports are iron, steel, soft goods, machinery, and coal.

The industries connected with the town are shipbuilding, saw mills, iron and brass foundries, sail-cloth factories, and establishments for the manufacture of sails, blocks, and rivets. Several of the shipbuilding yards are on an extensive scale. It may be here mentioned that it was at Port-Glasgow that the famous *Comet*, the pioneer steamship of the European world, was built in 1812. After plying for a time on the Forth she returned to the west coast, and was lost near Craignish in 1820.

Public Buildings, Municipality, etc.—The railway line runs nearly parallel to the shore through the middle of the town, and the station is near the centre. The principal streets are Fore Street, fronting the East and West Harbours; Bay Street, fronting the Wet Dock; and King Street and Princes Street parallel to Fore Street. The Town House is a good Doric building, with tetrastyle portico, erected in 1815 at a cost of

£12,000, and containing council chambers, town offices, court house, and police station. The clock-spire is 150 feet high. The Town Hall, in Princes Street, was erected in 1873. The Custom House is a fine building situated close to the docks. The Moffat Library, erected in 1887 from part of a bequest by the late James Moffat, Esq., merchant in the town, is an elegant building, containing library, reading, billiard, and smoking rooms. From the same bequest there have been erected at the east end of the town, the Carnegie Park Orphan Homes, which cost about £12,000, and have accommodation for about fifty boys and girls. The Public Baths and Wash-houses, in Bay Street, the gift of Mr Joseph Russell, shipbuilder, and erected at a cost of about £6000, were opened in 1894. Pipes having been laid down the wharf, a supply of water from the river can be procured every tide. In order to cope with the periodic epidemics of fever to which the burgh was for many years subject, and to check the spread of the malady, a Reception House for the isolation of those attacked was opened in 1893. It is situated on a comparatively isolated site at Brecon Park, at the foot of Clune Brae, is a two-storey building with five sick rooms, and has alongside of it a wash-house, drying-house, and fumigating room. Birkmyre Park, the gift of Mr William Birkmyre, M.P. for the Ayr Burghs, was thrown open to the public in 1894, pending the formal opening when completed. It comprises the estate and mansion-house of Glenhuintly, the latter of which the town council were authorised to sell or let, the revenue thus derived going to the upkeep of the park. An ornate bandstand has been fitted up, a bowling green and tennis court have been formed, and swings for girls and boys have been erected at the east and west sides of the park respectively. A fine monument of grey granite, to the memory of Mr Thomas Blackwood, engineer and shipbuilder, was erected in 1893 by his

workmen, to whom he had endeared himself by many considerate actions. It stands in the Cemetery, on the banks of the Clyde. The parish church, erected in 1823 at a cost of £3000, is a plain quadrangular building with 1200 sittings. It was renovated in 1894 at an expense of £1200. Newark church, to the SW, is a plain building of 1774, with 1500 sittings. It was re-

Seal of Port-Glasgow.

paired in 1891. There is also a mission church in connection with the Establishment. The first Free church dates from the Disruption, and contains 950 sittings; the second, formerly a church connected with the Reformed Presbyterians, has 300 sittings; and the third, erected in the west end, was opened in 1876, and contains 500 sittings. There are two U.P. churches and an Evangelical Union church. St Mary's Episcopal church, at the E end of the town, was built in 1856-57, by Miss Stewart, at a cost of £4000, and endowed by her with a fund of £10,000. It contains 331 sittings. In connection with it is a rectory, a hall, and an organist's house. St John's Roman Catholic church, with 600 sittings, was erected in 1854, and superseded a previous building. The following are the schools, with their accommodation, average attendance, and approximate government grants:—Chapelton public (450, 340, £375), Clune Park Public (644, 605, £580), Jean Street Public (712, 725, £845), and a Roman Catholic (983, 750, £785).

As has been already noticed, the burgh acquired municipal government in 1775, and the powers of the then corporation were enlarged by a subsequent act in 1803, when provision was made for the erection of a

new court house, a jail, and other public buildings. It was constituted a parliamentary burgh in 1832, and by the burgh reform act of 1833 the number of the councillors was reduced from 13 to 9. By the passing of the Burgh Police Act of 1892 it is governed by a provost, 4 bailies, and 7 commissioners. The corporation revenue in 1833 was £1889; in 1865, £4150; in 1883, £13,999; and in 1895, £15,680. The police force consists of 11 men (1 to every 1220 of the population), and the yearly pay of the superintendent is £173. The town has a post office, with money order, savings bank, insurance, and telegraph departments; branch offices of the Bank of Scotland, Clydesdale, Royal, and Union Banks; and several good hotels. There is one newspaper, the *Port Glasgow Express and Observer*, established 1875, and published on Friday. Among the miscellaneous institutions may be noticed a Volunteer Drill Hall, an Odd-fellows Hall, a Masonic lodge, a building society, a fire-engue station, a temperance institute, a female benevolent society, and the usual benevolent societies. There is a weekly market on Friday, and a three days' fair on the first Thursday of July and the two following days. There is a burgh court every Thursday, and justice of peace courts are held on alternate Mondays.

Port-Glasgow is connected with Greenock by tramway, and unites with Dumbarton, Renfrew, Rutherglen, and KILMARNOCK in sending a member to serve in parliament. Parliamentary constituency (1895) 1787; municipal 1968. Valuation (1884-85) £54,040, (1895-96) £55,690. Pop. (1841) 6938, (1861) 7214, (1871) 9851, (1881) 13,294, (1891) 14,685, of whom 7397 were males, and 7288 females. Houses (1891) inhabited 2932, uninhabited 76, and building 17.

Port-Gordon, a fishing village in Rathven parish, Banffshire, with a station on the Elgin and Portsoy section of the Great North of Scotland railway, 2½ miles SW of Buckie, 3½ E by S of the mouth of the Spey, and 5½ NE of Fochabers. Founded in 1797 by the fourth Duke of Gordon, it ranks as a creek of the port of Banff, and does some trade in exporting grain and importing salt and coals. Salmon are here abundant, and are captured with the stake and bag nets. Its 86 fishing boats employ 255 men and boys; and its artificial harbour, having fallen into decay in spite of repeated renewals and enlargements, has been superseded by a new harbour, which, formed in 1870-74 at a cost of £15,000 by the Duke of Richmond and Gordon, comprises two breakwaters, two piers, a quay berthage of 1400 feet, and a basin 3 acres in area. There is a Wesleyan chapel and a police station. A good water supply was introduced in 1884, and it was formed into a special water and drainage district in 1885. It has a post office. Pop. (1881) 737, (1891) 1254.—*Ord. Sur.*, sh. 95, 1876.

Portgower. See LOTH.

Portincross Castle. See KILBRIDE, WEST.

Port-Kingston. See KINGSTON.

Portknockie, a fishing village in Rathven *quoad civilia* parish, but in Cullen *quoad sacra* parish, Banffshire, on the coast, adjacent to Scar Nose, with a station on the Elgin and Portsoy section of the Great North of Scotland railway, 1¼ mile NW of Cullen town, and 4½ miles NE of Buckie. Founded in 1677, it carries on fishing in 85 large boats and 45 smaller ones, giving employment to 320 men and boys; and has a deep-water harbour, constructed in 1887-90 at a cost of £10,000, the berthage accommodation and wharfage being further increased in 1896 at a cost of about £3000. It has also a post office under Culler, a police station, an Established church (Seafield), a Free church, and a public school. Seafield church had a district assigned to it in 1884 as a *quoad sacra* parochial church. Pop. (1881) 1102, (1891) 1301.—*Ord. Sur.*, sh. 96, 1876.

Portlethen, a fishing village, a registration district, and a *quoad sacra* parish in Banchory-Devenick parish, Kincardineshire. The village stands on the coast, 7 furlongs E by S of Portlethen station on the Perth and Aberdeen section of the Caledonian railway, this being 8 miles S by W of Aberdeen. It has 40 fishing boats,

employing 82 men and boys. The *quoad sacra* parish, constituted by the court of teinds in 1856, is in the presbytery and synod of Aberdeen. The church contains 460 sittings. The minister's stipend is £190. Pop. of village (1861) 265, (1871) 315, (1881) 315, (1891) 355; of *q. s.* parish (1871) 1789, (1881) 1610, (1891) 1481.—*Ord. Sur.*, sh. 67, 1871.

Port-Logan, a seaport village on the W coast of Kirkmaiden parish, Wigtownshire, at the head of Portnessock Bay, 14 miles S by E of Stranraer. It has a post and telegraph office, a public school, and a jetty. A lifeboat was stationed here in 1894. A circular tidal fishpond, 10 yards in diameter, with an ingeniously contrived iron grating, has been excavated in the cliffs to the N of the bay, and contains some tame cod and a few 'blockans' or coal fish.—*Ord. Sur.*, sh. 1, 1856.

Portmahomack, a fishing village in Tarbat parish, NE Ross and Cromarty, on the SE side of the entrance to Dornoch Firth, 3 miles SSW of Tarbat Ness, and 9½ ENE of Tain. It has a post office, with money order, savings bank, and telegraph departments, 21 fishing-boats, employing 106 men and boys, and a pier 420 feet long, erected at a cost of £3168.—*Ord. Sur.*, sh. 94, 1878.

Portmary, an estate, with a mansion, on the coast of Rerrick parish, Kirkcudbrightshire, 7½ miles SE of Kirkcudbright, and 1½ mile S by E of Dundrennan Abbey. The name is said to be modern; but the rock is shown from which Queen Mary embarked on her flight to England. See DUNDRENNAN and TERREGLES.

Portmoak, a parish of E Kinross-shire, containing Scotlandwell village, 5 miles W of Leslie, and 6½ (only 4½ as the crow flies) E by S of Kinross, under which it has a post office. It is bounded SW by Cleish, W by Kinross, Loch Leven, and Orwell, and on all other sides by Fife, viz., N by Strathmiglo, NE by Falkland, E by Leslie and Kinglassie, and S by Auchterarder and Ballingry. Its utmost length, from N to S, is 5 miles; its breadth, from E to W, varies between 7 furlongs and 4½ miles. The Ryelaw detached part of Portmoak, which was also a detached part of the county of Kinross, was transferred by the Boundary Commissioners in 1891 to the parish of Kinglassie and to the county of Fife. Prior to that year the boundary between the two counties was the old channel of the river Leven. Between 1826 and 1836 a new channel was made for the river, and this is known since locally as the New Cut. The Boundary Commissioners substituted the New Cut as the county boundary for the old river channel throughout the whole distance along which that channel was formerly the boundary. By this change so much of the Fife parishes of Kinglassie and Ballingry as lay north of the New Cut has been transferred to the parish of Portmoak and to the county of Kinross, while those portions of Portmoak which lay to the south of the New Cut have been transferred to Kinglassie and to Fife. Loch LEVEN, to the extent of 5 miles along its eastern and its southern shore, margins the parish; the river Leven, flowing in the artificial cut just mentioned from Loch Leven, goes 2½ miles east-north-eastward; and GAINNEY WATER, running north-north-eastward into Loch Leven, forms for 1 mile the southerly part of the boundary with Kinross. From the shore of Loch Leven (353 feet above sea-level) the surface rises southward to flat-topped Benarty Hill (1167 feet) on the Ballingry border, and eastward to Bishop Hill, which culminates near Kinnesswood village in White Craigs (1492 feet), 1½ mile ENE of the nearest point of the loch. (See LOMOND HILLS.) All the parts of the parish not occupied by the two hill ridges and their skirts are narrow hanging plains; and the whole is a rich landscape of fine meadows, fertile fields, thriving plantations, beautiful braes, romantic crags, and picturesque sky-lines, exquisitely mirrored in Loch Leven. Copious springs of pure water are numerous in the north; and three within 400 yards of one another, in the neighbourhood of Scotlandwell, emit as much water as, with a suitable fall, would drive a mill. Eruptive rocks are in the hills, and have been worked;

sandstone abounds, but is not quarried; limestone is plentiful, and has been calcined to the amount of 4000 tons of carbonate in the year; and ironstone and coal, the former of excellent quality, were mined a number of years ago. The soil of most of the arable grounds is light, early, and exceedingly fertile. About 350 acres are under wood; three-fourths of the entire area are in tillage; and the rest of the land is nearly all pasture. KIRKNESS, noticed separately, is the principal residence; and the ruin of an old chapel at Scotlandwell is the only antiquity. Andrew Wyntoun (*fl.* 1400), the chronicler; John Douglas (d. 1574), the first 'tulchan' Archbishop of St Andrews; and Michael Bruce (1746-67), the poet, were natives of Portmoak; whilst the Rev. Ebenezer Erskine (1680-1754) was its minister from 1703 till in 1733 he founded the Secession at GAINNEY Bridge, where a monument was erected to celebrate the event in 1884. Portmoak is in the presbytery of Kinross and the synod of Fife; the living is worth £388. The parish church, at Scotlandwell, was built in 1839, and contains 730 sittings. Other places of worship are Portmoak Free church and Balgedie U.P. church. The public school, with accommodation for 162 children, has an average attendance of about 75, and a grant of nearly £65. Pop. (1801) 1151, (1831) 1554, (1861) 1450, (1871) 1193, (1881) 1042, (1891) 844.—*Ord. Sur.*, sh. 40, 1867.

Port-Monteith. See MONTEITH, PORT OF.

Port-Montgomery. See PORTPATRICK.

Portmore, an estate, with a mansion, in EDDLESTON parish, Peeblesshire, 1½ mile NNE of Eddleston station. Originally part of the Blackbarony estate, it was acquired in the early part of the 18th century by the Earl of Portmore (a title extinct since 1835), and in 1798 was sold to Alex. Mackenzie, W.S., whose grandson, William Forbes Mackenzie (1801-62), represented Peeblesshire for sixteen years, and carried through Parliament the Public House Act of 1852 that bears his name. His son, Colin Mackenzie, Esq. is present proprietor. The mansion, a Scottish Baronial edifice, erected in 1850 from designs by the late David Bryce, R.S.A., was destroyed by fire in April 1883, but was immediately afterwards restored.—*Ord. Sur.*, sh. 24, 1864.

Portnacraig, a village in Moulin parish, Perthshire, on the right bank of the Tummel, opposite Pitlochry.

Portnacroish, a village in Appin district, Argyllshire, on the E side of Loch Linnhe, 14 miles NNE of Oban. Its plain Episcopalian church, St Cross, containing 120 sittings, was built about 1809, and repaired in 1878.

Portnahaven, a village and a *quoad sacra* parish in Kilchoman parish, Islay island, Argyllshire. The village stands at the south-western extremity of Islay, adjacent to the islet and lighthouse of Oversay, at Rhynns Point, 10½ miles NW by W of the Mull of Oa, 15½ SW of Bridgend, and 24 SW of Port-Askaig. It occupies a picturesque, sheltered, rocky nook, on a shore often lashed with tempestuous billows; and has a post and money order office, an Established church built at the expense of Government, a Free church, and a new public school. The *quoad sacra* parish was constituted first by the ecclesiastical courts, and next in 1849 by the court of teinds; it is in the presbytery of Islay and Jura and synod of Argyll. The minister's stipend is £150. Pop. of village (1871) 411, (1881) 361, (1891) 345; of *q. s.* parish (1871) 979, (1881) 860, (1891) 869.

Portnessock Bay, a bay on the W side of Kirkmaiden parish, Wigtownshire, measuring 10½ furlongs across the entrance, and 6½ thence to its inmost recess. See PORT-LOGAN.

Portnockie. See PORTKNOCKIE.

Portobello, formerly an independent town, but amalgamated with Edinburgh in 1896. It is also a *quoad sacra* parish in Duddingston and South Leith parishes. A favourite watering-place and still a parliamentary burgh, it stands on the southerly shore of the Firth of Forth, 3 miles SE of Leith, and 2½ WNW of Musselburgh. With Leith it is connected by a branch of the North Brit-

ish; and with the centre of Edinburgh by the main line (1846) of that railway, by the Edinburgh Suburban railway (1884), and by a tramway $3\frac{1}{2}$ miles long. Prior to 1762 its site and the lands around it were a moorish furzy waste, called the FIGGATE WHINS, of no value whatever for agricultural purposes, and differing from a desert only in the presence of one human dwelling. But in that year they were let to a tenant at a rent equal to £11, 2s. 2 $\frac{1}{2}$ d. sterling, and a few months afterwards sold to Baron Muir for £1500. Parts of them now began to be feued out at £3 per acre; and so early as 1804 some portions were sub-feued at a perpetual rent of £40 per acre. Even the solitary hut, which was destined to give its name to the town, was built no earlier than 1742. A humble thatched cottage, it stood till 1862 on the SW side of the High Street, on the site now occupied by the town-hall, an object of interest to the townspeople and of curiosity to strangers. It was long used as a hostelry for travellers on a road which led out from the Fishwives' Causeway, across the whins, towards Musselburgh; and, according to tradition, it was built by a sailor, or marine, who had served under Admiral Vernon in the expedition of 1739, and was called by him Porto-Bello, in memory of his having acted a part in the capture of the town of that name on the Isthms of Panama. The Figgate Whins bore an evil reputation as a haunt of smugglers and robbers. Scott makes Effie Deans embark here on the smuggling lugger (1736); and in 1753 we find one 'George Hamilton in Portobello' advertising in the *Edinburgh Courant* that he would pay a reward of £3 to any one who should discover the author of a scandalous report representing him as having harboured robbers in his house. In 1765 Mr William Jamieson, the feuar under Baron Muir, discovered near the Figgate Burn a valuable bed of clay; and he erected on the banks of the stream, first a brick and tile work, and afterwards an earthenware manufactory. These public works gave rise to a small village, and co-operated with other and subsequent works to swell the village into a small town. About the beginning of the century the beauty of the beach, the fineness of its sands, and its general eligibility as a bathing-place, began to draw the attention of the citizens of Edinburgh; and thenceforth many neat dwelling-houses and numerous villas arose for the accommodation of summer visitors, converting the town into a fashionable watering-place. The principal street extends from NW to SE along the Edinburgh and Berwick highroad for a mile and a quarter, and bears over its NW half the name of High Street. The Figgate Burn intersects the town near its north-western end; the only parts of the burgh on the Leith side of the stream being mainly occupied by brick and bottle works. The High Street sends off at brief intervals, and generally at right angles, about a dozen alleys and streets to the beach. Those to the NW are narrow, and belong to the early periods of the town's existence; but those in the middle district, and towards the SE, increase in elegance as the distance recedes from the burn. The centre of the town, or what in old times would have been called the Cross, is a point at which Bath Street goes 330 yards north-eastward to the sea, and a spacious beautiful street, called Brighton Place, 400 yards south-westward to the station—Brighton Place being flanked by Brighton and Lee Crescents. Much of the area is open ground, much is occupied by garden-plots or villa enclosures, and much is rather a sprinkling of houses separately produced by individual taste or caprice, than a collection of edifices upon any preconceived plan. Yet most of the newer parts are comparatively regular both in their street lines and in their houses. The extensive brickwork which figured so prominently in the origination of the town has contributed much to disfigure it by tempting the construction of many of the houses with brick. But, over by much the greater part of the area, the building material is the same beautiful light-coloured sandstone which gives so pervading a charm to the architecture of the metropolis; and, as the brick edifices decay, it will pro-

bably be used for the houses which succeed them, and so allowed the universal adoption it deserves.

The curious Tower which overlooks the beach at the foot of Tower Street is a fantastic pile, built by the eccentric Mr Cunningham, who was one of the earliest subfeuars under Mr Jamieson. Antique carved stones appear in the cornices and the windows, and are alleged to have belonged partly to the Cross of Edinburgh, and partly to the dilapidated ecclesiastical piles of St Andrews. An excellent suite of hot and cold salt-water baths was erected in 1806 at a cost of £4000, between the foot of Bath Street and that of Regent Street. An edifice at the head of Bath Street was once an assembly-room, but is now an inn. The Town-hall, in a mixed style of French and Flemish, was built in 1862-63 by a limited liability company at a cost of £3000, on the S side of the High Street, to the E of Brighton Place. To the W, on the opposite side of the High Street, are the fine Municipal Buildings, Scottish Baronial in style, erected in 1878 at a cost of £7000. A principal feature is a three-dialled clock tower, surmounted by a flagstaff; and the town-hall also has its public clock. The fine level sands, 230 yards broad at low-water, on a Saturday afternoon of summer present an animated scene, with the ponies and donkeys, the pleasure boats and bathing-coaches, the throng of holiday-makers, and what not else besides. They are skirted by a smooth esplanade over a mile in length, midway on which, at the foot of Wellington Street, is the Prince of Wales's Drinking Fountain. In 1870-71 a promenade pier was constructed by a joint-stock company near the foot of Bath Street, at a cost of £7000. It extends 1250 feet into the sea, and is 22 feet broad, or 60 at the head, which is surmounted by a restaurant and an observatory. The pier is a calling place for excursion steamers, and serves not only for promenade concerts, but also for boating and (up to 9 a.m.) for swimming.

The view from the pier-head is one of singular beauty and interest—Inchkeith to the N, and the winding shores of Fife; to the NE, North Berwick Law and a peep of the Bass; to the E, Aberlady Bay, Prestonpans, Musselburgh, and the spire of Inveresk; to the S, the woods of Niddrie, Craigmillar Castle, and the Pentland Hills; and to the W, Arthur's Seat and a glimpse of Edinburgh. See these furnished by setting sun, or silvered by summer moon, and think of their many memories—the Pentlands, or 'lands of the Picts,' and Rullion Green; Inveresk, with its Roman remains; Arthur's Seat, named after the 'Blameless King,' and Edinburgh, after Eadwine of Northumbria; Kinghorn yonder, where King Alexander met his doom; Wilkie's 'ain blue Lomonds'; the battlefields of Pinkie and Prestonpans; Craigmillar, where Queen Mary wept; and Carberry Hill, where she resigned her crown. Nay, on these very sands, Cromwell held a conference with the Scots Commissioners; Prince Charlie arrayed his forces on the eve of the march to Derby; George IV. held a grand review; Scott composed the Flodden canto of *Marmion* on horseback; and Sir Archibald Allison, the historian, on one occasion, while a member of the Yeomanry Cavalry, after a six hours' drill on the sands, dined, drove 21 miles to a ball, danced all night, drove back, bathed in the sea, and went to another six hours' drill, 'without either being in bed or experiencing the least fatigue'; his right-hand man in the front rank during this mimic war being Lockhart, Sir Walter's son-in-law. At Shrub Mount, Portobello, Hugh Miller (1802-56) died by his own hand; and Portobello has been the birthplace or residence of two or three other men of mark—David Laing, LL.D. (1790-1878), antiquary; Prof. Robert Jameson (1774-1854), mineralogist; Samuel Brown, M.D. (1817-57), chemist and author; and Daniel D. Home (1833-86), spiritualist.

The *quoad sacra* parish church, in Melville Street, is a plain edifice, with a clock cupola, erected in 1810 as a chapel of ease at a cost of £2650, enlarged in 1815 and 1878, and containing 966 sittings. The parish was constituted by the General Assembly in 1834. St James's is another Established church, situated in High Street. The Free church, in Hamilton Terrace, Joppa, was

built in 1875-77, at a cost of £9000, from designs by Mr John Honeyman, and is a really striking edifice in the Early Decorated style of the close of the 13th century, its only defect being a certain thinness. It consists of an aisled nave, with 660 sittings and traceried stained-glass windows, and of a tower and spire 170 feet high, with a deep-toned bell of 36 cwt. The Windsor Place U.P. church, built in 1879-80, at a cost of £8500, from designs by Messrs Stewart & Menzies, is a less successful Gothic structure, consisting of nave and transepts, with 760 sittings and a NW tower and spire 130 feet high. The Regent Street U.P. church is a very plain but commodious building, reconstructed in 1880 from a previous church. St Mark's Episcopal Church, consecrated in 1828, is an uneccelesiastical-looking building, with a heavy Grecian portico, a stained-glass window, and 500 sittings. It was restored and improved in 1892. St John's Roman Catholic church (1835; enlarged 1878; 400 sittings), in Brighton Place, is plain but neat; and the same may be said of the Congregational church in Wellington Street. A beautiful cemetery, nearly $1\frac{1}{4}$ mile SE of the centre of the town, and 4 acres in extent, was laid out in 1876-77. There are two public schools and several private ones. A considerable trade is done in the manufacture of paper, bottles, pottery, earthenware, bricks, and tiles, and at Joppa there are saltworks.

The town besides has a post office, with money order, savings bank, insurance, and telegraph departments, branches of the Clydesdale, National, and Royal Banks, 2 hotels, a gas-light company, a drainage system which cost £11,000, a good water supply from the Edinburgh waterworks, a second railway station at Joppa, a Merchants' Association, a Destitute and Sick Society, a combination hospital, and a working men's reading room, Liberal and Conservative associations, boating, curling, and swimming clubs, masonic and other lodges, etc. Erected into a burgh in 1833, it was amalgamated with Edinburgh in 1896, and is divided into three wards, each sending three representatives to the Edinburgh Town Council. By the Reform Act of 1833 Portobello returns one member conjointly with Leith and Musselburgh. Its parliamentary constituency numbered 1305 in 1895. Valuation (1856) £16,843, (1866) £25,196, (1876) £37,861, (1885) £46,075, (1895) £48,981, exclusive of railways and tramways. Pop. (1841) 3587, (1851) 3527, (1861) 4366, (1871) 5551, (1881) 6926, (1891) 8684, of whom 4815 were females, 8182 were in the parliamentary burgh, 165 were in South Leith parish, and 5594 were in Portobello *quoad sacra* parish.—*Ord. Sur.*, sh. 32, 1857.

Seal of Portobello.

Port of Monteith. See MONTEITH, PORT OF.

Portpatrick, a Wigtownshire village and parish, on the W coast of the Rhinns of Galloway. The village by sea is $21\frac{1}{2}$ miles NE of Donaghadee in Ireland, whilst, as terminus of the Girvan and Portpatrick section of the Glasgow and South-Western railway, and of the Castle-Douglas and Portpatrick railway, it is $7\frac{3}{4}$ miles SW of Stranraer, 61 W by S of Castle-Douglas, 80 $\frac{1}{2}$ WSW of Dumfries, 170 $\frac{1}{4}$ SW of Edinburgh, and 66 $\frac{1}{2}$ SSW of Ayr. It lies snugly sheltered in a small triangular opening in the rock-bound coast, the base of the triangle being formed by the sea, and the other two sides by towering cliffs, which in places rise sheer to 130 feet, and behind recede into hills 300 to 400 feet high. The declivities of the amphitheatre at the sides of the little bay are steep and impracticable; and, even behind the town, except where a streamlet has cleft them into a cleugh and ploughed down a path for the highroad and railway, they are sufficiently rapid to give the whole inclosed space the appearance of a vast quarry, or the half of a huge bowl. Neither by land, nor northward or southward by sea, is the town seen until it is almost entered; and from either position, especially from the sea, it wears

an aspect of remarkable seclusion. Yet, though the nest in which it sits is almost as bare of embellishment as the bald head of a hill of the hardest primitive rock, Portpatrick basks in a south-westerly exposure, and during high winds from most points of the compass is enviably snug, so that of late years many patients have been recommended by the faculty to seek a shelter here from the keen east winds of spring and early summer, and it has become a great resort for visitors during the summer months. Most of the houses are of recent date; and all are built of native greywacke. The newest and principal street, about 350 yards long, commences near the centre of the basin at the harbour, and, running up towards the gorge or incision in the hill-screen, carries out the road to Stranraer. The street next in importance is bisected by the former nearly in the middle, has a slight curvature in its direction, and overlooks the harbour. Behind are some smaller streets.

The harbour of Portpatrick lies open to winds which blow about eight months in the year, and is exposed to a swell, which sometimes rolls into it with great violence. It was long a mere natural inlet, without any projecting elbow or sheltered recess; and the vessels which frequented it required to be flat-bottomed, and were drawn aground and re-launched at every voyage. But a pier of a kind then thought to be one of the finest in Britain, was built at it in 1774; and a reflecting lighthouse was erected to correspond with one on the opposite coast at Donaghadee. In 1821 an artificial harbour on a grand scale was commenced from designs by Rennie. Its form is nearly that of a horse-shoe; the sides running out into piers, which at the entrance approach within 250 feet of each other. On the S side of the inclosed basin the old pier of 1774 projects inward on a line nearer the land than the centre of the basin; and on the other side is a large rock or skerry rising above the surface of the water, and partially protecting the space within from the wind and swell at the entrance. The harbour is thus divided into an outer and an inner harbour; and the passage from the former to the latter, between the old pier and the skerry, has a width of 105 feet. The dimensions of the entire harbour, outer and inner, are 710 by 495 feet. The depth of the outer harbour is from 4 to 20 feet at low water spring tides; and that of the inner harbour is on the average $6\frac{1}{2}$ feet; but that over a bank in the passage between them is only $2\frac{1}{2}$ feet at low water spring tides. The parapets of the new piers are formed of large blocks of grey limestone from Wales; and that of the southern one terminates in a semicircular sweep, within which rose a handsome lighthouse of the same material, and 46 feet high. Portpatrick, both as a seaport and as a town, owed nearly all its former importance to its commanding the shortest communication from Britain to Ireland. A weekly mail across the channel was established at it in 1662; and a considerable trade with Ireland resulted from the formation of the pier in 1774; so that the importation of cattle and horses rose from 17,275 in 1790 to 20,000 in 1812, to sink again to 1080 in 1837. Four good-sized vessels were also built here, the last in 1790. A great increase of business was expected to arise from the construction of the new harbour and the employment of two steam mail-packets, which transmitted from 8000 to 10,000 letters per diem in 1838, and which in the twelve preceding years conveyed an annual average of 12,000 passengers, besides linens and lime from Ireland, coals from Ayrshire, and cotton goods from Glasgow and Manchester. There was a large custom-house, and troops were often shipped here for Ireland. But the establishment of communication between Glasgow and Belfast, between Holyhead and Dublin, and later, between Stranraer and Belfast, did Portpatrick severe damage, reducing it suddenly to insignificance. The mail ceased to run in 1849; the lighthouse was removed in 1869; and the massive harbour-works, which cost the country £500,000, are lapsing fast to a state of utter ruin. A submarine telegraph cable, from Portpatrick to Donaghadee, was laid on 23 May 1853.

Portpatrick derives its name from the great Apostle of

Ireland, who once, according to legend, here crossed the channel at a single stride, and left a deep footprint on a rock that was removed in the formation of the harbour. On another occasion, the savages of Glenapp had cut off his head; but, picking it up, the Saint quietly walked to Portpatrick, plunged into the sea, and, *holding his head in his teeth*, swam safely to the opposite shore. A chalybeate spring bears the name of St Patrick's Well; whilst a pre-Reformation chapel, called Chapel Patrick, stood on or near the site of the old parish church. The babe St Cuthbert, too, with Sabina his mother, is said to have crossed from Ireland on a stone currach, and landed 'in Galweia, in that region called Kenni, in the harbour of Rintnoc,' which Skene identifies with Portpatrick. The barony of Portree, within which were the village and haven of Portpatrick, belonged anciently to the family of Adair of Kilhilt, from whom, about 1608, it passed to Sir Hew Montgomery (afterwards Viscount Airds, in the county of Down). It remained in his family for three generations, and he speedily obtained the erection of the village into a burgh of barony, and imposed on it the name of Port Montgomery—a name, however, that never came much into vogue. Hitherto all the lands which constitute the present parish had belonged to the parish of Inch, and were called the Black Quarter of Inch. But in 1628 a charter, granted by Charles I., detached them—Portree, Kilhilt, and Sorbies—from Inch, erected them into a separate parish, ordained that a church which was then building should be the parish church, and constituted it a rectory under the patronage of the lord of the manor. Another charter, which was dated two years later, and which suppressed the abbey of Sauleseat, granted an endowment for the new parish the unappropriated revenues of the parish churches of Sauleseat and Kirkmaiden, which had belonged to the abbey. The ruinous old parish church, built in 1628-29, was a cruciform structure, with a circular central tower, suggestive of defensive purposes. In the churchyard lie 60 of the persons lost in the wreck of the *Orton*, a Glasgow and Liverpool steamer, which occurred in fine weather, $\frac{1}{4}$ mile N of the 'Port,' 18 June 1850. Portpatrick is now a lifeboat station, and has a coast-guard with rocket apparatus. It was long the Gretna Green for Ireland; and the marriages of 198 gentlemen, 15 officers, and 13 noblemen are registered in the kirk-session records for the 50 years prior to 1826, in which year the church courts interfered with the practice. The lowest fee then was £10 to the minister and £1 to the session clerk. The present parish church, built in 1842, is a handsome edifice, with 800 sittings, and a square embattled tower. It is a conspicuous as well as an ornamental object. In 1893 instrumental music was introduced, and a baptismal font presented to the church. The Free church, erected in 1888, is a handsome building in the Gothic style. There is also a Scotch Episcopal mission station. Portpatrick has a public school, a post office, with money order, savings bank, and telegraph departments, several inns, a battery of artillery volunteers, a public library, a coffee and reading room, a Good Templar lodge, a curling club, and good sea-bathing. Pop. of village (1831) 1205, (1841) 996, (1861) 1206, (1871) 685, (1881) 591, (1891) 520, of whom 307 were females. Houses (1891) inhabited 113, vacant 10, building 1.

The parish is bounded NW and N by Leswalt, NE by Inch, E and SE by Stoneykirk, and SW by the Irish Channel. Its utmost length, from NE to SW, is $4\frac{3}{4}$ miles; its utmost breadth is 4 miles; and its area is $9145\frac{1}{2}$ acres, of which 43 are foreshore and 8 water. The coast, $4\frac{3}{4}$ miles in extent, has a general south-south-easterly trend. Over its whole extent it is bold, rocky, and dangerous to navigation, presenting a line of natural rampart, interrupted only by four or five little bays, and comprising a series of cliffs and shelving rocks pierced with caves, torn with fissures, or notched with protuberances, and rising in many instances to an altitude of from 100 to 200 feet. The little bays have the capacity of mere creeks, yet possess pleasant

features, and in a certain degree, or in given winds, afford safe entrance and shelter to vessels. Killantringan Bay touches, or partly forms, the northern boundary; Port Kale and Port Mora, the next bay and a twin one, are $1\frac{1}{2}$ mile to the SSE; and Portpatrick and Castle Bays are respectively $1\frac{1}{2}$ and 1 mile from the southern boundary. Port Mora, though separated from Port Kale by only a slender promontory, has a beach entirely different, its composition being of the fine soft sand of freestone, while that of the other's beach is the grit and small boulders of primitive rock. A glen which comes down to the head of Port Mora, and brings to the sea the silvery waters of a brook, is pronounced by the writer of the *New Statistical Account* 'the most picturesque in Galloway;' its stream making 'a very pretty wild waterfall,' and its sides being traversed by walks which are 'very tastefully cut, and connect the two bays with the present mansion-house of Dunskey, situated about a mile distant on the height.' The interior of the parish is all elevated, and attains its greatest altitude about $3\frac{1}{2}$ miles from the coast. The surface is either hilly or irregularly undulated, exhibiting scarcely any level ground except in a few small tracts of peat moss. Most of the slopes are gradual, but a few are too steep to permit the traction of the plough, and many, especially the loftier ones, are flecked or jagged with bare rock. Most of the hills are tabular, but a few are cupular or conical. The loftier ones are called the fells of the farms to which they severally belong; and the loftiest of all, CAIRNPAT (593 feet), is the highest ground in the Rhinns of Galloway, and commands a very extensive and diversified prospect. The prevailing rocks are greywacke, greywacke slate, and alum slate, the first of which is quarried as building material. The soil is almost everywhere moorish or mossy, and where cultivated has become a brown mould or a blackish moss, streaked or interworked with a marly clay taken up by the plough from the subsoil. Mosses abound, and even on the hill tops are frequently 6 or 7 feet deep. Nearly three-fourths of the entire area are regularly or occasionally arable; rather less than one-third is waste or pastoral; and about 310 acres are under plantation. The chief antiquity and the chief mansion are noticed under DUNSKY. Portpatrick is in the presbytery of Stranraer and the synod of Galloway; the living is £200 and manse. The public school, with accommodation for 277 children, has an average attendance of about 115, and a grant of over £100. Pop. (1801) 1090, (1831) 2239, (1861) 2189, (1871) 1492, (1881) 1285, (1891) 1219.—*Ord. Sur.*, sh. 3, 1856.

Porttract, an estate, with a mansion, in Holywood parish, Dumfriesshire, near the right bank of the Nith, $3\frac{1}{4}$ miles SSE of Auldgrith.

Portramsay, a village and a harbour on the NW side of Lismore island, Argyllshire, near its NE end, 10 miles N by E of Oban. The harbour, large and commodious, and affording one of the best anchorages on the Argyllshire coast, is protected by several islets in the offing, and may be entered by any of three different straits between the islets. Strangers, however, must be careful of some neighbouring rocks, scarcely visible at low water, and entirely covered when the tide is up.—*Ord. Sur.*, sh. 45, 1876.

Portree (anciently *Kilturagleann*, from Celt. *Kíl*, 'a chapel;' *tar*, 'the bottom;' and *gleann*, 'a glen,' meaning the chapel at the bottom of the glen), a parish with a town of the same name in the Skye district of Inverness-shire, and comprehending the central part of the E coast of the island of Skye, as well as the adjacent islands of Raasay and South Rona, which are separately noticed. The portion in the island of Skye is bounded N by the parish of Snizort, E by the Sound of Raasay, S by the parish of Strath, and W by the parishes of Bracadale and Snizort. The total length, from the mouth of Bearreraig river on the N to the source of a small stream rising between Marsco and Beinn Dearg and flowing to the river Sligachan, is $16\frac{3}{4}$ miles, and from the extremity of Rona south-south-westward to the same point on the S is 23 miles; the

greatest width of the mainland portion, from the river Snizort on the W due eastward along the head of Portree Loch, is $6\frac{1}{2}$ miles, and to the E side of Raasay in the same line $10\frac{1}{2}$ miles; while the total area is 58,944 acres, including 336 acres of water, 1663 of foreshore, and 34 of tidal water. Of the total area 15,704 acres are in Raasay and 2564 in Rona. The coast is mostly rocky, and rises pretty steeply from the sea, while at various points there are lines of cliffs. Near the N end is the small Holm Island, and there are several skerries between Portree Harbour and the Narrows of Raasay. The coast-line is indented by several bays, rendering the outline along the E highly irregular. Five miles from the N end is Portree Bay and Loch, $1\frac{1}{2}$ mile wide at the mouth, and extending 2 miles inland; $2\frac{1}{2}$ miles farther S is the small Tianavaig Bay; and at the narrows of Raasay a promontory juts out with Camas a' Mhor-bheoil on the N and Balmeanach Bay on the S. Opposite Kyle More between the S end of Raasay and Scalpay, is Loch Sligachan, 3 furlongs wide at the mouth and 3 miles deep; while opposite the middle of Scalpay is Loch Ainort, $\frac{5}{8}$ mile wide at the mouth and $1\frac{1}{2}$ mile deep. Only the NW side of Loch Ainort is in Portree parish, and from the head of the loch the parish boundary line strikes up the burn at Kinloch Ainort, twists southward to the source of a burn that rises between Marseo and Beinn Dearg, and follows that stream to the river Sligachan, down which it passes to the top of Loch Sligachan. From the top of Loch Sligachan it strikes up the Allt Dubh across the road to Portree, and follows the course of the stream to the bend before it again crosses the road, and passes irregularly to the NW, till it reaches the river Snizort at Achaleathan. It follows the course of the Snizort to Hornisco Burn, and thence turns eastward to the small Loch nam Learg, and then irregularly N and NNE to the middle of Lake Leathan, and thence down Bearraig river to the sea, the southern two-thirds of Loch Leathan being within the parish. The surface is irregular. In the portion to the N of Portree Harbour it rises from the sea by a steep slope terminating in a bold line of cliff, rising at Sithean Bhealach Chumhaing to a height of 1286 feet, and again sloping from this inland to a hollow from 250 to 450 feet above sea-level. To the NW of this there is another line of cliff, which, on the border of the parish, reaches a height of 1087 feet at Bealach Mor. In the portion between Portree Loch and Tianavaig Bay it again rises steeply from the shore, and then by a line of cliff to the ridge of Ben Tianavaig (1352 feet) whence it slopes north-westward to Portree Bay and Loch. Round the W and SW sides of Portree Loch it slopes from the loch up to heights of 1367 feet at Beinn na Greine, 1288 at Skriag, and 1300 at Stròc-bheinn, and from these again falls away to the basin of the river Snizort. Between these heights and the lower slopes of Ben Tianavaig is the basin of the Varragill river, and between Glen Varragill and the Narrows of Raasay the ground reaches a height of over 700 feet, and between Glen Varragill and Loch Sligachan heights of 1456 at Ben Lee and 1099 at Meall Odhar Beag. In the W of the peninsula, between Loch Sligachan and Loch Ainort, is Ben Glamaig (2537 feet) and Beinn Dearg Mheadhonach (2094). From these the ground slopes eastward to Gleann Torra-michaig, the upper end of which is 429 feet above sea-level, and then rises again to 922 feet above Moll. Speaking generally, there may be said to be a chain of hills along the coast broken by the sea lochs and another chain inland, the two lines being separated from N to S by the hollows occupied by Lochs Leathan and Fada, Glen Varragill and Gleann Torra-michaig. In the extreme N the drainage finds its way by small streams to Loch Fada and Loch Leathan, and thence by Bearraig river to the sea. On this river there is a pretty waterfall, as there are indeed on several of the other streams. Between Loch Fada and Portree Harbour the drainage is carried off by the Chraicag and the Leageary, which flow into the harbour E and W of the town respectively. In the portion between Portree Harbour and Loch Sligachan the drainage of the

portion farthest to the W passes by Glenmore river to the Snizort, that of the centre by the Varragill and its tributaries, to the sea at Portree Loch, or by smaller streams directly into the loch and harbour; that of the district along the coast by a number of small streams direct to the sea, and that of the peninsula between Loch Sligachan and Loch Ainort by small streams to the river Sligachan or direct to the sea. There are a number of small lochs and lochans, but the only ones that need be mentioned are Loch Fada (454 feet; 6×2 furl.) and Loch Leathan (438; 6×4 furl.) in the N; and Loch Conardan ($4 \times \frac{1}{2}$ furl.), $\frac{3}{4}$ mile SW of Tianavaig Bay. Both lochs and streams afford excellent trout fishing. South of Loch Sligachan, about Ben Glamaig, is a deer forest of about 14,000 acres, belonging to Lord Macdonald. Particulars about Raasay and Rona are given in separate notices, and what follows applies to the mainland part of the parish. The soil includes patches of sand, gravel, and clay, but is principally very wet gravel or moss, almost everywhere cold, unkindly, and barren, so that the arable part bears but a very pitiful proportion to the pasture and waste moorland. Ground under coppice or plantation is hardly to be seen except about the town of Portree, as trees will not thrive. The little that is under cultivation is in the hands of crofters, who have a hard struggle for life, and have generally to eke out their scanty means of subsistence by taking part as 'hired-men' in the east coast herring fishing. The townships between Loch Sligachan and Tianavaig Bay are known as The Braes. The other principal crofter districts are at Sconser, on the S side of Loch Sligachan; at Glenmore, near the centre of the parish on the W side; and Drumuie, $2\frac{1}{2}$ miles NW of Portree. The greater part of the parish is under sheep. The underlying rocks are mostly volcanic, the tract of country between Loch Sligachan and Loch Ainort being occupied by syenite, and that N of Loch Sligachan by greenstone. On the S shore of Loch Sligachan near the centre is a patch of rock of oolitic age, and similar deposits exist on both sides of Portree Bay, and extend in a belt northward from the head of Loch Sligachan, and also northward from Portree Bay. They consist of beds of limestone, shale, and sandstone, and are in many places richly fossiliferous. In the early part of the 19th century Lord Macdonald tried, but unsuccessfully, to work some veins of lignite. A cave, 3 miles N of the entrance to Portree Bay, and about 5 miles from the town of Portree, bears the name of Prince Charles's Cave, and here, according to the guide books, the prince spent some time in concealment after Culloden; but it is more than doubtful whether he was ever at the place at all, for according to Flora Macdonald's account he passed straight from Kingsburgh to Portree, and after visiting the inn embarked almost at once for Raasay. On a stream a little to the S of this cave are two small waterfalls. There are some other caves along the coast, but none of importance. The SKYE Union Poorhouse is in this parish, about $\frac{1}{2}$ mile W of the town of Portree. The principal residences are Portree House and Viewfield House at the town, Lord Macdonald's shooting-box at Loch Sligachan, and Raasay House. The only industry is a small woollen manufactory, started during the destitution in the district about 1850, and the only result as yet of the many proposals to bring the manufactory into the district where the raw material is produced. The fabrics woven are excellent tweeds, plaide, and wineys. The antiquities are confined to a few tumuli, and in 1884 a valuable find of silver coins of the latter part of the 16th and the early part of the 17th centuries took place at Hillside of Woodend. The coins belonged mostly to the reign of James VI., with a few of Elizabeth, and one of Henry of Navarre.

The parish, which was anciently included in Snizort and Kilmuir, was disjoined in 1726. It is in the presbytery of Skye and the synod of Glenelg, and the living is £212 with manse. The churches are noticed in connection with the town. Under the School Board the schools of Braes, Glens, Peneffler, Portree, Raasay, Rona, Sconser, and Torran, with respective accommodation for

152, 30, 29, 292, 97, 52, 50, and 60 pupils, have an average attendance of about 150, 30, 20, 205, 75, 30, 45, and 40, and grants amounting to over £160, £45, £30, £325, £100, £55, £65, and £60. In the Braes district there is a mission church, built partly by public subscription and partly by a grant from the funds of the Baird Trust. Lord Macdonald holds almost the whole of the mainland part of the parish. Pop. of the whole parish (1801) 2246, (1831) 3441, (1861) 3159, (1871) 2928, (1881) 3191, (1891) 3176, of whom 1435 were males and 1741 females. Of these 2492 (1116 males and 1376 females) were in the mainland portion, including the town of Portree.

Portree, a town and seaport, stands at the point where Portree Bay bends round to the southward, and, though of no great size, gains importance from being the largest seat of population and the chief business centre for Skye and the neighbouring islands, as well as the headquarters of the ever-increasing number of tourists who visit the district yearly. *Via* Dingwall and Strome, the town is 103½ miles W of Inverness, and 32 miles WSW of Strome Ferry; by steamer it is 120 miles NNW of Oban, and 60 miles S by E of Stornoway; and by road 24½ NW of Broadford, 14 SE of Uig, and 23½ E of Dunvegan. The name is a corruption of *Port-an-rioh*, 'the king's harbour,' a title which was given when the royal fleet, commanded by King James V. in person, anchored in the harbour on the occasion of the great expedition to the Western Isles in 1540. Other authorities, however, refer the origin of the name, not to the visit of King James, but to that of Haeco, King of Norway, when on his LARGS expedition. There seems to have been a Columban church in the neighbourhood, for the bay NW of the town was formerly called Loch Columkille; and an islet, with traces of graves and of a small building standing E and W, is called Eilean Columkille. This is possibly the church from which the old name of the district was taken (see preceding article). The site is along a steep acclivity at the north-western corner of the bay; and the description given by Alexander Smith in his *Summer in Skye* (1865) is as applicable now as then:—'Portree folds two irregular ranges of white houses, the one range rising steeply above the other, around a noble bay, the entrance to which is guarded by rocky precipices. At a little distance the houses are white as shells, and as in summer they are all set in the greenness of foliage, the effect is strikingly pretty; and if the sense of prettiness departs to a considerable extent on a closer acquaintance, there is yet enough left to gratify you as long as you remain there, and to make it a pleasant place to think about when you are gone. The lower range of houses consists mainly of warehouses and fish stores; the upper, of the main hotel, the two banks, the courthouse, and the shops. A pier runs out into the bay, and here, when the state of the tide permits, comes the steamer on its way to or from Stornoway, and unloads. Should the tide be low the steamer lies to in the bay, and her cargo and passengers come to shore by means of boats. She usually arrives at night; and at low tide the burning of coloured lights at the mast-heads, the fitting hither and thither of busy lanterns, the pier boats coming and going with illuminated wakes and ghostly fires on the oar blades, the clatter of chains and the shock of the crank hoisting the cargo out of the hold, the general hubbub and storm of Gaelic shouts and imprecations, make the arrival at once picturesque and impressive. In the bay the yacht of the tourist is continually lying; and at the hotel door his dogcart is continually departing or arriving. In the hotel parties arrange to visit Quirang or the Storr, and on the evenings of market-days, in the large public rooms, farmers and cattle-dealers sit over tumblers of smoking punch and discuss noisily the prices and the qualities of stock. Besides the hotel and the pier, the banks and the courthouse already mentioned, there are other objects of interest in the little island town—three churches, a post office, a poorhouse, and a cloth manufactory. And it has more than meets the

eye—one of the Jameses landed here on a visitation of the isles; Prince Charles was here on his way to Raasay; Dr Johnson and Boswell were here; and somewhere on the green hill on which the pretty church stands, a murderer is buried—the precise spot of burial is unknown, and so the entire hill gets the credit that of right belongs only to a single yard of it. In Portree the tourist seldom abides long; he passes through it, as a fortnight before, he passed through Oban. It does not seem to the visitor a specially remarkable place, but everything is relative in this world. It is an event for the Islesman at Dunvegan or the Point of Sleat to go to Portree, just as it is an event for a Yorkshireman to go to London.' Whatever may have been the case when King James was here, however, it is certain that in Prince Charles's time, and even later, when Dr Johnson and Boswell were here, there was no village, but only an inn, and perhaps a clachan or kirkton, for Boswell says, in 1773, 'Sir James Macdonald intended to have built a village here, which would have done great good;' but though Sir James did not carry out the plan, the village made its appearance in due time under Sir James's successor. To the S of the town a craggy wooded promontory projects into the harbour, and is crowned by an octagonal tower erected by Dr Alexander Macleod in 1834, and commanding a good view. Portree House, belonging to Lord Macdonald, is to the W of the town; and farther W still is the woollen manufactory already alluded to. The quay was erected in 1819, and having been recently improved by Lord Macdonald at a cost of £3000, it is now suitable for vessels at all states of the tide. The Established church on the promontory already noticed was built in 1825, and contains 800 sittings. There are also Free, U.P., and Episcopal churches, of which the last, St Columba's, is a good Gothic edifice, after designs by Mr Ross of Inverness, erected in 1884 as a memorial to the late Bishop Mackarness. None of the others call for special notice. Skye being one of the judicial divisions of Inverness-shire there is a courthouse, erected in 1867, where the resident sheriff-substitute holds his courts. The district prison, legalised in 1848, was formerly used for prisoners whose sentences did not exceed 60 days, but since the passing of the Prisons Act it has been licensed only for prisoners whose sentence does not exceed 14 days. Instead of the one hotel mentioned by Alexander Smith there are now four, and there are also a post office, with money order, savings bank, insurance, and telegraph departments, branches of the Caledonian, National, and North of Scotland Banks, a National Security Savings Bank, and a temperance society. The Gesto Hospital, Edinbane, was founded by the late Kenneth Macleod of Greshernish for the reception of natives of Skye. At Portree also is located the Skye Union Poorhouse. Portree is one of the polling stations for Inverness-shire. The sheriff court is held for both ordinary and small debt cases every Thursday during session. There are cattle fairs on the last Tuesday of May and the third Tuesday of August, September, and November. Communication is maintained with the mainland by the Highland Railway Company's steamer between Portree and Strome Ferry daily, while the Glasgow steamers call twice a week, and the Oban steamers three times a week. The principal imports are miscellaneous goods; and the principal exports are sheep, cattle, wool, salt herring, salmon, and cod and ling salted and dried. Pop. of town (1861) 679, (1871) 731, (1881) 893, (1891) 1003, of whom 450 were males and 553 females. Houses inhabited 190, uninhabited 3.

Portree Bay opens off the Sound of Raasay almost opposite the middle of the island of Raasay, and is 1½ mile wide at the mouth. From this it extends westward about 2 miles to the town of Portree, and then turns off at right angles southward for over a mile in the portion known as Portree Loch. The shape resembles a stumpy leg and foot, the foot being formed by the loch. From the N side of the bay a point projects, terminating at Sgeir Mhòr, and from the S side Vriskaig Point stands

out a little farther to the W. The portion of the bay to the W of a line drawn between these two points is Portree Harbour, a fine land-locked piece of water spacious enough to accommodate a large number of vessels, with a depth of from 5 to 6 fathoms; the bottom, being strong clay, affords excellent holding ground for ships at anchor. At the corner where the bay turns southward there is another point, on which the Established church and part of the town of Portree stands. The upper part—the Loch—is nearly dry at low water. On both sides of the portion running E and W there are picturesque cliffs of volcanic rocks. One reach on the N side somewhat resembles Salisbury Crags on Arthur's Seat at Edinburgh, and those on the S side are pierced at several points of their base by caverns, and at other places recede so as to leave a steep grassy talus between them and the shore. Suidh Fhinn or Fingal's Seat, to the W of Portree Loch, commands from its summit a magnificent view of almost the whole of the western coast of Ross and Cromarty, and of nearly the whole of the Skye and Long Island portions of the Hebrides.

Port-Seton. See COCKENZIE.

Portskerra, a fishing village in the NE of Farr parish, Sutherland, near the mouth of the river Halladale. For want of boat accommodation, the fishermen here and at Skerry (in Tongue parish) had to fish at other ports, but in 1894 Government having granted £3000 to each place for a boat harbour, operations were begun to provide the harbours at an estimated expense of £4000 each (the balance having been made up by the late Duke of Sutherland). In the case of Portskerra it is proposed to run a breakwater or pier out on the rocky foreshore for a distance of 275 feet, sheltering a natural creek, which is to be excavated and levelled. At Skerry a breakwater is to be made across the bay in an easterly direction for a distance of 198 feet, afterwards bending landwards for a distance of 75 feet, and inclosing a large deep-water area. These works are intended to afford protection to the largest class of fishing boats. Pop. of Portskerra (1891) 332.

Port-Sonachan. See KILCHRENAN.

Portsoy, a seaport and burgh of barony in Fordyce parish, Banffshire. It was formerly the terminus of the Grange and Portsoy branch of the Great North of Scotland railway system, but is now one of the chief stations on the loop line of the same system, which was constructed in 1883-85, and which passes from Keith by Portsoy, Cullen, and Buckie to Elgin. By rail it is 8½ miles W of Banff, 13½ NE of Grange, 17¼ NE of Keith, 5½ E of Cullen, 11 E of Buckie, and 24½ E by N of Elgin. By road it is 18 miles ENE of Fochahers. It stands on a point of land on the W side of the little estuary of the Soy Burn, which carries off the surplus water from the Loch of Soy—now sadly encroached on by the railway—and from which the place takes its name. On the SE side the Burn of Durn enters the sea at the Back Green. The town is of some antiquity, and was in 1550 constituted by Queen Mary a burgh of barony holding of Sir Walter Ogilvie of Boyne, and with all the usual privileges, and the charter was ratified by Act of Parliament in 1581. The present superior is the Countess-Dowager of Seafield. As might be expected from its age the town is very irregularly built, and many parts of it have a very quaint appearance. There seems to have been a castle at one time, but there is no record of it, and its existence is only inferred from the place once known as the 'Castle Brae.' Of an ancient church dedicated to St Columba, which stood at the Aird, 'hard by the tounce where now [1724] is a large meeting-house lately buildit,' no trace now remains, though the Aird still exists; and even where the meeting-house was is not exactly known, though it is supposed to have been the Episcopal church which was destroyed by Cumberland's soldiers in 1746, and seems to have stood between Durn House and Durn Mill. There is a well still known as St Colme's or St Comb's Well. The district was constituted a preaching station in connection with the Established Church in

1741; and a chapel of ease was constituted in 1836, and became a *quoad sacra* charge in 1871. The church, which was built in 1815, was greatly improved in 1881, a clock tower having been previously erected by public subscription in 1876. The clock and bells in this were the gift of Mr F. P. Wilson, a native of the town. The original church bell, now at the school, bears the inscription, 'For the use of the Presbyterian Church, Portsoy. John Spicht, Rotterdam, 1746.' The bell which succeeded it is lying unused in the present clock tower. The Free church, built soon after the Disruption, and rebuilt with a handsome spire in 1869, has 456 sittings. The U.P. church, built in 1866, has 400 sittings. The Episcopal church (St John the Baptist), built in 1840, has 151 sittings. The sacramental plate belonged to the old church already mentioned as burnt in 1746. The Roman Catholic church of the Annunciation, erected in 1829, has 150 sittings. None of them call for more particular notice. Under the school board of Fordyce, the public and female industrial schools, with respective accommodation for 734 and 100 pupils, have an average attendance of about 460 and 50, and grants amounting to over £520 and £60. The cemetery on the sloping ground SE of the town was originally opened about 1728, and was extended in 1874. It contains a monument to Miss Bond, a native of Portsoy, who in 1814 published a book called *Letters of a Village Governess*, giving some curious pictures of life in a country village at the beginning of the 19th century. She died at Portsoy in 1839. The serpentine and associated minerals for which the place was long famous have been noticed under FORDYCE. An excellent harbour was formed by the Earl of Seafield in 1825-28, but was destroyed by storms in January 1839. In 1884 the old channel was cleared out, and the works then constructed restored at a cost of about £12,000, concrete being used instead of stone. There is now accommodation for 12 vessels of 100 tons, and a depth of 11 feet at high water of stream tides and of 9 feet at neap tides, the basin being tidal. Portsoy ranks as a creek under Banff, and the few ships belonging to the port have an average tonnage of under 100 tons. The chief imports are coals, and the principal exports grain, herring, potatoes, and stone. There were belonging to the port in 1894, 16 first-class fishing boats, 10 second-class boats, and 9 third-class boats, employing 128 resident fishermen and boys. The other industries in the town are connected with grain mills, brickworks, rope and sail making, and engineering. In the neighbourhood is Gleuglassaugh distillery, where there are extensive buildings, erected in 1873-75 at a cost, including fittings, of about £10,000. There is a town hall, a coastguard station, a post office, with money order, savings bank, and telegraph departments, branch offices of the North of Scotland and Union Banks, two hotels, a Christian Institute with a library of 1600 volumes, a horticultural society, a battery of artillery volunteers, Freemason and Oddfellow lodges, a gaswork, and a newspaper, the *Independent Banffshire Reporter* (1850), published on Wednesday. Portsoy was formed into a special water-supply district in 1879. In the neighbourhood is Durn House, associated with the early days of Ferguson the astronomer. Portsoy became a police burgh in 1889, and under the Burgh Police Act of 1892 it is governed by a provost, 2 bailies, and 6 commissioners. On the east and west sides of the town are situated respectively the extensive ruins of the old castles of Boyne and FINDLATER. The only distinguished native is the Rev. Peter Thomson, Free Church minister of St Fergus, who died in 1880 at the beginning of what promised to be a very brilliant career. The story of his life has been told in *A Scotch Student* (Edinb. 1881). Pop. of town (1841) 1720, (1861) 1903, (1871) 1822, (1881) 2091, (1891) 2061, of whom 909 were males and 1152 were females. Houses inhabited 444, uninhabited 27, and building 1. The *quoad sacra* parish is in the presbytery of Fordyce and synod of Aberdeen. The minister's stipend is £192 with manse. Pop. (1881) 2313, (1891) 2274.—*Ord. Sur.*, sh. 96, 1876.

Port-Wemyss, a village on the coast of Kilchoman parish, Islay island, Argyllshire, 14 $\frac{1}{2}$ miles SW of Bridgend.

Port-William, a small seaport in Mochrum parish, SE Wigtownshire, on the E side of Luce Bay, 7 miles WNW of Whithorn, 6 $\frac{1}{2}$ SW of Whauphill station on the Wigtownshire railway, 11 SW of Wigtown, and 24 SE of Stranraer. Founded about 1770 by Sir William Maxwell of Monreith, in honour of whom it is named, it chiefly consists of a terrace-line of cottages, well built, slated, and fronting the sea, and has a neat appearance. In 1788 a small barrack-house was erected for the accommodation of military, and of custom-house officers occasionally sent for the suppression of smuggling. The harbour, though small, is safe, and sufficiently commodious. On all sides but the S it is well-sheltered by the land, on the S it is defended by an artificial rampart or strong wall, and it easily admits vessels of 200 tons burden. The principal trade consists in the exportation of agricultural produce to Glasgow, Liverpool, and other west coast ports. The village has a post office, with money order, savings bank, and telegraph departments, a branch bank of the British Linen Co., three hotels, excellent sea-bathing, a Free church, a U.P. church, and a public school. A coach runs to Whauphill station twice daily. Pop. (1792) 210, (1841) 634, (1861) 884, (1871) 829, (1881) 755, (1891) 679.—*Ord. Sur.*, sh. 4, 1857.

Possil House, a quondam mansion in Maryhill parish, Lanarkshire, 2 miles N of the centre of Glasgow. It was a large but plain edifice, whose finely wooded grounds had a quiet secluded aspect, but about 1872 they were laid out as the site of a new Glasgow suburb called Possilpark (see GLASGOW). Possil was for many years the home of the historian, Sir Archibald Alison (1792-1867). Here he died, and here in 1855 he entertained Lord Clyde (then Sir Colin Campbell). See his *Autobiography* (1882).—*Ord. Sur.*, sh. 30, 1866.

Posso. See MANOR.

Potarch. See BIRSE and KINCARDINE O' NEIL.

Pot of Gartness. See GARTNESS.

Poundland, a village in Colmonell parish, Ayrshire, on the right bank of the Stinchar, 8 miles S of Girvan.

Pow, any one of numerous sluggish rivulets or stagnant burns in marshy or alluvial districts of Scotland. The name is an Anglicised or softened form of the Gaelic *Poll*, and the Cymric *Pwl*, signifying 'a pool, a ditch, a stagnating stream, or a marshy place,' and it correctly describes nearly all the streams to which it is applied.—A pow, called the Pow of Cummertrees, traverses the western side of the Howe of Annandale, from near the northern extremity of Dalton, through that parish and the parishes of Ruthwell and Cummertrees to the Solway Firth, 2 $\frac{1}{2}$ miles W of the mouth of the river Annan; is joined, on its left bank, 4 $\frac{1}{2}$ miles from its source, by an overflow or feeder from the river Annan; seems, from the junction of that overflow onward to its mouth, to run in the ancient channel of the Annan; and has a total course, chiefly in a south-south-easterly direction, of 8 miles.—A pow in Forfarshire is formed by numerous head-streams in Monreathmont Moor, principally within Guthrie parish; drains the parishes of Guthrie, Kinnell, and Farnell, 7 $\frac{1}{2}$ miles north-eastward to the South Esk, 1 $\frac{1}{2}$ mile above Montrose Basin; aspires to be called Pow Water; and imposes names, such as Pow-side, Pow-mill, and Pow-bridge, on various objects on its banks.—A pow in Perthshire rises in some mosses below Methven; runs mainly along a ditch or artificial canal, formed to drain off its stagnant and marsh-making waters; pursues a sluggish course of 11 miles to the Earn, near Innerpefferay; and is noted in some doggerel song well known in the country around it.—A pow in Kirkcandbrightshire rises, under the name of Glaisters Burn, in Kirkgunzeon parish; circles round the N end of the Criffel range of hills; traverses one lake, and receives the superfluous waters of another; goes eastward through Newabbey parish, assuming there the name of Newabbey Pow; has a total course of 15 miles; glides into the estuary of the Nith 8 miles S of Dumfries; and

is navigable for a short way by small vessels.—A pow in the Carse of Stirling rises near Bannockburn House in St Ninians parish; goes 8 miles eastward to the Forth, at a point 1 $\frac{1}{4}$ mile E of Airth village; and, like the Forfarshire Pow, gives name to various seats and other objects on its banks.—A pow in the Upper Carse of the Forth drains part of Kippen parish, and is distinctively called the Pow of Glincs.—A pow in the low grounds of Kyle, in Ayrshire, is formed by three or four head-streams, and goes to the Firth of Clyde at a point 3 $\frac{1}{2}$ miles N of the mouth of the river Ayr.—An eighth pow, in Edinburghshire, has been noticed as the JORDAN; and there are several others too unimportant to require special mention.

Powfoot or Queensberry, a small watering-place in Cummertrees parish, Dumfriesshire, on the Solway Firth, at the mouth of Pow Water, 4 miles WSW of Annan.

Powfowlis House, a modern mansion in Airth parish, Stirlingshire, near the shore of the Firth of Forth, 5 $\frac{1}{2}$ miles NNE of Falkirk.

Powmillon Burn, a rivulet of East Kilbride, Glassford, and Avondale parishes, Lanarkshire. It rises near Greenside, and runs 7 miles north-eastward and south-eastward, till, after passing through Strathaven, it falls into Avon Water, 1 mile E by S of that town.—*Ord. Sur.*, sh. 23, 1865.

Powrie, an estate, with an old castle, in Murroes parish, Forfarshire, 3 miles NNE of Dundee. The castle was long the residence of the ancient family of FOTHERINGHAM, who acquired the lands of Wester Powrie in the reign of Robert III. (1390-1406).

Powsail Burn. See DRUMMELZIER.

Powtrail Water, a head-stream of the river Clyde in Crawford parish, Lanarkshire. It rises on the northern side of Scawd Law (2166 feet) at an altitude of 1900 feet, close to the Dumfriesshire boundary; runs 7 miles north-north-eastward to a confluence (970 feet) with Daer Water, at a point 2 $\frac{3}{4}$ miles S of Elvanfoot station, on the Symington and Lockerbie section of the Caledonian railway; and brings down the Roman or 'Wellpath' road from Nithsdale to Clydesdale.—*Ord. Sur.*, sh. 15, 1864.

Poyntzfield House, a mansion in Resolis parish, Ross and Cromarty, 3 $\frac{1}{2}$ miles S of Invergordon, under which there is a post office of Poyntzfield. Its owner is George Mackenzie Gun Munro, Esq. (b. 1862; suc. 1869).—*Ord. Sur.*, sh. 94, 1878.

Premnay, a parish in Garioch district, Aberdeenshire, containing, close to the northern boundary, Insch station on the Great North of Scotland railway, 13 $\frac{1}{2}$ miles SE of Huntly and 27 $\frac{1}{2}$ NW of Aberdeen. Containing also Rothney and Auchleven villages, it is bounded NW and N by Insch, NE and E by Oyne, S by Keig, and W by Leslie. Its utmost length, from N to S, is 3 $\frac{1}{2}$ miles; its utmost width, from E to W, is 3 $\frac{1}{4}$ miles; and its area is 5432 $\frac{1}{2}$ acres, of which 1 $\frac{3}{4}$ are water. The drainage is carried eastward towards the Ury by GADIE BURN, traversing the interior, and the Shevock, tracing the northern boundary. Along Gadie Burn the surface declines to 400 feet above sea-level; and thence it rises westward and southward to 754 feet at Westfield, 747 at Waukmill Hill, 834 at Tillymuick, 999 near Hillhead, 927 at Brackla Hill, 1412 at Black Hill, 1564 at Hermit Seat, and 1619 at the Watch Craig at the SE corner of the parish. The three last heights all culminate right on the southern boundary, and the last is a summit of broad-based BENNOCHIE. Red or pink granite, of a kind easily worked and well suited for all sorts of building purposes, abounds to the S of Gadie Burn, and clay-slate to the N; whilst serpentine forms a bed 200 yards W of the parish church. The soil on the banks of Gadie Burn is various, but on the left bank is generally sharp and good; whilst along the foot of Bennochie is wet and cold. A few acres are under small plantation, rather more than 3000 acres are arable, and nearly all the rest of the land is pastoral or waste. There are Druidical remains at Druidstone, and a circular camp at Tillymuick. Lickleyhead Castle (1629) was restored about 1876, and the former mansion of Overhall is now a farmhouse. Auchleven has a small woollen factory.

Premnay is in the presbytery of Garioch and the synod of Aberdeen; the living is £160 with manse. The parish church, 2 miles SSE of Insch station, was built in 1792, and, as enlarged in 1828, contains 360 sittings. Leslie and Premnay Free church stands 2½ miles to the W, close to the Leslie boundary. The public school, with accommodation for 120 children, has an average attendance of about 110, and a grant of nearly £115. Pop. (1881) 930, (1891) 930.—*Ord. Sur.*, sh. 76, 1874.

Preshome. See RATHVEN.

Pressmennan, Loch. See STENTON.

Preston, a village in Prestonpans parish, Haddingtonshire, ½ mile S by E of the town of Prestonpans, and near Prestonpans station on the North British railway. It got its name from a *priests' town* of the monks of HOLYROOD and of NEWBATTLE, both of which fraternities had lands adjoining it, and with Prestonpans it figures prominently in traditional tales respecting their character and mercantile achievements. Both its relation to the monks, and its position on the great road of a former period, occasioned it to be frequently visited by the Scottish princes. It was formerly noted also for a fair held on the second Thursday of October, and called St Jerome's Fair. The chapmen or travelling merchants of the Lothians had, at a period when their craft was one of no small importance to the country, formed themselves into a regular guild, and they annually attended this fair to elect their office-bearers for the following year. In a garden at the side of the road, near the E end of the village, stands, in the centre of what till the 18th century formed a large open square, an elegant cross (1617)—a stone pillar about 15 feet high, surmounting a small octagonal erection 9 feet in height.

N of the village stands, in a ruinous condition, a venerable tower which Sir Walter Scott supposed to have been originally a fortalice of the Earls of Home, when they bore an almost princely sway over the SE of Scotland, and which, for a long time after the close of the 14th century, when the circumjacent barony came by marriage into the possession of the Hamiltons of Fingalton and Ross, was the seat of that family, the principal one of their name, and afterwards called the Hamiltons of Preston. The seat or castle, of which the ruined tower is but a vestige, was burned by the Earl of Hertford in 1544, by Cromwell in 1650, and by accident in 1663, and was then abandoned. The Hamiltons are represented by Sir William Stirling-Hamilton, Bart., whose father, Sir William (1791-1856), the learned professor of logic, reacquired the ruined tower and the garden around it in the early part of the 19th century. Figuring in history as staunch partisans of the cause of civil and religious liberty, they afforded marked protection to Mr John Davidson, the eminent confessor and 'Scottish worthy,' and in the stirring times of the ecclesiastico-civil war Robert Hamilton, the brother of Sir William of Preston, led the Presbyterians in the actions of Drumclog and Bothwell Bridge.

To the E of the cross, and within the enclosure surrounding what was till lately Dr Schaw's (now Miss Murray's) Hospital, are the remains of the ancient manorial residence of Lord Grange, whose wife, by his connivance, was carried off and clandestinely confined for years in the island of St Kilda. This, Preston House, was built after the Hamiltons had abandoned the 'venerable tower,' and was never occupied by any of them. What remained of the estate of Preston after the Revolution was, owing to the representative of the Hamilton family declining to take the oaths to the Revolution sovereigns, transferred to a nephew of Hamilton, under a private arrangement for redemption should a covenanted sovereign come to the throne. It was for this nephew, Sir James Oswald, Lord Provost of Edinburgh, or his son, who shortly thereafter succeeded him as laird, that Preston House was erected. The estate, however, being heavily burdened, the whole was, early in the 18th century, disposed of, and coming before 1715 into Lord Grange's hands he made up titles to it on purchasing the various bonds, and he occupied the house in that year, when his elder brother, the Earl

of Mar, was heading the rebellion. After Lord Grange's time it had a succession of owners, till acquired by Dr James Schaw before 1780, and occupied by him till his death, when by his will it was destined for the accommodation, maintenance, and education of poor boys. It was thus used till 1832, when a new and commodious house, in the old English style, was built, at a cost of nearly £3000, within the park near by. And this again, the Schaw funds being otherwise appropriated in 1881 under the Endowed Hospitals Act, is now occupied by the trustees of the Murray Charity as a training home for girl domestics, the scheme being the outcome of a bequest of £20,000 by the late Miss Mary Murray.—*Ord. Sur.*, sh. 33, 1863.

Preston or Prestonmill, a village in Kirkbean parish, SE Kirkeudbrightshire, 14 miles S of Dumfries, under which it has a post office. See KIRKBEAN.

Preston. See BUNKLE.

Prestonfield, a mansion in DUDDINGSTON parish, Edinburghshire, at the southern base of Arthur's Seat; ¾ mile SW of Duddingston Loch, and 2 miles SE of Edinburgh Post Office. It was built in 1687, from designs by the celebrated Sir William Bruce of KINROSS, on the site of the former manison of 'Priestfield,' which had been burnt by the Edinburgh students in the 'No Popery' riot of 11 Jan. 1681, its owner, Sir James Dick, Bart., being then Lord Provost. A grandson of Sir William Dick of Braid (see CRAIG HOUSE), he had purchased the estate from Sir Thomas Hamilton, and at his death, in 1728, was succeeded by his daughter Janet, the wife of Sir William Cunyngham, Bart. of CAPRINGTON. Her son, Sir Alexander Dick, third Bart. (1703-85), was an eminent physician, and an intimate friend of Dr Samuel Johnson, who visited Prestonfield in 1773; and his son, Sir William (1762-96), is mentioned in Lord Cockburn's *Memorials* as 'a great sportsman, handsome, good-natured, and a first-rate skater. We were the only boys at liberty to play in his grounds, and to use his nice boat. . . . All between Duddingston Loch and the house was a sort of Dutch garden, admirably kept. . . . A very curious place.' Sir Robert Keith Dick, seventh Bart., in 1829 succeeded his cousin-german, Sir William Cunyngham, in the Caprington baronetcy; and his grandson, Sir Robert Keith Alexander Dick-Cunyngham (b. 1836; suc. 1871), is thus ninth and seventh Bart. since 1707 and 1669.—*Ord. Sur.*, sh. 32, 1857. See John Small's *Castles and Mansions of the Lothians* (Edinb. 1883).

Prestongrange, a Scottish Baronial mansion in Prestonpans parish, Haddingtonshire, near the coast, and 1½ mile SW of the town. Part of it dates from the 16th century; but large additions, including a massive tower, were made in 1830 and subsequently. Robert de Quincey, Earl of Winchester, in 1184 bequeathed the estate to NEWBATTLE Abbey; and after the death of the first Earl of Lothian in 1609 it was disposed of to John Morison, whose son, Sir Alexander Morison, Knt., as a Lord of Session assumed the title of Lord Prestongrange (1626-31). So did the Lord Advocate, William Grant, who purchased the property in 1746, and whose second daughter married Sir George Suttie of BALGONE. Her great-great-grandson, Sir George Grant-Suttie, seventh Bart. since 1702 (b. 1870; suc. 1878), is present proprietor.—*Ord. Sur.*, sh. 32, 1857. See John Small's *Castles and Mansions of the Lothians* (Edinb. 1883).

Preston Hall, a mansion in Cranston parish, E Edinburghshire, near the right bank of Tyne Water, 1½ mile N by E of Ford, and 4½ miles E by S of Dalkeith. A splendid classical structure, it consists of a centre and two wings, connected by lower buildings, and was erected towards the close of the 18th century by W. Adam for General Lord Adam Gordon, whose mother, the Duchess-Dowager of Gordon, had purchased the estate in 1738 for £8877. The present proprietor is Henry Callander, Esq. (b. 1862; suc. 1865).—*Ord. Sur.*, sh. 33, 1863. See John Small's *Castles and Mansions of the Lothians* (Edinb. 1883).

Prestonhall; a mansion in Cupar parish, Fife, near the left bank of the Eden, 1 mile ENE of the town.

Prestonhaugh. See PRESTONKIRK

Prestonholm, a village in Cockpen parish, Edinburgh-shire, on the South Esk river, $3\frac{1}{2}$ miles SSE of Lassvade.

Preston House, a mansion in Linlithgow parish, Linlithgowshire, $1\frac{1}{2}$ mile S of the town.

Prestonkirk, a parish of Haddingtonshire, containing the town and station of East LINTON, $5\frac{1}{2}$ miles WSW of Dunbar, and $23\frac{1}{2}$ E by N of Edinburgh. Called the Halch, Hauch, or Haugh in the time of Gavin Douglas, since the Reformation it received the name, first of Prestonhaugh, then of Prestonkirk, and in legal documents is still designated 'Prestonhaugh, otherwise called Prestonkirk;' whilst its popular name is often briefly Linton. It is bounded N by North Berwick, NE by Whitekirk, E by Whitekirk and Dunbar, SE by Stenton, S by Whittingham, SW by Morham and Haddington, and W by Athelstaneford. With a somewhat irregular outline, it has an utmost length from NNW to SSE of $4\frac{1}{2}$ miles, a varying breadth of 3 furlongs and $4\frac{1}{2}$ miles, and an area of $7104\frac{1}{2}$ acres, of which $13\frac{1}{2}$ are water. The parish received a slight increase to the extent of its area in 1891, when the Boundary Commissioners transferred to it the Sandysmill detached portion of the parish of Athelstaneford, comprising 16 acres. The TYNE has here an east-north-easterly course of $4\frac{1}{2}$ miles, for the first 7 furlongs along the Haddington boundary; and the East PEPPER Burn flows east-north-eastward across the northern interior and along the Athelstaneford and Whitekirk borders. In the E, where the Tyne passes off from the parish, the surface declines to 75 feet above sea-level; and N of the river it nowhere exceeds 281 feet; but in the S is conical TRAPRAIN LAW (700 feet), which figures conspicuously over a wide extent of landscape. The predominant rocks are claystone, clinkstone, and limestone, and the first is often porphyritic, abounds in crystals of felspar, and contains in places veins of yellow jasper, and of heavy spar. The soil near the Tyne is mostly sandy and gravelly; in the N is argillaceous, partly very stiff; and in the S is calcareous. But a small proportion of land is under wood, about 200 acres are pasture, and nearly all the rest of the parish is in tillage. The chief antiquities are noticed under HAILES and TRAPRAIN LAW. Several stone coffins have been turned up by the plough; a standing stone is said to mark the grave of a Saxon commander; the site is pointed out of the ancient parish church, dedicated to St Baldred, and mentioned in record of the 9th century; and ruins exist of an ancient monastery on Markle farm. St Balthere or Baldred, who died in 756, and who was the patron saint of the parish, is said to have dwelt here, and to have founded the earliest church. He is commemorated in the name of an excellent spring, St Baldred's Well, and in the name of an eddy in the Tyne, St Baldred's Whirl. Gavin Douglas (1474-1522), the translator of Virgil, was 'parson of Hauch' (not Hawick), previous to becoming Bishop of Dunkeld in 1516. Mansions noticed separately are SNEATON and PHANTASSIE. Prestonkirk is in the presbytery of Dunbar and synod of Lothian and Tweeddale; the living is worth £351. The churches and the public school have been described under East LINTON. This school, with accommodation for 364 children, has an average attendance of about 205, and a grant of nearly £205. Valuation (1885) £16,850, (1893) £14,241. Pop. (1801) 1741, (1831) 1765, (1861) 1960, (1871) 1931, (1881) 1929, (1891) 1802.—*Ord. Surv.*, sh. 33, 1863.

Prestonmill. See PRESTON, Kirkcudbrightshire.

Prestonpans, a coast town and parish of W Haddingtonshire. The town, extending $\frac{1}{2}$ mile south-westward along the shore of the Firth of Forth, is $2\frac{1}{2}$ miles ENE of Musselburgh, 8 E of Edinburgh, $1\frac{1}{2}$ NW of Tranent, $9\frac{1}{2}$ W of Haddington, and $\frac{3}{4}$ NNW of Prestonpans and Tranent station on the North British railway. It is supposed to have become a seat of population for the manufacture of salt so early as the 12th century. The monks of NEWBATTLE, who pushed their trading enterprises in all directions from their property of PRESTONGRANGE, appear to have adopted and cherished Preston-

pans as the scene of their salt-making operations; and they probably secured for it a rude but abundant prosperity so long as it was under their influence. Even for generations after the Reformation it continued to thrive, and to be a flourishing seat of various sorts of the harder orders of industry. But chiefly in consequence of the repeal of the salt duty in 1825, the town lost its ancient sources of support, and fell into decay. Its deserted salt-works, some of them contiguous to it, others along the coast, form a rueful feature in the landscape. The masonry in these buildings looks as if it had withstood the buffetings of ages; the woodwork is comparatively fresh and uninjured; and yet the whole aspect is ruinous and forlorn. Numbers of the doors still show brass excise padlocks, bearing the now almost forgotten initials 'G. R.' The town itself, too, has a somewhat decayed appearance. It consists principally of a single street following the line of the beach. A rill runs across the roadway, cutting off from the W end of the street the suburb of Cuittle or Cuthill. The houses have a blackened, time-worn appearance; scarcely any two of them stand in a line; and the whole town, which was so built for defensive purposes, has been described as 'zigzag at both ends and crooked in the middle.' The parish church stands on a rising-ground above the town, and, dating from 1595, was partially rebuilt and reseated, with double galleries, in 1774. In 1891-92 it was renovated at a cost of about £1650. Within the churchyard there are several interesting memorial stones or tablets over the remains of Lords Cullen, Prestongrange, and Drummore; Captain Stewart of Physgill, who fell in the battle of Prestonpans; a brother of General Roy's, and others. A Free church was built in 1878; and a public school in 1881, at a cost of £3000. A monument to Dr Thomas Alexander, C.B., the director-general of the medical department of the British army, was erected in 1862, and consists of a stone statue $8\frac{1}{2}$ feet high, on a square pedestal $6\frac{1}{2}$ feet high, within an enclosure immediately N of the church. Prestonpans is much frequented by visitors during the bathing season.

Prestonpans and the neighbouring villages used to supply all the east of Scotland with salt. This part of the coast, owing to the absence of large rivers, is favourably situated for the production of salt; and being in the immediate vicinity of very extensive coalfields, it possessed great facilities for carrying on a large and lucrative salt-trade. Ten salt-pans belonged to the town, and were capable of producing between 800 and 900 bushels of salt per week; and there were others in the neighbourhood of similar extent. In the five years preceding 1792, the annual average amount of salt delivered in the Prestonpans collection was 83,471 bushels, about half of which was produced by the town's own pans, while the rest was produced by pans in the vicinity. A race of females known as salt-wives, and second in notoriety only to the fishwives of Fisherrow and Newhaven, used to carry the salt in creels for sale in Edinburgh and other towns. Salt, however, continues to be made in one salt-work in the town. A manufactory of sulphate of soda, and of sulphuric, nitric, and muriatic acids, once employed upwards of 50 men, but has long since been abandoned. Extensive potteries, commenced about the middle of the 18th century, employed about 40 men and upwards of 50 boys; but after the close of the first quarter of the 19th century, they degenerated into a small manufactory of brown and white ware. Two brick and tile works long sent forth a steady produce of roofing-tiles over the country; but they have been, to a considerable extent, superseded by the works of the Prestongrange Coal and Firebrick Co., for bricks, tiles, and every description of fireclay goods. There is also an extensive brewery and a large soapwork. For years a chief employment and traffic of the town was the fishing and exportation of oysters. The largest and fattest of the oysters were formerly taken nearest the shore, and have long been in high estimation as Pan-door or Pandore oysters—a name whimsically given them from the oyster-beds lying off the doors of

the salt-pans. The oyster-beds of Prestonpans, or 'scalps,' as they are called, extend about 6 miles into the firth, and rather more than 3 miles from E to W; and in the latter part of the 18th century they yielded a daily produce to dredgers of from 400 to 600 oysters in the day, which were sent not only to Scottish markets, but to Newcastle, Hull, and London. Now, however, the yield is not nearly so large. As the oysters spawn in May, and are in a sickly state till August, the proper dredging season begins on the first day of September and ends on the last day of April, continuing, as it is said, 'during the months in which there is an r.' The fishermen, while employed in dredging them, sing a peculiar air, which is said to be of Scandinavian origin, and has a very peculiar and striking effect when borne over the waters by fitful gusts of wind. The commerce of the town, through its port of MORISON'S HAVEN, a little way W of Cuthill, was great in the days of its manufacturing prosperity. The harbour, formed under a charter from the monks of Newbattle in 1526, and styled Acheson's Haven, from the name of its original owner, Alexander Acheson, ancestor of the Earl of Gosford in the Irish peerage, was once a custom-house port, whose range included all creeks and landing-places between the mouth of the Figgate Burn at Portobello and the mouth of the Tyne near Dumbar; and it had the right of levying customs and the various sorts of dues to the same extent as those exigible at Leith. All the western portions of Preston and Prestonpans towns and the adjacent hamlets are included within the barony of Prestongrange; and all the eastern portions of these towns and the adjacent villas and ancient mansions are within the barony of Preston, whose ancient cross, bearing date 1617, is still a conspicuous central object of interest. Prestonpans became a police burgh in 1862, and under the Burgh Police Act of 1892 it is governed by a provost, 2 bailies, and 6 commissioners. It has a post office, with money order, savings bank, and telegraph departments, a branch of the Royal Bank, two hotels, a gas company, and waterworks. Pop. of town (1841) 1659, (1851) 1640, (1861) 1577, (1871) 1790, (1881) 2265, (1891) 2224, of whom 1074 were females, and 1606 were in the police burgh. Houses (1891) inhabited 495, vacant 75.

In 1591 John Fian or Cunningham, schoolmaster at Prestonpans, was tried as one of the North BERWICK warlocks, and after suffering the cruellest tortures was condemned and burnt; in 1661 another schoolmaster here, Andrew Rutherford, was appointed commissioner for trying certain persons accused of witchcraft.

As a boy, Sir Walter Scott resided for some time, in 1777, at Prestonpans, and must have acquired then his minute knowledge of the localities which he afterwards turned to so good account in *Waverley*.

The battle which was fought on 21 Sept. 1745, between the Jacobite forces under Prince Charles Edward and the Hanoverian forces under Sir John Cope, occurred principally within the parish of Tranent, and is sometimes called the battle of Preston, sometimes the battle of GLADSMUIR, but oftener the battle of Prestonpans. Sir John Cope landed his troops and stores at Dunbar on the 16th, 17th, and 18th of September; and, desirous of making all speed to engage the rebels, who were then in possession of Edinburgh, he marched from Dunbar on the 19th and took post in battle order on the 20th in the eastern vicinity of Preston, his right extending towards the sea at Port-Seton, and his left towards a morass SE of Preston. Scarcely had he made his dispositions when the whole of the Highland army appeared descending the heights in the direction of Tranent. On approaching Tranent, the Highlanders were received by the King's troops with a vehement shout of defiance, which the Highlanders answered in a similar strain. About two o'clock in the afternoon the Highland army halted on an eminence called Birsley-Brae, about $\frac{1}{2}$ mile to the W of Tranent, and formed in order of battle about 1 mile from the royal forces. In the expectation that the Highlanders were advancing by the usual route through Musselburgh and Preston, Cope

had taken up the position we have described, with his front to the W; but as soon as he observed the Highlanders on the heights upon his left, he changed his front to the S. This change of position, while it secured Cope better from attack, in the case of defeat was not so well calculated for safety as the first position. On his right was the E wall of a park belonging to Erskine of Grange, which extended a considerable way from N to S, and still farther to the right was the village of Preston. The village of Seton was on his left, and the village of Cockenzie and the sea in his rear. Almost immediately in front was a deep ditch filled with water, and a strong thick hedge. Farther removed from the front, and between the two armies, was a morass, the ends of which had been drained, and were intersected by numerous cuts; and on the more firm ground at the ends were several small enclosures, with hedges, dry stone-walls, and willow trees. As the Highlanders were in excellent spirits, and eager to close immediately with the enemy, Charles felt very desirous to comply with their wishes; but he soon ascertained that the passage across the morass would be extremely dangerous, if not altogether impracticable.

While his lieutenant-general was, in consequence of this information, planning a different mode of attack, the Prince himself was moving with a great part of his army further off towards Dolphingston on Cope's right. Halting and turning towards Preston Tower, he seemed to threaten that flank of the English general, who, thereupon, returned to his original position with his front to Preston, and his right towards the sea. Lord George Murray, considering that the only practicable mode of attacking Cope was by advancing from the E, now led off part of the army through the village of Tranent, and sent notice to the Prince to follow him with the remainder as quickly as possible. After the Highland army had halted on the fields to the E of Tranent, a council of war was held, at which it was resolved to attack the enemy at break of day. A few pickets were placed around the bivouac, and the Highlanders, having wrapped themselves up in their plaids, lay down on the ground to repose for the night. When Cope observed Charles returning towards Tranent, he resumed his former position with his front to the S; and thus, in a few hours, he was obliged, by the unrestrained evolutions of the Highlanders, to shift his ground no fewer than four times. He now began to perceive that his situation was not so favourable as he had imagined, and that while the insurgents could move about at discretion, select their ground, and choose their time and mode of attack, he was cramped in his own movements and could act only on the defensive. To secure his army from surprise during the night, he placed advanced pickets of horse and foot along the side of the morass, extending nearly as far E as the village of Seaton. He, at the same time, sent his baggage and military chest down to Cockenzie; and as the night—that of Friday the 20th of September—was very cold, he ordered fires to be kindled along the front of his line, to keep his men warm.

In point of numbers, the army of Cope was rather inferior to that of Charles; but many of the Highlanders were badly armed, and some had no arms at all. The royal forces amounted altogether to about 2300 men; but the number in the field was diminished to 2100 by the despatch of the baggage-guard to Cockenzie. The order of battle finally formed by Cope along the N side of the morass was as follows: He drew up his foot in one line, in the centre of which were eight companies of Lascelles' regiment, and two of Guise's. On the right were five companies of Lee's regiment, and on the left the regiment of Murray, with a number of recruits for different regiments at home and abroad. Two squadrons of Gardiner's dragoons formed the right wing, and a similar number of Hamilton's composed the left. The remaining squadron of each regiment was placed in the rear of its companions as a reserve. On the left of the army, near the waggon-road from Tranent to Cockenzie

were placed the artillery, consisting of six or seven pieces of cannon and four cohorns under the orders of Lieut.-Colonel Whiteford, and guarded by a company of Lee's regiment commanded by Captain Cochrane. Besides the regular troops there were some volunteers, consisting principally of small parties of the neighbouring tenantry, headed by their respective landlords.

The Highland army commenced its movement in the morning of the 21st, early enough to allow the whole of it to pass the eastern outlet from the morass before the dawn. It was divided into two successive columns, with an interval between. The Duke of Perth led the first column, and two persons intimately acquainted with the morass went before him to show the way. A little in advance of the van, too, was a select party of 60 men doubly armed, under the command of Macdonald of Glenalladale, major of the regiment of Clanranald, whose appointed duty it was to seize the enemy's baggage. The army proceeded in an easterly direction till near the farm of Ringan-head; and then, turning to the left, they marched in a northerly direction through a small valley which intersects the farm. During the march the strictest silence was kept, not even a whisper was heard; and lest the trampling of horses might discover their advance, the few that were in the army were left behind. The ford or path across the morass was so narrow that the column—which marched three men abreast—had scarcely sufficient standing room; and the ground along it was so soft that many of the men at almost every step were up to the knees in mud. The path in question—which was about 200 paces to the W of the stone bridge afterwards built across Seton mill-dam—led to a small wooden bridge thrown over the large ditch which ran through the morass from W to E. This bridge, and the continuation of the path on the N of it, were a little to the E of Cope's left. From ignorance of the existence of this bridge, from oversight, or from a supposition that the marsh was not passable in that quarter, Cope had placed no guards in that direction; so that the Highland army, whose march across could here have been effectually stopped by a handful of men, passed the bridge and cleared the marsh without interruption.

Hitherto the darkness had concealed the march of the Highlanders; but the morning was now about to dawn, and at the time the order to halt was given, some of Cope's pickets, stationed on his left, for the first time heard the tramp of the Highlanders. The Highlanders plainly heard these advanced guards challenge them, 'Who is there?' No answer having been returned, the pickets gave the alarm, and the cry of 'Cannons, cannons! Get ready the cannons, cannoniers!' resounded through Cope's left wing. Charles instantly gave directions for attacking Cope before he should have time to change his position by opposing his front to that of the Highland army. As arranged at the council of war on the preceding evening, the army was drawn up in two lines. The first comprised a right wing, commanded by the Duke of Perth, and consisting of the regiments of Clanranald, Keppoch, Glengarry, and Glencoe, under their respective chiefs, and a left wing commanded by Lord George Murray, and consisting of the Camerons of Lochiel under their own chief, and the Stewarts of Appin under Stewart of Ardshiel. The second line, which was to serve as a reserve, consisted of the Athole men, the Robertsons of Strowan, and the MacLauchlans. This body was under the command of Lord Nairne. As soon as Cope received intelligence of the advance of the Highlanders, he gave orders to change his front to the E. Some confusion took place in carrying these orders into execution, from the advanced guards not being able to find out their regiments, and so stationing themselves on the right of Lee's five companies as to prevent the two squadrons of Gardiner's dragoons, which had been posted on the right of the line, from forming properly. For want of room, the squadron under Colonel Gardiner drew up behind that commanded by Lieut.-Colonel Whitney. In all other

respects the disposition of each regiment was the same; but the artillery, which before the change had been on the left, and close to that wing, was now on the right somewhat farther from the line, and in front of Whitney's squadron.

There was now nothing to prevent the armies from coming into collision; and if Cope had had the choice, he could not have selected ground more favourable for the operations of cavalry than that which lay between the two armies. It was a level cultivated field of considerable extent, without bush or tree, and had just been cleared of its crop of grain. But the celerity with which the Highlanders commenced the attack prevented Cope from availing himself of this local advantage. The beams of the rising sun were just beginning to illumine the horizon, but the mist which still hovered over the cornfields prevented the two armies from seeing each other. As the Highlanders had advanced considerably beyond the main ditch, Lord George Murray was apprehensive that Cope might turn the left flank; and to guard against such a contingency he desired Lochiel, who was on the extreme left, to order his men in advancing to incline to the left. Lord George then ordered the left wing to advance, and sent an aide-de-camp to the Duke of Perth to request him to put the right in motion. The Highlanders moved with such rapidity that their ranks broke; to recover which, they halted once or twice before closing with the enemy. When Cope, at daybreak, observed the first line of the Highland army formed in order of battle, at the distance of 200 paces from his position, he mistook it for bushes; but before it had advanced half-way, the rays of the rising sun bursting through the retiring mist showed the armies to each other.

As the right wing of the Highlanders marched straight forward without attending to the oblique movement of the Camerons to the left, a gap took place in the centre of the line. An attempt was made to fill it up with a second line, which was about 50 paces behind the first; but before this could be accomplished, the left wing, being the first to move, had advanced beyond the right of the line, and was now engaged with the enemy. By inclining to the left, the Camerons gained half the ground originally between them and the main ditch; but this movement brought them up directly opposite to Cope's cannon. On approaching the cannon the Highlanders fired a few shots at the artillery guard, which alarmed the gunners to such a degree that they fled, carrying the powder flasks along with them. To check the advance of the Highlanders, Colonel Whiteford fired off five of the field-pieces with his own hand; but though their left seemed to recoil, they instantly resumed the rapid pace they had set out with. The artillery guard next fired a volley with as little effect. Observing the squadron of dragoons under Whitney advancing to the charge, the Camerons set up a loud shout, rushed past the cannon, and, after firing a few shots at the dragoons, which killed several men and wounded the lieutenant-colonel, flew on them sword in hand. When assailed, the squadron was reeling to and fro from the fire; and the Highlanders following an order they had received, to strike at the noses of the horses without minding the riders, completed the disorder. In a moment the dragoons wheeled about, rode over the artillery guard, and fled, followed by the guard. The Highlanders continuing to push forward without stopping to take prisoners, Colonel Gardiner was ordered to advance with his squadron, and charge the enemy. He accordingly went forward, encouraging his men to stand firm; but this squadron, before it had advanced many paces, experienced a similar reception, and followed the example which the other had just set. After the flight of the dragoons, the Highlanders advanced upon the infantry, who opened a fire from right to left, which went down the line as far as Murray's regiment. They received this volley with a loud huzza, and throwing away their muskets, drew their claymores and rushed upon the foot before they had time to reload their pieces. Confounded by the flight of the dragoons,

and the furious onset of the Highlanders, the astonished infantry threw down their arms and took to their heels. Hamilton's dragoons, who were stationed on Cope's left, displayed even greater pusillanimity than their companions; for no sooner did they observe the squadrons on the right give way, than they turned their backs and fled without firing a single shot or drawing a sword. Murray's regiment being thus left alone on the field, fired upon the Macdonalds who were advancing, and also fled. Thus within a very few minutes after the action had commenced, the whole army of Cope was put to flight. With the exception of their fire, not the slightest resistance was made by horse or foot, and not a single bayonet was stained with blood. Such were the impetuosity and rapidity with which the first line of the Highlanders broke through Cope's ranks, that they left numbers of his men in their rear, who attempted to rally behind them, but, seeing the second line coming up, endeavoured to make their escape. Though the second line was not more than 50 paces behind the first, and was always running as fast as it could to overtake the first line, and near enough never to lose sight of it, yet such was the rapidity with which the battle was gained, that, according to the Chevalier Johnstone, who stood by the side of the Prince in the second line, he could see no other enemy on the field of battle than those who were lying on the ground killed and wounded.

Unfortunately for the royal infantry, the walls of Lord Grange's park enclosures about the village of Preston, which, from the position taken up on the preceding evening, formed their great security on their right, now that these park walls were in their rear, operated as a barrier to their flight. Having disencumbered themselves of their arms to facilitate their escape, they had deprived themselves of their only means of defence; and, driven as they were upon the walls of the enclosures, they would have all perished under the swords of the Highlanders, had not Charles and his officers strenuously exerted themselves to preserve the lives of their discomfited foes. The impetuosity of the attack, however, and the sudden flight of the royal army, allowed little leisure for the exercise of humanity; and before the carnage ceased several hundreds had fallen under the claymores of the Highlanders and the ruthless scythes of the Macgregors. Armed with these deadly weapons, which were sharpened and fixed to poles from 7 to 8 feet long, to supply the place of other arms, this party mowed down the affrighted enemy, cut off the legs of the horses, and severed, it is said, the bodies of their riders in twain. Of the infantry of the royal army, only about 170 escaped. From a report made by their own sergeants and corporals, by order of Lord George Murray, between 1600 and 1700 prisoners, foot and cavalry, fell into the hands of the Highlanders, including about 70 officers. In this number were comprehended the baggage guard stationed at Cockenzie, amounting to 300 men, who, on learning the fate of the main body and the loss of their cannon, surrendered to the Camerons. The cannon and all the baggage of the royal army, together with the military chest, containing £4000, fell into the hands of the victors. The greater part of the dragoons escaped by the two roads at the extremities of the park wall, one of which passed by Colonel Gardiner's house in the rear of their right, and the other on their left, to the N of Preston House. In retiring towards these outlets, the dragoons, at the entreaties of their officers, halted once or twice, and faced about to meet the enemy; but as soon as the Highlanders came up and fired at them, they wheeled about and fled. Cope, who was by no means deficient in personal courage, assisted by the Earls of Home and Loudon, collected about 450 of the panic-struck dragoons on the W side of the village of Preston, and attempted to lead them back to the charge; but no entreaties could induce these cowards to advance, and the whistling of a few bullets, discharged by some Highlanders near the village, so alarmed them that they instantly scampered off in a southerly direction, screening their heads behind their horses' necks to avoid

the bullets of the Highlanders. The general had no alternative but to gallop off with his men. He that night reached Coldstream, a town about 40 miles from the field of battle, and entered Berwick next day.

Among six of Cope's officers who were killed was Colonel James Gardiner (1688-1745), a veteran soldier who served under the Duke of Marlborough, and whose character combined a strong religious feeling with the most undaunted courage. He had been decidedly opposed to the defensive system of Cope on the preceding evening, and had counselled the general not to lose a moment in attacking the Highlanders; but his advice was disregarded. Anticipating the fate which awaited him, he spent the greater part of the night in devotion, and resolved at all hazards to perform his duty. He was wounded at the first onset at the head of his dragoons; but disdaining to follow them in their retreat, he joined a small body of foot, which attempted to rally not far from the wall of his own garden, and while fighting at their head was cut down by the murderous Lochaber axe of a Macgregor. He was carried to the manse of Tranent in almost a lifeless state, where he expired within a few hours, and was interred in the NW corner of the church of Tranent. Captain Brymer, of Lee's regiment, who appears to have participated in Gardiner's opinion as to attacking the Highlanders, met a similar fate, as did also Captain Stewart of Physgill, over whose grave in Prestonpans kirkyard there is still visible, though partially weather-worn, an interesting memorial tablet. The loss on the side of the Highlanders was trifling. Four officers, and between 30 and 40 privates, were killed; and 5 or 6 officers, and between 70 and 80 privates, wounded. After the termination of the fight, the field of battle presented an appalling spectacle, rarely exhibited in the most bloody conflicts. As almost all the slain were cut down by the broadsword and the scythe, the ground was strewn with legs, arms, hands, noses, and mutilated bodies, while, from the deep gashes inflicted by these dreadful weapons, the ground was literally soaked with gore. See, besides works cited under COLLODEN, Mr P. McNeill's *Tranent and its Surroundings* (2d ed., Edinb. 1884) and the *Autobiography of Alexander Carlyle, D.D.* (1722-1805), who was a son of the minister of Prestonpans, beheld the Jacobite victory from the top of the church steeple, and himself for 57 years was minister of INVERESK.

The small but populous parish of Prestonpans, containing also the villages of PRESTON and DOLPHINGSTON, is bounded E and SE by Tranent, SW by Tranent and by Inveresk in Edinburghshire, NW by the Firth of Forth. Its utmost length, from NE to SW, is 2½ miles; its breadth varies between 3 furlongs and 1½ mile; and its area is 1429½ acres, of which 135½ are foreshore. The surface rises gently from the shore, attaining 100 feet above sea-level at the railway station, and 200 at the Tranent border. The beach is low and sandy, with a bulwark of low reefs, much shattered and water-worn along its margin; and it commands a picturesque prospect of the Firth of Forth and the southern parts of Fife. Ravenshaugh Burn runs along the boundary with Edinburghshire. The rocks belong mainly to the Carboniferous Limestone series; and coal was wrought in this parish as early perhaps as in any district in Scotland, and continues still to be largely worked. Ironstone and fireclay also occur, and are turned to profitable account in connection with the mining operations. The prevailing soil is loam, partly heavy on a clay bottom, partly light on a sandy or gravelly bottom. Upwards of 1000 acres are under cultivation. The chief mansions, both noticed separately, are PRESTONGRANGE and DRUMORE. Prestonpans is in the presbytery of Haddington and the synod of Lothian and Tweeddale; the minister's stipend is £412 with manse. The original name of a hamlet near by was Aldhammer; but this early gave way to Priestistoun or Prieststown, which was gradually abbreviated into Preston; and that (which was the name under which the district was erected into a parish by act of parliament in 1606) was,

in its turn, superseded by successively Salt-Preston and Prestonpans. An ancient chapel, which was situated at Preston, and which was a vicarage of the monks of Holyrood, in 1544 was burned, in common with the town and castle of Preston, by the Earl of Hertford, and never afterwards repaired. Another ancient chapel, situated within what is now the West Kirkyard, towards the W end of the town of Prestonpans, was in pre-Reformation times supplied by the monks of Newbattle, who were then the owners of most of the property in that quarter, but, excepting old stones built into the walls, no trace of it remains. The inhabitants of the two baronies, the eastern and western, or Preston and Prestongrange, into which the parish was distributed, seem, for a time after the monastic services were discontinued, to have tacitly attached themselves to Tranent; but were quite unduly provided for, and could obtain but limited access to the interior of the church. Mr John Davidson (1550-1604), who was minister for the last eight years of his life, at length built, largely at his own expense, a church and a manse in the village of Prestonpans, to which a glebe, garden, and stipend were attached by George Hamilton of Preston; and he also founded here a school for the teaching of the Latin, Greek, and Hebrew languages, and endowed it with all his property, free, movable, and heritable. The grammarian Alexander Hume was its first master, from 1606 till 1616. In 1595 the General Assembly declared Prestonpans to be a parish *quoad sacra*, and in 1606 the parliament of Perth 'erected the said newly-built kirk into a parish kirk, which was to be called the parish kirk of Preston.' The public school, with accommodation for 498 children, has an average attendance of about 515, and a grant of nearly £480. Valuation (1885) £11,798, 14s., (1893) £11,554, 2s. 7d. Pop. (1801) 1964, (1831) 2322, (1861) 2080, (1871) 2069, (1881) 2573, (1891) 2659.—*Ord. Sur.*, shs. 33, 32, 1863-57.

Preston Tower. See PRESTON, Prestonpans.

Prestwick, a small town and an ancient parish in Monkton parish, Kyle district, Ayrshire, within 3 furlongs of the sea-shore, and 2 $\frac{3}{4}$ miles N by E of Ayr. Its age, and especially its constitution as a burgh of barony, are remarkable, and strongly resemble those of the curious neighbouring burgh of Newton-upon-Ayr. A charter, confirming and renewing its privileges, was granted by James VI. as administrator-in-law for his eldest son, then a minor, Henry, Duke of Rothesay, Earl of Kyle, Carrick, and Cunninghame, Lord of the Isles, and Prince Stewart of Scotland. The charter is dated 19 June 1600, and expressly says that Prestwick was known to have been a free burgh of barony beyond the memory of man, for the space of 617 years before the date of renewal. The burgh has power to elect every two years a provost, 2 bailies, and councillors, to grant franchises for several trades, and to hold a market weekly, and a fair on the feast of St Nicholas, 6 December. The freemen, or barons as they are called, are 36 in number. The burgh lands belonging to them as an incorporation extend in a broad strip along the Pow Burn to a line 1 $\frac{1}{2}$ mile nearer Ayr, and comprehend about 800 acres. The lands used to be distributed in lots among the freemen, and did not remain in perpetuity, but were drawn for every 19 years. Part of them long existed as a common, on which each of the freemen had a right of pasturing a certain number of sheep and cattle; but this, many years ago, was divided and appropriated in the same way as the rest of the barony. Freemen could not sell their lots or shares, or the baronial rights which belong to them, without the consent of the corporation; and females succeeded equally with males to

the inheritance of the freeholds. A freeman might, for an offence, be sent to prison, but not locked up; and, if he came out without being liberated by the judicial sentence of the magistrates, he forfeited all his corporation privileges and property. In 1850, however, all restrictions were abolished, and the land is now held in the same way as other heritable land in Scotland. The foreshore from Prestwick northward as far as Irvine is in the possession of the Duke of Portland. Prestwick is a favourite watering-place, and has two golf clubs with separate links, where the ancient game has been played for many years. It has also a post office, with money order, savings bank, and telegraph departments, a station on the Glasgow and South-Western railway, 2 hotels, an ancient market cross, a town-hall, a cemetery, Free and U.P. churches, and a public school. The town-hall, built about 1837, is a handsome edifice, with a Gothic spire. The Free church, built in 1874 at a cost of £1600, contains 450 sittings. The U.P. church was opened in 1884; and the public school, accommodating 304 children, in 1882. There are also the ruins of an ancient church, and in the neighbourhood those of an hospital for lepers founded by King Robert Bruce. A number of handsome seats were placed in 1894 at intervals along the foreshore. Pop. (1793) 260, (1837) 758, (1861) 851, (1871) 750, (1881) 1064, (1891) 1479, of whom 841 were females. Houses (1891) inhabited 326, vacant 71, building 8.—*Ord. Sur.*, sh. 14, 1863. See MONKTON, and John Fullarton's *Records of the Burgh of Prestwick from 1470 to 1782* (Glasg., Maitland Club, 1834).

Prestwick Toll or New Prestwick, a village in Monkton parish, Ayrshire, 1 mile S by W of Prestwick. Pop. (1871) 463, (1881) 734, (1891) 269.

Priesthill. See MUIRKIRK.

Primside Mill, a village in Morebattle parish, Roxburghshire, 1 mile SSW of Yetholm.

Prinlaws. See LESLIE.

Priorhill, a village in Canonbie parish, Dumfriesshire, close to Canonbie station, on the Langholm branch of the North British railway.

Prior Wood, a seat in Melrose parish, Roxburghshire, in the immediate vicinity of Melrose town. For the last eighteen years of his life it was the favourite residence of the Edinburgh publisher, William Tait (1792-1864), who welcomed Kossuth here in 1851; and at his death it passed to his brother-in-law, Adam Black (1784-1874), lord provost of Edinburgh 1843-48, and Liberal M.P. for that city 1856-65.—*Ord. Sur.*, sh. 25, 1865.

Prosen Water, a troutful stream of NW Forfarshire, rising at an altitude of 2750 feet on the western slope of Mayar (3043 feet), and running 18 miles south-eastward, till, after a total descent of nearly 2400 feet, it falls into the South Esk at a point 1 $\frac{1}{2}$ mile SE of Cortachy Castle. It receives in its progress Farchal, Cramie, Glenlogie, Inchmill, Glenuig, Glencally, and Corogie Burns; traverses, till near its mouth, a deep mountain glen, called from it GLENPROSEN; and on the Shawfield estate threads a narrow wooded gorge, the 'Loup,' where a fugitive of the '45 is said to have leapt the channel from rock to rock.—*Ord. Sur.*, shs. 65, 56, 1870.

Protstownhill, a village in Gamrie parish, Banffshire, 1 $\frac{3}{4}$ mile E of Gardenstown.

Provanhall, a village in Shettleston parish, Lanarkshire, 2 miles NNW of Baillieston station on the Caledonian railway.

Pulteneytown. See WICK.

Purves Hall, a mansion in Eccles parish, Berwickshire, 3 $\frac{1}{4}$ miles E by S of Greenlaw. Its owner, Sir John Purves Hume Campbell (b. 1879; suc. 1887), succeeded to the MARCHMONT estate and baronetcy in 1894.—*Ord. Sur.*, sh. 25, 1865.

Q

QUAICH. See QUOICH and GLENQUAICH.
Quair Water, a troutful stream of Traquair parish, Peeblesshire, rising on the E side of Dun Rig at an altitude of 2100 feet, close to the Selkirkshire boundary, and running 6½ miles north-eastward, till, after a descent of 1650 feet, it falls into the Tweed at a point 5 furlongs S of Innerleithen. It is fed by Newhall, Curly, and FINGLAND Burns, each nearly equal to itself in length and in volume; and it has been celebrated in several lyrics, of which that by Nicol begins, 'Where Quair rins sweet among the flowers.'—*Ord. Sur.*, sh. 24, 1864.

Quarterness. See KIRKWALL.

Quarff, an ancient *quoad civilita* parish and a modern *quoad sacra* parish in the S of Shetland. The ancient *quoad civilita* parish, forming a narrow part of the mainland, 6 miles SSW of Lerwick, extends 1½ mile from sea to sea, between the East and West Voes of Quarff, and comprises 2098 acres. It chiefly consists of an inhabited valley 1½ mile long and ½ mile broad, with pastoral hill flanks; and, together with the ancient *quoad civilita* parish of Burra, was united to Bressay parish until 1891, when the Boundary Commissioners disjoined it and Burra from Bressay and annexed them to Lerwick parish, which now consists of the ancient parishes of Lerwick, Gulberwick, Quarff, and Burra. The modern *quoad sacra* parish comprises the ancient parishes of Quarff and Burra; was constituted by the General Assembly in 1833, and reconstituted by the Court of Teinds prior to 1856; and is in the presbytery of Lerwick and synod of Shetland. Its church is a Government one, and contains 360 sittings. Pop. of *g. s.* parish (1871) 952, (1881) 918, (1891) 987.

Quarrelton, a collier village in the SW of Abbey parish, Renfrewshire, ½ mile S of Johnstone.

Quarrelwood, a hamlet in Kirkmahoe parish, Dumfriesshire, 3½ miles N by W of Dumfries.

Quarter, a mansion in Largs parish, Ayrshire, near the shore of the Firth of Clyde, 2½ miles NNW of Largs town.

Quarter, an estate, with a mansion, in Dunipace parish, Stirlingshire, 1½ mile N by W of Denny.

Quarter, an estate in Broughton parish, Peeblesshire, on Holms Water, 2½ miles SSW of Broughton station. It was sold in 1741 to Thomas Tweedie, a cadet of the Tweedies of OLIVER. See RACHAN HOUSE.

Quarter Ironworks and Darngaber, a conjoint village in Hamilton parish, Lanarkshire, 2 miles S of Hamilton town and ½ mile ENE of Quarter Road station on the Strathaven branch of the Caledonian railway. It has a post, money order, and telegraph office (Quarter), an Established chapel of ease, a public school, and ironworks with five blast furnaces. The chapel of ease is an Early Decorated edifice of 1884, containing 430 sittings. Pop. (1881) 886, (1891) 1179.—*Ord. Sur.*, sh. 23, 1865.

Quarter, West. See WESTQUARTER.

Queensberry, a mountain (2285 feet) in Closeburn parish, N Dumfriesshire, 1½ mile SE of the nearest point of Lanarkshire, 1¼ N by E of Wee Queensberry (1675 feet), 7 miles WSW of Moffat, and 7¼—but 12 to walk—ENE of Thornhill. Sending down its eastern base into the parish of Kirkpatrick-Juxta, and lifting its summit but a brief way from the extreme angle of the deep indentation made by Lanarkshire into Dumfriesshire, it forms, with its fine, bold, sombre mass, a striking feature in many rich scenic landscapes. Its suffix is the Anglo-Saxon *berg*, 'a hill,' softened into *berry*; and, situated amid a congeries of noble heights, but queening it over them all like a sovereign among her courtiers, it is truly the 'queen hill' of a rich and superb district. About 1802 Hogg, the Etrick Shepherd, was tending his master's ewes on the slopes of Queensberry, when he received a visit from James and Allan Cunningham.—*Ord. Sur.*, shs. 16, 10, 1864.

Queensferry or South Queensferry, a small town and yet smaller parish of Linlithgowshire. The town is a

royal and parliamentary burgh, the royal comprising all the parish of Queensferry, and the parliamentary extending into Dalmeny. It stands on the southern shore of the Firth of Forth, here only 1½ mile broad, and has a station on a branch line of the North British, 5½ miles N by W of Ratho Junction and 10 WNW of Edinburgh, from which by road it is 9 miles distant. Its site is a belt of low ground at a point opposite the peninsula of North Queensferry, and the intermediate island of Inchgarvie, where the firth is suddenly and briefly, but very greatly, contracted in breadth. The ground behind the town rises abruptly; and immediately at the summit, or even on the slope of the steep bank, becomes open agricultural country. The town comes first into notice as the station at which St Margaret, the queen of Malcolm Ceaunmor, crossed the Forth in her numerous excursions between Edinburgh and Dunfermline during 1068 and 1093; and it received in honour of her both its present name and some early Latin designations of similar import, e.g., *Portus Reginae* (1164) and *Passagium Reginae* (1182). Malcolm IV., the great-grandson of Margaret, made the monks of Dunfermline a grant of the right of ferry at the place, and of a small piece of ground within the limits of the present royalty—a grant which probably led almost immediately to the erection of the town; and in 1164 he granted also to the abbey of Scone a free passage here for the abbot, the monks, and their men. In 1294 Pope Gregory confirmed to the abbey of Dunfermline 'dimidium Passagii Sanctæ Margaritæ Reginae;' and in a charter (1363) of general confirmation of regality jurisdictions by David II. to the monks of Dunfermline, 'Passagium' figures as a burgh of regality along with 'Dunfermylne, Kirkcaldy, and Muskillburgh.' The place, as a burgh of regality, was again granted to the monks by Robert I., regranted by Robert III., and confirmed in 1450 by James IV. A new charter was granted in 1636 by Charles I., confirming the preceding royal grants, but at the same time confirming a charter by Robert, commendator of Dunfermline. As this is the latest extant charter, and the record of the Great Seal for the period is defective, no evidence exists as to the precise year when the town was erected into a royal burgh. Yet proof is decisive that the erection took place before 1641, as the Scots Act of 1641 ratifies and approves of the charter of erection into 'ane free Burgh Royall and in ane free Port, Haven, and Harbour, with the hail liberties, privileges, and immunities pertaining to ane free Burgh Royall.' In 1639 a commissioner from it appears for the first time to have sat in parliament; and in the parliament of the following year he recorded a protest that he had produced his commission for Queensferry as a royal burgh, and that 'he had ridden, sitten, and voyced in this parliament as the rest of commissioners of burghs.' He was confronted by a counter-protest on the part of the burgh of Linlithgow, that he 'had neither riddin, sittin, nor voyced in parliament for the Queensferry;' but in 1641 the same Act of Parliament which erected the place into a separate parish freed it from the galling opposition of Linlithgow, and definitely recognised it as a royal burgh.

Queensferry, in spite of its antiquity and historical importance, has always been small; nor has it ever been enriched by much commerce, or dignified by great events. Its principal street varies in width, but is generally narrow, and wends irregularly to a total length of 650 yards, partly along the shore and partly into the interior. A street of 200 yards goes off from this at right angles, with a terrace along the road leading to Kirkliston. Two or three short alleys lead down to the harbour. Only a square tower, with E and S wings, remains of a Carmelite priory, dedicated to the Virgin Mary, and built and endowed by Sir George Dundas of Dundas as early as 1332. After the Reformation it was used as the parish church till the present one was built,

remained disused for 250 years, and was made over in 1890, on a perpetual lease, by the head of the Dundas family to the Scottish Episcopal Church, when it was restored and adapted as a mission station, St Mary the Virgin. The plain parish church, built in 1633, refitted in 1821, and repaired in 1885, contains 400 sittings, and has an excellent bell, bearing date 1635. Queensferry besides has a U.P. church, a Roman Catholic chapel, St Margaret's (1884), with 250 sittings, a public school, a post office, with money order, savings bank, and telegraph departments, a branch of the Clydesdale bank, a water supply, gaswork, a town-hall, a pleasure fair on the second Friday of August, and two or three hotels, of which that at Newhalls is the 'Hawes Inn' of Scott's *Antiquary*. A handsome clock, erected by public subscription at a cost of over £200, has been erected in the centre of the village in commemoration of Her Majesty's Jubilee. A hall and reading-room, the gift of the Right Hon. the Earl of Rosebery in memory of the late Countess, was built in 1894. The harbour and ferry works of North and South Queensferry, Newhalls, and Port-Edgar were greatly improved in 1809-18, from designs by Rennie, at a cost of £33,825; and in 1877-78 the North British Railway Co. expended a further sum of £30,000 on the construction of a timber landing jetty, 900 feet long, a whinstone breakwater, 1300 feet long, a new railway station, etc. A ferry steambot, the 'Queen Margaret,' was placed on the passage in 1821, but the opening of the Granton and Burntisland ferry greatly diminished the number of passengers, who in 1811 numbered 228 to 447 a day, while the opening of the FORTH BRIDGE railway reduced the traffic to a local one. In the 17th century, about 20 vessels, most of them large brigs, belonged to Queensferry, and some trade in shipbuilding was carried on. But now no vessel belongs to the port, nor are any built at it; and the commerce of the place consists principally of a coasting trade in coals, manures, and barley inward, and in stones and potatoes outward. Herring fishing is a chief employment during the winter months; and there are connected with it half a dozen boats belonging to the town. George IV. embarked at Port-Edgar, 15 Aug. 1822, on his return to England; on 5 Sept. 1842, the Queen and Prince Albert drove from Dalkeith to South Queensferry, embarked on the 'William Adam' and, after a short cruise up the Forth, landed at North Queensferry, whence they drove on to Scone; and on 23 Aug. 1884 the Prince and Princess of Wales, after visiting the Forth Bridge Works, drove through the town on their way from Dalmeny to Hopetoun. The parish, formed out of Dalmeny in 1636, is in the presbytery of Linlithgow and the synod of Lothian and Tweeddale; the living is worth £365. The town is

governed by a provost (which office has been held by the Earls of Hopetoun and Rosebery), 2 bailies, and 6 councillors, who are also police commissioners. The magistrates have jurisdiction not only within the royalty but also in the parliamentary bounds, which include the Forth Bridge; and in olden times they were in the habit of exercising jurisdiction much beyond this. Queensferry unites with STIRLING, Inverkeithing, Dunfermline, and Culross in H.M.S. 'Caledonia,' a training ship for the royal navy accommodating over 700 boys, lies off Queensferry. The burgh became bankrupt in 1831, but obtained its discharge on a composition of

Seal of Queensferry.

sending a member to parliament.

A training ship for the royal navy accommodating over 700 boys, lies off Queensferry. The burgh became bankrupt in 1831, but obtained its discharge on a composition of

12s. 6d. per £ in 1882, and in 1895 it had a corporation revenue of £90, exclusive of assessments. The municipal and the parliamentary constituency numbered 321 and 249 in 1895, when the annual value of real property within the parliamentary burgh amounted to £5685; of railways £4396. Pop. (1841) 1233, (1851) 1195, (1861) 1230, (1871) 1521, (1881) 1966, (1891) 1531, of whom 768 were in the royal burgh or parish of Queensferry.—*Ord. Sur.*, sh. 32, 1857. See W. W. Effe's *Summer Life on Land and Water at South Queensferry* (Edinb. 1851).

Queensferry, North, a village of Fife in the former detached section of the parish of Dunfermline, but in 1891 transferred by the Boundary Commissioners to the parish of Inverkeithing. It is situated at the extremity of Ferryhill peninsula, on the N coast of the Firth of Forth, directly opposite Queensferry, having a station on the FORTH BRIDGE railway, and being 1½ mile S of Inverkeithing, connecting with which and South Queensferry there is a branch line of railway on the north and the ferry on the south. William, Bishop of St Andrews, in 1323 gave its chapel of St James to the abbey of Dunfermline; in 1781, after the visit of Paul Jones to the firth, it acquired a battery, long ago dismantled. Previous to the construction of the Great Bridge it was a favourite summer resort for sea-bathing, and it has a post office, with money order, savings bank, and telegraph departments, a railway station, a coastguard station, a Free church, and a public school. Great catches of a kind of sprat are taken here. A little to the west is the anchorage ground of St Margaret's Hope. Pop. (1831) 434, (1861) 369, (1871) 382, (1881) 360, (1891) 410.—*Ord. Sur.*, sh. 32, 1857.

Queensferry, South. See QUEENSFERRY.

Queenshill, a mansion in TONGLAND parish, Kirkcudbrightshire, 2 miles N of Tarff station. It was the residence and death-place of James Beaumont Neilson, C.B. (1792-1863), inventor of the famous hot-blast, to whose memory a pyramid, 35 feet high, was erected in 1833.—*Ord. Sur.*, sh. 5, 1857.

Queich. See GLENQUAICH.

Queich, North, a rivulet of Kinross-shire, rising among the Ochil Hills, adjacent to the boundary with Perthshire, and running 6½ miles east-by-southward, chiefly within Orwell parish, but for 2 miles along or close to the boundary with Kinross, till it falls into the NW corner of Loch Leven, 1 mile SE of Milnathort.—*Ord. Sur.*, sh. 40, 1867.

Queich, South, a rivulet partly of Perthshire, but chiefly of Kinross-shire. It rises among the Ochils, within the Perthshire border, 1½ mile WNW of the source of the North Queich; begins, a little below its source, to trace for nearly 4 miles the boundary between the two counties; then runs 4½ miles east-by-southward through Kinross parish; and falls into Loch Leven at the S end of Kinross town.—*Ord. Sur.*, sh. 40, 1867.

Quendale Bay, a bay towards the southern extremity of Dunrossness parish, Shetland. Opening from the SW, it is flanked by Fitful Head and Seatness (the latter 1½ mile W by N of Sumburgh Head); and it measures 3½ miles across the entrance, and 2½ miles thence to its inmost recess. It is esteemed a good natural harbour. Quendale House, at its head, 23 miles SSW of Lerwick, is the seat of Andrew John Grierson, Esq. (b. 1832; suc. 1863).

Quinag. See ASSYNT.

Quiraing, a mountain (1779 feet) in Kilmuir parish, Isle of Skye, Inverness-shire, 2 miles WNW of Stenscholl, 6 NE of Uig, and 20 N by W of Portree. Consisting of amygdaloidal trap, and apparently formed by volcanic eruption, it ascends very steeply, almost murally on the NE side; and is capped with a kind of crater, from which it takes its name (Gael. *cuith-fhìr-Fhinn*, 'pit of the men of Fingal'). The rim around the summit resembles a strong, rough, lofty rampart, with only three or four gaps or fissures affording access to the interior. The principal gap is a steep narrow passage, obstructed by *débris*, and overhung by a tall, tapering, isolated pinnacle, the 'Needle;' and the rampart all

round, except at the gaps, shows basalt in a variety of columnar formations. Through the gaps of this rampart-looking rim one gains picturesque glimpses of sea and land; and the hollow itself could shield 4000 head of black cattle, and indeed was probably used in olden times as a place of retreat and concealment from invasion. From the bottom of it rises an oblong tabular mass or truncated rocky hill, the flat and turf-covered 'Table,' which measures 300 feet long and 130 broad. Such is this 'nightmare of nature,' this huge 'basaltic cathedral,' which in 1872 was ascended on foot by the Empress Eugenie and the Prince Imperial. See chaps. vii. and xi. of Alexander Smith's *Summer in Skye* (1865).

Quivox, St. See ST QUIVOX.

Quoich Water, a stream of Crathie and Braemar parish, Aberdeenshire, formed by two head-streams on the eastern side of Benabour at an altitude of 2273 feet, and winding $8\frac{1}{2}$ miles south-by-eastward, till it falls into the Dee at a point $1\frac{1}{2}$ mile WSW of Castleton. It forms, 1 mile above its mouth, a beautiful waterfall, the Linn of Quoich, its steep ravine being fringed with birch and pine. At the falls there is a pretty summer-house, built by the late Earl of Fife for the convenience of visitors. Old Mar Lodge, the hunting seat of the Earls of Fife, is an interesting object at hand.—*Ord. Sur.*, sh. 65, 1870.

Quothquan. See LIBBERTON.

R

RAASAY (Scand. *Raa*, 'a roe deer,' and *ey*, 'an island'), an island in Portree parish, Inverness-shire, and lying between the centre of the E coast of Skye and the Applecross district of Ross-shire. From the former it is separated by the Sound of Raasay, $5\frac{1}{4}$ miles wide at the N end of the island, $2\frac{1}{2}$ at the centre, and 1 mile opposite Raasay House, at the Narrows of Raasay. From Applecross it is separated by the Inuer Sound, $5\frac{1}{4}$ miles wide at the N end, $8\frac{3}{8}$ opposite Applecross Bay, and $6\frac{3}{8}$ at the S end. At the N end is the small Eilean Tigh, which is practically part of Raasay, and this is separated from South Rona by Kyle Rona, $\frac{1}{2}$ mile wide. One and one-eighth mile SSW of Eilean Tigh is Eilean Fladday, from which Raasay is separated by Kyle Fladda, which is dry from half-tide to half-tide. On the S the island is separated from the peninsula of Skye which stands out between Loch Sligachan and Loch Ainort, by a strait 1 mile wide, and from Scalpay on the SE by Kyle More, $\frac{3}{4}$ mile wide. Raasay Sound has a depth varying from 73 to 87 fathoms, and the Inner Sound is 77 fathoms at the S end, 130 off Brochel Bay, and 138 (the greatest depth) opposite the S end of Rona. The deepest parts are in the centre, where they form depressions considerably below the bottom of the sea in the neighbourhood of Skye. These depressions unite at the N end of Rona, and form a basin running northward into the Minch to nearly a line drawn from the mouth of Loch Ewe to Stornoway, but gradually widening and becoming more shallow as it passes N. The whole basin may be taken as bounded by the 50-fathom line, and Professor James Geikie attributes its formation to the action of ice. The tidal current in the Sound, particularly in the narrow part S of Portree Bay, is very strong. At the SE end of Kyle Rona is the island of Garbh Eilean and the smaller Eilean-an-Fhraoich. Between Eilean Tigh and Eilean Fladday is Loch a Sguirr, $1\frac{1}{2}$ mile wide between the islands, and a mile deep. To the S of Eilean Fladday is the long point of Ard-an-Torrain, immediately to the S of which is Loch Arnish, 1 mile wide across the mouth, and 1 mile deep. The point to the S of this is Manish Point, and close to it is Manish Island. Five miles farther S is Holoman Island, with Holoman Bay beyond and Oskraig Point at the S side. Half-a-mile NNW of this point are the rocks known as Sgeir Chnapach, and 1 mile SW in the middle of the channel is M'Millan's Rock. On the NE side of the Narrows of Raasay is Churchton Bay, which is the last indentation on the W side of the island. The E side is but little indented, but near the centre is the sweep sometimes known as Brochel Bay. At Eyre Point, in the extreme SE, a lighthouse was erected in 1893. It is 30 feet high, and has a flashing white light with red sector, but is unwatched and unreliable. The total length of the island, inclusive of Eilean Tigh, is 13 miles, and the width $1\frac{1}{2}$ mile opposite the middle of Kyle Fladda, $2\frac{1}{4}$ miles in centre, and $3\frac{1}{2}$ miles at the widest part at Raasay House. The total area, inclusive of the foreshore, is 15,704·384 acres. From the N end down to

opposite Loch Arnish, the rocks are Laurentian, and from that to the centre of the island, they are Cambrian. To the S of this the deposits are estuarine beds of oolitic age, overlaid unconformably by a thick series of volcanic rocks belonging to the Tertiary period. The oolitic beds are exposed all across the island near the centre, and also down the eastern coast from this to the extreme S end of the island. The surface is irregular, but may be described generally as one long ridge broken by transverse hollows with a long slope towards the low shores on the W, and a steep slope bounded by a long range of cliffs on the E. Speaking of the latter, Dr Macculloch says that 'On this side, scenes of considerable grandeur occur, generally marked by great breadth and simplicity of manner, and by powerful effect; at times, however, verging to an artificial character, in the architectural regularity of the flat sandstone cliffs, which are frequently split into columnar and conical forms, rising like towers above the deep, dark sea that washes their bases. The houses perched on these summits seem more like the retreats of the birds that hover round them than the habitations of human beings; the eye from below scarcely distinguishing them, far less their inhabitants. The grandeur of these long-extended walls of rocks is often varied by the enormous fractures and dislocations which have at different times taken place; masses of immense bulk having been occasionally separated so as to form a second ridge below them; while, in other places, huge piles of ruin cover their slopes with fragments advancing far into the sea, and strewing the shore with rocks.' More than a third of the whole island is over 500 feet above sea-level, the highest points being Beinn na h-Iolair (826) in the part N of Loch Arnish, Beinn a Chapuill (1211) S of Brochel Castle, and the flat-topped Dun Caan (1456)—on the summit of which Boswell danced merrily—the highest point of the island. From the last there is a very fine and extensive view of the Hebrides, the western coast of Ross, and the north-western portions of Inverness-shire. The greater part of the surface of Raasay is barren and heathy, but on the strip of secondary rocks on the E side along the top of the cliffs the soil can be tilled to advantage, as well as in the flat portion about the mansion-house at the extreme SW of the island. There is but little wood, a considerable amount of natural wood and coppice that once existed having been almost entirely cut down for fuel in the wet seasons of 1836 and 1837, when the peats were too wet to burn. Except the cliffs on the E, the wooded part about the mansion-house and the shores of Loch Arnish, with their birch coppice and bold cliffs, there is but little of what may be called scenery in the island. The drainage is effected by a large number of small streams flowing mostly to the Sound of Raasay. Of these the largest from N to S are Manishmore Burn, Glam Burn, Storab Burn, and Inverarish Burn, the latter entering the sea near the mansion-house. In a hut in the glen of the Glam, Prince Charles Edward found a brief refuge after leaving Flora Macdonald. Storab Burn rises from Loch-na-Meilich

high up Dun Caan, and the Inverarish from Loch-na-Mna a little to the SSE. Of the latter Boswell tells a curious legend. Raasay and the adjacent islands belonged for about 500 years to the Macleods of Raasay, cadets of the Macleods of Lewis, often known as M'Gilliecallum of Raasay, and it was by one of this family that Dr Johnson and Boswell were so hospitably entertained in 1773. Raasay was, however, among the many proprietors ruined in the destitution crisis of 1846, and the estate passed into the hands of Mr Rainy, who cleared a considerable portion of the crofter population in order to lay out sheep farms. His son, who succeeded, made an early and interesting experiment on the crofter question. He established himself as a resident proprietor, interested himself in the welfare of the people—who then included 104 crofters, with an average rent of less than £5, and 65 cottars—and provided work for them in fencing, draining, trenching, etc., and at the end of four years found he had been spending over £400 a year more than his rental, while the condition of the people was in no way improved. On his death the estate was sold in 1872 to Mr G. G. M'Kay. The mania for highland sport having sprung up, it was resold in 1874 to Mr Armitage for about £60,000, to be partially converted into a deer forest; and again, in 1876, to the late Mr E. H. Wood, who kept more than half the island in his own hands for sporting purposes, the rest being in the hands of crofters, lotters, and cottars. He made a large number of improvements after the property passed into his possession. The mansion-house is pleasantly situated near the shore of Church Bay on the SW; and here is also the Free church of the island, the clachau, and the post and money order office, which is under Strome Ferry. The railway steamer calls here on the voyage between Strome Ferry and Portree, both going and coming. The distance from the former place is, in a straight line, 19½ miles, and by the steamer route about 25. The interesting ruin of Brochel Castle on the E coast is separately noticed. Pop. (1841) 647, (1861) 388, (1871) 389, (1881) 478, (1891) 438, of whom 192 were males and 246 females.—*Ord. Sur.*, shs. 81, 71, 1882-85.

Rabbit Islands, three islets of Tongue parish, Sutherland, in the mouth of Tongue Bay. The two largest rise to a height of 100 feet, and all three have a sandy soil covered with verdure. They take their name from being occupied by swarms of rabbits, but they were anciently designated Eilean-na-Gaeil, signifying the island of strangers; and they are said to have got that name from having been a landing place of the Danes. They enclose good anchorage for ships of any burden.—*Ord. Sur.*, sh. 114, 1880.

Rachan House, a mansion in BROUGHTON parish, Peeblesshire, near the left bank of Holms Water, 9 furlongs SSE of Broughton station on the Peebles and Symington branch of the Caledonian railway, and 6½ miles ESE of Biggar, under which there is a post office of Rachan Mill. A modern two-storey building in the style of an Italian villa, it has beautiful well-wooded grounds. During 1838-60 Mr. James Tweedie, the former proprietor, and his father, spent £80,000 on the purchase of Rachan and other properties; and in 1897 it was sold to H. B. Marshall, Esq. for £45,000. Rachan from at least 1406 till 1752, belonged to the Geddeses, of whom James Geddes (1710-48) was author of *An Essay on the Composition of the Ancients*.—*Ord. Sur.*, sh. 24, 1864.

Racks, a village in Torthorwald parish, Dumfriesshire, near the left bank of Lochar Water, with a station on the Glasgow and South-Western railway, 3¾ miles ESE of Dumfries.

Rackwick, Bow of. See NOOP.

Raddery House, a mansion in Rosemarkie parish, Ross and Cromarty, 4 miles NNW of Fortrose.

Radernie. See CAMERON.

Raeberry, a stronghold of the Maclellans on the coast of Kirkcudbright parish, Kirkcudbrightshire, 6¼ miles SSE of the town. It stood on the crest of a terrific precipice overhanging the Solway Firth; was defended on the landward side by a strong wall and a deep fosse,

the latter spanned by a huge drawbridge; suffered demolition of its main buildings about the middle of the 16th century, and of its defensive wall and drawbridge about the middle of the 18th; and is now represented by only the site and the fosse. It was hence that Sir Patrick Maclellan was carried prisoner to THREAVE CASTLE.—*Ord. Sur.*, sh. 5, 1857.

Raehills, a mansion in Johnstone parish, Dumfriesshire, near the right bank of Kinnel Water, 10 miles NNW of Lockerbie. A noble castellated edifice in the Tudor style, with very beautiful grounds, it was built in 1786 by James, third Earl of Hopetoun, and received a large addition in 1834. The Earl of Hopetoun in 1792 inherited the estates of his grand-uncle, George, third Marquis of Annandale; and Anne, his daughter, and the heiress to those estates, married her kinsman, Admiral Sir William Johnstone-Hope, G.C.B. Their great-grandson, John James Hope-Johnstone, Esq. of Annandale (b. 1842; suc. 1876), lays claim to the Annandale marquise, was Conservative member for Dumfriesshire from 1874 to 1880, and is keeper of Lochmaben Palace. See ANNANDALE, LOCHWOOD, and LOCHMABEN.—*Ord. Sur.*, sh. 10, 1864.

Raemoir, a mansion in Banchory-Ternan parish, Kincardineshire, 3 miles N of Banchory. Its owner is Alexander Innes, Esq. (b. 1872; suc. 1883).—*Ord. Sur.*, shs. 76, 66, 1874-71.

Rafford, a parish, containing a village of the same name, in the NW of Elginshire. It is bounded N by Kinloss parish, E by the parishes of Alves and Elgin, SE by the parish of Dallas, S and SW by the parish of Edinkillie, and W by the parish of Forres. The boundary on the SE and part of the S is formed by the Lochty or Black Burn and the Loch of Romach for a distance of over 5½ miles to the source of the burn. The Burn of Altyre also forms the boundary on the S border for about ¼ mile, and the Findhorn for about ¾ mile at the extreme W corner above the point where the parishes of Rafford, Edinkillie, and Forres meet in the centre of the river. Elsewhere the line is artificial. The shape of the parish is highly irregular, a long horn-like projection of the parish of Forres indenting the western side to a depth of 3½ miles, and almost separating a northern triangular portion from the rest. This triangular portion, comprising about a third of the whole area, is united to the more compact southern portion by a neck, ¾ mile wide, to the N of Bognie. The northern part is 3 miles from NNW to SSE, and 3 miles wide along the northern border; the southern part measures 3½ miles from N to S through the village of Rafford, and fully 6½ miles from the point where the parishes of Rafford, Edinkillie, and Forres meet on the Findhorn E by N to the point where the parishes of Elgin, Dallas, and Rafford meet on the Lochty. The total area is 12,504·106 acres, of which 47·971 acres are water. The northern border is low, flat, and fertile, the centre undulating, and the S a rough upland reaching a height of 533 feet on the E side at the northern end of the road running NNW of Bognie, 731 at the middle of the same road, 833 at the top of Burgie Hill, and over 900, on the shoulder of Romach Hill on the southern border, at the source of the Lochty. The upper districts have fine views of the 'Laich of Moray,' the Moray Firth, and the hills to the N of it. About 4000 acres in the centre and SW are under wood, and about as many under tillage, while the rest is mostly hill pasture or moorland. The soil along the N and centre is good strong clay or black mould; elsewhere it is clay, shallow black mould, sand, rough gravel on an almost impenetrable subsoil, or reclaimed moss. The underlying rocks are Silurian (S) and Old Red Sandstone (centre and N). A coarse grey slate in the former was once quarried, and a gritty sandstone in the latter is occasionally worked. The drainage in the N goes to a small stream that flows through Alves parish to Burghead Bay; in the SE it is carried off by the Lochty, and in the W by the streams flowing into the Altyre Burn, and that burn itself, which flows past Forres and into Findhorn Bay. On the southern border the whole

of Romach Loch ($\frac{7}{8}$ mile long by 100 yards wide) is in the parish, as is also part of Loch of Blairs (3×2 furl.), the rest being in Forres. Both contain good trout, especially Loch of Blairs, where the fish weigh from $\frac{1}{2}$ to $\frac{3}{4}$ lb., and are red-fleshed, but they are preserved. The parish is an old one, the church having been the prebend of the sub-chanter of the diocese of Moray; but the boundaries were altered in 1657, when a small portion was given off for the new parish of Kinloss, and again in 1659, when the pre-Reformation parish of Altyre was disjoined from Dallas and added to Rafford. Near the northern border the parish is traversed for $2\frac{1}{2}$ miles by the main road from Aberdeen to Inverness, and near the W side for 3 miles by the Forres and Perth section of the Highland Railway system, and by the road from Forres to Grantown. There are also a large number of good district roads. The principal residences are Altyre House and Burgie House, both of which are separately noticed. The whole district about Altyre House is beautifully wooded. The antiquities are Sueno's Stone in the extreme NW of the parish, which has been noticed under Forres, and Burgie and Blervie Towers, which are separately noticed. Blervie is identified with the Ulern or Vlern, where, according to some of the chroniclers, Malcolm I. was slain in 954. The old name was Blare. Near the castle are the remains of a stone circle. The site of Altyre church is on the banks of Altyre Burn, $\frac{1}{2}$ mile N of Altyre House. The only distinguished native was Dr Alexander Adam (1741-1809), a famous classical scholar and long rector of the high school of Edinburgh. The village is by road $2\frac{1}{2}$ miles SE of Forres, which is the nearest railway station, Rafford station having been discontinued. There is a post office under Forres.

The parish is in the presbytery of Forres and the synod of Moray, and the living is worth £288 a year. The parish church, at the village, was built in 1826 after designs by Gillespie Graham, and is a good Gothic building containing 600 sittings. There is also a Free church. Under the School Board are Rafford, Burgie, and Rafford female schools, which, with accommodation for 80, 52, and 61 pupils respectively, have an average attendance of about 45, 50, and 35, and grants of nearly £40, £60, and £30. There are four landed proprietors—the lairds of Altyre, Blervie, and Burgie, and the Earl of Moray. Pop. (1801) 1030, (1831) 992, (1861) 1005, (1881) 1052, (1891) 982.—*Ord. Sur.*, shs. 85, 84, 1876.

Raigmore, an estate, with a mansion, in Inverness parish, Inverness-shire, 1 mile distant from the town. Its owner is Aeneas William Mackintosh, Esq. (b. 1819), Liberal M.P. for Inverness 1868-74.

Rain. See RAYNE.

Rait. See KILSPINDIE.

Rait Castle. See NAIRN.

Raith, a mansion in Abbotshall parish, Fife, $2\frac{1}{2}$ miles W of Kirkcaldy. Standing on the eastern face of a hill, and originally built in 1694, it has received the addition of two wings and a fine Ionic portico; and is surrounded by extensive and beautifully-wooded grounds, containing a picturesque artificial lake (1812) of 21 acres. Near the summit of the hill, behind the mansion, 400 feet above sea-level, stands square Raith Tower, 54 feet high, whose top commands a magnificent view of fourteen or sixteen counties. Sir John de Melville of Raith swore fealty to Edward I. in 1296; and among his descendants were Sir John Melville, beheaded for treason in 1548; Sir Robert Melville of Mudocairnie (1527-1621), created Baron Melville of Monimail in 1616; his younger brother, Sir James Melville of Hall-hill (1535-1617), well known by his curious *Memoirs*; and George, fourth Lord Melville, created Earl of Melville in 1690. (See MELVILLE HOUSE.) After his death in 1707, the estate was purchased by Robert Ferguson (1690-1781); and Raith House was the birthplace of the Peninsular hero, Gen. Sir Ronald Craufurd Ferguson, M.P. (1773-1841), whose grandson, Ronald Craufurd Munro-Ferguson, Esq. (b. 1860; suc. 1868) is present proprietor, his father having succeeded to the estates

of Muirton and Novar in 1864. His grand-uncle and father represented the Kirkcaldy Burghs from 1831 to 1861; and he himself was M.P. for Ross-shire in 1884-85, and was elected for the Leith Burghs in 1886. A *quoad sacra* parish of Raith, formed out of Abbotshall in 1883, is in the presbytery of Kirkcaldy and the synod of Fife. Its church is the former Free church of Abbotshall, acquired by the Establishment in 1875, and reopened after reconstruction at a cost of over £5000 in 1883. There is a post office under Errol. Pop. of *q.s.* parish, (1891) 3427.—*Ord. Sur.*, sh. 40, 1867.

Ralston, an estate in Abbey parish, Renfrewshire, $1\frac{3}{4}$ mile E of Paisley. From an early period down to the beginning of the 18th century it belonged to a family of its own name, originally called Ralphston from their ancestor Ralph; and in 1800, with some exception, it was acquired by William Orr, Esq., who had previously purchased from the Earl of Glasgow a part of the adjacent estate of Ingliston, and who erected there a handsome mansion called Ralston House.—*Ord. Sur.*, sh. 30, 1866.

Rammerscales, a modern mansion in Dalton parish, Dumfriesshire, $3\frac{1}{2}$ miles S of Lochmaben. Standing on a high eastward slope of the Torthorwald Hills, and surrounded with a fine expanse of hanging wood, it commands a view of the greater part of Annandale. Its owner is William Bell Macdonald, Esq. (b. 1845; suc. 1862).—*Ord. Sur.*, sh. 10, 1864.

Ramornie, a mansion in Kettle parish, Fife, 7 furlongs E of Ladybank Junction. Its owner is Hugh Veitch Haig, Esq.—*Ord. Sur.*, sh. 40, 1867.

Ramoth, a village in Kilmadock parish, Perthshire, 3 miles ESE of Thoruhill.

Ramsaycleugh, a hamlet in Ettrick parish, Selkirkshire, on the left bank of Ettrick Water, 18 miles SW of Selkirk.

Ranfurly Castle. See KILBARCHAN.

Rangag, Loch. See LATHERON.

Range Castle. See ALMAGILL.

Rankeillour, Nether, an estate, with a mansion, in Collesic parish, Fife, 2 miles NE of Ladybank. It was sold to Mr. M. B. Nairn, of Kirkcaldy, in 1876 for £43,550.

Rankeillour, Over or Upper, a fine mansion in MONIMAIL parish, Fife, 3 miles W by S of Cupar. It was built by General John Hope, afterwards fourth Earl of Hopetoun; and has splendidly wooded grounds. The estate, which belonged originally to a family of the name of Rankeillour, at an early period went to a branch of the Sibbalds of Balgonie; and passing in the time of Charles II. to Sir Archibald Hope, grandson of the celebrated Sir Thomas Hope of Craighall, is now the property of H. W. Hope, Esq. of LUFFNESS.—*Ord. Sur.*, sh. 40, 1867.

Rankle Burn, a stream of Ettrick parish, Selkirkshire, rising at an altitude of 1350 feet, within $\frac{1}{4}$ mile of Moodlaw Loch, at the meeting-point of Selkirk, Dumfriesshire, and Roxburgh shires, and winding $9\frac{1}{2}$ miles northward—for $2\frac{3}{4}$ miles along the Robertson boundary, and for $\frac{3}{4}$ mile along that of Kirkhope—till, after a total descent of 635 feet, it falls into Ettrick Water opposite Tushielaw Tower. It traverses first a wildly moorish tract, afterwards a deeply sequestered pastoral glen, is sung in the ballad of the *Maid of the Rankle Burn*, and abounds in small trout.—*Ord. Sur.*, sh. 16, 1864.

Rannoch, Loch, a lake of Fortingall parish, NW Perthshire. Extending $9\frac{3}{8}$ miles eastward to within 300 yards of Kinloch-Rannoch (21 miles W by N of Pitlochry), and lying at an altitude of 668 feet above sea-level, it has a width near its head of only $\frac{1}{4}$ mile, but lower down broadens to from $5\frac{1}{2}$ to 9 furlongs. Throughout its greater part, especially towards the foot, its depth is from 60 to 85 fathoms; and it freezes so well in hard frost at the W end that persons can cross there on the ice, though the whole surface is not frozen over oftener, on an average, than once in 30 or 40 years. It abounds in small trout and large salmo-ferox, and receives at its head the GAUVR, coming from Loch Lydoch; at a point 7 furlongs from its head on the N

side the ERICHT, coming from Loch Erich; at other parts of its sides Killichouan, Aulich, Slochna-Creadha, Dall, and Bogair Burns; discharges all its superfluous at the foot in the river TUMMEL; and contains near its head an artificial crannoge, on which is a modernised keep. Flanked along both its sides by ranges of upland receding from brae and hill to lofty mountain, it is sky-lined in the distant W by the peaks of Buachaille-Etive and Glencoe, and nearly overhung in the near SE by the vast isolated mass of Schiehallion. Cornfields and birch woods adorn the skirts and lower braes of its northern flank; and a great pine forest, the Black Wood of Rannoch, runs far up all its southern acclivities, so that, viewed in connection with the basins of its contributory waters, and with the diversities and the distances of the horizon lines, it makes a vast and imposing display of magnificent scenery. At its head, 12 miles by road W by S of Kinloch-Rannoch, is Rannoch Lodge (Sir Robert Menzies, Bart. of Castle-Menzies); and $\frac{3}{4}$ mile to the SW is Rannoch Barracks (Struan-Robertson).—*Ord. Sur.*, shs. 54, 55, 1873-69.

The district of Rannoch is bounded NW by Lochaber, N by Badenoch, E by Blair Athole, S by the Fortingall and Glenlyon sections of Breadalbane, and W by Glenorchy and Appin. Its greatest length, from E to W, is 28 miles; its greatest breadth is 15 miles; and its area is about 290 square miles. The central part, from the eastern boundary to the extent of 22 miles westward, exhibits the picturesqueness of the glen and screens of Loch Rannoch; the northern part, excepting a small section on its northern border occupied by a portion of wild Loch Erich, consists entirely of bare, lofty, indomitable masses of the Central Grampians, variously peaked with soaring summits, expanded into plateaux of moor and loch, and cloven in their lower declivities with narrow glens; the southern part, all comparatively of small breadth, consists of the northern declivities and spurs of the hills and mountains flanking the N side of Fortingall and Glenlyon; and the western part is Rannoch Moor, the largest and dreariest moor in Scotland, lying at a mean elevation of 1000 feet above sea-level, all an open, monotonous, silent, black expanse of desert, a vast and dismal mixture of bog, morass, heath, and rock, streaked in the centre with long dreary Loch Lydoch; diversified elsewhere with only a few marshy pools, and some ditchy naked lines of dark water-course; and environed in the distance by rough, bleak, dark mountains, in rueful keeping of aspect with its own sable sea of moss.

‘Amid this vast tremendous solitude,
Where nought is heard except the wild wind’s sigh,
Or savage raven’s deep and hollow cry,
With awful thought the spirit is embued!
Around, around, for many a weary mile,
The alpine masses stretch; the heavy cloud
Cleaves round their brows, concealing with its shroud
Bleak, harren rocks, unthawed by summer’s smile.
Nought but the desert mountains and lone sky
Are here; birds sing not, and the wandering hee
Searches for flowers in vain; nor shrub, nor tree,
Nor human habitation greets the eye
Of heart-struck pilgrim; while around him lie
Silence and desolation, what is he!’

These solitudes, however, have at length been penetrated by the locomotive, the WEST HIGHLAND RAILWAY (opened in 1894), which crosses the Gaur Water about the centre of the moor, passing about a mile from the foot of Loch Lydoch and 5 miles from the head of Loch Rannoch, from which the public road has been extended to meet the railway. The station of Rannoch is on the north bank of the Gaur Water.

Ranza. See LOCHRANZA and GLENRANZA.

Raploch, a village in Stirling parish, Stirlingshire, adjacent to the Forth and Clyde railway, immediately under the NW side of Stirling Castle, $\frac{3}{4}$ mile W of Stirling Bridge, and within the parliamentary burgh. It was the birthplace of Dugald Graham (1724-79), the author of a rhyming *History of the Rebellion*. See GLASGOW, p. 144.

Rasay. See RAASAY and BLACKWATER.

Ratagan. See MAAAM-RATAGAIN.

Rathen (? Gael. *Rath-aan*, ‘the fort on the river’), a parish containing a hamlet of the same name on the NE coast of the Buchan district of Aberdeenshire. It is bounded N by Fraserburgh parish, NE by the German Ocean, SE by the parish of Lonmay, SW and W by the parish of Strichen, and NW by the parishes of Tyrie and Pitsligo. The boundary with Fraserburgh is formed for 2½ miles by the Rathen or Philorth Burn to its mouth, 2 miles SE of the town of Fraserburgh, and then extends along the sea-shore for 2½ miles. Elsewhere the line is artificial. On the coast is Cairnbulg Point, flanking the E side of Fraserburgh Bay. The greatest length of the parish, from NE to SW, is 6½ miles; the greatest breadth, 3¾ miles; and the area, 9789·758 acres, of which 177·581 are foreshore and 24·971 water. The coast is partly flat and sandy, and partly formed by low rocks; and the surface adjoining both coast and burn is flat and well cultivated. In the SW the ground sweeps up to the ridge culminating in Mormond Hill (769 feet), on the borders of the parishes of Rathen, Strichen, and Lonmay, and here the appearance is bleak and barren. Of the land area of 9587 acres, about 200 are planted, about 1800 are rough pasture, and the remainder is under cultivation. The soil varies from a strong alluvium to a poor moorish earth. The underlying rocks are Silurian, and the beds of limestone are worked. The drainage is mostly carried off by the Rathen Burn, which has a course of 3 miles through the parish, and 2½ along the border, and the smaller streams that flow into it. As might be expected from its vicinity to DEER, Rathen has associated with it the names of two of the early Culdee missionaries—St Ethernan, who is said to have had his hermitage in St Ethernan’s Den, on the E side of Mormond Hill; while a hillock and well, about ½ mile from the church, are associated with the name of St Oyne or Eyen. The old church is one of the most ancient in Aberdeenshire, and consisted of a nave with an aisle to the S, the latter erected by the Frasers of Memisie* in 1646. The belfry bears date 1782, and L. A. S., for Lord Abernethy and Saltoun; and the bell has the inscription, ‘Peter Jansen, 1643.’ The year after the manufacture of the bell, the church was the scene of one of the many ‘omens that were seene in diverse parts of the kingdom,’ during the great struggle between Argyll and Montrose. ‘At Rethine in Buchan,’ says Patrick Gordon, the author of *A Shorte Abridgement of Britain’s Distemper*, ‘there was, about the tyme of morneing prayer for diverse dayes together, hard in the church a queire of musicke, both of woces, organes, and other instrumentes, and with such a ravisheing sweetnes that they were transported which, in numbers, resorted to heire it with unspeakable pleasure and never wried delight. The preacher on day being much takin with the harmonie, went with diverse of his parisheners in to the church, to try if there eyes could beare witness to what there eares had hard, but they ware no sooner entred when, lo, the musicke ceased with a long not, or stroke of a *wioll de gambo*; and the sound came from ane upper lofte where the people used to heare service, but they could sie nothing.’ It underwent repair in 1767, but was finally replaced in 1870 by a new church, a Gothic building with a spire, erected to the E of the old site. The ancient parish comprehended also part of Fraserburgh and the greater part of Strichen. The church was given by Marjory, Countess of Buchan, to the Abbey of Arbroath; and in 1328, Robert Bruce granted the benefice to the college and canons of Old Machar. The chief residence is Mormond House, Memisie House being now used as a farmhouse. Both are separately noticed, as are also the Memisie Cairns and Cairnbulg and Inverallochy Castles. Trefor Hill, SE of the church, had, until some years ago, trenches and walls of earth and stone on it, so that it seems to have been a place of strength, and possibly the *rath* from which the parish takes its name. According to Peter Buchan, in his *Gleanings of Scarce Old Ballads*,

* The Frasers of Memisie were cadets of Fraser of Philorth, from which family they branched off in 1482.

the Jacobite songs of *Whirry, Whigs and Man*, and *Logie o' Buchan*, were written by George Hacket, schoolmaster of Rathen, 'in the years 1736 and 7;' and it is added that he also wrote a Dialogue between George II. and the Devil, which was so obnoxious that the Duke of Cumberland offered a reward of £100 for the discovery of the author. Hacket was schoolmaster, not in 1736-37, but from 1714 to 1725, when he was deposed from office as having 'come to that height of impudence as to deny all the faults he stands guilty of, and will not be convinced or made sensible of his miscarriages, and he having relapsed again and again, and no reformation of heart or of ways to be found in him.' He seems subsequently to have taught adventure schools at Cairnbulg, Memisie, and Tyrie. There is no evidence for or against the reputed authorship, which rests entirely on Buchan's assertion. The parish is traversed by the main roads from Ellon and Peterhead to Fraserburgh and also by the Fraserburgh branch of the Formartine and Buchan section of the Great North of Scotland railway, on which there is a station of Rathen, 44½ miles N of Aberdeen, and 2½ S of Fraserburgh. Besides the hamlet, which is ¾ mile W of the station, with a post office under Aberdeen, the parish contains also the villages of Inverallochy, Cairnbulg, and Charleston, all of which are separately noticed.

The parish is in the presbytery of Deer and synod of Aberdeen, and the living is worth £175 a year. It gives off the *quoad sacra* parish of INVERALLOCHY. The parish church has been already noticed. There is also a Free church, 2½ miles SSW of Inverallochy. Under the School Board, Rathen, Memisie, and Inverallochy public schools, with accommodation for 213, 97, and 303 pupils respectively, have an average attendance of about 120, 70, and 230, and grants amounting to nearly £115, £60, and £225. Besides these there are Cortes female school, with accommodation for 28 pupils, an average attendance of about 35, and a government grant amounting to over £30. Pop. (1801) 1588, (1831) 2100, (1861) 2554, (1871) 2850, (1881) 2825, (1891) 2627, of whom 1252 were males and 1375 females, while 1164 were in the ecclesiastical parish.—*Ord. Sur.* sh. 97, 1876.

Rathillet, a small village, with a U.P. church, in Kilmany parish, Fife, 4½ miles N by W of Cupar. The estate of Rathillet belonged for ages, till about 1772, to the family of Halkerstone or Hackston, of whom David Hackston was one of the murderers of Archbishop Sharp on MAGUS MUIR.—*Ord. Sur.*, sh. 48, 1868.

Rathmuriel. See CHRIST'S KIRK.

Ratho, a village and a parish of Edinburghshire. The village stands 1250 to 320 feet above sea-level, near the S bank of the Union Canal, 1¼ mile S by E of Ratho station on the North British railway, this being 8½ miles WSW of Edinburgh, and 9¼ ESE of Linlithgow. Its site is the slope or eastern declivity of gentle uplands; and it consists of a single street, coming down the declivity from W to E, and bending northward, near the end, to terminate on the canal. Most of its houses are neat whinstone cottages, lintelled with sandstone, and roofed with either tiles or slate. Aduiently a place of considerable note, Ratho fell into great decay, but has in modern times been revived, extended, and much improved. In a poem by Joseph Mitchell, who published two large octavo volumes of miscellaneous poetry in 1724, and who is known as 'the poet of Ratho,' it figures as having at one time risen to splendour, and then at another time sunk to desolation, till 'Ratho looked like Troy a field of corn.' It has now a post office, with money order, savings bank, and telegraph departments, a police station, and a gaswork. Pop. (1861) 658, (1871) 717, (1881) 713, (1891) 821.

The parish is bounded W and NW by Kirkliston, N by Kirkliston and Corstorphine, SE by Currie, and SW by Kirknewton. Sending off a long, narrow, south-south-westward projection, it has an utmost length from NNE to SSW of 5½ miles, a varying width of 5 furlongs and 5 miles, and an area of 6168½ acres, of which 21½ are water. Almost the only stream, and that a tiny one,

is Gogar Burn; but the UNION CANAL (1822) goes 3¼ miles north-westward and westward across the interior. With a gentle southerly rise from 132 to 350 feet above sea-level, the surface of the main body in its eastern half is a slightly variegated level; in its western is a congeries of broad-based hillocks or low table-land, with gentle swells. As the position is midway between the Pentland Hills and the Firth of Forth, and about 8 or 9 miles W of Edinburgh, magnificent views are obtained from the little heights of the scenery of the Lothians, the Forth, Fifeshire, the Ochils, and the frontier Grampians. The surface of the southern or projecting district rises slowly from a low line of connection with the main body to near the southern boundary; and it there shoots abruptly up in the two bold isolated heights of Dalmahoy and Kaimes Hills, each 800 feet above sea-level. These form a conspicuous and picturesque feature of the general Lothian landscape; and, like Salisbury Craigs, the rocks of Edinburgh and Stirling Castles, and various eminences at the NE end of the Lennox Hills, they break down in cliffs, or stoop precipitously to the W. The general aspect of the parish, from the diversity of its contour and the richness of its embellishments, possesses much beauty, and presents many fine close scenes. Nearly six-sevenths of the entire area are either in tillage or in an arable condition; and the remaining seventh is distributed, in not very unequal parts, into plantations and pasture. The soil is, in general, a light loam, with a preponderance of sand; but, towards the eastern border, it passes, in a great degree, into clay. Except for intrusions of diorite in the W, and of basalt in the southern hills, the rocks belong to the Calciferous Sandstone series. The basalt and sandstone have both been quarried; whilst claystone, or 'calmstone,' was formerly worked upon the property of Ratho Hall. Coal is said to have been mined long ago at Bonnington, but cannot now be found. The only noticeable antiquities are vestiges of two camps, both probably Danish, the one on Kaimes Hill, the other on South Platt Hill, a commanding little summit on the W. In 1315 the barony and patronage of Ratho were, along with much other property, granted by Robert I. to the Steward of Scotland, as the dowry of the Princess Marjory; and on the accession of Robert II. to the throne, in 1371, they became part of the property of the king's eldest son as prince of Scotland, for whom, in 1404, they and the other estates were erected into a principality with regal jurisdiction. Among eminent persons connected with the parish were William Wilkie, D.D. (1721-72), 'the Scottish Homer,' who was for six years minister; Sir Robert Liston, G.C.B. (1742-1836), British ambassador at seven courts, who spent his last years at Millburn; and Sir William Fettes (1750-1836), another resident and heritor, whose vast property was bequeathed for the founding at Edinburgh of the great Fettes College. Ratho Park, ¾ mile E by N of the village, is a good modern Grecian building, with beautiful grounds. Other mansions, noticed separately, are ASHLEY, DALMAHOY, HATTON, MILLBURN TOWER, and NORTON. Ratho is in the presbytery of Edinburgh and the synod of Lothian and Tweeddale; the living is worth £335. Standing near the village, on the opposite side of the canal, and embowered by ancient trees, the church is a somewhat cruciform structure, part old, part modern, its Dalmahoy aisle bearing date 1683. There is a Free church designated of Ratho and Kirknewton; a pretty little Roman Catholic church, St Mary's, with 200 sittings, was opened in 1833; and 1 mile SSE of the village is St Mary's Episcopal church of Dalmahoy. Two schools—Ratho public and Dalmahoy Episcopalian—with respective accommodation for 249 and 119 children, have an average attendance of about 210 and 65, and grants amounting to nearly £215 and £75. Valuation (1885) £16,486, (1894) £15,934, plus £3344 for railways. Pop. (1801) 987, (1831) 1313, (1861) 1659, (1871) 1744, (1881) 1815, (1891) 1839.—*Ord. Sur.*, sh. 32, 1857.

Rathven, a coast parish of NW Banffshire, containing the town of BUCKIE, part of the royal burgh of CULLEN,

and the four fishing villages of PORTKNOCKIE, FINDOCHTY, PORTESSIE, and PORT GORDON, all of which are noticed separately. The parish is bounded NW by the Moray Firth, NE by Cullen Bay, E by Cullen, SE by Deskford, S by Keith, and W by Bellie. Its utmost length, from ENE to WSW, is 8½ miles; its breadth diminishes eastward from 5½ to 3 miles; and its area is 36½ square miles or 23,551 acres, of which 40½ are water and 345 foreshore. The coast-line, 9½ miles in extent, is little indented by bay or headland, but rises steeply from the sea to 87 feet near Port Gordon, 75 at Buckie Newtown, 116 at the Law Hillock, and 177 near Portknockie. Three caverns of unknown extent bear the name of Farskane's, Janet Corstair's, and Cross Caves. The Burn of Tynet runs 5½ miles north-by-westward along most of the western boundary, and the Burn of DESK FORD 2½ miles north-north-westward along all the eastern, whilst several rapid rivulets drain the interior to the Moray Firth. That part of the parish between the shore and the road from Cullen to Fochabers attains a maximum altitude of only 271 feet at a point 7 furlongs SSE of Findochty; but the rest of the surface is very hilly, from E to W attaining 802 feet at the Little Bin, 1050 at the wooded, cairn-crowned BIN HILL OF CULLEN, 900 at the Hill of Maud, 893 at Addie Hill, 948 at the hill of Stonyslacks, and 987 at Millstone Hill. A very pure quartz rock is found in the Bin; metamorphic rocks, including gneiss, mica slate, clay slate, and other schists, prevail along the coast; greywacke alternates in some parts with the mica slate and the clay slate; Old Red sandstone occurs in the NE, and goes into conjunction with greywacke; limestone has been worked at Nether Buckie; and a beautiful whitish sand, said to be almost equal to the finest found in Holland, is plentiful near Litchieston. Medicinal springs, formerly held in high repute, are in three places; and springs of pure water are numerous, copious, and perennial. The soil, in one corner a light and extremely rich loam incumbent on clay, in another corner a thin yet fertile loam on a soft red subsoil, elsewhere alternates between a light sand and a stiffish clay; and almost everywhere, except in the sandy places, is profusely strewn and intermixed with small boulders. Less than one-third of the entire area is in tillage; rather more than 4000 acres are under wood; about 400 are meadow and grass land; and the rest of the parish is either pastoral or waste. Antiquities are a number of cairns on the heights of Corriedown; many tumuli on the field of the Battle of the Bauds;* a portion of Findochty Castle on Mains of Findochty farm; the ruins of Green and Tronach Castles near Portknockie; and remains of a pre-Reformation chapel near Farskane. Two wings still standing of the old mansion of Rannas are occupied by a farmer. The Rev. Alexander Geddes, LL.D. (1737-1802), an eccentric Roman Catholic divine, was born of crofter parents at Pathhead, which was also the birthplace of Alexander Paterson (1766-1831), Roman Catholic Bishop of Edinburgh. The parish is traversed by a branch of the Highland railway from Keith to Buckie, and by one of the Great North of Scotland railway from Elgin to Portsoy. At Inchgower, 1½ mile from Buckie, is a large distillery. Mansions, noticed separately, are LETTERFOURIE, CAIRNFIELD, and TANNACHY. Including all Buckie and Seafield *quoad sacra* parishes and most of Enzie, this parish is in the presbytery of Fordyce and the synod of Aberdeen; the stipend is £272 with manse. The parish church, ¾ mile SSE of Portessie, was built in 1794, and contains 1000 sittings. At Preshome, 3 miles SSE of Port-Gordon, is St Gregory's Roman Catholic church (1789; 450 sittings); and other places of worship are noticed under BUCKIE, ENZIE, and PORTKNOCKIE. Besides the three schools at Buckie, five public schools—Arradoul female, Findochty, Portknockie, Rathven, and Shiel-

* The 'Battle of the Bauds' is said to have been fought in 962 between the Norwegians and Indulph, King of Alban, who, after gaining a complete victory, himself was slain at 'Inverculen;' but Dr Skene is inclined to believe that Indulph retired to the monastery of Kilrymout or St Andrews.

burn—with respective accommodation for 71, 356, 383, 372, and 81 children, have an average attendance of about 55, 270, 280, 235, and 55, and grants amounting to nearly £50, £220, £245, £230, and £55. Valuation (1884) £23,646, (1893) £36,597, including £3939 for railway. Pop. (1801) 3901, (1831) 6484, (1861) 8240, (1871) 10,199, (1881) 11,180, (1891) 12,925, of whom 3415 were in the ecclesiastical parish of Rathven.—*Ord. Sur.*, shs. 95, 96, 85, 86, 1876. See the Rev. Dr J. F. S. Gordon's *Book of the Chronicles of Keith, Rathven*, etc. (Glasg. 1880).

Ratter, a hamlet in Dunnet parish, Caithness, near the coast, 7 miles NE of Castletown.

Ratray, a town and a parish in Strathmore district, E Perthshire. The town stands on the left side of the river Erich, opposite BLAIRGOWRIE, of which it is virtually a suburb, and with which it is connected by a four-arch bridge, repaired and widened in 1871. It comprises the villages of Old Ratray and New Ratray, the latter (of modern date) lying close to the river, the former ½ mile to the NE. A police burgh since 1862, by the Burgh Police Act of 1892 it is governed by a provost, 2 bailies, and 6 commissioners. A new sewage scheme was begun in 1894. Flax and tow spinning is the staple industry; and there are two post offices under Blairgowrie (Old and New Ratray), three inns, a curling club, the parish church (1820), a Free church, a U.P. church, and a Wesleyan Methodist chapel. Pop. (1871) 2161, (1881) 2533, (1891) 2225, of whom 1290 were females. Houses (1891) inhabited 490, vacant 50, building 4.

The parish is bounded N by Blairgowrie and Alyth, E and SE by Bendochy, and SW, W, and NW by Blairgowrie. Its utmost length, from N by W to S by E, is 5½ miles; its breadth increases south-ward from 1½ furlong to 2½ miles; and its area is now 4609 acres, of which 75½ are water. The Bleaton Hallet detached portion of the parish, comprising 848 acres, and lying 3½ miles NNW of the nearest point of the main body, was transferred by the Boundary Commissioners in 1891 to the parish of Kirkmichael. The ERICHT, which is formed by the confluence of the Black Water and the Arde on the western border of the north-east corner of Blairgowrie parish, winds 7¼ miles south-by-eastward and eastward along all the western, south-western, and southern boundary of the parish. Over most of this course the Erich is a romantic stream, overhung with copsewood, chiefly small oaks; and above Craighall its banks are sheer precipices of rock, upwards of 200 feet high, crowned with plantation, and parapeted with wall, to keep cattle and strangers from falling over. In the extreme S the surface declines to 190 feet above sea-level, and thence it rises gradually northward until, at the boundary with the Creuchies portion of Bendochy, it attains a maximum altitude of 909 feet above sea-level. Thus the parish for 1¼ mile from the southern boundary, is flat, or very gently ascending; and, over the rest of the area, consists of the lowest and slowly graduated heights which, several miles beyond the northern boundary, attain a Grampian elevation. The fine southern exposure, combined with the field afforded by the vast mountain-rampart in the comparatively near distance, renders the situation pleasant and the climate very healthy. The lands in the S have a dry and pretty fertile soil, and are all arable; those in the N are disposed chiefly in pasture. The rocks are variously igneous, Devonian, and Silurian. On an oblong mound called the Castle Hill, 1½ mile E by S of Old Ratray, are vestiges of the ancient castle of Ratray, a very large building, the original residence of the Ratray or De Rattrieff family. On the farm of Standingstones, which hence received its name, are remains of a stone circle. Mansions, noticed separately, are CRAIGHALL and GLENERICHT. A third, Parkhill, ¾ mile N of Old Ratray, is the seat of Charles Hill-Whitson, Esq. (b. 1840; suc. 1881). Ratray is in the presbytery of Dunkeld and the synod of Perth and Stirling; the living is worth £241. Two public schools—Craig Mill and Ratray—with respective accommo-

datation for 95 and 485 children, have an average attendance of about 60 and 320, and grants amounting to yearly £55 and £340. Pop. (1861) 2161, (1871) 2610, (1881) 3051, (1891) 2667.—*Ord. Sur.*, sh. 56, 1870.

Rattray, a commodious mausion in Crimond parish, NE Aberdeenshire, $7\frac{3}{4}$ miles NNW of Peterhead, and 4 ESE of Lonmay station. At Rattray Head, between Rattray House and Rattray village, a lighthouse with fog-signal was constructed in 1894-95. It shows a white light giving three flashes in quick succession every half minute. The total height is 120 feet, the light being visible for about 18 miles.—*Ord. Sur.*, sh. 87, 1876.

Ravelrig, an estate, with a mansion, in CURRIE parish, Edinburghshire, near the left bank of the Water of Leith, $1\frac{3}{4}$ mile SW of Currie village.

Ravelston, a mansion in Corstorphine parish, Edinburghshire, near the E skirt of Corstorphine Hill, $1\frac{1}{2}$ mile WNW of Murrayfield station, and $2\frac{1}{2}$ miles W of the centre of Edinburgh. The estate belonged about 1600 to George Foulis, whose son was created a baronet in 1661. Sir Archibald, second Bart., executed at Carlisle for his share in the '45, took the name of Primrose about 1700 on succeeding to the estate of Dunipace, and sold Ravelston in 1726 to Alexander Keith, W.S., a *soi-disant* descendant of the third Earl Marischal. His son, Alexander (1705-92), built the present mansion, and here was often visited by his kinsman, Sir Walter Scott, who took from the formal old-fashioned gardeus some of the features of 'Tully-Veolan' in *Waverley*. His son received a baronetcy in 1822, when he acted as Knight Marischal to George IV.; and after his death in 1832 Ravelston went to his son-in-law, Sir William Keith Murray, Bart. of OCHTERTYRE, whose son, Sir Patrick, sold it in 1872 to his uncle, John Murray-Gartshore, Esq. (1804-84). The latter made a handsome addition to the house, which remains in the possession of his daughter.—*Ord. Sur.*, sh. 32, 1857. See John Small's *Castles and Mansions of the Lothians* (Edin. 1883).

Ravensraig or Ravensheugh Castle, a ruin in Dysart parish, Fife, on a sea-cliff 1 mile SW of Dysart town. It was given, with circumjacent lands, by James III., to William Sinclair, third Earl of Orkney, in 1470; was long the seat of the Lords Sinclair; continued to be inhabited in the time of Oliver Cromwell; and now is interesting mainly for its associations.—*Ord. Sur.*, sh. 40, 1867.

Ravensraig, a station in Innerkip parish, Renfrewshire, on the Wemyss Bay railway, 2 miles SW of Upper Greenock station.

Ravensraig Castle. See PETERHEAD.

Ravenshall, a hamlet on the N border of Falkland parish, Fife, $1\frac{1}{2}$ mile N by W of Falkland town.

Ravenshall Point, a small headland in KIRKABRECK parish, Kirkcudbrightshire, on the E side of the estuary of Cree Water or upper part of Wigtown Bay, $6\frac{1}{2}$ miles SW of Gatehouse-of-Fleet. The coast around it is pierced with curious caves, and contests, with the shores of the Nith's estuary, the claim of being the scene of Sir Walter Scott's *Guy Mannering*.—*Ord. Sur.*, sh. 4, 1857.

Ravensheugh. See RAVENS CRAIG, Fife.

Ravensnook Castle, an old baronial fortalice in Penicuik parish, Edinburghshire, on the right bank of the North Esk, opposite Penicuik House. It belonged to Oliver Sinclair, commander-in-chief of the forces in the time of James V., and it is now reduced to fragmentary ruins.

Ravenstone, a fine old mansion, with well-wooded policies, in Glasserton parish, SE Wigtownshire, on rising ground 5 miles NW of Whithorn. It is the Scotch seat of Lord BORTHWICK.—*Ord. Sur.*, sh. 4, 1857.

Ravenstruther, a village in Carstairs parish, Lanarkshire, $2\frac{1}{2}$ miles ENE of Lanark, under which it has a post office.

Ravenswood, a mansion in Melrose parish, Roxburghshire, on the right bank of the Tweed, opposite the influx of Leader Water, 2 miles E of Melrose town. It

was built in 1827, and enlarged in 1860 and 1866.—*Ord. Sur.*, sh. 25, 1865.

Rawyards. See AIRDRIE.

Rayne (formerly *Rane, Raine, and Rayn*; Gaelic *raon*, 'a field of good ground'), a parish of central Aberdeenshire, containing at its SW border the village of Old Rayne, $1\frac{1}{2}$ mile NNE of Oyne station on the Huntly section of the Great North of Scotland railway, and $3\frac{1}{2}$ miles E by N of Insch, under which it has a post office. Here is a granite market-cross, nearly 12 feet high, erected probably towards the close of the 17th century, when John Horn of Westhall, superior of Old Rayne, was empowered to constitute it a burgh of barony; and Lawrence Fair, a large horse market, is still held here on the Wednesday after the first Tuesday of August, *o.s.* Containing also MEIKLE-WARTHILL (or Wartle) village, the parish is bounded N by Auchterless, NE by Fyvie, E by Daviot, SE by Chapel of Garioch, S and SW by Oyne, and W by Culsalmond. Its utmost length, from N to S, is 5 miles; its breadth varies between $\frac{1}{2}$ mile and $4\frac{1}{4}$ miles; and its area is $7890\frac{3}{4}$ acres, of which $5\frac{1}{4}$ are water. The drainage goes mostly to the river Ury, which flows $2\frac{1}{2}$ miles south-eastward along the south-western border; but the Black Burn, an affluent of the Ythan, traces the Auchterless boundary. In the extreme S, on the Ury, the surface declines to 270 feet above sea-level; and thence it steadily rises to 486 feet on the highest ground to the S of Drum's Cairn, to 491 at the parish church, and to 854 on the top of Rothmaise Hill. This last, near the northern border, is now all cultivated, except a piece around the summit, which has been planted. To the S there used to be a stretch of moss, extending from E to W; but it has now been nearly all brought under tillage. The NE corner of the parish, along the Fyvie border, is occupied by a considerable tract known as the Warthill Moss, but the peat is being gradually exhausted. The prevailing rocks are greenstone or whinstone in the southern and central parts of the parish; and in the northern, claystone, with a schistose tendency on exposure. These are used for building purposes. There is no granite, though it abounds in the parishes to the S of the Ury. The soil of the arable lands is either a rich loam incumbent on clay, or a shallower and more gravelly loam incumbent on till or rock; and it is generally of good fair quality, but wants lime. About four-fifths of the area are in tillage, and upwards of 350 acres are under wood. Agriculture is in an advanced state, and the farms are all of moderate size, with a considerable number of crofts. The farmhouses and steadings on the larger holdings are generally good, but the crofters' and cottars' houses are in some districts very indifferent. There are or were a number of cairns in the parish, near all of which sepulchral remains have been found. Drum's Cairn, now almost vanished, on the moors of Rayne, owes its name to a tradition that Irvine, the laird of Drum, was slain there while in pursuit of Donald of the Isles after the battle of Harlaw; and Tullidaff's Cairn, in the NE corner of the Stobbers Wood is so called from its being the reputed scene of the slaughter of the last of the Tullidaffs of that ilk, in revenge of the supposed murder of the first Leslie of Warthill in Lowran Fair. About $\frac{1}{4}$ mile SE of Old Rayne, on the Candle Hill, is a Druidical or stone circle, and on the E side of Rothmaise there are traces of another, where are also to be seen the Crichton and Federate Stones, said to point out the spot where certain members of these families had a fatal encounter. The Bowman Stone, a little to the W of the church, points to the place where the parishioners used to meet to practise archery. The great Roman road from the Dee at Peterculter to the camp at Glenmailen on the Ythan, crossing the Ury a little above Pitcaple Castle, would pass right through Rayne; and at Freefield there is a grassy mound, 60 yards in circumference, and formerly of considerable height, called the Spy Hill, and conjectured with much probability to have been originally one of its signal stations. It is on the probable line, and traces of the road are found in the vicinity. The whole

parish from very early times belonged to the Bishops of Aberdeen, and at Old Rayne they had a residence situated on a small moated eminence where the new public school now is, in digging the foundations of which traces of former buildings and certain remains were found. John Barbour, the father of Scottish poetry and author of *The Bruis*, was parson of Rayne in the latter half of the 14th century; and he seems to have been almost immediately succeeded in the same office by the famous priest Lundy, chaplain to Douglas, and one of the heroes of Otterburn. Mr John Middleton, minister of Rayne during the supremacy of the Covenant, and one of the chaplains to General Middleton's forces in the north, died in 1653, and his memory is perpetuated in the following curious epitaph on a slab of Fouldland slate close to the S wall, but outside the church—

'Whereas I stood in pulpit round,
And now I ly slow the ground;
When as you cers my corps so cold,
Remember the word that I you told.'

William Leslie (1657-1727), a son of a laird of Warthill, rose, from being schoolmaster of Chapel of Garioch, to be Bishop of Laibach and metropolitan of Carniola and a prince of the Holy Roman Empire. Mansions, noticed separately, are FREEFIELD and WARTHILL. Rayne is in the presbytery of Garioch and the synod of Aberdeen; the living is worth £230. The parish church, built in 1789, stands 2½ miles NE of Old Rayne, and 1 mile W of Warthill station, this being 3½ miles NNW of Inveramsay Junction. The belfry belonged to the previous church, and has on it the initials M. W. A. (Mr Walter Abercrombie, then minister of Rayne), and the date 1619. The church occupies a prominent position on the table-land, and has long been known as 'the white kirk of Rayne.' The old part of the manse has the date 1627 on one of the skewstones, but it has been from time to time repaired, enlarged, and altered. It is a fair house of its kind. In 1893 a church hall was erected at a cost of £600. There is also a Free church. The old parish school was in the Kirktown, but it was discontinued and sold, and the North public school and residences (cost over £2000), situated 1 mile N of the church at the cross roads at Cockmuir, were opened in 1877. A new public school and residence (cost over £700) was erected at Old Rayne, and opened in 1880. The former school has accommodation for 165 and the latter for 76 children, and they have respectively an average attendance of about 125 and 65, and grants of nearly £130 and £60. Pop. (1831) 1484, (1851) 1550, (1871) 1409, (1881) 1284, (1891) 1225.—*Ord. Sur.*, shs. 86, 76, 1876-74.

Reasort, Loch. See REASART, LOCH.

Reawick, an estate, with a mansion and a Congregational chapel, in Sandsting parish, Shetland, on the W side of Scalloway Bay, 6 miles WNW of Scalloway.

Reay, a village and a parish of NW Caithness. The village stands near the head of Sandside Bay, 10½ miles WSW of Thurso, under which it has a post office, with money order, savings bank, and telegraph departments. It consists of an inn, a school, the parish church, and a few houses. An older town, whose ruins were uncovered by a waterspout in 1751, is said to have been a burgh of regality, with two free fairs and a free port, granted by James VI. when he knighted Donald Mackay in 1616. This Donald Mackay was the first of the Lords Reay, an account of whom is given under TONGUE. A market cross at the present village claims to have belonged to the traditional burgh. Sandside Bay, measuring 6 furlongs across the entrance, and 5 thence to its inmost recess, is fringed with fine sandy links. A harbour was formed here about 1835 by Major Innes at a cost of over £3000.

The parish is bounded N by the North Sea, E by Thurso and Halkirk, and W by Farr. Formerly a large parish of 118,169 acres (including water and foreshore), and extending into the county of Sutherland, the Boundary Commissioners in 1891 transferred the Sutherland portion, embracing much the larger part of the parish (71,842½ acres), to the Sutherland parish of

Farr—Reay parish being thus restricted to its Caithness portion, comprising 46,326½ acres. The bold and rocky sea-coast, which measures about 12 miles along all its ins and outs, is indented by Sandside Bay, and by triangular Crosskirk Bay (2½ × 3 furl.) at the eastern boundary. It rises rapidly from the sea to 152 feet at Fregoe or Sandside Head, and 172 at the Hill of Lybster. Caverns are not infrequent; and near Borrowstou a turf-clad natural arch spans a tide-washed chasm, nearly 50 feet deep. Sandside, Reay, and Achvarasdal Burns flow northward to Saudside Bay; and FORSS Water, issuing from Loch Shurrery (1¼ mile × 2½ furl.; 321 feet), winds 12½ miles northward, mainly along the eastern boundary, to Crosskirk Bay. Of numerous other lakes and lakelets, the largest are Loch CALDER (2½ miles × 7½ furl.; 205 feet), on the eastern border; and Loch CAILAM or Chaluim (5 × 4 furl.; 435 feet), on the south-eastern border. The surface is hilly but hardly mountainous, chief elevations being BEN RATHA (795 feet), Ben nam Bad Mhor (952), and the Knockfin Heights (1442) at the meeting-point of Reay, Farr, Kildonan, and Halkirk parishes. The rocks on the seaboard are Devonian sandstone, paving flag, and limestone; whilst those of the hills include granite, syenite, gneiss, hornblende, and quartzite. The sandstone and limestone have been largely quarried; shell-marl has been dug in large quantities at Dounreay and Brawlbin; iron ore is found in various places; and a vein of lead ore occurs near Reay village, but not under conditions to encourage mining. A mineral spring at Helshetter claims to be little inferior to the Strathpeffer wells. The soil on the seaboard about Borrowston and Dounreay is clayey and very tenacious of moisture, and around Sandside Bay is sandy. Sandside estate belongs to Thomas Pilkington, Esq.; and the estate of Dounreay, 16,464 acres in extent, to Sir R. C. Sinclair of Stevenston, Bart. Great improvements were carried out on the last-named property between 1859 and 1875, in the way of building, draining, fencing, road-making, etc. Antiquities are a rude but extensive fortification on Ben Freiceadain near Loch Shurrery; numerous Picts' houses; and a ruined pre-Reformation chapel, St Mary's, at Lybster—'one of the most remarkable and ancient churches in the north of Scotland.' Its nave measures 17 feet by 12, and its chancel is 10 feet square; whilst a door at the W end and another in the chancel have inclined jambs, and are less than 4 feet high (T. S. Muir's *Old Church Architecture*, 1861). Reay is in the presbytery of Caithness and the synod of Sutherland and Caithness; the living is worth £284. The parish church was built in 1739. Other places of worship are Shurrery mission chapel and Reay Free church; and five public schools—Brawlbin, Brubster, Dounreay, Reay, and Shebster—with respective accommodation for 34, 50, 100, 142, and 50 children, have an average attendance of about 20, 30, 25, 65, and 15, and grants of nearly £35, £45, £35, £75, and £30. Pop. (1801) 2406, (1831) 2881, (1861) 2476, (1871) 2331, (1881) 2191, (1891) 1182, of whom 409 were Gaelic-speaking.—*Ord. Sur.*, shs. 115, 109, 1878.

Reay's Country, Lord. See TONGUE.

Redcastle, an ancient but modernised mansion in Killearran parish, Ross and Cromarty, on the N shore of Beaully Firth, 3½ miles E by S of Muir of Ord station, and 6½ (*via* Kessock Ferry) WNW of Inverness. It claims to be the oldest inhabited castle in Scotland, having been built in 1179 by David, brother to William the Lyon; was visited by Queen Mary in 1562; and is now the property of J. E. B. Baillie, Esq. There is a station here on the Black Isle branch (opened 1894) of the Highland railway.—*Ord. Sur.*, sh. 83, 1881.

Redcastle, an ancient castellated structure on the coast of Inverkeilor parish, Forfarshire, at the S side of the influx of Lunan Water to Luuan Bay, 4½ miles SSW of Montrose. Said to have been built by William the Lyon, perhaps to prevent invasion by the Danes, and to have been a royal hunting-seat, it seems to have been a place of considerable strength; and is now a ruin, with thick compact walls and a strong surrounding rampart.—*Ord. Sur.*, sh. 57, 1868.

Redden, a farmhouse in Sprouston parish, Roxburghshire, near the right bank of the Tweed, within 1 mile of the English Border, and 4 miles NE of Kelso. Redden made some figure in feuds and negotiations connected with the old Border strife; and a neighbouring alluvial tract bears the name of Redden Haughs, and is notable for fertility.—*Ord. Sur.*, sh. 26, 1864.

Redding, a collier village, with a post office, in Polmont parish, Stirlingshire, 1½ mile W by N of Polmont Junction, and 2½ miles ESE of Falkirk. An extensive tract, called Redding Moor, to the SW, remained till 1830 in a state of commonage; and began then, under permission of its proprietor, the Duke of Hamilton, to be enclosed and cultivated by the colliers at their spare hours. The district abounds in coal mines, and Nobel's Explosives Co. have large works for the manufacture of dynamite detonators, and for making vitriol and other chemicals. Pop. (1861) 642, (1871) 599, (1881) 520, (1891) 643.—*Ord. Sur.*, sh. 31, 1867.

Redford, a village in Carmyllie parish, Forfarshire, 7 miles WNW of Arbroath.

Redford, a village, with flax works, at the NW border of Dysart parish, Fife, on the left bank of the Ore, 2½ miles W by S of Thornton Junction, and 3½ N by W of Kirkcaldy.

Redford, a quaint old mansion in Colinton parish, Edinburghshire, in a pretty wooded dell on the left bank of Braid or Redford Burn, 5 furlongs E by S of Colinton village. The judge, Sir James Foulis, assumed from it the title of Lord Redford (1674); and it was the birthplace of John Allen (1771-1843), the political and historical writer. Redford now belongs to J. W. Macfie, Esq. of DREGHORN CASTLE.—*Ord. Sur.*, sh. 32, 1857. See John Small's *Castles and Mansions of the Lothians* (Edinb. 1883).

Redford House, a mansion in Muiravonside parish, Stirlingshire, near the left bank of the Avon, 4 miles SW of Linlithgow.

Redgorton, a parish of Perthshire, containing the village and station of LUNCARTY, 4 miles NNW of Perth, under which there is a post office of Redgorton. Containing also the villages of BRIDGETON, CROMWELL-PARK, and PITCAIRNGREEN, with part of STANLEY, it comprises the three ancient parishes of Redgorton, Luncarty, and St Serfis, united some time prior to 1619. The Mullion detached portion of the parish, comprising 1261 acres, and lying a mile and a half NW of the nearest point of the main body, was transferred by the Boundary Commissioners in 1891 to the parish of Mouzie. Redgorton is bounded NW and N by Auchtergaven, E by St Martins and Scone, S by Tibbermore, SW by Methven, and W by Methven and Moneydie. Its utmost length, from N to S, is 5½ miles; its breadth, increasing southward, varies between 4¼ furlongs and 3½ miles; and its area is 4907 acres, of which 160½ are water. The TAY, here a splendid salmon river, curves 4½ miles south-by-westward along all the eastern border of the parish; and the ALMOND, its affluent, winds 5½ miles south-eastward and east-north-eastward along most of the Methven and all the Tibbermore boundary. SHOCHIE BURN runs 1½ mile north-eastward, ORDIE BURN 9 furlongs south-south-eastward—both mainly along the Moneydie boundary; and their united stream continues ½ mile south-eastward across the interior, and falls into the Tay near Luncarty. The gently undulating surface declines at the mouth of the Almond to less than 50 feet above sea-level, and thence rises westward to 335 feet near Cotterton, northward to 245 near Burnside. Around these higher grounds there spreads one of those panoramas for which the county is famous—on the east, the palace and park and pleasant lands of Scone; on the south-east, the fertile strath of the Tay, its majestic stream now seen amid openings of wood, and now hid by its body-guard of forest; in the same direction, the bridge and city of Perth, and a semi-circular sweep of the Sidlaw and Ochil Hills, cloven down at Kinnoull and Moncreiffe, and overlooked by the distant Lomonds of Fife. The rocks are variously metamorphic, Silurian, and Devonian, and include clay-slate, chloritic slate, 1368

greywacke, coarse conglomerate, grey sandstone, argillaceous red sandstone, rock marl, and thin veins of satin spar. The soil, in most parts light and fertile, is here and there a mixture of clay and black earth. About three-fourths of the entire area are in tillage; rather more than one-ninth is under wood; and the rest of the parish is pasture, roads, waste, etc. Vestiges of an ancient Caledonian camp at PITCAIRN, the site of Bertha or old PERTH, adjacent to the confluence of the Tay and the Almond, and the legendary battle of LUNCARTY, are all treated in separate articles. Robert Fraser, F.R.S. (1760-1831), an eminent statistical writer, was born in the old manse. Mr Maxtone-Graham of CULROQUHRY and Redgorton is chief proprietor. Giving off its northern portion to Stanley *q. s.* parish, Redgorton is in the presbytery of Perth and the synod of Perth and Stirling; the living is worth £210. The parish church, 7 furlongs SSW of Luncarty station, was probably built about 1690, and was repaired in 1766. An addition was made to it in 1841; and the whole was most tastefully repaired and cleaned in 1871. The number of sittings is 450. The manse, one of the finest in the Church of Scotland, was built in 1866-67. There is a Free church of Pitcairngreen and a U.P. church of Pitcairn; and two public schools, Pitcairngreen and Redgorton, with respective accommodation for 85 and 126 children, have an average attendance of about 45 and 100, and grants amounting to nearly £35 and £80. Valuation (1884) £9309, 5s. 11d., (1892) £8431, 3s. 3d. Pop. (1801) 2009, (1811) 2216, (1821) 1589, (1841) 1926, (1861) 1671, (1871) 1461, (1881) 1452, (1891) 1369, of whom 996 were in the ecclesiastical parish.—*Ord. Sur.*, shs. 48, 47, 1868-69.

Redhall, a mansion in Colinton parish, Edinburghshire, on the right bank of the Water of Leith, in the southern vicinity of Slateford, and 3¼ miles SW of the centre of Edinburgh. In 1650 the neighbouring castle of Redhall was besieged and all but demolished by Cromwell, who took prisoners the garrison, sixty in number, and stripped them naked. The estate, held successively by Cunninghams, Otterburns, Hamiltons, etc., was purchased in 1755 by George Juglis; and its present proprietor is Alexander Juglis, Esq. (b. 1833; suc. 1889).—*Ord. Sur.*, sh. 32, 1857.

Redhall Tower, a quondam baronial fortalice in Kirkpatrick-Fleming parish, Dumfriesshire, on the left bank of Kirtle Water, 3½ miles ESE of Ecclefechan. A seat of the family of Fleming, it sustained a close three days' siege by an English force towards the end of Baliol's reign, and was eventually set on fire, when the thirty men who formed its garrison chose rather to perish in the flames than to surrender. It was entirely demolished about the beginning of the 18th century.

Redhead. See INVERKEHLOR.

Redhouse, a village in Kiucardine parish, Perthshire, 2½ miles S of Doune.

Redhouse Castle. See ABERLADY.

Redkirk. See GRETNA.

Rednock, a modern mansion, with finely wooded policies, in Port of Monteith parish, Perthshire, 7 furlongs E by N of the Lake of Monteith, and 4¼ miles N of Port Monteith station on the Forth and Clyde section of the North British railway.

Redpath, a hamlet in Earlstoun parish, Berwickshire, on the left bank of Leader Water, 2 miles S of Earlstoun town.

Redrow, a village in Newton parish, Edinburghshire, ½ mile WNW of Millerhill station on the Waverley route of the North British railway.

Redswire. See SOUTHDEAN.

Reekie Linn, a cataract of the river Isla, on the mutual border of Glenisla and Lintrathen parishes, W Forfarshire, 3¼ miles N of Alyth. The Isla, here traversing a gorge between cliffs 120 feet high, makes two falls of 60 and 20 feet; occasions a roverbation which echoes loudly up the flanking cliffs; and sends up from the abyss such clouds of spray as hang over it in almost perpetual smoke-like vapour. Fine masses of wood crown the cliffs; and a rustic tower, on the

right side, commands a full view of the cataract.—*Ord. Sur.*, sh. 56, 1870.

Regland, Loch. See DALRY, Kirkcudbrightshire.

Reichip House, a mansion on the Duke of Atholl's property, at the mutual border of Caputh and Clunie parishes, Perthshire, 6 miles NE of Dunkeld. The picturesque dell of Reichip abounds in some rare plants, and contains a well formerly held in superstitious veneration, with the site of a pre-Reformation chapel.—*Ord. Sur.*, sh. 56, 1870.

Reidswire. See SOUTHDEAN.

Reiss, a village in Wick parish, Caithness, near Sinclair Bay, 4 miles NNW of Wick town.

Relugas, a mansion in Edinkillie parish, Elginshire, on an eminence between the confluent Divie and Findhorn, 3½ miles NNW of Dunphail station on the Aviemore and Forres section of the Highland railway, this being 8½ miles S by W of Forres; there is a post office of Relugas under Dunphail. Occupying a romantic site, and surrounded by pleasure-grounds of singular beauty, it is a picturesque, irregular edifice, in the cottage-ornée style. Its oldest part bears date 1785, and a large addition was made about 1828. The estate belonged for two centuries to the Cumins, whose heiress, Miss C. Anne Cumin, in 1808 married her third cousin, Sir Thomas Dick-Lauder, Bart. (1784-1848), author of the *Moray Floods*, etc. It was sold in 1847 to W. M'Killigin, Esq., and again in 1852 to G. R. Smith, Esq., whose daughter-in-law, Mrs Smith, is present proprietor.—*Ord. Sur.*, sh. 84, 1876.

Remilton, a village in Abdie parish, NW Fife, 7 fur-longs ESE of Newburgh.

Rendall. See EVIE.

Renfield. See BLYTHSWOOD.

Renfrew (Br. *Rhyn*, 'a point of land,' and *frew*, 'the flowing of water'), a parish containing a town of the same name lying along and intersected by the Clyde, in the NE of Renfrewshire and in the Upper Ward of that county. A small part of the parish of Govan and of the county of Lanark which was situated within the burgh of Renfrew was transferred by the Boundary Commissioners in 1892 to the parish and county of Renfrew. It is bounded N by Dumbartonshire, E by Lanarkshire, S by Abbey parish, Paisley, W by Kilbarchan, and NW by Inchinnan. On the N and E the parish and county boundaries coincide. Starting from the centre of the Clyde at the mouth of the Black Cart, the line passes up the centre of the former river till at Yoker Burn it strikes to the N, and follows the course of the burn for about 1 mile. It then strikes across to Yoker mains Burn, and follows it up to beyond Scatterig, whence it turns southward and south-westward to the Clyde, which it reaches at the old position of Marline Ford. Crossing the Clyde the line continues near the E and S of the grounds of Elderslie House to Pudzeoch Burn, which it follows to Millburn Bridge, whence it follows the Mill Burn to the N end of the reservoir, and then proceeds irregularly to the corner of Hillington Wood. There it quits the county boundary and takes first a south-westerly direction to a point a little E of the 5-mile post on the Glasgow and Paisley joint railway, and afterwards a north-westerly direction to a point on the road midway between Newmains and Bogside. From this the course is up a small burn to a point a little west of Arkleston, and then westward to a point on the White Cart opposite the mouth of Abbots Burn, up which it proceeds by Wester Walkinshaw to the Black Cart, the centre of which it follows back to the Clyde. The greatest length, from the WNW at the junction of the Gryfe and the Black Cart to the ESE at Hillington Wood, is 4 miles; the greatest width, from the N at the mouth of the Black Cart to the S at Arkleston, is 2½ miles; and the area is 4488 acres, of which 18 are foreshore and 159 are water. The Clyde divides the parish into two unequal portions, about one-third of the whole area lying to the N of the river. In the northern section, which is the only part of Renfrewshire lying N of the Clyde, the ground is flat along the edge of the river, but thereafter rises rapidly to 50 and then to 100 feet, and reaches,

towards the NE, in the grounds of Jordanhill House, an extreme height of 149 feet. On the S side of the Clyde the ground is flat, rising in the SW to only from 17 to 20 feet above sea-level; in the SE to from 28 to 30 feet; and in the extreme S, at Cockle and Knock Hills, to over 50, the latter (85 feet) being the highest point of the southern section. On the extreme S the parish includes a portion of the municipal and parliamentary burgh of Paisley. Both sections are well-wooded and highly cultivated, the soil being a rich and fertile alluvium, with a subsoil of sand or strong clay. The underlying rocks are carboniferous, and both coal and ironstone are worked. Some of the clays in the NE and elsewhere are extensively used in the manufacture of bricks, and several of them contain arctic and recent shells. The drainage is effected by the streams and rivers mentioned in describing the boundaries. The ground between the policies of Elderslie House on the SW and the river Clyde is known as the King's Inch, and was, down to the middle of the 17th century or later, an island—a narrow branch of the Clyde having struck off from the main river at Marline Ford and passed between it and the burgh. Somerled, Lord of the Isles, who had risen in rebellion against King Malcolm IV., was defeated and slain at Renfrew in 1164; and a mound with a stone on the top is noticed by Pennant as, traditionally, the memorial of the place of his defeat, but no trace of it now remains.

The parish of Renfrew is distinguished for its connection with the ancient house of Stewart, the lands of Renfrew being the first mentioned of the estates specified in the charter granted by King Malcolm IV. in 1157 in favour of Walter, 'son of Alan,' and confirming a grant previously made by King David I. The office of King's High Steward being also conferred on Walter and his descendants, they took thence the surname of Stewart, and so this corner of the land became the cradle of the illustrious race destined to ascend in succession the thrones of Scotland and England. Knock Hill on the S is still shown as the traditional spot where Marjory Bruce, wife of a succeeding Walter, High Steward of Scotland, was thrown from her horse and killed while hunting in 1316. She was far advanced in pregnancy at the time, and the Cæsarean operation was resorted to in order to save the life of the child, who afterwards became Robert II. The tradition adds that an injury caused to his eyes during the operation was the occasion of the affection that procured him his popular name of 'Bleary.' The spot was marked till somewhere between 1779 and 1782 by an octagonal pillar placed on an eight-sided base, and known, by some confusion of names, as Queen Bleary's Cross. The monument was then destroyed by a rustic vandal who occupied the neighbouring farm, and who used the pillar as a door lintel, and the stones of the supporting steps to repair a fence. Its site was to the ESE of Knock Farm, and a little farther to the ESE there was formerly a mound called Kempe Knowe. It was a circular mound of earth about 20 yards across, and surrounded by a moat about 5 yards wide, but no trace of it now remains. According to tradition it was constructed to be the place of contest between the last Sir John Ross of Hawkhead and a noted English wrestler, whose match the English king of the period had challenged the Scotch king to produce. Ross disabled his adversary in a way that procured him the name of 'Palm-mine-arms,' and was rewarded by the king with the lands and royal castle at 'the Inch,' and the older inhabitants always referred to his monument, which is placed in a burial vault constructed for it by the Earl of Glasgow on the SE of the new church, as 'Palm-mine-arms.' Semple, in his continuation of Crawford's *History*, mentions that an urn had been dug up at the Knock Hill in 1746, and another in 1782, so that in all probability the mound had been a barrow much older than Sir John Ross's time. The lower part of the hill is called the 'Butts,' and was probably the place where the burghers of Renfrew practised archery. At the side of the road from Renfrew to Inchinnan, near the bridge across the White and

Black Carts, and within the policies of Blythswood House, is a large block of sandstone known as the Argyll Stone, and marking the spot where the Earl of Argyll was wounded and captured after the failure of his ill-conducted enterprise in 1685. After the dispersion of his forces in Dumbartonshire he crossed the river Clyde, and was attempting to make his escape in disguise when he was stopped by a party of militia who were guarding the ford where the bridge now stands. Some reddish veins in the stone, long pointed out as the stains made by his blood as he leant wounded against the rock, are no longer visible. Besides the burgh of Renfrew the parish also includes, on the N, the village of Yoker, and on the extreme NE the small mining village of Scaterig. The portion to the N of the Clyde is traversed by the road from Glasgow along the N bank of the river; while the high road from Glasgow to Greenock passes through the southern portion. A road from N to S passes from Paisley through the burgh of Renfrew to the Clyde, where a ferry, with large ferry boats for horses and carts, provides communication with the opposite side at Yoker. To the W of this road is a branch railway line from Paisley to Renfrew. The mansions are BLYTHSWOOD (the seat of Lord Blythswood), ELDERSLIE, JORDANHILL, Scotstoun, and Walkinshaw. Besides agriculture and the industries connected with the burgh, there are pits, brick and tile works, shipbuilding yards, and a distillery at Yoker.

The parish is in the presbytery of Paisley and synod of Glasgow and Ayr, and the living is worth £480 a year. The churches are noticed in connection with the burgh. The laudward School Board has under its management the Oswald, Scotstoun, and Yoker schools; and these, with accommodation for 200, 340, and 190 pupils respectively, have an average attendance of about 155, 270, and 190, and grants of nearly £140, £280, and £210. Pop. (1801) 2031, (1821) 2646, (1841) 3076, (1861) 4664, (1871) 5938, (1881) 7439, (1891) 9338, of whom 4768 were males and 4570 females.—*Ord. Surv.*, sh. 30, 1866.

Renfrew, a market town, port, and royal and parliamentary burgh, and the county town of Renfrewshire, is in the E of the parish just described, and close to the S bank of the river Clyde. Until 1892 it was also partly in the parish of Govan and the county of Lanark, but in that year it was placed by the Boundary Commissioners wholly in the parish and county of its own name. It is by rail 3 miles N by E of Paisley, and 6 W of Glasgow. The burgh is of considerable antiquity, for in the charter granted by Walter, the High Steward, when he founded the Abbey of Paisley in 1160, it is spoken of as 'burgo meo de Reinfru' and 'oppidum meum de Reinfru', so that it must even then have made some progress. The burgh, at first one of barony, became in the reign of Robert III. a royal burgh, having received a charter from that monarch in 1396, and subsequent confirmatory charters were granted by James VI. in 1575 and 1614—the former making an additional grant of all the religious houses and altarges connected with the burgh, and the latter making provision, among other things, for the better maintenance of the grammar school; and again by Queen Anne in 1703. The burgh and district gave in 1404 the title of Baron Renfrew to the heir apparent to the Scottish throne, and the connection of the place with 'the ancient Stuart line' is still maintained by the retention of the title among those borne by the Prince of Wales. At the date of the charter of 1614 the burgh seems to have been the principal port on the Clyde, and as is mentioned in the article on Paisley, it had some bitter struggles with that place at earlier dates as to its privileges of trade. Its old prosperity has now, however, suffered decline, and it has been completely eclipsed by its younger and more vigorous rivals, though why it is a little hard to say. Probably when the pinch came it relied more on the dignity of its long descent and ancient origin than on its energy. The town now consists of a main body—the original town—about $\frac{1}{2}$ mile distant from the present channel of the Clyde, and a

more modern extension reaching down to the Clyde itself. From the Cross near the centre of the main body of the town High Street passes to the E along the road to Glasgow, with Queen Street branching off it, while Fulbar Street continues the line to the W. Southward, along the Paisley Road, is Hairst Street; and northward are Canal Street and Ferry Road, with Orchard Street branching off to the westward. The older buildings have for the most part a humble and very unpretending appearance, but the outskirts have many villas and cottages. The old town was washed along the N by the old channel of the Clyde, which cut off the King's Inch, as noticed in the preceding article; but this has long been closed up, though a portion of its course is occupied by the harbour at the mouth of Pudzeoch Burn and the channel connecting that with the Clyde. These were constructed originally about 1785, and a stone wharf added in 1835 at a cost of about £800. During the year 1884 fresh operations were undertaken at a cost of £3000 for the purpose of giving greater accommodation and affording increased facility in loading and unloading vessels, with the result that there is now a depth of 6 feet at low water, and 16 feet at high water of ordinary spring tides, while in the former case the water area is 1'169 acre, and in the latter 1'862 acre. Along the Clyde is a wharf, which is a place of call for steamers, and at which the largest vessels that frequent the river can discharge and load. The original castle of the Stewards probably stood on the Inch, but their later one was on a slightly elevated piece of ground on the W side of the road leading from the town to the ferry, and although all trace of the building has long been gone the site is still called Castlehill, and traces of the fosse remained till about 1775. Adjacent lands are known as the Orchard, the King's Meadow, and the Dog Row, and the Castlehill and Orchard are excluded from the burgh royalty, though they are almost in its centre. The foundation of the Abbey of Paisley seems to have been preceded by the establishment of a number of monks at Renfrew, as in one of the grants to the Benedictines of Paisley mention is made of 'molendinum de Renfru et terram ubi monachi prius habitaverunt'; but whether the buildings they occupied were on the Inch or near Millburn House has been a matter of dispute.

Public Buildings, etc.—The old town-hall, with its diminutive spire, was built in 1670, and remained on the W side of the Cross till 1871, when it was removed, and a new town-hall erected in 1871-73 at a cost of £7500. The original structure was partially destroyed by fire on 6 March 1878, but was immediately after renovated. The style is a somewhat mixed French Gothic, and at the E end is a massive square tower, rising to a height of 105 feet, with corbelled turrets and ornamented cresting and finials. The design is poor, and some of the ornamentation very tawdry. The buildings contain a public hall with accommodation for 800 persons, a council chamber measuring 39 feet by 24, business offices, and a police office and cells. The Athenæum, with a public library, dates from 1853. In 1894 it was proposed to erect a joint hospital at Blawarthill, E of Yoker, for the burghs of Renfrew and Clydebank. The parish church, to the S of High Street, was erected in 1861, and is an excellent building in the Early English style, with an aisle to the SE over the burial-place of the family of Ross of Hillhead, now represented by Lord Glasgow, and containing the old effigy of Sir John Ross, commonly known as 'Palm-mine-arms.' It replaced a very old church which had been repaired till it would repair no longer. There is a good spire about 130 feet high. The Free church, NW of the town-hall, which was built immediately after the Disruption, was replaced in 1882-83 by a new plain Gothic building on the same site. It has a squat square tower with pinnacles. The U.P. church, in Hairst Place, is a plain Gothic building with a corner turret. A mission charge, St Margaret's, in connection with the Scottish Episcopal Church, conducts its services in the Coffee Palace. The Roman Catholic church (St James), erected in 1877, has 250 sittings. The Blythswood Testimonial, to the W, is a

classic building, erected by subscription in 1842 in honour of Mr Campbell of Blythswood. Used as the burgh grammar school, it was vested in the town council on condition of their maintaining it as a school and contributing £100 a year to its support; and in 1873 it was, under the Education Act, handed over to the burgh school board. There was a grammar school from an early date, and under the charter of 1614 revenues derived from the old chapelries and altarages were specially set aside for its better support. The Blythswood Testimonial and St James' (R.C.) schools, with respective accommodation for 1251 and 150 pupils, have an average attendance of about 970 and 115, and grants of nearly £1045 and £100. A handsome red polished granite fountain has been erected at the Cross to the memory of Provost Crawford by his nephew, A. C. Bryce, Esq. of Glasgow.

Municipality, etc.—The old royalty of the burgh was very extensive, covering an area of nearly 5 square miles, but the boundaries of the municipal and parliamentary burgh are much more confined. The latter line starts from the Clyde and passes up Pudzeoch Burn to Millburn Bridge, thence in a straight line S to the Mill Burn about $\frac{1}{8}$ mile farther up. From this it strikes straight north-westward to a point on the road near Longcroft Cottage, and then N by E straight back to the Clyde. Municipal affairs are managed by a provost, 2 bailies, a dean of guild, a treasurer, and 7 councillors; and the corporation property is, considering the size of the burgh, large and valuable, comprising farms, pasture land, house property, the ferry across the Clyde, and the harbour dues. The annual value, which was £1448 in 1833, is now over £4000. Extensive rights of salmon fishing in the Clyde belong to the town, but they have long ceased to be exercised in consequence

Seal of Renfrew.

of the changed condition of the river, and a yearly sum of upwards of £200 is paid to the town by the Clyde Trustees as compensation. By the Burgh Police Act of 1892 police affairs are managed by the provost, 2 bailies, and 6 commissioners, who have under their charge a force of 8 men and a superintendent (one to every 875 of the population), the latter with a salary of £120 a year. There is a gaswork to the N of the burgh, and water is supplied by the Paisley waterworks. The burgh arms are a vessel with the sun over the prow and the moon over the stern, with two crosses, one fore and another aft. At the top of the mast of the ship is a flag with a St Andrew's cross, and from the yard hang two shields, one bearing a lion rampant and the other the arms of the Stewarts; motto, *Deus gubernat navem*. The Queen was here in 1888, the Prince and Princess of Wales in 1876, and the Duke of Albany in 1875 and 1882. The industries are connected with two ship-building yards, a cabinet work, a forge, a sawmill, and a muslin manufactory.

The town has a post office, with money order, savings bank, and telegraph departments, an office of the Union Bank, a golf course (laid out in 1894), police and fire-engine stations, a horticultural society, a reading and recreation club, an investment and building society, and a masonic hall. A burgh court is held every Monday; and quarter sessions meet here on the first Tuesday of March, May, and August, and the last Tuesday of October. The weekly market is on Saturday; and cattle fairs are held on the third Tuesday of May and the last Friday of June. Renfrew unites with Rutherglen, Dumbarton, Port-Glasgow, and KILMARNOCK in sending a member to parliament. There is a

terminal station on a branch line of the Glasgow and South-Western railway, connecting Renfrew with Paisley and Glasgow. Omnibuses ply several times daily to and from Govan. Parliamentary constituency (1895) 1014, municipal constituency, 1114. Valuation (1885) £13,884, (1895) £25,421. Pop. of parliamentary burgh (1881) 4825, (1891) 6764, of whom 3461 were males and 3303 females. Population of the royal burgh (1891) 6254.

Renfrewshire (anciently *Strathgrufe*) is a maritime county on the W coast of Scotland. Although only twenty-seventh among the Scottish counties as regards area, by its industrial importance it ranks ninth in the order of valuation and fifth in the order of population, while as to density of population it is slightly in excess of Lanarkshire and second only to Edinburgh, the most densely populated county in Scotland, the figures being for Lanarkshire 1186, Renfrewshire 1187, and Edinburghshire 1199 to the square mile. The city of Glasgow, as defined by the City of Glasgow Act of 1891, was partly in Lanarkshire and partly in Renfrewshire, but the Boundary Commissioners in 1892 placed the whole of the extended city in the county of Lanark. The small police burgh of Kiuning Park was at the same time transferred from Renfrewshire to Lanarkshire, while of the parishes of Cathcart and East Kilbride, which were prior to 1891 partly in Renfrewshire and partly in Lanarkshire, Cathcart was placed in that year wholly in the former county, and East Kilbride wholly in the latter. Beith and Dunlop parishes, that were partly in Renfrewshire and partly in Ayrshire, were at the same time placed wholly in the latter county. For further particulars see GLASGOW, and for alterations on the boundaries of the interior parishes see the various articles throughout the work. The county is bounded N by the river Clyde and Dumbartonshire, NE and E by Lanarkshire, SSW by the Cunningham district of Ayrshire, and W by the Firth of Clyde. The shape is an irregular oblong. The greatest length, from Cloch Point on the NW to near Laird's Seat on the SE, is 30½ miles; the greatest breadth near the centre, from the grounds of Erskine House on the Clyde on the N to a point on Dubbs Burn near Beith Station on the SSW, is 13 miles; and the area is about 250 square miles, or 162,400 acres, of which 2021 are foreshore and 3621 water. Of the land area nearly two-thirds is cultivated, there being 92,217 acres in 1896 under crop, bare fallow, and grass, while 5961 were under wood, the rest being occupied by buildings and roads, etc., or by rough hill grazings and waste ground.

Commencing at the NW corner at Kempeck Point the boundary line follows the river Clyde for 17½ miles to the mouth of Yoker Burn, up which it passes, following it nearly to its source. Thereafter it strikes across to Yoker mains Burn, which it follows up till beyond Scaterig, whence it returns by the E side of Jordanhill and Scotstoun House grounds to the Clyde at the old line of the Marline Ford. Crossing the river it proceeds by an old channel of the Clyde along the western and south-western boundaries of the parish of GOVAN to the line of railway now occupying the old course of the Glasgow and Paisley Canal. Thence it proceeds southwards and eastwards along the Glasgow boundary line to a point half-way between Cathcart Church and Aikenhead Colliery. From this it bends southward and westward to the White Cart, and follows the course of that stream to the junction with Threepland Burn, which it follows for $\frac{1}{2}$ mile, and then winds southward and south-westward to a point midway between Quarry Hill and Muir Hill. Here it turns to the WSW in a very winding course, always near but seldom actually on the line of watershed between the streams that flow south-westward to the Garnock, Annick, and Irvine, and so to the Firth of Clyde; and those that flow north-eastward to the Gryfe, Black and White Carts, and so to the river Clyde. The line is therefore mostly artificial, but to the E of Beith station it follows the course of Roebank Burn, and to the W of the station the courses of Dubbs Burn and Maich Water, and passing between Misty Law Moor and Ladyland Moor, reaches

the watershed at Misty Law (1663 feet). It follows the watershed by East Girt Hill (1673 feet) and Hill of Stake (1711), to the E shoulder of Burnt Hill (1572), whence it takes the line of Calder Water for 1½ mile, crosses to the upper waters of the North Rotten Burn, follows this down to about ½ mile from Loch Thom, and then striking across to Kelly Dam follows Kelly Water down to the pier at Wemyss Bay. From this back northward to Kempock Point, the Firth of Clyde is again the boundary.

Districts and Surface, etc.—The county is divided into an Upper and a Lower Ward, the former with Paisley, and the latter with Greenock, as the chief town. The surface varies considerably, but may be considered as falling into three divisions—hilly, gently rising, and flat. The first lies along the southern border, and extends to the centre on the SE and along the W. It comprises most of the parishes of Eaglesham and Mearns, great part of the parishes of Neilston and Lochwinnoch, and most of the parishes of Kilmalcolm, Port Glasgow, Greenock, and Innerkip, and reaches an altitude of 1093 feet in Eaglesham, 871 in Mearns, 900 in Neilston, 1711 in Lochwinnoch, 1446 in Kilmalcolm, 661 in Port Glasgow, 995 in Greenock, and 936 in Innerkip. It is generally a somewhat bleak moorland, but some of the heights command good and extensive views. The gently rising district which lies immediately to the N of the hilly one commences at the boundary with Lanarkshire on the E, and extends WNW to the neighbourhood of Langbank and Kilmalcolm. It comprehends the parishes of Cathcart and Eastwood, and parts of the parishes of Neilston, Paisley, Renfrew, and Inchinnan, Kilbarchan, Houston, and Erskine. Many of the heights are well wooded, and the scenery is picturesque. The flat district, known locally as the 'laich lands,' lies along the N border, forming a level tract by the side of the Clyde, and extending along the narrow flat valley of the Black Cart and Castle Semple Loch. It extends from the eastern boundary of Renfrew parish to the Erskine Hills, and thence south-westward as already indicated, comprehending most of the parish of Renfrew, and parts of the parishes of Paisley, Inchinnan, Houston, Erskine, Kilbarchan, and Lochwinnoch. It appears to have been, at a comparatively recent geological period, covered by the waters of the inlet noticed in the article on GLASGOW. The physical characteristics of the small portion of the county to the N of the Clyde have been already noticed in the article on the parish of Renfrew.

The drainage is carried off by the White Cart, the Black Cart, and the Gryfe, all of which unite and flow into the Clyde 1 mile NW of Renfrew Ferry, and by the Clyde itself. The courses of these rivers are separately described, and it remains here merely to notice the drainage basins. The whole of the eastern and south-eastern portions of the county are drained by the White Cart and the streams flowing into it, of which the principal are, beginning at the SE corner, Threepland Burn, Ardoch and Holchall Burns, Earn Water, Newfield Burn, Brock Burn, Lavern Water, and Cowden Burn, and some smaller streams in the neighbourhood of Paisley. A small district in the centre is drained by the Black Cart, the river Calder, Patrick Water, and the other burns flowing into it, none of which are of any great size or importance. The western part of the county is drained by the Gryfe and its tributaries, of which the chief are, from the source downwards, North Rotten Burn, Green Water, Burnbank Water, Blacketty Water, Mill Burn, Gotter Water, Locher Water, all on the S side, and Barochan and Dargavel Burns on the N. Besides these a number of smaller streams, of which the chief are Dubbs Burn and Maich Water, flow into the Ayrshire drainage basin, and others again in the W and N flow direct to the Clyde. Of the latter the chief are Kely Burn, entering the Firth of Clyde at Wemyss Bay; the Kipp, which enters at Innerkip; and Shaws Water at Greenock. In the SE in the basin of the White Cart, there are a number of lochs, of which the most important are Loch Goin or Blackwoodhill Dam

(8×3 furl.), on the border of the county, and which, through Loch Burn and Craufurdland Water, is one of the main sources of Irvine Water; Dunwan Dam (5×2 furl.), the source of Holchall Burn; some small lochs SW of Eaglesham, Binend Loch (4×2 furl.), and Black Loch on the head-streams of the Earn; Brother Loch (3×3 furl.), on Capelrig or Thornliebank Burn; Glen Reservoir (3×1½ furl.) and Balgray Reservoir (5×3 furl.), on the course of Brook Burn; Glanderston Dam, Walton Dam, and Harelaw Dam (5×2 furl.), Long Loch (8×2 furl.), from which issues one of the head-streams of Annick Water (Ayrshire); a small loch a mile WNW of Paisley, and Stanley and Glenburn Reservoirs S of Paisley. Between the basins of the White and Black Carts is the small but picturesque Loch Libo, whence flows the Lugton (Ayrshire). In the basin of the Black Cart are Broadfield Dam, on a tributary of Patrick Water, and Castle Semple Loch (12×3 furl.), from which flows the Black Cart itself. At its upper end is the area formerly occupied by Barr Loch (8×4 furl.), which is now drained. On Calder Water are Calder Dam and Queenside Loch. In the valley of the Gryfe there are two small lochs near Bridge of Weir, and at the source are the Gryfe Reservoir and the Compensation Reservoir (together 12×2 furl.), connected with the Greenock waterworks; and immediately to the W of these is Loch Thom (12×3 furl.) The fishing in most of the lochs and streams, where the water is not poisoned by industrial operations, is fair.

Geology.—The geology of Renfrewshire claims special attention, on account of the remarkable development of volcanic rocks belonging to the Lower Carboniferous period, and the important series of coal-fields situated to the N of the volcanic area between Houston and the E border of the county near Rutherglen.

The various subdivisions of the Carboniferous system are represented within the limits of the county. Beginning with the red sandstones lying at the base of this formation, which are the oldest strata in Renfrewshire, they occupy a belt of ground along the coast in the neighbourhood of Innerkip. They are merely the prolongation towards the N of similar red sandstones fringing the Ayrshire coast between Ardrossan and Largs. Consisting mainly of red sandstones and conglomeration stones with bands of breccia and conglomerate, there is little variety in the character of the strata. They stretch inland, from the shores of the Firth of Clyde at Innerkip to the hills near Loch Thom, where they are thrown into a gentle anticlinal fold, succeeded by the overlying Cement-stone series, of which, however, there is but a limited development. Throughout Renfrewshire the Cement-stone series is almost wholly represented by a prodigious succession of contemporaneous volcanic rocks, which are the continuation of the great volcanic belt on the N side of the Clyde, forming the Kilpatrick Hills. There can be little doubt of the precise geological position of these volcanic rocks in this county, because, to the W of Loch Thom, they rest conformably on the white sandstones and Cement-stones, and where no faults intervene they graduate upwards into the Carboniferous Limestone series. They form a belt of hilly ground stretching across the county in a NW and SE direction, from the hills S of Greenock, by the Gleniffer Braes, to the high grounds round Eaglesham. In the E portion, the volcanic rocks form a low anticlinal arch, the axis of which coincides generally with the trend of the chain, the overlying strata being inclined towards the SW and NE. Throughout this extensive area the igneous rocks consist of basalts, melaphyres, and porphyrites, with intercalations of tuffs and coarse volcanic breccias. The upper and under surfaces of the lava flows are extremely slaggy and scoriaceous, and the cavities are filled with agates and various zeolites. The discharge of lavas and tuffs was so persistent that there are but few traces of sedimentary deposits in the volcanic series. In the neighbourhood of Eaglesham, however, sandstones, dark shales, and sometimes impure fossiliferous limestones are associated with the tuffs. An interesting feature con-

nected with this remarkable volcanic area is the existence of numerous vents, from which the igneous materials were discharged. They are now filled with basalt, porphyrite, or volcanic agglomerate. The best example of one of these ancient cones is to be found on the hills between Queenside Muir and Misty Law, where there is a great development of coarse agglomerate pierced by dykes and bosses of felstone and basalt. This agglomerate pierces the stratified volcanic rocks of the district.

As already indicated, there is a perfect passage from the contemporaneous volcanic rocks into the overlying Carboniferous Limestone series. The junction between the two, however, is usually a faulted one, and hence the regular succession is visible only at few localities. Where no faults intervene, the strata immediately overlying the ancient lavas consist of ashy sandstones, grits, and conglomerates, which are replaced at intervals by white sandstones and clay ironstones. Occasionally they are associated with bands of tuff. From the ashy character of the strata one might infer that the sedimentary materials were mainly derived from the denudation of the underlying volcanic rocks, while the bands of tuff indicate spasmodic outbursts of volcanic activity. The ashy strata just described are succeeded by the lowest members of the Carboniferous Limestone series. In Renfrewshire this important series of strata is divisible into three groups, in common with other areas in the midland counties, viz., a lower limestone group, a middle coal-bearing group, and an upper limestone group.

Along the N border of the volcanic area, between the White Cart Water at Busby and the banks of the Clyde near Erskine House, the members of the Carboniferous Limestone series are everywhere brought into contact with the ancient lavas and ashes by faults. A glance at the Geological Survey maps (sheets 30 and 22 of the 1-inch map of Scotland) shows the irregular nature of the boundary line due to the peculiar system of faulting. In one remarkable case the Carboniferous Limestone series stretches almost continuously across the volcanic belt, from Johnstone and Howwood to Lochwinnoch. This hollow is flanked by two powerful faults, throwing down the lowest members of the overlying series.

If we except some small patches of Millstone Grit to the E of Barrhead and near Pollokshields, and the limited development of the true Coal-measures on the border of the county of Rutherglen, the whole of the area lying to the N of the volcanic rocks belongs to the Carboniferous Limestone series. The strata are traversed by numerous faults which repeat the valuable seams of coal and ironstone. In the neighbourhood of Johnstone and Linwood they are arranged generally in the form of a synclinal fold. Along the W margin of this basin, near Bridge of Weir, we find the Hurllet Coal and Limestone dipping to the E and SE being rapidly followed by the Lillies Oil Shale, the Hosie Limestone, and the Johnstone Clayband Ironstone. In the neighbourhood of Linwood the deepest part of the basin is reached, the Lower Garscadden Clayband Ironstone being succeeded by various coal seams belonging to the middle coal-bearing group. To the S of Johnstone there is a remarkable development of intrusive sheets of basalt occurring near the base of the Carboniferous Limestone series. The largest of these masses occurs in the neighbourhood of Quarrelton, measuring 1½ mile from N to S, and consisting of dolerite. It is underlain by the thick Quarrelton Coal, which rests on a basement of volcanic tuff reposing on white sandstones intervening between the Quarrelton Coal and the volcanic rocks of the Cementstone group. Near Howwood, the intrusive sheet just referred to, and the associated strata, form an anticlinal arch, from which the Hurllet Coal and Limestone dip away towards the E and W. Similar intrusive sheets of basalt rock occur about 1 mile to the NE of Paisley, where they occupy a similar geological horizon.

Passing E to that portion of the basin extending from Hurllet to Shawlands and Crossmyloof, there is a splendid development of the middle coal-bearing and upper limestone groups. A traverse from Hurllet E to Cowglen shows, if we exclude minor faults, a general ascending

section from the outcrop of the Hurllet Coal and Limestone, through the Lillies Oil Shale, Hosie Limestone, and the various ironstones and coals of the middle coal-bearing group, to the Cowglen Limestone. The latter bed forms the base of the upper limestone group, thus occupying a similar position with the Index Limestone in the Lanarkshire basin. The valuable coals and ironstones of the middle group also occur to the N of Shawlands and Crossmyloof, where they are abruptly truncated by a fault throwing down to the NE the Millstone Grit and the Coal-measures. Near Crossmyloof the coal seams of the middle group of the Carboniferous Limestone series are actually brought into conjunction with the numerous coals and ironstones of the true Coal-measures.

Advancing S from Crossmyloof, where the coal seams of the middle group have a general dip to the S, there is a general ascending series through the upper limestone group to the overlying Millstone Grit. The observer crosses in succession the Cowglen or Index Limestone, the white Giffnock sandstones, the Orchard Limestone, which is underlain by a thin seam of coal; while at the top he finds the Arden Limestone, also underlain by a seam of coal. In this district the Arden Limestone is regarded as marking the boundary between the Carboniferous Limestone series and the overlying Millstone Grit. The limestones of the upper group are by no means very fossiliferous, but there is a bed of shale at Orchard teeming with fossils which has become famous among the geologists of the west of Scotland. From this band alone Messrs Young and Armstrong have chronicled upwards of 120 species of univalve and bivalve shells, together with Foraminifera and Entomostraca.

To the E of Barrhead there is a small outlier of thick yellow sandstones, representing the Millstone Grit, resting on the Arden Limestone which rises from underneath the sandstones on every side save the E, where the basin is truncated by a NE and SW fault. Another little outlier of Millstone Grit resting on the Arden Limestone occurs about a mile to the SE of Thornliebank.

Throughout the county there are numerous basalt dykes of Tertiary age, piercing alike the Lower Carboniferous volcanic rocks and the Carboniferous Limestone series. Perhaps the best examples occur in the volcanic area to the NW of Lochwinnoch, where some of the dykes run parallel with each other for a distance of several miles.

The proofs of glaciation in the county are abundant. Numerous instances of striations are met with, especially in the volcanic area between Lochwinnoch and Port Glasgow. Throughout that district the general trend of the ice-markings is SE, due to the movement of the great ice sheet radiating from the Highland mountains. This SE trend continues as far as Kilbarchan and Lochwinnoch, but to the E of these localities the striae gradually swing round to the SW. This change in the direction of the ice movement has been adequately explained by Professor James Geikie, who contends that during the great extension of the ice the glaciers from the Highland mountains moved in an E direction along the valley of the Clyde till they coalesced with those radiating from the Southern Uplands. Eventually the combined ice sheets moved in a SW direction across the volcanic chain in the E of Renfrewshire towards the Firth of Clyde. The glacial deposits will be described in the general article on the geology of Scotland.

Economic Minerals.—Copper ore occurs in grey sandstone near Gourock, and several copper mines have been worked in the volcanic rocks near Lochwinnoch. Agates occur in great abundance in the amygdaloidal volcanic rocks. The various ironstones and coal seams already enumerated, both in the true Coal-measures and in the coal-bearing group of the Carboniferous Limestone, have been extensively wrought. The Arden Limestone has been largely quarried near Barrhead and Thornliebank, where it reaches a thickness of about 10 feet. The Orchard Limestone, though comparatively thin, has been highly prized as a cement limestone, owing to the valuable feature which it possesses of

'setting' under water. Alum has been largely manufactured from the shale at Hurllet and at the Nitshill chemical works; copperas is obtained from the iron pyrites in the shale. As already indicated the great Oil-shale series of Midlothian is represented in this county by contemporaneous volcanic rocks, but there is a band of oil shale underneath the Hosiery Limestone at various localities between Houston and the E border of the county. The volcanic rocks supply excellent road metal; and the Giffnock sandstones, as well as some of the beds of limestone, supply excellent building material. See *Geological Survey Maps (1 inch) of Scotland, sheets 22 and 30, and the explanation to sheet 22.*

Soils and Agriculture.—The soil of the hill districts is principally a light earth, overlying gravel or disintegrated volcanic rock, and is in some parts covered with excellent pasture, and elsewhere with heath or deep moss. The soil of the gently rising district, though in some places thin and poor, is mostly a fairly good earth, overlying gravel or stiff clay, and passing in the haughs along streams into a good deep loam. Along the flat district the soil is a rich alluvium, varying in depth from a few inches to several feet, and in many places displaying all the excellences of rich carse land. The processes of husbandry differ in no respect from those employed in the neighbouring counties, and already noticed. Westerly and south-westerly winds prevail on an average for two-thirds of the year, and as they come directly from the Atlantic, they are loaded with vapour, and the result of their contact with the colder land is heavy rains. The western part of the county is, indeed, one of the wettest parts of the W coast of the Scottish mainland, the annual rainfall being about 60 inches. The mean temperature is about 48 degrees.

The areas under the various crops at different dates are given in the following tables:—

GRAIN CROPS.—ACRES.

Year.	Wheat.	Barley or Bere.	Oats.	Total.
1854	4495	513	16,392	21,400
1866	2973	234	14,229	17,436
1874	3346	259	13,645	17,250
1884	2229	173	14,132	16,539
1896	1320	167	12,259	13,746

GRASS, ROOT CROPS, ETC.—ACRES.

Year.	Hay and Grass in Rotation.	Permanent Pasture.	Turnips.	Potatoes.
1854	42,563	...	3334	5534
1868	17,133	41,287	2734	5006
1874	18,484	45,558	2485	4289
1884	22,997	47,880	2332	4361
1896	21,626	50,298	2323	3107

There are about 1000 acres annually under beans, rye, vetches, fallow, etc. The figures for 1854, as is so often the case with the returns for that year, seem unduly high. The acres under sown crop, exclusive of hay and grass, amount as given in that year to 30,263; but in 1866 the number was only 26,297; in 1874, 25,261; in 1884, 24,185; and in 1896, 20,044; but the whole area under crop, including hay and grass, and permanent pasture, has risen from about 90,000 acres in 1874, to 92,217 in 1896. The yield of the different crops is about average. The falling off in the area under crop, and the increase in that appropriated for grazing purposes, since 1854, is probably entirely due to the large towns in the neighbourhood, which afford a ready market for stock and for dairy produce. The agricultural live stock in the county at different periods is shown in the following table:—

Year.	Cattle.	Horses.	Sheep.	Pigs.	Total.
1854	23,513	3623	25,850	1808	54,794
1868	23,415	...	32,307	1583	...
1874	26,248	2941	33,724	1885	60,801
1884	27,548	3331	31,582	1952	74,413
1896	26,205	3523	41,197	1591	72,516

The principal mansions, excluding the villa residences in the neighbourhood of the large towns, are Ardgowan, Arthurlie House, Upper Arthurlie House, Auchneagh House, Barochan House, Barshaw House, Bishopton House, Blackstone House, Blythwood House, Broadfield House, Broom House, Capelrig House, Carruth House, Castle Semple, Castle Wemyss, Cathcart House, Craigends House, Crookston House, Cumnock House, Dargavel House, Eastchall House, Eaglesham House, Eastbank House, Eastwoodpark House, Elderslie House, Erskine House, Ferguson House, Finlayston House, Garthland, Glentyan House, Gourrock House, Gryfe Castle, Hazelden House, Hawkhead, Househill, Houston House, Johnstone Castle, Jordanhill House, Kirkton House, Kelly House, Langhouse, Levenhouse, Linn House, Lochside House, Merchiston House, Milliken House, Muirshields House, North Barr House, South Barr House, Park House, Pollok Castle, Pollok House, Ralston, Scotstoun House, Southfield House, and Walkinshaw House.

Industries, Communications, etc.—The industries of Renfrewshire are more extensive and diversified than those of any other county in Scotland, except Lanarkshire, and with those of the latter county they are, indeed, very intimately connected. Weaving, at one time the staple everywhere, is still extensively carried on, as well as the cognate trades of bleaching and dyeing. From 1740 to 1828, the principal fabrics were linens, but since then cotton has obtained the upper hand. Large numbers of the population are also engaged in the working of minerals, the manufacture of chemicals, the making of machinery, foundry-work, shipbuilding, and rope-making, and for more minute details in connection with all the industries, reference may be made to GLASGOW, GREENOCK, PAISLEY, PORT GLASGOW, RENFREW, and several of the parishes. At Greenock and Port Glasgow the commerce is also important.

The county is intersected by a number of main lines of road, all starting at Glasgow. Of these, the first passes westward through Govan and Renfrew, along the S bank of the Clyde to Greenock, and round the coast until it enters Ayrshire. A second strikes WSW by Kinning Park and Ibrox to Paisley, and, passing up the valley of the Black Cart, enters Ayrshire near Beith. The third and fourth pass to the W of the Queen's Park [see GLASGOW] and separate at Shawlands, one branch leading by Pollokshaws and Barrhead down the valley of Lugton Water to Irvine, while the other passes also to Irvine by Newton Mearns and Stewarton through the valley of Annick Water. The main line of road from Hamilton to Kilmarnock passes through the SE corner of the county by Eaglesham, and there is an important road from Paisley by Johnstone, Kilbarchan, and Kilmaccolm to Greenock, which is joined at Kilmaccolm by another road from Lochwinnoch. There are also a large number of cross and district roads. Railway communication is provided by both the Caledonian and Glasgow and South-Western railways. Of the former, one of the lines leaves Glasgow on the SW, and follows the line of the road by Barrhead and Neilston to Ardrossan and Irvine, and joint with the Glasgow and South-Western to Beith and Kilmarnock, while the other passes westward and then NW and W by Bishopton and Port Glasgow to Greenock, Gourrock, and Wemyss Bay. The Cathcart District Circular railway leaves and rejoins the first-mentioned line at Pollokshields, and further down the line, near Pollokshaws, another branch strikes off, and passes SE by Busby into Lanarkshire. The Glasgow and South-Western line to Paisley runs parallel with that of the Caledonian as far as Paisley, but it then strikes south-westward along the valley of the Black Cart into Ayrshire. At Johnstone a branch goes off by Bridge of Weir and Kilmaccolm to Greenock, and a short branch strikes off E of Paisley for Renfrew. The bed of the old Glasgow and Paisley Canal has now also been converted into a railway.

The only royal burgh is Renfrew; the parliamentary burghs are Paisley, Greenock and Port Glasgow.

The police burghs are Barrhead, Pollokshaws, Gourcock, and Johnstone. Places of over 2000 inhabitants are, Kilbarchan, Neilston, Old Cathcart, and Thornliebank; villages and places with populations between 100 and 2000 are Annesland, Blackstoun, Bishopton, Bridge of Weir, Busby, Clarkston, Clippens, Crofthead, Crosslee, Eaglesham, Elderslie, Gateside, Houston, Howwood, Hurler, Inkerman, Innerkip, Kilmalcolm, Linwood, Langbank, Lochwinnoch, Newton, Newton-Mearns, New Cathcart, Nitshill, Scotstoun, and Wemyss Bay.

The county has 16 entire *quoad civilia* parishes. These, with reference to the wards, are:—Upper Ward—Abbey Paisley, Kilbarchan, Houston, Erskine, Inchinnan, Renfrew, Neilston, Lochwinnoch, Eastwood, Mearns, Eaglesham, and Cathcart. Lower Ward—Innerkip, Greenock, Port Glasgow, and Kilmalcolm. The divisions of Paisley (4) and Greenock (3) and the *quoad sacra* parishes of Barrhead, Bridge of Weir, Caldwell, Cardonald, Elderslie, Greenbank, Johnstone, Lovern, Linwood, Thornliebank, Gourcock, Langbank, and Newark, are also included. All the parishes in the Lower Ward and Erskine are in the presbytery of Greenock and synod of Glasgow and Ayr; and all the others—with the exception of Cathcart and Eaglesham, which are in the presbytery of Glasgow—are in the presbytery of Paisley in the same synod. Including mission churches, there are 52 places of worship in connection with the Established Church, 41 in connection with the Free Church, 34 in connection with the United Presbyterian Church, 2 in connection with the United Original Seceders, 2 in connection with the Reformed Presbyterian Church, 7 in connection with the Congregational Church (with which the Evangelical Union was amalgamated in 1897), 5 in connection with the Baptist Church, 1 in connection with the Wesleyan Methodist, 9 in connection with the Episcopal Church, and 14 in connection with the Roman Catholic Church. In the year ending September 1894 there were in the county 149 schools, of which 115 were public, with accommodation for 51,269 children. These had 47,941 on the rolls, and an average attendance of 40,385. The county is governed by a lord-lieutenant, a vice-lieutenant, 30 deputy-lieutenants, and about 200 justices of the peace. The sheriff-principal is shared with Bute, and there is a sheriff-substitute for each ward. The sheriff court for the Upper Ward is held at Paisley every Tuesday during session, and for the Lower Ward at Greenock every Friday. Sheriff small debt courts are held weekly at Paisley on Thursday, and at Greenock weekly on Wednesday. Justice of peace small debt courts are held at Paisley every Friday, at Greenock every Thursday, at Port Glasgow every alternate Monday, at Pollokshaws on the first Monday of every month, at Johnstone on the second Tuesday of each month, and at Lochwinnoch on the first Saturday of each month; while quarter sessions are held at Renfrew on the first Tuesday of March, May, and August, and the last Tuesday of October. The County Council is composed of 60 members, being 58 for as many electoral divisions, and 2 for the burgh of Renfrew. The divisions are classed into two districts, Upper and Lower—the former containing 41 representatives and the latter 17. The police force, exclusive of the burghs of Greenock, Johnstone, Paisley, Port Glasgow, and Renfrew, which have separate forces, consists of 80 men (1 to every 881 of the population), under a chief constable, with a salary of £357 a year. In 1894 the average number of registered poor was 3224, with 1820 dependants, while the total expenditure for parochial board purposes amounted to £56,405. All the parishes are assessed, and there are poorhouses at GREENOCK and PAISLEY. The proportion of illegitimate births averages about 5 per cent., and the average annual death-rate is about 20 per 1000. Connected with the county is the 4th battalion of the Princess Louise's Argyll and Sutherland Highlanders (formerly the Royal Renfrew Militia), with headquarters at Paisley; a battalion of artillery volunteers, with headquarters at Greenock; and three battalions of rifle volunteers, with their headquarters at Greenock, Paisley, and Pollokshaws. By the Redistribution of Seats

Act of 1885, the county was separated into two divisions—Eastern and Western, each of which returns one member to serve in parliament; one is returned for Greenock, another for Paisley; and Port Glasgow and Renfrew have a share in a third. The parliamentary constituency of the Eastern Division in 1895 was 11,006; of the Western, 8597. Valuation, inclusive of railways, but exclusive of burghs (1674) £5764, (1815) £265,534, (1843) £474,568, (1875) £583,741, (1884) £781,195, (1896) £515,234. Pop. (1801) 78,501, (1811) 93,172, (1821) 112,175, (1831) 133,443, (1841) 155,072, (1851) 161,091, (1861) 177,561, (1871) 216,947, (1881) 263,374, (1891) 230,812, of whom 110,520 were males and 120,292 were females. These were distributed into 48,075 families, occupying 46,805 houses with 127,087 rooms, an average of 1.81 persons to each room. Of the 230,812 inhabitants 3223 males and 1640 females were connected with the civil or military services or professions, 656 men and 7881 women were domestic servants, 10,984 men and 484 women were connected with commerce, 3828 men and 894 women were connected with agriculture and fishing, and 50,388 men and 24,391 women were engaged in industrial handicrafts or were dealers in manufactured substances, while there were 23,774 boys and 23,841 girls of school age. Of those engaged in industrial handicrafts 7339 men and 15,992 women were connected with the manufacture of textile fabrics, and 7942 men and 177 women were connected with the working of mineral substances. Of those connected with farming and fishing 3683 men and 829 women were connected with farming alone, and 768 farmers employed 1142 men, 618 women, 372 boys, and 197 girls.

History.—The territory now forming Renfrewshire belonged to the ancient Caledonian Damii, and afterwards formed part of the kingdom of Strathclyde. [See DUMBARTON.] The western portion bore the name of Strathgryfe, and was by that title granted to Walter, the first High Steward of Scotland, by David I. Prior to 1404 it seems to have been included in the county of Lanark, but to have then become a separate county when King Robert III. granted to his son and heir James this barony and the other portions of his ancient patrimonial inheritance. Since that time the eldest son of the reigning monarch has, besides his other titles, been styled Prince and Steward of Scotland and Baron of Renfrew. When there is no heir-apparent these titles are merged in the crown. Traces of Roman remains and of the Roman occupation are noticed under PAISLEY. The county is associated with the defeat and death of Somerled, Lord of the Isles, in 1164, when we are told by the Chronicler of Melrose, that after landing at Renfrew, that prince was overtaken by Divine vengeance, 'and was there slain with his son and an immense number of his followers by a few of the people of the surrounding district.' In a very curious Latin poem printed in the appendix to Dr Skene's edition of Fordun (1871), the 'honour and praise' of the victory is given to the exertions of St Kentigern in return for devastations which Somerled had committed in the Glasgow district several years before, and which the bishop of Glasgow had prayed very hard that the saint might piously rebuke. During one of the many fruitless invasions of Scotland in the early years of Edward II., the English army in 1310 penetrated as far as Renfrewshire before returning. In 1489 the county was the scene of operations carried on by James IV. against some of the nobles that had adhered to his father's party, and in 1565 the Earl of Moray and the discontented barons assembled at Paisley, but marched into Lanarkshire almost immediately. Other historical events and antiquities will be found noticed particularly under the various parishes and places with which they are more immediately connected. Like most of the Scottish counties, Renfrewshire was seriously troubled with witches in the 17th century, and the case of the 'Witches of Renfrew' in 1697 became very famous. The person bewitched was Christian Shaw, a girl of eleven years of age, daughter of John Shaw, laird of

Bargarran, who, 'having had a quarrel with one of the maid-servants, pretended to be bewitched by her, and forthwith began, according to the common practice in such cases, to vomit all manner of trash; to be blind and deaf on occasion; to fall into convulsions; and to talk a world of nonsense, which the hearers received as the quintessence of afflicted piety. By degrees a great many persons were implicated in the guilt of the maid-servant, and no less than twenty were condemned, and five suffered death on the Gallow Green of Paisley, while one strangled himself in prison, or, as report went, was strangled by the devil, lest he should make a confession to the detriment of the service.'

See also Crawford's *Description of the Shire of Renfrew* (1710), with continuations by Semple (Paisley, 1782) and by Robertson (Paisley, 1818); Wilson's *General View of the Agriculture of Renfrewshire* (1812); Hamilton of Wishaw's *Description of the Sheriffdom of Lanark and Renfrew* (Maitland Club, 1831); Ramsay's *Views in Renfrewshire* (1839); Hector's *Selections from the Judicial Records of Renfrewshire* (1876-78); *Archaeological and Historical Collections of the County of Renfrew* (2 vols., Paisley, 1885-90); the works cited under PAISLEY, and for the witches *Narrative of the Sufferings and Relief of a Young Girl in the West* (1698); *Saducismus Debelatus* (London, 1698); *A History of the Witches of Renfrewshire* (Paisley, 1809; new ed. 1877); and *Witchcraft Proven, Arraigned, and Condemned* (Glasgow, 1697).—*Ord. Sur.*, shs. 29, 30, 31, 22, 1865-73.

Rennyhill, an estate, with a mansion, in Kilrenny parish, Fife, $1\frac{1}{2}$ mile NNE of Anstruther.

Renton, a town and a *quoad sacra* parish in Cardross parish, Dumbartonshire. The town, standing on the right bank of the river Leven, has a station on the Vale of Leven joint railway, $1\frac{1}{2}$ mile S of Alexandria, and $2\frac{1}{2}$ miles N by W of Dumbarton. It was founded in 1782 by Mrs Smollett of Bonhill, and named in honour of her daughter-in-law, one of the Rentons of Lammerton; grew and flourished in connection with the special industries of the Vale of Leven; has charming environs, enriched with the parks of Strathleven and Bonhill; carries on extensive industry in calico-printing, bleaching, and dyeing establishments; and has a post office with money order, savings bank, and telegraph departments, a *quoad sacra* parochial church, three Free churches (one of them Gaelic, and one Reformed Presbyterian till 1876), a U. P. church, a public school, a public hall (1882), a gaswork, a bowling green, a football club, and a public park. The Victoria Institute, built in 1887 and opened on Her Majesty's Jubilee day, is a substantial structure, with reading room, recreation room, and library of several thousand volumes, and cost about £2000. Tobias Smollett (1721-71), poet, historian, novelist, and M. D., was born in the old house of Dalquhurn; and at Renton, within $\frac{1}{2}$ mile of his birthplace, his cousin erected a monument to his memory in 1774. It is a round Tuscan column, 60 feet high, springing from a square base; and it bears a long Latin inscription by Prof. Geo. Stuart of Edinburgh, John Ramsay of Ochtertyre, and Dr Samuel Johnson. The *quoad sacra* parish, constituted in 1870, is in the presbytery of Dumbarton and the synod of Glasgow and Ayr; the minister's stipend is £200. On the site of the house in which the talented Smollett was born the new parish church has been erected. It is a 17th century Gothic building, is built of red sandstone, and consists of a nave and transepts, with a square tower of three stages in the centre of the front wall, which forms the entrance hall, and contains a fine presentation peal of bells. The church has 800 sittings, cost altogether £3500, and was opened in 1893. The old parish church, which was built as a chapel of ease at a cost of £700, underwent great improvements in 1869, and was sold for £400 to the U. P. congregation when the new church was built. Pop. of *g. s.* parish (1881) 4387, (1891) 5293; of town (1881) 1860, (1841) 2472, (1861) 2891, (1871) 3087, (1881) 4319, (1891) 6256, of whom 2860 were females. Houses (1891) inhabited 1071, vacant 32, building 5.—*Ord. Sur.*, sh. 30, 1866.

Rentonhall, an estate, with a mansion, in Morham parish, Haddingtonshire, $2\frac{3}{4}$ miles SE of Haddington.

Renton House, a mansion in the W of Coldingham parish, Berwickshire, near the left bank of Eye Water, $1\frac{1}{4}$ mile ESE of Grant's House station on the Dunbar and Reston section of the North British railway. Its owner is Charles Lisle Stirling Cookson, Esq.

Repentance, Tower of. See HODDAM.

Rerigonium. See BEREGONIUM and INNERMESSAN.

Berrick or **Rerwick**, a coast parish of S Kirkcudbrightshire, containing the villages of DUNDRENNAN and AUCHENCAIRN, 5 miles ESE and 10 E by N of Kirkcudbright, and anciently named Dundrennan. It is bounded NW and N by Kelton, E by Buittle, SE and S by the Solway Firth, and W by Kirkcudbright. Its utmost length, from N to S, is $7\frac{1}{4}$ miles; its utmost breadth, from E to W, is $6\frac{1}{2}$ miles; and its area is 21,672 $\frac{3}{4}$ acres, of which 1692 $\frac{3}{4}$ are foreshore. The coast, extending from Balcary Point, at the western side of the mouth of Auchencairn Bay, 9 miles west-south-westward to the mouth of Dunrod Burn, is mostly bold and iron-bound, and exhibits a series of abrupt headlands, 100 to 352 feet high, slightly intersected by the baylets of Rascarrel, Barlocco, Orroland, Portmary, Burnfoot, and Mullock. It abounds in craigs, fissures, tortuous ravines, and other features of romantic scenery; is believed to have contributed much of its landscape to Sir Walter Scott's descriptions of coast scenery in *Guy Mannering*; and commands, from nearly all its summits and salient points, very brilliant views, both inland and towards the sea. The Balcary lifeboat was launched in 1884. The interior is variously champaign, undulated, rolling, and hilly; declines to vale and plain in the E, around and above Auchencairn Bay; contains vales or hollows in the centre, formerly mossy or otherwise waste, but now charmingly luxuriant; and is nearly filled throughout the N, to the extent of about one-fourth of its entire area, by hills that almost attain the dignity of mountains. Chief elevations, from S to N, are Walls Hill (352 feet), Brown Hill (515), a nameless summit to the NE of the parish church (535), the Heughs of Airs (335), Newlaw Hill (695), Suie Hill (790), Bentutther Hill (900), and Bengairn or BENCAIRN (1280). The drainage, with slight exception, is all carried southward or south-south-eastward by indigenous brooks, chiefly Troudale, Collin, Rascarrel, Henmuir, and Abbey Burns. Granitic rocks prevail in the uplands, and Devonian rocks on the low grounds and the coast. Sandstone, of excellent quality for building, is found on the coast; iron and copper ore have been mined in considerable quantities; barytes mines were formerly worked extensively at Barlocco; jasper of fine quality occurs in oaves of the coast; and rock-crystal, of a pale purple colour and of perfect prismatic form, abounds in a burn on Sreel Hill. The soil in most parts is naturally wet and spongy, but has been worked by draining and cultivation into a good fertile mould. Nearly two-thirds of the entire area have been subjected to the plough, about 550 acres are under wood, and the rest of the parish is either pastoral or waste. The chief antiquities are a great barrow on the summit of Bengairn, remains of two Caledonian stone circles, vestiges of twelve camps, variously Roman, Danish, and Saxon, and the ruins of DUNDRENNAN Abbey. Mansions, noticed separately, are AUCHENCAIRN House, BALCARY, COLLIN, HAZLEFIELD, NETHERLAW, ORCHARDTON, and PORTMARY. In the presbytery of Kirkcudbright and the synod of Galloway, this parish is divided ecclesiastically into Rerrick proper and AUCHENCAIRN *quoad sacra* parish, the former a living worth £296. Part of the old parish church of Rerrick may still be seen, 9 furlongs SE of Dundrennan village; and a stone of it bears the inscription—'This Church, originally a Chapel, was enlarged in 1743, taken down in 1865.' The present parish church, in the centre of Dundrennan village, is a Gothic edifice of 1865-66, with a beautiful rose window, a tower and spire 68 feet high, and about 400 sittings. Two public schools, Auchencairn and Dundrennan, with

respective accommodation for 282 and 235 children, have an average attendance of about 150 and 100, and grants amounting to nearly £170 and £100. Pop. (1801) 1166, (1831) 1635, (1861) 1738, (1871) 1911, (1881) 1807, (1891) 1582, of whom 776 were in Rerrick ecclesiastical parish. Houses (1891) inhabited 324, vacant 21.—*Ord. Sur.*, sh. 5, 1857.

Resart, Loch, a sea-loch at the mutual border of Uig parish, Ross and Cromarty, and Harris parish, Inverness-shire, on the W side of Lewis, in the Outer Hebrides. Opening from the W, and penetrating $7\frac{1}{2}$ miles eastward, it measures 2 miles across the entrance, and contracts gradually to a point. Scarp island protects its entrance; and a salmon-stream of its own name flows 5 miles northward to its head from Harris.

Rescobie, a parish of central Forfarshire, whose church stands on the northern shore of Rescobie Loch, 7 furlongs E by N of CLOCKSBRIGGS station on the Forfar and Arbroath section of the Caledonian railway, this being $2\frac{1}{2}$ miles ENE of the post-town, Forfar. It is bounded N by Oathlaw, Aberlemno, and Guthrie; E by Kirkden; S by Kirkden, Dunnichen, and Forfar; and W by Kirriemuir. Its utmost length, from WNW to ESE, is $7\frac{3}{4}$ miles; its breadth varies between 5 furlongs and $2\frac{1}{2}$ miles; and its area is 6724 acres, of which 165 are water. Rescobie Loch, 2 to 20 feet deep, and lying at an altitude of 196 feet above sea-level, extends $1\frac{1}{4}$ mile east-south-eastward, and varies in width from 200 to 550 yards. LUNAN WATER, issuing from its foot, flows $2\frac{3}{4}$ miles east-south-eastward along the Aberlemno and Guthrie boundary, and early in this course expands into Balgavies Loch ($4 \times 1\frac{1}{2}$ furl.) From the shores of Rescobie Loch the surface rises southward to Dunnichen Hill (764 feet) on the Dunnichen boundary, and northward to Turin Hill (814) on the Aberlemno boundary. The face of the latter eminence presents a mural range of rock not unlike that of the Salisbury Craigs at Edinburgh; and its summit commands a very extensive and brilliant view of both land and sea. Devonian rocks, mainly grey paving-stone and Old Red sandstone conglomerate, are predominant; display, in some places, curious interstratification; and have long been worked in large quarries of remarkable appearance. The soil is much of it a dark brown loam, with good 'body,' but elsewhere is thin and moorish, sharp and gravelly, or clayey; and sometimes varies much within one and the same field. Nearly one-eleventh of the entire area is under wood; rather more than one-tenth is in permanent pasture; and nearly all the rest of the land is in tillage. In 1099 Donald Ban, the 'usurper,' taken prisoner and blinded by Eadgar, his nephew, was condemned to perpetual imprisonment at Roscolpin or Rescobie, where he died. There were formerly two fortalices of considerable importance, called the castles of Rescobie and Weems, but they have entirely disappeared. An ancient stronghold on the summit of Turin Hill is believed to have been one of the oldest stone forts in Scotland. It comprised a circular citadel of 685 square yards in area, and an extensive range of contiguous buildings. Parts of the citadel still remain, with walls 13 or 14 feet thick; and they popularly bear the name of Kemp or Camp Castle. Mansions are Burnside, Carse-Grav, Ochterlony, Pitscandly, and Reswallie. There is a curling club and a parish library. Rescobie is in the presbytery of Forfar and the synod of Angus and Mearns; the living is worth £262. The parish church was built in 1820. The public school, with accommodation for 61 children, has an average attendance of about 30, and a grant of nearly £35. Valuation (1855) £8465, 7s. (1893) £7295, plus £1467 for railway. Pop. (1801) 870, (1831) 808, (1861) 747, (1871) 748, (1881) 685, (1891) 660.—*Ord. Sur.*, sh. 57, 1868.

Resolis. See KIRKMICHAEL, Ross-shire.

Resort, Loch. See RESART.

Restalrig, a decayed village in South Leith parish, Edinburghshire, in the northern vicinity of Jock's Lodge, and north-eastern vicinity of St Margaret's railway depot, 2 miles E by N of the General Post Office, Edinburgh. In pre-Reformation days Restalrig

was the capital of the parish in which it stands, and the site of the parish church. According to tradition, St Triduana, a noble virgin of Achaia, who came to Scotland in the 8th century in company with St Rude, died at Restalrig; and down to Sir David Lyndsay's time many pilgrims, afflicted with eye-diseases, resorted hither to Sanct Tredwall's shrine. At the death of William the Lyon (1214), the district of Restalrig—or, as it was anciently called, Lestalric—was possessed by the De Lestalric family. In 1291 Adam of St Edmund's, parson of Lestalric, obtained a writ to the sheriff of Edinburgh to deliver him his lands and rights; and, in 1296, in the ancient church here, he swore fealty to Edward I. During the reign of Robert Bruce, or the early part of the 14th century, the barony passed by marriage into the possession of the Logans, with whom it continued till they incurred forfeiture for participation in the Gowrie Conspiracy. In 1435 the patronage of the church was confirmed to Thomae Logan, by William, Bishop of St Andrews. A collegiate establishment, dedicated to the Holy Trinity, the Virgin, and St Margaret, was established at Restalrig by James III. in 1487, enlarged by James IV. in 1512, and completed by James V. in 1515, the foundation comprising a dean, 9 prebendaries, 3 chaplains, and 2 singing boys. The parsonage, however, remained entire till the Reformation. In 1560 the first General Assembly ordained that the church, 'as a monument of idolatry, be raysit, and utterlie casten downe and destroyed;' and that the parishioners should in future adopt as their parish church, St Mary's chapel in LEITH. In 1609 the legal rights of the church and parish of Restalrig, with all their revenues and pertinents, were formally alienated from them by parliament, and conferred upon that chapel, then legally declared to be the parish church of South Leith. Robert Logan of Restalrig, the Gowrie conspirator, who died a bankrupt in 1606, had sold in 1596 his estate of Nether Gogar to Andrew Logan of Coalfield, in 1602 his lands of EAST CASTLE to Archibald Douglas, and in 1604 his barony of Restalrig to Lord Balmerino. The Lords BALMERINO held the lands of Restalrig till their forfeiture in 1746; and during the whole period of their possession appropriated the vaults of the forsaken and dilapidated church as the burying-place of themselves and their kinsfolk. Lady Balmerino, the wife of Arthur, the sixth and attainted Lord, resided in the village during the years of her widowhood, and died there in 1765. The Earls of Moray, who purchased the forfeited lands, now claim as their mausoleum an octagonal chapter-house to the S of the church, whose groined roof springs from a single central pillar, and which is said to have been built about 1435 by Sir Robert Logan. The Episcopalians have always, from the Revolution downward, had a strong attachment to Restalrig. They were for years prohibited from performing their funeral service in any of the city or suburban burying-grounds; so they adopted Restalrig as their cemetery, and here in 1720 interred the body of Alexander Rose, the last legal or more than titular bishop of Edinburgh. Here, too, is the grave of Lord Brougham's father, as well as of many a gallant soldier. The Second Pointed, three-bayed choir consisted of little more than the E wall and part of the side walls in 1836, when it was restored from designs by Mr W. Burn, and made a chapel of ease or mission chapel, subordinate to South Leith church. Under the verge of St Margaret's depot was a famous spring, called St Margaret's Well; and some fine old Gothic stonework over this was removed in 1860 to a tunnel at the N foot of Salisbury Craigs. Restalrig House, to the N of the village, is a plain substantial mansion, in a well-wooded park of 15 acres. It was built in 1815-17, and enlarged a few years afterwards. The ancient mansion on the barony was a castellated structure, opposite the W end of the church, and is now represented by the lower walls of a plain modern house in the village.—*Ord. Sur.*, sh. 32, 1857.

Rest-and-be-Thankful. See CORSTORPHINE and GLENCROE.

Restennet, an ancient parish of central Forfarshire, now forming the northern district of Forfar parish, which hence is legally known as Forfar-Restennet. A sheet of water, called Restennet Loch, on the Rescobie boundary, was drained at great expense, in the latter part of the 18th century, for the sake of obtaining a rich supply of shell-marl in its bed. A peninsula, projecting into the lake from a very narrow isthmus, rose into an eminence, which was crowned by a priory, $1\frac{1}{2}$ mile ENE of Forfar. At Restennet St Bonifacius is said to have baptized the Pictish king, Nectan, in 710, and to have dedicated a church to St Peter (see ROSEMARKIE); and on the site of this church David I. founded an Augustinian priory, which Malcolm IV. made a cell of the Abbey of Jedburgh. The roofless priory church, repaired during 1863-66, is First Pointed in style, and has a NW broach spire 70 feet high. It served as the parish church of Forfar till 1591, and was afterwards the burying-place of the families of Dempster and Hunter. Traces remain, too, of a cloister-garth 60 feet square.—*Ord. Sur.*, sh. 57, 1868.

Reston, a village in Coldingham parish, Berwickshire, near the right bank of Eye Water, with a station on the Dunbar and Berwick section of the North British railway, at the junction of the Berwickshire branch, $8\frac{3}{4}$ miles NE of Duns, $11\frac{1}{4}$ NW of Berwick, and $46\frac{1}{2}$ ESE of Edinburgh. It has a post and money order office, a market cross, a public school, a Free church (1880; 260 sittings), erected at a cost of £1150, three hotels, a Good Templar hall, a fishing club, a horticultural society, and a live stock sale every alternate Monday.—*Ord. Sur.*, sh. 34, 1864.

Reswallie, an estate, with a mansion, in Rescobie parish, Forfarshire, 3 miles ENE of Forfar.

Rhea. See KYLE-RHEA.

Rhiconich, a place with an inn in Eddrachillis parish, W Sutherland, at the head of salt-water Loch Inchard, $41\frac{1}{2}$ miles NW of Lairg.

Rhinds. See RHYND.

Rhinn (Gael. *roinn*, 'a point or promontory'), a peninsula in the SW of Islay island, Argyllshire, extending between the German Ocean and Loch Indal, communicating with the main body of the island by an isthmus, between the head of Loch Gruinnard and the upper part of Loch Indal, and terminating in a headland called Rhinn Point. Its length south-westward is 17 miles, and its greatest breadth is 7 miles. Its terminating point is not a headland proper, but the islet ORSAY.

Rhinn, the western one of the three districts of Wigtownshire. Known to the Romans as Chersonesus Novantum, it takes its present name, like the Rhinnus of Islay just described, from the Celtic *roinn*, 'a point or promontory;' and it forms a double peninsula, washed on the W side by the Irish Channel, and on most of the E side by Loch Ryan and Luce Bay. With the rest of the county it is connected by an isthmus, $5\frac{1}{2}$ miles wide at the narrowest, between the head of Loch Ryan and the head of Luce Bay; and it measures $28\frac{1}{2}$ miles in length from N by W to S by E, $5\frac{1}{2}$ miles in extreme breadth, and about 120 square miles in area. It begins on the N at Corsewall Point, and terminates at the S in the Mull of Galloway, each of them crowned by a lighthouse; it attains a maximum altitude of 593 feet in CAIRNPAT, and mostly consists of low land which at a comparatively recent geological period was clearly under marine water, and probably after becoming dry for some time an island or a series of islands. The parishes comprised within it are Kirkcolm, Leswalt, Portpatrick, and Kirkmaiden, most of Stoneykirk, and a small part of Inch.—*Ord. Sur.*, shs. 7, 3, 1, 1856-63.

Rhives, a modern mansion in Kilmuir-Easter parish, Ross and Cromarty, 7 furlongs N of Delny station on the Dingwall and Tain section of the Highland railway.—*Ord. Sur.*, sh. 94, 1878.

Rhonehouse. See KELTON HILL.

Rhu-Stoer or Point of Stoer, a bold rocky headland in Assynt parish, Sutherland, terminating the peninsula

in the extreme W of the parish, and presenting to the sea, $9\frac{1}{4}$ miles NW of Lochinver village, a detached mass of sandstone, rising to the height of 530 feet. A stack, or insulated towering sea-rock, confronting it, rises to a height of about 250 feet, and has such a curious outline as to seem at a distance like a large ship under studing sails.—*Ord. Sur.*, sh. 107, 1881.

Rhu-Vaal or Rudha Mhail, a headland at the northern extremity of Islay island, Argyllshire, flanking the W side of the northern entrance to the Sound of Islay, 7 miles N by W of Port Askaig. A lighthouse, erected on it in 1859 at a cost of £7437, shows a fixed red light in a westerly direction, between the bearings of about SSW $\frac{1}{2}$ W and about E by S, and a white light in every other direction, both visible at the distance of 18 nautical miles.

Rhymer's Glen and Tower. See HUNTLY (Roxburghshire) and EARLSTON.

Rhynd (Gael. *roinn*, 'point' or 'peninsula'), a Perthshire parish, whose church stands $3\frac{3}{4}$ miles NE of Bridge of Earn, and $4\frac{1}{4}$ SE of Perth, under which there is a post office of Rhynd. It is bounded N by Kinfauns, NE by St Madoes, S by Abernethy and Dunbarny, and W by Perth. Its utmost length, from WNW to ESE, is 4 miles; its utmost breadth is $1\frac{3}{4}$ mile; and its area is 2893 acres, of which $175\frac{1}{2}$ are foreshore and $260\frac{1}{2}$ water. The TAY, here 1 to 3 furlongs broad, curves $4\frac{1}{2}$ miles north-eastward and south-eastward along all the boundary with Kinfauns and St Madoes; and Sleepless Inch and Balhepburn Island belong to Rhynd. The river EARN winds $3\frac{3}{4}$ miles east-by-northward to the Tay along all the Abernethy border, though the point where it first touches the parish and that where it enters the Tay are only $1\frac{3}{4}$ mile distant as the crow flies. E of Fingask the surface is low and flat, at no point 50 feet above sea-level; but westward it rises to a maximum altitude of 725 feet on the summit of wooded MONCREIFFE Hill at the meeting-point of Rhynd, Perth, and Dunbarny parishes. Moncreiffe Hill mainly consists of greenstone, but elsewhere the principal rock is Old Red sandstone. The soil in the NW is sharp and gravelly, in the SE is chiefly clay, intermixed here and there with very fine black loam. About 100 acres are under wood, and nearly all the rest of the parish is in a state of high cultivation. At Grange of Elcho, near the western border, David Lindsay of Gleuesk founded, some time in the 13th century, a Cistercian nunnery, where, in 1346, the Earl of Ross assassinated Reginald of the Isles. ELCHO Castle, noticed separately, is the chief antiquity; and the Earl of Wemyss is chief proprietor. Rhynd is in the presbytery of Perth and the synod of Perth and Stirling; the living is worth £262. In the early part of the 12th century and on to the Reformation the parish was a dependency of the monastery of St Adrian, Isle of May; and a stone in the E gable of the old church marks the grave of one of the priors. The original church has entirely disappeared, but probably stood on the site of a wretched church, dating from the time of the Reformation, and inconveniently situated 2 miles to the SE of the present church, which was built in 1842. The public school, with accommodation for 96 children, has an average attendance of about 65, and a grant of nearly £75. Valuation (1884) £6176, 10s. 9d., (1892) £5055, 12s. Pop. (1801) 403, (1841) 402, (1861) 297, (1871) 327, (1881) 297, (1891) 270.—*Ord. Sur.*, sh. 48, 1868.

Rhynie, a parish on the western border of Aberdeenshire, in the SE containing the post-office village of MUIR OF RHYNIE, 4 miles SSW of Gartly station on the Huntly section of the Great North of Scotland railway, and $13\frac{3}{4}$ NW of Alford, the terminus of the Alford branch of the same railway. It comprises the ancient parishes of Rhynie and ESSIE; and is bounded N by Gartly, E by Kennethmont, SE by Clatt, S by Auchindoir, and W by Cabrach. Its utmost length, from E to W, is $7\frac{1}{2}$ miles; its breadth varies between 1½ and $4\frac{1}{2}$ miles; and its area is $20\frac{1}{2}$ square miles or $12,883\frac{3}{4}$ acres, of which $4\frac{1}{2}$ are water. The drainage all goes to the little Water of BOGIE, which flows $6\frac{1}{2}$ miles north-north-

eastward along all the south-eastern and eastern boundary. Where it quits the parish the surface declines to 524 feet above sea-level; and thence it rises to 1500 feet at the Hill of Noth, 1851 at the Tap o' Noth, 1059 at Quarry Hill, 1398 at Clayshot Hill, and 1669 at the Mound of Haddock, just within Cabrach parish. The rocks include granite, sandstone, greenstone, and syenite; and the soil is a loamy clay along the valley of the Bogie, clay and gravel towards the Tap o' Noth, and loamy or mossy over most of the western division. In the neighbourhood are two springs, remarkable for the extraordinary quantity of water they discharge. Antiquities, other than LESMORE Castle, are cairns, tumuli, several standing-stones (four of them sculptured, and very good of their kind), and remains of a large vitrified fort on the Tap o' Noth, with walls more than 10 feet thick. The Duke of Richmond and Gordon is almost sole proprietor. Rhyinie is in the presbytery of Strathbogie and the synod of Moray; the living is worth £220. The parish church, a Free church, and a Congregational chapel, all stand at Muir of Rhyinie. The parish church was repaired in 1889, when a new spire, with clock and bell, presented by James Symon, Esq. of Melbourne, was added, and a new manse erected. Lesmore public, Rhyinie public, and Duff's public schools, with respective accommodation for 85, 240, and 72 children, have an average attendance of about 60, 155, and 60, and grants of nearly £60, £135, and £55. Pop. (1801) 676, (1831) 1018, (1861) 1061, (1871) 1195, (1881) 1126, (1891) 1043.—*Ord. Sur.*, shs. 76, 86, 75, 85, 1874-76.

Rhynns. See RHYNNS.

Ricawr, Loch, a troutful lake in Straiton parish, Ayrshire, 8 miles SSE of Straiton village. Lying 960 feet above sea-level, it has an utmost length and breadth of 6 and 5 furlongs, and sends off a streamlet 3 miles east-north-eastward to the head of Loch Doon.—*Ord. Sur.*, sh. 8, 1863.

Riccarton, a parish on the northern border of Kyle district, Ayrshire, containing the Riccarton suburb of KILMARNOCK and the greater part of the town of HURLFORD. It is bounded N by Kilmarnock, E by Galston, S by Craigie, SW by Symington, and W by Dundonald. Its utmost length, from E to W, is $4\frac{1}{2}$ miles; and its utmost breadth, from N to S, is $2\frac{3}{4}$ miles. Until 1891 part of the parish was detached from the main portion by a narrow intervening part of Galston parish. The Boundary Commissioners in that year effected an exchange of territory between the two parishes, whereby Galston received the east portion of the detached part of Riccarton, while the remainder of the detached part was joined to the main portion by the annexation of the intervening portion of Galston parish. The river IRVINE winds $7\frac{1}{2}$ miles west-south-westward along all the northern border, though the point where it first touches and that where it quits the parish are only $4\frac{1}{2}$ miles distant as the crow flies. At the NE corner of the parish it is joined by CESSNOCK Water, which winds 5 miles north-by-eastward—viz. $1\frac{1}{2}$ mile along the Galston boundary, $1\frac{1}{2}$ mile across the eastern interior, and $1\frac{1}{2}$ mile again along the Galston boundary. Higher up, Cessnock Water runs $1\frac{1}{2}$ mile westward along all the southern border of the detached portion. In the extreme W the surface declines along the Irvine to close upon 70 feet above sea-level; and thence it rises to 186 at Whalriggs, 448 at the Craigie border, and 442 near Hillhouse. The parish, on the whole, is gently undulating, but rises gradually towards the S and SE, till it terminates in a low ridge of hills, whose highest points command an extensive and brilliant view to the N and W. The banks of Cessnock Water are picturesque, but those of the Irvine are very tame. The rocks are chiefly of the Carboniferous formation. Coal, which exists in great abundance, and which seems to have been worked from a very early period, has been increasingly mined since the formation of the railways. Much anthracite or blind coal is likewise raised, and limestone has been quarried both for mortar and for manure; whilst iron working is carried on at Hurlford. The soil in most parts is strongly argillaceous. Nearly

500 acres are under wood, and most of the remainder is either arable or pasture, 700 acres of moss having in great measure been reclaimed since 1840. Riccarton was anciently a chapelry, subordinate to the parish church of Dundonald; and it followed the fortunes of that church in annexation, from 1229 till 1238, to the short-lived convent of Dalmulin, and in subsequent annexation to the monastery of Paisley. At some period of the Paisley monks' possession, it was made a parish church, and treated by them as a vicarage. After the Reformation it was incorporated with Craigie, but in 1648 it was disunited from that parish and made independent. The name Riccarton was originally Richardstown or Ricardston, and seems to have been derived from a Richard Wallace, whom tradition declares to have been the uncle of the celebrated Sir William, the patriot, but who probably lived too early to claim that honour. In the 13th and 14th centuries the lands of Riccardston belonged to a family of the name of Wallace, or, as the word was anciently written, Waleys. During the reign of Alexander II., and under the second Walter the Steward, Richard Waleys held considerable estates in other parts of Kyle-Stewart, and appears to have been one of the most considerable of the Steward's vassals; and he very probably was the ancestor of the Ricardston Wallaces, the first holder of their property, and the person from whom it derived its manorial designation. A seat of Sir Ronald Crawford, the maternal uncle of Sir William Wallace, stood on the site of Yardside farmhouse, and is closely associated, in traditionary story, with early exploits of the Scottish patriot. Sir John Cunningham of Caprington (d. 1684), a very eminent lawyer in the time of Charles II.; and Sir James Shaw (1764-1843), Lord Mayor of London and a distinguished benefactor of Kilmarnock, were natives of Riccarton. Mansions, noticed separately, are BELLFIELD, CAPRINGTON Castle, DOLLARS, MILRIG, SHAWHILL, and TREESBANK. The Duke of Portland is chief proprietor. Giving off since 1874 the greater part of Hurlford *quoad sacra* parish, Riccarton is in the presbytery of Ayr and the synod of Glasgow and Ayr; the living is worth £390. The parish church surmounts a mound in the southern suburb of Kilmarnock, partly natural and partly artificial, and formerly known as the 'Seat of Justice.' Built in 1823, and containing over 1000 sittings, it is a large edifice with a lofty spire, which forms a conspicuous object in a wide circumjacent landscape. Six schools—Crossroads public, Hurlford public, Riccarton public, Barleith, Caprington juvenile, and Hurlford Roman Catholic—with respective accommodation for 104, 533, 162, 230, 100, and 247 children, have an average attendance of about 70, 375, 85, 100, 70, and 60, and grants amounting to nearly £70, £330, £70, £80, £65, and £60. Landward valuation (1885) £24,835, 15s. 5d., (1894) £21,156, 12s. Pop. (1801) 1364, (1831) 2499, (1861) 5629, (1871) 5845, (1881) 7112, (1891) 7317, of whom 2307 were in the parliamentary burgh of Kilmarnock, and 3637 in the town and *quoad sacra* parish of Hurlford.—*Ord. Sur.*, sh. 22, 1865.

Riccarton, a station in Castleton parish, S Roxburghshire, on the Waverley route (1862) of the North British railway, at the junction of the Border Counties line towards Hexham and Newcastle, $62\frac{3}{4}$ miles WNW of Newcastle, $32\frac{1}{2}$ NNE of Carlisle, and 13 S by E of Hawick, under which it has a post and money order office.—*Ord. Sur.*, sh. 17, 1864.

Riccarton, a mansion, with a fine park, in Currie parish, Edinburghshire, $1\frac{1}{2}$ mile NNW of Currie village, and 6 miles SW of Edinburgh. Its oldest part, a square tower at the W end, is supposed to have been given by King Robert Bruce as part of the dowry of his daughter, Marjory, on her marriage to Walter, High Steward of Scotland; but the main body of the house was built in 1621, and a large addition in the Elizabethan style was completed in 1827. Sir Thomas Craig of Riccarton (1538-1608) was a distinguished writer on the feudal law; and the estate remained with his descendants till 1823, when it passed to a kinsman, James Gibson, W.S.

(1765-1850), who in 1831 was created a baronet as Sir James Gibson-Craig of Riccarton. He was a Liberal in politics, as likewise was his son, the Rt. Hon. Sir William Gibson-Craig, M.P. (1797-1878), whose son, Sir James Henry, third Bart. (b. 1841), is present proprietor.—*Ord. Sur.*, sh. 32, 1857. See John Small's *Castles and Mansions of the Lothians* (Edinb. 1883).

Rickarton, a *quoad sacra* parish in Fetteresso parish, Kincardineshire, 5 miles NW by W of Stonehaven, under which it has a post office. Constituted in 1872, it is in the presbytery of Fordoun and the synod of Angus and Mearns; the minister's stipend is £166. The church sprang from a bequest of £3278 by the late Rev. George Thomson, minister of Fetteresso; and was built, in 1870-71, at a cost of £1400. In 1892-93 it was repaired, and a memorial window inserted to the founder. Rickarton House is a good modern mansion on the N bank of Cowie Water, 3 miles NW of Stonehaven; and the estate, long held by the Hepburns, belongs now to Alex. Baird, Esq. of URIE. Pop. of *q. s.* parish (1881) 473, (1891) 400, of whom 19 were in Glenberrie parish.—*Ord. Sur.*, shs. 67, 66, 1871.

Riddell. See LILLIESLEAF.

Riddon, Loch, a sea-loch on the mutual border of Kilmoran and Inverchaolain parishes, Argyllshire. Opening from the most northerly part of the Kyles of Bute, and penetrating $3\frac{1}{2}$ miles northward to the mouth of GLENDARUEL, it has a maximum breadth of $6\frac{1}{2}$ furlongs and in scenery is not unlike the most picturesque reaches of the Kyles themselves. It contains, in its mouth, a group of islets including Ellan DHERRIG; and has on its left side the steamboat pier of Ormidale, and at its head roads which lead through fine reaches of Highland scenery towards Holy Loch, Strachur, and Otter Ferry.—*Ord. Sur.*, sh. 29, 1873.

Ricacawr, Loch. See RICAWE, LOCH.

Rigg. See GRETNA.

Riggend, a village in New Monkland parish, Lanarkshire, $3\frac{1}{2}$ miles N of Airdrie.

Rigside. See DOUGLAS.

Ringans, St. See ST NINIANS.

Ringford. See TONGLAND.

Rinnes. See BEN RINNES.

Rinns. See RHINNS.

Ristol or Isle Ristol, an island of Lochbroom parish, Ross and Cromarty, lying off the entrance of Loch Broom, $14\frac{1}{2}$ miles NW of Ullapool. Separated from the mainland by a channel only 1 furlong broad, and dry at low water, it has an utmost length and breadth of $8\frac{1}{2}$ and 8 furlongs, and rises to a height of 234 feet.—*Ord. Sur.*, sh. 101, 1882.

Rives. See RHIVES.

Roadmeetings, a village in Carluke parish, Lanarkshire, $1\frac{1}{2}$ mile E by S of the town. Pop., with Yieldshields (1881) 432, (1891) 341.

Roag, Loch, an intricate sea-loch of Uig parish, on the W side of Lewis, Outer Hebrides, Ross and Cromarty. Opening from the Atlantic, it has a width of $7\frac{1}{2}$ miles at the entrance; penetrates the land south-eastward to the extent of about 10 miles; is sectioned lengthwise, by a series of islands, into two main channels, called Loch Roag proper and Loch Bernera or West Loch Roag; measures 6 miles in mean breadth, over a length of $6\frac{1}{2}$ miles from its entrance, but is bisected, over all that length, by BERNERA island and some adjacent islets; forks, in its upper part, into two separate, widely detached, narrow reaches, Loch Ceann Thulabbig and Little Loch Roag; contains, all round from entrance to head, as many as 38 islands and islets; and is rendered so intricate by islands, islets, headlands, bays, and winding passages as to demand no ordinary degree of attention and skill for its navigation, while the entrance of Loch Roag proper is so obscure that it might escape the observation of a boat's crew passing within a hundred yards' distance. All the land of the islands, and of the immediate coasts, is either low and tame, or terminates in such cliffs of gneiss as have little elevation, much ruggedness, and no beauty. Several salmon streamlets run to the heads and sides of the lochs, and three of

them have a run of respectively 6, 7, and 8 miles.—*Ord. Sur.*, shs. 105, 104, 1858.

Roan. See ELLAN-NAN-RON.

Robertland, an estate, with a mansion and the site of an old castle, in Stewarton parish, Ayrshire, 2 miles NE of the town.

Roberton, a village and an ancient parish in the Upper Ward of Lanarkshire. The village, standing near the left bank of the river Clyde, 3 miles SSE of Lamington station on the Caledonian railway, has an Established church, a U.P. church, rebuilt in 1873, a public school, a subscription library, and a golf club. The ancient parish, lying around the village, was united to Wiston in 1772. The old church of Roberton, which was suppressed in 1772, was rebuilt in 1891, and had three memorial windows inserted in 1894.—*Ord. Sur.*, sh. 23, 1865.

Roberton, a parish of Roxburghshire, containing the hamlet of Deanburnhaugh, on the Dean Burn near its junction with Borthwick Water, $7\frac{1}{2}$ miles WSW of Hawick. This hamlet formerly contained above 100 inhabitants; now its population is under 20. The parish is bounded NE by Ashkirk and Wilton, SE by Hawick and Teviothead, SW by Eskdalemuir in Dumfriesshire, and NW by Ettrick and Kirkhope. Its utmost length, from NE to SW, is $12\frac{1}{2}$ miles; its utmost breadth is $5\frac{1}{2}$ miles; and its area is $46\frac{1}{2}$ square miles or 29,666 $\frac{1}{2}$ acres, of which 247 are water, and 11,628 $\frac{1}{2}$ belonged to Selkirkshire until 1891, when the Boundary Commissioners placed the parish wholly in Roxburghshire. BORTHWICK Water, rising close to the Dumfriesshire border at an altitude of 1400 feet, winds $14\frac{1}{2}$ miles north-eastward and eastward, until it passes off from the parish $1\frac{1}{2}$ mile above its influx to the Teviot; and during this course it is fed by a score of burns. RANKLE BURN runs $2\frac{1}{2}$ miles north-eastward along the Ettrick boundary; and ALE Water, rising near Henwoodie, at an altitude of 1100 feet, runs 8 miles north-eastward, at one point traversing ALEMUIR Loch ($\frac{1}{2} \times \frac{1}{2}$ mile), and, lower down, tracing for $2\frac{1}{2}$ miles the Ashkirk boundary. Kingside Loch ($2\frac{1}{2} \times 1\frac{1}{2}$ furl.) on the Ettrick boundary has been drained; but other lakes, still existing, are Hellmuir Loch ($3\frac{1}{2} \times 2\frac{1}{2}$ furl.) on the Kirkhope boundary, Crooked Loch (2×1 furl.) at the meeting-point with Kirkhope and Ettrick, and smaller Windylaw, Philhope, Broadlee, and Bog Lochs in the interior. Where Borthwick Water quits the parish, the surface declines to close on 500 feet above the sea; the chief elevations to the NW of the stream, as one goes up the glen, are *Borthaugh Hill (880 feet), Highchesters Hill (848), Smasha Hill (1092), Hangingshaw Hill (1044), Firestone Edge (1155), Mid Hill (1207), *Coutlair Knowe (1371), Crib Law (1389), Long Tae (1438), and *Craik Cross Hill (1482); to the SE, Todshaw Hill (938), *High Seat (1140), *Calshaw Head (1320), *Pike Hill (1369), and *Stock Hill (1561), where asterisks mark those summits that culminate on the confines of the parish. Thus Roberton, though not far distant from the centre of the southern Highlands, and though walled in by one of the middle stretches of their watersheds, is not strictly mountainous, and possesses both lowness of surface and softness of feature compared with either Ettrick on its one side, or Liddesdale on its other. The two vales which, to a certain extent, traverse it lengthwise, are narrow along the bottom, or are the merest glens; but they have gently sloping screens, and, except where beautified with wood, are in a state of cultivation. The hills are as rich in all the common kinds of game as the waters are in fish, so that the district is an attractive one to the sportsman. Though heath stretches out in patches, and almost every farm has its particular moss, the lands of the parish may, in general, be viewed as an assemblage of green hills, pleasantly and richly pastoral. The rocks are mainly Silurian, but include a seam of excellent ironstone. The soil in the bottom of Borthwick vale is of good quality; on the skirts and lower parts of the hills is gravelly, shallow, and dry; and on their summits is wet and boggy. Barely 2000 acres are either

regularly or occasionally in tillage; about 500 are under wood; and the rest of the parish, not covered with moss, is principally cattle pasture or sheep-walk. The antiquities include a reach of the CATRAIL and six or seven camps, some Caledonian and some Roman, but all locally known as Picts' works. Mansions, all noticed separately, are BORTHWICKBRAE, BORTHWICK-SHIELDS, CRISHOLM, HARDEN, and HOSCOTE. Robertson is in the presbytery of Selkirk and the synod of Merse and Teviotdale; the living is worth £325. The old parish church, 3 furlongs from the left bank of Borthwick Water, and 5 miles W of Hawick, was probably built in 1659 (the date upon it), to supersede the older kirk of HASSENDEAN. The new parish church, nearer the public road, was built in 1863 at a cost of £2000, and is a good Gothic edifice, containing 328 sittings. Two public schools, Howpasley and Robertson, with respective accommodation for 33 and 110 children, have an average attendance of about 15 and 40, and grants of nearly £30 and £55. Pop. (1801) 618, (1841) 757, (1861) 640, (1871) 593, (1881) 567, (1891) 455.—*Ord. Sur.*, shs. 17, 16, 1864.

Robgill Tower, an old baronial mansion in Dornoch parish, Dumfriesshire, near the right bank of Kirtle Water, 2½ miles SE of Kirtlebridge station. It belonged formerly to Gen. Sir Æmilius Irving, Bart. (1751-1828), and is now the property of Robert Paterson, Esq.—*Ord. Sur.*, sh. 10, 1864.

Rob Roy's Cave. See CRAIGROYSTON.

Robroyston, an estate, with a modern mansion, in Cadder parish, Lanarkshire, 4 miles NE of Glasgow. A cottage on it, standing till 1826, is said to have been the place where Sir William Wallace was betrayed to the English; and a neighbouring lake, which figures in the story of the patriot's betrayal, has been nearly all drained, and is now represented by a gloomy expanse, partially engirt with pine trees.—*Ord. Sur.*, sh. 31, 1867.

Rochsoles, an estate, with a mansion, in New Monkland parish, Lanarkshire, 2 miles NNW of Airdrie. Its owner is Lieut.-Col. Montagu Gilbert Gerard, C.B. (b. 1843; suc. 1880).—*Ord. Sur.*, sh. 31, 1867.

Rockcliff, a hamlet in Colvend parish, Kirkcudbrightshire, 7 miles SE of Dalbeattie.

Rockfield, a fishing village on the E coast of Tarbat parish, NE Ross and Cromarty, 1½ mile SSE of Portmahomack. It has a small pier and 15 boats.

Rockhall, a mansion in Mouswald parish, Dumfriesshire, 6 miles E of Dumfries. Its owner is Sir Alexander Davidson Grierson of Lag, eighth Bart. since 1685 (b. 1858; suc. 1879).—*Ord. Sur.*, sh. 10, 1864. See DUNSCORE.

Rodono, a commodious hotel in Ettrick parish, Selkirkshire, on the W shore of St Mary's Loch, ¾ mile from its head, and 14 miles SSW of Innerleithen. It was built as a gentleman's seat in 1866, and its architecture and grounds contribute highly to the scenery of the lake. The name is a revival of Rodonna, an ancient harony comprising the vale of Megget Water, and granted by Alexander II. in 1236 to the monks of Melrose.—*Ord. Sur.*, sh. 16, 1864.

Roe, Meikle. See MEIKLE ROE.

Rogart, a parish of SE Sutherland, containing a village of its own name with a post, money order, savings bank, and telegraph office, and also a station on the Tain and Helmsdale section of the Highland railway, 7½ miles W by N of Golspie, 10 E by N of Lairg, and 19 NE of Bonar-Bridge. It is bounded N by Farr, NE and E by Clyne, SE by Golspie, S by Dornoch, SW by Creich, and W by Lairg. Its utmost length, from N to S, is 15¾ miles; and its utmost width, from E to W, is 9¾ miles. An exchange of territory between this parish and Dornoch was effected by the Boundary Commissioners in 1891, when there was added to Rogart the Kinnauld detached portion of Dornoch parish, and Dornoch received an area which embraces nearly the whole of that part of Rogart which lies to the southwest of the watershed between Strath Fleet on the north and Strath Carnach (including Strath Tollie) on

the south. The river BRORA, formed in the NW corner of the parish, at 783 feet above sea-level, by head-streams that rise at altitudes of from 1500 to 1600 feet, runs 14½ miles south-by-westward, south-eastward, and east-north-eastward—for the last 1½ mile along the Clyne boundary—until it passes away into Clyne. The river FLEET, entering from Lairg 9½ furlongs below its source, flows 10 miles east-south-eastward, till it quits the parish at its SE corner; and is followed pretty closely by the railway, which, ¾ mile above the station, crosses the river by a stone arch viaduct of 55 feet span. Of thirty-three lochs and lochlets the largest are Loch BUIE (1¼ × ¾ mile; 527 feet) at the meeting-point with Creich and Dornoch parishes; Loch Craicail Mor (6 × 1¼ furl.; 620 feet) at the meeting-point with Creich and Lairg parishes; Loch CRAGGIE or Creagach (1 mile × 2½ furl.; 525 feet) on the Lairg boundary; Loch Beannaichte (7 × 2½ furl.; 970 feet) and Glas-Loch Mor (5½ × 2¾ furl.; 1190 feet) in the northern interior; Loch Bad an Aon-Tighe (6 × 1¾ furl.; 620 feet) and Loch Beannach (4½ × 3 furl.; 785 feet) on the Clyne boundary; and Loch an t-Salachaidh (5 × 1½ furl.; 552 feet) on the Golspie boundary. The surface is everywhere hilly, but hardly mountainous, and sinks in the SE along the Fleet to 17, in the E along the Brora to 290, feet above sea-level. Chief elevations are Meall Mor (900 feet), Creagan Glas (1028), and An Stocbheinn (1104), to the S of the Fleet; Cnoc Ard an Tionail (876) and Cnoc na Sguaipe (1056), between the Fleet and the Brora; Cnoc Liath-bhaid (937), Meallan Liath Mor (1516), and Meall an Fhuairain (1645), to the N of the Fleet. In both Strathfleet and Strathbrora there are several good patches of haugh-land, some being of medium loam; but peat-earth covers fully nine-tenths of the entire area, and there are many broad swamps of deep moss. Gneiss, veined with quartz and containing a large proportion of mica, is the predominant rock; and granite is fairly plentiful, partly *in situ*, but chiefly in surface or embedded boulders. Not more than 1200 acres are regularly or occasionally in tillage; and the rest of the parish, mosses and waste ground excepted, is chiefly disposed in sheep pasture. Though some of them are too small, the greater number of the crofter holdings in Rogart are superior to many in other parts of the county, and very much better than the majority of crofts in the Western Isles. Some remains of an ancient stone circle are at Corrie; and vestiges of tumuli, Scandinavian buildings, and ancient camps, with memorials of ancient battles, are in many places; and eleven silver brooches were discovered during the construction of the railway. In April 1650 the Marquis of Montrose's force, on their way to the battlefield of Invercharron, passed unmolested through Strathfleet, and halted for a night at Rhin. (See KINCARDINE.) Lady Matheson of the Levs holds 3 per cent. of the entire rental, and the Duke of Sutherland holds nearly all the remainder. Rogart is in the presbytery of Dornoch and the synod of Sutherland and Caithness; the living is worth £178. The parish church, nearly 2 miles NNE of the station, was built in 1777, and commands an extensive and beautiful view. A new and handsome manse was built in 1884 nearer the church than the old manse. The Free church stands 1¾ mile NNW of the station. Three public schools, Blarich, Rhilochan, and Rogart, with respective accommodation for 81, 43, and 109 children, have an average attendance of about 50, 25, and 50, and grants amounting to nearly £70, £35, and £95. There are an Educational Association, Culdrain Literary Institute, and a circulating library and reading room. A woollen manufactory at the village gives employment to a few of the inhabitants. Pop. (1801) 2022, (1831) 1805, (1861) 1439, (1871) 1341, (1881) 1227, (1891) 1268, of whom 955 were Gaelic-speaking.—*Ord. Sur.*, shs. 103, 102, 108, 109, 1878-81.

Romach, Loch, a lake on the mutual border of Rafford and Edinkillie parishes, Elginshire, 3 miles S by E of Rafford church. Lying 515 feet above sea-level, it extends ¾ mile eastward, is only 100 yards wide, has very precipitous banks, contains small trout, and sends

off the Black Burn towards the valley of Pluscarden.—*Ord. Sur.*, sh. 85, 1876.

Romanno Bridge, a hamlet in Newlands parish, Peeblesshire, on Lyne Water, $3\frac{1}{2}$ miles SSE of West Linton, $4\frac{3}{8}$ SW of Lamancha station on the Dolphinton branch of the North British railway, and $19\frac{3}{8}$ SSW of Edinburgh. A favourite angler's haunt, it has a mill, Newlands public school, and a steep narrow bridge, from which it takes its name. Romanno House, 5 furlongs to the NE, is a plain two-storey mansion of the time seemingly of George I. The estate of Romanno belonged to the Murrays from 1513 till 1676, when Margaret Murray married Dr Alexander Pennicuik of NEWHALL (1652-1722), author of the *Description of Tweeddale*. On 1 Oct. 1677 Romanno was the scene of a 'memorable polymachy' betwixt two clans of Gypsies, the Faws and Shaws, who had come from Haddington fair; and in 1683 Dr Pennicuik inscribed on the lintel of a dove-cot:—

'The field of Gipsie blood, which here you see,
A shelter for the harmless dove shall be.'

In 1720 the property was disposed of to George Kennedy, W.S., whose descendant, Major Irving John Kennedy (b. 1818; suc. 1886), is present proprietor. The 'Romanno Terraces,' on the face of a hill above Newlands church, are fourteen in number, and 6 to 12 feet broad. The late Dr Chambers believed that 'they were designed for horticultural or agricultural operations, and probably existed from an early British period.'—*Ord. Sur.*, sh. 24, 1864.

Rona, a small triangular island of Barvas parish, Outer Hebrides, Ross and Cromarty, 45 miles NNE of the Butt of Lewis, in lat. $59^{\circ} 7' N$ and long. $5^{\circ} 50' W$. It has an utmost length and breadth of 7 and 6 furlongs, and rises at its south-eastern corner to a height of 355 feet above sea-level. It was formerly inhabited by several families, who maintained themselves partly by agriculture, partly by fishing; and about 1850 it was offered gratis by the late Sir James Matheson to Government for a new penal settlement. It contains remains of a very ancient oratory built of uncemented stone, and the ruinous shells of five or six huts.—*Ord. Sur.*, sh. 113, 1882.

Rona, an island of Portree parish, Inverness-shire, in the belt of sea between the Isle of Skye and the mainland of Ross and Cromarty, $\frac{1}{2}$ mile N by E of Raasay, $8\frac{1}{2}$ miles NW of Applecross village, and $11\frac{1}{2}$ NNE of Portree. Extending $4\frac{3}{8}$ miles north-by-eastward, and nowhere more than $1\frac{1}{4}$ mile broad, it forms a ridge nearly in a line with Raasay; rises to an extreme altitude of 404 feet above sea-level; is separated, by deep irregular vales, into a series of rocky hills; presents an appearance prevaillingly tame and cheerless; is appropriated chiefly to the rearing of black cattle; contains a scattered village, some arable ground, and nearly all the population of the island at the head of a small bay; has a tolerably good harbour, called Acairseid Haven; and is crowned with a lighthouse, built in 1857 at a cost of £5063, and showing a flashing white light every 12 seconds, visible at the distance of 21 nautical miles. Pop. (1841) 165, (1861) 147, (1871) 157, (1881) 159, (1891) 181.—*Ord. Sur.*, sh. 81, 1882.

Ronaldshay, North, an island and a *quoad sacra* parish in Cross and Burness parish, Orkney. The island is the most northerly of the North Isles of Orkney, lying $2\frac{1}{2}$ miles N of Taffs Ness in Sanday, and 15 E of Papa Westray. Divided from Sanday by North Ronaldshay Firth, very dangerous to navigation, it measures 3 miles in extreme length from N by E to S by W, and 2 miles in extreme breadth. Its outline is diversified by five headlands—Dennis Head (near which there is a pier) in the NE, Brides Ness in the SE, Strom Ness in the S, Twinyas Ness in the SW, and Tor Ness in the NW. The seaweed-covered shores are flat and rocky; and the interior is much of it low and flat, but rises gently towards the middle of the island, which contains three small lakes, and consists partly of coarse slate rock. The soil is sandy but fertile, mixed in some places with clay, and mostly in a state of cultivation. North

Ronaldshay is a creek in the Orkney fishery district, and has 37 boats. Antiquities are several tumuli and vestiges of Burrian Castle, near which, on the southern headland, is a lighthouse built in 1854 at a cost of £12,927, whose flashing light attains its brightest state every ten seconds, and is visible at a distance of 18 nautical miles. Dr Traill of Woodwick is sole proprietor. The *quoad sacra* parish is identical with the island, and was constituted by the General Assembly in 1831, reconstituted by the Court of Teinds subsequent to 1843. It is in the presbytery of North Isles and the synod of Orkney; the minister's stipend is £120. The parish church is a parliamentary one, and there is also a Free church. Pop. (1811) 384, (1831) 522, (1861) 532, (1871) 539, (1881) 547, (1891) 501.

Ronaldshay, South, an island of Orkney. Most southerly of the Orkneys with exception of the Pentland Skerries, it occupies the SE corner of the archipelago, and is washed on the N by Water Sound, about $\frac{1}{2}$ mile broad, dividing it from Burray; on the E by the German Ocean; on the S by the eastern entrance of the Pentland Firth, $6\frac{1}{2}$ miles wide, dividing it from Duncansbay Head; on the W by the northern expansion of the Pentland Firth, or the entrance of Scapa Flow, dividing it from Swona, Hoy, and Flotta. It measures $7\frac{1}{2}$ miles in extreme length from N by E to S by W; whilst its breadth varies between $1\frac{1}{2}$ and $6\frac{1}{2}$ miles. It has mainly an oblong outline, diversified with headlands and bays; is mostly low and flat, attaining a maximum altitude of 389 feet in the Ward Hill; and, in the aggregate of both coast and interior, presents a much richer and more generally cultivated appearance than perhaps any equal extent of Orcadian territory. Grim Ness, Halcro Head, and Old Head project on the eastern coast; Brough Head projects in the extreme S, and confronts Duncansbay Head in Caithness; the Wing and Barth Head project slightly in the SW, opposite Swona; Herston Head and Hoxa Head terminate considerable peninsulas in the NW, opposite Flotta; and three of the headlands—two in the E and one in the W—present bold rocky fronts to the ocean, each with an elevation of over 200 feet above sea-level. Sandwick Bay, on the W, is a slender incurvature about $3\frac{1}{2}$ miles long, between Barth Head and Herston Head; Wide-wall Bay, in the W, between the peninsulas terminating in Herston Head and Hoxa Head, opens in an entrance little more than $\frac{1}{2}$ mile wide, penetrates the land north-eastward and south-eastward to an extent of $2\frac{1}{4}$ miles, ramifies into baylets at the head, and affords safe anchorage to vessels of 600 tons burden; and St Margaret's Hope, in the NW, is a comparatively small bay, but forms one of the safest and best harbours in Scotland for small craft. The rocks throughout the island are either sandstone or dark blue slate; and the sandstone is quarried in ordinary blocks for building purposes, while the blue slate has the character of flag, and is raised, at Herston and Hoxa, in slabs of from 6 to 8 feet in diameter. Agriculture is practised in the same way as in other prime parts of the Orkneys; and the fishing of cod and herrings is very extensively prosecuted, there being 77 boats, employing 189 men and boys. Remains of Picts' houses are numerous and extensive; some large standing-stones, supposed to be of pre-Scandinavian origin, are near the manse; and ruins of pre-Reformation chapels are in seven places. The parish of South Ronaldshay includes the inhabited islands of South Ronaldshay, Burray, Swona, Hunda, and Pentland Skerries, and comprehends the ancient parishes of St Mary or the South Church (consisting of Swona, the Pentland Skerries, and more than one-third of South Ronaldshay), St Peter or the North Church (consisting of the rest of South Ronaldshay), and Burray (consisting of Burray, Hunda, and the uninhabited island of Glimsholm). Its total land area is 15,062 acres. It is in the presbytery of Kirkwall and the synod of Orkney; the living is worth £229. The parish church of South Ronaldshay, St Peter's, stands on the eastern shore of the island, and contains 273 sittings. In 1893 a mission hall was built for congregational

purposes. The church of St Mary, on the south-western shore, contains 413 sittings, and was raised to *quoad sacra* status in 1875. Its minister's stipend is £100. Other places of worship are Burray and Herston chapels of ease, South Ronaldshay Free church, the U.P. churches of Burray and South Ronaldshay, and a Baptist church at Burray. Five public schools—Burray, Grimness, Hope, Widewall, and Tomison's—with respective accommodation for 133, 91, 158, 110, and 218 children, have an average attendance of about 115, 50, 85, 80, and 65, and grants amounting to about £95, £55, £120, £125, and £85. There are an agricultural society, a literary society, South Ronaldshay and Burray Medical Association, a branch of the Shipwrecked Fishermen and Mariners' Society, a bowling and tennis club, and a branch of the Union Bank. In South parish there are Tomison's Charity and a total abstinence society. Valuation of parish (1884) £4406, 4s. 7d., (1893) £4633, 15s. Pop. of South Ronaldshay island (1821) 1949, (1861) 2551, (1881) 2557, (1891) 2315; of the parish (1801) 1881, (1831) 2711, (1861) 3282, (1871) 3228, (1881) 3314, (1891) 3059, of whom 604 were in St Mary's *quoad sacra* parish.

Ronay, an island of North Uist parish, Outer Hebrides, Inverness-shire, 1 mile S of the south-eastern extremity of North Uist island, and 2 miles NE of Benbecula. It measures 2½ miles in length, and 1½ mile in extreme breadth; is much indented by the sea; has a belt of low productive land around its coast-line; and rises to a height of 600 feet above sea-level, presenting a rocky aspect in its higher grounds, and a broken surface down its eastern declivity. At one time it was regarded as of little or no value, but it has been improved by culture, so as now to be considered one of the best grazing grounds in North Uist parish. Pop. (1891) 6.

Rosa. See GLENROSIE.

Roscobie, a village in Dunfermline parish, Fife, 4½ miles N of Dunfermline town.

Rosebank, a village in Dalserf parish, Lanarkshire, on the left bank of the river Clyde, nearly opposite Mauldslielie Castle, 3¼ miles SE of Larkhall.

Rosebank, a mansion in the parish and near the town of Wick, Caithness.

Rosebank, a mansion in Kelso parish, Roxburghshire, near the left bank of the Tweed, a little way E of the town. It was for some time the residence of Sir Walter Scott.

Rosebery, an estate, with a small mansion, in Temple parish, Edinburghshire, on the left side of the river South Esk, 4 miles SW of Gorebridge. The ancient barony of Nicolson, in the quondam parish of Clerkington, it was purchased in 1695 by Archibald Primrose, M.P., and erected into the new barony of Rosebery—a title assumed by him on his elevation to the peerage of Scotland as Viscount in 1700, and Earl in 1703. He sold it in 1712; but the fourth Earl repurchased it in 1821. Its large and ancient mansion-house was demolished in 1805-12. See DALMENY.—*Ord. Sur.*, sh. 32, 1857.

Rosehall, an estate, with a mansion, in Creich parish, Sutherland, 7½ miles SW of Lairg. The mansion stands near the left bank of Cassley Water, 3 furlongs above its influx to the Oikell, and has beautiful, well-wooded grounds. Rosehall gives designation to an Established mission chapel of 1808, a Free church, a public school, and a post and money order office.—*Ord. Sur.*, sh. 102, 1881.

Rosehaugh, an estate in AVOCH parish, Ross and Cromarty, 4 miles WSW of Fortrose. In 1864 it was purchased for £145,000 from Sir James Mackenzie, Bart. of Seatwell, by James Fletcher, Esq., who built a fine new mansion in the Renaissance style, besides effecting vast agricultural improvements. It is now the property of his son, James Douglas Fletcher, Esq. (b. 1857, suc. 1885). See LETHAM GRANGE and pp. 104-107 of *Trans. Highl. and Ag. Soc.* (1877).—*Ord. Sur.*, sh. 84, 1876.

Roseheartly, a fishing village in Pitsligo parish, Aberdeenshire, on the coast of the Moray Firth, 4½ miles W of Fraserburgh, and 16 E by N of Banff. It is said to

date from the 14th century, and to have originated partly with a few crofters, partly with a small body of shipwrecked Danes. In 1681 it was constituted a burgh of barony, and it is now a police burgh, being governed, under the Burgh Police Act of 1892, by a provost, 2 bailies, and 6 commissioners. The 'Lodging House,' on the S side of its square, was built in 1753 for a Dowager Lady Pitsligo; and another old house, the 'Jam,' bears date 1573. Roseheartly has a post office under Fraserburgh, with money order, savings bank, and telegraph departments, a branch of the Union Bank, a good inn, a disused tolbooth, a Free church (1844), a U.P. church (1799), a public school, a masonic lodge, a coastguard station, a fishermen's hall, and a harbour. The herring fishery employs 77 boats, manned by 182 fishermen and boys; and the commerce chiefly consists in the exporting of fish, grain and potatoes, and the importing of coal, salt, and timber. The harbour is capable of admitting vessels of about 100 tons burden; is so situated on an exposed part of the coast as to possess much relative importance; and being the property, not of the superior of the burgh, but of the feuars, has been a principal occasion of the town's prosperity. The commerce of the place, however, is not considerable. Pop. (1841) 750, (1861) 908, (1871) 1206, (1881) 1404, (1891) 1179.—*Ord. Sur.*, sh. 97, 1876.

Roseisle, a hamlet in Duffus parish, Elginshire, ½ mile SSW of Hopeman, the nearest railway station.

Rosemarkie, a parish containing a town of the same name on the Moray Firth coast of Ross and Cromarty. The parish is bounded N by Cromarty parish, SE by the Moray Firth, S by Avoch, and W and NW by Kirk-michael. The boundary on the N is the Burn of Ethie. The extreme length of the parish from NE to SW is about 6 miles, the average breadth about 2, and the area 6980-332 acres, including 298-551 acres of foreshore, 0-130 of tidal water, and 6-584 of water. The coast lies along the upper part of the Moray Firth, the mouth of the Burn of Ethie being 1¼ mile SW of the entrance to the Cromarty Firth; and at the SW end the promontory of Chanonry Ness projects 1½ mile into the Moray Firth, and from the point, on which there is a lighthouse, a ferry-boat crosses the Firth to Fort George (1 mile). To the N of the point is the fine sweep of the Bay of Rosemarkie, with its sandy beach, affording excellent facilities for bathing. To the NE of this the coast is bold, rocky, and romantic, and from the sea-board the surface rises, in some places slowly, in others more abruptly, to the NW, till, along the boundary, it merges in the lower slopes of the long broad table-land noticed under ARDMEANACH. From the high ground (242 feet) to the N of Rosemarkie Bay a very fine view is to be obtained of the upper reaches and S coast of the Moray Firth. The soil on the low grounds adjacent to the coast is mostly a fine black mould overlying gravel, and in most places, particularly on the beautiful flat about the town of Rosemarkie, is in a state of high cultivation; on the higher ground the quality is poorer and the subsoil is clay. The rocks of the sea-cliffs are principally gneiss, and those of the interior all the way to the north-western boundary are Old Red Sandstone. Along the shore, on the NE, there is a patch of richly fossiliferous shale, clay, and limestone of Jurassic age, which was one of Hugh Miller's favourite haunts. The drainage in the N is carried off by Ethie Burn, and in the S by the Burn of Rosemarkie and the smaller streams that flow to it. The Burn of Ethie has two small cascades, and the lower part of its course is through a deep, rocky, and singularly picturesque ravine, which has been admirably described by Hugh Miller in his *Old Red Sandstone*. The course of the Burn of Rosemarkie is noted for the sections of the boulder clay. 'Rosemarkie,' says Hugh Miller in his *Rambles of a Geologist*, 'with its long narrow valley and its red abrupt scours, is chiefly interesting to the geologist for its vast beds of the boulder clay. I am acquainted with no other locality in the kingdom where this deposit is hollowed into ravines so profound, or presents precipices so imposing and lofty.' One of the

most interesting sections is the 'Kaes Craig,' immediately behind the town. The fame of the 'wondrous wizard Michael Scott' must have penetrated even thus far north, for we find his name associated by tradition with the curious points which, jutting out here from both sides of the firth at Chanonry Ness and Ardersier Point, would, were they not a mile awry, completely cut off the upper reaches of the Moray Firth from the sea. 'Michael had called up the hosts of Faery to erect the cathedral of Elgin and the chanonry kirk of Fortrose, which they completed from foundation to ridge, each in a single night—committing, in their hurry, merely the slight mistake of locating the building intended for Elgin in Fortrose, and that intended for Fortrose in Elgin; but, their work over and done, and when the magician had no further use for them, they absolutely refused to be *laid*, and came thronging round him clamouring for more employment. Fearing lest he should be torn in pieces—a catastrophe which has not unfrequently happened in such circumstances in the olden time, and of which those recent philanthropists who engage themselves in finding work for the unemployed, may have perhaps entertained some little dread in our own days—he got rid of them for the time by setting them off in a body to run a mound across the Moray Firth from Fortrose to Ardersier. Toiling hard in the evening of a moonlight night, they had proceeded greatly more than two-thirds towards the completion of the undertaking, when a luckless Highlander passing by bade God-speed the work, and, by thus breaking the charm, arrested at once and for ever the construction of the mound, and saved the navigation of Inverness.' Such at least is the Ross-shire form of the legend: the one obtaining on the southern shore of the firth is somewhat different. The latter tells how the Moray fairies, envious of the magnificent Chanonry Kirk originally built at Fortrose, and desiring to have it in their own district, formed one evening a road across the firth, and taking up Fortrose cathedral, transported it, without displacing one stone from another, to Elgin, and carried Elgin cathedral to Fortrose—all before morning, so that by daybreak the only traces of their night's work were the causeways of stones and sand jutting out into the firth where the road had been constructed, and the portions of this still remaining form the points. Chanonry Ness was, however, the scene of an act of pious zeal which must be considered as entirely compensating for anything 'uncanny' that may exist in connection with its origin. Episcopacy seems to have had a considerable hold in the neighbourhood, and the service-book which the Bishop of Ross had introduced about 1636 had been used 'peaceably' within the cathedral at Fortrose until the 11th of March 1638. On that day, however, 'about the ringing of the first bell, but before the last bell was rung,' a party of schoolboys, rushing into the church, carried off all the service-books, and, having procured materials for kindling a fire, proceeded to the Ness, intending to make a bonfire of the whole spoil. A sudden shower having, however, extinguished the flames, they tore the books all in pieces and threw the fragments into the sea. The Bishop preached, but he seems to have been much startled at the proceeding, for Spalding, who tells the story, says that 'He was not longsum but schort at sermon, and thair-after haistellie gois to hors and spak with the bischop of Morray, syne spak with the Marques of Huntlie, and privately disgyssit he rode south, and to the King gois he directlie; ane veray bussie man thoct to be in bringing in thir service bookis, and thairfor durst not for feir of his lyf returne to Scotland agane.' The old name of Rosemarkie was Rosemarkyne, the original Celtic form seeming to have been *Rosmbaircind*, and a monastery of Columban monks appears to have been established here about the middle of the 6th century under Lug-haidh (Lugadius) or Moluoc, bishop of Lismore, who died, according to the *Chronicon Hyense*, in 592. A well near the seashore to the N is also associated with the name of St Kennet. About the 8th century Curitan, better known as Albanus Kiritinus or Curitan, or

Bonifacius, who seems to have been a bishop of the Irish branch of the Celtic church which had conformed to Rome, came to Scotland, and is said to have founded a church at Rosemarkie about 716, a circumstance which led David I., when he founded the bishopric of Ross in 1124, to make this the seat of the see, and hence, subsequently, the cathedral was built at Fortrose. The old building of Bonifacius is said to have been about the ground now occupied by the parish church. A sculptured stone found on the site of the present church is now carefully set up at the end of the church. It was found in 1821, but as it long lay uncared for, one side has been slightly worn by passing feet. The symbols are of the usual elaborate character, and there are some cup-shaped ornaments that are not very common. The chief residences are Flowerburn House and Raddery House. The parish contains Rosemarkie and Chanonry, which, though each possessing a separate charter, conjointly form the burgh of Fortrose, which has been separately noticed. Rosemarkie has a post office of its own under Fortrose. The Black Isle combination poorhouse is on the shore of Rosemarkie Bay, half-way out Chanonry Ness.

The parish is in the presbytery of Chanonry and synod of Ross, and the living is worth £245 a year. Three incumbents of the name of Wood—father, son, and grandson—were ministers of the parish for over 150 years, the last of them dying in 1874. The parish church was erected in 1821-22. The other churches are noticed under Fortrose. Under the School Board, Rosemarkie public school, with accommodation for 130 pupils, has an average attendance of about 70, and a grant of nearly £65. The parish is traversed by the main coast road from Inverness northwards, and partly by the Black Isle branch of the Highland railway, opened in 1894 and 13½ miles long, which leaves the main line at Muir of Ord and terminates at Fortrose. Pop. of civil parish (1755) 1140, (1793) 1262, (1831) 1799, (1861) 1545, (1871) 1441, (1881) 1357, (1891) 1343, of whom 637 were males and 840 females. Of this total 706 were in the ecclesiastical parish, 871 in the parliamentary burgh of Fortrose, 980 in the royal burgh, and 368 in the Rosemarkie portion, as against 314 in the Rosemarkie part in 1821.—*Ord. Sur.*, shs. 84, 94, 1876-78.

Rosemount, a mansion in Symington parish, Ayrshire, 2 miles NE of Monkton station on the Irvine and Ayr section of the Glasgow and South-Western railway. A large two-storey edifice, it was rebuilt by Dr William Fullartoun about 1770.—*Ord. Sur.*, sh. 14, 1863. See A. H. Millar's *Castles and Mansions of Ayrshire* (Edinb. 1885).

Rosemount, an estate, with a mansion, in Montrose parish, Forfarshire, 1 mile NNW of Dubton station.

Roseneath. See ROSNEATH.

Rosetta, a mansion in Peebles parish, Peeblesshire, 1 mile NNW of Peebles town. It was built by Thomas Young, M.D., who changed its former name, Acrefield, to Rosetta, in remembrance of his service in Egypt under Sir Ralph Abercromby in 1801.—*Ord. Sur.*, sh. 24, 1864.

Roswell, a village in Lasswade parish, Edinburghshire, 5 furlongs S of Hawthornden station, and 4 miles SW of Dalkeith. It is largely inhabited by colliers employed in neighbouring coal mines; and it has a post office, with money order and savings bank departments, an established church, a Roman Catholic chapel, St Matthew (1889; 250 sittings), a public school, and a commodious hall. The church (1872; 350 sittings) is a handsome edifice, and was raised to *quoad sacra* status in 1874. Pop. of village (1871) 790, (1881) 1394, (1891) 1074; of *q. s.* parish (1881) 2129, (1891) 1942.—*Ord. Sur.*, sh. 32, 1857.

Roshk, Loch. See ROSQUE.

Rosie. See GLENROSIE.

Roslin (Brit. *ross*, 'a point,' and *lynn*, 'a waterfall,' the name often and perhaps more correctly spelled Rosslyn), a *quoad sacra* parish containing a village, chapel, and castle of the same name, in the civil parish of Lasswade, in the county of Edinburgh. The village, which stands on high ground near the NW bank of the

river North Esk, has in its neighbourhood three railway stations on different sections of the North British railway system, and each of them distant about 10 miles from Edinburgh. The nearest, Roslin, on the Edinburgh and Glencorse branch, is close to the village and the romantic glen that connects it with Hawthornden; Rosslyn Castle, on the Edinburgh and Penicuik branch, is distant about 1½ mile; and Rosslynlee, on the Edinburgh and Peebles line, about 1½ mile. During the summer months, also, omnibuses ply from Edinburgh. By road the village is about 6½ miles S of Edinburgh; and from Polton station, 7 miles SSE of Edinburgh, a public footpath winds through the beautifully wooded glen* of the North Esk to the village, the distance being about 2½ miles. About 1440, under the fostering protection of William St Clair, Prince of Orkney, Duke of Oldenburg, and having a string of other titles that it would weary even a Spaniard to repeat, the place is said to have stood third in Scotland for importance. In 1456 it received from James II. a charter, erecting it into a burgh of barony, with right to a market cross, a weekly market, and an annual fair, and in 1622 its rights were confirmed by James VI., and again by King Charles I. It afterwards declined and became merely a small rural village, a condition from which the attractions of the chapel, the beauty of the surrounding district, and the establishment of industries in the neighbourhood have again raised it. It has a post office, with money order, savings bank, and telegraph departments, a hotel, a police station, a *quoad sacra* parish church, a Free church, a public hall, and a public school, and Episcopal services are held in the old chapel. In the neighbourhood are a gunpowder manufactory and an extensive carpet work. The parochial church was built in 1827 as a chapel of ease. The Free church, to the S of the village, was built in 1880-81 at a cost of £1600, and contains over 500 sittings. One of the inns dates from 1660, and is that where Dr Johnson and Boswell 'dined and drank tea' on their way to Penicuik House. The bridge over the North Esk, to the SW of the village, with malleable iron lattice girders in two spans each 64 feet wide, was constructed in 1871. To the WSW of the chapel is an old burying-ground, and near it a well, called St Matthew's Well. There seems to have been in this churchyard a chapel dedicated to St Matthew, and of older date than the present chapel. The old water supply having been found contaminated, a water and drainage district was formed in 1883, and a new supply got from the Moorfoot pipe of the Edinburgh Water Trust near Rosslynlee station. The total cost of operations was about £1600, and the maximum supply is 20,000 gallons per day. Roslin gives name to one of the battles of the Scottish War of Independence, in which, 24 Feb. 1303, an English army under Sir Ralph de Manton encamped on the moor of Roslin, to the N, in three divisions, was surprised and defeated by a Scottish force mustered in the uplands of Peebles and Lanark. Fordun tells how John Comyn and Simon Fraser 'with their abettors came briskly through from Biggar to Roslyn in one night with some chosen men, who chose rather death before unworthy subjection to the English nation,' and defeated the first line, but that while they were dividing the spoil, 'another line straightway appeared in battle array; so the Scots, on seeing it, slaughtered their prisoners and armed their own vassals with the spoils of the slain; then putting away their jaded horses, and taking stronger ones, they fearlessly hastened to the fray,' and overcame the new force. Hardly, however, had this been done when 'there appeared a third, mightier than the former, and more choice in their harness. The Scots were thunder-struck at the sight of them; and being both fagged out in manifold ways—by the fatigues of travelling, watching, and want of food—and also sore distressed by the endless toil of fighting, began to be weary and to quail in spirit,' but plucking up courage, and cheered by the

* The scenery in the den is very pretty. 'I never,' says Dorothy Wordsworth, 'passed through a more delicious dell than the Glen of Roslin, though the water of the stream is dingy and muddy.'

patriotic words of their leaders, they killed their fresh prisoners, and 'by the power not of man but of God subdued their foes, and gained a happy and gladsome victory.' How far the great slaughter of prisoners is true may be doubted, but the English chroniclers admit the battle, and that a disaster befel the English arms. Pop. of village (1861) 467, (1871) 511, (1881) 611, (1891) 730, of whom 375 were males. Houses inhabited (1891) 138, vacant 2, building 6. The *quoad sacra* parish, comprising the district round the village, and originally constituted in 1835, is in the presbytery of Dalkeith and synod of Lothian and Tweeddale. The minister's stipend is £160 with manse. Pop. (1871) 1571, (1881) 1476, (1891) 1630.

The place gives the title of Earl of Rosslyn (1801) in the peerage of the United Kingdom to the family of St Clair-Erskine, and the present and fifth Earl succeeded in 1890. He has his seat at DYSART House, in Fife. William de St Clair, son of Waldernus, Count de St Clair, came to England with William the Conqueror, and either he or one of his descendants is said to have settled here as early as 1100, but though this is doubtful, certainly a William de St Clair possessed the barony of Rosslyn in the time of David I., and his descendants added Cousland, Pentland, Cardaine, and other lands to their original domains, and in the 13th century stood at the head of the baronage of Midlothian. By the marriage of the eighth baron from King David's time, with Isabel, one of the daughters and co-heiresses of Malise, Earl of Stratherne, Caithness, and Orkney, his son Henry became Earl of Orkney, and in 1379 obtained a recognition of his title from Hakon VI., King of Norway. The connection of the family with the Orkney Islands has been noticed in the article dealing with them. The third Earl of Orkney, as has been there noticed, was created Earl of Caithness in 1455, and resigned the title of Orkney in 1470. He had three sons, of whom William, the eldest, by his first wife—Lady Margaret Douglas, eldest daughter of Archibald, fourth Earl of Douglas—inherited the title of Baron Sinclair, and was, through an heiress who in 1659 married John Sinclair of Herdmanston, in Haddingtonshire, the ancestor of the St Clairs, Lords Sinclair of Herdmanston. In favour of the second son—the eldest by a second marriage, in 1476, with Marjory, daughter of Alexander Sutherland of Dunbeath—his father resigned the title of Earl of Caithness; and the third, Oliver, continued the line of the St Clairs of Roslin. Sir Oliver's right was disputed by the eldest son, Sir William, who, however, resigned all claim to Roslin in 1482, on receiving Cousland, Ravenscraig Castle, Dubbo, Carberry, and Wilston. The last heir male of the Roslin branch died in 1778, but he had previously, in 1736, sold the estate to the Hon. James St Clair—better known as General St Clair—second son of Lord St Clair of Herdmanston. The General was succeeded by his nephew, Colonel James Paterson, on whose death without issue, in 1789, the property devolved on Sir James Erskine, Bart., second Earl of Rosslyn, grandson of the Hon. Catherine St Clair, General St Clair's second eldest sister, who married Sir John Erskine, Bart. of Alva. The present title was granted in 1801 to Alexander Wedderburn, Baron Loughborough of Loughborough (1795), Lord Chancellor from 1793 to 1801; and on his death in 1805, without issue, the titles passed to his nephew, Sir James St Clair-Erskine, who represented a collateral branch of the old family, and founded the present line. The third Earl of Orkney had conferred on him by King James II., in 1455, the office of Grand Master Mason of Scotland, which remained hereditary in the family till the appointment was surrendered to the craft by the last heir male of line in 1736. Of the Sir William who lived in Bruce's time, a legend is told that he added Pentland to his lands by the fleetness of two hounds. A white deer had often on the Pentland Hills balked the royal hounds, and on the king's asking one day whether any of his nobles had swifter dogs than his own, Sir William St Clair offered to wager

his head that his two dogs, Help and Hold, would kill the deer before it could cross a certain burn. Bruce promised at once to give the forest of Pentland to the knight if he kept his promise. The deer was killed exactly at the burn, and so Sir William acquired the lands of Logan House, Kirkton, and Carnraig, and as, at a critical moment in the chase, he had invoked the aid of St Katherine, he erected the chapel of St Katherine in the Hopes on the Pentland Hills, now buried beneath the waters of the Compensation Pond. In connection with the event the rhyme addressed by Douglas to his dogs has been preserved:—

'Help! Hold! gin ye may,
Or Rosslyn tynes his head this day.'

The seat here was Roslin Castle, which occupies an almost isolated rock to the SSE of the village, and in a most romantic position, overhanging a beautiful reach of the glen. The site is completely cut off from the bank behind by a deep transverse gully, across which a narrow single arch bridge affords the only access to the castle. The situation, though pleasant, seems but ill chosen for a place of strength, for it is commanded by heights which press closely upon it, and look almost right down upon the tops of its chimneys. At what time the original castle was built is not known. An early castle seems to have been on a different site, near the present chapel; but probably the oldest part of the present building, a peel tower to the SE of the entrance, was erected by the Sir William St Clair who was one of the band of knights who set out with Bruce's heart to Palestine, and who fell fighting against the Moors in 1330. The great SW or donjon tower was added about 60 years later by Henry, the second Earl of Orkney, and large additions, showing French features, were made by his successor, the third Earl, who kept his semi-regal court here, and was, according to Father Hay, 'royally served at his own table, in vessels of gold and silver; Lord Dirleton being his master-household, Lord Borthwick his cup-bearer, and Lord Fleming his carver. He had his halls and other apartments richly adorned with embroidered hangings. His princess, Elizabeth Douglas, was served by 75 gentlewomen, whereof 53 were daughters of noblemen, all clothed in velvet and silks, with their chains of gold and other ornaments, and was attended by 200 riding gentlemen in all journies, and if it happened to be dark when she went to Edinburgh, where her lodgings were at the foot of Black Fryar's Wynd, 80 lighted torches were carried before her.' For such magnificence, a magnificent dwelling must have been needed, but as the Father did not write till nearly 250 years after these events, he may have drawn somewhat on his imagination. Indeed, with all her grandeur, the princess does not seem to have been at all particular on some points, for we find that she kept dogs, of which she was very fond, in her bedroom, and even allowed them to whelp there, a circumstance that indirectly led to the destruction by fire of the greater part of the castle about 1452. It must have been repaired again very rapidly, for in 1455 we find it selected as the prison of Sir William Hamilton, who had been concerned in the Douglas rebellion. In 1544 it was almost totally destroyed by the English, during Hertford's invasion, and being partially restored after 1580, was again injured in 1650 by General Monk, who plundered it after battering down the NW side. It was restored about 1682, but was again damaged by a mob in 1688; and Cardonell's picture a century later, and Grose's in 1790, show it utterly dilapidated—a mere rueful apology for the once grand fabric, whose name of Roslin Castle is so intimately associated with ballad and song. The more modern portion to the SE is still inhabited. Over the fire-place of the great hall are the arms of Sir William Sinclair, who carried out the restorations at the end of the 16th century, and those of his wife, while his son's initials and the date 1622 are on the lintel of the door leading to the great staircase. The ceiling of the dining-room is also richly

ornamented, and has the Rosslyn arms in the centre and the date 1622. The oldest portion of the old building is the triple tier of vaulted chambers on the NW, partly cut out of the rock. Some of them have been dungeons, others sleeping rooms for retainers, and one has evidently been the kitchen. Below is a garden, now noted for the excellence of its strawberries.

In the 16th century, and the beginning of the 17th, Roslin was a favourite haunt of the Gypsies, whose introduction into the neighbourhood is attributed to Sir William St Clair, Lord Justice General, who in 1559, 'returning from Edinburgh to Roslin, delivered once an Egyptian from the gibbet on the burgh muir; upon which account the whole body of Gypsies were of old accustomed to gather in the stanks* of Roslin every year, where they acted several plays during the months of May and June. There are two towers which were allowed them for their residence, the one called Robin Hood, the other Little John.' A body of them seem subsequently to have settled down in the neighbourhood, for in 1628 the privy council ordered the Gypsies to be expelled from Roslin, 'where they have a peaceable abode, as if they were lawful subjects.'

Roslin Chapel stands to the SE of the village, on the brow of the high ground overlooking the glen of the North Esk. The eminence which it occupies is called College Hill. The name chapel which is popularly given to it is incorrect, for the building is simply all that was ever constructed—the chancel and Lady chapel—of what was intended to be the collegiate church of Rosslyn, erected on a cruciform plan after the usual manner of such buildings. Although the foundations of the whole seem to have been laid—those of the nave having been dug up about the beginning of the 19th century—yet the portion actually built never got beyond the chancel and the eastern walls of the transepts. This part is 69 feet 8 inches long, 35 feet broad, and 41 feet 9 inches high to the top of the arched roof. The central aisle with clerestory is 15 feet wide, and on either side of it are aisles of five bays. At the E end is the Lady chapel, much lower in height than the rest of the building—the arched roof being only 15 feet from the pavement—and separated from it by a double row of three pillars. The floor is one step higher than in the other parts of the building, and the four altars seem to have been dedicated to the Virgin Mary, St Matthew, St Andrew, and St Peter. Reached by a flight of stairs in the SE corner, and stretching away to the E, is what is known as the crypt, and which 'has been a subject of sad puzzling to antiquarian brains. Was it a chapel, as generally asserted? Under the eastern window there was the stone altar; there is the piscina and the ambry for the sacramental plate—but what else? A fire-place (which has its chimney), a goodly array of closets, a doorway, once communicating with the outside, and a second door, leading to an inner room or rooms. Its domestic appurtenances clearly show it to have been the house of the priestly custodian of the chapel, and the ecclesiastical types first named were for his private meditations; and thus the puzzle ceases,' so at least says Dr Hill Burton, though there are certain difficulties in the way still, as the crypt is contemporaneous with the design for a complete church. Though used as a sacristy afterwards, it seems more probable that it was originally a chapel with a small vestry on the NE and an entrance apartment on the SE. It is 15 feet high, 14 wide, and 36 long, and has a barrel roof. It is partly subterranean, but owing to the slope of the ground on which the chapel stands, the E end is above the surface, and has a window. The whole building is remarkable for the peculiarities of its style, and—except the crypt, which is plain—for the richness of its ornament. It is often, from the unique nature of the design, considered to have been built by foreign masons, but it has been pointed out by Dr Daniel Wilson that 'many of the most remarkable

* Stank generally means a pool or a ditch, but in this and other places the meaning must be flat, perhaps even marshy, ground near a stream.

features of Roslin Chapel are derived from the prevailing models of the period [when it was erected], though carried to an exuberant excess. The circular doorway and segmental porch, the dark vaulted roof, and much of the window tracery are all common to the style. Even the singular arrangement of its retro-choir, with a clustered pillar terminating the vista of the central aisle, is nearly a repetition of that of the Cathedral of St Mungo at Glasgow. Various portions of other edifices will also be found to furnish examples of arrangement and details corresponding with those of Roslin, as in the doorway of the south porch and other features of St Michael's, Linlithgow, and also in some parts of the beautiful ruined church of St Bridget, Douglas. It is altogether a mistake to regard the singularly interesting church at Roslin, which even the critic enjoys while he condemns, as an exotic produced by foreign skill. Its counterparts will be more easily found in Scotland than in any other part of Europe.' Both in tracery and arches, forms abandoned more than 100 years before re-appear, and where contemporary forms are found, the architect seems to have preferred the baronial to the ordinary ecclesiastical style. 'Its squat stumpy outline,' says Dr Hill Burton, 'is a great contrast to the slender gracefulness of its rival at Melrose. All the beauties of Roslyn are superinduced on the design in the shape of mouldings and incrustations, and there is little to gratify the eye in its purely structural feature, unless it be the effect of aerial loftiness imparted to the central vaulting—a character to which its rich clusters of starry incrustations so well adapt themselves.' Another contrast to Melrose is the character of the workmanship, which has here no reference to the unseen, all fine works being in conspicuous positions, and the ornament stopping whenever it turns into an out-of-the-way corner. Dorothy Wordsworth had, for a wonder, no fault to find with Roslin, and even thought the architecture 'exquisitely beautiful,' while her brother has recorded his feelings in the sonnet, *Composed in Roslin Chapel*. On each side there are five aisle and clerestory windows, with seven buttresses, surmounted by crocketed pinnacles, and having niches for statues, but whether these were ever filled is doubtful—probably not, in spite of the many images shown in the views of Slezer and Father Hay. From the buttresses graceful and richly carved flying arches pass up to the clerestory wall, and there is a door on each side near the W end. In the interior the centre aisle is cut off from the side aisles by fourteen clustered pillars disposed in two rows, and though only 8 feet high, exquisitely rich in workmanship, and with capitals adorned with foliage and curiously wrought figures, among which may be mentioned thirteen figures of angels playing various musical instruments, including the bagpipes (!), Samson slaying the lion, the prodigal son feeding swine, and the crucifixion. The carvings on many of the brackets are also highly interesting. Notwithstanding the number of figure sculptures, they are far surpassed by the many representations of plants, including the harts-tongue fern, the curly-kail, oak leaves, etc., and almost the only ornament which is repeated more than once is the rose, probably with some idea of connection with the name of the place. The vaulted roof of the centre aisle is divided into five compartments, each with different flowers sculptured on them in check fashion. From the pillars flat arches—to use a very absurd expression—pass to the side walls, and these some delight to point out as marvels of strength, from their ability to support the weight of the roof above. The truth is, however, that there is a low-crowned arch over each, and that all the level part has to support its own weight. All these are richly carved, one of the designs being a fox carrying off a goose, which a pursuing farmer endeavours to rescue; another, Samson pulling down the house of the Philistines; another, the Dance of Death, with figures of a king, a courtier, a cardinal, a bishop, a lady looking into a mirror, an abbot, an abbot, a farmer, a husband and wife, a child, a sportsman, a gardener, a carpenter,

and a ploughman; another, a bishop in full pontificals; another, the seven deadly sins, represented by the proud Pharisee, the drunkard, the careless shepherd, the rich fool, the miser, and the sinful lovers, while the devil in the dragon's mouth stretches out his claws for his prey; another, the cardinal virtues—clothing the naked, leading the blind, visiting the sick, feeding the hungry, comforting the fatherless, visiting the prisoner, and burying the dead; another, the inscription in Lombardic letters, 'Forte est vinum, fortior est rex, fortiores sunt mulieres; super omnia vincet veritas,' a quotation from Esdras. Letters on the N clerestory wall give the initial letters of 'William Lord Sinclair, fundit yis College ye zeir of God mcccccl.' The decoration of the Lady chapel is very rich; the roof is groined, and from the keystones of the arches prominent and beautifully carved bosses project. In the SE corner is the finely sculptured Prentice Pillar. The ornaments upon the capital are Abraham offering up Isaac and a figure playing a bagpipe. From the top four spirals of flowers and foliage wind down the clustered shaft, while on the base are a number of dragons twisted together and cut in very high relief. The story whence the pillar takes its name is the well-known myth of the apprentice who proved a better workman than his master. The latter being unable to execute the design of this pillar from the plans furnished to him, had to go to Rome to examine a similar one there, and on his return found that his apprentice had, in his absence, overcome all difficulties and finished the work. Instead of being delighted at having trained such a workman, he was so overcome by jealousy, that he immediately killed the apprentice with a blow of his hammer and thereafter paid the penalty of his own misdeed. Three heads, supposed to represent those of the apprentice, his weeping mother, and his wicked master, were long pointed out in the SW part of the chapel; and, to emphasise matters, the wound in the head of the first was marked with red paint. In connection with the story, and perhaps even its recent origin, it is noteworthy that Slezer, writing about 1693, calls it the Prince's pillar, as if named in honour of the founder of the chapel; and Defoe, writing in 1723, terms it the Princess's pillar. The western wall of the chapel is disfigured by a recently erected baptistry and organ gallery, such a method of dealing with an old building being in very bad taste. Some of the windows are filled with stained glass.

The burial-place of the St Clair family is in a vault underneath the chapel, the entrance being under a large flagstone between the N wall and the third and fourth pillars. Here ten barons of the line were buried in full armour, that being always the mode of interment prior to 1650, when the Sir William St Clair of the time was, on his death, buried in a coffin 'against the sentiments of the Duke of York,' afterwards James VII., 'who was then in Scotland, and several other persons well versed in antiquity, to whom,' however, his wife, 'Jean Spottiswoode, grandniece of Archbishop Spottiswoode, would not hearken, thinking it beggarly to be buried in that manner.' The vastness of the sum of money which she threw away upon the obsequies of her husband was the cause of the sumptuary act for 'restraining the exorbitant expenses of marriages, baptisms, and burials' which was passed by the following parliament in 1681. The burial of the barons in full armour, and the belief that on the night before the death of any of them the chapel has the appearance of being in flames, have been finely used by Sir Walter Scott in his ballad of *Rosabelle*; and in Billings' *Baronial and Ecclesiastical Antiquities of Scotland* Dr Hill Burton gives a graphic account of such a phenomenon as once seen here by himself. A monument of early date is said to be that of the founder, or, according to others, that of the Sir William who was contemporary with Bruce, and whose hunting exploit has been already noticed. If the latter be the case, it must have been brought here from some older burying-ground, but it is more probable that it is the memorial of the Earl of Caithness who

was killed at Flodden. Another monument is in memory of George, Earl of Caithness, who died in 1582. The church was founded in 1450* by Sir William St Clair, the seventh of his name, baron of Roslin and Earl or Prince of Orkney. It was dedicated to St Matthew, and founded for a provost, six prebendaries, and two choristers. 'His adge creeping on him,' says Father Hay, 'to the end that he might not seem altogether unthankful to God for the benefices he received from him, it came in his mind to build a house for God's service, of most curious worke; the which that it might be done with greater glory and splendor, he caused artificers to be brought from other regions and forraigne kingdomes, and caused dayly to be abundance of all kinde of workemen present: as masons, carpenters, smiths, barrowmen, and quarriers, with others. The foundation of this rare worke he caused to be laid in the year of our Lord 1446; and to the end the worke might be the more rare: first he caused the draughts to be drawn upon Eastland boards, and made the carpenters to carve them according to the draughts thereon, and then gave them for patterns to the masons that they might thereby cut the like in stone.' There is a tradition that he procured the designs from Rome, but this, as has been already indicated, does not seem to be the case, and he was probably himself the source of the whole design, while the pains he took to procure good workmen—giving to each mason ten pounds a year, to each master-mason twenty pounds, to both an extent of land proportionate to the ability they displayed, and to other artificers a commensurate extent of compensation and encouragement—attracted to the place all the best workmen in Scotland as well as from parts of the Continent. If he was mainly his own architect, the preference for baronial types is explained by the experience acquired in connection with the castle, and his architectural taste is said to have been the cause of his advancement by James II. to the dignity of Grand Master Mason. He held also other high offices, having been in 1486 Admiral of the Fleet—in which capacity he conveyed the Princess Margaret to France—and from 1454 to 1458 chancellor of the kingdom. The crypt was founded by the Earl's first wife, the daughter of the Earl of Douglas. Earl William endowed the new church with a considerable amount of land and various revenues, and spent large sums on the building, but in spite of his great efforts and vast expenditure, even the small portion now remaining seems to have been left unfinished, and to have been carried on and completed by the founder's third son, Sir Oliver St Clair. Many of the succeeding harons made additions to the endowment, and in a grant by Sir William St Clair, in 1523, of some lands in the vicinity for dwelling-houses, gardens, and other accommodation for the provost and prebendaries, mention is made of the four altars already noticed. At the Reformation the lands and revenues belonging to the church were virtually taken away, and in 1572 they were relinquished by a formal deed of resignation. The chapel does not, however, seem to have suffered much violence till 1688, when a mob did a good deal of mischief. It remained uncared for, and gradually becoming ruinous, till, in the middle of the 18th century, General St Clair glazed the windows, relaid the floor, renewed the roof, and built the wall round about. Further repairs were executed by the first Earl of Roslyn, and again by the third Earl, who expended £3000 principally in renewing and retouching the carvings of the Lady chapel, a work said to have been suggested by the Queen, who visited the chapel 14 Sept. 1842. Since 1862, services in connection with the Scottish Episcopal Church have been held in it every Sunday.

Rosneath, a village and a parish of W Dumbartonshire. The village lies near the western shore of the Gare Loch, where a small triangular promontory projects to within 3 furlongs of the opposite point of Row, 5½ miles S by E of Garelochhead, 2½ W by N of Helensburgh, and 5 NNW of Greenock. A little place, serving rather as a centre of communication to the sprinkling of residences over miles in the neighbourhood, than as a seat of trade or of any considerable population, it adjoins a convenient wrought-iron pier erected by the Duke of Argyll in 1893, at which steamers call several times a day; and it has an inn and a post office, with money order, savings bank, and telegraph departments. Carlyle in 1817, when schoolmaster at Kirkcaldy, spent several days here when on a walking tour. There is an ancient avenue of yew trees, some of them measuring 12 feet in girth.

The parish, containing also the police burgh of COVE and KILCREGGAN and the village of COULPORT, forms a peninsula, bounded N by Row, E by the Gare Loch, S by the Firth of Clyde, and W and NW by Loch Long. Its utmost length, from N to S, is 7 miles; its breadth varies between 1½ and 3½ miles; and its area is 13½ square miles or 8819½ acres, of which 321 are foreshore, and 37½ water. The main part of its surface is a continuous ridge, which, rising immediately from the shores of the Gare Loch and Loch Long, and extending from the isthmus to within 1 mile of the Firth of Clyde, attains 717 feet at Tomnahara or Cnoc na h-Airidhe, 645 to the E of Peaton, 651 at Clach Mackenny, and 414 at the Gallowhill. The greater part of the ridge is a tableland, waste or pastoral, with swells commanding gorgeous views of the hill-flanks of the Clyde, together with the northern screen of the Gare Loch and 'Argyll's Bowling Green.' The southern extremity of the parish is on the whole low, but beautifully variegated, comprising a dingle from side to side, some fine swells and level fields, and the richly wooded grounds of Rosneath Castle, and terminating in a beautiful small point which projects south-eastward into the Firth of Clyde. The coast is partly sandy, partly rocky. The skirts of the slopes along the Gare Loch, and the parts which look southward down the Clyde, are so studded with villas and cottages ornées, as to wear a brilliant and embellished aspect. Numerous brooks run down the sides of the ridge, swollen in rainy weather into impetuous torrents, and showing in the lower parts of their course many fine cascades. CAMPSAIL or Rosneath Bay, in the lower part of the Gare Loch, has very beautiful shores, and affords one of the best-sheltered anchorages on the W coast of Scotland. Here the Queen found shelter on a stormy night in 1848 when on a visit to the Clyde. Clay, passing sometimes into chlorite slate or mica slate, is the prevailing rock; but Old Red Sandstone or its conglomerate occurs in the SE. The soil had long a factitious fame for fatality to rats. Nearly 2500 acres are arable ground or artificial pasture; some 1600 acres are under natural or planted wood; and most of the rest is uncultivated moorland. An ancient castle stood near the shore of Campsail Bay, and seems to have served for centuries merely as a place of strength, but was fitted up about the year 1630 by the Marquis of Argyll as a subsidiary residence to the castle of Inveraray. It underwent great changes, and was eventually destroyed by fire in 1802. A new mansion, on a spot at a little distance from the old site, was erected in 1803-5 according to a splendid design by J. Bonomi of London. This is the present ducal palace of Rosneath, and forms along with its park a conspicuous feature of the parish, or rather of the general landscape in which the southern part of the parish lies. The edifice, which has never been finished, is in the modern Italian style, with combinations of Greek. One principal front looks to the N, and is adorned with a magnificent portico, which

resembles in its style the Roman Ionic, and projects so far as to admit of a carriage-way within it. Another principal front looks to the S, but is less marked in feature. A circular tower rises in the centre of the edifice, and is crowned by a balustrade, which commands a brilliant panoramic view. Blind Harry and tradition associate the name of the patriot Wallace with Rosneath, but in tales too legendary to admit of discrimination between fact and fiction. A precipitous rock to the N of Rosneath Castle bears the name of Wallace's Leap. Many of the persecuted Covenanters, in the days of the Stuarts, found shelter in the parish under the protection of the friendly Argyll. Respecting even the noted Balfour of Burley, the late Mr Story writes in the *New Statistical Account* that 'there are strong presumptions that he found an asylum in the same peninsula, and that, having assumed the name of Salter, his descendants continued here for several generations.' Among the ministers of Rosneath have been the mathematician, Prof. Matthew Stewart (1717-84), the father of Dugald Stewart; Robert Story (1790-1859); and his son, Robert Herbert Story, D.D. (b. 1835), professor of church history in the University of Glasgow, and Moderator of the General Assembly in 1894-95. John Anderson, F.R.S. (1726-96), the founder of Anderson's College, Glasgow, was the son of another minister. It may also be noted that the 'picturesque island of Rosneath' is the scene of the closing chapters of the *Heart of Midlothian*. Much has been written as to the etymology of the name *Rosneath*, or *Rosnevyth* according to the old orthography. The first part is clearly the Celtic *ros*, 'a promontory'; and, as to the second, Dr Skene opines that it probably preserves the name of Nevydd, an early bishop in the North, who was slain by the Saxons and Picts. The ancient parish comprehended, besides the peninsula, all the territory which now constitutes Row, the latter having been disjoined in 1635. In the 12th century its church, St Modan's, was a free parsonage, under the patronage of the Earl of Lennox; but in 1225 it was given, with its pertinents, in perpetual alms to the monks of Paisley; and it continued to be maintained by them as a curacy till the Reformation. The peninsula and the adjacent but disjoined district of the ancient parish, together with a portion of land beyond, formed the country of Nevydd, which was granted at a very early date to the noble family of Lennox, and continued in their possession till the latter part of the 15th century. Part of Nevydd, including most of the peninsula, was in 1489 bestowed as a royal gift upon Colin, the first Earl of Argyll, and introduced his powerful family by territorial connection to an influence on the western Lowlands. The Duke of Argyll is the chief of three heritors. Giving off all the *quoad scora* parish of CRAIGROWNE and a portion of that of Garelochhead, Rosneath is in the presbytery of Dumbarton and the synod of Glasgow and Ayr; the living is worth £274. The parish church, built in 1853-95, is a good Gothic edifice, with nave, chancel, transepts, porch, and bellcote. There is also a Free church of Rosneath; and three public schools, Kilcreggan, Peaton, and Rosneath, with respective accommodation for 176, 25, and 150 children, have an average attendance of about 90, 15, and 80, and grants amounting to nearly £70, £30, and £65. Pop. (1891) 2064, of whom 790 were in the ecclesiastical parish.—*Ord. Sur.*, shs. 30, 29, 37, 38, 1866-76. See W. C. Maughan's *Rosneath Past and Present* (Paisley, 1893).

Rosque, Loch, or **Loch a Chroisg**, a beautiful lake of Contin parish, Ross and Cromarty, at the boundary with Gairloch parish, 1 mile W by N of Aucnasheen station on the Dingwall and Skye railway, this being 27½ miles W by S of Dingwall. Lying 508 feet above sea-level, and overhung to the N by Meall a Chaoruinn (2313 feet), it extends 3½ miles east-by-northward, has a maximum breadth of 3¼ furlongs, sends off the Bran towards the Conon, and contains some char and many fine trout.—*Ord. Sur.*, sh. 82, 1882.

Ross. See MORDINGTON.

Ross, an estate, with a mansion, in Hamilton parish, Lanarkshire, between the confluent Avon and Clyde,

1¼ mile E by N of the town of Hamilton. Held from the time of Alexander II. till about 1339 by the monks of Kelso, and afterwards by a branch of the Hamiltons, it now belongs to Thomas Stokes George Hugh Robertson-Aikman, Esq.—*Ord. Sur.*, sh. 23, 1865.

Ross, a peninsula in the SW of Mull island, Argyllshire, forming the Kilvickeon section of Kilmichen parish, and projecting 17¼ miles west-by-southward from the main body of the island. It commences in an isthmus 4½ miles wide, between Loch Buy on the S and the head of Loch Scridain on the N; terminates in a promontory 5½ miles broad, overhanging the Sound of Iona; is pierced, immediately E of the N side of that promontory, by Loch Laithaich; contains the village of BONESSAN; and exhibits, in two places, very remarkable cliff coast scenery, noticed in our articles on ARDTUN and CARSAIG.

Ross. See BORGUE.

Ross or Dingwall Castle. See DINGWALL.

Ross and Cromarty, a great northern Highland county extending across Scotland from the E coast along the upper reaches of the Moray Firth, to the Atlantic on the W coast, beyond the island of Lewis in the Outer Hebrides, and reaching on the west coast of the mainland from Loch Alsh on the S to Loch Enard on the N. By the Local Government (Scotland) Act of 1889 the counties of Ross and Cromarty became 'united for all purposes whatsoever under the name of the County of Ross and Cromarty.' The result of this was to dispose of the various scattered portions of the old county of Cromarty by placing them entirely in the new county of Ross and Cromarty (see CROMARTYSHIRE). The island portion of the county consists of the whole of the N part of the island of Lewis, and a number of smaller islets on the coast of Lewis, as well as on the coast of the mainland portion of the county. The Boundary Commissioners in 1891 made some changes on the boundaries of the county as affected by the adjoining counties of Inverness and Nairn. The parish of Urray, that was partly in Ross and Cromarty and partly in Inverness-shire, was restricted to the portion in the former county, the Inverness-shire portion going to the Inverness-shire parish of Kilmorack. This of itself caused no alteration on the county boundary, but by way of exchange the Ross and Cromarty boundary was extended to include within Urray parish the Tomich detached portion of Kilmorack parish. Another extension of the county took place at Ferintosh, when the parish of Urquhart and Logie-Wester, that was partly in Ross and Cromarty and partly in Nairnshire, was placed wholly in the former county. There were also alterations made on the boundaries of some of the interior parishes, for which, however, see the separate articles throughout the work. The united county is bounded N by E by Sutherlandshire and the Dornoch Firth, E by the Moray Firth, SE and S by Inverness-shire, and W by the Atlantic Ocean. The shape is irregular, but the outline of the mainland portion is roughly fan-shaped. The extreme breadth of this portion from Rudh' Re—at the NW corner of the peninsula between Gair Loch and Loch Ewe—E by N to the extreme point of Tarbet Ness at the entrance to the Dornoch Firth, is 74¾ miles; and the length, from the source of the Oyckell on the N to the S side of the upper end of Glen Shiel on the S, is 66¾ miles. From the island part the mainland is separated by the Minch, 24 miles across the narrowest part, and from the W coast of Lewis, ESE to Tarbet Ness, is 125 miles; while from the Butt of Lewis, SSE to the upper end of Glen Shiel, is 106 miles. It is the third largest county in Scotland, the total land area being 1,976,357 acres. Of this area there are in the islands 445,670 acres, of which 404,166 acres are land, 26,862 are water, and 14,641 are foreshore, while 417,458 acres, including foreshore and water, are in the part in the Hebrides. Of the enormous total of 1,976,357 acres, however, only 141,403 acres were in 1896 under crop, bare fallow, and grass, and 61,034 under planted wood, the rest being natural wood, rough hill grazing, heath, peat, or stony waste.

The county is the fourth least densely populated in Scotland, there being only 25 persons to the square mile. There are 11 inhabited islands, with a population of 27,834. Third of the counties of Scotland as regards area, Ross is twelfth as regards population, and seventeenth as regards valuation.

Starting at the extreme NW corner of the mainland portion at Loch Kirkaig between Loch Inver and Enard Bay, the boundary line passes up the river Kirkaig to Fionn Loch (357 feet); up the centre of this, along the connecting stream, to Loch Veyatie (366); and up the stream flowing into the upper end of this as far as the bend above the small Lochan Fhionnlaidh, where it takes to the ridge of the Cromalt Hills, along the watershed of which it runs by Meall Coir an Lochain (1692) and Meall a Bhuirich (1500) to Meall a Bhuirich Rapaig (1500). From this it turns northward by Meall Chaomuinn (1491 feet) and Cnoc nan Imirean to the SE end of Loch Borrolan (460), at the mouth of Allt an Loin Dhuibh, thence across the loch to the mouth of the burn that enters the N side near Aultnacallagach Inn, up this burn to Lochan Sgeireach, curves irregularly to Luban Croma, and follows to the source the stream that rises in the hollow between the highest top of Breabag (2670) and Sgonnan Mor (2028), whence it strikes up Breabag, passes to the E of the summit near the 2500 contour, and then passes along the N shoulder of the hill (2338), until, in the hollow between Breabag and Ben More Assynt, it reaches the source of the Oykell, and from this point it turns to the S and then to the E, following the river all the way to the Dornoch Firth at Bonar-Bridge, and at Loch Alsh (498) and Kyle of Sutherland passing through the centres of these sheets of water. At the mouth of Glen Einig at Oykell Bridge the line is only 8 miles E of the top of Meall a Bhuirich Rapaig, where it turns to the N, though between the points following the boundary the distance is 24 miles round the long narrow finger-like portion that projects up to Ben More Assynt. From Bonar-Bridge the line passes eastward along the S shore of the Dornoch Firth, then south-westward along the NW shore of the Moray Firth, and thereafter westward along the N shore of the Beaully Firth, till, 2 miles below Beaully, it once more takes to the land on the N side of the river Beaully. From this it curves north-westward to Muir of Ord station, then it passes irregularly westward till it reaches the Allt Goibhre—a tributary of the Orrin—up which it passes through Glen Gowrie to An Gorm-loch (1774 feet), and thence southward to the summit of Carn nam Pollan (2778). It then strikes south-westward and then westward by the Allt na Criche back to the Orrin, which it follows upward for over 3 miles before it quits it again and turns southward by Sgurr na Cairbhe to the summit of Sgurr Ruadh (3254 feet). Here it turns westward along the top of the ridge by Sgurr a' Choir Gblais (3552 feet) to Sgurr Fhuar-Thuill (3439), thence westward by Sgurr na Muice (2915) and Beinn na Muice (2272), till, 1 mile below Loch Monar (663), it reaches the Garbh Nisge, up which it proceeds, and then up the loch till, somewhat over a mile from the W end, it strikes southward along a burn to the W of Aultfean, and then by Meall an Buidhe (1819) to the eastern shoulder of An Riabhachan (3898), thence eastward along the ridge to the top of Sgurr na Lapaich, south-eastward down to the N end of Loch Tuill Bhearnach, which lies here in a cory, and thence down the glen to Loch Mullardoch (705), near the centre of the northern shore. Crossing the loch in a south-westerly direction for $\frac{3}{4}$ mile, it reaches the southern shore, and, striking up the hollow between Tuill Creagach (3452 feet, Inverness) and Tom a Choinich (3646), passes up to the summit of the latter, and thence along the ridge to the top of Carn Eige (3877), and then to Mam Soul (3862), and from this continues south-westward along the watershed between the upper end of Glen Affrick and Glen Clunie by Sgurr nan Ceathreamhnan (3771), Ben Attow (3383), Sgurr a Bhealach Dheirg (3378), Carn Fuaraloch (3241), and Ciste Dhubb (3218), reaches Garbh Leac (3673), just beyond

which the watershed begins between Glen Affrick and Glen Morriston. The line crosses this watershed to the top of Sgurr nan Conbhairean (3632 feet), and thence by Carn Ghluasaid to Loch Clunie (606), the northern shore of which is reached $1\frac{1}{2}$ mile from the W end. Crossing Loch Clunie at right angles, and then the highest point of Druim nan Cnaimh and so down to lower Loch Loyne (700 feet)—which it reaches about $\frac{1}{2}$ mile from the upper end—it passes up Loch Loyne and the intervening river to upper Loch Loyne, and then up the river Loyne till near the source, where it turns off first N and then W to the summit of Aonachair Cbrith (3342), and from this follows the watershed westward, first between Glen Clunie and Glen Quoich, then between Glen Shiel and Loch Hourn, and then between Loch Duich and Loch Alsh and Glenelg for a distance of 22 miles along a ridge with an average height of about 3000 feet, and reaches the sea at Kyle Rhea, $\frac{1}{2}$ mile from the northern end. From this it passes across the opening of Loch Alsh, through Kyleakin, between Longay and the Crowlin islands, up the Inner Sound between Raasay and the mainland; strikes north-westward across the Minch and up Loch Seaforth (Lewis); curves across Lewis and Harris to Loch Resort, and thence round the W and N of Lewis, and back across the Minch to the starting point at Kirkaig. The island district is separately treated under Lewis, and except for statistics what follows is chiefly confined to the mainland part of the county.

Districts and Surface.—The Moray Firth coast from Tarbet Ness to Craigton Point near Kessock measures in a straight line about 30 miles. Fourteen miles from Tarbet Ness it is indented by the CROMARTY FIRTH, and $11\frac{1}{2}$ miles farther to the SW by MUNLOCHY Bay, while along the S coast the Beaully Firth extends for 7 miles W of Craigton Point. Along the curve of the W coast the distance is probably about 75 miles, but if the windings of the coast be followed the length will be about 400 miles, so much is the line broken up by sea-lochs, some of them of large size. The chief in order from the N end, most of which are separately noticed, are Enard Bay, Loch Broom, Little Loch Broom, Gruinard Bay, Loch Ewe, Gair Loch, Loch Torridon branching off into Upper Loch Torridon and Loch Shielraig, Loch Carron branching off into Loch Kishorn and Upper Loch Carron, and Loch Alsh branching off into Loch Long and Loch Duich. The county may roughly be divided into three great divisions, Easter, Mid, and Wester Ross. The first is one of the finest agricultural districts in Scotland, and may be taken as including all the low ground on the E coast lying between the Dornoch and Cromarty Firths. Mid Ross division includes all the land lying between the Cromarty, Moray, and Beaully Firths, and known as Ardmeanach or the Black Isle; and the adjoining parishes of Urray, Contin, Dingwall, Fodderty, Kiltfean, and Alness, and these embrace the minor district of Strathpeffer and the lower parts of Strath Conan and Glen Orrin. Wester Ross division, including by far the greater portion of the county, occupies all the districts to the W of this, and contains the minor divisions of Strath Oykell in the N, with Glen Einig opening off it, and the lesser hollows of Strath Carron, Strath Chuilionach, and Glenn Mor near by; Coigach in the extreme NW of the county N of the outer part of Loch Broom; Loch Broom, with Strath Kanaird and Glen Achallt opening off from the loch, and, at its upper end, Strath More, which passes SE into Dirrie More, leading across to Strath Garve; Gruinard all round the head of Gruinard Bay between Little Loch Broom and Loch Maree and the lesser district of Rudha Mor to the W of Gruinard Bay; Gairloch, between Loch Maree, Gair Loch, and Loch Torridon; Applecross—the triangular peninsula between Lochs Torridon and Shielraig and Lochs Carron and Kishorn; the Aird, between Loch Kishorn and Upper Loch Carron; Glen Carron, upwards from Upper Loch Carron; Lochalsh, between Loch Carron and Loch Alsh, and at the upper end of the latter, Glen Ling and Glen Elchaig; Kintail, ESE of Loch Alsh; Glen Shiel,

up from the top of Loch Duich and passing over the watershed into the hollow of Glen Clunie, which passes downwards into Glen Morriston (Inverness-shire); the upper parts of Glen Orrin and Strath Conan. Near the centre of the N side of Strath Conan the hollow occupied by Loch Luichart branches off to the NW to Strath Bran, which continues westward to Auchnasheen, where it forks, one branch passing south-westward to Glen Carron, and the other westward and south-westward by the hollow of Loch a Chroisg (Rosque) and Glen Docherty, to Kinlochewe and Loch Maree. From the NW end of Loch Luichart the hollow of Strath Bran is continued eastward towards Strathpeffer, and from the N side Strath Garve passes off and is continued northward by Strath Vaich to Gleann Mor, and so to Strath Oykell; and north-westward by Dirrie More to Strath More and Loch Broom. Easter Ross division is almost entirely lowland in its character, consisting nearly altogether of a fertile and well-cultivated plain, but rising along the coast of the Moray Firth into a ridge with lofty cliffs facing the sea. Mid Ross division is also mostly well cultivated, but consists of a greater portion of uplands, and rises along the shore of the Moray Firth into the long ridge of ARDMANACH. Wester Ross division has a very unequal surface, its ruggedness being scarcely surpassed even by Inverness-shire, $\frac{2}{3}$ of the whole area being over 1000 feet above sea-level. The mountain tops rising above this can hardly be said to form distinct chains or ranges, but occur as single isolated summits or in groups. In Coigach, between Loch Veyatie and the outer part of Loch Broom, are Cul Mor (2786 feet), Cul Beag (2523), An Stac (2009), Beinn Eun (1973, Sgorr Deas), and Ben More Coigach (2438). The summits in the Cromalt Hills N of the upper part of Strath Kanaird have been noticed in connection with the boundary, except Meall an Fhuarain (1895 feet); between Glen Oykell and Strath Carron are Beinn Ulamhie (1616), Meall Deargaidh (1659), and Breac Bheinn (1520); and between Strath Kanaird and Glen Achallt are Na Dromannan (1337), Cnoc a Choilich (1336), Meall Liath Choire (1798), Cnoc an Daimh (1500). Between Glen Einig and Gleann Mor are the hills in Freevater Forest, of which the highest point is Sean a Bhragh (3000 feet)—between the upper waters of the Douchary, which flows down Glen Douchary to Glen Achallt, and the upper waters of Corriemulzie Burn, which flows by Strath Mulzie to Glen Einig—and from this a spur passes off to the NW with Meall nan Bradhan (2221). To the E of Sean a Bhragh is Carn Ban (2762 feet), and NE of that Bodach Mor (2689) and Bodach Beag (2500); and a shoulder runs away to the eastward with the highest points at An Socach (2424) and Srongun Aran (2138), 4 miles N of which is Carn a Choin Deirg (2302) overlooking Strath Chuilionaich. To the SW of Carn Ban is Carn Loch Sruban Mora (2406 feet), overlooking Gleann Beag, a continuation westward of Gleann Mor. To the SW of Sean a Bhragh is a great mass of hills occupying the district between Glen Achallt on the N, Upper Loch Broom and Strath More on the WSW, Dirrie More and Glasarnoch river (Upper Strath Garve) on the S, and Strath Vaich and the upper ends of Gleann Beag and Glen Douchary on the ENE. Of these the highest points, SSW from Sean a Bhragh, are Eididh nan Clach Geala (3039 feet) and Beinn Dearg (3547), and from Eididh nan Clach Geala a ridge is sent off NW towards Ullapool, where Glen Achallt opens on to Loch Broom, the highest points being Carn Mor (2122), Meall Dubh (2105), and Beinn Eilideach (1830) overlooking Ullapool. To the WSW of Beinn Dearg and E of the upper end of Strath More are Beinn Aonaclair (2915 feet) and Meall Doire Faid (2390), while to the E the highest point of the lumpy mountain that overlooks Strath Vaich is 3120 feet, and it slopes towards Glasarnoch river by Tom Ban Mor (2433) and Meall an Torcain (1735). In the great lozenge-shaped district bounded on the N by the sea; on the NE by the line of Loch Broom, Strath More, Dirrie More, Glasarnoch river, and Strath Garve; on the S by Strath Bran and the hollow of Loch a

Chroisg (Rosque); and on the SW by Glen Docherty, Loch Maree, and Loch Ewe,—the hills may be grouped roughly into three divisions, of which the second and third may be regarded as forming somewhat broken ranges. The first division is bounded by Loch Broom and Strathmore on the NE side, by Gleann Mor (a branch of Strath More passing to the SW) and the hollow of Loch a Bhrain (Vruin) on the SE, and the upper part of Strath na Sheallag and the valley of Loch na Sheallag and Gruinard river to Gruinard Bay on the SW. The NW end is indented by the long, narrow Little Loch Broom. Beginning to the S of Annat Bay on the point stretching out between Loch Broom and Little Loch Broom, there is the isolated mass with the tops of Beinn Ghobhlach (Goleach; 2082 feet) and Cnoc a Bhaid-rallaich (1780); farther to the SE is Cnoc an Droighinn (1327), Creag Chorrurach (1193), Carn a Bhibrain (1665), and Carn Bhreabadair (1573)—the last three round the end of Strath Beg at the head of Little Loch Broom. Between Strath Beg and Loch na Sheallag is the lumpy mass of An Teallach, with a northern spur, Mac us Mathair (2298 feet), a central summit (3483), and Sgurr Ruadh (2493), and Sgurr Fiona (3474) overlooking Loch na Sheallag. To the NW of this are Sail Mhor (2508 feet) and Carn nam Buailtean (1283), while to the SE are Meall a Bhainne (1503) and Carn nam Feithean (1820)—to the NE and SW of the upper hollow of Strathbeg river—Carn Breac Beag (1267) overlooking the top of Strath More, and in a triangular projection to the SW between the hollow of Loch a Bhrain and the southward prolongation of Strath na Sheallag, Meall an t'Sithe (1871), and Creag Ralnich (2646). The second division begins to the S of Loch na Sheallag, and extends south-eastward till opposite Creag Ralnich, where it becomes very narrow, and then turning to the E stretches eastward to the valley of Strath Garve, attaining its greatest breadth (over 7 miles) and greatest height between Glen More on the N and Loch Fannich on the S. The hollow on the SW is occupied by the basins of Fionn Loch and Lochan Fada, and on the S by that of Loch Fannich. Beginning at the NW end, the highest summits are Beinn a Chaisgein Beag (2234 feet), Beinn a' Chaisgein Mor (2802)—above Fionn Loch—Beinn Dearg Beag (2500), and Beinn Dearg Mhor (2974) S of Loch na Sheallag; Beinn a' Chlaidheimh (2750), Sgurr Ban (3194), Mullach Coirc Mhic Fhearchair (3250), and Beinn Tharsuinn (2750) between Strath na Sheallag and Lochan Fada. To the S of Creag Ralnich are Beinn Beag (2000 feet) and An Groban (2424) at the narrowest part of the range, which here turns to the E. In this eastward portion the summits are A' Chailleach (3276 feet), Sgurr Bhreac (3000), Beinn nan Ramh (2333), Sgurr nan Clach Geala (3500), Meall a' Chrasgaidh (3062), Carn na Cricbe (3000), Sgurr Mòr (3637), Beinn Liath Mhor Fannaich (3000), Beinn Liath Beag (2175), Meall an Rairigidh (3109), An Coileachan (3015), Beinn Liath Mhor a Ghinbhaish Li (2484), Beinn Dearg (2230), Beinn Liath Beag (1967), Meall Mhic-Iomhair (1984), Beinn a Bhric (1441), Beinn nan Cabag (1544), Carn na dubh Chaille (1570), and Creagan an Eich Ghla's (1086), the last two on the W side of Strath Garve. The third range begins at the N end of the NE side of Loch Maree, extends up the whole of that side and up the NE side of Glen Docherty, at the top of which it turns eastward, extending as far as the glen by which the river Fannich flows to the Bran. Beginning at the NW end the principal summits are Beinn Airidh a' Char (2593 feet), Meall Mheinnidh (2000), Beinn Lair (2817), Beinn Slioch (3217) and its eastern shoulder Sgurr an Tuill Bhain (3058), Beinn a Mhuinidh (2231), Carn a Ghlinne (1770) overlooking Glen Docherty, Fionn Bheinn (3060) with a south-western shoulder Meall a' Chaoruinn (2313), a southern shoulder Creagan nan Laoigh (2101), and a south-eastern shoulder Dos Mhucarain (1358), Carn Daraith (1521), An Cabar (1831), and Carn na Beiste (1661), the last on the SW of the river Fannich. At the SE end of Loch Maree, between Ben Slioch and Beinn a' Mhuinidh, the range is deeply cut by Gleann Bianasdaill, through which the Fhasaigh

Water flows from Lochan Fada to Loch Maree, and again opposite the lower end of Glen Docherty by the hollow of the Bruachaig Water, the central portion of which is only 239 feet above sea-level. The portion to the E of this is, from the central summit, often spoken of as the Fionn Bheinn range.

The promontory between Loch Ewe and Gair Loch is occupied by a low undulating range, which nowhere rises above 1000 feet, the highest points being An Cuaidh (971 feet) and Cnoc Breac (962). The portion between the head of Gair Loch and the NW end of Loch Maree rises higher, reaching at many places a height of over 1200 feet; 1357 at Meall an Spardain, 1381 at Meall an Doirein, and 1256 at An Groban, E of Gairloch. In the district between Loch Maree, the hollow SW of Kinlochewe, Glen Torridon, Upper Loch Torridon, and Loch Torridon is a curious circular group spreading out from the central Beinn Dearg, the surrounding summits being cut off by hollows radiating out from that hill like the spokes of a wheel. Beinn Dearg itself is 2995 feet; NNE is Beinn a' Chearcail (2576), with a northern shoulder Coinneachadh Beag (1830); E is Beinn Eighe, with a north-western point Ruadh-stac Mhor (3309), a western summit Sail Mhor (3217), an eastern summit Sgurr Ban (3188), and a northern shoulder (2882); S is Liathach, overlooking Glen Torridon and the head of Upper Loch Torridon, and with a central summit Mullach an Rathain (3358), an eastern shoulder Spidean an a' Ohoire Liath (3456), and a western shoulder Sgorr a Chadaid (2287); W is Beinn Alligin with a northern top (3232), a southern (3021), a western shoulder An Ruadh-mheallan (2196), and a north-western shoulder Beinn Bhreac (2031); NW is Busbheinn (2869); and NNW is Beinn an Eoin (2801). In the triangular projection between Loch Torridon, Loch Shildaig, Glen Shildaig, Glen Kishorn, Loch Kishorn, Loch Carron, and the Inner Sound, the summits to the NW of the glen that extends north-eastward from Applecross Bay are An Garbh-mheall (1615 feet), Croic-bheinn (1618), Meallnah-Uaidne (1701), and Meall an Fhreachan (2051). To the SE of the glen is the straggling Beinn Bhan (2936 feet), with Carn Dearg (2119) to the W, and Creag Ghorm (1945), Sgorr na Caorach (2539), and Meall Gorm (2325). To the NE is An Staoinach (1682 feet), overlooking Glen Shildaig; and to the N, on the opposite side of the glen, is the ridge of Ben Shildaig (1500). To the E of this an irregular and much broken range stretches eastward to the upper end of Strath Bran, at the E end of Loch a Choisg. The summits from W to E, beginning at Loch Damh to the E of Ben Shildaig, are Creag Sgorach (2251 feet), Beinn Damh (2958), Meall na Saobhaidhe (1207), Beinn na h-Eaglaise (2410), Sgurr Dnubh (2566), Beinn Liath Mhor (3034), Sgurr Ruadh (3141), Fuar Tholl (2968)—the last four between the upper part of Glen Torridon and Auchnashellach in Glen Carron—Carn Breac (2220), Beinn na Feusaige (2000), Carn Beag (1806), and the eastern shoulder of the range (1561). To the SW of Sgurr Ruadh an outlying spur of this range passes away down to the promontory between Loch Kishorn and Loch Carron, the highest points being, from NE to SW, Meall a Chinn Deirg (3060 feet), An Ruadh Stac (2919), Sgorr a Gharaidh (2396), Glas Bheinn (2330), An Sgorr (1282), and Bad a Chreamba (1293), the last two being N of Strome Castle.

To the SE of these, beyond the line of Glen Carron and Strath Bran, are a series of broken ranges extending from NE to SW or from E to W. Following first the line to the SE of the two great hollows just mentioned: to the W of Strome Ferry is Creag Mhaol (600 feet); between Strome Ferry and Loch Alsh are Beinn Rainn (1468) and Kirkton Hill (1481); and along the NW shore of Loch Long are Creag an Earbail (1273) and Carn nan Onaich (1100). To the N of these towards Loch Carron are Carn nan Iomairean (1590 feet) and Carn Allt na Bradh (1085); and following the line of heights east-north-eastward the summits are Meall Ruadh (1476), Carn Geur-aodainn (1950), Craig a' Chaoruinn Eagan (2200), Sgurr na Fiantaig (2830)—SE of Auchnashellach—Sgurr na Ceannaichean (2750),

Moruig (3026), with eastern shoulders Carn Gorm (2866) and Carn Liath (2813); Cnoc an t' Sitheinn (1218), Carn Mhartuinn (1765), Leanuidh (1841), Creag Ghlas (1895), Meall na Faochaig (2231), Sgurr a Mhuilinn (Vuillin; 2750), with Sgurr a Ghlas Leathaid (2778) and Carn na Feith-rabhain (1437) to the NW, and Creag Ruadh (2388) to the SE; Carn na Cre (1514), Meall Bhad Ghaineamhaich (1650), Creag Loch nan Dearcag (1760), and Sgurr Maire Suidhe (1899) SW of Loch Luichart. On the opposite side of Loch Luichart, opposite Garve station, is Cnoc na h-Iolair (1153 feet), and farther S Carn Faire nan Con (1210) and Creag a Chaoruinn (1078). From Moruig eastward the southern boundary of this range is marked first by Glen Fhiodhaig (Evaig) and then by the valley of the river Meig and the upper part of Strath Conan. From Sgurr na Fiantaig a branch goes off to the S of Glen Fhiodhaig, and dividing at the top of Glen Orrin sends offshoots down each side of that glen, the principal summits being Sgurr Choinnich (3260 feet), Sgurr a' Chaoruinn (3452), Bidean an Eoin Deirg (3430), Maolle Lunndaidh (3294), Creag Dhubb Mhor Maoile Choillmas (1653), overlooking Loch Monar, and An Sithean (2661), where the range divides. The tops N of Glen Orrin are Sgurr Coire nan Eun (2581 feet), Bac an Eich (2791), Beinn Mheadhoin (Vane; 2098), Meall Guibhais (2171), Creag Ghaineamhaich (1902), Carn Uilleim (2208), Meall nan Damh (2199), Carn na Cloiche Moire (1936), Carn Sgolbaidh (1342), Sron nan Saobhaidh (1339), and Beinn an Rudha Riabhaich (1497); to the S of Glen Orrin is Carn Eiteige (2891) and the summits about Sgurr Fhuar Thuill already mentioned in describing the boundaries; while farther E in the same range is Sgurr a Chlaisean (2383), a northern shoulder of Carn nam Pollan. To the S of Sgurr na Lapaich on the boundary N of the top of Glen Cannich are Braigh a Choire Bhig (3303 feet) and Mullach a Ghlas Thuill (2591); to the W of the same hill is An Riabhachan, with two tops (3896 E; 3526 W), and An Cruachan (2312) and Beinn Bheag (2030) to the N; and farther W still to the N of Glen Elchaig are An Creachal Beag (2854), Aonach Buidhe (2949), Am Fitheach (2847), Sguman Coinnich (2881), and Ben Killilan (2466). From Am Fitheach the heights of Carn na Sean-luibe (1903 feet), Beinn Dronaig (2612), Lurg Mhor (3234), Bidein a Choire Sheasgaich (3000), and Beinn Tharsuinn (2807) lead northward, and connect this group with Sgurr Choinnich. The heights to the S of Glen Shiel and Glen Olunie have been already noticed in dealing with the boundary. To the N of Loch Duich and Glen Shiel are Creag Reidh Raineach (1654 feet), Sgurr an Airgid (2757)—N of Kintail church—Sgurr na Moraich (2870)—at the head of Loch Duich—and Beinn Mhor, with the two tops Sgurr Fhuaran (Ouran; 3505 NW) and Sgurr na Ciste Duibhe (3370 SE), the latter being connected with Sgurr a' Bhealaich Deirg already mentioned on the boundary. Between Loch Duich and Glen Elchaig, NE of Creag Reidh Raineach, are Boo More (2064 feet), Carn Bad a Chreamha (2073), and Carn Loch nan Eun (1946). To the WNW of the last is Beinn a Mheadhoin (1351 feet), and to the SE Carn an Cruineachd. To the N of Ben Atton on the boundary is A' Ghlas-bheinn (3006 feet), and N of Carn Eige is Beinn Fhionnlaigh (3294). In the rest of the county the principal heights are simply scattered about without much regard to grouping, except to the E of Strath Garve, between which and the upper reaches of the Cromarty Firth is the huge bulk of Ben Wyvis (3429 feet) and the subsidiary heights around An Socach (3295 E), An Cabar (3106 S), and Little Wyvis (2497 W). From Ben Wyvis an undulating series of heights of from 1000 to 2800 feet leads away northward to Strath Oykel, a few of the principal hills being Creachan nan Sgadan (2147 feet), Beinn nan Eun (2436), Creag Ruadh (2194), Beinn a' Chaisteil (2500), Beinn Tharsuinn (2330), Carn Feur-lochain (2243), and Dun an Liath (2246)—the last four being ranged along the upper part of Strath Vaich and Gleann Mor. To the NE of Ben Wyvis another series of heights passes off, the hollows being occupied by the

streams flowing SE to the Cromarty Firth. The principal tops between the Glass which reaches the Firth below Evanton, and the Alness which reaches it below Alness, are Meall Beag (2121 feet) and Meall Mor (2419), Meall an Tuirc (2049), Beinn na Diollaidhe (1851), and Caislián (1715); between the upper part of the valley of the Alness, called Strath Rusdale, and the upper part of the valley of the Balnagowan Burn, called Strath Rory, are Beinn Tharsuinn (2270) and Doire Leathan (2089). To the N of Strath Rory is Cnoc an t-Sahhail (1116 feet).

Rivers and Lochs.—There are a considerable number of rivers throughout the county, and the small streams are simply innumerable. On the NE the drainage is carried to the Dornoch Firth by the Oykeil, of which the principal tributary from the Ross and Cromarty side is the river Einig, and by the river Carron, the head-stream of which is the Abhuinn a Ghlinne Mhoir in Glenn Mor, and the principal tributary the Black Water (NW). Farther down the firth are the Wester Fearn Burn, the Balblair Burn, the Edderton Burn, and the Aldie Water. On the extreme NW is the river Kirkaig, and Enard Bay receives the river Polly and the Abhuinn Owskeich. On the N side of the outer part of Loch Broom is the river Kanaird in the strath of the same name, and in the inner portion the Ullapool from Glen Achallt and the Lael and Broom at the head of the loch, the latter being formed by the junction of the Droma from Dirrie More (SE), and the Culleig from Glenn Mor* (SW). Little Loch Broom receives the Strathbeg river at the top, and into Gruinard Bay flow the Gruinard river from Strath na Sheallag on the SE, and Little Gruinard river from Fionn Loch in the centre. The surplus water from Loch Maree reaches Loch Ewe by the river Ewe, and Loch Maree itself receives the Fhasaigh from Lochan Fada on the NE side near the head, Kinlochewe river at the head—the principal streams of this being the Bruachaig (E) and the Ghairbhe (SW)—and on the SW side the rivers Grudie and Lungard. The principal stream flowing into Gair Loch is the Kerry, and Upper Loch Torridon receives the river Torridon at the head, and the Balgay from Loch Damh on the N side, while Loch Shildaig receives the Shildaig from Glen Shildaig at the upper end, and the Abhuinn Dubh from Loch Lundie on the SW. In the rest of the Applecross peninsula a number of fair sized streams flow direct to the Inner Sound, the chief being the river Applecross flowing into Applecross Bay, a little to the S of the centre. Loch Kishorn receives the Kishorn, Loch Carron the river Carron, Loch Alsh a fair sized stream from Glenn Udalaín, Loch Long the Ling (NE) and the Elchaig (ESE), and Loch Duich at the upper end the Croe (NE) and the Shiel (SE). At the top of Glen Shiel the watershed is crossed, and the Clunie flows eastward to Loch Clunie at the head of Glen Morrison. To the NE of Glen Elchaig are streams flowing to the upper end of Loch Monar, and so away down Strath Farrar, and farther to the NE still is the river Orrin and the small streams flowing to it. To the N of Glen Orrin is Strath Conan, with the river Conan issuing from Loch Luichart, and receiving about 1½ mile from the Loch the Meig (W), which flows through a long narrow winding glen, extending westwards to Mòruisg. Flowing into Loch Luichart is the Bran, which issues from Loch a Chroisg and flows down Strath Bran, passing through the lochs of Achanalt and Chuilinn near the lower end, and between the latter loch and Loch Luichart receiving the Fannich from Loch Fannich on the N. To the E of Loch Luichart is Loch Garve, which receives from Strath Garve the Black Water, which is formed by the union of streams from Strath Rannoch (N), Strath Vaich (N), and the Glas-carnoch river (NW). Below Loch Garve the stream is still known as the Black Water, and it flows into the Conan 1½ mile below Contin church. The principal streams flowing into the Moray Firth are the Avoch, Rosemarkie, and Ethie Burns; and the Cromarty Firth receives Newhall Burn (S) at Udale Bay, the Conan

* Not to be confounded with the Glenn Mor of Strath Carron.

from Strath Conan and the Peffery from Strathpeffer, both at the upper end; the Skiack and Glass passing to the S and N respectively of Evanton village, both rising on Ben Wyvis, and the latter passing through Loch Glass; the Alness flowing through Alness village; and the Balnagowan Burn flowing into the head of Nigg Bay.

There are about 80 lochs of fair size, and an immense number of smaller lochs and lochans. Of these the principal only can be mentioned here, the figures showing the height of the surface above sea-level. Other information about all the leading ones will be found in separate articles dealing with them. On the Kirkaig are Fionn Loch (357 feet) and Loch Veyatie (366); on the Polly, Loch Skinaskiuk (243) and Lochan Gainmheich (251), and connected with it farther S is Loch na Doire Seirbhe (222); on the Owskeich are Loch Owskeich (72) and Loch Bad a' Ghail and Loch Lurgan, both 173; and in Glen Achallt is Loch Achallt (265). At the summit level of the pass of Dirrie More is Loch Droma (about 900 feet); and on the other branch of the Broom river—the Culleig—is Loch a Bhraoin (813), while to the SE in a corrie of Sgurr Mòr is the lofty Loch a Mhadaidh (1831). In the course of the Gruinard river is Loch na Sheallag (279 feet), and stretching south-eastward from Loch Ewe is the celebrated Loch Maree (32). To the N of Loch Sheallag are Lochan Gaieamhaich, Loch Mor Bad, and Lochan Eich Dhuibh (737 feet); to the E of the centre of Loch Ewe are Loch a Bhaid-luachraich (311) and Loch Fada (498). To the NE of Loch Maree and distant from it 3 miles, across the mountain ridge, are Fionn Loch (559 feet) and Lochan Fada (1000)—the former having a number of smaller lochans connected with it; among the hills between this and Loch Sheallag are Loch Ghiubhsachain, Loch Toll a Mhadaidh, Lochan na Bearta, Lochan Feith, and Fuar Loch Mor; and farther N between Little Gruinard river and Gruinard river is Loch a Mhadaidh Mor. Connected with the river Ewe and the NW end of Loch Maree are Loch Tollie (W, 388 feet) and Loch Kernary (E); and connected with the upper part of it are Loch Garbhaig (1000) N of Ben Slioch; Loch Clair and Loch Coulin (WNW) on the course of the Ghairbhe and about 280 feet above sea-level; and the small Lochan Coire Mhic Fhearchair at a height of about 1900 feet on Beinn Eighe. On the course of the Kerry are Loch Bad an Sgalag (353 feet), Dubh Loch close beside it, and at the source Loch na h'Oidheche (1250) between Busbheinn and Beinn an Eoin. On the opposite side of Busbheinn are Loch a Ghobhainn and Loch a Bhealaich (both 1000 feet), the source of the Horrisdale Water, farther down which are Loch Gaineamhaich (900), and Loch Braigh Horrisdale (302); the stream flows N to Gair Loch. To the E of Loch Diabaig, in the SE of outer Loch Torridon, is Loch Mhullaich (443 feet); to the S of Upper Loch Torridon is Loch Damh (129), and farther up the same hollow Loch Coultrie, and on the Amhainn Dubh flowing into Loch Shildaig is Loch Lundie (753). On the river Carron are Loch Dhughail (168 feet), and high up near the sources Loch Sgamhain (Seaven, 491); at the source of the northern branch of the river Ling is Loch an Laoigh (877); and on the Elchaig are Loch na Leitreach (281), and at the source Loch Muirichinn (1500); while in Glen Clunie is the upper half of Loch Clunie (606), and on the course of the river Loyne part of Loch Loyne (700). At the top of Glen Cannich—which is mostly in Inverness-shire—is Loch Lungard (761 feet) and about half of Loch Mullardoch (705); at the top of Glen Strath Farrar—also mostly in Inverness-shire—is about ¾ of Loch Monar (663), and farther W An Gead Loch, Loch an Tachdaidh, and Loch Calavie (1129); near the source of the Orrin are Am Fiar Loch (1000) and Loch na Caoidhe; in Strath Conan are Loch Beannachan (465), Loch Luichart (280), and Loch Achilty (170); and in Strath Bran Loch a Chuilinn (350), Loch Achanalt (365), Loch a Chroisg (508), and, SW of Auchnasheen, Loch Gown (543); while in the tributary hollow of the river Fannich is Loch Fannich (322). In the valley of the Black Water is Loch Garve (220 feet), with the small

Loch na Croic at the lower end; and at the top of Strath Vaich are Loch Toll a' Mhic and Gorm Loch; while near the source of Glasarnoch river is Loch a' Gharbh Raoin and Loch Coire Lair. In the lower basin of the Conan is Loch Ussie (419 feet); NE of Ben Wyvis are Loch Glass (715) and Loch Morie (622), the latter sending off a tributary to the Alness; 1 mile N by E of Fearn station is Loch Eye (51); on the upper waters of the Carron (Dornoch Firth) is Loch Crom (1730) between Beinn a' Chaisteil and Beinn Tharsuinn; and in Strath Oykeil are the Kyle of Sutherland (tidal) near the mouth and part of Loch Ailsh (498); while on Corriemulzie Burn, a tributary of the Einig, is Loch a' Choire Mhoir, and on Abhuinn Poiblidh, a tributary of Rappach Water, the main source of the Einig, is Loch na Daimh (672), and NW from it the small Lochan Eilean and Clar Lochan. The whole of the principal rivers and lakes abound with fish of various kinds, and furnish capital sport.

On the W coast there are a large number of islands, but most of them are of small size. The chief are:—in Enard Bay, Eilean Mor (4×2 furl.); in outer Loch Broom, Ristal ($8\frac{1}{2} \times 8$ furl.), Tanera More ($1\frac{1}{2} \times 1\frac{3}{4}$ mile), Tanera Beag ($6\frac{1}{2} \times 4$ furl.), and Horse Island (8×3 furl.); farther up at Strath Kanaird, Isle Martin ($1 \times \frac{3}{4}$ mile); in Gruinard Bay, Gruinard Island (10×5 furl.); in Loch Ewe, the Isle of Ewe ($2 \times \frac{3}{4}$ miles); at the mouth of Gair Loch, Longa ($1 \times \frac{1}{2}$ mile), and farther in, Eilean Horrisdale (3×3 furl.); at the SW point of Applecross, the Crowlins, of which Eilean Mor is $1\frac{1}{2} \times \frac{3}{4}$ mile, and Eilean Meadhonach (8×2 furl.); at the entrance to Loch Kishorn, Kishorn Island ($2 \times 1\frac{1}{2}$ furl.); and near the entrance to Loch Alsh, Eilean nan Gillean (2×1 furl.). Of these the ones that are or have been inhabited within the last twenty years, with their populations in 1881 and 1891 respectively, are:—Crowlin (9, 9), Ewe (43, 39), Gillean (6, 14), Gruinard (6, 0), Horrisdale (0, 31), Isle Martin (42, 42), and Tanera (119, 95).

As might be expected the scenery of Ross and Cromarty is extremely varied. The western part of the county shows little but a sea of hills with brown undulating expanses of moorland and bare rock, intersected by hollows occupied by streams and lochs, and the whole in most places dull and dismal, except when the heather is in bloom. Many of the hollows, however, contain fertile haughs, though, except in the Mid and Easter Ross divisions, there is but little wood. Natural forests appear to have anciently covered almost the entire county, but they are now represented by straggling copses of oak, birch, and Scotch pine. In the early part of the 18th century Lord Seaforth set the example of extensive planting, and subsequently many of the other proprietors followed suit, and extensive plantations now exist, principally, however, along the shores of the Beauty, Cromarty, and Dornoch Firths, and especially about Brahan, Redcastle, Tulloch, Novar, and Balnagowan. The greater part of the land along the firths is also fertile and highly cultivated.

Geology.—The striking physical features so attractive to the tourist in the W part of the county are due to the remarkable geological formations in the NW Highlands. In that region there is an interesting development of the most ancient rocks in the British Islands. From the recent reports of the Director General of the Geological Survey, it appears that the detailed mapping of these rocks has revealed important evidence regarding their origin and development. The materials, as a whole, are now highly crystalline, but there can be no doubt that the constituents of this complex are of different origin, and their present structures have been developed at successive periods. They cover extensive areas, and give rise to some of the most picturesque scenery on the western seaboard. They form the rugged heights guarding the entrance to Upper Loch Torridon, they extend from Gair Loch to Loch Maree, and northwards by the Fionn Loch to Gruinard Bay, while they reappear to the north of the Coigach Mountains.

This crystalline complex of gneisses and schists is

composed partly of deep-seated igneous rocks of basic and acid composition, which may have acquired their foliated structure either during consolidation or at a later date by mechanical deformation. After these gneisses had assumed their banded structure, they were pierced by a series of basic dykes, now for the most part converted into hornblende schist. In certain areas, as south of Poolewe, the complex of gneiss and intrusive dykes has been thrown into a series of remarkable folds, whereby secondary structures have been superinduced in these rocks. No less interesting is the development of a group of strata, probably of sedimentary origin, on the northern shores of Loch Maree. They consist of quartz-schist, mica-schist, graphite-schist, and limestone, the assemblage being pierced by a great mass of hornblende schist—the latter forming the peaks of Ben Lair and Ben Airidh-a-char. The relation of these crystalline schists, probably of sedimentary origin, to the ancient gneiss complex is obscure, but it appears that they rest upon a pavement of biotite gneiss, and are overlain by a slice of crystalline gneiss, with dykes of hornblende schist. The crystalline limestone in this group forms a beautiful marble, which has been quarried near Letterewe House. The whole series has been thrown into a series of sharp folds, the axes of which run in a NW and SE direction. Various lines of disruption have been followed across the area occupied by these Archaean masses, which have developed new structures in the rocks.

One of the most important results of the recent examination of this region, is the evidence of great denudation of the ancient Archaean land surface before the oldest sedimentary formations were laid down upon it. Long before the Torridon Sandstone was deposited the old land surface of that area had been carved into a group of mountains from 2000 to 3000 feet high, with deep and narrow valleys. From the partial removal of the overlying sediments the observer can study this Archaean topography, and note the local breccia which accumulated on the mountain slopes.

To these crystalline rocks succeed a grand development of chocolate-coloured sandstones, grits, conglomerates, and shales, named the Torridon Sandstone by Professor Nicol, from the sea-loch where the formation is typically represented. They form striking groups of mountains in Applecross, between Loch Torridon and Loch Maree, and again in Coigach north of Loch Broom. Owing to the comparatively low angles of inclination of the beds, the successive outcrops form a series of terraces in marked contrast with the Archaean rocks, on which they rest unconformably. The unconformable junction is admirably seen on the shores of Loch Maree, Loch Torridon, and Gair Loch. Where the gneiss passes underneath the overlying grits, it presents a rounded contour analogous to that produced by glacial action. At the base there is usually a coarse breccia, composed mainly of sub-angular fragments of the underlying crystalline rocks. Behind the hotel at Gair Loch this basal breccia is admirably exposed, and is remarkably coarse—some of the included blocks of schist measuring 5 feet in length. From the recent researches of the Geological Survey, it appears that the Torridon Sandstone reaches thousands of feet in thickness, and forms three well-marked groups in the W of the county—(1) a lower group of epidotic grits, black and grey shales with impure limestone bands, and lenticles, greywackes, sandstones, and shales; (2) a middle group of false-bedded grits and sandstones, with pebbles of various materials; (3) an upper group of micaceous sandstones, flags, dark and black shales. To the west of the great lines of terrestrial movement, the lower group is well exposed on the N shore of Loch Torridon at Diabeg, while to the east of these lines it is admirably seen on the shores of Loch Carron and Loch Alsh, where the beds are inverted or turned upside down. The middle group occurs in Applecross, in the region north of Loch Torridon, and in Coigach, while the upper group is represented on Cailleach Head N of Little Loch Broom.

Formerly this great system of sedimentary deposits was

correlated with the Cambrian rocks of Wales, but the discovery by the officers of the survey of well-marked fossils in certain overlying shales has proved that the Torridon Sandstone is pre-Cambrian. As yet no undoubted organic remains have been met with in Torridon strata, though some of the calcareous shales might be expected to contain fossils.

The sedimentary deposits just described are overlaid unconformably by another sedimentary series, comprising quartzites, fucoid beds, and limestones, which we now know to be of Cambrian age. One of the remarkable features in the west of the county is the striking appearance presented by some of the lofty mountains of Torridon Sandstone, the tops of which are capped by a thin cake of white quartzite. In some instances, as on Ben Leagach, the basal quartzites have been isolated by denudation, and hence in the far distance they resemble a thin capping of snow on the sombre-tinted sandstones. In 1891, in the heart of the Dundonnell Forest, between Loch Maree and Loch Broom, certain fossils were found in the strata overlying the quartzites. These proved to be fragments of trilobites, referable to *Olenellus*, a gneiss characteristic of Lower Cambrian strata elsewhere. This discovery has proved to be of prime importance, because it fixes with certainty the age of these quartzites, fucoid beds, and limestones. In the course of the Geological Survey this trilobite horizon has recently been traced for many miles southwards to Loch Maree and northwards to the county boundary at Elphin.

In this county there is the clearest evidence in proof of those great terrestrial displacements which intervened between the Cambrian period and the Old Red Sandstone (see general article on the Geology of Scotland). Not only do the eastern schists overlie the Cambrian rocks, but in certain areas the comparatively unaltered Archæan gneiss is made to rest transgressively on various members of the Cambrian formation. The latter phenomenon is well seen in Glen Logan, N of Kinlochewe, and on the hill slope on the west bank of the stream. To Professor Bonney belongs the merit of having been the first to point out that the coarsely crystalline gneiss in Glen Logan is merely a portion of the floor of Archæan gneiss, which has been brought up by a great reversed fault, and made to overlie the quartzites and limestones. Though it presents in places a highly crushed appearance, still the NW strike is retained throughout a great part of the mass. Veins of granite and pegmatite, bosses of hornblende rocks, and dykes of basic material traverse the gneiss. Indeed, the presence of these different constituents gave rise, in a great measure, to the controversy as to the true nature of this crystalline mass. This great reversed fault, or thrust plane, has been traced northwards by Ullapool to Elphin, and southwards to Glen Carron, while it can be traced also from Coulags, near Strathcarron, south-west to Loch Kishorn. In this latter region a great slice of the lower division of the Torridon Sandstone, with the old Archæan floor, is brought to the surface in inverted order or turned upside down. The structures impressed on the gneiss and Torridon sediments by these movements are seen to advantage in that region.

To the east of the foregoing great line of movement there succeeds another plane of disruption, which ushers in the eastern schists. It has been traced over a great part of the county. The strata overlying this plane consist mainly of grey quartzose flagstones and mica schists, which recall the appearance of crystalline schists of sedimentary origin. These rocks occupy wide areas, and their origin is still a matter of uncertainty. But from the evidence near Loch Carron and north of Auchnashellach, it seems probable that these schists may be composed in part of altered members of the Torridon Sandstone. Inclined at a gentle angle to the SE, these crystalline schists are overlain towards the E by garnetiferous mica schist and gneiss on Ben Fyn, followed by various types of gneiss, till eventually they disappear under the Old Red Sandstone.

There is one remarkable zone in the eastern schists

deserving of notice, as it possesses peculiar lithological characters. It is admirably seen in Strath Garve near Innisbae, both in the stream section and on the ground by the roadside, where it consists of a coarse porphyritic gneiss, with large crystals of felspar, the long axes of which run parallel with the lines of foliation. The plates of mica envelop the felspar crystals, and the peculiar arrangement of the latter relatively to the other ingredients is identical with that occurring in the *augen* gneiss of German petrographers. Another remarkable band, found between Garve and Dingwall, is the famous garnet rock, which has become celebrated for the size and beauty of the garnets obtained from it. Finally, reference ought to be made to the occurrence of that rare mineral, zoisite, in the neighbourhood of Garve, as recently described by Mr W. Bell.

Along the E border of the county the metamorphic crystalline rocks are covered unconformably by the representatives of the Old Red Sandstone. The boundary between these two formations forms a sinuous line which can be traced from the neighbourhood of Beauly, N by Strathpeffer and the Ault Graat, to Edderton on the Dornoch Firth. At the base of the series there is generally a coarse breccia or conglomerate forming rounded hills, the pebbles being composed of the underlying crystalline rocks. These coarse conglomerates graduate upwards into red or chocolate sandstones and flags, with grey bituminous flags and shales, which are seen in Strathpeffer, in the Ault Graat, and in the Alesse river. On this horizon the Rev. Dr Joass of Golspie obtained a series of ichthyolites from calcareous nodules embedded in red clays closely resembling the well-known fish bed on the S side of the Moray Firth. These ichthyolitic flagstones are overlaid by an upper band of conglomerate of considerable thickness, through which the famous gorge of the Ault Graat has been excavated. To this zone succeeds reddish sandstones and shales which apparently form a great synclinal fold in the basin of the Cromarty Firth, rising with a steep inclination on the E side of the basin. Along the Black Isle from Munloch to the Sutors of Cromarty, there is a great anticlinal fold revealing the ancient crystalline rocks, and the conglomerates marking the base of the series. In the calcareous nodules embedded in the clays overlying these conglomerates at Cromarty, Hugh Miller obtained a fine series of fish remains—a locality which has since become famous through his classic descriptions. The same anticlinal fold is traceable in the ridge to the N of the entrance to the Cromarty Firth, where similar basal beds occur. From the investigations of the Rev. Dr Joass, it would appear that fossils are to be met with in the flaggy strata at Geanies. In the cliff at the W boundary of Geanies there are several bands of calcareous shale resting on red sandstones which have a general inclination to the NW. These beds are traceable along the shore as far as the site of the old Mill of Tarrel, where they have yielded an entire specimen of *Cocosteus* and other ichthyolites. It is highly probable, therefore, that this series of calcareous flagstones occupies the same horizon as the flaggy strata on Culloden Moor. Beyond Geanies the strata just described are followed by reddish, grey, and yellow sandstones resembling the Upper Old Red Sandstone on the S side of the Moray Firth, which are specially interesting on account of the curious reptilian tracks found in them.

In connection with the Old Red bituminous flags in Strathpeffer, reference ought to be made to the occurrence of the mineral Albertite in veins up to 2 inches thick. From the descriptions of these veins recently given by Mr Morrison, Dingwall, it appears that in all cases they are vertical or nearly so, and that they trend E and W, irrespective of the geological formation in which they are found. They occur both in the gneiss at the head of the valley and in the micaceous sandstone farther down the strath. The mineral is found even in the E and W fissures in the conglomerate overlying these sandstones, but, strange to say, not in the cracks with a different trend.

At the base of the cliff formed by the Palæozoic strata of the Black Isle and the N Sutor, there are certain patches of Oolitic rocks which, notwithstanding their limited development, are of great interest. They occur on the beach beneath high-water mark at Eathie, and again at Port-an-Righ and Cadh-an-Righ near Sandwick. The great fault traversing the Great Glen is prolonged towards the NE, skirting the base of the Old Red Sandstone cliff of the Black Isle, and by means of this dislocation these patches of Jurassic strata have been brought into conjunction with the Palæozoic rocks. Near the village of Sandwick, the strata are composed of hardened shales with bands of argillaceous limestone which are traversed by numerous transverse faults shifting the outcrops of the beds. From the researches of Professor Judd it appears that the patches at Port-an-Righ and Cadh-an-Righ belong to the Lower and Middle Oolite, while that at Eathie pertains to the Upper Oolite. The section at Cadh-an-Righ shows the following order of succession: next the talus at the base of the cliff covering the position of the fault, there are estuarine sandstones and blue clays followed by sandstones, clays, and limestones, with fresh-water fossils. These are succeeded by shelly bands and clays yielding both fresh-water and marine shells, overlain by a thin coal seam. According to the classification adopted by Professor Judd, these zones represent the Lower Oolite, the thin coal seam being the equivalent of the Main coal at the top of the Lower Oolite of Sutherland. Here, however, it has thinned away to a few inches, but its position is clearly defined by the 'roof-bed,' consisting of sandy clay merging into hard sandstone, becoming in places calcareous from the abundance of shells. A remarkable feature connected with the 'roof-bed' at this locality is the number and size of the belemnites found in the upper part of the band, but otherwise the fossils agree with those obtained from the same horizon in Sutherland. This zone is followed by sandstone, sandy clays, and dark blue clays, with marine fossils belonging to the Middle Oolite. At Port-an-Righ certain dark blue shales, with bands of sandy argillaceous limestone, are met with, which are regarded by Professor Judd as the equivalents of the Coralline Oolite of England. They have yielded, among other forms, *Belemnites sulcatus*, *B. abbreviatus*, *Ammonites vertebratis*, *A. cordatus*, *A. excavatus*, *Gryphaea dilatata*, *Pecten demissus*. The small patches at Eathie, which have also become widely known through the publications of Hugh Miller, consist of Upper Oolite shales and limestones, which have been thrown into a series of sharp folds, and display a crushed appearance close to the fault. A remarkable feature connected with these patches at Eathie is the occurrence of pseudo-dykes traversing the shales and limestones usually in the direction of the axes of the anticlinal folds. Instead of being composed of igneous materials, these dykes consist of ordinary sediment; indeed, an oolitic shell was found by Hugh Miller in one of the veins. It is evident that the fissures must have been filled from above with the sediment, and that this must have taken place subsequent to the faulting and folding of the strata. They have generally been considered as belonging to the Lias, but on palæontological grounds Professor Judd classifies them with the Upper Oolites of Sutherland. The peculiar species of ammonites and belemnites, the abundance of *Lima concentrica*, *Ostrea Roemeri*, with the remains of Conifers, Cycads, and Ferns, seem to indicate close affinities with the types of fossils obtained from the Upper Oolites of Sutherland. In the S patch at Eathie Bay the strata exhibit certain lithological differences from their Sutherland equivalents, as they consist of finely laminated shale with bands of limestone; but in the N patch the intercalation of grits and sandstones in the black shales points to physical conditions resembling those which prevailed during part of this period in Sutherland. The presence of thin bands with plant remains led to unsuccessful attempts in search of coal at this locality. The following fossils have been ob-

tained from these beds: *Belemnites spicularis*, *B. obeliscus*, *Ammonites mutabilis*, *A. flexuosus*, *A. biplex*, *Lima concentrica*, *Avicula* sp., *Nucula* sp., *Pecten* sp., etc. In addition to these fossils numerous fish remains have been found, consisting of bones, teeth, scales, etc., and with these are associated the vertebrae of *Ichthyosaurus*. From these references it is apparent that, though the patches of Secondary strata at the base of the Ross and Cromarty cliff are very fragmentary, they are of great interest as affording means of comparison with their representatives in Sutherland.

The glacial phenomena of Ross and Cromarty are in many respects remarkable, though only a brief allusion can here be made to them. On the W seaboard the general trend of the ice-markings is towards the NW or the WNW. On the area occupied by the Archaean gneiss on the shores of Loch Maree the rounded contour indicating intense abrasion by the ice-sheet is everywhere apparent, the prevailing direction of the striae being parallel with the long axis of the loch. Round Gair Loch and Loch Torridon the trend of the striae is WNW. In the Applecross peninsula, the ice movement during the great glaciation was also towards the NW. Indeed the evidence obtained regarding the extent of the great glaciation in the W part of the county is overwhelming. Many of the lofty peaks composed of Torridon Sandstone and Cambrian quartzite are striated between the 2000 and 3000 feet contour lines produced by the ice-sheet moving westwards from the mainland. This westerly movement is further proved by erratics of eastern schist and gneiss occurring at these great elevations on the Torridon Sandstone and Cambrian Mountains. On the E side of the watershed the general direction of the ice-markings is towards the Moray Firth.

In the lower parts of the valleys bordering the Moray Firth there is a considerable development of boulder clay, and on both sides of the great watershed the moraines belonging to the later glaciation cover extensive areas. Indeed there is no more striking feature in the glacial phenomena of the W part of Ross and Cromarty than the great extent and size of the moraines. Most of the main valleys and the tributary streams possess great groups of moraines. Further, we find on the shores of the Beaully, Dornoch, and Cromarty Firths a considerable development of gravels which probably belong in part to the 100-foot sea beach. At the mouth of Loch Carron, on both sides of the sea loch, the remains of this sea beach are admirably preserved. The flat terraces at the 100-foot level suddenly terminate at North Strome and west of Strome Ferry, and no trace of them can be found further up the loch, though remnants of the 50 and 25 feet beaches occur. It seems highly probable that some of these sea lochs may have been filled with valley glaciers during the formation of the 100-foot beach. This high level terrace can be traced along part of the western shore of Applecross. Generally, however, this sea beach is not so perfectly preserved as the 25-foot beach which forms a belt of flat land round the fiords on the W coast and the firths on the E seaboard.

Soils and Agriculture.—The soil varies very much, the western hill districts having it mostly very poor and bad, while the other parts of the county include some of the best agricultural land in Scotland. All the arable land lies on the E coast or in the glens and haughs of the streams, the rest of the surface being pastoral or under game. In the Black Isle the soil varies considerably, being light and gravelly along the centre of the ridge, while all along the coast it is rich black loam, and good clay with a subsoil of sand, gravel, and clay. Deposits of Moray-coast or pan (see ELGINSHIRE) have been mostly broken up and removed. The clay subsoil is in some places on the Cromarty Firth side of great depth. On the SW it is a light but fertile loam. Round Dingwall the soil varies from a good clayey loam, which produces excellent crops of wheat, to light rich friable mould, and through this to mountain clay, sand, and gravel, and poor mossy mould.

Along the upper part of the Cromarty Firth, on the N side, the land is, on the low ground, heavy loam overlying clay, and on the higher ground a gravelly loam, but farther to the NE it becomes lighter. In the flat between the Cromarty and Dornoch Firths it varies from loam to clay or to sand, but the loam is the prevailing soil, and is in some places very deep, yielding excellent crops. The E coast is much drier than the W coast, the rainfall along the latter averaging about 50 inches, and in the E about 24, the difference being accounted for by the prevailing wind, which, being westerly and south-westerly, comes in from the Atlantic laden with vapour. Between Loch Carron and Loch Alsh, where no outlying islands protect the mainland, the rainfall is sometimes excessive, and has been known to exceed 70 inches in a single year. The average mean annual temperature is about 46°, the greater summer heat on the E coast being counterbalanced by the milder winters on the W.

Up till the end of the 18th century farming was in a very backward state, but in 1798 the farm of Meikle Tarrel, in the parish of Tarbat, 'was taken on a nineteen years' lease by a farmer [Mr George Mackenzie] who had studied the most approved mode of agriculture in East Lothian. The farm, which then consisted of about 250 acres of arable land, was occupied by several small tenants, whose lands were in a state of wretchedness. This farmer brought with him horses and implements of husbandry of the very best description from the south, as also farm servants of his own training. This was the first introduction of modern husbandry into this part of the country, from which the introducer obtained the name of Farmer George. In bringing his system into practice he had at first to contend with many deep-rooted prejudices. Even the proprietor could not then understand how his interests were to be forwarded by encouraging his tenants. In the first place a dwelling-house had to be built, as also a set of suitable offices, houses, and a threshing-mill and garden, etc., enclosed. All this was done at the farmer's own expense, without any assistance from the proprietor, and at an outlay of £1500. The soil being good, and the new system bringing it into favourable operation, the farmer soon began to reap the reward of his expense and labours, and in the seventh year after his entry he had the satisfaction of obtaining for his wheat and oats the highest price in Mark Lane—circumstances which dissipated the opposition of prejudice and raised up a spirit of imitation.' He was soon followed by others, and 'during the first fifty years of the present century,' says Mr James Macdonald in his paper 'On the Agriculture of the Counties of Ross and Cromarty,' in the *Transactions of the Highland and Agricultural Society for 1877*, 'it is not too much to say that the agricultural and social customs of Ross and Cromarty were completely revolutionised. Large tracts of land were reclaimed, draining and fencing were executed extensively, new dwelling-houses and farm-steadings were built, roads were made, improved farm implements were introduced, threshing-mills brought into the country, a regular and systematic course of cropping was adopted, artificial manures introduced; the barley, oats, and potatoes of the olden times supplemented by wheat, turnips, and clover; better horses, better cattle, and better sheep were bred; and, in short, almost every trace of the primitive simplicity and rude barbarities of the feudalistic time were abolished for ever.' In the latter part of the century the changes have been equally great, fencing, draining, squaring fields, and reconstruction of buildings having been extensively carried on; the introduction of artificial manures and further improvements on the system of cropping have made great changes for the better; and the communication established by the construction of the Highland railway has given a great impetus to the breeding and rearing of stock for the market. Since 1850 over 51,000 acres of land have been reclaimed, and the rental in some districts has increased over 100 per cent., and on an average probably over 40 per cent. everywhere. The

principal reclamations were carried on by Mr Fletcher of Rosehaugh, the Hon. H. J. Baillie of Redcastle, Mr Mackenzie of Ord, Mr Davidson of Tulloch, Sir Alexander Matheson of Ardross, Mr Kenneth Murray of Geanies, and Sir John Fowler of Braemore. In 1854 the whole area under crop of all kinds, including hay, grass, and permanent pasture, was about 87,919 acres, and in 1876 this had risen to 124,826 acres; while in 1896 it was 141,403 acres, a percentage of arable land to whole area of only 6·89, that for all Scotland being 25·6, and for Fife 78·9. The areas under the various crops at different dates are given in the following tables:—

GRAIN CROPS.—ACRES.

Year.	Wheat.	Barley or Bere.	Oats.	Total of All Grains
1854	7527	7,551	16,645	32,717
1869	7356	9,370	25,806	46,746
1876	6019	10,461	29,509	47,413
1884	2182	12,729	31,701	46,612
1896	518	12,047	31,468	44,033

GRASS, ROOT CROPS, ETC.—ACRES.

Year.	Hay, Grass, and Permanent Pasture.	Turnips.	Potatoes.
1854	19,641	10,467	5394
1869	28,547	16,735	9524
1876	29,987	17,126	9256
1884	59,850	16,155	9335
1896	71,673	16,505	7572

There are about 1800 acres annually under other root crops or lying fallow. Harvest in the Easter division begins usually about the second or third week of August. The farms are worked mostly on the five-shift rotation, but for some of the lighter lands the six-shift is adopted, and on a few of the very rich soils the four-shift. The average yield of wheat is from 23 to 36 bushels per acre, but on some of the richer soils from 40 to 56 bushels are produced; barley, 32 to 48 bushels; oats, 32 to 48 bushels; turnips, 20 to 35 tons; and potatoes, from 4 to 8 tons. The last are very variable, and the figures given are too high for the product of the poorer class of crofts. The great decrease of the area under wheat within the last 20 years is as well marked here as elsewhere, and is the more noteworthy as Ross and Cromarty was formerly the fifth wheat county in Scotland, and in point of quality and amount produced per acre ranks even higher.

The agricultural live-stock in the county at different dates is shown in the following table:—

Year.	Cattle.	Horses.	Sheep.	Pigs.	Total.
1854	15,850	3975	251,619	4583	276,027
1869	36,671	6681	390,788	4664	438,804
1876	41,609	7079	362,980	6535	418,203
1884	42,028	7208	309,888	6876	366,000
1896	44,932	8289	326,754	5360	385,335

The number of cattle bred is small, but the number fed is very large. The animals are mostly Highland or crosses, and at Udale is a herd of shorthorns. From the table it is seen that in forty years the number of cattle has been trebled, but the figures by no means represent the actual number of cattle fed in the county, as cattle bought in autumn are fattened during the winter and sold off in spring before the Board of Trade returns have been collected. The farm horses were formerly broad low-set 'garrons,' and though now greatly improved by the introduction of good Clydesdale stallions, they still want bone and substance, and among the smaller farmers and crofters ponies are common. The area under sheep in Wester Ross is enormous; indeed this division is almost as celebrated for its sheep farms as Easter Ross is for its arable land. Systematic sheep-farming was introduced into the county about 1764 by Sir J. L. Ross of Balnagowan,

who, taking one of the sheep farms on his estate into his own hands, replaced the native small-growing Kerry breed of sheep with black-faces, and for seven years—the only sheep farmer north of Aberdeenshire—he, in spite of all opposition, stubbornly stuck to his purpose of introducing a better breed of sheep. By and by, however, others joined him, and the beginning of the 19th century saw sheep-farming firmly established in the county. In the first ten years of that century Leicester tups were introduced, and about 1815 Cheviots. Half-bred sheep from Leicester tups and Cheviot ewes are now common, as well as grey-faces bred from Leicester tups and black-faced ewes. Sheep-farming reached its point of greatest prosperity about 1860-70, but since then it has begun to decline, owing partly to the low price of wool brought about by the large quantities now imported from abroad, and also to many of the grazings having, under sheep entirely, deteriorated, so that they will no longer carry the same number of animals. The total decrease since 1869 has been about 11 per cent. Ewe lambs and ewes are sold at Inverness Wool Fair, or in autumn at Muir of Ord, while wethers are generally sold at the Wool Fair. The young sheep are generally sent to winter in the lowlands, as far sometimes as Aberdeenshire, but from the higher and bleaker districts both young and old sheep have alike to be removed during the winter months. Almost 93 per cent. of the holdings are under 50 acres, 87 per cent. under 20 acres, and 69 per cent. under 5 acres, and of the remainder two-thirds are over 100 acres. The county has double the number of holdings of under 5 acres of any other county in Scotland, and the only county that exceeds it in the total number of holdings is Aberdeenshire.

The area of the county may be estimated as follows:—Arable land under crops and permanent pasture, 141,403 acres; under deer, over 800,000; under wood, 61,034; lakes, rivers, and foreshore, 93,012; under sheep alone, about 500,000; and waste heath and grouse moor, about 600,000. The whole district under heath amounts probably to about 1,000,000 acres, but over a large part of the county this is mixed with fine pasture. The deer forests given up to deer alone number 39, and some of them are very extensive. Their area is 719,305 acres, while in addition there are forests where sheep and deer graze together. There are also a number of excellent grouse moors, and all the usual high and low country game. The largest proprietors are Lord Middleton, Lord Wimborne, Sir Kenneth S. Mackenzie, Sir Kenneth J. Matheson, Sir A. G. R. Mackenzie, Sir C. Ross, Bart., Sir Hector Munro, Bart., Sir John Fowler, Bart., Mr R. C. M. Fergusson, Right Hon. A. J. Balfour, Mr H. Mackenzie, Mr J. D. Fletcher, and Mr J. E. B. Baillie. The principal mansions, etc., most of which are separately noticed, are Allangrange House, Amat Lodge, Applecross House, Ardross Castle, Arduill House, Avoch House, Balconie House, Balnagowan House, Bayfield House, Belmaduthy House, Birchfield House, Brahan Castle, Calrossie House, Castle Leod, Conan House, Corriemoillie Lodge, Coul House, Cromarty House, Dalbreac Lodge, Duncraig House, Dumdonnell House, Flowerdale House, Foulis Castle, Geanies House, Highfield House, Inverburn Lodge, Invergordon Lodge, Inverlael Lodge, Kerrisdale House, Kildary House, Kinbeachie House, Kindeace House, Leckmelm House, Ledgown Lodge, Letterewe, Loch Luichart Lodge, Loch Rosque Lodge, Morangie, Mountgerald, Newhall House, Newmore House, Novar House, Ord House, Pitcalnie, Poyntzfield House, Raddery House, Redcastle, Rockfield House, Rosehall House, Rosehaugh House, Shandwick House, Stornoway Castle, Strathmore Lodge, Teaninich House, Tarbat House, Tarlogie Lodge, Tarradale House, Tulloch Castle, and Westfield House.

Industries and Communications.—Except the distillation of whisky at Dalmore, Teaninich, Ord, Dingwall, Glenmorangie, and Balblair distilleries, there are no manufactures. The salmon fisheries, however, in the rivers and estuaries are extensive and valuable, and there are also large sea-fisheries. Of the 27 fishery

districts into which Scotland is divided, the county contains Cromarty on the E coast, and on the W coast Stornoway, and Loch Broom and part of Loch Carron. In 1894 there were employed in these districts (taking half Loch Carron as belonging to the county) 350 first-class, 659 second-class, and 1276 third-class boats, or 9·3, 17, and 23·1 per cent. of the boats in their respective classes in the whole of Scotland. In the same year these gave employment to 8441 fishermen and boys, 139 fishcurers, 335 coopers, and 8790 other persons; the value of the boats employed—a large proportion of which do not, however, belong to the county—was £44,040; of fishing gear, £68,615. The number of barrels of herring cured was 73,896, and the number of cod, ling, or hake taken was 342,705. Commerce enjoys considerable advantages from the many bays and inlets, and with many of those on the W coast communication is regularly maintained by lines of steamers from the Clyde. The principal articles of export are cattle, sheep, wool, grain, and fish. The fairs, markets, and trysts for cattle and sheep, some established by act of parliament, others by custom, are numerous, and are held at convenient places. Regular communication was established with the S in 1839, when the steamer *Duke of Sutherland* began to trade between Leith, Inverness, and Invergordon, and subsequently two steamers were put on the passage. These were, however, superseded by the Highland railway, which was opened in 1862 as far as Dingwall, in 1863 to Invergordon, and in 1866 to Tain and Bonar-Bridge, and the line from Dingwall to Stromie Ferry in 1865-68. The portion of the system within Ross and Cromarty enters the county on the SE at Muir of Ord Station, passes N by the valley of the lower Conan to Dingwall, and from that skirts the N shore of the Cromarty Firth as far as Logie-Easter. There it sweeps inland by Fearn, and reaching the Dornoch Firth near Tain skirts its southern shore all the way to Invershin at the upper end of the Kyle of Sutherland, where it passes into Sutherlandshire. The Black Isle branch (which was opened in 1894, is 13½ miles in length, and cost £57,000) strikes off at Muir of Ord, passes through Tarradale and the Spittal Wood, in which heavy cuttings occur, then enters the estate of Kilcoy and passes close by the castle. Near this is the first station, Redcastle. Passing the village of Tore it proceeds to Allangrange, Munloch, and Avoch, at each of which places there is a station. Thence skirting the seashore the line is carried on to Fortrose at such an elevation that it may easily be extended to the town of Cromarty. The Dingwall and Skye section strikes westward by the valley of Strathpeffer and the valley of the Black Water to the mouth of Strath Garve, and to Loch Luichart; thence up Strath Bran, and then south-westward across the watershed, down Glen Carron, and along the SE side of the loch to the present terminus at the narrows at Stromie. In 1893 operations were begun for continuing the line to the end of the peninsula at a point opposite Kyle-Akin in Skye. (See KYLE-AKIN.) The whole railway system follows the line of the old main roads, and, besides these, district roads run up almost all the glens that have been mentioned, and provide the necessary communication for the different parts of the low country, or between one part and another. The opening of the railway system has been of the utmost advantage to the county, both from the opening up of trade, and from the great influx of summer tourist traffic brought about by its means. Steel girder bridges over the Conan at May, and over the Orrin at Arcau, were erected by the County Council in 1894, each at an expense of about £2000; and in the same year piers were erected, also by the County Council, at Badentarbat, Breaslet, Inverasdale, Laide, Milvaig, and Portnambhathag.

The royal burghs are Dingwall (the county town), Tain, and Fortrose including Rosemarkie; the parliamentary burghs—Cromarty, Dingwall, Fortrose, and Tain; and the police burghs—Cromarty, Dingwall, Fortrose, Invergordon, Stornoway, and Tain. The only towns of over 2000 inhabitants are Dingwall and Stornoway; the towns of over 1000 inhabitants—Alass, Avoch,

Cromarty, Invergordon, Swainbost, and Tain. Smaller towns and villages are Arnol, Back, Ballallan, Ballintore, Barvas, Lower Bayble, Upper Bayble, Bragar, Breasleet, Callanish, Carloway, Coll, Conan Bridge, Crossbost, Evanton, Fivepenny Borve, Garrabost, Gruver, Hilton of Cadboll, Inver, Jeantown, Knockard, Laxdale, Leurbost, Maryburgh, Melloncharles, Plockton, Portmahomack, Rarnish, Saltburn, Shandwick, Shawbost, Strathpeffer, Swordle, Tolsta, Tong, Ullapool, Valtos, and Vatskeir.

The civil county contains the thirty-three entire *quoad civilia* parishes of Alness, Applecross, Avoch, Barvas, Contin, Cromarty, Dingwall, Edderton, Fearn, Fodderty, Gairloch, Glenshiel, Killearnan, Kilmuir-Easter, Kiltarn, Kincardine, Kintail, Knockbain, Lochalsh, Lochbroom, Lochcarron, Lochs, Logie-Easter, Nigg, Resolis, Rosemarkie, Rosskeen, Stornoway, Tain, Tarbat, Uig, Urquhart, and Urray; and includes also the *quoad sacra* parishes of Carnoch (Contin, Fodderty, and Urray), Croick (Kincardine), Cross (Barvas), Erchless (Kintail), Fortrose (Rosemarkie), Kinlochluichart (Contin, Fodderty, and Urray), Knock (Stornoway), Poolewe (Gairloch), Shieldaig (Applecross and Lochcarron), and Ullapool (Lochbroom). These are included ecclesiastically in the presbyteries of Chanonry, Dingwall, and Tain in the synod of Ross, and the presbyteries of Lochcarron and Lewis in the synod of Glenelg. Except in Alness, Avoch, Carnoch, Cromarty (which has a Gaelic chapel), Dingwall, Fortrose, Kinlochluichart, and Rosemarkie, the services are conducted in Gaelic. There are also 53 places of worship connected with the Free Church, 3 in connection with the United Presbyterian Church, 1 in connection with the Congregational Church, 1 in connection with the Baptist Union, 8 in connection with the Episcopal Church, 1 in connection with the Roman Catholic Church. In the year ending September 1894 there were in the county 141 schools, of which 134 were public, with accommodation for 16,626 children, 13,902 on the rolls, and an average attendance of 11,176. Ross and Cromarty, with (1895-96) a constituency of 8386, returns one member to parliament; while Fortrose, Cromarty, Dingwall, and Tain have shares in other two. It is governed by a lord-lieutenant and a vice-lieutenant, and has 48 deputy-lieutenants and about 200 justices of the peace. The County Council is composed of 55 members, comprising 51 for as many electoral divisions, and one each for the 4 burghs of Dingwall, Tain, Fortrose, and Cromarty. The divisions are classed into six districts, namely, Black Isle District, containing 6 divisions; Easter Ross District, 12; Lewis District, 11; Mid Ross District, 13; South-Western District, 4; and Western District, 5. The Council is divided into the following committees:—County Road Board, Standing Joint Committee (appointed partly by the Council and partly by the Commissioners of Supply), County Valuation Committee, Finance Committee, Public Health Committee, Executive Committee under Contagious Diseases (Animals) Act, Piers and Harbours Committee, and Small Holdings and Allotments Committee. The sheriffdom is Ross and Cromarty and Sutherland, with resident sheriff-substitutes for Ross and Cromarty at Dingwall and Stornoway. For the better and more expeditious administration of justice the county is divided into Easter, Wester, Cromarty, and Lewis districts, at the head of which respectively are the towns of Dingwall, Tain, Cromarty, and Stornoway, each having a sheriff court. Ordinary and small debt courts are held at Dingwall every Friday during session for the parishes of Alness, Applecross, Avoch, Contin, Dingwall, Fodderty, Gairloch, Glenshiel, Killearnan, Kiltarn, Kintail, Knockbain, Lochalsh, Lochbroom, Lochcarron, Resolis, Rosemarkie, Urquhart, and Urray; at Stornoway every Wednesday during session for the parishes of Barvas, Lochs, Stornoway, and Uig; at Tain every Wednesday during session for the parishes of Edderton, Fearn, Kilmuir-Easter, Kincardine, Logie-Easter, Nigg, Rosskeen, Tain, and Tarbat; and at Cromarty on the first Thursday of every month. Small debt courts are also held quarterly at

Invergordon and Fortrose in January, April, July, and October; at Ullapool and Lochcarron half-yearly in April and October. The police force consists of 49 men, under a chief constable, with a salary of £297 a year. The number of registered poor in 1894 was 2582; of dependants on these 987. The expenditure for poor law purposes was £26,850. All the parishes are assessed, and seven of them form the Black Isle Poor Law Combination, with a poorhouse near Fortrose; while ten form the Easter Division Combination, with a poorhouse near Tain. The proportion of illegitimate births averages about 4.5 per cent., and the average death-rate about 17 per 1000. Connected with the county are the 3d (militia) battalion Seaforth Highlanders (Ross-shire Buffs, the Duke of Albany's), with their headquarters at Dingwall; the Highland Volunteer Artillery, with companies at Cromarty, Stornoway, and Lochcarron; and the 1st Volunteer Battalion Seaforth Highlanders, with companies at Tain, Dingwall, Fortrose, Munloch, Ullapool, Invergordon, Evanton, Brahan, and Gairloch. Valuation (1674) £7683, (1815) £121,557, (1850) £160,565, (1866) £210,991, (1876) £262,817, (1885) £266,601, (1895) £259,510, plus £24,018 for railways. Pop. (1801) 56,318, (1811) 60,853, (1821) 68,762, (1831) 74,820, (1841) 78,685, (1851) 82,707, (1861), 81,406, (1871) 80,955, (1881) 78,547, (1891) 78,727, of whom 37,279 were males and 41,448 females. In 1891 the number of families was 17,833, of houses 16,079, and of rooms 57,186. Of the total population 1370 males and 591 females were connected with the civil or military services or with professions, 94 men and 2627 women were domestic servants, 1582 men and 23 women were connected with commerce, 14,407 men and 3221 women were connected with agriculture and fishing, and 5442 men and 1049 women were engaged in industrial handicrafts or were dealers in manufactured substances; while there were 8791 boys and 8285 girls of school age. Of those connected with farming and fishing 9558 men and 3032 women were concerned in farming alone, and 4281 farmers employed 2032 men, 907 boys, 1671 women, and 556 girls.

The SYNOD of Ross, which meets in rotation at Dingwall, Tain, and Chanonry, on the third Tuesday of April, contains the presbyteries of Chanonry, Dingwall, and Tain, all of which are separately noticed. There is also a Free church synod of Ross, containing three presbyteries, with the same names as those of the Established Church. The Episcopal Church bishopric of Moray, Ross, and Caithness is noticed under Moray.

The territory now forming the mainland district of the combined county belonged to the ancient Caledonii or Dicaledonæ, and afterwards to the same tribes under the name of the Northern Picts. The eastern territory formed one of the mortuaths (see MORAY), but of its mormaers there is no account, though Macbeth, mormaer of Moray, seems to have held sway in Ross as well. The eastern portion between the watershed and the Beaul, Moray, and Dornoch Firths was the Ross proper of this early period, while the portion W of the watershed was included in the province of Aregathel or Ergadia. The history of the island division is traced under HEBRIDES. After the middle of the 12th century the district seems to have been annexed to the Crown, for Malcolm IV. granted it to that Malcolm Macheth whose career is noticed in the article MORAY, and who held it till 1179, when, after his rebellion, he was driven out by William the Lyon, who, in order to secure his authority, erected forts at Dunseaith, to the N of the entrance to the Cromarty Firth, and at the site of the modern Redcastle. William had hardly quitted the district when a fresh insurrection broke out in favour of Donald Ban MacWilliam, who was defeated in 1187, and the province along with Moray again annexed to the Crown. Nominally the earldom had been granted to the Count of Holland, but we find him complaining that he had been deprived of all real power though he had not been forfeited, and in reality probably the whole district remained in a very turbulent state. Alexander II. granted the earldom to Ferohard

Macintaggart, the heir of a line of lay abbots of Applecross, and thus the eastern and western portions of Ross were united, and the foundation of the present county formed. Subsequently an heiress carried the earldom to Walter de Lesly, and afterwards to Alexander Stewart, Earl of Buchan, but it reverted thereafter by another heiress to the Celtic Lords of the Isles, by whom, in the person of John of Isla, it was in 1476 resigned to the Crown. Both before and after this the shire was constantly disturbed by the turbulence of the Lords of the Isles and the clans who inhabited it. Notices of some of the conflicts and disturbances will be found under INVERNESS and the various parishes. The county of Ross was constituted in 1661. The bishopric was founded prior to 1128, as a charter granted by King David in or about that year is witnessed by, among others, Makbeth, bishop of Rosemarkie. The defeat of the Marquis of Montrose in more recent times is noticed under KINCARDINE. For the Celtic and Scandinavian remains, reference may be made to the articles on the various parishes.

During the clan period the greater part of the county was in the possession of the powerful sept of the Mackenzies; the Munroes occupied a district round Fowlis Castle and Alness, measuring about 8 miles square; the Rosses or Clan Ghillanders, possibly representing one of the older tribes, held the district between the lower parts of the Cromarty and Dornoch Firths, and extending north-westward as far as the Eoin; a branch of the Macleods of Lewis held the territory bounded NE by the line of Loch Ewe and Loch Maree, and on the S by a curved line, extending from the southern end of Loch Maree to Loch Diabaig on outer Loch Torridon; and the Glengarry Macdonalds held two small patches—one all round Little Loch Broom, and bounded eastward by Loch Broom and Abhuinn Cuileig, and westward by the line of Strath na Sheallag and the Gruinard river; and the other, in the point between Loch Kishorn and Upper Loch Carron, and along all the SW side of the latter loch. The common language in Wester Ross is still Gaelic, and many of the inhabitants speak no English, but the number of these is rapidly diminishing. In Easter Ross Gaelic is confined to the labouring classes. As has been already noticed, the county contains a large number of small holdings, and these are scattered everywhere, occupying the poorer soils in the Easter division, the ridge of the Black Isle, and most of the seaward glens and straths in the W. As a result of the awards of the Crofters Commission in 1892, there was a net decrease in rents in Ross and Cromarty of 29 per cent.

Rosdhu (Gael. *ros-dubh*, 'dark headland'), the seat of Sir James Colquhoun, Bart., in Luss parish, Dumbartonshire, on a small promontory of its own name, on the W side of Loch Lomond, $3\frac{1}{2}$ miles S of Luss village. A handsome edifice, built about 1774, it stands near remains of an older tower and a roofless chapel used as the family burying-place, and has beautiful wooded grounds, partly extending along the lake's shore, partly ascending Creachan Hill and Tom-na-Cona, and partly including islands in the lake. On 29 Sept. 1875 the Queen 'drove up to the house, and, without getting out of the carriage, received a nosegay from Sir J. Colquhoun's little girl and a basket of fruit.' The estate belonged anciently to the Earls of LENNOX; was given, about the beginning of the 12th century, to the Dean of Lennox; and went by marriage, in the reign of Robert Bruce, or the early part of the 14th century, to Sir Robert de Colquhoun, whose nineteenth lineal descendant, Sir James Colquhoun, twelfth Bart. since 1625 (b. 1844; suc. 1873), is present proprietor.—*Ord. Sur.*, sh. 38, 1871. See also INCHMURRIN; FRUIN WATER; LOMOND, LOOH; and Sir Wm. Fraser's *The Chiefs of Colquhoun and their Country* (2 vols., Edinb. 1869).

Rosend Castle. See BURNISLAND.

Rossie, a plain oblong mansion, with a large old-fashioned garden and well-wooded policies, in Forgandenny parish, Perthshire, immediately W of Forgandenny village, and $3\frac{1}{4}$ miles W of Bridge of Earn. The estate of Rossie Hill or Rossie Ochil, $4\frac{1}{2}$ miles due S, was purchased from Andrew Blair in 1583 by William Oliphant of Newtown, whose descendant, Robert, in 1727 added part of the charter lands of Forgandenny; and the present proprietor is Thomas Truman Oliphant, Esq. (b. 1839; suc. 1872).—*Ord. Sur.*, shs. 48, 40, 1868-67. See chap. xiv. of Thos. Hunter's *Woods and Estates of Perthshire* (Perth, 1883).

Rossie Castle, a mansion of 1800 in Craig parish, Forfarshire, $1\frac{1}{2}$ mile SSW of Montrose. It belongs to Edward Millar, Esq., who purchased it in 1880. See INCHBRAYOCK.—*Ord. Sur.*, sh. 57, 1868.

Rossie House, a mansion in the W of Collesie parish, Fife, $1\frac{3}{4}$ mile E by N of Auchtermuchty. Rossie Loch, once the largest sheet of water in the county, abounding in perch and pike, was partially drained in 1740, but only so as to be marshy in summer and almost covered with water in the winter. In 1805-6, however, it was better drained, by means of deepened and extended ducts toward the Eden, at a cost of £3000; and it then left 250 acres capable of productive tillage, and 40 more so far marshy as to yield natural hay.—*Ord. Sur.*, sh. 40, 1867.

Rossie Priory, the princely seat of Lord Kinnaird in INCHTURE parish, E Perthshire, $3\frac{1}{2}$ miles N of Inchtute station, this being $7\frac{1}{2}$ miles WSW of Dundee. Standing 132 feet above sea-level, on the south-eastern slope of Rossie Hill (567 feet), it commands an extensive and very brilliant view; succeeded a previous mansion, called DRIMMIE House, within the limits of Longforgan parish; and was erected in 1807-17, from designs by Mr Atkinson, by the eighth Lord Kinnaird. It is a superb monastic-looking pile, spacious and elegant within, and of imposing aspect without; contains a valuable collection of antiquities, chiefly Roman; and has pleasure-grounds, gardens, and policies of great extent and singular beauty. The barony of Kinnaird in the Gowrie district was conferred in 1170 on Radulphus Rufus, whose descendant, Reginald de Kinnaird, in 1399 acquired the lands of Inchtute through marriage with Marjory, daughter and heiress of Sir John Kirkaldy. Their descendant, George-Patrick Kinnaird, for his loyalty to the house of Stuart, was knighted by Charles II. in 1661, and raised to the Scottish peerage in 1682 as Baron Kinnaird of Inchtute. The Hon. Douglas James William Kinnaird (1788-1830) was an eminent banker, the friend of Byron and Sheridan. Arthur Fitzgerald Kinnaird is the present and eleventh Lord (b. 1847; suc. 1887).—*Ord. Sur.*, sh. 48, 1868.

Rossie, Wester, a small village on the western verge of Collesie parish, Fife, $1\frac{1}{4}$ mile ENE of Auchtermuchty.

Rosskeen (Gael. *ros-ceann*, 'promontory of the head'), a coast parish of NE Ross and Cromarty, containing the seaport and station of INVERGORDON, $12\frac{1}{2}$ miles NE of Dingwall and $12\frac{1}{2}$ SSW of Tain. It also contains the Bridgend portion and the station of ALNESS village, $2\frac{1}{2}$ miles W by N of Invergordon. Washed on the SE for $5\frac{1}{2}$ miles by the Cromarty Firth, it is bounded by Kincardine around its north-western extremity, and along its north-eastern side by Edderton and Kilmuir-Easter, along its south-western side by Alness. Its utmost length, from NW to SE, is $17\frac{1}{2}$ miles; its breadth varies between $1\frac{1}{2}$ and $6\frac{1}{2}$ miles; and its area is $55\frac{1}{2}$ square miles or $34,384\frac{1}{2}$ acres, of which $501\frac{1}{2}$ are fore-shore, $152\frac{1}{2}$ water, and 5 tidal water. From a point $3\frac{3}{4}$ miles below its efflux from Loch Morie, the river ALNESS flows $8\frac{1}{2}$ miles south-south-eastward to the Cromarty Firth along the Alness boundary; and at that point, 495 feet above sea-level, it is joined by the Black Water, which, rising at an altitude of 1700 feet, runs $9\frac{1}{4}$ miles south-eastward down Strath Rusdale through the north-western interior. Lochan Chairn ($3\frac{3}{4} \times 1\frac{1}{2}$ furl.; 1329 feet) and Loch Chuinneag ($2\frac{1}{2} \times 1\frac{1}{2}$ furl.; 1680 feet), in the north-western extremity of the parish, near the source of the Black Water, send off their superfluence north-north-westward to the river Carron; and the Strathrory or Balnagowan river, rising on Beinn Tharsuinn at an altitude of 1980 feet, runs $4\frac{1}{2}$ miles south-eastward through Rosskeen till it

passes off into KILMUIR-EASTER. Loch Achnadoich (2 × 1 furl.; 395 feet), 4½ miles N by E of Alness village, is a beautiful little lake. The shore is low; and S of the highroad the surface nowhere exceeds 72 feet above sea-level. Beyond, it rises to 700 feet at Cnoc Navie, 1301 at *Cnoc Corr Guinig, 1000 at Cnoc Strathy, 2158 at Cnoc an t-Sithein Mor, 2259 at Beinn Tharsuinn, 1978 at *Carn nan Gabhar, 1744 at *Meall Bhenneit, and 2114 at Carn an Lochan, where asterisks mark those summits that culminate on the confines of the parish. Old Red Sandstone, the prevailing rock of the lowlands of the parish, has been quarried for building purposes. The soil of the coast district is partly gravelly and light, partly loam, and partly a deep strong clay; in the middle district, or higher arable land, it was formerly light and spongy, but has been worked into a rich deep loam. Little more than one-ninth of the entire area is in tillage; about one-twelfth is under wood, the middle district being finely wooded; and nearly all the remainder is pastoral or waste. A standing-stone near the church and a number of cairns are the chief antiquities. William Macintosh (1738-1809), the Eastern traveller, was born at Newmore, as also was George, his younger brother, who introduced Turkey-red dyeing to Scotland, and whose son, Charles, F.R.S. (1766-1843), invented 'macintosh' waterproofs. Mansions, noticed separately, are AERDROSS Castle, INVERGORDON Castle, and NEWMORE. Rosskeen is in the presbytery of Tain and the synod of Ross; the living is worth £233. The churches, Established and Free, are described under INVERGORDON. Six public schools—Ardross, Bridgend, Invergordon, Newmore, Saltburn, and Strathrusdale—with respective accommodation for 114, 205, 308, 107, 90, and 28 children, have an average attendance of about 55, 165, 215, 55, 30, and 15, and grants of nearly £75, £220, £300, £55, £35, and £40. Pop. (1801) 2074, (1831) 2916, (1861) 3766, (1871) 3808, (1881) 3773, (1891) 3480, of whom 1117 were in Invergordon and 705 in Bridgend, whilst 1450 were Gaelic-speaking.—*Ord. Sur.*, shs. 94, 93, 1878-81.

Ross, Little. See LITTLE ROSS.

Roslyn. See ROSLIN.

Ross of Mull. See ROSS.

Ross Priory, a mansion in Kilmarnock parish, Dumbartonshire, on the SE shore of Loch Lomond, 4½ miles NNE of Balloch station. Considerably enlarged about the year 1810, it has beautifully wooded grounds, and was much frequented by Sir Walter Scott in 1817 while he was writing *Rob Roy*. The estate has come, through his mother, to Sir George Hector Leith-Buchanan, Bart. See DRYGRANGE.—*Ord. Sur.*, sh. 38, 1871.

Ross, The. See ROSS, Lanarkshire.

Rosyth Castle, a ruin on the coast of INVERKEITHING parish, Fife, 1½ mile NW of North Queensferry. It stands on a small sea-rock, connected by a causeway with the mainland, but surrounded at high water by the tide; and is a square, thick-walled tower of considerable height, somewhat resembling a Norman keep. Over its main entrance on the N side is the date 1561, with the initials M. R. (Maria Regina). A large mulioned window on the E side is dated 1655, when the damage was repaired of Cromwell's men four years before. And on the S side is this quaint inscription:—

'In dev tym dra yis cord ye bel to clink
Qvais mery voce warnis to mete and drink.'

Rosyth Castle is said to have been the birthplace of Oliver Cromwell's mother, a tradition noticed by the Queen under date 6 Sept. 1842; and it figures in Scott's novel of *The Abbot*. The barony of Rosyth was purchased by Sir David Stewart about 1435, and remained with his descendants till about the beginning of the 18th century. It was then sold to the Earl of Rosebery, but belongs now to the Earl of Hopetoun.—*Ord. Sur.*, sh. 32, 1857. See vol. ii. of Grose's *Antiquities of Scotland* (1791).

Roths. See MARKINCH.

Roths, a parish containing a small police burgh of the same name, partly in Elginshire and partly (on the

opposite side of the Spey) in Banffshire until 1891, when the Boundary Commissioners placed it wholly in the county of Elgin. It is bounded N by the parishes of St Andrews-Lhanbryd and Speymouth, NE by Bellie, E and SE by Banffshire, SSW by Knockando, SW by Dallas, W by Birnie, and NW by Elgin. The greater part of the eastern and south-eastern boundaries are natural, lying along the river Spey, except near the centre, where from Sheriffhaugh about 1 mile above Boat of Bridge upwards to the bend immediately to the E of the village of Roth's, the parish occupies both the Elginshire and Banffshire sides of the river for a distance of about 2¾ miles, and for a small portion where, at Haughs of Arndilly to the S of the burgh of Roth's, both parish and county boundaries take to the W side of the Spey for about ¾ mile, following, however, apparently an old course of the river. Along the other sides the boundary is artificial. The greatest length of the parish, from where Speymouth, Bellie, and Roth's parishes meet on the NE south-westward to the boundary with Knockando parish, is 9 miles; the greatest width, along the south-western border, from Craigelachie Bridge on the E west-north-westward to the point where the parishes of Knockando, Dallas, and Roth's meet, is 6¾ miles; and the total area is 20,133·785 acres, of which 317·784 acres are water. The surface is irregular, but slopes gradually from E to W. The whole of the ground on the E along the Spey is low and level, particularly at the fertile haughs of Orton, Dundurcus, Roth's, and Dandaleith, two of which figure in the old rhyme which declares that

'Dipple, Dundurcus, Dandaleith, and Dalvey
Are the four bonniest haughs on the banks of the Spey.'

The haughs are separated from one another by hill spurs, which run westward into rounded eminences which skirt the low land and pass into wild uplands along the western border, reaching a height of 639 feet near Whiteriggs (NE), 925 above Netherglen (N), 887 above Piterraigie (centre), 1065 at Brylach (NW), 1165 at Branch Hill (W), 1104 W of The Kettles, and 1114 E of The Kettles (SW). The surface declined to less than 160 feet above sea-level in the NE corner of the parish, and the height of the road at the S end of the burgh of Roth's is 228 feet. The low ground is highly cultivated, and as the encircling heights are covered with thriving woods, the scenery is at many points very pretty. The drainage in the NE is carried off by the Inchberry and Sourden Burns, in the centre by the Auchinroath and Back Burns, and in the S and SW by the Burn of Roth's, the last three all uniting to the NE of the burgh of Roth's before they flow into the Spey. None of the streams are of any great size, but in the great flood of 1829 all of them, as well as the Spey, did a great amount of mischief. At the flat at Dandaleith 26 acres of excellent land were carried away, and 50 more covered with sand and gravel to a depth of 3 feet, and the stacks of corn in the farmyard were swept away. The Burn of Roth's and the Back Burn rose very high and overflowed the whole of the centre and the north-eastern end of the burgh of Roth's. Those of the inhabitants 'who were themselves in safety flew to succour their friends and neighbours who were in peril. Then were the stout and active of both sexes seen wading in at the risk of being carried away by the stream, and dragging the young, the aged, and the infirm, some of whom had not for years been from under a roof, out of their windows or doors as they best could, and carrying them, some on their backs, some in their arms, through the deep and powerful currents. Peats in black masses, firewood, poultry, and pigs were seen tumbling along; and every now and then the young fellows were dashing in and hauling out huge hogs by the hind legs, or plunging to the middle after some other live or dead object. Fortunate it was that all this confusion occurred during the light of day, and that the whole of the people were placed in safety before nightfall; but as the burn increased and the bridge in the centre of the village gave way, darkness brought with it a night

of dreadful suspense. There was a partial subsidence here as elsewhere; but after 12 o'clock next day, the flood again rose and to a still greater height, and either totally demolished or partially destroyed 15 dwelling houses of as good and substantial masonry as could possibly be built. Many of the houses were filled with gravel and mud to a depth of 5 feet; from 70 to 80 acres of haugh land were carried away; and in the whole parish there were 107 families rendered destitute. At the rock of Sourden the Spey was 20 feet 10 inches above its ordinary level. There is excellent salmon and trout fishing in the Spey, and the larger burns contain trout. The soil of the low flat grounds is mostly a very fertile alluvium with patches of clay, sand, and gravel; that along the skirts of the hills is a sharp gravelly mould; and that on the higher arable grounds is principally a mossy earth with patches of clay. Fully one-third of the total area is pastoral or waste; about 1000 acres are under wood; and the rest is under cultivation. The underlying rocks are Silurian schists, granite, and quartzite; one mass of the last at Conerock, to the S of the burgh of Rothes, being particularly noteworthy for its finely-veined structure. In the course of the Sourden Burn there is a vein of heavy spar. Many large erratic blocks are to be found on the uplands, and a bed of finely laminated clay in the course of the Back Burn is worthy of notice. The haugh of Rothes seems to have been formed in a large lake by the dammed back waters of the Spey, ere the rocky barrier at Sourden was cut down to its present level. The parish is traversed from end to end along the eastern border by the great line of road following the left bank of the Spey, and at the burgh of Rothes another main line of road branches off to the NW and passes by the great hollow, known as the Glen of Rothes, to Elgin. Following the same course as this line of road is the Morayshire section of the Great North of Scotland railway system, which has a course of 7 miles in the parish from the point where it enters on the NW near Netherglen, till it quits it on the SE at Craigellachie viaduct. A branch line passing from Rothes station down the valley of the Spey to Orton station on the Highland railway system has not been worked since 1866. Auchinroath (A. J. Mitchell Gill, Esq.) is a plain two-storey house, $\frac{1}{2}$ mile NNW of Rothes station. Glen Rothes (Dunbar of SEA PARK), 3 miles NNW of Rothes, is a plain summer residence, built in 1871. ORTON HOUSE is separately noticed. The chief antiquities are the remains of Rothes Castle, and the ruins of Dundurcus church. The Castle of Rothes stands on a steep rounded hillock to the SW of the burgh, and only a very small fragment of it now remains, though it appears to have been a place of considerable size and strength. It seems to occupy the same site as, but to be of later date than, the castle or manor-house of Rothes, where Edward I. stayed on 29 and 30 July 1296, when he was on his way back from his first visit to the N of Scotland. The barony of Rothes belonged in the 12th century to a family called Pollock, and by the marriage of the heiress, Muriel de Pollock, passed to the family of Murthac, and again by subsequent heiresses first to Watsons and then to the Leslies, who in 1457 became Earls of Rothes. They sold their estates in this quarter about 1700 to Grant of Elchies, from whom Rothes was, in 1708, acquired by the Earl of Findlater, and along with his estates passed to the family of Grant of Grant, Earl of Seafield, in whose possession the property still remains. Rothes gives the title of Earl to the Leslie family, but their seat is now Leslie House, in Fife. Dundurcus is separately noticed, as is also the hamlet of Inchberry in the NE of the parish. The parish of Rothes, which was enlarged in 1782 by the addition of part of the suppressed parish of Dundurcus (the rest being given to Boharm), is in the presbytery of Aberlour and synod of Moray, and the living is worth £197 2 year. The church is noticed below. Under the School Board the Rothes and Inchberry schools, with accommodation for 592 and 108 pupils respectively, have attendances of about 350 and 75, and grants of nearly £355

and £30. The principal landowner is the Countess Dowager of Seafield. Pop. (1801) 1521, (1831) 1709, (1861) 2407, (1871) 2148, (1881) 2201, (1891) 2299, of whom 1120 were males and 1179 females. Houses (1891) inhabited 488, uninhabited 35, and being built 4.

The TOWN of ROTHES was constituted a police burgh in 1884. It stands in the SE of the parish just described, and has a station on the Morayshire section of the Great North of Scotland railway system. It is by rail 3 miles N of Craigellachie, 7 NNW of Duftown, and 11 SSE of Elgin. Founded in 1766, it was long a mere township of crofters, but has now come to be the centre of some local trade. The original feus were given off along the road which runs from N to S, the portion to the S being now known as Old Street, which is continued to the N as New Street. Intersecting the line of these at an acute angle are Green Street and Burnside Street, and Breich Street and Land Street run parallel respectively to New Street and Green Street. The original houses, which were merely one-storey thatched tenements, have now to a large extent been replaced by more pretentious structures. The Established church, near the centre of the town, is a plain building with 800 sittings. It was repaired in 1868, and a clock tower added by public subscription in 1870. A Free Church congregation was formed at the Disruption, but the church was not built till 1858. The public school, on the E side of the town, is a handsome building, erected in 1875-76 at a cost of £2500. To the W of the town are the Glen Grant, Glen Rothes, and Glen Spey distilleries, the first erected in 1840, the second in 1878, and the last in 1883-84; and in the neighbourhood is a fourth, the Macallan Distillery. On the Burn of Rothes there is also a grain mill, and there are one or two saw-mills. A system of drainage was introduced in 1885, half of the expense being borne by the superior. Gas was introduced in 1850, and water in 1870. Municipal matters are, under the Burgh Police Act of 1892, managed by a provost, 2 bailies, and 6 commissioners. There are a post office, with money order, savings bank, and telegraph departments, branch offices of the Caledonian, North of Scotland, and Town and County banks, a police station, a masonic lodge and hall, an Oddfellows' lodge, two hotels, curling and lawn tennis clubs, a library and reading room, and a literary association. There are fairs on the third Thursday of April, the last Monday of July, and the third Wednesday of October; but, except that in July, which is a large harvest feeing market, they are practically extinct. Sheriff small debt courts are held four times a year for the parishes of Rothes and Knockando, and police courts as required. Pop. of the village (1861) 1465, (1871) 1319, (1881) 1382, (1891) 1548, of whom 741 were males and 807 females. Houses (1891) inhabited 350, uninhabited 26, and being built 4.—*Ord. Sur.*, sh. 85, 1876.

Rothsay (perhaps from Gaelic *Reogh-siudh*, 'King's seat'), a post and market town, sea-port, and royal burgh, is the chief town of Buteshire, and stands at the head of Rothsay Bay, on the E side of the island of Bute, 9 miles WNW of Largs, 11 NW of Millport, 22 NNE of Brodick, 19 SSW of Greenock, and 40 W by N of Glasgow. The situation of the town is both beautiful and sheltered. The bay enters between Ardbeg Point on the W and Bogany Point on the E, which lie $\frac{1}{2}$ mile apart; and from the middle of a straight line joining these two points it stretches inland for about a mile. Its shape resembles what mathematicians call a semi-ellipse. All round it is screened by a gentle and varying slope, rising in the E to Ardencraig (433 feet) and in the SW to Barone Hill (530); while from the town and harbour there stretches on either side, round the entire circuit of the bay, a curving line of elegant villas, picturesquely set with their gardens and shrubberies against a background of trees or sloping-ground, and only interrupted on the W side of the bay, where Skeoch Wood borders the road for some distance. The stretch of water outward from the bay has been described by Dr Moir ('Delta') as 'fairer than that of which Naples makes her boast.' The coast of Cowal,

immediately opposite, is adorned with the mansion and pleasure-grounds of Castle-Toward, and is overhung in the distance by lofty mountain masses, stretching away to the rugged peaks of the Duke of Argyll's 'Bowling Green'; to the NE are seen the pleasant hills of Renfrewshire; and northward one looks into the stern Highland recess of Loch Striven. As the old song has it—

'The great black hills, like sleepin' kings,
Sit grand roon' Rothessay Bay.'

Rothessay Bay in any weather and under any circumstances would attract the eye, but it looks its best under a bright summer sun.

The town, as seen from the bay, is picturesque, the villas especially adding to the ornamental appearance. The commercial and business parts of the burgh are chiefly congregated at the head of the bay, immediately behind the harbour and quay, or along the line of the High Street, which extends directly inland. An open space between the inner harbour and the coast end of High Street is known as Guildford Square. Thence towards the W bay runs Victoria Street, and to the E bay Albert Place and East Princes Street; while the bulk of the best of the town lies to the W of High Street and S of Victoria Street. The buildings in Guildford Square and in the principal streets are fairly handsome; but the less important streets are remarkable neither for fine building nor for breadth of roadway. The cleanliness of the streets is, however, commendable; and considerable improvements have lately been effected in relieving the more closely built parts of the town. About £30,000 has been spent in these improvements; and Russell Street, formerly the Old Vennel, bears the name of one of the most active promoters of the scheme, Mr Thomas Russell of Ascog. The outskirts are open and cheerful; and the villas and houses there are both neat and comfortable. The houses are built for the most part of greenstone, which lacks the lightness and polish of sandstone; but their regularity and tidiness compensate this failing. To the N of the harbour a space of rough foreshore of about 4 acres was, in 1869-70, at a cost of £5000, converted into a broad esplanade, laid out with ornamental gardens and gravel walks of from 50 to 15 feet in breadth. An octagonal hand-stand in the centre, with iron columns and a dome, measures 18 feet in diameter, and 30 high; and was presented to the town in 1873 by Mr Russell of Ascog. Esplanades have also been constructed along the shore on both sides of the bay. There is a public park in High Street, leased from the Marquess of Bute. It makes no attempt to be ornamental. Athletic sports are annually held in it. There is another public park at the top of the Serpentine Walk, from whence splendid views may be had. The Serpentine Walk is a zigzag road leading from Castle Street over the Burnt Hill to the shore at Craigmore. Besides these the Skipper's Plantation, a wooded slope to the east of the bay, with a beautifully shaded walk leading from Bishop Terrace to Craigmore, and the Skeoch Wood, to the west of the bay, with its lovely sylvan footpaths, may also be regarded as public parks. From Guildford Square to Kamesburgh or Port Bannatyne, 2½ miles to the NNW, a tramway line, double for a portion of the way, with frequent cars, was opened in 1882.

The chief modern public edifice is the County Buildings and Town Hall, occupying a conspicuous site with its chief front to Castle Street. This ornamental erection is in the castellated style, and contains accommodation for the town and county officials, a court-room, and a prison—the last, however, closed in 1883. The court-room contains a fine portrait of the late Marquess of Bute, painted by Graham Gilbert, and presented by public subscription to the corporation. The edifice was originally built in 1832 at a cost of £4000; was enlarged in 1865-67; and now represents a total cost of about £12,000. The new Public Halls form a handsome pile fronting Princes Pier, and were built in 1879 by ex-Provost C. Duncan at a cost of £20,000. The largest

hall can seat 1350 persons, and there are various small chambers and committee-rooms. Other halls in the town are the Victoria Hall in Store Lane, with accommodation for 500; the Music Hall in Watergate Street, rented by the Salvation Army, and holding 400; the West End Hall in Bridge Street, and the Good Templars' Hall in Bridgend Street, each capable of containing 300. On the summit of Chapelhill—so called from its having been the site of a chapel of St Bride, the last remains of which fell in 1860—is a castellated building containing the museum of the Archaeological and Physical Society, opened in 1873. The building was erected by the corporation originally as refreshment rooms. The Royal Aquarium and Concert Room, erected in 1875-76 on the site of the former battery at the E end of the town, is the property of a joint-stock company, and cost £15,000, the site being presented by the Marquess of Bute. Designed by Mr J. Thomson of Rothessay, the building consists of two one-storey wings, stretching from a low dome-covered tower, the whole having a 'rustic' base, and the entrance being by a broad flight of steps. The frontage is 102 feet, and the height 22 feet. It contains a promenade hall measuring 45 by 48 feet, a main corridor 90 by 15 feet, various side rooms, a camera obscura, and a seal-house. The tanks are chiefly in the corridor; and the rock-work about them is supposed to represent the geology of Bute. Half a mile S of the town is the Robertson Stewart Cottage Hospital, built in 1873 for £1500 by Mr. R. Stewart, a native of Bute and merchant in Glasgow, and enlarged subsequently by his sons. Other public buildings are the churches and schools noted below. Rothessay has several fountains, viz., the Albert Memorial erected by public subscription in East Princes Street in 1863; the Ballard Fountain on the Esplanade, presented by Mr Ballard of Brighton; the Ewing Fountain in Guildford Square, erected by bequest of Mrs Catherine Ewing in 1862; and the Thomson Memorial (1867), at the junction of Ardbeg Road and Marine Place. In July 1884 a statue was unveiled on the Esplanade to the late Mr A. B. Stewart, convener of the county and merchant in Glasgow, who conferred many benefits on the neighbourhood.

The Old Parish church, in High Street, is a plain building erected in 1796, and contains over 900 sittings. The New Parish church, at the W side of the bay, was originally erected in 1800 as a chapel of ease at a cost of £1300, and contains 830 sittings. It now is a handsome Gothic edifice with a fine spire. A new manse was erected in 1894. The Established Gaelic church is a chapel of ease, erected for about £600. St Brendan's church at Craigmore, is also a chapel of ease, and was opened in 1839. The Free parish or East Free church and the West Free church are both elegant buildings with conspicuous spires. The Free Gaelic church is on Chapelhill. The U.P. church, at Bridgend, was built about 1840, and contains 647 sittings. There is also a U.P. church at Craigmore. St Paul's Episcopal church, in Victoria Street, has 166 sittings, the Baptist chapel (1855) in Ardbeg Road 400, and St Andrew's Roman Catholic church (1866) in Columhill Street 200. The burgh is well provided with schools. The Rothessay Academy and Thomson Institute occupies a fine Gothic pile with an ornamental tower, designed by Mr J. R. Thomson. Erected in 1869, it was partly endowed by the trustees of the late Mr Duncan Thomson, as a first-class secondary school. Originally the property of the East and West Free churches, it was handed over in 1873 to the Burgh School Board, and is conducted by a rector and assistants. The public, former parochial, school in High Street is a handsome building erected by the School Board, and having accommodation for 947 boys and girls. Bellevue, in Barone Road, in 1882 was converted by Lady Bute into a Roman Catholic orphanage for girls, under the charge of the Sisters, 'Servants of the Sacred Heart.' There are 135 girls housed in the orphanage. There are also private adventure schools.

The Post Office having become insufficient for the

requirements of the town, handsome new premises were erected in Bishop Street in 1895-97. In the town there are branches of the Clydesdale Bank, Royal Bank, Bank of Scotland, and National Security Savings Bank. The chief hotels are the Bute Arms, Victoria, Queen's, Royal, Lorne, Eagle, and Argyll Arms, besides a number of temperance houses. Glenburn Hydropathic Establishment, occupying a lofty site on the E side of the bay, was the first institution of the kind in Scotland, having been opened in 1843 by the late W. Paterson, Esq., M.D., who had studied the water-treatment at Gräfenberg in Silesia, under Priessnitz, the father of hydropathy. It was destroyed by fire in 1892, re-erected on a grander scale, and reopened in 1894. The Salt-water Swimming Baths, built in 1882 at a cost of £1500, and presented to the town by Mr A. B. Stewart, are situated on the shore, immediately opposite the aquarium. On the opposite side of the bay, in front of Skeoch Wood, are the ladies' and gentlemen's bathing places erected by the burgh. They have dressing-rooms, with attendants, and are screened from view by stone walls. The Norman Stewart Institute, in Montague Street, opened in 1885, and the erection of which cost £14,000, partly bequeathed by the late Mr Norman Stewart of Richmond, Virginia, but mainly by his nephews, Messrs John, Daniel, and Bryce Stewart, of America, natives of Rothesay, provides accommodation for the Working Men's Club, Bute Women's Temperance Prayer Union, Rothesay Young Women's Christian Association, etc. It has a large and handsome refreshment room, amply-supplied reading and writing rooms, billiard, recreation, and smoking rooms, and lavatories, besides a lending library for annual members. Among the miscellaneous institutions of Rothesay are the horticultural, farmers', and archæological societies. The premier yacht club of Scotland, the Royal Northern, has its club-house at Rothesay, built in 1877 adjacent to the Queen's Hotel; and the Royal Rothesay Aquatic Club has its club-house at Skeoch Wood. Both clubs hold annual regattas. There are also bowling, tennis, golf, and cricket clubs. Rothesay has three weekly newspapers—the *Liberal Buteman* (1854), the *Conservative Rothesay Chronicle* (1863), and the *Independent Rothesay Express* (1877), the first two published on Saturday, the last on Wednesday; and *The Visitors' List* is published every Friday during the four summer months.

Rothesay is by no means an industrial town. The manufacture of linen was introduced into it about 1750, but it did not flourish. A cotton factory—claimed to be the first in Scotland—was started here in 1779 by an English company; passed later into the possession of the celebrated David Dale; and at one time employed 800 hands. For three-quarters of a century the industry flourished, and it came to employ 4 mills, with 1000 looms and 50,000 spindles; but gradually it began to decline, and latterly died out, as did also the tanning industry, Rothesay at one time having had three tanneries. Boatbuilding, once carried on in two yards, is also extinct, though for 30 years the industry was maintained in a yard with a patent slip belonging to the burgh. Its trade and commerce are equally insignificant. In early times it enjoyed a considerable shipping trade, but about 1700 it was superseded by the growth of Campbeltown. About 1765, when act of parliament made it compulsory that all colonial produce intended for Ireland should first be landed in Great Britain, Rothesay was made a custom-house station for the purposes of the Irish colonial trade. But the first thing to bring prosperity to the burgh was the development of the herring fishery, encouraged by a Government bounty which had for its real object the obtaining of naval reserve recruits. Rothesay became a centre of the west coast herring fishery and of the curing industry, and quite a brisk trade sprang up, employing vessels of considerable size. In 1855 the fishery in the district employed 557 boats of an aggregate tonnage of 2590, 1654 fishermen and boys, and 1102 other persons indirectly; produced 5074 barrels of cured herrings,

besides those sold uncured; and the value of the boats, nets, and lines employed was £18,842. But as it began to be more profitable to have the larger curing stations nearer the great fishing centres, the industry began to decline in Bute, and now has quite left Rothesay.

In 1822 an excellent harbour was made at a cost of £600; in 1840 a slip and building dock were added; and in 1863 a large extension of the harbour was made at a cost of £3800. It now consists of two basins—an outer and an inner—with substantially built walls, and protected on the seaward side by a commodious quay, 650 feet long by 80 broad. The quay and harbour walls together cost £25,000. In July 1884 a very handsome suite of waiting-rooms and offices, surrounded with a verandah, was opened at a total cost of nearly £2000. But about £200 is received in the shape of rent annually. The quay is one of the busiest on the Clyde. River and railway steamers call at it daily all the year round, some of them several times a day; and on the arrival of the large tourist steamers the quay presents a very gay and bustling appearance during 'the season.' A few small vessels of some 36 tons downwards belong to the port; these, with others registered elsewhere, are engaged mainly in importing coals, slates, and building materials, and in exporting turnips, potatoes, and farm produce. The steamers perform most of the other carrying trade connected with the place. The harbour trust is vested in the magistrates and town council and 4 representatives of the shipowners.

Rothesay was a burgh of barony from an early period, and became a royal burgh in 1400 by charter from Robert III., who also conferred grants of landed property and various privileges. In 1584, a charter of confirmation and novodamus was given by James VI. The ancestors of the Marquess of Bute used frequently to hold the office of provost; and from 1788 till 1839, the office was held exclusively by members of that family. In 1896 the present marquis was elected provost. The burgh is governed by a provost, 3 bailies, and 12 councillors. Police affairs are also managed by the councillors, who form the commissioners. The burgh revenue in 1894-95, including harbour, gas, water, etc., was £26,239. The municipal constituency numbered 2234 in 1896. In that year the police force consisted of 8 men, and a superintendent, with a salary of £150. Sheriff courts are held every Tuesday and Thursday in session, and justice of peace as required. Gas works were erected in 1840, and are the property of the corporation. The water supply for the houses on the lower levels is obtained from Loch Ascog, for those on the terraces from Dhu Loch—the two schemes together costing the burgh £36,000. The drainage of the town is carried by means of a brick conduit into deep water in front of the quay. From the union until 1832, Rothesay had a representative in parliament, but since the Reform Bill it has been included in Buteshire. Annual valuation of burgh (1835) £55,266, (1895) £62,064. Pop. (1821) 4107, (1841) 5789, (1861) 7122, (1871) 7800, (1881) 8329, (1891) 9108, of whom 5236 were females, and 691 Gaelic-speaking. Houses inhabited (1891) 2038, vacant 467, building 3.

Rothesay depends for its prosperity almost entirely upon its character as a watering-place and as a centre for visiting the places of interest on the Clyde. The

Seal of Rothesay.

climate is eminently suited to the delicate, and has earned for Bute the title of the Madeira of Scotland. The temperature in winter is 13 degrees above the average of Scotland, and in summer 5 degrees cooler; and several eminent physicians have recommended Rothesay as an abode for those suffering from pulmonary complaints. The Mineral Well, on the shore, a short distance beyond Craigmore pier, has had a pavilion raised over it, in which the water is sold at a penny a glass. An analysis by the late Dr Thomson, professor of chemistry in the University of Glasgow, gave in an imperial gallon, common salt, 1860.73 grains; sulphate of lime, 125.20; sulphate of soda, 129.77; chloride of magnesium, 32.80; silica, 14.20; sulphuretted hydrogen gas, 17.4 cubic inches. The waters, according to Professor W. Ivison Macadam, F.R.S.E., are twice as strong as those of Harrowgate. They are exceedingly valuable in complaints of the skin, are held in high esteem as a curative agent in a variety of disorders, including glandular diseases in general, and are more strongly purgative than most mineral springs in this country. The bathing facilities have already been noted. Boating is safe and convenient, and the letting of small boats is quite an important industry. Yachts find good anchorage in the bay; while those who desire to visit the various places of interest on the Clyde by steamer will find Rothesay the most convenient centre on the firth.

The chief antiquity of Rothesay and its most interesting object is its ruined castle, standing near the middle of the S part of the town. The original portion, believed to have been built by Magnus Barefoot about 1098, consists of a circular building, 138 feet in diameter, with walls 9 feet thick and 26 high, and flanked by 4 round towers, 3 of which were 28 feet in diameter, while the fourth and only remaining one is 33. Within the court are seen the walls of the ancient chapel of St Michael, 45 feet long by 23 broad, built in the Decorated style, and traces of the foundations of other buildings, supposed to have been the residence of the townspeople during sieges. The older part seems to have been built of pink stone from Ascog; the newer part is different in material and style, and is built on to the entrance-front of the original hold. It is believed to have been erected by Robert III., and is called 'the Palace.' The entrance to the castle faces the N, and is surmounted by a shield, bearing a much defaced royal coat of arms. Since 1874, this gateway has been made once more the entrance, access to which is obtained by a drawbridge, across a moat, which occupies the basin of the original moat. The restoration of the gateway, drawbridge, and moat, and the removal of contiguous tenements from the castle, were carried through by the Marquess of Bute, hereditary keeper of Rothesay Castle, at a cost of £8000. Among the apartments within the castle are a vaulted hall (43 x 11 feet), a dungeon below the floor, and a grand hall above, to which there is access by a staircase. Still higher there were sleeping apartments, now gone, among which was the small chamber in which Robert III. died in 1406. The walls of the castle are in many places overshadowed by trees, which have taken root in the crevices, and they are picturesquely covered with ivy; while the grounds surrounding it—about 2 acres—have been prettily laid out with shrubbery and flowers.

Rothesay Castle, though not unknown in history as a fort and as a royal residence, presents neither a beautiful nor a highly interesting appearance. As a fortification it was even on the ancient principles very deficient; 'even the gate is neither flanked nor machicolated, and it might have been mined or assaulted at almost any point.' As a royal palace, also, it seems to have lacked even an average amount of comfort and commodiousness. Built, as we have said, about 1098, it is said to have belonged, before the time of Alexander III., to a family of the name of MacRoderick. It underwent extension and improvement at various periods to serve as a fortified palace for the Lord High Stewards of Scotland, and for their successors the Royal Stewards.

It first comes into historical notice in 1228, when it was attacked by Olave, King of Man, and Husbac, King of the Southern Hebrides, with 80 ships, and after a siege was carried by assault with a loss of 390 men. In 1263 it was captured by Haco of Norway, and after the battle of Largs was retaken by the Scots. Under John Baliol it was occupied by the English, but in 1311 it submitted to Robert Bruce. In 1334 it was again seized and fortified in the English interest, but was once more recaptured. Robert II. visited the castle in 1376 and 1381; and Robert III. died broken-hearted within its walls April 13, 1406. Oliver Cromwell's troops destroyed part of its walls in 1650; and in 1685 the brother of the Earl of Argyll burned it and reduced it to utter ruin, either in revenge for a raid into his country, or for some action on the part of the burghers. For long years the castle was left to decay and destruction; it became overgrown with weeds and trees, and environed and hidden by more modern tenements. About 1815, however, the hereditary keeper instituted clearances and restitution, which revealed the terraces, towers, and chapel, with various apartments. Renewed and more extensive clearances and renovations in 1871-77 have brought it to its present well-kept condition. Another interesting antiquity is the ruined choir of the abbey church of St Mary, in the present cemetery, lying rather more than half a mile from the town. It contains a recumbent figure of Stuart of Bute who fell at Falkirk. The tomb of the family of Bute is a plain Gothic building, painted white, in the old part of the churchyard. Among the old tombstones, that of the Wallaces of Bush, reputed descendants of the great Wallace, is one of the most interesting. There is also a fragment of the monument to the Jamiesons of Kilmorie, hereditary coroners of Bute, which was brought hence from Kilmorie castle when the family property was transferred to the present Bute family.

The town of Rothesay was originally a village in connection with the castle, and its earlier history is directly associated with the story of that fortress, already narrated. Its later history is merely the account of the rise, progress, and decline of its commerce, and its arrival at its present position as a favourite watering-place and tourist-centre. The Queen and Prince Albert spent the night of August 17, 1847, in Rothesay Bay; and Rothesay she describes in her Journal as 'a pretty little town, built round a fine bay, with hills in the distance, and a fine harbour. The people cheered the "Duke of Rothesay" very much, and also called for a cheer for the "Princess of Great Britain." When we went on deck after dinner, we found the whole town brilliantly illuminated, with every window lit up, which had a very pretty effect.' In 1874 the Princess Louise and the Marquess of Lorne, and in 1876 Prince Leopold, visited the ruins of the castle.

The castle of Rothesay gave title to the first dukedom which existed in the Scottish peerage, and continues the title to the British sovereign's eldest son as a collateral for Scotland to that of Prince of Wales for England. The dukedom of Rothesay was created in a solemn council held at Scone in 1398, and conferred on David, Earl of Carrick, Prince and Steward of Scotland, and eldest son of Robert III.; and when David, in 1402, fell a victim to the ambition of his uncle, the Duke of Albany, it was transferred to his brother James, afterwards James I. of Scotland. An Act of Parliament, passed in 1409, declared 'that the lordship of Bute with the castle of Rothesay, the lordship of Cowal with the castle of Dunoon, the earldom of Carrick, the lands of Dundonald with the castle of the same, the harony of Renfrew with the lands and tenandries of the same, the lordship of Stewarton, the lordship of Kilmarnock with the castle of the same, the lordship of Dalry, the lands of Nodisdale, Kilbryde, Narristoun, and Cairtoun, also the lands of Frarynzan, Drumcall, Trebrauch with the fortalice of the same, "principibus primogenitis Regum Scotiæ successorum nostrorum, perpetuis futuris temporibus, uniantur, incorporentur, et annexantur.'" Since that period

the dukedom of Rothesay, in common with the principality and stewardry of Scotland, the earldom of Carrick, and the lordship of the Isles, and the barony of Renfrew, has been vested in the eldest son and heir-apparent of the sovereign. In the event of the first-born dying without an heir, the right passes to the sovereign's eldest surviving son; and when the sovereign has no son or heir-apparent, it reverts to the sovereign in person as the representative of an expected prince.

The parish of Rothesay, which included till 1846 the parish of North Bute, now occupies the centre of the island, between the parishes of North Bute and Kingarth, and extends in a narrow strip right across Bute from Rothesay to St Ninian's Bay. Its greatest length, from NE to SW, is 6 miles; its greatest breadth is $2\frac{1}{2}$ miles; and its total area is 6083 acres. It includes the royal burgh of Rothesay. The natural features have been already described in our article on BUTE. The chief proprietor is the Marquess of Bute. The parish is in the presbytery of Dunoon and the synod of Argyll; the living is worth £366. Total pop. (1861) 7438, (1871) 8027, (1881) 8538, (1891) 9306, of whom 712 were Gaelic-speaking, whilst ecclesiastically 5740 were in Rothesay and 3566 in New Rothesay parish.—*Ord. Sur.*, sh. 29, 1873. See J. Wilson's *Account of Rothesay and Bute* (Roth. 1848); J. Roger's *Ancient Monuments in the Church of St Mary, Rothesay* (1848); J. Thoms' *Rothesay Castle* (Roth. 1870); Hewison, *History of Bute* (1894-95); and the '*Bute-man's Guide to Rothesay* (Roth. 1894).

Rothie or Rothie-Norman. See FVYIE.

Rothiemay, a village and a parish of E Banffshire. The village of Rothiemay or Milltown stands, 290 feet above sea-level, on the left bank of the river Deveron, $2\frac{1}{4}$ miles NNE of Rothiemay station in Cairnie parish on the Great North of Scotland railway, this being $3\frac{1}{2}$ miles SSE of Grange Junction, $45\frac{1}{4}$ NW of Aberdeen, and 5 N of Huntly, under which there is a post office, with money order, savings bank, and telegraph departments. Towards the close of 1880 the sewage works of the village were extended and greatly improved, and its water supply was taken from a new source, all at the expense of the Duke of Fife. There are a public reading-room and a woollen manufactory. Fairs are held here on the third Tuesday of May o. s. and the Friday after the first Thursday of October o. s.

The parish is bounded NE by Marnoch, SE by Inverkeithny and by Forgue in Aberdeenshire, S and SW by Huntly and Cairnie in Aberdeenshire, and NW by Grange. Its utmost length, from E to W, is $6\frac{1}{4}$ miles; its utmost breadth, from N to S, is $5\frac{3}{8}$ miles; and its area is 9468 $\frac{3}{8}$ acres, of which 103 $\frac{3}{8}$ are water. Shiel Burn runs $4\frac{1}{2}$ miles south-westward along all the Grange boundary to the Isla; the ISLA flows $3\frac{1}{4}$ miles south-eastward along all the Cairnie boundary to the Deveron; and the DEVERON winds $8\frac{3}{8}$ miles east-north-eastward—for 3 miles across the southern interior, elsewhere along the Huntly, Forgue, and Inverkeithny boundaries. In the extreme E the surface declines along the Deveron to 195 feet above sea-level; and thence it rises to 871 feet at the Cairns of Geith, 500 at Mossiehead, and 767 at Meikle Brown Hill on the north-eastern border. The northern district, a tolerably level plateau, includes an extensive moss, affording supplies of peat fuel to a wide extent of country, and is elsewhere disposed variously in arable and pasture ground and fine plantations. The southern district is partly a gentle declivity of more than 1 mile in breadth to the Isla and the Deveron, and partly a luxuriant valley, highly embellished with culture and wood. Much land that was formerly in a waste condition has been brought under the plough; and a very extensive aggregate area is under plantations. Granite is the predominant rock; and the soil of the arable lands is mostly rich and fertile. An ancient Caledonian stone circle stands a little way N of the village; and an ancient road, supposed to be a Roman *iter*, traverses the western district. The self-taught astronomer, James Ferguson, F.R.S. (1710-76), was born at the Core of Mayen, in a cottage whose ruins were removed about 1848. Rothie-

may House, to the E of the village, is a building of some antiquity, traditionally said to have given a night's lodging to Queen Mary in 1562. Another mansion, MAYEN HOUSE, is noticed separately. Rothiemay is in the presbytery of Strathbogie and the synod of Moray; the living is worth £251. Places of worship are the parish church (1807; 500 sittings) and a Free church; and two public schools—Rothiemay and Ternenny—with respective accommodation for 171 and 107 children, have an average attendance of about 140 and 75, and grants amounting to nearly £150 and £70. The Mannoch Hill, a former public school, and the Rothiemay school were amalgamated in 1893, thus reducing the number of schools from three to two. Valuation (1885) £5060, (1893) £5312. Pop. (1801) 1061, (1831) 1228, (1861) 1414, (1871) 1370, (1881) 1363, (1891) 1291.—*Ord. Sur.*, sh. 86, 1876.

Rothiemurchus. See DUTHIL.

Rothie-Norman or Rothie. See FVYIE.

Rothmaise Hill. See RAYNE.

Rothney, a village in Premnay parish, Aberdeenshire, close to Inch station.

Rottearns House, a mansion in Ardoch parish, Perthshire, $1\frac{1}{4}$ mile E of Greenloaning station.

Rotten Calder. See CALDER, ROTTEN.

Roucan, a village in Tortherwald parish, Dumfriesshire, $3\frac{1}{2}$ miles ENE of Dumfries.

Roughrigg, a village near the eastern border of New Monkland parish, Lanarkshire, $2\frac{1}{2}$ miles SW of Slamannan. Pop. (1871) 365, (1881) 689, (1891) 470.

Rousay, an island of Orkney, 7 furlongs N by E of the nearest point of Evie parish in Pomona, $4\frac{1}{4}$ miles SSW of Westray, and 11 N by W of Kirkwall, under which it has a post office, with money order and savings bank departments. Its utmost length, from E to W, is $5\frac{1}{2}$ miles; its utmost breadth, from N to S, is $4\frac{1}{2}$ miles; and, but for Saviskaill Bay ($2\frac{1}{2}$ miles \times 1 mile) on the N side, its outline would be nearly circular. The north-western coast is rocky and precipitous, rising rapidly to a height of 399 feet above sea-level; but elsewhere the shore is lower and more sloping, with several safe though small harbours. Of six fresh-water lakes much the largest is the Muckle Water ($1\frac{1}{2} \times \frac{1}{4}$ mile; 322 feet), which sends off Suso Burn east-north-eastward to Rousay Sound; but Loch Saviskaill or Wasbister yields far better trout-fishing. On every side the surface rises in hilly acclivity, and forms an upland mass in the general shape of a flattened cone, which, measuring several miles around the shoulder, presents an imposing aspect. The ascent for the most part is steep, and is marked at intervals with abrupt ridges and terraces, apparently former sea-margins. A strip of fertile arable land fringes much of the seaboard, between the beach and the base of the uplands. The latter are suitable for black-faced sheep, for Highland cattle, and for game, Rousay being the best grouse island in Orkney. The rocks belong to the Old Red Sandstone formation. A group of five sepulchral mounds, known as Manzie's or Magnus', on Corquoy farm, were carefully trenced in 1880, and yielded a curious oval urn, of a somewhat metallic appearance. Trumland House, near the southern shore, was erected in 1872 from designs by the late David Bryce, R.S.A., and is the seat of Lieut.-Gen. Frederick William Traill-Burroughs, C.B. (b. 1831). The parish of Rousay and Eagleshay comprises also the inhabited islands of EAGLESHAY or Eglishay and WER or Viera, both of which are noticed separately; and has a land area of 13,754 acres. It is in the presbytery of North Isles and the synod of Orkney; the living is worth £179. Rousay and Eagleshay have each an Established church, the former having been repaired in 1892, and the grounds around the church designated as a new burying-ground and fenced. There are also Free and U.P. churches of Rousay; whilst an Episcopalian cemetery, near Rousay parish church, was consecrated in 1881. There are an agricultural society and a medical association. Five public schools—Eagleshay, Frotoft, Sonrin, Viera, and Wasbister—with respective accommodation for 50, 77,

90, 30, and 65 children, have an average attendance of about 25, 20, 50, 10, and 35, and grants amounting to nearly £40, £40, £75, £25, and £55. Valuation of parish (1834) £3879, 9s. 4d., (1893) £3463, 14s. 4d. Pop. of Rousay island (1811) 795, (1831) 921, (1851) 937, (1871) 860, (1881) 873, (1891) 774; of parish (1801) 1061, (1841) 1294, (1871) 1101, (1881) 1118, (1891) 988.

Routenburn House, a mansion in Largs parish, Ayrshire, near the shore of the Firth of Clyde, 2 miles N by W of Largs town.

Routing-Bridge. See KIRKPATRICK-IRONGRAY.

Row (Gael. *rudha*, 'a promontory'), a village and a parish in the W of Dumbartonshire. The village lies on the E side of the Gare Loch, immediately SE of the small, low, triangular promontory that gives the parish name, with a station on the West Highland railway, and 2 miles NW of Helensburgh, under which it has a post office, with money order, savings bank, and telegraph departments. Charmingly situated on a small bight nearly opposite Rosneath village, it has delightful environs of slopes and braes, profusely sprinkled with elegant villas, and richly embellished with gardens, shrubberies, and groves. It is not a seat of any trade, and presents a rural retired appearance, yet serves as a point of thoroughfare for very many neighbouring residents, and for summer tourists; enjoys frequent daily communication by steamers with Garelochhead, Helensburgh, Craigendoran, and Greenock; and has a good small steamboat quay. Pop. (1871) 242, (1881) 527, (1891) 916, plus 399 on board the *Empress* training-ship.

The parish, containing also the town of HELENSBURGH and most of the village of GARELOCHHEAD, was formed out of Rosneath and Cardross in 1643-48. It is bounded NE and E by Luss, SE by Cardross, SW by the Gare Loch and Rosneath, and NW by Loch Long. Its utmost length, from NNW to SSE, is $9\frac{1}{2}$ miles; its breadth varies between 2 and $4\frac{3}{4}$ miles or $6\frac{3}{4}$ along Loch Long; and its area is 32 square miles or 20,530 $\frac{1}{2}$ acres, of which 358 $\frac{3}{4}$ are foreshore and 46 water. The road from Helensburgh to Garelochhead and Arrochar runs $7\frac{1}{2}$ miles north-north-eastward along the E shore of the GARE LOCH, $2\frac{1}{2}$ miles northward across the neck of the Rosneath peninsula, and then $3\frac{3}{4}$ miles north-north-eastward along the E shore of Loch Long, till it leaves Row parish near Gortan. The West Highland railway (opened in 1894) enters the parish a short distance from Craigendoran station, traverses its entire length along the shores of the Gare Loch and Loch Long, and has stations at Upper Helensburgh, Row, Shandon, Garelochhead, and Whistlefield. FRUIN WATER, rising at an altitude of 1500 feet above sea-level, winds $3\frac{3}{4}$ miles south-south-eastward—for the last $1\frac{1}{2}$ mile along the Luss boundary—till it passes off into Luss parish on its way to Loch Lomond. The surface is everywhere hilly or mountainous, chief elevations from N to S being Creagan Hill (923 feet), Tom Buidhe (936), *BEN MHANARCH (2323), Maol an Fheidh (1934), *BEN CHAORACH (2338), *BEN THARSUINN (2149), the Strone (1683), Auchinvennal Hill (1680), *Balcnock (2092), *Craproch (1500), and Tom na h-Airidhe (1185), where asterisks mark those summits that culminate on the Luss boundary. Row, on the side of Glenfruin, is naked and heathy; but on the Gare Loch side it has in great part been worked by art into a state of productiveness or of high embellishment. At its SE end, for $1\frac{1}{2}$ mile inward from the boundary with Cardross, it declines into very gentle upland, and is nearly all under cultivation. The skirts and lower declivities of it, from its eastern extremity to the head of the Gare Loch, are thickly studded with mansions, villas, and cottages *ornées*, embosomed among gardens and woods, and presenting a lovely series of close landscapes; while nearly all of it, from the beach to the summit, commands magnificent views of the Gare Loch and the Clyde, the Cowal mountains, the peninsula of Rosneath, and the hills of Renfrewshire. The rocks are variously metamorphic, Silurian, and Devonian; transition limestone and clay-slate have been worked, but are both of inferior

quality; and some useless searches have been made for coal. The soil of the arable grounds is, for the most part, light and fertile. In the immediate neighbourhood of the village of Row, a large trade in illicit distillation of whisky was carried on about sixty years ago. Most of the stills were in Aldownick Glen, a deep ravine $\frac{1}{2}$ mile from the church. In the *Heart of Midlothian*, Sir Walter Scott alludes to the smugglers here, and to this gorge under the name of the Whistlers Glen, so called probably from the fact that those on the outlook gave warning of the approach of a stranger by imitating the whistle of the curlew. When George IV. visited Scotland he expressed a desire to taste real smuggled whisky, and the Duke of Argyll procured a barrel from a still at the mouth of this glen for his consumption, though the bargain was a difficult one to make, the Duke having to meet the smugglers personally at the end of Row Point. The conflict of Glenfruin is described under FRUIN WATER. ARDINCAPLE CASTLE, the principal mansion, is noticed separately, as also is the SHANDON Hydropathic. Sir James Colquhoun of Luss, Bart., is sole proprietor. The present Duke of Argyll was born at Ardincaple Castle, 30 April 1823. Including the *quoad sacra* parishes of Helensburgh and Helensburgh West, and most of that of Garelochhead, Row itself is a parish in the presbytery of Dumbarton and the synod of Glasgow and Ayr; the living is worth £293. The parish church, on the shore of the Gare Loch at the village of Row, is a Gothic edifice of 1850. An organ was placed in it in 1880, and a clock and chimes in 1881. Its tower, 110 feet high, was partially destroyed by the storm of Dec. 1833, but has since been restored. In 1892 the church was enlarged and improved at a cost of £1600. John M'Leod Campbell, D.D. (1800-71) was minister from 1825 till his deposition in 1831 over the famous Row heresy case. Dr Campbell died at Rosneath. A statue of Henry Bell in a sitting posture was erected in front of the parish church by the late Robert Napier, the eminent shipbuilder. (See HELENSBURGH.) Besides four schools noticed under Helensburgh, the four public schools of Garelochhead, Glenfruin, Row, and Shandon, with respective accommodation for 136, 75, 200, and 40 children, have an average attendance of about 80, 10, 125, and 20, and grants amounting to nearly £85, £25, £125, and £20. Pop. (1801) 970, (1831) 1759, (1861) 6334, (1871) 8439, (1881) 10,097, (1891) 11,172, of whom 1969 were in Row ecclesiastical parish.—*Ord. Sur.*, shs. 30, 38, 37, 1866-76.

Rowadill. See HARRIS.

Rowallan Castle. See KILMARNOCK.

Rowanburn, a village in Canonbie parish, SE Dumfriesshire, near the right bank of Liddel Water, $1\frac{1}{2}$ mile ESE of Canonbie village. Pop. (1871) 434, (1881) 407, (1891) 412.

Rowardennan, a hotel in Buchanan parish, Stirlingshire, on the E shore of Loch Lomond, opposite Inveruglas ferry, 6 miles S of the summit of Ben Lomond, and $9\frac{1}{2}$ N of Balloch. It adjoins a steamboat pier, is the best starting-place for the ascent of Ben Lomond, and furnishes guides and well-trained ponies for parties making the ascent. There is a post office under Glasgow.—*Ord. Sur.*, sh. 38, 1871.

Rowcan. See ROUCAN.

Rowchester, an estate, with a fine modern mansion, in Greenlaw parish, Berwickshire, 3 miles SE of the town. It is the property of Messrs. J. & F. B. Marjoribanks.—*Ord. Sur.*, sh. 25, 1865.

Roxburgh, a village and a parish of N Roxburghshire. The village, near the left bank of the Teviot, has a station, Roxburgh Junction, on the North British railway, $7\frac{1}{2}$ miles NNE of Jedburgh, $8\frac{1}{2}$ E by S of St Boswells, and 3 SW of Kelso. It is an ancient but decayed place, with a post office, having money order, savings bank, and railway telegraph departments.

The parish, containing also HEIRON village, is bounded N and E by Kelso, S by Eckford and Crailing, SW by Ancrum, W by Maxton, and NW by Makerstoun. Projecting a long, narrow south-western wing, it has an

utmost length from NE to SW of $7\frac{3}{8}$ miles, a varying width of 3 furlongs and $3\frac{5}{8}$ miles, and an area of $7924\frac{3}{4}$ acres, of which $143\frac{3}{4}$ are water. The TWEED, here a splendid salmon river, curves $4\frac{3}{8}$ miles north-eastward along all the north-western and northern border; and the TEVIOT, entering from Eckford, flows 4 miles north-north-eastward—for the last $1\frac{3}{8}$ mile along the Kelso boundary—until, $\frac{1}{4}$ mile above its influx to the Tweed, it passes off into Kelso parish. Near the village it is spanned by a lofty railway viaduct of fourteen arches. In the NE extremity of the parish the surface declines to 100 feet above sea-level; and thence it rises to 212 at Roxburgh Castle, 368 at Ladyrigg, 550 at the Eckford boundary, 383 near Moorhouse, and 663 at Down, Doune, or Dunse Law. The western and southern borders, at one time moorish, have for many years been brought under the plough. In almost every corner the eye is presented with objects which nature and art seem vying how best to adorn. Hedgerow enclosures, rows of trees, clumps and groves upon knolls and rocky hillocks, and curvatures of slope, render the landscape rich and beautiful. One of the fairest prospects in the world is the ducal castle and park of Floors, the splendid mansion and grounds of Springwood Park, the Tweed and the Teviot, each spanned by an elegant bridge, and right in front Kelso and its immediate environs in all their glory. From a spot in the village of Roxburgh you look, on the one hand, along a valley 8 or 10 miles long, apparently all of it covered with trees, or but thinly diversified with glade and dwelling; whilst, on the other hand, is an open and very diversified prospect of double the distance, away to the summits of the Cheviot Hills. From a rising-ground near the southern boundary, the Teviot, after moving awhile in concealment behind overshadowing banks, rolls romantically into view, and instantly passes again into concealment. Caves of considerable extent and of curious forms, once used as places of concealment, occur on the banks of the Teviot. An immense natural dam, called the Trow Craigs, consisting of trap rock, lies across the Tweed, but has been worn by the river into four slits, which, when there is no flood, admit in separated currents the entire volume of water. Two of these slits are 34 feet deep, and so narrow that a person may bestride them; and they and the other gulleys have a length of 450 and a descent of 16 feet. They form eddies and rapids, and offer to the current alternate accelerations and obstructions, which at all seasons occasion a loud noise, and at the breaking up of the ice create a tremendous roar, resembling the cry of the tempest-lashed sea. The principal rocks are traps and sandstones, little suited for building purposes. Two springs near the Tweed have a remarkable petrifying power. Much of the peninsula between the Tweed and the Teviot is so stony as to have given rise to a tradition that it was once all covered with town. The soil of the parish is in some parts a mossy mould, in some a gravelly or sandy alluvium, in some a fine fertile loam. The great Roman road, called Watling Street, runs $1\frac{1}{4}$ mile along all the Ancrum boundary, and was used here until comparatively recent times as a drove road for cattle. The strongly-vaulted basement storey of a fortalice, variously called Roxburgh, Sunlaws, and Wallace Tower, the subject of many legends, and seemingly one of a chain of strengths between Roxburgh Castle and Upper Teviotdale, stands between the village of Roxburgh and the Teviot. Vestiges of camps and trenches appear in several localities; and traces of villages and malt steeps, with other memorials of inhabitation, indicate the population to have formerly been very considerable. Mansions are Sunlaws and Fairnington. The Duke of Roxburgh holds fully one-half of the entire rental. Roxburgh is in the presbytery of Kelso and the synod of Merse and Teviotdale; the living is worth £317. The parish church, at the village, was built in 1752. In the churchyard is the grave of Andrew Gemmels, the 'Bluegown, Edie Ochiltree,' of Sir Walter Scott's *Antiquary*, who 'died at Roxburgh Newton in 1793, aged 106 years.' Three public schools—Fairnington, Heiton, and Roxburgh—

with respective accommodation for 83, 75, and 123 children, have an average attendance of about 35, 55, and 75, and grants amounting to nearly £45, £50, and £65. Pop. (1801) 949, (1831) 962, (1861) 1178, (1871) 1053, (1881) 1012, (1891) 954.—*Ord. Sur.*, sh. 25, 1865.

Old Roxburgh stood over against Kelso, on a rising-ground at the W end of the low fertile peninsula between the Teviot and the Tweed, 2 miles NNE of the village of Roxburgh, from which one approaches it by a beautiful walk by the side of the Teviot. It is now quite extinct. Brief and obscure notices by various historians indicate that it was a place of considerable note long before the 12th century; but they fail to throw light on its condition, and do not furnish any certain facts in its history. While David I., who mounted the throne in 1124, was yet only Earl of Northumberland, the town, as well as the castle, belonged to him as an appanage of his earldom, and appears to have been so flourishing that it could not accommodate the crowds who pressed into it to enrol themselves its citizens. An overflow of its population was the occasion of the erection of the new town, the original of the present village. Whether the new town was founded by David or at a period even more remote is uncertain; but the fact of its being so early an offshoot strikingly evinces how great a seat of population was the district at the mouth of the Teviot in even rude and semi-barbarous times. Among other elements of the old town's importance in the first half of the 12th century, it possessed an encincturing fortification of wall and ditch, and had its three churches and schools, which David gave to the monks of Kelso Abbey. When he ascended the throne, it became, as a matter of course, a royal burgh—one of those 'Four Burghs' (the others being Edinburgh, Berwick, and Stirling) whose burghal parliament still exists as the Convention of Royal Burghs. But its main feature was its ancient castle, supposed to have been built by the Saxons while they held their sovereignty of the Northumbrian kingdom, and long a most important fortress, a royal residence, a centre of strife, an eyesore to every great party who had not possession of it, and at once the political glory and the social bane of Teviotdale. Only a few fragments of some of its outer walls remain—on a tabular rock which rises about 40 feet perpendicular from the level of the plain; but these distinctly indicate it to have been a place of great strength.

Old Roxburgh was governed by a provost and bailies; it had a burgh or city seal; and it was the seat of a royal mint, at least in the reigns of William the Lion and James II. It also very early had a weekly market and an annual fair—the latter the original of the great fair of St James which continues to be held on its site, and now belongs to KELSO. In 1368 it was subject to Edward III. of England, and received from that monarch a confirmation of its privileges as a burgh; and in 1460, having again come under the power of the Scottish crown, it was, in punishment of its disloyalty, denuded of its honours, and struck from the list of Scottish burghs. It was, as a town, more or less affected by nearly all the vicissitudes which befell its castle; and at many periods, particularly in the years 1369 and 1460, it was burned by hostile armies. It is said to have been, for some time, the fourth town in Scotland in both population and general importance. Near it, on the Teviot side, at a place which still bears the name of Friars, is the site of a convent of Franciscan monks. In the vicinity stood also a Maison Dieu or hospital, for the reception of pilgrims, and of the diseased and the indigent. David I. spent much time at the town and castle of Roxburgh, partly in the way of ordinary residence, and partly in the way of conducting hostilities with England. William the Lion, under the misfortunes of war, delivered up the castle of Roxburgh to Henry II. of England (1174), but received it back from Richard I.; and he afterwards held his court here, and sent forth forces hence to quell insurrections among his subjects as far N as the province of Moray. Alexander

II. resided much at Roxburgh, and was married here in 1239. Alexander III. was born at Roxburgh two years later, and afterwards, at two periods, was shut up in it by turbulences amongst his nobles; and here in 1255 he welcomed his father-in-law, Henry III. of England. Roxburgh Castle was affected by the first movements of Edward I. against Scotland, and continued to figure prominently in most of the leading events throughout the Wars of the Succession. During the interregnum, the public writings and records had been transmitted from Edinburgh to Roxburgh, where the auditors appointed for Scottish affairs by Edward I. held their assemblies. In 1295 John Baliol consented that Roxburgh, with Berwick and Jedburgh, should be delivered to the Bishop of Carlisle, as a pledge of adherence to the interests of Edward. In September 1292 Edward himself resided at Roxburgh; and four years afterwards, in punishment of some resistance to his claims, he took formal military possession of the castle. In 1297 an unsuccessful attempt was made by the Scots to retake it; but on Shrove-Tuesday 1313, the castle was surprised and captured by Sir James Douglas while the garrison were indulging in riot. In 1332 Edward Baliol got possession of the castle of Roxburgh, and here acknowledged Edward III. of England as his liege lord, surrendering to him the independence of Scotland, and alienating the town, castle, and county of Roxburgh as an annexation to the crown of England. Edward III. spent some time in Roxburgh Castle, and twice celebrated his birthday here. On Easter Day, 1342, Sir Alexander Ramsay of Dalhousie took the castle by escalade (see HERMITAGE CASTLE); but in 1346 the English regained possession of it after the battle of Hexham. In 1355 Edward III. of England again resided here; and Edward Baliol, who attended him as a vassal, made here a formal and more absolute surrender to him than before of the crown rights of Scotland, degrading himself so far as, in token of submission, to present him with the Scottish crown and with a portion of the Scottish soil. In 1398, during a truce, the Earl of Douglas' son, with Sir William Stewart and others, taking advantage of the critical situation of Richard II., broke down the bridge at Roxburgh, plundered the town, and ravaged the adjacent lands. In 1411 Douglas of Drumlanrig and Gavin Dunbar adopted the same course of hostility; for they broke down the bridge of Roxburgh, and set fire to the town. James I.'s vain attempt to recover this fortress in 1435 is naively described by Bellenden:—'The king past with an army to sege the castell of Marchmond, that is to say Roxburgh. The Scottis war nowmerit in this army to H.C.M. men, by [besides] futmen, and caragemen. At last quhen the kyng had lyne at the sege foresaid xv. dayis and waistit all his munitioun and powder, he returnit haim, but [without] ony mair felicitee succeeding to his army.' In 1400 James II.—perhaps from the thought of its shaming the Scottish crown that Berwick and Roxburgh should continue so long under English dominion—laid siege to the latter, with a numerous army, well-furnished with artillery and warlike machinery. He had taken the town, and levelled it to the ground; but on 3 Aug., during the siege of the castle, while he was watching the discharge of a cannon, of so great a calibre that it was called the 'Lion,' it burst, and the king was almost instantaneously struck dead. A yew tree, planted by the sixth Duke of Roxburgh, marks the spot where he fell. On receiving the mournful tidings the Queen, Mary of Gueldres, hurried to the camp with her eldest son, a boy of eight years of age. She conducted herself with such heroism as to inspire the troops with redoubled energy; and the garrison, finding themselves reduced to extremities, surrendered the fortress. 'That the place,' says Ridpath, 'which the English had held for more than a hundred years, might thenceforth cease to be a centre of rapine and violence, or a cause of future strife between the nations, the victors reduced it to a heap of ruins.' In this dismantled state did it remain till the English army, in 1547, under the Protector Somerset, encamped

on the plain between the ruins of Roxburgh Castle and the confluence of Tweed and Teviot. Observing the strength and convenience of the situation, he resolved to make the fortress tenable. This he did, and left in it a garrison of 300 soldiers and 200 pioneers, under Sir Ralph Bulmer. While the English were at Roxburgh, a great number of the Scottish gentry in this district came into the camp, and made their submission to Somerset, swearing fealty to the King of England. In 1499 Walter Ker of Cessford obtained from James IV. a grant of the site of the ruined town and castle. Robert, his fifth descendant, received the title of Baron Roxburgh in 1600, and of Earl of Roxburgh in 1616; and in 1707 the fifth Earl was created Duke of Roxburgh. See FLOORS CASTLE, KELSO, and works cited under the latter article.

Roxburghshire, an inland county in the middle of the Scottish marches, and perhaps the most characteristically Border county of all, lies between 55° 6' 40" and 55° 42' 52" N lat., and between 2° 11' and 3° 7' 50" W long. It is bounded on the N by Berwickshire, E and SE by England, SW by Dumfriesshire, W by Selkirkshire, and NW by a south-eastern projection of Edinburghshire. Its greatest length, from the point where the Tweed issues from the county in the N to the extreme SW, is 42 miles; its greatest breadth, from E to W, is 30 miles; and its total area is 669·5 square miles; or 428,493 acres, of which 2836 are water. As a result of the rearrangement of the county boundaries in 1891, of the parishes partly in Roxburghshire and partly in Selkirkshire, Ashkirk, Galashiels, and Selkirk have been placed wholly in the county of Selkirk, while the Selkirkshire portion of Melrose parish has been transferred to Galashiels—Melrose parish being thus restricted to its Roxburghshire portion. Robertson parish, however, that was also situated in both counties, was placed wholly in Roxburghshire. The Roxburghshire portions of the Berwickshire parishes of Earlston and Mertoun were transferred to Roxburghshire parishes, as was also a portion of the Berwickshire part of the former parish, while the detached part of the parish of Lauder (which was wholly a Berwickshire parish) was transferred to Melrose and to Roxburghshire. For more particular information regarding these changes, see the articles under the parishes mentioned; and for alterations on the interior parishes, see under the various parishes in the county. Roxburghshire is the thirteenth county of Scotland in point of size, and the sixteenth in point of population. Its outline is irregular; but its shape may be described as a rough rectangle, 17 or 18 miles by 35 to 40, lying from NE to SW along the English border, with a narrow peninsula, 10 or 12 miles long, protruding from its northern side. The boundary line runs from the Tweed at Carham Burn southwards to the Cheviot Hills on the English border; thence turns to the SW along a series of watersheds between the two countries, past Carter Fell and Peel Fell, to Kershope Water, which carries it on to the SW extremity at Liddlebank. Thence the line turns almost due N along the E border of Dumfriesshire; but at Tudhope Fell bends suddenly westwards, and after a circuit trends NW in an exceedingly irregular and arbitrary course to the sources of the Elwyn, which marks the N limit of the county. Thence turning eastward for a few miles it follows the course of the Leader southwards to the Tweed. Thence it follows the course of the Tweed to the western boundary of Makerstoun parish, here making two considerable loops northwards to include the parishes of Makerstoun and Smalholm, and Ednam and Stichel, before it once more reaches Carham Burn. This line, throughout most of its circuit, entirely disregards all geographical and natural boundaries, and its irregularities and divergences are perplexingly capricious. Between the Tweed on the N and the Liddesdale watershed (S of which is the large parish of Castleton) lies the basin of the Teviot. It bears the general name of Teviotdale, which, indeed, is sometimes used as synonymous with Roxburghshire.

Surface.—The surface of the two divisions N of the

Tweed and of the whole northern part of Teviotdale, is, as compared with the rest of the county, decidedly champaign—undulating and even boldly variegated, but in no place rising into heights, except in the Eildon Hills behind Melrose, the Penielheugh, the Dunian, the Minto, and the Ruberslaw Hills. The Merse district is almost level; while on the S bank of the Tweed there extends a sort of rolling plain. Everywhere, but especially near the Tweed, this region is highly farmed and extensively adorned with trees. The county S of this united district is, in a general view, all hilly, and over a great extent mountainous. The vales and hanging plains within the basin of the Teviot follow the course of that stream or its tributaries, and whether they have narrow bottoms or sloping braes, are either under tillage or covered with sheep, or profusely adorned with wood. The heights are all beautiful and rounded in aspect, though those which overhang the upper Teviot and Liddesdale valleys are more boldly mountainous, and in some instances moorish, barren, and bleak.

Mountains.—The chief mountains of Roxburghshire are those of the Cheviot range. The highest summits in this range within the county, from E to W, are the Schel (1978 feet), Auchopeacairn (2382), Hounam Law (1464), Grindstone Law (1535), Arks Edge (1469), Carter Fell (1399), Peel Fell (1964), and Lauriston Fells (1677). A projection of the Cheviots strikes westward from a point about 20 miles SW of Auchopeacairn, and forms the mutual boundary between Teviotdale and Liddesdale, and thence extends NW across the south-western border of Teviotdale into junction with the southern Highlands, which extend across Scotland from the coast of Berwickshire to the coast of Ayrshire. On the watershed between Teviotdale and Liddesdale the chief summits are Wheelrig Head (1465 feet), Carlintooth (1801), Needslaw (1457), Fanna Hill (1643), Winburgh (1662), Leap Steel (1544), Maiden Paps (1677), and Skelfhill Fell (1749); while on the Dumfriesshire border rise Watch Hill (1642), Roan Fell (1839), Din Fell (1735), Tudhope Hill (1961), Wisp Hill (1951), Whitehope Edge (1506), and Craik Cross Hill (1481). Other summits and hills within the county are Ruberslaw (1392 feet) between the Teviot and Rule, with Minto Crags (700) on the opposite bank of the former river, while to the NW rise the two rounded summits of Minto (905). East of the Rule, and between the Teviot and Jed, rises the Dunian (1095 feet), overhanging Jedburgh; and immediately N of the point where these two rivers join stands Penielheugh (700). Dunlaw (663 feet), near the scene of the battle of Anerum Moor, is surmounted by the ruins of an observatory built by Baron Rutherford of Fairnington, and now locally known as 'the baron's folly.' Near Melrose rise the three Eildons (respectively 1385, 1327, and 1216 feet), commanding a lovely and extensive view. In the small peninsula part of the shire N of the Tweed and between the Gala and the Leader the chief hills are Buckholm Hill (1064 feet), William Law (1315), and Sell Moor (1388).

Streams.—Roxburghshire is perhaps only excelled by Perthshire among the counties of Scotland for the number and picturesque beauty of its streams; but the rivers of the southern county are even more celebrated in song than those of the northern. The chief stream, both in bulk and in beauty, is the Tweed, which enters the county from Selkirkshire about 2 miles below the burgh of Selkirk, and leaves it after a beautiful course of 80 miles at the influx of Carham Burn on the NE border. All the other main streams of Roxburghshire flow directly or ultimately into the Tweed. The chief affluents of that river in the county on the left or northern bank are the Gala, which forms part of the western border of the shire; Allan Water; the Leader, which separates Roxburghshire from part of Berwickshire; and not far from the point where it leaves the district, Eden Water. On the right or S bank the main tributaries of the Tweed are the Ettrick, which touches the county only for a mile or two on the western border; and the Teviot, which joins the Tweed at Kelso. The Teviot is the second river in Roxburghshire, and its

whole course lies within the county limits. It rises in the Fanhill, one of the hills which separate Roxburghshire from Dumfriesshire in the SE, and thence it flows NW in a line parallel to the main axis of the shire for about 40 miles, until it falls into the Tweed at Kelso. On its left bank it receives the Borthwick and Ale Waters; and on its right bank the Allan, Slitrig, Rule, Jed, Oxnam, and Kale. Borthwick Water is formed by the junction of the Craik Hope, Howpasley, and Wolfcleugh Burns, and has a course of 16 miles. The Ale flows for 24 miles in a winding course before it joins the Teviot. The Allan has a short course of only 5 miles; it supplies the town of Hawick with water. The Slitrig, which joins the Teviot at Hawick, is an impetuous stream subject to floods. The Rule is formed by the junction of the Wauchope, Harwood, and Catlee Burns, and has a course of 9½ miles, for the most part through a narrow wooded glen. The 'crystal Jed' rises on the Liddesdale border, and receives on its course of 21½ miles the Black, Carlee, White, Shaw, Edgerston, and Pier Burns. The Oxnam flows 9½ miles before entering the main stream; and Kale Water falls into the Teviot at Kalemouth, after a sinuous course of 20½ miles, during which it is joined by Cessford Burn and other small affluents. The Liddel, receiving on its right bank the Hermitage and Tinnis, and on the left the Black Burn, Larriston Burn, and the Kershope, crosses the Scottish border, and after a course of 26½ miles joins the Esk below Canonbie. In the E of the shire the Bowmont Water runs northwards, and crosses the border in Yetholm parish to join the Till in England.

The lakes of the county are both few and small. Prim-side or Yetholm Loch, in Morebattle parish, is about 1½ mile in circumference; it is thought to have been connected with the former Linton Loch, now drained, close by. Hoselaw Loch is in Linton parish. Cauldsheels Loch, about a mile in circumference, is situated on the Abbotsford property, and is surrounded by trees planted by Sir Walter Scott. Huntly Burn flows from this lakelet through the Rhymer's Glen, a favourite haunt of Thomas the Rhymer. Petrifying streams occur in the parishes of Roxburgh, Minto, and Carleton; mineral springs in Jedburgh, Oxnam, Crailing, St Boswells, and Castleton; and 'consecrated' wells, as St Helen's, St Robert's, and St Dunstan's, in the neighbourhood of Melrose.

Geology.—The geological history of Roxburghshire presents several features of special interest to the geologist, partly from the remarkable development of the older Palæozoic rocks and partly from the relations of the Calciferous Sandstones along the border to the Carboniferous system in the N of England. The various formations represented in this county are given in the following table:—

Recent and Pleistocene.	}	Peat and alluvium.
		Glacial gravels.
		Kames.
		Boulder-clay with inter-glacial beds.
Carboniferous.		Calciferous Sandstone series.
	}	Upper. { Conglomerates and sandstones with fish remains.
Old Red Sandstone.		Lower. { Intercalations of sandstones and conglomerates with the contemporaneous volcanic rocks of the Cheviots.
	}	Ludlow and Wenslock. { Sandy shales, sandstones, and grits, with characteristic Ludlow and Wenslock fossils.
		Llandoverly. { Massive grits and greywackes (Queensberry). Birkhill black shales group.
		Caradoc. { Lowther Shales with fossiliferous limestones and conglomerates of Wrae, Kilbucho, etc., with greywackes and shales. Hartfell black shales.
	}	Upper Silurian. { Black shales, mudstones, and greywackes, with Glenkiln fossils.
		Lower Silurian. { Radiolarian cherts and mudstones.
		Arenig. { Contemporaneous and intrusive volcanic rocks.

IGNEOUS ROCKS.

Contemporaneous.	}	Porphyrites, tuffs, etc., of Lower Carboniferous age.
		Porphyrites, tuffs, etc., of Upper Old Red Sandstone age.
		Porphyrites, tuffs, etc., of Lower Old Red Sandstone age.
Intrusive.	}	Basalt dykes of Tertiary age.
		Diabase, Basalt, Porphyrite, and volcanic necks of Carboniferous age.
		Minette and Granite, Post Upper Silurian and Lower Old Red Sandstone age.

Beginning with the Silurian rocks, which are the oldest sedimentary strata in the county, we find that they cover an extensive area lying to the W of a line drawn from Old Melrose, S by Kirkton to the sources of the Teviot and Jed. The representatives of the Moffat series occur along sharp anticlinal folds, extending from the boundary with Selkirk, near Coldshiels, to the Leader, near Leaderfoot, where they are overlain by the Upper Old Red Sandstone. The *Radiolarian* cherts are met with south of Coldshiels Loch, near the border of the county; the Hartfell black shales are seen in the Rhymer's Glen and in the Tweed, at Leaderfoot; while the Birkhill black shales are exposed at the Coldshiels Loch and in the Rhymer's Glen. At the latter locality there is evidence of excessive crumpling and crushing of the beds, but, nevertheless, they yield characteristic fossils.

Overlying the Moffat series on both sides of the anticlines, the observer finds the 'Gala grits' or 'Queensberry series.' To the north they form a succession of normal folds—the highest strata in this part of the county being represented by the Buckholm grits. To the south of the black shale series these strata are repeated by a series of inverted folds inclined towards the NW, and are succeeded by the Hawick rocks, extending from Bowden Moor southwards to Stobs Castle. The chief fossils found in this group are fragments of *Eurypterus*, and tracts among which the most characteristic form is *Protovirgularia*. It is apparent, therefore, that the Gala grits and Hawick rocks occupy the larger part of the county, and from their relation to the highest members of the Moffat series have been classed with the *Llandovery* formation.

The Wenlock and Ludlow rocks occupy several areas, the largest of which lies immediately to the S of the tract covered by the Hawick beds, extending from the county boundary at Wisp Hill E by Stobs Castle, till they are overlapped by the Upper Old Red Sandstone. Other masses occur in the heart of the Old Red Sandstone and Carboniferous areas, and of these, the most important is traceable from near Riccarton NE to near Hobkirk—a distance of 14 miles. Throughout these areas, the strata are as much folded and contorted as the Lower Silurian rocks, and hence there is a constant repetition of the same beds. Along the N limit of the tract bounding the Ardwell Group, about 3 miles S of Hawick, the lowest beds consist of grits, which are rapidly succeeded by shales containing a thin band crowded with graptolites and orthoceratites. These are followed by greenish-grey greywackes and shales forming the dominant members of the series, occasionally containing a band of fossiliferous shales similar to that just indicated. Zones of pebbly grit and conglomerate, yielding casts of shells, ennerinites, etc., are frequently met with. Excellent sections of the highest beds of the series are exposed in the railway cuttings near Riccarton.

The representatives of the Lower Old Red Sandstone consist almost wholly of contemporaneous volcanic rocks, and cover an area of about 80 square miles on the Cheviots. Before the outburst of volcanic activity during this period, the Silurian rocks had been plicated and subjected to a vast amount of denudation. Wherever the unconformable junction is exposed, the lavas and tuffs rest on the upturned edges of the Silurian strata, so that a long interval of time must have elapsed between the close of the Upper Silurian period and the earliest volcanic eruptions of the Lower Old Red Sandstone in this region. The oldest member of the volcanic

series in Roxburghshire consists of a coarse agglomerate or tuff exposed on the hill slopes E of Hindhope at the head of Kale Water, where it rests on the Upper Silurian greywackes and shales. Sheet after sheet of porphyrite succeeds this basal tuff, the whole series being inclined at a gentle angle to the SE. Few intercalations of tuff are associated with these ancient lavas, but occasionally thin seams of chocolate-coloured sandstone are met with, thereby indicating that the area had subsided beneath the waters of the Old Red Sandstone lake. An excellent example of the alternation of sandstones and lavas occurs on the Kale Water, about 4 miles S of the village of Hounam. Some of the bands still retain their original glassy matrix, as, for example, at Cocklawfoot in the neighbourhood of the Big Cheviot and near Morebattle on Kale Water. A few volcanic necks pierce these porphyrite lavas, occurring chiefly round the Big Cheviot.

That the volcanic series just described was highly denuded before the deposition of the Upper Old Red Sandstone is evident from an examination of the boundary line between the two formations, and also from the character of the conglomerate at the base of the Upper Old Red strata. The latter fills up bays and hollows cut out of the ancient lavas, while the included pebbles of the basal conglomerate, where it flanks the volcanic area, are composed mainly of trapezian fragments. Far to the W, even, where no Lower Old Red lavas or tuffs are now to be found, as, for instance, S of Hawick, there is a larger number of blocks of Cheviot porphyrites in the conglomerates than Silurian fragments.

Nearly one-third of the county is made up of Upper Old Red strata. A line drawn from Newtown St Boswells to Kirkton, thence to Edgerton, Kelso, and back to St Boswells, encloses the largest mass of this formation. To the SW of this area long tongues of Upper Old Red Sandstone fill old valleys carved out of the older rocks, while another narrow belt skirting the Cheviot volcanic rocks extends from Crailing to the English border on the S side of the Tweed. The oldest member of this formation consists of a coarse conglomerate resembling a boulder clay, filling up old hollows and river courses in the older rocks. The greatest development of this deposit occurs in Lauderdale, where, owing to the smoothed edges of the included blocks and their irregular arrangement, it is sometimes difficult to tell the boundary line between it and the overlying boulder clay. Overlying this conglomerate we find a great development of marls and sandstones forming the prominent beds of this formation. They are admirably exposed in the Tweed from St Boswells to Rutherford, in the Ale Water near Ancrum, and in the Jed Water near Kelso. From the sandstone bands in these sections, fish remains have been obtained, comprising *Holoptychius nobilissimus* and *Pterichthys major*. In Belses quarry, near Ancrum, *Palæopteris Hibernica* is said to have been found.

Along the N border of the county the Upper Old Red Sandstone attains its greatest development; and near the upper limits of the formation near Smailholm, a thin band of porphyrite lava is intercalated with the red sandstones—evidently the first indication of the Kelso volcanic rocks. The latter form an important horizon between the Upper Old Red Sandstone and the overlying Calciferous Sandstones in Roxburghshire. From the N border of the county near Sticheil, where they pass into Berwickshire, these ancient lavas, composed of diabase-porphyrates, can be traced W to Smailholm, thence across the Tweed to Makerston, causing the gorge known as 'the Makerston trows' (troughs). From this point the volcanic belt can be followed E along the S side of the Tweed as far as the county boundary. This volcanic zone, represented by a few bands of slaggy diabase with an overlying bed of tuff, occurs in the neighbourhood of Riccarton, coming to the surface wherever this horizon is exposed. Between this point and Kelso the volcanic rocks are absent, the Calciferous Sandstones resting directly on the Upper Old Red Sandstone. It reappears, however, in the Dinley Burn,

a tributary of the Hermitage Water, and can be traced across the watershed to the Tarras Water.

An interesting feature connected with this development of volcanic rocks at the base of the Calciferous Sandstones, is the number of necks or volcanic orifices throughout the county. Some of these undoubtedly supplied the volcanic rocks belonging to this horizon, while others probably acted as blowholes for the discharge of triturated materials. An excellent example occurs at Melrose, and in the quarry near the station there is a capital section of the material filling the vent. A glance at the Geological Survey maps of the county (sheets 11, 25, 26 of the 1-inch map) will show the distribution of these old centres of eruption. Black Law, Down Law, Dunian Hill, Rubers Law, the Maiden Paps, are all examples of the cores of Lower Carboniferous Cones.

There are two areas of Carboniferous rocks in the county—one in the extreme NE part, extending from near Kelso to the Merse of Berwickshire; the other, and larger area of the two, runs along the English border from a point where the road crosses from Jedburgh to Redesdale, to near the junction of the Liddel with the Esk. The latter covers the greater part of Liddesdale and the surrounding heights, culminating in the Peel, Carter, and Larriston Fells. In the former area, the strata form the rim of the Carboniferous basin of the Merse of Berwickshire. As already indicated, they overlie the volcanic belt at Kelso, and consist of blue, red, and green clays, white and blue cement-stones, flaggy sandstones, and occasional bands of calcareous conglomeratic sandstone, dipping away at gentle angles from the ancient lavas. It is evident, therefore, that they resemble the type of the Cement-stone series as developed in Midlothian.

The relations of the Carboniferous rocks of Liddesdale to those in the N of England will be discussed in the general article on the geology of Scotland. Even in this limited area there are considerable variations in the order of succession of the strata when traced along the strike. Beginning with the section in Lower Liddesdale we find that the beds overlying the volcanic zone at the base of the Calciferous Sandstones consist of sandstones, well seen on the Whita Hill above Langholm, followed by cement-stones consisting of blue and green clays, shales, and calcareous sandstones. Near Newcastleton there is a volcanic zone occupying the horizon of the famous scorpion bed at Langholm. (See the geological section in the article DUMFRIESSHIRE.) A second horizon of slaggy basalt occurs a little higher up in the series, just above the lowest beds of the Fell Sandstones, which form the next subdivision of the Calciferous Sandstones of Liddesdale. In the lower districts the base of this group is represented by a coarse sandstone seen at Kershope Foot, thickening out towards the E, and forming the Kidd's Linn Sandstone of Upper Liddesdale. The basalt zone of Caerby Hill comes next in order, followed by strata resembling the underlying Cement-stone group, with a band of fine tuff and some thin coal seams, the whole series being overlain by the Larriston Fell Sandstones—the highest beds in this part of the county. Along this horizon, however, to the W there is a gradual increase in the number of bands of marine limestone, the equivalents of the Penton Limestone group, and perhaps the lower part of the Canonbie Coalfield. The upper part of the latter coalfield is probably on the same horizon as the Plashetts Coalfield, which is high up in the Fell Sandstone group.

In Upper Liddesdale the succession is not so varied. The white sandstones at the base are replaced by cement-stones and clays, the whole of the upper part of the valley being carved out of these strata, and they are also traceable high up on the flanks of Peel Fell. Thick beds of sandstone alternate with the upper part of the series, and these are overlain by the great group of the Fell Sandstones. Underneath the latter there is a thin seam of coal, the outcrop of which can be followed for some distance.

Between Hawick and Selkirk some dykes of minette and mica trap occur, having a NNE and SSW trend, which are only found in the Silurian rocks. As they do not pierce any rocks later than the Upper Silurian, they are supposed to have been intruded either during Ludlow or Lower Old Red Sandstone time. Pink felsite is found in dykes, and also in the form of sheets, as in the Bildons and the black Hill of Earlstoun. As these sheets penetrate the Silurian and Upper Old Red Sandstone, they are probably associated with the volcanic activity in the Lower Carboniferous period. Sheets and masses of intrusive basalt belonging to the same period occur, and bosses of porphyrite are also associated with the volcanic orifices. Basalt dykes of Tertiary age are met with, one of which crosses the county from E to W, passing through Hawick, where it is known as 'the Yetlan dyke' (i.e., Cast Iron dyke).

The glacial phenomena of the Border county will be discussed in the general article on the geology of Scotland.

Economic Minerals.—The calcareous bands in the Calciferous Sandstone series have been wrought for lime in Liddesdale, as, for instance, at Thorlieshope. Some of them yield an excellent marine cement, but those at present quarried are used for mortar and for agricultural purposes. The white sandstones at the base of the series in Lower Liddesdale form an excellent building stone. The coarse sandstone at Kershope Foot has also been worked. One of the thick beds of sandstone in the Cement-stones of the upper part of the basin has been worked at the Dead Water, and has been extensively used for building purposes in the Border towns. In the E part of the county the harder bands of the Upper Old Red formation, as well as the grits in the Silurian series, are used for similar purposes.

Soil.—The soil of the arable lands is partly light and partly heavy. The former consists of rich loam, or of mixtures of sand and loam, gravel and loam, or sand, gravel, and clay, on various subsoils, and occurs generally on low or level lands in the vales of the streams. In some cases it is also found on eminences of considerable height, especially in the parishes of Linton, Eckford, Crailing, Ancrum, Maxton, and Melrose. The heavy soil consists chiefly of clay or clay mixtures lying upon till or other retentive subsoils. It occurs mostly on the high arable lands; it rarely appears in the valleys except on a dry bottom or alternating with light soil. It forms a considerable aggregate in the parishes on both sides of the Tweed around Kelso; it covers an area 10 miles by 4, comprising nearly all Bowden, Lilliesleaf, and Minto parishes, and parts of the parishes on the northern border of these. Over one-half of that area it is deep and fertile; but over the other it is cold and shallow and uncertain in production, and is therefore largely devoted to plantation. The pastoral lands have either dry, wet, or heathy soils. The first prevails all eastward of the Jed, is interspersed with some small patches of heath and a few small drained marshes, and in general has a thick sward of rich sweet grass. Wet soil prevails from the SW skirts of Ruberslaw to the confines of Liddesdale, and consists there of stubborn clay upon impenetrable till. Within Liddesdale it is extensively intermixed with heath; and in all the region SW of the Jed, or from the SW skirts of Ruberslaw to the SW extremity of Liddesdale, it is prevailing so wet as to render the land almost entirely pastoral. At the same time it isolates a considerable aggregate proportion of dry land, and includes spongy fields susceptible of great improvement by draining.

Climate.—The climate is temperate, but the eastern border is in winter exposed to violent snowstorms. The most copious rainfall in the county occurs in the mountains towards the SW and S. Very cold winds from the N and E prevail at certain seasons of the year.

Industries.—The manufacturing industries centre wholly in the towns and larger villages, Hawick, Jedburgh, and Kelso being famous for their woollen manufactures. According to the census of 1891, 4773 of the male population were engaged in agriculture; 7755 in

Industrial employments; 1297 in commerce; 3882 unproductive; and the rest variously employed. Roxburghshire carries on arable and pastoral farming, which indeed is the sole county industry. In early times the monks of the great abbeys were the chief cultivators of the soil in the county, and these contributed not a little to its civilisation and enrichment. Modern agricultural improvements began in Roxburghshire about the same time as in the other southern counties of Scotland. Before 1743 the practice of draining, enclosing, and fallowing, and of raising cabbages, flax, hemp, rape, and grass seeds, were generally introduced. In 1747 the practice of sowing turnips in the fields was introduced by Dr John Rutherford of Melrose, and by 1753 the culture was reduced to a regular system of cropping by Mr Dawson at Frogden. Potatoes were introduced as a field crop in 1754; and next year lime and marl began to be used as manures, after the example of Mr Dawson and Sir Gilbert Elliot. Thenceforward the progress was rapid. Mr Wight, who made two agricultural surveys of the county, respectively in 1773 and 1780, declared, at the latter date, that 'he was amazed at the advances all had made since his former survey, as every field had assumed a better aspect from an improving hand.' In the twenty years 1774-1794, the lands in the county became doubled in value, almost solely in consequence of ameliorations in husbandry. Since then the shire has not lagged, and in certain districts the farmers of Roxburghshire are little behind those of the Lothians. The arable farms are mostly between 400 and 600 acres, those of larger extent being chiefly pastoral.

The following table exhibits the principal crops, and the acreage under each at various dates:—

	1868.	1877.	1884.	1896.
Wheat,	3,007	1,509	1,515	325
Barley,	13,327	16,472	13,355	12,383
Oats,	30,969	33,111	32,624	30,373
Potatoes,	2,199	1,846	2,118	1,373
Turnips,	25,596	26,531	25,143	22,270
Cabbages, etc.,	216	398	464	692
Other Green Crops,	450	522	660	18
Bare or Fallow,	540	...	310	1
Grasses in Rotation,	52,712	57,810	59,937	54,361
Permanent Pasture,	50,866	38,097	47,058	57,449

The above figures are exclusive of heath or mountain pasture. In 1896 66 acres were in orchards; 71 in market-gardens; 35 in nursery grounds; and 15,084 in plantations and coppices, exclusive of garden shrubberies. The following table exhibits the quantity of live stock in the county at different dates:—

	1868.	1875.	1884.	1896.
Horses,	4,521	4,420	4,365
Cattle,	16,106	17,062	17,831	16,929
Sheep,	487,933	486,790	502,721	522,906
Pigs,	3,911	3,960	4,783	3,730

Among the other resources of the county, the valuable salmon-fisheries on the Tweed must not be overlooked. According to the *Sportsman's, Tourist's, and General Guide* for Oct. 1896, the annual value of rod fishings let in Roxburghshire was £4334, while the value of grouse and other shootings let was £9065. Very many of the other streams also contain excellent trout and other fresh-water fish, and perch and pike abound in the lochs. The main imports into the shire are lime, coal, foreign wool for manufacturing purposes, and articles for domestic consumption; and the exports are chiefly the manufactured products of the textile factories, and cattle and sheep, largely sent to England.

Roads and Railways.—Previous to 1764 the county was miserably provided with roads and bridges, and possessed but few reaches of roadway suitable for wheeled traffic. There were then only two good bridges across the Tweed, viz., at Melrose and Kelso; and only two across the Teviot, viz., at Hawick and Ancrum. Bnt between 1764 and 1797 no less than 153 miles of excellent road were formed, 2 bridges were rebuilt,

25 new stone bridges erected over the principal streams, besides large numbers of smaller erections over the minor streams and hollows. During the 19th century a similar activity prevailed, and now the county, except in its more mountainous parts, is amply provided with the means of interior communication. The Waverley Route of the North British railway, from Edinburgh to Carlisle, runs southwards for about 50 miles through the county, with stations at Melrose, St Boswells, Belses, Hassendean, Hawick, Stobs, Shankend, Riccarton, Steele Road, Newcastleton, and Kershope Foot. From Newtown St Boswells Junction, one branch, known as the Berwickshire railway, runs, but with no Roxburghshire stations, to Berwick; and another proceeds thither also, by the Tweed valley, with stations at Maxton, Rutherford, Roxburgh, Kelso, Sprouton, Carham, and Sni-laws, and sending off at Roxburgh Junction a short branch southwards to Jedburgh, with stations at Kirk-bank, Nisbet, and Jedfoot Bridge. From Riccarton Junction on the main line a branch starts off eastwards, passes the station of Saughtree before leaving the county, and leads *viâ* Hexham to Newcastle.

Towns and Villages.—The only royal burgh in Roxburghshire is Jedburgh (population, 2455); Hawick (19,204) is the only parliamentary burgh; and the only other towns are Melrose (1432) and Kelso (4184). The villages with more than 300 inhabitants in 1891 were Darnick, Denholm, Lessnadden, Lilliesleaf, Newcastleton, Newtown St Boswells, and Yetholm. Other villages are Appletreehall, Bedrule, Bonjedward, Bowden, Carverton, Cessford, Chesters, Crailing, Dean, Deanhurn-baugh, Eckford, Ednam, Eildon, Heiton, Hownam, Lanton, Lempitlaw, Linton, Makerstoun, Maxton, Maxwellhaugh, Midlem, Minto, Nisbet (East and West), Rowcastle, Riccarton, Roxburgh, Rutherford, Smail-holm, and Ulston.

Mansions.—Among the principal mansions and seats in the county are Floors Castle (Duke of Roxburghe), Branxbolm (Duke of Buccleuch), Eildon Hall, Mount Teviot (Marquis of Lothian), Minto House (Earl of Minto), Hartrigge House, Monnt Ulston (Lord Stratheden and Campbell), Harden (Lord Polwarth), Stobs Castle, Wells, and Hallrnie (Sir William Elliott, Bart.), Abbots-ford, Ancrum House, Ashkirk House, etc.

Roxburghshire is governed by a lord-lieutenant, a vice-lieutenant, 12 deputy-lieutenants, a sheriff, a sheriff-substitute, and 4 assistant sheriff-substitutes. Sheriff and other courts are held at Jedburgh periodically, as detailed in our article on that town; and small debt courts at Kelso, Hawick, and Melrose. The County Council consists of 37 members, comprising 3 representatives for the burgh of Jedburgh, and 34 for as many electoral divisions into which the county was por-tioned by the Boundary Commissioners in 1891, under the provisions of the Local Government (Scotland) Act of 1890. The divisions are classed into the following five districts:—Jedburgh District, containing 7 divisions; Melrose District, 7; Kelso District, 13; Hawick District, 5; and Liddesdale District, 2. The county police force in 1893, exclusive of Hawick, comprised 40 men, and a superintendent with a salary of £300. Hawick unites with Galashiels and Selkirk in sending a member to parliament. The county elects a member for itself, and had in 1895-96 a parliamentary constituency of 6056. The valuation of the county was (£1674) £26,222, (1815) £254,180, (1855) £316,131, (1876) £420,161, (1884-85) £421,520, (1896) £350,783, inclusive of railways.

According to the census of 1891 Roxburgh had 80 inhabitants to the square mile, 19 counties being more densely populated; and the average for all Scotland being 135 per square mile. Pop. (1801) 33,721, (1821) 40,892, (1841) 46,025, (1861) 54,119, (1881) 53,442, (1891) 53,500, of whom 28,599 were females, and 174 Gaelic-speaking. Houses (1891) occupied 10,863, vacant 701, building 35.

The civil county contains 32 entire *quoad civilia* parishes, viz.:—Ancrum, Bedrule, Bowden, Castleton, Cavers, Crailing, Eckford, Ednam, Hawick, Hobkirk, Hownam, Jedburgh, Kelso, Kirkton, Lilliesleaf, Lin-

ton, Makerstoun, Maxton, Melrose, Minto, Morebattle, Oxnam, Robertson, Roxburgh, St Boswells, Smailholm, Southdean, Sprouton, Sticheil, Teviothead, Wilton, and Yetholm. Ecclesiastically the county is distributed among 34 entire *quoad sacra* parishes, and parts of 7 others, all, except Castleton, in the presbyteries of Jedburgh, Kelso, Selkirk, and Earlston, all in the synod of Merse and Teviotdale. Castleton is in the presbytery of Langholm and the synod of Dumfries. There are in the shire 73 elementary day-schools (68 of them public), which, with total accommodation for 11,529 children, have 8964 on the registers, and an average attendance of 7602. All the parishes are assessed for the poor. In 1894 the registered poor numbered 622, with 344 dependants, on whom was spent a total of £8417. There are combination poorhouses at Hawick, Jedburgh, and Kelso. The Roxburgh, Berwick, and Selkirk district asylum for the insane is situated at Melrose, a model lodging-house at Jedburgh, and an orphan home at St Boswells. The percentage of illegitimate births was (1871) 11·5, (1876) 11·4, (1883) 10·2, (1896) 10·6.

Antiquities.—The antiquities of Roxburghshire are tolerably numerous and very interesting. The tumuli, standing-stones, camps, and hill-forts of the ancient Caledonians, the military works and other remains of the Romanised Britons, and the peel-towers and baronial fortalices of the Middle Ages, are too numerous for separate mention, except in our articles on the various parishes. Among the chief British remains are the very large cairn near Tinnis Hill in Liddesdale, the stones at Ninestanerig, a circle at Plenderleath, standing-stones at Hownam, Yetholm, Kale Water, etc., and the moat-hill at Hawick. There are remains of forts on the summits of many, if not most, of the highest hills, as on Caerby and Tinnis Hills in Liddesdale; on Blackburn, Cocklaw, the Dumian, Penielheugh, Gattonside Hill, and one of the Eildons. There are caves in the cliffs on the Jed, at Grahamslaw on the Kail, on the Teviot near Roxburgh, and other places. Perhaps the principal relic of the ancient inhabitants is a reach of the CATRAIL, which passes through the county. The Romans have left traces of their presence in Roxburghshire in part of the WATLING STREET, and in the Wheel Causeway, another road which seems to have deflected from the Watling Street to traverse Upper Teviotdale. Traces of this second road are to be found in the NE of Liddesdale, and its junction with the Maiden Road, in the N of England, has been made out. The Saxons have left most direct vestiges of their occupation of the county in the local names. The mediæval peels and fortalices, excluding the minor ones, amounted at one time to about 40, but for the most part have now sunk into ruins or absolutely vanished. Among the most famous of these were the castles of Roxburgh, Jedburgh, Cessford, Hermitage, Home, and Fernieherst; and the towers of Branxholm, Goldielands, Harden, Smailholm, Clintwood, Glassford, Littledean, Lintalee, Habbidean, and Delphiston. Fastnesses of the time of the Border feuds lined the strong banks of the Oxnam Water and some of the Cheviot valleys, and served both as defences against the English inroads and as rally-points for the Scottish forays. These, as they comprehensively bore the name of Henwood, gave rise to the Scottish Border war-cry of 'A' Henwoody! A' Henwoody!' Splendid remains exist of the abbeys of Jedburgh, Kelso, Dryburgh, and Melrose; and interesting associations remain in connection with the Culdean establishment of Old Melrose, and of the neighbouring successor to it, called Red Abbey. Ancient crosses, more or less in good repair, still stand at Anerum, Bowden, Maxton, Melrose, and Milnholm, and probably other spots. Among historical crosses that have now disappeared were Lyliot's Cross, probably on the site of the memorial stone on the summit of Lilliard's Edge; Heap Cross, at a place called Heap, near Hawick; William's Cross, near Philipphang, traditionally said to mark the spot where one of the Douglasses was murdered; and Tait's Cross, on the summit of Kershope Hill.

History.—What is now known as Roxburghshire was

at the period of the Roman invasion part of the territory of the tribes Gadeni and Ottadini. The Romans marched through the district and made themselves so far masters of it; and after their departure it eventually became part of the Saxon kingdom of Northumbria. Subject to the varying fortunes of that kingdom, Roxburghshire passed under the dominion of the Scottish crown in 1020, when large part of Northumbria was ceded to Malcolm Ceanmor. In 1107, when Alexander ascended the throne, Roxburghshire, with other lands in the south and west of Scotland, passed to Earl David, the king's brother, as an appanage. David ruled it throughout the period of his earldom almost in the manner of a sovereign lord, and on his accession to the throne treated it as part of his kingdom. He made it a chief scene of his administration; founded and richly endowed the abbeys of Melrose, Kelso, and Jedburgh; made profuse grants of its lands to his barons; and in consequence almost revolutionised the condition of the county. The Morvilles, Soulises, Corbetts, Percys, Berkeleys, and Vesseys, all followers of David from England, were established in Roxburghshire in this reign. The ambitions of the nobles, and the power and wealth of the rich abbeys, speedily made the county a place of importance, while they assisted in its development. Numerous events of both national and local importance occurred in the county in reigns subsequent to that of David, but they have been already treated in our articles on the chief towns of the shire.

So early as the commencement of the Scoto-Saxon period, and up to the death of the Maid of Norway, Roxburgh was a sheriffdom. Edward I. seems to have considered this frontier county as his own, and when he settled the affairs of the kingdom he appointed a custodian of the castles of Roxburgh and Jedburgh to act as military governor of the whole shire. Under Bruce Roxburghshire began to enjoy for a short period its ancient policy of peaceful times; but after his death it was claimed in sovereignty by the English kings, and suffered no little anarchy from their collisions with the Scottish crown. In 1334 a sheriff was set over it by Edward III., and soon after an antagonist sheriff was appointed by David II.; and during the revolutions of that age sheriffs continued to be alternately and conflictingly appointed by the respective monarchs, according to the fluctuations of their power. During all the period of David's captivity Edward III. nominated sheriffs, and governed as he pleased. As the shire, with the exception of Roxburgh Castle, was freed from the English yoke, chiefly by the exertions of the Douglasses, it afterwards, as to its sheriffship or administration, generally followed their fortunes. In 1398 the sheriffship of the county and the lands of Cavers were granted to George, Earl of Angus, who died in 1402; and having passed to Isobel, Countess of Mar, they were, without the consent of the king, transferred by her to the Earl of Douglas. Robert III., conceiving that they had become escheated by being disposed of without his consent, conferred them, in 1405, on Sir David Fleming of Biggar. But James Douglas of Balveny, the second son of the Earl Douglas, soon after assassinated the new sheriff, and paved the way, amidst the afflictions of the king and the subsequent misrule of the Duke of Albany, for the Douglasses to domineer over the county with the utmost freedom from control. The sheriffship of the county was now, with the lands of Cavers, transferred to Archibald, a bastard son of James, the second Earl of Douglas; and it continued in his family, though probably with some interruptions, till the abolition of hereditary jurisdictions. Archibald Douglas, brother of Douglas of Cavers, claimed in 1747 a compensation of £10,000 for the sheriffship, and was allowed £1666, 13s. 4d.

In early times the major part of Roxburghshire, then included in Northumbria, belonged to the diocese of Lindisfarne. From the reign of David I. till the Reformation, all of it S of the Tweed belonged to the bishopric of Glasgow; and from 1238 this large section formed the archdeaconry of Teviotdale, ruled by its

own archdeacon under the superintendence of the bishop.

Famous Natives.—Among the natives of this county who have risen to more or less fame, the following may be noted:—William Turnbull (died 1454), Bishop successively of Dunkeld and Glasgow, and founder in 1451 of Glasgow University; Alexander Cairncross of Cumbesley (d. 1701), Archbishop of Glasgow; John Rutherford (d. 1577), scholastic philosopher and author of *The Art of Reasoning on Aristotelian Principles*; Mark Duncan, Principal of Saumur University (d. 1648); Samuel Rutherford (d. 1661); James Thomson (1700-48), the author of *The Seasons*, etc.; Gilbert Elliot (1722-77), poet; and his sister Jane Elliot (1727-1805), who wrote the *Flowers of the Forest*; John Armstrong (1709-79), physician and poet; James Brown (1709-83), linguist and traveller, and author of a Persian grammar and dictionary; Robert Riccaltoun (d. 1765), divine; William Turnbull (1729-96), London physician; John Buchan (d. 1805), physician, author of the *Domestic Medicine*; John Clark (1744-1805), surgeon; John Leyden (1775-1811), poet; Robert Hall (1763-1824), surgeon; Rev. Dr Thomas Somerville (1741-1830), author of a *History of the Reign of Queen Anne*; his niece and daughter-in-law, Mrs Mary Somerville (1780-1872), of mathematical fame; James Bell (1769-1833), weaver and editor of geographical works; Robert Edmonstone (1794-1834), painter; Thomas Pringle (1789-1834), poet; Andrew Scott (1757-1839), poet; Robert Balmer (1787-1844), divine; John Younger (d. 1860), prose essayist; James Telfer (1800-62), author; Thomas Davidson (1838-70), poet; and Thomas Aird (1802-76), poet.

See Alex. Jeffrey's *History of Roxburghshire* (1836; new ed., 4 vols., 1857-64); Robert Bruce Armstrong's *History of Liddesdale* (1884); and other works cited under ABBOTSFORD, CASTLETON, HAWICK, JEDBURGH, KELSO, MELROSE, TWEED, and YETHOLM.

Roy. See GLENROY.

Roy's Cairn. See KNOCKANDO.

Rozelle, a fine mansion, with beautifully wooded grounds, in Ayr parish, Ayrshire, 2 miles S of Ayr town.—*Ord. Sur.*, sh. 14, 1863.

Ruberslaw, an elongated, rugged, peaked hill on the mutual border of Hobkirk and Cavers parishes, Roxburghshire, 2 miles SSE of Denholm and 5 E by N of Hawick. Rising 1392 feet above sea-level, and projecting boldly from the northern frontier masses of the Cheviots, it steeply flanks the left side of the vale of Rule Water, and broadly overhangs the reach of the valley of the Teviot opposite Minto Hills. It looks along a great extent of the Teviot's valley, and forms a conspicuous feature in one-half or more of all the picturesque landscapes of Teviotdale; presents a bleak stern aspect with more traces of volcanic action than probably any other hill in the eastern Border counties; contrasts strongly in peaked summit, ragged sky-line, sharp saliciencies of contour, and rockiness or heathiness of surface with the green, smooth, neighbouring Cheviots; attracts electricity and heavy rain-clouds with such force as often to occasion a deep drenching or flooding of the tract adjacent to it while the neighbouring country remains dry; and is noted for having afforded, among the rocky recesses of its skirts, facilities for hill-meetings of the persecuted Covenanters, and for containing there a place where Peden preached to a large congregation. The dwellers in Teviotdale within view of its summit are well accustomed

‘To see, with strange delight, the snow-clouds form,
When Ruberslaw conceives the mountain storm—
Dark Ruberslaw, that lifts his bead sublime,
Rugged and hoary with the wrecks of time;
On his broad misty front the giant wears
The horrid furrows of ten thousand years.’

Rubislaw. See ABERDEEN and ABERDEENSHIRE.

Ruchill, Water of, a stream of Comrie parish, SW Perthshire, rising on the skirts of BEN VORLICH, and running first 3 miles east-south-eastward, next 7½ miles north-eastward along GLENARTNEY, till it falls into the

river Earn at Dalginross, opposite Comrie town. It receives numerous tributaries, chiefly mountain torrents; flows mostly on a rugged channel beset with boulders and fragments of rock; and is in high repute among anglers for abundance of common trout and sea trout.

—*Ord. Sur.*, shs. 39, 47, 1869.

Ruchlaw, an ancient mansion in Whittingham parish, Haddingtonshire, on the left bank of Souchet Water, 3¾ miles SE of East Linton. Its owner is Thomas Buchan Sydserrif, Esq.—*Ord. Sur.*, sh. 33, 1863.

Rueval, the Sound between North Uist and Benbecula islands, Outer Hebrides, Inverness-shire. Measuring 9 miles in length from E to W, and about 3 in mean breadth, it is strewn throughout its eastern part with such a multitude of islands and islets—Grimsa, Flodda, Bent, Broad, Rona, Flotamore, Flotabeg, and others whose names are scarcely known—as to be there a maze of land and water; is reduced to two straits at the W end by the intervention of Baleshare island; has nevertheless free communication at both ends with the sea; and is commonly, but improperly, called Loch Rueval.

Rule Water, a troutful stream of Teviotdale, Roxburghshire, formed by several burns that descend from the watershed with Liddesdale, and running 9¼ miles northward, partly within Hobkirk parish, and partly on the boundary between Hobkirk and Cavers on the left and Bedrule on the right, till it falls into the Teviot, 2½ miles NNE of Denholm.

‘Between red ezlar banks that frightful scowl,
Fringed with grey hazel roars the mining Rowll,’

whose deep rocky ravine is overhung to the right by Bonchester Hill, to the left by Ruberslaw. In tradition or song Rule Water is associated with the old roistering clau of the Turnbills, and with Sir Walter Scott's ‘jovial harper, rattling roaring Willie.’—*Ord. Sur.*, sh. 17, 1864.

Rullion Green, a place in Glencorse parish, Edinburghshire, on the eastern slope of the Pentland Hills, 1½ mile NNW of Penicuik. On the evening of 23 Nov. 1666, it was the scene of the defeat of 900 Covenanters, under Col. Wallace, by Sir Thomas Dalryell of BINNS, and a monument is supposed to mark the site of the battle. Dr Hill Burton, however, remarks that ‘neither the spot itself, nor any part of the Pentlands close to it, corresponds with the description of the ground taken by Wallace—a ridge running N and S, and rising abruptly on the N end.’—*Ord. Sur.*, sh. 32, 1857.

Rum, an island of the Inner Hebrides, in the parish of SMALL ISLES, and in the county of Argyll until 1891, when the Boundary Commissioners placed all the islands of the parish in the county of Inverness. It is separated from Skye on the N and NE by Cuillin Sound, across which the coast of Rum is 6¾ miles S of Rudh ‘an Duain or Dumain Point, at the entrance to Loch Brittle, 6 S by W of the southerly point of Soay, 9 SW of Strathaird Point between Loch Scaivaig and Loch Eishart, and 8½ W of the Point of Slat. The coast is also 4½ miles NW of the nearest part of the island of Eigg, 7 N by W of Muck, and 15 N by W of Ardnamurchan. On the NW it is separated from the island of Canna by the Sound of Canna, 3¾ miles wide to Canna, and 2 to the adjacent island of Sanday. The lonely Hyskeir or Oigh-sgeir Islands are 11 miles W of the mouth of Glen Harris. In shape Rum is somewhat like a dumpty pear, with the long diameter N and S. Its extreme length in this direction is 8½ miles; its extreme width from E to W is 3 miles; and its area is 4239 miles or 26,786 acres, of which only 300 are arable, 530 foreshore, 150 lochs and rivers, and the rest forest and moorland. There are some small bays at the mouth of Kilmory Glen on the N, at the mouth of Glen Harris on the SW, and elsewhere; but the only indentation of any size is on the E side at the broadest part, where Loch Scorsort opens inland with a length of 1¼ mile, and a breadth of 1½ mile at the mouth; and forms a safe and convenient harbour. From this loch to Guirdil on the NW side

the coast consists of low rocks or cliffs, with here and there small strips of beach, but round the greater part of the rest of the island there is a series of cliffs rising at many points to heights of over 300 feet above sea-level, and in many places sinking sheer into the sea, though occasionally there are strips of foreshore. The whole surface is very rough and hilly, and of the total area of 30,000 acres little more than one-twentieth is under cultivation. A narrow valley runs westward from Loch Sresort along Kinloch river, and passes across the watershed into the low ground that opens to the sea at Seilideir and Guirdil, but the rest of the island may almost be described as a wild sea of hills. The lowest portion is that to the N of the transverse hollows, where a height of 635 feet is reached N of Loch Sresort at Meall a Ghoirtein, and 902 at Sagorishal at the W side of Kilmory Glen. To the S of the central hollows a line of high ground begins at Mam Tuach (988 feet), and extends westward along Monadh Mhiltich at a height of over 800 feet, farther W still of over 1100, and rising between this and the western part of the SW coast of the island into a lofty cliff-edged plateau, the highest points of which are 1869 and 1641 feet above sea-level. To the NW near the most westerly point of the island there is the lower plateau of Sgor Mor, the highest point of which, to the N, is 1272 feet high. The wildest and roughest part of the island is, however, to the S and SE, where, to the N of Glen Harris, is An Dornabae (858 feet), and higher up Bhaire-mheall (1924). Across the top of the glen is a narrow sharp-pointed ridge running from N to S with the northern shoulder 1770 feet high, and the highest points at Ailbe-meall (2368) and Aisge-mheall (2659)*—the highest point in the island; and SW of this is the wider ridge of which the summits are Ais-mheall (2552), Beinn More (2505), and Sgor nan Gillean (2503). From the last a cliff-edged plateau runs westward at a height of about 1500 feet, the highest part being 1607. 'The geology of the island of Rum,' says Hugh Miller, 'is simple but curious. Let the reader take, if he can, from twelve to fifteen trap-hills, varying from 1000 to 2300 feet in height; let him pack them closely and squarely together, like rum-bottles in a case-basket; let him surround them with a frame of Old Red Sandstone, measuring rather more than 7 miles on the side in the way the basket surrounds the bottles; then let him set them down in the sea a dozen miles off the land, and he shall have produced a second island of Rum, similar in structure to the existing one. In the actual island, however, there is a defect in the inclosing basket of sandstone; the basket, complete on three of its sides, wants the fourth; and the side opposite to the gap which the fourth would have occupied is thicker than the two other sides put together.' The sandstones are not, however, of Old Red age, but are probably Cambrian, and these, with some masses of Lower Silurian rocks, occupy the NW, NE, and SE sides of the island, while the interior and W consist of great masses of eruptive crystalline rocks which have burst through the older strata, the latter being everywhere violently upheaved and contorted, and extensively metamorphosed, as they approach the great central mass. The volcanic rocks form wild and rugged peaks, and are the remains of a great volcanic mountain that at one time occupied the centre and S of the island. Sgor Mor on the W is famous for its minerals, including pitchstone, heliotropes, and beautiful agates. The hills of Rum being the first land between Mull and Skye to meet the clouds coming in from the Atlantic, the climate is very wet, and there is a large number of streams, the largest being Kinloch river, flowing through Kinloch River Glen, W of Loch Sresort; Kilmory river, flowing through Kilmory Glen in the N; Abhuinn Duibhal and Abhuinn Fiadhinnish on either side of Glen Harris, and Abhuinn Rhangail in Glen Harris, all near the centre of the south-western side; Dibidil river, in Glen Dibidil, to the E of Ben More; and about 40 smaller streams. In the

* Perhaps more familiar under the forms of Halival and Haiskeval.

centre of the island is Loch Sgathaig; SSE of it Loch Gainmhiach; in the NW, Loch Sgaorishal; on Abhuinn Fiadhinnish, Loch Fiadhinnish; NE of Aisge-mheall, Loch Coire nan Grund—more of them covering more than 19 acres—and there are a number of smaller lochans. In the *Description of the Western Isles of Scotland*, by Donald Monro, Dean of the Isles, who visited the Hebrides in 1549, the name is given as Ronin, and the island is described as abounding with 'litle deire' and wild fowl, but there seem to have been few inhabitants, for he says that 'the fowls hes few to start them except deir.' Prior to 1826 the crofters and their families numbered at least 400, but in that year all, save one family, were cleared off to America, and the whole island was converted into a single sheep-farm, so that at the end of 1828 the sole inhabitants were the sheep farmer and his shepherds. A year or two after some families from Skye were allowed to settle at Loch Sresort. In 1845 Rum was sold to be converted into a deer-forest, and as a sporting place has few equals. In 1888 it was again sold to George Bullough, Esq. of Meggernie. Pop. (1831) 134, (1861) 73, (1871) 81, (1881) 89, (1891) 53.

Rumbling-Bridge, a place in Little Dunkeld parish, Perthshire, on the river Bran, $2\frac{3}{4}$ miles WSW of Dunkeld. The impetuous Bran, whose chasm is spanned here by a one-arched bridge, thunders in a sheer leap of 80 feet into a dark cauldron, and is so flanked and barred by rugged rocks, and so mantled with gloom, as to present a solemnly imposing scene.—*Ord. Sur.*, sh. 47, 1869.

Rumbling-Bridge, a station on the Devon Valley railway, in Fossoway parish, Kinross-shire, $4\frac{1}{4}$ miles ENE of Dollar, with a post and telegraph office under Stirling. It takes its name from a bridge-spanned aetartac of the river Devon, which, forming part of what are called the Falls of Devon, commences at the DEVIL'S MILL, 350 yards higher up; traverses thence, till past the Rumbling-Bridge, a narrow gloomy chasm, over blocks and clefts and rugged shelves of rock, between tangled craggy steeps; and emits a hollow rumbling sound, like that produced by heavy-laden waggons on a rough road between reverberating heights. The chasm has a mean depth of not more than 100 feet, but is so shagged with brushwood, so overshadowed by crags, as to look like an abyss; and, as seen from certain points of view, has the appearance of a sharp continuous fissure, formed by a vertical earthquake. Two bridges span it in the vicinity of the hotel—the one 80 feet above the bed of the stream, and constructed in 1713; the other 120 feet high, and constructed in 1816—and both command a grandly impressive view.—*Ord. Sur.*, sh. 40, 1867.

Rumford, a village on the northern verge of Muir-avonside parish, Stirlingshire, contiguous to Craigs village in Polmont parish, 7 furlongs SSE of Polmont Junction. There is a Roman Catholic school-chapel.

Rusco Castle. See ANWORTH.

Ruskie, Loch. See MONTEITH, PORT OF.

Rutherford, a decayed village in Maxton parish, Roxburghshire, 7 furlongs SW of Rutherford station on the Kelso branch of the North British railway, this being 6 miles WSW of Kelso. An absurd tradition makes its name originally to have been either Rue-the-ford or Rue-their-ford, from the defeat of an English army, after crossing and re-crossing a neighbouring ford on the Tweed. The ancient parish of Rutherford, long united to Maxton, contained the hospice of St Mary Magdalene, which Robert I. granted to the canons of Jedburgh. The Rutherford estate belongs to Sir Edmund Antrobus, Bart.—*Ord. Sur.*, sh. 25, 1865.

Rutherglen (popularly *Ruglen*; old form, *Rutheglen*), a parish containing a town of the same name in the Lower Ward of Lanarkshire, and near the extreme NW of the county. It is bounded N and E by the river Clyde, SE by the parish of Cambuslang, S by the parish of Carmunnoch, W by the parish of Cathcart, and NW by Govan parish. On the N the boundary is traced by the Clyde for $4\frac{1}{2}$ miles, and on the W it is

formed by the Polmadie and Malls Mire Burns as far as West House; elsewhere it is practically artificial. The greatest length of the parish, from near Rosebank House on the E to the point where the boundary line quits Malls Mire Burn on the W, is $2\frac{1}{2}$ miles; the greatest width, from N to S, is barely $2\frac{1}{2}$ miles; and the area is 2219·918 acres, of which 0·647 acres are foreshore, and 67·877 are water. The portion along the Clyde is from 30 to 40 feet above sea-level, and the surface rises at the burgh to from 50 to 100 feet, and thereafter southwards till, near the extreme S, a height of 303 feet is reached. The soil on the low ground is a fertile alluvium, and the whole parish is arable. The surface in the centre is undulating, and on the S there is an ascent towards the Cathkin Braes. Coal and iron are both extensively worked. The principal estates are Shawfield, Farme, Rosebank, Gallowflat, Scotstown, Stonelaw, and Baukhead. The parish is traversed by the main road from Glasgow to Hamilton, which passes eastward from the S side of Glasgow, and a branch road connecting this with the Bridgetou district of Glasgow crosses the Clyde by Rutherglen Bridge, a handsomestone structure re-erected in 1893-96 on the site of the old bridge, which was erected in 1776 at a cost of £2000, of which the burgesses of Rutherglen contributed more than half. This bridge was said to resemble closely the 'Auld Brig o' Glasgow,' had steep gradients with one narrow side-path, and consisted of five arches. Prior to its erection the only means of communication had been by a ford, or by going round by Glasgow Bridge. At Farme, farther to the E, stands Dalmarnock Bridge, erected in 1889, and 320 feet long by 50 feet wide. It has five steel-girder spans each 54 feet 8 inches long, the girders resting on granite piers. The first bridge at this spot, which was originally a ford, was a wooden erection; it was built in 1821 and lasted till 1843, when it was replaced by a somewhat picturesque structure of the same material, which was removed to make room for the present handsome bridge. Between Rutherglen and Dalmarnock bridges stands the Caledonian railway bridge, built in 1861. The parish is also traversed by two branches of the Caledonian railway system. Farme, which is separately noticed, is an old royal domain, and belonged thereafter to the Stewarts, the Douglasses, and the Hamiltons. A tumulus which stood at Drumlaw was destroyed many years ago, and another at Farme also met with the same fate. In the latter, in 1768, a stone coffin was found. Of a third tumulus at Gallowflat, which was surrounded by a moat, some traces still remain. An ancient cross, 10 feet high and $3\frac{1}{2}$ wide, with a sculptured representation of Christ entering Jerusalem riding on an ass, stood on the top of the 'Cross Hill,' about $\frac{1}{2}$ mile WSW of the burgh, till the latter half of the 18th century. The parish, which was in the time of the early Scottish kings a royal demesne, is in the presbytery of Glasgow and synod of Glasgow and Ayr, and is divided ecclesiastically into Rutherglen, Rutherglen West, and Wardlawhill parishes, the latter two being *quoad sacra* charges. The living is worth £360 a year. The churches are noticed under the burgh. Pop. of parish (1801) 2437, (1831) 5503, (1861) 9335, (1871) 10,766, (1881) 13,801, (1891) 16,178, of whom 3163 were in Rutherglen West and 2992 in Wardlawhill *q. s.* parishes, and 1751 were in the landward part of the parish.

Rutherglen, a royal and parliamentary burgh on the N side of the parish just described, and adjoining the Clyde. It has a new and convenient station on the Caledonian railway, 2 miles SE of Glasgow. The burgh is of considerable antiquity, and tradition carries its origin back to a mythical Caledonian chief (Reuther) who lived and ruled here some two centuries before the Christian era. Though we may decline to believe in this ruler, whether in his own proper person or even in the identification of him with that Reuda under whose leadership, according to Bede, the Scots crossed from Ireland, and who lived about 350 years after the birth of Christ, yet it is certain that there was a seat of some population here at a pretty early date. As has been

already noticed, the parish was a royal demesne, and in a supplication presented to the Scottish Parliament in 1661 David I. is said to have constituted the demesne village a royal burgh in 1126; while in the oldest extant charter, granted by King Robert the Bruce in 1324, a confirming charter of William the Lyon is quoted, and the date assigned to it is 1189. The latter monarch also granted the church to the Abbey of Paisley, and Bishop Joceline of Glasgow (1175-99) confirmed the grant. The original royalty bounds were so extensive as to include part, if not the whole, of Glasgow; and we find Bishop Walter of Glasgow (1207-32) engaged in a dispute with both Rutherglen and Dumbarton in regard to payment of toll and custom; and though he prevailed altogether against Dumbarton, he was only able to push the boundaries of Rutherglen a short distance to the E, King Alexander II. having decided that the privileges of the burgh should extend as far as the cross of Shettleston at the E end of modern Glasgow. Then, and long after, it was the chief trading and commercial town in the lower part of the Clyde, and even in 1402, when Lanarkshire was divided into two wards, Rutherglen was declared the head burgh of the Lower Ward. Much of this early importance was no doubt due to the royal castle which stood at the town and occupied a site in King Street nearly at the point where that thoroughfare is intersected by Castle Street. It must latterly have been a stronghold of some importance, as it was one of the places strongly garrisoned by the English during the wars of independence. During the early part of Bruce's career he is said to have besieged it several times without success; but it was eventually captured by his brother Edward about 1313. Barbour, in his account of the strengths that were then taken, says:—

'In this tyme, that thir jupertyss
Off thir castellis, that I dewiss,
War eschewyt sa hardly,
Schir Edward the Bruce the hardy,
Had all Galloway and Nydysdale
Wonnyn till his liking all halle;
And dongyn down the castellis halle
Rycht in the dyk, hath tour and wall.
He hard then say, ang knew it weil,
That in Ruglyne wes a pele.
Thiddir he went, with his menyne,
And wonnyn it in schort tyme has he.'

Unlike so many of the other castles then taken, it was not destroyed, and it remained in good order till after the battle of Langside, when the Regent Murray, in laying waste the possessions of the Hamiltons, burnt it. The great tower was subsequently repaired, and became the seat of the Hamiltons of Ellistoun, lairds of Shawfield. Shortly after the beginning of the 18th century, this portion and the new buildings that had been added were abandoned as a residence, and being allowed to become ruinous, the stones were carried off by the inhabitants of the town, and the walls were soon levelled to the ground. The walls of the tower were very thick, and so large were the stones used in the foundation that they remained some thirty years after the rest of the building had disappeared. Queen Mary, in her flight from the field of Langside, passed close to the S side of the town, and at a lane, called Din's Dykes, about 150 yards S of Main Street, two rustics, who were cutting grass there at the time, attempted to stop her by threatening her with their scythes. Shortly after the Reformation, Rutherglen seems to have been considered by the presbytery of Glasgow as a place needing special care and attention, and we find that in 1590 they instructed the teacher of the school of Rutherglen to desist from reading prayers, and at the same time denounced the use of sacramental wine mixed with water. In 1593 they had again to interfere with the playing of pipes and the indulging in games on Sunday, both of which were forbidden between sunrise and sunset, on pain of excommunication. Though this proclamation was ordered to be read in all churches, and especially in the church of Rutherglen, it does not seem to have had altogether the desired effect—in spirit

at all events—for in 1595 the presbytery had to transmit letters to the bailie of the burgh, enjoining him to stop the profane plays introduced on the Lord's Day, 'as they fear the eternal God, and will be answerable to His kirk;' and they also made complaint as to the practice of fishing for salmon on Sunday, and of the colliers selecting the same time for the settlement of their accounts. During the Covenanting times, Rutherglen was the scene of an event which was the prelude to the armed rising which ended at BOTHWELL Bridge. In 1679, the irreconcilables of the Presbyterian party had determined to publish a 'Declaration and Testimony of the true Presbyterian Party in Scotland,' and a body of 80 horsemen, under the command of Robert Hamilton, brother of the laird of Preston, set off for Glasgow, with the intention of there publicly proclaiming their doctrine; but finding that that town was occupied by a strong garrison of royalist troops, they turned aside to Rutherglen. The day chosen was the 29th of May, the anniversary of the birthday of Charles II., and also of the day on which he entered London at the Restoration, and the whole town was accordingly lit up with bonfires in honour of the occasion. These the Covenanters immediately extinguished,* and having lit a bonfire of their own, they therein burnt all the acts of parliament and proclamations directed against themselves and their cause, and then having read their testimony at the burgh cross, to which they also fixed a copy, they retired to Evandale and Newmilns. Claverhouse and his dragoons arrived on the 31st to investigate the matter, but none of the inhabitants seem to have been implicated, and he passed on to Loudon Hill (see DRUMCLOG), where his force was defeated by the armed Covenanters, and thereafter came the battle of the Butts in GLASGOW, and of fateful BOTHWELL Bridge. Rutherglen espoused the cause of electoral reform at a very early date, for in 1671 a new set was fixed whereby the practice of the council's electing their successors was abolished, and the right of election given to the Incorporated Trades and the burgesses generally. Shortly afterwards they anticipated the compulsory clauses of the Education Act of two centuries afterwards, by ordaining, in 1675, that all the inhabitants of the burgh should send their children betwixt 6 and 12 years of age 'to the comunc Schoole to be educat yat with certification that whaever neglects there dewtye herein shall be compelled to pay the quarter waidges as if there children were at the Schoole,' and the fees were to be recoverable by poinding and imprisonment. As Glasgow rose in importance Rutherglen diminished, and in 1695 it was reckoned as one of the least of the royal burghs, the monthly cess being fixed at £1 sterling, while thereafter it became practically a quiet country village; and, though it has again become of more importance, this has arisen rather from its having become a manufacturing suburb of Glasgow than from any power existing within itself. Some old customs survived to a comparatively recent period, one of them, entirely peculiar to the place, being a ceremonious baking, on St Luke's eve, of excessively thin sour cakes, which were given to strangers visiting St Luke's Fair.

The modern town consists of a very wide and spacious Main Street, extending along the road from Glasgow to Hamilton, and planted in 1893 with a row of young trees on the north side. There are narrower streets and lanes branching off from it, the chief being Farme Loan Road (N) and Hamilton Road (S), both at the E end; Castle Street (N), near the centre; and Mill Street on the opposite side farther W, and leading to the Cathkin Braes. Stonelaw Road on the east, forming the continuation of Farme Loan Road, leads also to the Braes, where is situated one of Glasgow's

* The fifth article of their own testimony was 'against that presumptuous Act for imposing ane holy anniversary-day as they call it, to be kept yearly upon the 29th of May as a day of rejoicing and thanksgiving for the king's hirth and restoration: wherby the appointers have intruded upon the Lord's prerogative and the observers have given the glory to the creature that is due to our Lord Redeemer, and rejoiced over the setting up of an usurping power to the destroying the interest of Christ in the land.'

parcs, with a magnificent view of the vale of Clyde from Carmyle to Dumbarton, and as far as Goatfell in Arran. This road passes through the fine residential spot called Burnside, containing many elegant villas and cottages, and in winter a fine skating pond lighted up after dark. At the W end of the burgh the principal street divides into two narrow branches, of which that to the N retains at first the name of Main Street, and then becomes Chapel Street, while the branch to the S is Cathcart Road. Parallel to Main Street on the N is the long narrow King Street. Though there are several old and somewhat straggling streets, many new and handsome streets have been and are still being formed, and on the low rich flat to the N and NW, beyond the railway, are the principal manufactories. The old town-hall projects into Main Street on the N side. The modern town-hall, erected in 1861-62, farther W, and subsequently added to on the E, is a very handsome building which would do honour to many a much larger town, and cost altogether £14,778. This building adds very much to the appearance of the town, and can be seen at a great distance. Late Baronial in style, it has a street frontage of 120 feet, and near the centre a square clock tower with turrets, with ogee roofs, rising to a height of 110 feet. The portion to the W, which was the first erected, contains a burgh court-room, a council chamber, various retiring rooms, and a public hall, measuring 75 by 40 feet, and with accommodation for about 800 persons. The eastern addition contains the various burgh offices. The ancient parish church was immediately to the W of the burgh hall, and was a building of some note, for, according to Blind Harry, it was in it that in 1297 a truce was agreed on between Scotland and England.

'Erl of Stamford, was chanslar of Ingland,
With Schyr Amar this trawill tuk on hand
A saif condyt that pruchest of Wallace.
In Ruglen Kyrk the tryst than haiff that set.'

After telling how 'The gret chanslar and Amar thidder past,' and giving an account of the debate between the parties, he tells how

'Wallace said; "Schyr, we jangill hot in wayne.
My consell gyffis, I will na fahill mak,
As for a yer a fnaill pess to tak.
Nocht for myself, that I bynd to your seill
I can nocht trow that eur ye will he leill;
Bot for pur folk grethiye has heyne supprisyt,
I will tak pess, quhill forthir we he awisit."
Than hand thair thus; thar suld he no debait,
Castell and towne suld stand in that ilk stait,
Fra thair day furth, quhill a yer war at an end:
Selyt this pess, and tuk thair leyff to wend.'

According to the same authority it was here, too, that Sir John Menteith agreed to betray Wallace to the English:

'Schyr Jhon Menteth Wallace his gossop was,
A messynger Schyr Amar has gert pass
On to Schyr Jhon, and sone a tryst has set,
At Ruglyn Kyrk thair twa toygdyer met.'

Of the church, which was dedicated to the Virgin and had altars of the Holy Trinity and St Nicholas, the only part now remaining is the quaint low tower with its curious spire, the rest having been demolished in 1794 when the present structure, about 30 yards farther W, was constructed. It is somewhat curious that the dedication of the church was to the Virgin, while the chief fair was held on St Luke's day in October. The modern church has 880 sittings, and is surrounded by a churchyard. The West Church, on the S side of Chapel Street, was built in 1836 as a chapel of ease, and stood unused for some time after the Disruption, but it was constituted a *quoad sacra* charge in 1868. In 1883 the Established Church also purchased the former Congregational church at Wardlawhill, which was erected into a *quoad sacra* parish in 1891. There is also a mission church at Greenhill Road, opened in 1887. The First Free church, on the NW, in Glasgow Road, erected soon after the Disruption, is a plain Gothic building with 820 sittings and a square pinnacled tower. The Second Free church, in Farme Loan Road to the E, was erected in 1871-72, at a cost of £3000, as a Reformed

Presbyterian church, but passed into possession of the Free Church when the two denominations were united in 1876. It is an Early English building, with 750 sittings and a SW tower and spire rising to a height of 123 feet. The U.P. church, a very plain building of 1836, in King Street, contains 950 sittings. The Roman Catholic church (St Columbkil), on the S side of Main Street, is a plain building of 1853, with 800 sittings. There are also an E. U. church in Regent Street, a Baptist congregation meeting in the Town-hall, and an Evangelistic hall. St John's Masonic Hall (1875) cost £1500. Under the burgh and landward school board are the Burgh, Eastfield, Farie Street, Macdonald, and Stonelaw schools, which, with accommodation for respectively 400, 216, 544, 890, and 562 pupils, have an average attendance of about 370, 210, 535, 635, and 265, and grants amounting to nearly £340, £210, £540, £650, and £290. There is also a Roman Catholic school with accommodation for 619 pupils, and an attendance of about 440. The Macdonald school was erected originally by subscription and partly endowed with the interest of £500 bequeathed by Lieutenant-Colonel Macdonald for the education of Protestant children in the town and parish of Rutherglen. Under the Educational Endowments Act the interest of this money is spent in bursaries.

Municipal matters are attended to by a provost, 2 bailies, a treasurer, a dean of guild, and 13 councillors. The corporation revenue is about £1700. The police force is united with that of the county. Rutherglen has a post office, with money order, savings bank, and telegraph departments, under Glasgow, offices of the National and Commercial banks, a slaughter-house erected in 1893 at a cost of £1144, parochial offices opened 1893, and a newspaper, *The Reformer*, published on Saturday. Among the miscellaneous institutions may be noticed a public library, two masonic lodges (St John's, 347, and Royal Arch, 116), an evangelistic association, Salvation Army barracks, and other local societies. There are fairs on the first Friday after 4 May, the first Tuesday after 4 June, the first Friday after 25 July, the first Friday after 25 August, the Wednesday before the first Friday of November, the first Friday of November, and the Friday after 25 November. Several of these, particularly the one in May called Beltane Fair, and that in November called St Luke's Fair, are famous for the sale of horses and cattle, and for the large number of buyers and sellers who attend them. The inhabitants of the town and district are employed in the coal pits, quarries, and brick-works in the neighbourhood, or in the industrial works connected with the burgh, these latter being factories, extensive chemical works, dye works, a paper mill, a pottery, tube works, a small boat-building yard, rope and twine works, a gold-beating work, and spindle works. The Clyde being navigable at high water for small vessels as far as Rutherglen, vessels of considerable size have been launched from its yard, and important contracts are still carried out. Rutherglen unites with Dumbarton, KILMARNOCK, Port Glasgow, and Renfrew in returning a member to serve in Parliament. Parliamentary constituency (1896) 2128; municipal 2226. Valuation of parliamentary burgh (1885) £34,556, (1896) £50,049. Pop. of royal burgh (1831) 4741, (1861) 8071, (1871) 9239, (1881) 11,473, (1891) 13,364, of whom 6491 were males and 6873 females; of parliamentary burgh (1861) 8062, (1871) 9453, (1881) 11,265, (1891) 13,083, of whom 6396 were males and 6687 females. Houses (1891) inhabited 2758, uninhabited 59, and building 60. Of the whole population in the same year, 3300 males and 1369 females were connected with industrial handicrafts, or were dealers in manufactured substances, and of these 1553 men and 85 women were connected with mineral substances alone; while there were 1432 boys and 1431 girls of school age. See Ure's *History of Rutherglen and East Kilbride* (Glasg. 1793).—*Ord. Sur.*, shs. 30, 31, 1866-67.

Ruthven, a village in Cairnie parish, Aberdeenshire, 2½ miles WNW of Rothiemay station and 6 NNW of Huntly, under which it has a post office.

Ruthven, a small parish of W Forfarshire, 3 miles E of Alyth and 4½ N by E of Meikle, with a post office under Alyth. It is bounded NE, E, and SE by Airlie, SW, W, and NW by Alyth in Perthshire. Its utmost length, from E by N to S by W, is 2½ miles; its utmost breadth is 2½ miles; and its area is 2087½ acres, of which 38½ are water. The river ISLA has here a winding course of 3½ miles; viz., 1½ mile west-south-westward along the north-western border; 2½ miles south-south-eastward through the interior, and 3 furlongs south-westward along the south-eastern border—though the point where it first touches and that where it quits the parish are only 2½ miles distant as the crow flies. With rocky bed, and bold, well-wooded banks, it offers many pretty bits of scenery. The surface, a gentle southerly slope, on the northern side of Strathmore, is diversified by some swells and knolls, and attains a maximum altitude of 325 feet, whilst sinking southward to 165. The rocks are sandstone beds of the Old Red formation, and masses of *débris* from the Grampians. The sandstone is a good building material; and the gravels of the *débris* have been much used for roads. The soil, in general, is a light loam on a gravelly bottom. Much of the wood is oak coppice, both profitable and ornamental; and the rest is chiefly planted larch and Scotch firs on naturally poor land. Ruthven Castle, an ancient baronial residence, belonging at one time to the Earls of Crawford, stood in the SE of the parish near the left bank of the Isla, but, falling into ruin, was long ago removed. A knoll in the neighbourhood still bears the name of Gallows Hill, from being the place where the old feudal barons of Ruthven erected their gibbet; and a small field adjoining it is known by the name of the Hangman's Acres. Ruthven House, near the site of the castle, 3 miles NNE of Meikle, is the seat of Thomas Wedderburn-Ogilvy, Esq. (b. 1814; suc. 1853), his maternal great-grandfather having purchased the estate (long held by the Crichtons) in 1744. Ruthven is in the presbytery of Meikle and the synod of Angus and Mearns; the living is worth £185. The parish church, on the right bank of the Isla, near Inverqueneich, was built in 1859, and contains 150 sittings. Adjacent to it is the manse, rebuilt in 1874. Ruthven in the 12th century was a vicarage of the Abbey, dedicated to St Maluack, and specially confirmed by Pope Honorius III. in 1219. The public school, with accommodation for 64 children, has an average attendance of about 45, and a grant of nearly £50. Valuation (1885) £2195, 2s., (1893) £1574, 3s., plus £515 for railway. Pop. (1801) 211, (1841) 471, (1861) 265, (1871) 247, (1881) 195, (1891) 188.—*Ord. Sur.*, sh. 56, 1870. See a work by the minister, Dr M'Pherson, F.R.S.E., on *The Ecclesiastical Antiquities of Strathmore* (1885).

Ruthven Barracks. See KINGUSSIE.

Ruthven Castle. See HUNTINGTOWER.

Ruthven Loch, a pretty birch-fringed lake on the mutual border of Dore and Daviot parishes, Inverness shire, 11½ miles S by W of Inverness. Lying 700 feet above sea-level, it curves 2½ miles west-south-westward, varies in breadth between 1 and 4½ furlongs, sends off a rivulet ¾ mile west-by-southward to the FARGAIG, and is perhaps the best trouting loch in the district.—*Ord. Sur.*, sh. 73, 1878.

Ruthven Water. See AUCHTERARDER.

Ruthwell, a village and a coast parish of Dumfriesshire. The village stands 1 mile inland and 1½ SSE of Ruthwell station on the Glasgow and South-Western railway, this being 8½ miles ESE of Dumfries and 7 WNW of the post-town, Annan. In 1509 it was erected into a burgh of barony, in favour of Sir John Murray of Cockpool, with the right of holding fairs and markets; but it has long forgotten all its burghal honours, and is a place of neither trade nor manufacture. It has a post office with money order, savings bank, and telegraph departments.

The parish, containing also the post office village of CLARENCEFIELD and the small decayed watering-place of Brow Well, is bounded N by Mouswald and Dalton, E by Cummertrees, S by Solway Firth, and SW and

W by Caerlaverock. Its utmost length, from E to W, is $6\frac{1}{2}$ miles; its utmost breadth, from N to S, is $3\frac{1}{2}$ miles; and its area is $11,321\frac{1}{4}$ acres, of which 2549 are foreshore and $78\frac{3}{4}$ water. LOCHAR Water winds 5 miles south-eastward along all the Caerlaverock boundary, and then, at low water, must still go $5\frac{1}{2}$ miles further across the broad, clayey sands, having BLACKSHAW Bank to the right and Priestside Bank to the left. The coast-line, $3\frac{3}{4}$ miles in extent, is low, at no point exceeding 29 feet above sea-level. The interior, too, in the W forming part of LOCHAR Moss, is low and flat, and attains a maximum altitude of only 154 feet near Kirkstyle in the NE. The principal rock is a coarse limestone, which, towards the close of the 18th century, was worked to a considerable extent; and about the same time search was made, but in vain, for a workable seam of coal on Belidding farm. The soil for the most part is a strong gravel, intermixed with vegetable mould; and the tract of moss in the W is partly waste, partly pastoral, and partly used for the supply of peat-fuel. COMLONGAN and COOKPOOL Castles have been noticed separately. In the manse grounds stands the famous Ruthwell Cross, a sandstone Runic monument $17\frac{3}{4}$ feet high, $2\frac{1}{2}$ feet to $8\frac{1}{2}$ inches broad (3 feet across the arms* of the cross), and $1\frac{1}{2}$ to $\frac{3}{4}$ foot thick. Of its four faces, the side ones are carved with graceful vines and curious animals of the type familiar in other sculptured stones; whilst on their margins are Runic verses from Caedmon's lay of *The Holy Rood*—unquestionably the oldest extant fragment of English literature. The other two faces, in front and behind, contain representations of the Crucifixion (almost defaced), the Annunciation, Christ healing the Blind, etc., with corresponding Latin inscriptions in Roman character. The discoveries of Kemble (1842), Haigh (1856), and Stephens (1865) have demolished the theory that these faces, in front and behind, are of later workmanship than the cross as a whole, which cross is said to have originally been set up, as early likely as 680 A.D., at Priestside near the sea, and thence to have been drawn by a team of oxen to the parish church, where it remained long after the Reformation. In 1642, however, it was cast down and broken into several pieces, one of which was recovered from a grave towards the close of the 18th century. The other fragments were lying within the church in 1772, but soon after were removed to the churchyard, and left to decay, until in 1802 this priceless relic of antiquity was re-erected in the manse garden by the Rev. Henry Duncan, D.D. (1774-1846), who was minister from 1799 till the Disruption. For its better preservation it was in 1887 transferred to a new wing built into the church, admission to which is at all times free. It was this Dr Duncan who in 1810 established at Ruthwell the earliest savings bank in Scotland; and he, too, was first to discover reptilian footprints in red sandstone from Corncockle Moor. These were inserted in the wall of his summer-house, into which there were also built two rudely sculptured stones, without any inscription, said to have been removed to the churchyard from a small chapel or preceptory of the Knights of St John at Kirkstyle, but afterwards by Dr Duncan built into the wall of his Free church in Mouswald parish. The Earl of Mausfield is chief proprietor. Ruthwell is in the presbytery of Annan and the synod of Dumfries; the living is worth £322. The parish church, $\frac{1}{2}$ mile N of Ruthwell village, is a patchwork edifice of various dates, and contains 420 sittings. In 1890 a new manse and a new vestry were built. The Free church, at the Mouswald boundary, $1\frac{1}{4}$ mile NW of Ruthwell station,

was founded by Dr Duncan; and near it is a pyramidal monument to his memory, 40 feet high. A public and a female industrial school, with respective accommodation for 172 and 56 children, have an average attendance of about 110 and 45, and grants of nearly £115 and £40. Pop. (1801) 996, (1831) 1216, (1861) 1046, (1871) 972, (1881) 868, (1891) 858.—*Ord. Sur.*, shs. 6, 10, 1863-64. See articles by Dr Duncan in *Trans. Royal Soc. of Edinb.* (1828), *Trans. Soc. Ants. Scotl.* (1832), and the *New Statistical Account* (1845); Dr John Stuart's *Sculptured Stones of Scotland* (2 vols., 1856-67); and Joseph Anderson's *Scotland in Early Christian Times* (2d series, 1881).

Ruvail. See RHU VAAL.

Ryan, Loch (the *Rerigonius Sinus* of Ptolemy), a sea-loch striking from the S side of the entrance of the Firth of Clyde, nearly opposite the Mull of Kintyre. Lying partly in Ayrshire and Wigtownshire, and projecting into the interior of the latter county, it forms the eastern boundary of the northern part of the Rhinns of Galloway. It extends $8\frac{1}{4}$ miles nearly due south-by-eastward; and measuring from $1\frac{3}{8}$ mile to $2\frac{3}{8}$ miles in breadth, is narrowest immediately within the entrance, widest within $2\frac{1}{4}$ miles of the head, being narrower over all the lower half than in the mean of the upper half. A sandbank called the Scar runs $2\frac{3}{8}$ miles diagonally or south-south-eastward from the middle of its W side; and it is indented on the E side, opposite the lower end of the Scar, by Cairn Point projecting from a neighbouring eminence 640 feet high. It is overlooked on the E side of the entrance by rocky shores, and at two parts of its W side by eminences 324 and 314 feet high; has almost everywhere, except at these places and at Cairn Point, low, flat, sandy shores; is left dry, at low water, over most of the Scar, over a belt nearly $\frac{1}{2}$ mile broad around its head, and over a slender belt round most of its upper half; contains excellent anchoring ground over most of its extent, but especially in the south-eastern vicinity of Cairn Point, at Portmore, and in the baylets of Wig, Soleburn, and Dalmenock; forms, on the whole, a safe, commodious, natural harbour, of easy access, and so capacious as to afford ample anchorage for the largest fleets; is adjoined in the western part of its head by the town, seaport, and railway station of Stranraer; and serves, from that place, as the line of the most easy communication by steamers between Scotland and the N of Ireland. At one time the loch afforded a large supply of splendid oysters, but the beds having been impoverished the fishery became unprofitable. An application in 1894 for its re-establishment was refused. Several kinds of white fish are caught, and occasionally herrings. At Stranraer, where there is a coastguard station, the sea-bathing is excellent. Loch Ryan lighthouse, erected on Cairn Point in 1847 at a cost of £4241, shows a fixed white light visible at a distance of 12 nautical miles. The Queen passed four nights on board the royal yacht in Loch Ryan in 1847 and 1849; and she describes it as 'very fine, the hills and glens lovely, the loch very large, and the hills very high and wooded.'—*Ord. Sur.*, shs. 7, 3, 1863-56.

Ryedale, an estate, with a mansion, in Troqueer parish, Kirkcudbrightshire, near the right bank of the Nith, in the southern vicinity of Maxwelltown.

Ryefield. See FERINTOSH.

Rye Water, a rivulet of Dalry parish, Cunninghame district, Ayrshire, running 7 miles south-south-eastward, chiefly through a hilly country, and falling into the Garnock in the north-eastern vicinity of Dalry town.—*Ord. Sur.*, sh. 22, 1865.

* These are a restoration by Dr Duncan in 1823.

S

SADDELL AND SKIPNESS, a parish on the E side of Kintyre peninsula, Argyllshire, formed from the parishes of Killean and Kilcalmonell in 1753.

It contains the village of CARRADALE, 13 miles N by E of Campbeltown and 22 S by E of Tarbert, with a post office, having money order, savings bank, and telegraph departments, and a hotel; other villages being Saddell, 4 miles S by W, and SKIPNESS, 15½ N by E, of Carradale. It is bounded NE by the lower waters of Loch Fyne, E by Kilbrannan Sound, SW by Campbeltown, W by Killean and Kilcalmonell, and NW by Kilcalmonell. Its utmost length, from NNE to SSW, is 24½ miles; its breadth varies between 1½ and 5 miles, whilst tapering northward and southward to a point; and its area is 74½ square miles or 47,663½ acres, of which 300½ are water, 480½ foreshore, and 10½ tidal water. The coast, extending 6½ miles south-south-eastward and southward along Loch Fyne to Skipness Point, and thence 24½ miles south-south-westward along Kilbrannan Sound, is indented by only one good-sized inlet, Carradale Bay; projects but one considerable headland, Carradale Point (133 feet high); and mostly rises steeply from the sea to a height of over 100 feet. Of seventeen streams that run to Kilbrannan Sound much the largest is Carradale Water, others being Skipness, Clonaig, and Saddell Waters; whilst of fifteen small fresh-water lakes the chief are Lochs Romain (4 × 1 furl.; 542 feet) and Tana (2½ × 1 furl.; 605 feet). The surface is hilly everywhere, in places mountainous, the principal summits from N to S being Cruach Doire Leithe (1236 feet), Coire nan Capull (1095), Fuar Larach (886), Creag Mhor (741), Cnoc an Samhlaidh (866), Deucharan Hill (1081), Cnoc nan Gabhar (753), Beinn Bhreac (1398), Meall Donn (1138), BEN AN TUIRC (1491), Cnocmalavilach (853), and Bord Mor (1338). Of these, Ben an Tuirc commands a magnificent view of seven Scottish and two Irish counties, from Corsill Point in Wigtownshire to Ben More in Mull and Ben Lomond in Stirlingshire. The hills are neither steep, barren, nor rocky, but generally covered with an intermixture of grass and heath; and, rising regularly and with easy ascent from the shore, they have flat summits, or stretch away into small tablelands. The glens, all running from NW to SE, usually open, at their lower ends, upon beautiful little bays; and they enjoy so great a degree of heat, and such happy visitations of fertilising showers, as are highly favourable to agriculture. A stranger traversing the parish lengthwise along the road is presented with a great variety of land and sea views, and alternately moves along a delightful bank overlooking the sea and Buteshire, and suddenly descends into pleasant woods and valleys. Mica slate, intersected with quartzite and basaltic veins, is the predominant rock; and granite occurs in large boulders. The soil in the bottom of the glens is a fine alluvium; that of the higher arable lands is light and sandy. At Saddell village, near the right bank of Saddell Water, stand the tree-embowered ruins of Saddell Abbey. Its cruciform minster measured 136 by 24 feet, or 78 across the transept; and the cloister-garth to the S was 58 feet square; but little remains save portions of the choir wall and the N transept. In the churchyard are some most interesting sculptured effigies, and hard by is a holy well. The abbey of 'Saghadul' or Saddell was founded for Cistercian monks by Ragnall or Reginald, the second son of Somerled, who himself is styled King of the Isles and Argyll, and who died in 1207. It made peace with Haco of Norway in 1263, and in 1507 was, with all its possessions, annexed by James IV. to the bishopric of Argyll. Saddell Castle, 3 furlongs SSE, at the head of Saddell Bay, is a large square battlemented tower. Hither Ragnall's great-grandson, Angus Og, is said to have welcomed Robert Bruce in 1306, after the defeats of Methven and Dalry. Other antiquities, besides those

noticed under Carradale and Skipness, are several cairns, tumuli, and hill-forts. Opposite Saddell Castle stands Saddell or Glensaddell House, the seat of John Neil Macleod, Esq. of Kintarbert. Other mansions, noticed separately, are Carradale House, Cour, Skipness Castle, and Torrisdale Castle. In the presbytery of Kintyre and the synod of Argyll, this parish since 1871 has been ecclesiastically divided into Saddell and Skipness, the former a living worth £155. Saddell parish church, at Carradale village, was built about 1771, and contains over 300 sittings. There is a Free church of Carradale and Skipness; and four public schools—Carradale, Saddell, Skipness, and Spersaig—with respective accommodation for 158, 54, 54, and 30 children, have an average attendance of about 105, 35, 20, and 25, and annual government grants amounting to nearly £115, £55, £40, and £45. Pop. (1801) 1767, (1831) 2152, (1861) 1227, (1871) 1153, (1881) 1163, (1891) 1156, of whom 698 were Gaelic-speaking, and 761 were in Saddell ecclesiastical parish.—*Ord. Sur.*, shs. 20, 21, 29, 12, 1870-76.

Saddle Yoke. See MOFFAT.

St Abb's Head. See ABB'S HEAD, ST.

St Andrews, a parish containing a royal burgh of the same name on the E coast of the county of Fife, between the entrance to the Firth of Tay and Fife Ness. When the parish of St Leonards, which had previously consisted of four separate parts, was re-formed by the Boundary Commissioners in 1891, there was some exchange of territory between it and St Andrews parish. St Leonards is now situated wholly within the burgh of St Andrews. The parish of St Andrews is bounded N by the parish of Leuchars, NE by St Andrews Bay, SE by the parish of Kingsbarns, S by the parishes of Dumino, Cameron, and Ceres, W by the parish of Kemback, and NW by the parish of Leuchars. On the N and NW the boundary is formed by the river Eden from the mouth to Nydie Mill, a distance of 6½ miles; on the SSE it follows Kenly Burn for about 3 miles, though there are divergences; elsewhere, except on the sea-coast and for a mile near Wester Balrymonth along a small stream flowing to Kinness Burn, the line is almost entirely artificial. The extreme length of the parish, from Nydie Mill on the W east-south-eastward to the mouth of Kenly Burn, is 9½ miles; the average breadth at right angles to this is about 2½ miles. The coast, from the Eden to the burgh of St Andrews, is a flat, firm, sandy beach, skirted by the links; and from the burgh to Kenly Burn an expanse of rough shelving rocks skirted by low cliffs from 30 to 40 feet in height. Among these are several caves, but Kinkell Cave, a mile to the E of the burgh, with a length of about 75 feet and a height of from 10 to 25 feet, is the only one of importance. The Maiden Rock to the N of the burgh, the Rock and Spindle to the E of Kinkell Ness, and Buddo Rock near Boarhills, also present curious features, especially the Rock and Spindle, which shows a peculiar radial arrangement of basaltic columns. The surface is generally flat along the seaboard, and rises from this slowly towards the interior boundary, heights of 360, 375, and 547 feet being reached at East Balrymonth Hill, West Balrymonth Hill, and Clatto Hill respectively. The soil is fertile, and is mostly under tillage, the woodland being generally confined to the policies of the mansions. The underlying rocks are carboniferous, consisting of beds of sandstone, with thin seams of coal, clay, and clay-ironstone. Many of the beds are fossiliferous, and there are also volcanic rocks. Basalt for road metal and paving-sets is quarried in several places, and sandstone of excellent quality for building is worked at Knock Hill and Strathkinness. The drainage is carried off by the river Eden and Kenly Burn on the borders, and in the centre by Kinness Burn, which enters the sea to the E of St Andrews, one branch rising on the W at Knock Hill, and another

on the S border at Priory Bank. At the mouth of the Eden—up which the tide flows for 4 miles—there is a shallow sandy bay abounding in flat fish and shells, and along the lower part of the river salmon and sea-trout may be caught. Magus Muir, on the SW, where Archbishop Sharpe was assassinated, is separately noticed. The south-eastern part of the parish is traversed by the great coast road along the Firth of Forth and by the East Neuk of Fife to St Andrews and thence to Dundee, and by the road from St Andrews westward to Cupar-Fife, as well as by a large number of good district roads. The St Andrews branch of the North British railway system enters the parish at the river Eden at Guard Bridge, and runs east-south-eastward $3\frac{1}{2}$ miles to the W end of the town of St Andrews. It was opened in 1852, and the Anstruther and St Andrews section of the same system was opened to Boarhills in 1883, and to St Andrews in 1887. The proposed East Fife Central railway, from Leven to Bonnyton and northward to Dairsie, is to have an eastern branch from Bonnyton to Strathvie on the Anstruther and St Andrews railway. Besides the town of St Andrews the parish contains also the villages of Strathkinness (W) and Boarhills (E) and the hamlet of Kincapele (N), with part of the hamlet of Denhead (S), the last three of which are separately noticed, as is also the old bridge at Guard Bridge. The mansions are Balmungo, Clatto, Denbrae, Kincapele, Kingask, Broomhills, Kenly Green, and Strathtyrum, the first five of which are separately noticed, as is also Mount Melville, part of the policies of which are in this parish, though the mansion-house is in the parish of Cameron. The parish is in the presbytery of St Andrews and synod of Fife, and the charge is collegiate, the living of the first minister being over £563 a year, and that of the second over £193. It gives off the *quoad sacra* parish of Strathkinness, and there is a mission station at Boarhills. The churches are noticed in the following article, and there is also a Free church at Strathkinness. Under the landward school board of the parish of St Andrews, the Boarhills and Strathkinness schools, with accommodation for 117 and 208 pupils respectively, have attendances of about 60 and 140, and grants of nearly £55 and £120. Landward valuation (1885) £23,752, (1893) £21,492, 19s. 8d. Pop. (1801) 4203, (1831) 5621, (1861) 7092, (1871) 7851, (1881) 7835, (1891) 7538, of whom 3318 were males and 4220 females, while 5636 were in the town and 888 were in the *quoad sacra* parish of Strathkinness.

The *Bay of St Andrews*, which may be taken as bounded on the N by the Red Head, and on the S by Fife Ness, measures 24 miles along the line between these points, and 10 miles along a line at right angles to this westward to the head of the bay. It is dangerous and stormy; and vessels driven in by easterly winds are compelled to run for the entrance to the Tay, with its dangerous and intricate sandbanks.

The Established Church has a presbytery of St Andrews, which is in the synod of Fife, and comprehends the parishes of St Andrews, Abercrombie, Anstruther-Easter, Anstruther-Wester, Cameron, Carnbee, Crail, Dunino, Elie, Ferry Port on Craig, Forgan, Kemback, Kilconquhar, Kilrenny, Kingsbarns, Largo, Leuchars, Newburn, Pittenweem, and St Leonards, and the *quoad sacra* parishes of Cellardyke, Largoward, Newport, and Strathkinness. The Free Church has also a presbytery of St Andrews, with congregations at Aberdour, Aberfoyle, Acharn, Anstruther, Carnbee, Crail, Elie, Ferry Port on Craig, Largo, Leuchars, Newport (Forgan), St Andrews, St Monance, and Strathkinness. The Episcopal Church has a united diocese of St Andrews, Dunkeld, and Dunblane, with churches at Alyth, Auchterarder, Blairgowrie, Bridge of Allan, Burntisland, Callander, Comrie, Coupar-Angus, Criannlarich, Crieff (2), Culross, Cupar-Fife, Dollar, Donne, Dunblane, Dunfermline (2), Dunkeld, Dunning, Fernan, Forfar, Glamis, Glenalmond, Killin, Kilmaveonaig, Kincardine-on-Forth, Kinghorn, Kinloch-Rannoch, Kinross, Kirkcaldy, Kirriemuir, Leven, Lochearnhead, Meigle, Muthill, Newport, Perth (2), Pitlochrie,

Pittenweem, St Andrews, Strathtay, Taymouth, Tummel Bridge, and Weem; and the Roman Catholic Church has an archbishopric of St Andrews and Edinburgh, with churches in Edinburgh (6), Balfron, Bathgate, Borrowstouness, Broxburn, Dalkeith, Davidson's Mains, Denny, Dunbar, Dunfermline, Falkirk, Fauldhouse, Galashiels, Haddington, Hawick, Innerleithen, Jedburgh, Kelso, Kilsyth, Kirkcaldy, Leith, Lennoxton, Linlithgow, Loanhead, Lochgelly, Musselburgh, North Berwick, Oakley, Pathhead, Peebles, Penicuik, Portobello, Ratho, Rosewell, St Andrews, Selkirk, Slamannan, South Queensferry, Stirling, Strathblane, Tranent, and West Calder.

St Andrews, a royal burgh, market, and university town, and a seaport on St Andrews Bay, near the middle of the sea-coast of the parish just described. It was long the ecclesiastical metropolis of Scotland, and is still the seat of a presbytery. The station, on a branch line of the North British system leaving the main line at Leuchars, is by rail 12 miles E of Cupar, $12\frac{3}{4}$ SE of Dundee by the Tay Bridge, and $55\frac{1}{2}$ NE of Edinburgh by the Forth Bridge. By the Anstruther and St Andrews railway, opened in 1887, the town is also connected with the Leven and East of Fife section of the North British system. The country round is low and flat, and the environs are somewhat tame, though from various points of view, particularly from the W and N, the town itself, with its spires and venerable towers and ruined buildings, looks well. The site of the town is a tabular rocky eminence, some 50 feet above sea-level, and about 1 mile long and $\frac{3}{4}$ broad, falling to the sea on the E and N by steep rocky declivities, and dipping on the landward side into a narrow vale traversed by the Kinness Burn. The situation is somewhat exposed, but the climate is healthy and bracing.

Lines of Street, etc.—The cathedral, a short distance W of the harbour, marks the point from which the town grew, and so we find that the three principal streets run westward from this point, diverging somewhat from one another in their course. The chief of the three is South Street, which is the one farthest S; in the centre is Market Street, and farther N is North Street. The first and last are wide airy streets, measuring 70 feet from side to side, and all are well built and well paved. South Street is lined on both sides with lime trees, and terminates westwards in a fine arched gateway, being the old city gate. Market Street is broad and spacious in the middle and W end, but the E end is still narrow. They are intersected by a number of cross streets from N to S. From the E end of South Street, Pends Lane passes eastward, farther W are Castle Street (N) and Abbey Street (S—the latter being continued westward by Abbey Walk), Union Street and College Street (both between Market Street and North Street), Church Street (a continuation of College Street to South Street), North Bell Street and South Bell Street (from North Street to South Street), and at the extreme W are Golf Place, Hope Street, City Road, and Bridge Street. Between North Street and the shore there is another thoroughfare called at one time Swallow Street, the line of which is now occupied by the walk called The Scores. Southward from the centre of South Street is Queen Street, and on the NW of the town is a winding path, called Lead Braes Walk. The railway station is at the E end of North Street. The extreme length of the town is about a mile—counting from the harbour westward, and the greatest width at the W end is under half a mile. A rough map of the town, made in 1530, shows that since that time no change has taken place in the plan of the main streets. The most of the older houses seem to have been of wood. Subsequent to the Reformation these were replaced by more substantial structures, many of them built with stones taken from the castle, the cathedral, or some of the other ecclesiastical buildings that had been wrecked at the time. The Reformation, however, ruined the prosperity of the town, and the rough and inconvenient state of the streets that had obtained in the end of the 16th

century, was but little improved till well into the 19th century. Prior to 1840 'there was not a foot of side pavement in any of the streets; filth and squalor abounded unchecked; cows and pigs grazed in front of the colleges; the venerable ruins were fast going, by neglect, to decay, and were littered with rubbish; the lines of the public streets were continually broken by awkward abutments of ungainly houses; there were few visitors of any distinction, even to the splendid links, which lay with all their vast capabilities almost untrodden; and generally St Andrews, considering the *prestige* of its antiquity as an ecclesiastical capital and its rank as a seat of learning, was at the lowest pitch of miserable neglect and decay.' The St Andrews of to-day, with its wide well-paved streets, handsome public buildings and houses, and its gay season of summer visitors, had still to be created; but in 1842 the hour came, and the man, in the person of Major H. L. Playfair (1786-1861), son of Principal Playfair (1799-1819) of the United College. Major (afterwards Sir Hugh) Playfair quitted the service of the Honourable East India Company—in which he held high command in the artillery—in 1834, and retired to St Andrews, where he spent the rest of his life. He was elected provost in 1842, and at once set to work on the new reformation on which his heart was set, and during his provostship revolutionized the town. The old streets were widened, levelled, causewayed, and provided with side paths, a new quay built, barriers erected to prevent the encroachments of the sea on the links—one achievement being the completion of the Dane's Work on the NE, an unfinished bulwark of rough stones, commenced by one of the priors in 1507, and afterwards abandoned—the formation of The Scores and other walks, the erection of new university and municipal buildings, and of a club-house at the links. The town had a number of ports or gates, but seems never to have had a regular wall, the fences at the backs of the houses being probably deemed sufficient. One of the gates was at the N end of Castle Street, another at the Harbour Hill, a third at the W end of Market Street, one at the shore on the road to Crail, and one still remains at the W end of South Street.

History.—Like so many of the older Scottish burghs, St Andrews owes its origin and early importance to its connection with the Church. About the 7th century the whole district seems to have been a wild expanse of moorland and forest, forming a hunting-ground for the Pictish kings, and known as Muckross, from the Celtic *muic*, 'a pig or boar,' and *ross*, 'a promontory.' In the grant of this tract to the Bishop by Alexander I., the name appears as *Cursus Apri*, or boar chase, and the village of Boarhills seems still to keep up the remembrance of the old title, as do also the city arms, the shield bearing a boar tied to a tree. Hector Boece says it was 'so called from a boar of wondrous size, which, after having made prodigious havoc among men and cattle, and having often been unsuccessfully attacked by the huntsmen at the imminent danger of their lives, was at last set upon by the whole of the inhabitants of the district, and killed while endeavouring to make his escape across this tract of ground.' The historian further adds that in his time manifest proofs of the existence of this huge beast were extant in the shape of two tusks, each 16 inches long and 4 thick, which were preserved in the cathedral. Tradition claims for the first religious house at St Andrews, the date of 347 A.D. The full account, as ultimately elaborated, is, that when in 345 Constantine the Great invaded Patras with a large army in order to avenge the martyrdom of St Andrew, an angel appeared to Regulus the bishop and ordered him to remove and hide some of the relics of the saint. In obedience to this command Regulus concealed three fingers of the saint's right hand, a part of one of his arms, the pan of one of his knees, and one of his teeth; and after Constantine had carried off the rest of the remains to Constantinople, the bishop, again visited by the angel in a dream, was enjoined to sail northwards with his relics, and to found and dedicate a church

to St Andrew wherever his ship should be wrecked. Meanwhile the saint himself had appeared in a vision to Hungus, son of Fergus, king of the Picts, who was at the time at war with Athelstan, king of the Saxons, with whom he was about to fight an important battle, and after promising him the victory, warned him also as to the approach of the relics and the honour and fame which would gather round the place where they were landed. The Picts vowed to revere St Andrew for ever if they should gain the victory, and as their cause was successful and Athelstan was killed, they were quite prepared to extend a warm welcome to Regulus, who, after sailing about for a year and a half, was at last wrecked in St Andrews Bay somewhere near the present harbour. Regulus, weary with his long voyage, rested for seven days, and then leaving part of his company at the place where he had landed, he set out with the relics for Forteviot, where he was kindly received by Hungus' three sons, 'who, being anxious as to the life of their father, then on an expedition in the region of Argathelia, gave a tenth part of Forteviot to God and St Andrew.' The king returned safe, and further grants of land were made to the clerics, Hungus himself going with them to Muckcross or Kilyrnyont, where they had been wrecked, and 'making a circuit round a great part of that place immolated it to God and St Andrew for the erection of churches and oratories, . . . with waters, meadows, fields, pastures, moors, and woods as a gift for ever, and granted the place with such liberty that its inhabitants should be free and for ever relieved from the burden of hosting and building castles and bridges, and all secular exactions.' Such is the completed legend, the older forms of which make, however, no mention of Regulus at all; in a subsequent form he is introduced as a monk and abbot; and in the latest form he is a bishop. Dr Skene, who has compared and analysed all the stories, is of opinion that the early part of the legend belongs entirely to the relics, and was tacked on to the latter part of the story in order to give the dedication to St Andrew a fictitious date, so that the foundation might seem to have a greater antiquity than that of Iona. The Hungus or Angus, son of Fergus, referred to, seems to be the Angus who ruled over the Picts from 731 to 761, and the adoption of St Andrew as the national saint must lie somewhere between those dates. It must have been subsequent to 731, for when Bede finished his *Ecclesiastical History*, in that year the national saint was St Peter, to whom Nectan had dedicated the land of the Picts in 710, and it must have been prior to 747, for in that year *Tighernac* records the death of Tuathalan, abbot of Kilyrnyont. Under the date of 736 the same annalist records that Angus devastated Dalriada, so that the latter year is probably that of the foundation of the see and of the mediæval prosperity and importance of the town. The dedication to St Andrew and the great veneration in which he was thereafter held seems to have been borrowed from the Saxons of Northumbria, where Wilfred, Bishop of York, who was the leader of the Roman party in the Northumbrian Church, had erected a church dedicated to this saint, at Hexham, in 674; and there is a vague tradition that Acca, Bishop of Hexham, who was driven from his Northumbrian bishopric in 732, founded a see among the Picts. Whether St Regulus or St Rulc is to be connected with the earlier or later portion of the legend is doubtful, and in all probability there is a confusion of two different persons, viz., St Regulus the first Bishop of Senlis in Gaul, and St Riaguil of Muicinsi in Ireland; for while the ordinary day assigned in Scotland for the commemoration of St Rule is the 17th October, the day of the Irish saint is the 16th, and the Aberdeen Breviary has a St Rule commemorated on the 30th March. It is also highly probable that the mystification may be intentional so as to take in an older church dedicated to the Irish St Rule, who was a contemporary of St Columba, and erected in the end of the 6th century during the mission to St Cainich—one of the companions of St Columba—who is said to have had a church at Kilyrnyont, although it is possible that the

word in the particular passage where this is mentioned may refer rather to the district generally than to the position of the modern town.

In those early days of St Andrews the primacy was at Abernethy, but it must have been removed to St Andrews during the next century and a half, whether by Kenneth II. or Grig cannot now be settled, for in 908 Bishop Cellach of St Andrews appears as the leading churchman in the great council held by King Constantine at the Mote Hill of Scone. Cellach was the first bishop, and he was succeeded by ten Culdee bishops, the last being the second Fothad or Modath, who performed the ecclesiastical rites at the marriage of Malcolm Ceanmor and Margaret. The next three bishops all died before consecration, and for about 16 years after the death of Malcolm the bishopric appears to have been vacant. The thirteenth bishop was Turgot, Queen Margaret's confessor, who ruled from 1109 to 1115—the first bishop not of native birth—during whose episcopate the Culdee influence began to decline. At some period prior to 1107 the Culdee community had split up into two sections, each of which carried with it a portion of the spiritualities and temporalities which we may reasonably conceive had been originally combined. On the one side were a prior and twelve brethren representing the old foundation, and as clerical vicars performing divine service, and holding part of the estates as well as receiving the minor dues; the other party consisted of the bishop and the representatives of the abbot and other greater officers, secularised, yet enjoying another portion of the estates and the greater ecclesiastical dues. The appropriation of church revenues by secular officials began early in the 12th century to be regarded as a scandal, and a further blow was dealt at the practice in the time of the seventeenth bishop, Robert (1121-59), by the establishment in 1144 of a body of canons regular, to whom was granted the hospital as well as a large amount of other ecclesiastical property, and thus 'there were now two rival ecclesiastical bodies in existence at St Andrews—one, the old corporation of secular priests, who were completely thrown into the shade, and shorn of many of their privileges and possessions; and the other, that of the regular canons, who virtually represented the secularised portion of the old institution, and entered on the enjoyment of their estates. But this rivalry or co-existence was very distasteful to the chief authorities, both lay and ecclesiastical, as soon became manifest.' Immediately upon the foundation of St Andrews, King David, as he did also in the case of Lochleven, made an ordinance that the prior and canons should receive into incorporation with them the Keledei of Kilrymont, who were to become canons provided they would conform to canonical rule. If they refused they were to be merely liferented in their possessions, and as they died out regular canons were to be appointed in their room. The influence of the Culdees was, however, strong, for, notwithstanding this edict, Malcolm IV. confirmed them in their possessions in 1160, and though every pope from 1147 to 1248 issued an injunction that from the time of his edict vacant places should be filled by regular canons, it seems never to have been possible to enforce the order. In 1199 they had a quarrel with the regular prior, and compromised matters by giving up their rights as to dues, while they were allowed to hold the tithes of their own lands. They clung to their prescriptive right to take part in the election of a bishop down to 1273, when they were excluded under protest, and in 1332 they were absolutely excluded, and seem to have abandoned their claim. They, however, retained possession of their lands in the *Cursus Apri*, and although the name of Culdee does not appear after the early part of the 14th century, the institution remained under the names of 'Prepositura ecclesie beate Marie civitatis Sancti Andree,' the 'ecclesia beate Marie de Rupe,' and 'the Provostry of Kirkheugh' till the Reformation, when the provostry became vested in the Crown, and in 1616 it was annexed to the see of St Andrews (see Dr Reeves' *Culdees*). What was the size of the bishopric as origi-

ally established is not known, but in the time of Malcolm IV. it embraced the counties of Fife, Kinross, and Clackmannan, the three Lothians, Berwickshire, Roxburghshire, and parts of Perthshire, Forfarshire, and Kincardineshire, and though it was afterwards lessened by the erection of new sees, the extent and importance of St Andrews always remained very great, and at the Reformation the archbishop held the patronage of 131 benefices, and administered the affairs of 245 parishes, the diocese being divided into 2 archdeaconries and 9 rural deaneries. The benefactions of some of the bishops are subsequently noticed. The last bishop was James Kennedy (1440-66)—the thirty-sixth from Cellach—his successor, Patrick Graham (1466-78), having obtained from Pope Sixtus IV. a bull erecting the see into an archbishopric. The document is lost, and the exact date is not known, but it seems to have been issued in 1471 or 1472. The bishop of York had originally the supervision of the portion of the kingdom of Northumbria, along the S side of the Firth of Forth, and after the introduction of the line of bishops of English birth beginning with Turgot, he repeatedly claimed the bishop of St Andrews as his suffragan, and though the claim was always indignantly set aside by the Scottish authorities it was revived from time to time down to this period, when St Andrews became the metropolitan see of Scotland, the suffragans being the bishops of Dunkeld, Dunblane, Brechin, Aberdeen, Moray, Ross, Caithness, and Orkney. Poor Graham did not, however, long enjoy his new dignity, for the jealousies and quarrels in which his elevation involved him seem to have driven him mad, and after a formal trial in 1477 he was early in 1478 deposed by a bull of Pope Sixtus IV. and imprisoned first at Inchcolm and afterwards in the priory at Lochleven. Including Graham there were eight Roman Catholic archbishops—the most famous being James Beaton (1522-39) and his nephew Cardinal Beaton (1539-46), and the last John Hamilton, who was executed on a charge of treason in 1571. The bishops and archbishops were lords of regality and ultimate heirs of all confiscated property within their domains; they levied customs; and they seem also to have had, at times at all events, the power of coining money. The archbishops also presided at synods, controlled the appointment of abbots and priors, were included with the king in the oath of allegiance, and took precedence next after the royal family, and before all Scottish noblemen whatever. After the Reformation there were three Tulehan bishops, the last of whom, George Gladstones, had also from 1610 till his death in 1615 some real ecclesiastical functions. He was succeeded by the well-known John Spotiswoode (1615-39), after whose time there was no archbishop till James Sharpe (1661-79), who was assassinated at MAGUS MUIR, and who was succeeded by Alexander Burnet (1679-84). Burnet was succeeded by Arthur Ross (1684-88), who was the last of the archbishops till the re-establishment of the titular dignity by the Roman Catholic Church in 1878. The modern bishopric in connection with the Episcopal Church was originally constituted in 1720 as a bishopric of Dunkeld, Dunblane, and Fife, but this title was, at the synod held at Aberdeen in 1844, exchanged for that of Bishop of St Andrews, Dunkeld, and Duublane. This see has been already noticed.

The town, which has been the scene of some of the most memorable events recorded in Scottish history, is of great antiquity, and must indeed have originated soon after the first settlement of the churchmen. The great creator of royal burghs, David I., granted it a charter about 1140, the first provost being a Fleming called Maynard; but the oldest charter existing is a confirmation by Malcolm IV. 'to the burgesses of the bishop of St Andrews of all the liberties and privileges which my burgesses have in common over the whole of my dominions, and at whatever parts they may land.' This grant of free trade led in 1369 and the following years to a long dispute with the burgesses of Cnparfife, who had just obtained a charter from David II.,

and who wished to prevent the citizens of St Andrews from trading within the bounds of Cupar without payment of customs, but the dispute was settled by parliament in favour of St Andrews. In 1408 John Reseby an Englishman, was burned alive on a charge of heresy, his chief offence seemingly being his upholding the doctrines set forth by Wyclif; and here also perished in 1432 Paul Crawar or Craw, a German physician, accused of propagating the doctrines preached by Huss and Jerome of Prague; and in 1527 Patrick Hamilton, lay Abbot of FEARN, suffered the same fate. He was a young man of great accomplishments and of powerful family, as he was the son of Sir Patrick Hamilton of Kincael, and Catherine, daughter of the Duke of Albany, and a nephew of the Earl of Arran; but this did not save him from Archbishop James Beaton and his court, who, having 'founde the same Mr Patrike many wayes infamed wyth heresie, disputing, holding and maintaynyng divers heresies of Martin Luther and hys folowers, repugnant to our fayth,' therefore declared 'the sayde Mr Patrick Hamelton, for his affirmyng, confessing, and maintaynyng of the foresayd heresies, and his pertinacitie (they being condemned already by the Church, general Councils, and most famous Universities), to be an hereticke,' and so handed him over to the secular power to be punished, and he was burned in the open space in front of St Salvator's Church. Within a few years this execution was followed by that of a young Benedictine named Henry Forrest, who, for the heresy of declaring that Patrick Hamilton had been put to death unjustly, was burned 'at the North Church stile of the Abbey Church of St Andrews, to the intent that all the people of Angus might see the fire, and so might be the more feared from falling into the like doctrine.'

In 1538 King James V. came here to receive Mary of Guise, who, says Pitscottie, 'landed in Scotland, at the place called Fyfeness, near Balcomy, where she remained till horse came to her. But the king was in St Andrews, with many of his nobility, waiting upon her home-coming. Then he, seeing that she was landed in such a part, rode forth himself to meet her, with the whole lords, spiritual and temporal, with many barons, lairds, and gentlemen, who were convened for the time at St Andrews in their best array; and received the queen with great honours and plays made to her. And first, she was received at the new Abbey-gate, upon the east side whereof there was made to her a triumphant arch, by Sir David Lindsay of the Mont, lyon-herald, which caused a great cloud come out of the heavens above the gate, and open instantly; and there appeared a fair lady most like an angel, having the keys of Scotland in her hands, and delivered them to the queen, in sign and token that all the hearts of Scotland were open to receive her grace; with certain orations and exhortations made by the said Sir David Lindsay to the queen, instructing her to serve her God, obey her husband, and keep her body clean, according to God's will and commandments. This being done, the queen was received unto her palace, which was called The New Inns, which was well decorated against her coming. Also the bishops, abbots, priors, monks, friars, and canons regular, made great solemnity in the kirk, with masses, songs, and playing of the organs. The king received the queen in his palace to dinner, where was great mirth all day till time of supper. On the morn, the queen past through the town, she saw the Blackfriars, the Gray-friars, the old college and the new college, and St Leonards; she saw the provost of the town and honest burgesses: But when the queen came to her palace, and met with the king, she confessed unto him she never saw in France, nor no other country, so many good faces in so little room, as she saw that day in Scotland: For she said it was shewn unto her in France, that Scotland was but a barbarous country, destitute and void of all good commodities that used to be in other countries; but now she confessed she saw the contrary: For she never saw so many fair personages of men, women, young babes and children, as she saw that day; and so 'the king remained in St Andrews the

space of forty days, with great merriness and game, as justing, running at the lists, archery, hunting, hawking, with singing and dancing in maskery, and playing, and all other princely game, according to a king and a queen.'

After the appointment of Cardinal Beaton to the archbishopric the city was in Mar. 1546 the scene of the martyrdom of George Wishart, who was burned in front of the Castle for heresy, an execution that led to the speedy death of the Cardinal himself in the following May, when he was murdered by a number of Wishart's friends. Norman Leslie, oldest son of the Earl of Rothes, his uncle John Leslie, Kirkaldy of Grange, and others, having, with a small body of followers, obtained admission to the Castle early in the morning, when the drawbridge was lowered to admit some workmen, made themselves quietly and in a very short time masters of the building, and having succeeded afterwards in forcing their way into the Cardinal's chamber, they put him to death with their swords and daggers, one of their number telling him, ere he stabbed him, that the blow he was about to deal was not the mercenary one 'of a hired assassin, but the just vengeance which hath fallen on an obstinate and cruel enemy of Christ and the holy Gospel.' The workmen and servants who had been driven out of the Castle had meanwhile raised the alarm in the town, and 'the provest assembles the communitie, and cumis to the fowseis syd, crying, "What have ye done with my lord cardinall? Where is my lord cardinall? Have ye slayne my lord cardinall? Lett us see my lord cardinall!"' Thei that war within answered gentilye—"Best it war unto yow to returne to your awin housis; for the man ye call the cardinall has received his reward, and in his awin persone will truble the world no more." But then more enaragedlye thei cry, "We shall never departe till that we see him." And so was he brought to the east blokhouse head and schawen dead over the wall to the faithless multitude, which wold not believe befor it saw: How miserably lay David Betoun, cairfull cardinall. And so thei departed, without *Requiem eternam*, and *Requiescat in pace* song for his saule.' The body lay for a time, as is noticed under the Castle, at the bottom of a vault in the sea-tower, but was ultimately buried either at Kilrenny or in the churchyard of the Blackfriars monastery. The band of conspirators numbered at first only sixteen, but others soon gathered to them, and so strong was their position, that they held out for fourteen months against the royal forces, but were at last compelled to surrender by a French force which assailed the Castle by land and sea, and battered it with cannon placed on the top of the town steeples; and so 'at last they concluded that they would give it over to the King of France's will, as they did. Then the Frenchmen entered the castle, and spoiled very rigorously, where they got both gold, silver, clothing, bedding, meat and drink, with all weapons, artillery, and victuals, and all other plenishing, pertaining to the said castle, and left nothing behind them that they might get carried away in their galleys; and took all the captains and keepers of the said castle as prisoners, and had them away to the king of France.' In April 1558 Walter Mill, parish priest of Lunan, a decrepit old man of over 80 years of age, was burnt for heresy in front of the main gate of the Priory, but so strongly was the popular resentment expressed on the occasion that he was the last of the Reformation martyrs. One of the garrison that had defended the Castle was John Knox, who was carried off to France with the others and condemned to service in the galleys, but who was destined to return in triumph in 1559, when, meeting the Earl of Argyll and Lord James Stewart by appointment at St Andrews, he preached there in spite of the threats of the bishop, who had sent word 'to him that if he appeared in the pulpit he would give orders to the soldiers to fire upon him.' His sermons at this time, on the 14th of June and the three following days, led up to the popular outbreaks that made the Lords of the Congregation masters of the whole kingdom. Queen

Mary was at St Andrews in 1563 and in 1564, and it was on the former occasion that Chatelar was here tried and executed for the crime of forcing his way into the queen's apartment while she was resting at Burntisland for a night. In 1583 James VI. having obtained permission from the Earls of Mar, Gowrie, Glencairn, and others, into whose hands he had fallen at the Raid of Ruthven, to visit his uncle the Earl of March, who was living at the Priory of St Andrews, entered the Castle and caused the governor immediately to ehut the gates and refuse admission to the adherents of Gowrie, who had accompanied him from Falkland. When he had thus gained his liberty he soon gathered a body of nobles about him and issued a proclamation 'commanding all the lieges to remain quiet, and discharging any noblemen or gentlemen from coming to court accompanied by more than the following number of attendants: viz., fifteen for an earl, fifteen for a bishop, ten for a lord, ten for an abbot or prior, and six for a baron, and these to come peaceably under the highest penalties.' Whether it was from this circumstance or from its being a seat of learning, certain it is that James retained a strong liking for St Andrews, and visited it often while he remained in Scotland; and when, in 1617, he revisited his native country with 'a salmon-like instinct to see the place of his breeding,' he convened an assembly of the clergy at St Andrews, and addressed them in a speech of considerable length, in which he proposed the introduction of Episcopacy, and upbraided them with what he called 'having mutinously assembled themselves and formed a protestation to cross his just desires.' In 1586 and again in 1605 there was a violent outbreak of plague in the city, and in 1609 it was the scene of the trial of Lord Balmerinoch, one of the Secretaries of State, who, being found guilty of having surreptitiously procured the king's signature to a letter addressed to the pope, was sentenced to have his hands and feet cut off, and his lands and titles forfeited, but the first part of the sentence was remitted. In 1650 Charles II. visited St Andrews, and was received at the West Port by the provost and magistrates, who presented him with silver keys; and afterwards Dr Samuel Rutherford made him a long address in front of St Mary's College. During the subsequent troubles the importance of the town rapidly diminished, and its affairs had become so bad by 1655, that in that year the council humbly represented to General Monk, Commander-in-chief in Scotland, that in consequence of the total failure of trade the town was utterly unable to pay the assessment of £43 imposed by him. So far had this process of decay gone in 1697 that a proposal was made to remove the university to Perth, some of the reasons given being that the 'place being now only a village, where most part farmers dwell, the whole streets are filled with dunghills, which are exceedingly noisome and ready to infect the air, especially at this season (September) when the herring guts are exposed in them, or rather in all corners of the town by themselves; and the season of the year apt to breed infection, which partly may be said to have been the occasion of last year's dysentire, and which from its beginning here, raged through most part of the kingdom.'

From this time its deserted condition became still worse, till by 1830 it had become, as has been already described, little more than a country village, with but the spacious streets and fine ruins to serve as marks of its former grandeur, a state from which it was revived by the vigorous exertions of Sir Hugh Lyon Playfair. It was then quite neglected by tourists, and deemed too secluded and bleak to be thought of as a watering-place, but by 1855 there was such a change, that on the 1st January of that year Provost Playfair was able to tell the citizens that 'In consequence of the cleanliness of the streets and the taste displayed in ornamenting the houses, the fame of St Andrews has spread abroad. This well-deserved celebrity is rapidly extending. Strangers from every quarter are induced to reside amongst us.' This progress was greatly aided by the opening of the railway in 1853, and now what Lord Teignmouth desiderated viz., that it should

be visited by strangers in some due proportion to 'its own picturesque situation, the extent, diversity, and grandeur of the remains of its ancient secular and ecclesiastical establishments, the importance of the events which they attest, and the celebrity which it has derived from the records of historians and the descriptions of topographical writers'—has more than come to pass, and though the ancient university is not in such a flourishing state as might be wished, the town has become one of the most fashionable summer resorts on the E coast of Scotland, 'the season' lasting from June to October. On each side of the town are great stretches of sands, those on the west side stretching to the Eden, on whose banks are famous mussel beds. Cockles innumerable are found in the sand, and in the neighbourhood of the town about 130 species of shells may be collected. Raised sea beaches are to be seen along the coast to the east of the town, while in an old charter there is mention made of a broad extensive lawn separating the castle from the sea, so that the sea would seem to have been again making encroachments on the land. The great summer amusement in St Andrews is golf, the practice of which has been much encouraged everywhere by the Royal and Ancient Golf Club of St Andrews, established in 1754 by a body of 22 gentlemen, headed by the Earls of Elgin and Wemyss. The club, which was the first instituted, has the Queen and Prince of Wales as patrons, and numbers upwards of 800 noblemen and gentlemen as members, holds two great meetings annually, one in May and the other about the end of September, at which various medals are competed for, among them being the highest honour of the year—the gold medal presented by King William IV. in 1837—the contest for which takes place in October. The captain for the year wears a gold medal gifted by Queen Adelaide in 1838.

Antiquities, etc.—The ruins of the cathedral are close to the shore, at the E end of the town, between the point where the three main streets branch off westward and the harbour. The first building was begun by Bishop Arnold (1160-62) in 1161, but was not finished till the time of Bishop Lamberton (1297-1328) in 1318, the work having been carried on by eleven successive bishops. During its progress in 1276 the eastern end was greatly injured during a violent tempest, and in 1378, only sixty years after completion, the roofs of the choir, east aisle, and transepts, and part of the great central tower, were much damaged or totally destroyed by an accidental fire said to have been caused by a jackdaw carrying a lighted brand to its nest about the roof of the cathedral. The restoration was begun at once by Bishop William Landel (1341-85), and completed in the time of Bishop Henry Wardlaw (1404-40), who in 1430 greatly improved the interior by laying fine pavements in the choir, transepts, and nave, and also filled in the windows of the nave with stained glass, and formed a large window in the eastern gable. From about 1440 the building remained in all its grandeur till 1559, when it was destroyed by a 'rascal multitude' of Reformers, who had been urged on to their work of destruction by four successive days of the fiery eloquence of John Knox in those famous sermons against idolatry, wherein he 'did intreat [treat of] the ejectione of the buyers and the sellers furthe of the temple of Jerusalem, as it is written in the evangelists Matthew and John; and so applied the corruptione that was then to the corruptione in the papistrie; and Christ's fact to the devote [duty] of thois to quhome God giveth the power and zeill thereto, that as weil the magistrattee, the provest and baillies, as the commonalty, did agree to remove all monuments of idolatrie, quhilk also they did with expeditione'—with such expedition indeed that in a single day the magnificent building, which had cost so many years of labour and so much toil and thought, was utterly ruined, amid

—Stair, strabus and strife,
Whan, bickerin' frae the towns o' Fife,
Great bangs of bodies, thick and rife
Gaed to Sanct Androis town,

And, wi' John Calvin i' their heads,
And hammers i' their hands, and spades,
Enrag'd at idols, mass, and beads,
Dang the Cathedral down.'

From this time the ruins were used as a convenient storehouse of building materials, whence every man 'carried away stones who imagined he had need of them,' down till 1826, when the Barons of the Exchequer took possession of what remained, and clearing away the *débris* exposed the bases of the pillars, and did whatever else they could to conserve the ruins. The total length inside has been 358 feet, the width across the nave and choir 62 feet, and the width across the transepts 160 feet. The nave and choir had lateral aisles, and the transept an aisle on the E side, while at the extreme E end was a projecting Lady chapel about 33 feet square. 'All that remains of the edifice is the east gable, part of the west front, the wall on the south side of the nave, and that of the west side of the south transept. In this last may still be seen the remains of some interlaced arches, and the ruins of the steps by which the canons descended from the dormitory to the church to perform their midnight services. The standing walls contain thirteen windows, of which the six nearest the west have pointed arches with single mullions, and the remaining seven semicircular arches. This transition from the latter style to the former took place in the 13th century, just at the time when we know the church was about one-half completed. The great central tower was built on four massive piers, the bases of which may still be seen at the intersection of the nave with the transepts, though of the precise form of the tower we have no account. The bases of a few of the pillars also exist; those of the nave being oblong, unequally-sided octagons seven feet by six, while those in the choir are circular and beautifully clustered, five feet and three-fourths in diameter. The east gable consists of three very ancient oblong windows, with semicircular arches and a large window above them. These are situated between two turrets which terminate in octagonal pinnacles. In these turrets are yet seen the terminations of the three rows of galleries, one above the other, which, when entire, ran round the whole clerestory, passing in some places within the thickness of the walls, and in other places opening by arcades into the interior of the church. The west front consists of a pointed arched gateway, ornamented with rich mouldings. Immediately above it were two windows, of which only one is entire; and above these again there appear to have been two arches of somewhat larger dimensions. Only one of the turrets of the west front is standing; it is of delicate and elegant workmanship, and terminates in an octagonal lantern pinnacle. There is no appearance of buttresses in any part of the ruins except at the north-east angle of the Lady chapel, where there is the base of a very substantial one. There was, doubtless, another at the corresponding south-east angle.' The wall near the S transept, with a number of stone seats, formed part of the chapter-house. At the opening between the cloister and the chapter-house is a richly-carved gateway. The bells from the various turrets are said to have been sent away by sea to be sold, but the ship on board which they were sank in St Andrews Bay. The architecture is partly Norman, partly Early English. Near the site of the high altar is a large, flat, blue stone, probably marking the burial-place of one or more of the bishops. In the churchyard around are a number of interesting tombstones. On that of the celebrated Dr Samuel Rutherford the following verses are added after the epitaph:—

'What tongue, what pen or skill of men
Can famous Rutherford commend,
His learning justly raised his fame,
True godliness adorned his name.
He did converse with things above,
Acquainted with Emanuel's love;
Most orthodox he was and sound,
And many errors did confound,
For Zion's King and Zion's cause,
And Scotland's covenanted laws

Most constantly he did commend,
Untill his time was at an end,
Then he wan to the full fruition
Of that which he had seen in vision.'

On an old tablet on which is a rude carving of two figures with joined hands, and an inscription in memory of 'Christiane Bryde, spous to James Carstairs, Bailie of St Andrews,' is a line with the curious play upon words 'Yet rede my name, for Christ-ane Bryde am I.' Among more recent monuments may be noticed a finely executed female figure looking up to a cross. It was designed and cut by Mr Hutchison, R.S.A., in 1881. In the new burying-ground is a handsome Maltese Cross marking the last resting-place of Principal Tulloch.

About 120 feet SE of the E end of the cathedral is the unique little Romanesque church of St Regulus or St Rule, with its lofty square tower. It probably occupies the site of the older Culdee cell, and was used by the Roman party as the church before the erection of the cathedral. The greater portion of it has in some mysterious way been preserved from the destruction that has befallen the surrounding buildings. What now remains consists of a square tower 112 feet high and 20 feet 8 inches broad at the base. The chapel is 31 feet 8 inches long and 25 feet broad; the height from the floor to the top of the side walls is 29 feet 7 inches, and to the apex of the original high-pointed roof, as shown by the mark on the tower wall, is 55 feet 5 inches. Marks of three successive roofs may be seen on the tower wall. The arches are round-headed and very plain, the tops of the narrow windows being carved out of one slab. The chancel arch, and indeed all the proportions of the building are highly remarkable for the great height in proportion to width. Whether there ever was a nave is doubtful, as no remains of one have ever been discovered, but on the other hand, some of the early seals represent a church—sometimes presumed to be this one—with a central square tower and nave and choir. The masonry is good and substantial, and the stone of such excellent quality that the walls do not look so much weatherworn as those of the cathedral, though they must be much older. The interior of the chapel forms the resting-place of several noted persons, amongst whom may be mentioned Dr Robert Chambers, author and publisher, and immediately west of the tower is the grave of Samuel Rutherford. The exact date of the structure can be only vaguely assigned to the 10th, 11th, or 12th centuries, most probably the beginning of the latter, if we are to identify it with the church erected by Bishop Robert (1126-58) in 1144. It is just possible, however, that the tower may be older, and be akin to the round towers of Abernethy and Brechin, and like them intended as a place of security. If this be so, it was probably erected by the devotees of the Celtic Church, but Bishop Robert, finding it suited for his purpose, added to it the little church he erected here on the introduction of the canons-regular in 1144, after cutting openings in the E and W walls to provide access to the nave and choir. The St Andrews sculptured stones and the famous sarcophagus were found near this tower. There was originally no stair or trace of stair in it, but the present one was introduced in 1789 when the rubbish about the building was cleared away and the walls repaired at the expense of the Exchequer. Further repairs were executed in 1841. From the top of the tower a splendid view is to be had of the town and neighbourhood, and of the bay out to the Bell Rock. Inside is to be seen an old log, the transom beam of one of the ships of the Spanish Armada. For a long time this beam served as the lintel at the porch of the burying-ground. St Rule's cave is subsequently noticed, and both cave and church were long much resorted to by pilgrims, as sung by Scott in *Marmion*—

'But I have solemn vows to pay,
And may not linger by the way,
To fair St Andrews bound,
Within the ocean-cave to pray,
Where good Saint Rule his holy lay,
From midnight to the dawn of day
Sung to the hillows' sound.'

A very old chapel, possibly the first one erected by the Culdees, and known as the church of St Mary on the Rock, is said to have stood on the Lady's Craig, a reef near the pier, but no trace of it now remains. Another chapel, also dedicated to the Virgin, stood on the Kirk Hough, immediately W of the harbour, and was known as the Chapel of the King of Scotland on the Hill, whence, according to some, the early name of the place—Kilrimonth. All traces of it were for a long time lost, but in 1860 the foundations were discovered, and show it to have been, in its later form at any rate, a cruciform structure 99 feet long, 20 feet wide across the nave, and 84 feet wide across the transepts.

The Priory or Augustinian Monastery, to the S of the cathedral, founded by Bishop Robert (1126-58) in 1144, and one of the finest structures of the class in Europe, has now almost disappeared. The precinct, comprising about 20 acres, was enclosed about 1516 by Prior John Hepburn (1482-1522), by a magnificent wall, which, starting at the NE corner of the cathedral, passed round by the harbour and along behind the houses, till it joined the walls of St Leonard's College on the SW. This, about a mile in extent, is all that now remains, but it must at one time have passed back from the college to the cathedral. The wall is 20 feet high and 4 thick, and has 13 turrets, each of them with canopied niches for an image. The portion towards the shore has a parapet on each side, as if designed for a walk. There were 3 gateways, of the chief of which, now called the Pends, on the SW, considerable ruins still remain. These consist of walls 77 feet long by 16 broad, with a pointed arch at each end, and marks of 3 intermediate groins. One of the other gateways is near the harbour, and the third on the S side. Martiue, the secretary of Archbishop Sharpe, who wrote in 1683, though his account was not published till 1797, mentions in his *Reliquiæ Divi Andree* that in his time fourteen buildings were discernible beside the cathedral and St Rule's Chapel. Among these the chief were the Prior's House or the Old Inn, to the SE of the cathedral, of which only a few vaults now remain; the cloisters, W of this house, now the garden of a private house, in the quadrangle of which the Senzie Fair used to be held, beginning in the second week of Easter, and continuing for 15 days; the Senzie House or house of the sub-prior, subsequently used as an inn, but now pulled down and the site occupied by a private house; the refectory on the S side of the cloister, which has now disappeared; the dormitory, between the prior's house and the cloister, from which, as Fordun relates, Edward I. carried off all the lead to supply his battering machines at the siege of Stirling, now also gone; the Guest Hall, within the precinct of St Leonard's College, SW of Pends Lane; the Teinds' Barn, Abbey Mill, and Granary, all to the SW; and the New Inn, the latest of all the buildings of the monastery, erected for the reception of Magdalene, the first wife of James V. The young queen, who was of delicate constitution, was advised by her physicians to reside here, and the New Inn was built for her accommodation in, it is said, a single month. The queen, however, did not live to occupy the house, as she died on the 7th of July 1537, six weeks after her arrival in Scotland. It was, however, for a short time the residence of Mary of Guise, when she first arrived in Scotland, and after the priory was annexed to the archbishopric in 1635, the building became the residence of the later archbishops. The prior had superiority over the priories of Pittenweem, Lochleven, Monymusk, and the Isle of May, and was also a lord of regality. As a baron, he took precedence in parliament of all priors, and he, his sub-prior, and his canons formed the chapter of the cathedral. From 1144 to 1535 there were 25 priors; from 1535 to 1586 the lands were in possession of the Earl of Murray and Robert Stewart, the latter entirely and the former most of the time being merely lay commendators; from 1586 to 1606 they were held by the Crown; from 1606 to 1635 by the Duke of Lennox; from 1635 to 1639 by the

Archbishop of St Andrews; from 1639 till 1661 by the University; from 1661 till 1688 by the archbishops again; and from 1688 by the Crown. The part within the abbey wall was sold by the Commissioners of Woods and Forests to the United College for £2600.

A Dominican Monastery, which stood on the S side of South Street, near the West Port, was founded in 1274, by Bishop Wishart (1273-79), and was governed by a prior, who was not subject to the Episcopal control. The site and the adjacent ground passed at the Reformation to Lord Seton, and was subsequently made over to the town council as a site for a grammar school, and passed thereafter into the hands of Dr Bell's trustees. The ruin of the N transept of the chapel still stands on the street line, in front of Madras College. An Observantine or Greyfriars' Monastery, which stood immediately N of the West Port, at the W end of Market Street, was founded about 1450 by Bishop Kennedy (1440-66), and was completed in 1478 by Archbishop Graham (1466-78). It was governed by a warden, but the buildings, partially destroyed at the Reformation, have entirely disappeared. The grounds belonging to it were granted to the town council by Queen Mary.

The ruins of the Castle stand on a rocky promontory overhanging the sea, NNW of the cathedral. The original building is said, on the authority of Martiue, to have been erected by Bishop Roger (1188-1202) as an Episcopal residence, the bishops having previously lived in the Culdee monastery at Kirkcubright, or in the Priory. From the first it seems to have been a place of military importance, and when in 1332 the disaffected Scottish barons, with Edward Baliol at their head, landed in Fife, the Castle fell into their hands, and was held by them till 1336, when it was recovered for David II. by Sir Andrew Moray of Bothwell, who dismantled it. About 1390 a new building was erected by Bishop Trail (1385-1401), and in 1402 the Duke of Rothesay set out to make an attempt to seize it, but was stopped by Albany at Straththyrum and carried off to die at Falkland. It is sometimes stated that he was confined here for a short time, but there seems to be no foundation for the assertion. James III. seems to have been born here, for in the 'Golden Charter' James II. speaks of the 'birth of his first-born son in the chief mansion of the city of the blessed Andrew.' In 1514, during a dispute about the succession to the archbishopric vacant by the death of Archbishop Stewart (1509-13), the Douglasses seized, and for a short time held, the Castle on behalf of Bishop Gavin Douglas, who was one of the candidates, but they were driven out by Prior John Hepburn as vicar-general for the time. In 1526 Archbishop James Beaton (1522-39) sided with the Lennox faction against the Douglasses, and so after the battle of Manuel, in which the latter party were victorious, they visited Fife and plundered the Castle, 'but he was,' says Pitscottie, 'keeping sheep in Balgrumo with shepherd's clothes on him like as he had been a shepherd himself.' As, however, he was 'a great man and had many casualties of tacks and tithes to be gotten at his hand,' the Douglasses soon came to terms with him, and he returned to his see. He became involved in other plots later, and was for a short time, in 1533, imprisoned in his own castle, as was also his nephew and successor, Cardinal David Beaton (1539-46), in 1543 by Arran when regent; though it is doubtful how far this latter imprisonment was real. In 1546 the Cardinal was murdered here, as has been already noticed, by a party of the Reformers, who held the Castle till the following year, when it was captured by a body of French troops, an expedition sent by Henry VIII. to their assistance having arrived too late. Many of the defenders, John Knox among others, were carried off to France and sent to the galleys. There is a very picturesque account of the siege in Pitscottie's *History*. The Castle, which had been much injured, was repaired by Archbishop Hamilton (1549-71), and in 1583 afforded refuge to James VI. till he freed

himself from the power of the lords who had seized on his person in the Raid of Ruthven. In 1606 the Castle was gifted to the Earl of Dunbar, but was restored to the archbishop (Gladstones, 1610-15) about 1612, for in the following year, during a meeting of the bishops at St Andrews, they were entertained by Gladstones in the Castle. After the battle of Philip-hangh a number of the prisoners were confined here, among others being Gordon of Haddo, Ogilvie of Inverquharity, and Sir Robert Spotswood, the first and last of whom, as well as some others of smaller note, were executed. After this time the building passed into the possession of the town council, who proved but sorry guardians, for in 1654 they ordered its 'sleatts and timmer' to be used for the repair of the pier. The small portion that remains is now cared for by the Commissioners of Woods and Forests. The encroachments of the sea in its neighbourhood have been considerable, for Martine says that in his time there were people still living who remembered seeing bowls played on flat ground to the E and N of the Castle where now there is none, and in 1801 a considerable portion of the seaward walls of the building itself were undermined and fell. In the centre of the grass-grown court-yard is a rock-cut well about 50 feet deep, but the chief point of interest is the old bottle-shaped dungeon at the NW corner beneath the sea-tower. It is cut out of the solid rock, and is 7 feet in diameter at the top and 16 at the bottom, the depth being 18 feet. Many of the early Reformers with whose names St Andrews is associated are said—whether truly or not, none can tell—to have been confined in its dismal depths. It was also the original burial-place of Cardinal David Beaton after his murder in 1546. 'Now because the weather was hot,' says Knox, 'and his funerals could not suddenly be prepared, it was thought best . . . to give him great salt enough, a cope of lead, and a nuke in the bottom of the Sea-Tower, a place where many of God's children had been imprisoned before, to await what exsequies his brethren the bishops would prepare for him.' The open ground in front of the Castle was the scene of George Wishart's martyrdom in 1546. Some years ago, while digging the foundation for a new house opposite the Castle, the workmen discovered a subterranean passage leading under the moat into the Castle. This is supposed to have been used for provisioning the garrison in the time of siege, has been cleaned out, and is open for inspection. Longfellow has recorded his feelings on visiting the Castle:—

'Well have I seen that castle—
That castle by the sea,
And the moon above it standing,
And the mist rise solemnly.

'The winds and the waves of ocean,
They rested quietly;
But I heard on the gale a sound of wail,
And tears came to my eye.'

Public Buildings, etc.—The town-house and tolbooth were long in the centre of Market Street, but they have, since 1858-62, been superseded by the New Town Hall on the S side of South Street, at the corner of Queen Street. It is Scottish in style, and contains a council room, a police station, and public hall, with retiring rooms. The great hall is 75 feet long, 35 wide, and 24 high, and has accommodation for 600 persons. The Town Church, or properly the Church of the Holy Trinity, on the N side of South Street, near the centre, was originally built in 1112 by Bishop Turgot, and subsequently by Bishop Bernham dedicated to the Holy Trinity. It had, in the palmy days of the Roman Catholic Church, thirty altars, each with a separate priest and fifteen choristers; and it was here that John Knox preached the sermon that led to the destruction of the cathedral and the monastic buildings, as is afterwards noticed. The original building was a beautiful structure, partly Norman in style and partly First Pointed, but in the end of the 18th century it underwent vigorous restoration of the only kind then known. The groined roofs were removed from the side aisles, and

the outer walls raised nearly to the height of the original clerestory walls, the space so gained being utilized in the provision of galleries, by which the church, which is 162 feet long and 63 wide, was made capable of accommodating 2500 people. The interior has of late been very much improved. In it is preserved a fine specimen of the old Scottish branks, usually called the Bishop's Branks, and said to have been fixed on the heads of Patriek Hamilton and others of the earlier Scottish martyrs when they were put to death. This tradition seems, however, to be untrue, and its present name may be traced to the fact that Archbishop Sharpe made use of it for silencing a woman who had promulgated scandal about him openly before the congregation. From the top of the steeple there is a good view. The pulpit was not occupied by an Episcopalian clergyman from the time of the Revolution in 1688 till 16 March 1884, when the Bishop of St Andrews (Dr Wordsworth) preached on behalf of the University Missionary Society. In the interior, to the right of the main entrance, is a monument of black and white marble, erected in memory of Archbishop Sharpe, by his son, Sir William Sharpe of Scotsraig and Straththrum. Executed in Holland, it shows an angel about to place the crown of martyrdom on the archbishop's head; above is a bas-relief representing him as propping up a falling church, while below another represents the murder. On an urn is a long Latin inscription of a most extravagant description, which describes the archbishop as 'a most pious prelate, a most prudent senator, and a most holy martyr,' and declares that Scotland 'saw, acknowledged, and admired' him 'as a chief minister of both her civil and ecclesiastical affairs;' Britain 'as the adviser of the restoration of Charles II. and of monarchy;' and the Christian world 'as the restorer of Episcopacy and good order in Scotland.' 'Whom all good and faithful subjects perceived to be a pattern of piety, an angel of peace, an oracle of wisdom, an example of dignity; and all the enemies of God, of the King, and of the Church found the implacable foe of impiety, of treason, and of schism.' Sir William also gave a sum of money to be applied to the relief of the poor on condition that this monument was kept in good repair in all time coming, and in 1849-50 the parochial board expended about £130 in restoring it to good condition. At this time the vault was opened, but no remains of the archbishop could be found. His skull and bones were probably removed, either when the church was altered in 1798, or in 1725 when the town council offered a reward of £10 sterling for the discovery of the person or persons who had entered the church and injured the monument. Some of the communion plate was presented to the church by Archbishop Sharpe. St Mary's Church, near the W end of Market Street, built in 1840, and greatly improved in 1870, contains 630 sittings. It has a fine oak pulpit and several stained-glass windows, two of them having been introduced in memory of the Rev. Dr Robert Haldane, by whose exertions the church was erected, and who was its first minister. A previous church of St Mary, of ancient date, and sometimes called the Kirkheugh Church, has been already noticed. St Leonard's or College Church, afterwards noticed, contains 396 sittings. A tall square tower somewhat resembling that at the cross of Glasgow rises at the W end of the church, and is surmounted by a stumpy octagonal spire. The Free church (Martyrs), on the opposite side of North Street, built in 1844, has a good front; it contains 864 sittings. The original U.P. church, built in North Street in 1826, had 380 sittings, but the present building with a spire in Market Street, built in 1865, has accommodation for 700. The Congregational church was originally a small building in Market Street, with 320 sittings, but the present place of worship, with 360 sittings, was erected in South Bell Street in 1856-58. The Baptist church in South Street, built in 1842, has 250 sittings. The original Episcopal church (St Andrew), in North Street, to the E of the College Church, was erected in 1825 at a cost of £1400, and enlarged in 1853 so as to have 180 sittings, but it was superseded

by the present building, erected in 1867-69, consecrated in 1878, and containing 530 sittings, a mosaic reredos, representing our Lord's Ascension, a beautifully carved oak pulpit, and a fine organ. Dr Rowand Anderson was the architect, and the style is that of the 13th century. The Coast Mission chapel (for seamen) is situated in Gregory's Lane. The Roman Catholic church (St James's) is a neat iron structure. The Gibson Memorial Hospital, founded and endowed by the late Mr William Gibson of Duloch, for the sick, aged, and infirm poor of the city and parish of St Andrews and of the parish of St Leonards, was erected in 1882-84 at a cost of £4000. The Recreation Hall with tennis courts, constructed at a cost of £2000 in 1883-84, contains a hall measuring 100 by 50 feet, and being about 30 feet high. There are also the Town Hall (in South Street), the City Hall (in Church Square), the Drill Hall (in City Road), and the Good Templars' Hall (in North Street). In Market Street is a handsome fountain, erected in 1880 in memory of Major Whyte Melville, the well-known novelist, and one of the four memorials of him instituted by his friends after his death, the others being a tombstone at Tetbury where he died, a monument in the Guards' Chapel, Wellington Barracks, London, and a sum forming the nucleus of an annuity fund in connection with the Hunt Servants' Benevolent Society. The fountain here, which cost about £800, is of red sandstone from Dumfriesshire, with steps, columns, and copings of Dalbeattie granite. The diameter is 14 feet, and the total height about the same. It rises in a series of three basins, and on the second, which is very elaborately carved, are four white marble medallions, one showing a bas-relief bust of Major Whyte Melville, executed by J. C. Boehm; other two respectively the family arms and the arms of the Coldstream Guards; and the fourth the following inscription:—

*This fountain is erected by many friends, rich and poor, to the beloved memory of George John Whyte Melville of Mount Melville, Bennoch, and Strathkinness; born 19th July 1821; died 5th December 1878, from an accident in the hunting-field near Tetbury, Gloucestershire. His writings delighted; his conversation charmed and instructed; his life was an example to all who enjoyed his friendship, and who now mourn his untimely end.

Immediately to the W of the Castle is the ladies' bathing place, and about 150 yards farther W is the cave, or rather rock chamber, formerly known as St Rule's Cave, but now as Lady Buchan's, from having been fitted up by that eccentric person (the mother of Lord Chancellor Erskine), at the close of the 18th century, for tea parties. It is much worn away. A hundred yards NW of the Castle are the public baths, and farther W still are the Witch Lake and the Witch Hill, where, if the witch escaped death by the water ordeal at the former, she suffered worse doom at the stake on the latter. St Andrews was long troubled with witches, and we find it stated that even such a grave man as the Earl of Murray repaired to St Andrews in 1569, 'quhair a notabill sorceres callit Nicnivn was condemmit to the death and burnt.' Some have been inclined to believe that she is the same witch mentioned* in Law's *Memorials* as having been burnt in 1572, and that the regent of the time would therefore be Morton. The author of the *Historie of King James the Sext*, who tells the story, also adds that 'a Frenchman callit Paris, quba was one of the designeris of the King's [Darnley's] death, was hangit in St Andro, and with him William Steward, lyon king of armes, for divers pointes of witecraft and necromancie;' and again in 1588 Alison Pearson, in Byrehills, was convicted and burnt on her own confession. She seems to have been a 'wise woman,' and to have by means of her prescriptions cured Archbishop Adamson of an illness, which she was

*She seems to have been a very bad specimen, for she is declared to have said openly that she cared not whether she went to heaven or hell; but on a white cloth 'like a coloure craig with stringis whairon was mony knottis,' being taken from her person, she gave way to despair, and exclaimed, 'Now I have no hoip of myself.'

alleged to have transferred to a white pony, which died in consequence. Here, as elsewhere, a horrible form of death seemed to have no effect, for repented witches continued to be found in Fife till the end of the 17th or the beginning of the 18th century, when the last one—a woman named Young, who lived in North Street—was burnt at the Witch Hill. Their fame, too, seems to have sometimes spread abroad, for in 1643 we find Spalding breaking off an account of the 'annoyans' of the king's subjects over the Solemn League and Covenant to record that 'about this tyme many witches are takin in Anstruther, Dysert, Culross, Sanctandrioss, and sindrie uther partits in the cost syde of Fyf. They maid strange confessionis, and war brynt to the death.' The bay, between the Witch Hill and the point called The Step, is now the gentlemen's bathing-place. To the W of this is the Bow Butts, a sort of natural amphitheatre, where the citizens used anciently to practise archery, and where, from 1681 to 1751, the members of an archers' club competed annually for the right of affixing a medal with the name of the best shot to a silver arrow. The practice of archery was revived in 1833, but did not prosper; but now the pastime is carried on by many of the lady visitors. Immediately S of the Bow Butts is the Martyrs' Monument, erected in 1842-43 to commemorate the martyrs of the Scottish Reformation who suffered at St Andrews. It is an obelisk on a graduated base, and rises to a height of 45 feet. Farther W is the Golf Club House, containing a principal room, a billiard room, a reading-room, dressing-rooms, and stewards' apartments; and from the clubhouse the famous links, which are said to be the finest in the kingdom, extend north-north-westward to the mouth of the river Eden, a stretch of about 2 miles. They are simply sandy plains covered with coarse herbage and interspersed with bunkers and bent hills, but their now classic connection with the game of golf has been the making of modern St Andrews. They were acquired in 1894 by the city. There are nine holes out and nine in, the whole round being almost 3½ miles. The average number of strokes for very good players is from 87 to 97.

Educational Institutions.—The University of St Andrews is the oldest in Scotland, St Mary's College having been founded by Bishop Wardlaw (1403-40) in 1411, and in 1413 a series of six Bulls were obtained from Pope Benedict XIII. sanctioning the foundation and constituting a *Studium Generale* or University, where instruction was to be given in theology, canon and civil law, medicine, and the liberal arts, and power was also granted to confer degrees. The classes, which were under the care of 21 doctors or lecturers, were at first scattered throughout the city, each teacher being in a separate room, but the bishop soon provided accommodation for them in a building called the Pedagogy, in South Street. Under the royal patronage of James I., who confirmed all the charters in 1432, the young seat of learning prospered; and in the time of James II., in 1456, Bishop Kennedy (1440-66) founded and endowed a second college, which he dedicated to Christ, under the name of St Salvator. The foundation was confirmed by Pope Nicholas V., and subsequently fresh privileges were granted to the college by Pope Pius II. in 1458, and Pope Paul II. in 1468, the latter granting power to confer degrees in theology and arts. In 1512, Prior John Hepburn (1482-1522), in conjunction with Archbishop Alexander Stewart (1506-13), founded St Leonard's College, and endowed it with the revenue of an hospital, originally founded for the maintenance of poor pilgrims who had come to visit the shrine of St Andrew; and in 1537, Archbishop James Beaton (1523-39), with the approval of Pope Paul III., added to the endowments of the original Pedagogy, and erecting new buildings, dedicated the college to the Virgin Mary; while, in 1553, Archbishop John Hamilton (1546-71) granted additional endowments and obtained a fresh Bull of confirmation from Pope Julius III. In 1580 Andrew Melvil was transferred from Glasgow to St Andrews as principal, and the whole

arrangements of the colleges were remodelled, St Mary's being entirely set apart for the teaching of theology. The trouble of this and the following century greatly injured the University, and in 1697 a proposal was made that its seat should be transferred to Perth, some of the reasons given being that, at St Andrews, 'the climate is very severe; that the town is out of the way; that provisions are dear; that the streets are foul and full of noisome pestilence; that endemics and epidemics are common; and finally that the town's-folk do not look favourably upon learning, and frequently mob the students.' The scheme was abandoned, but a suspicion, in 1718, that both students and professors were tainted with Jacobitism and leanings towards Episcopacy led to a visitation by royal commission, and made matters still worse. By 1747 the revenues of the colleges of St Leonard and St Salvator were so much diminished that in that year an act of parliament was obtained, providing for the union of the two institutions, and the restriction of their teaching to arts and medicine, while in St Mary's theology alone was to be taught. This arrangement still holds good, and the University consists of the two corporations of the United College of St Salvator and St Leonard, with a principal and 9 professors, distributed into a Faculty of Arts and a Faculty of Medicine; and St Mary's College with a principal and 3 professors, forming a Faculty of Theology. In the Faculty of Arts the chairs, with the dates of foundation and patrons, are:—Greek (instituted at foundation of colleges; University Court); Humanity (1620; Duke of Portland); Logic and Metaphysics (instituted at the foundation of the colleges; University Court); Moral Philosophy (instituted at the foundation of the colleges; University Court); Natural Philosophy (instituted at the foundation of the colleges; University Court); Mathematics (1668; Crown). In the Faculties of Arts and Medicine both, is the Chair of Civil and Natural History, originally founded in 1747 as a chair of civil history only, but by an ordinance of the University Commission of 1858, the professorship is now practically devoted to Natural History, and falls under the Faculty of Medicine. The patron is the Marquis of Ailsa. In the Faculty of Medicine are the Chairs of Medicine and Anatomy (1721; University Court); Chemistry (1808, but no professor appointed till 1840, as the endowment did not become available till then; the Earl of Leven). There is also a principal appointed by the Crown, and apart from either faculty is the Chair of Education, founded by the Bell Trustees in 1876. A lectureship on Natural Theology was founded in 1887 by the late Lord Gifford; and there are also lectureships on botany, French language and literature, philology, anatomy, *materia medica*, and history. In St Mary's are the Chairs of Systematic Theology (instituted at the foundation of the college, and held always by the principal; the Crown); Divinity and Biblical Criticism (instituted at the foundation of the college; the Crown); Divinity and Ecclesiastical History (suppressed for some time for want of funds, but revived and endowed in 1707; the Crown); Hebrew and Oriental Languages (suppressed for some time for want of funds, but revived in 1668, and received additional endowment from William III. in 1693; the Crown). Connected with the University there are bursaries and fellowships worth nearly £2500 per annum. There are also a number of important prizes in books or money open to students in the different classes. In 1897 it was proposed to erect a medical school within St Mary's College grounds adjoining Queen's Terrace and West Burne Lane. In 1892 the classes in arts, science, medicine, and theology were opened to women students, who are taught along with men and prepared for graduation along with them. In 1893 the University received the sum of £30,000 to be spent in bursaries open to students of both sexes attending the University, one-half of this sum being devoted to women exclusively. The University corporation consists of the chancellor, rector, three principals, the professors, the registered graduates and alumni, and the matriculated students, the government being vested

in the University Court, the *Senatus Academicus*, and a General Council. The officials of the University are the chancellor (appointed for life by the General Council), the vice-chancellor (appointed by the chancellor), the rector (appointed for three years by the matriculated students), the parliamentary representative, the principal, and the assessors. The senior principal for the time being is principal of the University. The University Court consists of the rector, the principal, the principal of St Mary's College, the principal of University College, Dundee, the Lord Provost of Dundee, the Provost of St Andrews, and the assessors. It acts as a court of supervision and appeal from the *senatus*, and appoints to some of the chairs—viz., Greek, Logic and Mathematics, Moral Philosophy, Natural Philosophy, and Medicine. The General Council consists of the chancellor, rector, and others of the University Court, the principals and professors, and all graduates who have been registered; and since 1881 this registration has been compulsory. The *Senatus Academicus* consists of the principals and professors, who superintend the teaching and discipline of the University. The session of the United College begins about the middle of October, and closes about the end of March; and that of St Mary's College commences early in November, and closes at the end of March. The summer session extends from a stated time in April or May till June or July. The students of the United College wear red frieze gowns with crimson velvet collars; those of St Mary's have no distinctive dress. The number of matriculated students in 1895-96 was 204, of whom 18 took the degree of M.A., 6 that of B.Sc., 10 that of M.D., and 14 that of B.D. The University has the privilege of granting the degree of M.D. to 'any registered medical practitioner above the age of 40 years whose professional position and experience are such as, in the estimation of the University, to entitle him to that degree, and who shall on examination satisfy the medical examiner of the sufficiency of his professional knowledge.' Formerly the number of such degrees that could be granted was unlimited, but it is now restricted to 10 every year, and the fee for the degree is fifty guineas. The General Council for 1895-96 contained 1474 members. It meets twice a year on the last Thursday of March and the last Friday of November. The University library contains upwards of 100,000 volumes and 160 MSS. Under the Reform Act of 1867 St Andrews University unites with that of Edinburgh in returning a member to serve in parliament, the electorate consisting of the members of General Council. Among the distinguished rectors since 1859 have been Sir William Stirling-Maxwell, J. S. Mill, J. A. Froude, Lord Neaves, Dean Stanley, Sir Theodore Martin, A. J. Balfour, and the Marquis of Bute; while connected with the University, either as professors or students, have been John Major, George Buchanan, John Knox, Andrew Melvil, James Melvil, Napier of Merchiston, the Admirable Crichton, Sir Richard Maitland of Lethington, Robert Rollock, the Marquis of Montrose, Samuel Rutherford, James Gregory (the inventor of the Gregorian telescope), Alexander Pitcairn, John Hunter, William Tennant (the author of *Anster Fair*), Thomas Chalmers, Sir David Brewster, James D. Forbes, Alexander Duff, John Tulloch, William Spalding, J. F. Ferrier, John Veitch, J. C. Shairp, Lewis Campbell, R. Flint, M. Forster Heddle, and H. A. Nicholson. Besides these the bishops and archbishops, from 1411 downwards, are all intimately associated with the history of the University.

The buildings of the United College stand near the centre of the N side of North Street, where they occupy three sides of a large quadrangle, 230 feet by 180. The site was originally that of St Salvator's College, the church of which occupied the S side of the quadrangle, while on the other three sides were the common hall, library, classrooms, and students' apartments. The church still remains, though greatly altered; but the other buildings, having become ruinous, were removed after the report of the University Commission of 1827, and the present classrooms on the N and E sides of the

quadrangle were erected between that date and 1847 at a cost of £18,600, the money being granted by Government. The entrance to the quadrangle is underneath a lofty tower at the W corner of the S side. It is a tall square structure, with a stumpy octagonal spire, the whole rising to a height of 156 feet. The College or St Leonard's Church, immediately to the E, is now looked on as the parish church of St Leonards, its use for that purpose dating from the early part of the 18th century. It contains a very elaborate monument to Bishop Kennedy, the founder of the college, said to have cost a sum equal to £10,000 sterling. It was greatly injured by the fall of the stone roof of the church about the middle of the 18th century. The tomb was opened in 1683, when six silver maces were found in it, of which three were presented to the other Scottish Universities and the remaining three were retained by the University of St Andrews. One of these last, which was made in Paris by Bishop Kennedy's orders in 1461, is very fine. In the vestibule of the church is a flat stone marking the grave of Dr Hugh Spens, principal of the College (1505-29); and on the N wall is a marble monument erected by his brother officers to the memory of the eldest son of the late Provost Playfair—Lieutenant W. D. Playfair, who fell at Sobraon in 1846. There is a good museum; and in the hall are portraits of John Hunter, Sir David Brewster, James D. Forbes, all of whom were principals; of Professors Ferrier and Macdonald, and others. At the union of the colleges of St Leonard and St Salvator in 1747 the buildings of the former, which were in South Street, near the E end, were sold, and now the ruined walls of the chapel alone remain. When Dr Johnson and Boswell were so hospitably entertained by the St Andrews professors this building was used as a 'kind of greenhouse,' and, adds the Doctor, 'to what use it will next be put I have no pleasure in conjecturing;' but, as he had always been hindered by some excuse from entering it, he admits that it was 'something that its present state is at least not ostentatiously displayed. Where there is yet shame there may in time be virtue.' It was afterwards used as an outhouse, but the virtue came in 1838, when it was cleared out, and since then the ruin has been properly cared for. It contains a fine monument to Robert Stuart, Earl of March, who died in 1611, and another in memory of Robert Wilkie, principal of the college (1589-1611). The official residence of George Buchanan when he was principal here (1566-70), a short distance S of the chapel, was the property and residence of Sir David Brewster when he was principal of the United College (1838-59). St Mary's College occupies the site of the old Pedagogy on the S side of South Street, the college buildings and University library forming two blocks at right angles, the library and the principal's residence being on the N, and the lecture rooms and old dining-hall on the W. The library, a plain structure, built at the expense of the University in 1764, and since greatly improved in 1829, superseded an older building which had been used as a provincial meeting-place for the Scottish parliament. It is divided into four large halls, the principal one 76 feet long, 28 wide, and 28 high. There are portraits of Cardinal David Beaton, George Buchanan, John Knox, Adam Fergusson, Bruce of Grangehill and Falkland (professor of logic at Edinburgh), Archbishop Spottiswoode, George Wishart, Principal Tulloch, and several of the chancellors. The nucleus of the present library was established in 1610 by the union of the libraries of the three colleges, and James VI., under whose auspices this took place, made a valuable gift of books to the new institution. Subsequent benefactors have been numerous, and there are now over 100,000 printed volumes and 160 MSS. Among the rarities may be specially mentioned a copy of the *Koran* that belonged to Tipoo Saib, a copy of Quintilian (1465), a Latin translation of the *Iliad* (1497), and the *Phrases* of Stephanus, both of which belonged to George Buchanan, and contain notes in his handwriting; a copy of the Canons of the Council of Trent that belonged to James Melvil, a fine MS. of the works

of St Augustine, a MS. of Wytoun's *Cronykil*, written in the latter part of the reign of James IV.; and the original copy of the Solemn League and Covenant, subscribed at St Andrews in 1643, and containing upwards of 1600 signatures. To the S of the buildings are the college gardens. St Andrews College Hall, to the SSW of the cathedral, opened in 1861, and belonging to a joint-stock company with a capital of £5000, serves as a residence for young gentlemen attending the University. It has accommodation for about 30 students, and is conducted by a warden, a tutor, and such other teachers as may be required. A building intended as a residence for lady students at the University was erected in 1894-95 at an estimated cost of £5000.

The Madras College, off the S side of South Street near the W end, was opened in October 1833, and superseded the old grammar and burgh schools. It was founded in terms of a bequest by Dr Bell, who was the first to introduce the monitorial or Madras system of school management. Dr Bell, who was the son of a hairdresser in St Andrews, and was educated at the University here, became, after various vicissitudes of fortune, superintendent of a male orphan asylum at Madras under the Honourable East India Company, and there originated his monitorial system. At his death he left a very large fortune, £120,000 of which was to be spent in the erection and maintenance of schools on his favourite system, and of this sum £60,000 was set apart for St Andrews, while the sums of £52 and £25 paid by the town as salaries to the masters of the former grammar and burgh schools have, since the opening of the new institution, been paid over to its funds. At first there were only two masters, but now there are masters of English, classics, mathematics and arithmetic, science, etc., modern languages, book-keeping, writing and shorthand, drawing and painting, vocal and instrumental music, and gymnastics; second masters in English and classics, and a teacher of sewing. The grounds cover a space of about 4 acres, and the school buildings are ranged round a quadrangle near the centre. A detached building to the W, built subsequently, contains 3 additional classrooms, and accommodation is provided altogether for 1540 scholars. At the two front corners of the ground adjoining South Street are houses for the English and classical masters, which provide accommodation for a considerable number of boarders. The college is now managed under the Educational Endowments (Scotland) Act. Connected with it is the Madras College Club, founded in 1871. Under the Burgh School Board the Burgh, East End, and Infant schools, with accommodation for 568, 359, and 369 pupils, have attendances of about 510, 170, and 300, and grants amounting to nearly £590, £140, and £255. There are also a number of private boarding and day schools for boys and girls.

Trade, etc.—During the 15th and 16th centuries St Andrews was one of the most important seaports to the N of the Forth, and was resorted to by merchant vessels from Holland, Flanders, France, and all the trading districts in Europe. The number of vessels in port at the time of the great annual local fair called the Seuzie Market—held in the priory grounds in April—is even said to have been from 200 to 300, but if this be so they must have been of small tonnage, and probably not larger than a fair-sized herring boat. The trade, however, seems to have departed during the Reformation troubles, and in 1656 Tucker, one of Cromwell's Commissioners of Customs—who described the town as 'a pretty neat thing which hath formerly been bigger, and although sufficiently humbled in the time of the intestine troubles, continues still proud in the ruins of her former magnificence'—mentions that there was only 1 vessel of 20 tons burden belonging to the port, while upwards of a century later we find that there were only 2 small vessels. By 1838 these had increased to 14 vessels of, aggregately, 680 tons; and bonded warehouses having been subsequently fitted up, the place became a head port and yielded a customs revenue of about £700 a year. A great trade also

sprang up in the export to iron-works on the Tyne of calcined ironstone from workings near Strathkinness, but this did not last, and the port sank again to the position of a sub-port, and the shipping trade, particularly since the opening of the railway, has become very small, and is confined to export of grain and potatoes; and import of coal, timber, guano, salt, and slates. The harbour, formed along the small natural creek at the mouth of the Kinness Burn, has a pier extending eastward for about 420 feet from high-water mark, and outer and inner basins. At low water it is dry except for the stream flowing through it, and even at high water there is not sufficient depth of water to admit fully-laden vessels of more than 100 tons, and the entrance, which is narrow, and is exposed to the roll of the sea when the wind is easterly, is dangerous. Two guiding lights—the one a red light at the end of the pier, and the other a bright white light on a turret of the cathedral north wall—when brought into line indicate a vessel's course for the harbour. There were belonging to the port (1894) 25 first-class, 18 second-class, and 3 third-class boats engaged in the herring fishing.

Municipality, etc.—Created a royal burgh in 1140, St Andrews is now governed by a provost, 4 bailies, a

Seal of St Andrews.

dean of guild, a treasurer, and 22 councillors, who also are police commissioners, but the police force itself forms part of that of the county. The corporation revenue is about £1000 per annum. The burgh boundaries were extended in 1860, and a thorough system of drainage was introduced in 1864-65, and in 1894 new drainage and sewerage works were undertaken by the corporation, to cost over £1300. Gas is supplied by a private company, with works near the harbour. The town has a head post office, with money order, savings bank, insurance, and telegraph departments, branch offices of the Bank of Scotland, Clydesdale Bank, Commercial Bank, and Royal Bank, a National Security Savings Bank, and several excellent hotels. A newspaper—the *St Andrews Citizen and Fife News* (1871)—issued on Saturday, is printed at Cupar-Fife. The public reading-room and library was established in 1845, and acquired in 1847 the books belonging to the old subscription library. In 1867 the books of the St Andrews subscription library were acquired by purchase, and subsequently, in return for a sum of money voted by the town council from the Bell Fund for the purpose of clearing off debt, the whole library was declared public property. Other institutions and associations are a branch of the Royal National Lifeboat Institution, with a lifeboat; a volunteer life brigade, with a rocket apparatus; a troop of the Fife Volunteer Light Horse, a battery of artillery volunteers (one of the guns of which is a Russian trophy), a company of rifle volunteers, with the headquarters of the

5th Volunteer Battalion of the Royal Highlanders, a drill hall, baths, a memorial cottage hospital, a fever hospital, two masonic lodges, a young men's Christian association, a horticultural society, an archery club, a curling club, a skating pond, a bowling club, the St Andrews Golf Club (the Mechanics from 1843 to 1851), the St Andrews Thistle Golf Club (1865), the Royal and Ancient Golf Club already noticed, and several other golf clubs, including one for ladies. There is a marine laboratory and fish hatchery on the East Bents, opposite the harbour. There is a weekly corn market on Monday, a fair on the second Monday of April, and feeing markets on the second Tuesday of August and the Monday after the 10th November. Sheriff small debt courts for the parishes of St Andrews, St Leonards, Kingsbarns, Dunino, Cameron, Forgan, Ferry Port on Craig, and Leuchars, are held on the third Mondays of January, April, July, and October. Justice of peace courts for granting licences for the sale of excisable liquors for the county are held on the third Tuesday of April and the last Tuesday of October; and burgh licensing courts are held on the second Tuesday of April and the third Tuesday of October. The burgh unites with Cupar, Easter and Wester Anstruther, Crail, Kilrenny, and Pittenweem in sending a member to parliament, and is the returning burgh. Parliamentary constituency (1896) 1041, municipal 1413. Valuation (1885) £36,083, 4s. 6d., (1896) £46,610, including railways. Pop. (1801) 3263, (1831) 4462, (1881) 6406, (1891) 6853, of whom 3928 were females.

J. Lyon's *History of St Andrews* (1843); C. Roger's *History of St Andrews* (1849); 'Early Ecclesiastical Settlements of St Andrews,' by Dr Skene, in the *Proc. Soc. Antiquaries of Scotland* for 1860-62; J. M. Anderson's *University of St Andrews* (Cupar, 1878); D. Hay Fleming's *Register of the Kirk-Session of St Andrews* (2 vols. Scottish Hist. Soc. 1889-90); Andrew Lang's *St Andrews* (Lond. 1894); and the Rev. A. K. H. Boyd's *Twenty-five Years of St Andrews* (2 vols. 1892), and *St Andrews and Elsewhere* (1895).

St Andrews, a parish, united *quoad civilia* to DEERNES, in the SE of the Mainland of Orkney, whose church stands near the W shore of Deer Sound, 6 miles ESE of the post-town, Kirkwall, whilst Deerness church, on the E coast, is 12 miles ESE of Kirkwall by road, though only 9½ as the crow flies. It is bounded NW by Kirkwall parish and Inganess Bay, N by Shapinsay Sound, NE, E, and SE by the North Sea, and SW by Holm parish; and it is deeply indented by Deer Sound, which, penetrating the land for 5½ miles south-westward and south-south-eastward, alternately broadens and contracts, from 3¾ miles to 1 mile, from 1½ mile to 5 furlongs, and from 2 miles to 2¼ furlongs. The parish thus consists of two natural divisions, connected by a sandy isthmus only 250 yards broad—St Andrews proper to the W and Deerness to the E. The former has an extreme length from NW to SE of 5¾ miles, and a varying width of ½ mile and 5¾ miles; the latter has an extreme length from SSW to NNE of 5 miles, and an extreme breadth of 3 miles; and the area of the whole is 12,830 acres. The coast is in places sandy, in places rocky, and sometimes precipitous; and the interior rises in St Andrews to 183, in Deerness at the Ward Hill to 285, feet above sea-level. The shallow fresh-water Loch of Tankerness (7 × 4½ furl.; 13 feet above the sea), lies 5 furlongs N of St Andrews church. The predominant rock is Old Red Sandstone, with interesting dykes of trap; and the soil is capable of much improvement. A curious cavern, the GLOUP, has been noticed separately. Tankerness Hall, near the NW shore of Deer Sound, is the chief residence. In the presbytery of Kirkwall and synod of Orkney, the civil parish since 1845 has been ecclesiastically divided into St Andrews and Deerness, the former a living worth £298. St Andrews church was built in 1801, and contains 400 sittings. There is

also a Free church of St Andrews; and three public schools—Deerness, St Andrews, and Tankerness—with respective accommodation for 155, 55, and 83 children, have an average attendance of about 120, 40, and 45, and grants amounting to nearly £165, £55, and £60. Valuation (1894) of St Andrews, £1925; of Deerness, £1876, 17s. Pop. of entire parish (1821) 1548, (1861) 1681, (1871) 1733, (1881) 1695, (1891) 1607, of whom 763 were in St Andrews and 844 in Deerness.

St Andrews-Lhanbryd, a parish containing the village of Lhanbryd in the NE of the county of Elgin and immediately E of the burgh of Elgin. It is bounded N by the parish of Drainie, NE by the parish of Urquhart, SE by the parish of Speymouth, S by the parish of Rothes, SW by the parish of Elgin, and W by the parishes of Elgin and Spynie. At the centre of the W side the boundary is formed by the river Lossie for $1\frac{1}{2}$ mile below the bend at Roy's Pot; at the NW corner for $\frac{3}{4}$ mile by the SPYNE Canal; and near the SE corner for $\frac{3}{4}$ mile by one of the head-streams of the Red Burn; elsewhere the line is artificial. The shape of the parish is highly irregular. There is a compact northern portion measuring fully $5\frac{1}{2}$ miles from the point where the parishes of Drainie, Urquhart, and St Andrews meet on the N to Mains of Cotts on the S, and with an average breadth of about 2 miles. From the SE corner of this a long straggling projection passes southward by Cranloch, and after narrowing to about 200 yards at Oldshields, broadens out again into the triangular portion of Teindland about $1\frac{1}{2}$ by 2 miles. The extreme length of the parish, from the point already mentioned on the N, south-south-westward to the extreme southerly point at the top of Findlay Seat (861 feet), is $8\frac{1}{2}$ miles; and the total area is 9359·544 acres, of which 162·983 are water. The surface is flat in the N, undulating in the centre—many of the hillocks being covered with thriving plantations—and the southern prolongation is a rough moorland, the highest point of the parish being over 1000 feet, at the SW corner of this projection. The drainage is carried off by the river Lossie, which, entering near the centre of the W side, flows first eastward and then northward through the parish in a course of about 5 miles; by the Lhanbryd or Longhill Burn, which flows along the centre, and by the Red Burn in the extreme S. In the N end of the parish is all that remains of the old Loch of SPYNE, now reduced to a portion 5 furlongs in length by $1\frac{1}{2}$ in breadth; and at the point where the southern prolongation is given off is Loch-na-bo ($4 \times 1\frac{1}{2}$ furl.), and two smaller lochans beside it. The soil is a sandy loam, which is, however, fertile. About 4000 acres are under tillage, about 700 under wood, and much of the rest is waste ground. The underlying rock is mostly an impure limestone, and masses of rocks of Jurassic age are found scattered through the soil and subsoil. On the west side, N of Elgin, at Linksfield, a curious patch of rock, supposed to be of Rhætic age, was once laid bare, but the section is no longer visible. The parish is traversed across the centre for $3\frac{1}{2}$ miles by the great main road from Inverness to Aberdeen, and the Forres and Keith section of the Highland railway is a little to the S of this road. Two sections of the Great North of Scotland railway system also pass through the northern and western portions of the parish. To the SE of Lhanbryd station are the remains of a stone circle, and many fine flint and stone weapons have been found at several places. The portion of the parish to the N was the chapelry of Inchbrook, that to the E was the chapelry of Lhanbryd ('the church of St Bridget'), and that to the W the chapelry of Kilmalemmoc, the last two dating from Culdee times. On the rising ground on the centre of the W side, on the road from Inverness to Aberdeen, formerly stood a stone cross marking the point where Elgin Cathedral first became visible. The adjoining farm is still called Stonecrosshill. The old churches of Lhanbryd and St Andrews are gone, but the churchyards remain, the former at the village and the latter at a bend of the Lossie near Kirkhill. The tower of COXTON is separately noticed. Besides the village of

Lhanbryd, lying along the road from Inverness to Aberdeen near the E side of the parish, St Andrews contains also part of the burgh of ELGIN. The village, which has a station on the Highland railway, $3\frac{1}{2}$ miles E of Elgin, has a number of well-built houses, the whole place having been re-arranged and laid out in 1854 under the direction of the trustees of James, second Earl of Fife. There is a post office under Elgin. The churchyard, near the centre of the village, contains one or two old monuments. There is a wool mill, and besides the industries connected with the Elgin portion—comprising an iron-foundry, large wool mills, and a saw and flour mill—there is a distillery at Linkwood on the SW, which was greatly enlarged and extended in 1875. The residences are Pitgavenny House in the N and Dunkinty House on the SW. The former—the locality of which is identified by Dr Skene with the Bothgouanan where King Duncan was killed—is a four-storey edifice, 'after a Portuguese model'; and the latter is a good building with Scottish baronial features, erected in 1876-78.

The principal landowner is the Duke of Fife. The parishes of St Andrews and Lhanbryd were united in 1780, and the conjoint parish is in the presbytery of Elgin and the synod of Moray. The church is near the centre of the parish, and the living is worth £266 a year. Under the school board St Andrews-Lhanbryd and Cranloch schools, with accommodation for 217 and 100 pupils respectively, have attendances of about 130 and 50, and grants of nearly £145 and £40. The latter is a combination school for the parishes of Elgin and St Andrews-Lhanbryd. Pop. (1801) 799, (1831) 1087, (1861) 1402, (1871) 1346, (1881) 1396, (1891) 1299, of whom 676 were males and 643 females. Horses (1891) inhabited 262, uninhabited 17, and being built 1.—*Ord. Sur.*, shs. 95, 85, 1876.

St Boswells, a village and a parish of NW Roxburghshire. The village of St Boswells or Lessudden stands near the right bank of the river Tweed, $1\frac{1}{2}$ mile ESE of St Boswells station, and 4 miles SE of Melrose, with a post office under NEWTOWN ST BOSWELLS. A place of high antiquity, it is thought to have got its original name, Lessedwin ('manor-place of Edwin'), either from Eadwine of Northumbria (586-633) or from some yet earlier prince. It contained sixteen strong bastle houses in 1544, when it was burned by the English; and now it consists of one long street, extending north-eastward from St Boswells Green. This common, about 40 acres in extent, is the scene of a fair on 18 July, or the following Monday if the 18th falls on a Sunday. At the close of the 18th and the beginning of the 19th century, St Boswells fair was the greatest in the South of Scotland for lambs, cattle, horses, wool, and general business; and from £8000 to £10,000 changed hands in the course of the day. It was largely attended by the tinkers and potters of the Border counties. In his *History of the Gipsies* (2d ed., New York, 1878) Mr Simson describes their encampment, and states that on one occasion 'there were upwards of 300 Gipsies in the place. Part of them formed their carts, laden with earthenware, into two lines, leaving a space between them like a street. In the rear of the carts were a few tents, in which were Gipsies, sleeping in the midst of the noise and bustle of the market; and numbers of children, horses, asses, and dogs, hanging around them. . . . Any one desirous of viewing an Asiatic encampment in Scotland should visit St Boswells Green a day or two after the fair.' Water is brought to the village from Heckside reservoir by a main 8 miles long, for which a new pipe was laid in 1894 at an expense of about £500. There is one good inn, the Buccleuch Arms, situated on the Green, and much frequented during the hunting season; and at the end of the Green are the kennels of the Buccleuch foxhounds (56 couples), erected by the late Duke of Buccleuch about 1830. In the hunt the three counties of Roxburgh, Selkirk, and Berwick are scoured. Braeheds, a ridge to the N of the village, commands a most exquisite view of the ruins of Dryburgh, the winding Tweed, and the triple Eildons. Pop. (1831) 433, (1861) 447, (1871) 556, (1881) 555, (1891) 564.

The parish is bounded NE by Mertoun in Berwickshire, SE by Maxton, S by Ancrum, W and NW by Bowden, and N by Melrose. Its utmost length, from NE to SW, is 3½ miles; its utmost breadth is 2 miles; and its area is 3203½ acres, of which 43½ are water. The small portion of the parish of Mertoun that adjoined this parish and is situated on the right bank of the Tweed, comprising 5 acres, was transferred by the Boundary Commissioners in 1891 to the parish of St Boswells and to the county of Roxburgh. The TWEED curves 3 miles south-eastward, north-eastward, and south-by-eastward along all the Berwickshire border, though the point where it first touches and that where it quits the parish are but 1½ mile distant as the crow flies. It is spanned here by two suspension bridges, one erected by Lord Polwarth in 1880; and its bank on the St Boswells side is steep and wooded. The surface sinks to 200 feet above sea-level along the Tweed, and rises gently thence to 268 feet at Benrig, 326 at Hiltonshill, and 538 near Maxpoffie, thus everywhere being dominated by the ELDON HILLS (1835 feet) in the neighbouring parish of Bowden. Red sandstone, of good building quality, is the predominant rock; and the soil is variously alluvium, black loam, and stiff clay. Rather less than 200 acres are under wood; and most of the remainder is in tillage. The parish is named after Boisil, who from about 650 to 661 was successively prior and abbot of the Columban monastery of Old MELROSE, and the fame of whose sanctity attracted thither the youthful St Cuthbert. Not a vestige remains of the ancient village of St Boswells, which stood near the parish church, 7 furlongs SE of Lessudden. This parish was the lifelong residence of, and has given designation to, John Younger (1785-1860), the shoemaker-fisherman-poet, who was born at Longnewton, and whose interesting Autobiography was published at Kelso in 1882. Near the village is Lessudden House, 'the small but still venerable and stately abode of the lairds of Raeburn.' Other mansions are Benrig, Elliston, Maxpoffie, Maxton Cottage, and The Holmes. St Boswells is in the presbytery of Selkirk and the synod of Merse and Teviotdale; the living is worth £305. The parish church is an old building, enlarged in 1824, and contains over 300 sittings. There is also a Free church; and the public school, with accommodation for 125 children, has an average attendance of about 105, and a grant of over £100. Pop. (1801) 497, (1831) 701, (1861) 865, (1871) 973, (1881) 959, (1891) 962.—*Ord. Sur.*, sh. 25, 1865.

St Catherinee. See CATHERINES, ST.

St Cuthberts. See EDINBURGH.

St Cyrus, formerly Ecclesgreig, a parish, with a village of the same name, in the extreme S of the county of Kincardine. It is bounded NE by the parish of Benholm, SE by the North Sea, SW by Forfarshire, NW by the parish of Marykirk, and N by that of Garvock. Along the sea-coast the boundary is natural, as it is also at the S corner and along the SW, where, as noticed in the article on the parish of Montrose, it follows for 4 miles partly the present and partly an old course of the river North Esk. For 2½ miles on the NW side it follows the course of the stream running along the Den of Canterland, and elsewhere it is artificial. The shape of the parish is a rectangle with irregular sides, the greatest length, from NE to SW, being 5½ miles; and the average width, north-westward from the sea-coast, 2½ miles. The area is 8718·608 acres, of which 390·561 are foreshore and 78·698 water. The surface lies on the slope from the hill of GARVOCK to the sea, and is broken up into a series of undulations running from NE to SW, attaining 486 feet at the Hill of Morphie, and 600 near Maryland in the NW corner of the parish. Almost the whole of the surface is under cultivation or woodland. The soil is everywhere a good sound loam, strong in some parts and light in others, but very fertile. It lies on a subsoil of decomposed red sandstone or volcanic rock, varying from clay to gravel. The underlying rocks are Old Red Sandstone—which is quarried at Lauriston—or interbedded volcanic strata,

which at DEN FENELLA and elsewhere contain very fine agatee and other minerals. In the Den of Canterland fish remains are found in the shales constituting the upper fish bed of the Old Red Sandstone of Forfar and Kincardine. There are also, at several places, bands of limestone which are not now worked, though former quarrying operations in connection with them led, at the E corner of the sea-coast, to rather disastrous results. 'On the Kincardineshire coast,' says Sir Charles Lyell, 'an illustration was afforded, at the close of the last century, of the effect of promontories in protecting a line of low shore. The village of Mathers, 2 miles S of Johnshaven, was built on an ancient shingle beach, protected by a projecting ledge of limestone rock. This was quarried for lime to such an extent that the sea broke through, and in 1795 carried away the whole village in one night, and penetrated 150 yards inland, where it has maintained its ground ever since, the new village having been built farther inland on the new shore;' and this new hamlet had to be protected by a stone bulwark. In the SW the drainage is carried off by the North Esk and the burns of Canterland, Morphie, Dannies Den, and Commieston, which flow into it. To the E of the village is the small burn of Woodston, and in the NE end of the parish are the burns of Lauriston and Den Fenella, all flowing direct to the sea. The Esk and all the other streams flow through deep and romantic dells, the gorges of the burns of Lauriston and Den Fenella being particularly fine and well-wooded. The latter, in which there is a high waterfall, and which is spanned by a very lofty viaduct of the Montrose and Bervie railway, is separately noticed. On the North Esk is a pool known as the Ponage or Pontage Pool, which was, in the days when bridges were not, long the abode of a water-kelpie. On one occasion the monster having appeared as a horse, was caught and bridled—presumably with a witch bridle—and kept in captivity for a considerable time, during which he was employed in drawing stones to Morphie for a castle that was then being erected, but of which only the site now remains. A servant having, however, incautiously removed the bridle to allow him to get some food, the kelpie immediately vanished through the wall laughing with joy, and calling out:

'Sair back and sair banes,
Carrying the laird o' Morphie's stanes.
The laird o' Morphie canna thrive
As lang's the kelpie is alive'—

a rhyme which he used often afterwards to repeat as he showed himself in the pool, a circumstance that has been turned to advantage in the local poem of *John o' Arnha*. The coast is mostly low and sandy, though at several points there are rocky promontories. From the centre of the coast-line south-westward to the mouth of the North Esk there is a stretch of eandhills, bounded on the NW by an old line of cliff, in some places from 150 to 200 feet high, but gradually becoming lower as it approaches the North Esk. The view from this across towards the Red Head and away beyond by the Isle of May towards the Firth of Forth is very fine. In 1858 a cave of considerable size, with many bones and heaps of edible shells lying along the floor, was discovered in these cliffs about half a mile from the North Esk, but was shortly afterwards rendered inaccessible by a fall of rock at the mouth. Near the river, in the stackyard of the farm of Stone of Morphie, is a solitary etanding-stone, but nothing is known as to its history. It is traditionally connected with the Danes, and said to have been erected to mark the grave of one of their leaders—Camus—who was killed here, and whose memory is also preserved in the name of the neighbouring farm of Commieston, while the Danes themselves give name to Dannies (Dane's) Den. Several stone coffins have been found in the neighbourhood, but defeated armies have seldom time to bury their dead in stone coffins, much less erect memorial stones. Amid the eandhills, near the centre of the base of the line of inland cliff already described, is the small parish burying-ground

known as the Nether Kirkyard. It was probably the site of the old Culdee church from which the parish derives its name, Ecclesgreig being 'the church of Grig.' This Grig or Giric or Cùrig, whom Chalmers describes as Mormaer of the tract of country between the Dee and Spey, but who in reality was associated in the government of the kingdom of Scone with Eocha, who was the grandson of Kenneth mac Alpin, reigned from 878 to 889. As guardian to a king whose succession was disputed, and who was a Briton of Strathclyde, he seems to have tried to win over the clergy of the Scottish Church by freeing them from all secular exactions and services. In the Pictish Chronicle his name appears as Ciricius, and as he seems to have been named after St Cyr or Ciricus, a martyr of Tarsus, the church was dedicated in honour of that saint, and hence the name St Cyrus. The church of 'Saint Ciricus of Eglesgìrig' was given to the priory of St Andrews by Bishop Richard (1163-77), and the grant was confirmed by King William the Lion. The adjacent estate is still called Kirkside, and the old name is preserved in connection with Ecclesgreig House, the former name of which was Mount Cyrus. The church remained that of the parish till 1632, when a new one was erected on the site of the present building. A dependent chapel dedicated to St Laurence was at Chapelfield, $\frac{1}{2}$ mile N of Lauriston House. At the point of Milton Ness, $1\frac{1}{4}$ mile E of the village, are the remains of an old castle called the Kaim of Mathers, said to have been built by Barclay of Mathers as a place of refuge from the vengeance of the law, by which he was threatened for his share in the slaughter of Sir John Melville. (See GARVOCK.) In October 1715 a band of Jacobites from Farnell and Kinaird placed an Episcopal clergyman in possession of the church and refused the minister admission, nor did he preach again till the 5th February 1716, when 'the rebels having all passed by this church,' he 'reposses himself of his pulpit; but on this and the two following Sundays he had but a small congregation, the people not being able to leave their houses for fear of finding them plundered before their return by the Swiss and Dutch soldiers who were in the neighbourhood.' The principal mansions are Lauriston and Ecclesgreig. The former is separately noticed, and the latter is the residence of F. G. Forsyth-Grant, Esq. Lauriston was long in possession of the family of Straton, one of whom was 'the stalwart laird of Lawriestoun' who 'was slau into his armour scheen' at the battle of Harlaw. A later laird, George Straton, was one of the early Reformers. His brother David was burnt for heresy at Greenside in Edinburgh in 1534, and his son, Sir Alexander, was moderator of the General Assembly held at Aberdeen in 1605. The last of the family was Sir Joseph M. Straton of Kirkside, K.C.B., a Peninsular and Waterloo hero, who died in 1846, and is buried in the Nether Kirkyard. In the SE corner of the same burying-ground is also interred George Beattie (1786-1823), a lawyer in Montrose, and the author of *John o' Arnha* and other poems of some local celebrity, who was a native of the parish. In a fit of despair at being jilted by a Miss Gibson, daughter of the then farmer at Stone of Morphie, he committed suicide close to the spot where now stands the tombstone erected to his memory 'by the friends who loved him in life and lamented him in death.' Another distinguished native is David Herd (1732-1810), editor of the first classical collection of Scottish songs and ballads—*Ancient and Modern Scottish Songs and Heroic Ballads* (Edinb. 1769-74). The Rev. Alexander Keith, D.D. (1791-1830), the writer on prophecy, was minister from 1816 till 1840. The village stands on high ground overlooking the sea near the middle of the coast of the parish. It has a post office under Montrose, and near it is the battery in connection with the St Cyrus company of the Forfar and Kincardine Artillery Volunteers. The parish is traversed near the coast by the main line of road from Dundee by Montrose to Aberdeen, which crosses the North Esk by a good stone bridge erected in 1775-80; and parallel to this road and between it and the sea is the Montrose

and Bervie section of the North British railway system, with stations at the North Esk, at the village of St Cyrus, and at Lauriston, $3\frac{1}{2}$, $5\frac{1}{2}$, and $6\frac{1}{2}$ miles respectively N of Montrose. There are also a large number of very good district roads. The only industries are farming, and operations connected with the quarry already mentioned and with the valuable salmon fishings along the coast and in the North Esk.

St Cyrus is in the presbytery of Fordoun and synod of Angus and Mearus, and the living is worth £259 a year. The parish church, at the village, built in 1853-54, is a good building with a tall spire. It was enlarged in 1891. There is also a Free church, built in 1844. Under the School Board the St Cyrus and Shortside schools, with accommodation for 251 and 65 pupils respectively, have an average attendance of about 180 and 35, and grants of nearly £180 and £30. The principal landowners are D. S. Porteous of Lauriston, and F. G. Forsyth-Grant of Ecclesgreig. Valuation (1856) £12,809, (1885) £17,614, 13s. 1d., (1893) £15,295, 15s. 4d., plus £1803 for the railway. Pop. (1755) 1271, (1801) 1622, (1831) 1598, (1861) 1552, (1871) 1585, (1881) 1487, (1891) 1327, of whom 654 were males and 673 females. Houses (1891) inhabited 311, and uninhabited 42.—*Ord. Surv.*, sh. 57, 1868.

St Fergus, a village and a coast parish of Buchan, NE Aberdeenshire. The village lies 1 mile inland, and 5 miles NNW of Peterhead; it has a post and telegraph office. The parish is bounded on the NW and the N by Crimond, on the E by the German Ocean, S by Peterhead, and SW by Loughside and Lonmay. Until 1891 forming a detached part of Banffshire, the entire parish was then transferred by the Boundary Commissioners to Aberdeenshire. Its utmost length, from NNW to SSE, is $6\frac{1}{2}$ miles; its breadth varies between 3 furlongs and 4 miles; and its area is 9180 $\frac{1}{4}$ acres, of which 285 are foreshore and 39 $\frac{1}{4}$ water. The low flat shore, $6\frac{1}{2}$ miles in extent, is bordered landward by a natural rampart of clay and sand hills, which, rising in places to 50 feet above sea-level, and thickly covered with bent-grass, protect the interior from encroachments of drifting sand. Extending along the coast for several miles, but of unequal breadth, within this ridge, is ground called the Links of St Fergus, constituting probably one of the pleasantest plains in Scotland, and producing—from its wild thyme, white clover, and short grass, it is thought—mutton of peculiar delicacy and fineness of flavour. Along the shore is an inexhaustible quantity of shells, which have been advantageously used as manure. The river Ugie winds 4 miles east-south-eastward along all the Peterhead boundary to its mouth in the German Ocean; and its feeder, the Burn of Ednie, runs $3\frac{1}{2}$ miles south-south-eastward along all the south-western border. A canal, which was cut near the Ugie towards the close of the 18th century, has long been entirely useless except for supplying water to a few farms. The surface exhibits a beautiful succession of rising-grounds and valleys; but there is no hill, the highest point (164 feet) being 2 miles WNW of the village. The rocks comprise granite, gneiss, trap, quartz, and crystalline limestone. The soil of the seaboard district is sandy loam and moss, of the middle district a strong adhesive clay, and of the western district reclaimed moor and moss. Fully four-fifths of the entire land area are in tillage, and barely 30 acres are under wood, while the rest is pasture, links, moss, etc. INVERUGIE Castle, which is noticed separately, was the birth-place of the great Field-Marshal Keith (1696-1758). (See PETERHEAD.) The name of the parish was Inverugie, or occasionally Langley, till 1616, when it was changed to St Fergus, most likely after the ancient patron saint, an Irish bishop of the Roman party, who built a basilica here in the first half of the 8th century. St Fergus is in the presbytery of Deer and the synod of Aberdeen; the living is worth £300. The parish church, built in 1869, contains 653 sittings. There are also a Free church and a Baptist chapel (1810); and two public schools—the Central and the North—with respective

accommodation for 175 and 101 children, have an average attendance of about 145 and 65, and grants amounting to nearly £140 and £55. Pop. (1801) 1270, (1831) 1334, (1861) 1608, (1871) 1633, (1881) 1527, (1891) 1318.—*Ord. Sur.*, sh. 87, 1876.

St Fillans. See FILLANS, ST.

St Germain's, a plain mausion in Tranent parish, Haddingtonshire, 2 miles NE of Tranent town and 2½ SW of Longniddry station. It was built towards the close of the 18th century by David Anderson, Esq., at one time secretary to Warren Hastings; and by his descendant it was sold a few years ago to the trustees of the late Charles Stewart Parker Tennent, Esq. of Wellpark, Glasgow, the present proprietor being A. Hay Tennent, Esq. The Knights Hospitallers here had an establishment, founded in the 12th century.—*Ord. Sur.*, sh. 33, 1863. See Jn. Small's *Castles and Mansions of the Lothians* (Edinb. 1833).

St Kilda, called anciently and by the natives Hirta or Hirt (Gael. *Iorta*), is the chief islet of a rocky group included among the Hebrides, though lying far out in the Atlantic, and quite detached from these islands. Situated in N lat. 57° 48' 35", and W long. 8° 35' 30", St Kilda is nominally included in the parish of Harris in Inverness-shire. It lies 40 miles almost due W of Griminish Point, the NW extremity of North Uist, and about 76 nautical miles NW of Dunvegan in the isle of Skye. It measures 3 miles from E to W, 2 from N to S, and about 7 in circumference; and its area is 1200 acres, or 1·9 square mile. In shape it resembles a roughly formed stunted letter H, sloping NW and SE; and its coasts are faced with lofty precipitous cliffs, rising sheer out of deep water, at nearly all points except the landing place in the SE, or village bay. In the NW bay also, the cliffs are lower, and in favourable weather a landing may sometimes be effected there. The other islets of the group are uninhabited; but serve as grazing ground for the St Kildans' sheep, and a breeding place for myriads of sea-fowl. They are the following—The Dune, a precipitous and jagged peaked islet forming the southern horn of the village bay, and only separated from St Kilda by a narrow passage of sea; Soa, or the Sheep Island (1031 feet), divided from the NW extremity of St Kilda by a strait 400 yards across, in which rise 3 lofty needle rocks, or 'stacks;' Borrera (1072 feet) between Stack-an-Armin and Stack Lù, ¾ miles towards the N; and Levenish (200 feet), a small rocky islet, 1½ mile SE of the Dune. The prevailing feature of all these islands is the precipitous nature of the cliffs of which they are composed; but apart from their picturesque aspect, they are entirely subsidiary to the inhabited island in interest. Between the bays at either end of St Kilda rises a high rocky ridge, forming the main body of the island, and rising into the four principal summits or 'tops' of Conagher (1220 feet), Mullach-seal, Mullach-geal, and Mullach-osterveal or oshival. The sides of these descend sheer into deep water; and the precipice of Conagher is said to be the deepest perpendicular precipice in Great Britain. There are several small streamlets flowing from the high lands; and among the wells and springs are St Kilda's Well and the Well of Virtues.

The climate is on the whole mild, as might be inferred from its situation, though sometimes damp mists, severe frosts, heavy snowstorms, and tempestuous winds fall upon the little community. No trees or shrubs grow on the island; but the grass is plentiful and nutritious as pasture. The only wild animal is the mouse; but the islets swarm with myriads of sea-fowl—fulmar, puffins, guillemots, razor-bills, and solan geese,—which annually supply the islanders with great part of their wealth. The last-named birds do not breed on St Kilda, but only on the smaller islets, and chiefly on the detached 'stacks' near Borrera. The geologic formation of St Kilda has not been scientifically determined, but Mr Sands says that the hills for several hundred feet are formed of sandstone, above which cliffs of igneous rock, trap, granite, etc., are found. The cultivated soil, though black, yields now a somewhat

poor return to the labour spent upon it by the industrious natives; but visitors are generally impressed with the brilliant verdure of the pastures and hills. The husbandry was long of the most primitive description, the *caschrom* or spade-plough being used up till 1830; but more modern implements have now been introduced into the island, and the people show much industry in fencing their fields and preparing the soil. In 1758 about 80 acres were estimated to be under tillage, and barley was the chief crop. Now only about half that area is in cultivation; and the chief crops are potatoes, oats, and bere. A few turnips and cabbages are also grown. A curious agricultural feature on the islands is formed by the *cleits* or *clactyan*, little pyramidal huts of dry-stone, 3 to 10 feet in diameter, and 4 to 5 high, used formerly to dry the sea-birds before salt was introduced, but now to protect the crops when cut. These are very numerous, though the estimate of 5000 supplied to one visitor is certainly exaggerated. The pasturage is sufficient and good in summer; but the sheep receive little attention from their owners. At the end of the 17th century there were about 2000 sheep on the group, in 1841 about the same, in 1861 about 1500, in 1877 between 1000 and 1200, and in 1886 about 1000. The sheep are of the old St Kilda breed, and others are of the black-faced variety. The islanders sell neither the sheep nor the wool, the latter being woven into blanketing and tweed. The number of sheep possessed by each crofter varies from 10 or 12 to about 150. The mutton is good; and the wool, which is *plucked* from the sheep, not shorn, is generally of a light dun colour. The number of cattle on the island in 1886 was 40, of the West Highland breed, mostly black or red and black. The young cattle are annually purchased by the landlord, who removes them from the island. There are now no horses on St Kilda, though in 1697 there were 18, and in 1841, 3 or 4. They are said to have been shipped away by a former lessee of the island, on the ground that they injured the grass. There is an imported breed of mongrel collie dogs, used in catching puffins, every crofter having two or three, there being 40 in all. Cats are plentiful, and so are mice, while rats are unknown. Hens are few in number, doubtless because eggs are otherwise obtained in abundance. In 1886 there were 22 families on the island. Of these, 16 families, as crofters, with as many crofters' houses, paid each £2 per annum for their holdings, while the rest of the inhabitants ranked as cottars. In 1815 the rental of the island was worth about £40; in 1841, £60; and in 1886, also £60. Rent is paid for the common pasture of the island. Formerly the islanders paid each year on a fixed number of sheep and cattle, but the charge for grazing each cow is now 7s. yearly, and for sheep 9d. each. The rents are paid in kind; feathers, oil, cloth, cheese, cattle, tallow, and ling being the chief articles exported. Although the surrounding seas abound with fish, fishing is rather neglected by the St Kildans. They are sby of fish-diet, asserting that it produces an eruption on the skin. The capture of sea-fowl is the chief occupation of the islanders. The men are bold and expert cragsmen; suspended only by slender ropes, they fearlessly explore the perpendicular cliffs of their island. They divide the rocks where the fulmars build into 16 portions. These are allocated by lot among the 16 crofters, each of whom looks after his own portion. The captured birds are then equally divided among their captors, salted, and preserved for winter. The fulmars are valuable for the sake of the oil the young birds have in their stomachs, and the other gulls for their feathers. The women employ themselves in catching puffins on the adjacent islands in the season; and immense numbers of birds are annually killed, without causing any appreciable lessening of the numbers that hover about the islands. The only manufacture is that of coarse tweed and blanketing from the wool of the sheep. The women spin the thread and dye it; while the men weave it into cloth; and, moreover, make all the garments required of it, both for themselves and for the

women. The men thus follow five or six different callings—of crofter, cragsman, fisherman, weaver, tailor, and cobbler.

There is but one village on St Kilda, situated at the head of the E bay, on comparatively level ground at the foot of steep and lofty hills. It contains a church, a manse, a factor's house, a store, 14 zinc-roofed and 2 thatched cottages arranged in a crescent, and standing from 15 to 20 yards apart from each other. The zinc-roofed cottages were built in 1861-62 by the late proprietor after a severe storm had unroofed the former primitive hovels, many of which still stand, and are used as byres or cellars. The church, a plain and substantial building with four windows, a slated roof, but an earthen floor, cost £600. The manse, the factor's house (used only for a few days in the year), and the storehouse are all slated houses. The little burial-place behind the village is walled, and the gate is kept closed; but the interior is as neglected as most Highland cemeteries. The St Kildans are exceedingly primitive in their habits, but they are more intelligent than their isolation would promise. They are for the most part fair-complexioned, but some are swarthy; and though inclined to be stout, they are active and hardy. The women are comely; some are said to be beautiful. The average height of the male inhabitants is 5 feet 6 inches. They are a very prolific race, but the new-born infants are peculiarly liable to be fatally seized with *tetanus infantum*, from a cause never satisfactorily explained, but the malady is known to have existed for more than a century, one-half of the infants of the island dying of it. When once past the dangerous age the children are healthy and strong. Both the juvenile and adult inhabitants are liable to a feverish cold, which they call 'the boat-cold,' because they believe it attacks the island whenever a boat from the outer world touches on their shores. Imbecility is almost unknown. Though nearly all can read the Gaelic Testament, only a few can write in the vernacular, and none speak English. The St Kilda music was formerly famous among the Hebrides; but the inhabitants are not now specially musical. Their morality is good; crime is unknown; and they adhere to the somewhat rigid piety of two generations ago. The entire population belongs to the Free Church, whose minister, when there is one, acts as schoolmaster. The dress of the inhabitants resembles the ordinary lowland costume in Scotland; the kilt is not worn even by children. The food is chiefly sea-fowl, mutton, milk, and eggs. There are only five surnames now known on the island, viz., Gillies, Macdonald, Ferguson, Mackinnon, and Macqueen. The population in 1697 was said to be 180; in 1758, 88; in 1795, 85; in 1815, 103; and in 1841, 105. The first government census took place only in 1851, and returned the population at 110; in 1861 it was 78; in 1871, 71; in 1881, 77; and in 1891, 71, of whom 39 were females. In 1856, 36 inhabitants emigrated to Australia.

St Kilda is the property of MacLeod of MacLeod, who purchased it for £3000 in 1871. It has, however, been for centuries in the MacLeod family. Lord Dunmore, proprietor of South Harris, is the feudal superior of the island, and is entitled to receive an annual feuduty of one shilling. The intercourse of St Kilda with the outer world is maintained by means of the factor's boat, which visits it three times a year, but excursions are made from Glasgow and Oban two or three times in the course of the summer.

The old name of the island appears in the forms Hirt, Hirth, Hirta, and Hyrtha, and is referred to the Gaelic *h-Iar-tìr*, 'the west country.' The inhabitants have a proverb, 'Hirst to Perth' (Perth), indicating their distance from the centre of the kingdom. The name St Kilda is probably connected with the Culdees, as the shadowy chronicler Gildas does not usually figure as a saint, and no more authentic representative of the name is found in history. Hirt appears in a charter of the 14th century by which the island and other lands are granted by John, Lord of the Isles, to his son Reginald. It is confirmed by Robert II. The island next passed

to Macdonald of Sleat, and later to the MacLeods of Dunvegan, who have held it for three centuries. James Boswell at one time thought of buying St Kilda. In 1615 it was invaded and ravaged by 'Colkitto;' in 1724 it was depopulated by smallpox, only 4 adults being left alive to support 26 children; from 1734 to 1742 Lady Grange was confined to the island by her cruel and powerful husband Lord Grange, and tales of her sojourn still linger among the people.

In 1697 three chapels are said to have existed on the island, and were dedicated to Christ, Columba, and St Brendan. The only relic of these is a stone, marked with a cross, built into one of the houses. In the Glen Mhor or Amazon's Valley, at the head of the N bay, there stood a pyramidal stone hut called the Female Warrior's house—a lady who is said to have hunted from St Kilda to Harris, at a time when the sea did not flow between them. On Borrera is a dome-roofed hut called the Stallir House, and related to have been the abode of a hermit; and on the Dune are the remains of an ancient fort. Subterranean dwellings, stone implements, and pottery have also been found.

The unique and romantic situation of St Kilda have, from comparatively early times, attracted a good deal of interest to the lonely little island. Sir Walter Scott notices it in his *Lord of the Isles* (Canto i., st. 8); and David Mallet makes it the scene of his poem *Amyntor and Theodora*; or, *The Hermit*. Lord Brougham visited it in 1799.

Notices of the island occur in Fordun, Boethius, Buchanan, Camden, Sir Robert Murray, and others. Books on the subject are Martin's *Late Voyage to St Kilda*, 1698, and his *Description of the Western Islands of Scotland*, 1703; Buchan's *Description of St Kilda*, 1741 and 1773; Rev. Kenneth Macaulay's *Voyage to and History of St Kilda*, 1764; Rev. John Lane Buchanan's *Travels in the Western Hebrides*, 1793; Dr John MacCulloch's *Description of the Western Islands of Scotland*, 1819, and his *Highlands and Western Islands*, 4 vols., 1824; L. MacLean's *Sketches of the Island of St Kilda*, 1838; J. Sands' *Out of the World*; or, *Life in St Kilda*, 1876 and 1877; MacDiarmid's 'St Kilda and its Inhabitants' in *Trans. Highl. and Ag. Soc.*, 1878; Geo. Seton's *St Kilda, Past and Present*, 1878; and Connell's *St Kilda and the St Kildians* (1886). Besides these a large number of magazine articles, etc., on the subject are detailed in Poole's *Index to Periodical Literature*.

St Leonards, a mansion, in the SE vicinity of Edinburgh, near the south-western base of Arthur's Seat, and $\frac{1}{2}$ mile SSE of the General Post Office. Surrounded by grounds 12 acres in extent, it is a lofty Scottish Baronial edifice, erected in 1869-70 from designs by Mr John Lessels.

St Leonards, a parish within the burgh of St Andrews, and forming practically part of the parish of St Andrews, E of Fife, though it is civilly and ecclesiastically distinct. It consisted formerly of a main portion, at Kenly, near the centre of the S border of St Andrews parish, and three detached portions situated respectively at Fisher's School, the Old College of St Leonards, and Rathelpie—the first two detached portions lying within the burgh of St Andrews. The Boundary Commissioners in 1891 transferred the Kenly portion, the Rathelpie portion, and a small part of the Old College portion to St Andrews parish in exchange for a part of the territory of the latter. An almost new parish of St Leonards was thus formed, which is now situated wholly within the burgh of St Andrews. The physical characteristics are the same as in St Andrews, and the height above sea-level rises towards the S till 317 feet is reached near the corner of Balcaithly Wood. Although the principal of St Leonard's College did not always officiate as the minister of the parish, and in the case of George Buchanan (1566-70) was not even a clergyman, it is certain that for some time before the Revolution the two offices were held by the same person; and from that time till 1836, first the principal of St Leonards, and thereafter of the United College of St

Salvator and St Leonard, was always a clergyman and minister of this parish. St Leonards is in the presbytery of St Andrews and the synod of Fife, and the living is worth £313 a year. The chapel of St Salvator's College has been used as the parish church since the latter half of the 18th century, and was legally annexed to the parish in 1843. Pop. (1801) 363, (1831) 482, (1861) 513, (1871) 741, (1881) 769, (1891) 1217, of whom 706 were females.—*Ord. Sur.*, shs. 49, 41, 1865-57.

St Madoes, a small parish at the W end of the Carse of Gowrie, Perthshire, adjoining, at its north-western boundary, GLENCAIRSE station on the Perth and Dundee section of the Caledonian railway, 15½ miles WSW of Dundee and 6 E by S of the post-town, Perth. It is bounded W and NW by Kinfauns, NE by Errol, and S by the Firth of Tay. In 1891 the eastern portion of the INCHYRA detached part of Kinnoull parish was transferred by the Boundary Commissioners to St Madoes. Its utmost length, from N to S, is 1½ mile; and its utmost breadth, from E to W, is 1½ mile. The Firth of Tay, which curves along the southern border for about 2 miles, broadens eastward from ½ to 1 mile, but at its widest is divided by Mugdrum island into the North and the South Deep. The shore is fringed by three old sea-margins, 3, 9, and 14 feet above the level of the Tay; and, beyond, the surface rises gently to a maximum altitude of 71 feet near Dumgreen. Old Red Sandstone is the predominant rock, and has been quarried at Cottown. The soil, a deep strong clay near the Tay, on the higher grounds is a rich brown loam. Excepting about 30 acres of plantation, 76 of permanent pasture, and 68 in the policy of Pitfour Castle, the entire area is constantly in tillage. A large brick and drain-pipe work employs a great number of people. Near the eastern boundary is the 'Hawk's Stane' referred to under LUNCARTY; in the Pitfour policy are remains of a stone circle, with cup-markings; and in the churchyard is an elaborately sculptured stone, 7 feet long and 2½ to 3 feet broad. Alexander Lindsay, Bishop of Dunkeld, was minister from 1591 till his death in 1639. PITFOUR CASTLE, noticed separately, is the only mansion; and Sir E. A. Stewart-Richardson, Bart., is almost the sole proprietor. St Madoes is in the presbytery of Perth and the synod of Perth and Stirling; the living is worth £271, with manse. The parish church, near Glencarse station, was built in 1798, and contains about 400 sittings. The public school, with accommodation for 120 children, has an average attendance of about 100, and a grant of over £90. Valuation (1885) £5297, 13s. 10d., (1892) £5715, 18s. 10d. Pop. (1801) 295, (1831) 327, (1861) 280, (1871) 290, (1881) 316, (1891) 420.—*Ord. Sur.*, sh. 48, 1868.

St Magnus Bay, a spacious bay on the W coast of the mainland of Shetland. It measures 12½ miles across the entrance, expands to 14 miles, and indents the land to a depth of 13½ miles. It enters between the headlands of Esha Ness on the N and the Ness of Melby on the S; but has in its mouth, 1 mile from the latter, the island of Papa-Stour; so that it is reduced at the entrance to an open channel only 9½ miles broad. Around its inner verge are the islets of Vemantry, Meikle Roe, Papa Little, and Linga, besides various holms and skerries; and projecting from it into the land are various bays or voes, which contain safe and excellent anchorage for any number of vessels of any burden—particularly Ura Firth, Olna Firth Voe, Gon Firth, and Aith Voe.

St Margaret's Hope, a harbour and a post-office village in the island of South Ronaldshay, Orkney. The harbour is a small bay, projecting into the middle of the N coast of the island, and opening into the sound which separates South Ronaldshay from Burray. It is one of the safest and best harbours for small vessels in the kingdom. A fishery here, which drew regular visits from London lobster smacks, and engaged the capital of different English companies, was for many years the only regular fishery in Orkney. The village, standing at the head of the harbour, 13 miles S of Kirkwall, is

the seat of an industrious population, chiefly engaged in fisheries. Its post office has money order, savings bank, and telegraph departments, and there are a branch of the Union Bank and a good inn. Pop. (1861) 260, (1871) 363, (1881) 412, (1891) 404.

St Martins, a parish in the Strathmore district of Perthshire, containing Guildtown village, 6 miles N by E of Perth, under which it has a post office. Since the close of the 17th century it has comprised the ancient parish of Cambusmichael; and it is bounded N by Cargill, NE by Collace, SE by Kilspondie, S by Scone, W by Redgorton, and NW by Auchtergaven. Its utmost length, from W by N to E by S, is 5 miles; its utmost breadth is 3 miles; and its area is 7018 acres. This includes 453 acres that were transferred by the Boundary Commissioners in 1891 from the parish of Kinnoull, being the BALBEGGIE detached part of that parish. The TAY, here a splendid salmon river, curves 2¾ miles south-south-westward along all the Auchtergaven and Redgorton boundary, and past the village of Stanley. Beside it the surface declines to less than 200 feet above sea-level; and thence it rises to 239 feet near Guildtown, 453 near Newlands, 413 near Cairnbeddie, 397 near Rosemount, and 424 near East Melgiuch. Thus, although neither flat nor hilly, it rises considerably above the Tay, and is much diversified by depressions and rising-grounds. Plantations are extensive enough to give a warm appearance to the interior; and copse-woods fringe the margin of the river. The soil in general is a black mould, incumbent on till, and much improved by art; whilst towards the river it is naturally good and fertile. Freestone abounds, and has been largely quarried. Limestone and rock-marl also occur. One still may trace a Roman road leading north-north-eastward from the ancient Bertha towards the parish of Cargill. There are vestiges of several stone-circles; and one most interesting antiquity has been noticed in our article CAIRNBEDDIE. The church of St Martins anciently lay within the diocese of Dunkeld, and was a mensal church of the abbey of Holyrood. The church of Cambusmichael—still indicated by its ruins beside the Tay, on a low plain of the class which Gaelic calls *cambus*—was included in the diocese of St Andrews, and belonged to the abbacy of Scone. The principal mansion, St Martins Abbey, 5 miles NNE of Perth, belongs to the trustees of the late William Macdonald Macdonald, Esq., the only son of General Farquharson, and who claimed the chieftainship of the Colquhouns. The estate, originally called the Kirklands, was purchased by Wm. Macdonald, W.S., of Ranachan (1732-1814), a founder of the Highland and Agricultural Society; and by him the mansion was erected towards the close of the 18th century. A massive and commodious building, it was greatly enlarged and adorned by the late proprietor; and its beautiful grounds and policies were planned and laid out about 1858 by Mr Craiggie-Halket, the celebrated landscape gardener. In Sept. 1884 Mr Gladstone visited the late Sir Andrew Clark, Bart., M.D., his physician, at St Martins Abbey. (See chap. xlii. of T. Hunter's *Woods and Estates of Perthshire*, Perth, 1883.) St Martins is in the presbytery of Perth and the synod of Perth and Stirling; the living is worth £236. The parish church is a handsome and commodious edifice of 1842. Guildtown and Balbeggie public schools, with accommodation for 106 and 120 children, have an average attendance of about 95 and 90, and grants of nearly £90 and £90. Valuation (1885) £8754, 13s. 5d., (1892) £8402, 14s. Pop. (1801) 1136, (1831) 1135, (1861) 904, (1871) 735, (1881) 741, (1891) 871.—*Ord. Sur.*, sh. 48, 1868.

St Mary's. See RONALDSEAY, SOUTH.

St Mary's Holm, a place on the S coast of Holm parish, Orkney, 7 miles S by E of Kirkwall, under which it has a post office, with money order, savings bank, and telegraph departments.

St Mary's Isle, the seat of the late Earl of Selkirk, in Kirkcudbright parish, Kirkcudbrightshire, 1½ mile SSW of the town, from which it is approached by a long lime-tree avenue. It stands on a finely-wooded peninsula,

projecting $1\frac{1}{2}$ mile south-south-westward into the head of Kirkcudbright Bay, and 1 to 3 furlongs broad. The retreat of the sea, so noticeable along the whole coast of Kirkcudbrightshire, is peculiarly observable in this peninsula. The sea in former times made the place literally an isle, and covered at every tide at least one-half of its present cultivated surface. The W side is high ground, defended by a border of rocks; but the E side visibly discloses from end to end, in large shell-banks, the former line of high water. The house, a rambling, old-fashioned building, with grounds of singular beauty, occupies the site of a priory founded about 1129 by Fergus, Lord of Galloway. The original name of the island was *Trahil* or *Trayl*, and the priory was dedicated to the *Virgiu Mary*, whence we find it designated '*Prioratus Sauctæ Mariæ de Trayll*.' It was the seat of canons-regular of the order of St Augustine, and being given by its founder to the abbey of Holyrood, became a dependent cell of that establishment. The prior was a lord of parliament. The priory was surrounded with high walls, which enclosed an extensive area. The outer gate was distant at least $\frac{1}{2}$ mile from the priory, and stood at a place still called the Great Cross. The inner gate led immediately to a group of cells, the habitations of the monks, and was called the Little Cross. All the buildings were swept away towards the close of the 17th century, to give full scope for beautifying the ground as a noble demesne. Towards the close of the following century, while the Earl of Selkirk was extending his garden, 14 human skeletons were discovered by the workmen, placed regularly alongside of one another with their feet to the E, occupying a spot quite different from the burying-ground of the monks, and all the remains possibly of persons interred previous to the existence of the priory. David Panther, or Paniter, was prior of St Mary's Isle, and afterwards commendator of CAMBUSKENNETH. He was one of the most eminent literary men of his day, and wrote letters, published by Ruddiman in 1772, which afford a model of classical Latinity. According, however, to Buchanan, he was a profane man, and instigated persons at court to all manner of impurities; whilst Knox says that 'eating and drinking was the pastyme of his lyif.' He died at Stirling on 1 Oct. 1558. Robert Richardson, descended from a line of respectable citizens of Edinburgh, and previously promoted to the offices of lord-treasurer and general of the mint, was made commendator of St Mary's Isle in 1558; and he was so adroit as to hold all his lucrative situations under both Mary and her son. Large estates were purchased by him, and at his death, in 1571, were left to his two sons, Sir James Richardson of Smeaton, and Sir Robert Richardson of Pencaitland. On 22 April 1778 the famous Paul Jones, whose father had been gardener at Arbigland, in the parish of Kirkbean, made a descent on St Mary's Isle, with the view of seizing the Earl of Selkirk as a hostage during the war with America. His lordship being from home, all the silver plate in his mansion was seized and carried off to France, but was returned uninjured and without cost seven years after the depredation. The plate was returned at the instigation, it is said, of Dr Benjamin Franklin, who was then at Paris as representative of the American Government, and who, on the arrival of Jones at Brest with his ship, sent him a severe reprimand for piracy, and a peremptory order to send the plate at once to him that he might return it to the Earl of Selkirk. In consequence of the war, however, it was 1785 before it was received back again at St Mary's Isle, when it was found just as it had been when carried off, the tea-leaves even being still in the teapot. All the correspondence regarding this incident, it may be mentioned, has been preserved at St Mary's Isle. Lord William Douglas (1634-94), eldest son, by a second marriage, of the first Marquess of DOUGLAS, was created Earl of Selkirk in 1646. He married Anne, Duchess of HAMILTON, and in 1660 obtained the title of third Duke of Hamilton, at the same time resigning the earldom of Selkirk, which, however, by a new patent of 1688 was conferred on his second son. On the death

of Dunbar James Douglas, the sixth Earl (1809-85), the title reverted to the Duke of Hamilton, and the estate went to Captain John Hope, son of a sister of the earl.—*Ord. Sur.*, sh. 5, 1857.

St Mary's Loch, a beautiful lake in the west of Selkirkshire, $15\frac{1}{2}$ miles WSW of Selkirk, 14 SSW of Innerleithen, and $15\frac{1}{2}$ NE of Moffat. Lying 814 feet above sea-level, and 80 to 90 feet deep, it extends 3 miles north-by-eastward and north-eastward, and has a maximum breadth of exactly $\frac{1}{2}$ mile. At its head is the smaller Loch of LOWES; MEGGET Water and KIRKSTEAD Burn are the chief of eight streams that enter it; and YARROW Water issues from its foot. On either side the smooth green hills rise steeply—to the SE, BOWERHOPE Law (1570 feet), the Wiss (1932), and Peat Law (1737); to the NW, Watch Hill (1710), Bridgend Hill (1594), Copper Law (1690), Henderland Hill (1740), and DEER LAW (2065). Its waters are well stocked with trout of $\frac{1}{2}$ lb. each on an average; and pike and perch are also taken, with an occasional salmon and bull-trout. Scott, in his introduction to *canto second of Marmion*, has drawn a perfect picture of the scenery:—

' Oft in my mind such thoughts awake
By lone St Mary's silent lake.
Thou know'st it well,—nor fen, nor sedge,
Pollute the pure lake's crystal edge;
Abrupt and sheer, the mountains sink
At once upon the level brink;
And just a trace of silver sand
Marks where the water meets the land.
Far in the mirror, bright and blue,
Each hill's huge outline you may view,
Shaggy with heath, but lonely, bare,
Nor tree, nor bush, nor brake is there,
Save where, of land, yon slender line
Bears thwart the lake the scattered pine.
Nor thicket, dell, nor copse you spy
Where living thing concealed might lie;
Nor point, retiring, hides a dell,
Where swain, or woodman lone, might dwell;
There's nothing left to Fancy's guess,—
You see that all is loneliness:
And silence aids,—though the steep hills
Send to the lake a thousand rills;
In summer-tide so soft they weep,
The sound but lulls the ear asleep;
Your horse's hoof-tread sounds too rude—
So stilly is the solitude.'

Yet, as in Wordsworth's day—

' The swan on still St Mary's Lake
Floats double, swan and shadow;'

and yet, like Wordsworth, we may fancy that—

' Throughout her depths, St Mary's Lake
Is visibly delighted;
For not a feature of those hills
Is in the mirror sighted.'

The road from Peebles and Innerleithen to St Mary's Loch passes through a wild mountain defile, which opens on the vale of the Yarrow about 3 miles from the lake. On emerging from this, the lonely Yarrow bursts all at once on the traveller's view; and he looks on the mountains dotted with sheep, and ALTRIVE, the cottage of Hogg, the Ettrick Shepherd, which stands a little way E of the lake, and which, more than any other feature in the landscape, makes St Mary's Loch an object of interest to lovers of poetry. Almost every mountain and stream in 'fair Ettrick Forest' have been hallowed by the genius of the bard, who

' Found in youth a harp among the hills,
Dropt by the Efin-people; and whilst the moon
Entranced hung o'er still St Mary's Loch,
Har'd by that charmed water, so that the swan
Came floating onwards through the water blue,—
A dream-like creature listening to a dream;
And the Queen of the Fairies rising silently
Through the pure mist, stood at the shepherd's feet,
And half-forgot her own green paradise,
Far in the bosom of the hill,—so wild!
So sweet! so sad! flowed forth that shepherd's lay.'

'My beloved Shepherd,' said Christopher North in 1824, 'some half century hence your effigy will be seen on some bonny green knowe in the Forest, with its honest

face looking across St Mary's Loch, and up towards the Grey Mare's Tail; while by moonlight all your own fairies will weave a dance round its pedestal.' This prediction has been almost exactly verified by the erection in 1860 of a monument on a grassy esplanade at the head of the loch. It consists of a square pedestal and a statue, $9\frac{1}{2}$ and $8\frac{1}{2}$ feet high, of Denholm freestone, by Andrew Currie, F.S.A., himself a native of 'the Forest.' The Shepherd, with plaid around him, is seated on an oak-root; at his feet lies Hector, his favourite dog; his right hand rests on a staff, and his left holds a scroll inscribed with the last line of the *Queen's Wake*—

'He taught the wandering winds to sing.'

Opposite, on the wooded patch of holm between the lochs, 19 miles WSW of Selkirk, is St Margaret's Cottage or 'Tibbie Sheils,' long kept by Mrs Richardson (1781-1878), and the scene of one of the *Noctes*. The inn has been added to considerably of late. Here 'Christopher North' used to reside with his family in the autumn, and Tibbie and her cosy 'cottage' occupy no small part of the *Noctes*. The 'Ettrick Shepherd' also made the 'wren's nest,' as he called the inn, a frequent resting-place, not only on account of Tibbie having been long a servant in his father's house, but also to meet several of his literary friends, on which occasions the mirth often made the rafters ring. For many years Tibbie's fireside had been the haunt of poets and other writers, and some lyrics have been sung in her praise. She and her husband, who predeceased her fifty-six years, both lie buried in Ettrick churchyard. The *RODONO* Hotel has been noticed separately, as also are *BINRAM'S CROSS*, *BLACKHOUSE*, *CHAPELHOPE*, *COPPERCLEUCH*, *DOUGLAS BURN*, *DRYHOPE*, *HENDERLAND*, and *MOUNT BENDER*. On the NW shore of the loch, 7 furlongs from its head, is the site of St Mary's kirk, with its ancient graveyard. This, too, the poet's pen has rendered a classic spot. In this lonely place the bones of many an outlaw mingle with the dust; and here the shepherd of the present century still finds his last resting-place.

'For though in feudal strife a foe
Hath laid our Lady's chapel low,
Yet still beneath the hallowed soil
The peasant rests him from his toil:
And, dying, bids his bones be laid
Where erst his simple fathers prayed.'

This ancient chapel is the subject of many traditions, and of numerous ballads and poems of ancient and modern date.

'St Mary's Loch lies shimmering still,
But St Mary's kirk-bell's lang dune ringing!
There's naething now but the grave-stane hill
To tell o' a' their loud psalm-singing!'

Among the ballads, that of *The Douglas Tragedy* has been rendered widely familiar by the *Border Minstrelsy*. Another ancient and very popular tradition furnished the ground-work of Hogg's ballad of *Mess John*; and the chapel is the scene of the principal incident in his ballad of *Mary Scott*. Here the daughter of stern Tushilaw is supposed by the poet to have been brought to be buried; here she awoke from that sleep which seemed to all the sleep that knows no waking; and here she was married to her lover, Pringle, Lord of Torwoodlee.—*Ord. Sur.*, sh. 16, 1864.

St Mary's Tower, the Scottish seat of the Duke of Rutland, in Little Dunkeld parish, Perthshire, near the right bank of the Tay, a little way E of Birnam. It is a large and stately Scottish Baronial edifice, of modern erection, with very beautiful grounds.—*Ord. Sur.*, sh. 48, 1868.

St Monance. See *ABERCROMBIE*.

St Mungo, a parish of Annandale, Dumfriesshire, whose church stands near the right bank of the Water of Milk, 3 miles S by E of the post-town, Lockerbie. It is bounded NE by Tundergarth, E by Hoddam, S by Cummertrees, SW by Dalton, and W, NW, and N by

Dryfesdale. Its utmost length, from N by E to S by W, is $5\frac{1}{4}$ miles; its breadth varies between $\frac{1}{2}$ mile and $3\frac{3}{4}$ miles; and its area is 4982 $\frac{1}{2}$ acres, of which 35 $\frac{3}{4}$ are water. The river ANNAN winds 3 $\frac{3}{4}$ miles south-eastward along all the Dalton and Cummertrees boundary; and the Water of MILK 6 miles south-by-westward—mainly through the interior, but for the first $1\frac{1}{2}$ mile along the boundary with Tundergarth, and for the last $5\frac{3}{4}$ furlongs along or near to that with Hoddam—until it falls into the Annan at the SE corner of the parish. Springs of the purest water, welling up from the rocks, and maintaining, in some cases, an equable temperature all the year round, are both many and copious. The general surface is slightly uneven, sinking little below 180, and little exceeding 300, feet above sea-level; but in a wing of the parish to the E of the Caledonian railway it attains near Cowdens a maximum altitude of 603 feet. Seen from distant heights which command a maplike view of it, the parish looks almost flat; but, though not strictly hilly, it has such swells and eminences as, with aid of Brunswark Hill in the neighbouring parish of Hoddam, and the wooded rising grounds of Kirkwood in Dalton, present on nearer inspection a gracefully varied and pleasing landscape. Silurian and Devonian rocks predominate; limestone has been quarried on the north-eastern border; sandstone and shale, belonging to the Carboniferous formation, are at the head of the glebe; porphyritic amygdaloid forms the main mass of Nutholm Hill; and galena, jasper, and chalcidony are found in various parts. The soil on about 280 acres of holm-land adjacent to the Annan and the Milk is a rich, deep alluvium, and elsewhere varies considerably. Nearly nine-tenths of the entire area are in tillage, and some 300 acres are under wood. A sepulchral tumulus was removed about 1830 from Sorrysikemuir; an ancient Caledonian camp was formerly near the site of that tumulus; and on Cowdens farm is the spot where Ralph Erskine's tent was pitched at the introduction of Secession principles to Annandale. Mansions, noticed separately, are CASTLEMLK and MURRAYFIELD; and Sir Robert Jardine, Bart., is chief proprietor. St Mungo is in the presbytery of Lochmaben and the synod of Dumfries; the living is worth £308. The original parish church, which was dedicated to St Mungo or Kentigern, stood on the left bank of the river Annan, $1\frac{1}{2}$ mile SW of the present one, and was a cruciform First Pointed edifice, partly rebuilt in 1754 and 1805. This church was confirmed by Robert de Bruce in 1174 to the episcopate of Glasgow, and became a mensal church of that see till the Reformation. The bishops of Glasgow are conjectured—chiefly from some remains visible at the end of the 18th century of an ancient village, and of an extensive garden with a fish-pond—to have had a residence here. In 1116 the parish bore the name of Abermilk ('confluence of the Milk')—a name exchanged for Castlemilk by 1170, and afterwards for St Mungo. For a short period succeeding 1609 the parish was annexed to Tundergarth. The present church, on a picturesque site 200 yards to the SE of its predecessor of 1842, is a handsome edifice erected in 1875-77 at a cost of £5000, the whole defrayed by Mr Jardine of Castlemilk. Scottish Gothic in style, from designs by the late David Bryce, R.S.A., it is built of light grey freestone, and has 350 sittings, stained-glass windows, and a massive NE tower, 19 feet square and 70 high. The public school, with accommodation for 150 children, has an average attendance of about 120, and a grant of nearly £125. Pop. (1801) 644, (1831) 791, (1861) 686, (1871) 658, (1881) 653, (1891) 603.—*Ord. Sur.*, sh. 10, 1864.

St Ninians or **St Ringans**, a large parish containing a post-town of the same name in the NE of the county of Stirling. It is bounded N by Perthshire, by the parishes of Logie and Stirling, and by Clackmannanshire, E by the parish of Airth, S by the parishes of Larbert, Dunipace, Denny, and Kilsyth, W by the parish of Fintray, and WNW by the parish of Gargunnoch. In order to adjust the boundaries of the two parishes of

St Ninians and Stirling, the Boundary Commissioners in 1891 transferred to the parish of Stirling the three detached parts of St Ninians parish, situated at the Craigs, Allan Park, and Shiphaugh—all within the parliamentary limits of the burgh of Stirling, and comprising respectively 6, 12, and 170 acres; also the parts of the same parish situated at Raploch, to the east of the western parliamentary boundary of the burgh of Stirling, and at Forthbank, to the west of the eastern parliamentary boundary of the burgh. They at the same time transferred to St Ninians parish those portions of Stirling parish which lay on the right bank of the river Forth and to the east of the eastern parliamentary boundary of the burgh of Stirling, and also the portion which lay to the east of the Stirling and St Ninians Road and of Port Street, and to the south of Craigs Street. The boundary is largely natural. From the NW corner the line follows the N side of the Forth from the mouth of the West Carse Burn downwards to the junction with the Teith, and then the middle of the river downwards to the mouth of East Mains Burn, except for $1\frac{1}{2}$ mile N of the town of Stirling, where the parish of Stirling comes in, the whole distance traced by the Forth being $19\frac{1}{2}$ miles following the windings of the river. On the E the line largely follows the courses of the East Mains, Darnbog, and Tor Burns; on the S those of Tor Burn and the river Carron, which forms the boundary for $6\frac{1}{2}$ miles; and on the W those of Endrick Water and Burnfoot Burn. The greatest length of the parish, from the junction of the Darnbog and Tor Burns to form the Pow Burn on the E, to the junction of Burnfoot Burn with Endrick Water on the W, is $12\frac{1}{2}$ miles; and the greatest breadth, from the junction of the rivers Forth and Teith on the N, to the junction of Buckie Burn with the river Carron on the S, is 7 miles. The height above sea-level rises from 26 feet near the Forth in the NE corner and 35 near the Forth at the NW corner, towards the S and W borders. The central portion of the parish is on an average from 200 to 300 feet high; and at Gillies Hill the height is 500 feet, at Great Hill W of Sauchie House 831, above Barr Wood SW of Auchinbowie House 503. The highest ground, forming the eastern extremity of the LENNOX HILLS, is in the W and SW, at Scout Head (705 feet), Earl's Hill (1443), Hart Hill (1428), Cringate Law (1300)—including the moorlands of Touch Muir, Touchadam Muir, The Fell, and Cringate Muir—Cairnoch Hill (1354), Craiggannet Hill (1171), Craigengelt Hill (1000), and Dundaff Hill (1157). The ground is divided into what is locally known as carse, dryfield, and moorland. The first—which occupies the southern and eastern districts—was, before the march of modern agricultural improvement began, a flat stretch of morass, but is now highly cultivated, and produces heavy crops. The part of it along the edge of the Forth has to be protected by strong embankments against the overflow of the river during floods. The dryfield—the most extensive of the three—is the higher ground behind the carse, with an undulating surface sloping chiefly to the N and E. It is highly cultivated, and has numerous hedgerows and plantations. The moorland, lying in the W and SW among the heights already mentioned, comprises about $\frac{1}{4}$ of the whole area. The northern part is heathy, but the southern abounds in excellent pasture, and there is some good and well-cultivated haughland along the river Carron. The soil of the carse is an alluvium 8 to 20 feet deep, and below this lie successively layers of moss, drift, and sand. The whole of it has been, within a comparatively recent period—certainly subsequent to the appearance of man—beneath the level of the sea, but there must have been a land surface previous to the formation of the upper alluvial deposits, as the layer of moss beneath these contains bark and branches of hazel. At the time of the battle of Bannockburn the carse seems to have been an impassable morass. The underlying rocks are carboniferous, those to the E belonging to the Coal-measures, those in the centre to the Carboniferous Limestone series, while on the W throughout the moorland district

are interbedded basalts. There are collieries at Auchinbowie, Bannockburn, Cowie, Greenyards, and Plean, and the other beds are quarried at different places. The drainage of a small portion of the parish in the extreme W goes to the great Clyde basin, being carried off by ENDRICK WATER and Burnfoot Burn and the smaller streams flowing to it; the surplus rainfall elsewhere goes to the Forth. Along the N it is carried off by the river Forth itself, which receives in the NW corner the Baston and Touch Burns—the latter receiving the Craighrock Burn—and elsewhere along the N a number of smaller streams. Flowing through the centre and NE of the parish is the Bannock Burn, which, rising at Earl's Hill, has a course of 14 miles north-eastward to the Forth, receiving near the middle of its length Sauchie Burn. Besides the streams already mentioned on the E and S borders, there are also in the SE Small Burn, uniting with some other streams to form Sauchinford Burn flowing to Tor Burn, and Plean Burn also flowing to Tor Burn; in the centre of the S side Auchinbowie Burn, which passes through the parish of Dunipace to the Carron; and in the SW Buckie Burn and Earl's Burn, both flowing to the Carron. On Touch Burn is a waterfall called Gilmour's Linn, and on the river Carron another called Auchentillin's Spout. Neither are of any great height. The only lake is Loch Coulter, near the middle of the S side, which is separately noticed.

There are a number of tumuli, and at that at Ghosts' Knowe, on the Buckie Burn, near the centre of the S side of the parish, a sepulchral chamber was opened in 1839, but the valuable find of implements, etc., was scattered by the ignorant workmen employed. The Roman road from Camelon northwards entered the parish about $\frac{1}{2}$ mile W of Carbrook House (in Dunipace parish), and ran in a straight line north-westward to Snahhead, SW of Bannockburn House, where it turned NNW and ran parallel to the modern road through the town of St Ninians to Stirling and to the W of it. A few traces of it are still to be seen, as well as of some of the stations. The old pronunciation and often the spelling of the name was St Ringans, which is still in common local use, though it is now beginning to be superseded by St Ninians, which has been the spelling since the end of the 18th century. There must have been a church here from a very early date, and the dedication was to St Ninian, who flourished in the end of the 4th and the beginning of the 5th centuries, and who converted the southern Picts to Christianity. (See WHITEHORN.) This church was probably near the well called St Ninian's Well, on the S side of Stirling. In the reign of David I. Robert, Bishop of St Andrews (1126-58), granted to the newly founded Cambuskenneth Abbey 'the church of Egglis St Ninians, with its chapels of Dunipace and Lithert, and all its other chapels and oratories, and all other pertinents; but whether this church was on the site of the early one or occupied the same position as the present church cannot now be determined. Another church at Kirk-o'-muir, $7\frac{1}{2}$ miles SW of the present parish church, is said to have been one of the earliest churches in Scotland where the sacrament of the Lord's Supper was dispensed by the Reformers in Scotland. It figures in the Commissary's list as the church of a distinct parish apart from St Ninians, but no traces of the building are now to be seen, though the churchyard remains. There was also a chapel at Cambusharron, and another dedicated to the Virgin Mary at Skeoch, $\frac{1}{2}$ mile NE of Bannockburn. In the extreme SW of the parish are the ruins of a castle, once the stronghold of Sir John Graham, the companion of Wallace; and near it are the lands of Dundaff, from which the Duke of Montrose, who is sprung from an elder branch of the same family of Graham, takes his title of Viscount of Dundaff. There are also ruins of old castles at Sauchie and Carnock, which are separately noticed. Traversed by the great main road from Edinburgh to Stirling and the north, the parish has been the scene of many of the events connected with the national history of Scotland. To the SW of the town

of St Ninians is the Bore-stone marking the place where Bruce's standard was planted during the battle of Bannockburn. The battle itself is separately noticed, as are also the battles of Sauchieburn and Stirling Bridge, the latter under Stirling. The town of St Ninians was the limit of the pursuit of the surprise party from Edinburgh which in 1571 attacked Stirling and attempted to carry off the Regent Lennox, who was slain in the skirmish that followed. The exact spot where the Regent fell was formerly pointed out at Newhouse between Stirling and the town of St Ninians; but, considering the whole circumstances, the place where he received his mortal wound was probably nearer Stirling. A heap of stones raised to mark the spot was removed when the road was widened in 1758. In 1745 Prince Charles Edward Stuart, on his march to the south, spent a night at Bannockburn House; and in January 1746, when on his return to the north, he made that house his headquarters. While lodging there he was shot at, and the mark made by the bullet is still shown in one of the rooms. On the morning of the 17th January he drew up his army on Plean Moor preparatory to their march to the battlefield of Falkirk; and on the 1st of February, just as the retreat northward was begun before the approaching forces of the Duke of Cumberland, the parish church, which had been used by the Highland army as a powder magazine, was blown up, whether purposely or accidentally is not known. The steeple remained entire, and, as the new church was built at some distance from it the tower still stands a lonely witness to the rebellion of 1745. The parishioners here suffered so much from a case of intrusion in 1734, and from another in 1773, that they adopted towards the end of the century a very effective method of dealing with the patronage question by buying up the rights of the patron in 1788 at a cost of between £600 and £700, which they raised by voluntary contributions among themselves. In the immediate neighbourhood of Plean *quoad sacra* church is an asylum founded and endowed by the late Francis Simpson, Esq. of East Plean, for the residence and support of indigent old men, preference being given to those who have served in the army or navy. It has usually about 30 inmates. Distinguished natives of the parish are Dr Henry, the historian (1718-90), who was born at Muirton; Sir George Harvey, P.R.S.A. (1805-76); and Dr Robert Buchanan, Free Church leader (1802-75); and Miss Hamilton (1758-1816), author of the *Cottagers of Glenburnie*, resided at Crook while composing that work. The parish is traversed by main roads from Stirling to Airth, Edinburgh by Falkirk, Denny, Glasgow, and Balfron; and there are also a large number of good district roads. A reach of the North British and Caledonian joint railway from Edinburgh and Glasgow, which passes across the SE and centre for 5½ miles, has a station at Bannockburn, 33½ miles NW of Edinburgh, 27 NE of Glasgow, and 2½ SSE of Stirling; and access is also readily obtained from Stirling station. In the E end of the parish the South Alloa branch of the Caledonian railway has a course of 2½ miles before it passes into Airth parish close to Dunmore Pottery, where the branch to Alloa strikes off to the left, and traversing the NE corner of St Ninians parish crosses the Forth by a new bridge about a mile above the ferry. (See ALLOA.) A reach of the Forth and Clyde railway passes for 5 miles along the northern border from Stirling westward. The industries other than farming are noticed in connection with the villages. An important annual market for cattle and horses is held at Bannockburn on the third Tuesday of June. The principal mansions, most of which are separately noticed, are Auchenbowie House, Bannockburn House, Carnock House, Craigforth, Gartur, Laurelhill, Easter and Wester Livlands, Plean House, Polmaise, Sauchie House, Seton Lodge, and Touch House.

St Ninians is in the presbytery of Stirling and synod of Perth and Stirling, and the living is worth £440 a year. The parish church at the town was built in 1750, and contains about 1500 sittings; and there are *quoad*

sacra churches at Bannockburn and Plean, the former dating from 1838 and the latter from 1839. The old Free church was altered and fitted up as a parish hall in 1892. It contains a public hall, rooms for classes, library and reading-room, recreation room, baths, and keeper's house. There are also Free and U.P. churches at Bannockburn and the town of St Ninians, and a Free church at Cambusbarron. The first Relief congregation, that at the town, was formed after the forcible induction of a parish minister in 1773, and that at Bannockburn in 1797. There is also a mission station in the town in connection with the Episcopal church. Under the School Board are Bannockburn, Cambusbarron, East Plean, Fallin, Milton, Muirland, and West Plean public schools, and Sauchie female school, which, with accommodation for 501, 268, 150, 60, 150, 40, 100, and 71 pupils respectively, have attendances of about 410, 180, 105, 45, 90, 15, 45, and 35, and grants amounting to nearly £385, £170, £90, £55, £85, £30, £45, and £50. At Bannockburn there is also the endowed Wilson Academy, founded and endowed in 1848 by Sir James Wilson, and further endowed by his sister in 1849 and 1859. Under the Educational Endowment Act the building was handed over to the School Board along with one-third of the revenue, while about three-eighths of the revenue were devoted to the assistance of technical education in Stirling, and the rest of the income to the foundation of six bursaries to enable children of merit resident in the village of Bannockburn to attend Stirling High School. The principal proprietors are the Duke of Montrose, Sir James R. Gibson-Maitland of Sauchie, Colonel John Murray of Touchadam and Polmaise, and Claud H. Hamilton. Valuation (1885) £55,167, (1892) £55,417. Pop. of parish (1801) 6849, (1831) 9552, (1861) 8946, (1871) 10,146, (1881) 10,423, (1891) 9571, of whom 4591 were males and 4980 were females, while 5737 were in the ecclesiastical parish. Houses (1891) inhabited 2090, uninhabited 227, and being built 7. The population of the landward portion of the parish in 1891 was 4663, of whom 2310 were males and 2353 females.—*Ord. Sur.*, shs. 39, 31, 1869-67.

Besides the post-town of the same name, the parish contains also the post-towns of Bannockburn and Cambusbarron and the villages or hamlets of Auchenbowie, Belfield, Chartershall, Muirton, Newhouse, Plean, Torbrex, and Whins of Melton, most of which are separately noticed. The town of St Ninians stands in the N of the parish, close to the S side of Stirling. Up to 1724 it was simply the Kirkton, but has since then been known as St Kingans or St Ninians. Although nominally 1½ mile S of Stirling, it is in reality part of that town, being within its boundaries. It consists mainly of one long narrow street along the great south road from Stirling, just to the N of the point where it forks into the roads leading to Glasgow and Edinburgh. The houses are curious and old-fashioned, and many of them bear rude sculpturings of dates, initials, and sometimes of the tools of the tradesmen to whom they originally belonged. St Ninians has a share in the woollen industries connected with Stirling, Bannockburn, and Cambusbarron, and has still some manufacture of nails and screw-bolts of its own as well as tan-works of considerable size.

St Quivox, prior to 1895 an independent parish of Kyle, Ayrshire, but by an Order of the Secretary for Scotland, dated 31 January of that year, amalgamated with the parishes of Ayr and Newton-upon-Ayr—the combined parish being called the Parish of Ayr. St Quivox is 4¾ miles in length; its breadth varies between ¾ mile and 2¾ miles; and its area is 4930½ acres, of which 54½ are water. The beautiful river Ayr curves 5½ miles west-south-westward along all the south-eastern and southern boundary, its banks in places being steep and wooded. The surface rises north-eastward to 228 feet above the sea at Brocklehill; but the southern and western districts are low and level, at no point much exceeding 60 feet. The rocks are carboniferous; and coal and excellent sandstone have both been worked.

The soil is sandy in the W, in the centre is light and gravelly on an irretentive subsoil, and on the eastern border is a stiffish clay. Nearly 250 acres are under wood; and almost all the remainder is arable. Mansions, noticed separately, are AUCHENCUIVE and CRAIGIE. Giving off since 1874 the *quoad sacra* parish of Wallace-town, St Quivox is in the presbytery of Ayr and the synod of Glasgow and Ayr; the living is worth £336. The ancient parish church was originally, and for centuries, called Sanchar, the antique form of the modernised Sanquhar, from the Gaelic *sean*, 'old,' and *cathair* or *caer*, 'a fort.' In 1212 it was a rectory, between 1229 and 1238 it belonged to the short-lived Gilbertine convent which the second Walter the Steward established at Dalmulin, and from 1238 till the Reformation it belonged to the monks of Paisley. Though Sanchar continued to be the name of the several estates which were portions of the ancient territory or manor, the church appears at the Reformation under the designation of St Kevoc. This name is commonly supposed to be derived from Kevoca, a holy virgin of Kyle, who lived in the first half of the 11th century; but Bishop Forbes, in his *Kalendar of Scottish Saints* (1872), refers it to the Irish saint, Caemhan or Pulcherius, the affectionate form of whose name is *Mo-chaemhoc*, pronounced *Mo-keevoc*. The present parish church, near Auchencruive station, is of pre-Reformation date, and enlarged about 1825 contains nearly 500 sittings. Two public schools, St Quivox and Whitlets, with respective accommodation for 93 and 164 children, have an average attendance of about 70 and 120, and grants amounting to nearly £75 and £115. Valuation (1885) £12,076, 9s. 8d., (1894) £10,198, exclusive of railway. Pop. (1801) 2070, (1831) 5289, (1861) 7097, (1871) 6069, (1881) 7352, (1891) 7713, of whom 1430 were in the ecclesiastical parish.—*Ord. Surv.*, sh. 14, 1863.

St Ringans. See ST NINIANS.

St Vigeans, a village and a coast parish of Forfarshire. The village, though small, is ancient; and is said to derive its name either from a hermit and confessor who died at Grange of Conon in the neighbourhood about the year 1012, or from the Irish ecclesiastic Fechin, abbot of Fobhar, who died in 664. It stands on the Brothock, 1½ mile N of Arbroath.

The parish of St Vigeans, one of the oldest in the country, consisted formerly of a main body and two detached portions. The smaller of these detached portions, that situated at Hospitalfield and comprising 133 acres, was transferred by the Boundary Commissioners in 1891 to the parish of Arbroath; while the larger, situated at Inverpeffer and comprising 1108 acres, was transferred to the parish of Panbride. Part of the parish of Arbroath was at the same time transferred to the parish of St Vigeans. (See ARBROATH.) The parish, containing great part of the town of Arbroath, is bounded N by Inverkeilor, E and SE by the North Sea, S by Arbroath and Arbriot, and W and NW by Carmyllie. It measures 7½ miles from E to W; and varies in breadth between 1¼ and 4½ miles. Up till about 1560 it included the entire town of Arbroath with its abbey, and was sometimes called Aberbrothock. From the boundary with Inverkeilor to within a mile of Arbroath, the coast of the parish is a range of almost perpendicular cliffs, with a maximum height of 157 feet. In nearly their whole extent their base is covered with water at full tide, so that for the most part access to the large and interesting caves, crevices, and arches which are numerous along the seaward face, is possible only at low water or by boat. The chief of these spacious and romantic caverns are the GAYLET POT, the Mason's Cave, and the Maiden Castle Cave. The cliffs figure in Sir Walter Scott's *Antiquary* as the scene of the dangerous adventure of Sir Arthur and Miss Wardour. The surface of the parish is mainly occupied by three different declivities or ridges; while the streamlet Brothock, flowing SSE, divides it into two tolerably equal parts. The chief eminences are Dichmont Law (323 feet), about 1½ mile from the coast, and Cairn Conan (597), in the W, 7½

miles from the sea, and commanding a beautiful and extensive view. Eruptive rock occurs in St Vigeans, but is not prominent; Old Red Sandstone is found tolerably general, and is extensively quarried at Whittiness, and has been a good deal used for building in Arbroath; and a softer variety, containing vegetable fossils, is quarried at Drumyellow and Brax. Diluvial ridges, consisting of boulders, gravel, sand, and clay strata, several of them 1 mile long, lie along the sides of the Brothock, and have a maximum altitude of about 40 feet. Several rocky heights of sandstone also occur near the lower course of the Brothock. One of them affords a convenient and conspicuous site for the parish church; and another very similar in appearance, 180 yards distant, is famous for an echo of four syllables. The soil varies in character throughout the parish, but is prevaillingly fertile. In 1744, with the exception of garden ground, not more than 40 acres were enclosed within the parish. Now rather more than 800 acres are under wood, and nearly all the remainder is in tillage. The industries of the parish include, besides agriculture, a part of the textile industry in ARBROATH, with fishing at AUCHMITHIE, and spinning in an extensive establishment at Inchmill, originally erected in 1808. The roads of the parish are good; and a section of the Arbroath and Forfar branch of the Caledonian railway crosses it, as does also the Arbroath and Montrose section of the North British railway. Besides the village of the same name, St Vigeans parish includes the villages of AUCHMITHIE, COLLISTON, MARYWELL, and GOWANBANK, and part of the post-town of ARBROATH. The chief modern mansions are Letham, Seaton, Abbe-thune, Springfield, Parkhill, Newton, Millbank, Woodlands, Almeriecross, Beechwood, and Hospitalfield. The old mansion of Colliston is said to have been built by Cardinal Beaton for his son-in-law.

St Vigeans itself is in the presbytery of Arbroath and the synod of Angus and Mearns; the living is worth £303. The parish is divided ecclesiastically into St Vigeans proper and the *quoad sacra* parishes of AUCHMITHIE, COLLISTON, and INVERBROTHOCK, with parts of the *quoad sacra* parishes of St Margaret's, LADYLOAN, and ABBEY Arbroath. The parish church was originally erected not later than the beginning of the 11th century, but it was considerably enlarged before 1242, and repaired in 1485. Alterations or repairs took place during the 18th century, and some enlargements in 1822 and 1827, in course of which the church lost much of its original Saxon or Norman character. In 1872, however, it was restored at a cost of fully £3000, to a plain uniform 15th century Gothic style; and it now comprises a nave, aisles, pentagonal chancel, with a square tower and spire, while the interior is adorned with a carved oaken pulpit, an octagonal baptismal font, and beautiful stained-glass windows. It contains about 900 sittings. Both the ancient church and the surrounding burying-ground were noted for sculptured sepulchral stones; and several ancient crosses and finely executed mouldings have been found. A chapel, dedicated to St Ninian, formerly stood near the sea; and the adjacent St Ninian's Well was believed to possess great curative powers. Two public schools, Colliston and St Vigeans, with respective accommodation for 170 and 188 children, have an average attendance of about 85 and 95, and government grants amounting to nearly £80 and £85. Valuation (1885) £20,970, (1893) £17,384, plus £3163 for railway. Pop. of civil parish (1801) 4243, (1831) 7135, (1861) 10,537, (1871) 12,805, (1881) 14,982, (1891) 15,620, of whom 1299 were in the ecclesiastical parish.—*Ord. Surv.*, shs. 57, 49, 1868-65.

Salachie, Loch, or Lochan t-Salachaidh. See GOLSPRIE.

Salen, a *quoad sacra* parish in the NE of Mull island, Argyllshire, on the Sound of Mull, containing AROS post office, an Established church (circa 1783), a Free church (1883), St Columba's Episcopal church (1874), a public school, and a hotel. Pop. (1871) 605, (1881) 600, (1891) 522, of whom 359 were in Torosay parish and 162 in Kilninian and Kilmore.

Salen, a place in Ardnamurchan parish, Argyllshire, on the N shore of Loch Sunart, 10 miles WNW of Strontian. It has an inn and a post office, with money order, savings bank, and telegraph departments.

Saline, a village and a parish in the NW corner of the west division of Fife. The village, standing 405 feet above sea-level, at the SW base of Saline Hill, is 2½ miles N by W of Oakley station on the Alloa and Dunfermline section of the North British railway, and 5½ NW of Dunfermline; it has a post office, with money order and savings bank departments, under Oakley. It is a pleasant little place, clean and picturesque in appearance, the houses neatly built and whitewashed, and all with small gardens attached. Pop. (1871) 396, (1881) 369, (1891) 304.

The parish is bounded N and NW by Fossoy and Cleish in Kinross-shire, E by Dunfermline, SE by Carnock, SW by Culross, and W by Clackmannan. Its utmost length, from E to W, is 5½ miles; its utmost breadth, from N to S, is 3¼ miles; and the area is 8768 acres. The parish of Saline had a detached part, containing 1154 acres, situated at Inzievar, and adjoining the parish of Torryburn; and the parish of Torryburn had a detached part, containing 1734 acres, situated at or near the lands of Cults, and lying to the north of the parish of Saline. The Boundary Commissioners in 1891 caused these parishes to exchange their detached parts. The drainage is mainly carried west-south-westward towards the Forth by the Black Devon; and in the extreme W the surface declines to 200 feet above sea-level, thence rising eastward to 340 feet near Stand Alane, 700 near Bandrum, 627 near Miry Hall, and 1178 at Saline Hill. Coal, limestone, and ironstone have been largely worked; and the soil of the low tracts is mostly a mixture of clay and loam incumbent on till, generally somewhat shallow, but in places extremely fertile. The uplands are chiefly pastoral, and partly marshy, yet include some good arable tracts. Peat moss abounds in the marshy parts, and affords excellent peat fuel. The antiquities are some cairns, two Roman camps, and two old towers; and mansions, noticed separately, are BALGONAR, BANDRUM, and KINEDDER. Including ecclesiastically a portion of TORRYBURN, Saline is in the presbytery of Dunfermline and the synod of Fife; the living is worth £164. The parish church occupies a conspicuous site, and is a handsome Gothic edifice. There is also a Free church; and the public school, with accommodation for 200 children, has an average attendance of about 145, and a grant of over £135. Valuation (1885) £7936, 16s. 3d., (1893) £8350, 11s. Pop. of ecclesiastical parish (1881) 1038, (1891) 965; of civil parish (1801) 945, (1831) 1139, (1861) 1610, (1871) 1259, (1881) 954, (1891) 760.—*Ord. Sur.*, shs. 40, 39, 1869-67.

Salisbury Craigs. See ARTHUR'S SEAT and EDINBURGH.

Salloch. See GLENSALACH.

Salsburgh or **Salysburgh**, a village, with a post office, in Shotts parish, Lanarkshire, 3¼ miles NW of Shotts station, and 4½ ENE of Holytown. Pop. (1861) 325, (1871) 553, (1881) 576, (1891) 481.

Saltburn, a village, with a public school, in Rosskeen parish, NE Ross and Cromarty, on the shore of the Cromarty Firth, 1¼ mile NE of Invergordon.

Saltcoats, a town in Cunninghame district, Ayrshire, in the parishes of Ardrossan and Stevenston. Lying about the middle of the northern side of the Bay of Ayr, 1¼ mile ESE of the town of Ardrossan, it has a station on a branch line of the Glasgow and South-Western and another on the Lanarkshire and Ayrshire railway (opened in 1888), 4 miles WSW of Kilwinning Junction, and 29½ SW of Glasgow, and is one of the favourite watering-places of the inhabitants of the west. Its site is low level ground in the vicinity of sandy bluffs and flat expanses, but is relieved from dullness by the vicinity of a range of high ground to the N, and by the prospect across the waters of the splendid mountains of Arran. What with a colliery at the east end of the town, its proximity to Ardrossan on the one side with its har-

bours and docks, and with Stevenston on the other with its colliery, explosive works, and foundries, the trade and the population of the place have gone on increasing. In the west end a large number of private residences have been erected. Possessing an extensive sandy beach on each side of the town, Saltcoats is much resorted to for sea-bathing, a select place at the North Pans having been opened formally in 1894, when a number of seats also were placed along the shore at suitable sites, and the amenity of the east shore otherwise improved. Great improvements have likewise been effected in the town. Large alterations and additions to the railway station in 1894, and the construction of additional sheds, caused extensive alterations and improvements on the roads in the neighbourhood. Some of the churches, and one or two other public buildings, have claims to architectural beauty. The Town-hall, opened in 1892, and costing about £4000, was erected on the site of the old parish school and immediately to the south of the old Town-house and steeple (erected in 1825), with the picturesque style of which it is made to harmonize in some degree. The public hall, with gallery, is capable of holding 850 people, exclusive of the platform. A spacious landing on the upper floor leads to the gallery, to the court-room, and to the old town-house. There are also retiring-rooms, a cloak-room, and lavatories. At the opening ceremony a bust of the late Mr William Burns, a distinguished native of Saltcoats, was presented by his step-son Lord Shand. Places of worship in Saltcoats are Ardrossan parish church (1774), the North church, the Free church, the Gaelic Free church, the Trinity and West U.P. churches, the E.U. church, Salvation Army barracks, and the Roman Catholic church of Our Lady, Star of the Sea (1856). The last is a good Early English edifice, built at a cost of £2200. A hall in connection with the Young Men's Christian Association was erected in 1893. The public school, French Gothic in style, with accommodation for 689 children, and with a bell-tower 60 feet high, was erected in 1876; and in 1885 another school, with accommodation for 289 children, was erected in place of Kyles Hill School. There is also a Roman Catholic school, with accommodation for 313 children. The town has an abundant supply of gravitation water of excellent quality, a post office, with money order, savings bank, insurance, and telegraph departments, branches of the Bank of Scotland and Royal Bank, three hotels, a gas company (who light the town lamps free), an admirable drainage system and excellent paving, a cemetery, a horticultural society, homes for the destitute, several halls, a Young Men's Christian Association, a golf club, a hathing club, etc. The Mission Coast Home, comprising three buildings and affording accommodation and treatment for about 60 inmates, is supported by voluntary contributions. Saltcoats was made a burgh of barony by a charter of 1528; but it soon lost its burghal character, and almost sank into extinction. It was originally a collection of clay-built cots, inhabited by poor persons who manufactured salt in small pans and kettles; and it thence obtained the name of Saltcotes. But it possessed only a fitful prosperity, and about the year 1660 it had dwindled away to only four houses. In 1686, however, Robert Cunninghame, whose uncle, Sir Robert, had purchased the barony of Steveston in 1656, built several large salt pans at Saltcoats, placed the manufacture of salt on an entirely new and advantageous footing, constructed a harbour, formed a canal for the conveyance of coal to the harbour, and opened various coal-pits in the vicinity. The decayed hamlet grew suddenly into a considerable village, and the village thenceforth enlarged into a small town. The salt manufacture, engaging seven large salt pans, continued to flourish till the repeal of the salt duty in 1827, and is now quite extinct. A magnesia work, started in connection with the salt pans in 1802, was the earliest establishment of its kind in Scotland. Shipbuilding has at various periods been vigorously conducted, but has been so fitful as alternately to rise into prominence and to sink into extinction. The commerce of the port

has ceased for a good many years, having been absorbed by ARDROSSAN. It consisted chiefly in the export of coals to Ireland, and was of such extent that the amount of local dues yielded by it was about £120 a year. The harbour is a creek of the port of Irvine. Saltoats became a burgh in 1885, and by the Burgh Police Act of 1892 its affairs are managed by a provost, 2 bailies, and 6 commissioners. The design for the burgh seal was fixed by the burgh commissioners in 1894. On the top of the seal is a fishing smack, in the centre a representation of an old landmark—the salt pans—and on each side a herring. The motto is—'Per mare et per terram' (By sea and land). A fair for cattle, pigs, and hiring is held on the last Thursday of May; and a justice of peace court sits on the first Friday of every month. Pop. (1821) 3413, (1841) 4238, (1861) 4780, (1871) 4624, (1881) 5096, (1891) 5895, of whom 3136 were females, and 4228 were in Ardrossan parish. Houses (1891) inhabited 1309, vacant 114, building 25.—*Ord. Sur.*, sh. 22, 1865.

Salthouse Head. See PETERHEAD.

Salton, a parish of W Haddingtonshire, whose church stands at East Salton village, in the centre of the parish, 6½ miles SSW of Haddington, 5½ SE of Tranent, and 2½ ESE of the post-town, Pencaitland. Containing also West Salton village (1 mile WSW), with a post office, it is bounded N by Gladsmuir, NE by Haddington, E and SE by Bolton, S and SW by Humbie, and W and NW by Pencaitland. Its utmost length, from N to S, is 3½ miles; its utmost width is 2½ miles; and its area is 3811½ acres. The TYNE winds 2½ miles north-eastward along or near to all the north-western and northern boundary; and its affluent, Salton or Birns Water, over the last 3½ miles of its course, roughly traces all the eouthern, south-western, and western boundary. The surface has a general eouthward ascent—from a little below 200 feet at the northern border to a little over 500 at broad-based Skimmer Hill. On the SE and E this high ground is, in a certain degree, continued by low uplands; but on all other sides the surface falls gradually off to the boundaries, and becomes lost in levels of very humble altitude. A wood, which covers nearly 1 square mile, and is continuous with a forest of similar size in Hmbie, occupies most of the hanging plain on the SW. The rocks are carboniferous; and limestone has been largely worked, whilst coal is believed to lie under the strata of limestone. The soil is very various, chiefly a deep rich clay, but also a clayey or friable loam and a light sand. Except the area under wood, and about 150 acres in permanent pasture, the entire parish is arable. Salton is noted for having been the first place in Scotland in which pot-barley was manufactured, and the first in Britain in which the weaving of hollands was established—both these industries having been introduced from the Netherlands by the lady of Henry Fletcher of Salton in or soon after 1710. It was also the first place in which a bleachfield of the British Linen Company was formed (in 1750), and one of the earliest in which a paper-mill and a starch-work were set up. It is further associated with the invention and improvement of some agricultural machines; but all its manufactures have long been things of the past. The parish is traversed by the road from Edinburgh, across the Lammermuirs, to Duns. In the 12th and the first half of the 13th century the manor of Salton belonged to the De Morvillee, lords high-constables of Scotland, and their successors the Lords of Galloway; but about 1260 the greater part of it seems to have been possessed by Sir William de Abernethy, whose descendant, Laurence, in 1445 was created Baron Saltoun (see PHILORTE). In 1643 the ninth Lord Saltoun sold the estate to Sir Andrew Fletcher, a judge of session, with the title of Lord Innerpeffer, among whose descendants have been Andrew Fletcher (1653-1716), the patriot and political writer, and Andrew Fletcher, Lord Milton (1692-1766), a distinguished judge. The present owner is John Fletcher, Esq. (b. 1827; suc. 1879). His seat, Salton Hall, on the right bank of Salton Water, 1½ mile WNW of East Salton, was formerly a fortified

place of some strength, but, as modernised and improved in recent years, is now a fine Elizabethan structure, with a great square tower, a valuable library (formed by the patriot, Andrew Fletcher), and a large and well-wooded park (Jn. Small's *Castles and Mansions of the Lothians*, 1833). Another mansion, noticed separately, is HERDMANSTON. Gilbert Burnet, D.D. (1643-1716), historian and Bishop of Salisbury, was minister from 1665 to 1669, and at his death bequeathed 20,000 merke for the benefit of the parish, to be applied in building a schoolhouse, clothing and educating 30 poor children, improving a library for the use of the minister, etc. The proceeds of this bequest now amount to about £100. Patrick Scougal, D.D. (1608-82), was minister from 1659 to 1664, when he was raised to the bishopric of Aberdeen; and his son Henry (1650-78), author of *Life of God in the Soul of Man*, has been claimed—wrongly it would seem—as a native. Salton is in the presbytery of Haddington and the synod of Lothian and Tweeddale; the living is worth £231. The church, which was held by Dryburgh Abbey from its foundation till the dissolution, was annexed in 1633 to the short-lived see of Edinburgh. As almost rebuilt in 1805, it is a cruciform Gothic edifice, with 400 sittings, a tower and spire 90 feet high, and the family vault of the Fletchers. A Free church for Salton and Bolton is situated in the latter parish, 1½ mile NNE of East Salton. Salton public school, with accommodation for 139 children, has an average attendance of about 90, and a grant of nearly £90. Valuation (1885) £6011, 9s., (1893) £4630, 12s. 6d. Pop. (1801) 786, (1831) 786, (1861) 712, (1871) 647, (1881) 575, (1891) 495.—*Ord. Sur.*, sh. 33, 1863.

Sampfrey, an uninhabited island of Delting parish, Shetland, in the SE entrance of Yell Sound, ¼ mile S by W of the south-western extremity of Yell island. It has an utmost length and breadth of 7½ and 4½ furlongs, and attains a maximum altitude of 99 feet.

Sameon's Ribs. See ARTHUR'S SEAT.

Sanda, a small island, belonging to the parish of Southend, Argyllshire. It lies at the W side of the entrance of the Firth of Clyde, 1½ mile SSE of the nearest part of the peninsula of Kintyre, 6½ miles ESE of the Mull of Kintyre, and 10 S by E of Campbeltown. It has an utmost length and breadth of 1½ and ¾ mile, and a circumference of 4 miles; consists of sandstone rock; and has a tumulated surface, with an extreme altitude of 405 feet above sea-level. Moderately high cliffs form part of its shores; and one of these is pierced with a very large natural arch, and forms a very picturesque object. The island is covered with good grass, and is all disposed in sheep-walk, in the tenancy of one farmer. Two islets, called Sheep Isle and Glunimore, lie off its NE side, and are also clothed in good grass. A small, good, natural harbour lies between it and these islets, and is a place of shelter and rendezvous for the smaller sort of vessels which navigate the Clyde. This harbour was a common station of the Scandinavian fleets during the contests for the possession of Kintyre and the Hebrides. The island, in this connection, was then called Avona Porticosa—a name which it still retains, in the abbreviated form of Aven, among the Highlanders; but it figures, under its more proper name of Sanda, in the more ancient record of Adamnan's Life of Columba. There are remains on it of an ancient chapel which was dedicated to Columba, and of a circumjacent cemetery which appears to have long possessed some superstitious celebrity. A dangerous rock, above a mile in circumference, and bearing the name of Pater-son's Rock, lies 1 mile E by N of Sanda; and, being always covered by flood tide, has endangered many a vessel. A lighthouse, erected on Sanda in 1850 at a cost of £11,931, and altered in 1881, shows an occulting light in a SW direction, from NW ½ W round to SE by E ½ E, visible at the distance of 18 nautical miles. There is also a fog eyren. Pop. (1841) 11, (1861) 36, (1871) 57, (1881) 14, (1891) 36.—*Ord. Sur.*, sh. 12, 1872.

Sanday, a small island in the Hebridean parish of SMALL ISLES, Inverness-shire, lying on the S side of the

eastern extremity of CANNA, of which it may be viewed as constituting a portion, the two being united at low water by a beach of shell sand. It extends $1\frac{1}{2}$ mile east-by-southward, has a maximum breadth of 5 furlongs and an area of $577\frac{3}{4}$ acres, and is distant $2\frac{1}{2}$ miles from RUM. Its surface is low at the side towards CANNA, but rises at its south-western extremity to 192 and at its eastern to 131 feet above sea-level, terminating in abrupt cliffs, which are skirted with detached high masses of rock. See DUN-NA-FEULAN. Pop. (1871) 58, (1881) 62, (1891) 62.

Sanday, one of the most considerable of the North Isles of Orkney. It contains a post office station of its own name. It lies $2\frac{1}{2}$ miles N of Stronsay, $1\frac{1}{2}$ mile E of Eday, 7 miles E of Westray, and $2\frac{1}{2}$ S of North Ronaldshay. Its form is exceedingly irregular, and may, in a general view, be regarded as three large peninsulas and two small ones radiating from a common centre. Its length, from NE to SW, is $13\frac{1}{2}$ miles; and its breadth varies between $\frac{1}{2}$ mile and 5 miles. Excepting a hillocky ridge of 116 to 173 feet in altitude on its W side, the island is extremely flat. Its soil is everywhere light and sandy, and, when well manured with seaweed, produces as good crops as any which are raised in Orkney. The principal harbours are Kettletoft on the SE side of the island, and OTTERS-WIOK BAY on the NE, both commodious and pretty safe. At Start Point, on the east, a lighthouse was erected in 1806, with a fixed red light, visible at a distance of 14 miles. Eleven small lakes, the largest about $2\frac{1}{2}$ miles in circumference, and two or three others not much inferior to this, occur in various parts of the island, particularly in the N. On the promontory of Els Ness, which projects to the S, and commands an extensive sea view, are upwards of twenty vitrified cairns, supposed by Dr Hibbert to have been signal stations of the Norsemen for communicating with their fleets in the sound. The other antiquities of the island are the ruins of one or two ancient chapels, and of some considerable Picts' houses. Sanday is ecclesiastically divided into LADY parish on the E, and the united parish of CROSS AND BURNES on the W. There are U.P. and Free churches, and a Free Church preaching station. Five public schools—Burness, Cross, Lady (central), North Ronaldshay, and Sellibister—with respective accommodation for 101, 60, 140, 96, and 105 children, have an average attendance of about 55, 35, 110, 60, and 40, and annual government grants amounting to nearly £65, £55, £140, £65, and £60. Pop. (1831) 1839, (1861) 2145, (1871) 2053, (1881) 2082, (1891) 1929, of whom 1084 were in Cross and Burness, and 845 in Lady.

Sandbank and Ardnadam, two watering-places which are virtually one, lying on either side of the pier, in Dunoon parish, Argyllshire, on the S side of Holy Loch, opposite Kilmun, and $2\frac{3}{4}$ miles NNW of Dunoon town. Of recent origin, the place forms the upper end of the long line of summer sea-bathing resort extending through Hunter's Quay and Kirn to the southern extremity of Dunoon; occupies a similar site and enjoys similar amenities and advantages to those of Kilmun and Hunter's Quay; commands ready access to the romantic glens at the head of Holy Loch; enjoys communication with Greenock and Glasgow by means of the steamers; and has a post office, with money order, savings bank, and telegraph departments, 3 hotels, a pier 200 feet long, a club-hall, a bowling-green, a coffee-house, a good water supply, a *quoad sacra* church, a Free church, a public school, a dam for supplying the North British railway steamers with water led to the pier by iron pipes, and two newspapers—the Saturday *Argyllshire Standard* (1871) and the *Wednesday Cowal Watchman* (1876). The Established church, built as a chapel of ease at a cost of £840, has a stained-glass window, and was made *quoad sacra* in 1876. Pop. of village and parish (1871) 620, (1881) 570, (1891) 721.—*Ord. Surv.*, sh. 29, 1873.

Sandend, a fishing village in Fordyce parish, Banffshire, SE of Crathie Point, and $2\frac{1}{2}$ miles W by N of Portsoy.

Sanderay, an island in the Hebridean parish of Barra, Inverness-shire. It lies $3\frac{1}{2}$ miles S of the island of Barra, $2\frac{1}{2}$ miles NE of Pabbay, and $\frac{3}{4}$ mile SSE of Vatersay, being separated from the last by a strait called the Sound of Sanderay. Though indented in outline, it is not far from being circular, with a diameter of $1\frac{1}{2}$ mile; and it consists of a single hill of gneiss, which attains an elevation of 800 feet. To a certain extent it is sheltered from the western swell by the islets Fladda and Linga, but it is so covered with drifted calcareous sand as to present the appearance, at some distance, of being sheeted with snow. A very large Danish dun is on its E coast. Pop. (1871) 7, (1881) 10, (1891) 4.

Sandford. See STONEHOUSE.

Sandford Bay. See PETERHEAD.

Sandhaven. See PITULLIE and PITSLIGO.

Sandhead, a village in Stoneykirk parish, Wigtownshire, on Luce Bay, 7 miles S by E of Stranraer. It has a post and telegraph office, an inn, a public school, a neat and substantial co-operative creamery, erected in 1894, and a natural harbour consisting of a small bay, and affording anchorage for lime and coal sloops.—*Ord. Surv.*, sh. 3, 1856.

Sands, a mansion in Tulliallan parish, Fife, near the shore of the Firth of Forth, $1\frac{1}{2}$ mile SE of Kincardine. Its owner is Laurence Johnston, Esq. (b. 1856).—*Ord. Surv.*, sh. 39, 1869.

Sandside Bay. See REAY.

Sandsound Voe, an elongated narrow bay or sea-loch in Sandsting parish, Shetland. It opens at the extremity of the N side of Scalloway Bay, strikes $5\frac{1}{2}$ miles north-north-westward, and is all narrow and winding.

Sandsting and Aithsting, a united parish in the middle of the Mainland of Shetland, 13 miles and upwards NW of Lerwick, under which there are post offices at Tresta and Garderhouse. It comprises the islands of Vementry and Papa Little, with a number of smaller islets, and is bounded NE by Delting, E by Tingwall, W by Walls, and on all other sides by the sea. Its utmost length, from N to S, is $13\frac{1}{2}$ miles; its utmost breadth, from E to W, is $8\frac{1}{2}$ miles; and its land area is $62\frac{1}{2}$ square miles, or 39,870 acres. The coast, which in places is bold and rocky, is deeply indented by Gruting, Skeld, Seli, and Sandsound Voes on the S, and by West Burra Firth, Brindister Voe, and Aith Voe on the N. The surface is everywhere hillocky, and, at no point reaching any noticeable elevation or admitting any considerable extent of plain, attains 297 feet in Vementry, 348 at the Ward of Scollan, 457 near the eastern border, 436 at Sand Field, 355 at the Giant's Grave, and 393 at the Ward of Culswick. A perfect network of fresh-water lochs is scattered over the interior, their number being estimated at no fewer than 140 in the *New Statistical Account*. Among the larger are Clousta, Vaara, Hulma, Gossa, Sulma, and Vaxterby Lochs, the last of which lies on the Walls boundary. The rocks include red granite in the W, quartzose gneiss, quartzite, hornblende slate, felspar porphyry, syenitic greenstone, etc. The soil, in a few places sandy, in some clay, and in others a light brown mould, is mostly a deep black moss. The arable land lies mostly along the shore. Antiquities are several standing-stones and sepulchral barrows, three or four Scandinavian brochs, and five pre-Reformation burying-grounds. Reawick is the chief mansion. Sandsting is in the presbytery of Olnafirth and the synod of Shetland; the living is worth £173. The parish church, built in 1780, contains 437 sittings. There are also Baptist and Congregational chapels; and 7 public schools, with total accommodation for 434 children, have an average attendance of about 300, and grants amounting to nearly £400. Valuation (1884) £2673, 5s. 3d., (1893) £2288, 15s. 11d. Pop. (1801) 1493, (1831) 2194, (1861) 2670, (1871) 2806, (1881) 2702, (1891) 2562, of whom 1541 were females.

Sandwick, an Orkney parish on the W coast of Pomona, whose church stands 100 yards from the NE shore of the Bay of Skail, and 5 miles N by W of

Stromness, under which there is a post office. It is bounded N and NE by Birsay, E by Harray and the Loch of Harray, SE by Stenness and the Loch of Stenness, S by Stromness, and W by the Atlantic Ocean. Its utmost length, from N to S, is 5½ miles; its utmost width is 4¾ miles; and its land area is 18½ square miles or 11,827 acres. The coast, 7¼ miles in extent, is everywhere precipitous, except at the Bay of Skail, which measures 6 furlongs across the entrance and 4½ thence to its inmost recess, and S of which the Ward Hill rises steeply to a height of 194 feet above sea-level. The western district is somewhat hilly, in the S attaining 342 feet at Crua Breck, 252 at Gyran, and 206 at Linga Field, in the N 305 at Vestra Field; whilst the eastern district slopes gently towards the Lochs of Harray and STENNESS. The Loch of Skail (7 × 4 furl.) is the largest of seven small fresh-water lakes scattered over the interior. The rocks include granite, flagstone, sandstone, and trap; bog-iron, clay, and marl are plentiful; and moss yields abundance of peat-fuel. To abridge from a recent article by Mr Pringle, 'The parish of Sandwick presents a more fertile aspect than that of Stromness, and a more advanced state of agricultural industry. The manse has a singularly cosy look for an Orkney dwelling owing to the thriving plantation which is growing in front of it. There are about 70 heritors, and the valuation of many of these lairds does not exceed £15 to £20 per annum, whilst some are valued as low as £5 per annum. They are the relics of the old Norse udallers, a class of freeholders once very common in Orkney, but now existing only in some parts of the West Mainland. Hitherto this class has not done much in improving their lands, and their houses and habits are those of the lowest rank of peasantry. If they make a shilling they put it past, and no inducement is sufficient to cause them to part with it. The improved appearance of the parish is owing chiefly to the operations carried on by the late W. W. G. Watt, Esq. of Breckness, who owned fully two-thirds of the parish. Mr Watt's father for many years farmed a large portion of his property, and effected great improvements on it, and the work so begun was carried out on a still more extensive scale by his son. The farms of Skail and Kierfield are as highly improved and well cultivated as if they had been situated in East Lothian, instead of on the N side of the Pentland Firth. These farms are contiguous, but are worked separately. The soil of both farms varies from pure sand to a stiff clay loam, and their extent altogether is upwards of 700 acres.' Near the coast are remains of a large building, the 'Castle of Snusgar,' and other antiquities are standing-stones, vitrified cairns, a cromlech, Scandinavian brochs, a great number of sepulchral barrows, and ruins of a small old church. A large collection of ornaments, ingots, coins, etc. (more than 16 lbs. in weight), was found in 1858 in a sandhill near the N side of the Bay of Skail, and is now in the Edinburgh Antiquarian Museum. This deposit, which was probably the concealed hoard of some of the Scandinavian Vikings of the 10th century, consists of five large penannular ring brooches, having bulbous extremities shaped like thistle-heads, and ornamented with dragoesque tracery on one side and prickly-like ornament on the other; four penannular ring brooches, with flattened extremities and thistle-headed acus; thirteen wreathed neck-rings of silver wire, spirally twisted together, and with recurved ends or hook and eyelet fastenings; an arm-ring, 3¾ inches inner diameter, of spirally twisted plaits of silver wire, welded into solid ends, which terminate in dragoesque heads; a flat arm-band of thin metal; an arm-let or ankle, penannular in form and triangular in section; twenty-five plain rings of the same form; a quantity of ingots of silver; a quantity of fragments of brooches, rings, etc., which have been purposely chopped into small pieces; seven Cufic coins of the Samanian, and two of the Abbasside Caliphs, dating from A.D. 887 to 945; a coin of Æthelstan, 925, struck at Leicester; and a Peter's Penny, struck at York. The Rev. Charles Clouston. LL.D., eminent as a meteorologist, naturalist,

and antiquary, was minister from 1833 till his death in 1884. Sandwick is in the presbytery of Cairston and the synod of Orkney; the living is worth £178. The parish church, built in 1836, contains 564 sittings. There are a U.P. church of Sandwick (1828) and a Free church of Harray and Sandwick; and Dounby and the North and South and Yesnaby public schools, with respective accommodation for 93, 60, 60, and 53 children, have an average attendance of about 80, 50, 60, and 15, and grants of nearly £90, £65, £75, and £15. Valuation (1884) £3660, 11s. 1d., (1893) £3325, 6s. 6d. Pop. (1801) 970, (1831) 973, (1861) 1225, (1871) 1153, (1881) 1198, (1891) 1109.

Sandwick, a hamlet, an ancient parish, and a *quoad sacra* parish in the S of Shetland. The hamlet lies on the E coast of Mainland, 13 miles SSW of Lerwick, under which it has a post, money order, and telegraph office. The ancient parish lies around the hamlet, and is now annexed, *quoad civilia*, to Dunrossness. The *quoad sacra* parish, comprehending the ancient parishes of Sandwick and Conningsburgh, is in the presbytery of Lerwick and synod of Shetland. Stipend £120. The church was built in 1807 at the expense of government, and contains 564 sittings. An Established mission church and a Free church are in Conningsburgh; and a Free Church preaching station, a Good Templar lodge, a Rechabite tent, a public school, and a parochial library are in Sandwick. Pop. of *q. s.* parish (1871) 2326, (1881) 2308, (1891) 2114.

Sandwick, a village in Stornoway parish, Lewis, Ross and Cromarty, 1¼ mile E by S of the town. Pop. (1871) 445, (1881) 525, (1891) 491.

Sandy Knowe. See **MALHOLM**.

Sannox. See **GLENSANNOX**.

Sanquhar, a small town and a parish of Upper Nithsdale, Dumfriesshire. A royal and parliamentary burgh, the town stands 440 feet above sea-level, within 3 furlongs of the Nith's left bank. By road it is 32 miles ESE of Ayr, 18¾ SW of Abington station on the Caledonian railway, and 56 SW of Edinburgh; whilst its own station on the Glasgow and South-Western railway (1850) is 26½ miles NNW of Dumfries and 16¼ ESE of Cumnock. The main street runs 5 furlongs south-eastward along the Glasgow and Dumfries highroad (1777); and on a rising-ground, at its upper end, stands the parish church (1824; 960 sittings), a handsome edifice with a square tower. This succeeded a building which was remarkable for its size and disproportion, and which, from some sculptured stones in its walls, was supposed to be of great antiquity. At an expansion of the High Street, a short way from its head, is the town-hall, built at the expense of the last Duke of Queensberry, and having a tower and clock; and in 1882 a handsome public hall was erected at a cost of £1500. On a steep bank, overlooking the Nith, about 1 furlong from the foot of the town, stands the picturesque ruin of Sanquhar Castle. This seems to have been a strong quadrangular structure, with towers at the angles. On the N side was a deep fosse with a drawbridge; on the W were gardens, whose site retains trace of a fish pond; on another side was a spacious deer park; and a little way to the SE is the ancient mote of Ryehill. Either the castle, or some fortified predecessor on its site, seems to have given origin, as it certainly gave name, to the town; for 'Sanquhar,' originally and for centuries spelt 'Sancher' or 'Sanchar,' is simply the Celtic *seann-caer*, 'an old fort.' The earliest proprietors of the castle and circumjacent lands, or Lords of Sanquhar, were the Roos, Roose, or Ross family, cadets of the Earls of Ross, Lords of the Isles. Isabel de Ross, daughter and heiress of Robert de Ross, the last of the line, married William de Crichton, who died in 1360; and Sir Robert de Crichton, their great-grandson, was, in 1485, created Lord Crichton of Sanquhar. The sixth Lord, Robert, was hanged at Westminster in 1612 for the murder of a fencing master; and his kinsman and successor, William, first Earl of DUMFRIES, who in 1617 welcomed James VI. to the 'Peel' of Sanquhar, in 1630 disposed of lands, lordship, and castle to William Douglas, Viscount of DRUMLAN-

RIG. The castle became now the seat of the proud Drumlanrig Douglases. Even after William, first Duke of Queensherry (1637-95), had built the magnificent palace of Drumlanrig, he spent but one night within its walls, and retired for the remainder of his days to Sanquhar Castle. The old pile was forsaken, however, by the second Duke, and abandoned to utter neglect. Plunderers speedily thronged upon it, first to divest it of its leaden roof, next to use it as a quarry, until they left not a vestige of its ancient magnificence except its gaunt but venerable ruin. Excavations carried out in 1876 brought to light several human skeletons and a very deep well with a bucket suspended in it.

Sanquhar rose into considerable prosperity under the fostering care of the third Duke of Queensherry, who, at a cost of £1500, formed for at least 21 miles across his estate, the great line of road which passes through the hugh between Dumfries and the West of Scotland. He also cut, at an expense of £600, a cross road running up Minnick Water to Wanlockhead, and at a cost of £300 a road in the neighbouring parish of Kirkconnel, leading up to a lime-work at Whitecleugh; whilst, jointly with the Trustees for the Encouragement of Manufactures, he gave £40 a year to be distributed among stocking-makers and other manufacturing artificers in the town and its vicinity. The knitting of stockings and mittens, mostly parti-coloured and very various in pattern, long formed a staple manufacture, and afforded a large number of the lower classes a comfortable support; but this industry was extinguished by the outbreak of the American War in 1775, the principal market having been Virginia. Blankets and other woollen goods, however, are manufactured; hut brick and tile making, coal-mining, and the manufacture of shovels constitute the leading industries. Sanquhar has a post office, with money order, savings bank, and telegraph departments, branches of the British Linen Co. and Royal Banks, a local savings bank (1819), two hotels, gas and water companies, a howling and lawn tennis club, a curling club (1774), a social club, a subscription library, a Young Men's Christian Association, a farmers' society, an angling association, and fairs on the first Fridays of February and November (both old style), and on 17th July, if a Friday, otherwise on the first Friday following. Places of worship, besides the parish church, are a Free church (1845), the North U.P. church (1849), of which the Rev. Robert Simpson, D.D. (1792-1867), author of *Traditions of the Covenanters*, etc., was for 47 years minister, the South U.P. church (1742), and an Evangelical Union church (1864). A fund of £2000 was appropriated by the executors of the late James Crichton of Friar's Carse, a native of Sanquhar, for the purpose of erecting and endowing a free school in his native town. Since 1885 the net proceeds of this endowment, after two annual bursaries of £5 and free books to poor children have been provided for, are applied by the School Board to the purposes of higher education.

The 'Corda' of Ptolemy, a town of the Selgovæ, Sanquhar was a burgh of harony from time immemorial, and

was re-erected in 1484. In 1598, at the instance of Robert, sixth Lord Crichton of Sanquhar, it was, by charter of James VI., constituted a royal burgh. The town council consists of a provost, 2 bailies, a dean of guild, a treasurer, and 4 councillors. A grey granite monument, erected in 1860, marks the site of the old town cross, to which were affixed the two famous Sanquhar

witnessing against the usurpation of the government by James VII. Sanquhar unites with DUMFRIES, Annan, Kirkcudbright, and Lochmaben in returning a member to parliament. Parliamentary constituency (1896) 236; municipal, 320. Corporation revenue (1832) £66, (1865) £354, (1884) £280, (1896) £160. Valuation (1885) £4120, (1896) £3866. Pop. (1831) 1527, (1841) 1719, (1851) 2381, (1861) 1754, (1871) 1324, (1881) 1339, (1891) 1315, of whom 695 were females, and 1241 were in the royal burgh. Houses (1891) inhabited 325, vacant 16, building 3.

The parish, which contains also the villages of WANLOCKHEAD and CRAWICK MILL, since 1727 has comprehended great part of the ancient parish of Kirkbride. It is bounded NW by Kirkconnel, NE and E by Crawfordjohn and Crawford in Lanarkshire, SE by Durisdeer, S by Penpont and by Dalry in Kirkcudbrightshire, and W by New Cumnock in Ayrshire. Its utmost length, from ENE to WSW, is 15 $\frac{3}{8}$ miles; its utmost breadth is 7 $\frac{1}{2}$ miles; and its area is 64 $\frac{1}{2}$ square miles or 41,077 $\frac{3}{8}$ acres, of which 231 $\frac{1}{2}$ are water. The NITH flows 2 miles east-south-eastward along the Kirkconnel border, then 5 $\frac{1}{2}$ miles through the interior; and amongst its numerous affluents the chief are KELLO WATER, running 8 $\frac{5}{8}$ miles north-eastward along the New Cumnock and Kirkconnel boundary; CRAWICK WATER, running 8 miles south-south-westward along the Kirkconnel boundary; EUGHAN WATER, running 9 $\frac{1}{4}$ miles east-north-eastward through the south-western interior; and MINNICK WATER, running 6 $\frac{5}{8}$ miles west-south-westward through the north-eastern interior. Declining along the Nith, at the point where it quits the parish, to 347 feet above the sea, the surface is everywhere hilly or mountainous. Chief elevations to the NE of the Nith are Dalpedder Hill (1291 feet), *Cairn Hill (1471), *Threehope Height (1802), Brown Hill (1544), Willowgrain Hill (1686), *LOWTHER Hill (2377), Stood Hill (1925), *Wanlock Dod (1808), and Conrig Hill (1591); to the SW *Heathery Hill (1669), Whiteside Hill (1695), Mid Hill (1695), *Corse Hill (1902), and *BLACKLARG Hill (2231), where asterisks mark those summits that culminate on or close to the confines of the parish. The vale of the Nith is here a mimic strath of considerable beauty, flanked by hill-screens which are cleft by little transverse vales, each bringing down its tribute rivulet to the Nith. The rest of the surface is hilly, partly green and partly heathy, exhibiting great diversity of upland character and mountain contour. The rocks of the uplands are nearly all of Silurian formation. A coalfield, extending along the Nith, is supposed to be a wing of the great field of Ayrshire. Extensive lead mines are worked at Wanlockhead; and coal mines, as also quarries of sandstone and limestone, are worked in the carboniferous region. The soil in the vale of the Nith, and in the lower parts of some of the lateral vales, is in general dry and gravelly, and in some places loamy; but that in the other districts is for the most part clayey or mossy, much of it very wet, yet generally deep and well adapted for grazing. Rather less than one-seventh of the entire area is in tillage; nearly 800 acres are under wood; and almost all the rest is pastoral or waste. Castle-Gilmour stood near the right bank of Minnick Water, Kemps Castle on the left bank of Euchar Water; and other antiquities are part of the DEIL'S DYKE running S of the Nith, a crannog in Black or Sanquhar Loch, and remains of harrows, stone circles, etc. The glens and moors were the frequent retreat of the persecuted Covenanters. The Rev. Andrew Thomson, D.D. (1779-1831), an eminent Edinburgh minister, was born in the former manse; and a yet more illustrious native, the 'Admirable' Crichton (1560-c. 1585), was born in ELLILOCK House. The Duke of Buccleuch is the principal proprietor. Since 1861 giving off the *quoad sacra* parish of Wanlockhead, Sanquhar is in the presbytery of Penpont and the synod of Dumfries; the living is worth £370. Three schools—Sanquhar public, Minnick Bridge (Duke of Buccleuch's), and Wanlockhead—with respective accommodation for 392, 66, and 169 children, have an average attendance

Seal of Sanquhar.

'Declarations'—the first on 22 June 1680 by Richard Cameron, disowning allegiance to Charles II.; the second on 28 May 1685 by the Rev. James Renwick

of about 330, 35, and 140, and grants amounting to nearly £350, £30, and £135. Pop. (1801) 2350, (1851) 4071, (1871) 3038, (1881) 3109, (1891) 2910—of whom 2165 were in the ecclesiastical parish.—*Ord. Sur.*, sh. 15, 1864. See the Rev. Dr. J. Moir Porteous' *God's Treasure-House in Scotland* (Lond. 1876), and James Brown's *History of Sanquhar* (Dumfries, 1891).

Sanquhar House. See FORRES.

Sarclet, a small fishing village in Wick parish, Caithness, 5 miles S of Wick town.

Sark, a small river in the extreme SE of Dumfriesshire. It is formed by the confluence of Woodside or All-for-nought Burn, tracing the northern boundary of Half-Morton, and Hall Burn, out of Canonbie; and it winds 11½ miles in a southerly and a south-south-westerly direction to the head of the Solway Firth. For the first 3¾ miles it divides Half-Morton from Canonbie; and afterwards, over a distance of 7½ miles, it divides Half-Morton and Gretna from Cumberland. Its sources lie among the lower declivities of the Eskdale Hills, but by far the greater part of its course is across either a low and beautiful plain or along the skirts of the Solway Moss. It yields fair trout-fishing, but during a comparatively dry summer it almost ceases to exist.—*Ord. Sur.*, shs. 10, 6, 1864-63.

Sark, The Black, a rivulet of SE Dumfriesshire, rising at Burnfoot Hill, near Sarkshiels, in the parish of Kirkpatrick-Fleming, and flowing south-eastward through that parish, and through Half-Morton and Gretna, to the Sark, ¾ mile above Springfield.

Sauchen, a place in Cluny parish, Aberdeenshire, with a post office under Aberdeen and a branch of the North of Scotland Bank.

Sauchie, an estate, with a mansion and a ruined fortalice, in St Ninians parish, Stirlingshire, 3 miles SSW of Stirling. At the death of his cousin, Mr Ramsay, in 1865, it passed, with BARNTON, to Sir Alexander Charles Gibson-Maitland, Bart., of CLIFTON HALL, whose great-grandfather, the Hon. Gen. Alexander Maitland, received the baronetcy in 1818, and was the fifth son of Charles, sixth Earl of Lauderdale. His son, Sir James Ramsay-Gibson-Maitland, is the present and fourth Bart. (b. 1848; suc. 1876).

The Battle of Sauchie, called also the Battle of Sauchieburn or Stirling, was fought on 11 June 1488, between James III. and his insurgent nobles. The two armies met on a tract of ground, now called Little Cangler, on the E side of the streamlet of Sauchie Burn, about 1½ mile from the field of Bannockburn. The malcontent army was 18,000 strong, and was ranged in three divisions, commanded respectively by Lords Home and Hailes, by Lord Gray, and by officers acting as promoters to the Prince of Scotland, a youth of 15. The King's army is variously stated in strength, and was also disposed in three divisions, commanded (we are not told under what arrangement) by the Earls of Menzies and Crawford, the Lords Erskine, Graham, Ruthven, and Maxwell, and the second Lord Lyndsay of the Byres. The King was armed *cap-a-pié*, and mounted on a spirited grey charger, which Lord Lyndsay had given him that very day, with the assurance that he might at any moment trust his safety to its swiftness and sure-footedness, provided only he could keep his seat. The malcontents saw their first line driven back at the onset; but, the second speedily giving support, all became firm and composed; and they soon not only recovered their ground, but pushed the first and the second lines of the royalists back to the third. The King, who was not noted for courage, soon lost the little he possessed; and—previous to the striking of any decisive blow—put spurs to his horse and galloped off, with the view, it is thought, of saving himself in one of Sir Andrew Wood's two ships, which lay in the Forth near Alloa. After the King's flight, his troops continued to fight with great bravery; but eventually finding themselves unable to stand their ground, and disheartened by a flying rumour of the King's death, they began to retreat towards Stirling, and were allowed to retire without much pursuit. The victorious army

lay all night upon the field, and next day marched to Linlithgow. The number of slain on both sides must have been great, as the action was of several hours' duration, and stubbornly maintained; and on the royalists' side it included the Earl of Glencairn and some other persons of high rank. James himself, in his flight, was on the point of crossing the Bannock Burn at the village of Milton, when his horse started at a pitcher which a woman, in the act of drawing water, dropped at the sight of the furious rider. The King was thrown to the ground, and sustained such damage from his fall and the weight of his armour, that he fainted away. He was removed by the miller and his wife into a mill in the immediate vicinity, and treated by them, though ignorant of his rank, with every possible care. When he had somewhat recovered, he told them who he was; and, supposing himself dying, called for a priest. The miller's wife flew in search of a ghostly adviser, and, meeting a party of the malcontents who had observed the King's flight and were tracking his steps, entreated that, if there were a priest among them, he would stop and 'shrive his majesty.' 'I,' said one of them, whose name is not certainly known, 'I am a priest: lead me to him.' Being introduced, he approached on his knees under pretence of reverence, treacherously ascertained that the King thought he would recover if he had the aid of a surgeon, and then stabbed him again and again to the heart. 'Beaton's Mill,' a small old house, with cropp-stepped gables, but a mill no longer, is pointed out as the scene of this tragedy. The King was buried in CAMBUSKENNETH Abbey.—*Ord. Sur.*, sh. 39, 1869.

Sauchie, a village in Alloa parish, Clackmannanshire, with a station on the Devon Valley railway, 1½ mile N by E of Alloa, under which it has a post office, with money order, savings bank, and telegraph departments. A church here, built as a chapel of ease in 1841-42, and improved in 1889, was raised to *quoad sacra* status in 1877. A little to the southward lies the village of New Sauchie, now a suburb of Alloa. The population of both villages is largely composed of colliers, for the benefit of whose children there is a Sunday school maintained by an endowment known as Lady Charlotte Erskine's. Pop. of *q. s.* parish (1881) 2935, (1891) 3370.—*Ord. Sur.*, sh. 39, 1869.

Sauchieburn. See SAUCHIE, Stirlingshire.

Saughton, New, or Cammo, a mansion of 1693, with finely wooded grounds, in Cramond parish, Midlothian, 5 furlongs SSW of Cramond Bridge, and 2¼ miles WSW of Davidson's Mains.

Saulseat or Soulseat, an ancient parish and an abbey of Wigtownshire. The parish was a vicarage under the monks of the abbey; and, about the middle of the 17th century, it was incorporated with Inch. Its ecclesiastical revenues are divided between the minister of Inch and the minister of Portpatrick. The abbey stood on a peninsula of Saulseat Loch (4 × ½ to 2¼ furl.), in the vicinity of the present manse (1838) of Inch, 3 miles ESE of Stranraer. The building was in ruins in 1684, when Symson wrote his *Description of Galloway*; and it is now commemorated only by some grassy mounds. Its burying-ground contains some curious gravestones, one of them bearing date 1647. The abbey was founded in 1148 by Fergus, Lord of Galloway, for Premonstratensian monks. It was called in Latin *Sedes Animarum* ('souls' seat') or *Monasterium Viridis Stagni* ('monastery of the green loch'); but some have derived its name from its having had one Saul for its first abbot, and so being *Sedes Saulis* ('the seat of Saul'). Chalmers says, 'It was the mother of the more celebrated and opulent priory of Whithorn, as well as of the abbey of Holywood, both of which were planted by monks of the same order. It appears to have been the original establishment of the Premonstratensian monks in Scotland; and the abbots of Soulseat were the superiors of that order in this kingdom.' Its abbacy was one of the few in Scotland the appointment of which remained with the King, and could not be disposed of or controlled by the Pope. The abbey never rose to any eminence or

figured conspicuously in history. In 1568 its abbot, along with some of the most distinguished men of the kingdom, subscribed a bond obliging themselves to defend Queen Mary.—*Ord. Sur.*, sh. 3, 1856.

Scalloway, a seaport village in Tingwall parish, Shetland, 6 miles WSW of Lerwick. Its cottages are of a better description than most in the northern islands; and, arranged round a fine semicircular sweep of bay, they combine with the sea-scene in front, and the old castellated mansion of Scalloway towering above them in the rear, to form a picturesque landscape. The harbour is naturally good, and is supposed to have given to the locality the name of Scalloway, or 'the huts on the bay'—*Skabi* signifying 'a booth or shieling,' and *vagr*, transmuted into *way*, 'a voe or roadstead.' The village was anciently a burgh, and the capital of Shetland. In the 18th century most of the great Shetland landowners had residences here. The great bulk of the present population are fishermen and their families, there being 57 fishing boats belonging to the place in 1894. The inhabitants are industrious and persevering, and the fishermen very fearless. A large quay, warehouses, and a coepage were erected a good many years ago, for the accommodation of the fisheries; and Scalloway has a post office, with money order, savings bank, and telegraph departments, a branch of the Union Bank, a U.P. Church mission station, a Congregational chapel, an Oddfellows' lodge, and a public school. Pop. (1861) 448, (1871) 525, (1881) 648, (1891) 732.

Scalloway Castle, situated above the village, was built in 1600 by Patrick Stewart, the tyrannical Earl of Orkney. A previous mansion of the Earl, at Sunbungh, having given way in consequence of the sandiness of its foundation, the despot compelled the inhabitants, on pain of forfeiting their property, to find as many men as were required for speedily building a new castle, and to supply them gratuitously with provisions; and he superintended and matured the execution of his ignoble plan by means of a military force. The castle, though now a mere shell, exhibits plentiful and distinct indications of its original condition. It is a structure of three storeys, surmounted at each angle by a small round turret. The windows are very large; but the principal door is quite disproportionate and even puny. On the ground floor are an excellent kitchen and vaulted cellars, with a broad flight of ascending steps; and above are a spacious hall and suites of ordinary sized chambers.

Scalpa or Scalpay, an island in the Harris district of the Hebrides, with a post, money order, and telegraph office under Portree. It lies at the entrance of East Loch Tarbert, $\frac{1}{2}$ mile from the N, and 3 miles from the S headland. It measures $2\frac{1}{2}$ miles in extreme length, and $1\frac{1}{2}$ mile in extreme breadth; but is much indented, and cut into small peninsulas, by the sea. It is low and heath-clad, and consists of irregular protuberances of gneiss. A bed of serpentine, generally placed at a high angle, and often having a vertical position, traverses a promontory in the extreme E. Near the W extremity of the island are two of the best natural harbours in the Hebrides. At the SE extremity lies Glass Island, with a lighthouse having a fixed white light visible at a distance of 17 miles. Pop. (1841) 31, (1861) 388, (1871) 421, (1881) 540, (1891) 517.

Scalpay, an island of Strath parish, Skye, Inverness-shire, separated from the E coast of Skye by Scalpay Sound or Loch na Cairidh, which, at two points, is less than $\frac{1}{2}$ mile broad. It lies off the mouth of Loch Ainort, and is 7 furlongs SSE of Raassay, $9\frac{1}{2}$ miles SSW of Applecross, and $7\frac{1}{2}$ W by N of Kyle Akin. It is of an irregularly oval shape of $4\frac{1}{2}$ by 3 miles; and has the longer axis from NW to SE. Most of its area is occupied by a grassy mountain (994 feet) of uneven summit and rounded outline, displaying much bare rock, yet nowhere marked by asperities or wearing a barren aspect. The descent in most places, but especially along the side towards Skye, comes down in smooth and gentle declivities to the sea, but towards the NE it terminates in bold though not very high

cliffs. The Sound of Scalpay is a noted rendezvous of the herring fleet; and it abounds in oysters, some of which, both fish and shell, are black, while others are of a dingy blue colour. These oysters are supposed to be only a variety of the common species, and to derive their unwonted hue from the dark mud in which they breed. On the island are vestiges of an ancient chapel dedicated to St Francis. Pop. (1841) 90, (1861) 70, (1871) 48, (1881) 37, (1891) 49.

Scalpay Sound. See SCALPAY.

Scalpsie Bay, a bay ($9\frac{1}{2} \times 5$ furl.) on the SW coast of the island of Bute. It penetrates the boundary between the parish of Kingarth and the parish of Rothesay; and is screened on the N side by a small promontory called Ardschalpsie Point (90 feet), $1\frac{1}{2}$ mile ESE of the S end of Inchmarnock.

Scamadale, Loch. See KILNINVER.

Scapa Flow, a large expanse of sea interspersed with land in the southern parts of Orkney. Irrespective of lateral recesses and outlets, it measures about 15 miles in extreme length from N to S, 8 miles in mean breadth, and 45 or 47 miles in circumference. In a general view it may be regarded as having Pomona on the N, Burray and South Ronaldshay on the E, the Pentland Firth on the S, the island of Hoy on the W, and the small islands of Cava, Risa, Pharay, Calf, Flotta, Switha, and Hunda in its bosom. In the extreme NW it opens by Hoy Sound, 7 miles in length and 2 in mean breadth, to the Atlantic Ocean; in the NE it opens by Holm Sound, $3\frac{1}{2}$ miles by 2, to the German Ocean; in the middle of the E side it opens by Water Sound, 4 miles by $\frac{1}{2}$ mile, to the same ocean; and in the S it has the island of Swona near the middle of the line where it becomes identified with the Pentland Firth. This isle-begirt sea abounds, in its numerous recesses, with safe roadsteads and fine harbours. The chief is Longhope, in Walls, quite landlocked, capacious enough for the largest fleet, and possessing good anchorage and sufficient depth of water for the largest ship in the British navy; and others are Holm Sound, Widewall Bay, St Margaret's Hope, and Panhope. The tide, at its entering Scapa Flow from the SW, and through the Sound of Hoy, flows with rapidity akin to its current through the Pentland Firth; but it gradually slackens, till its motion becomes scarcely perceptible. At one part of the coast of Graemsay lying in the Sound of Hoy, the current, in consequence of being intercepted by a reef of rocks, runs 9 hours in one direction and 3 in the opposite.

Scarba, an island in the Hebridean parish of Jura, Argyllshire. It lies $1\frac{1}{2}$ mile N of the island of Jura, and $3\frac{1}{2}$ miles WNW of Craignish Point on the mainland. Its length is $3\frac{1}{2}$ miles, and its greatest breadth is $2\frac{1}{2}$; but its mean breadth is much less. Most of it consists of a single mountain of an oblong conoidal form, which towers aloft to a height of 1500 feet, and is conspicuous at a distance as much for its outline as for its altitude. The shores on the S, the W, and the N are generally high, rocky, and precipitous, and in some places consist of a perpendicular face or sheer fall of several hundred feet of the mountain. All these shores and the high grounds, wherever not quite naked, are for the most part covered with heath. But the E side of the island is eminently beautiful; it recedes in a semi-circular curvature from the sea, so as to enclose a fine bay in a magnificent amphitheatre; it rises up along the seaboard with a uniform and quite practicable acclivity; it has a subsidiary and comparatively low ridge of rising ground along the skirt of the interior mountain; it is sheeted over with verdure and with natural woods, occasionally interrupted by projecting rocks; and in all the magnificent sweep of its recess from the bay, it commands a view of the variegated and intricate channel of the Slate islands, with the sound of Oban, and the distant ranges of mountains that extend from Ben Cruachan to Ben Nevis. Quartz rock, dipping towards the E in angles of 40 or 50 degrees, forms the principal body of the mountain; but it alternates with and passes into micaceous schist; and both it and the

varieties which the intermixture with it of the micaceous schist produces, alternate with clay-slate. The island belongs to F. C. T. Gascoigne, Esq. of Craignish, and is under deer. Scarba (Norse *Skarpey*) is the Engaricenna of Ptolemy, and one of his five Ebudæ. Pop. (1861) 13, (1871) 7, (1881) 19, (1891) 9.

Scare, Big and Little. See LUGE BAY.

Scarfskerry, a fishing village in the NE corner of Dunnet parish, Caithness, on the coast, $7\frac{1}{2}$ miles NE of Castletown. It has a post office under Thurso. In 1894-95 a pier 238 feet long, and composed of Portland cement concrete, was constructed for the purpose of providing a sheltered haven for the fishing boats, the inclosed area having previously been excavated. The sea end of the pier, for a distance of 100 feet, slopes downwards for $4\frac{1}{2}$ feet above high water to 6 feet below low water. The cost of the undertaking was £1000, of which Government gave £800.

Scarp, an island in the Hebridean parish of Harris, Inverness-shire, $\frac{1}{2}$ mile W of the nearest point of North Harris. Its length north-westward is 3 miles; and its greatest breadth is $2\frac{1}{4}$ miles. It consists chiefly of one mountain of gneiss rock, with little soil, and rising to an altitude of 1000 feet above sea-level. Pop. (1841) 129, (1861) 151, (1871) 156, (1881) 213, (1891) 143.

Scarsburgh. See JEDBURGH.

Scar Water, a troutful rivulet of Nithsdale, Dumfriesshire, rising within $1\frac{1}{2}$ mile of the meeting-point of Dumfries, Kirkcudbright, and Ayr shires, at an altitude of 1600 feet, and flowing $18\frac{3}{4}$ miles east-south-eastward—for the first $11\frac{3}{4}$ miles through PENPONT parish, and then along or close to the boundaries of Tynron and Keir—till, after a descent of 1420 feet, it falls into the Nith at a point 2 miles S by W of Thornhill.—*Ord. Surv.*, shs. 15, 9, 1864-63.

Scatwell, a mansion in Contin parish, Ross and Cromarty, on the right bank of the Conan, near the Meig's influx, 10 miles WNW of Muir of Ord station on the Highland railway. Its owner is Sir William J. Bell, who purchased the estate in 1888.

Scavaig, Loch, a remarkable inlet of the sea, a scene of wild and dismal grandeur, on the SW coast of Skye. It measures $4\frac{3}{4}$ miles across the entrance, and 3 miles thence to its inmost recess; and it penetrates among the Cuchullin Mountains. Its flanks are stupendous heights of bare rock, which shoot abruptly up from the bosom of the sea, and, being composed of hypersthene, have a singularly dark and metallic aspect. 'But,' says Dr Macculloch, who brought this remarkable piece of scenery into notice, and is the fittest person to describe it, 'it is impossible to convey any idea of this spot, which before my visit had never been seen by a stranger, and was indeed known to few, even of the inhabitants of Skye. Scarcely any but shepherds had trod these sequestered retreats, the dwelling of clouds and solitude; fit haunts for the poetical demons of the storm. Loch Scavaig is inaccessible by land on the N side, and equally so on the S, to all but the active and practised mountaineer. The traveller whose object is picturesque beauty, should enter it from Strathaird. In this direction the view from the sea is extremely fine, the dark ridge of the Cuchullin, with all its spiry and serrated projections, flanked by the equally dark and lofty ridge of Blaven, forming a varied and rugged outline of the sky. On entering the bay, these summits disappear, as they retire below the high skirts of the hills which descend into the sea, varied by projecting points and rocky islets, and surrounding the spectator with a continuous surface of bare and brown rock, scarcely presenting a symptom of vegetation. The falling of a cascade, the deep dark green of the water, and the wheeling flight of the sea-birds that frequent this retired spot, are the only objects which vary the uniformity of colours and of character it everywhere displays. On landing, similar scenes meet the eye in every direction, no intruding object occurring to diminish the effect produced by the gloomy grandeur and savage aspect of the place.' See CORUIK and CUCHULLINS.

Schaw Park, a seat of the Earl of Mansfield, in Alloa parish, Clackmannanshire, $2\frac{1}{2}$ miles NNE of the town. It is a fine mansion, and commands a wide and beautiful prospect.

Schel. See MOREBATTLE.

Schiehallion, an isolated mountain of Perthshire, on the mutual border of Fortingall and Dull parishes, $4\frac{1}{2}$ miles SE of Kinloch-Rannoch, and 11 WNW of Aberfeldy. Its altitude above sea-level is 3547 feet. It is situated at the eastern entrance of the district of Rannoch, a little detached from the long ridge of 7 miles breadth at the base, and 3000 feet or upwards in mean elevation, which divides Rannoch from the vales of Glenlyon and Fortingall; and, seen on entering the country by any approach from the Lowlands, it has a conspicuous and commanding appearance. Viewed from the NW, it seems a cone; but viewed from the S or E, it is seen to be elongated eastward and westward, to rest on a long narrow base, to rise gently at its E end, and to be steep on the W and on the S side. Its outline is, on the whole, curvilinear, and has fewer angles and breaks than that of most of the monarch-heights of the Highlands. The view from its summit promises, *a priori*, to be magnificent; but, when actually seen, it greatly disappoints. The valley of the Tummel is sufficiently remote to appear trifling; Loch Rannoch seems strip of its attractions, and sinks into comparative tameness; Glenlyon is shut out by the interposed mountain-range; and all else is a tumultuous sea of wild elevations, among which the eye traces few striking forms. Schiehallion is known throughout the scientific world as the scene, in 1774, of curious observations by Dr Nevil Maskelyne, astronomer-royal, to ascertain the mean density of the earth by observing the effect of the mountain on the plumb-line; and it afterwards acquired additional celebrity from the visit and notices, first of Dr Playfair, and next of Dr Macculloch. The name is said to be a corruption of the Gaelic *Ti-challinn*, 'the maiden's pap.'—*Ord. Surv.*, sh. 55, 1869.

Schivas. See TARVES.

Scone, a parish containing the hamlet of Old Scone and the town of New Scone, in the SE of Perthshire, on the E bank of the river Tay. The district at West Kinloch, containing $717\frac{1}{2}$ acres, and shown on the Ordnance Survey maps as a detached part of this parish, but alleged to be a part of Kettins parish in Forfarshire, was transferred by the Boundary Commissioners in 1891 to the parish of Cargill. There was effected at the same time a change of territory between the parishes of Scone and Kinnoull. So much of the Balthayock detached part of the latter parish as lay on the north side of the public road running past Two-mile House and Balraig was transferred to the parish of Scone, while so much of Scone parish as lay on the south of the same road was transferred to Kinnoull. The parish of Scone is bounded N and NE by the parish of St Martius, E by the parish of Kilspindie, SE by the parish of Kinnoull, SW by the parishes of Perth and Tibbermore, and W by the parish of Redgorton. On the W the boundary line follows the Tay for $4\frac{1}{2}$ miles, and elsewhere it follows the courses of two of the burns for a short distance, but it is mostly artificial. The length, from Colen Wood on the N to the point on the river Tay where the parishes of Kinnoull, Perth, and Scone meet on the S, is $3\frac{3}{4}$ miles; and the extreme breadth, from the point on the E where the parishes of St Martins, Kilspindie, and Scone meet, near Blackcraigs, to the bend of the Tay at the NW corner of the policies of Scone Palace on the W, is 5 miles. The surface rises in gentle undulations from the Tay towards the eastern boundary, where it attains an extreme height of over 500 feet. The whole is fertile and well cultivated, and there are numerous belts and clumps of trees. The prevailing rocks are basalts and sandstones, both of which are quarried. Along the W side near the Tay is a strong rich clay, elsewhere the soil varies from good deep black loam to a light sandy gravel. The drainage is carried off by the Tay and some small burns flowing into it. Of these the chief are one in the N at Stormontfield,

one flowing from Muirward Wood farther S, two flowing through the policies of Scone Palace, and one to the S of New Scone, flowing through the Den of Scone. The principal antiquities are two stone circles, each about 21 feet in diameter, in the SE of the parish—one to the WNW of the town of New Scone, and the other about 1 mile to the NE near Shianbank; a cairn in the N near Barclayhill House; traces of a reach of Roman road which, coming from Ardoch, crosses the Tay at Dorders Ford, W of the palace of Scone, and passed in a straight line N by E till it left the parish near Colen; remains of a Roman camp on this road, N of the Palace policies; and the site of an old fortification called Gold Castle in the NW of the Palace policies. The old palace and the Mote Hill are subsequently noticed. The great Earl of Mansfield (1705-93), being one of the Stormont family, was connected with the parish though born at Perth, and Scone was itself the birthplace of David Douglas (1799-1834) the traveller and botanist. The parish is traversed by the roads from Perth to Blairgowrie, Coupar-Angus, and Newtyle. Scone contains the hamlet of Old Scone, the town of New Scone, the village of Stormontfield, and a small part of the burgh of Perth. The chief residences are Scone Palace and Bonhard House, the latter the seat of Alexander Macduff, Esq. The Earl of Mansfield is the principal landowner.

The parish is in the presbytery of Perth and the synod of Perth and Stirling; and the living is worth £404 a year. The churches are noticed under the town. Under the School Board the New Scone and Stormontfield schools, with respective accommodation for 311 and 59 pupils, have an average attendance of about 250 and 25, and grants of over £270 and £30. Valuation (1885) £14,414, 3s. 6d., (1892) £12,653, 12s. 8d. Pop. (1801) 1670, (1831) 2268, (1861) 2199, (1871) 2240, (1881) 2347, (1891) 2150, of whom 984 were males and 1166 females, and 2100 were in the landward part of the parish. Houses (1891) in landward part inhabited 501, uninhabited 46, and building 2.—*Ord. Surv.*, sh. 48, 1868.

The town of New Scone is near the centre of the southern part of the parish, on the road from Perth to Blairgowrie, 2 miles NE of Perth. Occupying a fine airy position well sheltered on the E, it dates from the beginning of the nineteenth century, and its houses are mostly neat substantial buildings. There is a post office under Perth, with money order, savings bank, and telegraph departments, a public hall and reading-room, a public school, a cemetery, and Established, Free, and U.P. churches. The public hall is a Romanesque building, erected in 1879-80 at the junction of Albert and Coupar-Angus roads, and the hall has accommodation for 400 persons. The school, Elizabethan in style, was opened in March 1876. The parish church was erected in 1804 and enlarged in 1834. The U.P. church was built in 1810. A monument to the memory of David Douglas, already mentioned, has been erected by his fellow-townsmen. The unfortunate naturalist met his death in the Sandwich Islands by falling into a pit the natives had made for ensnaring wild beasts. A tramway between Perth and Scone, covering over 3 miles, was opened in Sept. 1895. Pop. of town (1841) 1364, (1861) 1403, (1871) 1477, (1881) 1483, (1891) 1329, of whom 583 were males and 746 females.

The hamlet of Old Scone, $1\frac{1}{2}$ mile to the WNW, has disappeared, all that remains of it being a fine old cross surrounded by stately trees; but the site is interesting from its connection with old Scottish history. As has been aptly remarked, 'There are many instances of towns losing their market crosses, but this is the only cross which has lost its town.' In the early part of the 8th century we find Scone appearing as the capital of Pictavia, one of the four kingdoms into which modern Scotland was then divided. Occupying a position between the two divisions of the Northern and Southern Picts, it seems to have become naturally the central point of the Pictish government, and in 710 it appears to have been here, at the Mote or Bote Hill that

Naitan, King of the Picts, publicly 'renounced the error by which he and his nation had till then held, in relation to the observance of Easter, and submitted, together with his people, to celebrate the Catholic time of our Lord's resurrection,' and it was probably from this that the mound acquired its name of Caislen Credi or Castle of Belief. This change in the date of the keeping of Easter led to the expulsion of the Columban missionaries, who had exercised ecclesiastical sway within the Pictish territories for over a century, and so caused the quarrel between the Picts and Dalriadic Scots that afterwards, in 844, led to the union of Dalriada and Pictavia under Kenneth Mac Alpin. Under Kenneth it remained the capital of the kingdom, and appears too as the place of keeping of the famous Stone of Destiny, which is traditionally said to have been brought by this monarch from Dunstaffnage. This myth represents it as having been the stone which Jacob used as a pillow at Bethel, but which, having passed into the possession of Scota, daughter of Pharaoh, who married Gaythelos, son of the King of Greece, and contemporary with Moses, was by her carried first to Spain, then to Ireland, and ultimately to Dalriadic Scotland, being all this time a sort of talisman for the owners, and held in high reverence as their *biafail* or stone of destiny, as set forth in the old rhyme—

'Ni fallat fatum, Scoti, quocunque locatum,
Invenient lapidem, regnare tenentur ibidem;'

or, as Bellenden has rendered it—

'The Scottis sail bruke that realme, as natyve ground
(Geif weirdis fayll nocht) quhair evir this Chair is found.'

Wyntoun, in telling the story, says that the stone was brought to Ireland* by Simon Brec, son of the King of Spain, and that it was afterwards by Fergus-Ercson transferred to Iona, and thereafter to Scone; while the *Rhyming Chronicle* makes Simon Brec the son of Milo, King of Spain, who did not live till more than a thousand years after Pharaoh's time, and all the later chroniclers agree that the stone was finally transferred to Scone by Kenneth Mac Alpin, when he united the Picts and Scots under one sovereignty. Such is the rough tradition, but Dr Skene has shown that for its later more polished forms, and for the identification of the mystic stone with that at Scone, we are indebted to Baldred Bisset, who was one of the commissioners sent to Rome to plead the cause of Scottish independence before the Pope, and who was desirous of thus strengthening his cause. That the stone was looked on as mystical, and held in high reverence, is undoubted, though the reason cannot now be definitely ascertained. Dr Joseph Robertson supposed that it might have been brought from IONA, and was possibly the stone used by Columba as a pillow, but the block is of no rock found in that island, and is indeed a mass of dull reddish or purplish sandstone, with a few embedded pebbles, and having as much resemblance to the sandstones of the neighbourhood as to any other deposits. Dr Skene thinks that in all probability it was a stone used by St Boniface—an Irish missionary who was concerned in the conversion of Naitan and his people to the Roman method of calculating Easter—as an altar, and hence the veneration; and he points out that a stone on which the kings of Munster were seated when crowned was believed to be the stone altar used by St Patrick in his service after the conversion of the king of Cashel. There seems to be a difference between both the Scone and Munster stones and those used in the common Celtic custom of inaugurating kings while they stood on some rock or large stone, for both of the former slabs were movable and were kept in churches. After the kingdom of Scone passed into the kingdom of Alban in A.D. 900, Scone still remained the capital, for in 906, when the Mote Hill was the scene of a solemn assembly where King Constantin and Cellach, Bishop of St Andrews,

* It is a curious fact that while the Scottish stone was said to have been brought from Ireland, the Irish stone of Tara was, according to tradition, brought from Scotland.

resolved on a union of the Pictish and Scottish Churches, it is spoken of as *regalis civitas*, and from this time onwards the same hill was frequently the meeting place of rough parliaments. In 1054 a battle was fought in the neighbourhood between the forces of Siward, Earl of Northumbria, and Macbeth. Siward was the uncle of Malcolm Ceanmor, and, anxious to place his nephew on his rightful throne, he 'went with a large army into Scotland, both with a naval force and a land force, and fought against the Scots, of whom he made great slaughter, and put them to flight, and the king escaped.' The struggle was, however, so keen, and so many of Siward's men were killed, that he had to retire, and Macbeth's rule over Scotia was maintained for other three years. From the reference to a naval force, Siward would seem to have brought ships, which operated along the Tay.

After the kingdom of Alban became the kingdom of Scotia, and still later, when Celtic finally passed into feudal Scotland, neither the importance of the place nor of its mystic stone diminished. 'No king,' says Fordun, 'was ever wont to reign in Scotland unless he had sat upon this stone at Scone;' and this may possibly have been so, though there is no contemporary evidence of the fact prior to the 12th century, when John of Hexham states that in 1153* Malcolm IV. was crowned here, and from this time onwards Scone was the regular place of coronation till the beginning of the reign of James IV. Subsequent to that time the only king who was crowned at Scone was Charles II. in 1651. Of most of the ceremonies no particulars have been recorded, but of that of Alexander III. a graphic account has been given by Fordun, and of that of Charles a full account is given in a thin quarto printed at Aberdeen in 1651, and reprinted by Dr Gordon in his *Monasticon* (London, 1875). The last king crowned seated on the mystic stone was Alexander III., as the relic was in 1296 carried off to London by Edward I., who, much given to relic worship, seems to have held it in as high esteem as the Scots themselves, and evidently regarded it as the palladium of Scotland. His first intention was to make for it a magnificent shrine, which was to serve as a coronation chair for the English kings, but this idea was abandoned in favour of that of a chair of bronze, and then of one of wood, which has been used as a coronation chair for all the English and British sovereigns since, and underneath the seat of which the stone still remains. Some doubt was at one time expressed as to whether this stone at Westminster is that formerly at Scone, because in the treaty of Northampton in 1328, it was stipulated that the relic should be given back. Complaint is, however, afterwards made that the stipulation had not been fulfilled, and there cannot be the slightest question as to the identity. The Abbey of Scone stood to the W of Old Scone on the site of the present palace. It was founded by Alexander I. in 1114 for Augustinian monks, whom he brought from the priory of St Oswald at Nostal, near Pontefract in Yorkshire. The new foundation was dedicated by Alexander and his wife Sibylla to the Virgin, St Michael, St John, St Lawrence, and St Augustine; and it seems to have replaced an older church dating from the time of St Boniface, and dedicated to the Holy Trinity. During the Wars of Independence the monks of Scone were, like so many of the Scottish churchmen, thoroughly opposed to the English claims, and so we find their home destroyed by the English army in 1298, and Edward petitioning the Pope to take the Abbey out of the midst of a hostile population, while, later, Abbot Thomas was one of those who took part in the coronation of Robert Bruce and suffered in consequence, being sent to England as a prisoner. The Abbey possessed a precious relic in the head of St Fergus (*circa* 700), for which James IV. provided a silver case. From traces which have been observed of its foundations, the abbey wall is supposed to have enclosed an area of

12 acres. About 100 yards due E from the SE corner of the present palace is an old burying ground, and here in 1841 part of the abbey buildings were laid bare. The church is supposed to have stood here. About 70 yards N of this is the Mote Hill—'the hill of belief' of the chroniclers, and the Mons Placitii of the *Regium Majestatem*; Gaelic, *Tom-a-mhoid*, 'the hill where justice is administered'—with a flat area on the top of 100 by 60 yards. The Abbey buildings and the old palace, properly the house of the abbots, were destroyed by a mob from Perth in 1559. 'Some of the poore in houp of spoyle, and sum of Dundie to consider what was done, passed up to the same Abbay of Scone; whairat the Bischopis servandis, offended, began to threatene and speak prouddie; and as it was constantlie affirmed one of the Bischopis sonis stogged throuch with a rapper one of Dundie, for because he was looking in at the girnell door. This brute noysed abrode, the town of Dundie was more enraged than befor, who, putting thame selfis in armour, send word to the inhabitantis of Sanct Johnestoun, "That onles they should support thame to avenge that injurie that thai should never after that day concur with thame in any action." The multitud, easelie inflambd, gave the alarme, and so was that Abbay and Palace appointit to saccage; in doing whairof they took no lang deliberation, bot committed the hole to the merciment of fyre; wharat no small number of us war offendit, that patientlie we culd nocht speak till any that war of Dundie or Sanct Johnestoun.' So complete was the destruction, that hardly any ruins even remained. The building of a new palace was begun by the first lay commendator, the Earl of Gowrie, and on his forfeiture the property was bestowed by King James VI. on David Murray of the house of Tullibardine, who became Baron Scone in 1605, and Viscount Stormont in 1621. He finished the palace and erected the old gateway 200 yards to the NE of the present mansion. The old abbey church having fallen, he also, in 1624, erected a parish church on the top of the Mote Hill. Of this only an aisle now remains, containing a magnificent marble statue of the first Viscount, and other family monuments. During the January of 1716 the Chevalier St George lived here for about three weeks 'in all the grandeur of an English King,' dining and supping alone and being served on the knee by the lord of the bedchamber in waiting. Prince Charles Edward also visited the house in 1745. After the succession of the Stormonts to the Mansfield title the old palace seems to have dissatisfied them, and a new mansion-house, the present Palace of Scone, was erected in 1803-8 at a cost of £70,000. It is a castellated edifice, somewhat heavy and cumbrous, but contains many fine paintings, and the greater part of the old furniture and furnishings have been preserved, including a bed that belonged to James VI., and another, the hangings of which were worked by Queen Mary when a prisoner in Loch Leven Castle. The music gallery occupies the site of the old great hall where the coronation ceremonies took place. The situation is pleasant, on an extensive lawn sloping gently up from the Tay; and the well-wooded and beautiful grounds known as Scone Park stretch along the river for about 2 miles. Among many noble trees may be noticed Queen Mary's sycamore, and an oak and another sycamore, both planted by James VI. The Queen and Prince Albert here spent the night of 6 Sept. 1842. In the grounds is the old cross of Scone—a narrow pillar, 13 feet high, with a sculptured top—the original position of which was about 30 yards E of the ancient gateway already mentioned. Scone Palace is the seat of William David Murray, present and fourth Earl of Mansfield, ninth Viscount Stormont and Baron Scone (b. 1806; suc. 1840). See COMLONGAN and SCHAW PARK.

Scoonie (anciently *Scouny*), a parish on the S coast of Fife, containing the post-town and railway station of LEVEN. It is bounded N by Ceres, E by Largo, SE by the Firth of Forth, S by Wemyss, SW by Markinch, W by Kennoway, and NW by Kettle. Its utmost length, from N to S, is 4½ miles; its breadth varies between 5 furlongs and 2¾ miles; and its area is 4236½ acres, of which 184½ are foreshore and 10½ water. The shore, 1½ mile in extent, is flat and sandy, and east of the town of Leven is skirted by Scoonie Links. The river Leven flows 1½ mile east-by-southward along all the southern boundary to Largo Bay; a burn, coming in from Kennoway, runs eastward and south-by-eastward through the interior to the bay; and a copious spring, called the Boiling Well, rises in a sandy flat a little way from the beach. The surface rises gradually northward to 200 feet near Springfield, 380 near Toddy Bridge, and 600 near Kilmux Wood in the extreme N: and the higher grounds command an extensive and brilliant view of the Firth of Forth and the Lothians. Beds of coal of various thickness lie beneath all the surface, and have long been worked. The soil is variable; but nearly nine-tenths of the entire area are in tillage, whilst over 260 acres are under wood. A tumulus on the Aithernie estate in 1821 was found to contain about twenty stone coffins, in which were various urns. Numerous unconfined bones were also found. Of Aithernie Castle only a fragment now remains. The chapman-scholar, Jerome Stone (1727-57), was the son of a Scoonie mariner. Mansions, noticed separately, are DURIE, KILMUX, and MONTRAVE. Scoonie is in the presbytery of Kirkcaldy and the synod of Fife; the living is worth £440. The old parish church, in the centre of the burying-ground, ¼ mile distant from Leven, is now reduced to a fragment, which serves as the family vault of the Durie property. The present churches have been described under Leven. Two public schools, Leven and Smithy Green, with respective accommodation for 1178 and 65 children, have an average attendance of about 925 and 55, and grants amounting to nearly £1000 and £60. Valuation (1835) £19,044, 0s. 11d. (1893) £21,895, 6s. 9d. Pop. (1801) 1681, (1831) 2566, (1861) 3257, (1871) 3178, (1881) 3730, (1891) 4693.—*Ord. Surv.*, sh. 40, 1867.

Scotlandwell. See PORTMOAK.

Scotsbrig, a farm in Middlebie parish, Dumfriesshire, 3 miles NE of Ecclefechan. It became the home of the Carlyle family in 1826.

Scotsburn. See LOGIE-EASTER.

Scotsraig, a large substantial mansion of 1817, in Ferry-Port-on-Craig parish, NE Fife, 1 mile SW of Tayport. The estate at an early period belonged to the bishops of St Andrews, by one of whom it was feued during the first half of the 13th century to Sir Michael Scott of Balwearie, father of the famed Sir Michael Scott, with whose descendants the lands for some time continued. It was in consequence of this that they came to be denominated Scotsraig. From the family of Scott, Scotsraig came by purchase to Durie of that ilk, from whom it passed to the Ramsays, ancestors of the Earl of Dalhousie. It afterwards belonged to the Buchanans, then to the Erskines; and during the reign of Charles II. the whole estate became the property of Archbishop Sharp, from whose successors it was purchased by Mr Alexander Colville, the representative of the Lords Colville of Culross. From this family the lands were afterwards purchased by the Rev. Robert Dalgleish, D.D., who was minister and proprietor of the whole parish. The present proprietrix is Mrs. Elizabeth K. Maitland-Dougall.—*Ord. Surv.*, sh. 49, 1865.

Scots Dyke, The, an old ditch and embankment 3½ miles in length, forming part of the march-line between England and Scotland. It struck off abruptly from the Esk at a point 4 miles to the N of Longtown, and ran W to the banks of the Sark, which, flowing southward to the Solway Firth, from the point of contact with the Scots Dyke to its efflux in the Solway forms the boundary of the two countries. The small district situated S of the Scots Dyke, and bounded on the E by the Esk and on the W by the Sark, used formerly to be known as

the Debatable Land, and was claimed by both kingdoms.—*Ord. Surv.*, shs. 11, 10, 1863-64.

Scotstarvet Tower, a square, battlemented tower in CERES parish, Fife, 2¼ miles S by W of Cupar. Standing on an eminence, it is 24 feet square, and 50 to 60 feet high, commands a fine view, and itself is widely conspicuous.—*Ord. Surv.*, sh. 40, 1867.

Scotstown, a village of Sunart district, Argyllshire, 2 miles N of Strontian.

Scourie, a village in EDRRACHILLIS parish, W Sutherlandshire, at the head of a small bay of its own name, 43½ miles NW of Lairg, under which it has a post office, with money order, savings bank, and telegraph departments, and with which it communicates by a daily mail-gig. The township, except where it looks out upon the bay, is quite surrounded by an amphitheatre of rugged ledges of rock; and the land is comparatively verdant and arable, in fine contrast to the sterile and rocky surface of the mountain-screens. Scourie Bay is 7¾ furlongs in length by 5 across the entrance, and opens upon the romantic island of Handa. In the 16th century a branch of the Mackays took possession of the south-western part of what came to be called Lord Reay's Country, and, adopting Scourie as the seat and centre of their influence, assumed the designation of the Mackays of Scourie. One of this race was Lieutenant-General Hugh Mackay, the celebrated commander-in-chief in the reign of William and Mary. He was to have been ennobled by the title of Earl of Scourie, but lost favour at court through the intrigues of his rival, Mackenzie of Cromarty.—*Ord. Surv.*, sh. 107, 1881.

Scour-na-Lapaich. See MONAR, LOCH.

Scrabster, a seaport and suburb of Thurso, Caithnessshire, on the westward expansion of the upper part of Thurso Bay, and near the eastern entrance to the Pentland Firth. Of considerable importance as a fishing station, and the accommodation available for the large fishing fleet which regularly prosecutes the herring fishery having been found to be totally inadequate for the purpose, its harbour was considerably extended in 1893-94, this extension being the first part of a larger scheme which the harbour trustees intend to carry out as funds are available. The Western Highlands and Islands Commission in 1894 recommended that £3000 be given in aid of these works. The value of herring, all of excellent quality, landed at Scrabster in 1893 exceeded £30,000. It has a post office under Thurso, and near at hand are vestiges of Scrabster Castle, once a residence of the bishops of Caithness, and afterwards a fortalice of the crown.

Scrape, The, a rounded mountain (2347 feet) on the mutual border of Manor and Drummelzier parishes, Peeblesshire, 7 miles SW of Peebles. It consists of greywacke veined with quartz, and commands an extensive and interesting prospect. Along its top are traces of a road which is supposed to have been Roman, and which probably connected the camp at Lyne with the great road from Carlisle up Annandale and down Lanarkshire.—*Ord. Surv.*, sh. 24, 1864.

Scresort, Loch. See RUM.

Scriden Rocks. See ARRAN.

Scroggiehill, a village in Methven parish, Perthshire, 4 miles WNW of Perth.

Scur of Eigg. See EIGG.

Scullamie. See KYLE OF TONGUE.

Seacliff House, a mansion in Whitekirk parish, Haddingtonshire, near the coast, 4½ miles E by S of North Berwick. Scottish Baronial in style, it was rebuilt by the late Mr Sligo, and enlarged by John Watson Laidlay, Esq., who acquired the estate in 1850, and died in 1885. R. W. Laidlay is present proprietor.—*Ord. Surv.*, sh. 41, 1857. See J. Small's *Castles and Mansions of the Lothians* (Edinb. 1833).

Seafield House, a mansion in Ayr parish, on the right bank of the estuary of the Doon, the property of Sir William Arrol, M.P., and erected by him in 1892.

Seafield Tower. See KINGHORN.

Seafield Tower, a mansiou in Ardrossan parish, Ayrshire, near the coast, 1 mile N by W of the town.

Built in 1820, and greatly enlarged and improved in 1858, it is a chateau-like edifice in a pleasing combination of the Scottish Baronial, Jacobean, and Italian styles, and is now used as a hydropathic establishment.—*Ord. Sur.*, sh. 22, 1865. See A. H. Millar's *Castles and Mansions of Ayrshire* (Edinb. 1855).

Seaforth, Loch, a projection of the sea on the E coast of the island of Lewis. It is $3\frac{1}{4}$ miles wide at the entrance, and, striking north-westward for $8\frac{1}{2}$ miles, diminishes gradually to a breadth of 1 mile; it then bears $5\frac{1}{2}$ miles north-north-eastward, its breadth contracting from $2\frac{3}{4}$ miles to $\frac{1}{4}$ mile, and embosoms to the S an island, Eilean Shithford ($1\frac{1}{2}$ mile \times $6\frac{1}{2}$ furl.; 600 feet high); and it finally goes off in two arms—1 mile westward and 3 miles eastward, with a maximum breadth of $\frac{1}{2}$ mile. Over the first $8\frac{1}{2}$ miles it divides Lewis from Harris, and over the rest of its length it penetrates the Lewis parish of Lochs. The mountains around its entrance rise to a great height, and, together with much grandeur of outline, form groups of highly-picturesque composition. In all the narrow or central and upper part, the loch, being environed with lofty ground, and forming a stupendous natural canal, is gloomy, sequestered, and silent; and in its lower part, though frequented by shipping, it is subject, from the clefts of the surrounding mountains, to sudden squalls and gusts, which render its anchorage not altogether safe. At a shoal $3\frac{1}{2}$ miles above Eilean Shithford the current of a spring tide runs at the rate of 8 miles an hour, and makes a noise which, in calm weather, can be heard at a distance of several miles. This shoal cannot be passed by boats except near high water. Seaforth gave the title of Earl to a branch of the family of Mackenzie, created Baron Mackenzie of Kintail in 1609, and Earl of Seaforth in 1623. The earldom became attained, in 1716, in the person of William, the fifth Earl.—*Ord. Sur.*, sh. 99, 1858.

Seal Island. See ELLAN-NAN-RON.

Seamab Hill. See MUCKHART.

Seamill. See KILBRIDE, WEST.

Sea Park, a good modern mansion, with beautiful grounds, in Kinloss parish, Elginshire, $1\frac{1}{4}$ mile W by N of Kinloss station, and $2\frac{1}{2}$ miles NE of Forres. The estate belonged to the Ellisons from 1574 till 1800, and in 1838 was purchased by the late John Dunbar, Esq.—*Ord. Sur.*, sh. 95, 1876.

Seaton. See SETON.

Seggieden, a mansion, with finely-wooded grounds, in Kinnoull parish, Perthshire, near the left bank of the Tay, 4 miles ESE of Perth. Its owners are the Trustees of the late Col. Drummond Hay.—*Ord. Sur.*, sh. 48, 1868.

Seil, an island of Kilbrandon and Kilchattan parish, Argyllshire, lying $3\frac{1}{2}$ miles S by W of Kerrera, and 4 SE of Mull. It is separated on the E by a very narrow strait from the mainland district of Nether Lorn; on the S by sounds only 2 or 3 furlongs broad from Torsa and Luing; and on the W by sounds of $\frac{1}{2}$ mile and 1 mile in breadth from Easdale and Sheep Isle. It measures $4\frac{1}{2}$ miles in length from N to S, and $2\frac{1}{2}$ miles in extreme breadth; but is much indented by the sea, and has a very irregular outline. Its area is $3820\frac{1}{2}$ acres, of which $433\frac{1}{2}$ are foreshore and $2580\frac{1}{2}$ moorland. The surface is disposed in three parallel ridges, two intervening valleys, and a belt of plain along part of the shore. The northern ridge, which is the highest and most rugged, has an altitude of upwards of 800 feet, and presents to the sea on the N side of the island a series of naked precipices. The middle ridge is prolonged more decidedly than the former, and in a north-easterly direction; it does not acquire an elevation of more than 400 feet; and, though in many parts presenting faces of bare rock, it descends at each end to the sea in flat and verdant shores. The southern ridge is low and narrow; it extends from side to side of the island in the same direction as the former; it is distinguished, even at a distance, by its grey colour and its numerous protrusions of bare rock; and it is succeeded on the SE by a flat shore, much indented, but verdant and fertile.

Clay slate, in several varieties, constitutes the larger part of the island; but, in consequence of the immediate vicinity of the superior slate of Easdale, it is not very extensively worked. The soil, wherever the form of the ground admits of cultivation, is good. Several summits of the ridges command pleasant views of the intricate channels and numerous islands along the coast of Lorn, and of the distant mountains of Mull and Jura. The E side of the island, and the confronting land in Lorn, form, with the intervening strait, a series of very rich close landscapes. The strait somewhat resembles the famed Kyles of Bute, but is more isleted, more romantically narrow, and riper in those flexures of channel and projections of land which seem to prohibit farther progress. The shores, on the Seil side, now lofty and now low, are finely variegated with arable fields, green meadows, waving trees, and rugged rocks; and on the Lorn side they are high, extensively sheeted with hanging wood, and romantically varied with ornamental culture, wood-embosomed cliffs, and sharply receding bays and creeks. The strait between these shores is at least 3 miles in length; and over most of this distance it rarely exceeds 200 yards in breadth, whilst in one place towards the N it contracts for a considerable way to a breadth of only 50 or 60 yards. The tidal stream, running with considerable velocity through this passage, generally wears the appearance of a great inland mountain river; and it betrays its marine connections only at low water when the rocks look up with a shaggy dress of seaweed. The water is deep enough at half tide to admit the passage of the boats of the country; and across the narrowest part of the strait strides a bridge of one large arch, erected towards the close of the 18th century, 78 feet in span and 26 above high-water mark. Lord Breadalbane owns all the island except the estate of Ardincaple, which was sold, with Sheep Island, in 1881, for £21,000. Pop. (1861) 724, (1871) 731, (1881) 661, (1891) 548, of whom 292 were females, and 468 were Gaelic-speaking.

Selkirk, a post and market town, a royal and parliamentary burgh, and a parish in Selkirkshire. Selkirk is the county town, and is situated on a rising-ground flanking a fine haugh on the right bank of Ettrick Water, $6\frac{1}{4}$ miles S by W of Galashiels, 7 SW of Melrose, 11 N by W of Hawick, 22 ESE of Peebles, and 38 SSE by road and 40 by rail from Edinburgh. It stands at the terminus of a branch line, $6\frac{1}{2}$ miles long, from Galashiels, formed under an act of 1854, and amalgamated with the North British in 1859. Its site on an eminence, rising from 400 to 619 feet above sea-level, is eminently favourable for sanitary arrangements; and its environs comprise the beautiful pleasure-grounds of Haining and picturesque reaches of Ettrick and Yarrow Waters to Oakwood Tower and Newark Castle. At the beginning of the 19th century the town presented the appearance of an ill-built, irregular, and decaying place, fast hastening to extinction; but since then it has suddenly revived, has undergone both renovation and extension, and is now a pleasant, prosperous, and comparatively ornate place, including various lines of new thoroughfares, elegant private residences, several good public buildings, and a number of busy factories. The plan of Selkirk is far from being regular. A spacious triangular market-place occupies the centre of the town; and thence the chief streets branch off in different directions. On the shortest side of the market-place is the town-hall, a neat modern edifice surmounted by a spire 110 feet high. The county buildings, occupying a site on the side of the road leading to Galashiels, were erected in 1870, and contain a handsome courtroom with an open timber roof, and well-planned apartments for various official purposes. Two portraits of George III. and his Queen were presented by a Duke of Buccleuch. A tunnel under the intervening street communicates with the sunk floor of the county prison, which stands opposite, and which was altered and enlarged in 1865-66 at a cost of £2000. In the open area of the market-place stands Handyside Ritchie's monument to Sir Walter Scott, erected by the gentlemen of the county in 1839.

The statue, 7½ feet high, represents the great author in his robes as sheriff of Selkirkshire, and is raised on a pedestal 20 feet high. Another monument, by Andrew Currie, was erected in High Street in 1859 to Mungo Park, the African traveller, who was born at Fowlshiels, in the parish of Selkirk, on the left bank of Yarrow Water. The ancient market-cross and the tolbooth, as well as the stalls of the old flesh market, also stood in the market-place; but all these have now disappeared. In 1884 a marble tablet was erected in the West Port to mark the site of the old Forest Inn, where, on 13 May 1787, Burns is believed to have written his 'Epistle to Willie Creech.' The railway station stands in the haugh at the foot of the rising ground occupied by the town; and the ascent from it, though short, is steep and fatiguing. A bridge, carrying the line across the Tweed immediately below the influx of Etrick Water, was originally a wooden structure; but after the winter of 1877 it was reconstructed in a more substantial form, with six piers and with iron girders. A public hall was erected in 1894-95 in Viewfield Gardens at an estimated expense of £5000.

The present parochial church was built in 1862, and contains 1100 sittings. In 1888 a chancel and an organ were added to the church, which was renovated in 1889, and had a memorial window inserted in 1891. The living is worth £888. A chapel of ease was opened at Heatherlie in 1877, and cost £3856. Early Decorated in style, it is a cruciform and apsidal structure, containing 600 sittings. In 1889 a stained-glass memorial window was placed in the church, which was raised to *quoad sacra* parish status in 1885. The Free church was built soon after the Disruption, and contains 700 sittings. There are two U.P. churches in the town. The first U.P. congregation occupy a church, opened in 1880, with 850 sittings, and a hall behind. It is in the Early Gothic style, with a spire 130 feet high, and cost about £5000. The new West U.P. church (1890) has 700 sittings. The E.U. chapel contains 130 sittings. There are also Congregational and Baptist chapels. St John's Episcopal church, with 156 sittings, is an Early English edifice of 1869; and the Roman Catholic church of our Lady and St Joseph contains 250 sittings, and was erected in 1866. Three schools—Knowe Park, Burgh, and Roman Catholic—with respective accommodation for 539, 541, and 121 children, have an average attendance of about 365, 410, and 70, and government grants amounting to nearly £385, £360, and £60. The Selkirk Science Class (Physiography) meets in the Burgh School. There is also the Scott and Oliver Trust, for which a new school was erected in 1896-97.

Selkirk has a post office, with money order, savings bank, and telegraph departments, branches of the British Linen, the National, and Commercial Banks, and of the National Security Savings Bank, and six hotels. The disused prison of Selkirk was purchased by Provost Craig Brown, who converted it into a library and reading-room, and replicated it to the town. It contains two full-sized replicas of 'The Resting Mercury' and the 'Adorante' that are now in the museum at Naples, and were recovered from the buried town of Herculaneum—the gift of Sir J. D. Gibson Carmichael, Bart. Among the miscellaneous institutions and associations of the burgh are the South of Scotland Chamber of Commerce, the Border Counties Association, a subscription library founded in 1772, a choral union (1872), a cottagers' horticultural society (1852), a farmers' club (1806), an association for the improvement of domestic poultry (1863), an ornithological association, a Conservative club, the Etrick Forest Bowling Club (1788), two Co-operative societies, two friendly societies, a provident building society (1859), Freemasons', Free Gardeners', Foresters', and Good Templar lodges, an angling association, curling, cricket, football, bowling, and golfing clubs, a total abstinence society, and various religious and philanthropic associations. There are also a gaswork, a volunteer drill hall, with accommodation for 800 persons; the Union Hall, for 400; the Chapel Street Hall, for 150; and the Baptist Chapel Hall, for

400. The *Southern Reporter* (1855) is published in the town every Thursday. Markets are held on alternate Wednesdays. The anniversary festival known as the Common Riding is on the Friday following that of Hawick. Annual fairs are held on 5 April and 31 Oct. General holidays are held on the first Friday and Saturday in August.

Industries.—The present staple manufacture of Selkirk is woollen goods—tweeds, tartans, shawls, and such articles—similar to those produced at Galashiels. This manufacture was introduced in 1835, has since steadily increased in importance, and is carried on in large factories employing very many hands. There are now half-a-dozen mills engaged in spinning woollen yarns, and a dozen in the manufacture of tweeds and tartans, etc. One of these, known as The Scottish Tweed Manufacturing Society's mill, and conducted on Co-operative principles, was taken over in 1896 by the Scottish Co-operative Wholesale Society, which now carries it on. Besides these there are a number of hosiery manufactories. The other industrial establishments are of less importance; they include an engineering and millwright work, saw-mills, corn-mills, and the usual commercial institutions of a country town. In former times a principal employment of the inhabitants was the making of single-soled shoon, 'a sort of brogues with a single thin sole, the purchaser himself performing the further operation of sewing on another of thick leather.' So prominent was this craft as to give the name of 'souters' (shoemakers) to the whole body of burghesses; while, in conferring the freedom of the burgh, one of the indispensable ceremonies consisted in the new-made burgess dipping in his wine and then passing through his mouth in token of respect to the souters four or five bristles, such as shoemakers use, which were attached to the seal of the burgess ticket, and which had previously passed between the lips of the burghesses present. 'The ceremony,' however, writes Mr T. Craig Brown, of Woodburn House, 'is comparatively modern, and I am much inclined to blame Sir Walter Scott for its institution.' He himself was made a 'Souter o' Selkirk' in this sort, but in the case of Prince Leopold of Saxe-Coburg (1819) the custom was omitted. Even in the middle of the 18th century the shoemakers of Selkirk were so numerous as to furnish more than one-half of the 6000 pairs of shoes demanded from the magistrates of Edinburgh by the Highland army in 1745. But since then the glory of the craft has departed, and the souters are not more conspicuous in Selkirk than in any other country town. A song very familiar in the S of Scotland has for its first verse—

'Up wi' the souters o' Selkirk
And down wi' the Earl o' Home!
And up wi' a' the brow lads
' That sew the single-soled shoon!'

These lines, which undoubtedly relate to a football match between Lord Home's men and the souters, have given rise to much literary contro-

versy. Scott, who gives other two verses in his *Minstrelsy of the Scottish Border*, seems inclined to refer them to the gallantry of the men of Selkirk at Flodden, and to the alleged pottroonery of Lord Home on the same occasion. 'The few survivors,' he says, 'on their return home, found, by the side of Ladywood Edge, the corpse of a female, wife to one of their fallen comrades, with a child suck-

Seal of Selkirk.

ing at her breast. In memory of this latter event, continues the tradition, the present arms of the burgh bear a female, holding a child in her arms, and seated on a sarcophagus, decorated with the Scottish lion, in the background a wood.' Certain at least it is that the figures in the burgh arms are those of the Virgin and Child.

Selkirk was made a royal burgh in the reign of David I. It is governed by a provost, 2 bailies, a dean of guild, a treasurer, and 10 councillors. The corporation revenue in 1895-96 was £1581; and in 1896 the municipal constituency was 1271, of whom 273 were females. The police force is incorporated with that of the county, and since 1884 has been under the chief constable of Selkirkshire. Justice of peace courts for the whole county are held as occasion requires. Sheriff courts for the county and sheriff small debt courts are held weekly during session; small debt cases, ordinary cases, and cases under the Debts Recovery Act, on Fridays. By the Reform Act of 1832 Selkirk was thrown into the county for parliamentary purposes, but under the Act of 1868 it now unites with Galashiels and Hawick in returning one member to parliament. The parliamentary burgh is continuous with the royal burgh, and has a constituency of 998. Extensive works in connection with the water supply were undertaken in 1866-67; and in 1876 a complete drainage system was introduced, the sewage being dispersed by irrigation. Valuation of real property in the burgh (1885) £22,898, (1896) £26,100. Pop. (1831) 1880, (1861) 3695, (1871) 4640, (1881) 6090, (1891) 6397, of whom 3436 were females, and 5662 were in the police burgh.

History.—*Shielkirk*, or the *kirk* planted beside the *shiels* of herdsmen and hunters in the Forest, is the modern equivalent of *Scheleschirche*, the earliest spelling of the name on record. In 1113 Earl David—afterwards David I.—founded at Selkirk a Tyronensian abbey. The erection of a royal castle was probably posterior to that of the church, as he speaks of a road 'between the castle and the old town;' but after 13 years the abbey was removed for convenience to KILSO; and the distinction between Selkirk Abbatis, or the village beside the abbey, and Selkirk Regis, or the village beside the castle, gradually disappeared as the places merged in one. David I. seems to have preferred Roxburgh to Selkirk as a place of residence; but the latter castle was frequently inhabited by William the Lyon, who dated several of his charters from it. Alexander II. and Alexander III. also spent some time at Selkirk; but after the accession of Robert I. it seems to have ceased to be a royal residence, though still regarded as a town of the king's demesne. Selkirk made some figure in the war of succession; and the gallantry of its citizens at the battle of Flodden has already been alluded to. James V. recognised the claims of the burgh by granting 1000 acres of Ettrick Forest to the corporation; and when the town, a little later, was burned by the English, the king gave timber from his forest to rebuild it. With the battle of PHILIPPAUGH, also in 1645, Selkirk had intimate connection; and in 1745 it was the scene of some skirmishing with the foragers of the Pretender's army, on its way to England. Selkirk gave the title of Earl in the peerage of Scotland to a branch of the powerful family of Douglas, which at one time held extensive sway in the Forest. The earldom is now one of the Duke of Hamilton's numerous titles. See ST MARY'S ISLE.

The parish of Selkirk was partly in Selkirkshire and partly in Roxburghshire until 1891, when the Boundary Commissioners placed it wholly in the county of Selkirk, and transferred its detached portion, situated at Todrig and comprising 1430½ acres, to the parish of Ashkirk. The parish of Selkirk is bounded N by Stow, NE by Galashiels, E by Melrose and Bowden, SE by Lilliesleaf and Ashkirk, SW by Kirkhope, and W and NW by Yarrow. The greatest length of the parish, from ENE to WSW, is 7½ miles; its breadth varies between 4½ and 7½ miles; and the area is 21,445 acres, of which 316 are water. The surface of the parish is
